Tanami Gold Mining Syndicate, Ltd.—Issued capital, 1,957,400 shares of 1s. each. Incorporated October, 1932, and has now decided to exercise an option held equally with R. W., Ltd., on holdings of Rosterman Mining Syndicate in Kakamega District, Kenya, for £12,000 cash and 30 per cent. of capital of company formed to develop the mine. Company also interested in Pakaneusi Prospecting and Development Company, Ltd. £76,330 is available for working capital.

Vlaakfontein Gold Mining Company, Ltd.—Issued capital, 1,100,000 10s. shares fully paid, and 3,650,000 10s. shares, 1s. paid. Incorporated in South Africa, to acquire mining rights and Government lease over 3,718 claims from Lace Proprietary Mines, for £325,000 payable in cash. Vendor subscribes for 650,000 shares. Property adjoins Sub Nigel Mine, from which haulage is now being sunk. £50,000 is payable to Sub Nigel, Ltd., in consideration for this facility.

Swan Estates, Ltd.—Issued capital, 140,000 ordinary shares of £1 each. Formed February, 1933, and has acquired flat and shop properties in Chelsea and Maida Vale. Outstanding mortgages, £216,000. Properties valued in books at £333,984. Income for year to March 25, 1934, £25,044, and after £11,308 mortgage and loan interest, net revenue amounted to £11,001.

Star Brewery Company, Ltd.—Issued capital, 150,000 5 per cent. cumulative preference shares of £1 and 8,000 ordinary shares of £10. Incorporated 1886 and now owns 41 licensed properties. Profits, before tax, fees and interest, for years to June 30th: 1932, £14,307; 1933, £10,798; 1934, £13,877. Assets total, £198,386 (property £153,481), mortgage being £76,333 and reserve fund, £40,000.

J. and J. Makin, Ltd.—Issued capital, 100,000 6 per cent. cumulative preference and 150,000 ordinary shares of £1. Incorporated in 1901 to acquire paper manufacturing business, and purchased Disley Paper Mill Company in November, 1934. Combined profits for years to June 30: 1932, £31,935; 1933, £25,972; 1934, £27,591. Average balance after depreciation and fees, £19,103. Assets at November 17, 1934, £319,664; fixed assets, £191,000; stock, £74,081.

ISSUES TO SHAREHOLDERS ONLY

Oxendale and Company (Proprietors).—50,000 5½ per cent. preference £1 shares are offered to shareholders registered on November 29th at par, payable 5s. per share on application and 15s. on allotment. It is proposed to pay the preference dividend on January 1st and July 1st and the first dividend will be payable on July 1st, 1935, and will be calculated from the date of allotment.

Shropshire, Worcestershire and Staffordshire Electric Power. The directors have authorised the issue of 500,000 "B" ordinary £1 shares to "A" and "B" ordinary shareholders at 22s. 6d. per share, payable 5s. per share on application, at 7s. 6d. (including 2s. 6d. premium) on allotment and 5s. on April 1st and July 1, 1935. The shares will rank as to capital

and dividend (on the amounts paid up), voting and otherwise *pari passu* with the existing "B" ordinary shares as and from January 1, 1935. Applications to be received not later than December 31st and the directors to proceed to allotment on January 1st next.

Smith (D.) and Sons.—Shareholders of this company are entitled to subscribe at par for 6 per cent. preference 5s. shares and 500,000 ordinary 1s. shares of Machinery (Smith's Patents) Company.

East Rand Proprietary Mines, Ltd.—Offer of 600,000 shares of 10s. each for subscription at 45s. per share to shareholders who are registered on December 8, 1934. The closing date for the receipt of acceptances will be January 12, 1935. The new shares will rank for dividends declared subsequently to January 1, 1935. The issue has been underwritten jointly by the Central Mining and Investment Corporation, Ltd., and the General Mining and Finance Corporation, Ltd., for a cash commission of 2½ per cent.

Press Caps.—The directors have decided to offer 104,000 ordinary shares of 5s. at par to existing holders of ordinary shares. The new shares will rank for a full year's dividend for the year ending June 30, 1935, *pari passu* with the existing ordinary. The shares are offered in the proportion of two new for every five held on November 23rd.

British Power and Light Corporation (1929), Ltd.—Issue of 400,000 5 per cent. cumulative preference shares £1 to holders registered November 30th at 28s. 9d. per share payable 5s. on application and balance on December 18, 1934. New shares will rank for dividend from October 1, 1934. Purpose of issue to provide funds for repayment of bank loan, amounting to £225,000, purchase of up to 150,000 6 per cent. cum. part. preference shares £1 in Electricity Distribution of North Wales, and for general purposes.

PRIVATE PLACING

Sphere Investment Trust.—A line of £75,000 new 4 per cent. first charge debenture stock of the Sphere Investment Trust has been placed privately.

CONVERSIONS AND REPAYMENTS

3 per cent. Treasury Bonds.—The list of numbers of the £44,000,000 £3 per cent. Treasury Bonds drawn for repayment on April 15, 1935, was published in a special supplement to the *London Gazette* dated December 5, 1934. Copies of the list may be obtained at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, E.C.2.

British North Borneo Company.—The whole of the outstanding 5 per cent. certificates of indebtedness will be redeemed on December 31, 1934.

Gadek Rubber Estates.—The outstanding 7 per cent. twelve-year convertible notes are being paid off on December 31, 1934.

Hawthorn (R. and W.), Leslie and Company.—The company intends to redeem the whole of the outstanding 5 per cent. first mortgage debenture stock at 110 per cent. on May 31, 1935, with accrued interest to that date.

Shanghai-Hangchow-Ningpo Railway.—The Chinese Government has given notice to the British and Chinese Corporation, of its intention to redeem at par on June 1, 1935, the outstanding balance of the 5 per cent. Shanghai-Hangchow-Ningpo Railway Loan. The amount outstanding is £300,000.

Standard Trust Company.—The Standard Trust has decided to redeem on May 31, 1935, the outstanding 4½ per cent. debenture stock at 102 per cent., together with interest (less tax) on the principal of the debentures. In connection with the redemption, the company will create and issue at par £850,000 3½ per cent. debenture stock redeemable at par December 1, 1935.

Republic of Finland 5½ per cent. External Loan.—The Republic of Finland will redeem on February 1, 1935, sinking fund gold bonds due February 1, 1935, outstanding at a redemption price equivalent to 100 per cent. of the principal amount.

Republic of Finland 7 per cent. External Loan.—The Republic of Finland will redeem on March 1, 1935, sinking fund gold bonds due March 1, 1935, then outstanding at a redemption price equivalent to 100 per cent. of the principal amount.

Vauxhall Motors.—As the directors of Vauxhall Motors have been unable to purchase sufficient 7 per cent. first mortgage debenture stock during the year to meet the redemption called for under the trust deed, they have made drawings as prescribed by the deed. Outstanding debenture stock totals £312,605.

Swedish 1887 Loan.—The Swedish National Debt Office announces that it will repay on June 30th next the 3.6 per cent. 1887-1909 loan, of which Kr. 83,689,360 is outstanding.

OFFERS ABROAD

Austrian Conversion Loan.—The list opened November 30th of the Sch. 93,400,000 loan, comprising the portion to be issued in Austria of the guarantee conversion loan designed to convert the outstanding bonds of the International Austrian Loan of 1923. The Austrian portion of the conversion loan carried 5 per cent. interest and is issued at 87. The bonds are in schillings, while the bonds of the Austrian portion of the International Loan of 1923 were in dollars. For every \$100 in face value of the old bonds Sch. 600 in face value of the conversion loan bonds is being given, with a cash bonus of Sch. 11.50.

Belgian Loan.—Part of the one-year credit of Fl. 100,000,000 (£8,300,000 at par) granted by a Dutch banking syndicate to Belgium will be placed in Switzerland. The rate of interest will be 4 per cent. The proceeds will be utilised to cover the needs of the Belgian Treasury, particularly those ensuing from the extra-ordinary Budget containing measures for alleviating unemployment. Of the total amount, Fl. 75,000,000 (£6,200,000) will be used to finance public works in Belgium and the remaining Fl. 25,000,000 (£2,100,000) for the Belgian Congo.

Swedish Treasury Bills.—The Swedish Treasury announces a second issue of three months' Treasury bills to an amount of Kr. 15 million.

Japan 4 per Cent. Bonds.—The Japanese Government has made a further issue of 300,000,000 yen (about £18,000,000 at current rates of exchange) of 4 per cent. bonds, all of which have been underwritten by the Bank of Japan. The new issue brings the total of bonds issued during the current fiscal year to 500,000,000 yen (£30,000,000) out of the 907,160,000 yen (£53,360,000) authorised by the last Diet for this period.

FORTHCOMING ISSUES

Rhokana Corporation.—An issue of £1,500,000 5½ per cent. redeemable preference shares £1 at 21s. will be made on December 12th.

Guildhall Property Company.—This company will shortly issue 90,000 6 per cent. preference shares at par.

Melbourne Electric Supply.—The Melbourne Electric Supply Company, Ltd., proposes to distribute before December 31st next £400,300 of undivided profits as bonus shares to holders of consolidated ordinary stock. Stockholders will receive one of such bonus shares of £1 each fully paid for every £2 of consolidated ordinary stock held. These bonus shares will be issued out of the present unissued shares, and no increase of the nominal capital will be necessary, but as some of the unissued shares were created as preference shares, it will be necessary first to convert such shares into ordinary shares. An extra-ordinary meeting for obtaining the sanction from shareholders will be held in Melbourne on December 28, 1934.

Great Work Tin Mines.—Underwriting is in progress for a company being formed to acquire from Wheal Reeth Tin the tin and certain other mineral rights over an area of approximately 272 acres.

The Luipaards Vlei Estate and Gold Mining Company.—The necessary funds for plant extension purposes are to be mainly provided through an issue of £275,000 5½ per cent. five-year notes. Noteholders will have the option of converting notes on the basis of 120 fully-paid shares for each £100 notes, which are redeemable at 105 on six months' notice. It is proposed to offer these notes to members at the close of books on December 12th. The issue has been guaranteed by H.E. Proprietary for a commission of 2½ per cent.

Alvis Car and Engineering Company, Ltd.—An extraordinary general meeting was held on December 4th, Sir A. Lowes Dickinson presiding. The resolution to increase the capital to £300,000 by the creation of 400,000 new ordinary shares of 5s. each was duly passed. The chairman stated that the board would only issue 280,000 ordinary shares, keeping 120,000 ordinary shares available for future requirements.

Union Cinema Company, Ltd.—An extraordinary general meeting will be held at 167, Wardour Street, W.1, on December 28, 1934, at 11 a.m., for considering the increase of the capital to £350,000 by creation of 50,000 new shares of £1. The capital to be then divided into 200,000 cumulative participating preference shares and 150,000 ordinary shares. In case of liquidation, the preference shares are to be repaid at their par value, and after the ordinary shares have received their par value, the preference shares are to receive 25 per cent. of the surplus available subject to a maximum payment of 28s. 6d. per share. The shares are to have no voting powers so long as the 7 per cent. cumulative preference dividend is paid.

Dundee Corporation.—Dundee Finance Committee has decided to recommend the issue of a new loan of at least £700,000. It is intended to repay at Whitsuntide, 1935,

approximately £700,000 of mortgage loans falling due then and carrying 4½ and 5 per cent. interest. That sum covers all loans from £3,000 upwards.

Atlantic Hotel (Liverpool).—Underwriting has been in progress for an issue at par of 120,000 6 per cent. cumulative participating preference £1 shares and 200,000 10s. ordinary shares in the Atlantic Hotel (Liverpool), Ltd.

S. G. B. (Dudley), Ltd.—The subscription list will open and close December 11, 1934, for an issue of 125,000 6 per cent. cumulative preference shares at 21s. per share and 500,000 ordinary shares at 5s. 6d. per share. The prospectus shows that the company acquires old-established business with net assets of £343,057, with continuity of management. Profits for year ended June 30, 1934, amounted to £31,814. Average profits over seven years, £25,524. Preference dividend covered over three times and balance, £22,814, represents 15.2 per cent. on ordinary shares. Preference shares and ordinary shares can be applied for separately. The company is a successor to the Stourbridge Glazed Brick and Fire Clay Company, Ltd.

Vactic, Ltd.—The subscription list will open on Tuesday next for an issue of 100,000 6 per cent. cumulative redeemable preference shares of £1 each at par, and 100,000 ordinary shares of 5s. at 12s. 6d. per share. Company will acquire the business of Vacuum Sweepers, Ltd., formed in 1924. Net profits for the year ended March 31st last exceeded £30,000 and for the subsequent six months only slightly less than for the whole of the previous year. The managing directors estimate that net profits for the current year should exceed £50,000. The issue is not being underwritten, but the managing directors have undertaken to subscribe in cash for any shares not allotted to the public or the vendor company.

RESULTS OF ISSUES

York Corporation 3 per Cent. Stock.—Cash lists in connection with the issue at par of £500,000 York Corporation 3 per cent. redeemable stock, 1955-65, were closed at 9.5 a.m. November 30th. It is estimated that these subscriptions totalled £22,000,000.

United States Treasury Notes.—The Treasury issue of \$450,000,000 1½ per cent. 18-month notes was heavily oversubscribed.

National Star Brick and Tile Holdings.—The subscription list for the issue at par of 100,000 6 per cent. cumulative preference shares of £1 and 200,000 ordinary shares of 5s. was closed at 10.45 a.m. December 4th.

Oxendale and Company (Proprietors) Ltd.—We are informed that the recent issue to shareholders of 50,000 £1 cumulative preference shares has been oversubscribed. Allotment letters were posted December 5, 1934.

Stockton-on-Tees 3 per Cent. Stock, 1960.—The lists for £600,000 3 per cent. stock issue at 100½ were closed at 9.10 a.m. December 5th owing to over-subscription.

CALLS DUE DECEMBER 10 TO DECEMBER 15, 1934

The grand total of calls falling due in December, 1934, is £7,934,567 which compares with £53,366,016 which fell due in November, 1933. The following calls fall due from December 10, 1934, to December 15, 1934, inclusive:—

* Free of Income Tax.

BANK OF NEW SOUTH WALES.—A final dividend has been declared for the quarter ended September 30th last, at the rate of 5s. per share, Australian currency, making 5 per cent. for the year. The dividend on shares on the London register will be payable on and after December 21st. A credit balance of £116,335 ls. 7d. has been carried forward.

THE COMPANIA HISPANO-AMERICANA DE ELECTRICIDAD (CHADE).—This company is to pay an interim dividend for the year 1934 at the rate of gold pesetas 16 for Series "A," "B" and "C" shares and gold pesetas 3.20 for Series "D" and "E" shares. The dividend will be payable on December 20th at the banks appointed for the purpose and at the Buenos Ayres offices of the company. Last year an interim dividend was paid of 20 Argentine paper pesos in respect of the Series "A," "B" and "C" shares and 4 Argentine paper pesos on the Series "D" and "E" shares. A final dividend of 20 gold pesetas on the "A," "B" and "C" shares was distributed and 4 gold pesetas on the "D" and "E" shares, free of Spanish taxes.

BRITISH GENERAL FIXED TRUST.—A first distribution, amounting to 1-6d. on each sub-unit of British General Fixed Trust Series "A," will be made by the Trustee, General Accident Fire and Life Assurance Corporation, Ltd., on January 15, 1935, an earned balance of 0-0285d. per sub-unit being carried forward to the next half-year.

ALLIANCE PROPERTY COMPANY, LTD.—The directors announce that payment of interest on 5 per cent. first mortgage debenture stock for half-year ending December 31, 1934, will be made on December 31, 1934, and have also declared a dividend at the rate of 7 per cent. per annum on the £1 7 per cent. cumulative preference shares for the half-year ending December 31, 1934, payable on January 1, 1935, both less tax at 4s. 6d. in the £.

HARRISON AND CROSFIELD.—A 6 per cent. per annum on 6 per cent. cumulative preference for three months to December 31, 1934, less tax at 4s. at 10 per cent. per annum on 10 per cent. preferred ordinary for six months to December 31, 1934, less tax at 4s. Warrants to be posted December 31st to holders, including approved transferees in respect of transfers lodged at the company's office not later than December 8th.

AUSTRALIAN ESTATES.—The directors of the Australian Estates and Mortgage Company have decided to postpone consideration of the payment of any dividend on the 8 1/2 per cent. cumulative preference shares until the accounts for the year to December 31st have been received.

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

IMPROVED OUTLOOK—STRONG LIQUID POSITION

SIR WILLIAM CURRIE'S REVIEW

Sir William Currie, the deputy chairman, presided at the ninety-fourth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company held, on the 5th instant, at the company's offices, 122 Leadenhall Street, London, E.C.3.

The report and accounts having been taken as read, Sir William said that it was with the greatest regret that the chairman, the Hon. Alexander Shaw, found himself unable to be present. Mr Shaw had been seriously ill, but was making good progress, and there was every hope of his early and complete restoration to health.

The fates had indeed been unkind to the company in the past year. On January 3rd the Rt. Hon. Viscount Churchill had died. He had been a member of the board for ten years and his advice and counsel were deeply missed.

On September 27th their deputy chairman, Sir Frederick Allen, passed away after a short illness. His loss to the company was a severe one. Many in addition to his friends and colleagues at 122 Leadenhall Street deeply mourned his passing.

With the greatest regret the board were again unable to recommend a dividend upon the deferred stock. The reasons which their chairman had detailed at last year's meeting were as cogent to-day as a year ago. World trade, on which shipping depended, was still beset with the difficulties of tariff walls, quotas and uncertain exchanges.

THE ACCOUNTS

The accounts showed a slight improvement in the revenue position as compared with last year. It had again been necessary to draw upon reserves to the extent of £550,000 to provide for depreciation of the fleet on the basis of 5 per cent. on the original cost.

In addition to the usual depreciation of 5 per cent. on prime cost, a further sum of £385,085 had been deducted from the value of the fleet, derived from the profit on the sale of the company's holding in Messrs Wm. Cory & Son, Limited, and it was partly due to this credit that the fleet stood at £575,362 below the 5 per cent. depreciation basis. Unless there was a marked revival in trade, it might be necessary in the near future for the company to dispose of one or two ships which would be surplus to requirements and which stood in the books at figures very considerably in excess of break-up values. When and if these surplus ships were sold, the fleet would stand in the books at some £190,000 less than on a value calculated on the 5 per cent. depreciation basis.

The company's 4 1/2 per cent. debenture stock outstanding had been reduced by £60,000 during the year under review. Under the terms of the debenture conversion issue of £6,000,000 made in May, 1933, the company undertook to redeem it at 1 per cent. per annum, plus interest on such redemptions. For this purpose the company had been fortunate enough to be able to purchase for redemption £60,000 of the stock at par, but, owing to the rise in the market value of this stock, it would appear that in the current financial year further purchases at par would not be possible, and it would therefore be necessary to resort to drawings at par in terms of the deed.

Shipbuilding bills had been reduced since last year by £410,000, and since the close of the accounts they had been further decreased by £170,000.

The balance sheet showed that the liquid position of the company was slightly over £1,000,000 better than a year ago.

to maintain a favourable balance of trade in merchandise, quite apart from heavy shipments of gold. Competition from various industrial countries remained very keen, making it difficult to maintain the British percentage share of India's import trade. With India now producing the bulk of her own iron, steel and cement, they must look to new industries to make up for that loss of sea-carriage.

Outward trade to Bombay was now dealt with almost exclusively by their through steamers to Australia and the Far East, enabling the vessels to be dispatched from London with less vacant cargo space than formerly.

Rates of freight from Calcutta continued on a fair level, and homeward trade from that port had been well maintained. To supplement their joint service with the British India Company they had, when necessary, berthed additional steamers homewards to satisfy the requirements of their supporters.

From Bombay, rates continued on an unremunerative level owing to the "open market" conditions which prevailed. Gold shipments, which for some time had been a useful source of additional revenue, had recently shown signs of falling off.

The "Strathmore," building at Vickers Armstrongs' yard, was designed to accommodate 445 first-class passengers and 663 tourist passengers. As she would be utilised in the Australian run as well as in the Bombay service, she would be fitted with insulated chambers for the carriage of chilled beef and other refrigerated cargoes.

It would be recalled that at last year's meeting the chairman reported his intention of proceeding to Australia and New Zealand. This visit Mr Shaw carried out. It was a most strenuous one, and had proved invaluable not only in the domestic sphere of the P. and O. Company and its allies, but also in the interests of the British shipping industry as a whole. Mr Shaw had enlisted the sympathy of the Australian and New Zealand Governments, and it was hoped that they would concert such measures as might be desirable to safeguard British and Empire shipping in the inter-Colonial trade.

TRAMP SHIPPING

Mr Shaw in his speech last year referred to the straits to which tramp shipping had been reduced. Since then the Government had decided that the tramp section of the British shipping industry should be protected against the uneconomic competition of foreign subsidised shipping. In fulfilment of that decision, Parliament were being asked to vote a sum of £2,000,000.

In these times of uncertainty it would be a matter of temerity to attempt any prophecy as to the future, but it might be said that while there was still an undoubted surplus of tonnage for the requirements of the diminished volume of international trade the limitation of shipbuilding, and the very considerable breaking-up of old tonnage were factors slowly tending to narrow the difference between supply and demand. But while for the shipping industry the clouds were not quite so black as they had been, there was as yet no sign of that permanent improvement which could inspire real confidence in the future.

Their organisation worked smoothly, and when the long-deferred improvement in world trade did come, the P. and O. Company and its allies would be ready to meet it.

The report and accounts were unanimously adopted, and a cordial vote of thanks to the Chairman, directors and staff terminated the proceedings.

PAHANG CONSOLIDATED COMPANY, LIMITED

INCREASED PROFIT—RESTRICTION SCHEME CRITICISED

The twenty-eighth ordinary general meeting of the Pahang Consolidated Company, Limited, was held, on the 4th instant, at Winchester House, E.C.

Mr H. Frisby, the chairman and managing director, in moving the adoption of the report and accounts, said that the output of tin oxide was 1,264 tons, as against 920 in the previous year. This was partly due to an increase in their quota and partly to their producing 110 tons for the "Buffer Pool." The mines' profit for the year amounted to £79,380, as compared with £20,372 last year. Adding to the mines' profit the amount brought forward, less London expenses and the extra remuneration for the directors and bonus to the staff, a sum remained of £113,754 4s. 8d. They had paid the six months' dividend on the preference shares, which came to £3,500, and 5 per cent. interim on the ordinary, which absorbed £18,750, leaving a balance of £91,504 4s. 8d.

They now proposed to write off the usual 10 per cent. depreciation on machinery, to transfer £10,000 to general reserve, and to allocate £500 of the stores profits for social welfare at the mines. This would leave £76,065, and they recommended the following dividends: 3½ per cent. on the preference, making 7 per cent. for the year; 10 per cent. on the ordinary, making 15 per cent. for the year; and an extra 5 per cent. on the preference, making 12 per cent. for the year, leaving £30,065 os. 1d. to be carried forward.

He thought they would regard the balance sheet as satisfactory and sound in every particular.

With regard to their developments, these had been confined to Willinks Mine, six of their mines having been shut down owing to restriction. In Willinks Mine they had been opening up the Utara lode, the richest lode they had ever had in the mine. The average value, so far as they had gone, was just under 5 per cent. tin oxide, which was a very high percentage. They were very anxious to find out if this rich ore went down to the 1,200 ft. level, and a shaft had been sunk there; after a certain amount of work had been done, including 50 ft. of driving on the lode, which was high grade, work there was stopped.

It seemed rather a strange thing, in the history of mining, that, when a rich ore body such as this had been found, they were compelled, from outside sources, not to develop it. There was no particular reason why they should spend money on developing ore which they could not use. Their present ore reserves were fifteen years ahead of the mill on the present output of 1,000 tons per annum. What they were doing, therefore, in the Willinks Mine was searching for new ore bodies, and two or three months ago they discovered a new one in the far eastern end of the mine. Where it was cut it gave a very high assay value, but not enough work had yet been done upon it for the board to give them a considered opinion as to its value. All they could say at that moment was that it was very promising.

A little later on they discovered another lode running parallel to the Utara lode. The same remark applied there—they had not been able to do enough work to tell them what it was worth; and that was the curse of the restriction scheme forced on a deep lode mine like Willinks, with its enormous overhead charges.

The International Tin output had recently been cut again by 10 per cent., although only a few months had elapsed since it was raised by 10 per cent. He considered that that was a confession by the Tin Restrictionists that their object had failed. The reason for this cut they could guess. It was because the Americans were not using the amount of tin it was expected they would use, despite their increased motor-car production and tinfoil production. There might be other reasons. It was the fashion with Tin Restrictionists to pooh-pooh the idea that the Americans could use substitutes. In an article which appeared in *British Malaya* last June, Messrs Strauss and Company, who were very important dealers, stressed the point that they were using substitutes, and went so far as to mention the most important of them as aluminium, which was £100 a ton cheaper than tin.

Were the Americans getting tin from other sources? It had been stated that China was now delivering to America and Europe 20 million dollars' worth of tin a year. The Belgian Congo was increasing its output very considerably, and also Burma. There was an old saying in London, and a very true one, that if you form a pool and corner the market at a certain price, "rats" always appear. He wondered whether there was a leakage among producers. It must be pretty galling to a consumer to have to pay £230 a ton for the white metal when he knew that it was being produced at from £50 to £60 a ton; £170 a ton was not a fair commercial profit; he called it commercial robbery.

The report and accounts were unanimously adopted.

NEW GOLDFIELDS OF VENEZUELA, LIMITED

SATISFACTORY PROGRESS AT THE MINES

ADVERSE EFFECT OF EXCHANGE

The seventh annual general meeting of the New Goldfields of Venezuela, Limited, was held, on the 5th instant, at River Plate House, Finsbury Circus, London, E.C.

Mr John A. Agnew (the Chairman), in the course of his speech, said: In reviewing the work carried out for the year to June 30th last there are two features that stand out above all others. The first of these is this: In all matters which may be said to have come within the control of the management of the mine or the board we have accomplished more than might reasonably have been expected. In development work in all the mines, whether from the point of view of the amount carried out or the results obtained from same, in the further reduction of costs of mining and treatment and in the work in the treatment plant, there have been shown improvements that are most gratifying and which reflect the greatest credit on the general manager, Mr A. J. Anderson. Now this would have provided grounds for intense satisfaction if it had not been for the second of the factors to which I have referred and which has operated to our very great disadvantage—I allude to the adverse exchange rate which has ruled against us since February and which has prevented us from reaping the reward that should have resulted from the year's work.

GOVERNMENT AND THE EXCHANGE SITUATION

Although the gold bullion produced is marketed in London, purchase of Bolívares to meet operating expenses in Venezuela have had to be made at unfavourable rates. This brings me to the steps taken by the Venezuelan Government to deal with the exchange situation. In August last the Venezuelan Government entered into an arrangement with the banks of that country and the oil companies, whereby, as we understand it, the oil companies for a period which apparently still continues, were to obtain the bulk of their requirements of Bolívares from the Government, but only at the gold import point, or roughly Bs. 15 = £1. The effect of this was to create a shortage on the exchange market of foreign currencies available against Bolívares, or, to put it more plainly, the demand to-day is for the foreign currencies available, more Bolívares having to be offered for the dollar or the pound to attract sellers. So far as we can ascertain, the desire of the Government in the first place is to establish a rate of Bs. 3.90, equal \$1, which is the equivalent, at \$5 equal £1, of Bs. 19.50, equal £1. This rate has not become fully effective, at least as far as dealing between London, New York and Caracas are concerned, although we understand that locally in Caracas it more or less rules. Our most recent transactions have been at Bs. 19.15, but the market still remains a very narrow and somewhat difficult one. I feel convinced that having gone so far the Venezuelan Government will not rest until it has placed the exchange situation on a thoroughly satisfactory basis.

Dealing now with the accounts for the year, there remains a credit balance of £41,872, which has been carried to the balance sheet, reducing the balance which stood at the debit of profit and loss account at £108,025 to £66,153. Costs, but for the incidence of exchange, have been reduced by a satisfactory amount over the year. This reflects improved operations and work on the part of the staff, which, unfortunately, is masked by the adverse effect of exchange.

DEVELOPMENT WORK

Referring now to the principal development work carried out and still in progress. In the "A" lode mine the most important work was the extension of the west drive on the third level from No. 36 shaft at the east end of the mine. In the Laguna mine development results have been of an excellent character. In the Chile section a total of 2,019 ft. of development was carried out, and of this 762 ft. showed an average over the width of the ore body exposed of 9.6 dwt. gold. In the Union, or Caratal, section 2,971 ft. of development work has been carried out, and of this 1,458 ft. were in payable ore assaying 9.9 dwts. per ton.

The position at the property in the main may be said to be very satisfactory. If it is possible here to express a definite personal opinion I would say that if a satisfactory conclusion could be arrived at regarding the maintenance of the exchange rate on a satisfactory basis the board would be well warranted in approaching shareholders with the object of placing the company at once on such a footing as would permit the milling equipment being increased to deal with not less than 1,000 tons of ore per day. All that has transpired in the course of the last year or two's work adds to the conviction that the mine could readily be put into a position to provide such an output.

The report was unanimously adopted.

BUSHTICK MINES (1934), LIMITED

EXCELLENT REPORT—STRONG FINANCIAL POSITION

The first general meeting of the Bushtick Mines (1934), Limited, was held in Bulawayo on Thursday, November 15th last.

The Hon. H. U. Moffat, C.M.G., the chairman, in moving the adoption of the directors' report, said:—The company was registered in Southern Rhodesia on June 15, 1934, its object being to acquire and work the Bushtick Mine. Cash on hand amounts to £151,958 19s. 1d., which amount, according to our consulting engineers' estimates, will enable the company to carry on development work and equip the mine for production at the rate of 10,000 to 12,000 tons per month. The programme laid down in the prospectus provided for milling at the rate of 8,000 tons only per month for the initial stages. The ore reserve position is considered sufficiently satisfactory to warrant this increase. Three main or hauling shafts have been sunk on the west, the Foundation shaft; 1,500 yards to the east, the Hollins shaft, and 900 yards further east the Warwick shaft on the eastern section of the ore body. We have proved at the Foundation section a shoot length of 120 feet on the second level averaging 8.0 dwts. over 111 inches. The persistence in depth of this shoot is indicated by a drive on the third level (282 feet from surface) where 58 feet averages 4.5 dwts. over 82 inches. Six hundred feet east of the Foundation shaft a cross-cut from the Sally shaft on the 70 foot level proves the extension of the reef along strike. The values here were 4 dwts. At the Hollins section the shaft has been completely dewatered and reconditioned to the fifth (530 foot level). The connecting drive on third level east to Warwick section made excellent progress, and a hitherto unknown shoot has been indicated. The last 64 feet driven gives an average value of 5 dwts. over 83 inches.

An interesting feature is the disclosure, by cross-cuts at intervals on this horizon, of a parallel reef over about 1,100 feet of strike from 200 feet east of the main Hollins shaft to 900 feet west. About 200 feet of driving accomplished indicates a 6-foot reef averaging 4 dwts.

In conclusion I would point out that the ore developed and the results obtained from the work done justify the confident hope that the Bushtick Mine will prove a sound and profit-making mine with possibilities of developing into a big proposition, producing on a very much larger scale than we are at present providing for.

The resolution was carried unanimously.

STRAND HOTEL, LIMITED

CONTINUED PROSPERITY

The twenty-seventh ordinary general meeting of the Strand Hotel, Limited, was held, on the 5th instant, at the Trocadero Restaurant, London. Major M. Gluckstein, the chairman, presiding.

Mr H. F. Joyner (director and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said that the turnover had been practically the same as in the previous year, and it was proposed to pay the same rate of dividends as for that period. The extension of the Regent Palace Hotel had enabled them to provide more than 100 additional bedrooms for visitors, and these rooms had been fully let since they were brought into capacity. The hotel now had 1,122 bedrooms, and could accommodate 1,648 guests. The company's hotels continued to adopt all that was best in modern development, and to this end their hotel bedrooms were being re-equipped on distinctive lines, and the style of the public rooms redesigned, to accord with prevailing tastes. The internal conditions of this country, upon which their business mainly depended, showed some improvement, but the number of visitors from abroad was still much below normal. In these circumstances, the volume of business they had realised was a sign of the undiminished popularity of their hotels. This had encouraged them to make such preparations as would, in the opinion of the directors, ensure to the company a favourable share in any increase in the country's prosperity.

Mr Maurice Salmon said that the success of the Maison Lyons Corner House and the Cumberland Hotel must have been apparent to shareholders who had visited the premises, and he was happy to confirm that this new venture, which was sponsored equally by J. Lyons and Company and this company, showed every promise of proving a sound investment, and being of potential value to the respective companies.

The report and accounts were unanimously adopted.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

SUCCESSFUL RESULTS—INCREASED PROFITS

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 4th instant, at River Plate House, Finsbury Circus, London, Mr John A. Agnew (the chairman of the company) presiding.

The Chairman, in the course of his speech, said: Taking first the profit and loss account of New Consolidated Gold Fields, Limited, the profit from sales, dividends, etc., was £1,388,060, compared with £933,841 last year—an increase of £454,219. It is gratifying to note that although part of this increase is due to the profit on sales during the year, the greater portion arises from increases in dividends, interest, and sundry revenue. Dividends on investments are nearly £100,000 greater than last year, due largely to the increased dividend on our Sub Nigel holding.

The balance carried down is £1,327,076, compared with £875,112. Adding the balance of £114,754 brought forward from last year, we have a total of £1,441,830 to deal with.

Against this have been charged the interim dividend of 1s. 3d. per share paid on June 14, 1934, which enabled the Consolidated Gold Fields of South Africa, Limited, to make a similar distribution, preference dividends, South African taxation, and a reserve for United Kingdom taxation, the last named amounting to £210,000.

SUBSTANTIAL RESERVE

Following my remarks at last year's meeting, we have charged £100,000 as a reserve for depreciation. The balance on this account, with any addition we may make to it in future years, will be available whenever it is necessary to write off depreciation on any of our assets, which at the date of making up our accounts may have a value less than the book figure. We have also transferred a sum of £300,000 to reserve, which now stands at £700,000, and there remains a balance of £517,894, out of which a dividend of 2s. 9d. per share, less tax, has been declared, leaving £162,970 to be carried forward to next year, against £114,754 brought forward.

Turning now to the balance sheet of the New Consolidated Gold Fields, Limited, the capital remains the same, and the reserve account, as I have already mentioned, now stands at £700,000. Sundry creditors on deposit show a decrease of £117,500, and on current account an increase of £171,000, the latter due mainly to the further reserve made for United Kingdom income-tax. Contingent liabilities at £720,873 show a decrease of £478,000.

GOVERNMENT SECURITIES

On the credit side of the balance sheet we have shown separately this year Government securities amounting to £652,825. You will see that this represents an increase of £504,000 over last year's figure.

It is perhaps a striking commentary on the position of industry at this time that we find ourselves unable to employ such considerable sums of money as the above in earning more than an extremely low rate of interest. We feel, however, that the temptation to endeavour to obtain a better return on a considerable portion of our funds by investing in securities of a character about which there is the least question should be resisted and that it is preferable to have a good deal of money lying practically idle than take any inordinate risk with it.

Shares in companies at or under cost show an increase of £866,000 over last year's figure, representing an increase of purchases over the cost of shares sold. Properties and ventures at £169,261 show a decrease of £303,829, due partly to the sale of certain properties which included our Sospiro Venture, and partly to amounts written off other properties.

The sale of our Sospiro interests was completed in January last, and we received a price which, in our opinion, was very satisfactory, being in fact very near to the figure at which this venture and the loan in respect thereof stood in our books. Loans at short call show an increase of £567,000, and we are receiving a satisfactory rate of interest on this amount. Sundry debtors call for no particular comment, but cash advances and mortgages show a reduction of £1,201,000 due to repayments during the year; the latter include the loan to the Sospiro company which formed part of the sale referred to above.

The remaining items in the balance sheet call for no particular comment, the liquid position, including the Government securities, approximating last year's figure, in spite of the large increase in share investments.

The final dividend of 2s. 9d. per share on the shares of New Consolidated Gold Fields, Limited, enables us to recommend the

payment of a dividend of a similar amount on the shares of the Consolidated Gold Fields of South Africa, Limited, which, with the interim dividend of 1s. 3d. per share, makes 4s. or 20 per cent. for the year to June 30th last.

The Chairman then dealt at some length with the company's interests in South Africa, with special reference to the most recent undertakings, West Witwatersrand Areas, Venterspost Gold Mining, Vogelstruisbult, Vlakkfontein and Spaarwater, all of which had made encouraging progress.

The Chairman then proceeded to give an exhaustive review of the company's outside interests, in the course of which he stated that in Australia the Wiluna Gold Corporation, Limited, had just had a most successful year, and dividends representing 2½ per cent. on the capital of the Corporation had been distributed. At Kalgoolie, the Lake View and Star property continued to show very fine profits, and had distributed dividends amounting to 57½ per cent. on its nominal capital. The Gold Fields Australian Development Company's activities during the year had been almost entirely devoted to the development of a group of leases adjacent to the Wiluna Gold Mines, Limited. Drilling and diamond drilling results had warranted the exercise of the option held by Gold Fields Australian Development Company, Limited.

The report and accounts were unanimously adopted.

BEKOH CONSOLIDATED RUBBER ESTATES, LIMITED

DIVIDEND RESUMED

The fourteenth ordinary general meeting of this company was held, on the 30th ultimo, at 2-4 Idol Lane, London, Mr R. W. Harrison, the chairman, presiding.

The Chairman said in the course of his address: As I anticipated when addressing you last year, a great improvement has taken place in the outlook for the rubber industry. Owing to the expectation of restriction, the price of rubber, which at the commencement of our last financial year was under 4d. per lb., steadily improved, and for June, the last month of our year, the average for the month was rather over 6½d.

Though only a very small proportion of our crop got the benefit of the 7d. price, the year's working resulted in a profit of £6,381—against a loss of £709 in the previous year. We bring forward £11,863, which, added to the profit, gives us £18,246 to deal with to-day. This, subject to your approval, we propose to allocate as follows: to transfer to income-tax reserve £300; to pay you a dividend at the rate of 2½ per cent. less tax; and to carry forward the balance of £12,145.

The year's crop amounted to 846,582 lbs. of rubber, against 960,565 lbs. in the previous year, a shortfall of 110,983 lbs.

The cost of production was again low, though slightly higher than in the previous year. The respective figures being an estate cost of approximately 2d. per lb., against 1½d., and all-in cost, which includes London expenditure and transit and selling charges, was 3½d., against 2½d. The price obtained for the crop was slightly over 5d. per lb., against 2 3/5d. in the previous year.

Our standard production under the restriction scheme has been fixed at 1,084,735 lbs., so during the first three months of 1935, for which period there is a cut of 25 per cent., we shall be able to export at the rate of about 68,000 lbs. per month.

As restriction becomes fully operative and world stocks show a steady reduction, it is to be hoped that the price will recover to one that will be remunerative to all connected with the industry.

The report and accounts were adopted.

STEAUA ROMANA (BRITISH), LIMITED

INCREASED TRADING PROFIT

The fourteenth annual general meeting of Steaua Romana (British), Limited, was held, on the 6th instant, at Winchester House, London, E.C.

Sir Albert G. Stern, K.B.E., C.M.G., who presided, after dealing with the difficulties of producers of oil in Roumania arising, among other things, from the situation in the United States, said that results shown by the Roumanian company during the period under review did not make a very satisfactory showing. Although it was found possible to repeat for 1933 the dividend of 5 per cent. paid for 1932, difficulties had been experienced on account of foreign exchange restrictions as regarded the payment of foreign shareholders. The same restrictions had made it impossible for the Roumanian company to make any further repayments of the temporary advances made by this company.

As to the internal affairs of the Steaua Romana, the external adverse circumstances had been partially countered by increased efficiency and by still further reductions in the cost of drilling, producing and refining. The economies under the first two of these headings had been assisted by the further rational development of the Aricesti field. Production in this field was maintained at approximately 750 tons daily, and could have been increased had it not been advantageous to continue to purchase certain quantities of crude oil on the open market to complete refinery requirements. This latter policy had the advantage of conserving the company's existing lands against a day when prices and profits might prove to be greater.

In June last tanker freights had increased by 21 per cent. compared with the corresponding period of 1933, and to-day's rates showed a further increase of 15 per cent. If to-day's rates could be maintained, profits from the Steaua Romana's fleet would make a satisfactory showing.

The trading profit showed an increase over last year, which, in view of all the difficulties existing, was a very satisfactory result. The directors recommended a final dividend on the ordinary shares at the rate of 2 per cent., less tax (making 4 per cent. for the year), placing £10,000 to a reserve for staff pensions, £15,000 to general reserve, and carrying forward £34,648.

The report was unanimously adopted.

TOWN INVESTMENTS, LIMITED

UNASSAILABLE FINANCIAL STRUCTURE

The twelfth ordinary general meeting of Town Investments, Limited, was held, on the 6th instant, at 47 Grosvenor Street, London, W.

Mr A. Maitland Kisch, F.S.I. (chairman and managing director) said that he was pleased to report continued prosperity. The net profit was £63,383, some £3,000 less than a year ago, but he anticipated that that result would be satisfactory when the shareholders appreciated the investment difficulties of the time. The net profit represented net earnings of slightly under 20 per cent. upon the ordinary capital. This rate of earnings was about equal to the average of the last three years. The addition of £10,000 from the year's profits, together with the transfer of £20,000 previously standing to the credit of dividend equalisation, had increased the general reserve to £250,000, a sum equal to the authorised and issued ordinary capital.

The balance sheet was an impressive one and revealed an unassailable financial structure. The position was liquid and offered great scope for expansion. It had been the directors' keen desire to build up on strong foundations, and in that they had succeeded. Up-to-the-hilt distributions could not enhance the real value of their enterprise.

The outstanding feature of the year had, however, been the rapid increase in flat construction within a mile or so of the West-end. The western trend of business continued, and it was significant that tenants generally were now more discriminating and exacting and demanded every up-to-date convenience which modern architecture could devise.

The company possessed a secure business, and enjoyed the advantage of a valuable goodwill. Their scope was limitless, and he believed in their ability to prosper. Continued trade improvement already facilitated the letting of vacant business properties and should tend to restore declining rental values. Given international and political stability, they appeared to be "set fair" for that continued steady prosperity which they would spare no effort to maintain.

The report and accounts were unanimously adopted.

TREPCA MINES, LIMITED

SATISFACTORY RESULTS—DIVIDEND 12 PER CENT.

The seventh annual general meeting of Trepcia Mines, Limited, was held, on the 5th instant, at the Institute of Chartered Accountants, Moorgate Place, London.

Mr A. Chester Beatty (the chairman), in the course of his speech, said:—The profit and loss account shows a profit, before providing for depreciation and taxation, of £224,073. After providing for these items, and bringing in the balance of £9,960 from the previous year, there is available on appropriation account a total of £170,511. Against this there has been charged £66,960 for the interim dividend of 6 per cent. paid in June last. We now recommend the payment of a final dividend of 6 per cent., making a total of 12 per cent. for the year. This final dividend will absorb a further £66,962, and will leave £36,589 to be carried forward. These figures have been obtained in face of adverse factors, and I think under the circumstances they may be considered not unsatisfactory.

Development during the year consisted mainly of the further opening up of the ore-body above the 610 metre or deep adit level. You will see from the report of the general manager that on the 670 metre level an important additional body of ore, detached from the main ore-body, has been discovered; recent development has proved its area to exceed 1,000 square metres, the limits not having yet been determined. With this addition, the area of ore opened up on this level is larger than on any other so far developed, and to date amounts to 7,742 square metres. This discovery indicates that considerable tonnages of ore may be found outside the main ore-body.

The ore reserves, as calculated at September 30th last, amounted to 2,500,000 tons of an average value of 8.7 per cent. lead and 8.5 per cent. zinc. In making this calculation, no tonnage below the 610 metre level has been included. The diamond drilling carried on during the year below this level, however, has yielded very satisfactory results, the ore-body having been proved to continue down for at least another 300 metres.

I think we have every reason to be satisfied with our property and its prospects. The mine is in excellent shape, with ample ore reserves, and the treatment plant has proved its capacity to handle a tonnage largely in excess of what was originally anticipated.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 1, 1934, amounted to £7,613,000 against ordinary expenditure of £31,971,000. After allowing for a decrease in Exchequer Balances of £212,426, the operations for the week, as shown below, increased the National Debt by £24,396,000 to approximately £8,131 millions.*

GOLD MARKET

Messrs. Samuel Montague and Co., writes on December 5, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £192,113,083 on the 28th ultimo, showing no change as compared with the previous Wednesday. During the week the Bank of England reported purchases of bar gold to the total of £69,722.

Business in the open market has been on a smaller scale, the amount offered during the week being approximately £800,000. The weaker tendency of sterling in terms of the dollar has been reflected in the higher prices, and about £1,000,000 of gold has been shipped to New York.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
November 29	139s. 6d.	12s. 2-16d.
" 30	139s. 8 1/2d.	12s. 1-94d.
December 1	139s. 9 1/2d.	12s. 1-85d.
" 2	140s. 2d.	12s. 1-46d.

" 4	140s. 11d.	12s. 0-69d.
" 5	140s. 1-25d.	12s. 1-53d.
Average		

Gold shipments from Bombay last week amounted to about £1,146,000. The s.s. "Kaisar-i-Hind" carries £1,040,000 consigned to London and the s.s. "President Van Buren" £106,000, consigned to New York. The Southern Rhodesian gold output for October, 1934, was 58,626 fine ounces, as compared with 58,850 fine ounces for September, 1934, and 55,196 fine ounces for October, 1933.

SILVER MARKET

The market has remained very steady and during the past week prices showed a variation of only 1/4d.

The Indian Bazaars and speculators continued to give support and buying for America followed the weaker tendency of sterling. China sales were again in evidence and with a few speculative re-sales, offerings were sufficient to cope with the moderate demand. Although at the moment buying is not being pressed, there are yet indications of a firm undertone.

Quotations during the week:—

IN LONDON		IN NEW YORK

COMPANY NEWS

REPORTS AND NOTICES

Messrs Thomas Skinner and Company announce that "The Bankers' Almanac and Year Book," 1934-35, will be published on December 11th.

The directors announce that Mr John Ivan Spens, of Messrs Brown, Fleming and Murray, 4 Frederick's Place, Old Jewry, E.C., has been elected to a seat on the board of the Union Discount Company of London, Ltd.

The Right Hon. Lord Aberconway, C.B.E., has been elected a member of the court of directors of the London Assurance.

Mr Edwin Fisher, deputy chairman of Barclays Bank, Ltd., has been appointed a director of the Alliance Assurance Company.

We understand that Mr J. T. H. Legge has resigned from the position of managing director of Edmundsons Electricity Corporation, Ltd., and his directorships on the associated companies.

It is announced that, in consequence of his appointment as Prime Minister of Belgium, Monsieur Georges Theunis, G.C.M.G., has resigned his seat on the board of the Imperial Continental Gas Association.

The Union Assurance Society, Ltd., announce that the Rt. Hon. Lord Stanmore, P.C., K.C.V.O., has been elected as chairman of the board in succession to the late Mr Fredk. Single.

BANKS

MIDLAND BANK EXECUTOR AND TRUSTEE COMPANY, LTD.—

The Midland Bank Executor and Trustee Company, Ltd., has just completed the first quarter of a century of its existence, a period during which it has steadily enlarged the scope of its business. It was incorporated on December 7, 1909, as an affiliation of the Midland Bank, Ltd., which holds the whole of its shares. The authorised and subscribed capital of the company is £1,000,000, consisting of 200,000 shares of £5, of which £200,000, or £1 per share, is paid up. The reserve fund stands at £100,000 and, according to the last balance sheet, there is an undivided balance of £101,000 on profit and loss account. The directorate is identical with that of the bank, but the company has its own separate management and staff. The principal office of the company is situated in the head office building of the Midland Bank in Poultry, London, E.C.2. The manager of each of the 2,120 branches of the bank acts as an agent of the Executor and Trustee Company. In addition the company has direct offices of its own in Bangor, Birmingham, Bournemouth, Bristol, Leeds, Leicester, Liverpool, Manchester and Newcastle. The balance sheet of the Executor and Trustee Company is printed with the annual report of the Midland Bank.

INSURANCE

SUN LIFE ASSURANCE COMPANY OF CANADA.—In the United Kingdom the company's year ended on November 15, 1934, and the total new business, exclusive of a large volume transacted in other parts of the world, amounted to more than £7,000,000. This is an increase of £1,225,000 over last year's results. Advances were recorded in all branches of the company's activities. Included in the total new business figure is the sum of £1,306,827, representing purchase money for annuities taken with the Sun Life Assurance Company of Canada during 1934. The total assurances in force in the United Kingdom now exceed £67,000,000.

THE STANDARD LIFE ASSURANCE COMPANY.—This company announces the maintenance of its annual compound bonus of 42s. per cent. for the year ended November 15, 1934, the rate which has been paid for several years past.

OIL OUTPUTS

ATTOCK OIL COMPANY, LTD.—Production for November, 6,721 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended November 17th: Venezuela, 17,489 barrels; Trinidad, 31,753 barrels; total, 49,242 barrels. Production for the week ended November 24th: Venezuela, 16,471 barrels; Trinidad, 31,326 barrels; total, 47,797 barrels.

MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended November 17, 1934, was 383,000 barrels.

PHOENIX OIL AND TRANSPORT.—The gross production of crude oil of the Phoenix group of companies for November was 78,594 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during November, 31,499 tons; oil purchased during November from other companies, 57,055 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended November 24, 1934, was: Bolivar district, 652,061 barrels; Maracaibo district, 34,338 barrels; total, 686,399 barrels. Production for the week ended December 1st, 1934, was: Bolivar district, 642,734 barrels; Maracaibo district, 34,599 barrels; total, 677,333 barrels.

§ 8 days.

COAL

SHEFFIELD.—Following an increase this week of the output quota for South Yorkshire from 60 per cent. to 65 per cent. larger supplies of steam coals are available for export. The recent scarcity is now ended. Most of the business passing is on prompt account. Forward export business is quiet. The home market continues active for all classes of fuel, although demand for house coal continues below normal and super qualities are neglected. Best steams fetch up to 17s. 6d. f.o.b., best house 21s. to 23s. at pits, and blast furnace coke 14s. 6d. at ovens.

NEWCASTLE-ON-TYNE.—Despite mild weather, which has lessened the domestic demand from the English coast, Northumberland steam collieries continue to work regularly, and the position is firm for several weeks ahead. The Swedish State Railways have negotiated for the supply of 11,000 tons of Tyne Prime screened steam coals and 8,000 tons of Durham screened steam coals, the prices being based upon current quotations. Active conditions continue in the Durham coking and gas coals, and there is a steady trade in the bunker section. Every class of coke has a good sale under a steady inland and foreign demand.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 14s. 9d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—The market on the whole maintains a steady tone, with export prices tending upward. The latter trend is not so much due to an increase in new business with foreign buyers, which is still relatively quiet, as to a good home demand which reduces supplies available for shipment. The collieries are, however, fairly well booked, and the prompt position has also been helped by the better arrival of tonnage after recent delays. This was reflected in a 50,000 ton jump in shipments last week to 283,000 tons.

Shipment prices f.o.b. district ports: **LANARKSHIRE.**—Ell best, 15s.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 13s.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 12s. 3d.—12s. 6d.; pearls, 12s.; dross, 10s. **FIFE.**—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 9d.—14s.; third-class steam, 12s. 9d.—13s.; trebles, 13s. 6d.—16s. 6d.; doubles, 14s.; singles, 12s. 3d.—12s. 6d.; pearls, 11s. 9d.—12s. **LOTHIANS.**—Prime steam, 13s. 6d.; secondary steam, 13s.; unscreened navigation, 12s. 6d.; trebles, 14s.—14s. 6d.; doubles, 13s. 6d.—13s. 9d.; singles, 12s.—12s. 3d.; pearls, 11s. 9d.—12s. **AYRSHIRE.**—Best unscreened navigation, 14s. 3d.; jewel, 15s.; steam, 14s.; trebles, 15s. 6d.—15s. 9d.; doubles, 14s.; singles, 13s. 6d.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—The Egyptian State Railways have accepted a South Wales tender for the bulk of their coal contract for the first three months of next year, and have placed another order for 121,000 tons at 23s. 11d. c.i.f. It is also understood that the French State Railways have bought 270,000 tons for next year, and that freight contracts, on the basis of 6s. 3d. to 6s. 9d. to Montreal-Quebec, have been concluded for next season's Canadian trade. New contract inquiries on the market include between 30,000 and 40,000 tons of double screened large coals for the Norwegian State Railways, 55,000 tons of locomotive coals for the Spanish M.Z.A. Railways, and 30,000 for the Andalusian Railways.

The current volume of business is not expanding and large coals continue in excessive supply. Sized classes, however, are scarce, and are commanding prices above the minimum scheduled figures. The audit of the South Wales coalfield for the three months ended October certifies a debit balance of £46,461, compared with a debit balance of £31,609 in the previous quarter, and £72,375 in the corresponding period last year. The increase in the wages under the recent arbitration award is estimated at about 3½d. per ton, equal to £500,000 per annum. The industry is faced with a further increase of £132,000 per annum, or 1½d. per ton, as the result of the reduction of the rebate from the Railway Rates Fund under the 1929 Local Government Act, and of £43,000 owing to an increase as from March next of ½d. per ton in the tipping and weighing charge on export coal.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, French, 24s. 6d.; Portuguese, 20s. 9d. to 21s.

IRON AND STEEL

MIDDLESBROUGH.—The pig iron market continues firm. Daily transactions in both foundry and hematite pig iron are numerous, and makers have contracts on their books which will ensure steady deliveries over the first few months of next year. Hematite iron

has been in rather better demand, and it is understood that contracts with Midland makers have been renewed in some cases for delivery as far ahead as the end of June, 1935. The demand from home consumers of pig iron generally is good, whilst odd parcels continue to be arranged for shipment to overseas destinations, but the difficulties are still great. Prices of No. 3 Cleveland foundry pig iron remain based on minimum 67s. 6d. per ton for delivery locally, and for East Coast hematite the minimum for No. 1 quality is 69s. per ton delivered Middlesbrough. For export, makers are free to shade these figures. Shipments of all classes of pig iron from the Tees during the month of November amounted to 14,754 tons, against 16,081 tons during October.

The steel departments continue busy. Semi-manufactured steel is in better request, whilst there is a good demand for constructional steel. Rail departments are not so busy as the home railways are not placing delivery orders, and it is not expected they will do so until early in the New Year. Shipbuilding requirements are improving, and the demand for sheets is slightly better. Heavy steel melting scrap continues active, and about 51s. per ton delivered at the works is a fair indication of price.

Blast furnace coke is in good supply, but owing to the change in the derating allowances on the carriage, the price is maintained at 20s. per ton delivered furnaces here. Foreign ore continues to be based on Best Bilbao Rubio at 17s. per ton c.i.f. Middlesbrough.

SHEFFIELD.—Whilst buying and selling of steel materials continues to shrink, the position at the works is rather more active than before and there are numerous orders on hand for delivery in the New Year. The situation shows no symptom of weakness and there is considerable work in sight for the home market. Some people are discussing the probability of lower prices resulting from the usual revision at the end of the year. The market for ferro-alloys has been quiet over a lengthy period. The price of ferro-molybdenum has been reduced from 5s. 6d. to 5s. 3d. per lb.

Export trade is only moderately good, business with a number of foreign markets being poor. All plants producing partly manufactured steel are running full time and do not complain of a lack of new booking. Prospects of this section next year are bright and there is plenty of confidence in steel circles. All kinds of tools are in brisk demand, alike for home and export. The cutlery and plate trades are quietening and contain a number of unsatisfactory patches.

GLASGOW.—The position is practically unchanged. Steelmakers are fully employed, and new specifications are coming in freely. Tonnage booked for semis is also fairly satisfactory, but buyers seem to be confining their purchases to immediate requirements, and there is no forward buying. While tube makers are still busy, the amount of new work placed is somewhat disappointing. At the sheet mills conditions are unaltered, home business being very good, but the export trade, while slightly better, remains on a small scale. In the wrought iron and steel bar re-rolling branches things are still quiet, and works only partially employed. At the manufacturing and engineering works in and around Glasgow a steady output is being maintained, and the volume of new business placed just recently points to a continuance of regular employment at many establishments.

CARDIFF.—The position in the South Wales iron and steel trade is practically unchanged. In the tinplate industry works are being well employed up to their quota limits, and there has been a slight improvement in the volume of exports. Prices are ruling at the international agreement scheduled figures, and steel bars and galvanised sheets are unchanged. Imports of foreign semi-finished steel have increased, particularly from Belgium. Shipments of tinplates at Swansea last week totalled 85,964 boxes and stockat warehouse totalled 122,294 boxes compared with 142,330 boxes at the corresponding period last year.

OTHER METALS

The hope of a new restriction scheme has again influenced the copper market during the past week, but little progress has yet been made. Uncertainties regarding the future are exerting an adverse influence on demand just when the market is in need of confidence. Protracted negotiations for restriction tend to weaken confidence still further, and it would not be surprising if the anticipated improvement in prices failed to materialise for this reason.

Sentiment in the tin market has improved a little. According to A. Strauss and Company, November witnessed a considerable decline in stocks, which were reduced by 1,518 tons to 17,113 tons, while deliveries increased by 2,596 tons to 8,364 tons. Although not unexpected, these developments have stimulated purchases a little. Since stocks of consumers are at present small, while a seasonal expansion is to be expected in the motor car and tinplate industries, it seems probable that purchases will show an increase in due course.

The markets in lead and spelter continue dull and the future of the zinc cartel remains uncertain. The output of spelter in Germany increased during October by 1,364 metric tons to 7,184 metric tons—a development which is doubtless due to the opening of the Giesche works. It is interesting, however, to note that the output of zinc in Poland increased by 223 metric tons to 7,793 metric tons during October, although German ores were no longer smelted in Poland. It would appear, therefore, that the erection of the Giesche smelter at Magdeburg will stimulate Polish mines to expand their output to replace the lost German contracts, thus increasing the total European output of the metal.

TIN.—Sales of tin on the London Metal Exchange: 200 tons on Monday, against 385 tons last week; 350 tons on Tuesday, against

350 last week; 475 tons on Wednesday, against 575 tons last week. The New York quotation on Wednesday was 50.90 cents per lb., against 51.37½ cents a week ago and 51.25 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 7s. 6d. to £228 10s., compared with £229 15s. to £229 17s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,982 tons, an increase of 185 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,300 tons on Monday, against 1,900 tons last week; 1,500 tons on Tuesday, against 1,151 tons last week; 850 tons on Wednesday, against 1,750 tons last week. Domestic spot was quoted at 6.52½ cents per lb. in New York on Wednesday, against 6.62½ cents a week ago and 6.52½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 3s. 9d. to £27 5s., compared with £27 10s. to £27 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 40,148 tons, show an increase of 1,221 tons, and stocks of rough copper, at 10,615 tons, a decrease of 352 tons.

LEAD.—Sales on the London Metal Exchange: 500 tons on Monday, against 250 tons last week; 1,000 tons on Tuesday, against 400 tons last week; 750 tons on Wednesday, against 950 tons last week. The New York quotation on Wednesday was 3.50 cents per lb., against 3.50 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 6s. 3d. for shipment during the current month, compared with £10 15s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 400 tons on Monday, against 175 tons last week; 975 tons on Tuesday, against 400 last week; 600 tons on Wednesday, against 550 tons last week. Wednesday's quotation in East St. Louis was 3.70 cents per lb., against 3.70 cents the week before, and 3.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 16s. 3d. for shipment during the current month, against £11 18s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs. Foreign antimony was again quoted at £60 per ton. Chinese wolfram was again quoted at 39s. to 41s. per unit c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—**Manchester.**—Since a week ago the market has become rather quieter than recently. Rather more uncertainty has prevailed with regard to the future level of raw cotton prices. Details of the production programme in the United States for next season are given below. It is being urged by the officials at Washington that the Bankhead Act should be continued, and a ballot of farmers is now being taken. In many quarters the opinion is held that it will not be an easy matter to drive prices on to a higher level in view of the certainty of a larger supply of cotton next season. The latest estimate of the Egyptian crop is considered rather bullish. Prices for all cottons, however, during the week have shown very little change.

Sales of cloth have tended to fall off. Most manufacturers have met with plenty of inquiry, but less progress has been made in securing orders. Miscellaneous transactions have occurred in light whites and fancies for India, but the response to prices wired to the other side remains poor. Further encouraging contracts have been arranged for South America (chiefly Argentina) in printed and dyed goods, but only a quiet demand has been experienced for the Dominions and the home trade. Order lists of manufacturers continue very irregular. In the yarn market a feature of interest has been the decision by Royton spinners to reduce the basic price under the legal agreement from 2½d. to 2¼d. per lb. This action has been taken owing to under-selling by spinners outside the agreement. Competition, however, is being met with from yarns spun from Indian cotton. A restricted turnover has taken place in the yarn market as a whole, and quotations generally tend to become more irregular.

UNITED STATES COTTON PLAN.—The Secretary of Agriculture of the United States Government has published the programme for cotton production next season. It has been decided to call on growers to limit their 1935 acreage to 75 per cent. of the 1928-32 average, which was 41,400,000 acres for farmers who signed the

Government contract. The acreage will therefore be about 31,000,000, but it is necessary to add the area planted by those outside the agreement. It is believed in trade circles that the area will be over 33,000,000 acres. According to the Government officials, the next year's crop will be slightly above 12,000,000 bales, against 9,750,000 bales for this season.

These particulars have had very little effect upon prices, as the details have been about equal to expectations. A good deal of interest, however, has been taken in the statement of President Roosevelt, that he hoped that within three years surplus supplies would be reduced to 4,000,000 bales, and the price increased to above 15 cents a lb. Users of American cotton are considerably harassed by this Government interference, and the uncertainty of the outlook results in buyers being cautious. It is believed that if further efforts are made by the Washington Government to push up the price of American cotton, there will be still further extensions of cotton growing in other countries, and especially in South America.

WOOL.—**Bradford.**—During the past fortnight trading has been active on the Coleman Street Wool Exchange, and the sales are drawing to a close with more strength than at the opening. Although Germany has not been as active as could have been desired, it is known that some operations have been conducted on her account. One encouraging feature has been the activity displayed by France, the excellent selection of merinos having doubtless been the prime factor in inducing operations; the activity of other Continental countries also has been satisfactory. There has been active buying of both merinos and crossbreds by the home trade, and it would not be surprising if the takings of this section are the heaviest of any this year—a proof that trade in consuming centres is good and consumption large. No doubt stocks among topmakers, spinners and manufacturers are light for the time of year, and the activity of machinery has compelled topmakers in particular to be large buyers of wool.

The course of prices has also been encouraging. Merinos have moved well at the best point of the series, and there has been no weakening whatever, quotations rather tending in favour of sellers. These observations apply both to merinos and crossbreds, the latter selling remarkably well considering the big weight available. All things considered, the carry-over will not be unduly large. Owners of old New Zealand crossbreds have wisely met the market, and the sooner every bale of old wool is got rid of the better. The small selection of "Capes" last Tuesday also sold at full market prices.

There is no important change in consuming centres, and while markets are far from active, consumption is well maintained. Prices for tops remain steady, but there is not much "lift" in the market. The reported agreement between the South African Government and the German wool trade for the latter to take a considerable weight of raw material is an item of considerable interest.

GRAIN MARKETS

WHEAT.—The past week witnessed a slight improvement in the international wheat situation and prices showed a firmer tendency. There has been some deterioration in the crop of Argentina, and, according to the *Corn Trade News*, the yield is expected to be some 5,000,000–6,000,000 quarters below last year's harvest of 35,800,000 quarters. Moreover, the market has also been influenced by sales of Canadian wheat to the United States.

According to Mr G. Broomhall, total shipments during the past week were 1,278,000 quarters, against 1,289,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 102½ cents per bushel, against 98½ cents the week before and 100½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 9d. per 496 lbs., against 32s. 3d. to 32s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 31s. 3d., against 28s. 9d. to 29s. 6d. Australian, ex ship, 25s. 3d. to 25s. 9d., against 25s. 6d. a week ago.

FLOUR.—There has been a slight improvement in the demand for home-milled flour in this country, but trade in imported grades was dull. North American shipments were 128,000 sacks in the past week, as compared with 72,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 23s. 6d. last week; delivered London, 23s. 6d., as compared with 22s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 24s. 6d. to 26s. 6d.; Australian, ex store, 19s. to 20s., against 19s. to 20s.

BARLEY.—Last week's improvement in the market for feeding barley has been maintained, partly owing to the scarcity of supplies from abroad. "December" futures were quoted at 56½ cents per bushel in Winnipeg on Wednesday, against 54 cents last week and 52½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 50s., against 31s. to 50s. a week before.

OATS.—The market in oats has again been firm, partly owing to the emergency of the United States as an importer. On Wednesday, "December" futures were quoted at 57½ cents per bushel in Chicago, against 53½ cents a week ago and 52 cents last month. Quotations in London, Wednesday: "River Plate," landed, not quoted; "Chilean White," landed, 24s. to 24s. 6d., against 23s. 9d. a week earlier.

MAIZE.—A good European demand, coupled with the shortage of feeding stuffs in the United States, was responsible for a further rise in prices in the past week. "December" futures were quoted on Wednesday at 94½ cents per bushel in Chicago, against

90 cents a week ago and 78½ cents last month. Quotations in London, Wednesday: "Plate," landed, 23s. 6d. per 480 lbs., as compared with 22s. 3d. last week; "Plate," ex ship, 22s. 9d., as against 21s. 3d.; "Plate," "December," 23s. 3d., as against 22s. 3d. Yellow maize meal, ex wharf, was quoted 7s. 5s. to 7s. 6d. per ton, against 7s. 6d. to 7s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat	Cwts. 61,685	Cwts. 316,455	Cwts. 267,045	Cwts. 331,556
1 week to December 1	1,037,057	3,779,807	4,633,891	6,096,656
Average price of English wheat per cwt.	s. d. 6 7	s. d. 5 5	s. d. 4 7	s. d. 4 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 29, 1930	Cwts. 119,674	Cwts. 427,366	Cwts. 47,544	s. d. 6 5	s. d. 8 8	s. d. 5 8
Nov. 28, 1931	77,941	431,379	60,861	6 9	8 10	7 0
Dec. 3, 1932	316,455	395,707	50,559	5 5	6 11	5 9
Dec. 2, 1933	267,045	420,569	43,502	4 7	9 1	5 4
Nov. 24, 1934	307,579	367,641	49,953	4 11	8 8	6 8
Dec. 1, 1934	331,556	363,718	54,291	4 11	8 10	6 9

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Dec. 6, 1933	Jan. 3, 1934	Nov. 28, 1934	Dec. 5, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	60½	65½	78½	80½
Chicago (No. 2 Winter)	55½	48½	84½	84½	99½	102½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 123,813,000 bushels shows a decrease of 1,324,000 bushels on the week. Supplies a year ago amounted to 114,198,000 bushels.

OTHER FOODS

SUGAR.—The New York spot market has been steady on most days and quotations are unchanged on the week; futures have been firm. The London futures market has been slightly easier and business rather restricted. The spot price in New York on Wednesday was 3.085 cents per lb., as compared with 3.085 cents per lb. last week and 2.82 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March delivery" at 4s. 5½d., against 4s. 5½d. to 4s. 5½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons						
London	918	74	1,514	515	17,009	17,058
Liverpool ...	32,441	11,577	13,880	13,320	145,678	106,658
Total tons....	33,359	11,651	15,394	13,835	162,687	123,716
Last week ...	15,796	33,815	15,966	14,687	144,732	125,900

COFFEE.—Quiet conditions have again prevailed on the New York market and quotations are unchanged on the week. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London spot market has ruled quietly steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 73 bags; delivered, for home consumption, 359 bags; exported, 94 bags; stocks, 28,079 bags, against 24,724 bags a year ago. Central American, landed, 1,810 packages; delivered, for home consumption, 1,386 packages; exported, 598 packages; stocks, 76,349 packages, against 63,133 packages last year. Other kinds: Landed, 1,471 packages; delivered, for home consumption, 1,826 packages; exported, 342 packages; stocks, 70,635 packages, against 99,737 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "December-January," was 20s. 6d. per 50 kilos, c.i.f. Continent, as against 20s. 3d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 4,337 bags; delivered, for home consumption, 9,639 bags; exported, 186 bags; stocks, 135,909 bags, against 105,174 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,642 packages of Indian and 18,192 packages of Ceylon tea. Prices for the Indian grades tended to a higher level on Monday, but irregularity set in on Wednesday. All grades of Ceylon were in active request and quotations were occasionally advanced. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	Northern India		Southern India		Ceylon		Java		Sumatra		Nyasaland		Total
	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	d.	
Nov. 30, 1933	12-61	12-93	14-80	11-23	10-41	10-67	12-58	12-58	12-58	12-58	12-58	12-58	
Nov. 1, 1934	12-33	11-44	14-27	10-69	9-23	10-75	12-51	12-51	12-51	12-51	12-51	12-51	
Nov. 8	13-21	11-62	14-39	10-23	9-23	10-75	12-51	12-51	12-51	12-51	12-51	12-51	
Nov. 15	13-10	11-51	14-15	10-29	9-57	10-69	12-39	12-39	12-39	12-39	12-39	12-39	
Nov. 22	11-96	11-45	13-73	10-30	9-21	10-83	12-09	12-09	12-09	12-09	12-09	12-09	
Nov. 29	11-66	11-50	13-39	10-69	9-31	10-85	11-90	11-90	11-90	11-90	11-90	11-90	

RICE.—The "spot" price was 8s. 3d. per cwt. on Wednesday, as compared with 8s. 3d. per cwt. a week ago, while the forward quotation, at 6s. 10½d. per cwt. (new crop) also remains unchanged. Movements in London during the past week were as follows: Landed, 137 tons; delivered, 295 tons; stocks, 2,604 tons, against 2,320 tons a year ago.

POTATOES.—Supplies on offer this week have again been ample for the current level of demand and quotations have generally shown a slightly easier tendency. At the London Borough Market on Tuesday, light soil "King Edward" sold at 5s. 9d. to 6s. 3d. per cwt., ex market, the same as last week.

SPICES.—"Lampung" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 60 tons; delivered, 48 tons; stocks, 637 tons, against 640 tons a year ago. White, landed, 1,453 tons; delivered, 31 tons; stocks, 11,410 tons, against 2,038 tons a year ago.

MEAT.—On the whole, demand has been slow this week, with the majority of quotations showing little change compared with those ruling a week ago. At Smithfield on Wednesday, Argentine beef, chilled hindquarters, was quoted at 3s. 4d. to 3s. 8d. per 8 lbs., as compared with 2s. 8d. to 3s. 2d. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 6d. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,336 tons, against 9,272 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84 per cent. of the beef supplies, against 82.8 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 69.2 per cent. of the total supply of mutton and lamb, against 66.8 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OIL AND OILSEEDS.—Generally there is a firm tone, but business is checked by the advance in prices. Reports of cold weather succeeding heavy rains in Argentina have caused linseed prices to harden again, but with crushers' immediate wants well supplied, demand is only moderate. Plate for January-February shipment to Hull has been sold up to 9s. 12s. 6d. and rather more is now quoted. Indian linseed is more or less neglected, Calcutta being held for 11s. 12s. 6d. and Bombay 12s. 6d. The quantity of linseed afloat for Europe has dropped to 96,900 tons (or 24,300 tons less than last week), and that afloat for the United States and Canada is now 40,600 tons, against 20,200 tons a year ago. The latest unofficial estimate of the Argentine yield is around 1,800,000 tons. Cottonseed is irregular and in less demand, the current price of black Egyptian for early shipment being 7s. 5s. per ton delivered.

Linseed oil is firmer and dearer, mainly in sympathy with seed, but trade is slow. Raw oil for December delivery ex Hull mill is quoted 19s. 10s. and January-April 19s. 15s. per ton (naked) and closes firm. Cotton oil continues firm on a good export demand. Egyptian crude ex Hull is held for 19s. and refined for 20s. 10s. per ton prompt. Groundnut, palm kernel and soya oils are also firmer and dearer. The demand for oilcakes continues to improve and prices are steady.

RUBBER.—The past week has not been marked by any very special feature or development. Prices for all positions are practically unchanged, after daily fluctuations of ½d. to ¼d. per lb. The market on the whole may be described as having been a dull one, with a fairly steady demand from the trade each morning. As soon as hand-to-mouth requirements had been satisfied, a few outside sellers were daily in evidence and prices usually eased ½d. in later trading. America and the Continent have not afforded much support and speculators and market operators have not yet regained sufficient confidence in the working of the International Regulation Scheme to enter into any material commitments on the "bull" side. On the other hand, there has been no sign of any development to encourage operators to take any liberties in the opposite position, and we shall probably have a quiet market until Christmas, unless some fresh and unexpected feature of importance should develop meantime. The Government of the Dutch East Indies has given further evidence of its determination to implement its agreement and keep within its quota by tightening the control of native shipments and insisting on dealers reducing their stocks by limiting their purchases. This has resulted in strengthening the Amsterdam market appreciably. The October shipments from the Dutch East Indies have been announced as 18,461 tons, which compares with 31,648 for September and 30,666 tons in October, 1933. Consumption in America in November and December is expected to be about 64,000 tons, which would

compare with 58,249 tons for the corresponding months of last year.

The task of fixing assessments for individual plantations under the control scheme continues to go forward and many additional estates have announced their figures during the past week.

The gross shipments from Malaya for November were 51,140 tons, against 47,045 for October and 54,599 for November, 1933.

On Tuesday it was announced that the Malayan Legislative Council had passed the necessary laws against hoarding of rubber by dealers, very similar to those previously enacted by the Dutch East Indies Government, and it is evident that the contracting parties are doing all that is possible to make the Regulation Scheme

work. There is to be another meeting of the international committee, probably on December 11th, but it is not expected that the question of the April-June quota will come up for decision.

In New York, Wednesday's spot price for rubber, at 12½ cents per lb., compared with 13½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6½d. for January-March, 1935, as against 6½d. to 6½d. a week ago. Stocks in London and Liverpool at the end of last week, at 128,065 tons, show an increase of 434 tons as compared with the preceding week.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following list are revised with the assistance of an eminent firm in each department.

LONDON, December 5th.				POTATOES—				WOOL—							
CEREALS AND MEAT				Good English, per cwt.				English Southdown, greasy, per lb.				Cape

FOR INVESTORS IN WALL STREET! A NEW DAILY SERVICE

There is appearing daily on the American Page of

THE FINANCIAL NEWS

a special column, edited by our American Editor, of
WALL STREET INVESTMENT NOTES

The Financial News wishes to draw special attention to this new feature as it is believed that for a number of reasons it will prove of particular value. First, as evidenced by the letters of enquiry to the Editor, increased attention is being paid to the very substantially higher yields obtained from American Securities than from their English counterparts, and interest has naturally been much stimulated by the recent further decline in long term yields in the London Market.

The Wall Street Investment Notes will regularly include details of high-grade American Securities on which good yields are obtainable.

Secondly, it is widely believed, both in London and New York, that the recent recovery in Wall Street is a real indication that market activity is reviving and that movements over the next few months will tend broadly to be upward. Favourable factors which are being watched are Roosevelt's swing away from experimentation, the conciliatory attitude of the Stock Exchange Commission and the likelihood of a revision of the Securities Act.

The Wall Street Investment Notes, together with our comprehensive daily American News Service and daily quotation list of over 350 American Security Prices, will keep you abreast of these market developments and help you to select Securities for Investment.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

A SCORE FOR COMMONSENSE

WE may all congratulate ourselves on the final outcome of this last session of the League Council. The dreaded explosion has occurred; but now that the cloud of smoke has cleared away and the reverberations have died down, we can see—with profound relief—that there have been no casualties. If the League is able to isolate and damp down a shock of this magnitude once, it will be able to do so again; and each time there will be a greater margin of safety, since the strength of the League—or, indeed, of any human institution—depends so largely on the belief that it will be efficacious for its purpose. "So the League is some good after all" is the moral which the Governments and the peoples of Europe have rightly been drawing from the happy outcome of this last critical session of the Council. And the drawing of that moral occurs at a particularly opportune moment.

For the Council's success in dealing with the controversy between Yugoslavia and Hungary the congratulations which are owing to all parties concerned are specially due to Mr Eden, and to the Government on whose mandate he was acting. The history of H.M. Government's double success at Geneva on this occasion reads quite like an old-fashioned moral tale. In doing the right thing about the Saar, they no doubt hoped—and their hope has been abundantly justified—that they would be helping to remove a dangerous obstacle from the path of a Franco-German understanding; but perhaps they hardly foresaw that they would be winning a goodwill and acquiring a prestige which would make all the difference to the effectiveness of the part which their representative was to play in the other, and even more dangerous, piece of business which was on the Council's agenda. It is not too far-fetched to suggest that the British Government's announcement of its readiness to send troops to the Saar has prevented other movements of other troops in other parts of Europe which might otherwise have taken place, and which certainly could not have taken place without disastrous consequences.

Our successful issue out of these present afflictions is all the more reassuring when we remind ourselves—as we now can do, in retrospect, without recrimination or offence—of the unpropitious circumstances in which the Council had to take the business up. A direct accusation of having sided with and abetted the murderers of King Alexander was made, in public, against the Hungarian Government, by the Yugoslav representative on the Council; the Hungarian representative retorted by raising the question of the revision of the peace treaties; the Rumanian delegate was still more outspoken than his Yugoslav friend whom he was supporting; and the tension was keyed up, hour by hour, by the news of the continuing deportations of Hungarian nationals from Yugoslav territory. When M. Laval lined up definitely behind M. Yevtitch, and Baron Aloisi discreetly behind M. Eckhardt, and when the Central European press began to talk of the possibility that the countries of the Little Entente and of the Balkan group might decide to withdraw from the League if Yugoslavia were disappointed by the Council of that satisfaction from Hungary which she regarded as her due, it looked for a moment as though the League might burst asunder and the nations of the Continent might divide once more into two camps.

The happy avoidance of this catastrophe is due to the combined operation of a number of causes. One cause was Mr Eden, who rode the storm which was raised in the Little Entente camp by his refusal to join in a condemnation of Hungary out of hand, and who has succeeded, as *rapporteur* for the Council in this delicate affair, in producing a report which has not only been accepted by the Yugoslav and Hungarian Governments, but has actually been acclaimed simultaneously in the press of both countries. Another cause of success was the relative amenability of the Yugoslav Government. Before the session began they had been persuaded by the anxious importunity of their friends to direct their charges against Hungary only—a policy of hitting the little fellow and leaving the big fellow alone, which may not have been

very handsome, but was undoubtedly more expedient. As for the expulsions, which did so much to prejudice Jugoslavia's case at Geneva when she had so much sympathy, as well as justice, on her side, we may conjecture that they were the work of underlings who took the bit between their teeth. At any rate, the Government intervened and brought them to a standstill on Sunday, and this was perhaps the crucial act which turned the tide at Geneva.

Mr Eden's report has the sterling merit of inflicting no insufferable humiliation or intolerable disappointment upon anybody. On the one hand, the Council has gone far to meet Jugoslavia's demands by expressing the opinion that certain Hungarian officials may have been guilty at any rate of a sin of omission; on the other hand, it has spared Hungary's feelings by refraining from passing a positive judgment and by leaving it to the Hungarian Government to conduct its own investigation, instead of insisting (as the Hungarians themselves insisted in 1914) upon a foreign commission of inquiry. If this is something less than the Jugoslavs had hoped for in the way of dealing with the past, the report makes provision for the future by proposing arrangements for the conclusion of an international convention for the suppression of political terrorism. This is a good thing from every point of view; for if the granting of political asylum continues to be abused, it will eventually be discontinued, and there has been no time in the modern history of Europe when the ancient custom of granting it has been so valuable as it is to-day. One of the great dangers of the moment is that the world is full of uprooted, disappointed and desperate men. If these are shut up, without hope of escape, in countries where life is made impossible for them, they will simply turn more savage than they are already. On the other hand, the good custom of granting asylum cannot possibly be allowed to carry with it a connivance in the use of this asylum as a base of operations for perpetrating crimes of violence which do not cease to be criminal when they are committed in a political cause.

Thus closes an incident which has startled the world by its amazing similarity to the events which set Europe ablaze in 1914. The historian who reflects on the outcome in the two cases, will probably record that, while the European background was different in the two cases, nevertheless the existence of the League has done much to save Europe from another war. Under the present test, "the New Diplomacy" has shown itself superior to "the Old Diplomacy" in at least two important ways. In the first place, the Council has provided a safety-valve through which the aggrieved parties have been able to blow off steam; in the second place, it has given the dog a helping hand in his efforts to avoid being wagged by his tail. In 1914, when Russia lined up behind Serbia and Germany behind Austria-Hungary, all hope of preserving the peace of Europe was at an end. In 1934, France and Italy have been saved from being dragged into a conflict, which both of them abhorred, at the tails of their respective East-European satellites. The news which tells us for certain that the crisis is past is the announcement that M. Laval is to visit Italy before Christmas. If Herr Hess then visits France after the plebiscite in the Saar, the dreaded year 1935 may prove to have inaugurated a new era in Europe.

INDIA IN THE COMMONS

THE great Indian debate in the Commons and the corresponding function which is still proceeding in the Lords have been singularly lacking in drama. It might have been thought that, when the Mother of Parliaments came to consider whether it would endorse the proposals of the Joint Committee and authorise the Government to draw up a charter of federation and self-government for a country which includes over 70 per cent. of the population of the British Empire, the whole world would have hung on every word that was spoken.

In actual fact the public has given only casual attention to the discussion, having come to the conclusion that

the question of principle is decided once for all. As a result of the recent meeting at the Queen's Hall it became evident that the Conservative Party would not finally split, or desert its leaders, on this issue, and the only point of interest that remained was to see how many Conservative members would follow Mr Churchill into the "No" lobby. In the event he mustered 75 stalwarts.

True, the actual division showed a minority of 127 against 410. But for once the Labour Party joined forces with Mr Churchill, not because they agreed with his views on India, but for the precisely opposite reason that they did not think the Joint Committee scheme went far enough. But they could cast their votes with a clear conscience, knowing full well that the Reform scheme was perfectly safe. Indeed, the Labour Opposition were at pains to ensure that their vote should not be misunderstood in India; for their spokesmen urged the Indian politicians not to boycott so great an advance in self-government, but to work the scheme in the hope of getting something better later on from a Labour Government. Labour speakers have complained that the scheme is not elastic enough in providing for the evolution of the Constitution towards full Dominion status; but it is significant that the most trusted of recent Indian viceroys, Lord Halifax, emphasised the contrary view that the scheme will in practice permit the development of an immense amount of real responsibility, provided it is worked in the spirit of co-operation with which it is being offered.

As to the debate itself, from the opening speech of Sir Samuel Hoare onwards speakers for the Reform scheme were conscious of the danger that if they sought too eagerly to persuade British doubters by stressing the "safeguards" they might persuade India that the offer of self-government is a sham; whereas if they emphasised the magnitude of the new departure they would strengthen the conviction of the Die-hards at home. The Secretary of State resolved the dilemma by sticking to the middle of the road. He defended the plan as one which is at once one of the greatest advances ever made in the application of Parliamentary methods to a substantial fraction of the world's population, and is at the same time protected against a breakdown; for it would be difficult to exaggerate the disaster for the whole world if this experiment were to come to grief in its early stages through the inexperience and the almost complete absence of democratic traditions.

An attempt was made to show that the Princes were not really in accord and were dissatisfied, and that the present Viceroy himself had sought to prevent British Members of Parliament from making more difficult his delicate task of cajoling the States unwillingly into a Federation. Mr Baldwin completely disposed of this attack. Sir John Simon, in a closely reasoned argument, was at pains to rebut the attempt by the Conservative opposition to invoke the Simon Commission's Report on their side, by pointing out that he and his colleagues had been confined to the problem of British India, that there was no immediate possibility of Federation with the Indian States when he was in India, but that he had stressed the unity of India and the importance of working towards a Federation. The position had been transformed in this respect by the First Round Table Conference. All the surviving members of the Statutory Commission were now in favour of the setting up of a Federation with responsibility at the centre. The adoption of indirect election for the Central Parliament was the subject of Liberal criticism, but the case made by Sir John Simon and Mr Attlee was convincing enough to show that while this proposal does not in any way weaken the degree of responsibility granted to India, it may very well lead to a more effective central Parliament.

The course of the debate served to show once again that if care and thought can create a constitution adapted to meet a complex situation, the new Indian constitution should fulfil expectations. The task is full of difficulties and great risks are involved, but they are less serious than those of any alternative course. Ireland and South Africa prove that timely concession may be the creator of real co-operation; if delayed too long it may lead to disaster. If Parliament proceeds with its present intent the case of India may show to the world the value of Federation as an instrument of Government over large areas and point the way to the adoption of free political institutions in the Asiatic world.

HEALTH IN THE SCHOOLS

BRITAIN'S School Medical Service, which is scarcely older than the reign of King George, has recently celebrated its silver jubilee. Founded in 1907 its record has been a noteworthy and honourable one. The Service has provided the "means of ascertainment," whereas a generation ago the State "did not know what the physical condition of children actually was." Secondly, it has made arrangements for attending to the health both of the sick and of the healthy. While a steady burden of disease remains, the Chief Medical Officer claims that certain morbid conditions have been substantially reduced, the cases of malnutrition have fallen from between 10 and 20 per cent. of the elementary school population to about one per cent., and there has been a steady all-round improvement in general physique which has reduced child suffering and raised the standard of school attendance. Finally, this progress has enabled the individual child to respond better to his schooling and has, also, been largely instrumental in creating a "health conscience" throughout the nation. Though the improved health of the nation owes much to other factors such as housing, higher real wages, unemployment and sickness insurance, child welfare and public health services generally, it is clear that the School Service has played an important part in the improvement that has taken place.

But as Sir George Newman himself points out,* there is no service so good as not to leave room for improvement. The report accordingly discusses with frankness whether or no there is reason to fear that this important administration is becoming too static, and in what directions it should broaden out and link up with other activities for improving the health of the nation. Attention to health is needed from the cradle to the grave; it is not a matter that merely concerns us between the ages of 8 and 14. Nor will the "health conscience" to which Sir George Newman refers be entirely satisfied with what he has to say about malnutrition, for even the figures here given show disturbing signs of deterioration in certain economically stricken areas, while the standard on which official optimism regarding the nourishment of the people generally is based has recently been severely and authoritatively criticised.

The many topics dealt with in the present report fall into three main groups. First there is the ascertainment and treatment of defects; secondly, the care for the normal child, and thirdly, the provision of health services for the pre- and post-school child.

During 1933, 1,855,499 children at elementary schools passed through a "routine" examination (i.e. on entering school, or at the age of 8 or 12), and 1,239,427 children underwent a "special" inspection (i.e. an examination asked for by the school nurse or by someone outside the medical service). The total of three millions represents just over 60 per cent. of the average school attendance. Almost two million of these children were re-examined during the year. Defective eyesight and tonsillitis and adenoids were still by far the most prevalent defects observed, although there has been a decline of 40 per cent. in the incidence of the latter since 1929. Speaking generally, there has been a marked decline, not only as compared with 1932, but over the five-year period 1929-33 in the number of defects of all kinds, except malnutrition, noted at routine examinations as requiring treatment.

This improvement is very satisfactory. But, asks Sir George Newman, "are we doing all that is practicable for the nutrition, physical education, nurture and health of the normal child (70 to 80 per cent. of the elementary school population)? I fear we are not." At the root of this problem lies the question of nutrition, for as an experienced medical officer observes: "Nutrition is the chief of all environmental factors in rearing efficient citizens." So far as actual cases of malnutrition are concerned, the report reveals that there is still much room for improvement. Thus, there were 9.6 cases per 1,000 inspections in 1929, 10.6 in 1930, 11.2 in 1931, 10.7 in 1932, and 11.1 in 1933 requiring

treatment. In this last year a further 12.8 per 1,000 were under-nourished and "requiring observation," making a total of 44,339 children who were considered to be inadequately nourished. The proportion varied very much in different parts of the country, for malnutrition is an evil which is naturally growing in the areas suffering from continued economic depression. While the proportion of under-nourished children in London is lower than at any previous time, and in Manchester has fallen from 1.38 per cent. of the number inspected in 1929 to 0.63 per cent. in 1933, and while no deterioration has been noticed in manufacturing towns such as Sheffield and Birmingham or, surprisingly enough, in the North Riding of Yorkshire; other districts showed a marked increase even during the past three years. In Burnley, for example, the figure rose from 3.1 per cent. in 1931 to 8.5 per cent. in 1933, and in Llanelly from 9.5 to 23.7 per cent., if those recorded as "fairly" and "badly" nourished are coupled together.

To meet these cases, as well as those of children not definitely coming within the category of those suffering from malnutrition, but who for various reasons are not securing adequate food at home, the school authorities provided meals to a total of 68,843,281, of which more than half consisted of milk, in the financial year 1933-34 for 414,786 children—a record number and an increase of 15,300 as compared with 1932-33. This work will be facilitated by the new arrangements under the Milk Marketing Scheme. This provides that children in full-time schools and courses approved by the Board of Education and in Junior Instruction Centres approved by the Ministry of Labour, shall, from October 1, 1934, be able to obtain one-third pint of milk for ½d. instead of 1d., and that those who are certified as "under-nourished" may get two-thirds of a pint free daily if they cannot afford to buy it.

As Sir George Newman points out, however, malnutrition is not solely due to lack of food. It may develop from inherent inability to extract nourishment from food or from an ill-balanced diet, lacking some essential ingredient, such as first-class protein, which is found in milk. These factors are themselves partly the direct result of poverty or of the economic policy of the country and to that extent cannot be influenced by the education authorities. But there is much which they can do by teaching the elements of dietetics and hygiene at school, by providing healthy surroundings and adequate space for indoor and outdoor exercise, by teaching dancing, rhythm exercises, swimming and all the training known to the Greeks under the general terms harmony and gymnastic. Here is scope for an imaginative development of curriculum and for co-operation between the teaching and the medical staff.

It is not enough, however, to deal with the child while he is at the elementary school. The Chief Medical Officer is the first to recognise this and has many suggestions to make in connection with infant welfare and for co-operation with the authorities who take charge of the child when he leaves the elementary school. As regards the child from one to five years old, a certain amount is already being done in the way of Maternity and Child Welfare Centres, Nursery

Schools and Open-Air Schools, and the C.M.O. puts forward an eloquent plea for an extension of these services as the essential basis of a healthy nation. An equally important problem is that of the adolescent. A certain number go to secondary schools, where they continue in most cases to have a periodic medical examination. Unfortunately the incidence of defective vision, of postural defects, of heart disease, and even of tonsils and adenoids among these children is in most parts of the country considerably higher than in the elementary schools. Here is an important field for a tightening up and closer co-operation between the authorities concerned.

The majority, however, of children leaving the elementary schools enter the labour market. There are three important ways in which the School Medical Service should set a final seal on its charter to "equip the child physically for industry and for life." First, in the choice of an occupation, where medical opinion should have much to say. Secondly, medical authorities should try and increase co-operation with factory surgeons wherever possible. Thirdly, with the introduction of the new Unemployment Act, under which Local Authorities have to prepare schemes for courses of instruction for all unemployed persons between the ages of fourteen and eighteen, medical officers will have an opportunity for continued supervision of unemployed adolescents. Here, above all, is a field where the State must garner the fruits of its work in the years of elementary schooling, for a nation which allows its young people to deteriorate, physically and mentally, because of unemployment is not only incurring a heavy moral responsibility, but is laying up for itself—to put it in its lowest terms—a heavy liability.

RECOVERY IN BRITISH STEEL—II

(BY A CORRESPONDENT)

A FIRST article in the *Economist* of December 1st discussed the extent to which the imposition of our tariff on imports of steel has been responsible for the recovery which has occurred in many branches of the industry in the last three years. When we go on to consider the export branches of the British steel industry the outlook appears less promising. Export markets in 1929 accounted for 85 per cent. of the production of galvanised sheets, or 712,000 tons. By 1933 the export figure had fallen to 276,000 tons, and, with home consumption also declining, manufacturers have been seeking new outlets by turning their attention, for instance, to the manufacture of bright annealed sheets. The problem of the export traders is not merely one of reduced purchasing power abroad, but of the growth of native industries behind tariff walls in former markets; and here time will not prove a very efficient healer. India is a case in point; and the benefits obtained from the Ottawa agreement by the galvanisers have been very meagre. If any substantial proportion of Britain's former export trade is to be regained, nothing less is likely to suffice than a radical reorganisation of marketing methods, accompanied by agreements with overseas competitors, while the establishment of overseas plants—on the lines tried out by John Lysaght's in Australia, Canada and Argentina—is also worth further consideration. Even if this does not make much direct contribution to the problem of employment at home, it is becoming an increasing source of revenue to many companies in other industries.

Tinplates have suffered from a similar tendency, though one of longer duration. The seriousness of the position has, however, been partly disguised by the steadiness of domestic consumption, which has reduced the dependence on export markets from 66 per cent. in 1929 to 59 per cent. in 1933. The expansion of the home canning industry cannot, however, be expected to continue indefinitely, while the productive capacity of Continental and Japanese competitors is in process of rapid expansion on the most modern lines. The conclusion of the international tinplate agreement in July was, therefore, a timely safeguard for the export trade. Great Britain was allotted about 55 per cent. of the world export market (against 22 per cent. for U.S.A. and 16 per cent. for Germany), and the basic

price was agreed at 18s.—an advance of about 1s. on the price ruling immediately before the conclusion of the agreement. It is as yet early to estimate the full value of the agreement to South Wales, but it is significant that Richard Thomas, within the last few weeks, have booked an order for shipment to Canada next year of 1½ million basic boxes, and has concluded a long-term contract for some years to come.

The dependence of the tinplate industry on imports of cheap Continental tinplate bars was a measure of its lack of technical integration compared with other branches of the steel industry, although there are indications that mills associated with steel works are gaining at the expense of those which are not. In view of the fact, however, that the attached mills were by no means always the most efficient technically, integration is not necessarily in the immediate interests of the industry; its future development, however, certainly seems to lie in this direction. The imports of sheet and tinplate bars were reduced by the tariff from 727,000 tons in 1931 to 84,500 tons in 1933 and a rise of about 8 per cent. in the price of the semi-product has occurred in the last twelve months. It is interesting to note that early in the year supplies of tinplate bars were being sought in Canada in order to avoid the tariff on Continental imports. The tinplate and galvanised sheet industries would undoubtedly benefit from the development of domestic supplies of low-priced steel, but it is not by any means certain that reduction in the price of the semi-product is the only means of cost reduction available.

The brightest spot in the export trade is provided by tubes, exports of which are approaching the 1930 level. Some big orders have been placed by Russia, but the real reason for the progress of this section is probably to be looked for in its internal organisation, which is the strongest of any section of the industry, and its membership of the International Tube Cartel.

The benefits which tubes, ship-plates, rails and tinplates have received from their participation in international agreements are undoubted, but their continuance is unfortunately in some danger owing to the attitude of the industry as a whole on the question of self-sufficiency.

In spite of extended discussions on the subject, the accession of the British industry as a whole to the International Steel Cartel has not yet materialised, and Continental manufacturers are becoming increasingly and understandably restive at the British policy of attempting to run with the hare and hunt with the hounds. With the continued strength of the domestic demand there is a tendency among British makers to snap their fingers at the Cartel and to follow the old Continental practice of exporting on a marginal basis at the expense of the home consumer. It is this spirit that inspired the applications for still higher tariffs immediately after the 33½ per cent. rate had been prolonged in May. Even if domestic consumption remains at its present level—a doubtful assumption in itself—it must be remembered that replacement of Continental by home-produced semi-products has in many cases only been achieved by increasing the cost of production of finished products, particularly of those finished products which form the industry's chief exports. The effect cannot be other than to make export competition more difficult, while from the Continental side competition is likely to be more intense if foreign steel makers are forced to begin the production of finished products in order to use their output of semi-products formerly exported to England.

It may be argued that there are few direct advantages in joining the Cartel at the present time at the price which the Cartel would be willing to take in respect of an import quota. To this the answer is that there is a great deal to lose, and plenty of room for bargaining. The existence of the Cartel has already facilitated the making of agreements with regard to isolated products and has exerted a certain indirectly favourable influence by relieving the pressure of price competition among Continental makers. But it is not so strong internally that it could stand the strain of a definite British refusal to co-operate, particularly as several Continental producers, such as the Forges de Clabecq, continue to show signs of restlessness, and the inevitable consequences of a break-up would be to precipitate the whole of the European industry once more into an orgy of price-cutting.

THE STATE OF IRELAND

THE "economic war" between the United Kingdom and the Irish Free State has now been pursuing its imbecile course for two and a-half years. Since each Government has solid political support in its own country, the prospects of settlement seem as remote as ever. From London and from Dublin we are told that the door is still open for settlement, but holding the door open apparently means, for either party, no more than its willingness to accept the surrender of the other.

The two contestants are of very unequal strength; the United Kingdom has fifteen times the population and more than twenty times the wealth of the Irish Free State. Many, therefore, expected that the United Kingdom would feel the economic war as a pinprick while to the Free State it might be a mortal wound. This expectation has not been realised. The United Kingdom has had more than pinpricks to bear—unless the loss of one-third of our sales to one of our best customers can be so described. And the Free State has not suffered a mortal wound. The total of her exports has, it is true, been reduced from £14.3 millions in the first half of 1932 to £8.6 millions in the first half of 1934 and the market of her principal industry, cattle-breeding, has been destroyed. But there has been no economic disaster, not even any very sure sign of rapid economic deterioration.

On the surface all is comparatively well in the Irish Free State. There has been a considerable rise in the register of unemployed, from 78,000 in September, 1932, to 110,186 in September, 1934, but this can be at least partly, and perhaps wholly, explained by the fact that in those two years greater inducements, in the shape of non-insurance benefits, have been held out to the unemployed to register themselves. The number of applicants for benefit under the Unemployment Insurance Acts has fallen from 20,987 in September, 1932, to 18,823 in September, 1934. According to the Minister for Industry and Commerce the number of those in employment in 1933 was nearly 9 per cent. higher than in 1931. In other directions the statistics are equally favourable. The monetary circulation is higher than two years ago, savings bank deposits have increased by more than 11 per cent., goods train receipts of the railways in the third quarter were nearly 5 per cent. higher in 1934 than in 1932; all the indications are that consumption is rising and that retail trade, at least in Dublin, is flourishing.

It would be rash, however, to conclude that everything in the Irish garden is lovely. The outstanding feature of Irish life at the moment is the discontent of large numbers of the farming class. Since the days of the Land League in the 'eighties the newspapers have not been so full of news of agrarian disturbances. Sales are forcibly prevented, or, if they succeed in being held, are boycotted; the gaols are full of respectable farmers and their sons; and agrarian outrages are being punished by extraordinary tribunals. While it is doubtless true that some Opposition

politicians are profiting from fishing in the troubled waters, it is impossible that a movement so widespread and apparently so spontaneous has no basis of real hardship. This distress in the countryside reacts on the finances of the local authorities, partly through the non-payment of rates and partly because uncollected land annuities are deducted by the Ministry of Finance from its grants-in-aid. As a result, several of the county councils are very badly in debt to the banks, which are beginning to put a limit to their borrowings. The distress is not universal, since certain types of agriculture, especially cereal raising, have benefited by the Government's protective measures, while the very small farmers have shared to some extent in the schemes of general relief. The brunt of the burden has fallen on the so-called "prairie" farmer, that is, the larger cattle-breeder, as is shown by the following figures of exports of live animals and foodstuffs of animal origin in the first three quarters of recent years:—

Year	£
1929	24,031,907
1930	23,364,804
1931	19,103,411
1932	13,791,699
1933	8,634,610
1934	8,029,748

To the figures for 1932, 1933 and 1934 there should be added about £2,000,000 each year in respect of the export bounties; the farmers' income has also been supplemented by the bounties on beef, wheat and tobacco and by the artificially high price of butter consumed in the home market. But even with all these allowances the figures show very clearly how drastic has been the decline in the income of "unsheltered" producers.

In the sphere of finance there are also grounds for anxiety. The official estimates of the Balance of Payments are no more reliable than similar estimates for other countries, but the net addition to or draft on capital can be estimated by the published figures of the net sterling reserves of the banking system, i.e. the excess of the banks' sterling assets over their sterling liabilities. This figure has fallen from £86,490,177 in the September quarter of 1932 to £76,751,982 in the September quarter of 1934. The position is thus still one of considerable strength, as the country possesses external assets (including the Currency Commission's reserve) of nearly £84 millions against a total of currency and bank deposits in the Free State of only about £135 millions. But the position is deteriorating quite rapidly, as there has been an apparent draft on capital of £10 millions (equivalent to £220 millions for the United Kingdom) in two years. Moreover, the draft might have been larger but for the success of the Hospitals Sweepstakes, which cannot be expected to continue indefinitely. The budgetary position is also not without its anxieties. The standard of living of the farmers and the volume of employment in the towns are being maintained largely by public expenditure. Bounties, relief work, unemployment assistance, free milk and meat and doles of every kind continue to be distributed, while the revenue shows no sign

of overtaking expenditure. The objects of the borrowing may be justifiable; the fact is that the Free State is being run these years on borrowed money. It is an open secret that the source of the recent borrowing has been almost entirely the banks, and if this source were to dry up the financial situation would at once become very critical. The Commission which was recently appointed is empowered to report on these subjects as well as on the banking system, and its report can hardly be very favourable.

But when all the evidences of deterioration are identified the Free State still appears surprisingly prosperous. How is this paradox to be explained? In the first place, there has undoubtedly been a certain amount of living on capital, both in the international and also in the individual sense. The chief effect of the "war" has fallen on those classes which had accumulated savings to draw upon. In addition, there must have been considerable "invisible" drafts on capital by the failure completely to replace circulating capital; this has been particularly true of the animal breeding industry, whose circulating capital consists, of course, in the quality and quantity of its livestock. This sort of "dis-saving" will not readily show in the statistics. Secondly, there has undoubtedly been an extensive redistribution of incomes both from the rich to the poor and from the countryside to the towns. Destruction of external markets has considerably reduced the retail price of many foodstuffs; meat, in particular, is being regularly consumed in many households where it was formerly an infrequent visitor. The highly protectionist policy of the Government has assisted the employment situation in the towns; urban unemployment has been falling, rural unemployment rising. A rough comparison by the Minister for Industry and Commerce of not strictly comparable figures shows a decline in unemployment over the last eight years of 16 per cent. in the four county boroughs (Dublin, Cork, Limerick and Galway) and an increase of no less than 280 per cent. in Connaught. These shifts are significant, for it is the activities of the towns and the consumption of the poor which reveal themselves in statistics. There is, therefore, reason to believe that the available statistics give too favourable a picture.

But even with these allowances the resilience of a fundamentally agricultural economy has proved to be far greater than could have been expected, or was expected by the British Government, two and a half years ago. If it is true that the position is not as good as it seems, it is equally true that Ireland obviously cannot be coerced by means such as these. The "economic war" may yet ruin Ireland; the resources or the patience of those now bearing its brunt may be exhausted; a financial crisis may uncover some of the deterioration now hidden; the *rentier* class may, as they easily could, emigrate, taking their incomes, their expenditures and their taxability with them. These are dangers for Ireland; but they are not grounds of hope for England. It could serve no purpose of finance, prestige or Imperial solidarity for Great Britain to reduce her nearest neighbour and good customer to financial collapse and destitution. Nor would it enhance the reputation of British statesmanship. Only the faces of the two Governments stand in the way of a settlement. If the war drags on they may be saved, but there will be little else to salvage from the wreck of what was until recently a mutually profitable relationship.

AMERICA INSURES IN LONDON

Nor many people realise the extent to which British insurance companies operate in the United States. The greatly improved results of British companies as a whole in 1933 (which we analysed in our annual Insurance Supplement of July 14, 1934), were due in no small measure to a rapid improvement in the underwriting profit on the American fire business of British companies in that year. We propose here to examine the American business of British companies in 1933, first under the heading of fire business and then under the heading of accident and miscellaneous insurance. The results of the fire insurance of British companies during 1933 showed a very substantial improvement com-

pared with 1932, mainly due to a much better experience in the United States, from which approximately 50 per cent. of their premium income is obtained. The fall in the total American fire premium income, i.e. including both American and foreign companies, was nearly 14 per cent. in 1932 and a further 10 per cent. last year. The corresponding figures for the British offices, however, were 9 per cent. and 3 per cent. The table which follows has been based on the official reports of the companies furnished to the American insurance authorities and published annually by the Spectator Company of New York. For comparative purposes the figures have been converted at £1 = \$4.87. The twenty-one companies or groups of companies have been selected to comprise all the principal British offices operating in the United States, and the figures of underwriting profits have been adjusted to conform with the British practice of allowing for an unexpired risk reserve equal to 40 per cent. of the total premiums. The aggregate results for each of the past seven years on this basis are as follows:—

Year.....	FIRE INSURANCE.		
	Premium Income	Underwriting Profit	Percentage of Premium Income
1927	31,710,646	2,110,373	6.7
1928	31,277,814	2,531,231	8.1
1929	31,224,583	2,236,280	7.1
1930	27,688,317	647,149	2.3
1931	25,814,406	40,521	-0.2
1932	23,546,121	506,523	-2.2
1933	22,851,424	1,430,401	6.3

The results of individual companies and groups of companies for each of the last two years are shown in the following table:—

Company or Group of Companies	1932			1933		
	Premium Income	Underwriting Profit or Loss		Premium Income	Underwriting Profit or Loss	
		Amount	Percentage of Premium Income		Amount	Percentage of Premium Income
1. Atlas	£688,320	- 42,134	- 6.1	£628,899	+ 25,416	+ 4.0
2. Eagle Star & British Dominions	432,489	+ 1,309	+ 0.3	472,525	- 5,838	- 1.2
3. Caledonian	512,071	- 47,414	- 9.3	394,478	- 1,519	- 0.4
4. Commercial Union	2,931,497	- 192,531	- 6.6	2,541,125	+ 141,527	+ 5.6
5. Century	277,547	- 7,414	- 2.7	265,029	+ 13,417	+ 5.1
6. Employers' Liability	351,169	- 2,014	- 0.6	371,304	+ 21,679	+ 5.8
7. General Accident	274,465	- 39,381	- 14.3	272,925	- 14,998	- 5.5
8. London Assurance	841,379	+ 35,654	+ 4.2	812,748	+ 83,462	+ 10.3
9. London and Lancs.	1,209,397	+ 25,425	+ 2.1	1,222,683	+ 110,366	+ 9.0
10. North British and Mercantile	3,090,606	- 26,846	- 0.9	3,198,045	+ 225,107	+ 7.0
11. Northern	876,196	- 78,928	- 9.0	777,899	+ 34,546	+ 4.4
12. Norwich Union	680,145	- 20,326	- 3.0	638,422	+ 26,331	+ 4.1
13. Phoenix	1,388,641	- 2,195	- 0.2	1,269,583	+ 46,217	+ 3.8
14. Prudential	616,821	+ 930	+ 0.2	521,980	+ 94,760	+ 18.2
15. Pearl	247,260	+ 20,779	+ 8.4	942,531	+ 70,482	+ 7.5
16. Royal	4,043,595	+ 70,890	+ 1.8	3,907,309	+ 311,346	+ 8.0
17. Liverpool and London and Globe	2,184,673	+ 55,506	+ 2.5	2,116,819	+ 171,392	+ 8.1
18. Royal Exchange	589,112	- 31,209	- 5.3	584,949	- 411	- 0.1
19. Scottish Union and National	709,764	- 69,673	- 9.8	623,010	+ 20,309	+ 3.3
20. Sun	929,318	- 79,477	- 8.5	822,306	+ 52,336	+ 6.4
21. Yorkshire	671,656	- 77,474	- 11.5	526,875	+ 4,474	+ 0.8
	23,546,121	- 506,523	- 2.2	22,851,424	+ 1,430,401	+ 6.3

It will be seen that in the majority of cases the premium income was smaller, a reduction exceeding 10 per cent. being shown by eight of the offices. Perhaps the most remarkable result is the increase from £247,000 to £943,000 in the case of the Pearl. In all but four cases underwriting profits were secured.

The experience of all offices operating in the United States in respect of their accident and miscellaneous business—which comprises all types of insurance other than life, fire and marine—was marked by a decline of 8 per cent. in the premium income, compared with 14 per cent. in 1932. The British offices, however, suffered a decline of only 10 per cent. in 1932 and recorded an increase of 1 per cent. last year.

Motor and workmen's compensation business accounts for more than one-half of the premium income coming under the title of this article, and in both classes the experience, although still far from satisfactory, was an improvement on the previous year.

The following table has been compiled from the same official sources as the corresponding fire insurance figures, and the profits have been adjusted to conform with British practice. The figures given relate to eleven companies or groups of companies, including the principal British offices represented in America, in the various branches of insurance other than life and fire. The aggregate results for each of the past seven years are as follows and reflect the unprofitable character of the business:—

Year	OTHER INSURANCE		
	Premiums	Underwriting Profit	Percentage of Premiums
1927	£27,196,037	- 593,723	- 2.2
1928	28,126,188	774,478	2.8
1929	28,422,634	77,509	0.3
1930	27,064,828	- 439,115	- 1.6
1931	24,952,718	- 168,085	- 0.7
1932	22,311,866	- 376,521	- 1.7
1933	22,512,726	- 15,966	- 0.1

It will be seen that the fall in premium income has been arrested and the underwriting results are somewhat less unfavourable than in recent years. The experience of individual offices in 1933 is shown in the following table, from which it will be seen that the only offices to succeed in making a profit were the General Accident and Employers' Liability.

Company or Group of Companies	1932			1933		
	Premium Income	Underwriting Profit or Loss		Premium Income	Underwriting Profit or Loss	
	Amount	Per-centage of Pre-mium Income		Amount	Per-centage of Pre-mium Income	
1. Commercial Union	£2,124,303	- 27,732	- 1.3	£2,208,879	- 105,931	- 4.8
2. Employers' Liability	6,304,788	+ 36,146	+ 0.6	6,172,462	+ 172,404	+ 2.8
3. General Accident	2,931,550	+ 191,854	+ 6.5	3,015,397	+ 155,480	+ 5.2
4. Liverpool and London and Globe	3,447,703	- 195,626	- 5.7	3,397,389	- 42,774	- 1.3
5. London and Lancs.	526,536	- 149,481	- 28.4	495,642	- 17,677	- 3.6
6. Norwich Union	531,587	- 2,889	- 0.5	585,233	- 40,602	- 6.9
7. Phoenix	2,151,760	- 12,236	- 0.6	2,162,941	- 5,505	- 0.3
8. Royal	3,157,224	- 190,087	- 6.0	3,168,430	- 77,186	- 2.4
9. Royal Exchange	259,098	- 1,705	- 0.7	309,085	- 7,648	- 2.5
10. Sun	683,326	+ 4,962	+ 0.7	795,666	- 25,770	- 3.2
11. Yorkshire	173,991	- 29,733	- 17.1	201,602	- 20,757	- 10.3
	22,311,866	- 376,521	- 1.7	22,512,726	- 15,966	- 0.1

Thus, while the British companies underwriting American fire risks did very well last year, in a positive sense, those engaged in accident and miscellaneous insurance in America have only been able, on balance, virtually to break even on the year's operations. It will therefore be particularly interesting to see how the experience of 1934 compares with 1933.

NOTES OF THE WEEK

The Neutral Force in the Saar.—His Majesty's Government have rendered sound service for the security of this country in offering, on their own initiative, to send a contingent of British troops as part of the neutral force which is to stand by in the Saar during the plebiscite period. The happy consequences of this offer have already contributed notably towards improving the whole international atmosphere in Europe; and the peace of Europe and the security of Great Britain are two aspects of the same thing. All Mr Eden's conditions have been fulfilled within a few hours of their being put forward; and the arrangement of the practical details for implementing the scheme has been as prompt as the acceptance of the idea by the Governments. The international force is to arrive in the Saar by December 22nd at the latest, and is to consist of 1,500 British, 1,300 Italian, 250 Dutch and 250 Swedish troops, the whole force being under British command and under the authority of the Saar Governing Commission. The British advance guard has already left. It would now seem to be assured that the plebiscite will take place without disturbance and under conditions that will be recognised as fair both in Germany and in France, as well as in the Saar itself. The relaxation of the tension between Germany and France is already evident; but this, though ultimately, perhaps, the most important result of His Majesty's Government's gesture, is by no means the only happy consequence, or even the first. The first-fruits of Mr Eden's offer last week can be seen in his success in coping with the Hungarian-Jugoslav crisis. As Marshal MacMahon once said to the coloured cadet at St. Cyr: "*Continuez, mon enfant, continuez.*"

Taking the Profit out of War.—President Roosevelt has not been slow to draw the moral from the revelations of the Senate inquiry into the armaments industry. He announced on Wednesday that legislation would be presented to Congress early in the New Year designed "to take the profit out of war" and also to prepare, as a measure of precaution against any future conflict, a thoroughgoing co-ordination of the industrial, military and individual efforts of the country. A Committee has been formed to prepare this legislation, consisting of Mr Bernard Baruch, who during the war was Chairman of the War Industries Board, General Johnson, who was in charge of the "draft"

(i.e. conscription) in 1917-18 and of N.R.A. more recently, and General McArthur, the present Chief of Staff. The precise nature of this legislation is not indicated by the President's announcement, but it is expected to include the imposition in advance of confiscatory taxation on war profits. The problem of taxing excessive wartime profits is technically very difficult, as the British Inland Revenue has good reason to know. But the difficulties will be less if they are faced beforehand, and the general principle of such taxation is so laudable that the American attempt to enact it in detail will be watched with sympathy and interest. The other object of the projected legislation is more dubious. Two out of the three members of the Committee have been more concerned with the conscription of persons than that of industries. The War Department has for some years been agitating for a scheme of "national mobilisation" similar to that enacted in France, and it is not improbable that this will prove to be the real substance of the Bill. In spite of America's passionate attachment to isolation, there is a strong streak of militarism in the national character, as witnessed by the insistence on compulsory military training in State-supported colleges and by the refusal of citizenship even to female conscientious objectors. The Bill may prove to be a definite step towards militarisation, even though it has the sugar coating of the taxation of wartime profits. The Senate inquiry has, meantime, been proceeding, with a wealth of new facts still further establishing the unwholesome influence on international politics of the "ring" of armament makers. Senator Nye, the Chairman of the Committee, has offered to place the files of the investigations at the disposal of the forthcoming British Commission of inquiry. These files are said to contain a great deal of information on the operations of British firms, and a Commission which was determined to get to the bottom of the matter would not hesitate to make use of it. The treatment of Senator Nye's offer will be a useful test of the sincerity of the British inquiry.

Debt Diplomacy.—Our war debt to the United States has been hauled once again into the light of public scrutiny by a Government White Paper (Cmd. 4763) issued on Tuesday. The publication consists merely of a reprint of a letter from the American Secretary of State on November 22nd to the British Ambassador at Washington, enclosing details of the total British debt services due up

to and including that due on Saturday, and a reprint of the British Ambassador's reply on Monday of this week. The British indebtedness due on Saturday includes the half-yearly interest payment of \$75,390,000, the annual sinking-fund payment of \$32,000,000, a year's interest on the amount for sinking fund which was not paid a year ago, i.e. \$560,000, and a third half-yearly instalment of \$9,720,765.05 on account of payments which were not made during the Hoover Moratorium under the Agreement of June 4, 1932 (Cmd. 4202). That makes a sum due this Saturday of \$117,670,765.05. But to that must be added previous instalments of principal and interest outstanding, amounting to \$261,791,011.68, giving a grand total of \$379,461,776.73, or, at roughly \$5 to the £1, of £76 millions—all due on Saturday. The American Secretary of State assures the British Ambassador that the United States Government "is fully disposed to discuss, through diplomatic channels, any proposals your Government may desire to put forward in regard to the payment of this indebtedness," and assures him that "such proposals would receive careful consideration with a view to eventual submission to the American Congress." To which Sir Ronald Lindsay replies by praying in aid the British Note of last June when the first British "default" was made: "His Majesty's Government . . . regret that they have reached the conclusion that the considerations which governed their decision six months ago apply with equal force to-day. Accordingly they feel it would be useless, and therefore unwise, to initiate negotiations at present; but they will continue to watch for any effective opportunity of taking steps in that direction." A semi-annual exchange of such Notes may rapidly become a traditional monument to Anglo-American collaboration—a bare recognition that *noblesse oblige*—and little else!

The Air Above.—By International Air Convention (1919), sovereign States own the air above their territories in "fee simple" as it were, *usque ad coelum*. This has often obstructed international air traffic. For example, the Imperial Airways route to the Far East and to the Cape started at Croydon, halted at Paris, and then passengers had to continue by train all the way from Paris to Brindisi owing to the opposition of the French and Italian authorities to the regular working of foreign air lines over their territories—notably on the route from Paris to Marseilles and thence over the frontier fortifications to Rome. Last week a convention was signed in Rome permitting British aircraft to fly over Italy; and on Wednesday it was announced by the French Air Ministry in Paris that a similar convention had been concluded permitting British aircraft to fly over France to Marseilles and thence to Rome. This is a sensible ending to an unsatisfactory state of affairs. There may be more in these conventions than meets the eye. Negotiations have been proceeding for years to obtain them. Now they are quietly announced. May it not be that the recent *rapprochement* between France and Italy, and between Great Britain and both of them, has had a salutary effect in the sphere of peace and progress? It only remains for other Continental countries to follow suit, especially those in the Centre and South-East of Europe, where in many cases it is impossible for international air services to link one capital direct with another owing to "strategic considerations."

The Nobel Awards.—The bulk of an immense fortune made by a Swedish chemist last century from high explosive was funded at his death in 1896 for the granting of annual prizes in the sciences and arts. One branch of human activity so recognised is that of "the person or society that renders the greatest service to the cause of international brotherhood, in the suppression or reduction of standing armies, or in the establishment or furtherance of peace congresses." The prize was not awarded in 1933. For 1934 it has been awarded to Mr Arthur Henderson, M.P., President of the Disarmament Conference, who travelled to Bergen to receive it at the hands of the Norwegian authorities on Monday. At the same time it was announced that last year's award had been made to Sir

Norman Angell, whose book, "The Great Illusion," probably did more than anything else to awaken the pre-1914 world to the ultimately profitless prodigality of all war—without avail. Is the experience of Sir Norman Angell an unhappy omen for Mr Henderson's endeavours at Geneva and elsewhere to awaken the post-1918 rulers of the nations to the same bare truth? That remains to be seen. But it is to the credit of both Mr Henderson and Sir Norman Angell that they "have not despaired of their country." And as their country is the world, and their cause to seek peace and ensue it for the citizens of that country, they have deserved well of the world. We cannot imagine more fitting recognition of their services than the awards made this week.

Stifling Private Enterprise.—In our issue of last week we discussed the Government's persistent opposition to the proposed formation of a new shipping company for exploiting the Woolworth principle on the North Atlantic route. So far, Mr Neville Chamberlain has succeeded in barring Major Bustard and his fellow-promoters of the scheme from the mosque of the capital market. An offer by Major Bustard to take off his boots, undertaking to consult with His Majesty's Government before building any new tonnage, only drew the reply that, even though he divested himself of his footwear, Major Bustard remained an infidel. In a letter to Lieut.-Colonel Sandeman Allen, M.P., Mr Neville Chamberlain said that he could not regard favourably a proposal "which laid upon His Majesty's Government a recurring responsibility of an embarrassing character in respect of a concern in which they had no financial stake." The italics are our own; the significance of the words ineluctably plain. The Government finds competition with any concern in which it is financially interested "embarrassing." But it will only accept responsibility for a concern if they have a financial stake in it. We sympathise with Mr Chamberlain in not wishing to be the dictator of the private shipping business of this country. Yet by his action he has created an untenable position for himself, for he has deliberately obstructed an attempt to increase traffic by the lowering of rates, which is the only possible alternative for British shipping to dependence on the Treasury. Meanwhile, two of the five ships which were to be purchased have already been sold for scrapping and the "Belgenland" has been transferred to the American flag. The remaining two vessels, the "Westernland" and the "Pennland" are still available, but may be purchased by a German concern before long. In attempting to stifle what might be a profitable enterprise, the Government may well end by aiding foreign shipping, to combat which it has invested public funds in the Cunard White Star merger. It all seems uncommonly like a trip through the looking-glass for which the taxpayer will pay both ways, if, indeed, he ever gets back.

An Australian Gesture.—Last week we asked if the entry of the free trade Country Party, under Dr. Earle Page's leadership, into the Australian Government would persuade that Government to remove the recently-imposed additional duties on Lancashire cotton goods. On December 7th the details of revisions in the Australian tariff were published in London. The figures are as telegraphed, and the High Commissioner for Australia points out, therefore, that they are subject to correction. But on the face of it the new Australian import duties, over a wide range of articles, maintain the proportions of the British preferences at the same time as they represent a reduction in the general level of the duties. For example, on British cotton piece-goods such as shirtings, undyed sheetings, drills and jeans the new duties are reduced to 5 per cent. *ad valorem*, as against 6d. per square yard *plus* 20 per cent. *ad valorem*. The general tariff is also proportionately reduced. For soap, the British preference is increased by reducing the duties in the preferential list more than those in the general list; the same procedure is followed for cotton blankets, mining and dredging machinery, white lead and sanitary earthenware. British iron and steel tubes or pipes now bear a duty of 10 per cent. *ad valorem* instead of a primage

duty of 10 per cent., i.e. no change; but foreign tubes and pipes bear a somewhat heavier duty than before. On the other hand, the duty on British electrical heating and cooking appliances has been increased, and that on foreign appliances much more so—a purely protective or a revenue measure. For many of the above articles the provisions of the Australian Customs Tariff (Exchange Adjustment) Act no longer apply, so that the depreciation of the Australian pound against sterling now comes into effect as a deterrent to British exports and *a fortiori* to those from gold standard countries. To this extent, and to the extent that both the new preferential and general duties are still prohibitive, British exporters will scarcely be benefited. But the Country Party's influence, the outcry of the secessionists in Western Australia against the high-tariff protectionists in New South Wales and Victoria, and the clamour of Lancashire have combined to evoke a gesture from Australia. Is the gesture a formal introduction to a more liberal interpretation of the Ottawa Agreements, or will it remain merely a gesture? The answer lies in the shifting sands of Australian politics.

Tremors in Italy.—We hardly expected so speedily something in the nature of an interim answer to our article last week "What of the Lira?" Last Saturday a Cabinet Council issued a decree, the details of which appear in our Turin correspondent's letters this week on page 1147. The Italian Government—Signor Mussolini, in fact—has taken drastic steps to commandeer the foreign assets of all Italian persons, private and corporate, within the next few days. Such holdings of foreign exchange, or of securities or realisable claims abroad by Italians or persons domiciled in Italy, must be declared forthwith under dire penalties. Such a decree in any democratic country would be ominous; in a dictatorship it is not so surprising; one gets used to sudden scares. But what does this move in Italy portend? Devaluation, in flat contradiction to all the Duce's resounding protestations to the contrary? It seems scarcely possible. A "double-shuffle" currency system of the German pattern, with one value of the lira for imports and internal purchase and another for export sales? That seems difficult, for three reasons. First, Italy is more dependent than Germany on imported raw materials and less competitive in the world markets for exports. The lira would fall once she had consumed her capital assets abroad; and her exports would probably not increase sufficiently to enable her to maintain the volume of imports necessitated by her public works schemes. Secondly, unlike Germany, Italy is paradoxically unfortunate in the one sense that she does not owe foreigners enough on her external debt; so she cannot "block," or threaten to "block," lire which should be transferred. Therefore she cannot hope to lever up her exports and cajole tide-over credits in the way that Dr. Schacht has so ingeniously done. Thirdly, the example of Germany is a deterrent; and Germany's painful economic isolation is not as bad as Italy's would be. The lira has not weakened as much as might have been expected this week. It looks as if the Duce were intent on managing an Exchange Equalisation Fund with his citizens' foreign assets. As Italy has never been strictly on gold since 1927, in the sense that the Bank of Italy was legally compelled to deliver gold against notes, the lira has technically been a managed currency since then. This fact, often overlooked, may explain the need for last Saturday's decree.

A Clash in Somaliland.—The fighting which occurred between Italian and Abyssinian armed forces on December 5th is regrettable for many reasons. The scene of the engagement was the border between Abyssinia and Italian Somaliland, and the combatants were the garrison of an Italian military post and the Abyssinian escort of an Anglo-Abyssinian Commission which was investigating the grazing rights of the nomadic tribes which habitually cross the frontier between Abyssinia and British Somaliland in their seasonal migrations. The Italians say that the Abyssinian force came provocatively close to a long-established Italian post; the Abyssinians say that the post had been planted

some sixty miles beyond the frontier on the Abyssinian side, and that in such a case length of occupation confers no prescriptive right. The truth seems to be that the country in this region is only sketchily mapped, and that the Italo-Abyssinian frontier is only vaguely defined. More serious are the underlying grounds for Italo-Abyssinian suspicion and hostility. The Abyssinians have never forgotten that, in the last decade of the nineteenth century, Italy regarded it as her "manifest destiny" to acquire Abyssinia for her colonial empire; and the two Italian possessions of Somaliland and Eritrea, which survive to-day in isolation from one another on the coasts of the Indian Ocean and the Red Sea, are monuments of Italian imperial ambitions which were shattered by Abyssinian arms at the Battle of Adowa. Since then, Abyssinian suspicions of Italy's intentions have been revived by the Anglo-Italian agreement of December, 1925, in which these two neighbours of Abyssinia agreed, over Abyssinia's head, to put no obstacles in the way of one another's respective economic desiderata in Abyssinian territory. The British desideratum was to tap the waters of Lake Tana for the irrigation of the Sudan; the Italian was to build a railway between Eritrea and Italian Somaliland across Abyssinian territory. This agreement was largely explained away when Abyssinia protested against it at Geneva; but since then Abyssinia has found an effective way of making Italy uneasy, in her turn, by flirting with Japan. Latterly the Italians have been feeling the competition of Japanese textiles in the Abyssinian market; and it required Italian diplomatic pressure to quash the project for an Abyssino-Japanese royal marriage. As one of the two sole surviving independent native African States, Abyssinia may be drawn towards an Asiatic Power which is twisting Europe's tail.

M. Flandin and Food Prices.—When M. Flandin a fortnight ago announced his intention of returning to the paths of "economic liberalism," we confessed some scepticism about the probability of his living up to his brave words. Some scepticism was perhaps pardonable, in view of the widespread discrepancy between the professions and performances of statesmen in this matter during recent years. In particular, the vested interest of the farmer and peasant has everywhere stood like a rock in the way of all attempts to reduce the cost of living commensurately with the fall in world prices. However, on this occasion we did M. Flandin an injustice. For it has now been announced that the wholly uneconomic fixed price for French wheat, established last year, is to be abolished, and a free market is to be set up once more. A small but appreciable fall in the price of bread is expected to follow. It is true that M. Flandin's attachment to "economic liberalism" appears on examination to be somewhat platonic:

import restrictions are to be continued; production is to be limited; stocks are to be liquidated in various artificial ways; France is still to export; and the free price, in effect, is not to be the world price or anything like it, but a free price in an insulated French market. Nevertheless, M. Flandin has taken at least one step toward economic sanity; and this, in the contemporary world, is an event which must provoke surprise and gratitude. But could not he now go further? Could not he relax the French import restriction system and so reduce the cost of living and allow the gold standard to have its natural effect in an influx of imports and an outflow of gold? During 1933, before the advent of the Doumergue Government, France had a much heavier import surplus than she has had since. Yet she was far less depressed. And in the case of most of the countries with devalued currencies a freeing of the exchanges and an increase of imports has been an accompaniment, if not a cause, of recovery. If France could thus free her external trade without abandoning gold, she might reap some of the advantages of devaluation without suffering the shock. At any rate, it is almost certain that devaluation—which M. Flandin still indignantly repudiates—cannot be avoided without a further fall in the cost of living. For at present, as our Paris letter this week shows, production is still falling despite the drop in the cost of living that has so far taken place.

Assisting the Uninsured.—The Minister of Labour has just published the Unemployment Assistance Board instructions for the assessment of the needs and resources of applicants for relief under the new Act which is to become operative in January. These instructions, which attempt for the first time to make the standard of assistance as far as possible uniform in scale and administration all over the country, are rather higher than the course of the discussions in Parliament had suggested would be the case. For members of a household weekly basic needs are assessed at the rate of 16s. for a man, 14s. for a woman, or 24s. for a man and wife, with additional allowances for children up to 18 of 3s. to 6s., according to their age, and of 7s. to 10s. for older dependants, according to their age and sex. In the case of an only child the allowance is not to be less than 4s. On the other hand, a reduction of 1s. is to be made in respect of every member of a household in excess of five. For men and women living alone the rates are 15s. and 14s., respectively, for those aged 18 and over, and 13s. and 12s. for those under 18. An attempt has been made to adjust inequalities of need due to differences in rent in the following way. A basic rent allowance is fixed at 7s. 6d. for those whose needs are assessed at between 24s. and 30s., and this is raised or lowered by a quarter of the amount by which the assessments exceed or fall short of these limits. If the applicant is paying a net rent (i.e. rent minus receipts from sub-letting) of more or less than this basic rent, his assessed needs (with some exceptions) may be increased or reduced by the difference, provided the rent being paid is considered reasonable. This is to prevent any possible encouragement to landlords to raise rents, or to tenants to continue to pay high rents, when cheaper accommodation is available. The following table shows an interesting comparison of the scale of benefits needed to fulfil the B.M.A. standard of food and the standard of minimum fuel, clothing, light, etc., laid down by the Merseyside Survey with the actual rate at which needs will be assessed under the new regulations and with present unemployment benefit rates. The respective rents are assumed to be 6s., 7s. 6d., 7s. 6d. and 9s. per week:—

	Unemployment Insurance Benefit	Unemployment Assistance Board Scale	B.M.A. and Mersey Standard
Man and wife	26/-	22/6 to 24/-	22/8
Man, wife and one child under 5	28/-	28/-	27/9
Man, wife and three children under 10	32/-	35/7½	37/3
Man, wife and five children under 14	36/-	40/10½ to 45/6½	50/3

While the new scale makes far more adequate provision for larger households than before, it still falls short of the B.M.A. and Mersey standards of minimum needs in the fourth class.

The Assessment of Needs.—After defining needs, the Board has to estimate the resources of the members of the family. Several criticisms levelled against the administration of the Means Test in this respect have been recognised and met. As regards capital resources, the first £25 of savings is to be disregarded altogether, every further £25 up to a total of £300 is to be counted as an income of 1s. per week, and amounts above this are to be considered as available for immediate use. As regards income from sickness benefit the following items are to be disregarded entirely: the first 5s. per week sick pay from a Friendly Society; the first 7s. 6d. received under the National Health Insurance Acts, 1924-32; all maternity benefits under these Acts (except additional or second maternity benefits); the first £1 a week from a wound or disability pension; and half of any weekly payments under workmen's compensation enactments. Further, the Unemployment Assistance Board is to take into account the personal requirements of members of a household, other than the actual applicant for assistance, who contribute to its total resources, before assuming that such income is available for the household as a whole. These deductions are to be at the rate of 5s. per week for the wife, husband, father or mother of the applicant, of one-third of earnings up to 20s. and one-quarter of earnings above that amount for a son, daughter, brother or sister of the applicant, and of one-third of the earnings of all other members of the household. This seems quite a reasonable discrimination as between near and distant dependants. The regulations also contain certain important general provisos for the giving of assistance. First, in no case is the final assessment of benefit to exceed the amount which would be available to the household if the applicant and other members were employed in their normal occupation. Secondly, wide powers of discretion are given to increase or reduce benefits in exceptional cases. At present, the number of persons who will be affected by the Unemployment Assistance Scheme is about 1,000,000, together with their dependants. The increased cost of the scheme to the Exchequer will be about £11 millions. Of this, £8 millions will be in respect of persons formerly provided for by the Public Assistance Authorities. The other £3 millions is the estimated increase in expenditure on those who were formerly entitled to Transitional Payments.

Anglo-Polish Coal Agreement.—On December 6th representatives of British and Polish coalowners at last agreed to terminate a long economic struggle for foreign markets, and to "bury the hatchet." The agreement, which has yet to be ratified, provides (a) for the establishment of a tonnage relationship between British and Polish coal exports, and (b) for the maintenance of an appropriate relationship between the export prices of the two countries. No information is as yet available concerning the method of fixing prices and the tonnage ratio between the two countries. It is understood, however, that Polish exports by sea will bear a fixed relationship with variable British exports. But, as the following table shows, Poland is not the only coal-exporting country:—

EXPORTS OF COAL (In thousands of tons)						
Period	Belgium and Luxembourg	France	Germany	Poland	U.S.A.	U.K. (excl. bunkers)
1925	2,508	5,040	13,440	7,920	18,180	50,817
1927	2,916	4,848	26,520	10,920	18,780	51,149
1929	3,732	5,784	26,400	13,800	18,360	60,267
1931	3,900	4,570	24,000	12,360	16,200	54,874
1932	3,440	4,092	22,764	13,596	12,420	42,750
1933	3,530	3,440	18,000	10,060	9,033	38,899
		3,257	18,200	8,951	8,992	39,068

The combined total of the five leading overseas exporting countries is still only slightly larger than the volume of British exports. In fact, the British proportion of the total exports of the countries shown in the above table rose slightly from 47.0 per cent. in 1929 to 47.7 per cent. in 1933. Moreover, an appreciable proportion of the exports of some of these countries do not compete with British coal. But profitability has been seriously impaired by competitive price-cutting, and an agreement among European exporters would undoubtedly lead to an improvement in the situation. The future of the coal industry in this and other countries depends, however, upon a revival of demand, which might easily be stifled by a shortsighted price policy.

November Overseas Trade.—The preliminary figures of our overseas trade in November, published in this week's *Board of Trade Journal*, show a decrease in both imports and exports as compared with October, and a slight increase on November, 1933. But as contrasted with the returns for October, the increase in exports as compared with a year ago was greater than the rise in imports. The excess of imports over exports during the first eleven months of 1934 is now £260,047,000, an increase of £29,292,000 on 1933. The unfavourable balance of merchandise trade in 1934 is, however, likely to be smaller than seemed likely earlier in the year:—

MONTH OF NOVEMBER					
	1934	Increase (+) or Decrease (—) as compared with			
		November, 1933		November, 1932	
Imports	£'000	£'000	%	£'000	%
British exports	64,687	+ 958	+ 1.5	+ 3,171	+ 5.1
Re-exports	36,125	+ 1,890	+ 4.9	+ 5,031	+ 16.2
Total exports	4,008	+ 389	+ 10.7	— 52	— 1.3
Imports	40,133	+ 2,079	+ 5.3	+ 4,979	+ 14.1
Re-exports	24,554	+ 1,121	+ 4.4	+ 1,807	+ 6.9
Total imports	2,001	— 4	— 0.2	— 306	— 13.3

ELEVEN MONTHS ENDED NOVEMBER					
Imports	£'000	£'000	%	£'000	%
British exports	669,603	+ 56,752	+ 9.3	+ 27,145	+ 4.2
Re-exports	361,873	+ 24,861	+ 7.4	+ 29,232	+ 8.8
Total exports	47,683	+ 2,599	+ 5.8	+ 903	+ 1.9
Imports	409,556	+ 27,460	+ 7.2	+ 30,135	+ 8.0
Re-exports	260,047	+ 29,292	+ 12.7	+ 2,990	+ 1.1
Total imports	21,844	— 64	— 0.3	+ 1,347	+ 6.6

As far as imports are concerned, the value of food, drink and tobacco in November was £32,487,000, as compared with £35,682,000 in October and £31,992,000 a year ago. On the other hand, imports of raw materials declined from £16,982,000 in November last year to £16,893,000 in October and £16,740,000 in November, 1934. The *Economist's* index of the volume of imports of raw materials (corrected for seasonal variations) declined from 108 (1924 = 100) in October to 100 in November. A year ago the figure stood at 108. The value of manufactures imported in November, at £15,171,000, showed a decrease of £856,000 on October, but an increase of £621,000 on the corresponding month last year. The value of exports in November, though slightly lower than in the previous month, was appreciably higher than a year ago. Exports of manufactures, at £27,407,000, showed a rise of £1,606,000 in value and one of 5½ per cent. in volume. The slackening of the rate of British recovery is therefore reflected in these figures; for while we are now exporting more of the results of our labour on former increased raw material imports, our present imports of material are not keeping up to last year's figures.

Tea Restriction.—The policy of the International Tea Committee has so far been less drastic than that of most other restriction schemes. The Committee started off with an export quota of 85 per cent. of the agreed standard exports of 807.7 million lbs. from April 1, 1933. The agreed standard exports of the participating countries are: India, 382.6 million lbs.; Ceylon, 251.5 million lbs.; and the Dutch East Indies, 173.6 million lbs. Following an appreciable rise in prices, the quota was increased to 87½

per cent. from April 1, 1934. But during recent months the situation has again deteriorated. Stocks in bonded warehouses in this country increased from 253.2 million lbs. on September 30, 1933, to 258.6 million lbs. on the same day in 1934. The average price realised at the tea auctions in Mincing Lane declined from 13.01d. per lb. during the week ended November 30, 1933, to 11.90d. per lb. during the last week of the past month. Production outside the restricting countries was stimulated by the rise in prices following the adoption of the scheme, but so far the increase has not been very substantial. According to a recent estimate, total production in non-restriction countries rose from 134 million lbs. in 1932-33 to 143 million lbs. in 1933-34. As a result of the recent decline in prices and of the increase in stocks, the International Tea Committee recently decided to recommend a decrease in the export quota from 87½ per cent. to 82½ per cent. of the standard exports from April 1, 1935. Although the proportion of world production controlled by the restriction scheme is substantial, a rise in prices might easily lead to a further increase in "outside" production.

Employment in November.—The latest report of the Ministry of Labour shows that business activity in this country is being maintained, though it is not increasing as it did at the corresponding date of 1933. The number of insured persons aged 16-64 in employment in Great Britain on November 26, 1934, was approximately 10,212,000, an increase of 6,000 as compared with October 22nd of this year and of 252,000 as compared with November 20, 1933. The number of persons on the registers of Employment Exchanges, on the other hand, rose by 1,150 during the month and fell by only 159,232 during the year. The total of 2,120,785 consisted of 1,729,838 wholly unemployed, 309,643 temporarily stopped and 81,304 registered as "normally in casual employment." There has been a decrease of 146,100 and 41,400 (9.4 and 16.2 per cent.) in the number of men wholly and temporarily unemployed respectively. On the other hand, the number of women unemployed has increased since November, 1933, by 8,000, and the number of juveniles by 23,000. These figures are affected by the general deterioration in the textile trades as compared with last year, and by the unusually large number of children entering the labour market this summer. The following table shows the principal changes in the number of insured persons unemployed in different industries:—

	Increase (+) or Decrease (—) since Oct. 22, 1934		Increase (+) or Decrease (—) since Nov. 20, 1933	
	Number	Per cent.	Number	Per cent.
Coal mining	— 30,233	— 10.8	— 60,188	— 19.4
Iron and steel manufacture	— 118	— 0.3	— 13,760	— 24.2
Engineering	+ 989	+ 1.0	— 47,494	— 31.8
Shipbuilding and repairing	— 1,408	— 1.9	— 16,931	— 18.1
Motor vehicles, cycles and aircraft	— 2,286	— 8.8	— 7,384	— 23.8
Metal goods manufacture	— 237	— 0.4	— 10,638	— 13.9
Cotton	— 7,772	— 7.1	— 348	— 0.3
Woolen and worsted	— 2,692	— 8.1	+ 9,001	+ 42.2
Hosiery	— 1,259	— 11.3	+ 3,634	+ 58.0
Boot and shoe	— 1,008	— 4.5	— 985	— 4.4
Tailoring	+ 4,161	+ 14.0	+ 711	+ 2.1
Building	+ 17,453	+ 10.5	+ 4,720	+ 2.5
Public works contracting	+ 2,397	+ 1.9	— 2,673	— 2.0
Shipping service	+ 2,493	+ 5.2	+ 4,100	+ 7.5
Dock and harbour service	— 2,998	— 5.9	— 3,444	— 6.7
Hotel and boarding house service	+ 4,547	+ 6.2	+ 2,490	+ 3.3
Distribution	— 2,606	— 1.4	— 4,676	— 2.0

Total, all industries (registered persons)..... + 1,150 + 0.5 — 159,232 — 7.0

It will be seen that there has been very little change during the month in the position of the heavy industries, but consumption trades show increasing activity. The number of persons on the registers in London and Southern districts has increased by 19,153 during the month, but an improvement is to be looked for during the current month owing to increased business in the distributive and lighter industries. Scotland also records a large increase of 8,483. The Midland, North-Eastern and North-Western districts, on the other hand, show decreases of 10,447, 10,752 and 5,085 respectively, but in Wales there has been no change. A welcome sign of improvement is the decrease in the

proportion of unemployed persons who have been out of work for more than twelve months—from 23.3 per cent. in November, 1933, to 21 per cent. on November 26, 1934.

* * *

Shipping Freight Index.—As measured by our monthly index number, the general level of the whole cargo shipping freights fell by 1.6 per cent. during November, following a fall of 2.7 per cent. during October. The current figure of 86.2 compares with 85.5 in November last and 88.8 in November, 1932. Details of the index number are as follows:—

(1898-1913 = 100)					
	Average, 1913	November, 1933	September, 1934	October, 1934	November, 1934
European waters	110.0	87.1	90.3	87.8	86.6
North America	113.1	76.6	79.3	77.4	76.6
South America	123.4	80.8	82.8	78.1	79.4
India	106.3	82.7	98.6	96.3	94.5
Far East and Pacific	117.4	85.0	93.5	91.8	89.0
Australia	127.9	89.9	95.3	93.7	90.8
Total	116.3	85.5	89.9	87.5	86.2

While rates in most cases are rather lower than a month ago, freight markets have been very steady. Liverpool reports a moderate demand for outward coal tonnage, and a good tone in the River Plate homeward market. At Newcastle, Mediterranean trade is easier, but rates are firmer for coast-wise traffic and the Baltic. Demand at Glasgow is also mainly for the Baltic and other markets are quiet. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	85.1	+0.9	South America :		
Bay-outwards	95.4	-3.7	Outwards	64.2	-1.0
Bay-homewards	83.9	-3.2	Homewards	94.7	+3.8
Mediterranean :			India-outwards	77.9	+4.2
Outwards	85.9	-3.0	India-homewards	110.1	-8.9
Homewards	84.4	+1.1	Far East, etc.	89.0	-2.7
North America	76.6	-0.8	Australia	90.8	-2.9

Expressed as a percentage of the average for 1913, the total figure of our index number for November is 74.1, compared with 75.2 for October and 73.5 for November last year.

UNITED STATES

SIGNS OF BUSINESS RECOVERY

THE Federal Reserve Board indices for October showed a small upturn from September.

FEDERAL RESERVE BOARD INDICES

	Base 1923-5		Adjusted for Seasonal	
	Oct., 1933	Sept., 1934	Oct., 1933	Oct., 1934
Industrial production (total)	76	71	73	
Manufactures	76	69	72	
Minerals	81	82	80	
Construction contracts (total) ...	37	29	31	
Residential	12	11	12	
Others	57	44	46	
Factory employment	77.8	73.9	77	
Factory payrolls	59.4	57.9	60.7	
Freight car loadings	58	59	57	
Department store sales	70	75	75	

The principal recovery was in textile manufactures (from 64 in September to 90 in October); and this represented the ending of the strike. Except for department store sales, most of the October figures were about at the level of a year ago. The prevailing gossip of business men is rather at variance with these data, being on the whole more favourable. It seems almost incredible that the Treasury could have lavished its billions without producing some economic effects, even though they are statistically invisible. The current data suggest that November showed a continuing rise over October. Some of this recovery may be attributed to the reduced frequency and magnitude of strikes.

The foreign trade figures for October continued the record of recent months. October exports, at \$206 millions, exceeded both those of September and of October, 1933, although the comparison with September was by no means so striking as in recent months. This suggests the possibility that the maximum effect of the impact of devaluation upon our export trade may have been felt. October imports present the opposite picture, being less than those of September and less than those of October, 1933. For the ten months merchandise exports have been almost \$500 millions above 1933, while imports are less than \$200 millions greater—that increase having occurred in the first six months of the year. For the ten months our excess of merchandise exports is almost four times that of the same period of 1933, viz., \$396 millions against \$111 millions. This is the more remarkable since our exports of various agricultural commodities are substantially lower than last year. October saw

the beginning of the recent gold import movement, but the net gold import was only \$11 millions, being exceeded by the silver import of \$13 millions. In so far as an increasing export trade is evidence of, or contribution to, our recovery, it is welcome; but in the financial district these figures are received with mixed sentiments, as it is realised that the counterpart of the excess of merchandise exports is the import of the equivalent of more than the world's gold production in the current year.

The gold influx which started in October has amounted to over \$125 millions, of which \$112 millions came in November. About half has come from France, with the rest scattered. For the eleven months our monetary gold stock has increased \$1,250 millions, of which domestic production accounts for about \$75 millions, and \$90 millions is recovery of gold used in the arts.

A part of the A.A.A. cotton programme for the coming crop-year has been announced. The standard rate of curtailment is 25 per cent. (from the base acreage), against 40 per cent. this year, and contemplates a crop of 12 million bales against an actual crop of under 10 millions this year. The announcement omits the important question—the official loan price; for this year it has been 12 cents. The establishment of this figure set the domestic price for the current year, and it has proved so high as to restrain the export of the crop. As a result of the loan arrangement it appears likely that a considerable portion of the current crop will be added to the Government stocks. In cotton, the A.A.A. control scheme has become decidedly subordinate to the loan feature, which is merely a synonym for price-fixing; and it has reverted to the well-remembered tactics of the Farm Board. It seems scarcely likely that the domestic official price for 1935 will be less than 12 cents a lb.; but there is always the possibility that at some time the Government will endeavour to unload its surplus cotton abroad at a figure below the official price.

THE UNDERVALUATION OF THE DOLLAR

That the dollar has been an undervalued currency during 1934 your correspondent considers a statistically demonstrable fact. The article entitled "The Eternal Triangle," which appeared in the *Economist* of October 27, 1934, reached that conclusion from considerations of relative price indices. This correspondence has argued it from the movements of merchandise imports and exports, and from the gold flow. The measure of this undervaluation and its consequences is far from determinate, but the editorial statement of the *Economist* (page 17, November 17, 1934),

that "The United States is smashing the post-crisis gold standard before it has been set up," indicates the threat rather than the actuality. First of all, when the dollar was established at the end of January, 1934, on the basis of gold at \$35 an ounce, the actual dollar was valued in the exchanges about 10 per cent. higher, on the basis of gold at about \$32.50 an ounce. Britain met this adjustment through the gold market, with the result that the pound-dollar relationship maintained its continuity in the vicinity of \$5; but the gold currencies appreciated in terms of both the dollar and sterling. The main gold flow of the year occurred under the impulse of our sudden adoption of the \$35 price; and to that extent represented a transitory influence. Meanwhile our trade balance was becoming more favourable throughout the year.

There is some reason to think, however, that the increase in exports is approaching its culmination. Three factors have influenced our imports: first, there was the "flight from the dollar" into imported raw materials which took the form (in 1933) of heavy anticipatory buying in rubber, tin, etc.—again a movement of transitory character; second, the devaluation added substantially to a tariff system which had been designed to be all but prohibitive on many foreign manufactures. Third, there was the great slump in American business from May to the present, which seems to have produced a visible reduction in our imports—at least there is a coincidence in time. Assuming this severe recurrence of the depression to be temporary, one might expect that further recovery would be attended by some increase in imports in coming months. As for the recent gold imports, there has been considerable evidence that the repatriation of American capital played a considerable part—again a transitory influence. Finally, while our economy is so saturated with credit that gold imports of approximately \$1,000 millions in a calendar year have no perceptible influence, the fact remains that our prices have shown through 1934 what might be called a persistent tendency to rise.

Altogether, one might accept the premise that the dollar was considerably undervalued in the beginning of 1934, that it is now undervalued by some uncertain percentage, and the deduction that this undervaluation has impeded the progress of other countries during the current year; but one would hesitate to make a projection of the future on the basis of the data of 1934. Several other considerations seem to be of greater future weight. First of all, our agricultural policy, if we can be said to have one, seems to contemplate a scheme of Government fixation of domestic agricultural prices, combined with some curtailment of output but not necessarily to the level of domestic consumption. Cotton is a commodity in point. This policy seems to contemplate a surplus, which comes into the possession of the State; but no scheme for its disposal has been announced. Second, the flow of international investment and speculative capital frequently dominates the exchanges. While America has, until very recently, lent no money abroad formally for years, there was, at times, in 1933 and 1934, some exodus of American capital, and, recently, some repatriation. These sums could easily have exceeded even the large figure of our current trade balance. Finally, there is always the chance that at some phase our security markets may prove a magnet for substantial sums of European capital. In such an event factors like trade balances resulting from relative devaluation would shrink into insignificance.

In short, it seems that at the end of 1933 the dollar was decidedly undervalued, that at the end of 1934 the dollar may be undervalued, but to a lesser degree; that the consequences of the initial undervaluation were largely experienced in 1934, and will be of diminishing influence in 1935, even making some allowance for various lags. On the other hand, our indeterminate agricultural policy could, under certain developments, have a considerable influence upon other agricultural countries; and the possibility of a flow of European capital into the American security markets, sufficient to derange conditions abroad, is quite within range of the imagination.

NEW YORK, December 3.

FRANCE

FREEDING THE WHEAT MARKET

WHILE the Senate is expediting its examination of the Budget Bill, the Chamber is applying the emergency procedure to the Wheat Bill, so that both may become law for Christmas.

The agricultural and financial committees of the Chamber have modified the Government Wheat Bill on the ground that the freeing of wheat sales in three months would be too rapid and dangerous, so the fixed price will not be abolished before July, 1935. The Minister of Finance has also limited the sums to be expended in liquidating stocks before July. This limitation required an exact estimate of wheat stocks:—

(000,000 quintals)	
Stocks—	
1933 surplus	24
1934 crop	88
Imports from North Africa	3
Total	115
Consumption—	
Seeds	10
Consumption	78
Exports realised	3
Denaturation realised	1
Total	92
Surplus	23

The financial resources needed have been fixed at 1,880 million francs, out of which 380 millions will be recovered through the sale by the State of "denatured" wheat, and 1,500 millions will be furnished by a loan to be issued. Interest and amortisation on this loan will be guaranteed by an increase of the production tax and a doubling of the milling tax, which will produce 175 millions, the balance to be furnished by the existing Wheat Fund. The price of bread should be lowered, nevertheless, before the end of the year.

The Government's wine policy has been endorsed by the Chamber Committee. It proposes to form a reserve of 10 million hectolitres and to distil 15 million hectolitres. The financial backing for these operations is to be obtained by an increase of 5 francs in the circulation tax. Thus, in the case of wine as of wheat, the liquidation of stocks is provided by the market. Parliament is in general unfavourable to the policy of controlling production which is included in the Governmental plans for freeing prices.

The rapidity with which the Budget and the Wheat Bill have been handled by Parliament has improved sentiment on the security markets. The investing public has subscribed with alacrity to recent loans, such as the Ville de Paris 5 per cent. debentures issued at 900 francs and redeemable at 1,000 francs between 1956 and 1975, and the colonial loans of 5 per cent. issued at 910 francs and amortisable at 1,000 francs in 48½ years. The amount of the loans was inconsiderable: 390 millions for the Ville de Paris and 150 millions for the Colonies.

FALL IN WHOLESALE AND RETAIL PRICES

The Statistique Générale de la France has just published its index of prices for November. Wholesale prices of meat kinds fell:—

	Articles	(1913=100)		
		End of Sept.	End of Oct.	End of Nov.
General index	126	365	357	356
Foodstuffs	39	383	368	366
Vegetable food	24	366	351	346
Animal food	15	413	396	400
Industrial products	87	350	347	347
Ores and metals	17	376	378	379
Textiles	19	305	302	305

Retail prices in Paris are falling rapidly. The figure for November was 464 (1914 = 100), compared with 466 in October and 467 in September and an average of 475 in 1933.

The annual reports of iron and steel companies show that a great deal of plant is idle as a result of diminishing

orders, particularly in the home market. But the reconstruction of the international selling organisation has led to some increase of orders. Interest is therefore expressed in the result of the negotiations going on with Great Britain about the possibility of her adherence to the International Cartel.

Production of pig-iron increased from 499,000 tons in September to 530,000 tons in October, compared with 537,000 tons in October, 1933. In general, however, production is still falling:—

	INDUSTRIAL PRODUCTION (1913=100)			
	Oct., 1933	Aug., 1934	Sept., 1934	Oct., 1934
General index	108	97	95	94
Engineering	111	100	99	98
Iron and steel	81	81	79	79
Textiles	77	55	54	55
Mines	101	101	102	101
Building (adjusted figures) ..	88	81	80	77
Leather (" ") ..	103	96	90	85
Paper (" ") ..	126	149	141	133
Rubber (" ") ..	930	856	852	840
Motors (" ") ..	438	468	466	452

In the motor industry, 9,331 automobiles and 1,562 lorries have been put on the road, compared with 8,361 and 1,771 in October, 1933.

The figures for the cotton industry are as follows:—

	July, 1934	Aug., 1934	Sept., 1934	Oct., 1934
Spinning (average per spindle in kilograms):—				
Production	1.370	1.343	1.277	1.422
Deliveries	1.364	1.282	1.352	1.464
Stocks	2.482	2.541	2.503	2.468
Unfulfilled orders	4.459	4.408	4.076	3.921
Weaving (average per loom in pieces of 100 metres):				
Production	4.49	4.20	3.66	3.94
Deliveries	4.30	4.19	3.17	3.78
Stocks	9.87	9.82	10.64	10.51
Unfulfilled orders	11.74	10.21	9.74	9.88

Bankruptcies in November amounted to 933, against 896 in October and 596 in September; bankruptcies and judicial liquidations were 1,292, against 1,331 in October and 893 in September.

PARIS, December 13.

GERMANY

BANK REFORM LAW

THE Bank Reform Law, which is to come into force on January 1st, embodies in more precise form the recommendations of the committee reported in this letter last week. It embraces all classes of banks, with the exceptions of the Reichsbank, the Gold Discount Bank, the Reichspost (postal cheque accounts), and housing credit institutions. The provisions for the grant of concessions are elastic. Permission to establish a bank may be refused, not only on the ground of personal unfitness or of insufficient resources, but also if the foundation does not seem to be justified by local or general conditions. The authority for concessions is the Reich Commissar for Credit, who is the executive officer of the Bank Supervision Office. The Commissar may withdraw a concession, in which case the bank must close, but he must first hear the banker's case. Changes in leading personnel, or in capital, and proposals to fuse banks must be reported to the Commissar. The terms "bank" and "savings bank" are legally protected. Members of the Bank Supervision Office, which is to be attached to the Reichsbank, are, as president, the president of the Reichsbank, the Reichsbank's vice-president as deputy, a person to be appointed by the Chancellor, and the Secretaries of State of the Ministries of Finance, Economy, Food and Interior.

The Bank Commissar is entitled to attend sessions, but has only an advisory voice. Decisions and ordinances of the Office will be made by its president, "after consultation with the other members." The Reich Government is to decide in doubtful cases; in particular if a member opposes a proposed decision. From this it seems that in

most cases the president of the Office (the Reichsbank president) will decide after merely hearing the opinions of his fellow members. Against decisions or measures of the Bank Commissar appeal may be made within a stated term to the Bank Office; otherwise the Commissar's measures are valid and irrevocable. The general function of the Office is to remove banking abuses. The Office can take measures if a bank gets into difficulties, and it can lay down principles for the management of banks. In general the Commissar is subject to the Minister of Economy.

The most detailed provisions of the law concern liquidity. After defining precisely the terms "liabilities," "capital" and "reserves," the law prescribes that the credit given by a bank to a single borrower shall not exceed a certain percentage of the bank's capital which is to be fixed by the Bank Office. Interdependent and connected borrowers count as a single borrower. Unsecured credits exceeding Rm. 5,000 may be given only on condition that the credit taker reveals to the bank his financial condition. Banks must maintain a cash reserve consisting of their own cash holdings, and their deposits in the Reichsbank and on postal cheque account. The cash reserve is not to fall below a percentage of liabilities to be fixed by the Bank Office, which may vary for different classes of banks but may not exceed 10 per cent.

The banks have also to maintain a sum equal to a percentage (also to be fixed by the Bank Office) of their liabilities in trade bills payable within ninety days and in securities valid for Reichsbank advances. Here also the percentage may vary for different bank classes, but may in no case exceed 30 per cent. A bank's holdings of company shares (other than its permanent participations in a company) and of bonds not quoted on German bourses, must not exceed a certain percentage of its liabilities to be fixed by the Bank Office; this percentage is not to be lower than 5 per cent. Investment by a bank in real estate is limited. The Office is authorised to fix a maximum ratio of total liabilities to capital, variously for different classes or groups of banks, with the condition that a bank's liabilities, less the liquid assets of the two classes above mentioned, shall not be more than fivefold in excess of the capital.

SEASONAL INCREASE IN UNEMPLOYMENT

The number of unemployed rose in November by 86,000 to 2,354,000. The winter seasonal unemployment increase has begun one month earlier than in 1933, when November showed a small decline; but it is still much later than in the depression years. The October report shows a continued increase in the proportion of all working places that are occupied, but the ratio of total hours worked to the possible maximum remains considerably lower. According to the November reports of the Chambers of Commerce, the production goods branches are still active, though some consumption goods branches are slack. The supply of textile raw materials is described as still scarce, but export of textiles is more active. The department stores show very considerable increases in business. Turnover in October was between 24 to 30 per cent. higher than in the same month of 1933. Railway car loadings in October were 10.8 per cent. higher than in October, 1933, 6.8 per cent. lower than in October, 1930. Freight traffic on internal waterways very considerably increased.

The wholesale price index for December 5th was 101.1, as against 101.2 on November 28th. The competence of the Reich Price Commissar has been extended from "necessary goods and services" to the whole business domain, except wages, and therefore includes the instruments and materials of production. Advances in the price of meat have been entirely prohibited. According to the Price Commissar's latest statement his attention will next be concentrated on cartel-fixed prices. The Commissar reports that the hoarding of goods on price grounds, which was very active some weeks ago, has ceased. More precise rules about the display of prices and quantities have been issued.

The official report on the condition of winter sowings on December 1st is favourable. Both wheat and rye show an improvement, compared with November. According to the definitive crop returns for 1934 some 7,600,000 tons of rye were harvested, against 8,700,000 tons in 1933; 4,700,000

tons of wheat and spelt, against 5,800,000 tons; 3,200,000 tons of barley, against 3,500,000 tons; and 5,500,000 tons of oats, against 7,000,000 tons. There was a falling-off, therefore, of cereals of about 4,000,000 tons, but the figures for rye, wheat and barley are above the average of the preceding decade.

The Ministry of Economy has extended to chemical and mechanical cellulose the restrictions on production imposed in May this year on paper and cardboard. It is officially stated that the establishment of new cellulose works for the production of raw material for the new textiles substitutes must be prevented, since the existing works, which are not fully occupied, suffice.

Money last week was in increased demand, and this week the quarterly income-tax liability has kept the market stiff. The day loan rate has been 4-4½ per cent., and the demand for Reich short-term securities has been small. Reichsbank credits and investments declined in the first week of December by Rm. 172 millions, or by 39 per cent. of the additional month-end credits of the last November week. The average term of bills in the Bank's discount portfolio is somewhat longer than a year ago. It is understood that about half the bills held are for "work creation." Deposits, for the first time, show a very sharp drop, being down to Rm. 3,717 millions, as against Rm. 3,810 millions on November 30th. This is in part due to withdrawals for meeting bills, in part to a decline in foreign clearing deposits. The Bank of England credit of £750,000 for the payment of British commercial debts appears in the "other assets" of the return of December 7th. A new clearing agreement has been reached with Switzerland.

BERLIN, December 12.

ITALY

DEFLATION AND THE LIRA

SUBSCRIPTIONS for the 2,000 million lire 9-year 4 per cent. Treasury loan at par were opened on November 21st. Subscriptions amounted to 3,935 million lire by 563,004 subscribers. Small subscriptions will be accepted in full, reductions being made progressively. The purpose of the loan has not been fully explained. As the Budget deficit for the first four months of the current financial year is 730 million lire, against 1,527 millions for the corresponding period in 1933, and will amount possibly to 2,000 million lire for the whole year, a loan was not needed. The Loan and Deposit Bank (Cassa Depositi e Prestiti) and other public institutions are well able to aid the Treasury, and, in fact, had lent them in the same period 660 million lire.

Signor De Stefani, in the *Corriere della Sera*, has repeatedly hinted that the best use of the proceeds of the loan would be the reduction of the note circulation of the Bank of Italy. The monetary situation is undoubtedly the core of the general economic situation:—

	(000,000 lire)		
	Notes in Circulation	Total Gold Reserve	Discounts and Advances (including Advances to the I.R.I.)
December 31, 1933	13,243.3	7,396.7	5,831.3
October 31, 1934	13,255.4	6,098.8	6,083.3

In November the gold reserve fell to below the 6,000 million lire level, which to many observers looks very disconcerting. To counteract the fall of the reserve most people are asking for new restrictions on international trade. The Government most wisely has decided instead to issue the 2,000-million loan, and (on November 24th) raised the official rate of discount from 3 to 4 per cent. and the rate of interest on advances from 3½ to 4½. If the proceeds of the loan are utilised to reimburse the Bank of Italy the sums advanced to the I.R.I. and other frozen advances—which are already a charge on the Treasury—the circulation will be restricted to about 11,000 million lire; and a deflationary pressure will be exerted on the price level more effective and better distributed than that exercised by a general indiscriminate drive for a 5 or 10 per cent. all-round reduction of prices. The rise of the rate of discount should also contribute to this

An Income of 5% plus a return of Capital

The Society has devised a scheme whereby an income of 5 per cent. on the Capital invested is secured for life, and on death a return of a portion of the Capital is guaranteed. The investor, moreover, is entitled to participate in the profits of the Society in respect of this portion, and will thus obtain the benefit of any future favourable trend in the investment situation.

end and should counteract the tendency to a flight of capital which has recently been visible.

TURIN, December 6.

NEW EMERGENCY DECREES

(By Air Mail)

A further fall of the total gold reserve was announced on December 7th.

TOTAL GOLD RESERVE: ITALY

	(Million lire)	
December 31, 1933	7,396.7	June 30, 1934
March 31, 1934	6,918.2	October 31, 1934
December 7, 1934	5,866.8	

On Saturday, December 8th, a decree was issued by the Cabinet Council for the enforcement of a full-dress control of foreign exchange transactions.

A distinction is drawn between two kinds of foreign assets on the one hand: (a) *Credits*, i.e. money in current or deposit account or otherwise held, and sums due for goods sold, etc., and (b) *Securities*, foreign or Italian, if issued in foreign countries, whether held in Italy or otherwise; and, on the other hand, between two kinds of holders: (1) firms, banks, bankers, companies and bodies, and (2) private citizens.

As to the (a) credits possessed by class (1), they must be offered to the "National Institute for Foreign Exchanges." If requested, the possessor must sell at the current rate all immediately realisable credits, and, at a price to be settled, the non-liquid credits. Forms must be sent to the Bank of Italy containing all necessary data within 10 days from December 8th; and all credits arising thereafter must be reported to the same bank within 10 days of their origin. The same firms, companies or bodies must also send, within 10 days, a report to the Bank of Italy on their obligations in the shape of payments due to foreign creditors.

Class (2) holders of credits abroad are only obliged to send to the Bank of Italy by December 31, 1934, and thereafter within 15 days from their origin, a report on all their Class (a) credit claims on parties resident in foreign countries.

Both firms and private citizens (Classes 1 and 2) are obliged to send by December 31st, 1934, and afterwards within 15 days of any alterations, a report on their Class (b) security holdings and subsequent variations.

Insurance and transport companies or agencies are authorised to keep foreign exchange accounts; but at the end of each quarter must send to the Bank of Italy a report on their transactions and on the state of their funds of foreign exchange.

Very detailed regulations about exports are issued, the gist of which is that no export is permissible without a previous report to the Bank of Italy and the latter's authorisation. All credits arising from exports must be sold to the National Institute for Foreign Exchanges. In each province a Committee will revise prices reported for goods sold.

Offenders are liable to heavy penalties up to one year's imprisonment or a sum equal to the non-reported amounts,

and possibly confinement (*confino*) in the islands. The Bank of Italy's directors and employees must keep secret all foreign exchange transactions. The purpose of the decrees is to give the Treasury and the Bank of Italy actual disposal of all credits abroad, whether they arise from present foreign assets or from future exports. Later on, if need be, arrangements may be made for the sale of the securities, which must meanwhile be reported.

REACTIONS TO THE DECREES

Newspaper comments on the new State monopoly of foreign exchange can be summarised thus: The lira is unchanged, unchangeable and independent. Perhaps a more matter-of-fact explanation of the events which culminated in the recent decree may be found in an illuminating monthly review of the Treasury and Budget accounts by Signor Mazzucchelli in *Rivista Bancaria* for May of this year. Total gold reserves of the Bank of Italy, including gold exchange, increased during 1926 and 1927, reaching the maximum of 12,518.8½ million lire on April 30, 1928, mainly owing to loans issued in foreign countries (mostly U.S.A.) by the State and other public and private bodies and concerns. Signor Mazzucchelli calculates the amount of these gold-producing loans at 8,000 million lire, the greater part of the gold proceeds going to the Bank of Italy. As happened before in the 'eighties after the 640 million gold lire loan for Italy's adherence to gold, an opposite movement began in April, 1928. Partly in consequence of the interest and amortisation payments abroad, but mostly of the repurchase by Italians of Italian securities issued in foreign countries, gold was bound to return abroad; and Italy was left with a gold reserve roughly corresponding to the reserve held before the ill-fated 1926-27 loans. But though these decreases in gold holdings were, in a way, a favourable index of the capacity of Italian new savings to repatriate Italian securities, further decreases below the 7,000 million lire were deemed disquieting. The decrease of about 1,500 million lire in the first 11 months of 1934 cannot be said to originate in the current income deficit of the international balance of payments.

Signor Mussolini, in his speech of May 26, 1934, in the Chamber of Deputies, estimated the proportion due to capital flight at one-third of the whole decrease. The State monopoly of foreign exchange ought, in the first place, to compel exporters to reimport all their balances held abroad. Then, if need be, the State may also requisition foreign and Italian foreign-issued securities. It should be observed that Italian foreign-issued securities which have already been repatriated cannot exercise any pressure on the foreign exchanges. Last June, all foreign and foreign-issued securities were stamped, thus enabling the Treasury to estimate their exact amount. No estimate has yet been published. As to bank and other balances held by Italians in foreign countries, a figure of 8,000 million lire was widely accepted in 1923, among others by Professor Pantaleoni. Now the amount would be vastly reduced. The crisis has reduced these credits and has obliged many holders to cash what was left. The recent increase in the rate of discount of the Bank of Italy should have worked, if not to invite foreign capital, at least to induce exporters to draw on their foreign balances.

TURIN, *December 12.*

SWEDEN

RECOVERY WELL MAINTAINED

OWING, no doubt, to the halt in world recovery, the steeply rising economic curve of the spring has been interrupted in Sweden also. But the setback here has been very slight. In normal years, owing to the strong seasonal tendencies due to climatic conditions, the curve of Swedish production usually shows a decided upward movement in the spring months, followed by a slackening in the summer and succeeded in the autumn by a new and more pronounced rise. This year *Industriförbundet's* index of production shows a rise from 103 in January (1925-30 = 100) to 112 in June. The summer slackening shows itself in the fall during July to 107, a setback which is perhaps too

great to be accounted for by ordinary seasonal causes, but the index number then rose to 112 in August, 112 in September and 111 in October. In other words, the highest level of the spring was again reached, although it has not been surpassed. The setback in October was confined to the consumption industries.

Compared with earlier years, the present recovery is very striking. The general index number which Kommerskollegium calculates on the basis of the quantity of work offered and a number of other data from various branches of industry is most illuminating. The highest point in the preceding boom was reached by this index (4 indicates good and 3 fairly good), with 3.51 for the three quarters of 1929, and the lowest point of the subsequent depression by 2.30 for the first quarter in 1933. Since then the figure has risen continuously, and in the last quarter of 1933 it had touched 3.08, and for the first three quarters of this year 3.24, 3.55, and 3.63 respectively. Thus as early as the second quarter of this year the highest point in the 1929 boom had been passed, and during the third quarter the increase was still in progress. The general development is clearly reflected in the statistics of unemployment. Indeed, the improvement has been so great that it is questionable whether the unemployment which still remains is really abnormal or "conjunctural." It seems to have been gradually reduced to dimensions which may be regarded as normal. The number of applications for work per 100 vacancies at the public labour exchanges was at its lowest in September, 1929, at 127. It rose successively to a maximum of 689 in 1932. It then improved to 560 in January this year and to 286 in September. These variations include also the usual seasonal disturbances, which may be seen. The statistics of the Unemployment Commission for the number of unemployed seeking assistance reached a maximum of 188,000 in February, 1933, and then declined to 171,000 in January, 1934, and to 79,000 in October.

THE INCREASE IN FOREIGN TRADE

The slackening off in recovery this autumn is reflected in the foreign trade figures. In the first half of 1934 there was an increase in exports of about 30 per cent. in value compared with 1933; in July the excess was 10 per cent., and during the three following months 13, 7, and 10 per cent. respectively. Imports in the first half-year showed an increase of 20 per cent. in value over last year, and during July and August the increase was respectively 24 per cent. and 22 per cent. In September it was 12 per cent., and has remained much the same since. In October the balance of trade swung seasonally from active to passive.

In the money market a surplus of capital and falling rates of interest have prevailed. In October, as against a continued accumulation of deposits and restricted loans, there was a corresponding increase of exchange reserves, so that the liquidity of the commercial banks has become still more pronounced. The funds of the latter amounted to Kr. 688 millions, and the effective loan surplus to Kr. 109 millions. The commercial banks possessed Kr. 430 millions sight assets and foreign investments of Kr. 195 millions. In other words, we are approaching a surplus of deposits, and in the case of particular banks this position has already arisen. Consequently the first attempt of the National Debt Commission to place Treasury bills in the open market in the English manner has been successful. Offers were invited for three months' bills for Kr. 15 millions, and roughly Kr. 80 millions was subscribed at an average interest rate of not quite $\frac{1}{2}$ per cent. The $\frac{3}{4}$ per cent. national loan of 1933 stands at 106-107, and quite recently one of the largest timber companies converted an early debenture issue to $3\frac{3}{4}$ per cent. The market now appears to be ripe for industrial flotations at $3\frac{1}{2}$ per cent. Another significant manifestation of the abundant supplies of capital and the difficulties of investing it on a reasonably profitable basis has been the extraordinary firmness of the Stockholm Stock Exchange during a large part of the autumn. Although the level of prices during the summer months has not shown any particular change, there occurred in September a rise in Stock Exchange value of A-list shares of Kr. 4 millions, and during October no less than Kr. 150 millions. In November, however, a more cautious tone supervened.

STOCKHOLM, *December 7.*

SWITZERLAND

FROM PROTECTION TO DEFLATION

SWITZERLAND is on the point of completely modifying the economic policy pursued during the past three years, as it is now evident that excessive protection is leading the country to ruin.

In order to defend Swiss industry and commerce against the competition of countries with a depreciated currency, the Swiss Federal Government has been raising Customs duties and setting up import quotas designed to prevent the Swiss market from being flooded by cheap foreign goods. Simultaneously, State subsidies have been granted to a number of industries in the hope of combating unemployment, lowering costs of production and fostering exports. These measures have not given the expected results. Imports have been reduced by about 15 per cent., but unemployment has continued to rise. Exports have not improved; indeed, they had decreased during the past two years. The grant of subsidies proved a heavy burden for the Federal Treasury, the receipts of which have been dwindling, and the raising of Customs duties has prevented the cost of living from being reduced as it should have been. The result of protection as a whole has been to make Switzerland an island of high prices.

The most stubborn supporter of this protectionist policy was the chief of the Federal Department of Public Economy, Federal Councillor Edmund Schulthess. His views were opposed and combated by his colleague, Federal Councillor M. Musy, chief of the Federal Finance Department, who was a strong partisan of deflation—that is, of a drastic reduction in all costs and a general lowering of prices. Last March, M. Musy resigned, and since then M. Schulthess has changed his mind. In a recent speech which caused a widespread sensation in Switzerland, M. Schulthess admitted frankly the complete failure of his protective policy, and laid stress on the urgent necessity of bringing about a general deflation. He remarked that the Federal Budget deficit for 1935 will exceed 70 million francs—including extraordinary expenditure—and that the Federal Railways will show a deficit of about 50 millions. He estimated that, including the deficit of cantonal and municipal accounts, Swiss public finances will record next year an aggregate deficit of nearly 200 millions.

M. Schulthess gallantly acknowledges the failure of his system, and he now advocates the adoption of a deflation policy providing for drastic curtailments in all State expenditure, particularly State subsidies. His plans—and the Government's plans—are not yet definite, but Parliament will be called upon to decide on a Government proposal for the grant of full powers to the Federal Council in order to carry out a general reduction in workers' and employees' salaries, in the prices of goods which would be regulated by the Government, and in the rents of houses, flats and farmhouses. Once the Government is invested with full powers it will entrust the Department of Public Economy with the task of proposing the means likely to reduce the cost of living.

This deflationary policy should not cause any modification in the Swiss monetary system. There is no question of abandoning the gold standard, as Switzerland lives on the credit and confidence she enjoys with other countries.

GENEVA, *December 10.*

ARGENTINA

PROPOSED TAX ON FOREIGN FIRMS' PROFITS

THE Bill proposing a surtax on remittances of profits by foreign limited liability companies is being very strongly opposed by the Committee of Foreign Chambers of Commerce. Meanwhile a new Bill has been presented to Congress proposing a special inheritance tax on the lines of the British death duties. This tax is designed to range from 1 per cent. to 12 per cent., according to the global value of the estate. The tax appears to be just and equitable, and it will reduce, in time, the number of large

privately-owned properties. The new internal loan described in this correspondence a fortnight ago has been a marked success. The issue was oversubscribed.

The Grain Regulating Board have issued their report on results during the first year of their operations. These show a loss of \$8,815,942, and stocks of wheat on hand at November 30th amounted to 167,153 tons. The above loss is very much less than was originally expected owing to the rise in the price of cereals as a result of the American drought, and there is no doubt that the action of the Board in fixing a minimum price did much to assist the farmers in the early part of the year. From the published figures it appears that the Board were not guilty of the fault of holding stocks in the hope of obtaining better prices. The basic prices are being maintained during the coming year, but should present quotations continue firm, it is to be hoped that the Board will not incur any losses.

THE GOVERNMENT'S EXCHANGE PROFIT

The Ministry of Finance have at last published figures showing the result of the first ten months of their intervention in the exchange market. The total profit on their operations is slightly over \$91,200,000. The amount of exchange sold by the Bureau was \$764,700,000. To the above profit must be added some \$5,000,000 received by the Government in respect of their operations on the free exchange market. This latter sum was delivered to the National Treasury as compensation for the suppression of the 10 per cent. tax on private remittances. The distribution of the \$91,200,000 is as follows: \$24,600,000 handed to the Treasury to cover losses on remittances in respect of foreign debt services, etc., \$8,800,000 used in covering losses of the Grain Regulating Board and \$1,700,000 granted to the Dairy Industry Regulating Board for return to the producers as compensation for the low prices obtained for their products. The balance of \$56,100,000 is held in cash and foreign currencies for a purpose not as yet specified. Apart from the profit on exchange, the Government also hold an overbought position in foreign currencies, amounting to approximately \$71,900,000, which is being utilised as an exchange equalisation fund. This fund has, of course, been formed at the expense of those foreign companies which cannot obtain sufficient exchange at the official rate to cover their commitments; it has been suggested, however, that part of the \$56,100,000 mentioned above will be destined to assist such companies as are in need of foreign currency.

The following is the value of Argentine imports and exports, by countries, for the first ten months of 1934:—

	Market Values of Argentine Imports, according to Origin		Percentage of Total	
	1933	1934	1933	1934
	\$	\$		
United Kingdom	169,760,011	188,681,407	21·4	22·8
United States ...	97,468,348	126,100,687	12·3	15·2
Germany	83,377,609	82,957,582	10·5	10·0
Italy	74,465,253	55,845,848	9·4	6·8

Market Values of Argentine Exports according to Destination				
	\$	\$		
United Kingdom	339,116,378	404,033,990	36.4	33.3
Netherlands	89,485,432	103,334,341	9.6	8.5
Belgium	94,210,627	101,042,570	10.0	8.3
Germany	67,722,061	89,057,632	7.3	7.3

Imports continue to increase; Great Britain is maintaining her place well at the head of the list and increasing her percentage of the total. The import of textiles showed a

slight falling off as compared with last year, due no doubt to the increase in domestic manufacture which is protected by the depreciated peso.

Buenos Aires, December 1.

AUSTRALIA

BUDGET DEFICITS IN 1934-35

THE Budgets of the six Australian States for 1934-35 show estimated deficits aggregating £5,525,010, but the Commonwealth shows an estimated surplus of £13,810, leaving a net total deficit for the seven Governments of £5,511,200, after providing for sinking funds as part of the expenditure. The State deficits are £2,910,000 for New South Wales, £243,496 for Victoria, £1,001,457 for Queensland, £517,820 for South Australia, £644,452 for Western Australia, and £207,785 for Tasmania. Although the ordinary revenue and expenditure accounts remain unbalanced, taxation continues at a high level, especially in comparison with the aggregate value of production. The loan expenditure on public works for 1934-35 is estimated at £25 millions for the States, and £1½ millions for the Commonwealth, a total of £26½ millions. This total is to be provided partly by the internal loan last June and partly by further internal borrowing still to be carried out.

The quarterly average banking returns to September 30th for Australia (exclusive of London) show deposits of £290,133,642, or an increase of £21,482,410 as compared with a year ago; advances £242,336,927, or an increase of £5,213,495; and Government and municipal securities £50,712,453, or a decrease of £181,392. The relatively large increase in deposits is based upon production during the 1933-34 season, while on the other hand there has been some increase in the demand for accommodation, more particularly for building.

For the 1934-35 season, owing to the low prices for wool and butter and the smaller wheat harvest, the outlook is for a diminished value of production, which will mean less opportunity for increasing deposits and reducing indebtedness to the banks, and a smaller total value of exports. As imports have been increasing during the last few months in response to the increase in exports during 1933-34, London balances are expected to be drawn upon, leaving little or practically no prospect of improvement in the exchange rate.

As the result of a series of downward steps, bank fixed deposit rates are at an exceptionally low level, the rate for two years being now 2½ per cent., against 5½ per cent. to which it rose early in 1930, and for twelve months 2½ per cent., against 5 per cent. There is a feeling in various important quarters, however, that the rates have been reduced excessively, and that while they may help to facilitate the impending loan flotation they give opening for depositors to transfer their money to speculative forms of employment or to investment in good securities at excessively high prices.

The rainfall has been very satisfactory during October and has gone far to assure the wheat harvest, now estimated at 110 to 120 million bushels. While this is much smaller than the 1933-34 crop of 173 million bushels, the quantity available for export will include a balance from that crop to be carried over next December, owing to the slow rate at which farmers have been selling.

MELBOURNE, November 15.

LETTERS TO THE EDITOR

RED STAR AND WHITE

TO THE EDITOR OF THE ECONOMIST

SIR,—The recent reports dealing with the depressed areas could not foresee much immediate hope for increased ship-repairing or construction. Within one month a concrete scheme has been launched which would give work both to construction and repair yards as well as to about 2,500 men as ships' officers and crews, but this idea will apparently be still-born owing to opposition from official quarters.

Even if the proposal to construct new ships of a profitable type, such as the "Britannic," runs counter to Cunard-White Star interests, which are now equally the interests of the Government, surely it is desirable to prevent the transfer of 50,000 tons of high-class coal-burning liner tonnage from British to foreign registry, where it will compete even more strongly with Cunard-White Star liners.

It may or may not be possible to rationalise such industries as steel or coal, but it certainly is impossible to rationalise the Atlantic liner trade where six countries are in competition and where 70 per cent. of the receipts are derived from the United States.

The ships in question are the only all-tourist ships in the trade and the majority of their passengers, if the ships lose British registry, will follow them or go to German and American vessels where fares are low.

In attempting to correct the trade balance, the item of invisible exports is too often forgotten, and this example, occurring at the very time when the German Hapag-Lloyd union is to be dissolved, demonstrates the vital dangers of theoretical planning and State interference in a highly individualistic trade.—Yours faithfully,

United University Club, C. E. R. SHERRINGTON.
Pall Mall East, S.W.1.
December 12, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—I notice on pages 1086 and 1087 of your issue of Saturday, December 8th, a Note on the Red Star Line and White Star Line.

While agreeing with the view you express, I think it only right that any credit or otherwise for raising the question should be given to my son, Lt.-Colonel Sandeman Allen, M.P. for Birkenhead, and not to myself, as I took no part in it. As Senior Member for Liverpool, however, I feel it is a matter which must be pressed.

I should be grateful if you could correct this slight and very excusable inaccuracy.—Yours faithfully,

J. SANDEMAN ALLEN.
House of Commons, S.W.1.
December 10, 1934.

BACON SUPPLIES AND PRICES

TO THE EDITOR OF THE ECONOMIST

SIR,—Your leading article in to-day's *Economist* on bacon supplies and prices is both interesting and informative. Most of your arguments are sound and I agree that at present the consumer is being sacrificed to the farmer and curer. But you must bear in mind that to breed a pig which will satisfy the requirements of the Danish bacon trade cannot be done in a day, and while this process is going on the farmer must have some degree of protection. No doubt in time the farmer will be able to produce bacon pigs and the curer bacon equal in every way to that of the Danes and at as low a price. The danger to guard against in a scheme of this kind is its exploitation by curers or farmers.

A rather significant point in the new contracts for 1935 is the flat railway rate for carriage of 1s. 6d. per pig which all curers have to agree to. The bulk of curers whose factories are economically situated—i.e., in pig-producing districts—have not been paying more than 6d. to 1s. per pig in the past. It would appear that the larger curers, who, I understand, are largely behind the scheme, are trying to draw all the pigs to their factories at the expense of the smaller more economically situated curers. This is one straw only which shows the way the wind may blow.—I remain, yours faithfully,

SIDNEY GASKELL.
Betchton Hall, Sandbach, Cheshire.

BOOKS RECEIVED

The Bankers' Almanac and Year Book, 1934-35. Nineteenth edition. Pages 2244. (London) Thos. Skinner and Company. 42s. net.

The latest edition of this indispensable reference work is completely revised. The many important recent changes in the banking world are recorded; there are tables of the growth of banking deposits and of exchange movements, and a diary of important events since 1866.

Post Office London Directory. Kelly's Directory, Ltd. 3639 pages. 55s.

This unique directory contains information about London of almost every kind, including private addresses, maps, etc. It will be indispensable to foreigners, visitors, and to all who require accurate and easily obtainable knowledge of the capital and its business concerns. The Municipal Borough of Willesden has been included for the first time.

MONEY AND BANKING

DEBTORS AND THEIR DEBTS

A NOT unreasonable definition of the great world crisis is that which describes it as a destruction of the debtor-creditor relationship. The fall in the prices of the world's raw materials and foodstuffs made itself apparent as early as 1928; and when the fall became general, all debtor countries found the real burden of their indebtedness increasing at an alarming rate to an intolerable, unmanageable level. It is generally admitted that a substantial reduction in the burden of international debt is necessary if the world is to return to prosperity. The devaluation of the pound and dollar has, among other things, done something to effect this. In the present article an attempt is made to estimate how far the depreciation of these two great currencies has effected a reduction in the foreign indebtedness of four countries, viz. Germany, Italy, Poland and Hungary, all of which are still on the "nominal gold standard."

There is a great margin of error in such an estimate. The chief difficulty lies in the impossibility of calculating, with any degree of accuracy, the amount of external bonds held within the country at a given date. There is no means of knowing how rapidly the process of repatriation is being carried out. Therefore the figures for the savings effected on interest and sinking fund payments abroad are very tentative. In the cases of Italy and Germany some allowance has, however, been made for this factor.

The German experience is perhaps the most interesting. If we consider first the period from July, 1931, to September 30, 1933, we find that according to one estimate Germany's total foreign indebtedness declined from Rm. 23,800 millions to Rm. 14,800 millions, or by Rm. 9,000 millions. Of this reduction, Rm. 5,000 millions represented actual repayments, and the remaining Rm. 4,000 millions the reduction in her external debt expressed in Reichsmarks as a result of the depreciation of certain foreign currencies—the depreciation of the pound and the dollar accounting for all but Rm. 300 millions of this. Only a comparatively small proportion—probably not more than Rm. 350 to 400 millions—of this saving has been cashed in by the redemption of debts, and the balance remains a saving only on paper, which would disappear if the Reichsmark depreciated or if the currencies of Germany's creditors rose in value.

For public debt alone (the debt of the Reich, States and municipalities) the reduction during this period was from Rm. 4,835 to Rm. 3,046 millions, or a reduction of some Rm. 1,800 millions. Of this reduction, Rm. 900 millions was due to repayments, and the remaining 900 millions to the depreciation of foreign currencies.

In his speech to the International Agrarian Conference at Bad Eilsen last August, Dr. Schacht carried the analysis a stage further, for he reviewed a period running from July, 1931, to February 28, 1934. His estimate for this longer period was a reduction of Rm. 4,000 millions due to foreign currency depreciation alone; and he gave Germany's total outstanding foreign indebtedness at Rm. 13,900 millions on February 28th last.

These estimates are not entirely consistent with those for the shorter period, but a comparison of the two suggests that Germany's total foreign indebtedness fell from Rm. 14,800 millions in September, 1933, to Rm. 13,900 millions in February, 1934, i.e. by a further Rm. 900 millions. Probably at least Rm. 400 millions of this total reduction of Rm. 900 millions was due to currency depreciation alone.

If this be added to the reduction of Rm. 4,000 millions which was occasioned by depreciation prior to September, 1933, we find that the total reduction due to this factor between July, 1931, and February, 1934, was in the neighbourhood of Rm. 4,400 millions. This is somewhat in excess of Dr. Schacht's estimate of Rm. 4,000 millions, and it would appear that Dr. Schacht's calculations erred on the side of conservatism.

Of these four countries Italy is in the most favourable position from the debtor's point of view. Her foreign public debt is very small, both absolutely and as a proportion of her total national indebtedness. Almost the whole foreign debt is contracted in dollars—and part of the balance in pounds—so that she has benefited from devaluation abroad much more than the other three countries. She has not defaulted on either sinking fund or interest payments, and her actual saving in foreign exchange requirements, therefore, is large in proportion to the size of the foreign debt.

Between the middle of 1931 and November 1, 1934, Italy's foreign public indebtedness declined by 45 per cent., as is shown in the following table:—

ITALIAN EXTERNAL PUBLIC DEBTS
(000,000 omitted)

	1931 June 30th	1933 June 30th	1934 Nov. 1st
I £ debts	2.65	2.60	2.30
II \$ debts	169.62	160.92	152.89
I + II in Lire*	3,466.22	3,296.68	3,115.91
I + II in Lire†	3,466.22	2,132.52	1,906.89

* Lire at par. † Lire at respective current rates of exchange.

It will be seen that as a result of the depreciation of the pound and dollar, Italy's external public indebtedness was reduced, on paper, by 1,200 million lire at November 1, 1934, allowing for a depreciation of 7.3 lire in the dollar rate and 34 lire in that of the pound. The saving on amortisation and interest payment has been about 250 million lire, and has been effected on all payments on the two sterling loans since September, 1931, and on the dollar loans since April, 1933.

The total foreign indebtedness of Poland has remained virtually stable during the last few years at 10,000 million zloty, but the external public debt (State and Municipal) rose between January, 1930, and January 1, 1933, from 3,973 million to 4,727 million zloty. During 1933 it dropped once more to 3,700 million. If from this latter amount we deduct the post-war liquidation debt, debts due to foreign Governments, and the State-guaranteed provincial and municipal obligations, the amount remaining (for which statistics are available) is about 1,200 million zloty. Of this, about 1,000 million is in sterling and dollar loans. Assuming a devaluation of 16.9 zloty in the pound rate and 3.6 zloty in that of the dollar (except for the American *tranche* of the 1927 Stabilisation Loan, the service on which has been continued at par), it would seem that between June, 1931, and June, 1934, Poland's bonded external indebtedness has been reduced, on paper, by approximately 300 million zloty. The saving on exchange purchases for interest and sinking fund payments has been about 80 million zloty.

The service on the internal and external indebtedness of Hungary is still far larger than the country can afford, but Reduction in the foreign debt owing to the devaluation of sterling and the dollar has gone far to ease, though not to solve, the problem. The transfer moratorium, however, turns this real advantage into a paper one.

An inquiry carried out on behalf of the Hungarian National Bank showed that the total foreign debt in October, 1931, was 4,300 million pengö. Of this, about 1,500 million pengö was State debt, while 700 million pengö were owed by public bodies, the National Bank, and Municipal enterprises, making a public external debt of about 2,300 million pengö. The total foreign debt was divided between France (1,122 million pengö), the United States (840 million pengö), Great Britain (732 million pengö), and other countries (1,632 million pengö).

Some 1,000 million pengö of the total 1,500 millions owed to Great Britain and the United States is accounted

for by public obligations. At the beginning of September, 1931, the total of public debts contracted in pounds and dollars to which the gold clause was not applicable was slightly over 900 million pengö. The figure at present rates of exchange is 500 millions; that is, there has been a reduction of 400 millions. This can be checked by reference to figures published by Mr Tyler, the Financial Commissioner of the League of Nations in Hungary, in his quarterly reports. He shows that the funded foreign State debt fell from 1,244 million pengö on March 31, 1932, to 921 millions on September 30, 1934. A few repayments and fluctuations in other currencies account for a small part of the reduction, so that the two sets of figures corroborate each other. Hungary has not, so far, profited in practice from the devaluation of foreign currencies, as virtually no sinking fund or interest payments on foreign loans have been made since December, 1931.

Thus, these four European debtor countries have enjoyed a substantial alleviation of their foreign indebtedness by reason of currency devaluation in creditor countries. This advantage would be lost if they themselves devalued, and if their creditors' currencies should ever re-appreciate. Still, it is clear that as matters stand at present the currency chaos has appreciably contributed to a financial redressment of the debtor-creditor relationship, whose rupture was one of the most harmful effects of the crisis.

FINANCIAL NOTES

The Money Market.—Discount rates have been variable this week. Most of the Treasury bills applied for last week are well held, so that on Tuesday and Thursday, when buyers came into the market, the rate at once weakened. The market, however, is very narrow, for the prevailing impression is that it is useless to buy bills at around $\frac{1}{2}$ per cent. when $2\frac{1}{2}$ per cent. may have to be paid against them to the Bank of England over the turn of the year. Meanwhile, "hot" Treasury bills are quoted at $\frac{1}{2}$ per cent., while January Treasury bills, which are equivalent to loans into the New Year, are for that reason quoted at the higher rate of $\frac{5}{8}$ per cent.

	Nov. 22, 1934	Nov. 29, 1934	Dec. 6, 1934	Dec. 13, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{1}{2}$

Day-to-day money is very plentiful at $\frac{1}{2}$ per cent., as the Christmas currency withdrawals have not been sufficient to absorb the War Loan dividend money released at the beginning of the month. The supply of money available for loans into the New Year is now becoming limited, and the rate has hardened to 1 per cent. against both eligible and non-eligible collateral. There are indications that some stringency may develop over the turn of the year.

The Bank Return.—Christmas currency withdrawals by the public have raised the note circulation to £393.2 millions. This is a record figure since the amalgamation of the note issues, and as there are still ten days before Christmas it is quite possible that the circulation will exceed £400 millions.

BANK OF ENGLAND					
	Dec. 13, 1933	Dec. 27, 1933	Nov. 28, 1934	Dec. 5, 1934	Dec. 12, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	190.6	190.7	192.1	192.2	192.2
Note circulation	381.9	392.0	379.7	385.4	393.2
Banking Department:—					
Reserve	69.8	59.7	73.0	67.3	59.5
Public deposits	14.5	22.2	27.7	8.6	7.9
Bankers' deposits	95.6	101.2	89.1	108.9	103.3
Government securities ..	72.9	88.0	80.4	84.8	85.8
Discounts and advances	8.4	16.8	9.2	9.6	10.1
Proportion	47.5%	37.3%	47.1%	43.7%	40.1%

The currency withdrawals have reduced both the Reserve and Bankers' Deposits. The Proportion has also fallen to 40.1 per cent. as the result of the contraction in the Reserve.

The Foreign Exchanges.—The dollar has gained ground during the week, for the spot rate has improved from \$4.95 $\frac{1}{2}$ to \$4.94 $\frac{1}{2}$, and three months' dollars have hardened from $\frac{1}{8}$ to $\frac{1}{4}$ cent. discount. There is now an impression that the seasonal pressure against sterling was stronger than it appeared, for the autumn decline in sterling against the dollar was temporarily arrested by sales of gold *bloc* currencies for sterling in November owing to the lack of confidence on the Continent. Confidence has now been partially restored, and so the temporary support to the pound has ceased. The Paris rate has improved from Frs. 75 $\frac{1}{2}$ to Frs. 75, while three months' francs are steady at 6 centimes discount. Forward belgas are still quoted nominally at 0.33 belgas discount, equivalent to 6 per cent. per annum, while an isolated deal in three months' lire was reported at the wide margin of 1 $\frac{1}{2}$ lire discount, or 7 $\frac{1}{2}$ per cent. discount. The Italian spot rate steadied, however, on the news of the exchange regulation discussed on another page. It is also known that the Italian authorities are not restricting commercial operations in London, for some fresh commercial credits were opened this week. So far foreign assets only have to be declared, and Italian exporters and others are not yet required to hand over their foreign exchange to the Bank of Italy. Still, these new powers will be used if they are required to protect Italian gold stocks.

New York Money and Banking.—New York money rates are unchanged. Brokers' loans by New York member banks rose from \$576 to \$639 millions during the week ended December 5th, while other loans against securities rose from \$814 to \$824 millions. Aggregate loans therefore totalled \$1,463 millions on December 5th against \$1,390 millions the week before. Gold continued to arrive from abroad. November imports amounted to \$130 millions, bringing the total gold in the Treasury to \$8,131 millions, which is a new high record. During the week ended December 5th, \$19.6 millions arrived from France and \$10.1 millions from Holland, in addition to small imports from India, Canada and England. It is reported that a banking group has arranged a short-term loan of \$15 millions at 1 $\frac{1}{2}$ per cent. for New York City. This is a short-term issue to fill the gap until a public offering of the bonds can be made. It follows the city's adoption of a new tax programme, which includes a 2 per cent. sales tax. November disbursements by the R.F.C. amounted to \$198 millions and repayments to \$71 millions. During November nine national banks were licensed to reopen. Only eight national banks now remain unopened.

The Austrian Standstill.—During the week it was announced that the standstill agreements between Austrian banking debtors and their foreign creditors would come to an end by mutual consent on December 10th. Three years ago the short-term banking indebtedness amounted to approximately £30 millions (gold), of which about £14 millions represented foreign credits to the Credit Anstalt. Since these have been funded under various schemes the announcement implies that roughly £16 millions (gold) have been repaid by the Austrian banks. Although the chief beneficiary of these repayments is New York, London being mainly a creditor of the Credit Anstalt, the moral is of the greatest importance to all creditor countries. If one country, almost entirely bereft of its reserves and, according to the League Commission, on the verge of collapse in 1931, is able to meet the service on her funded foreign obligations in full and repay her foreign short-term indebtedness within a comparatively short time, it is evident that the default of other countries on their obligations must be ascribed to their unwillingness rather than to their inability to pay. As has often been pointed out, Austria found the means of payment by adjusting the value of her

currency to the market price and by giving foreign creditors complete control of their funds within the country. This way is open to all countries who put their obligations as debtors before narrower interests. During the last few weeks the knowledge of the impending conversion of the League of Nations' loan and the further relaxation of exchange restrictions have caused a rapid rise in fixed interest-bearing securities, reducing their yield by more than 1 per cent. in less than four weeks. The collapse of international credit began in Austria; let us hope that its restoration there means that the crisis is now passing.

November Clearing Bank Averages.—The November returns of the nine English clearing banks show a reduction of £3.6 millions in cash and an increase of £19.4 millions in deposits. During November additional funds had been accumulated in public deposits at the Bank of England in readiness for the War Loan dividend on December 1st, and bankers' deposits were therefore inclined to run low. This probably explains the reduction in bank cash.

	Nov., 1933	Aug., 1934	Sept., 1934	Oct., 1934	Nov., 1934
Capital and reserves	123.3	123.4	123.4	123.4	123.4
Acceptances, etc.	113.8	108.7	112.1	117.6	122.1
Deposits (including undi- vided profits, etc.)	1,889.0	1,818.5	1,821.1	1,853.2	1,872.6
Total liabilities	2,126.1	2,050.6	2,056.6	2,094.2	2,118.1
Cash	213.0	193.4	203.9	210.2	206.6
Cheques, balances and items in transit	47.2	43.4	43.2	51.8	47.0
Money at call	94.0	135.2	133.2	132.1	130.2
Discounts	315.2	220.0	210.9	214.2	230.8
Investments	531.2	540.2	545.6	558.5	572.4
Loans and advances	722.4	740.7	738.6	740.4	739.7
Investments in affiliated banks	24.8	24.6	24.7	24.9	24.9
Cover for acceptances, pre- mises, etc.	158.3	153.1	156.5	162.1	166.5
Total assets	2,126.1	2,050.6	2,056.6	2,094.2	2,118.1

The rise in deposits reflects increases in discounts and investments. Further buying of securities by the banks was known to be a leading cause of the November boom in the gilt-edged market, so the expansion of £13.9 millions in investments is not surprising. The increase in discounts follows hard upon the breakdown of the banks' agreement to maintain discount rates, and it is perhaps significant that one of the "big five" shows no such increase in its return. The remaining banks, however, have been taking up fresh bills, and as a result the money market has apparently been able to reduce its call and short loans from the banks. The banks' ratio of cash to deposits has fallen from 11.3 to 11.0 per cent.

Barclays Bank (D.C.O.).—This year's accounts show a welcome expansion in both deposits and many of the earning assets, including advances. To a large extent this improvement is due to the business revival and expansion of credit in South Africa, due primarily to the Union's transfer from gold to sterling nearly two years ago and to the consequent rise in the price of gold expressed in South African currency. The bank's business in Palestine is also expanding, and news from its Egyptian branches is very fair. The salient features in the accounts are summarised below:—

	September 30th	1932	1933	1934
Liabilities—		£'000	£'000	£'000
Deposits		71,622	74,522	82,866
Note circulation		744	736	771
Acceptances		3,544	3,342	4,312
Capital		4,975	4,975	4,975
Reserve fund		1,650	1,650	1,750
Assets—				
Cash		14,502	15,699	16,958
Call money		1,849	1,626	3,374
Remittances in transit		1,332	2,168	1,216
Discounts		12,713	10,843	13,764
Investments		18,315	27,170	25,778
Advances		27,858	21,895	26,740
Net profit		372	372	410
To contingencies		100	100	Nil
To reserve		Nil	Nil	100
Dividend—				
" A " shares		4 $\frac{1}{2}$ %	4 $\frac{1}{2}$ %	5%
" B " shares		4 $\frac{1}{2}$ %	4 $\frac{1}{2}$ %	5%

Net profits have risen from £372,000 to £410,000, largely as a result of the expansion in the resources of the bank. This increase has enabled the board to raise the dividend on both classes of shares from 4 $\frac{1}{2}$ to 5 per cent. The more settled outlook has also enabled the directors to substitute an allocation of £100,000 to the reserve fund for the previous allocation to contingencies. Altogether this is a most encouraging report.

National Bank of Scotland.—The accounts of this bank show a further expansion in its resources, deposits having risen by £1,300,000 during the year. There has also been a slight increase in its note circulation. Among its assets, cash, balances, and cheques in course of collection are all higher, and the general inference is that money is circulating in Scotland a little more freely than a year ago. On the other hand, there has been a slight drop in acceptances. Earning assets show increases in call money and investments, and a fall in discounts and advances:—

	1932	1933	1934
Liabilities—	£'000	£'000	£'000
Capital	1,100	1,100	1,100
Reserve fund	1,550	1,550	1,550
Note circulation	2,251	2,288	2,354
Deposits	33,868	34,423	35,724
Acceptances	694	923	734
Endorsements, etc.	682	1,146	1,155
Assets—			
Cash	2,955	3,044	3,194
Balances and cheques	1,378	1,396	1,810
Call money	3,608	3,890	5,114
Investments	13,583	16,144	17,248
Discounts	3,748	2,526	1,756
Advances	13,068	11,984	11,215
Net profits	265	268	272
To contingencies	100	75	...
Other allocations	30	55	135
Dividend	16%	16%	16%

Net profits are slightly higher, and it is significant that this year the directors have not thought it necessary to allocate any part of the published profits to contingencies. Instead, they have increased the allocation to the reduction of the cost of hereditary property and alterations from £25,000 to £100,000. The dividend is unchanged at 16 per cent.

Bank of New South Wales.—The accounts of the bank for November 30th show an increase of £5.5 millions in deposits, offset by increases of £3.6 millions in cash and £5.0 millions in Government securities. Discounts and advances have risen by £1.7 millions, but Treasury bills are reduced by £3.8 millions and call money by £1.7 millions. The liquid assets of the bank are increased by £2.8 millions, and in general this year's balance sheet illustrates the recent trend towards a freer and more liquid supply of bank credit. Nevertheless, the President, in his annual address, felt bound to utter a warning regarding world trade conditions and their reaction upon Australian affairs. The growth of national self-sufficiency, if continued, must inevitably condemn the greater part of the world population to an unreasonably low income level, while the burden of debts may become even more intolerable if there is any further disruption to the normal channels of international trade. The recent contraction in the European demand for Australian wool, which is directly traceable to Germany's exchange difficulties, is an obvious case in point. The President also urged that general recovery depended on the revival of international borrowing. The reaction against past extravagance could be carried too far, and there should be no slackening of the attempts to promote conditions of cheap credit. Australia had no reason to regret the recent decline in interest rates, which reflected the improvement in her finances, but any enforced restriction upon Australasian exports might have the most serious economic consequences and might also carry serious risks upon all who had business or financial relations with Australia or New Zealand. This address comes as a timely warning to those who are inclined to regard Australasian recovery as now assured.

THE STOCK EXCHANGE

INDIAN RAILWAY STOCKS

THE market in Indian railway stocks is one of the least known in the Stock Exchange. Though the stocks it embraces represent a current market valuation in the neighbourhood of £130 millions, it is less often in the news than any other market of comparable intrinsic importance. For this there are two reasons. In the first place, a great majority of the stocks are fixed interest bearing. The proportion of equity or variable dividend securities is small, though it includes some exceptionally interesting examples. Secondly, a considerable proportion of the stocks consist of a form of security called "Annuities," which is unfamiliar to the ordinary investor, and of which, consequently, he is apt to fight shy. The result is that the market as a whole is distinctly "narrow." A single firm of jobbers deals in the stocks, and close prices are not easily obtainable. Nevertheless, the stocks afford a market of great technical interest—a market for the connoisseur of investment—which contains a great variety of types, including some securities that are unique. It contains, for example, two or three trustee stocks carrying a variable return. It also provides one of the most remarkable of the numerous anomalies of the Trustee Acts to which attention has recently been directed in these columns (see the *Economist*, October 13, 1934, page 687).

The great variety of types of security to be found in the market arises from certain facts of Indian railway history. The Indian railway system was largely built by private enterprise, backed by State financial assistance. The financial assistance normally took the form of a free grant of the land on which the railway was built (or, in some instances, of the sale of the land in return for a purchase consideration rendered in capital stock), together, in many cases, with a guarantee by the Government of the interest and principal of the debenture stocks and of a minimum dividend on the ordinary capital. In return for this assistance the Government was allotted a percentage of the profits remaining after payment of prior charges. The Government also retained the right to determine its contract with the railway company at prescribed dates and on its termination to take over the railway on payment (normally) of the nominal amount of the ordinary capital. In most of the contracts it is in fact declared that "the railway and its appurtenances are absolutely the property of the Government." Many of the railways (including some of the largest, like the East Indian, and the Great Indian Peninsula) have, on the termination of the contracts, been taken over by the Government, and to-day, of the whole Indian railway system, roughly two-thirds is State-owned and State-managed and only one-third is still company-managed. The contracts which have not already fallen in or have been renewed are all terminable within the next sixteen years. Though it is probable that the Indian Government will, as it has done in the past, grant renewals in certain cases, it is probably only a matter of a comparatively few years before the whole railway system of British India is "nationalised."

Meanwhile, Indian railway securities consist of a large number of debenture stocks, mostly guaranteed by the Secretary of State, in companies still existing or defunct, plus a smaller number of ordinary stocks (and one or two preference stocks) in companies whose contracts have not yet expired. There is, in addition, a further class of security, namely, the Annuities, to which reference has already been made. These arose out of the ashes of an earlier type of Indian railway, the old "guaranteed companies," whose contracts with the Government expired many years ago. On the expiry of these contracts, the companies' ordinary capitals were converted into Government-guaranteed terminable annuities. Of these Annuities there are two classes, designated "A" and "B" respectively (with two further classes "C" and "D" in the case of one railway, the East Indian). The "A" Annuities lapse entirely at a

given date, while the "B" Annuities are paid subject to a sinking fund deduction calculated to secure to the annuitant the payment of a certain capital sum at the date of the expiry of the Annuity. The "C" and "D" Annuities of the East Indian Railway are similar to the "B" Annuities in that they effect repayment of capital. The "C" Annuities were created to satisfy those "A" annuitants who desired the eventual return of their capital, while the "D" annuities were deferred annuities representing part of the original capital of the company.

Thus, in effect, the "B" Annuities (and the East Indian "C" and "D" Annuities) are closely akin to redeemable debenture stocks. There are, however, two important differences. In the first place, the payments in respect of the Annuities increase slightly each half-year,

(a) Available for investment by trustees at present time and prices. † Not allowing for redemption.

since a larger proportion of each £1 nominal of Annuity represents repayment of capital. Consequently, the deduction for income tax becomes slightly smaller each time. In the second place, the actual redemption value will differ from the stated par value if the actual average rate at which the sinking fund deduction is invested for the duration of the Annuity differs from the assumed rate. This fact largely accounts for the discrepant yields, which, as the accompanying table shows, are afforded by the different annuities, although the market attempts, from time to time, to frame estimates of the actual values at which redemption will finally be made. In the past twenty years, the actual yield has no doubt greatly exceeded the 2½ to 3½ per cent. assumed rates of investment on which the "par values" are based. In view, however, of the recent heavy fall in interest rates this is no longer true in every case. The fall in rates has, therefore, the odd consequence, so far as the annuitants are concerned, that while it tends to raise the market value of the Annuity *qua* Annuity it tends to depreciate the market value of the Annuity regarded as a right to the payment of a capital sum after a given period of years. Current market guesses at the redemption values of some of the Annuities are: Madras "B," £28, against a par value (on 3 per cent. basis) of £23 3s. 5d.; Great Indian Peninsula "B," £36, against par value (2½ per cent. basis) of £26 2s.; East Indian "B," £18 10s., against a par value (3½ per cent. basis) of £22 4s. 5d.; and East Indian "C" and "D," £22, against a par value (3½ per cent. basis) of £22 4s. 5d.

All the Annuities, except the "A" variety which lapse entirely at the end of the appointed period, are full trustee securities in England and Northern Ireland. They are not subject to the limitation of Section 2 (2) of the Trustee Act, 1925, which precludes trustees from investing in certain redeemable securities (a) if these stand above par and are liable to be redeemed at par or some other fixed rate within fifteen years; or (b) if they stand at more than 15 per cent. over the redemption value. The guaranteed redeemable debenture stocks of the Indian railways, on the other hand, come under the ban imposed by this section. Thus, the curious situation arises that a trustee may invest in Great Indian Peninsula Class "B" Annuities, due to be redeemed in August, 1948, though their price is apparently above the redemption value, but may not invest in the South Indian 4 per cent. debenture stock, redeemable in July, 1945, though both stocks equally are the liability of the Secretary of State. This is not the least striking example of the anomalies of a trustee investment system which the Chancellor of the Exchequer, "after careful consideration," has decided not to alter.

The debenture stocks, of which a representative selection is tabulated, with prices and yields, give a wide choice of redemption dates. Incidentally, the two irredeemable stocks (the East Indian 4½ per cent. and the G.I.P. 4 per cent.), both of which are now the direct obligation of the Secretary of State, give an appreciably more favourable yield than the "irredeemable" Indian Government loans. Thus, while India 3½ per cent. stock yields £3 12s. and India 2½ per cent. stock yields only £3 3s. 3d. at current prices, as much as £3 19s. per cent. can be had by purchasing East Indian 4½ per cent. irredeemable debenture stock. This fact may be worthy of note by the discerning trustee.

Finally, we come to the ordinary stocks of the surviving companies, and particularly to that interesting hybrid, the trustee stock with the speculative tail. This is to be discovered in the ordinary stocks on which a minimum dividend is guaranteed by the Indian Government. Actually the hybrid is rapidly becoming an extinct monster. By virtue partly of Section 2 (2) of the Trustee Act, already mentioned, and partly of the expiry of the contracts of several lines, there are now only two Indian ordinary stocks actually available to trustees—the Assam Bengal and the Bengal Nagpur. Of these the former now only pays the guaranteed dividend, while the latter, which has latterly had to draw upon reserves to pay ½ per cent. additional to the guaranteed 3½ per cent., will in a year's time cease to be available for trustees at over par.

As regards the prospects of Indian railway ordinary stocks in general, the accompanying table, giving gross and

net receipts for the company-managed lines for the past five years, will help the investor to form an opinion:—

EARNINGS IN LAKHS OF RUPEES

Year to March 31st	Bengal N.W.*		Bengal Nagpur		Bombay Baroda		Madras S.M.		S. Indian	
	Gross	Net	Gross	Net	Gross	Net	Gross	Net	Gross	Net

* Year to Sept. 30.

As the course of earnings suggests, Indian railways have not escaped the ills that railway enterprise has been heir to in most other countries. They have suffered from the effects of general trade depression and road vehicle competition, though the latter, in India, is a rather less serious factor than in many other countries. It is clear, however, that the corner has been turned. The trend of traffic is now definitely upwards, though present receipts are still far below the level of 1929.

India is a country capable of considerable further economic development, and the outlook for the railways may be regarded as moderately encouraging. In considering the ordinary stocks for investment purposes, however, it must be borne in mind that most of the lines have in recent years distributed dividends beyond their earnings. In the case of every stock, it is essential that an intending investor should carefully study all the circumstances, including the conditions of the contract and of its determination, the extent of reserve funds, and the earnings position and prospects of the line. The market, altogether, is essentially one for the discriminating type of investor.

INVESTMENT NOTES

Bank Dividend Prospects.—A sustained period of 2 per cent. Bank rate argues little prospect of spectacular bank and discount profits from normal operations. Investors in "money" shares who have come to rely upon minimal changes in their dividends may reasonably inquire whether this year's difficulties—exemplified by the breakdown of the bankers' agreement governing bill rates—will have any serious repercussion upon profits. From the revenue point of view, however, more importance attaches to the movement of advances. During the early months of the year there were signs of steady growth, but a relapse set in after May, and the level has since fluctuated narrowly about £740 millions for the nine London clearing banks. The "second line" reserves, constituted by the banks' bill holdings, have proved a thorny problem. Exchequer Funding policy and low rates have brought down the volume of discounts to sub-normal dimensions, and the recent defection from the banks' agreed tender rates has precipitated reduced the return on a much reduced volume of Treasury bills from about 15s. per cent. to as little as 4s. 9½d. per cent., with a subsequent recovery to over 11s. per cent. The growth in investments from some £539.9 millions in January to £572.4 millions in November—some 30.6 per cent. of deposits—shows how far the London clearing banks have been driven from normal banking practice into the gilt-edged market in search of revenue. As last Wednesday's events showed, their investment policy has been a powerful contributory factor in the market, and has tended to depress still further the yields obtainable, particularly upon short-dated stocks. In the meantime, the level of deposits has tended to recover since August, and with it, presumably, the proportion of time deposits which, in the provinces, bear interest from 1 per cent. On the other hand, the banks will have less provision to make for bad debts. On the whole, though profits may be allowed to show some slight decline, dividends should generally be maintained.

Bulgaria's League Loans.—The League Loans Committee (London) draws attention to the plea of Bulgaria that her growing exchange difficulties make impossible the maintenance of the arrangement of last April, which provided for payment, at 32½ per cent., of the coupons of the 7 per cent. Settlement Loan, 1926, and the 7½ per cent. Stabilisation Loan, 1928. Last month, when the Government officially raised the matter, the current year's service of the 1928 Loan had been completed, but only five out of six agreed instalments on the 1926 Loan had been provided. After a certain hesitation, Bulgaria has recognised the wisdom of the League Loans Committee's contention that all current payments should be fulfilled before further concessions were considered, and has transferred a sufficient sum to enable the January coupon of the 1926 Loan to be met at the agreed rate of 32½ per cent. Further negotiations are now in progress. The Bulgarian Finance Minister, M. Todoroff, and the Vice-Governor of the National Bank, M. Bojiloff, will meet the Committee in London early next week. Meanwhile, the Finance Committee of the League of Nations has undertaken an investigation in Bulgaria, and its report is expected next month. Admittedly, the transfer position has become more difficult since the assumption of office by the present Bulgarian Government, last May, after a *coup d'état*. How far this has been due, however, to conditions outside Bulgaria's control, and how far to the policy of the present Government in undertaking commitments from which bondholders can expect little benefit, is a moot point. The bondholders, indeed, may well ask whether any decisions taken by the Government in the interim have in fact contravened the suggestions of the League's advisers. It may be presumed that the League Loans Committee, which has shown praiseworthy zeal in maintaining the legitimate interests of bondholders, will insist upon a thorough discussion of the implications of Bulgarian political and financial policy before considering any further concessions whatever.

Welsh Colliery Merger.—From the viewpoint of the South Wales coal industry, an unqualified welcome may be given to the announcement, last Tuesday, of an amalgamation between Powell Duffryn and Welsh Associated Collieries, which will bring two-thirds of the steam coal production of the area under a single control. For some time past South Wales has set an example to many other regions in the economics of amalgamation. Welsh Associated Collieries itself was a 1930 amalgamation of numerous collieries acquired by Guest, Keen and Nettlefolds, and by the Llewellyn interests, respectively, in preceding years. The new operating company will control 75 collieries, with a potential productive capacity in excess of 20 million tons a year, and estimated available reserves of over 1,700 million tons. On the export side, the merger will have an effective organisation, for already the Powell Duffryn output is marketed through Coal Distributors (South Wales), Ltd. (formed eighteen months ago by William Cory and Stephenson Clarke), while the Welsh Associated output is chiefly distributed by Guéret, Llewellyn and Merrett, which is included in the merger. In view of the differential advantage in the export trade which the North East Coast has lately enjoyed, and the questions which may arise as a result of the Anglo-Polish Coal Agreement, this week, the existence of a dominating single organisation, to uphold the views and further the interests of the South Wales steam coal industry, is more than desirable. As regards the finance of the merger, however, the official announcement is somewhat vague. The Powell Duffryn Company will acquire one-half of the ordinary share capital of Welsh Associated Collieries by the issue of 1,181,509 of its £1 ordinary shares, together with a cash payment of £87,995 to the vendors of the Welsh Associated Collieries' shares. Who, however, are these vendors? The announcement declares that "the other half of the ordinary share capital in Welsh Associated Collieries remains undisturbed." Is it to be inferred that Guest, Keen and Nettlefolds, which owns 51 per cent. of the ordinary shares of Welsh Associated Collieries, is in effect selling a large part of its interest in return for Powell Duffryn ordinary shares? The latter company has paid an ordinary dividend of 6½ per cent. for the fifteen months to

March 31st last, and is to pay an interim of 1½ per cent. for the current year. Further details of the merger are given in our Commerce and Trade Section, on page 1186. The market price of Powell Duffryn ordinary stock units declined from 21s. to 19s. 9d. on the announcement.

Trust Companies' "Industrial" Investments.—In our recent Investment Trust Supplement, we suggested that, other things being equal, those trust companies having the largest proportion of their total portfolio invested in industrial and public utility securities, as distinct from railway stocks and Government bonds, might have the speediest recovery potentialities. We publish below a list of companies to which this condition applies, the percentages of utility and industrial investments, combined, being shown in descending order:—

PERCENTAGE OF TOTAL PORTFOLIO INVESTED IN PUBLIC UTILITIES AND INDUSTRIALS—As shown in latest report. (Percentages based on market values shown in italics; all other percentages based on book values)

Company	Percentage	Company	Percentage
PRE-WAR ENGLISH—		POST-WAR ENGLISH (cont.)—	
British Steamship*	82.9	Second Guardian (4)	78.1
Nelson Financial Trust (1)*	80.9	London and Provincial	78.1
Trust Union*	78.2	London, Border and General*	78.0
Traction and General*	78.1	General Funds	76.4
Metropolitan Trust	75.7	Nineteen-Twenty-Nine	75.0
POST-WAR ENGLISH—		PRE-WAR SCOTTISH—	
Scottish Stockholders (2)	89.3	Second Scottish Northern*	91.2
Stockholders Inv.*	88.7	Scottish Northern*	91.1
London Stockholders*	86.6	East of Scotland*	85.7
Southern Stockholders*	86.1	Aberdeen Trust*	82.6
Redeemable Sec. and General*	83.6	Scottish Western	80.3
British and German	83.5	Clydesdale Inv.	80.1
English and New York	82.4	Caledonian Trust	79.4

London and Strathclyde	80.2	Second Clydesdale	82.4
London and Lomond*	79.5	Third Caledonian	76.4
Trust Co. of L. and Scot. (3)	78.6		

* Included in list of companies with high percentage in Great Britain and Empire (see *The Economist*, December 8th, page 1100). (1) At October 31, 1933. (2) Registered Office, London. (3) At May 31, 1933. (4) At May 5, 1933.

The companies marked with an asterisk, which (as we showed in a Note in our last week's issue), have more than the average proportion in Great Britain and the Empire as distinct from foreign countries, have a two-fold case for closer investment examination. We repeat, however, our former *caveat*. Many other factors must be taken into account in assessing the future possibilities of any individual trust company stock. The analysis, further, takes no account of companies whose directors do not see their way to furnish any particulars regarding the nature of their holdings.

Cinema Overbuilding.—Investors who may not have been favourably impressed by the rapid multiplication of super cinemas will welcome the publication of a pamphlet by the Cinematograph Exhibitors' Association, dealing with the problem of over-development. In Central London, the suburbs and the provinces, houses have been rapidly built in recent years with a seating capacity of anything up to 3,000, luxuriously appointed, and elegantly named in the neo-classical manner. This pamphlet gives another warning that profits, past and prospective, do not expand proportionately with new building. In the first place, much of the added capacity is merely "substitutive" and not "additive," and the total patronage of the houses, where a district was previously adequately catered for, is not sensibly increased. The Exhibitors' Association very properly points out that progress in the exhibiting industry must not be checked, but declares that much new investment in cinemas is doomed to ultimate failure and in the meantime is bound to prejudice the interests of proprietors of longer standing. So far as such new building is carried out with inadequate knowledge or consideration of future prospects, few investors will quarrel with these views. The orgy of over-building and purchase of cinema chains at inflated prices in the United States will always sober extravagant hopes in this country. As Mr Sam Eckman, Jr., states, however, improving standards of

comfort impose upon proprietors of cinemas in their 'teens the necessity for continuous improvement in seating, and without this reform from within, the industry, particularly in the provinces, will have itself to blame for any further competitive building. Shareholders in the leading film companies have been warned, from time to time, of the harmful effects of extravagant building, but they may not be aware of the reaction on the producing units. Either an increased number of copies of existing films are required or the production programmes must be expanded to supply the new exhibitor. The first policy will presumably fail to increase receipts proportionately to costs, since rentals are to a considerable extent based on potential capacity, and the second would inevitably lower even existing quality standards. In the light of this pamphlet, investors would do well to reconsider the prospects for the exhibiting side of the industry, even if steady expansion of domestic purchasing power continues.

New Issues in November.—Low interest rates have yet to make expansion in new investment effective. The November total of new issues showed satisfactory advance by comparison with November, 1933, but the results are little better than the low monthly average for 1931. We set out our usual analysis below:—

	(000's omitted)				
Monthly Average	United Kingdom	British Possessions	Foreign Countries	Total	
	£	£	£	£	
1930	14,220	5,121	2,975	22,316	
1931	4,542	3,209	761	8,512	
1932	13,589	2,129	24	15,742	
1933	17,520	2,429	449	20,398	
Monthly Total	Govt.	Other			
September, 1933 ...	89,843	2,896	563	Nil	93,302
September, 1934 ...	50	6,759	2,148	300	9,257
October, 1933	300	4,310	2,216	54	6,880
October, 1934	50	20,642	1,477	75	22,244
November, 1933 ...	Dr. 500	6,697	300	Nil	6,497
November, 1934 ...	350	9,062	1,173	8	10,593

Some £6½ millions nominal of Home Corporation stocks have been issued, largely to replace short-term mortgage debt, but these appear as "new money" in conformity with our usual practice. Chief interest here has centred on the large Birmingham 2½ per cent. issue, whose initial reception, owing to the low nominal rate and a temporary recession in the gilt-edged market, was distinctly cold. Home industrial issues involving new capital included the Butterley and Thos. W. Ward preference shares. A feature of the month was the increase in patent and new process exploitations, but little new mining capital was sought.

Actuaries' Investment Index.—For the third week in succession, share values have displayed a recessionary tendency. The Actuaries' Index for 144 industrial shares, based on Tuesday's prices, now stands at 73.1 (December 31, 1928 = 100), compared with 73.7 for the previous week and 73.1 four weeks ago. The yield figures for the corresponding dates are 3.66, 3.62 and 3.63 per cent. The following selection of component indices illustrates the general character of the fall:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Nov. 13, 1934	Dec. 4, 1934	Dec. 11, 1934	Nov. 13, 1934	Dec. 4, 1934	Dec. 11, 1934
Coal (6)	91.4	93.3	91.1	4.05	3.90	4.04
Cotton (6)	45.8	45.3	44.1	2.30	2.21	2.23
Elect. Light and Power (14)	134.8	134.7	134.1	3.70	3.70	3.71
Oil (5)	57.1	55.7	54.0	5.07	5.22	5.39
Electric Supplies (8)	99.3	103.9	101.5	4.31	4.15	4.32
Home Rails (4)	75.7	75.7	74.8	1.53	1.51	1.52
Miscellaneous (50)	64.5	65.1	64.5	3.85	3.85	3.89

Hesitancy in the gilt-edged market has lowered values of steady dividend shares, such as electric light and power, but the absence of speculative activity in industrials is largely associated with seasonal influences and a temporising phase in industrial activity.

COMPANY NOTES

Coal Processing Companies.—One department of coal carbonisation, namely, gas making, is the basis of one of the oldest and soundest industries in this country. As the accompanying table of profits indicates, however, the more modern variants, aiming at the recovery of products other than gas, have had an almost disastrous commercial record. The recent dividend of 3 per cent. declared by Low Temperature Carbonisation, Limited, is a welcome indication that better times may, perhaps, lie ahead. Broadly, the gas industry turns out a distinct product, with special qualities. The modern low temperature processes, however, result in a group of products which compete with others already well established, and, so far as solid fuel is concerned, with their own raw material. There are, therefore, two essentials necessary to the commercial success of the new low temperature processes. They must be able to rely on supplies of semi-waste small coal which are otherwise difficult to dispose of. They must be able to convert that coal into products, all of which are readily marketable. The recent advance in the Low Temperature Carbonisation company's profits is doubtless due in part to Government support, not only through the British Hydrocarbon Oils Act of 1933, but also through the purchase of a large part of the company's oil and petrol output for the R.A.F. and Navy. It is also due, however, to the success of the smokeless solid fuel "Coalite" as a substitute for raw coal in open fires. The success of "Coalite" may help to create goodwill for similar products. The fuel has the substantial advantages of clean handling and absence of smoke. Given a growing national consciousness of the necessity for smoke abatement, the company may yet derive privileges from anti-smoke legislation. It is even possible to imagine that,

in time, every coal-producing district will be equipped with a low temperature carbonisation plant to convert its semi-waste small coal into more valuable products. The process, however, is competitive, not only on the selling but also on the buying side. Modern combustion practice has already revolutionised the use and valuation of small coal. In South Wales, the once despised "smalls" now

command a premium. Pulverisation may carry the process still further. As coal carbonisation depends economically on converting semi-waste into valuable products, these considerations are important. For the investor, therefore, shares in coal carbonisation concerns offer attractive possibilities, but carry a not inconsiderable "industrial risk."

Alliance Trust.—In response to numerous inquiries from readers, we summarise below the last ten years' results of the Alliance Trust Company, whose omission from our Investment Trust Supplement was due to the "distorting" element in its figures, as a result of the relative recency of its change-over from a predominantly mortgage business to general investment trust operations. For fifteen years after its establishment in 1889, in fact, the company was almost entirely a mortgage concern. Its participation in bond and stock business during the next ten years was so gradual that at the end of 1914 general investments accounted for only 44 per cent. of the whole. After the war, however, the company pursued a policy of steady liquidation of its mortgage interests and, to an even more marked extent, of expansion in its bond and stock business. Under both heads, the results have been a tribute to the company's acumen. American agriculture has been in endemic depression since the war, but the new departments of the company's business have given results above the average for the investment trust movement, as the following table suggests:—

Years to Jan. 31	Investments, Book Value*	Proportion represented by Bonds and Stocks	Revenue from Investments	Ordinary Stock		Market Value of Bonds and Stocks compared with Book Value
				Earned	Paid	
1925 ...	£ 6,575,191	65.0	£ 416,754	36.7	23	"Exceeds"
1926 ...	6,851,965	69.0	454,326	35.0	24

* At or under cost (throughout) and after deduction of contingent fund (years to 1929).
† Depreciation of less than 1 per cent. ‡ Capital bonus of 20 per cent. in preference stock.
§ And capital bonus of 10 per cent. in 5 per cent. preference stock.
|| Interim dividend for 1934-35, 11 per cent., against 12½ per cent. in preceding eight years.

During the years of "prosperity" between 1925 and 1931 (to January 31st in each case), the company reduced the proportion of its mortgage holdings from over one-third to approximately one-eighth of its total investments. At the same time, it increased its total portfolio, at book values, by 65 per cent., and its investment revenue by 66 per cent. Out of annual earnings averaging about 37 per cent., the ordinary stock received regular dividends of 25 per cent., with a couple of bonuses in preference stock. The subsequent depression, and the almost complete collapse of American agriculture, brought the process of realisation of mortgages largely to a standstill. The decline in investment revenue, however, was much more moderate than in the case of most other investment trusts, and the ordinary dividends were maintained at the pre-depression rate with something to spare. The "depreciation factor" in the company's investments was also much less than in the trust movement as a whole. Though the reduction in the interim dividend for the current year suggests that earnings may have been reduced, it is clear that the company, during the depression, has given evidence of more than average stability. As the directors, however, do not publish particulars of the nature of the company's investments, it is difficult to say how far this creditable achievement has been due to questions of geographical and industrial "distribution," or to factors more personal to the company and its management.

* * *

Ind Coope and Allsopp.—Although the profits of these combined businesses have obviously increased during the year to September 30th last, the capital and other changes which have followed the merger make the accounts an unsafe medium for detailed comparison. The "trading profit" shown by the merger company apparently corresponds to that of Ind Coope under the old dispensation, and shows a rise from £337,063 to £391,724—an increase of 16 per cent. Other merger company receipts, from interest on investments, etc., and "dividend on shares in subsidiary companies," total £234,949. A year ago Ind Coope showed a corresponding figure of £94,009. The difference, namely, £140,940, may perhaps be taken as a very rough measure of the earnings received from Samuel Allsopp, subject to two important qualifications. First, investors have no means of ascertaining any changes which may have taken place in receipts from other Ind Coope investments. Secondly, some £54,300 was paid by way of an interim dividend to the vendors of the preferred and ordinary shares of Allsopp, for the period before the merger. Leaving the first factor out of account, but making full allowance for the second, the total indicated Allsopp profit for 1934 would be in the neighbourhood of £195,240, against £130,988 for 1933. The calculation at least suggests that Allsopp has obtained its full share of the improvement in brewery earnings generally. The merger company has a net balance after depreciation, fees, debenture interest, charges and taxation, of £391,805, out of which preference dividends absorb £52,974, and total ordinary dividends of 22½ per cent. (against 15 per cent. for Ind Coope last year) take £229,356. The Public House Improvement and Licence reserve is raised to £200,000 by a transfer from revenue of £32,906, and general reserve to £800,000 by a transfer of £50,000. The balance carried forward is increased from £312,491 to £339,060. A combined balance-sheet, which accompanies the report, shows that the ordinary capital of £1,475,698 is covered by surplus assets (including those of subsidiary companies), totalling £3,617,201, exclusive of combined "goodwill" valued at £272,000. The accounts, necessarily, do not reflect the economies which should be achieved from the merger as time goes on.

* * *

Thomas Tilling Meeting.—There was a ring of genuine regret in the speech in which Mr J. F. Heaton, chairman and managing director of Thomas Tilling, Ltd., bade an official farewell to the company's London under-

taking at this week's meeting. The London business, which has been "forcibly acquired" (to use the chairman's phrase), by the London Transport Board, was the oldest of its kind in the country, having been in existence for eighty-six years. The cost of its mere physical assets was small (see the *Economist* of December 8th, page 1102), but the company's claim, before the tribunal, had been based on average earning power for the years 1928, 1929 and 1930. The period, in fact, was identical with that taken for other undertakings transferred to the Board under the Act, and the amount of the annual adjusted profits was agreed by the company's accountants with the accountants to the Board at a figure of £158,145 per annum. The income on the London Transport stocks awarded will be £57,535 on the basis of a 3 per cent. dividend on Transport "C" stock, some £86,780 on a 5 per cent. dividend, and £101,403 on an eventual maximum dividend of 6 per cent. Earnings from Tilling's London undertaking may conceivably have shown a cyclical decline before the "appointed day" under the Act (July 1, 1933). Shareholders, nevertheless, will sympathise with the chairman in his dual regret over the loss of all future equity in the expansion of the London undertaking and over the stereotyping of receipts, for all time, at a figure which, even under the most favourable conditions, will be some £56,742 below the 1928-30 average. The company accepts the Arbitration Tribunal's award under *force majeure*, since it is advised by counsel that any possibility of an appeal is precluded. It is well for shareholders that the company has many additional strings to its bow. These, as the chairman disclosed at the meeting, include 380 commercial motor vehicles, the Brighton and Hove omnibus section, the remainder of the original "horse department," and interests in thirty undertakings, through subsidiary and associated companies in all parts of the country.

* * *

Other Company Results.—The seasonal output of reports to September has considerably expanded our profits table, which appears on page 1183, and summarises the results of 81 other companies. The brewery results, which have been discussed at length in earlier issues, continue satisfactory. The most impressive report this week has come from Joshua Tetley, of Leeds, whose net profits have advanced from £144,762 to £203,007, but smaller concerns such as Bentley's Yorkshire and Offilers show very satisfactory results. Notable improvement is shown by several Australian land concerns, in the finance and land group, while Second Covent Garden Property shows a first result of £29,929 for the first fifteen months. Among heavy industrial companies, Redpath Brown have replaced the previous year's loss by a profit of £20,282. Two oil companies, Anglo-Ecuadorian and British Burmah, show completely disparate results. The former has earned £80,393, against £55,017; while the latter has increased a loss of £7,886 to as much as £58,379. Further rubber results display a favourable trend, prominent results including Kuala Lumpur (£12,719, against Dr. £481) and Lumut (£10,793, against £3,358). Among textile concerns, Combined Egyptian Mills results are somewhat better (£39,085, against Dr. £159,752), but the large debit of £1,089,491 is carried forward. Home transport concerns, such as Barton and East Yorkshire Motor, display increased earning power. Investment trust revenues as a whole continue to show little variation from the previous year, although Camperdown and Northern American show a further slight fall. A large number of miscellaneous companies present several interesting features. The results of Agar, Cross and Co., who trade in the Argentine, clearly reflect the exchange difficulties. The full report of Carreras shows that total profits are little changed, although net profits are lower. Satisfactory profits expansion has been achieved by British Tyre and Rubber (£109,416, against £93,541), while the results of Crittall Manufacturing (£79,016, against Dr. £45,018) have encouraged the board to name August, 1935, as a probable date for the submission of reconstruction proposals. Waterlow and Sons, the printing and engraving concern, have increased their net profits by nearly 25 per cent. to £100,961, while Financial News shows a net income of

£16,508 for the year to June last. Such diverse concerns as Sunlight Laundries, Ilford, Cow and Gate, Bristol Industries and India Rubber Gutta Percha show how generalised the increase in profits has been during a recovery year.

MINING NOTES

Rand Dividends: First Instalment.—For the most part, the declarations made so far by the Rand gold mining companies for the December half-year correspond closely with recent market estimates (writes our mining correspondent). Two or three surprises, however, call for notice. Despite the substantial decline in profits (shown in our leading article last week), the Langlaagte Estate is paying an increased dividend. The explanation may doubtless be found in the changed basis of taxation which came into force as from January 1st last. A somewhat similar position exists in the case of Randfontein. The announcement of West Rand Consolidated is up to the highest expectations, and amounts, in fact, to double the rate of a year ago. For some time past profits have been on the upgrade, and capital expenditure has been on a reduced scale. The yield afforded on the company's shares is higher than that given by any other long-lived mine on the Rand, being about 10 per cent. gross. Considerable disappointment was caused by the absence of increase in the rate on Robinson Deep "B," the requirements of the deep-level air-cooling scheme having been somewhat overlooked by the market. At their prevailing price the shares return about 8 per cent. gross, irrespective of allowance for Dominion income tax. The following table shows, for the

* Tax free in sterling.

On the present occasion only the companies in the "Johannesburg" group state the amounts paid to the Government by way of taxation or participation in profits. These (with the corresponding figures for the first half of this year in brackets) are:—Government Areas, £1,214,000 (£1,193,170); New State Areas, £727,000 (£698,700); Langlaagte, £42,750 (£39,650); Randfontein, £124,350 (£123,000); Van Ryn Deep, £120,450 (£114,950); and Witwatersrand Gold, £38,300 (£37,050). The alteration in the incidence of taxation has operated adversely in the case of the last-named, which paid only £16,800 for the second half of 1933.

Ariston.—The latest Ariston report makes an unexpectedly good showing in the matter of ore reserves. Their quantity, at 552,200 tons, exceeds that of last year by 320,800 tons, while their value is only 0.3 dwts. lower at 10.45 dwts. The consulting engineer states that, in view of the results of development in depth, a similar increase may be expected from the main ore body. These calculations take no account of the Anfargah property, where re-sampling has confirmed old records. Unfortunately, production has been interfered with by two accidents to the shaft, so that the tonnage has declined and costs have risen. The profit is £84,760, against £123,740. For 1932-33 two dividends of 10 per cent. each were paid, leaving a substantially increased balance to go forward. A 15 per cent. interim, paid for 1934, raised natural hopes of an increased total for the year, but the company's unexpected ill-fortune has reduced the final payment to 5 per cent. An interim dividend of 7½ per cent., however, is to be distributed on account of the current year. The capital, now fully issued, is £700,000 in half-crown shares. On a 20 per cent. basis, the yield, at the present market price, is little over 4 per cent. A quotation of about 12s., in fact, discounts improved future results.

Malayan Dredging Group.—The effects of the high price level for tin, established under the output restriction scheme, are strikingly reflected in the results of the Malayan Dredging group of companies for the past financial year. The parent company, treating an increased quantity of ground, produced 770 tons, against 629 tons, the average price received being £141 6s., against £95 16s. respectively. Profit rose from £32,200 to £78,270, and dividends totalled 36½ per cent., as compared with 16½ per cent. With the balance distribution of 15 per cent. will be paid a second interim of 7½ per cent. for the current year. Property, plant and other fixed assets have been written down, in the balance sheet, from £72,530 to £1, raised by appropriating the share premium account of £43,250, together with £29,280 from profit and loss. Investments, at cost, stand at £247,360, an increase of £134,240. Some £18,400 has been invested in, or advanced to, a subsidiary company named Malayan Securities, "to facilitate the investment of funds not immediately required." Of the subsidiary undertakings, Southern Malayan results show an increase of over 350 tons in output and a rise in profit from £19,660 to £76,120. Dividends total 20 per cent., against only 5 per cent. A second distribution of 5 per cent. is being made on account of the current year. The Southern

Perak's scale of operations is comparatively small, but the differences in the two years' figures are impressive. Profit amounts to £16,180, against £3,960, and dividends total 10 per cent., against 2½ per cent. On last year's distributions, the current yield is slightly under 7 per cent. on Malayan Dredging and Southern Malayan shares and about 8 per cent. on Southern Perak.

North Broken Hill.—The earnings of this "mixed" undertaking, last year, showed less expansion than might have been inferred from the rate of dividend. Operating profit totalled £273,360, against £166,570, while dividends absorbed £245,000, against £105,000. The £30,000 set aside towards new plant represents less than half the provision made in either of the two preceding reports. An increased quantity of crude ore was treated last year at a lower average cost. At the date of the balance sheet the cash assets showed a net surplus of £846,280. Development approximately replaced the ore taken out of the mine, the reserves in the three principal sections remaining at 4,500,000 tons. This represents about nine years' supply at last year's rate of exhaustion. The £1 shares are quoted on the Stock Exchange at £4.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, Commercial Bank of Scotland, Bank of London and South America, Mexican Railway, London and Rhodesian Mining and Land, Rhokana Corporation, New Zealand Loan and Mercantile Agency, Nelson Financial Trust, Luipaards Vlei Estates and Gold Mining, Bowaters Paper Mills, Kamunting Tin Dredging, and Taylors (Cash Chemists). At the British Overseas Bank meeting, Mr Arthur C. D. Gairdner emphasised the importance, for trade revival, of the achievement of stability over a wider area than at present, and dwelt upon the consistency of the bank's figures under conditions in which violent fluctuations might have been expected. The Earl of Mar and Kellie informed shareholders in the Commercial Bank of Scotland that the improvement in the steel industry was beginning to be reflected in the allied trades, although the difficulty in finding profitable employment for bank resources remained. At the shareholders' meeting of the Bank of London and South America, Mr Richard Foster gave an informative review of conditions in South America. In Argentina, he declared, improvement had developed into all-round recovery. At the Mexican Railway meeting, the chairman declared that, next to Great Britain, Mexico was recovering from depression more rapidly than any other country in the world. The Government's success in pegging the exchange during the whole of the year had been a powerful factor in the revival. At the London and Rhodesian Mining meeting Lord Lurgan declared that the company's interests in Rhodesia were all looking extremely well. Sir Auckland Geddes informed Rhokana shareholders that the total ore reserves owned by the Corporation were 270,780,000 short tons, averaging 4.3 per cent. copper. Rhokana had, and Mufulira would soon have, a complete treatment plant. The resolution authorising the creation of £1,500,000 of redeemable preference shares was agreed. At the New Zealand Loan meeting, Mr Harold G. Brown disclosed that the unfavourable prospects for the current year were responsible for the withholding of one year's dividend on the first preference stock. The chairman of the Nelson Financial Trust showed that the net depreciation on the company's investments had been reduced, over the preceding twelve months, from 17.68 per cent. to 7.62 per cent. At the Luipaards Vlei meeting, Mr E. Turk referred to indications that improved ore values were being obtained as greater depth was reached. Mr Eric V. Bowater informed the shareholders of Bowaters Paper Mills that substantially the whole output of the company and its associates had already been sold for 1935 at above present ruling prices. At the Kamunting Tin Dredging meeting, the chairman strongly defended the continuance of the tin restriction scheme. At the joint meetings of the Taylors (Cash Chemists) companies, Mr Philip E. Hill outlined the scope of the reorganisation of the Taylors' chain of shops.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
December 18	December 20

THE approach of Christmas has projected itself in lacklustre markets. Steadiness has been the keynote, but conditions have been unexciting and, at times, rather sedate. Public interest has been distinctly sparse, and the speculative operator has found little reason to extend his activities on either tack. The maintenance of the general level of employment—despite some fall in the building trades—and the November export figures, were voted respectable rather than exciting. Some far-seeing investors, however, noted the failure of raw material imports to register the usual seasonal expansion. The omens suggest little likelihood of a repetition of last year's pre-Christmas activity, which subsequently developed into a minor boom in January.

It was left to the Chancellor of the Exchequer to provide the week's feature. His statement in the House of Commons that cheap money continues to form an essential part of the Government's policy, provided fuel for a considerable flare-up in the gilt-edged market. Old Consols advanced by as much as 1½ on Wednesday, but the average advance in the remainder of the list was well under one point. Institutional investors were understood to be purchasing on a fair scale. India stocks were generally firm, and fair support was forthcoming for Dominion issues, particularly after publication of the South Africa 3 per cent. loan terms.

European bonds opened heavily, in the shadow of the Jugoslavia-Hungary dispute, but the basis of agreement achieved at Geneva late on Monday encouraged a firmer tone. German issues staged a temporary recovery, but apprehension which developed in mid-week concerning the trend of potash sales depressed the 6½ and 7 per cent. bonds and sympathetically affected the "Dawes" and "Young" issues. Saarbruecken 6 per cents., which enjoyed a rapid rise late last week, made little further headway. Brazilian funding bonds received quiet support, the market being prepared to take official assurances of debt service at their full value. Argentine issues were firm, and Chilean loans showed slightly better spirit in mid-week dealings. Effective "House" publicity focussed interest upon Chinese railway bonds, but Japanese issues were not maintained.

Business in home rails was very quiet. Ordinary stocks were maintained, until publication of the traffics, when small recessions were marked throughout the list and spread to the marginal preference issues. Other preference stocks were steady. The foreign rail market was idle and featureless.

Turnover in the industrial markets was only moderate, and although the general tone was steady, price changes were spasmodic. Brewery shares continued to attract support on a further batch of reports and dividends. Considerable interest was displayed for coal shares, on the Powell Duffryn-Welsh Associated merger (outlined on page 1156), while in the "heavy" industry section South Durham and Tube Investments appreciated. Both electric supply and equipment issues lost their recent attraction. Motor shares were irregular, but mostly easier, Tilling registering the chairman's disappointment with the Transport award (see page 1158). The aviation group displayed an uncertain trend. Stores issues were dull and inclined to move to lower levels, while textile shares remained very quiet. More activity was apparent among rayon shares, and Courtaulds maintained most of Tuesday's improvement. In the miscellaneous section the weakness of brick issues provided a feature. Other leaders, such as Imperial Chemical, Dunlop, and British Oxygen, were easier on balance. Spillers received moderate support, but other milling issues were reactionary. In the shipping group, Royal Mail and Elder Dempster debentures were fairly active on Thursday.

Oil shares were offered at the opening, but only a moderate scale of Continental purchasing was needed to improve the tone on Tuesday. Later reports that the

gasoline price war had abated gave moderate assistance, but turnover remained very small. "Shell" Transport became more active on Thursday.

The rubber market was depressed by a persistent stream of moderate sales, and by early weakness of the commodity on Tuesday. A somewhat better—if inexplicable—tendency developed on Wednesday, when selling abated sufficiently to prevent further recession in prices, but buyers remained aloof. Tea shares were somewhat steadier at the opening, but it was not long before the poor results at this week's auctions renewed the persistent selling which has given so much trouble in recent weeks. As is usual in this market, the absence of buying support exaggerated the effect upon prices, which was most severe in the Indian section.

Gold shares opened in dull fashion and made little response to satisfactory dividends, which had already been adequately discounted. Some improvement in tone could be seen on Tuesday, on correct forecasts of increased declarations, but interest abated on the following day, and prices moved within narrow limits. West African shares provided some interest on Tuesday after a firm but quiet opening, but with the exceptions of Kwahu and Gold Coast Selection prices made little further advance. Australian issues were dull under the influence of the wages award. Rhodesian copper issues were dull, despite the success of the Rhokana issue. Tin shares were fairly steady, and some demand for Malayan Tin and Southern Malayan was reported on the results.

FOREIGN STOCK EXCHANGES NEW YORK

ALTHOUGH business news is good, the stock markets are quiet and irregular. Operators are reflecting that, if Christmas comes, Congress is not far behind. The slight suggestion of doubt of the Administration's continued aversion to radical courses is probably irrational and unsupported by definite evidence. Such indications as are available, are, on the whole, reassuring. Limitation of war profits will have national influence behind it. The proposed new Banking Bill, which the Secretary of the Treasury has discussed with congressional representatives, contains few drastic provisions. The Stock Exchange Commission's security regulations, whose publication is expected shortly, may represent an appreciable relaxation of the over-stringent rules which have hampered new issue business hitherto. Nevertheless, the rising tendency of security values has lost its momentum, and there is a disposition to postpone better times to the New Year. Italy's control measures upset the bond market on Monday, the initial (and exaggerated) report that the Italian Government was seizing all overseas holdings of its nationals forthwith, being interpreted as an intimation of early selling to support the lira. Second-grade bonds, both foreign and industrial, were especially affected. Subsequently, however, the market showed a stronger tendency, after the news of the settlement of the dispute between Yugoslavia and Hungary. In the stock markets, a few isolated shares, like American Can, were steady, but prices as a whole marked time. Railroads generally held their ground, but utilities showed some weakness. The volume of business generally was reduced to small dimensions, many operators choosing to hold back until President Roosevelt had made his speech on December 16th. Basic industrial conditions are not unfavourable. Steel activity continues to increase. Christmas retail trading is progressing favourably. The oil situation shows signs of improvement, thanks to reduced movement of petrol made from "hot oil," and the termination of the so-called "gasoline war" by the restoration of retail prices in New Jersey to normal.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

£7,000,000, of which loans amounting to £4,062,991 have been sanctioned. Proceeds required for repayment of temporary development loans and extension. Authority has area of 1,820 square miles, of which undertakings already acquired serve 200 square miles, and fixes prices for electricity to cover interest and sinking fund charges under Electricity (Supply) Act, 1922. Stock is transferable free of stamp.

Rhokana Corporation, Ltd.—Offer of 1,500,000 5½ per cent. redeemable cumulative £1 preference shares at 21s. per share. Shares redeemable at 24s. from 1940–49, 22s. from 1950–59, and 21s. thereafter, by appropriation of £7,500 p.a. from profits. Company founded 1923, and now owns rights over Nkana, Mindola, and Nchanga ore-bodies, 2,758,586 shares in Mufulira Copper Mines, and prospecting rights until 1940 over 57,600 square miles. Production commenced 1931; estimated production by 1937, 120,000 short tons per annum, at £24 per long ton, including depreciation and debenture interest. Issue required to repay £250,000 loan from British S. Africa Company, and for development at Mindola. Profits after debenture interest, for years to June 30: 1933, £40,863; 1934, £389,045. N. M. Rothschild and Sons have acquired shares at 21s. less commission of 1s. 1½d. per share. 500,000 shares have been placed on underwriting terms.

S. G. B. (Dudley), Ltd.—Issue of 125,000 6 per cent. cumulative £1 preference shares at 21s. per share, and 500,000 5s. ordinary shares at 5s. 6d. per share. Formed to acquire business and assets of Stourbridge Glazed Brick and Fire Clay Company, Ltd., established 1892, covering 27 acres freehold, with mining rights over 130 acres. Profits, for years to June 30: 1932, £11,763; 1933, £14,740; 1934, £31,814. Assets acquired, £343,057. Consideration, £300,000 as to £250,000 in cash, and balance by allotment of 25,000 preference and 100,000 ordinary shares.

Vactric, Ltd.—Issue of 100,000 6 per cent. cumulative redeemable £1 preference shares at par, and 100,000 5s. ordinary shares at 12s. 6d. Formed to acquire business of Vacuum Sweepers, Ltd., established 1924. Profits for years to March 31: 1932, £8,373; 1933, £11,213; 1934, £30,295; 6 months to September 30, 1934, £30,148. Net assets acquired, £67,682, excluding goodwill £137,500, to be reduced to £100,000 after deducting share premiums. Consideration, £205,182, as to £130,182 in cash or shares of either class at company's option, and as to balance by allotment of 300,000 ordinary shares.

Great Work Tin Mines, Ltd.—Issue of 1,200,000 shares of 2s. each at par. Formed to acquire mineral rights over 272 acres in Cornwall from Wheal Reeth Tin, Ltd. Estimated reserves, 44,000 tons, with value of 33 lbs. concentrate (70 per cent. metal) per ton. Ore will be reduced at Wheal Reeth plant for 10s. per dry ton ore. Working costs estimated £101 16s. per ton concentrate, and approximate profit per ton, £41 8s. 3d. Estimated capital expenditure £29,500, for output of 100–200 tons ore per day. Purchase consideration for rights, £45,000, as to £15,000 cash and balance in ordinary shares.

ISSUES TO SHAREHOLDERS ONLY

British Cyanides.—305,863 ordinary 2s. shares are offered to ordinary shareholders registered on November 10th in proportion of one new ordinary share for each 12 shares held, at 2s. 6d. The new shares carry right to subscribe at 3s. per share for a further share in respect of each new share held, such option being exercisable on March 31, 1935, or on the last day of any subsequent quarter up to December 31, 1936.

Guildhall Property Company, Ltd.—Issue of 90,000 6 per cent. cumulative preference shares £1 at par to pay for extensions, to acquire further properties and to provide additional working capital.

London County Freehold and Leasehold Properties.—The board has decided to issue 237,247 ordinary shares £1 at £2 6s. 6d. in proportion one new share for every £8 of stock held on December 3rd. The new shares will not participate in dividends in respect of the year to March 31, 1935.

BY TENDER

Great Marlow Water Co., Ltd.—Offer for sale by tender of £6,000 5 per cent. debenture bonds, minimum price £125 per cent. Redeemable at par January 1, 1962. Profits, exclusive of Government grant: 1931, £4,036; 1932, £3,588; 1933, £3,873. Issued debenture capital, £21,000. Service connections, 3,527.

CONVERSIONS AND REPAYMENTS

Anglo-Scottish Tea Investment Trust.—Issue at par of £37,500 in ten-year 4½ per cent. convertible notes. The purpose is to meet repayment of existing notes on December 31, 1934, and to reduce the trust's indebtedness to the bank. Noteholders will be entitled to allotment equal to 110 per cent. of their holding of 6 per cent. notes.

Eastbourne Corporation.—The corporation has decided to redeem the 3 per cent. redeemable stock, 1920–40, on March 25, 1935, instead of in 1940.

Hoscote Rubber Estates.—The whole of the outstanding 7 per cent. debenture stock has been redeemed by the issue of 33,341 fully paid £1 ordinary shares and £137 in cash.

Moors' and Robson's Breweries.—£20,391 of 5½ per cent. debenture stock is to be redeemed on 31st December.

Norfolk and Western Railway.—This company will redeem on March 1, 1935, at 105 per cent. of the principal amount, and accrued interest, all of its outstanding convertible 10-25 year 4½ per cent. gold bonds due September 1, 1938.

Tasmania 4½ per Cent. Inscribed Stock, 1935.—This stock will be repaid at par on January 1, 1935.

FORTHCOMING ISSUES

Connaught Estates (1934), Ltd.—This company has recently acquired further selected properties. In order to meet the cost and also to repay mortgages the board have decided to issue a new series of 5 per cent. first mortgage debenture stock at 101. Investment Registry, Ltd., have underwritten the issue.

Amari Nigeria Tin Mines.—It is proposed to issue 600,000 2s. shares at par to present holders, carrying an option for one year to purchase one share at par for each two held.

Ruston and Hornsby.—This company proposes to convert £250,000 of 6 per cent. debentures. A similar amount of new 4½ per cent. first mortgage debenture stock is to be created, and a meeting of the company's existing 4½ per cent. debenture stockholders is being called to approve the proposals.

Tecalemit, Ltd.—A public issue is expected shortly.

RESULTS OF ISSUES

Buenos Aires Western Railway 4 per cent. Notes.—Underwriters left with 40 per cent.

London and Home Counties Joint Electricity Authority.—The list for the issue at 97½ of £1,000,000 3½ per cent. stock, 1955–75, was closed at 10.30 a.m., December 10th. Heavily over-subscribed.

Barnet District Gas.—Tenders were opened December 10th for £25,000 4½ per cent. preference stock offered for sale. The total applications amounted to £185,000 at prices ranging from £122 6s. per £100 down to the minimum of £114 per £100. The whole of the stock was allotted at £122 6s.

Austrian Government Guaranteed Conversion Loan, 1934–1959.—The subscription lists for cash applications for issue of £10,163,900 4½ 10s. per cent. guaranteed sterling bonds were closed at twelve o'clock December 7th.

Biting Rubber Estates, Ltd.—The list for issue of ordinary shares of 1s. was closed on November 30th. It was over-subscribed.

Great Work Tin Mines.—The lists were closed at 9.45 a.m., December 12th.

S. G. B. (Dudley), Ltd.—List for issue of 6 per cent. preference and ordinary shares was closed at 9.5 a.m. December 11th. Heavily over-subscribed.

Vactric, Ltd.—List for issue of 6 per cent. redeemable preference shares at par and ordinary shares of 5s. at 12s. 6d. was closed at 9.10 a.m. December 11th. Heavily over-subscribed.

Rhokana Corporation.—Lists for offer for sale 5½ per cent. preference shares of £1 each at 21s. were closed at 9.5 a.m., December 12th. Over-subscribed.

CALLS DUE DECEMBER 17 TO DECEMBER 22, 1934

The grand total of calls falling due in December, 1934, is £7,934,567 which compares with £53,366,016 which fell due in November, 1933. The following calls fall due from December 17, 1934, to December 22, 1934, inclusive:—

REPORTS AND NOTICES

Colonel C. F. Hitchins, D.S.O., M.I.Mech.E., M.I.N.A., of Messrs Hitchins, Jervis and Partners, consulting engineers, Westminster, has joined the board of the Partington Steel and Iron Company, Ltd.

GOVERNMENT, &c.

CZECHOSLOVAK 8 PER CENT. STATE LOAN, 1922.—Figures subject to audit received from the Ministry of Finance, Prague, show that for the third quarter of 1934 the receipts from the Customs Duties amounted to Kc. 139,853,146, and the net profits of the Tobacco Monopoly to Kc. 363,000,000.

BANKS

ITALO-BELGIAN BANK.—Net profits of the Italo-Belgian Bank for the year to June 30, 1934, amounted to Frs. 8,588,820, compared with Frs. 8,365,303 for 1932–33. Dividend is maintained at 7 per cent., and after allocating Frs. 1,000,000 against Frs. 800,000 for taxes and crediting Frs. 10,135,631 brought in, a balance of Frs. 10,186,128 is carried forward. Deposits have declined from Frs. 700,876,198 to Frs. 682,184,881, while liabilities to bankers and correspondents have risen from Frs. 182,381,823 to Frs. 192,243,585. Bills payable have fallen from Frs. 83,851,795 to Frs. 46,148,864. Cash has risen by Frs. 8,171,350 to Frs. 211,692,090, and bills receivable at Frs. 391,912,133 compare with Frs. 386,999,774 last year. Loans and advances have declined from Frs. 329,280,207 to Frs. 286,132,415.

COMPANY MEETINGS, &c.

THE BRITISH OVERSEAS BANK, LIMITED

SIGNS OF ECONOMIC RECOVERY

NEED FOR STABLE EXCHANGES

TRIBUTE TO THE LATE LORD CHURCHILL

MR ARTHUR GAIRDNER'S ADDRESS

The fifteenth annual general meeting of The British Overseas Bank, Limited, was held at the bank's premises, 33 Gracechurch Street, London, E.C., on the 11th instant, Mr Arthur C. D. Gairdner (the Chairman) presiding.

The Secretary (Mr A. E. Thorne) having read the notice convening the meeting and the report of the auditors, said that they had received letters from two of their Advisory Directors, Mr R. T. Hindley and Sir Edgar Horne, Bart, regretting their inability to attend the meeting; also the Hon. Bernard Rollo, one of the Directors, had expressed regret at his unavoidable absence.

The Chairman said: Ladies and gentlemen, when we last met in this room, twelve months ago, Lord Churchill presided, and there was no warning of the blow that was so soon to fall upon us. Lord Churchill's sudden illness and death removed one who had been connected with the bank since its foundation, firstly as Governor of the Council and latterly as Chairman. During all these years his advice and support had been invaluable in the difficulties that must always be faced in the early days of any institution. Lord Churchill, although not a banker in the technical sense, was much more, and his knowledge of affairs and men was unrivalled. This experience he placed unreservedly at our disposal, and his firmness of character and the sagacity which he brought to the solution of any problem made him a tower of strength in the bank, while his personal charm not only made him a welcome visitor everywhere but overcame many difficulties that might otherwise have proved insoluble.

The question of Lord Churchill's successor demanded and received very earnest consideration from the Board. It was felt that to expect another to bring to the office of Chairman the same qualities which we had enjoyed when Lord Churchill occupied this position was impossible, and the Board consequently decided to revert to our original principle of an all-time Chairman. This position my colleagues paid me the compliment of asking me to fill, and I accordingly relinquished my former post of Managing Director and Deputy-Chairman. When the bank was constituted it was intended that we should have Managers dealing as experts with the various phases of banking, who should be answerable directly to the Board, and the Directors were glad to have an opportunity of showing their confidence in the present Management by reverting to the original idea and doing away with the office of Managing Director, which post had naturally somewhat obscured the original policy.

In regard to the Deputy-Chairmanship of the bank, it was felt that, as this office brought the holder into closer touch with the work of the bank than was the case with ordinary directors, it should be held by members of the Board in rotation. Mr Campbell, who has been associated with the bank since its commencement, was consequently appointed Deputy-Chairman, to hold office until the end of our financial year in 1935, when he will be succeeded by another member of the Board. We trust you will approve of the manner in which your Board have dealt with these questions, and that we may in the future count on your support and sympathy in the same way as it has been extended to us in the past.

"Silence is golden, speech silver." The advice contained in this old proverb was never more apt than it is to-day, and I therefore propose to confine my remarks within the smallest compass.

TREND OF ECONOMIC FORCES

It is difficult at any time to deal with economic affairs apart from politics—the more so in these times of wholesale State interference—and generalisation becomes almost impossible in conditions as chaotic as they are to-day. But I think one can say that at the moment, in spite of political uncertainty and tension, and in spite of the obstacles of trade barriers, quotas and exchange

instability, economic forces appear to be tending towards recovery. Where these forces have been allowed most freedom, trade has improved, more particularly internal trade. International trade, where groups of nations are held together by a common bond, is also definitely, although very slightly, better. I refer particularly to the so-called sterling *bloc*, in which stability between its members is reflected in their increasing mutual trade and in the fact that their home trade shows relatively more improvement than the average; and this is encouraging as indicating a basis on which to build up a wider and more general improvement.

As regards the countries in which we are more specially interested, it is satisfactory to be able to record that Poland maintains her remarkable capacity for resistance in face of the difficulties with which, as an outstanding agricultural member of the gold *bloc*, she has been confronted; internal trade has been steady with an improving tendency, and foreign trade has increased. Scandinavia and the Baltic Republics show distinct progress in both home and foreign trade. In Central Europe the shadow of increasing political tension has rather nullified the tendency to economic improvement noted elsewhere, but, even so, in Austria and Hungary, perhaps the most hardly hit countries of all Europe, the position shows signs of greater underlying soundness. In Spain, serious internal political troubles have been encountered, we may now hope overcome, and economically the position shows a certain and perhaps surprising degree of stability.

POLITICAL UNCERTAINTIES

In referring to these favourable points I do not, unfortunately, mean to imply that the picture as a whole is encouraging; very much the reverse. Political uncertainties overshadow Europe, and, in addition, instability, or the fear of instability, in currency matters is a heavy drag on any tendency for confidence to revive. But in spite of this I do emphasise that the existence of these favourable factors holds out hope for the future, if only the world can bring itself to deal sensibly and reasonably with its problems before it is too late. The fact that trade can improve, and confidence tend to return, in spite of such immense hindrances, suggests the lines along which progress may be possible. By that I mean that the improvement in the sterling *bloc* indicates the importance of currency stability in promoting not only foreign but also internal trade.

The gold *bloc*, also, has produced results similar in kind though not in extent. The sterling *bloc* is a loosely defined group of countries collaborating in the development of their common interests in the broadest sense, without either fixed limits or rigidly defined policies, individually affected in varying degree by their abandonment of gold, as the standard of living, internal price levels and foreign indebtedness, to mention only a few of the principal factors, differ in every case. On the other hand, the gold *bloc* has practically one inflexible object—the maintenance by its members of the gold standard at the existing gold parities. Although conditions have changed radically since those parities were established, and are still changing, all other considerations of economic policy have been subordinated to this aim, and it has been maintained up to now at the cost of drastic deflation, which in some cases may have to be carried still further. The effect of this policy on the individual countries composing the *bloc* is much more striking and shows greater diversity than is the case in the sterling *bloc*. At the same time, the fact that there is a common denominator gives a community of interest and force to the group that is important, although the fear of possible breakdown creates a sense of insecurity which has hitherto discouraged the revival of confidence and prevented the appearance of any marked trade revival in this group. The very rigidity of the *bloc* is its weakness and, although one must welcome any form of collaboration between nations in currency matters, the prospect of some currency revaluations becoming unavoidable sooner or later has hitherto

prevented the gold *bloc* from acting as a constructive influence in the restoration of world trade.

STABILITY NEEDFUL FOR TRADE REVIVAL

For the reasons I have outlined, the experience of the gold *bloc* confirms my conclusion as to the importance of currency stability in trade revival, and indeed the achievement of stability over a wider area than at present is one of the most important problems to be faced. The difficulties are great; the interests of these two groups are in many respects conflicting, and, moreover, we have in the U.S.A. a third important element hovering outside the confines of both groups. However, unless some permanent basis can be found for stability, it is difficult if not impossible to see how confidence can be fully restored and international trade again function with adequate freedom.

It is also becoming increasingly clear that the other great hindrance to recovery is the growing interference by Governments in the normal flow of economic life. Such interference was perhaps inevitable in the attempt to put straight the maladjustments following on the war. But we now see that it would have been better to trust to the healing effect of time and natural developments, for in the application of economics, science and finance, our present level of knowledge has shown itself incapable of anticipating the human reactions to the measures that have been adopted. As a consequence not only have the hoped-for results not been obtained, but in general it is in those countries where Government interference has been working at highest pressure that the least progress has been made.

CONSISTENCY OF BANK'S FIGURES

Turning now to our report and balance sheet, which are before you, I think you will be surprised, as I have been, by the consistency of the figures shown under conditions in which violent fluctuations might have seemed a more natural result. "Current, Deposit and Other Accounts" and "Amounts Owing to Subsidiary Companies" show small increases as compared with last year. These, however, are very active accounts and the changes since last year have no significance. "Acceptances" also show a moderate increase. This item has fluctuated somewhat during the year and on several occasions has given us the impression that more active business could be anticipated. From one cause or another this activity has always been checked. The primary reason for this lack of response is naturally to be found in the fact that prices of commodities have shown no material improvement, while low interest and discount rates also reflect trade inactivity. At the moment we are not without indications that here and there greater activity may be anticipated, but it is probably too much to expect this movement to become general.

On the other side of our balance sheet our assets show so little change that our experience might almost be considered subnormal. "Bills Discounted," showing a substantial reduction, is perhaps an exception, but you will readily agree that discounting bills is not at the moment an attractive method in which to employ our funds.

Net profits, at £62,332 16s. 11d., are for all practical purposes the same as last year and represent a very small margin of profit after payment of the dividend on our "A" ordinary shares. As mentioned last year, this margin of profit does not justify payment of an interim dividend, and we have still no intention of reverting to this method of dividing profits.

RETIREMENT OF MR HOPKINS

I have already referred to the appreciation felt by the Board for the services rendered by the Management and Staff, and it was, therefore, with great regret that we learnt that Mr Hopkins had decided to close his active participation in the affairs of the bank and retire to enjoy the leisure he so well deserved. Mr Hopkins' active career in the City had extended over a period of about 50 years, and he joined our service some 12 years ago when we took over the London and Liverpool Bank of Commerce, with whom he had previously been associated. We have learnt to depend more and more on Mr Hopkins' thoughtful and efficient management, and we part from him with much regret and the hope that he will long enjoy the leisure he has so fully earned. (Hear, hear.)

It now remains for me to propose the adoption of the report and accounts, which I shall ask Mr Norman L. Hird to second, but before putting the motion to the meeting I shall be glad to reply to any points on which further information is desired. I now move the following resolution: "That the report and accounts for the year ended 31st October, 1934, as audited and certified by your Auditors, now before the meeting, be approved and adopted; that the dividend of 6 per cent. for the year recommended on the 'A' ordinary shares be approved and paid to shareholders on the

register of members at the closing of the books on 27th November, 1934."

MR NORMAN HIRD'S SPEECH

Mr Norman L. Hird (Advisory Director): Mr Chairman, ladies and gentlemen, in seconding the adoption of the report and accounts for the year, I really feel that I have very little to add to what the Chairman has said. I find myself in complete agreement with him. I should like, however, to emphasise how much we miss our old friend, Lord Churchill. Those of us who often came into contact with him—of course, not so frequently as the Board and the Officials—had the very highest respect for his many fine qualities, and, what is probably as important, we had a very deep affection for him as a man.

With so many difficulties to face, difficulties of which you are all aware and to which the Chairman has referred—in fact, we seem to have been referring to them for many years now—it is not surprising that the profits show so little change. I congratulate the "A" shareholders on receiving their dividend, and, as a representative of the "B" shareholders, I can say that we hope the day may not long be deferred when we shall be within reasonable reach of a dividend ourselves. (Hear, hear.)

The outlook is still uncertain, and we can only hope that such improvement as has started in this country and in certain other sterling *bloc* countries may spread all over and that we may be rid of those most harassing restrictions on trade and Government interference to which the Chairman has referred. There is one thing which I should like to say and that is that, although you may not see very large profits, the British Overseas Bank continues to go on building up a most excellent goodwill on the Continent of Europe. That goodwill is obtained by the efficiency of its Management and the excellence of its service and Staff, and, when the world comes to its senses, we ought to benefit by that goodwill. It is a very important and essential asset in a bank. You cannot measure it in pounds, but it is one of the most important things.

For the building up of that goodwill we shareholders are greatly indebted to the various Managers, to the extremely efficient Staff and above all to the inspiration of Mr Gairdner, whom we welcome in his new rôle, and wish him every success. (Applause.) I have much pleasure in seconding the adoption of the report and accounts.

Mr E. Edward Levy: I am sure we all regret very much the death of our late Chairman, and we congratulate Mr Gairdner on the position which he now occupies. I am sorry to hear that the prospects are less rosy than I anticipated, because I noticed that the report of another overseas bank was a very good one. I hope that it will not be very long before we follow in its footsteps. With regard to the dividend, I see that you have already debited that in the balance sheet, no doubt taking it for granted that the shareholders would agree to it. I for one shall certainly agree. With those few remarks, I am very pleased to support the adoption of the report and balance sheet.

The resolution was carried unanimously.

RE-ELECTION OF DIRECTORS

The Rt. Hon. Lord Aberconway (Director): I beg to move, "That the directors retiring by rotation, namely, Sir James Caird, Bt., and Mr Nigel L. Campbell, be re-elected." Both these gentlemen are very well known to you and this resolution needs no word from me. Sir James Caird brings a most varied business knowledge and experience to the service of your Board. Mr Nigel Campbell is one of the original Directors of the bank and the Board are very fortunate in that he has been prevailed upon to accept the office of Deputy-Chairman. He gives a great deal of his most valuable time to the business of the bank, and his help and advice are of the greatest possible assistance to the Board. (Applause.) I beg to move that resolution.

Mr Frederic Hewson: I second that. For many years I have attended these meetings, although I did not do so last year, and I have got to know something of the ability of the gentlemen recommended.

The resolution was unanimously approved.

Sir James Caird, Bt.: I thank Lord Aberconway for his kind remarks and you gentlemen for re-electing me.

Mr Nigel L. Campbell: I thank Lord Aberconway and you, gentlemen.

Mr W. H. Allen: Gentlemen, I beg to move: "That the retiring Auditors, Messrs George A. Touche and Company and Messrs McClelland, Ker and Company, be re-appointed Auditors of the Company for the current year at the same remuneration, namely, a collective fee of £750."

Mr Hewson: I second that.

The resolution was passed unanimously.

VOTE OF THANKS

Mr Walter Scott: Gentlemen, previous speakers have taken out of my mouth words which I would have used with regard to our late Chairman. It certainly seems strange not to see him in the chair, and I am sure I am voicing the feelings of all the shareholders when I tender deep sympathy to Lady Churchill. (Hear, hear.) That brings me to yourself, sir. It must give the shareholders great pleasure to see you assuming the great office of Chairman. Last year I asked the late Lord Churchill to be good enough to convey our sympathy to you in your indisposition. We are all pleased to see you looking so well to-day. (Hear, hear.) I propose a most hearty vote of thanks to you, sir, for your very lucid speech. (Applause.)

Mr Levy: I shall be very pleased to second that. We are all very pleased to see you in the chair, sir, and we hope you will occupy that position for a long time to come. (Applause.)

The vote was unanimously accorded.

The Chairman: Mr Scott, Mr Levy and gentlemen, I thank you very much for your kind words. It is encouraging in these times to feel that one has the sympathy of the shareholders, and it is a great encouragement to go on, I hope, to better times. As Mr Hird indicated, when they come we are in a position to take advantage of them. There is certainly no shareholder who regrets more than I do the death of Lord Churchill. During the period in which he occupied the position of Chairman in this bank I was very closely associated with him, and it was a great wrench when I was ill myself to learn that he had passed away. It is a great source of regret to me, and I miss his counsel and his presence more than you can tell. I am glad to feel that in that also I have your sympathy. (Applause.)

The proceedings then terminated.

LUIPAARDS VLEI ESTATE AND GOLD MINING COMPANY, LIMITED

DIVIDEND INCREASED TO 50 PER CENT.

Presiding at the ordinary general meeting of Luipaards Vlei Estate and Gold Mining Company, Limited, held, on the 12th instant, Mr E. Turk (chairman) in moving the adoption of the report and accounts, said that the net result of the year's operations was a profit of £176,032, which compared with £135,100 for the previous year. The directors recommended the payment of a dividend of 50 per cent., equal to 1s. per share, less income tax, leaving a sum of £45,072 to be carried forward to the current year's accounts. This dividend compared with 33½ per cent. for last year and 12½ per cent. for the year before. The share capital stood at £274,279, as against £229,874 in the previous accounts. The two reserve accounts in the balance sheet totalled £170,000, equal to over 60 per cent. of the company's issued capital.

ORE RESERVES

The tonnage of ore treated of 454,500 tons showed an increase of about 10 per cent. on the previous year. It was expected to raise the tonnage to somewhere near 50,000 tons per month as soon as adequate compound accommodation was made available, which would take about six months. The ore reserves position continued sound, being nearly four years ahead of milling requirements. There was a strong indication that, as greater depth was reached, an improvement in values was taking place.

OFFER TO SHAREHOLDERS

In order to provide for proposed capital expenditure an issue would be made of £275,000 5-Year Notes, bearing interest at 5½ per cent. and convertible into shares at the option of the holder at the rate of 120 shares for each £100 Notes. This worked out at 16s. 8d. per share. The Notes will be repayable at the end of five years, or earlier, at a premium of £5 per cent. on six months' notice by the company. In accordance with their practice in the past, the offer would be confined to shareholders. Last year's profit of the company covered the interest requirements of the Note issue more than eleven times. The large mining area ensured to the company a very long life, while the French-Rand-Tudor area had added to the prospective value of the property, in an important degree, the extent of which should become definitely known through the exploration work which was to commence in the coming year. During next year, the plant should treat an output of 10 per cent. to 15 per cent. above the highest figures so far reached. They could, he thought, look forward to the results of the New Year with confidence.

The report and accounts were unanimously adopted.

RHOKANA CORPORATION, LIMITED

ALL-ROUND PROGRESS

The twelfth annual ordinary general meeting of the Rhokana Corporation, Limited, was held, on the 10th instant, at Southern House, Cannon Street, London, E.C., the Right Hon. Sir Auckland C. Geddes, P.C., G.C.M.G., K.C.B. (chairman of the corporation), presiding.

The Chairman said that shareholders would see by the operating account they had made an operating profit of £614,412 8s. in spite of the conservative procedure of bringing their stock of metals in process, stock, and transit to account at cost. Dealing with the principal items in the balance sheet, the chairman pointed out that there was a total of liquid assets of £1,350,762 12s. 3d., and their net accumulated profit was £429,907 10s. 1d. Why, then, it would be asked, did the directors not recommend a dividend? The answer was quite plain. It was because they were definitely under-capitalised in relation to the rapid expansion and magnitude of their undertakings, and they were being compelled to use all their profits either as working capital or to supply part of the fixed capital necessary for their expansion. Hence the proposal for the issue of redeemable cumulative preference shares.

Continuing, the chairman asked shareholders to consider what the corporation had done and were doing. In addition to being a mining corporation they were a holding company, holding 2,758,586 shares in Mufulira Copper Mines, Limited, for which they had paid £1,007,731 7s. 6d. Calculated on the present market price of Rhodesian Selection Trust shares their holding of Mufulira shares was worth £1,793,000. In their balance sheet the Mufulira shares were valued at £1,007,731, or less than 8s. per share. That mine was still in process of development and equipment, but had already commenced production.

The total ore reserves of the various deposits owned by the corporation was 270,780,000 short tons, averaging 4.3 per cent. copper, less approximately 3,850,000 tons extracted to date. It was not worth while to spend money to prove more ore at present. They were now extracting about 200,000 tons of ore a month. At that rate of extraction there were more than 110 years' reserves of ore. An interesting point was that their richest ore still remained to be developed and worked. In other words, they were to-day milling ore definitely below the calculated average of their ore reserves.

He had been asked the other day by an anxious shareholder, "Had they any real reserves of copper in the mine?" The answer was over 11,000,000 tons of real copper. It was important to remember that. It had a very real influence on policy. Similarly Mufulira's ore reserves of 162,000,000 short tons of 4.14 per cent. copper content must have an influence on that company's policy.

Rhokana had, and Mufulira would soon have, a complete treatment plant, designed and built on the most modern lines and capable of producing enormous quantities of metal. At present they could sell all that they produced, and they would not seek to produce copper that they could not sell, but he believed that they were going to be called on for more copper. Did shareholders realise that England was consuming more copper to-day than it had done in the boom years? In all respects they had moved forward. They had all but completed their electrolytic refinery, with an annual capacity of 36,000 tons of copper.

They had a reserve of over 11,000,000 tons of copper behind them in the mines, which they carried as an asset on their balance sheet at £1. They had a magnificent plant which had cost them, erected in the heart of Africa, £5,669,738 6s. 7d. That they had written down to under £3,000,000.

They had spent £1,794,908 4s. 3d. on the development of their mines, but they had written that down and set up a reserve against the written-down figure, so that for balance-sheet purposes they only claimed for that development an asset value of £45,173 13s. 7d., and that was for major development only. All minor development work was charged against production cost.

The copper market was expanding, and though they intended to hold firmly to the policy of only producing what they could sell they felt they must put themselves into a position to produce more, because it would be wanted. They thought the present price of copper too low. They would like to see it higher, but not too high, because they did not want to check the development of the market for copper. They were quite prepared to co-operate with other producers, but the terms of co-operation must be reasonable from the point of view of their shareholders.

The directors were going to ask the shareholders to pass the special resolution, which they had before them, creating £1,500,000 of redeemable cumulative preference shares.

The report and accounts were adopted, and the proposed increase of capital approved.

THE COMMERCIAL BANK OF SCOTLAND, LIMITED

SATISFACTORY RESULTS—STRONG AND LIQUID POSITION

IMPROVED CONDITIONS AT HOME

EARL OF MAR AND KELLIE'S INTERESTING REVIEW

The annual meeting of the shareholders of the Commercial Bank of Scotland, Limited, was held, on the 13th instant, at Edinburgh, the Earl of Mar and Kellie, governor of the bank, presiding.

TRIBUTE TO DECEASED DIRECTORS

Before commencing the business of the meeting the Governor referred to the loss which the bank had sustained during the year through the death of Mr Thomas W. Tod, who, for the long period of thirty-three years, had been a member of the board of ordinary directors, and also of Mr Robb, the late general manager, who, during his short retirement, was an extraordinary director. Mr Tod was, he said, a man of outstanding business capacity, breadth of view and simple sincerity of character, and his wise counsel, based upon wide experience and an intimate knowledge of the business of the bank over a long period, was of the utmost value to his colleagues on the board and to the officials. Ever mindful of the interests of the staff and ready with a kindly word of encouragement, he endeared himself to all who had the privilege of coming into contact with him. To the eminent services rendered by Mr Robb during his long period of duty, reference was made a few years ago on the occasion of his retirement, and it was a matter of profound regret to all that his well-earned leisure was of so short duration and that its enjoyment was marred by ill-health almost from its commencement. He had left behind a memory of loyalty and devotion to duty with few parallels, which must remain an example and inspiration to all who served under him.

CHAIRMAN'S SPEECH

In submitting the report the Governor said:—Again I am glad to say I have the pleasure to submit for your approval a balance sheet and profit and loss account, the former of which speaks for itself as to strength and liquidity, and the latter I venture to think you will also regard as satisfactory.

Since last I addressed you conditions at home have continued to show quiet but on the whole reasonable improvement, but I regret the international outlook is not materially improved and restrictions of varied nature render profitable overseas business well-nigh impossible. Under the beneficent influence of sound national finance at home the tender plant of confidence is beginning to show signs of growth, and I think you will feel, as I do, that it would be a profound mistake if any step were taken or even threatened which might jeopardise the measure of returning prosperity so laboriously achieved. We are witnessing experiments in government and finance throughout the world on a scale which has no precedent, and it is difficult to see far into the future. The characteristic of our own people, however, in preferring gradual readjustment and transition to violent change still stands this country in good stead.

CONDITIONS OF THE VARIOUS INDUSTRIES

The notable improvement in the steel industry which has taken place during the past year we are glad to find is beginning to be reflected in allied trades. The herring-fishing industry, in the absence of Continental markets under present circumstances, presents a problem difficult of solution, although steps are being taken to that end. The tweed trade has suffered severely from inability to retain foreign markets and several old and respected names have disappeared from the trade in recent years. Farming conditions, I am glad to say, we find rather better than a year ago, and, generally speaking, there appears greater confidence in the industry. The Scottish Agricultural Securities Corporation, which I referred to last year as having been established under Government auspices by four of the Scottish banks, of which this bank is one, is now fully operative, and in granting long-term advances against agricultural land on reasonable terms is, I consider, fulfilling a useful function.

From a banking viewpoint the year under review has been one of difficulty in finding profitable employment for the large liquid resources which are incidental to the business.

BALANCE SHEET ITEMS—LIABILITIES

Turning now to the report, you will observe that for the purpose of comparison last year's figures are also shown. On this occasion shillings and pence have been eliminated, the figures being shown to the nearest pound, which I think you will regard as making for a clearer statement.

The reserve fund remains at £2,850,000, or £600,000 more than the paid-up capital, and with the proposed dividend payable on January 2nd next amounting to £127,875, and the balance of profit and loss account of £78,047, the shareholders' funds aggregate £5,305,922. It is interesting to note that the bank has now well over eight thousand shareholders, who are for the most part resident in Scotland, and that the number is steadily increasing.

NOTES IN CIRCULATION

Notes in circulation at £3,223,037 are about £20,000 less than last year, but the amount fluctuates from day to day, and this small reduction at the date of the balance sheet has no significance.

Deposits are more by £1,200,000 at £38,932,033, despite the low interest rates ruling.

Acceptances and engagements on account of customers are more by £1,500,000, which is chiefly accounted for by the inclusion of foreign exchange forward contracts which customers having foreign commitments find it desirable to arrange to cover the risk of fluctuation in exchange.

ASSETS

On the assets side you will observe the cash items conveniently grouped and making a total of £9,224,263.

British Government securities amount to £21,663,849, or about £1,200,000 more than last year. An adequate proportion of the total consists of short- and medium-dated stocks, and the balance sheet figure is substantially under the present market value. Our holdings outside of the British Government group are less than £300,000, the chief item being our holding of Bank of England stock.

Bills discounted are less than a year ago by about £284,000 at £874,216. This figure represents discounts in the ordinary course of business and does not include any Treasury bills. I am interested to observe that prominence is again being given to the virtue of the bill of exchange as a medium for the mobilisation of credit. There is no doubt that from the bankers' viewpoint the genuine trade bill is most desirable as providing a self-liquidating advance, and the low discount rates quoted for this type of facility should encourage the use of the Bill in suitable cases where facilities are required. It has to be kept in mind, however, that not all borrowing is appropriately reducible to the form of a bill.

LOANS AND ADVANCES

Loans and advances at £14,529,282 are within £100,000 of being the same as a year ago. With an active business such as ours the figure fluctuates considerably, and during the course of the year the figure was substantially higher from time to time. It can readily be seen that the bank is in a strong position to meet the requirements of its customers as trade improves.

Heritable property at £870,000 is £44,000 more than a year ago. The policy of bringing our offices up to a high state of efficiency has been continued during the year. A prominent site in Bothwell Street, Glasgow, was acquired during the year, and a building to house our important Bothwell Street branch is being erected to the design of Mr James Miller, R.S.A., F.R.I.B.A., who was also responsible for the new West George Street branch building. The alterations and improvements at the head office are now completed, resulting in accommodation for all departments being now available on the most modern and approved lines. It is a tribute, I think, to the foresight of the directors of the time that they provided a building here almost ninety years ago which has been capable of adaptation to present-day requirements without any outward change of appearance or character.

YEAR'S PROFIT

The profit for the year amounts to £379,337, which, you will observe, is arrived at after providing for all bad and doubtful debts. This is about £7,000 less than a year ago, which, I am disposed to think, is very satisfactory looking to the conditions ruling.

As to the allocation of the profits, interim dividends have been paid on the "A" shares at the rate of 16 per cent. per annum, and on the "B" shares at the rate of 10 per cent. per annum, and it is now proposed that a distribution to both classes of shares be made at the same respective rates for the second half of the year, both subject to income tax.

You will observe that £50,000 has been allocated to contingency fund, £30,000 to the officers' pension scheme, and £50,000 in reduction of the cost of heritable properties. After providing for these dividends and allocations there remains a sum of £78,047 to be carried forward.

MR A. W. ROBERTSON DURHAM APPOINTED TO THE BOARD

To fill the vacancy created by Mr Tod's death, the directors nominated Mr A. W. Robertson Durham to a seat on the board, and his appointment falls to be confirmed by the shareholders. Mr Robertson Durham, who for many years acted as one of the auditors of the bank, having succeeded his father in that capacity, brings to the board a wide business experience and an intimate knowledge of the affairs of the bank gained in his previous capacity. We are pleased to welcome Mr Robertson Durham to-day for the first time at this table. To fill the vacancy created by Mr Robertson Durham's appointment the directors, in terms of their powers under the constitution, appointed Mr William Annan, C.A., as an auditor.

The Governor then moved the adoption of the report, and the motion having been seconded by Mr. Howden was put to the meeting and carried.

At the close of the meeting a vote of thanks was accorded to the directors and the staff for their services during the year.

NELSON FINANCIAL TRUST, LIMITED

IMPROVED POSITION

The ordinary general meeting of the members of Nelson Financial Trust, Limited, was held, on the 10th instant, at Southern House, Cannon Street, London, E.C., Mr Harold Nelson (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said it would be seen that the debenture stock had been increased by £300,000, and the directors had already made good use of the additional funds. The investments, now about 725 in number, amounted to £1,468,234, which valuation showed the net depreciation had been reduced to 7.62 per cent., as compared with 17.68 per cent. last year.

The spread of their investments geographically was—Great Britain 43 per cent., British Empire outside Great Britain 34 per cent., Europe and Asia 12 per cent., North America 4 per cent., and South and Central America 7 per cent. With regard to classification, their holdings comprised 54 per cent. of British funds, Colonial and foreign Government and Corporation stocks, debentures and preference shares; and 46 per cent. in ordinary shares, the latter class including banks, public utility companies and other stable securities which were in a separate category to ordinary industrial shares.

In the profit and loss account the gross income showed an increase of £4,330, while the net amount carried to the balance sheet was £3,247 greater. He was of opinion that the progress the trust was making might justify some increased distribution in the near future, but shareholders, no doubt, had had brought home to them the increasing difficulties of investment now that the values were being adjusted to the present state of the money market.

Mr W. A. Porter (general manager) seconded the resolution, which was carried unanimously, and a cordial vote of thanks to the chairman and directors terminated the proceedings.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Boulevard Street, Fleet Street, London, E.C.4.

LONDON AND RHODESIAN MINING AND LAND COMPANY, LIMITED

PROSPECTS OF INCREASING REVENUE

The ordinary general meeting of The London and Rhodesian Mining and Land Company, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London.

Lord Lurgan, K.C.V.O., who presided, said that he thought the credit balance for the year of £153,237 could be considered satisfactory. With the carry-forward there was a total of £207,449 available, and shareholders had received a final dividend of 2½ per cent. in respect of the previous year's accounts, as well as a 5 per cent. dividend for the past year. It should be borne in mind that shareholders who took up the new shares in August last would also participate in the present dividends, and this meant a larger distribution by the company. Those who participated in the new issue had no reason to complain, as they were receiving 7½ per cent. on their money after a period of less than six months. A sum of £30,849 had been transferred to reserve, raising it to £100,000. Owing to the fact that the company's investments were now well spread, and also owing to the conservative value at which their various assets stood on the books, there was no necessity—at any rate for the present—to earmark any further sum for reserve purposes, and this policy meant that in future there should be a larger balance available for distribution.

THE INVESTMENTS

With regard to the balance sheet: Investments, at £338,215, showed a considerable increase, the previous year's figure being £241,988. These investments, taken at cost or under, so far as the quoted investments alone were concerned, were of a value at June 30th last of £524,551, and, with the investments valued by the board, they had a total valuation of £637,981, or practically £300,000 above book figures, which was a very strong position. The cash position of the company was satisfactory, as by taking debtors and cash at bank and deducting creditors they had a surplus of approximately £105,000. In spite of the cattle losses and the heavy amounts they felt compelled to use to write down their livestock, the year's results could be considered as highly satisfactory as, after making these allocations and the distribution shown, they carried forward £70,905 compared with £54,211 brought in.

During the year 22,060 shares were issued to the shareholders of the Town Properties of Buluwayo Company, and since the date of the accounts the balance of the unissued capital, namely, 538,462 shares had been issued to shareholders only for cash. A large proportion of the proceeds from this issue had already been invested in—in most cases—dividend-paying investments, the revenue from which would help to increase the current year's profits.

PROGRESS OF VARIOUS INTERESTS

Dealing with the various interests held by the company, the Chairman said that the Cam and Motor Company had again done very well, although a slightly decreased dividend was received during the year. Developments had proceeded in a most satisfactory manner, and a steady and increasing revenue could be expected from this interest for many years to come. That company had just announced a dividend of 3s. 6d. per share for the half-year ending December 31st, which compared with 2s. 6d. for the same period last year.

South African Coal Estates had had a successful year, and they could look forward to increased distributions from this interest. The Dominion Tobacco Company had made steady further progress, but it had been decided to build up its financial strength rather than to make a distribution. The African Investment Trust had been reorganised during the year and had now entered the dividend-paying stage. The London and Rhodesian Company was interested in a number of important Rand Gold Mining shares from which regular dividends were being received. He might say that since June 30th their holding in a number of these Rand companies had been increased.

The company's stand holding should benefit from the increasing activity in Rhodesia, and the board looked upon these assets as having considerable potential value with an increasing revenue.

In spite of the bad returns from the ranching and farming interests, they faced this year with every confidence, as, in other directions, the company's interests were all looking extremely well. They had every reason to expect that the company's revenue would increase, not only from their gold interests, but in other directions, as the continuance of the gold premium meant steadily improving prosperity to Rhodesia where most of their interests were situated. The report and accounts were unanimously adopted.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

STRONG LIQUID POSITION

MR RICHARD FOSTER'S REVIEW OF CONDITIONS IN SOUTH AMERICA

The seventy-second ordinary meeting of the Bank of London and South America, Limited, was held, on the 11th instant, at 6, 7, and 8, Tokenhouse Yard, London. Mr Richard Foster (deputy-chairman) presiding.

The Chairman, in the course of his speech, said:—Before going through the accounts I wish to draw your attention to the fact stated therein that the figures are converted at the official rates of exchange ruling on September 30th last. I do this because the regulations placed by some South American Governments on their exchange have been entirely changed during the year, and on account of these changes different views might be held as to the rate of exchange at which currencies should be converted for balance-sheet purposes. A year ago it was impossible for law-abiding institutions to remit any profit, interest, overhead expenses, and, least of all, capital at any exchange. There were black, grey, and even in one country, I believe, red rates which could be procured, but not by those who, working in these countries, try to carry out both the spirit and letter of the law and conform to the wishes of the authorities.

CHANGES IN EXCHANGE REGULATIONS

Now, however, this is all changed. In Argentina we have an official rate used for exports and service of the national external debt. Another rate created by tender is used for imports, debenture interest for foreign companies, and other approved remittances. The latter rate was 12½ per cent. lower than the official rate on September 30th last. Then there is also a free rate, and, to the limited extent of available exchange at this rate, we can now remit what we like, whilst we are not without hope of being able to get a portion at least of some of our overheads allowed at the tender rate. The difference between the tender rate and free rate on September 30th last was 8½ per cent. In Brazil there is now an official rate for exchange, produced by 80 per cent. of coffee exports, which is used for the foreign debt service and 60 per cent. of imports, the Bank of Brazil having announced that from yesterday this 60 per cent. cover will be distributed proportionately to each country according to its coffee purchases, and this will be 46 per cent. to the U.S.A., 13 per cent. to France, 26 per cent. among nine other countries, and 15 per cent. among the remaining countries. These include Great Britain. Bills emanating from all other exports are negotiated at a free rate which varies with supply and demand. As, however, coffee forms by far the larger proportion of Brazil's exports, the supply of exchange in the free market is limited, and out of this limited amount 40 per cent. of the costs of imports has to be supplied. Remittances, therefore, for other purposes are still difficult to obtain and must in certain cases be sanctioned by the authorities. As Great Britain's imports of coffee are relatively small there can only be a small amount of official exchange for British exporters, and unless the free rate improves they must be prepared to quote at least 20 per cent. cheaper than those countries which have a larger share of the official exchange to even maintain their shipments, as the official rate is to-day 26 per cent. higher than the free. The official rate was 11½ per cent. higher than the free rate on September 30th last. In Chile there is an official rate and a rate for export bills, but no official exchange is on offer, and only a small amount of export paper is obtainable at about 60 per cent. depreciation. Uruguay has three rates, official, free controlled, and free. The difference between the last two and the official was 4½ per cent. and 48½ per cent. Colombia a year ago set her exchange free, but remittances, except for payment of imports, are unobtainable. The rate was then \$5.89. After heavy fluctuations it stood at \$8.60 on September 30th.

CONVERSION AT OFFICIAL RATES

That is how the exchanges are. We can all have our own view as to what exchange rate we ought to take for conversion of accounts, but what are these views worth? Take, for instance, Argentina—if there were no restrictions, what would the rate be? Would the official fall to the free rate or the free rate advance to the official, or would they meet somewhere between? At the moment everything in the exchange market is nebulous—sterling, the dollars of America, Argentina, Uruguay, Chile, and Colombia, and the milreis of Brazil, all acting on each other, but not necessarily in relation, all manipulated, perhaps necessarily,

more or less by their Governments, and not one showing the true picture of the country's balance of trade. This being so, your board have followed their usual practice of converting at official rates, thus making comparisons easier between the accounts of this and last year.

Taking the conversion at official rates the nominal loss on capital is £913,000, but at free rates it would be larger. Such loss, however, would only be realised should we cease to function as a bank, but the remittance of currency profits is another story, for when these are remitted at the free rate and the accounts closed at the official rate there is a definite loss. As regards the other items in the accounts, the rate at which exchange is taken is of little importance, as assets and liabilities are converted at the same rate, the amounts being merely enlarged or lessened according to the rate taken for conversion.

THE BALANCE SHEET

Turning to the balance sheet, the one item of our liabilities calling for comment is current and deposit accounts, etc., totalling £31,300,000, or £11,400,000 less than last year. Half this reduction is due to conversions at lower rates of exchange, so the real fall in deposits is somewhat under £6,000,000. You will recollect that our chairman told you last December that very heavy transfers of funds had been made by this bank in the early part of this financial year to the Banco de la Nacion Argentina and the Banco do Brasil, when frozen funds were released for conversion into foreign countries under schemes evolved by the two republics. In Argentina alone the amount was some £7,000,000, so apart from these exceptional withdrawals, our deposits are being maintained, and are providing us with sufficient funds to meet the current requirements of our customers.

Our assets show that cash at £9,600,000 is lower by £7,900,000, bills receivable at £6,600,000 lower by £2,600,000, and advances and other accounts receivable at £18,200,000 lower by £1,900,000, but investments amounting to £1,100,000, principally in British Government securities, are now shown separately in the balance sheet, with the result that the net reduction amounts to some £11,300,000 and approximately offsets our reduced liability to customers. We remain in a strong position, our holding of cash alone exceeding 30 per cent. of total deposits.

PROFIT AND DIVIDEND

The profit and loss account shows that expenses after bearing the loss on the remittance of part of currency profits at free rates, are reduced by £130,000, mainly due to lower official exchange rates, and the lower exchange also accounts for the fall of £191,000 in gross profit. This leaves us with a net profit of £276,330, which is lower by £61,000 than that of last year, but this profit has been arrived at after making provision for bad and doubtful debts, whereas last year part of the provision was taken from contingency reserve. To this profit has to be added the carry-forward of last year—viz. £193,430—making an available total of £469,760. Your board having in mind the continued great uncertainty of international trade, feel that it is still advisable to recommend a conservative course, namely, a dividend of 3 per cent., absorbing £106,200, strengthening contingency reserve with £200,000, and leaving £163,560 to carry forward. I believe you will agree that the accounts you have before you are, under the conditions now ruling for foreign trade, satisfactory and a distinct improvement on last year.

CONDITIONS IN THE VARIOUS COUNTRIES

In Argentina the improvement in conditions that began a year ago has developed into an all-round recovery in her commerce, industry and production. The banking and currency positions have not altered to any great extent, financial soundness prevails, and full compliance has been given to all national obligations, both internal and external. Compared with last year international trade has shown expansion both in volume and value, the figures for the total movement of the first ten months being 2,118 million pesos, an increase of 450 million pesos. Local industrialism, which developed when the import of various easily manufactured articles was costly, is now flourishing and the country is less dependent on others for essentials. There has been no labour unrest. Pastoral prospects have improved, in spite of quotas and other restrictions. Local consumption of meat is rising and there is some hope of new markets. The outlook for hides and wool is uncertain. The greater flow of currency consequent upon the improvement in grain prices is filtering through all channels of general business, and the steadiness of Argentina's recovery from the world crisis is reassuring.

In Uruguay there has been improvement in internal conditions during the past year. In spite of economies, 1933 closed with a deficit of \$3,500,000, mainly attributable to concessions in taxation granted to farmers and others affected by the crisis, and also to unforeseen expenses for locust destruction and unemployment relief. The current year's fiscal finances have improved with increases in the collection of Customs dues and other taxes, and Budget equilibrium is hoped for. As regards prospects, cattle are healthy, crops are favourably reported on, and wool is expected to show an increase of 15 per cent. over last season's clip, while the quality is reported to be excellent.

Paraguay.—For over two years the war with Bolivia has overshadowed the social and economic life of the nation, various offers of mediation having been unsuccessful. Prospects for the future are obscure, but with an early termination of the war the recovery of the country should not be slow or difficult.

Brazil both politically and economically has progressed during the year, the outstanding event being her return to constitutional government. The continuity of leadership should enable the work of national reconstruction initiated by the late provisional Government to be carried on without interruption.

Chile has tried hard to straighten out her economic situation, and has been helped by good prices for her wool and agricultural produce and also by an increase in nitrate and copper shipments. Exports have been facilitated by the low exchange, but the greater movement is partly accounted for by the export of goods to several European countries under compensation treaties, which have as a basis the gradual liquidation of frozen credits, and it remains to be seen whether trade will be upheld when those credits have been finally liquidated. Much of the stock of nitrate formerly held abroad has now run off and is being replenished by shipments from Chile.

I think you will have gathered that in all the countries in which we operate the internal conditions have distinctly improved; but what of the future and the resumption of unhindered international trade? I fear the answer to that is beyond my limitations. I can only say as regards the future that as far as it is possible to judge this bank has the staff, the reputation, and the liquidity to face or take advantage of whatever fate may have in store for banking in South America.

The report and accounts were unanimously adopted.

NEW ZEALAND LOAN AND MERCANTILE AGENCY COMPANY, LIMITED

CONSIDERABLY IMPROVED RESULTS

The fortieth annual general meeting of the New Zealand Loan and Mercantile Agency Company, Limited, was held, on the 13th instant, at 1, Coleman Street, London.

Mr Harold G. Brown (the Chairman) said that the directors were glad to be able to submit accounts that showed a considerable improvement from those of the previous four years, though the results were still some way from being what they would like to see them.

The year's revenue amounted to £486,000, after providing for bad and doubtful debts, and showed an improvement of about £132,000 as compared with the previous year. In 1929, one of the best years the company had had, the corresponding figure was £679,000, so that the past year's figure showed a drop of £193,000. There was a disposable balance of the year's profits available for dividend of £89,000. This would have enabled the directors to pay two years' dividend on the first preference stock, less tax, with a small margin, and it might be wondered why, in view of the strong financial position of the company, they only recommend the payment of one year's dividend on the stock. The year now current could not possibly be as good as the year under review. The glut of money and other circumstances had forced interest rates down to a point at which they were insufficient to provide a reasonable return having regard to the risks inseparable from advances of the character which they made on agricultural land and livestock. They had therefore thought it prudent to retain out of last year's profit a sum in hand sufficient to cover the dividend on their first preference stock for another year, so that the holders might feel reasonably confident that they would next year again receive their dividend.

They carried on their business in competition not only with companies similarly situated to theirs with their capital raised in this country, but with local companies. They were determined to hold their own and, until the special difficulties which they had to face had disappeared, they must of necessity adopt a conservative dividend policy.

The report was unanimously adopted.

TAYLORS (CASH CHEMISTS) TRUST, LIMITED

TAYLORS (CASH CHEMISTS) LONDON, LIMITED

OFFER OF TIMOTHY WHITES LIMITED, EXPLAINED

The annual general meeting of each of the above companies was held, on the 13th instant, at the Hotel Victoria, London. Mr Philip E. Hill, the chairman, presided.

At the conclusion of the annual general meetings, Mr Philip E. Hill met the shareholders of both companies at a joint meeting and explained to them the full effects of the proposed purchase by Timothy Whites, Limited, of the preferred and deferred ordinary shares in both companies, and of the funding certificates of Taylors (Cash Chemists) London, Limited.

He said: The offer by Timothy Whites, Limited, to the preferred ordinary and deferred ordinary shareholders of these companies and to the holders of the funding certificates in Taylors (Cash Chemists) London, Limited, subject to the conditions mentioned in my letter, is as follows:—(1) To purchase the preferred ordinary shares of both companies at the price of ten shillings per share, payable in cash, giving to every shareholder the right of reinvesting his purchase money in the ordinary shares of Timothy Whites, Limited, at the price of twenty shillings per share. (2) To purchase the deferred ordinary shares at the price of ninepence per share, with a similar right to reinvest the purchase money in Timothy Whites, Limited, ordinary shares at the price of twenty shillings per share. (3) To purchase the funding certificates for cash at par.

COGENT REASONS FOR ACCEPTANCE

Dealing with these proposals, your directors are unanimously in favour of them, and the points which have influenced them in coming to this decision are, firstly, the companies will be better able to meet competition by increasing the size and attractiveness of the shops, which they will be in a position to do with the large additional capital of over £1,500,000 which Timothy Whites are proposing to provide. This capital, I estimate, can be provided at an average cost of 4½ per cent.

Secondly, the average profit of a Timothy Whites' shop is nearly five times greater than the average profit of a Taylors' shop. This is explained by the fact that in almost every case the Timothy Whites' shop consists of two units combining a druggist and chemist business with a household store and hardware business, whereas the Taylors' shops are single units and, generally speaking, half the size of one unit of the Timothy Whites' shops. Thirdly, the directors are confident that the introduction of a household store and hardware business into as many of the Taylors' shops as are and can be made adaptable for its reception will be a profitable enterprise. Generally, new shops opened in the future for the Taylors' group would be double shops on the lines of Timothy Whites. Fourthly, economies to the extent of approximately £40,000 per annum can be effected when the merger is fully operative, and, finally, the additional capital to be provided by Timothy Whites can also be employed in opening new shops in suitable localities for such of the companies as may be determined. As far as the advantages of the merger of the three companies are concerned, I think an irrefutable case in its favour has been established.

I now have to deal with the equity of the proposal insofar as the different classes of shares are concerned. As chairman of the three companies I have naturally been anxious that it should be fair and reasonable to all parties concerned, and in order to secure an independent opinion of one of the highest authorities on such an important matter the directors consulted Messrs Price, Waterhouse and Company. The position of the three companies and their respective subsidiaries has been thoroughly examined by them and the proposals before you have their unqualified approval.

You will have seen from my letter accompanying the annual reports of your companies that I therein expressed the view that as and when the estimated economies of £40,000 a year become effective, a distribution on the ordinary shares of Timothy Whites of 25 per cent. could reasonably be anticipated. I am also of opinion that these shares have considerable possibilities of appreciation. Nothing has been included in our estimate for the profits anticipated to arise from the introduction of the hardware business into Taylors' shops or for the profits which should accrue as the result of the modernisation and expansion of these businesses or from the additional capital which is being provided.

The joint meeting, which was overwhelmingly in favour of the acceptance of the offer put forward by Timothy Whites, Limited, closed with a hearty vote of thanks to the chairman.

MEXICAN RAILWAY COMPANY, LIMITED

WELCOME RECOVERY IN EARNING POWER

MR VINCENT YORKE'S SPEECH

The 139th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Vincent W. Yorke (the chairman) said:—At our last meeting, six months ago, I ventured to express the opinion that a recovery of prosperity in Mexico had set in and was likely to continue and increase, and I am glad to be able to say that my forecast has been fully realised. In fact, so far as I am able to judge, next to our own country Mexico would seem to be recovering from the depression more rapidly than any other country in the world. The steady rise in the price of silver has, of course, stimulated the mining industry, and the balance of trade for the first six months of this year has been extremely favourable, exports having nearly doubled imports for that period. The Budget surplus for the year 1933 amounted to 22 millions of pesos, and banking deposits are reported to be greater than for many years past. The Government have been successful in pegging the exchange at 3.60 pesos to the dollar during the whole of this year, which has been a powerful factor in the revival of commerce. For instance, the cotton factories in the district of Orizaba, which we serve, are all working more than full time, and other industries are fully employed. There has been an immense increase in the influx of tourists from the United States of America, which has been stimulated by the establishment of complete order and the favourable rate of exchange.

TRAFFIC RECEIPTS

Turning to the report for last half-year the receipts from passenger traffic show a gratifying increase of 16 per cent., as compared with the corresponding half-year, which is almost entirely due to the increase in tourist traffic. This increase has continued into the current half-year, though receipts have fallen off since the disaster to the *Morro Castle*, one of the steamers of the Ward Line, which company works in close connection with us and gives an excellent service from New York to Vera Cruz. There can be little doubt, however, that this traffic will revive again, and already several modern hotels, in which the capital has been hitherto lamentably deficient, are springing up in Mexico City to be ready for the revival. If peaceful conditions are maintained in the country, the possibilities of tourist travel from the United States of America would seem to be unbounded.

The highly satisfactory increase of about 30 per cent. in receipts from goods traffic is spread over all classes of goods, the largest advance being, curiously enough, in fuel oil and refined petroleum. When the Mexican Eagle Oil Company constructed a pipe line from the oilfields to Mexico City, we anticipated a large decrease in receipts from fuel oil traffic, but a competing company came to our rescue and by shipping their oil over our line, made up the deficiency. At the same time, the crude oil that was conveyed by pipe to be refined in Mexico City has given us a new and valuable traffic in refined products, and although the competing company has now made an arrangement for their oil to come to the city by pipe line, it is to be hoped that further new traffic in refined products will again accrue to our advantage, or at any rate not leave us worse off than we were before.

As regards expenses, it is very satisfactory to be able to point to the fact that while our total receipts have increased 26 per cent. the expenses have only increased 12.9 per cent., in spite of a heavy fall in exchange from 18.88d. in 1933 to 13½d. in 1934, which has largely added to the cost of electric power and fuel oil, the prices of which are fixed in American dollars. This relatively small increase in expenses shows that they have been most carefully watched and reflects much credit on our management.

REVENUE FIGURES

The net revenue earned of \$757,000 compares very favourably with the corresponding half-year, when it was only \$114,000, and if exchange had remained at par would have produced very nearly enough in pounds to satisfy our debenture interest for the half-year. As it is the heavy depreciation in exchange has reduced our earnings to £42,000, or a little more than one-half of what is needed for debenture interest. Nevertheless these figures, inadequate as they may be, show a welcome recovery in earning power, and we have to go back as far as the first half-year of 1930 to find any so good.

Since the publication of the report we have received by telegraph the estimated net revenue for the month of October last, which amounted to \$148,100. This, added to the net revenue

for the months of July, August and September given in the report, brings out the estimate at \$315,400 for the first four months of the current half-year, as compared with a deficit of \$7,600 for the corresponding period of 1933. Gross traffics since the end of October have continued to be satisfactory, and it would appear reasonable to look forward to a profit of at any rate about \$400,000 for the whole of the current half-year. This is not equal to the profit of the first half-year, but experience points to the second half of the year as being the leaner one of the two.

You may have noticed in the report that we have made a somewhat radical alteration in the presentation of our accounts, in that we have abandoned our long-standing practice of converting the Mexican peso at the arbitrary rate of 10 to the £1, and have converted it at more or less the rate of the day. This change, which has the full approval of our auditors, has had the effect of largely deflating certain items, such as stores, in our balance-sheet, but I think it is a wise one to have made. It was obviously ridiculous, as I am sure you will readily see, to purchase, as we do, many of our stores in Mexico and then to inflate their value by converting their cost price at a fictitious rate into sterling.

LABOUR CONDITIONS

At our last meeting I was able to read you a cablegram from Mexico which stated that labour conditions were quiet. Since then, however, I regret to say that agitation both on our system and the much larger system of the National Railways has become rampant. All sorts of new demands, including a 42-hour week, payment for Sundays when no time has been worked, and the constitution of a Labour Committee to sanction all expenditure, have been vigorously and insistently forced upon us.

The mixed commission of officers and men to which we had consented, and which had worked admirably well for the last eighteen months in settling the many problems always arising between employer and employees, has been abruptly terminated without notice by the men. We have firmly and steadily resisted these demands, which we consider entirely unreasonable, in spite of very definite threats of a strike. So far as I can judge, the wages earned by our men and the treatment which they receive from us compare favourably with those of the employees of any railway in the world, and I cannot conceive it possible for us to go further to meet them than we have already done.

FINANCIAL SITUATION

Our financial situation, I am glad to be able to say again, continues to improve, though not so rapidly as we would wish, and we are faced with the expenditure of £25,000 on freight cars which have now been ordered and will be absolutely necessary to us if we are to deal properly with the increased volume of goods traffic now offering. If passenger traffic continues to increase any more, it is also more than likely that we may be forced to purchase fresh equipment to cope with it, but for the moment we can struggle on with our existing stock. As I informed you at our last meeting, it is possible that we may obtain a little relief next year by reason of our holding of \$14,000,000 of Interior Bonds, one-fortieth of which became payable this year, and if not paid may be used next year for the discharge of taxes and some other purposes. Any relief, of course, that we can obtain in this manner will be most welcome.

A RECENT CABLEGRAM

I will now read a cablegram from our general manager:—“Cereal crops both divisions fairly good, on lower division of line coffee and tobacco will yield less than last year. Outlook for increased tonnage of general goods favourable; all-rail banana movement resumed on small scale last month and should continue. Textile and flour mills at Puebla and cotton, jute and beer factories at Orizaba now working full time. Indices exportations and importations show improvement. Commodity prices improved to 1929 levels. Tourist traffic encouraging and large conference of rotarians from United States will be held next half-year in Mexico City.”

“New Cabinet (which took office 1st instant) not yet settled down and difficult to forecast its attitude towards labour aspirations vis-a-vis railways; labour agitation worse than ever. Exchange now 17.83 pesos to the £.”

The cablegram is certainly most encouraging with regard to prospects of traffic, but the concluding remark about labour only emphasises what I have already said on that subject.

I must again thank our general manager, Mr Holmes, and our assistant manager, Mr Taylor, who did excellent work during the absence of Mr Holmes at the end of last year, for their valuable services under very difficult circumstances, and I include in my thanks the very loyal staff who serve under them.

NOTICES

Mr R. M. Holland Martin, C.B., who has been the honorary secretary to the committee of London Clearing Bankers since July, 1905, has resigned office owing to the pressure of his other duties. Mr Ernest Sykes has been appointed to succeed him as secretary to the committee.

Mr G. F. Abell, one of the chief general managers of Lloyds Bank Limited, has been appointed a director of Lloyds and National Provincial Foreign Bank Limited.

COMPANY NEWS

REPORTS AND NOTICES

(Continued from page 1167)

RUBBER

PONTIAN (MALAY) RUBBER COMPANY, LTD.—The outturn of dry rubber for year ended September 30, 1934, was 515,507 lbs., a considerable increase over the previous year's crop of 415,472 lbs. The average selling price for the financial year was 5.37d. per lb., being almost 2d. per lb. better than the previous year's figure, due to improved market conditions since the Rubber Regulation Scheme became operative. Estate costs are slightly higher, but after crediting income from investments and allowing for London expenses and ample depreciation, the profit for the year is £3,790 1s. 10d. This sum, added to the £312 7s. 7d. brought in from the 1933 accounts, makes £4,102 9s. 5d. available in the profit and loss account. It is proposed to pay, on December 21, 1934, a dividend of 7 1/2 per cent. (less income tax at 4s. 6d. in the £) absorbing £3,703 8s., leaving £399 1s. 5d. to be carried forward. The property stands in the books at £49,302 0s. 7d., being under £39 per planted acre. Investments, with the exception of a small holding in another company, are all in Government securities, which had a market valuation well in excess of the book value at date of the balance sheet. The Rubber Regulation Scheme has delayed the preparation of reliable estimates for the whole of the current year, but these are receiving the attention of the company's agents in the East. The meeting will be held at 7, Great Winchester Street, London, on December 19th, at 12.30 p.m.

MISCELLANEOUS

DORMAN LONG SCHEME CONFIRMED.—Mr Justice Eve, in the Chancery Division December 12, confirmed the scheme for the reorganisation of Dorman, Long and Company, Ltd. The share capital is to be reduced from £11,248,146 to £2,007,271 by wiping out £9,240,875.

EASTBOURNE CORPORATION 3 PER CENT. REDEEMABLE STOCK, 1920-1940.—Williams Deacon's Bank Limited give notice that in order to prepare the interest warrants, due December 24, 1934, on Eastbourne Corporation 3 per cent. redeemable stock, 1920-40, the books will be closed from December 11 to 24, 1934, inclusive.

FINANCIAL NEWSPAPER PROPRIETORS LTD.—A resolution for the voluntary liquidation of Financial Newspaper Proprietors, Ltd., and the distribution of ordinary shares of the Financial News, Ltd., in place of Financial Newspaper Proprietors shares, is to be submitted at a meeting to be held on January 7, 1935. An option to apply for further Financial News shares will also be available. The report of the Financial News, Ltd., for the year to June 30, 1934, shows a profit of £19,062, against a loss of £6,130 for the previous year. With £21,907 brought forward there is £40,968 available, and after providing for the 5 per cent. and 6 per cent. preference share dividends and tax, £27,876 remains to be carried forward. The directors state that during the past financial year the circulation and advertising revenues of the various publications owned by the company showed a considerable improvement.

UNITED PICTURE THEATRES.—The receiver for the 7 per cent. debenture holders of United Picture Theatres is inviting tenders for the purchase of ten theatre and cinema properties of the company and for the company's holding of 60,000 ordinary £1 shares of British Amalgamated Theatres. The debenture stock outstanding totals £346,715. Gaumont-British Picture Corporation is managing the company's theatres until July 21st next.

(a) Paid on a larger capital. † Free of Income Tax.

BLEACHERS' ASSOCIATION.—Directors state they are unable to recommend an interim dividend on 5½ per cent. cum. pref. in respect of year ending March 31, 1935 (dividend paid to June 30, 1933).

BRADFORD DYERS.—Directors have decided to pay interest on 4 per cent. deb. stock, as usual, on January 1st, and to defer dividend on 5 per cent. cum. pref. for the six months ending December 31st (dividend paid to December 31, 1932).

BRITISH TYRE AND RUBBER COMPANY, LTD. (FORMERLY BRITISH GOODRICH RUBBER).—The directors announce that the net profit for the year ended September 30, 1934, amounts to £126,714, after providing for depreciation of plant and machinery, and debenture interest, but before making allowance for income tax. This compares with a net profit for the year ended September 30, 1933, of £109,165. After providing for income tax and allocation of £40,000 (last year £30,000) to reserves, the directors will recommend payment of a final dividend of 5 per cent. less tax, making total dividends of 8 per cent., less tax, for the year. This compares with 6½ per cent., less tax, last year. The final dividend is payable on 800,000 ordinary shares of £1 each now issued, whilst the dividends last year were paid on an issued ordinary capital of 650,000 shares. The share register will be closed on December 8, 1934, to December 17, 1934, both dates inclusive, and the annual general meeting will be called for Monday, December 17, 1934.

DOMINION-SCOTTISH INVESTMENTS, LTD.—The directors have declared a dividend of 5 per cent. cumulative redeemable preference stock (par value \$50) of the company at the rate of 2 per cent. per annum for the quarter ending November 30, 1934, payable on December 1, 1934, to shareholders of record at the close of business on November 20, 1934.

EASTMAN KODAK COMPANY.—This company has declared an extra common dividend of 75 cents per share, payable on January 2, 1935, to stockholders of record on December 5, 1934. This payment will be in addition to the regular one dollar dividend, which was declared on November 8th.

KRAMAT TIN DREDGING, LTD.—The Anglo-Oriental and General Investment Trust Ltd., announce that the above company has declared an interim dividend of 1s. per share, plus a bonus of 1s. per share, both payable on December 19, 1934, and in respect of the year ending March 31, 1935, to shareholders registered on December 12, 1934. These dividends make total interims of 10 per cent., plus bonuses of 15 per cent. to date on account of current year to March 31, 1935, against total distribution of 20 per cent. for fourteen months to March 31, 1934.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

WHILE there were no developments of outstanding importance in the commodity markets during the week ended last Wednesday, the firmer tendency of prices noticeable since the end of November has so far been maintained.

The publication of a slightly higher estimate of the United States' cotton crop had no influence on the market, and quotations actually rose a little. The latest cables concerning the development of wool sales in Australia are quite cheerful. On the other hand, jute prices were marked down, and buyers of Dundee jute manufactures are withholding orders in the hope of a further decline in the price of the raw material. Flax, supplies of which are controlled by the Soviet and Baltic monopolies, continued to rise in price during the past week. The latest quotation for this fibre (Slanzet medium first sort) is £

COAL

SHEFFIELD.—The coal market is more lively than for a long time, due in part to seasonal influences. A number of pits are working extra time until the Christmas stoppage. The increased output quota has released more tonnage for export and demand for prompt account is rather brisk, prices of best steams being firm at 17s. and 17s. 6d. f.o.b. Industrial requirements of steams, smalls and coke remain at a high level. Demand for house coal has expanded but continues poor for the time of year. Best qualities are quoted at 21s. to 23s. at pits. Demand for blast furnace coke is maintained at previous levels and supplies are larger owing to increased production. Prices on the open market are about 14s. 6d. at ovens. Foundry coke is also in a fairly strong position.

NEWCASTLE-ON-TYNE.—Northumberland steam collieries are heavily stemmed, there being very little coal of any description available for the remainder of this year. January also promises to open favourably as the seasonal demand is now more insistent particularly from the English coasting ports. Since the report of the Anglo-Polish Coal Pact there has been an increased inquiry from Scandinavia for screened coals over next year.

The Durham section has shown further improvement. Foreign coaling station trade in prime bunkers is brisk and there is a good demand from Spain for coking coal, pending the Asturian mines getting into working order.

Current f.o.b. prices for export: **NORTHUMBERLAND**—D.C.B. screened, 14s. 9d.; smalls, 11s. 6d.; Howards, Bentinck, Newbigin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime large, 13s. 6d.; smalls, 11s.; Hartley Main large, 13s. 6d.; smalls, 11s. **DURHAM**—Lambton, South Hutton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 14s. 3d.; second-class unscreened bunkers, 13s. 6d.; prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—The Scottish coal market maintains a strong tone. Home requirements are on a larger scale than for some years, and despite the increase in production, supplies for the shipping branch are smaller. The collieries catering for the latter trade are well booked until the end of the month in both large coal and washed nuts, and already the prompt market is assuming the nominal appearance usual in the closing weeks of the year.

Shipment prices f.o.b. district ports: **LANARKSHIRE**—Ell best, 15s.; splint best, 17s.; splint second, 15s. 6d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 13s.; trebles, 14s. 6d.—15s.; doubles, 13s. 6d.—13s. 9d.; singles, 12s. 6d.; pearls, 12s.; dross, 10s. **FIFE**—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 9d.—14s.; third-class steam, 13s.—13s. 3d.; trebles, 14s.—16s.; doubles, 14s.; singles, 12s. 9d.—13s.; pearls, 11s. 9d.—12s. **LOTHIANS**—Prime steam, 13s. 6d.; secondary steam, 13s.; unscreened navigation, 12s. 6d.; trebles, 14s.—14s. 6d.; doubles, 14s.; singles, 12s. 3d.—12s. 6d.; pearls, 11s. 9d.—12s. **AYRSHIRE**—Best unscreened navigation, 14s. 3d.; jewel, 15s.; steam, 14s. 6d.; trebles, 15s. 6d.—15s. 9d.; doubles, 14s. to 14s. 6d.; singles, 13s. 9d.; pearls, 12s. 9d.; dross, 10s.

CARDIFF.—The outstanding event in the South Wales coal trade this week was the merging of the interests of the Powell Duffryn Steam Coal Company, Ltd., and the Welsh Associated Collieries, Ltd. These two undertakings own about 75 collieries with a potential productive capacity of over 20 million tons and a share and debenture capital of over £17 millions. The assets and liabilities of the two companies are to be transferred to an operating company, of which Mr Edmund L. Hann, the chairman of the Powell Duffryn Company, is to be the head. The Powell Duffryn Company are acquiring one-half of the £5,078,016 ordinary share capital of Welsh Associated Collieries by the issue of £1,181,509 Powell Duffryn ordinary shares at par, together with a cash payment of £87,995; while another condition of the deal is that the £1,831,457 preferred participating ordinary share capital of Welsh Associated Collieries is to be converted into preferred ordinary shares of that company with a fixed dividend of 4½ per cent. The revenue of the constituent companies will be derived from their respective shares in the profits of the operating company which will be distributed in agreed proportions "reflecting present-day earning capacity, additional profits being divided equally." The effect of the merger, if it goes through, as is probable, will be to eliminate still further the evil of inter-competition, while it is also hoped that it will facilitate economies both in production and in marketing and strengthen competitive power in overseas markets. The implications of the merger are discussed in a Note in the Stock Exchange section.

The Executive Board of the South Wales Coal Marketing Scheme on Monday approved the terms of the Anglo-Polish coal agreement. In market conditions there has been no change this week, and in spite of the approach of the holidays there has been little or no expansion in shipments.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; best anthracite large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; French nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. French, 20s. 9d. to 21s. Portuguese.

IRON AND STEEL

MIDDLESBROUGH.—New business is not so plentiful, customers in most cases having now covered their requirements for the next few weeks. Prices of both Cleveland foundry iron and hematite pig iron remain fixed at the official minimum prices to home consumers. Shipments during the past week have been heavy, a large parcel of about 1,750 tons having been forwarded to Denmark, whilst further shipments have been made to Italy, Germany, and Norway; coastwise shipments to Scotland continue good.

The steel departments are maintaining a large output both for semi-manufactured and finished material, and producers have sufficient orders on the books to keep them busy for some time ahead. Heavy steel melting scrap is in good demand. Buyers are offering 51s. per ton delivered works with merchants asking for higher figures. Blast furnace coke remains at 20s. per ton delivered at the furnaces here; business in foreign ore is small but remains based on best Bilbao rubio ore at 17s. per ton c.i.f. Tees.

SHEFFIELD.—The proximity of the Christmas holiday is responsible for a further decline of buying in the materials market, and quietude is extending to the special steel department. Nevertheless the works maintain their former activity and there appears to be little, if any, anxiety as to work coming forward in the New Year. Conditions in the home market are as good as ever. New uses and applications are constantly bringing fresh business to the steel industry. Large inquiries and orders for stainless steel road studs have come to Sheffield lately. Railways and shipbuilders are buying more steel than a year ago. Export trade is better in some departments, but only moderate as a whole. The hand and engineers' small tool branches continue busy, but seasonal orders for cutlery and plate have suffered a sharp decline. Lysaghts, Ltd., are completing the erection of a huge strip and bar mill of the continuous type, in connection with their steel works in North Lincolnshire. Part of the huge steel works which have been erected at Corby by Stewarts and Lloyds, Ltd., will be started next week with several hundred workmen. These works contain the only plant in the country producing basic Bessemer steel, users of such steel having obtained supplies from the Continent in the past.

GLASGOW.—Works are practically all busy in the West of Scotland and reports received from various quarters indicate that the volume of new work coming in is on the increase. There is no change in the position at the steel plants, where full-time working has been general for some considerable time now. There are a few more sheet mills operating this week, but this department of the industry is not securing sufficient tonnage of export business to enable the makers to keep all plant running, notwithstanding the great demands of the home trade. Clyde ship repairers have had a large amount of work during the present week. Machinery makers in Glasgow and district are all fully employed just now and the amount of new business coming forward is very satisfactory.

CARDIFF.—On the Swansea Metal Exchange on Tuesday export business in tinplates was comparatively quiet, but there was a fair inquiry for supplies for the home market. Prices are unaltered. For tinplates the scheduled c.i.f. quotations were firm; galvanised sheets for markets other than India and Scandinavia were ruling from £11 5s. to £11 15s.; and steel bars at £5 2s. 6d. per ton. Shipments of tinplates from Swansea at 85,736 boxes were practically the same as in the previous week and in the corresponding week last year, but stocks at 126,380 boxes were about 4,000 more than the previous week, but 8,000 less than a year ago.

OTHER METALS

Sentiment on the copper market has improved a little, although business continues small. It has been rumoured this week that the Rhodesians and the Belgians held a preliminary meeting in London to prepare for a world conference, but such discussions always take place when one of the Belgian copper leaders visits London, and too much significance should not, therefore, be attached to it. The statements of Sir Auckland C. Geddes at the annual meeting of the Rhokana Corporation confirm the view that no basis for a world agreement has yet been found. In the absence of definite news regarding restriction, it seems improbable that purchases will show any signs of expansion before Christmas, but it is expected that consumers will begin to cover their requirements early in the New Year. Since producers are interested in obtaining higher prices towards the end of the year—for the valuation of stocks in the annual balance sheets—it is likely that prices may show some increase by the end of the present month.

Although tin prices have shown little change, the better tone of the market has not been fully maintained. But consumers' stocks are low and a seasonal expansion in activity in the tinplate and motor industries is now due, so that purchases must increase in the next few weeks. It may then appear that production quotas are too low. On the Continent, German tinplate exporters are already undercutting the prices fixed by the new tinplate convention. Although the success of the latter was doubtful from the beginning, these early difficulties are somewhat surprising.

Lead and spelter have been slightly easier in price, although demand continues fair. There are no important new developments to report. Sales of platinum, which have been on a large scale throughout the year, showed a further increase in recent weeks. The sharp decline in price over the past few years has increased the popularity of the metal, which now has a Christmas season. The official quotation remains at £7 15s. per ounce, but the actual price paid varies from £6 5s. to £6 15s., according to the size of the order.

TIN.—Sales of tin on the London Metal Exchange: 150 tons on Monday, against 200 tons last week; 110 tons on Tuesday, against 350 last week; 60 tons on Wednesday, against 475 tons last week.

The New York quotation on Wednesday was 50.90 cents per lb., against 50.90 cents a week ago and 51.20 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 10s. to £228 12s. 6d., compared with £228 7s. 6d. to £228 10s. last week. Stocks in London and Liverpool at the end of last week were 3,774 tons, a decrease of 208 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,200 tons on Monday, against 1,300 tons last week; 1,375 tons on Tuesday, against 1,500 tons last week; 1,200 tons on Wednesday, against 850 tons last week. Domestic spot was quoted at 6.67½ cents per lb. in New York on Wednesday, against 6.52½ cents a week ago and 6.65 cents a month ago. Wednesday's official closing price for standard cash in London was £27 13s. 9d. to £27 15s., compared with £27 3s. 9d. to £27 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 41,585 tons, show an increase of 1,437 tons, and stocks of rough copper, at 10,485 tons, a decrease of 130 tons.

LEAD.—Sales on the London Metal Exchange: 950 tons on Monday, against 500 tons last week; 650 tons on Tuesday, against 1,000 tons last week; nil on Wednesday, against 750 tons last week. The New York quotation on Wednesday was 3.50 cents per lb., against 3.50 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 2s. 6d. for shipment during the current month, compared with £10 6s. 3d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 400 tons on Monday, against 400 tons last week; 425 tons on Tuesday, against 975 last week; 150 tons on Wednesday, against 600 tons last week. Wednesday's quotation in East St. Louis was 3.70 cents per lb., against 3.70 cents the week before, and 3.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 13s. 9d. for shipment during the current month, against £11 16s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs., as against £11 10s. to £11 12s. 6d. per flask of 76 lbs. last week. Foreign antimony was quoted at £60 to £61 per ton, as against £60 per ton last week. Chinese wolfram was again quoted at 39s. to 41s. per unit c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. — Throughout the past week only minor changes have occurred in raw cotton prices. The American Government crop statistics published at the end of last week were featureless and came through as expected. Very little interest is now being taken in the current crop, most attention being centred on the prospects for next season. According to local merchants, rather more material is being offered by the Southern States, but the basis remains very stiff and makes business difficult. It is significant that exports from America so far this season are 42 per cent. smaller than a year ago. The demand for outside growths continues active.

Although the general inquiry in piece goods has been of fair extent, most of the orders booked have been of a sorting-up character. Restricted buying has taken place for India, chiefly in light bleaching descriptions. Cloths for printing and dyeing continue to be sold for South America and Scandinavia. Some fairly substantial lines have been mentioned in dress materials for the Dominions, especially South Africa. Fresh contracts in home-trade fabrics have not been important, but fairly encouraging delivery instructions are being received from the wholesale houses.

In American yarns, most of the demand has run on the coarser counts. Some spinners of Egyptian qualities have sold a little more freely and rather better news has come from Germany with regard to trade prospects. An attempt is now being made to arrange a minimum price scheme for Egyptian yarns on a legal basis, but the proposals cannot be put into operation without the support of 90 per cent. of the spindles concerned.

AMERICAN COTTON CROP.—There was no excitement whatever in the raw cotton markets of the world at the end of last week, when the Department of Agriculture of the United States Government published further statistics relating to the crop for this season. As anticipated, the estimate of production was slightly increased from 9,634,000 bales a month ago to 9,731,000 bales. The yield per acre was reduced from 169.3 lbs. to 169.2 lbs., the area left for harvest being given as 27,515,000 acres. It was stated that up to the end of November 9,030,000 bales had been ginned, against

12,106,000 bales same time last year, and the amount given indicates that the crop forecast will be realised. With a carry-over from last season of 10,500,000 bales, the available supplies for the twelve months will be about 20,250,000 bales. There is some difference of opinion as to the probable world consumption, but this is likely to be between 11,000,000 and 11,500,000 bales. The strength of prices for some little time back has been due to the 12-cent loan plan of the Government, the material being very firmly held. There is some concern, however, in the United States owing to the decline in export trade, and shipments so far this season are 42 per cent. smaller than a year ago. It remains to be seen whether the present price of American cotton can be maintained in view of increasing supplies and consumption of outside growths.

JUTE.—Dundee. — The jute market has quietened down considerably as the result of the advance in raw jute prices being checked, and buyers of yarns and cloth, who were on the point of placing good orders, are withholding them in the hope of lower prices. Spinners and manufacturers, while being quite busy with orders in hand for delivery this year, have little to go upon for delivery next year, and there is an inclination to shade prices in order to induce buyers to operate. But the latter, though apparently having business to place, are still undecided and only a renewed advance in prices for raw jute will bring out orders on a larger scale. Much depends upon the scheme of the Government of Bengal for the restriction of sowings for next season's crop of jute, and the statement as to the extent of restriction aimed at, promised for the first week in January, is eagerly awaited. This scheme has already been responsible for the raising of jute prices since the middle of November, when it was first actually taken in hand, though recently there has been a tendency to weakness.

Daisee 2/3, which had risen from £13 12s. 6d. to £15 2s. 6d., has dropped back again to £14 15s. for the full group and to £15 for good single marks, and Daisee-4 quoted at £13 17s. 6d., while Tossa-2/3 is offered at £15 17s. 6d. and 4's at £14 15s., December-January. Good First Marks are quoted at £19 15s. and Lightnings at from £17 17s. 6d., with Hearts at from £13 17s. 6d. for grade quality to £16 10s. for SCC-H, December-January.

Jute yarns are very quiet and prices of the hessian descriptions are more or less nominal in the absence of a test. The quoted rates are still 1s. 10d. for common 8-lb. cops and 1s. 10½d. for 8-lb. spools, while twist is offered at 3½d. to 3¾d. for 3-ply 8-lb., and sacking yarns are unchanged at 2½d. for 24-lb. weft and 3d. for 8-lb. chains. Rove remains at £17 for 48-lb. and £14 for 200-lb., and the finer yarns are slow at unaltered rates.

Only a few orders are being placed for jute cloth for delivery after the end of the year, delivery being very difficult to obtain before then. A strike of stevedores in Calcutta has been responsible for some business being done here for forward delivery. Prices are 2½d. for 10½-oz. 40-in. and 2d. for 8-oz., for delivery in 1935, and firm at ¾d. more for anything obtainable this year. A fair inquiry continues to be made, but little fresh business is now expected during the remainder of the year. Linoleum Hessians and heavy goods are quiet, but steady.

Calcutta goods have shown slight weakness during the past week, but there is an undertone of steadiness.

GRAIN MARKETS

WHEAT.—Quotations have hardened slightly during the past week, demand from Continental purchasers having improved. It is also reported that Oriental buyers are interested in Australian varieties, partly on account of the smallness of the rice crop. Australian output is smaller this season than last, and no American competition for the Oriental demand is anticipated. Unfavourable weather in both Australia and Argentina has delayed the harvest in those countries. According to the *Corn Trade News*, an official revision of the French crop raises the estimate by three million quarters to 41.5 million quarters.

According to Mr G. Broomhall, total shipments during the past week were 1,168,000 quarters, against 1,278,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 100½ cents per bushel, against 102½ cents the week before and 99½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 34s. per 496 lbs., against 33s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 31s. 6d., against 31s. 3d. Australian, ex ship, 25s. 6d. to 25s. 9d., against 25s. 3d. to 25s. 9d. a week ago.

FLOUR.—Demand continues quiet, and quotations are generally unchanged. North American shipments were 135,000 sacks in the past week, as compared with 128,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 24s. 6d. to 26s. 6d. Australian, ex store, 19s. 6d. to 20s., against 19s. to 20s.

BARLEY.—Prices continue firm for most varieties of feeding barley, but it is reported that the quality of English malting grades is poor. "December" futures were quoted at 53½ cents per bushel in Winnipeg on Wednesday, against 56½ cents last week and 55 cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 50s., against 30s. to 50s. a week.

OATS.—Demand has been rather slow and quotations, both here and in Chicago, have shown a tendency to ease this week. On Wednesday, "December" futures were quoted at 54½ cents per bushel in Chicago, against 57½ cents a week ago and 51½ cents last month. Quotations in London, Wednesday: "River Plate," landed, not quoted; "Chilean White," landed, 24s. to 24s. 6d., against 24s. to 24s. 6d. a week earlier.

MAIZE.—Supplies are ample, and trade has been rather quiet, quotations being generally below those ruling a week ago. "December" futures were quoted on Wednesday at 91½ cents per bushel in Chicago, against 94½ cents a week ago and 81 cents last month. Quotations in London, Wednesday: "Plate," ex ship, 22s. 3d., as against 22s. 9d.; "Plate," "December," 22s. 6d., as against 23s. 6d. Yellow maize meal, ex wharf, was quoted £6 5s. to £6 7s. 6d. per ton, against £6 5s. to £6 7s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to December 8	Cwts. 82,018	Cwts. 267,558	Cwts. 338,534	Cwts. 380,540
15 weeks to December 8	1,119,075	4,047,365	4,972,425	6,477,196
Average price of English wheat per cwt.	s. d. 6 5	s. d. 5 4	s. d. 4 7	s. d. 4 10

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Dec. 6, 1930	Cwts. 102,253	Cwts. 324,310	Cwts. 34,274	s. d. 6 4	s. d. 8 5	s. d. 5 8
Dec. 5, 1931	61,685	405,398	54,592	6 7	8 5	7 0
Dec. 10, 1932	267,538	346,273	54,633	5 4	6 11	5 9
Dec. 9, 1933	338,534	375,163	45,712	4 7	9 2	5 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

Nearest Future	Jan. 4, 1932	Jan. 4, 1933	Dec. 13, 1933	Jan. 3, 1934	Dec. 5, 1934	Dec. 12, 1934
Winnipeg (No. 1 Manitoba)						
—Cents per 60 lb.	62½	46½	60½	65½	80½	78
Chicago (No. 2 Winter)						
—Cents per 60 lb.	55½	46½	83½	84½	102½	100½

The visible supply of wheat in Canada, at 123,639,000 bushels, shows a decrease of 174,000 bushels on the week. Supplies a year ago amounted to 114,224,000 bushels.

OTHER FOODS

SUGAR.—The market for raw sugar, both in London and New York, remains quiet, and quotations are unchanged on the week. The spot price in New York on Wednesday was 3.085 cents per lb., as compared with 3.085 cents per lb. last week and 2.86 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March delivery" at 4s. 4½d. to 4s. 5d., against 4s. 5½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London.....	649	934	1,373	1,849	16,285	16,143
Liverpool.....	36,554	10,119	13,722	13,560	168,510	103,217
Total tons ...	37,203	11,053	15,095	15,409	184,795	119,360
Last week	33,359	11,651	15,394	13,835	162,687	123,716

COFFEE.—The New York market has again been steady, and quotations have been advanced slightly. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London spot market has again been quietly steady, prices remaining unchanged. Last week's movements of coffee in London were as follows: Brazilian, landed, 13 bags; delivered, for home consumption 87 bags; exported, 69 bags; stocks, 27,936 bags, against 24,572 bags a year ago. Central American, landed, 1,079 packages; delivered, for home consumption, 2,398 packages; exported, 1,393 packages; stocks, 73,637 packages, against 59,927 packages last year. Other kinds: Landed, 3,108 packages; delivered, for home consumption, 2,625 packages; exported, 443 packages; stocks, 70,675 packages, against 100,982 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., against 5½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "December-February," was 21s. 3d. per 50 kilos, c.i.f. Continent, as against 20s. 6d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 11,406 bags; delivered, for home consumption, 4,996 bags; exported, 1,424 bags; stocks, 140,895 bags, against 105,682 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,797 packages of Indian and 18,806 packages of Ceylon tea. Although the demand was generally quite good, quotations for most varieties were rather lower than of late. It is learned that no further public sales of Indian grades will take place until January 7, 1935. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.									
Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total		
Dec. 7, 1933	13-21	13-45	15-23	11-29	10-29	Nil	13-42		
Nov. 8, 1934	13-21	11-62	14-39	10-23	9-28	10-75	12-51		
Nov. 15, "	13-10	11-51	14-15	10-29	9-57	10-69	12-39		
Nov. 22, "	11-96	11-45	13-73	10-30	9-21	10-83	12-09		
Nov. 29, "	11-66	11-50	13-39	10-69	9-31	10-85	11-90		
Dec. 6, "	11-72	11-53	13-26	10-19	9-53	11-10	11-93		

RICE.—The "spot" price was 8s. 3d. per cwt. on Wednesday, as compared with 8s. 3d. per cwt. a week ago, while the forward quotation, at 6s. 10½d. per cwt. (new crop) also remains unchanged. Movements in London during the past week were as follows: Landed: 1 ton; delivered, 256 tons; stocks, 2,349 tons, against 2,199 tons a year ago.

POTATOES.—The Potato Marketing Board has decided to impose more severe riddle regulations, at least until January 12, 1935, in order to reduce the supplies on offer at the markets. It is suggested, however, that home supplies are not excessive, and that producers who withhold their crop until January or February will be able to realise a higher price. Sales from Scotland are reported to have been heavy in recent weeks, and the Board are therefore offering £2 5s. per ton for potatoes held for January delivery. This has had a steadying influence on the market, and it is probable that a spell of colder weather would result in a substantial improvement in demand. Supplies at the London Borough Market on Tuesday were ample, and quotations eased slightly. Light soil "King Edward" sold at 5s. 6d. to 6s. per cwt., ex market, as against 5s. 9d. to 6s. 3d. last week.

SPICES.—"Lampong" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 124 tons; delivered, 43 tons; stocks, 718 tons, against 643 tons a year ago. White, landed, 862 tons; delivered, 38 tons; stocks, 12,234 tons, against 2,113 tons a year ago.

MEAT.—Trade has been rather slow this week, but prices show little change as compared with those ruling a week ago. At Smithfield on Wednesday, Argentine beef, chilled hindquarters, was quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 4d. to 3s. 8d. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 6d. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,058 tons, against 9,805 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.4 per cent. of the beef supplies, against 82.1 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 71.6 per cent. of the total supply of mutton and lamb, against 66.7 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets generally have taken a quieter turn, and there is very little disposition to do business. Reports as to the progress of the new linseed crop in Argentina vary, but after the recent rains warmer conditions are required to assist harvesting. A wide diversity of opinion prevails as to the extent of the deterioration, but the situation should be clarified by the official estimate of probable yield now due for publication. Meanwhile, prices have eased, and buyers are out of the market. New crop Plate for January-February shipment to Hull is now quoted around £9 7s. 6d. per ton delivered. Indian linseed fails to attract attention. The quantity of linseed now afloat for Europe is 75,400 tons (including 11,800 tons from India), or 21,500 tons less than last week; and for the United States and Canada 28,800 tons,

against 35,300 tons a year ago. Cottonseed, after a period of firmness, is quiet. Black Egyptian for December-January loading is offered freely at £6 5s.

The recent advance in linseed oil has not been maintained, and quotations are about 12s. 6d. below the highest. Raw oil, ex Hull, for December delivery is quoted at £18 15s. per ton (naked) and January-April, £19. Cotton oil remains firm, and is held for more money. Egyptian crude, ex Hull, is quoted £20, and refined £22 per ton, prompt. Oilcakes are in better demand, and are firm.

RUBBER.—According to Messrs Symington and Wilson, the rubber market has again fluctuated only within narrow limits, although quotations have eased slightly since last week. It is

understood that the business before the International Rubber Regulation Committee at its meeting this week was of a purely formal nature.

In New York, Wednesday's spot price for rubber, at 12½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6½d. for January-March, 1935, as against 6½d. to 6½d. a week ago. Stocks in London and Liverpool at the end of last week, at 129,462 tons, show an increase of 1,397 tons as compared with the preceding week.

THE CUNARD STEAM SHIP COMPANY LIMITED

The directors of The Cunard Steam Ship Company, Limited, have resolved to defer payment of the dividends on the 5 per cent. Cumulative Preference Stock and 6 per cent. Second Cumulative Preference Stock of the Company, due to be made on the 1st January next for the half year ending 31st December, 1934.

SPANISH

4% EXTERNAL AND INTERNAL LOANS AND 6% GOLD TREASURY BONDS.

The coupons due 1st January, 1935, can be presented for PAYMENT at the Bank of Spain, Bilbao House, New Broad Street, E.C., between the hours 10 and 2, Saturdays 10 and 12.
Coupons of the 4 per cent. Internal Debt will be paid less 20 per cent. discount, by orders on Madrid at 15 days after examination thereof.

A. VALLS, Manager.

London, 17th December, 1934.

TERRITORY OF SOUTHERN RHODESIA SALISBURY MUNICIPAL LOAN

ISSUE OF £100,000 4% PER CENT. BONDS TO BEARER OF £100 EACH
NOTICE IS HEREBY GIVEN that in accordance with the conditions on which the above Loan was issued the following BONDS were on the 6th December, 1934, DRAWN for REDEMPTION at par on 31st December, 1934:

BONDS NUMBERED
28, 81, 113, 232, 284, 358, 387, 465, 490, 506, 516, 530, 560, 648, 654, 682, 784, 852, 991, 993
viz.:—20 Bonds of £100 each.
Presented by: J. D. Watts, Notary Public of the firm of Cheeswright Casey, Duff Watts and Co., Notaries, St. Dunstan's Buildings, E.C.3.
The Bonds and all interest Coupons not then due must be left at the office of the Standard Bank of South Africa, Limited, 10 Clement's Lane, E.C.4, three clear days for examination. Payment of principal will be made on and after 31st December, 1934. The Bonds will cease to bear interest from 31st December, 1934. For the Standard Bank of South Africa, Limited.
BERTRAM LOWNDES, Manager.
10 Clement's Lane, London, E.C.4.
December 6, 1934.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, DECEMBER 17th—THE NEWSPRINT INDUSTRY—2, by a Special Correspondent. This article deals with the position of such leading Companies as Bowaters, Edward Lloyd and Albert E. Reed. (The first article appears in our issue of Saturday, December 15th.)

TUESDAY, DECEMBER 18th—"MINOTAUR," our Special Mining Correspondent, writes on the EAST AFRICAN GOLDFIELDS. An expert survey, illustrated by a map, of the Lupa and other goldfields of East Africa.

WEDNESDAY, DECEMBER 19th—Dr. Paul Einzig on THE FUTURE OF GOLD. A practical forecast of conditions in the Gold Market in the coming years.

THURSDAY, DECEMBER 20th—INDIA'S ECONOMIC PROSPECTS, by C. S. Rangaswami, Managing Editor of "Indian Finance," the leading Indian financial paper.

FRIDAY & SATURDAY, DECEMBER 21st & 22nd—RATIONALISATION IN THE COTTON INDUSTRY, by Godfrey Craven. The writer takes the view that the large scale merger has provided an inadequate means of reconstruction and sums up the prospects for the success of "The Redundancy Scheme" and the plan for a new Central Association.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

"FIRMER AT THE CLOSE"

ON Friday of this week Parliament adjourned and the politicians, following the good example of the younger generation, "broke up" for the Christmas holidays. The festive season is a time for laying aside the affairs of the workaday world. But it is also a time for reflection; and it may well be that our rulers may find a quiet moment in the next few days to ask themselves what we have achieved in the past twelve months, whither we are heading, and where we stand to-day.

Anyone who asks himself such questions must for the most part answer with a note of interrogation. A year which has seen the outbreak of civil strife in Austria, a sanguinary "cleansing" process in Germany and the startling assassinations at Vienna and Marseilles, can hardly be termed uneventful. Yet from the standpoint of world history it is not untrue to say that it has been a year of incident rather than of great change—a year of eddy and cross-current which makes it difficult to assess the movement of the stream. Though 1934 is packed with outstanding events, they are not to be compared in secular importance with those of 1933, which saw the Hitler revolution in Germany and the inauguration of the New Deal in the United States.

On the international plane, the approach of 1935 has for some time past been awaited with misgiving. Opening with the plebiscite in the Saar, it is the year in which the withdrawals of Germany and Japan from the League of Nations are due to take effect; while the question of naval armaments, which automatically comes up for consideration under the Washington Treaty, has been thrown once more into the melting pot by Japan's demand for naval parity with Great Britain and America. All these three matters must add seriously to the anxiety of those on whom responsibility rests for ordering the world's affairs.

Yet, paradoxical though it may seem, the year ends with the world in a better frame of mind than seemed probable a few months ago. In Europe, tempers seem to have cooled and some fears have been set at rest. The action taken at the recent Council meeting at Geneva has furnished an assurance that the Saar plebiscite will be

carried out without disturbance, and by its handling of Jugoslavia's complaint against Hungary the League has removed the danger of imminent crisis in Central Europe. As to Germany, there are many signs of the changing temper of her rulers. Throughout the year it has been made clear again and again that the "Leader" is not looking for international trouble; and, if the decision reached as a result of the Saar plebiscite does not unduly exacerbate opinion, there is real ground for hope that in the coming year an agreement may be reached regarding the limitation of armaments, and that this time next year Germany may be found in her proper place at Geneva.

Indeed, it is not the least of the many paradoxes in the puzzling story of 1934 that, in a year when the Disarmament Conference has ended in virtual deadlock, the League of Nations comes out with enhanced prestige. Its value as a means of securing peace has once again been strikingly demonstrated; its membership has been strengthened by the adhesion of Russia (the largest territorial unit in the world); and there are signs that the United States, deeply stirred by the revelation of the Senatorial inquiry into the Arms traffic, is prepared to work much more closely in collaboration with Geneva—if not actually to take the seat left vacant for her in 1920.

When we seek to explain what lies behind this improvement in the situation, perhaps the chief weight should be assigned to the temper of public opinion all over the world, and to its alarm at events which have revived the possibility of war. Whatever may be said of the much discussed "peace ballot" in this country, the votes cast are undoubtedly a symptom of public uneasiness, and it is significant that it is now proposed to imitate it in France, whose Prime Minister has also declared his readiness to participate in concerted measures for the control of the trade in arms.

This evidence of the importance of public opinion suggests further reflections. While there are some grounds for believing that international tension has begun to relax in 1934, it is quite possible that the present year has also seen the passing of the crisis of democracy. Dictators are still in power in Germany, Austria and Italy, and two of these

countries have been the scene of bloody repression. But in both cases the event has proved the impossibility of destroying the influence of public opinion even when the Press is controlled or freedom of speech denied. The threatened overthrow of Parliamentarianism in France has not yet taken place, while our British Fascists, who enjoyed for a while a little reflected glory from the stirring events in Europe, have steadily faded into the background as it has become increasingly evident that dictatorship is neither pleasant nor profitable.

But what of the home front? Here, too, the end of the year has brought the Government slightly enhanced prestige. And not before it was needed. In the middle years of a Parliamentary term Governments commonly show signs of staleness; but the growing indifference to its fate revealed in the bye-elections of the year and its complete failure to arouse any enthusiasm either in or out of Parliament has been exceptionally marked. The economic recovery has been hanging fire; there has been little sign of any plan for grappling with unemployment; economic policy was at sixes and sevens, and international affairs seemed drifting into chaos. In the past month there has been a slight revival in the Government stock. The offer to send troops to the Saar—in defiance of Lord Beaverbrook's clamour for "isolation"—and Mr Eden's success with Yugoslavia and Hungary has been followed by a resounding victory for Mr Baldwin's India policy, which has averted, at all events for the present, any possibility of disintegration of the Conservative Party. In domestic affairs the Government's plan for dealing with housing and the depressed areas has caused profound disappointment, while the announcement of subsidy after subsidy is a sign of the bankruptcy—if not of the nation, at all events of its economic statesmanship. The activities of certain departments, such as the Ministry of Transport; the decision to make a survey of our water resources; and the announcement of the surprisingly liberal terms of relief under the Unemployment Assistance Act are modest make-weights on the other side, which will only go a little way to offset the general feeling that our internal policy lacks guidance and direction.

In short, if our politicians can take comfort to themselves this Christmastide that—in the language of the stock markets—the situation at the close is a little above the worst, they cannot afford to harbour any illusion regarding the difficulties with which they are still confronted. The moral of recent events is clear. The problems of the world are in a condition to yield—in an almost magical way—to firm handling. They can only be so handled by a Government whose course is clearly defined. Our rulers will only deserve and recapture the confidence of the country if they start the year with fresh and vigorous efforts to bring real peace out of the world's confusion and to revive that international intercourse which is the essential condition of Britain's prosperity.

THE OUTLOOK IN THE PACIFIC

THE London naval conversations have now been formally adjourned after having been practically at a standstill for many weeks past. The adjournment will be promptly followed by the despatch of the long-expected Japanese notice of intention to terminate the Five-Power Naval Treaty of Washington. Article XXIII of the Washington Treaty provides that, if and when notice of termination is served by any contracting party, all the parties shall meet in conference within a year of that date. The London Naval Treaty of 1930 also provides for the holding of a conference in 1935. Accordingly, a naval conference some time next year is obligatory under both contracts. It is, therefore, conceivable that—with the London Treaty expiring on December 31, 1936, and the Washington Treaty on the 21st of the same month—two years hence there may be an unregulated naval armaments race in the Pacific between the three principal naval Powers of the world.

The Japanese Government insists upon naval parity with the British Empire and the United States. It is important to do full justice to the points in Japan's favour. First,

then, she is not in this case breaking a treaty (as she has broken the Covenant and the Kellogg Pact and the Nine Power Washington Treaty regarding China); she is exercising a right which the Washington Treaty gives her. Secondly, the claim to parity is one which has already been made, and successfully insisted upon, by the United States *vis-à-vis* the British Empire. Thirdly, Japan has proposed parity on the lower level of the two alternatives (i.e. the present Japanese level and the present Anglo-American). As the financially weakest of the three Naval Powers in the Pacific, she is naturally interested in obtaining the parity that she seeks on the lowest level possible. And the Japanese definition of the "offensive naval armaments" which she wishes to see abolished is the one which suits Japan's own book (e.g. it excludes submarines, while including aircraft-carriers). This kind of manoeuvre, however, is common form in international negotiations. We must admit that, if Japan's present proposals were accepted, both the number, the variety and the financial cost of the warships available for warfare in the Pacific would be substantially diminished—though, of course, the whole of this diminution would be achieved by reducing the superiority of the American and the British navies.

When a Power asks for a parity which it has not previously enjoyed, its neighbours naturally look for the motive. In this case, as in other cases, there are in theory three possible motives: a desire for greater security, or a sensitiveness over prestige, or an aggressive ambition.

We may dismiss the hypothesis that Japan is afraid of being attacked either by the United States or by the British Empire or by the two Powers in combination; for while the Washington ratio of 3-5-5 (or, on the second hypothesis, 3-10) in capital ships does put Japan at a numerical disadvantage, she is completely protected by Article XIX of the Washington Treaty, under which the British Empire and the United States pledge themselves, so long as the Treaty lasts, to construct no naval base nearer to the Japanese Empire than Singapore and Hawaii respectively. The fact that, in terminating the Treaty, Japan is now deliberately renouncing this sovereign safeguard of her security is enough to show that her motive cannot be fear.

Is the motive prestige? A Power which has recently defied the world, and has so far "got away with it," cannot really be tormented by the sore feelings of an "under dog." Nor do we believe that so realistic a Government as that of Japan would take so grave a step from an exclusively sentimental motive.

In considering whether Japan entertains aggressive intentions, there are two pertinent facts to be recalled. The first is that the geographical scope of Article XIX of the Washington Treaty—which precludes the construction of fresh fortifications or naval bases by any of the contracting parties within a specified zone—has the effect of exempting the whole of the Japanese Empire from attack by the British and American fleets, while it leaves at the Japanese fleet's mercy a number of British and American pawns, as well as other valuable pieces. The pawns left at Japan's mercy are Hongkong, the Philippines, the International Settlement at Shanghai and the British concessions at other Chinese treaty-ports; the larger pieces are China herself and the Far Eastern dominions of the Soviet Union. The Washington Treaty enables Japan to ensure naval, and therefore also military, access to all these places for herself, and at the same time to prevent the British and American armed forces, either separately or jointly, from getting at them. If Japan has this in her power on the Washington ratio, she would have it *a fortiori* on a ratio of parity.

But, if Japan were granted parity, would she be likely to take advantage of it for aggressive purposes? The answer to this question is given by the second of the two pertinent facts; and this is the naval and military action which Japan has already taken in Manchuria and at Shanghai since September, 1931. For this the present rulers of Japan are avowedly impenitent; and they have given no indication that their aggression in the Western Pacific up to date represents the limit of their ambitions. On the contrary, the *ballon d'essai* about a Japanese Monroe Doctrine which the "official spokesman" at Tokyo let fly some months ago suggests that Japan intends to go on with her present policy until she has made herself effective mistress in the Western Pacific, with China under her thumb and the Russian,

European and American possessions and interests in that region reduced to the same *de facto* status.

In this situation, Japan's denunciation of the Washington Treaty and insistence upon parity is an act of the utmost gravity. Indeed, it is not too much to say that Japan's action has overthrown the *status quo ante* on which Anglo-American relations have rested since the time of the Washington Conference. In other words, if Japan's action does not bring the British Empire and the United States together, it will succeed in driving them apart—a prospect which doubtless looms large in the Japanese Government's present calculations.

At this stage, when such serious decisions lie before the English-speaking peoples, it is important to face the difficulties in the way of closer co-operation. The chief obstacles on the American side are the tradition of isolation (though this works less powerfully against Trans-Pacific than against Trans-Atlantic entanglements) and an argument—which the American isolationists are sure to use—that the direct interests of the British Empire in China and the Western Pacific are far larger than those of the United States. On the British side, the obstacles are a traditional friendliness towards Japan and unfriendliness towards the United States in certain naval and Conservative circles in the United Kingdom; and the argument that, if it came to a "show-down," the Japanese could promptly take all the local British pawns, while American interests would suffer no corresponding damage. "The United States is a Power which will never commit itself in advance to precise undertakings," say Englishmen of this school (just as Continentals of the corresponding school say about Britain's attitude to collective security!). "With America we can't deal; with Japan we can; so let us make a bargain with Japan, and acquiesce in her having a free hand in China and at sea, in return for a Japanese undertaking to respect local British interests." Of such a proposal as this it is enough to say that its statesmanship is as bad as its morals. It is equivalent to a proposal to keep Hongkong, at Japan's good pleasure, and at the risk of losing Canada or Australia! For an Anglo-Japanese deal would mean a bitter estrangement between the United Kingdom and the United States; and if ever Canada were to be forced into taking sides, as between the United Kingdom and the United States, sheer geographical necessity would compel her to give her friendship with her great American neighbour the priority over her friendship with this distant European island.

The right way to meet the coming crisis in the Pacific is neither for the United Kingdom to strike an improper and disastrous bargain with Japan, nor for the United States to withdraw into an ultimately untenable isolation, nor again for the English-speaking peoples to line up on a sheerly anti-Japanese front. The solution lies in an application—if only a regional application—of the collective system. The two English-speaking peoples ought now to get together with the Russians and the Chinese to guard against any possibility of successful aggression in the Pacific by any local Power; and they ought then to offer Japan the choice between joining them in the maintenance of peace in the Pacific or else having to face an overwhelming combination of defensive force if, with open eyes, she casts herself for the aggressor's part.

OUR WATER SUPPLIES

THE abundant rainfall of the past few weeks has probably obliterated already in the minds of most people the memory of the last summer's drought. But this happy oblivion has, fortunately, not been taken by the Government as an easy excuse for lack of forethought.

Last week the Minister of Health announced his intention of appointing a committee to undertake a survey of our inland water resources. This was a formal adoption of the recommendation made by a committee appointed in 1932 by the British Association. The committee reported this year that a systematic survey of this nature was urgently required. The two successive dry years which we have just experienced have served to reveal many of the weaknesses of our present system of water supplies—especially in

rural areas; and though, notwithstanding the severe drought last summer, there were no outbreaks of disease, such as the typhoid outbreak in Yorkshire two years ago which could definitely be traced to deficient water supplies, many outlying districts suffered severe hardships, and it does not need much imagination to realise that a third year of drought might produce serious difficulties in many parts of the country. There is therefore every reason to welcome a systematic survey by an impartial authoritative committee such as that foreshadowed by Sir Hilton Young.

A departmental survey of a less comprehensive character was undertaken by the Ministry of Health in 1924, and the data then obtained will be placed at the disposal of the new committee. Such a survey has, in fact, been long overdue. As far back as 1921, the Water Power Resources Committee in its final Report pointed out the unsatisfactory exploitation of the water resources of the country.

We find that the difficulty of allocating the natural resources of water is becoming greater year by year in England and Wales, and the evidence we have heard proves beyond doubt the urgent necessity of control of all water, both underground and surface, in order that the available supplies may be impartially renewed and allocated and may be made to suffice for all purposes in the future. In consequence of the increase of population, the improvement in conditions of life and the growing requirements of industry, the demand for water is steadily increasing, and the problem of meeting future needs is giving rise to anxiety in many parts of England and Wales.

The defects of our rural water supplies are mainly due to a few quite simple causes. First and foremost there is the question of expense. Waterworks demand substantial capital investment, and the rural district council is only too often unwilling or unable to shoulder the expense. For though, since the Emergency Act passed this year, the Treasury is able to assist with a grant-in-aid, and though county councils have for some years been able to contribute towards expenditure incurred on water supplies, the initiative still remains with the district council, which is often most reluctant to put up the rates for what in less enlightened circles is regarded as a fad.

It may appear strange that in a country with such a generous rainfall as ours the problem of water supply should be any difficulty at all. But there are two factors which have long been operating to increase costs for local authorities, namely the antiquated provisions of the law with regard to water rights, which enable private individuals to raise expensive obstructions; and, secondly, the pollution of so many rivers by the effluents of urban and rural industries, which renders expensive purification processes indispensable. Finally, the enormous number of separate water concerns, whether local authorities or public or private companies, has undoubtedly added very heavily to the cost of exploiting the water resources of the country. According to the official estimates there are no less than 2,000 water undertakings in Great Britain, of which 810, supplying rather over 80 per cent. of the annual output, are in the hands of local authorities (including Joint Boards); but

there are approximately 200 statutory companies, about 80 non-statutory companies and, roughly, 1,000 private persons who supply water for sale. The largest water authority of the country is, of course, the Metropolitan Water Board, which supplies more than 7,000,000 persons in the area of Greater London. And the large municipalities, like Manchester, Liverpool, Birmingham, etc., have extensive undertakings which supply big masses of population. But outside these large urban areas authorities are often too small to render the planning of water supplies on a proper scale possible.

Various proposals have been made for remedying this unsatisfactory state of affairs, notably the creation of a vast water-grid analogous to the electricity grid, under the control of a single central authority which should cover the whole area of the country. But the analogy of electricity supply seems to be thoroughly misleading, and the expenditure necessary to erect such a grid would be enormously heavy and exceedingly wasteful. In nearly every portion of the country there is plenty of water which can be obtained locally; the real difficulty has been that in many cases the administrative area has been too small and the financial charges spread over too narrow a field. And though there is a strong case for much more interlocking of neighbouring sources of supply to meet emergency needs, it by no means follows that the solution of the rural problem, i.e. the supply to small villages, is to be found everywhere or even generally on "grid" lines. As Mr R. G. Hetherington, the Chief Engineer Inspector of the Ministry of Health, pointed out at a meeting of the Public Health Conference in the Agricultural Hall last month, the small local source is usually the soundest form of village supply. The chief factor which has hitherto prevented it from being exploited is the cost. The grant of £1,000,000 promised by the Government has gone a little way towards meeting the trouble and, up to date, applications have been received from 210 rural district councils covering 1,189 parishes in respect of schemes whose total cost has been estimated at £3,270,000. But the Exchequer grants so far allocated by the beginning of last month amount to less than £300,000, and a proposed scheme to supply 40 villages in the East Riding may have to be abandoned because the Government grant is too small to enable the rural district council to undertake the improvement. Here is a work of capital development eminently calculated to expand employment, which can be carried out cheaply at present—and yet the Ministry hangs back. Surely this is a case, if ever there was one, for a 75 per cent. grant.

But the problem of water supplies is not confined to rural districts. Consumption per head in our great urban areas is on the increase—though it is still far below that in the cities of the United States—and the shift of population has created a need for planning many years ahead. The expansion of London, for example, has been exercising the attention of the Metropolitan Water Board, which has just decided to build two new reservoirs in the Thames Valley and one in the Lea Valley, but has rejected for the moment the more ambitious plan for obtaining water from Wales—a scheme which was put forward as far back as 1898. Whether that was in the circumstances a wise decision, only the future can decide. Indeed, it may be doubted whether the construction of new reservoirs in the Thames and Lea valleys can be more than an interim measure.

It is on problems such as these that the proposed survey should throw additional light. Meanwhile, there are some useful measures which the Government would be well advised to put in hand immediately. In the first place, a reform of the law affecting water rights is urgently needed. The Ministry of Health has already drawn attention to this need in one of its memoranda in the following words: "One of the chief difficulties arising is the lack of any power in the general law as to public water supplies enabling a local authority compulsorily to acquire water rights as such, other than such limited water rights as may be acquired by the purchase of a restricted area of land." Secondly, there is a strong case for placing all water-supply undertakings in the charge of a public authority, if only because it is easier for such an authority to enforce the law as regards pollution and waste. Finally, it would be most

advisable that certain provisions of the Water Supplies (Exceptional Shortage Orders) Act should be continued, especially those authorising or requiring the supply of water in bulk by one water authority to another—a provision which proved extremely useful in the emergency of last summer and may yet prove useful in encouraging co-operation among the multitude of separate water undertakings.

THE WORLD'S TIMBER—I

As a "universal provider" of toys, matches, pencils, newspapers, artificial silk, Christmas trees and many other things, timber is one of the most important raw materials of industry. It accounts for a good share of international trade, and is the source of a substantial proportion of the national income of a number of countries. In value, timber occupies second or third place in international trade, and shipments of timber constitute about 8 per cent. of the total sea-borne trade of the world.

The dislocation of the world's timber trade in recent years cannot be wholly attributed to the world depression. As the table below shows, prices began to decline long before 1929. Before the war Russia was Europe's chief source of supply, but in subsequent years her exports fell to a very low level. The deficiency, however, was made good by a substantial increase in production in Finland and elsewhere. The need for revenue in these countries led to an intensive exploitation of their timber resources beyond current replacement. As demand did not increase proportionately, the increase in supplies could only be marketed at a gradually falling price between 1924 and 1929.

UNITED KINGDOM IMPORT PRICE OF TIMBER (C.I.F.) (SAWN SOFTWOOD, OTHER THAN PLANED OR DRESSED) (In £'s per load)			
1924	5.36	1933—March	3.29
1927	4.70	June	2.89
1928	4.65	September	3.02
1929	4.53	December	3.29
1930	4.26	1934—March	3.50
1931	3.44	June	3.51
1932	3.09	September	3.54
1933	3.06	November	3.40

But despite the fall in prices, consumption of timber increased much less than that of other raw materials. According to Messrs William Brandt's Sons and Company, world imports of sawn and planed softwoods, which form more than 50 per cent. of the total trade in timber, increased by only 21 per cent. between 1912 and 1929, from 5,395,000 standards to 6,543,500 standards. Although the increase in the output of paper, cellulose and rayon stimulated the demand for timber, the market nevertheless suffered from substitution as well as from economy in use. The importance of timber as a fuel is declining; in the building trade wood has been extensively replaced by other materials and the reduction in the size of rooms and houses has led to smaller requirements of timber; steel has encroached upon its use in mines, on the railway track and in the manufacture of furniture.

As in the case of manganese and wheat, the re-emergence of Russia in 1929 as a large exporter of timber seriously aggravated the difficulties of the timber industry and led to a further decline in prices. Messrs W. Brandt's Sons and Company estimate that her exports of sawn and planed softwoods rose from 320,000 standards in 1926 to 829,000 in 1929 and 965,000 in 1930. As Russia's re-entrance into the timber market on a large scale coincided with the advent of the world depression and the consequent decline in the demand for timber, the slump in prices is scarcely surprising. Despite an appreciable improvement in demand in 1933, prices remained as low as ever, but more recently a slight improvement has been noticeable. The distribution of exports between the various European exporting countries in 1932 and 1933, as compiled by the International Timber Committee, is shown in the next table. It will be seen that Russia has once more established herself as the leading exporter of timber. Nevertheless, her relative share in Europe's exports suffered a slight decline in 1933. On the other hand, Finland, Poland and Sweden increased their share of total exports. The increase

16 per cent. in total European exports reflects the improvement in demand in the United Kingdom, Germany and Holland. Owing to the paucity of home-grown timber, the United Kingdom has long been the leading importer of this raw material. Sawn and planed timber was chiefly responsible for the large increase in British imports in 1933. The improvement in demand was in a large measure due to the remarkable expansion of building activity. On the other hand, imports of pitprops and pitwood, logs and sleepers showed a decline.

EUROPE'S EXPORTS OF TIMBER†
(In thousands of metric tons)

Country	1932		1933	
	Quantity	Percentage of Total	Quantity	Percentage of Total
Sweden	2,294	13.0	2,762	13.6
Finland	2,892	16.5	3,935	19.4
U.S.S.R.	5,366	30.6	5,740	28.2
Latvia	495	2.8	797	3.9
Poland	1,010	5.7	1,672	8.2
Czechoslovakia	1,042	5.9	950	4.7
Austria	827	4.7	978	4.8
Jugoslavia	780	4.4	910	4.5
Roumania	845	4.8	621	3.1
Total (incl. other countries)	17,573	100	20,343	100

† Raw and semi-manufactured.

The distribution of Europe's imports of raw and semi-manufactured timber in 1932 and 1933 is summarised in the next table from the statistical tables prepared by the International Timber Committee:—

EUROPE'S IMPORTS OF TIMBER
(In thousands of metric tons)

(a) <i>By Countries</i>				
	1932		1933	
	Quantity	Percentage of Total	Quantity	Percentage of Total
United Kingdom	5,288	32.0	6,507	33.2
Holland	1,219	7.4	1,782	9.1
Belgium	1,344	8.1	1,500	7.7
France	1,325	8.0	1,434	7.3
Germany	2,472	15.0	3,788	19.3
Hungary	822	5.0	578	2.9
Italy	1,245	7.5	1,388	7.1
Total (incl. other countries)	16,522	100	19,611	100

(b) <i>By Classes</i>				
	1932		1933	
	Quantity	Percentage of Total	Quantity	Percentage of Total
Wood for fuel	957	5.8	570	2.9
Logs	2,094	12.7	2,135	10.9
Pitprops and pitwood ...	2,150	13.0	2,291	11.7
Telegraph poles and other roundwood	69	0.4	88	0.4
Sleepers	313	1.9	279	1.4
Staves	84	0.5	135	0.7
Hewn	109	0.7	104	0.5
Sawn	8,281	50.1	9,770	49.8
Planed	517	3.1	710	3.6
Boxboards.....	20	1.2	14	0.7
Pulpwood	1,926	11.6	3,515	17.9
Total	16,522	100	19,611	100

Comparison with the previous table shows that Europe is a net exporter of timber, though only by a small margin. Total imports of European importing countries increased by no less than 19 per cent. between 1932 and 1933. Imports of pulpwood showed a striking expansion, due to heavy purchases by Germany, but those of logs, pitprops and pitwood and sleepers increased less than the average, and imports of wood for fuel registered a marked decline. The improvement in demand continued in 1934. Exports from Northern countries (Norway, Sweden and Finland) increased from 7,614,700 cubic metres during January-August, 1933, to 8,671,245 cubic metres during the corresponding period in 1934. During the same period, shipments from the Baltic States (Estonia, Latvia and Lithuania) rose from 1,740,285 cubic metres to 1,870,458, and those of the members of the International Timber Committee (Poland, Czechoslovakia, Austria, Jugoslavia and Roumania) from 5,733,125 cubic metres to 7,929,611 cubic metres. The distribution by classes of exports of raw and semi-manufactured shows that the improvement in 1934 was most marked in the case of sawn wood, pulpwood, logs and telegraph poles and other roundwood. Germany, the United Kingdom, Hungary and Italy all increased their purchases of timber appreciably during the first eight months of 1934.

HUNGARY'S EXCHANGE PROBLEM

(BY OUR BUDAPEST CORRESPONDENT)

HUNGARY was the first European country to establish an exchange control (July, 1931), and to supplement it with a transfer moratorium (December, 1931), in order to safeguard the stability of the currency. The three years' experience of the Hungarian authorities may therefore profitably be reviewed.

For more than three years the pengő has been in quarantine, although the authorities have gradually lifted the control to such an extent that the pengő, nominally on the gold standard, is now virtually a scientifically managed currency. The National Bank still issues daily quotations for foreign exchange, based on the original parity of 3,800 pengő per kilogram of fine gold. But at the same time the authorities permit the functioning of a free gold market at the produce exchange, where the precious metal changes hands about 5,700 pengő per kilogram—that is, 50 per cent. above the official parity. A similar premium of 45-50 per cent. is officially allowed over and above the daily quotations of the National Bank for foreign exchange brought into the country by tourists, etc. Foreign trade has adjusted itself to the export-premium and import-surcharge system established under the exchange control. The extent of export premium is fixed by the authorities according to the amount of subsidy needed to market the various export commodities, and the percentage import surcharge is fixed by reference to the need for the imported articles.

It might seem from the above that Hungary would rapidly be faced with the need to revalue her currency. So far the authorities, while allowing *de facto* readjustment of the pengő, have resisted *de jure* devaluation. There were weighty reasons for delaying such action. In August, 1931, when the crisis was at its height in Hungary, the abandonment of the gold standard would have precipitated financial chaos, ending in uncontrolled inflation. In order to prevent a major disaster the Government made "pengő" contracts payable in "gold pengő," which then helped to strengthen confidence in the currency. Official devaluation would necessitate the annulment of this gold clause, which the Government, as yet apparently, would not like to decree. Fortunately the English and the American precedents of changing the gold content of the currency afford the Hungarian Government an excellent example for a *de jure* devaluation without losing face; for no sane person could reasonably expect payments on a gold basis from an insolvent country after its main creditors, Great Britain and the United States, had found it necessary to alter that gold basis for their own currencies.

Apart from these legal difficulties in the way of readjustment for the pengő, the Hungarian authorities, remembering the demoralising effect of wide exchange fluctuations during the inflation period, deemed it prudent to

await the result of the currency readjustments of the leading free exchanges. This means a flexible policy of exchange premium for exports and tourist expenditures and a free market for gold at the produce exchange, on the one hand, and, on the other, the maintenance of the old parity and the "gold pengő clause."

The question then arises: does Hungarian trade not suffer under the exchange control? It undoubtedly does, but in all fairness it must be added that, even in case of devaluation of the currency, the exchange control would have to be maintained on account of Hungary's foreign indebtedness, a problem which is far from being solved. Also it must be pointed out that trade in the Danube Valley is practically a chain of barter and political agreements, and that even a more liberal currency policy could not revive international commerce in the absence of a political truce. In 1933 and in the first nine months of 1934, according to the official returns, more than two-thirds of the foreign trade of Hungary was done through clearing and compensation agreements, and the export exchange actually acquired by the National Bank was less than 20 per cent. of the export values.

Other Danubian countries, Austria, Czechoslovakia and Yugoslavia, found it necessary to devalue their respective currencies; and since Hungary has a commercial agreement with Austria on the basis of the original parity of the two currencies, a large percentage of Hungary's exports is, as it were, already on a pengő with a lower gold content. It is significant, however, that the depreciation of the Austrian schilling and the Czechoslovak krone is considerably less than that of the dollar and sterling. Whereas the premium paid for gold over the old parity amounts to 65-70 per cent. in the case of the dollar and sterling, the Czechoslovak currency reform raised the price of gold by 20 per cent., and Austria by less than 30 per cent., over the original statutory buying price. In Yugoslavia, as in Hungary, a *de jure* devaluation has not yet taken place, but the premium paid for foreign exchange is over 40 per cent. of the original gold parity. Hungary, with her 50 per cent. premium paid for gold on the free produce market, as against the statutory buying price of the National Bank, is thus in reality nearer to the pound and dollar than other Danubian currencies.

Far more important, and infinitely more difficult than may be suspected abroad, is the delicate task of the Hungarian Government in convincing public opinion at home that a *de jure* devaluation of the pengő will ultimately be both inevitable and desirable in order to lay the foundation for a sounder financial structure. As a matter of fact, in the long run Hungary will benefit considerably from the fact that the pengő was allowed to settle at its present natural level nearer to the depreciated dollar and sterling level than to that of the other Danubian currencies. For it is obvious that the world price level, determined chiefly by dollar and sterling prices, will be more in sympathy with those currencies which have been permitted to settle near

the Anglo-Saxon exchanges. And, after all, who would have dreamed in 1931 that in 1934, instead of the old parity of 27.80, sterling could be purchased in Budapest at only 25 pengő, and that in the "black market"?

The strength of the pengő is due to the fact that, despite the budgetary deficit, the Government has been able to resist inflation, thanks to economy measures, to curtailed expenditure and to the prudent utilisation of the non-transferable blocked pengő, and has been able provisionally to make both ends meet. When the Foreign Creditors' Fund was established by the transfer moratorium three years ago, it was feared that the accumulation of the non-transferable pengő deposits at the National Bank would cause serious deflation. The depreciation of the dollar and sterling, the compulsory reduction of interest rates, and the suspension of capital amortisation payments reduced the payments into the Fund to less than one-half of the figure originally contemplated in 1931. Further, the disposal from the Fund of the blocked pengő amounts by the foreign creditors brought the currency deposited in the Fund back into circulation; and a large part of what was left in the Fund was reborrowed by the Government with the consent of the creditors to meet the budgetary deficit. Thus the Hungarian currency was saved both from deflation and inflation.

Hungary's foreign creditors have fared better than anyone could have expected in 1931. On the whole they have received 3 to 3½ per cent. interest, both on the short and long-term private debts, in their respective currencies (after deducting the 50 per cent. premium which exists between the nominal quotations and the external value of the pengő). As interest is paid in pengő at the rate of 5 per cent., according to the original parity, sterling debts are paid at 17 pengő to the £; and around 3.40 pengő to the dollar. Before any *de jure* devaluation of the pengő could be accomplished, foreign creditors would have to agree that the burden on the debtor would not be increased when reckoned in the new devalued pengő. This would not involve further sacrifices by the creditors, because, as was pointed out, if they want to convert the blocked pengő balances into foreign exchange, they already have to bear the difference between the nominal and external value of the pengő.

A complete abolition of exchange control is not a necessary corollary of the devaluation of the pengő. The re-establishment of the free exchange market depends on: (1) A satisfactory settlement with the foreign creditors, involving the conversion of Hungary's short-term debt, both private and public, amounting to more than 1,000 million pengő (£35-40 millions) into bonded long-term debt; (2) a balanced budget; and (3) a safe margin in the current items of the balance of international payments, to meet the reduced service on the consolidated foreign debts. While considerable progress has been achieved in the past three years in the above directions, it may take years to achieve all three objectives, the realisation of which depends on goodwill and sacrifices both at home and abroad.

NOTES OF THE WEEK

India in the Lords.—The House of Lords endorsed the Government's India policy this week by an even heavier majority than the House of Commons. A final vote of four to one was recorded, despite the abstention of the Labour peers and the intrusion into the House of a surprising array of noble lords summoned from the distant shires. Indeed, as it turned out, at least half of the backwoodsmen must have voted in favour of the Government. The debate was on a high level throughout, and the case presented by the rebels was an unusually moderate one. Lord Salisbury's dissenting amendment merely called for delay; and Lord Lloyd, in supporting the amendment, did not tell the peers, as Mr Churchill recently told the Conservative Party, that Great Britain was being "chattered out of India," but merely urged that the movement should proceed more slowly and not at the pace of the Gadarene swine. His

picture of a Gadarene rush, however, does not seem to have impressed the assembled peers, some of whom may have reflected that it is now 170 years since the Battle of Plassey was won and 17 years since self-government was promised to India. Lord Salisbury's doubts about the necessity for a Federal Government were in effect answered by Lord Halifax, who argued in his opening speech that provincial autonomy could not work without a strong and autonomous central Government. The entrusting of law and order to responsible Indian Ministers was defended by the Lord Chancellor as a necessary part of self-government; and both Lord Reading and Lord Hailsham affirmed the reality of the proposed "safeguards." The conclusion of the debate leaves the way open for the introduction of the Government's Bill, and the heavy majority recorded banishes the last shred of possibility of that Bill's ultimate defeat.

Lord Hewart Protests.—Ten days ago, on December 11th, the Lord Chief Justice created a minor sensation in the House of Lords by his onslaught upon the Government's Supreme Court of Judicature (Amendment) Bill, which had come up for second reading under the sponsorship of the Lord Chancellor. The Bill provided for the appointment of two more judges, in view of the congestion and arrears of cases in the High Court, and proposed to remove the necessity of laying a resolution before Parliament when it became necessary to appoint an extra judge. It also provided, in Clause 2, for the nomination of a vice-president in the Court of Appeal, who should preside in one of that court's two divisions, if no *ex-officio* judge were sitting there. Lord Hewart stigmatised the Bill as "a disgraceful measure"; alleged that it would make for political control of the judiciary; objected that he had not been consulted about the composition of the Royal Commission which had produced the Bill, nor by the Commission itself; asserted that Clause 2 was a deliberate interpolation to keep Lord Justice Slesser from succeeding Lord Justice Greer in the presidency of one division of the Court of Appeal; and concluded by announcing that "if these odious features were not removed, then he would adjourn his Court every day . . . to take part in fighting the obnoxious parts of this Bill, not clause by clause, but line by line and word by word." The debate stood adjourned till December 14th, for the Lord Chancellor to reply. The House of Lords on Friday of last week presented a really extraordinary spectacle. Former Lords Chancellor, Lords Chief Justice and Attorneys-General, together with the present Lord High Chancellor and Lord Chief Justice of England, proceeded to range the entire ground of judicial appointment; relations between executive, judiciary and civil service; composition of the Court of Appeal; arrears of cases; and, in detail, the offending Bill itself. The independence of the judiciary of England seemed once more the subject of a dispute between the Lord Chief Justice and the Lord Chancellor, as it was over three hundred years ago between supporters of the Attorney-General, Lord Bacon, and Lord Chief Justice Coke. In the end, honour was satisfied by the Government's acceptance of Lord Reading's proposal to incorporate in the Bill provisions to safeguard the rights of everyone now sitting in the Court of Appeal. A "painful occasion" ended with handshakes all round on the floor of their lordships' House. But many outside that House must have wondered whether the extraordinary scenes of last week were really more than a very big storm in a very small teacup.

Trouble in the Saar.—The incident which occurred in Saarbrücken in the small hours of last Sunday morning may perhaps be regarded as having been closed by the resignation of Major Hemsley, the head of the International Police Force in the Saar, following upon the suspension of Mr Justice, the member of the Force who caused the incident to arise. The latter officer was driving two companions home in a car from a boisterous party and, having overshot a street, pulled up and reversed. In reversing he mounted the pavement and collided with two pedestrians. A man was knocked down without being hurt, and a woman was injured, though happily not seriously, in the foot. A crowd collected; some youthful Saarlanders were fetched from a neighbouring restaurant and one or two of them assaulted the officer. He drew a revolver and fired on the ground—an act which, so far from intimidating the Saarlanders, resulted in a general *mélée*, in which the policeman was knocked unconscious. In the scuffle, the revolver went off for the second time, and this time wounded a bystander—though, fortunately again, the wound was only skin-deep. After that, the police arrived and restored order. It would seem that the members of the party which led to the incident hardly had due regard for their status as guarantors of law, order and good behaviour in a foreign land. One of the crucial points in the Saar problem is the unavoidable tension of local feeling; the statesmanship of Europe has been labouring for months to ensure that this feeling shall not be exacerbated. This was one of the chief purposes of the recruitment of the International Police Force; and it ought to have been so deeply graven upon the mind of a

member of that force that it should have been out of the question for him to have courted even the remotest danger of himself becoming the centre of an incident like this. It is also, of course, particularly unfortunate that Mr Justice and Major Hemsley (who appears to have been present at the party from which Mr Justice was driving away) should both happen to be British subjects, especially as the international military force, which is in the act of arriving in the Saar, is largely British in its composition, has been sent on British initiative, and is under British command. There is, of course, no connection whatever between this British force and an international force that has been recruited individually by the Saar Governing Commission and contains English members for whose selection and behaviour His Majesty's Government is manifestly not responsible. Nevertheless, it would be easy for people in an excited state of mind to miss this distinction. Happily, however, there seems no disposition, in any of the countries concerned, either to magnify the incident or to envenom it. We may hope that the effect will be soon erased from the Saarlanders' minds by the good conduct of the contingents from the British, Italian, Dutch and Swedish regular armies, which are now arriving in the territory for the plebiscite period.

* * *

"War and Business" in the United States.—America is at present moving along three distinct but converging paths towards a policy of drastic governmental control over war industries at all times and over all industries in war-times—and this whether the United States finds herself a belligerent or a neutral. The President has just appointed a committee to advise him on the question of doing what the French have done in their law of 1928: that is, "taking the profit out of war" by empowering the Government, in war-time, to conscript the nation's economic and financial resources on the same terms as its man-power. Secondly, the State Department is said to have been preparing for the President a report on the pros and cons of revising the traditional American policy with regard to the "neutral rights" of the United States in a war between other parties. The traditional American attitude about "neutral rights" is not, of course, different from that of any other unregenerately sovereign-minded State. It is a matter of special notoriety simply because the United States is (or was) more likely to be a neutral than any other great Power, and because her strength—both economic and naval—is so immense that her behaviour as a neutral may have a decisive effect upon the fortunes of the belligerents. The tradition is that a neutral Power has a right to ensure to its nationals the opportunity to make the utmost private profit for themselves out of the belligerents' necessities, subject to two conditions: the neutral must be strictly impartial, and it must submit to the stoppage of its nationals' trade in contraband by any belligerent who has established an effective blockade. If these neutral rights are violated by either belligerent, the neutral's remedy, in the last resort, is to go to war with the offender. This traditional attitude has now been undermined both morally and practically. On the practical plane, all commodities have now become virtual contraband; in consequence, the neutral's risk of being involved in war in defence of his neutral rights has been greatly increased. Nowadays, a neutral's chief concern when there is a war on is not to make profits out of it, but to avoid being implicated. And such immunity can no longer be completely ensured, except by ceasing to trade with belligerents altogether. This is the point that is being rubbed in by the distinguished legal authority, Mr Charles

Warren, on whose elucidation of the question the State Department Report is said to be based. Thus, on practical grounds, the abandonment of the traditional "neutral rights" in favour of non-intercourse with *both* belligerents may become the policy of the American isolationists. And at the same time, on moral grounds, American internationalists may follow Mr Stimson in favouring a policy of discrimination, instead of neutrality, in any war between a Power which has branded itself as an aggressor and its opponents who are upholding the collective system. This, in turn, would mean the abandonment of "neutral rights" in order to penalise the one party and assist the other. It will be seen that, at this stage, a movement in the United States for the abandonment of traditional neutral rights may be a step either towards greater isolation or towards greater international solidarity. Towards which of these alternative goals is President Roosevelt setting his face?

* * *

Waiting for the President.—Mr Roosevelt is still preserving the silence on the general lines of his policy for next year which he has maintained since the Congressional election six weeks ago. Immediately prior to that election he concluded with some ostentation a *rapprochement* with embattled Big Business. This has inevitably started tendentious rumours which have pictured the President as converted to the policy of seeking recovery by the sympathetic fostering of private business and by the abandonment of all the Recovery-cum-Reform measures of 1933-34. The annual Budget Message is due in the first week of January, and the Conservatives are eagerly urging a complete balancing of the Budget and the abandonment of Public Works and Federal Relief in the sacred name of "Confidence." The problem of unemployment, they say, should be, and can be, taken care of by an expansion of private industry. This, of course, is sound economic doctrine for the long run, but there is no prospect whatever that, with eighteen million persons on the relief rolls, the President will recommend any reduction in the Federal provision for destitution. Moreover, he is known to be working on a plan for the continuance of public works, although the details are not yet public. From the Left he is being urged to adopt immense spending programmes. Mr Hopkins, the Federal Relief Administrator, wants \$8,000 millions next year for combined relief and public works. The National Resources Board has prepared the most grandiose plan for spending from \$3,500 millions to \$5,000 millions a year for the next two or three decades, the money to be borrowed from the banks in times of depression and repaid in times of prosperity. These plans and the proposals of the Budget-balancers represent the two extremes between which the President must choose. Both parties, of course, deny the possibility of any compromise, but the President has never accepted the rigid dilemma of Right and Recovery versus Left and Reform. It is a safe prophecy that he will continue to tread the middle path. He will doubtless take great care to avoid any damage to the tender plant of business confidence which might arrest the promising revival now getting under way. But his active support of the movement for publicly-owned utilities shows how unlikely he is to abandon the principles which have inspired his policy hitherto.

* * *

The Gold Bloc's Difficulties.—There is still no sign of recovery in the gold bloc countries. The drastic measures taken by Signor Mussolini last week to defend the lira coincided with a decision by the Swiss Government to abandon high protectionism and adopt a thoroughgoing deflationary policy instead. At the same time depression is deepening in France, Belgium and Holland. The index of industrial production in France stood at 94 in October, compared with 97 in August and 108 in October, 1933; and the difficulties of the Citroën Company reported this week are further grim evidence of the depth of France's depression. The fundamental malady is, of course, the overvaluation of the gold currencies—or, to put it another way, the undervaluation of the depreciated currencies. It is not

merely a matter, however, of the non-gold countries having stolen away some of the export trade of the gold countries by exchange depreciation. The crucial point is that the general level of prices has been brought more into relation with that of costs in the non-gold than in the gold countries. This is proved by the only evidence capable of proving it: the fact that depression and unemployment are increasing in the gold countries and decreasing in the non-gold countries. Measured by wholesale price levels, it is probable that the gold currencies, or at least the franc, are not much overvalued. We estimated in our issue of October 27th that on the basis of August prices an exchange rate of 80 francs was the lowest at which equilibrium between the pound and franc was possible. The actual rate now stands at about 75. Since August, however, French prices have fallen; and although sterling prices were also falling from August to October they have since been rising, while franc prices have continued to fall. The exchange value of the pound has also been rising since October. For the last two months, therefore, the franc would seem to have moved nearer to equilibrium. Unfortunately, however, this very movement—involving a reduction in French prices—has intensified depression in France, for costs have not been proportionately reduced, as the unemployment figures eloquently testify. It is interesting to observe that Italian prices have actually been rising since October. Italy, that is to say, has escaped an intensification of depression at the cost of endangering the currency. But Italy, France, Switzerland and all the gold countries together are still faced by the same fundamental dilemma. Only by the disturbing and inequitable policy of a new thoroughgoing deflation can the existing gold parities be permanently maintained.

* * *

Restricting Beef Imports.—In giving the British beef producer to understand that he is to be protected against falling prices at all costs, the Government has embarked on a very dangerous policy. It became clear last summer that a mere limitation of foreign imports could not raise prices, since Dominion imports were increasing heavily. The Dominions were unwilling to restrict these imports, and the Government consequently took refuge in a subsidy to gain time. More than half the subsidy period has passed, however, and the Dominions are showing no more disposition to restrict production than they were six months ago. The meeting held between Mr Elliot and representatives of the Dominions this week does not seem to have carried matters much further. No agreement has been reached either for the remaining three months of the subsidy period, or for a long-term policy thereafter. Meanwhile in this country the agitation for drastic restriction of all imports is continuing. A great many disingenuous arguments are being used in the course of this agitation. It is claimed, for instance, that the raising of the price of beef will increase the incomes of the producers and so swell general purchasing power and stimulate recovery. If this seductive argument were really correct, our economic troubles could be very easily cured indeed. But unfortunately it is fallacious. For every shilling more which consumers have to spend on beef, they will spend a shilling less on something else; and the producers of the something else will lose exactly as much as the beef producers gain. There will be neither an increase nor a decrease in general purchasing power. But since the price of beef will have risen, the community will get less for its money. The real national income will consequently have been reduced by this amount. Such is the ultimate result of all import restriction. In the case of beef, however, it is particularly foolish, not merely because beef is a staple foodstuff, but because general demand is tending to shift away towards mutton and pork. For this reason, import restriction has not yet raised beef prices but has simply prevented them from falling. Total imports this year will be lower than last, but prices are no higher. In such circumstances, the more heavily imports are restricted, and prices raised, the more rapid is the shrinkage in demand likely to be—to the ultimate loss not only of the British consumer and exporter, but of the British producer as well.

A Subsidy for Cotton?—Though official circles have been very reticent about the deputation from the cotton industry which visited the President of the Board of Trade last week, advices from Lancashire have revealed the true nature of its business, which appears to have been to ask for a subsidy in connection with the redundancy scheme. The main feature of this scheme, which was drawn up by a Committee appointed by the Spinners' Federation with Lord Colwyn as independent chairman, is a proposal for a statutory levy on all active spinning mills for the purpose of purchasing and putting out of action, by scrapping or otherwise, redundant spindles, of which there are at the moment some 13½ millions in Lancashire. The scheme has recently been submitted to a ballot, the results of which have not been made public, but it is known that some 20 per cent. of the mills refrained from voting, though it is rumoured that a large proportion of those who did not vote were in favour of the proposal—at any rate in principle. But the visit to Whitehall, hat in hand, of the promoters of the scheme makes it possible to suspect that the adhesion of a number of mills was made conditional on the levy being paid by somebody else—namely, the Government. Now Mr Runciman, in his statement in the House of Commons on Wednesday, made no mention of a subsidy—a significant omission. For it is clear that the Government could not consider such a subsidy even for a moment—indeed, if it were to take such a step Whitehall would soon be besieged by a host of applicants for similar benefits. And there is reason to suppose that Mr Runciman made this perfectly plain in his reply to the deputation. But in view of the lavish way in which subsidies, open or disguised, have been distributed during the past two years, it is impossible not to feel some sympathy with the disappointed applicants, while at the same time approving the Government's decision. Lancashire feels, not unnaturally, that the Government's protectionist policy has in fact injured the export trade of this country in cotton goods, and it feels justified therefore in demanding the subsidy as an indemnity. In refusing this demand the Government has, however, made it plain that it is prepared to assist the industry in other ways. Mr Runciman has declared his readiness to give statutory sanction to the proposed levy if sufficient support can be found for it in the industry—a step which has important implications for industrial policy. The Government, having gone thus far, might perhaps also be persuaded to underwrite any loan raised on the security of the levy so as to ensure for the industry the fullest benefits of cheap money. But it is difficult to see how it could go further along these lines. The cotton industry must learn to stand on its own feet without help from the taxpayer.

* * *

Supplementary Expenditure.—A Supplementary estimate amounting to £7,458,500 has been presented to the House of Commons. The total is made up of £403,500 for the Ministry of Health in payment of grants to local authorities in distressed areas in England, £55,000 to the Scottish office for a similar purpose in Scotland, £2,000,000 for the new Depressed Areas Fund and £5,000,000 for the Unemployment Assistance Board to cover its expenses in the year ending March 31, 1935. These estimates raise the total of this year's Supplementaries to no less than £11,830,320, which does not include those subsidies which are made in the technical form of "advances" or those which have been promised but are not yet payable. According to the latest weekly Treasury return, ordinary expenditure to date is more than £8,000,000 higher than in the corresponding period of last year, although £3,300,000 was paid in War Debts in 1933-34 and nothing has been paid this year. Revenue, on the other hand, is £3,000,000 less than last year. These comparisons are not a very pleasing introduction to the budget-making season.

* * *

The Change of Government in Yugoslavia.—It is good news that the Regency at Belgrade has accepted the resignation of the late Prime Minister, M. Ouzounovitch, and has entrusted the formation of a new Ministry to M.

Yevtitch, who has been Minister for Foreign Affairs in M. Ouzounovitch's Cabinet; for this change means an immediate widening of the basis of the Government and presumably a move towards a restoration of freedom in political life. This development is the more welcome in view of the fear that the Regency might have missed the opportunity of reconciliation which arose out of the common national grief at the death of King Alexander. The King was mourned by Slovene, Croat and Serb Radical leaders upon whom his hand had fallen heavily; but although they were released from internment in order to attend the King's funeral they were not then invited to return to political life. It was supposed at the time that Prince Paul was inhibited from calling these opposition leaders in, by the fear that such a gesture on his part might lead to a *pronunciamiento* on the part of the Army. Whether or not these fears were entertained a few weeks ago there seems to be no question of them now, since General Zhivkovitch is to hold the portfolio for War in the new Ministry as in the last. The present crisis was precipitated by the strange treatment which M. Yevtitch received from his colleagues, who denied him credit for his diplomatic success at Geneva—a success that had been acclaimed even in the officially-controlled press. Apparently, M. Ouzounovitch and his colleagues of the Yugoslav National Party could not forgive M. Yevtitch for being outside Yugoslav party politics and immune from the bitterly partisan feelings by which they are animated. The tension came to a breach, and M. Yevtitch walked out of a Cabinet meeting. All this, of course, qualifies him for securing the co-operation of parties which have been harried, under the dictatorship, as being "tribal," in spite of their acceptance of the principle of Yugoslav unity. M. Yevtitch is now negotiating for the inclusion in his Cabinet of the Slovene, Dr. Koroshetz, the Moslem, Dr. Spaho, and two Croats. It is sincerely to be hoped that the negotiations will succeed; for a strong, representative and constitutional Government in Yugoslavia would be a fine restorative, not only for Yugoslavia's own political health, but equally for the peace of Europe.

* * *

Italy and Abyssinia.—The Italo-Abyssinian incident on which we commented last week seems more serious than it appeared at first sight. The Italian Government has presented the Abyssinian Government with a demand—apparently not in the form of an ultimatum—for the payment of an indemnity to the amount of £20,000; the performance of an act of homage to the Italian flag at the place where the fighting occurred; and the punishment of the Abyssinian subjects who, according to the Italian account, started the fighting. The Abyssinian Government, on its part, has asked the Italian Government to proceed to arbitration in accordance with Article 5 of the 1928 Italo-Abyssinian treaty of amity and arbitration. The Italians have refused this demand on the ground that there is nothing to arbitrate about. Since then the Abyssinians have circulated a statement of their case to the other States-members of the League, and the Italians have followed suit. In addressing themselves to Geneva, neither party has specifically invoked any article of the Covenant; so that their statements, as they stand, are merely for the League's information. At the same time, it is not easy to see how the controversy can be settled amicably by the two parties *à deux*. If the Abyssinians comply with the Italian demands they feel that they will not only be admitting they were the aggressors in this incident, but that they will also be acquiescing, by implication, in the Italian claim to lawful possession of the disputed territory. The Italians, on their side, point out that a delimitation of the frontier was provided for in a treaty of 1908, and they declare that the fault lies with the Abyssinians, and not with themselves, if the work of delimitation was never carried out. The difficulties of the situation are increased by certain suspicions entertained on both sides. The Abyssinians suspect the Italians of never having abandoned their nineteenth-century ambition to absorb Abyssinia into the Italian empire; and, in particular, they fear that one of the Italian desiderata in the forthcoming Italo-French negotiations may be the cession to Italy of the French port of Jibouti, which is the maritime terminus of a railway leading to the Abyssinian capital, Addis Abeba. The Italians suspect that the

Abyssinians have latterly been preparing for war, and that in this militant policy they may have the Japanese behind them. The dispute particularly concerns this country, which is a near neighbour to both parties in virtue of its own territorial possessions in Somaliland. Might not something be achieved by an offer of British good offices for conciliation?

Sterling and International Prices.—The slow recovery in sterling prices which first became apparent a month ago has continued. During the past fortnight the complete *Economist* index number of sterling prices rose by 0.6 per cent., while the index number of primary products rose by 0.1 per cent. The advance in American prices has for the moment been checked. The *Economist* index number of American primary products has fallen by 0.8 per cent., while the Irving Fisher index number of wholesale prices generally has fallen by 0.1 per cent. French prices have risen by 0.5 per cent., this being the first advance since August. Italian wholesale prices are fractionally lower, so that the December uncertainties of the lira have not so far affected internal prices. German wholesale prices have also fallen by a fractional amount.

* These figures refer to Dec. 12th.

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Nov. 21, 1933	Dec. 5, 1934	Dec. 19, 1934
Cereals and meat	64.5	67.5	69.1	69.4
Other foods	62.2	59.4	59.7	60.3
Textiles	43.7	52.0	53.3	53.6
Minerals	67.4	75.3	75.5	75.5
Miscellaneous	65.8	68.2	68.9	69.3
Complete index	60.4	64.4	65.4	65.7
1913 = 100	83.1	88.7	89.9	90.4
1924 = 100	52.2	55.7	56.5	56.7

The rise in the cereals and meat group was due to sharp increases in beef and New Zealand mutton. Grain prices are all slightly lower than a fortnight ago. Among other foodstuffs tea was cheaper, but there was an appreciable rise in Danish butter. The rise in the textiles group was mainly due to higher prices for wool tops, flax and jute. American cotton was also dearer, but Egyptian cotton cheapened. In the minerals group a slight rise in copper was neutralised by a fall in spelter. Among miscellaneous materials, cement, hides and creosote advanced in price, but leather and linseed oil were lower.

A Cement Cartel.—After many unsuccessful attempts the cement industry of this country has at last been cartelised. Following the conclusion of price agreements among producers in the South of England last April, and in Scotland last September, a similar agreement was reached a week ago in the North of England. The Cement

Makers' Federation will direct the general policy of the industry, and a new central committee will be charged with the allocation of quotas and with the promotion of the use of cement. So far so good. A measure of co-operation in an industry with heavy fixed charges is desirable in so far as wise central control may prevent the ruinous price-cutting which generally accompanies readjustment of capacity during a period of industrial depression. But if central control is to be justified it must see to it that production is carried on efficiently, and it must pass on to the consumer any reduction in costs of production. This is especially important in the case of cement, which is used on a large scale in house-building and road-making. Unfortunately, the conclusion of the last agreement was heralded by a further increase in the price of cement by 2s. per ton. If this means that those in control of the industry will attempt to exact a monopoly price for an essential raw material, the conclusion of such agreements can hardly be welcomed.

November Overseas Trade.—We are now able to supplement our preliminary analysis of British overseas trade in November, published in the *Economist* of last week, with our usual quantitative survey of imports and exports of certain leading products:—

Item and Measure		TOTAL IMPORTS		
		Month of November		
		1932	1933	1934
Wheat	'000 cwt.	8,395	10,089	8,120
Beef	'000 cwt.	922	939	1,096
Sugar (unrefined)	'000 cwt.	4,247	3,649	3,065
Wood and timber, soft	'000 tons	168	271	429
Other than planed or dressed	'000 loads	382	533	534
Planed or dressed	'000 loads	68	82	80
Raw cotton	'000 bales	1,445	1,641	999
Sheep's and lambs' wool	'000 lbs.	66,615	62,709	47,580
Raw silk	'000 lbs.	400	556	658
Flax, hemp and jute	tons	19,079	27,325	28,649
Crude petroleum	'000 galls.	21,654	40,239	50,235
Hides, wet and dry	'000 cwt.	192	113	140
Wood pulp	'000 tons	167	163	203
Rubber	'000 cents	16,035	15,112	30,398
Unwrought copper	tons	28,475	27,705	24,845
Pig lead	tons	2,329	2,072	4,036
Tin: Ore and concentrates	tons	196	430	699
Blocks, ingots, bars and slabs	tons	57,892	91,927	104,088
Iron and steel and manufactures	tons			

As compared with the corresponding month in 1933, imports of maize showed a sharp rise from 3,766,475 cwt. to 6,191,172 cwt., and imports of meat were also appreciably larger. The increase of £1,150,069 in our imports of tobacco is due almost entirely to a rise in prices. The sharp increase in our imports of iron ore and scrap-rubber and wood pulp reflects the expansion of the industries using these materials. On the other hand, the quantity of cotton and wool imported last month was appreciably smaller than in the corresponding month a year ago. A heavy increase in imports of petroleum products was largely responsible for the increase of £620,794 in our purchases abroad of articles classified as articles wholly or mainly manufactured:—

Item and Measure		BRITISH EXPORTS		
		Month of November		
		1932	1933	1934
Coal	'000 tons	3,391	3,607	3,318
Pig-iron and ferro-alloys	tons	8,531	14,370	13,690
Railway material	tons	12,120	9,433	15,487
Total iron and steel	'000 tons	170	184	220
Textile machinery	tons	4,945	6,989	6,910
Total machinery	tons	22,830	27,956	31,074
Cotton yarns	'000 lbs.	9,940	12,671	10,642
Cotton piece-goods	'000,000 sq. yds.	159	170	172
Wool tops	'000 lbs.	4,121	4,084	3,799
Worsted yarns	'000 lbs.	2,628	3,429	2,621
Woolen tissues	'000 sq. yds.	3,708	5,159	4,998
Worsted tissues	'000 sq. yds.	1,814	2,730	2,206
Linon piece-goods	'000 sq. yds.	5,906	6,025	5,996
Leather boots and shoes	'000 dozen pairs	57	47	43
Leather	'000 cwt.	18	22	22
Paper and cardboard	'000 cwt.	358	356	299
Locomotives	tons	...	...	1,013
Motor vehicles and chassis	number	4,929	5,380	5,754

Exports of coal, textile materials and boots and shoes in November were smaller than in the corresponding month

a year ago. On the other hand, sales abroad of iron and steel, machinery and motor-cars were appreciably larger than last year. Machinery contributed £639,434 and iron and steel £619,052 to the increase of £1,606,710 in our total exports of manufactures. Exports of iron and steel to Australia, British India, Canada and South Africa all exceeded £300,000. British India, South Africa and Australia were the largest purchasers of machinery during the past month.

Iron and Steel Production in November.—Since there was one working day less in November than in October, it is not surprising that the production of iron and steel in November failed to reach the output in the previous month. Pig-iron production fell from 527,100 tons in October to 507,600 tons in November, and steel production from 812,000 tons to 766,000 tons. Allowing for the shorter month, production appears to be well maintained. Seasonal influences are affecting markets at the moment, but the general undertone is firm, and there is every indication that prospects for 1935 are favourable. It is now possible to

estimate with some accuracy the total output for the year. Pig-iron should reach 6 million tons, an increase of 40 per cent. over 1933; and steel should reach 9 million tons, an increase of 30 per cent. Imports of iron and steel in November amounted to 104,100 tons, a decline of 16,100 tons compared with October, but an increase of 12,200 tons compared with November, 1933. Of the total imports, 12,951 tons consisted of pig-iron, of which 11,199 tons were from India. Imports of sheet and tinplate bars increased from 7,800 tons in October to 16,800 tons in November, but imports of most other products declined. Imports of scrap iron and steel amounted to 19,400 tons, compared with 28,000 tons in the previous month. Exports of iron and steel amounted to 219,900 tons and exceeded the 200,000 tons level for the third time this year. Exports of pig-iron amounted to 13,400 tons, of steel bars, rods, etc., to 18,000, of thick plates and sheets to 13,000, black plates and sheets to 20,700, galvanised sheets to 26,200, tinplates and sheets to 40,400, and tubes and pipes to 30,800 tons. The chief markets to which iron and steel were exported in November were the Union of South Africa (23,500 tons), British India (23,000 tons), Australia (21,000 tons), Canada (17,100 tons), Argentina (10,800 tons), Denmark (9,200 tons), Japan (8,300 tons), and New Zealand (8,000 tons).

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE NEW RECOVERY PROGRAMME

PREPARATORY to the assembling of Congress, various clashing elements of the Administration are endeavouring to secure the incorporation of their projects in the programme expected to be presented by the President. As usual, these projects are classified under the titles of Relief and Recovery. Approximately twenty million persons are now the beneficiaries of Federal relief; in some States, the Federal Treasury supports the entire cost of relief; in others it supports a major fraction; in still others a minor fraction. In some cases, work is expected in return for relief; in others it is a simple dole. Work relief is not invariably paid higher than the dole. The confusion of views is impressive, ranging from advocacy of the dole without work as the most economical method, through a maintenance of the present system, but at reduced rates (the relief rates in instances successfully compete with the prevailing wage rate in many localities), on into elaborate schemes for Government factories, hardly to be distinguished from the E.P.I.C. proposals of Mr Upton Sinclair. Recovery projects usually centre on housing developments, and these range from the simple guaranteed mortgage scheme of the Federal Housing Administration, through proposals for a 20 per cent. cash subsidy for new construction, to public works enterprises involving direct Government building.

The elements of the housing situation are simple. There has been almost no residential building since 1929; in this period the population has grown by perhaps 4,000,000, and an uncertain number of dwellings have been destroyed by fire or time. Simultaneously, the depression forced some "doubling up" which economised space. Nevertheless, by early 1934 statistical evidence supported common belief in the conclusion that not merely was there no surplus of dwellings, but there were at least local shortages. Furthermore, a major proportion of existing dwellings were visibly in varied stages of neglect and dilapidation. A year ago, in the vicinity of New York at least, there was a fair promise that 1934 would see substantial residential building, although costs were considered high; and in the early months of 1934 signs of building activity appeared. In April, however, the N.R.A. building cartel applied a steep and comprehensive increase in raw material prices, and activity fell away. When these prices were reduced in September, the year's building opportunity had largely

passed. But, meanwhile, the shortage had continued to accumulate, and again signs of building intentions appeared, only to be arrested by the conflicting suggestions from Washington of subsidies, Federal projects, etc. It is probable that the current uncertainties about building will be resolved by the spring, and it is the prospects for residential building and for motor production that form the basis of the wide-spread expectations of a marked industrial recovery in the spring.

SUCCESSFUL TREASURY ISSUE

The Treasury offering of the current week was one of the most successful operations in recent months. Some \$900 millions of new money was desired; and maturing 2½ per cent. notes amounting to about \$1,000 millions were to be re-financed. The issues consisted of \$450 millions 3½ per cent. 15-18-year bonds, an equal amount of 1½ per cent. 18-month notes, and a conversion offer of 2½ per cent. 4½-year notes. Some doubts had been expressed about the feasibility of a long-term issue, in view of the limited success of the 10-12-year 3½ per cent. issue in September. The current long-term issue was five times subscribed.

The cotton situation has been and is causing much more discussion in trade circles than in the Press. Broadly speaking, it is realised that the world is capable of becoming independent of American cotton; and that if American cotton is to regain its export market it must do so at a competitive price. In the current year, this price would be below the official valorisation price, not to mention the domestic price, which includes the processing tax. But the Agricultural Adjustment Administration is committed to the parity price for cotton. At the same time, while the A.A.A. is undertaking to curtail output, it is not undertaking to reduce it to a domestic basis. The result is that stocks of cotton in the possession of the Government, under one title and another, have accumulated and threaten to continue to accumulate. The only proposal yet made for their disposition is an extension of the present two-price scheme, namely that all the cotton domestically consumed shall bear the official price, and that the exportable surplus shall be dumped abroad by the Government, but not necessarily at the valorisation price. On a limited scale, this has been done in the past with wheat. As yet no actual arrangement has been made for this disposal of cotton, but the Press announces the possibility of effecting a "barter" arrangement with Germany to the amount of 500,000 bales or more. Whether this particular deal goes through or not is immaterial. The simple fact is that we

produce an exportable surplus of cotton; that there is no prospect of curtailment to a domestic basis; and no willingness to accept the world price. The attempt to valorise the entire crop is merely leading to an accumulation of the surplus by the State.

The year has been an unhappy one for the railways. For the ten months ended October, net operating revenue was slightly below the ten months of 1933, and gross income was slightly above. Of 147 Class I railways, 37 have failed to cover expenses and taxes, and, of course, a still larger number have been kept from receivership only by Federal funds. One small wage increase was given in July and another will be made in January; but the Court declaration that the Rail Pension Bill was unconstitutional possibly averted a considerable addition to the list of railways now in receivership. Under such conditions, orders for new equipment (with a few striking exceptions) are almost absent, and even maintenance is cut to the limit. In past depressions, notably in 1921, railway re-equipping has been a considerable force in the recovery. Several schemes are under consideration. First of all, the R.F.C. is apparently willing to avert receiverships with loans, in anticipation of an increase in traffic. The railways themselves are applying for higher rates. Beyond these are a variety of proposals for re-financing with Government guarantees, etc. There is a curious and almost complete absence of suggestion that the Government should "take over" the railways, when conditions actually supply more argument than usual for such a procedure, and when there is so much agitation for public ownership of the utilities.

NEW YORK, December 7.

FRANCE

WHEAT AND WINE

By 387 votes to 175 the Chamber has voted the Wheat Bill with a text nearer to the original Government draft than to the counter-proposal of the Chamber Committee. In particular, it is provided that stocks shall be purchased by the co-operatives "at the average price of the first six months of 1935 on the Paris free market" instead of the fixed price of 97 francs proposed by the Committee. The Government's Wine Bill was passed by 398 votes to 162. Both projects will come before the Senate as soon as it has finished its examination of the Budget.

M. Joseph Caillaux made an important speech in the Senate's debate on the Budget. After a revision of the figures voted by the Chamber, the Financial Committee of the Senate had agreed to an admitted deficit of 459,708,256 francs. This total may, of course, vary according to the future course of the crisis. M. Germain-Martin, Minister of Finance, admitted that it might reach 3,000 million francs at the end of 1935; and this figure does not seem exaggerated if one considers that, on September 30th, the deficit for the current fiscal year was already 3,800 millions. M. Caillaux maintained that the estimate should be raised to 6,000 millions; so that if one takes into account all supplementary charges, except the railway deficit, the Treasury would have to borrow a sum of 11,000 million or 12,000 million francs. M. Caillaux concluded that, this being the case, "the era of economies is only at its beginning, and that, after having diminished public expenditure, private expenditure must be contracted by a lowering of the cost of living."

The Government hopes that the reduction of costs so obtained will start France's internal economy working again, in particular by stimulating exports, which already show signs of recovery. Unemployment, however, is still increasing, and the official figure now stands at 384,841, compared with 375,183 in the preceding week and 269,618 a year ago. Public economies are consequently thought necessary. M. Caillaux maintains that France now pays 75,000 millions of taxes (State and Municipal) yearly, compared with 7,200 million gold francs before the war, or 36,000 millions in new francs. Meanwhile the public debt (perpetual debt excluded) has already reached 12,500

millions, or more than a quarter of the Budget. M. Caillaux places the taxable capacity of the country at round about 45,000 million francs a year.

GOVERNMENT BORROWING AND THE RATE OF INTEREST

The long-term capital market will not have to furnish the total needs of the Treasury for 1935. A portion will come from the money market, and the Minister of Finance will probably ask the Chamber to authorise him to raise from 10,000 millions to 12,000 or 15,000 millions the authorised maximum of short-term Treasury bonds, which had been previously reduced from 15,500 to 12,000 millions and 10,000 millions. The Government hopes that this procedure will not prevent the general reduction of interest rates. So far, however, repeated State loans have kept interest rate high. The average yield on debentures rose from 4.18 per cent. in 1931 to 5.24 per cent. in 1932, 5.81 per cent. in 1933 and nearly 6 per cent. in 1934; so that the cost of a loan, taxes and charges included, amounted to between 8 or 9 per cent. or, with amortisation, 10 to 11 per cent. The Government accordingly intends to keep out of the long-term market in order to facilitate a rise of rates and a consequent fall of interest rates.

The annual report to the Chamber on the Budget of the Merchant Service declares that, in spite of the Governmental support, the situation of the merchant fleet remains alarming. Out of a total of 3,468,454 tons, 564,003 tons were laid up on September 1, 1934.

The following percentages of the fleets of various companies were laid up at that date:—

Transatlantique	18%
Messageries Maritimes.....	27%
Services Contractuels.....	13%
Chargeurs Réunis.....	14%
Transport Maritimes à Vapeur	26%
Compagnie Paquet.....	7%
Auxiliaire de Navigation	39%
Compagnie Cyprien Fabre.....	25%
Havraise Péninsulaire.....	36%
Société Navale de l'Ouest	40%

The shipping crisis has been worsened since 1931 by the fall of the pound. Between 1926 and 1930 the tonnage laid up had varied from 84,480 to 204,692 tons, which represented vessels on repair and spare steamers. From 229,111 tons in January, 1931, it then grew to 590,835 tons at the end of 1931, and reached 1,092,889 tons in September, 1932. The law of July 12, 1934, which gave Government assistance to private shipping, led to an improvement. The tonnage laid up fell from 1,015,074 tons in December, 1932, to 886,659 tons in December, 1933, 797,150 tons on June 1, 1934, 717,497 tons on July 15th, 564,003 tons on September 1st and 586,126 tons on September 15th. But a part of this improvement consisted of the selling and breaking up of vessels.

The 68 largest French producers and distributors of electricity sold 930,920,651 kwh. in October, compared with 945,852,263 kwh. in October, 1933; a diminution of 1.57 per cent. For the first ten months of 1934 the production of electricity was 8,765,570,991 kwh., compared with 8,442,483,726 kwh. for the same period of 1933; an increase of 3.82 per cent.

PARIS, December 20.

GERMANY

HERR KRUPP, DR. SCHACHT AND HERR FEDER

THE recent withdrawal of Herr Krupp von Bohlen from the presidency of the "Reichsstand" (formerly Federation) of German Industry, and now from his remaining offices in the Nazi central business organisation, seems to indicate disharmony between the Nazi authorities and private business. Of late there have been several changes pointing in the same direction. Industry is upset by the steady increase in State interference. When Dr. Schacht took over the Ministry of Economy from Herr Schmitt it was expected that interference with production, if not with other branches of business, would be less frequent. Dr. Schacht had always been supposed to believe in

economic freedom. In general, however, the State's grip on business has become tighter. In part, this has been the outcome of the shortage of foreign exchange and of the embarrassing rise in prices; but both of these are themselves outcomes of the Nazi system. It is certain, however, that Dr. Schacht, in regulating production and trade ever more rigorously, is not merely the obedient executor of orders from his Nazi associates. His own competence and authority have both formally and *de facto* increased. Besides his general powers as Reichsbank President, he becomes under the new Bank Law practically the dictator of commercial banking, and the representatives of the other Ministries are, except in rare cases, merely his advisers. Moreover, it is the Minister of Economy who appoints the Presidents of the new Reich Economic Chamber.

Dr. Schacht still shows no tendency, however, to adopt the more radical Nazi proposals, which mainly concern capital and credit. Indeed, the most prominent advocate of these, Herr Gottfried Feder, has been removed as an inconvenient person from Dr. Schacht's Ministry and from his only other office. Herr Feder, though an engineer by profession, was for years Herr Hitler's economic adviser. His original currency ("Federgeld") and credit plans, and his association with the official "war on international loan-capital," kept him much in the public eye; and as he would have been incompetent as Minister of Economy, he was put into this department as Secretary of State, where he was to play the same rôle as Secretary of State Herr Reinhardt plays under the Finance Minister. Herr Feder ceased his somewhat embarrassing utterances when Dr. Schacht succeeded Herr Schmitt, and he has now been eliminated. In general, in matters requiring expert knowledge the mere Nazi politicians have been falling increasingly into the background; but there have been numerous less desirable changes apparently enforced by Nazis in private business. These have often led to the replacement of qualified men by inexperienced amateurs, mostly mere Party men.

The Finance Minister, Count Schwerin von Krosigk, this week expressed himself optimistically about the Reich finances. He estimated the improvement in revenue as Rm. 1,000 millions, compared with 1932, and the reduction in expenditure at Rm. 1,500 millions. The official policy, Count Schwerin said, is to keep both prices and wages low. Gross wages are not to be increased, but wage-earners may be helped by an increase in net wages, secured by means of a lowering of the various deductions now made.

The sugar industry has now been organised within the frame of the Nährstand. Since March, 1931, there has been a compulsory sugar cartel, which was confined, however, to the manufacturing branch, and had a private character. The new organisation will embrace beet production, sugar manufacturing and the sugar trade. It will have price-fixing powers, subject for the moment to the Reich Price Commissar. The prohibition against the opening of new retail shops, first temporarily imposed by General von Schleicher when Chancellor, and several times extended by the present Administration, has now been indefinitely extended. Retail shops will ultimately be regulated by a Reich retail-trade law based on the concession principle, so that no person will be allowed to open a shop without permit. Any considerable increase of the floor area of existing shops is also forbidden. There are signs in other business and professional branches of the same tendency to introduce the concession principle which is sometimes purely political. A new regulation of the legal profession makes it possible to exclude candidates who are "not desired." These measures are inspired by a general fear of competition. In order to prevent competition large numbers of persons are being precluded by various official restrictions from entering the occupations for which they are suited or trained.

HEAVY INDUSTRY BUSIER

The wholesale price index for December 12th is unchanged at 101.1. The prices of manufactured consumption goods, in the main textiles, have risen, and textiles raw material prices are also up. According to the Bureau of Statistics, the national income from salaries and wages in

the third quarter of the year 1934 was Rm. 7,600 millions, which is Rm. 300 millions more than in the second quarter. The wage total rose more than the salaries total, and the chief rise was in the higher wage groups.

The tonnage of ships arriving and leaving German ports in October was 8.7 per cent. higher than in October, 1933. Pig-iron output in November totalled 829,155 tons, against 842,484 tons in the longer month October; and in the first eleven months output was 7,908,900 tons, against 4,732,900 tons in the same months of 1933. The machine-manufacturing industry in November was occupied to 63 per cent. of normal, against 60 per cent. in October.

The foreign trade balance in November was active by Rm. 10 millions, against an active balance of Rm. 16 millions in October.

IMPORTS	Millions of Marks		
	Oct.	Nov.	Jan. to Nov.
Livestock	1.8	3.2	30.7
Foodstuffs.....	101.0	98.3	949.4
Raw and half-manufactured materials.....	185.6	185.7	2,389.7
Manufactured goods.....	61.1	58.6	683.6
Totals	349.5	345.8	4,053.4
EXPORTS			
	Oct.	Nov.	Jan. to Nov.
Livestock	0.2	0.2	3.4
Foodstuffs.....	7.9	8.5	110.1
Raw and half-manufactured materials.....	67.5	61.7	728.5
Manufactured goods.....	290.3	285.3	2,971.2
Totals	365.9	355.7	3,813.2

The seasonal decline in total exports and in exports of manufactures was much smaller than in the November of 1933 and of earlier years.

The money market has been somewhat strained owing to tax payments and the holiday demand, and there are heavy offers of private discounts. Day-loan rates are around 4-4½ per cent. The Reichsbank's reserves remain practically unchanged. There have been some small receipts of gold from home sources. The return for December 15th shows a repayment of nearly 63 per cent. of the November month-end credits. These redemptions were, in part, the cause of the heavy drop in deposits, which are down to Rm. 760 millions, against Rm. 857 millions on December 7th and Rm. 961 millions on November 30th. The withdrawals of Reich and other public deposits were very considerable, and the absence of the usual mid-month decline of circulation is due to this. The circulation of all currency is Rm. 5,675 millions, as against Rm. 5,459 millions in November.

The Supreme Court has given a definite decision in the Steel Trust bond dispute. The Trust's bonds, guaranteed by a dollar clause, are declared to be payable at the rate of Rm. 4.2 to the dollar; the depreciation of the dollar is not to inflict any loss on the bondholders. This decision does not necessarily apply to all dollar-clause issues, and the Reich denies that it applies to the Treasury bond issue of 1923.

BERLIN, December 19.

AUSTRIA

LEAGUE LOAN SUCCESSFULLY CONVERTED

THE conversion of the League Loan can now be said to be completely successful. The success of the conversion abroad is a striking proof of sympathy and confidence. Naturally the conversion is absorbing a lot of ready money, but in spite of this the tone of the money market is easy. Savings deposits increased by 19 million schillings in November. Even in the first week of December there was a further increase, although at this time preparations were being made for the conversion of the Loan, and although it is usual for withdrawal to begin with a view to Christmas purchases, especially in the case of savings clubs. It is remarkable that on the last day of November the position of the National Bank again showed improvement, as both total circulation and bill portfolio receded, while cover was slightly increased. Government securities have been steadily rising since November.

Money is so abundant that the question of the issue of another section of the Lottery Loan of last year is being considered. If this Loan is actually floated, the proceeds will be devoted chiefly to building activity. Building activity is at present at a very low ebb, now that the big housing schemes taken in hand several years ago have been stopped and the Municipality of Vienna has given up building houses. Private house-building is not developing, as tenants' protection still obtains, though in a milder form. It is not possible to lay down conditions for the financing of any larger projects, even though house property, which was for a long time dead capital, is now beginning to pay to an extent corresponding to about 5 per cent. on capital invested. House-owners are the only section of the population whose purchasing power has shown increase recently. Apart from them, just as the first signs of Christmas business are visible, a further decline in general purchasing power must be reckoned with. The chief cause of this decline is to be found in the cuts which have been made in wages and salaries. These cuts have been made at a time when prices have not fallen; wholesale and retail price indices have remained unchanged since the beginning of the year. Agricultural protection is largely responsible for this.

Despite low internal purchasing power, exports have been increasing. A total export of 81 million schillings was recorded in October, the best figure for the last year and a-half. Owing to the triple Trade Pact of Rome, exports to Hungary and Italy are considerably higher than last year, those to Hungary, in particular, having increased until quite recently:—

	Austrian Exports to Italy		Hungary	
	1933	1934	1933	1934
January.....	4.9	7.1	5.6	4.8
February.....	5.2	7.1	4.9	5.5
March.....	6.7	9.6	7.6	7.4
April.....	7.6	8.4	7.2	7.8
May.....	7.1	6.8	7.4	8.4
June.....	6.9	7.4	7.1	9.4
July.....	7.0	7.3	6.9	8.7
August.....	7.2	7.3	5.9	9.4
September.....	8.3	8.7	7.6	9.1

Negotiations are now proceeding with Italy for a further increase in Austrian exports, and a new agreement has been reached with Hungary to maintain Austrian exports at their present level.

VIENNA, December 17.

HOLLAND

GLOOMY ECONOMIC SITUATION

The Netherlands Association of Employers has addressed a letter to the Prime Minister, Dr. Colijn, containing the following words:—

Our anxiety about the future of Holland and her inhabitants is such that we feel compelled to give expression to our misgivings, especially as our alarm has been accentuated by the recently presented Budget figures. Wherever we look, there is no escape from the impression that Holland's sources of prosperity are definitely drying up.

The letter points out that Holland's industries are being seriously hampered by tariff walls and quotas and foreign exchange restrictions abroad. In the home market the obstacle of limited consuming power is encountered, and the low price level is accentuated by imports from countries which can produce much more cheaply than Holland owing to their depreciated exchanges. It is the task of Holland, the letter continues, to maintain and win as large a share as is possible of the dwindled trade of the world. To do this, however, a reduction in production costs is inevitable. The Association maintains that the process of readjustment is proceeding far too slowly.

The application of the Holland-America Line for Government aid for the construction of a new passenger liner has been refused by the Government on the ground that such a ship could not be made remunerative. For the purpose of stimulating industrial development, how-

ever, the establishment of regional industrial banks is now being taken in hand. Negotiations with the Province of Limburg are already in an advanced stage, and similar schemes are being considered for the Provinces of North Holland and Overijssel.

The unsatisfactory state of Dutch trade and industry is also illustrated by the continuously declining trend of securities prices, as shown by the following table of indices for shares, published by the Central Statistical Bureau:—

	1934				
	July	Aug.	Sept.	Oct.	Nov.
Industrials	34	33	33	32	29
Banking and credit ...	65	66	67	70	68
Shipping	2.3	2.5	2.6	2.3	2.0
Others	40	41	39	38	35
Indies securities	37	38	39	36	33
Petroleum	49	48	48	46	43

Negotiations with Germany have again been resumed at The Hague for a new clearing and commercial treaty. Some difficult problems have arisen, including the question of the old frozen debts; but for this a satisfactory solution appears to have been found. There is also talk of placing the entire exports of Holland under Government control by the establishment of a new Netherlands Exportation Company. The object would be to make the operation of a new clearing treaty as effective as possible.

THE FOREIGN TRADE POSITION

Imports in October rose by 9.5 million guilders. According to the returns of the Central Statistical Bureau, imports (excluding gold and silver) increased from 1,828,000 tons and a value of 77.74 million guilders in September to 1,925,000 tons and a value of 87.28 million guilders in October. Exports meanwhile declined in value but rose in volume. The course of Dutch imports and exports, month by month, during the last few years has been as follows:—

	Imports			Exports		
	(In million guilders)					
	1932	1933	1934	1932	1933	1934
January	131	95	100	70	58	56
February	110	86	82	76	55	51
March	116	99	84	73	65	61
April	113	90	86	69	54	54
May	101	97	87	64	61	57
June	107	97	89	66	62	59
July	96	104	86	63	56	58
August	95	105	89	67	62	69
September	101	111	78	77	74	69
October	117	109	87	82	63	62
November	106	109	...	69	63	...
December	107	108	...	70	52	...

The import surplus rose in October to 25.53 million guilders, but this cannot be termed high. For the first ten months of 1934 exports are only slightly below last year's figures in value, but imports are much lower. Imports in 1934 have been (in volume) 19,135,000 tons and (in value) 877.55 million guilders; and exports 11,283,000 tons and 596.08 million guilders. The import surplus dropped steeply from 382.17 million guilders in January-October, 1933, to 281.46 million guilders in January-October, 1934.

AMSTERDAM, December 17.

TURKEY

SURNAMES AND SELF-SUFFICIENCY

It has been decided to dissolve the National Assembly and proceed to new elections in January. The People's Party Congress in May desires to make new recommendations to Parliament, and it is considered best that the present legislature should not overlap with the period in which these recommendations will be carried out. At the end of its term, therefore, the present assembly has hurried through a number of reforms intended to make the Turkish nation look and sound purely Turkish. The surname Atatürk—father of the Turks—has been conferred on Ghazi Mustafa Kemal. This introduces and typifies the new surname epoch which begins in February next. The educated classes have also adopted purely Turkish surnames, so that when one hears a Turkish name in future one will not be in doubt whether its bearer is an Arab or some other Oriental. The

Assembly has also abolished all Oriental titles such as "pasha," "bey," and "effendi." The higher Army and Navy ranks are to be called Marshal, General, Admiral, according to Western usage.

The Premier, General Ismet Inönü—he was Ismet Pasha a week ago before he had a surname and the new title—has founded at Ereğli in the Konia Province of Central Anatolia the second of the large State cotton mills, which are the first line of the five-year industrial plan. It will be the first mill in Turkey producing fine cotton goods. With its foundation it is felt that Turkey is well on the way to self-sufficiency, even in wheat, sugar and cotton, which were the weak points in her autarkic structure.

Wheat production rose from 1,080,000 tons in 1925 to 2,500,000 tons this year, and with the construction of silos at many places in Anatolia, together with a judicious internal buying policy carried out by the Agricultural Bank, prices are well held and the export of cereals is increasing. Sugar consumption is now fully covered and there is even some excess from the four refineries now working. Cotton, which has been responsible for the chief drain on Turkish currency for the import of cotton goods, will begin to be produced on a large scale next year from two new mills and one extended mill. The industrialisation programme is thus being fully carried out at the scheduled dates.

RAILWAY AND CAMEL COMPETITION

An American expert has examined the railway deficit and the Government has introduced lower fares and a system of circular long-term tickets to encourage business and pleasure travel in Anatolia. The result has been very satisfactory. The competition of motor-buses has been successfully met. Passengers and goods traffic have risen by 40 per cent., and receipts by 20 per cent. The one-month circular tickets, which have been reduced by 50 per cent., have been responsible for 15,000 more passengers, and commercial travellers have been given special facilities for carrying sample goods. For the first time excursion tickets have been organised and have proved very popular. The new railway policy as a whole will prevent the return to camel transport, which the peasants were beginning to favour.

The Government has called in a French expert to overhaul the whole Turkish financial system. Meanwhile, the first meeting of the Balkan Economic Committee, established by the recent Balkan Entente Conference at Ankara, will meet this month at the capital and will begin the study of the various problems of Balkan trade co-operation. Turkey and Greece have already set up a body to examine the relations of the two products in which both countries are primarily interested—raisins and tobacco. The Greek Minister of Commerce has made a tour of Turkish factories with the object of co-ordinating the industrial production of the two countries and eliminating redundant production. The same policy will now be extended to the other members of the Balkan Entente, Roumania and Yugoslavia.

Following proposals made by the British Government about a new commercial convention, the Turkish Government has denounced the Turco-British treaty. This has been done with the object of bringing Great Britain into line with the Turkish policy of restricting trade by clearing agreements, of which over a dozen have been made. Negotiations are now going on.

ISTANBUL, December 1.

INDIA

AFTER THE COTTON STRIKE

THERE has been a great improvement in the condition of the Bombay mill industry. With the strike out of the way and with wages now assured of some stability, even though there will be a reduction in hours of work according to Statute next year, a greater feeling of security has been engendered. Conditions have also been helped by the general economic improvement, which, though not yet marked, is distinct. Before the strike, which began at the end of April and ended in the last week of June, the number of operatives employed in the Bombay mills on day-shift

was 95,000 and on night-shift only 8,000; the figures now are 115,000 on day and 20,000 on night. Old stocks of piece-goods have been much curtailed, and the only issue is whether the Bombay mills may not be landed with further unwieldy stocks if they persist at their present rate of production.

As a result of the strike the Bombay Government has passed legislation to apply conciliation to labour disputes. More important still, they have decided to appoint a Labour Officer who would be in constant touch with the workers, study their grievances, and meet trouble before it had time to mature. This rather unusual post for a Government official—the Labour Officer in question is a member of the Civil Service—is certainly warranted by the absence of any proper trade union organisation in the mill industry. The Royal Commission on Labour in India noted the peculiar place of the jobber in the Bombay mill industry. He stands as a middleman between employer and employed, and there are many reasons why his disappearance would be of benefit. Meanwhile, the Labour Officer can help to prevent some of the worst results of his presence. He can expose the ill-feeling caused by a jobber demanding payment to give a man a job as well as to reinstate him if he goes on leave. Continuity in mill employment would do much to improve labour conditions.

Bombay is particularly interested in the Indian sugar industry, having invested large sums in its development under protection. Some anxiety has therefore been caused by the reductions in the prices of Java sugar, which have increased imports and are due, it is said, to the desire of Dutch producers to get rid of long-held stocks before they deteriorate. Incidentally, the increased imports have been of assistance to Government revenues. The sugar duty was estimated to bring in Rs. 205 lakhs in the financial year, whereas the Government have already received over Rs. 240 lakhs. The Indian sugar millowners have already appealed to the Government to increase the import duty on sugar to help the Indian industry. Some part of the Javanese sales are no doubt induced by the prospect of the Indian industry establishing a marketing board for the sale of sugar at various ports. Java has tried to anticipate the formation of this board by placing large stocks at Calcutta, Bombay, Karachi, Madras and Rangoon.

REDUCING AGRICULTURAL DEBTS

All over India the question of debt relief for the ryot is a prominent question. Bills now before the Punjab and the United Provinces Councils deal with this matter. They have been amended in Committee principally by the debtor interests, and are now little better than debt repudiation instruments. Much wiser has been the establishment of conciliation courts for the reduction of debts. This procedure was first adopted in the Central Provinces, where it has been most successful. Mr M. L. Darling, the special officer deputed by the Government of India to investigate rural indebtedness, has recently remarked that on average these conciliation courts have succeeded in obtaining a 40 per cent. reduction in the debt burden. An experimental land mortgage bank in the Bombay Presidency has had equally satisfactory results in debt remission through the conciliatory methods which it unofficially encourages.

The fifteen new land mortgage banks, which it is proposed to open in various parts of the Bombay Presidency next April, will also undertake unofficially to bring debtor and creditor together in the hope that some agreed reduction of liabilities may be effected. Agreement is all the more likely as the creditor will know that the banks will help the debtor to pay off the agreed sum. The new banks will not be solely concerned with providing cash and security for the liquidation of debts; they will also be available for financing approved schemes for agricultural improvements. The loans given by these banks will on the average have a longer life than those now granted by the present co-operative credit societies, which can offer their facilities only for a short term. The new banks will obtain their cash needs by debentures, the principal and interest on which will, it is proposed, be guaranteed by the Government of Bombay. The Madras Government have already guaranteed the debentures issued by the Central Land Mortgage Bank to the extent of Rs. 50 lakhs at a rate of interest not exceeding 6½ per cent. Debentures issued at

this rate, however, are now being redeemed and issued at a lower rate.

Marked success is being achieved in producing in India the "strong" wheats demanded by millers. The Agricultural Research Institute at Pusa has evolved a harder wheat from indigenous forms, and known as Pusa 4, which is well suited to Bihar, Bundelkhand and the North-West Frontier Province. It is an early maturing variety and grows well in soil with minimum water content. Pusa, however, regards the wheat Pusa 3 as its most notable achievement. It stands damp weather better than Pusa 4, and in milling and baking tests it has proved equal in value to good Manitoba wheat. Both varieties, owing to their thin skin, yield a high percentage of flour. There are at least five other varieties of Pusa wheat now isolated, in addition to hybrids of these existing strains, and it is obvious that in a few years the wheat lands of India will be provided with strains suited to their individual requirements. Even bearded strains, for areas where birds and animals cause damage to the crops, have been evolved.

BOMBAY, December 10.

SOUTH AFRICA

UNEMPLOYMENT VANISHING

THE Union trade balance is resuming more normal proportions. For the nine months to the end of September, the value of the grand total of imports was £47.5 millions and of exports £63.4 millions (including £16.6 millions estimated gold premium). Trade is still on the up-grade, and unemployment is rapidly approaching vanishing point. In most lines first-class artisans are almost unobtainable.

From apparently authoritative reports in the daily Press the main outlines of the proposed constitution of the new Party resulting from the union of the South African and Nationalist Parties have been settled for presentation to the inaugural congress at Bloemfontein. It is understood that the proposals provide for a Central Head Committee with responsibility for the Party programme and extensive powers, supervising provincial head committees who are to enjoy a measure of autonomy on local questions. Only Europeans will be members of the Party, but there will be affiliation open to coloured people (i.e. mixed blood) in the Cape Province. Native voters will not be eligible for membership.

By the terms of the new Mozambique Convention, which was signed in the middle of November, the native labour complement of Portuguese native subjects is fixed at between a maximum of 80,000 and a minimum of 65,000. By consultation between the two Governments these numbers may be varied in accordance with the labour conditions at any particular time. Under the present Convention the figure is supposed to be 80,000, but the numbers have been far lower for some time owing to the unprecedented availability of Union and Protectorate natives. The fees payable to the Portuguese Government are fixed at a minimum of 44s. 6d. South African currency per head of the average number employed in any year. Approximately half of their earnings is to be paid to Portuguese natives after their return to their own territory.

Considerable interest has been caused here by the decision, by a two-thirds majority, of the House of Assembly in South-West Africa to petition for the administration of that territory, under the Mandate, as a fifth province of the Union. There is no doubt about the severe economic difficulties of independence. The country suffers acutely from poverty and under-development, as will be seen from the following figures:—

	Area Sq. miles	Population European Non-European
Union.....	473,000	1,920,000 6,568,000
South West Africa.....	310,000	31,600 242,000

For the year 1932-33 the revenue was £387,000 and the expenditure £671,000. The territory is heavily in debt to the Union. Although the Report of the Union Government to the Council of the League of Nations shows an excess of assets over liabilities of the Territory (at March 31, 1933) of

£2,286,000, many of the assets are "frozen" at present. There is some good ranching country, and a variety of mineral deposits believed to be extensive but very inadequately prospected. German citizens naturally object to a step which would be regarded as in the direction of annexation, although protagonists of the scheme deny any intention of departing from the terms of the Union's mandate. Nazi activities in South-West Africa have not helped the German case.

MINIMUM WAGE BILL AND NATIVES

At a luncheon to members of a Commission which is now engaged in reviewing industrial legislation, Mr A. P. J. Fourie, Minister for Labour, announced publicly that a Minimum Wage Bill is to be introduced next Session. The main proposal would be to vest the Minister with power to prescribe a minimum wage of one shilling per hour for certain classes of employment. The avowed object is to reserve certain occupations, mainly the driving of motor cars and machinery, for Europeans. Mr Fourie quoted the Prime Minister as saying that "natives lack the psychology to manage a dangerous machine like a motor car." Mr Fourie is one of those die-hards who believe that the economic and social health of Europeans in the mass can be improved quite easily by simply-worded legislation repressing the natives.

A case of great importance has arisen under the Industrial Conciliation Act. There is in existence a wage determination for the furniture trade, expiring on February 25, 1935. Recently the employees wished for this to be terminated forthwith and succeeded by an agreement carrying increased wages—trade at the present time being very active. On October 20th all the employees gave one hour's notice of termination of their employment. A conviction for contravening the Act has now been set aside by the Supreme Court, which held that the men resigned their employment in the ordinary way and were not "strikers." This position destroys the value of agreements in trades where there is no floating unemployed number of artisans, and it is probable that further legal action will be taken. On December 1st the men resumed work at the wages in the agreement and negotiations have been started for a new agreement to come into force in February.

The Government announced on November 24th an offer to convert £6,995,900 five per cent. 10-year loan repayable in 1935 into 3½ per cent. local registered stock to be issued at £100 per cent. with interest half-yearly on January 15th and July 15th. The offer is open only to holders of the existing stock redeemable on January 15, 1935. The new stock is repayable at par on January 15, 1965, but the Government may repay the whole or any portion on or after January 15, 1955, upon three months' notice.

JOHANNESBURG, December 10.

BRAZIL

INCREASE IN FOREIGN TRADE

THE latest figures show that Brazil's foreign trade is gradually reviving, and there are indications that the revival will continue.

Imports and Exports, January to September, 1933 and 1934.

	Tons	Value in Contos of Reis	Value in £ gold
Imports, 1933.....	3,001,991	1,578,396	21,569,000
" 1934.....	3,018,436	1,818,694	18,227,000
Exports, 1933.....	1,431,746	2,125,462	28,059,000
" 1934.....	1,557,783	2,535,487	25,526,000

As the value of gold has increased considerably over the period covered by the figures given above, the £ gold value does not give as true a picture as the milreis value. The active trade balance was for the first nine months of 1933 some 547,066 contos of reis, and for the similar period of 1934 some 716,793 contos of reis, an increase of 169,727 contos of reis.

The increase in cotton exports, principally from Sao Paulo, for the nine months' period was from 2,542 tons in 1933 to 75,525 tons in 1934. There has been a slight decrease, however, in exports of oranges and coffee.

RIO DE JANEIRO, December 15.

LETTER TO THE EDITOR

THE "CORPORATIVE STATE"

TO THE EDITOR OF THE ECONOMIST

SIR,—I gather from the editorial note in your issue of November 17th that you are somewhat uncertain about the character and significance of the Italian corporate system. Yet the literature on the subject, in English as well as in Italian, is now very voluminous, and much of it quite easy to understand. To mention only a few books there are "The Making of the Corporate State," by H. Goad; "The Working of a Corporate State," by H. Goad and M. Currey; P. Einzig's "Economic Aspects of Fascism"; K. Walter's "Co-operation in Changing Italy"; "Fascist Era—Year XII," edited by the General Fascist Confederation of Fascist Industry (in Rome), to mention but a few.

The word Corporation does not apply, as your contributor seems to think, to the Fascist trade unions, which have always been known as syndicates, but to the State organisations grouping those trade unions and the employers' associations and those of the experts, technical and clerical staffs, etc. At first these co-ordinating functions were fulfilled by special committees created *ad hoc*; later, also, by the various sections of the National Council of Corporations acting as arbitral organs to conciliate the interests of employers and workers when in conflict. All this happened between 1922 and 1934, so that to say that "nothing really happened" is, perhaps, a terminological inexactitude. That a part of the outside world may have wondered what it all meant is quite possible, but only that part which never takes the trouble to understand anything at all (or is incapable of doing so).

In introducing this entirely new system the Government has—wisely, I think—proceeded by degrees, experimenting with the different aspects of the system to see how each worked out in practice, and correcting errors where they were made, instead of launching a set of brand-new institutions ready made. You say "it is a little difficult to discover on what economic principles the corporations will work, if, indeed, they work at all." The difficulty, I venture to think, exists only for that part of the outside world mentioned above. Anyone who inquires for himself into the system will have no difficulty in understanding it. You suggest that it may be only a muddled combination of monopoly and protection. As a matter of fact, the elimination of monopoly is one of the very objects which it aims at, and as for protection, that is to-day a universal feature of every economic system; in Italy we are trying to make its incidence as supportable as possible.

The corporations now created, on which labour, capital and the State (i.e., the nation of consumers as a whole) are represented, have taken over the functions of the sections of the National Council of Corporations and hold the balance between conflicting interests. Each corporation represents all the interests of some particular branch of economic activity, such as agriculture, textiles, banking, etc., as a whole, interests which are common to all persons connected with it—employers, workers, technical experts, the clerical staff. The National Council conciliates such conflicts as may arise between those different branches of economic activity.

You ask whether the purpose of the system is merely to hide "the stark fact of low wages." The answer is definitely in the negative. Wages in Italy are low, but it should be remembered that from the advent of the Fascist regime until that of the world depression (for which Fascism is not responsible) wages had steadily increased, that, if they have fallen since the depression, so has the cost of living, leaving real wages higher than they were before October, 1922, and that by adapting wages to the economic situation the number of unemployed has been kept lower than it would otherwise have been. It is not much advantage that a certain number of workers should enjoy very high wages, if many others have no wages at all. Italy has thus a far lower percentage of unemployed to her total population than Great Britain, Germany, the United States and other countries. You mention the small number of unemployed receiving State assistance (i.e., unemployment insurance). But that is only one of the many forms of assistance to the unemployed. A very large part of the activities and resources of the various Fascist organisations are mobilised for unemployment relief, the municipalities, the Church and numberless private associations all contribute. In few other countries is relief so thoroughly and efficiently organised.

You seem to deplore the abolition of the right to strike. It should be added that the right to proclaim lock-outs is likewise abolished. The law punishes both strikes and lock-outs impartially, but it has never been applied, for the occasion has never arisen. As for the destruction of all "genuine

instruments of collective bargaining," the Corporative system has created the most perfect organisation for collective bargaining ever devised. Under the old system it was not the party having right on its side which won in labour disputes, but that party which was strongest, best organised and richest. In Italy to-day the parties in conflict are really equal before the law, and in the last resort the Labour Courts, composed of impartial and competent judges, decide. That is what is really behind what you are pleased to call an "elaborate and imposing façade." Class war has been eliminated, and this, as an expert British observer remarked not long ago, is the greatest achievement of Fascism.—Yours faithfully,

2 Via Antonio Bosio, Rome.

LUIGI VILLARI.

November 20, 1934.

[Signor Villari seems to have misunderstood or misread some of the remarks in our Note on the Corporative State. We cannot accept all the statements he now makes, but since we have no wish to give a distorted picture of the Corporative State, we propose to devote a special article to the subject in a forthcoming issue.—ED., *Econ.*]

MONEY AND BANKING

GUARANTEEING EXPORT TRADE

QUIETLY and unostentatiously there has been developed in this country since the war a useful piece of Government machinery known as the Export Credits Guarantee Department. In its early stages it was admittedly experimental, but in 1926 it assumed its present form, and is now doing very useful work in furthering our export trade. Briefly, what it does is to insure the British exporter against the insolvency of the foreign importer. The exporter comes to the Department and puts forward his proposition. The status of the foreign customer is investigated by reference to the Department's records and other sources of information, and, if inquiries are satisfactory, the Department may in return for a small premium insure the solvency of the importer up to a limit of 75 per cent. of the account. As a rule the guarantee is given practically up to this limit, but in special cases the exporter may ask for a lower percentage of cover; while in cases of exceptional risk the Department may decline to insure up to its maximum limit.

The Department has a statutory limit of £25 millions to its total outstanding commitments at any moment. Assuming that its average percentage of cover is 70 per cent., this implies that at any moment it can be guaranteeing £35 millions of export trade. Most of its work is connected with exports of consumable goods, which are paid for within a matter of weeks or months. Hence in comparing this limit of £35 millions with the total exports of British goods amounting to about £370 millions, it is important to regard the Department's commitments as a revolving fund which in the course of the year can deal with trade amounting to several times its maximum limit at any one time. It is thus conceivable that a fair proportion, perhaps one-quarter, of our total export trade is to-day being guaranteed in this way.

The Department is run on a strictly self-supporting basis, and for that reason it refuses to take only bad risks and gives some preference to exporters who insure the whole of their foreign business with the Department. It does not grant credits in the banking sense of the term: that is, it does not advance money or accept or endorse bills of exchange. On the contrary, it works in co-operation with the banks. It is not uncommon for a banker to send his customer to obtain insurance from the Department before the banker agrees to open a credit or otherwise to finance a proposed export transaction.

In these days it is important to realise that, except in certain special cases, the Export Credits Guarantee Department only insures the solvency in his own currency of the individual foreign buyer. It does not normally insure the transfer of the debt into sterling, and if the foreign buyer only pays in blocked currency, the Department will not shoulder the loss to the British exporter. In its very early days the Department actually undertook this liability, and, indeed, went so far as to endorse bills drawn in sterling by the exporter; but this practice was modified in 1926, and in 1931, when the Credit Anstalt failure came, the Department shifted the basis of its insurance to a guarantee of the solvency of the buyer and let it be known that it undertook no liability for losses due to exchange restrictions.

This is broadly what the Export Credits Guarantee Department does to-day. It insures solvency and does not grant credits; so that the term "Credits" is in a sense confusing. It deals solely with exports of British goods produced or partly manufactured at home, and does not touch re-exports. It deals both with the export of consumable goods and also with those of capital goods, payment for which may be spread over several years. Thus it definitely extends its guarantee to medium-term credits, and through diplomatic channels it is often able to make special arrangements to ensure the solvency of the debtor and the exemption of the payments from present or future exchange restrictions. Equally, it can obtain Treasury sanction at home, when a contract requiring extended credit appears to conflict with the embargo upon foreign loans. Last but

not least, the Department has built up an unrivalled information service, in conjunction with our embassies and consulates abroad and with many of our banks. Thus, whenever a new proposition is laid before it, the Department can judge its merits either from its own records or by inquiries through its own channels.

Within its defined limits, this system of guarantees to exports is working very well. One striking example is that of trade with Russia, where the exporters' bills are accepted by Arcos, guaranteed by the Soviet Trade Delegation in London, and insured by the Export Credits Guarantee Department. Such bills are readily discounted, and are met regularly by Arcos on their maturity. Still, there are obvious ways in which the scope of the system could be extended, and these merit discussion.

First, the whole system was originally devised as a temporary expedient to assist the revival of our export trade after the war. It is conceivable that the Treasury still regards the Department as a stop-gap, to be wound up rather than extended within the measurable future. It would be a pity if this view were still held, for the Department has amply justified its existence, and should be given encouragement to extend its activities.

An obvious weakness in the system is its confinement to British exports and the exclusion of re-exports. Our *entrepôt* trade deserves assistance just as much as our export trade, and, apart from this, the exclusion of re-exports must create many borderline problems. Allied with this is the fact that much of our re-export trade consists of raw materials imported from the Empire and resold to the Continent. It would be a graceful act to the Dominions to bring these within the scope of the system, and, indeed, the possibility might be discussed of extending the Department so that it could act on behalf of Empire trade as a whole. This, however, would depend upon consultation with the Dominions, and for this and many other reasons it is only possible to throw out the bare suggestion.

Another interesting departure arises from the conclusion of the Anglo-German Payments Agreement of November 1st. This provides for the payment in sterling for future British exports to Germany, but exporters—particularly those who have outstanding debts—can be pardoned if they feel certain qualms about the future. To reassure them, the Export Credits Guarantee Department has undertaken to insure the transfer of the debt as well as the solvency of the debtor up to 75 per cent. of the sum involved. There are, however, two qualifications. Firstly, the Department will not assume liability until six months have elapsed after the due date of payment. Secondly, the Department takes a first charge upon any sum subsequently received in sterling; whereas, in the case of any recovery from a temporarily insolvent debtor, the Department only recoups itself in proportion to the percentage guaranteed by it.

The six months' interval is not so serious a matter as might be thought, for any bills drawn against shipments made under these conditions are usually not discounted, but lodged as collateral against bank loans. Hence, if the bill is not met in sterling on its due date, it is a relatively simple matter to extend the loan, in whole or in part, for six months until the Export Credits Guarantee Department fulfils its obligation. Greater complications would clearly arise if the bill were discounted and passed into the London money market.

Once sufficient experience has been gained from German trade, there seems no reason why this arrangement should not be extended to other countries. The Argentine and possibly Brazil offer obvious scope for such an extension.

The question naturally arises whether there is not scope for a similar State guarantee of the solvency of home buyers. This raises many difficult problems, both of general principle and practical detail, and a Government Department formed specifically to assist export trade could not

easily deal with home trade as well. Yet exporters and their bankers apparently welcome some means of insuring the solvency of their foreign customers, and a similar insurance of home buyers might be welcome, particularly in the case of capital goods when medium-term, as distinguished from short-term, credits have to be arranged. These suggestions can only be thrown out as meriting discussion, and it is not even certain that private institutions could not handle home trade, where credit information is more easily obtainable, better than a Government Department. Still, in the export field, where Government representatives abroad can obtain information more easily than agents of private firms, experience has shown that the State insurance of foreign debts has proved both practicable and of benefit to our traders.

FINANCIAL NOTES

The Money Market.—The demand for money is now concentrated upon loans into the New Year. During most of the week $1\frac{1}{2}$ per cent. was paid for loans against bills, but there are some signs that most of the money available has already been lent, and on Thursday afternoon it was rumoured that one or two borrowers were having to pay $1\frac{3}{4}$ per cent. It is expected that there will be heavy borrowings from the Bank of England over the end of the year. Day-to-day money is obtainable at $\frac{1}{2}$ per cent.

	Nov. 29, 1934	Dec. 6, 1934	Dec. 13, 1934	Dec. 20, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1-1	1	1	1-1
Discount rates:—				
Treasury bills.....	3-7	3-1	3	7-3
Three months' bank bills	1-1	1	1	1

The discount market has been very idle. Last week's Treasury bill tender rate was 9s. 5.48d. per cent., against 11s. 2.18d. per cent. the week before. Only £31.9 millions of the week's offer of £35.0 millions were allotted, but maturities only amounted to £29.8 millions, so that the total volume of tender issues of Treasury bills rose from £447.8 to £449.9 millions. This week there has been some business in hot Treasury bills at $\frac{7}{16}$ per cent., and they are reported to have been offered at $\frac{3}{16}$ per cent. by those in need of money. February Treasury bills have been quoted at the higher rate of $\frac{9}{16}$ per cent., while three months' bank bills have varied between $\frac{1}{16}$ and $\frac{3}{16}$ per cent.

The Bank Return.—The note circulation has established a new record, for this week it has risen to £402.0 millions. This year's Christmas increase already amounts to £25.1 millions, against an increase of only £21.8 millions in 1933. A further small expansion may be expected in next Monday's return. Even before the depression began Christmas increases of only £21.2 millions and £17.1 millions were recorded in 1928 and 1929 respectively, so that, allowing for the fall in prices since those years, the volume of Christmas trade appears to have achieved a new record.

	Dec. 20, 1933	Dec. 27, 1933	Dec. 5, 1934	Dec. 12, 1934	Dec. 19, 1934

mid-month excise duty receipts, which this time have not been paid into public deposits but have been used to reduce the Ways and Means advances from the Bank shown in last Saturday's floating debt statement. All these movements have combined to reduce bankers' deposits, which have fallen during the week by £12.6 millions.

The Foreign Exchanges.—Sterling has this week depreciated against the gold currencies, the Paris spot rate having fallen from Frs. 75 $\frac{1}{2}$ on December 15th to Frs. 74 $\frac{1}{2}$ on December 20th. Three months' francs have also been firm at 10 $\frac{1}{2}$ centimes discount. Early in the month uncertainties regarding the Saar and the dispute between Hungary and Yugoslavia tended to attract a certain amount of panic money to London, but a better feeling now prevails, while foreign houses are also strengthening their cash resources in preparation for their New Year balance sheets. This panic money is therefore now returning home. Sterling has not declined to any serious extent, but on Tuesday, when dollars were offered against francs, the pound fell in sympathy to Frs. 74 $\frac{1}{4}$, and the British Control intervened and bought a few francs. The gold currencies have also strengthened against the dollar, with the result that gold shipments to New York are no longer profitable. As a further consequence the London-New York rate has remained at \$4.94 $\frac{3}{4}$. Three months' dollars are a shade stronger at $\frac{1}{2}$ cent discount. The heavy speculative short position in dollars which grew up in 1933 has now been entirely liquidated, and forward operations largely consist of purchases of three months' dollars by New York banks against sales of spot dollars. This is purely a banking operation designed to secure American balances in London and to secure a small profit from the discount on forward dollars. Since ten days ago the Montreal rate has risen from \$4.85 to \$4.89. This marks the end of the autumn demand for Canadian dollars.

New York Money and Banking.—Money remains easy and New York rates are unchanged. During the week ended December 12th, member bank loans to brokers fell from \$639 to \$633 millions, while other loans against securities fell from \$824 to \$823 millions. During November, the total of commercial paper outstanding contracted from \$188 to \$178 millions, while bankers' acceptances declined in volume from \$593 to \$561 millions. Bills drawn against goods in warehouse contracted by \$10.4 millions, while bills drawn against imports fell by \$4.0 millions. There was an increase of \$1.7 millions in bills drawn against exports. Bankers' acceptances granted against goods stored abroad or in transit between foreign countries were estimated at \$126.9 millions at the end of November, against \$133.1 millions at the beginning of the month. This figure of \$126.9 millions is equivalent at the current exchange to not quite £26 millions sterling, whereas commercial bills (including standstill bills) held in the London market were recently estimated to be not quite £100 millions.

THE STOCK EXCHANGE

TOWARDS BETTER ACCOUNTING

THE progress of company accounting, as it concerns the outside shareholder, regrettably exemplifies the Devil's experience as a Monk. The world's medicine cupboards are crammed with remedies which reviving patients have discarded, not through scepticism of their efficacy, but from dislike of their unpalatability. In view of the tendency of reforming pressure to decline with returning health in the body economic, there is real danger that the public outcry against uninformative company accounts, which was so loud two or three years ago, may be lulled into premature calm by a period of partial trade revival and increased company profits.

What advance has, in fact, been made since the discussions of 1931-32? It would be untrue to say that the stirring of the waters by such a *cause célèbre* as the Kysant case has achieved no positive result. Here and there, on individual initiative, the standard of company reporting has been indubitably raised, in gross and in detail. On the whole, however, most thoughtful investors will admit that the majority of published reports still fail to satisfy all the requirements of reasonably informative documents. Legal stipulations are frequently interpreted in a Puritan spirit, and may well serve only to create a barrier behind which obscurantism may shelter in complete inviolability. For example, the Companies Act of 1929, which first made the keeping of proper company accounts compulsory, provides in Section 124 for the setting out of "such particulars as are necessary to disclose the general nature of the liabilities and the assets of the company and to distinguish between . . . the fixed assets and floating assets," with a definition of "how the values of the fixed assets have been arrived at." This section admittedly protects the investor from such an omnibus statement as the following, which appeared on the assets side of the September 30, 1928, balance sheet of a British company whose name is world-famous:—

Steamers, motor vessels, tugs, tenders, barges and other small craft, fuel oil, stores, heritable and other property, including docks, jetties, coal sheds, workshops, moorings, etc., debts owing to the company, cash in banks and in hand and sundry investments . . . £12,108,699 ts. gd.

Section 124, however, still allows wide latitude to directors whenever obscurantism is allied with ingenuity. The Royal Mail case has not by any means resolved the problem of secret reserves. Fortified by the opinion of leading members of their profession, accountants have continued to approve balance sheets which, in certain cases, quite obviously show a conservative valuation of assets and liabilities. Mr Justice Wright's *dicta* in the Royal Mail case left no doubt that, in his opinion, utilisation of secret reserves ought to be disclosed to the company, and that the existence of large portions of a company's assets in the secret disposition of the directors might conceivably promote serious abuse. The defendants in the case were certainly acquitted on the charges relating to accounts, but his Lordship voiced the hope of many investors by his anticipation of "some appropriate proceeding, in order to find out and elucidate these very special matters." The case for authoritative definition is still weighty and urgent, though companies generally are careful nowadays, when utilising secret reserves to support declining current earnings, to make an oblique and oracular observation—which at least serves to attract curiosity, though not to satisfy it. It would be helpful if more companies would adopt the more satisfactory procedure of declaring the non-recurring amount brought in. Are the arguments for non-disclosure of secret reserves really maintainable in ultimate analysis?

Since secret reserves are designed primarily for equalisation of earnings, it may be useful to examine a further feature of the profit and loss account which, in our opinion, throws up a serious weakness in the Companies Act. Section 126 of the Act requires a statement, accompanying the balance sheet, showing how the profits and losses of

subsidiary companies "have, so far as they concern the holding company, been dealt with in . . . the accounts of the holding company," together with the method and extent of provision for subsidiary companies' losses. In practice, this requirement has been very narrowly interpreted. Companies are not required to specify the actual amounts concerned, and the common form statement reads thus:—

Profits of subsidiary companies have been brought into the accounts of this company to the extent of the dividends actually received during the year, and have been included in the profit shown.

The extent, therefore, to which profits of the subsidiary companies have been drawn upon cannot be determined from inspection of the accounts. In other instances the letter of the law is observed, but the intention of the Act is clearly frustrated. The following wording is an example:—

In respect of a subsidiary company credit has been taken for the dividend actually declared out of profits earned for the year. The losses have been carried forward in the accounts of each of the subsidiaries concerned, but have not specifically been provided for.

Apart from questions of the adequacy of subsidiary companies' provision for depreciation—safeguarded only by the repetition of any qualified audit certificate in the parent company's accounts—this practice makes it possible for a holding concern grossly to over-distribute the earnings of the group of which it is the heart. Is there any valid reason why the amounts involved should not be specified, or, failing that, why a statement of the parent company's share of the subsidiary and sub-subsidiary companies' total earnings should not be declared in each year? Shareholders have a right, surely (subject to obvious limits of discretion), to be informed of the most remote profit figure, and of any subsequent adjustments. This applies equally to companies whose disclosed profits are shown after unstated adjustments made for "contingencies." In the case of Strand Hotel these "adjustments" have produced the fantastic result of identical disclosed profits for each of the last three years.

One major reform, however, is slowly gaining ground. The publication of consolidated balance sheets is being effected by an increasing number of holding companies whose assets consist largely of interests in subsidiaries. Other means of giving information regarding the position of subsidiaries are sometimes employed. These include the publication of a selection of principal subsidiaries' balance sheets (e.g. Yorkshire Amalgamated Collieries and Unilever) or a combined statement of subsidiaries' assets and liabilities (e.g. the Aerated Bread Company). It is generally acknowledged, however, that a consolidated balance sheet gives, within the limits of practicability, clearest insight into the economic position of a group as a whole. There are three arguments commonly advanced against the consolidated balance sheet. In the first place, it is contended that its preparation entails undue trouble for companies with a large number of subsidiary concerns. The argument, however, is two-edged. If the directors of a parent company are to manage their group's affairs with the utmost efficiency, they cannot dispense with adequate "control" figures, of which an annual combined statement is the most obvious. Despite certain technical difficulties, arising from varied accounting dates and exchange fluctuations, there seems to be no good reason why a group statement should involve undue difficulty or delay.

In the second place, it is frequently alleged that creditors of a holding company may dangerously misinterpret a consolidated statement by regarding the assets of the whole group as a common fund. From their point of view, this would be clearly illegitimate, since their only recourse is against the assets of the parent. From the broader aspect, however, there is no reason why the parent of a sound

group should not be granted a favourable long-term credit rating in proportion to the "group" resources. On the other hand, experience suggests that a discount house, for example, in assessing the rating of a parent concern, is not apt to overlook any weakness in its current position on account of a strong group showing.

Thirdly, and this is a principal objection, it is argued that publication of a consolidated balance sheet may supply information to competitors which would be detrimental to the interests of a group as a whole. This argument has been employed in opposition to every successive step in disclosure. Investors are familiar with the type of chairman who endeavours to disarm the curiosity of alert shareholders by assuring them that reticence is in their own interests. The best answer derives not from pure logic, but from general practice. We have prepared a table, which makes no claim to be exhaustive, of 25 companies which now publish group statements. These cover a comprehensive range of industries, and in the majority of cases the companies are substantially exposed to competition.

Company	Date of Accounts	Total Assets	Proportion represented by Holdings in and Advances to Subsidiary and Allied Companies	Total Group Assets shown in Consolidated Balance Sheet	Proportion represented by Fixed Assets
Amalgamated Metal	1934 Mar. 31	5,492,586	97.1	7,037,422	(a) 38.3

Turner & Newall	1933 Sept. 30	8,569,996	40.7	6,617,836	54.0
Wiggins, Teape	1933 Dec. 31	5,096,753	62.2	6,680,774	55.8

(a) Percentage of "Investment Holdings." (b) Written down to nominal value.
(c) Based on figures which "are not based on a valuation, nor do they express an opinion that the properties are worth those amounts." (d) Investments and advances to subsidiaries represent further 21.9 per cent. (e) Now Cable and Wireless (Holdings).

Who is prepared to assert that any one of these concerns has suffered through publication of a consolidated statement? On the contrary, a certain prestige has been derived in some cases, for enlightened accountancy, especially when practised by a large firm, has an advertisement value going outside the walls of the Stock Exchange. Moreover, if the "competitive" argument carried any weight it could not apply, *ex hypothesi*, to the many large quasi-monopoly firms who are most reticent in publishing detailed figures.

The two percentage columns in our table illustrate one of the main advantages of the consolidated statement. The balance sheet of, say, the British Power and Light Corporation in its original form is a mere legal truism. The company holds interests in subsidiaries amounting to £2,287,125, and the rest of its assets are worth less than £40,000. The consolidated statement of the subsidiaries' position (drawn up in the form of a "net worth" analysis) shows, however, that the participation of the Corporation is valued at £2,929,591, of which fixed assets, after deduction of "outside" debenture interests, represent £2,650,806. In short, a group statement clearly reveals the economic as opposed to the legal position, and enables proprietors to trace changes in the organisation of the group, which would be quite undiscernible from inspection of the statutory balance sheet of the parent company alone. It is untrue to say, of course, that the presen-

tation of group statements has yet reached the acme of perfection. Few consolidated balance sheets completely define the basis of their figures. Edmundsons Electricity Corporation and Dunlop Rubber Company state that all subsidiary and sub-subsidiary companies in which over 50 per cent. equity interest or voting control is held, are included. In other cases, such as Electric and Musical Industries and Ebbw Vale, the consolidated statement stops short at the first generation, leaving the position of sub-subsidiaries undisclosed.

From what direction is further progress to be expected? Representations towards accounting improvement were strongly voiced at the International Accounting Congress held in 1933. This professional interest is commendable and useful, for it has encouraged an increasing number of holding companies to publish more information. Voluntary improvement is the more welcome since it would appear that, at the present stage, insufficient experience is available to provide a basis for a compulsory form of publication suitable for all types of businesses. Legislative enactment, moreover, is difficult to achieve, and rarely watertight. As a contemporary movement, it is desirable that companies which have published consolidated balance sheets should pursue their policy to the logical conclusion by setting out the group earnings position. This is already practised by companies like Richard Thomas, Wiggins, Teape and Company, British Power and Light, and Ebbw Vale and Dunlop Rubber. The Chief Accountant of the last-named company, Mr F. R. M. De Paula, has been a most effective pioneer of improved accounting, in theory and in practice. Investors seeking a somewhat austere but instructive holiday task might well compare these enlightened reports with those of companies who, in their accounting, still confuse parsimony with "policy."

INVESTMENT NOTES

Royal Mail Outlook.—The Royal Mail Scheme of Arrangement expires on December 31st. Shortly after these words appear in print, the debenture holders and creditors concerned will receive details of a proposed scheme for orderly liquidation. The necessary meetings of debenture holders in the Royal Mail Steam Packet and Elder Dempster companies will be held early in the New Year, for the risk of "wrecking" action would otherwise increase with every day that passed. The autonomy and continued operation of the ships, under the operating companies, Royal Mail Lines, Limited, and Elder Dempster Lines, Limited, was assured with the passing of the original scheme of arrangement. A final and inevitable "clean up" cannot affect their future, while the continued publication of documents like the last R.M.S.P. report may well prejudice their standing in the eyes of interested parties. The latter may not, on every past occasion, have appreciated all the implications of these operating companies' separate organisation, sound current finance, and proved ability to trade on a basis covering current expenses with a margin of earnings towards depreciation. As regards the parent concerns, it is in the interests of the City of London, whose prestige is involved in the largest shipping failure in British history, to ensure that liquidation is carried out under the highest possible auspices and that potentially good assets are not squandered in a general "creditors' scramble." It should not be beyond human ingenuity to devise the necessary machinery to ensure that creditors like the first debenture holders of each company, whose requirements are covered in any event, shall be satisfied with as little delay as possible, while the remaining assets are retained for realisation under conditions which will safeguard their future as distinct from their immediate value. If such a plan can be agreed upon, it may be possible to give some sort of equity in future liquidation possibilities to parties like the unsecured creditors, whose prospects of an immediate return will otherwise be more than doubtful. Unhappily, a close study of available facts and figures suggests little ground for hope of any eventual return to holders of R.M.S.P. share capital.

Markets and "The Shop."—Recent market conditions have given point to Stock Exchange discussion of the perennial question of "the Shop." This generic term covers any outside financial interest, from the recognised finance house associated with the management of a company to the irresponsible group of financiers doing a share "deal." The "Shop" is the source to which the jobber turns to undo his bargains in shares which do not command a ready market or a specific investment value. In the securities of most small- and medium-sized companies, price and marketability may frequently be determined to quite an appreciable extent by outside influences. It is obvious that such a position may, on occasion, offer opportunities of exploitation, to the detriment of the private investor. Jobbers who are urged to take a more independent attitude, however, point out, with reason, that it is not an economic proposition, from their standpoint, to build up a large "book" in stocks which are infrequently dealt in. Only by such a policy could the power of the "shop" to influence the price be minimised. Each dealer necessarily covers a large number of companies (if he does not confine himself to active counters), and to accumulate a substantial "book" would not only tie up his capital, but expose him to the danger of heavy financial losses. What escape from this dilemma is possible, on the basis of existing market technique? It is difficult to devise any practicable method of eliminating "the jobber's jobber."

* * *

Brazilian Debt Service.—The London market has been seriously concerned in recent weeks for the implementation of the Brazilian Debt Scheme, which was imposed by the unilateral decree of the Brazilian Government last February. The British bondholder was impelled, much against his will, to accept the "agreements" under which the Brazilian Government determined the treatment to be meted out to the eight classes of bonds. The transfer of about one-third of interest and sinking fund charges was then regarded as well within Brazil's capacity, especially as she had apparently reached the recovery phase. We suggested at the time (see the *Economist*, February 17th, page 356) that internal political conditions might have restrained Dr. Oswaldo Aranha's wishes to provide better treatment for the British creditor. Since the ex-Finance Minister was appointed to the Embassy in Washington in mid-August, criticism of British economic policy and its reaction on Brazil's capacity of payment has become more forceful. The Ottawa preferences have encouraged extreme nationalist spokesmen to press for measures of retaliation. This movement, though understandable, is to be regretted. Already it has put the Brazilian Government, through its Ambassador in London, to the necessity for a strongly worded disclaimer of any intention to modify the agreements, which declares that "all its action is in the sense of carrying them out rigorously." The matter is closely connected with the partial liberation of the exchange. The Government has been compelled to prevent depreciation of the milreis to a level which would impose an unwieldy budget burden for the debt service, together with such self-contradictory objectives as encouragement of exports without stimulating new coffee planting, and restriction of "non-essential" exports without fostering reprisals. The rapid fall in the milreis rate from 4.204d. in May to an average of 3.022d. in July and a subsequent recovery towards 3.25d. has followed the policy of greater freedom of transfer. This is calculated to encourage Brazilian exports, although present regulations require the delivery of Frs. 155 or their equivalent to the Bank of Brazil for each bag of coffee exported, the balance being saleable in the free market. The active trade balance for the first eight months of 1934 was £5,688,000 gold, against £5,902,000 gold for the corresponding period of 1933, and the volume of total trade showed satisfactory expansion. The revised budget for 1935 shows an estimated deficit of 522,127 contos. Of a total expenditure of 2,691,684 contos, 406,796 contos (equivalent to £4,500,000) has been allocated for external debt service. Concerning Brazil's ability to pay, therefore, there should be little question. The apportionment of exchange, however, is raising some questions of

discrimination. In reply to a question in the House of Commons, on Tuesday, Mr Eden stated that representations to ensure equitable exchange facilities for British interests were being made to the Brazilian Government. There is no reason, however, why holders of Brazilian bonds, who have been forced to submit to a four-year scheme of arrangement, should be required to suffer further hard treatment in present circumstances. Some 80 per cent. of the proceeds of coffee exports are applied to the external debt service and to the provision of exchange at standard rates for 60 per cent. of imports. The allocation of this latter proportion, which has raised suspicion of exchange discrimination, has no direct relevance to the bond service. In view of the weakness of the loans in this week's dealings, however, the Brazilian Government might reasonably consider the advisability of a further pronouncement making the position thoroughly clear.

* * *

Argentine Railway Developments.—A message from Buenos Aires at the beginning of this week declared that the Argentine Government had decided that the railways would not be allowed to include interest on bearer bonds, overdrafts and cumulative preference shares when formulating claims for wage reductions under the President's award of November last. A subsequent message declares that the Buenos Aires Great Southern and the Central Argentine railways have decided to suspend wage "cuts" from December. The news draws attention to the disabilities under which the British-owned railways in the Argentine are labouring as a result mainly of the Government's official policy. In a leading article in the *Economist* of November 10th (page 881) we showed that the total exchange differences charged against net revenue for the year to June 30th last on the four largest lines were £3,957,038, against £1,184,997 in the preceding year. This increase of £2½ millions was due entirely to a unilateral decision by the authorities, in November, 1933, which, in effect, reduced the exchange value of the peso by 20 per cent. overnight. Subsequently, Argentine trade showed a strong tendency to recover, and the increased peso receipts of the railways prompted an application by the Labour Unions for the elimination of the "cuts" in wages which they had accepted in the period of adversity. Though the President's award was, in form, a compromise, it significantly increases the burden of the more prosperous lines, since, broadly, no company may henceforth pay preference dividends to its shareholders until it has restored the "cuts" to its workers. In the absence of a definite statement by their respective boards, shareholders are in the dark as to the effect on their dividend prospects for 1934. As a rough basis of calculation, however, the following table shows the amount of the railway wage bill on the Buenos Aires Great Southern and the Western lines in 1933-34, and the effect of possible increases of 5 and 10 per cent. respectively:—

Company	Total Wages and Salaries, 1933-34	Amount required for Increases of		Amount re-quired for Full Preference Dividends	Amount Earned for Preference Dividends, 1933-34
		Five per cent.	Ten per cent.		
B.A. Gt. Southern.....	£ 4,676,260	£ 233,813	£ 467,626	£ 880,000	£ 301,052
B.A. Western.....	£ 1,978,069	£ 98,903	£ 197,807	£ 129,855	£ 108,486

Note.—The latest report of the B.A. Gt. Southern declared that a wage "cut" of 5 per cent. had been ruling in salaries of all staff represented by the "Union Ferroviaria" and of the administration staff, together with "cuts" for the footplate staff, and a 10 per cent. deduction on higher salaries.

At the annual meetings of November 14th shareholders were informed that a 1 per cent. dividend on the ordinary stock would require an increase in peso receipts this year of 13½ per cent. on the Great Southern and 10 per cent. on the Western. For the twenty-four weeks of the year to date the actual peso increases have been 4.0 per cent. and 3.7 per cent. respectively. The calculation, however, is based on the maintenance of the peso's exchange value and the absence of an increase in expenditure. In view of the latest wages decision, however, it would appear that ordinary stockholders on the Southern and the Western

have little hope of receiving a dividend in the near future. Unless the railways obtain substantial benefit from the eventual recommendations of the Official Committee which has been considering the entire Argentine transport problem, stockholders would seem to have a distinct grievance over the way in which the fruits of substantial economic revival are being prevented from reaching them.

* * *

Discount Company Prospects.—In last week's *Economist* we discussed the dividend outlook of the joint-stock banks, and suggested that, although profits might be allowed to show some slight decline, dividends should generally be maintained. As regards the large discount houses, the revenue problem recently appeared to have reached an acute stage. Influential voices, indeed, advocated a relaxation of Treasury policy to strengthen discount rates. The apparent loss on running bills at 1 per cent., however, has been qualified by certain more favourable factors. First, large houses have been able to obtain substantial amounts of "outside" money—possibly as much as 40 per cent.—at something like ½ per cent. Business in trade bills has still shown adequate rediscounting profit. The reduction in discount rates itself resulting from the "bankers' scramble," gave the market an immediate capital profit on its portfolio. This is a factor which is apt to be overlooked during a period of steadily falling rates, as in the current year. It is true that the market has been forced into "shorts" to a larger extent than is consistent with normal operations, and presumably these have been run against call money at higher rates. The market, however, has shrewdly adapted itself—temporarily, it may be hoped—to specialisation in short-dated securities as well as "names." On the whole, there is probably little reason to budget for a really damaging fall in earning power, and the latter in any case can be adjusted to some extent by rebate policy. Consequently, any far-reaching reduction in dividends would come as a surprise.

* * *

American Utility Position.—The American public utility industry during depression has fared poorly in finance and worse in public favour. The notorious financial excesses perpetrated by certain utility companies during the Wall Street boom created problems of over-capitalisation, whose solution, in depression and partial recovery, has been only partially achieved. A Democratic Administration, therefore, has enjoyed ample opportunity, and in some cases, it must be conceded, not a little justification, for sponsoring a programme of far-reaching reform. So far policy has been directed towards increased taxation of utilities and reduction of rates. The Tennessee Valley scheme has become a stick to beat the privately-owned companies. It has inspired a considerable electoral demand for public ownership, and there is news this week that the President is prepared to advance funds for the construction of plants by those cities which show that they can produce power cheaply, while plans are afoot for extending rural power lines of companies whose rates are considered reasonable. The former move apparently is closely connected with the recently-published declaration by the New York Power Authority that existing rates in its area are 40 per cent. too high, and with the St. Lawrence waterway project. Further progress with the latter scheme would involve ratification of a new treaty with the Canadian authorities, and the present suggestion of Mayor La Guardia is that the first stage in the power network which it would supply might be a municipal plant for power distribution. Meanwhile the work of the Federal Power Commission is expected to lead to proposals stringently regulating holding companies and their earlier policy of "pyramiding." Wall Street quotations have registered apprehension regarding the many inquiries, federal and State, now proceeding, pending cases relating to rates, and the prospective investigation into the position of American Telephone and Telegraph Company. The flood of plans in anticipation of Congress, which is convened for

January 3rd, has thoroughly unnerved operators, and the Standard Statistics index of 37 utilities has fallen this week from 59.5 to 57.0, a new low level for the year. In the long period, however, it will probably be found that the various proposals will be severely modified in the courts. Companies in industrial areas have least to fear from pressure to reduce rates, but holding concerns, with widely spread interests, may be considerably affected by federal legislation. A vigorous upswing in economic activity would do much to assist rate reductions and to appease consumers' discontent.

* * *

Industrial Profits in November.—We received 143 company reports last month, showing an aggregate rise in profits of 33.97 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits*	1934—	Reports Published in	No. of Companies	Rise or Fall in Profits*
1933—				1934—		
September.....	102	— 4.06		April.....	188	+12.96
October.....	121	+17.06		May.....	251	+23.43
November.....	185	+79.64		June.....	201	+20.44
December.....	138	+13.04		July.....	197	+27.10
1934—				August.....	30	+35.47
January.....	122	+ 3.02		September..	89	+40.63
February.....	209	+ 5.02		October.....	165	+49.70
March.....	216	+ 6.34		November...	143	+33.97

* After payment of debenture interest.

The reports of the month disclose net profits of £10,542,929, as compared with £7,869,514 in the preceding year. All groups, with the exceptions of oil, shipping and tea companies, show improvement. Particularly favourable reports have been issued by the brewery companies, 21 of which earned net profits of £2,343,526, against £1,853,239. The greatest advance, however, has been accorded by the financial, land and investment group, which consists largely of pastoral and property companies, with a few concerns specifically holding certain industrial securities. Some 17 of these companies show an advance of £634,069 in net profits, the total being £2,151,097. The iron and steel, motor and building materials companies show very substantial recoveries in earnings. We set out our usual selection of important results which have appeared during the month:—

	Net profits after debenture interest, years ending in		Change %
	1933	1934	
Bass, Ratcliff and Gretton.....	471,154	558,913	+18.6
Electric and Musical Industries...	902	325,031	...
Orient Steam Navigation.....	433,379	410,152	— 5.4
Provincial Cinematograph Theatres	459,490	508,648	+10.7
Tate and Lyle.....	933,361	1,205,868	+29.2
Tobacco Securities.....	802,134	758,410	— 5.5
Wall Paper Manufacturers.....	536,242	612,948	+14.4
Total, seven companies.....	3,636,662	4,379,970	+20.5

These seven companies contribute nearly 42 per cent. of the total profits, but their rate of improvement is well below the general average.

★ ★ ★

Actuaries' Investment Index.—Although markets have experienced the seasonal deceleration of activity, quotations on the whole have resisted any tendency towards lower levels. The firm position is well illustrated by this week's index figure for 144 industrials, which, at 73.0, compares with 73.1 a week ago and 74.7 a month ago. The halt in the downward phase from mid-November masks a number of irregular changes in the component series, of which a selection is given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month ago (Nov. 20)	Week ago (Dec. 11)	This Week (Dec. 18)	Month ago (Nov. 20)	Week ago (Dec. 11)	This Week (Dec. 18)

Breweries and Distill. (16)	123.0	123.5	124.0	3.67	3.84	3.89
Lower this week						
Cotton (6)	45.3	44.1	42.8	2.23	2.23	2.25
Oil (5)	56.2	54.0	52.6	5.17	5.39	4.89
Electric (8)	103.6	101.5	100.5	4.16	4.32	4.38
Home rails (4)	75.9	74.8	73.2	1.51	1.52	1.53

"Money" shares have reflected a slight firming-up of gilt-edged and the confident expectation of maintained dividends. Brewery shares have been slightly firmer, although the index still shows a fall of 4 points since a month ago. The reaction in home rails results from declining traffic comparisons, the coal figures being somewhat inauspicious, while further profit-taking has reduced the average level of electrical equipment shares.

COMPANY NOTES

"Christmas Trading" Companies.—A record circulation of money, as shown in the Bank of England's return, testifies to an active Christmas business, while the advertisement columns of the daily papers demonstrate the wide variety of trades (not excluding the Press itself) aspiring to a share in the business available. Most groups outside the capital construction trades, in fact, share, directly or indirectly, in the public's Christmas expenditure. There are, however, only a few groups to which the Christmas trade can make the difference between good and mediocre profits. Such groups must include the leading London stores, which, though transacting a steady business in daily necessities throughout the year, attract a much wider clientèle from all over the country during the weeks of "Christmas shopping." The new retail index numbers have so far shown that London shops are subject to greater fluctuations between the busy and the slack seasons than are shops in other centres. Presumably, this will apply with even greater force at Christmas time, and will entitle such companies as Harrods, Selfridge and Bakers to a place among "Christmas traders." If schoolboys remain as they used to be, Gamages must also qualify. But even more dependent on Christmas business than the general retailers are those shops which deal in luxuries, fancy goods and non-essentials. Such concerns include Asprey and Company, whose accounts to March 31st last showed incipient, but very slight, recovery. They include Fortnum and Mason, whose prudently developed general departments have saved the company from any serious setback in depression, but whose fancy departments are important enough to benefit substantially from a good Christmas. They also embrace Ciro Pearls (Holdings), who have been able to pay off their preferred dividend arrears, but have not yet resumed ordinary dividends. A place must be found for such wine and spirit merchants as Shorts, Ltd.; and, inevitably, for Woolworth and Marks and Spencer. Outside the retail trade

there are few public companies to whom Christmas is of decisive importance, but no doubt Raphael Tuck and Sons, with their large Christmas card and calendar business, look to Christmas for a high proportion of their profits. Finally, the cigar manufacturers, of whom Henry Clay and Bock and Company may be taken as representative, are traditionally the source of male and business gifts. For the rest, the appurtenances of Christmas are of a higher

antiquity than joint-stock investment, which hitherto has had little part in turkeys, and holly and mince pies—but has enjoyed more than one opportunity of interesting itself during the last twelve months in patent medicines! But why strike a sombre note? The results of leading "Christmas companies" (excluding London stores, other than Gamages) are set out, for recent years, in the annexed table.

★ ★ ★

B.A.T. and Carreras.—The B.A.T. results and the Carreras meeting this week have provided tobacco shareholders with food for thought and, on the whole, for satisfaction. The information revealed by the accounts of British-American Tobacco is welcome so far as it goes. Shareholders are presented with an omnibus net profits figure, after undisclosed adjustments for subsidiary company earnings, and deduction of all charges. The disclosed profits for the latest year to September 30th, at £5,452,981—nearly £50,000 higher than for the previous year—are the best since 1929-30. Dividend on the ordinary stock is maintained at 20 per cent., tax free. The results for the last three years are summarised below:—

	Years to Sept. 30		
	1932	1933	1934
Profits and dividends, including transfer from "reserve for losses of subsidiaries" after all charges and taxation	5,438,253	5,403,066	5,452,981
Preference dividends	585,000	585,000	585,000
Ordinary stock (tax free)—			
Earned	4,853,253	4,818,066	4,867,981
Paid	4,716,627	4,716,627	4,729,519
Earned %	20.6	20.4	20.6
Paid	20	20	20
Carried forward	1,969,741	2,071,180	2,209,642

Discarding the element of "policy" in the figures, it would appear that the company, with its 100 associated concerns, has fared extremely well during depression, despite its exposure to restrictions on international trade, and reduced purchasing power in agricultural countries. During the company's financial year, in fact, exports of manufactured tobacco have shown little movement, but the overseas subsidiaries now undertake a large proportion of manufacturing and distribution. In this connection an advance in loans to subsidiary and associated companies from £6,325,720 to £9,372,342 may be related to financing of increased stocks and turnover. The company, unlike Carreras, lies outside the scope of the coupon truce. Lord Reading's remarks at the Carreras meeting disappointed those who were seeking some information regarding the working of the coupon arrangement. He declined to discuss any details of the scheme and its impact upon the company, but assured the meeting that the board "had their eyes very closely upon the interests of everybody concerned," and that the current year had opened satisfactory. Discretion, in a highly competitive industry, is no doubt inevitable, and although shareholders would have welcomed some general indication of the new arrangement they were left with a satisfactory impression as to future prospects. The B.A.T. £1 ordinary stock units are quoted at £6.3 to yield £3 4s. 7d. per cent., tax free, and Carreras "A" ordinary at £7½xd yielding £4 11s. 9d. per cent.

★ ★ ★

International Tea Acquisition.—The International Tea Company Stores, Limited, which, some years ago, withdrew at the eleventh hour from a contract of marriage with the stores in the Unilever group, has not, apparently, found subsequent reason to repent of its decision. While the Unilever companies have suffered considerable reductions in earnings and have found it necessary to reduce their dividends, International Tea has recorded only a modest decline in profits since 1932, and has maintained its dividends at 30 per cent. Last July, an offer was made of 549,752 ordinary shares of 5s. to existing shareholders, and 150,000 ordinary shares to directors, officials and employees, at 20s., to produce approximately £700,000 of new money. The latter was required, in part, for the erection of a large block of shops and other premises in Brighton. It is now announced that the company has acquired the controlling interest in George J. Mason, Limited, a business owning 385 retail shops, mainly in the Midlands, Yorkshire and Wales. The business has always been profitable, earnings on the £400,000 of ordinary capital having averaged well over 30 per cent. in the last five years. Last year, however, the directors complained of "fierce competition," and reduced the ordinary dividend from 25 per cent. to 20 per cent. The purchase price has not been disclosed. It has been arranged that the deal shall be financed by an issue of International Tea capital and that the issue shall be handled by the Lonsdale Investment Trust, from whom the purchase was made—which suggests that a public offer is contemplated.

★ ★ ★

Citroën Position.—The "B" shares of S. A. André Citroën (500 frs. par), which touched 2,140 in 1929, and have been as high as 525 this year, were dealt in on Wednesday at 81 and on Thursday at 70. The company which is the largest manufacturer of cars on the Continent of Europe, has been affected by tariffs and the inevitable difficulties of manufacturing under a gold currency and selling a substantial part of its products in countries with depreciated currencies. The company, which has an authorised and paid-up capital of 700 million francs in "A" shares and 300 million francs in "B" shares (with 900,000 beneficiary shares of no par value), earned gross profits of 186.4 million francs in 1931 and 172.0 million francs in 1932, but suffered a decline to 143.0 million francs in 1933 (years to June 30th in each case). Dividends have been maintained at a steady 7 per cent. on the "A" and 8 per cent. on the "B" shares. Although the balance sheet for 1933 showed a tendency for liquid assets to

decline, the total surplus of working capital, at 191,971,000 francs, appeared ample. Rumours of a strained financial position, however, have gained currency recently, and on Wednesday the situation was regarded as sufficiently serious to warrant a visit by M. André Citroën to the Premier, M. Flandin. Unofficial reports suggest that a protective liquidation, as a preliminary to reconstruction, may be the best way out of the difficulty. The interests involved are considerable, but the French Government will doubtless be reluctant to intervene, in view of the discouraging nature of past precedents for such action.

★ ★ ★

Apex (Trinidad) Oilfields.—The market welcomed the preliminary figures for the year to September 30th issued this week. A slight reduction in the final dividend and profits would not have been surprising in view of the depressed state of the oil market this year. In fact, the maintenance of the total distribution of 35 per cent. accords with the most optimistic expectations. Oil profits are £16,724 lower at £348,700, but earnings for dividends show a decline of only £3,629 to £180,101, owing to reduced requirements for taxation. The monthly returns show that both output and deliveries were higher than in the preceding year. This year's allocation of £130,973 for amortisation of wells brings the total under this head during the last five years to £634,668. A comparative profits table follows:—

	Years to September 30,		
	1932	1933	1934
Oil profits	332,457	365,424	348,700
Other income	6,356	2,281	...
Total income	338,813	367,705	348,700
Amortisation of wells	115,058	128,652	130,973
Head office expenditure	10,312	12,026	17,433
Directors' additional remuneration	6,250	8,750	8,750

Paid %	25	35	35
General reserve	40,000	...	...
Carried forward	101,779	110,509	115,611
† Net.			

The chairman at last year's meeting looked forward to a satisfactory year, although his expectation of higher petrol prices was in fact reversed. The successful "Regent" petrol is produced by Trinidad Leaseholds largely from the company's crude, under a supply contract expiring in 1940. The full accounts will be issued on January 7, 1935. The 5s. shares are quoted at 25s. to yield £7 6s. 8d. per cent. after allowing for final dividend. The yield would apparently reflect the manager's estimate (possibly somewhat conservative) of a probable life of 18 years for the present proved area of the company.

★ ★ ★

Other Company Results.—The spate of pre-Christmas reports subsided abruptly this week, and our usual summary table, on page 1238, shows the results of 21 additional companies. Only two companies have suffered the unfortunate experience of reduced earning power. Newcastle Brewery results show more than average improvement, for profits have advanced by over £30,000 to £71,663, and the dividend is increased from 4 to 7 per cent. R. E. Jones has made further progress since its less fortunate trading period; net profits are slightly higher at £42,177 and an

initial ordinary dividend of 5 per cent. is declared. Five investment trust reports have been published this week, all showing recovery in net revenues. The principal results include Army and Navy (£32,031 against £31,338), Second British Steamship (£21,225 against £18,541 and 4½ against £12,683). The full report of Turner and Newall (whose results were outlined in the *Economist* of December 8th), states that progress has been made in every section of the business, and that a scheme of capital expenditure of £500,000 is in progress, being provided out of the company's own resources. The financial position disclosed by the consolidated balance sheet is very strong, net liquid assets amounting to £2,943,154. The report of Stoll Theatres Corporation is again disappointing. No details are vouchsafed of the new entertainments policy which the chairman discussed at last year's meeting, and the balance sheet contains a number of qualifications. The accounts of D. and W. Murray to July 19th last, which were delayed owing to the partial amalgamation with Goode Durrant and Company, show that the company has considerably reduced its loss. The deficit is £8,923 against £53,146, leaving a debit balance to go forward of £283,332.

MINING NOTES

Rand Dividends: Final Instalment.—Our mining correspondent writes: The "Kaffir" dividends received too late for inclusion last week included those of companies in the Rand Mines-Central Mining, Anglo-American and Union Corporation groups, together with a few miscellaneous mines. The declarations of the Rand Mines-Central Mining group were noteworthy for the appreciable increases shown by the Consolidated Main Reef and Crown Mines. The former, fulfilling highest expectations, raised the year's total payment to over 21 per cent. In our note on the annual report we emphasised the satisfactory position of the company. In the case of the Crown Mines, also, there is a striking difference in the totals for this year and last. The Rand Mines dividend is also raised, the company having a large holding of Crown Mines. The progressive expansion in the disbursements of the Daggafontein is gratifying, and affords good promise for the future. The only distribution in the latest list which slightly disappointed the market was that of East Geduld, the increase being less than had been looked for in view of the growth in mining profits. Capital expenditure doubtless supplies an explanation. We contrast this month's dividends with those of earlier periods, in the table which follows:—

	Dec., 1933	Total, 1933	June, 1934	Dec., 1934	Total, 1934
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
Brakpan	25	50	25	27½	52½
Consol. Main Reef	8½	16½	8½	12½	21½
Crown Mines	80	142½	80	90	170
Daggafontein	11½	18½	13½	21½	35
Durban Deep	15	32½	12½	12½	25
East Geduld	18½	35	20	21½	41½
East Rand Propy.	15	22½	12½	15	27½
Geduld Propy.	30	56½	32½	35	67½
Goldenhuis Deep	15	27½	10	15	25
Modder B.	25	50	35	35	70
Modder Deep	60	120	60	60	120
Modder East	12½	25	12½	15	27½
New Kleinfontein	50	102½	55	57½	112½
Nourse	8½	18½	10	10	20
Rose Deep	2½	5	2½	2½	5
Springs Mines	26½	48½	25	28½	53½
West Springs	6½	11½	5	5	10
Witwatersrand Deep	10	20	10	10	20

Taking all the December figures together, it appears that, out of 32 concerns in the dividend list, 17 are paying more for the second than for the first half of 1934. There is no single instance of a reduction in dividend. Comparison with December, 1933, discloses 20 increases and four decreases. In several cases the latest distributions are the highest in the companies' history.

The Spaarwater Muddle.—Ill fortune has dogged the flotation of the Spaarwater Gold Mining Company, the prospects of which were optimistically canvassed in the "Kaffir" market a few months ago. Owing to delay, doubtless unavoidable, in the granting of the leased portion of the ground, the actual flotation came rather as an anticlimax, for market conditions had deteriorated in the meantime. On the Johannesburg Stock Exchange, East Rand Consols were dealt in last Monday, *ex* the rights to subscribe for Spaarwater shares, the amount deducted being about 4s. The value of these rights was purely a matter of surmise, since permission to deal in Spaarwater shares had been applied for but not granted. As Spaarwater renunciation letters are not to be posted until December 31st, dealings cannot take place in London until the first business day of the New Year. It is believed that the opening quotation for Spaarwater may be between 15s. and 16s., and this, apparently, is the basis of the deduction made on the Johannesburg Stock Exchange. If, however, for any reason the opening price were materially higher, an anomalous and difficult position would arise in Johannesburg. Incidentally, there has been a certain vocal dissatisfaction in that centre with the alleged inadequacy of the participation in Spaarwater offered to shareholders of East Rand Consolidated.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of Scotland, Orient Steam Navigation, Messina (Transvaal) Development, Anglo-Ecuadorian Oilfields, British Burmah Petroleum, Burma Corporation, Low Temperature Carbonisation, Rhodesian Corporation, Pontian (Malay) Rubber, Second Covent Garden Property, Agar Cross & Co., Carreras, Ind Coope and Allsopp, British Tyre and Rubber, United Molasses, Ariston Gold Mines, Gold Coast Banket Areas, Tarkwa Banket West, Kwahu Mining, Beryl Gold Corporation, and British Tar Products. At the National Bank of Scotland meeting the Marquess of Zetland declared that the Bank's figures showed evidence of increasing activity in the home market but not in exports. At the Orient Steam Navigation meeting the chairman regretted that there appeared to be no sign of permanent improvement in the general condition of shipping. The chairman of Messina (Transvaal) Development declared that the company's financial position had been more than maintained. Mr H. C. R. Williamson informed the shareholders of Anglo-Ecuadorian Oilfields that current indications suggested that the company's increased profit and dividend might be maintained. The chairman of British Burmah Petroleum spoke encouragingly of the possibilities of the Torbanite interest in South Africa. The summary of the speech of the Burma Corporation chairman showed that the board was considering a partial return of capital out of the company's strong liquid resources. Shareholders of Low Temperature Carbonisation were informed by the chairman that the increasing use of oil in almost every branch of engineering was having a beneficial effect on the company's fortunes. At the Rhodesian Corporation meeting reference was made to the Spaarwater position. The chairman of Pontian pointed out that the company's trading had shown a profit eight times as large as in the previous year. Mr. Philip E. Hill, at the Second Covent Garden Property meeting, declared that additional capital might be required if negotiations for additional properties matured. The chairman of Agar Cross dealt with trading prospects in the Argentine. The Carreras meeting is dealt with on page 1214. Sir G. L. Courthope, Bt., disclosed that the trading profit of Allsopp had risen from £179,000 to £196,000 and that of Ind Coope from £337,063 to £391,723. Sir W. Sinclair, at the British Tyre and Rubber meeting, described the company's progress with the task of co-ordinating the activities of subsidiary companies. At the United Molasses meeting details were given of the forthcoming new issue of shares. The shareholders of Ariston Gold Mines were informed that a reserve of 500,000 tons of high-grade ore was fully developed, on which a profit of over £1,000,000 was expected. At the Gold Coast Banket Areas meeting the satisfactory results of operations were outlined. The chairman of Tarkwa Banket West

disclosed that shares in subsidiaries taken at £54,400 in the accounts had a current value of £1,017,175. At the Kwahu meeting Mr M. L. Innes Browne gave an impressive account of unrealised profits on shareholdings and of dividend returns in prospect. The chairman of Beryl Gold Corporation declared that the company was amply protected financially for its programme of intensive mine preparation. The chairman of British Tar Products described the company's hopeful indications for 1935.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET JANUARY 8 | ACCOUNT JANUARY 10

THE opening of the three weeks' holiday account has provided no unusual features. The prospects of a "green Christmas" may be unseasonable, but markets have experienced a gradual decline in business as the holiday approaches, which, unlike last year, is fully in accordance with precedent. The principal revelation in a quiet week is the relative firmness of quotations, accompanied by better spirits. Last week's ruffling of the surface has given place to an improved tone, which, at the beginning of a normal account, might have provided the basis for a further upward movement.

The motto in the gilt-edged market was "quietly firm." A minor selling movement early on Monday was righted fairly promptly, and thereafter business became subnormal, although the cheerful tone was in no way impaired. Quotations throughout the list were largely unchanged during the week, in striking contrast to recent movements. India loans were steadily firm, and Dominion issues were well maintained, although conditions were quiet.

In the foreign bond market, Japanese loans were a strong feature, with half-point advances on each of the first three days. Chinese issues opened in dull spirits, but some interest developed later for railway bonds. German bonds opened in good style, but with the exception of Potash and some municipal loans they had difficulty in holding their ground. Movements in other European bonds were small. In the South American section, Brazilian issues became distinctly depressed owing to apprehension regarding the debt service (discussed in a Note on page 1212). Argentine bonds were firm, but Chilean issues registered impatience with the delay in debt negotiations.

Business in the Home Rail market was quiet at the opening, but trading became brisker on Tuesday on misplaced hopefulness regarding the traffics. The figures, particularly for coal, proved disappointing to the optimists, and fractional advances in London Midland and Scottish and Great Western ordinaries were lost. Prior charges showed no appreciable change. A further good return from London Transport provided reason for an advance of 1½ points to 96½.

Conditions in the foreign rail market were almost idle, and after early irregular movements, prices reflected the absence of supporting orders. Argentine ordinary stocks were maintained, but poor traffics and the wages decision exerted their full effects upon the prior charge issues (whose position is analysed on page 1212). Brazilian issues became irregular, but San Paulo moved higher on the new rates scale. Canadian Pacific, after a fair start, became reactionary.

In the industrial markets, fresh orders were on a very modest scale, and although markets presented a fairly cheerful aspect, the usual end-year closing of commitments and a little private profit-taking were sufficient to induce some irregularity in prices. An early demand for Cable and Wireless stocks led to a temporary improvement, but the traffics index proved disappointing. Brewery issues remained in investment favour. In the motor section Thomas Tilling remained in the forefront, although best prices were not held. Among aviation shares, Fairey were dull on the dividend and most issues moved downward. Coal shares were a firm group, while fractional improvements were generally found in the iron and steel list. A

slight strengthening in electric supply issues occurred, but, apart from a small recovery in Ever Ready, which have been a weak feature recently, movements in equipment issues were limited. The Gaumont-British group remained depressed, on nervous selling caused by reports of increased competition. Leading tobacco shares were well supported, although a satisfactory report and dividend from British-American Tobacco (discussed on page 1214) was followed by a slight reaction. Profit-takers were also active elsewhere, and quotations for Imperial Tobacco and Carreras "A" were easier on Wednesday. Textile shares remained quiet, and Courtaulds, after providing early interest in the rayon group, followed the general reaction. A fair business was recorded in Royal Mail and Elder Dempster debentures, in anticipation of the reconstruction scheme. News of a cement agreement in the North stiffened leading shares in the group, but brick issues remained in a dull condition. Milling issues were fairly confident, but most miscellaneous leaders showed irregular sixpenny changes.

Turnover in the oil market remained poor. A little selling from the Continent depressed prices in the absence of local professional and public interest. Apex, whose preliminary results (set out on page 1215) were up to best expectations, made only slight response. The rubber market improved perceptibly as the week proceeded. After two quiet days investors began to nibble at reasonably valued shares. Although this inspired a better tone in the market, the volume of business remained very small and extremely selective. Tea shares remained a sensitive market, and a small selling movement in Indian issues depressed the market once more on Monday. Tuesday's steadiness was short lived, and renewed weakness developed in Wednesday's idle dealings.

This week the mining sections suggested an element of geographical specialisation on successive days. "Kaffirs" had their day on Monday, when many of the dividend deductions were recovered. Randfontein were in good demand. Movements on later days were small, the Spaarwater controversy (the history of which is noted on page 1216) leading to some uncertainty. Tuesday saw another good day in the West African market, although the greater part of the business came from the "shops," and the absence of public support was fully revealed in Wednesday's quiet session. Australian issues, after a steady opening, provided Wednesday's feature, with good rises throughout the list. Among tin shares, Kramat Pulai made further progress, and a limited inquiry kept quotations firm. Copper shares were noticeably firmer on the higher metal price and good consumption figures.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET shows a disposition to respond to any good news there may be, but the President and his Administration are deaf to the voice of the prompter. The bond market is strong, on a plethora of money, evidenced by the reduction in the interest rate on time deposits by the Federal Reserve Board. Although the medicine men are actively preparing their formulas for next month's meeting of Congress, the financial district generally continues to credit the President with determination to hold a strait and narrow course. The share market, however, has lacked a lead and business has consequently been quiet, with the undertone sufficiently firm to promise better things. The declining tendency of grain prices is causing a little disquietude, but satisfactory Christmas business reports from most areas make operators content to leave the question of farmer purchasing power for 1935 till the turn of the year. Industrials generally have shown only fractional movements, metal, mining and motor shares being a shade higher, while steel issues were easier at the beginning of the week, despite the ninth successive weekly rise in steel mill activity, to 34.6 per cent. of activity. The least satisfactory section of the market has been utilities. The visit of Mayor La Guardia to Washington has let loose a flood of rumours, mostly unfavourable. The President may be cruel to be kind, but the emphasis falls differently in Washington and Wall Street. For the rest, the market may well have to wait for its presidential lead until Congress assembles.

* Two-hour Session.

PARIS

Markets showed a better disposition at the end of last week, and were steady at the opening of business on Monday. The Bourse was well satisfied with the Government's political progress and the rapidity with which its Budget programme was making headway. The volume of dealings, however, failed to broaden as had been expected, the doubtful position of the Citroën Company being an adverse factor. Rentes, however, were supported in the middle of the week, and bank shares recovered after a weak opening. Home industrial shares were irregular. On the Coulisse, diamond shares were in tentative demand, but gold mining shares failed to hold all their gains.

BERLIN

Share prices continued their slow decline last week. Shipping shares were among the worst sufferers, though they subsequently regained part of their losses. Reichsbank reacted to around 145, after touching 152½ early in the week. This week's business opened with a further general decline, shipping shares being again heavily sold. On Tuesday the market was irregular, with a weaker tendency in most shares and a stronger tone towards the close. Vereinigte Stahlwerke domestic bonds advanced on the Supreme Court's decision that they were payable on a gold dollar basis. Quotations for bonds showed a slight decline. In the middle of the week most industrials were firmer. Even shipping issues shared in the recovery. Reichsbank reached 147, and other bank shares were firm. The official index of share prices in November has been given as 80.37, against 83.22 for October, and the index for domestic bonds as 92.27, against 91.55.

	Dec. 12, 1934	Dec. 17, 1934	Dec. 19, 1934	Dec. 12, 1934	Dec. 17, 1934	Dec. 19, 1934

AMSTERDAM

The market was depressed at the outset by a drop of five points in the shares of the Netherlands Trading Company. Plantation shares were dull, and little or no interest was shown in industrials. The tone, however, subsequently showed moderate improvement. Rubber shares, in particular, were in demand on M. Colijn's declaration regarding estate quotas. The industrial market, however, remained listless and irregular, Aku in particular being weak on the report of the dismissal of 700 workers.

CAPITAL ISSUES

THE near approach of Christmas has induced many borrowers to make the most of admittedly favourable capital market conditions, lest the going be less good after the holiday. The week's gilt-edged issue has been made by Swansea Corporation, approximately £1¼ millions of whose £2¼ millions offer is for conversion of a couple of "optionally redeemable" issues. The willingness of the Treasury to waive, in this instance, its ban on the conversion of existing trustee securities, has raised some discussion regarding the *raison d'être* for the "ban" under current conditions, and the possibility that home municipal borrowers have come near the end of their opportunities for

raising new money, so long as the Government remains hostile to the idea of large public works. The other "prospectus" offers of the week included as many as seven public companies, whose activities range from insurance to commercial aviation. The *Eagle Star and British Dominions Insurance Company* has offered 4 per Cent. Second Preference shares at a premium of 5 per cent., in order "to take fuller advantage of investments which, in many instances, will carry with them desirable insurance business." The company is a combination of a number of offices, founded from 1807 onwards. Its results have been progressive and the shares are fairly well covered. *Connaught Estates (1934)* owns freehold and leasehold properties in the London area. The yield on the debenture stock appears to recognise that the cover, though ample, is not generous. *Tecalemit* has taken over a company owning rights in a high-pressure lubrication process. Although profits in 1931 and 1932 reflected trade depression, the subsequent increase in demand from the motor, aviation and general engineering trades finds expression in the prospectus figures. The shares, including their premium of 55 per cent., are a reasonable industrial proposition. The *Associated Fireclay Companies* owns two old-established Lancashire businesses and is taking over a Paisley concern in liquidation. Preference dividends have been regularly paid, though a small loss was made in the twelve months to March, 1933, owing to dislocation in the course of re-organisation and extension. The high yield on the preference shares calls attention to the existence of an indubitable but not disproportionate trade "risk." *Woodlands Chemists*, which has a "straight" ordinary capitalisation, has taken over 34 businesses in London and the provinces. Subscribers are investing in the ability of the management to run their "chain" with the success achieved by retail organisations whose names are more familiar to the investor. *Hillman's Airways* is the first unsubsidised British air transport enterprise whose shares have been placed on the market. Since its inception, only three years ago, by a successful motor-coach proprietor, the company has taken a leading "pioneering" part, and has recently concluded a contract with the Postmaster-General for a daily air mail service between various cities. At the present stage, all air transport shares are necessarily speculative, but the commercial ability of the management is of good promise. *Hoyle's (Ilex)* is a small company which has taken over a Lancashire shoe and slipper business. Its shares and debentures will doubtless have a local appeal. The week's "public advertisements" include those of the large and important *Liverpool Gas Company*, a property enterprise, a West Indian electric company, a South African general investment company, and a South Wales chain of general stores.

PUBLIC OFFERS

Swansea Corporation.—Issue of £2,250,000 3 per cent. stock, 1955-65 at £100 10s. per cent. Repayable at par June 30, 1965, or from June 30, 1955, on three months' notice. Proceeds to be applied to redemption of 5½ per cent. 1935-45 and 3½ per cent. 1930-70 stocks of which notice and conversion offer has been given, and balance for replacement of mortgage loans and new capital purposes. Secured on general rate, and revenues of undertakings. Net debt, £8,424,639, of which £5,149,317 is in respect of productive works. Rateable value, £1,038,479; population, 165,500; exchequer grant, £177,085; current rates, 15s. 6d. in £. Trustee security, transferable free of stamp.

Eagle Star and British Dominions Insurance Company, Ltd.—Issue of 1,000,000 4 per cent. second cumulative £1 preference shares at 21s. per share. Proceeds required for expanding investments, which carry insurance business. Net assets, exclusive of present issue, £3,089,008. Adjusted annual profits: 1931, £79,915; 1932, £284,249; 1933, £283,921. Shares rank after 1,000,000 4 per cent. £1 preference shares. Company established 1904, and has acquired share capitals of companies established since 1807. Applications from shareholders receive preferential consideration.

Connaught Estates (1934), Ltd.—Issue of £122,000 5 per cent. first mortgage debenture stock (Series "B") at £101 per cent. Secured by first specific mortgage on land and properties valued £183,790, redeemable from April 1, 1940, at £102½ per cent. on six months' notice, and finally on April 1, 1962. Incorporated February, 1931, to acquire artisan house properties of which 40 per cent. are controlled. Estimated net income of properties charged, £16,059. Total properties acquired at March 1, 1934, were valued £321,790, and net revenue £28,657. Proceeds required for repayment of £78,000 mortgages, and as to £18,880 for purchase of properties.

Hillman's Airways, Ltd.—Issue of 400,000 ordinary shares of 5s. at par. Formed to acquire business and certain assets of Edward Henry Hillman, Ltd. Established 1931 and now runs regular air services to Paris, and has received contract for air mail services to Liverpool, Belfast and Glasgow, from December 1, 1934. New regular services, and freight and charter work are to be developed. Purchase consideration, £30,000 by allotment of 120,000 shares. Net assets, £22,675. Profits, years to March 31: 1933, Dr. £1,603; 1934, Dr. £4,699; six months to September 30, 1934, £3,548.

Woodlands Chemists, Ltd.—Issue of 400,000 ordinary shares of 5s. each at par. Incorporated to acquire 34 chemists shops in London and provinces as going concerns. Total value of assets acquired £43,565; leases £14,275; fixtures £9,650; stock £19,640 ("which can be taken to be approximately accurate"). Adjusted profits, after depreciation, of businesses, for three latest years have been: £10,647; £11,919; £11,590. Estimated net profits for current year, £13,000. Purchase consideration, £73,614, payable in cash, of which £29,412 is payable for goodwill, and £5,000 profit of vendor.

(Continued on page 1222)

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest quoted price, plus or minus any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Paid in New Zealand Currency. (e) Allowance for rate of exchange.

(f) Flat yield without allowing for redemption. (g) For 15 months. Yield worked on a 15% basis. (h) Yield on 3% basis.

(a) Yield worked on redemption at par on Feb. 1, 1957. (f) Yield worked on redemption at par on December 1, 1952. (h) Based on interest payment of 2½ per cent.

(s) Yield worked on redemption at par on April 1, 1961.

† Free of Income Tax

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield worked on last year's dividend, viz., 12½ per cent. free of tax. (e) Cash bonus from capital accretions. (f) Includes 11% from capital accretions. (m) Including bonus 5% free of tax. (n) Dividend for 15 months yield worked on a 51 per cent. basis. (p) Based on a dividend of 15 per cent. (r) Calculated on basis of 5 annas dividend per share paid for 1933-34. Taken at 16 annas to one rupee. (e) Annas per share. (w) Also bonus 300 per cent. from reserves in A shares. Yield worked on a 25 per cent. basis. Highest price 1934 on capital before the bonus distribution. † Free of Income Tax.

(Continued from page 1219)

Hoyle's (Hex), Ltd.—Issue of £10,000 4 per cent. debentures and 40,000 shares of 10s. at par. Formed to acquire shoe business of Hoyle, Hoyle and Company, Ltd., of Rossendale. Assets acquired, £23,300, vendor discharging liabilities. Profits, before depreciation, years to early December: 1932, £1,927; 1933, £3,491; period to November 17, 1934, £56. Consideration, £23,300 in cash, vendors subscribing for 9,600 shares and £4,300 debentures. Debentures secured by specific mortgage on freehold property and floating charge, and redeemable at par from 1945. Issues have not been underwritten.

BY OFFER FOR SALE

Tecalemit, Ltd.—Offer for sale of 540,000 5s. shares at 7s. 9d. per share. Issued capital, 800,000 5s. shares. Incorporated December, 1934, to acquire undertaking of similar name, and right to exploit high-pressure lubrication process, now adopted by 2,500 garages. Vendor company supplies greasing equipment to leading motor, aviation and other firms. Profits of vendors, before depreciation and loan interest, and subject to certain reservations, years to October 31: 1932, £14,809; 1933, £24,353; period to October 15, 1934, £41,707. Net assets of vendor, £170,000 (net assets acquired, £88,345, patents, licences and designs at cost, £41,655, proceeds of issue £40,000) acquired at par by allotment of 680,000 shares. Messrs W. H. Botsford and Company, Ltd., have purchased 420,000 shares of the new company for £160,000, and subscribe at par for 120,000 shares.

BY STOCK EXCHANGE INTRODUCTION

John White (Impregnable Boots), Ltd.—Particulars of issue of 125,000 6 per cent. redeemable cumulative £1 preference shares. Company acquired John White's Trust, Ltd., boot manufacturers, founded 16 years ago. Capacity after impending extension, 2,500,000 pairs per year. Profits, after depreciation, years to end November: 1931, £22,661; 1932, £22,464; 1933, £28,128; 1934, "equal to average of £24,417." Net assets, £247,383, including £114,850 net proceeds of issue, and £18,000 estimated net profit. Consideration, £125,000, of which £400 cash and £124,600 in 5s. ordinary shares. Preference shares redeemable at 21s. 6d. by 1½ per cent. cumulative redemption fund, commencing June, 1936, or at 22s. per share from 1937 on three months' notice.

Eldoret Mining Syndicate, Ltd. (Incorporated in Kenya).—Issued capital, 621,762 shares of 5s. each. Incorporated 1933, and has acquired interests in prospecting licences and claims in Kakamega District and Tanganyika Territory, and 277,000 shares in Kimiringi Gold Mining Company, and 1,000 shares in Kentan Gold Areas. 93,620 shares have been issued to vendors, 518,135 shares issued as bonus, and 10,007 for cash. Realised profit on investments, six months to October, £153,938, and £20,285 is carried forward. Shareholders have pooled 40 per cent. of their holdings for three months.

Leslie's Stores, Ltd.—Particulars of issue at par of 100,000 6 per cent. cumulative £1 preference shares and 200,000 5s. ordinary shares. Formed to acquire stores businesses in South Wales established 1921. Further extensions are in prospect. Assets acquired £78,276. Purchase consideration £69,000 in cash, discharge of liabilities £45,579, and option on 50,000 ordinary shares at 6s. per share until 1937. £35,761 attributable to goodwill. Profits after depreciation and adjustments: 1930, £8,269; 1931, £10,036; 15 months to March, 1933, £10,277; 18 months to September, 1934, £19,223. Capital has been subscribed at par, less commission of 1s. 6d. and 6d. per preference and ordinary share, and with option on 50,000 ordinary shares at 6s. until December 31, 1937.

Duchess Property Company, Ltd.—Particulars of issue of 40,550 7 per cent. guaranteed redeemable £1 preference shares. Redeemable from March, 1937, at 20s. 6d. per share, or earlier with consent of holders. Shares guaranteed for principal and dividend by Mayfair and General Property Trust, who own all ordinary shares. Further particulars appear in Stock Exchange Official Year Book.

Jamaica Public Service Company, Ltd.—Particulars of issue of £420,000 4½ per cent. first mortgage debenture stock (series "C"). Secured by specific charge on fixed assets and floating charge on remainder of undertaking. Proceeds required for repayment of \$1,940,000 Series "B" bonds. Redeemable at par, January 15, 1965, and at various declining premiums on thirty days' notice from date of issue. Company acquired West India Electric Company and operates electricity and other public utility services in Jamaica. Total assets, £976,522, plant £825,427 (dollars taken at par). Operating revenue, for 1933, £67,783.

South African and General Investment and Trust Company, Ltd.—Particulars of £160,000 4½ per cent. second debenture

stock, of which £100,000 has been issued. Redeemable by cumulative sinking fund of 1½ per cent. per annum, calculated to terminate December, 1967, or from December 1, 1949, to June 1, 1954, at £102 per cent., and thereafter at par on six months' notice. Further particulars appear in Stock Exchange Official Year Book.

Liverpool Gas Company.—Particulars of issue of £300,000 3½ per cent. redeemable debenture stock. Proceeds to be applied to capital extension. Formed 1848; total sales, 1933, £1,382,224; free reserves, £430,672. Redeemable at par, December 31, 1964. Stock has been placed at £96½ per cent.

ISSUES TO SHAREHOLDERS ONLY

Associated Fireclay Companies.—Issue at par of 50,000 7½ per cent. cumulative preference shares of £1 each, to acquire from November 12th the earthenware business of Robert Brown and Son, Ltd., Paisley, now in liquidation. Purchase price £27,500. Profits are shown for the past five years as follows: Year to March 31, 1930, profit £21,822; 1931, £20,716; 1932, £13,932; 1933, loss £3,898; 1934, profit £19,134. Preference dividend of 7½ per cent. each year has been paid for past five years. On the 140,307 ordinary shares dividends for past five years have been: 7½ per cent., 1929-30; 5 per cent., 1930-31; 2½ per cent., 1931-32; and nil for past two years. Net assets amount to £270,694. Net proceeds of present issue, £44,500. Total available as capital cover £315,194. The issue has been underwritten.

Luipaards Vlei Estate and Gold Mining.—Issue at par of £275,000 5½ per cent. 5-year registered convertible notes to provide funds for largely increasing the underground developments, for the expansion of plant capacity and for the extension of the company's mining properties, which now cover 1,868 claims. The profits for the year ended June 30th last amounted to £176,032, and since the commencement of the current financial year the monthly profits have shown further increase.

Viborita Gold Mines.—The directors have decided to issue all the unissued shares—namely, 36,000 at par (5s.). This will bring the total in issue to the authorised amount of £130,000. Members of the board have applied and paid for 7,000 shares and the balance is offered to shareholders. The sum of 1s. is payable on application, 1s. 6d. on allotment and 2s. 6d. one month after allotment. The shares will rank *pari passu* with those already issued. The issue is underwritten.

East Rand Proprietary.—Holders of 10s. shares are invited to subscribe 1,200,000 new shares at the bonus price of 45s. The list will remain open until January 12th.

United Molasses Company.—Ordinary shareholders registered in the company's books December 19th have the right to subscribe to one 6s. 8d. share for every five shares held at 10s. a share. Letters of right will be posted on January 7, 1935, and will be subject to acceptances reaching the company's bankers not later than February 7, 1935.

OFFER ABROAD

Canadian National Railways.—Royal Securities Corporation, Ltd., is a member of the banking group which is offering in Canada \$20,500,000 Canadian National Railways (Dominion guaranteed) 3 per cent. bonds, due December 15, 1950. Principal and interest on these bonds is unconditionally guaranteed by the Dominion of Canada. Callable at 100 on or after December 15, 1945. Principal and interest is payable in Canadian funds. The bonds are being issued at 99½, Montreal terms.

CONVERSIONS AND REPAYMENTS

John Jameson and Son, Ltd.—This company is shortly to redeem at 105 the whole of the outstanding debenture issue, amounting to over £300,000. These debentures were created in 1902, and carry interest at the rate of 4 per cent. They are secured under a trust deed which empowers the company to redeem the principal at 105 at any time on six months' notice. It is understood that no fresh issue of capital is to be made, and that the debentures are being paid off out of accumulated reserves.

The Law Accident Insurance Society, Ltd.—This society intends to redeem the outstanding amount of its 4 per cent. debenture stock on June 20, 1935, at 102 per cent. The amount of stock outstanding is £183,725.

Victoria Falls and Transvaal Power Company, Ltd.—The company announce that they intend to pay off the whole of the then outstanding £5½ per cent. second mortgage debentures, whether of Series "A" or "B," at the rate of 103 per cent. on July 1, 1935. All holders of these debentures should present their debentures with the unexpired coupon No. 47 attached at the offices of Erlangers, Ltd., 4 Moorgate, E.C.2. Coupon No. 46 for interest due July 1, 1935, should be presented for payment in the usual manner.

FORTHCOMING ISSUES

Bergen Loan.—A new 4 per cent. loan will be issued early in January at 96 to convert 5½ per cent. loan.

Consolidated Gold Concessions.—A public issue of 2,000,000 ordinary shares 5s. each is expected in the New Year.

New Irish Insurance.—A new Irish controlled insurance company with a capital of £500,000 will be launched in Dublin at an early date. The first issue will be for £100,000.

International Tea Company Stores, Ltd. An issue of capital will be made by this company in connection with the purchase from Lonsdale Investment Trust, Ltd., of the controlling interest in George J. Mason, Ltd., of Birmingham, grocery and provision merchants.

Dorman Long and Company, Ltd.—Lord Greenwood, chairman of Dorman Long and Company, at the annual meeting on December 18, said that it would be necessary soon to raise new capital to build essential plant to meet increasing business, and power had been taken in the scheme to issue prior lien debentures for this purpose. The issue could only be made after consultation with the debenture-holders' committee.

Aberdeen Corporation.—An issue, not to exceed £1,500,000, is expected.

Bexhill Corporation.—The Bexhill Corporation will shortly make an issue of £350,000.

Palestine Loan.—A loan of £500,000 has been negotiated in London for the Jewish development of Palestine. The loan is for 15 years, at rate of 4 per cent.

Portsmouth and Sunderland Newspapers, Ltd. (formerly Portsmouth Newspapers, Ltd.).—At an extraordinary general meeting of Portsmouth Newspapers, Ltd., extraordinary resolutions were passed increasing the capital to £610,000 by the creation of 250,000 5 per cent. participating preference shares of £1 each, with a view to the acquisition of the undertakings of the Sunderland Echo Company, Ltd., and the Northern Daily Mail Company, Ltd. Special resolutions were also passed changing the name of the company to Portsmouth and Sunderland Newspapers, Ltd.

PRIVATE PLACING

Rose Deep, Ltd.—The board has accepted an offer from The Central Mining and Investment Corporation, Ltd., to purchase at £1 3s. 0d. per share the 37,017 ex-enemy shares at present held by the company. These shares will rank for dividend as from January 1, 1935. The proceeds of this sale will be used to meet in part the heavy capital expenditure that will be incurred during the ensuing year.

RESULTS OF ISSUES

South Suburban Gas Company.—New issue of £200,000 4 per cent. perpetual preference stock at a minimum price of 105 per cent. The number of tenders received was 261. Tenders ranged from the minimum price to 115½ per cent. Average price obtained, £106 10s. 8-44d. Total amount subscribed, £542,995.

Union of South Africa Loan.—Lists for cash applications for £11,000,000 3 per cent. inscribed stock, 1954-64, closed December 14th, after remaining open all day. Holders of Transvaal Government 3 per cent. stock, 1923-53, have until December 28th to exercise their rights of conversion.

Baumont Property Trust.—The recent issue of new ordinary and preference shares to shareholders was heavily oversubscribed in respect of both classes.

Austrian Loan.—Conversion lists for issue of Austrian Government 4½ per cent. guaranteed sterling bonds were closed December 19th. Cash lists were opened and closed on December 7th.

Eagle Star and British Dominions Insurance.—The subscription list for issue of 4 per cent. preference shares of £1 at 21s. was closed at 9.25 a.m. December 19th, having been heavily over-subscribed.

Woodlands Chemists.—The subscription list for issue at par of ordinary shares 5s. was closed at 10 a.m. December 19th.

Tecalemit, Ltd.—The offer of shares of 5s. at 7s. 9d. has been fully subscribed and the list closed at 9.10 a.m. December 19th.

Hillman's Airways.—Lists for issue of ordinary shares of 5s. at par were closed at 10.10 a.m. December 19th.

Standard Trust 3½ per Cent. Debentures.—The recent offer of 3½ per cent. debenture stock has been fully subscribed.

Swansea Corporation 3 per cent. Stock.—Cash list closed December 20th.

CALLS DUE DECEMBER 24 TO DECEMBER 29, 1934

The grand total of calls falling due in December, 1934, is £7,934,567 which compares with £53,366,016 which fell due in November, 1933. The following calls fall due from December 24, 1934, to December 29, 1934, inclusive:—

Production for the week ended December 15, 1934, was: Bolivar district, 650,651 barrels; Maracaibo district, 33,779 barrels; total 684,430 barrels.

COMPANY MEETINGS, &c.

UNITED MOLASSES COMPANY, LIMITED

DETAILS OF NEW ISSUE

MR F. K. KIELBERG'S SPEECH

The ninth annual general meeting of the United Molasses Company, Limited, was held, on the 15th instant, at Irving Hall, Bush House, Strand, London, Mr F. K. Kielberg, chairman of the company presiding.

The secretary (Mr James Don, A.L.A.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen, the directors' report and the accounts have been in your hands for over a fortnight, and I presume that you will, as usual, take them as read. (Agreed.)

The directors' report contains, as usual, the information which would ordinarily form the subject of the chairman's speech, and I propose to confine my remarks to giving a few details about the proposed new issue of ordinary shares.

As mentioned in the report, it is proposed to offer the ordinary shareholders who are registered or entitled to be registered as such on December 19, 1934, the right to subscribe to one 6s. 8d. share for every complete five shares held, at a price of 10s. a share.

No fractions are to be issued, but any of the above-mentioned shares which are not taken up by the parties entitled and any which represent fractions may be disposed of at the best price obtainable for the benefit of the company, making the new issue 970,249 shares.

The new shares will not entitle the holders to participate in any dividend paid in respect of the financial year of the company ended September 30, 1934, but will rank *pari passu* with the existing ordinary shares for all dividends in respect of any subsequent period.

DATES OF PAYMENT

Letters of right will be posted on January 7, 1935, and will be subject to acceptances reaching the company's bankers not later than February 7, 1935.

The new shares will be payable as follows:—

2s. 6d. a share on February 7, 1935, of which 10d. is on account of premium.

7s. 6d. a share on March 15, 1935, of which 2s. 6d. is on account of premium.

Allotment letters will be posted on February 14, 1935, and renunciations will be accepted up to March 25, 1935, inclusive. The new share certificates will be ready for delivery on April 25, 1935. Notice will be given on December 28, 1934, of the directors' intention to redeem on March 31, 1935, the outstanding balance of £562,781 10s. 6 per cent. cumulative unsecured income debenture stock at a premium of 10 per cent.

One hundred thousand pounds 4 per cent. cumulative funded income stock will be redeemed on February 28, 1935. The particular stock to be redeemed will be selected by a drawing, and notices sent on January 30, 1935, to holders of stock drawn.

THE RESOLUTION

I now have pleasure in moving the following resolution:—

"That the directors' report and the accounts for the year ended September 30, 1934, be received and adopted and that a dividend for the year of 6 per cent., less tax, be declared, payable on January 8, 1935, to the holders of the 4,851,251 ordinary shares entitled to participate therein, registered in the books of the company as on December 19, 1934.

"That a sum of £2,000 be contributed and paid to the staff superannuation fund.

"That the directors be and they are hereby authorised to arrange for the establishment on terms to be approved by them of a fund to be placed in the hands of trustees, to be used for the purpose of providing pensions, retiring allowances or payments, or other benefits for directors and officers of the company and their relatives or dependents on death or retirement, and that out of the profits of the year ended September 30, 1934, a sum of £2,000 be contributed and paid to the trustees of such fund."

I call on Mr R. G. Simpson to second this resolution.

Mr R. G. Simpson seconded the resolution, and after some congratulatory remarks by shareholders it was unanimously carried.

The director retiring by rotation, Mr R. G. Simpson, was re-elected, and the auditors (Messrs Price, Waterhouse and Company, and Messrs Hilditch and Young) having been reappointed, the proceedings terminated with a cordial vote of thanks to the chairman, directors and staff, which was passed with acclamation.

CARRERAS, LIMITED

SOUND POSITION—35 PER CENT. DIVIDEND

The thirty-first annual general meeting of Carreras, Limited, was held, on the 19th instant, at Arcadia Works, Hampstead Road, London, the Most Hon. The Marquess of Reading, G.C.B. (the chairman), presiding.

The Chairman, after paying a tribute to the late chairman, Sir Louis Baron, in the course of his speech, said: The net profit for the year is £804,942. This figure is arrived at after charging all expenses, including the full amount of advertising, and making ample provision for depreciations on buildings, plant, machinery and other items. The amount brought forward from last year is £1,249,596, so that there is an available balance in the profit and loss account of £2,102,914, which the directors propose to appropriate as set out in their report, leaving £1,264,511 to be carried forward to next year, an increase of £14,915.

You will have noticed in the accounts a charge of £297,905, the total cost of terminating coupon trading. Your chairman informed you at last year's meeting that it had been arranged that the issue of coupons should be discontinued on December 31, 1933, and we, in common with other leading manufacturers and the distributing sections of the trade, put the plan into operation on that date. That, however, was by no means the end of the matter, and you will readily appreciate that when a system of this magnitude which had existed for many years, was terminated with comparative suddenness, it left liabilities in respect of unredeemed coupons issued, losses on gifts in stock which became unusable and commitments in respect of gifts purchased for future delivery which had to be disposed of at a sacrifice.

COUPON TRADING LIABILITIES WRITTEN OFF

Your directors have ascertained the full amount involved in the cost of this termination, and we have deemed it the proper course to write it off once and for all in this year's accounts. The total amount is dealt with in the appropriation account.

As was to be expected, the termination of coupon trading has had its reactions on the cigarette manufacturing industry generally. Some well-known brands have suffered and others have gained considerably as a result of the change. In our own business we have felt the effect both ways, as we had leading brands both coupon and non-coupon, and the net result for the year leaves our profit at almost the same figure as last year.

In spite of economic troubles throughout the world, our trade in overseas markets has been well maintained. You will notice in the balance sheet a considerable decrease in the item "Amounts due by Subsidiary Companies." This is accounted for by an arrangement which your directors were able to make during the year, whereby this company's holding and interests in "Carreras (India), Limited," were converted into another form of investment which will not only consolidate the position of our well-known brands in that country, but will also give increased scope for expansion as time proceeds. Your directors are convinced that this transaction will prove a benefit in the best interests of the business and may be expected to result in a steady and progressive advantage in the future.

The matter I have just mentioned is also partly responsible for the increase in the item in the balance sheet—"Other Investments." The remainder of the amount represents high-class securities purchased by the company and on which a satisfactory yield may be confidently anticipated. It will interest you to know that the market value of investments is considerably in excess of their book value.

I think we may claim that the Accounts before you disclose the sound position of the company. In addition to the undivided balance of profit and loss carried forward, £1,264,000, our specific and general reserves amount to £1,083,000, making a total sum of £2,347,000 available to meet any contingency which may arise. You will observe from the assets shown in the balance sheet that our liquid resources are ample.

In conclusion, let me assure you that your directors are fully alive to the necessity of adjusting their policy to the changed conditions within the industry, and it must be remembered that we shall still have to contend with keen competition. Your board, however, have every confidence that the high reputation of Carreras will be maintained and, we hope, enhanced in the estimation of the purchasing public. Although you will not expect me to indulge in prophecy, yet I may tell you that the trading so far in the current financial year has opened satisfactorily, and if, as we trust, it should be continued throughout the ensuing months, the results should be to your satisfaction.

The report and accounts were unanimously adopted and a final dividend of 20 per cent., making 35 per cent. on all classes of ordinary shares, was approved.

GOLD COAST BANKET AREAS, LIMITED

SATISFACTORY PROGRESS OF OPERATIONS

The first ordinary general meeting of Gold Coast Banket Areas, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Sir Frank Meyer, Bart. (the chairman of the company), presiding.

The Chairman, in the course of his speech, said:—I am glad to be able to inform you that during the past five and a half months the progress of operations has continued to be entirely satisfactory.

The second power unit was put into operation before the end of July. These first two units have since operated very satisfactorily, either individually or simultaneously, according to the power demand. The third unit is nearing completion and will be ready in time for the start of the metallurgical plant.

The dewatering of the shaft and underground workings proceeded very rapidly early in July to a point below No. 6 level at an inclined depth of 770 ft. from the surface. The water now stands in the shaft at an inclined depth of 1,305 ft., or about 50 ft. below No. 8 level. This level is less than 300 ft. from the bottom of the shaft, and a very limited amount of lateral development was done by the former company before that point.

Active development work has been confined to No. 1, No. 3, No. 6 and No. 7 levels, and all preparations have been made for commencing production.

The results on No. 2 and No. 3 levels, as had been anticipated from old mine plans available, were unfavourable. This was mainly due to the narrow average width of reef of only 10.4 to 12.4 in., with the result that very limited tonnages can be mined from the present workings on these two levels. However, it is proposed to continue the driving of No. 3 level to the south, where there should be a good prospect of encountering further payable ore chutes, judging by the favourable showing near the surface. In this section, from two adits, over 1,000 ft. of reef was exposed, assaying 4.8 dwt. over 48 in., according to the old records. On No. 6 level there was a definite improvement, both in average values and width of reef. A length of 716 ft. of reef sampled in this level averaged 9.4 dwt. over 26.7 in., or, expressed differently, 251 inch-dwt.

The most favourable developments in any part of the mine have been on No. 7 level, where 518 ft. of reef sampled averaged 16.4 dwt. over 19.8 in. (325 inch-dwt.).

The results of all the sampling to date, including the new development work, indicate that in the section of the Fanti mine already opened there is a decided improvement in values with depth.

The footage resampled in the mine already indicates ore in sight of an average grade of 6.6 dwt. for a year, at the present estimated capacity of the cyanide plant. The prospects of developing substantial additional ore reserves can be considered as very favourable, especially in view of the location of the property, the extensive area held by the company and the results of the development work accomplished to date.

A year ago a sample of the mine ore was sent to England for testing in one of the foremost laboratories. These tests were entirely favourable and indicated that an extraction of more than 95 per cent. of the gold should be obtainable by means of a straight all-slime cyanide treatment. The milling and cyanide plant should be able to treat a minimum of from 175 to 200 tons per day, and quite possibly more, if the extraction can be maintained without too fine grinding or an excessively long period of agitation in the Pachuca tanks.

The whole milling plant has been laid out with the idea of future expansion, corresponding to the anticipated increase in the ore reserves. The capacity of the milling and cyanide plant could be doubled for a comparatively small additional expenditure.

The construction and installation of all the mechanical and electrical units have progressed with the minimum of delay, so that according to the latest cabled advice the plant will be operating early in January, or just over a year from the arrival on the property of the first unit of the power plant. The crushing section has actually already been started on the 15th inst.

The general layout of the whole plant is very compact, and the arrangements for handling the ore both on the surface and through the metallurgical plant are advantageous and economical. It follows that, with the installation of modern machinery, combined with the use of excellent drilling and other equipment, the working cost of production should be distinctly favourable, especially when the plant is operating at a higher capacity.

The report and accounts were unanimously adopted.

NATIONAL BANK OF SCOTLAND, LIMITED

INCREASED PROFIT

The 109th annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held in the bank's head office, Edinburgh, on the 20th instant, the Most Honourable the Marquess of Zetland, P.C., G.C.S.I., G.C.I.E., the governor of the bank, presiding.

The Marquess said: Your directors submit with some degree of satisfaction their report upon the bank's operations for the year which ended on November 1st last. These have resulted in a profit of £271,596, the figures being almost £4,000 higher than for the previous year. Before arriving at this figure, all bad and doubtful debts, income tax, and other charges have been fully provided for. With the balance brought forward the sum available for distribution is £353,351, which, after payment of the usual dividend at the rate of 16 per cent. per annum, less tax, has been allocated as follows:—To Heritable Property Account, £100,000; to Staff Pension Fund, £30,000; and to Staff Widows' Fund, £5,000, leaving £81,952 to be carried forward.

Turning now to the balance sheet, the figures of the note circulation show an increase of £66,000 over the figures of the same date last year. This is encouraging so far as it goes; but as the note circulation fluctuates from week to week we must not over-stress the significance of the increase shown. Then again deposits are higher by £1,300,000 at the substantial figure of £35,723,950. Acceptances, on the other hand, are lower than last year by £190,000.

On the assets side of the balance sheet you will observe that the immediately liquid items, such as money at call, balances with the Bank of England and other banks, along with cash on hand, stand at the large figure of £10,118,000, representing a considerable proportion of our liabilities, and showing a strong liquid position. Loans and advances, however, as well as bills discounted, show a further diminution at a total of £12,970,415, which can only mean that the development of the country's overseas trade has made but little progress during the year, with consequently no fresh demands of importance for banking assistance. The largest item on this side of the balance sheet is, of course, represented by British Government securities, standing in the books at £16,298,390. The market value is considerably in excess of that figure.

The report and accounts were adopted.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

EFFECT OF LOW COPPER PRICES

The annual ordinary general meeting of The Messina (Transvaal) Development Company, Limited, was held, on the 19th instant, at Southern House, Cannon Street, London, E.C., Lieut.-Colonel John P. Grenfell (the chairman) presiding.

The Chairman, in the course of his speech, said that their financial position of a year ago had been more than maintained, the surplus of floating assets over liabilities now amounting to £100,370. Receipts amounted to £299,086 and, deducting the expenditure of £298,102, there was a balance of £1,096 as a result of the year's working. During the year the price of copper was disappointing, averaging £33 8s. 9d., a level which was unremunerative, even to the cheapest producers. In normal working expenditure there was an actual reduction of £13,420. The ore production had increased from 405,706 tons of 2.35 per cent. c.u. to 408,947 tons of 2.16 per cent. c.u., while the ore developed increased from 387,998 tons of 1.69 per cent. c.u. to 406,896 tons of 1.74 per cent. c.u. The grade had been low, chiefly because they seemed to have struck a poor patch in the Harper mine, but since the close of the year they had picked up the original rich "A" lode in the sixteenth level, which so far averaged 65 ft. wide by 105 ft. long, with the probability of an increase, the area now being 5,400 sq. ft. of an average value of 5 per cent. The Campbell mine had been reopened, and in view of recent discoveries they thought there was a good chance of finding high-grade deposits there. They would like to open up that mine, and might have something to say to the shareholders on the subject in the course of the year. Ore reserves had been maintained at 1,163,663 tons of 2.25 per cent. c.u.

While copper ruled so low in price it was wise to adopt a long view, which meant improving the future value of their industry by endeavouring to place themselves on a lower cost basis.

The board were confident that the policy they had adopted was in the best interests of shareholders, so that when better times returned, as surely they must, they would be in a position to deal profitably with a situation which at present seemed abnormal.

The report and accounts were unanimously adopted.

RHODESIAN CORPORATION, LIMITED

GOOD RESULTS AND PROSPECTS

The annual general meeting of the Rhodesian Corporation, Limited, was held, on the 18th instant, at River Plate House, London.

Captain Hugh B. Jameson, the chairman, said that their issued capital was £1,466,666 ios. in 5,866,666 shares of 5s. each, all fully paid. The profit for the year under review was £164,115, which, added to the amount brought forward from last year, made a total of £179,626 to the credit of profit and loss account. An interim dividend of 7½ per cent., less income tax, would be paid in respect of the current year to all shareholders registered on the books as at January 31, 1935.

Operations at the Fred Mine had resulted in a profit of £39,910, equal to 30s. 3d. per ton treated. In estimating the value of the ore reserves, gold had been taken at 135s. per oz. The working cost for the year averaged 31s. 8d. per ton, as against 31s. 0½d., as some of the development expenditure had been charged directly to working cost. The Fred Mine had been a good revenue producer for the company for many years, and from current development results he saw no reason why it should not continue so for a good number of years. They had a large and valuable holding in the Wanderer Consolidated Gold Mines, Limited, which was in a strong position. He had stated last year that he considered the East Rand Consolidated, Limited, had become the greatest proposition among the non-producing ones in the Far East Rand. He still thought that East Rand Consolidated maintained its position.

Its first subsidiary, the Spaarwater Gold Mining Company, Limited, had already been incorporated to work a part of the Farm Spaarwater and portions of the Sub-Nigel properties. The Spaarwater Company had the best technical advice, and would have the very able and proficient services of the New Consolidated Gold Fields as managers and secretaries. The Rhodesian Corporation would participate in the issue of shares which would shortly be made to shareholders of East Rand Consolidated, Limited.

In conclusion, he stated that they had had a very good year in 1933-34, and he looked forward to making a still better report to the shareholders for 1934-35.

The report and accounts were adopted.

THE BRITISH BURMAH PETROLEUM COMPANY, LIMITED

IMPORTANCE OF THE TORBANITE INTEREST

The twenty-fourth ordinary general meeting of this company was held, on the 18th instant, at the Southern House, Cannon Street, London, the Hon. Lionel Holland (the chairman) presiding.

The Chairman, in the course of his speech, said that the figures in the profit and loss account illustrated only too vividly the unfavourable conditions which had prevailed during the past year. For the last four years the oil industry—not only in India—had experienced unexampled depression and discouragement. In spite of repeated years of unprofitable trading the figures in the balance sheet showed that the financial position of the company remained a sound one, its liquid assets being very largely in excess of current liabilities.

NEW INDUSTRY TO SOUTH AFRICA

Referring to the South African Torbanite Mining and Refining Company, Limited, the Chairman said that it was starting in the Transvaal an industry new to South Africa with every promise of its becoming an early, permanent, and a steadily expanding success. No pains and no expenditure had been spared to ensure the business being established upon solid and sound foundations. Although not exclusively confined to retorting and refining oil obtained from torbanite—one of the richest known minerals yielding oil on distillation, which formed the basis of the early prosperity of the Scottish refining industry—the aim of the new undertaking was to supply a portion of the considerable demand in the Transvaal for motor spirit with motor spirit extracted and refined in South Africa from the native torbanite. There were fortunately large torbanite deposits in the Ermelo district of the Transvaal, and the Torbanite Company had secured the mining rights over an acreage estimated to contain more than 5,000,000 tons of commercial torbanite besides options over some 150 square miles of torbanite-bearing land. At the retail prices of petrol now ruling the company's sales would return a thoroughly satisfactory profit.

The report and accounts were unanimously adopted.

SECOND COVENT GARDEN PROPERTY COMPANY, LIMITED

FAVOURABLE REVENUE BALANCE

The first ordinary general meeting of the Second Covent Garden Property Company, Limited, was held, on the 19th instant, at the Hotel Victoria, London, W.C.

Mr Philip E. Hill (the chairman), in moving the adoption of the report and accounts, said: Ladies and gentlemen,—You will have seen from the directors' report and accounts that although your company was registered in July, 1933, its transactions up to the end of December of that year were negligible, so that the period of activity under review is approximately ten months. Our net rental for this period is £52,198, income from investments £2,393 and the profit on the sale of one of our properties £8,909—approximating 25 per cent. on the cost—giving us a net available income of £63,590. This result, we think, may be regarded as satisfactory.

THE DIVIDEND

The directors propose an initial dividend at the rate of 5 per cent. per annum on the company's ordinary share capital, and they are utilising the premium on shares account, £14,750, and a small part of this year's revenue in reducing the company's preliminary expenses by the sum of £15,225, in addition to which it is proposed to carry forward the sum of £9,947. It is anticipated that the balance of our preliminary expenses will be written off out of share premium on further issues of capital from time to time. The company now owns 135 shops, of which 83 are freehold, the whole of which have substantially increased in value since their acquisition by the company.

Our present revenue shows a balance available for the ordinary shares in excess of the prospectus figure. Negotiations are pending in respect of additional important properties, but it is too early to speak with any real certainty as to their result, but should they mature, additional capital will be issued to provide the necessary purchase money.

Mr Louis Nicholas seconded the resolution and it was carried unanimously.

BERYL GOLD CORPORATION, LIMITED

PROGRAMME OF INTENSIVE WORK

The statutory meeting of the Beryl Gold Corporation, Limited, was held, on the 19th instant, in London.

Colonel Sir William R. Campion, K.C.M.G., D.S.O. (the chairman) said that the company had been formed with a minimum of cost, due to its formation having been undertaken by Commonwealth Mining and Finance, Limited. They were therefore amply protected financially to carry out properly and efficiently the policy laid down—to develop the mine preparatory to starting treatment and to equip the property with the necessary machinery for the purpose. The parent company, Anglo Australian Gold Development, Limited, was to be congratulated on the manner and expedition with which it had handled the initial testing of the property. A manager had been appointed and was expected to take up his duties at the mine within the next fortnight.

The confidence of the board stood behind the prospects of the mine and they anticipated that the development reports would lend ever-increasing encouragement to the belief that within a reasonable period the mine would be producing gold profitably and to the benefit of the shareholders.

Mr Claude A. de Bernales (managing director) said that it had been estimated that 12 months' intensive development work should place the Beryl Mines in the necessary position to warrant the erection of the treatment plant and that within two years the machinery would be turning out gold and building up the cash profits which later should be distributed as dividends.

Jointly, the Gem and Flag lodes were reported to have available ore and tailings approximating 44,000 tons, containing 22,650 fine ozs. of gold. In the calculations which arrived at the estimated yearly profits which the company could reasonably expect to make, the Harbour View and Hillsborough lodes possibilities had not been allowed to enter. The profit, based on the maintenance of the present currency value of gold and the present ore development being maintained, had been calculated on a monthly ore treatment of 5,000 tons, yielding a net profit of 40s. per ton in Australian currency, which meant a yearly profit equal to £96,000 sterling, which would represent a little more than 27 per cent. available for dividend purposes.

PONTIAN (MALAY) RUBBER COMPANY, LIMITED

NECESSITY FOR PERMANENT CONTROL

The annual meeting of the Pontian (Malay) Rubber Company, Limited, was held, on the 19th instant, at 7 Great Winchester Street, London, E.C.

Mr Philippe E. Gourju (the chairman) said:—Gentlemen,—The year's trading shows a profit eight times as large as that for the previous year and is a striking testimony to the necessity for the scheme for the regulation of rubber production and to its benefits. The immediate result in the case of your company was an improvement in the selling price by nearly 2d. per pound, and while costs were slightly higher, this was not unexpected, as the low rates of pay for labour and staff could not have continued indefinitely. All estate workers are being quite well paid now and on a satisfactory basis. Your estate has been kept in very good order and has benefited considerably by the voluntary curtailment of tapping carried out during the slump, so that when a year ago some of the rested areas were reopened they produced extraordinarily good yields, with the result that the crop for the past twelve months, at 515,500 lbs., was a record for your company. This rate of output will, of course, not be maintained, as we are bound by the provisions of the rubber regulation scheme. This plan is now getting into its proper stride. Its object is to adjust as equitably as possible production and consumption, and it has been drawn up with the consent of all the producing countries, yet with due consideration for the manufacturer. The manufacturing interests are represented on the committee, so as to ensure that they are being justly dealt with. Control of production is not peculiar to rubber. The output of most commodities has increased enormously, and on all sides we see rationalisation of output, so that the supply should not exceed the demand and complicate the trade of the world. The most important feature is that further plantation of rubber is to be strictly supervised and controlled. Although the present scheme is intended to be binding only until the end of December, 1938, it is to be hoped that its provisions will be made permanent, for only by permanent regulation of planting can a succession of booms and slumps be avoided.

The report was adopted, the retiring director and auditors were re-elected, and a vote of thanks to the chairman, directors, agents and staff in the East and in London was unanimously accorded.

BRITISH TYRE AND RUBBER COMPANY, LIMITED

RECORD PROFITS—INCREASED DIVIDEND

The tenth annual general meeting of the British Tyre and Rubber Company, Limited, was held, on the 17th instant, at Thames House, Millbank, London, S.W., Sir Walrood Sinclair, K.B.E., the chairman and managing director, presiding.

The Chairman, in the course of his speech, said that it was once again the board's pleasure to be able to submit accounts recording further progress. The net profit for the year amounted to £126,715, the largest profit earned since the incorporation of the company in 1924.

The directors recommended a final dividend of 5 per cent., making 8 per cent., less tax, for the year, as compared with 6½ per cent., less tax, last year. The business had expanded substantially, and, as a result of recent acquisitions, they could now claim to be one of the most important rubber manufacturing organisations in the country.

During the past year work had been proceeding steadily with the task of co-ordinating the interest and activities of the subsidiary companies with those of their own organisation. The India Rubber, Gutta Percha and Telegraph Works Company had already been able to resume payment of its preference dividend, and the directors were satisfied that this asset should ultimately prove of considerable value to the British Tyre and Rubber Company. Similar progress had been made by the British Moulded Hose Company, which earned a profit in the past year of £12,901, against £7,501 previously, finally extinguishing the debit balance in that company's profit and loss account, and leaving a credit of £3,608.

With regard to the current year's prospects he felt they were justified in being reasonably hopeful. During the past twelve months trade conditions had continued to improve in this country, and also, though in most cases more slowly, in other parts of the world. Their company was in a sound financial condition; its works and equipment were up to date and efficient; the quality of its products and service had been and would continue to be fully maintained, and he could, therefore, see no reason why the company should not secure its fair share in any future expansion of trade activity.

The report was unanimously adopted.

LOW TEMPERATURE CARBONISATION, LIMITED

SERVICES AND INDUSTRIES USING COMPANY'S PRODUCTS

The annual general meeting of this company was held, on the 14th instant, at Southern House, London, Col. W. A. Bristow, M.I.E.E., F.R.A.S. (chairman and managing director) presiding.

The Chairman, in the course of his speech, said: The profit on the trading account with interest and dividends from our subsidiary, Doncaster Coalite, Limited, amounts to a total of £87,286.

There is a new factor which is having a most beneficial effect upon the fortunes of the company, and that is the increasing use of oil in almost every branch of engineering. When the late Mr Thomas Parker took out his first patent for low temperature carbonisation coal was pre-eminent as a source of power. Since that time the advance of the internal combustion engine using heavy oil, and the use of oil for steam raising, has revolutionised engineering practice, and the change-over from coal to oil continues to-day on an extensive scale.

Nor is this all, as since the commencement of the late war the whole of the defences of this country, and the British Empire in general, have become dependent upon the supply of immense quantities of imported petrol and oil. The first line of defence, the Royal Air Force, must remain immobile without petrol, the Navy is in the same plight without fuel oil, and the Army is also largely dependent upon oil for its major operations.

Fortunately for this company, and perhaps also for the nation, this lamentable state of affairs has witnessed the birth of the first successful oil-from-coal industry in this country. We have for the first time in history produced from coal aviation petrol and naval fuel oil. Nine home defence squadrons of the Royal Air Force have been running on coal petrol made by this company and refined and distributed by Messrs. Carless Capel and Leonard. At the last Air Force Pageant over eighty of our finest fighting machines were flying on our coal petrol. In addition to the fuel oil supplied to the Navy, large quantities have been used by railways and important industrial undertakings, and the foundations of this new industry have been well and truly laid.

Your company has both the ability and the confidence necessary to enable it to remain in the forefront of this great national movement, and I feel sure that in our time we shall witness an enormous advance in the industry which we have created.

The report and accounts were unanimously adopted.

IND COOPE AND ALLSOPP, LIMITED

SUCCESS OF THE AMALGAMATION

The annual general meeting of Ind Coope and Allsopp, Limited, was held, on the 17th instant, in London.

Colonel Sir George L. Courthope, Bart., M.C., M.P. (the chairman), said that the meeting was memorable for the fact that the two companies, Ind Coope and Samuel Allsopp, had become amalgamated during the year under review. It had been expected that an issue of preference shares for cash would be advisable during the present year, but the position of their cash resources rendered such an issue unnecessary for the present. A long time must elapse before every advantage of the amalgamation could be realised to the full, but an excellent start had been made, and they were already satisfied that the scheme was fully justified.

Allsopp's trading profit for the year was £196,000, compared with £179,000 in 1933, and that of Ind Coope was £391,723, compared with £337,063. The directors recommended a final dividend of 16½ per cent., less tax, making 22½ per cent. for the year.

Their sales had been increasing. The improvement compared not unfavourably with that of the brewing trade in general, but the consumption of beer was much less than in pre-war days, largely due to the heavy taxation of recent years, which had raised the price of beer beyond the reach of many a working man. The present duty, although less ruinous than that which it had displaced, was still nearly ten times the pre-war duty and was grossly excessive. During the last completed financial year it had yielded nearly £54,000,000. It was impossible to justify the continued imposition of such a burden.

With regard to the supplies of hops and barley, he was convinced that the Brewers' Society had acted rightly in co-operating with the Hops Marketing Board in setting up a joint committee to deal with the grading and valuation of hops. The barley position was much more difficult. Beyond all doubt the trade had responded fully to the appeal of the Chancellor of the Exchequer to increase as far as possible their use of home-grown barley. The beer duty, by depriving the working man of reasonably cheap beer, also deprived the barley grower of a large part of his former market.

The report and accounts were unanimously adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED

WORLD TONNAGE AND WORLD TRADE

The thirty-fifth ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 19th instant, at their offices, 3 and 5 Fenchurch Avenue, London, E.C.

Mr I. C. Geddes, who presided in the absence in Australia of the chairman (Sir Alan Anderson, G.B.E.), in the course of his remarks, said: The operating profit, after making provision for contingencies, is £315,958, compared with £321,503 last year; to this we add a profit of £94,195 arising from the sale of investments, against £40,814 last year. After meeting our statutory depreciation of 4 per cent. on first cost of ships, and paying the preference dividends, we propose to transfer £50,000 to general reserve and pay a dividend of 5 per cent. free of income tax on the ordinary shares. The result is not so good as we should wish, profit on the sale of investments is an adventitious one resulting from the general rise in value of Government securities. Being well provided with reserves, we feel justified in making the foregoing recommendations.

The primary design of our ships is for the carriage of passengers, and we look to passage money to provide us with the major portion of our earnings. Australians are great travellers; we cannot, however, expect that they will travel in such numbers as we should desire nor that Australia will be in a position to welcome newcomers until her producers sell at a profit. The prices of wheat, meat and butter, as well as of wool, are the immediate arbitrators of our prosperity.

WINTER VOYAGES TO AUSTRALIA

In recent years we have told our fellow countrymen of the joys of a visit to Australia during the winter months. That Australia proves to be an attractive alternative to other winter resorts is, I think, confirmed by passengers repeating the voyage in consecutive years.

Additional to causes of depression peculiar to Australian trade, there is the general condition of all shipping. In that I regret there appears to be no real sign of permanent improvement, nor can there be until world tonnage bears a closer relation to the needs of world trade. With the extreme nationalistic tendencies in the form of subsidies which are so much in evidence to-day, how can we expect the market to be allowed to adjust itself?

Rightly or wrongly, many nations believe that it is necessary to possess an adequate share of the world's mercantile tonnage and the sum total of these "adequate shares" is vastly in excess of the tonnage required to carry such overseas trade as is left in the world when the demands for national self-sufficiency have been satisfied.

Another factor hurtful to British shipping and part of the same problem arises from the counter-measures which our Government have found it necessary to take in order to protect our home labour market.

BRITISH GOVERNMENT AND FOREIGN SHIPPING SUBSIDIES

If we agree that a mercantile marine for this country is a necessity and not a luxury, then the British Government is in process of making the necessary answer until other countries are prepared to revise the assistance given to their national shipping, not only by straight-out subsidy but also by indirect means, which are perhaps more difficult to combat.

During the year under review we have run cruises totalling 344 days, and to judge from the comments received from passengers they have on the whole met with approval.

Mr A. O. Lang seconded the resolution, which, in the absence of questions or comment, was carried unanimously.

A cordial vote of thanks was passed to the chairman, directors and managers on the motion of Sir Philip Devitt, Bt., seconded by Mr E. W. Green, and the proceedings then terminated.

BURMA CORPORATION, LIMITED

(Incorporated in India)

At the annual general meeting held in Rangoon on Wednesday, December 19th, the vice-chairman, Mr P. E. Marmion referred to developments and the ore reserve position, and intimated that whilst the prospects of addition to the ore reserves in depth were unfavourable, there remained large areas to be explored in the favourable zone above No. 10 level: he also stated that there was a large tonnage of low grade ore—not at present included in the reserves—which, subject to the future course of metal prices and further reductions in the cost of production, should eventually provide a substantial addition. He also referred to the negative results of exploration of outside areas in Burma over a series of

years, and said that since it was not likely that any large sums would now be required for development purposes, the Board were considering the return of such capital as might be definitely surplus to the Corporation's requirements from the strong liquid resources that had been accumulated. He emphasised the power of the Corporation to earn satisfactory profits from existing resources, particularly if there should be some improvement in the value of its principal product.

The full text of the speech will be available for publication on or about January 2, 1935.

AGAR, CROSS AND COMPANY, LIMITED

ARGENTINE TRADE CONDITIONS

MR WILLIAM A. AGAR ON THE POSITION

The twenty-eighth ordinary general meeting of Agar, Cross and Company, Limited, was held, on the 18th instant, at Dorland House, 14/16 Regent Street, London, S.W.1.

The chairman (Mr William A. Agar), after dealing with the directors' report and balance sheet, referred to the directors being once again in the unfortunate position of having to present a balance sheet showing a continuance of the losses which the company had been suffering for the past four years, and explained the main reasons therefor. He added, in this connection, that it was, however, comforting to know that the Argentine farmer could produce wheat and other cereals at lower cost than almost anyone else, and should be among the very first to reap the benefit of improved prices.

Prior to dealing with the company's affairs, Mr Agar made brief reference to the more important events in the Argentine during the year under review.

DIFFICULT TRADING CONDITIONS

Passing to the affairs of the company, the chairman gave, at some length, a lucid exposition of the various causes which had affected the company's trading operations during the year under review, and the difficulties the company had had to contend with. He referred also to the improvement in sales and collections since the introduction of the Grain Regulating Board, and reduced provision required for bad and doubtful debts. He touched upon the wisdom of the policy of giving, where possible, liberal treatment to clients who were behind in their payments: the profit to the company through the decision of the directors to hold the Argentine Sterling bonds instead of selling them to the United Kingdom and Argentine 1933 Convention Trust: the liberal support and co-operation the company had always received from their large constituents in the United States and Great Britain, and also from their bankers.

After briefly outlining the reasons which, in the opinion of the directors, warranted their taking a hopeful view of the company's future prospects, Mr Agar closed his speech with a generous appreciation of the wholehearted support afforded to the directors by the company's staff, despite the further reductions in remuneration which it has been necessary to put in force.

Mr H. S. F. Alexander (managing director), at the request of the chairman, then dealt in detail with the figures in the balance sheet before proceeding to give a most interesting and instructive account of his recent visit to the Argentine. He spoke of the spirit of cheerfulness and optimism he found there, which had been absent for a long time, the excellent state of the company's properties and stocks, and the care exercised in looking after same; of his visit to the camp agents and clients, and the high reputation the company enjoyed amongst the agricultural community and throughout the country; of how the policy of assisting, where warranted, their clients through their difficulties had earned an enviable goodwill which should redound to the ultimate benefit of the company now that business was improving.

EFFICIENCY OF LOCAL STAFF

Mr Alexander also referred to the many lines the company handled in addition to agricultural machinery, the question of local manufactures, and of the high opinion he had formed of the efficiency of the local officials and staff, and how well the company was equipped to take full advantage of any improvement in business conditions, which improvement, in his opinion, was in sight.

The usual resolution having been proposed by the chairman and seconded by Mr Alexander, who answered various questions asked by a shareholder, the motion was put to the meeting and carried unanimously.

The re-election of Mr Stuart C. Sheppard as a director, the re-appointment of the auditors and a vote of thanks to the chairman and directors closed the proceedings.

ANGLO-ECUADORIAN OILFIELDS, LIMITED

INCREASED PROFIT AND DIVIDEND

The sixteenth annual ordinary general meeting of Anglo-Ecuadorian Oilfields, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, Mr H. C. R. Williamson (the chairman) presiding.

The Chairman, in the course of his speech, said that it was gratifying to be able to submit accounts showing an increased profit, and to recommend an increase in the dividend, while providing for writings off on the usual scale and maintaining a strong liquid financial position. The most satisfactory feature of the year's working had been the ability of the field management to maintain the monthly production at about 16,000 tons in spite of the fact that less footage had been drilled. While no new shallow areas of much promise had been discovered, experience had tended to show that wells in the proven areas could be more closely interspaced without greatly affecting the output of existing wells.

EXCHANGE DIFFICULTIES

During the year the price of mid-Continent crude oil of 36 degrees Baumé had risen by successive stages to \$1 per barrel, but the dollar exchange rate was a factor of great importance to them, and the average rate of that had been less favourable than in the previous year, so that in spite of the rise in dollar prices the sterling price per ton realised had been actually less. In connection with overseas shipments of crude oil, also, they had a serious loss to contend with, due to Ecuadorian exchange control. Conditions in the oil industry continued to depend chiefly on the American situation, which was still chaotic, especially in regard to gasoline prices, but the United States Government was fully alive to the importance of preventing waste of the natural oil resources.

As to the future, on the basis of the current year's working to date, and the contracts arranged for next year, and on the assumption that crude oil prices, exchanges, and taxation did not materially alter, the board hoped to place before the next meeting accounts at least as good as the present.

The report and accounts were unanimously adopted.

ARISTON GOLD MINES (1929), LIMITED

STRONG POSITION—LARGE ORE RESERVES

The fifth ordinary general meeting of Ariston Gold Mines (1929), Limited, was held, on the 17th instant, at River Plate House, London, E.C., Mr Francis Allen (the chairman of the company) presiding.

The Chairman, in the course of his speech, said: In regard to the balance sheet, sundry creditors at £62,000 odd may look rather a large sum, but I ought to tell you that that includes £44,000 income-tax reserve to meet the income tax this year. On the assets side, the one item which we are always anxious to keep down is development account. You will see it continues to grow, but on the other side we have share premium account amounting to nearly £90,000, so that we have a large reserve in hand which we can in due course use for writing down our development account and keep that account within reasonable limits. Another sound point in our balance sheet is that we have cash at bankers and bullion on hand and in transit amounting to £250,000. That gives us a very strong position.

Now as to the mine. We have in the past year, despite our setbacks, made solid advance. To-day we have, fully developed, a reserve of more than 500,000 tons of high-grade ore, and on this I can see a profit of well over £1,000,000. By the time our new main shaft is down, this ore reserve will certainly be doubled, and our development will then be at least three years ahead of our mill, basing the mill requirement on 30,000 tons per month. On crushing this tonnage our profits will amount to about £50,000 per month, with gold at £6. Our flotation process is steadily improving our recovery, and a final recovery of 95 per cent. will add very materially to our revenue. Our recovery at the moment is 85 per cent. All the preliminaries are well in hand for sinking our new shaft of large capacity, and our strong cash position enables us to lay out our policy to secure for the future a very large and prosperous mine.

In connection with that I want to say that had we deliberately abstained from pushing development in the way we have done we might have added something to our monthly output, but it would have been very bad mining policy and very poor policy for the shareholders. It is for that reason we have pushed on with developments, and I think our manager, Mr G. H. Plowman, and

his staff, are entitled to our congratulations for pushing on development so splendidly.

We are limited in our handling of tonnage by the two shafts we have now, the North and the Prestea shaft. The Prestea shaft, which from time to time has given us trouble, has been taken in hand, and solid work is now being put into that shaft and they are making a really good job of it. This work will probably be finished at the end of April. In the meantime you will see our tonnage steadily increasing. I hope by the end of April or the beginning of May that our output will reach from 10,000 to 12,000 tons a month. That will give us a very materially increased profit. . . .

The report and accounts were unanimously adopted, and a final dividend of 5 per cent., less tax, was declared.

The Chairman said that it had also been decided to pay an interim dividend of 7½ per cent. in respect of the present year.

KWAHU MINING COMPANY (1925) LIMITED

PROFITS AND PROSPECTIVE PROFITS

The ordinary general meeting of the Kwahu Mining Company (1925), Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London.

Mr M. L. Innes Browne (the chairman) said:—A net profit of £29,712 4s. 11d. was realised for the year, but a great deal more profit has yet to be made from the year's work. Take, for instance, the sale of one of our five Boppo areas for 400,000 fully-paid-up shares in Marlu Gold Mining Areas, Limited. The result of this sale is that we have now 400,000 Marlu shares at a cost of £250, and anything that these shares realise above £250 is profit. (Hear, hear.) The price of Marlu shares to-day on the Stock Exchange is 12s. 6d. per share, which gives a valuation of £250,000.

On the other hand, it should not be so very long before Marlu are producing, and they should give a very big return in dividends. We have other properties there to deal with. We are now developing our adjoining Boppo properties, and are well advised as to the developments on the neighbouring properties now owned by the Marlu Gold Mining Areas, Limited.

We have also large profits to be made from Gold Coast Main Reef, Limited. Again here we own adjoining properties, the value of which is being enhanced by the work being done by Gold Coast Main Reef, Limited.

We have also yet to realise the profit to be made from our calls at par on 100,000 shares in Obuom Gold Mines, Limited, and 100,000 shares in Tarkwa Gold Mines, Limited, which calls stand in our balance sheet at the nominal cost of £1, so you will understand why we say in our report that the main profit from the year's work has yet to be made.

The capital of our company is only £40,000, and in order that it can take a substantial part in the development of the gold-mining industry of the colony, and in the profits to be reaped from such work, our first aim has been to put the company into a sound financial position, so we have dug into the company the profit of £29,712 4s. 11d. made during the year, and now have £67,705 12s. in cash, apart from other assets.

GOLD-MINING CONCESSIONS

Although we should obtain good profits from our holdings and interests in other mining companies, our largest profits should be made from our gold-mining concessions or properties covering a total area of 45,000 acres. Of these properties 42,800 acres are well placed on the Prestea-Ashanti line of reef. The mines on this line of reef have produced in the past, and are still producing, most of the gold won in West Africa. In the past this goldfield was the scene of extensive prospecting operations, and the reefs were proved to carry gold in payable mining values and quantities.

The Prestea-Ashanti reef formation has been surveyed and reported upon by the Geological Survey of the colony, and there is now a large amount of data available respecting this goldfield. Economically, the Prestea-Ashanti goldfield is of considerable importance owing to the great strength and persistence of the main ore channels and the auriferous content of the lodes. The reefs have been proved to continue in depth and to maintain their values, and the Prestea-Ashanti line of reef has become the centre of activity of the important South African mining groups interesting themselves in West Africa.

In view of the data available regarding the Prestea-Ashanti reefs formation and the prospecting and development work now being confidently undertaken there, this line of reef, on which our properties cover so large an area, will continue to be the centre of the gold-mining activity in the colony.

The report and accounts were unanimously adopted.

BRITISH TAR PRODUCTS, LIMITED

SATISFACTORY YEAR'S TRADING

The fourteenth ordinary general meeting of British Tar Products, Limited, was held at the Royal Victoria Hotel, Sheffield, on Thursday, December 13th.

Mr A. Woolley-Hart (the chairman of the company) was in the chair.

The Secretary (Mr John Jordan) read the notice convening the meeting and the auditors' certificate.

The Chairman said:—Gentlemen,—The directors' report and the accounts having been in your hands some days, I propose, if it is your pleasure, to take them as read.

As mentioned in the report, the year's trading may be considered very satisfactory. Somewhat larger tonnages of crude material have been received and treated, and, speaking generally, have been disposed of at profitable prices. As a result, the net profit for the year—£51,819—is £5,174 higher than last year.

THE ACCOUNTS

Turning to the accounts, on the debtor side we see that the general reserve account stands at £11,271, against £16,500. I will return to this item presently. Sundry creditors are £25,521, against £22,756; bank overdraft £2,794, against £2,261; and the reserve for income tax £5,219, against £6,290.

On the creditor side, the fixed assets stand at £129,250, against £134,502. The former amount is arrived at after making additions to plant, machinery, etc., of some £4,700, and providing the usual ample depreciation.

As regards the floating assets, stocks stand at £21,196, against £22,727; debtors at £75,230, against £76,454; and the other items are practically identical with the exception of investments, the cost value of which has been increased from £113,746 to £114,201.

Further additions to the company's investments have been made since the close of the year, and they now stand at £116,997, with the present market value of £115,955.

I think you will agree that the balance sheet presents a strong position.

GENERAL RESERVE ACCOUNTS

To return to my reference to the general reserve account, it will be recalled that last year reference was made to certain experimental work which was being carried out. This, however, could not be continued in the manner in which it has been done, as it was in contravention of certain regulations relating to the treatment of hydro-carbons, although, possibly, later, other experiments on different lines may be pursued. It was, therefore, thought that the cost of such experiments should be made a charge over a period of two or three years against the reserve account—this, of course, being the proper function of such an account.

As you know, I do not like to be unduly optimistic in forecasting the trend of future events, but I think I may fairly say the indications are hopeful that next year may be at least as good as one as this.

The Chairman then moved:—"That the directors' report and the audited accounts and balance sheet, as presented, be and they are hereby approved and adopted, and that the final dividend of 3½ per cent., less tax (making 10 per cent., less tax, for the year), and bonus of 5 per cent., less tax, as recommended by the board, be paid forthwith to the preferred ordinary and ordinary shareholders whose names appear on the register on this date."

Mr Maurice Deacon, who retired by rotation, was re-elected a member of the board, and the auditors, Messrs Bryden, Johnson and Company were reappointed.

A vote of thanks to the chairman, managing director and staff was proposed by Mr Hazel, and carried unanimously.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

TARKWA BANKET WEST, LIMITED

POTENTIALITIES OF THE FIELD

The ordinary general meeting of Tarkwa Banket West, Limited, was held, on the 20th instant, at Winchester House, London.

Mr M. L. Innes Brown (chairman) said:—Shares in subsidiary companies at cost, £54,400, are well covered with the market valuation £1,017,175 odd, and to "shares in other mining companies" must be added the £500 we deducted from property account. Against this added valuation of £500 we have 400,000 fully paid up shares in Marlu Gold Mining Areas, Limited, so there is a fair profit in view to be realised. Valued at the market price of 12s. 6d. per share, these Marlu shares are worth £250,000. "Cash at bankers" amounts to £84,890. I think the balance-sheet shows the improved position of the company, which is now able to take its part in the development of the gold mining industry of the Colony and to benefit from its policy in the past of acquiring good mining areas at the low prices then ruling.

The Marlu Gold Mining Areas properties are situated on the Prestea-Ashanti line of reef, and on its properties there are reefs carrying high gold values; but at present the company is developing what is known as the crushed zone. It is reported that upwards of two million tons of low-grade but highly profitable ore are already proved on the portions already prospected, and that preparations are being made to erect the necessary equipment to deal with this ore. It is expected that mining and treatment costs will be very low and that good dividends will be earned. The company has ample working capital.

Our own subsidiary, Obuom Gold Mines, Limited, in which we hold 800,000 shares, also has ample working capital. An extensive programme of development is being carried out and giving excellent results.

Then in our other subsidiary, Tarkwa Gold Mines, Limited, in due course we shall have another producing company. Both the Idua Priem and Edua Priem mines, which adjoin, are being developed, and the excellent results being obtained give promise that these mines will yield some of the highest grade ore of the Banket gold fields.

When Mr O. A. L. Whitelaw, M.Inst.M.M., F.R.S.S., F.G.S., examined these properties and advised that the workings be reopened and the mines further developed, he told us, in his report, that these properties had the Banket ore exceptionally well

developed and that the workings suggested considerable pay-off even under the old gold values. To get similar beds of ore one would have to go 1,200 ft. deep at Tarquah, 2,000 ft. deep at Abbotiakoon, and 4,000 ft. at Abosso.

From Idua Priem to the end of Edua Priem there is a length of 8,000 ft. of reef. Work at present is mainly on some 3,000 ft. of this, the distance from No. 1 shaft Idua Priem to No. 2 shaft Edua Priem being 2,700 ft. The formation of this subsidiary company provided adequate working capital to develop and equip these mines. The property is being equipped with a power plant, and development work is being pushed forward with a view to bringing the mines to the producing stage by this time next year. These two properties, when developed, will make one of the best mines in the Gold Coast Colony. Apart from our subsidiary companies and shares in other mining companies, we have gold-mining properties covering a total area of 8,500 acres, some in the Tarkwa Banket gold field, but mainly on the Prestea-Ashanti reef formation.

In view of the reliable data now available regarding the Prestea-Ashanti reef formation, this field has attracted the South African mining groups interesting themselves in West Africa, and the Prestea-Ashanti line of reefs is the centre of the gold-mining interest of the Colony. It is on this line of reefs that our properties are mainly situated.

We are now in a position to make profits, and we look forward to a prosperous year for the company.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 15, 1934, amounted to £9,930,000 against ordinary expenditure of £14,503,000. After allowing for an increase in Exchequer Balances of £186,242, the operations for the week, as shown below, increased the National Debt by £4,995,000 to approximately £8,146 millions.*

COMPARISONS WITH CORRESPONDING PERIODS, 1933 and 1934 (000's omitted)

	Great Western	L.M.S.	L.N.E.R.	Southern
First half-year 1934, compared with first half-year 1933:				
Gross increase or decrease	+ 399	+ 1,422	+ 1,479	+ 232
Net increase or decrease*	+ 370	+ 1,000	+ 688	+ 90
Second half-year 1934, compared with second half-year 1933:				
24 weeks to December 16, 1934	+ 185	+ 714	+ 570	+ 179
Weekly average second half 1934	+ 7 1/2	+ 29 1/2	+ 23 1/2	+ 7 1/2
Latest week 1934 compared with 1933	- 14	- 9	+ 1	+ 1

* Including receipts from ancillary businesses.

LONDON TRANSPORT

Week ending December 15, 1934, compared with first half-year 1933: Gross increase or decrease + 399, Net increase or decrease + 370. Aggregate 24 weeks ending December 15, 1934, compared with second half-year 1933: Gross increase or decrease + 185, Net increase or decrease + 714.

* For an explanation of the manner in which the figures are made up, see the *Economist*, March 17, 1934, page 610. Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted, on the basis of the best information available.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of November, 1934, as compared with the corresponding month of 1933, show an increase of 17 per cent. of units sold.

THE CHARTERED INSTITUTE OF SECRETARIES.—Mr. Howard Foulds, J.P., secretary of Callender's Cable and Construction Company, Ltd., has been elected president of the Institute in succession to Mr. W. G. Hislop. Sir Enoch Hill, J.P., president and managing director of the Halifax Building Society, and Mr. Christmas Evans, secretary of Ocean Accident and Guarantee Corporation, Ltd., have been elected vice-presidents. Lieut.-Colonel Reginald Tristram Harper, O.B.E., secretary of Buenos Ayres Great Southern Railway Company, Ltd., has been elected treasurer.

JOHN ISMAY AND SONS, LTD.—The directors announce that they have acquired a controlling interest in the British Blue Spot Company, Ltd., manufacturers of wireless loud speakers and accessories.

SOUTH-WESTERN GAS CORPORATION.—Close Brothers, Ltd., announce that the South Western Gas Corporation, Ltd., has recently

acquired 65.5 per cent. of the 5 per cent. debenture stock, 87.75 per cent. of the irredeemable preference stock, and 84.36 per cent. of the ordinary shares and stock of the Newquay and District Water Company.

COMPANIA ARGENTINA DE NAVEGACION MIHANOVICH, LIMITADA.—Gross takings for the month of November amounted to Argentine paper \$2,068,295. This compares with Argentine paper \$1,909,886 for November, 1933, an increase of Argentine paper \$158,409, or 8.29 per cent.

CABLE AND WIRELESS, LTD., INDEX NUMBERS.—The index number for November, 1934, is 71.3, against 73.6 for October, 1934, and 71.8 for November, 1933.

SOUTH-WESTERN GAS CORPORATION, LTD.—Close Brothers, Ltd., announce that the South-Western Gas Corporation, Ltd., has recently acquired 95 per cent. of the ordinary share capital and 96 per cent. of the participating preference shares of the Lostwithiel Gas Light and Coke Company, Ltd., and 100 per cent. of the share capital of the Malmesbury Gas and Coke Company, Ltd.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THERE was a lull in a number of commodity markets during the week ended last Wednesday owing to the approach of Christmas. Although a number of quotations were marked down a little, the improvement noticeable in recent weeks has, on the whole, been maintained.

Partly as a result of smaller Continental purchases, wheat prices are slightly lower on the week. An important development in the wheat market was the decision of Argentina, Australia, Canada and the United States "to make room for France's temporary rôle as a wheat exporting country" in the reallocation of quotas for 1934-35. Wednesday's quotations for raw sugar were a little lower than a week ago. At Smithfield market, English beef and

New Zealand frozen mutton were dearer, but Argentine beef was cheaper than a week ago. Following last week's decline, egg prices were again marked down sharply.

Among textile raw materials, cotton, hemp and silk are practically unchanged on the week, but flax continued to advance in price and now costs almost twice as much as a year ago.

The market in copper was active and quotations rose to a slightly higher level. It appears that the problem of international restriction of supplies is to be discussed at a conference in January. A meeting of the members of the Zinc Cartel took place this week at Brussels, but its decisions were not yet known when we went to press. Wednesday's price of lead was slightly higher, but the quotation for tin somewhat lower, than a week ago. The

market in vegetable oils experienced a slight reaction, due partly to favourable crop reports from Argentina. The market in rubber closed on Wednesday with quotations at slightly higher levels than a week ago.

Grain prices in Chicago are fractionally lower on the week, but cocoa, copper, lead and spelter are dearer. Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 151.1 on Wednesday last, compared with 150.7 a week ago, 147.1 a month ago, and 122.8 on the corresponding date last year.

COAL

SHEFFIELD.—Collieries have been raising larger tonnages with the object of completing the December quota before the Christmas holiday. Demand has been brisk this week for all classes of fuel and deliveries difficult. Certain shipping qualities are scarce, a condition which hampers the arranging of forward business. The growth of electrical generation is responsible for a heavy and ever-increasing call for small coals. Steam coals and coke are experiencing a full demand, and sales of house coal have increased, although the super-qualities are still neglected.

NEWCASTLE-ON-TYNE.—Shipment figures are at a good level. From the Tyne the total of coal and coke cleared last week reached the aggregate of 325,115 tons, which is 51,312 tons more than in the corresponding period last year. The Northumberland steam market remains firm, there being little coal of any description available for shipment this year, whilst inquiry continues to be good for several weeks ahead. The better conditions in Durham are maintained, trade in the gas and coking section being brisk. Bunkers are a steady market.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 14s. 9d.; smalls, 11s. 6d.; Howards, Bentineck, Newbiggin, screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 6d.; Prime Foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—Home requirements are on a fairly large scale, so that export supplies are none too plentiful, and the scarcity of prompt shipping parcels is accentuated by the fact that the collieries are well booked until the end of the year. The market is therefore firm, but is becoming increasingly nominal. Shipments last week expanded by 33,750 tons to 279,000 tons, raising the increase for the year to date over the comparable total for 1933 to 943,600 tons.

Shipment prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 15s.; splint best, 17s.; splint second, 15s. 6d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 13s.; trebles, 15s.; doubles, 14s.; singles, 12s. 9d.; pearls, 12s.; dross, 10s. **FIFE.**—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 6d.; first-class steam, 14s.; third-class steam, 13s.—13s. 3d.; trebles, 14s.—16s.; doubles, 14s.; singles, 12s. 9d.—13s.; pearls, 12s. **LOTHIANS.**—Prime steam, 13s. 6d.; secondary steam, 13s.; unscreened navigation, 12s. 6d.; trebles, 13s. 9d.—14s. 6d.; doubles, 14s.; singles, 12s. 6d.; pearls, 12s. **AYRSHIRE.**—Best unscreened navigation, 14s. 3d.; jewel, 15s.; steam, 14s. 6d.; trebles, 15s. 6d.—15s. 9d.; doubles, 14s.—14s. 6d.; singles, 13s. 9d.; pearls, 12s. 9d.; dross, 10s.

CARDIFF.—Conditions on the Cardiff coal market have not been affected to any appreciable extent by the approach of the holidays. Last week shipments in the foreign and coastwise trades at the South Wales docks totalled 382,800 tons, compared with 367,800 tons in the previous week, and 359,260 tons in the corresponding period last year, but these statistics represent little more than 50 per cent. of the actual capacity of the appliances, and neither the recent charterings in the freight market nor the stem sheets of the collieries justify hopes of any considerable increase in loadings during the present week. No further contracts are announced, but the Spanish Norte Railways are inquiring for tenders for the supply of 30,000 tons. Washed and sized coals, particularly dry classes, are the strongest feature, and the supply of large, in spite of reduced outputs, is more than adequate for current demands. It transpires that the approval of the Courts will be necessary for the conclusion of the merger of the Powell Duffryn Steam Coal Company, Ltd., and the Welsh Associated Collieries, Ltd., and that the offer of the Powell Duffryn Company to exchange at par one Powell Duffryn ordinary share for two ½ ordinary shares of the Welsh Associated Collieries, Ltd. (up to half the amount of the total ordinary share capital of ½ millions) is made to all the ordinary shareholders in the last named company, and not to any particular group of interests with large holdings in it.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. (December), 24s. 1½d. (March quarter) for French, and 21s. 6d. to 21s. 9d. for Portuguese.

WORKINGTON.—The coal trade is brisk, and as is usually the case at this time of the year, prompt delivery is difficult to secure. Forward business is being done in the Irish market, and there have

been large shipments to Belfast and Londonderry. Free State business, on the other hand, is very meagre, and is still declining. Landsale is lively, but competition from other coalfields keeps prices at an unremunerative level. Industrial fuel is in heavy request, and now and again small coal has to be imported for the coking plants, the entire make of which is going to Workington and Millom smelters. Prices are firm. Nominally, best round is quoted at 21s. 6d.; washed doubles, 20s.; washed singles, 18s., all f.o.b. Small 15s. 6d. per ton. Best house coal 30s. 8d.; and house nuts 29s. at station. Gas coal 27s. per ton. Local coke is from 15s. 6d. to 16s. 6d. per ton.

IRON AND STEEL

MIDDLESBROUGH.—The pig iron market is quieter with the approach of the holidays, and as the local foundries will be closed for two or three days next week, pig iron producers will have a welcome opportunity of replenishing their stocks, which are very low. Prices are maintained on the basis of 67s. 6d. per ton delivered Middlesbrough for No. 3 Cleveland foundry pig iron and 69s. per ton delivered Middlesbrough for No. 1 quality hematite with the usual extras for other areas. An order has been placed in this district for 9,000 tons of railway chairs, the bulk of which will be produced by foundries belonging to the big pig-iron producers. Messrs Dorman, Long and Company are lighting an additional blast furnace at their South Bank works at the end of this week for the production of ferro-manganese. This will mean an increase in the consumption of blast furnace coke, for which there is a steady demand, prices being maintained at 20s. per ton delivered at the furnaces. Foreign ore is in poor demand, but the tone is distinctly firm with sellers hinting at higher figures for forward delivery. The production of semi-manufactured and finished steel is very high, and the figures for this area over the twelve months ending December 31st will show a very considerable increase when compared with the preceding twelve months. Heavy steel scrap is firm with makers offering 51s. per ton, but merchants are not too keen to commit themselves at this figure.

SHEFFIELD.—Works have been speeding up this week in anticipation of the holiday stoppage. This is likely to be normal in duration as there is a considerable amount of work to carry over into next year. The volume of trade appears to be maintaining previous levels, with a tendency to ease off in the lighter and special qualities of steel. Exports of iron and steel materials, electrical apparatus, tools and hardware and non-ferrous metals during November barely held their own as compared with October. Nevertheless the comparison with last year is favourable and most branches of steel occupy a strong position. Local sentiment is generally optimistic, tempered by a little dissatisfaction with the export position. Employment in the steel and allied branches will be well maintained until the end of the year. The seasonal trade in plate and cutlery has ended rather unfavourably, but the year's operations have been equal to those of last year.

WORKINGTON.—Trade closes on a strong note on the North-West Coast. A large volume of forward business has been done, and makers are so well sold that they are sure of the disposal of their production for four months to come. Any further improvement in demand in mid-January would probably warrant the blowing in of an additional furnace, to increase the number in blast between Workington and Barrow to nine. Midland and South Walian needs are increasing, and the Scottish and Continental demand is improving slightly. Altogether, these requirements account for the spill-over available after the wants of the steelworks at Workington and Barrow have been satisfied. East Coast competition is still keen and accordingly there is no appreciation of prices. Bessemer mixed numbers are quoted at 43 12s. 6d. per ton at Glasgow; 43 18s. 6d. at Manchester; 44 3s. 6d. at Sheffield; and 44 4s. 6d. at Birmingham, with an additional 2s. 6d. to 5s. per ton for special brands. Malleable iron is a steady trade at 45 15s. per ton delivered at Birmingham, and ferro-manganese is in firm request at 10 15s. to 11 5s. per ton by home users. Two furnaces at Moss Bay at Workington are to be lighted next month to smelt manganese alloys. In the steel trade also there has been freer booking of orders with the result that activity will be maintained at the present level until the end of the first quarter of next year. Workington has several overseas orders for rails and sleepers to roll. Of late the chief production has been home rails, billets, bars and slabs, and at Barrow rails, hoops and strip. Little headway is being made in the native ore industry, the only needs being those of local consumers. The metal is quoted at from 13s. 6d. to 14s. 6d. per ton. Imports of North African and German ore at Workington during the past four weeks have totalled 24,800 tons.

GLASGOW.—The position as regards Clyde shipbuilding has much improved within the past ten days, contracts having been placed with yards at Port Glasgow, Greenock and Dumbarton involving a considerable tonnage and giving promise of employment to a large number of men. In many cases the machinery will be supplied by makers in the Clyde districts who have also secured orders for machinery for vessels to be built in other areas. Steel makers still have a good deal of work on hand and there seems more disposition on the part of buyers to place orders for future delivery. There is not quite such a good demand for semis, although the recent rate of production is being maintained. Sheetmakers are doing a steady home business, but no further improvement is noticeable in the export trade. In most branches local demand is quiet, mainly owing to the fact that stocktaking at the end of the year is very general in this district.

CARDIFF.—Quiet conditions have prevailed this week in the South Wales tinplate trade. Current production is at the rate of approximately 51 per cent. of capacity and most of the mills are

likely to be idle during the whole of next week. Scheduled quotations are unaltered. The galvanised sheet market has maintained a fairly steady tone, with quotations ruling from £11 5s. to £11 15s. per ton f.o.b., while steel bars are also unaltered. Shipments of tinplates at Swansea last week totalled 72,592 boxes, compared with 85,736 the previous week, and stocks totalled 138,914 boxes compared with 126,380 boxes the previous week, and 138,444 boxes a year ago.

OTHER METALS

With the exception of antimony, the price of which appreciated considerably, the markets in non-ferrous metals have shown little change during the past week. The price of copper once again passed the £28 mark, and the turnover on several days was large; nevertheless, consumer's demand is still rather restricted. Despite the absence of official statements and the fact that some of the leading producers outside the United States know nothing definite, it is generally believed that a world copper conference will be held towards the middle of January. The outcome of these discussions will be of great importance, since at the present time, restriction propaganda overshadows the entire market situation.

Holiday influences led to reserve on the part of tin consumers, and quotations have eased a little. Since the end of August it has been illegal in Germany to use solder with a tin content of over 40 per cent., except in the manufacture of food containers. A new order has now been issued by the Metal Supervision Office, under which the production of solder containing more than 40 per cent. tin is prohibited except where this is specially ordered for one of the allowed purposes; the holding of stocks of such solder will be illegal. As a result of the high price of the commodity, the tin mines near Albertba (Czechoslovakia) are to resume production after many years of idleness.

On Thursday and Friday of this week, the International Zinc Cartel held a meeting at Brussels, to consider the future of the cartel, which is due to expire on December 31st., but as we go to press the result of the discussions is still unknown. The prolongation of the cartel would probably stimulate the market a little, whilst it is probable that its dissolution would have little immediate effect, since this eventuality is already discounted in present prices. According to the *Metallgesellschaft*, the world's output of smelter lead increased during October by about 4,450 metric tons to 115,485 metric tons, a development which is, however, largely due to the greater number of working days in that month. The daily rate of production rose only by 24 tons to 3,725 metric tons.

The price of antimony jumped considerably this week, Chinese antimony is now selling at about £65 per ton, against about £27 per ton at the beginning of the year. Increased demand, on account of the improvement in the steel position, is the main reason for this notable rise. An additional factor has been the conclusion, some weeks ago, of a monopoly contract between the Chinese Government and Arnhold and Company of Shanghai. The latest jump in price is, however, partly due to psychological influences—the belief that the policy of the Chinese Government with regard to antimony is similar to its treatment of wolfram, which has been very successful during the past 18 months. Whether the effort to control the price of antimony will be as successful as the Chinese wolfram policy is somewhat doubtful, and it must be remembered that the previous effort to control the antimony market collapsed in the spring of last year, when wolfram was just starting its rise.

TIN.—Sales of tin on the London Metal Exchange: 125 tons on Monday, against 150 tons last week; 190 tons on Tuesday, against 110 last week; 135 tons on Wednesday, against 60 tons last week. The New York quotation on Wednesday was 50.85 cents per lb., against 50.90 cents a week ago and 51.25 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 2s. 6d. to £228 5s., compared with £228 10s. to £228 12s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,722 tons, a decrease of 52 tons on the week.

COPPER.—Sales on the London Metal Exchange: 2,850 tons on Monday, against 1,200 tons last week; 2,350 tons on Tuesday, against 1,375 tons last week; 1,800 tons on Wednesday, against 1,200 tons last week. Domestic spot was quoted at 6.72½ cents per lb. in New York on Wednesday, against 6.67½ cents a week ago and 6.72½ cents a month ago. Wednesday's official closing price for standard cash in London was £23 1s. 3d. to £23 2s. 6d., compared with £27 13s. 9d. to £27 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 43,247 tons, show an increase of 1,662 tons, and stocks of rough copper, at 10,560 tons, an increase of 75 tons.

LEAD.—Sales on the London Metal Exchange: 50 tons on Monday, against 950 tons last week; 500 tons on Tuesday, against 650 tons last week; 250 tons on Wednesday, against nil last week. The New York quotation on Wednesday was 3.70 cents per lb., against 3.50 cents a week ago and 3.50 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 5s. for shipment during the current month, compared with £10 2s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 25 tons on Monday, against 400 tons last week; 50 tons on Tuesday, against 425 last week; 300 tons on Wednesday, against 150 tons last week. Wednesday's quotation in East St. Louis was 3.75 cents per lb., against 3.70 cents the week before, and 3.70 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 12s. 6d. for shipment during the current month, against £11 13s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel at £200 to £205 per ton, remains unchanged. Quicksilver was

again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £65 per ton, as against £60 to £61 per ton last week. Chinese wolfram was again quoted at 39s. to 41s. per unit c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. American cotton prices have been steady, with limited trading, and the markets are badly in need of a stimulating influence. There has been rather more business in American cotton, and imports for last week, at 43,815 bales, were for these times exceptionally large. There appears to be little probability of any distinct change in prices in the immediate future.

The general inquiry in piece goods has been fairly well maintained, with India providing the bulk of the demand. Encouraging sales have taken place for that outlet in light bleaching styles and fancies. A fair trade has also been done for Singapore and there has been a steady demand for South America. Further buying has taken place for the Empire markets, especially South Africa. The home trade has been quiet. Sales of Egyptian yarns have been larger, but to secure orders prices have had to be shaded. The voluntary agreement on minimum rates has apparently broken down and there appears to be little likelihood of any agreement on a legal basis being adopted. The turnover in American descriptions has been irregular, practically all the orders being of small dimensions. Joint negotiations between the employers and operatives in the manufacturing section were resumed on Tuesday to settle final details regarding the proposed new wages agreement, which will later be sent to the Minister of Labour for legalisation. The Colwyn Committee, which is dealing with the redundancy scheme in the spinning section, at a meeting this week decided to proceed with the proposals to scrap 10,000,000 spindles. All spinners in Great Britain will at an early date receive a circular asking them to state what amount of machinery they are prepared to eliminate. This decision coincided with the important statement in Parliament by Mr. Walter Runciman that the Government was prepared to aid the cotton industry in obtaining the £2,000,000 which is the estimated cost of the proposals. The full implications of these developments are discussed in a Note of the Week.

WOOL.—Bradford. The year is finishing with the wool textile industry in better heart than has been seen since last April. This is expressing itself in about 80 per cent. of machinery activity, and both spinners and manufacturers are fairly well placed for new business in the New Year. The firm finish in Coleman Street Wool Exchange has impressed itself upon the entire industry, there being a recovery from the opening decline in practically all descriptions. Prices of all qualities are reasonable, and this is encouraging wholesale fabric buyers to operate fairly extensively. Overseas selling centres have also revealed a firm situation, and both in Australia and New Zealand quotations have slightly hardened during the past fortnight.

The past two weeks have shed light upon the agreement between Germany and South Africa, whereby the former is to purchase considerable weights of Cape wool, and to pay with goods sold to South African storekeepers. Accounts have to be paid into local banks and then transferred to a central authority, which will pay for wool bought by Germany in the usual way. German buyers are not to receive preferential treatment, but will have to compete for the raw material with other sections of the trade, the varied lots going to the highest bidder. Any special favours granted to German customers would have led to serious trouble in the trade and finally to France and England transferring their competition to Australian selling centres. Most Cape growers have withdrawn their wools until the New Year, when it is expected Germany will commence operations. Prices for the various semi-manufactured materials, such as tops and yarns, have remained very firm during the past fortnight, with a slight hardening tendency, consumption being large. Markets are firm everywhere, and on the whole trade is good.

GRAIN MARKETS

WHEAT.—Trade in wheat was not very active during the week ended last Wednesday, and quotations tended to decline. The representatives of Argentina, Australia, Canada and the United States have now informed the French Government that, "having regard to the great importance they attach to the new French wheat legislation, and the resulting re-entry of France as a wheat importing country, they would be prepared, when the 1934-35

quotas were re-allocated, to make room, along the lines of the Budapest proposals, for France's temporary rôle as a wheat exporting country." It appears that France's export quota in 1935 will be 4,600,000 quarters, but 2,750,000 quarters are to be exported as denatured wheat.

According to Mr G. Broomhall, total shipments during the past week were 835,000 quarters, against 1,168,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 97½ cents per bushel, against 100½ cents the week before and 98½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 3d. per 496 lbs., against 34s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 9d., against 31s. 6d. Australian, ex ship, 24s. 9d. to 25s. 9d., against 25s. 6d. to 25s. 9d. a week ago.

FLOUR.—North American shipments were 51,000 sacks in the past week, as compared with 135,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 3d. to 26s. 3d., against 24s. 6d. to 26s. 6d. Australian, ex store, 19s. to 20s., against 19s. 6d. to 20s.

BARLEY.—"December" futures were quoted at 54½ cents per bushel in Winnipeg on Wednesday, against 53½ cents last week and 52½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 50s., against 30s. to 50s. a week ago.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURES	Jan. 4, 1932	Jan. 4, 1933	Dec. 20, 1933	Jan. 3, 1934	Dec. 12, 1934	Dec. 19, 1934
Winnipeg (No. 1 Manitoba)						
—Cents per 60 lb.	62½	46½	58½	65½	78	77½
Chicago (No. 2 Winter)						
—Cents per 60 lb.	55½	46½	79½	84½	100½	97½

The visible supply of wheat in Canada, at 123,470,000 bushels, shows a decrease of 169,000 bushels on the week. Supplies a year ago amounted to 113,681,000 bushels.

OTHER FOODS

SUGAR.—The New York market continues featureless, the spot quotation being unchanged on the week. In London, business has been quiet, and quotations have eased a little. The spot price in New York on Wednesday was 3.085 cents per lb., as compared with 3.085 cents per lb. last week and 3.00 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March delivery" at 4s. 2½d., against 4s. 4½d. to 4s. 5d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London	69	599	1,436	1,148	14,918	15,594
Liverpool	36,275	28,390	13,710	13,734	191,075	117,873
Total tons	36,344	28,989	15,146	14,882	205,993	133,467
Last week	37,203	11,053	15,095	15,409	184,795	119,360

COFFEE.—The New York market remains quietly steady. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. In London, trade has been quiet to dull, with quotations showing little change. Last week's movements of coffee in London were as follows: Brazilian, landed, 128 bags; delivered for home consumption 62 bags; exported, 146 bags; stocks, 27,856 bags, against 24,376 bags a year ago. Central American, landed, 2,089 packages; delivered, for home consumption, 1,792 packages; exported, 1,035 packages; stocks, 72,899 packages, against 57,997 packages last year. Other kinds: Landed, 2,353 packages; delivered, for home consumption, 2,234 packages; exported, 257 packages; stocks, 70,537 packages, against 103,289 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5 cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "January-March," was 22s. to 22s. 3d. per 50 kilos, c.i.f. Continent, as against 21s. 3d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 10,191 bags; delivered, for home consumption, 6,622 bags; exported, 560 bags; stocks, 143,904 bags, against 102,113 bags a year ago.

TEA.—No auctions have been held this week. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land
Dec. 14, 1933	d. 13-80	d. 13-93	d. 15-39	d. 11-04	d. 10-74	d. 12-43
Nov. 15, 1934	13-10	11-51	14-15	10-29	9-57	10-69
Nov. 22, "	11-96	11-45	13-73	10-30	9-21	10-83
Nov. 29, "	11-66	11-50	13-39	10-19	9-31	10-85
Dec. 6, "	11-72	11-53	13-26	10-19	9-53	11-10
Dec. 13, "	11-35	11-34	12-82	10-18	9-33	10-81

RICE.—The "spot" price was 8s. 3d. per cwt. on Wednesday, as compared with 8s. 3d. per cwt. a week ago, while the forward quotation, at 6s. 9d. per cwt. (new crop) shows a fall of 1½d. on the week. Movements in London during the past week were as follows: Landed: 227 tons; delivered, 63 tons; stocks, 2,513 tons, against 1,593 tons a year ago.

POTATOES.—The ample supplies of potatoes on offer this week have encountered a fair demand, and quotations are steady. At the London Borough Market on Tuesday, light soil "King Edward" sold at 5s. 6d. to 6s. per cwt., ex market, as against 5s. 6d. to 6s. last week.

SPICES.—"Lampung" was quoted at 6½d. per lb. on Wednesday against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 75 tons; delivered, 48 tons; stocks, 745 tons, against 624 tons a year ago. White, landed, 472 tons; delivered, 52 tons; stocks, 12,654 tons, against 2,068 tons a year ago.

MEAT.—Supplies have been substantial this week, but the continuance of mild weather acts as a check upon demand. Prices have fluctuated little. At Smithfield on Wednesday, Argentine beef, chilled hindquarters, was quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 10,186 tons, against 10,115 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.3 per cent. of the beef supplies, against 80.3 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 69 per cent. of the total supply of mutton and lamb, against 66.1 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—A much quieter feeling has manifested itself in most sections and quotations have taken an easier turn. Favourable news of harvesting operations in Argentina has caused some reaction in linseed, but buyers both here and on the Continent are seemingly disposed to await the official estimate of the new season's yield before resuming purchases. For December shipment to Antwerp £9 10s. has been paid. The current price of Plate to Hull January-February is around £9 5s. per ton. Indian linseed attracts but meagre attention, though shippers are more reasonable and quotations are largely nominal. Nearly the whole of the old Plate crop has now been shipped. The quantity of linseed now afloat for Europe is 66,900 tons (including 14,400 tons from India), or 8,500 tons less than last week; and for the United States and Canada 18,200 tons, against 22,900 tons a year ago. Cottonseed is in poor request and decidedly easier in price. Black Egyptian for shipment to February 7th is offered at £6 per ton, delivered terms.

Trade in vegetable oils is only moderately active. Raw linseed oil is easier in sympathy with seed, but is steady at the decline. December delivery is quoted £19 2s. 6d. per ton (naked) ex Hull mill, and January-April £19 5s. Crude cotton oil is not so firm. Egyptian ex Hull is quoted £20 and refined £22 per ton prompt. Oilcakes are in fair demand and steady in price.

HIDES AND LEATHER.—Considering the nearness of the Christmas holidays, trade in the hide, leather and footwear markets has kept up remarkably well, and although few firms are expecting much fresh business until the New Year, indications point to the prospect of a quite satisfactory resumption. There was very little change in prices for hides and skins from home-slaughtered cattle at the auctions this week; a few lots of warbled ox and heifers made ½d. per lb. less, while one or two classes of cows appreciated by a similar amount. Calfskins were inclined to be easier on the lighter weights, but heavies remained unchanged. The imported hide market has shown a firmer tendency, particularly in regard to wetsalted Argentine ox, in which descriptions a fair amount of trade has been done. Dry South American hides are unchanged in price, but there has been a fractional easing in quotations for Capes.

Business in the leather market has continued steady and, although individual requirements are still small, there is a fair amount of inquiry for rather larger parcels for delivery in the New Year. In English and wetsalted bends, request has been mainly in regard to light and medium averages and some quite good sales have been effected. Dry hide bends are quiet, shoe manufacturers not wishing to take more than they possibly can into stock until after the holiday. Inquiry for offal, both rough and pinned, has also been rather restricted. The upper leather section has shown less activity than the sole section and, although practically all descriptions have been asked for, orders have been most rigidly confined to goods required to complete those footwear orders which are wanted before the closing down.

TIMBER.—The spot market for European and Canadian building and joinery woods has continued dull, the large November imports, the heavy stocks on hand, unfavourable weather for outside work, and the keen desire to sell, all being unfavourable features to a healthy trade. Imports of the above descriptions for the eleven months of 1934 are 13.3 per cent. above those for the corresponding period of 1933 and 50 per cent. over those of January-November, 1932. In the forward market the North European shipping season is closing quickly. It is believed that many of the later sales have been made by shippers at low prices "to clear," which will tell on the strength of the spot market. Business for next season's goods (which will begin to arrive about May next) is in abeyance until the quantities and prices of the Russian exports to the United Kingdom have been definitely fixed. Canada has now to be regarded as a formidable competitor, and if this year's volume is surpassed next year this must perforce tell on the demand for the European varieties, the producers of which only a short while ago regarded this market as their own.

There is a good demand for the popular sawn hardwoods as a whole, but imports of American oak have shown a tendency to

decrease lately. The reason for this is that N.R.A. minimum export prices restrict forward business. London dock stocks of all oak lumber are slightly larger than those of a year ago, but whereas the American descriptions are of smaller volume the European are larger. There are plenty of Canadian hardwoods going into consumption, whilst another progressive branch of Empire trade is that in mahogany logs, principally from British West Africa, the demand for which is increasing at firmer prices. The call for mahogany lumber from British Empire sources is increasing month by month. More pitwood has also come forward this year, mainly from foreign sources, the collieries being slightly busier than at this time last year. Plywood imports have declined in recent weeks, although arrivals this week are in excess of those of 1933, and demand also is better.

RUBBER.—The tone of the market has been fairly steady during the past week and prices have fluctuated within rather narrow limits. Wednesday's quotations showed a slight advance over those ruling a week ago. The London market will be closed from noon to-day (Saturday) until Thursday next, and also on New Year's Day. In New York, Wednesday's spot price for rubber, at 12½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for January-March, 1935, as against 6½d. to 6¾d. a week ago. Stocks in London and Liverpool at the end of last week, at 132,499 tons, show an increase of 3,037 tons as compared with the preceding week.

WHOLESALE COMMODITY PRICES

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription **8s. 2d.**

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

RELUCTANT RECOVERY

THE Christmas reflections on the state of world politics which we described last week disclosed a record in the past year of one disappointment after another, of civil strife in several countries, of the breakdown of the most strenuous efforts to attain collective security, and of grave misgiving for the year that lies ahead. Yet the lessons of experience have apparently been taken to heart, for we were able to describe the political situation as a little better at the close.

If our politician were to extend his survey to the economic field he would find a somewhat different picture. A year ago Great Britain, in company with most countries of the world, was experiencing a definite and substantial recovery from the depths of the great depression, and the momentum of the upswing continued well into 1934. But by the early summer the rate of recovery had slowed down, and for the greater part of the year we have been doing not much more than hold the ground that has been gained. This conclusion emerges from our own index of business activity (the graph of which will be found this week in our usual Trade Supplement), from the Board of Trade's index of production, from the experience and diagnoses of bankers and industrialists, and from the records of international statistics.

No single generalisation, however, applies equally to the whole world, and a closer analysis shows that progress has not been equally distributed. Indeed, a contrast at once suggests itself between the countries of the sterling group—which have done relatively well—and those of the gold bloc—which have been making heavy weather—while the United States come somewhere in between. We are not concerned here with the causes of this disparity in experience, but merely recall the evidence of it which is continually accumulating—as, for example, when the Netherlands Association of Employers recently stated in a letter to the Prime Minister that "wherever we look, there is no escape from the impression that Holland's sources of prosperity are definitely drying up." Holland, with its high standard of living and its huge trade built up on commercial freedom, is in a peculiarly vulnerable position when the world is in a mood of nationalistic restriction. But an assessment

of the present position in other gold standard countries shows a similar state of stagnation and of economic difficulty if not of actual regression. As to America, she has had ups and downs. The dollar has been stabilised in terms of gold for practically the whole of the year; but confidence has not yet returned, and the best that our New York correspondent can find to say is that the business world is hoping for a recovery in the spring—based on a resumption of building and a fresh expansion of the motor industry.

It is interesting to compare with these general statements the movement of wholesale prices, the heavy fall in which was at once the measure of the great depression and the cause of many of its far-reaching complications. Prices in the countries of the gold bloc have continued to fall, and the sustained downward trend has accentuated their internal difficulties; prices and production have tended to decline together. But in the rest of the world the curve of activity has not followed the movement of prices; for in the sterling group, where the improvement has been most pronounced, prices have neither risen nor fallen on balance during the year, while in America, where Mr Roosevelt's policies have succeeded in raising the price level substantially, the huge mass of the unemployed has not been appreciably reduced nor investment stimulated.

The fatal tendency to confuse cause and effect is nowhere better illustrated than in this matter of prices, for all over the world attempts have been made to escape from the slump by raising prices—without removing the causes that brought them down. Thus N.R.A. has raised building costs, but has not sufficiently increased the effective demand for houses—with the result that two incipient building booms have during the past twelve months been nipped in the bud. Elsewhere, many control schemes for restricting the supply of materials have been brought into effect and have raised prices. This has benefited individual trades; but in no case has it helped general recovery. France, so far as price policy is concerned, has been caught in two minds; for while she is ostensibly seeking to deflate so as to reduce costs to the price-level

resulting from the high value of the franc, she is at the same time holding up the cost of living by quotas and restrictions in the interests of her peasantry. The trouble with the world is that the price level is low because of the absence of demand. Almost nothing is being done to remedy this, and the raising of prices—by whatever method—without increasing the volume of effective demand for goods merely makes matters worse. Almost nothing has been done the world over to remove restrictions on trade, to lower tariffs, to encourage investment, or to revive confidence. In short, the world has swung back from the excesses of the depression—but it cannot yet be said that either monetary or trade policies have provided the conditions in which a new expansion of world trade can take place.

Meanwhile, how has England fared? The outstanding contributions of State policy towards recovery in 1934, as in past years, have been the maintenance of confidence in our financial stability and the continued policy of cheap money, which have together resulted in a steady fall in the rate of interest on long-term investments. But this monetary policy has not sufficed to bring about expansion. There has been a small increase of external trade and a more substantial expansion at home. Technical progress and business reorganisation have probably been more actively pursued than at any time since the war. Profits are recovering, and in new industries turnover is again expanding. But coal and cotton are now on a level of activity from which they are unlikely in present conditions to rise very substantially, and the growth of new industries is not sufficiently rapid to absorb many of the unemployed. No impression has therefore been made on the numbers of the unemployed since May, and the general attitude of the business world is not one of looking forward optimistically to further rapid progress.

For this world conditions are generally blamed; but our own policy in face of these conditions cannot escape censure, and its contradictions are at last being exposed even on the Government side of the House of Commons. The Government, through the mouth of Mr Runciman, offers a subsidy to shipping in the hope that we may induce other countries to abandon the subsidy policy and that one day there will be sufficient international trade to keep our ships at sea. But, at the very same time, our rulers are doing their best to prevent this by striving, at great cost to the taxpayer and consumer, to increase our home production of sugar, wheat, bacon and many other articles instead of acquiring them in exchange for our exports. It is imperative to find ways of providing useful work for our unemployed, but it is folly to make work at the cost of throwing others out of employment. There is no more urgent task in the New Year than that of bringing order out of the present chaos of our own economic policy.

In the political sphere we have recently seen the beneficial and instantaneous effect of clear and definite action by this country. The same could undoubtedly be achieved in the economic sphere—if only the Government knew its own mind. A conception of Britain's economic future and of its place in the world firmly and persistently pursued and translated into policy, would work wonders at home and abroad. Indeed, its effect in restoring general stability and well-being would be second only in importance to the supreme political task—without which even the wisest economic programme must come to grief—namely, the restoration of real peace between the nations.

The Road to Recovery

by

Sir Henry Strakosch, G.B.E.

will be published next week
as a Special Supplement to

The Economist

TIME AND SPEED

(BY A CORRESPONDENT)

THOSE of us who are old enough to remember the swimming of the Channel by Captain Webb will recall the stupefaction with which the news was received. It was as easy to imagine a man jumping a hundred yards. Swimming suddenly took on a new capacity in a new world. So with flying. Many gallant and quick flights had been made: the map was criss-crossed by air routes; but people only vaguely realised what was happening till they awoke with a start the other day to find that London was but seventy hours from Melbourne.

As a result of Mr C. W. A. Scott's and Mr T. Campbell Black's record-making flight to Melbourne, and the fine record of the Dutch air liner which came in second, a demand for speedier Empire air services at once arose. The response has been quickly made, for on Thursday of last week the Under-Secretary of State for Air announced in the House of Commons that, in conjunction with the Postmaster-General, the Air Ministry had been in consultation with Imperial Airways for many months; that proposals had been drafted, and approved by His Majesty's Government, who had conveyed them to the Dominion Governments concerned, and that, pending the approval of these Governments, they could be placed before the House. The scheme provides for

A very material improvement on present time schedules between the several parts of the Empire concerned; secondly, there is to be a substantial increase in the frequency of services; and, thirdly, all first-class mail to the Empire countries covered by the projected services is in future to be carried by air.

The new time schedules allow for just over two days to India, two and a half days to East Africa, four days to the Cape, four days to Singapore, and seven days to Australia. Four, or possibly five, services a week to India are envisaged; three a week to Singapore and East Africa; and two a week to South Africa and Australia respectively. No details of the financial arrangements were given, but the Under-Secretary referred to "a comprehensive programme for the development of a ground organisation of Empire air routes on a basis which will enable the services, which will cater for passenger as well as mail traffic, to operate by night as freely as by day." In view of so important a step forward it is opportune to examine the present position of British commercial aviation as compared with that of other countries.

Six important countries compete in the air for world traffic and world commerce, the enterprises of the rest being either small or local. These six—Great Britain, United States, France, Germany, Holland and Italy—differ widely in the conditions under which they operate, the objects they have in view, the results they are obtaining and the money they are spending. Compare first of all Great Britain with the United States. In our island the home traffic is small, and is unlikely to extend greatly, seeing how short are our distances and how excellent our roads and our trains. Its chief opportunity will be overseas to Belfast, Dublin and the Channel Islands, where air competes with slow sea transport and passengers avoid sea-sickness. Except for such routes and small inland services, British commercial flying is represented by the overseas activities of Imperial Airways, the only company receiving a Government subsidy. Once across the Channel they have a concentrated and profitable European service; but the most important of their activities are the great Empire routes, of which one is to Cairo, Baghdad, India, Singapore and Brisbane, a total distance of 12,808 miles. The single fare is £195, against £96 to £123 by steamship, and the time taken is seven days. Another is through Cairo, by the Soudan and Nairobi to South Africa and Capetown—7,910 miles. The fare is £130, against £66 to £90 by steamship, and the time taken is four days. The last section of the Australian flight, Singapore to Brisbane, is undertaken by Qantas, the allied Australian company. Between Croydon and Australia eight foreign countries are crossed, each with its different ground organisation. Petrol on Empire routes costs 2s. 6d. a gallon, representing at that figure about 35 per cent. of total cost. The services get a subsidy

from the British Government (but with substantial additions from Dominion and Colonial sources for the Cairo to Capetown route) of £548,000 a year. Let it be added that, except for short routes, no commercial aeroplane in any part of the world takes the air without a subsidy.

Such are the British conditions. Very different are the American. There you have immense internal routes—New York to Los Angeles is 2,609 miles; a domestic service worked, not by a unitary company such as Imperial Airways, but by thirty-one separate concerns; a ground staff all of one nationality; and petrol at 7d. a gallon, against 2s. 6d. There is little that corresponds with our Empire services, but as against these the American companies do, and we do not, launch out into foreign lands. They are active in South America, which they are coming to regard almost as their own territory, and they are beginning to operate in China; consequently about one-third of their subsidy is spent outside the national boundary. The actual cost of this subsidy to the United States Government was for the last financial year £4,750,000 against our humble £548,000. We treat the air as a bond of Empire, a means of quickening Empire mails, and a help to Empire trade. The United States, not having the same problem, have turned to foreign trade. Their incursions into South America, China and elsewhere are commercial—"showing the flag," and getting a grip on foreign markets. It is difficult to estimate their success. But they are being followed by France, Germany and Holland. France, including her South American service, spent £1,465,000 last year in subsidy, and Germany, in 1932, £850,000. Both these sums, it will be seen, greatly exceed the British. Holland's payment is impossible to calculate. Nominally, she spent £72,000 on the average of the last three years, and in addition £82,000 in the Dutch East Indies, a total of only £142,000 a year, which is astonishingly low even for so thrifty a people. But there is in reality much more, because of some ingenious indirect subsidies too complicated to describe.

All three countries follow Britain in one respect, for they each have a unified transport system. But all follow the United States in making a bold push for foreign trade. France, of course, runs European services, and also an excellent one to her possessions in North Africa: Germany too has spread her net over northern Europe, including Russia. And each has a substantial internal traffic. But their great goal is overseas. The only existing passenger service to South America is by the Graf Zeppelin, which has been suspended for the winter. It carried on a fortnightly service from Friedrichshafen to Pernambuco, at a fare of Rm. 1,400 throughout the summer. Air France has a weekly air mail service from Toulouse to Rio, Buenos Aires and Chile. But all three countries are planning to fly regularly across the South Atlantic, and to carry passengers and goods as well as mail.

The Dutch up to now have concentrated solely on the route to the East. They fly to Batavia, 9,037 miles, in nine days in winter and eight days in summer, but these times will be improved, and it is said that a five-day service will be started. In fact, the Christmas flight, which met with so terrible a disaster, was to have done it in three. They have one ambition, to reach Australia and get a share in the Australian mail.

How does Great Britain compare with her European rivals? Imperial Airways on their world services carried last year a greater ton-mileage than Air France, 90 per cent. more than K.L.M., the Dutch company, and double that of the Italians; German figures are not available. Ton-mileage figures of the United States are, of course, not comparable. But economically Britain is ahead. The United States have reached high speed and high technical efficiency, but at great cost.

Speed is the commodity which air transport has to sell; but it can be bought too dearly. Speeds which are technically possible are not practicable economically. Air transport, like that by sea or rail, has its economic speed which can only be increased at a ruinous price. The new Cunarder is a 28-knot boat: at 30 knots she would have crossed more quickly and competed on better terms: but this 7 per cent. increase in speed would have entailed a 21 per cent. increase in cost, and prohibitive working ex-

penses. Opinions differ as to the proper normal economic cruising speed for long-distance air transport. The Singapore-Brisbane section of the Australian route is being flown at 145 miles per hour: the highest average of any American fleet is 162. Probably at the moment 140 to 150 is the economic limit; but things move swiftly in the air, and by the time these words are printed some inspired inventor may have designed an aeroplane that is still faster, and yet economic. But the United States have admittedly gone too fast. An extravagant air boom has been followed by a disastrous slump: an output of 6,000 planes in 1929 fell to 1,050 in 1933, a figure lower than ours: some few individuals made fortunes, whilst thousands of small investors suffered lamentable losses. Thereupon, the aviation companies with one accord told the Federal Aviation Commission that they would be ruined: "at the present rate all the lines will be in bankruptcy not later than June 30, 1935," and, again, "most, if not all, of the present companies carrying mail, express and passengers by air . . . can continue only so long as their capital reserves hold out." Against this, Imperial Airways pay a handsome dividend.

But before we are too complacent, let a word be said on the other side. We traditionally distrust subsidies, and, indeed, most of them are awarded ill-advisedly; but it might pay us to extend more into world trade than we do now. We might copy the United States in this, and the money would be well invested. After all, if subsidies are to be paid at all, it is desirable to get the best return for them. We have shown that we can work air transport more safely, more efficiently and, above all, more cheaply than our rivals. Moreover, subsidies for the air cost little compared with the large sums we have spent on other services. The future may show that we should have been wiser to have spent a quarter of a million in helping the air than a much larger sum in helping shipping. An extra quarter-million in the air would have taken us a very long way indeed.

MEAT SUPPLIES AND PRICES

IN our issue of December 1st we attempted to trace the effects of import restriction on bacon supplies and prices. In this article we discuss the effects of restriction on supplies and prices of beef and mutton respectively. A marketing scheme has not of course been in operation for beef and mutton, as it has for bacon.

In the case of beef and mutton, unlike that of bacon, a long-term change of demand was already operating before the depression began. A transfer of taste away from beef and towards mutton and pork was gradually taking place. Total supplies of beef and veal on the British market were more or less stable between 1923 and 1930, but prices were steadily, if slowly, falling. Annual *per capita* consumption in Great Britain dropped from 71.2 lbs. in 1925 to

69.8 lbs. in 1930. A tendency was also apparent for chilled beef, which comes mostly from South America; to drive frozen beef, which comes from Australia, out of the field. At the same time, *per capita* consumption of mutton and lamb, which comes mainly from New Zealand but also from Australia and Argentina, was increasing. Nevertheless, the total of beef and veal consumed was still twice as great as that of mutton and lamb in 1930.

The subsequent history of beef supplies and prices gives clear evidence of this pre-depression shift of demand. When the depression supervened, a general falling off in purchasing power was added to the shift of taste away from beef, and prices fell heavily. The wholesale price of English beef fell from 6s. 1d. in April, 1930, to 4s. in October, 1932, and of Argentine from 5s. 7d. in August, 1930, to 3s. 4d. in February, 1932. This fall was wholly due to a falling off in demand, and not, as in the case of bacon and mutton, partly to an increase in supply; for total supplies of beef and veal fell from 1,268,000 tons in 1930 to 1,188,000 tons in 1932. Both home supplies and imports fell, though Empire imports were actually increasing rapidly. A fall of about 9 per cent. in foreign imports coincided with a 20 per cent. fall in the price of Argentine beef; and a fall of about 8 per cent. in home supplies coincided with a fall in prices of about 13 per cent. Meanwhile retail prices of British had fallen from 1s. 4½d. in January, 1930, to 1s. 2½d. in December, 1932, and of frozen from 11½d. in February, 1930, to 8½d. in November, 1932.

* On the basis of the first ten months. † Fat stock Reorganisation Commission Report. ‡ Ministry of Agriculture estimate.

Although a shrinkage of demand had been the cause of the fall in beef prices, the Government decided in 1932 to attempt to raise prices by contracting supplies. Restriction was agreed on at the Ottawa Conference in the summer of 1932. Certain voluntary restrictions of foreign imports were arranged in the last two months of 1932; and the Ottawa Agreements actually came into force at the beginning of 1933. By these Agreements foreign beef imports were to be limited in the next two years to the following percentage of the "Ottawa year" (June, 1931-June, 1932):—

	Jan.- March, 1933	April- June, 1933	July- Sept., 1933	Oct.- Dec., 1933	Jan.- March, 1934	April- June, 1934
Chilled beef..	100	100	100	100	100	100
Frozen beef..	90	85	80	75	70	65

Still greater emergency reductions of foreign imports were arranged later, and detailed arrangements for restriction were embodied in the Argentine Agreement. The Dominions, however, were promised free entry into the British market up to June 30, 1934. In return Australia promised to "use its best endeavours to ensure" that frozen beef exports to this country should not increase by more than 10 per cent. Finally, it must be remembered that a heavy tariff was imposed on beef imports from Ireland in July, 1932.

The effect of these restrictive efforts was a drop in foreign imports of beef and veal from 531,000 tons in 1932 to 496,000 tons in 1933 and 451,000 tons (on the basis of the first ten months) in 1934. Meanwhile, Empire imports rose from 84,000 tons in 1932 to 115,000 tons in 1933 and 149,000 tons in 1934 (on the basis of the first ten months). There has actually been a fall in total imports both between 1932 and 1933, and (despite heavy Empire imports) between 1933 and 1934. Home supplies fell slightly between 1932 and 1933; and no figures are available for 1934. Total supplies were consequently very slightly lower in 1933 than 1932, and seem likely to fall a little further in 1934.

Restriction has entirely failed, in the case of beef, to raise prices. Wholesale prices, after a brief increase between November, 1932, and January, 1933, continued to fall until the middle of 1933, and have scarcely risen since. The annual average price of English beef actually fell from 4s. 11d. in 1932 to 4s. 5d. in 1933 and 4s. 4d. in the first ten months of 1934; and the annual average of Argentine fell from 3s. 11d. in 1932 to 3s. 9d. in 1933 and 1934. Meanwhile retail prices of English beef fell from 1s. 2½d. in December, 1932, to 1s. 1½d. in November, 1934; retail prices of Argentine remained more or less stable. Throughout 1934 both retail prices have been well below the pre-depression level.

When the Fat Stock Reorganisation Commission reported this summer and the temporary beef subsidy was granted, the general effect of restricting beef imports had been to maintain total supplies slightly below the pre-restriction level and well below the pre-depression level, foreign imports being heavily reduced and Empire imports heavily increased. Prices have remained at the pre-restriction level—about 20 per cent., that is to say, below the pre-depression level.

Mutton and lamb have fared differently. Supplies had been increasing before the depression and they continued to increase from 1930 to 1932, despite the falling off in purchasing power. Both imports and home supplies increased substantially, and total supplies were 616,000 tons in 1932 compared with 545,000 tons in 1930. The result was a heavy fall in prices. Wholesale prices of English mutton fell from 7s. 10d. in June and July, 1930, to 4s. in October, 1932, or nearly 50 per cent., and those of New Zealand mutton from 5s. 4d. in February, 1930, to 2s. 4d. in October, 1932, a fall of about 55 per cent. The annual average shows that the fall in prices was much greater than the fall in supplies. It is reasonable to infer, therefore, that demand was falling; i.e. that the shift of taste in favour of mutton was outweighed during these years by the general fall in purchasing power. Meanwhile retail prices of English mutton fell from 1s. 6d. in the spring and summer of 1930 to 1s. 2d. in December, 1932, and of frozen mutton from 11½d. in the spring of 1930 to 9d. in December, 1932:—

* Australia and New Zealand.
† Argentina, Uruguay and Chile.
‡ On the basis of the first ten months.
§ Fat Stock Reorganisation Commission Report.
|| Ministry of Agriculture provisional estimate.

Restriction of mutton imports with the object of raising prices was also adopted by the Government in 1932. Voluntary emergency restrictions with Australia, New Zealand and Argentina were arranged in November and December, 1932. On January 1, 1933, the Ottawa Agreements came into force, according to which foreign imports of frozen mutton and lamb were to be reduced by the same percentages of the "Ottawa year" imports as applied to frozen beef in the table given above. Australia also promised to limit mutton and lamb imports to Great Britain to the quantity exported in the Ottawa year.

The effect of these restrictions was a fall in imports between 1932 and 1933 and a subsequent rise to a figure above that of 1932. Actually a large rise in Empire imports has more than offset a large fall in foreign imports; foreign imports are likely to be 40 per cent. less in 1934 than in 1930, though total imports are greater. Indeed, one of the salient movements over the whole period in the case of both beef and mutton has been the supersession of foreign by Empire imports. Home supplies of mutton and lamb have remained more or less stable since 1932; so that

total supplies in 1933 were still well above the pre-depression level of 1930. And a further rise is more likely than a fall for the whole of 1934.

In spite of this increase in supplies, which contrasts with a decrease of beef supplies, prices have risen, whereas beef prices have failed to rise. Wholesale prices of English mutton rose from an average of 4s. 6d. in 1932 to 5s. 4d. in 1933 and to 6s. in the first ten months of 1934, and of New Zealand from an average of 2s. 9d. in 1932 to 3s. 2d. in 1933 and 3s. 8d. in the first ten months of 1934. Retail prices of English rose from 1s. 2d. in December, 1932, to 1s. 3d. in November, 1934, and of foreign from 9d. in December, 1932, to 9½d. in November, 1934. Wholesale prices, that is to say, have risen almost to the pre-depression level, and retail prices have risen above the pre-restriction level.

The principal moral of the whole story seems to be the potency of the influence of demand on the price of even such a comparative necessity as meat. During the depression period of 1930-32 the general shrinkage of demand was so powerful that beef prices fell, although supplies were falling. In the period of reviving demand between 1932-34 the shift from beef to mutton has been so marked that mutton prices have risen, despite an increase in supplies, and beef prices have fallen, despite a decrease in supplies. In 1930 the retail price of beef, both English and imported, was higher than that of mutton (judging by representative quotations). To-day it is lower; though beef supplies have fallen and mutton supplies risen. The further fact that wholesale mutton prices have risen, while beef prices have fallen, since 1932, although mutton prices fell faster than beef prices between 1930 and 1932, suggests that the policy of artificially maintaining beef prices is actually *accelerating* the shift of demand away from beef. At any rate, the policy of maintaining beef prices, whether by import restriction or levy, is likely to be a dangerous one. The Government is trying to sell a fixed quantity of British beef at a rising price on a falling market. Either levy or restriction will tend to raise prices, and this, in the case of beef, may restrict consumption so sharply as to defeat its own end. Indeed, the subsidy policy has involved the Government in a tangle which it will find it difficult to unravel.

THE YEAR'S NEW CAPITAL

THE demand for capital is one of the surest indices of economic activity. In an economic depression, the rate of interest generally falls, leading to recovery through increased investment at lower rates of interest. In the last two and a half years the rate has continued steadily downward, but economic activity has found an equilibrium at a lower level, thanks to the world-wide nature of the crisis and to the narrowly conceived national measures for its solution. Existing concerns have found themselves liquid, and few outlets for new capital and new enterprise are apparent.

The figures of new capital raised in the London market in the last three months bring us once more to the end of another year's statistics; but the present figures are not over-encouraging. Of the total of £43.7 millions raised, as against £17.7 millions in the corresponding quarter of 1933, the British Government borrowed only £1.4 millions in the form of a net surplus of Savings Certificates sales, while the balance was practically accounted for by British corporations (municipalities, public boards, etc.), gold and copper mining concerns, and a few home industries.

NEW CAPITAL ISSUES: CLASSES OF BORROWERS
(£ millions)

	Total	British Government	Foreign and Colonial Govt.	British Colonial and Foreign Corpns.	Foreign Railways	Mines, Finance, and Exploration	Rubber and Oil	Balance (Mainly Home Industry)
Whole year, 1927.....	355.1	66.0	67.5	37.9	5.4	33.2	11.0	134.1
" " 1928.....	369.0	83.8	56.1	28.4	3.1	49.7	8.7	141.2

" " 1930.....	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
" " 1931.....	102.1	10.7	32.2	8.0	2.9	12.2	0.2	35.9
" " 1932.....	188.9	102.8	23.8	Nil	2.7	0.8	29.9	...
" " 1933.....	244.8	150.8	29.4	24.6	Nil	6.1	0.2	33.7
" " 1934.....	169.1	44.1	8.4	36.1	Nil	23.9	1.9	54.7
1934—1st quarter ..	20.1	1.3	1.5	5.7	Nil	3.1	0.2	8.3
2nd " ..	76.8	41.6	6.9	6.3	Nil	7.0	0.1	14.9
3rd " ..	28.5	Dr. 0.2	Nil	4.0	Nil	7.1	0.8	16.8
4th " ..	43.7	1.4	Nil	20.1	Nil	6.7	0.8	14.7
Total 1934	169.1	44.1	8.4	36.1	Nil	23.9	1.9	54.7

There were the usual absentees from the London new capital market, namely, foreign and colonial Governments, foreign and colonial corporations, and foreign railways. The net new borrowing in the last quarter of 1934 brings the annual total to £169.1 millions, or only two-thirds of the total in 1933 and the next lowest total to the record "low" of £102.1 millions in the crisis year of 1931. This is a disappointingly low total, but British corporations have provided a bright spot in place of the British Government.

Our next table shows the geographical distribution of the new issues:—

DESTINATION OF NEW CAPITAL

	Year 1913	Year 1930	Year 1931	Year 1932	Year 1933	Year 1934
United Kingdom—						
Government	Nil	65,640,000	10,700,000	102,739,200	150,813,600	44,100,000
Other	35,951,200	105,006,100	43,802,000	60,332,800	59,426,500	93,590,300
British Possessions—						
Government	26,278,700	49,081,300	30,571,600	23,761,200	24,174,500	8,461,200
Other	49,858,500	12,366,900	7,936,800	1,785,800	4,976,300	21,462,200
Foreign countries—						
Government	76,137,200	61,448,200	38,508,400	25,547,000	29,150,800	29,923,400
Other	26,158,200	21,330,000	1,740,000	Nil	5,298,600	Nil
Grand Total	196,537,000	267,800,700	102,144,300	188,910,000	244,780,500	169,108,700

From these figures the slump in foreign borrowing, largely due to the Treasury embargo, is patent. Indeed, in the last quarter the only activity abroad seemed to be in gold mines in British possessions. On the other hand, new issues for "other" than Government purposes in the United Kingdom have risen in 1934 to very near their 1930 level, at £93.6 millions, and form a higher proportion of the total raised than for many years past.

The next table analyses the new issues into their public or industrial groupings, and gives the corresponding figures for 1933:—

Description	Whole Year, 1933	Year 1934

Total ...	244,780,500	125,425,200	43,683,500	169,108,700

From this table it is clear that the last quarter's figures have added little novelty to the year's chronicle. The absentees of the last quarter are again notable; activity is centred upon British Corporations, in which category come the borrowings of £3 millions by Sheffield, £6 millions by the Central Electricity Board, £5 millions by Birmingham, and £1 million by London and Home Counties Electricity; upon gold mines, among which appear borrowings of £600,000 by Kalgoolie in Australia, £2½ millions by "Kafir" gold mines, and a little for copper and tin concerns under foreign mines; and upon iron, steel, coal and engineering, in which group are new borrowings of £2½ millions by United Steel Companies, and of £1.6 millions by Colvilles. There was a little activity apparent in plantations, holding and investment trusts, and property companies under the heading "Exploration, financial, etc."; and again in rubber, electric light, cinema, motor accessories, and patent medicine concerns. The Eagle, Star and British Dominions Insurance Company raised a shade over £1 million in new capital (second cumulative preference shares at 4 per cent.). The once considerable repository of new borrowers, under the heading "Manufacturing and Miscellaneous," accounted for very little last quarter; in this group appear such concerns as three aircraft manufacturing companies, one cement concern, one asphalt company, one paper manufacturer, two or three automatic device manufacturers, and one brickmaking concern.

The whole year's figures show to what a large extent the new capital market has proved dependent upon one or two outstanding lines of economic development—e.g. Government and corporation borrowing, gold mines, property trusts, iron and steel companies (after the imposition of a very high tariff), electric light and power undertakings, and concerns mainly ministering to home demand for "secondary" goods or "conventional necessities" like entertainments, patent medicines, hotels, breweries, and the concerns allied to the now active building industry.

Our next table shows the distribution of the net new borrowing over the different forms of participation in enterprise:—

Year		NATURE OF BORROWING			Total
		Debentures, Bonds, etc.	Preference Stocks and Shares	Ordinary Stocks and Shares	
1927	...	228,958,000	36,836,600	89,371,400	355,166,000
1928	...	212,917,900	45,062,600	111,177,600	369,158,100
1929	...	137,670,300	31,543,400	116,025,700	285,239,400
1930	...	230,364,800	15,824,600	22,090,100	268,279,500
1931	...	74,935,600	6,911,900	20,296,800	102,144,300
1932	...	170,172,800	12,773,800	5,963,400	188,910,000
1933	...	222,064,300	12,733,700	9,982,500	244,780,500
1934	...	102,769,300	21,461,000	44,878,400	169,108,700

The proportion of new capital raised in the form of ordinary ("equity") stocks and shares is very much higher—higher than at any time since the last prosperity year, 1929. Similarly, the preference stock and share has come back into favour. But the debenture has fallen into disfavour; for we have to go back again to 1929 before we find debentures accounting for so small a proportion of the total of new capital raised.

The following table is striking evidence of the tone of the London capital market, for in almost every case the new issues of the year stand at substantial premia over their issue prices. The latest quotations give no indication of any expectancy of lower rates of return on capital in the near future.

The following table shows the principal issues of the year 1934, with their issue prices and latest quotations:—

Month of Issue	Name and Description	Nominal Amount	Issue Price	Price, Dec. 24, 1934
1934				
Jan.	Nyasaland Government 3 per cent. Guar.	1,570,000	98½	102
Jan.	Port of London 3½ per cent. Reg. Stock	12,961,874	par	107½
Feb.	Raleigh Cycle Holdings Ord. £1	500,000	25/-	38/3x
Feb.	Australia 3½ per cent. 5½ Pref. £1	1,000,000	21/-	23/-x
Feb.	British Celanese 5½ per cent. Deb. Stk.	21,638,550	97	104
Feb.	Powell Duffryn Coal 4½ per cent.	2,800,000	par	104x
March	United Kingdom 3 per cent. Funding Loan	2,500,000	102½	109
April	Liverpool Corporation 3 per cent., 1954-64	150,000,000	98	104½
April	Canada (Govt.) 3½ per cent., 1950-55	4,000,000	96½	102
June	Kent Gold Arica (10/-)	10,000,000	98½	105
July	Cory (Wm.) £1 shares	1,000,000	par	11/-
July	Griffiths Hughes Props. 5½ Cum. Pref. £1	1,000,000	20/6	49/4
July	New Zealand Govt. 3½ Stk., 1955-60	3,989,100	par	106
July	Welsh Associated Collieries 5½ Pref.	500,000	21/6	20/-x
Sept.	Argentine Government 4½ Bonds	1,500,000	par	102x
Sept.	Nigeria Government 3½ Stock, 1955	6,771,880	93½	95
Sept.	City of Stoke-on-Trent 3½, 1955-65	4,045,593	97½	104
Sept.	Eno Proprietaries 5½ Ord.	1,000,000	par	104½
Oct.	Sheffield Corporation 3½ Stk.	1,000,000	11/-	12/3
Oct.	United Steel Co. 4½ Deb. Stk.	5,000,000	98½	101½
Oct.	Associated British Picture 5½ Deb. Stk.	2,500,000	par	105
Oct.	Colvilles 5½ Cum. Pref. £1	2,500,000	101	97½
Oct.	Central Electricity 3½ Stk.	1,600,000	20/6	21/-
Nov.	Argentine Navigation 5½ Debs.	6,000,000	93	97
Nov.	City of Birmingham 2½ Stk., 1955-57	1,500,000	98	97½
Dec.	Argentine Govt. 4½ Bonds	5,000,000	98½	98
Dec.	Austrian Govt. 4½ Guar. Bonds	3,800,000	94½	95
Dec.	South Africa 3½ Stk., 1954-64	10,163,900	98½	98½
Dec.	Swansea 3½ 1955-65	11,000,000	par	100½
Dec.		2,250,000	100½	...

(c) For Conversion purposes. (d) £105,000,000 for Conversion purposes. (e) £2,735,253 for Conversion purposes. (f) £1,728,900 for Conversion purposes.

The entry of borrowers on to the public market by the circuitous route of the Stock Exchange "introduction" continues to be a feature of these figures:—

CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION

	United Kingdom	Dominions and Colonies	Abroad	Total
Year 1932				
1st Quarter	473,800	96,500	Nil	570,300
2nd Quarter	4,866,500	1,515,100	Nil	6,381,600
3rd Quarter	2,200,000	Nil	Nil	2,200,000
4th Quarter	5,851,000	550,000	Nil	6,401,000
Total Year 1932	13,391,300	2,161,600	Nil	15,552,900
Year 1933				
1st Quarter	4,599,300	3,342,300	Nil	7,941,600
2nd Quarter	11,774,100	2,410,300	Nil	14,184,400
3rd Quarter	6,569,400	Nil	Nil	6,569,400
4th Quarter	8,918,900	1,404,800	Nil	10,323,700
Total Year 1933	31,861,700	7,157,400	Nil	39,019,100
Year 1934				
1st Quarter	6,995,500	Nil	Nil	6,995,500
2nd Quarter	6,368,300	618,600	Nil	6,986,900
3rd Quarter	7,349,200	10,784,000	1,331,700	19,464,900
4th Quarter	4,819,700	4,048,100	Nil	8,867,800
Total Year 1934	25,527,700	15,450,700	1,331,700	42,310,100

Not quite so much new capital was raised last quarter by this method as in the last quarter of 1933, though much more, relatively, was so raised for the Dominions and Colonies. The total raised in this way for the year 1934 is, however, a record.

Our review of the capital market in 1934 is not complete without reference to the issues of new capital for the purpose of converting outstanding capital to lower rates of interest. These are shown in the last table:—

TOTAL CONVERSION OPERATIONS			
	To all Conversions		Total Conversions
Whole year 1928	324,041,983	Whole year 1932	2,510,774,302 (a)
Whole year 1929	203,525,540	Whole year 1933	223,141,000 (b)
Whole year 1930	187,089,084	Whole year 1934	241,571,600 (c)
Whole year 1931	12,246,375		

(a) Includes British Government conversions of £2,478,967,382.
(b) Includes British Government conversions of £50,757,000.
(c) Includes British Government conversions of £105,000,000.

In 1934 the British Government issued £105 millions for conversion purposes, leaving a net total of £136.9 millions. Of this balance Dominion and Colonial Governments issued £60.5 millions, of which £36.1 millions were by Australia, £2.7 millions by Canada, £2.7 millions by Southern Rhodesia, £4 millions by New Zealand, £11 mil-

lions by South Africa, and £4 millions by Nigeria; foreign Governments issued £24.2 millions, of which Austria issued £10 millions, Argentina £12.9 millions and Iceland and Finland £1.3 millions between them; and British (home) corporations issued £20 millions. Of the £223.1 millions issued in 1933 for conversion purposes, Governments and home corporations issued £165.2 millions, leaving £57.9 millions issued by enterprise in general, both home and foreign. In 1934, however, whereas the total was higher at £241.9 millions, Governments and home corporations issued £209.8 millions, leaving only £32.1 millions issued by enterprise for converting outstanding capital to lower interest rates.

We may sum up, therefore, in these terms: interest rates continue downwards; Dominion, Colonial and foreign Governments have promptly taken advantage of this trend to convert; but the British Government still holds its hand. In the absence of a revival in international trade, which would benefit the London capital market, British heavy exporting industries and British shipping, new industrial borrowers are still confined to the home recovery industries, to tariff-protected or "restrictionist" industries and to gold-mining, which is reaping an adventitious reward from the world's currency chaos. Nevertheless, in the return of the equity share to favour some faint signs of a return to the upturn of economic activity can be discerned.

NOTES OF THE WEEK

Monetary Policy in Parliament.—The debate on monetary policy in the House of Commons on Friday of last week failed to elicit anything new. The Government promised nothing and revealed nothing, while private members, though they rode their respective hobby horses, contributed no ideas that are not already painfully familiar. Virtually the only lesson of interest to be derived from the debate was the hostility shown in every party to the dumb autocracy of our financial system, personified for most members in the Governor of the Bank of England. Mr Boothby made the most interesting speech of the day. His chief complaint was that the Government had no declared financial policy save the maintenance of cheap money, which, as he convincingly demonstrated, is only the beginning of a true policy. By way of suggestions, he named three directions in which cheap money might be utilised: the purchase of coal royalties, the construction of roads and the housing of the poor. Mr Boothby also showed a gratifying interest, surprising in one of his Party, in the international trade of this country, though it is doubtful whether there will be general agreement with his prescription of a return to the gold standard with "a 50-cent dollar and a ros. pound, linked at an exchange rate of five dollars and a gold price of 165s." Mr Amery followed with a strange compound of common sense and the crudest fallacies. He criticised the belief that cheap money is an end in itself; he condemned the fallacy that prosperity can be achieved by restriction; he made the sensible point that the failure of public works in 1929-31 did not mean their uselessness in 1935; and he suggested the application of the War Cabinet remedy to the present congenial inability of the Cabinet to formulate a policy. But his only contribution to a positive policy was to suggest the further restriction of manufactured imports; if imports could be reduced by £50 millions, employment, he said, could be increased by 200,000. It is strange that Mr Amery found it possible to talk this nonsense not only with the same breath as he condemned restrictionism but in a debate in which several members dwelt at length on the woes of Lancashire. Mr Lloyd George revealed nothing of his promised "New Deal," but contented himself with joining in the general clamour for a statement of policy from the Government. Mr Chamberlain conceded nothing to the House. He agreed in academic terms with many of the suggestions put forward in the debate—notably with the "unification" of mining royalties—but always with the qualification that nothing could really be done about it. There was not one

particle of comfort for those who are anxious that the promising recovery of 1932-34 should not come to a stop. All that the Chancellor of the Exchequer had to offer was forty minutes of blank negation. His most interesting statements were impromptu replies to interrogations. To Mr D. M. Mason, who asked him whether he suggested that the Government had been entirely responsible for cheap money, he replied, "Most certainly I do"; and to Mr Lloyd George, who reminded him that he was expected to say something about unemployment policy, he said, "Our unemployment policy is to continue as we have been doing." These two remarks, taken with the general tone of his speech, convict him out of his own mouth of being in what Mr Boothby called "a trance of self-satisfaction and complacency."

Sir John Simon in Paris.—Last Saturday Sir John Simon, *en passage* through Paris, had a discussion with M. Laval which ranged over the whole field of international affairs without resulting, or being intended to result, in any positive action. The interest of the discussion between the two statesmen—as far as its upshot has been made public—lies in the evidence which it gives of the progress of two tendencies: a tendency for the different strands of transactions and relations to weave themselves into a single rope; and the tendency for French and English policies to move slowly nearer together. German armaments seem, as before, to have taken first place on the agenda; and it is on this subject that French and British views remain farthest apart. For, while both the French and the British Governments would like to see Germany re-enter the League and become a party to an agreement for the limitation of armaments, the French are still unable to pay the price of recognising the illegal rearmament which Germany has already carried out. Perhaps the key to a solution of the German problem lies in the relations between France and Italy. If a firm and cordial agreement between these two Powers can be achieved, France will be able to accept with equanimity a higher level of German armaments than she could otherwise reconcile herself to. In that event Germany may be enabled to satisfy her *amour propre* (if that is really all she wants) without being enabled to use her increased armaments as the instrument of an aggressive national policy—for instance, in her dealings with Austria. A Franco-Italian

entente which safeguarded Austrian integrity and included a *détente* between Italy and Yugoslavia and between the Little Entente and Hungary would indeed be worth having. And, if British good offices can in any way contribute towards this end, we may find our reward in a relaxation of the present French attitude towards Germany. The Japanese denunciation of the Washington Naval Treaty, which was among the subjects discussed in Paris last Saturday, has an intimate bearing on European problems for the simple reason that the British Grand Fleet cannot be at Scapa Flow and Singapore at one and the same moment. If Franco-Italian naval competition in the Mediterranean were brought to an end, and if a European understanding about armaments were reached between France, Italy and Great Britain on the one hand and Germany on the other, the unpleasant possibility of simultaneous outbreaks in Europe and in the Far East would fade out of the international horizon.

* * *

A Pig Crisis.—The crisis in the affairs of the bacon pig marketing scheme is rapidly coming to a head. The contract terms for next year, as negotiated by the Pigs and Bacon Boards, included an obligation on the part of the breeder to spread his deliveries of pigs with a certain minimum degree of regularity over the twelve months of the year. Not less than 25 per cent. of the total contracted for was to be delivered in the first four months of the year, nor more than 45 per cent. in the last four months. In addition prices were to vary with the price of bacon, feeding stuffs and offals. Both these provisions were concessions to the curers (the latter being repeated from the previous contracting period), and they were apparently so little to the taste of the breeders that an inadequate supply of pigs was contracted for. Moreover, the distribution between factories was most uneven. The curers consequently delivered an ultimatum that unless a further 450,000 pigs were contracted for by December 22nd they would withdraw from the scheme. These additional pigs were not to be subject to the level-delivery provisions, but the contracts were to be made direct with the Board, so that they could be distributed to the factories with inadequate supplies. These additional pigs have not been forthcoming; indeed, it is understood that not many more than 100,000 pigs have been offered. The scheme is thus on the verge of collapse. Collapse would mean the disorganisation of the market and, presumably, the suspension of import restrictions, since the legality of these restrictions depends on the existence of a marketing scheme. It will be most regrettable if any scheme for organising agricultural marketing should collapse. But if it fails, let us at least be clear where the blame lies. It lies not on foreign competition nor on the "collapse of the price structure" nor on the "economics of glut," but on the inability of the domestic pig breeders to organise their production efficiently and in a manner suited to the needs of the market.

* * *

Equality before the Law.—It has been the proud boast of this country that all men are equal before the law. Not so men and women, however; nor even all women. For the married woman was originally devoid of personality under the Common Law. Her property, as her person, was merged in the marriage with that of the husband. He gained her property, at the cost of incurring all liability for her debts and civil wrongs, whether incurred before or after marriage. A Married Women's Property Act of 1882 recognised the equitable safeguards devised and accorded by the Court of Chancery to married women's property which had been put into trust. The Act of 1882, however, only allowed a married woman to enter into contracts, and to sue and be sued for civil wrongs, to the extent of her *separate property*—i.e. property retained at marriage or acquired thereafter. After 1882 "her husband need not be joined with her as plaintiff or defendant" . . . but he still could be joined with her as a defendant in an action for civil wrong. The married woman was still in a favoured position *vis-à-vis* bachelors, husbands and spinsters; for the Court of Chancery long ago devised the "restraint upon anticipation" clause, which prevented a married woman from realising

her capital in the trust, or from mortgaging her future income from it. Thus, even after 1882, creditors who had obtained judgment against a married woman could only enforce it against her separate property; they could not realise any of her capital, nor attach any of her income before it originated or reached her hands, nor put her in prison for debt. All these anomalies remain to-day. But in January of this year the Lord Chancellor appointed a Committee to report, *inter alia*, on the state of the law regarding the married woman's liability in tort and contract and the liability of her husband for her torts. The report of this Committee was published on December 21st. The Committee, composed of six High Court Judges, three professors of law, as well as barristers, solicitors and civil servants, unanimously recommend that a husband, as such, shall no longer be liable for his wife's ante-nuptial debts, contracts or wrongs, nor for wrongs committed by his wife during marriage; that her "separate property" be eliminated from the law, so that she be in the same position as a man or unmarried woman in contract; that the married woman's capacity in contract, her right to sue and liability to be sued and to have judgments executed against her, should be the same as that of men and unmarried women; and that the "restraint on anticipation" clause should be made illegal in future. The Committee even goes so far beyond its terms of reference as to hint that the proviso to rule 16 of the General Rules under the Income Tax Act, 1918, by which the "profits" of a married woman living with her husband are deemed to be the "profits" of the husband and are charged in his name, should be revised so as to place the married woman in the same position as the *feme sole*. Ardent feminists will welcome these latest recommendations of a progressive Lord Chancellor's progressive Committee. So will all Englishmen who, like Figaro, wish to "avenge the whole race of husbands."

* * *

Politics and Conscience in Germany.—While the Third Reich is leaving the Catholic Church alone pending the taking of the plebiscite in the Saar, it has resumed its offensive against German Protestantism. The State has officially declared its neutrality in the conflict between the Confessional Movement and "the German Christians"; but it has not ceased from its efforts to badger the Confessional Administration, by threats of using the power of the purse, into coming to terms with their opponents. The latest proposals from the Government side have been for a fusion in which the incompetent Reichsbishop Müller would fade out in order to make way for Bishop Marahrens of Hanover to reign in his stead, while on the other hand the offices of Bishop of Prussia and Legal Administrator—made vacant by the removal of Drs. Müller and Jäger—would be placed in "German-Christian" or "semi-German-Christian" hands. The Confessional Movement went so far as to discuss this scheme, but it has declined, on closer inspection, to walk into the trap, and the negotiations have broken down. Assuredly the Confessional leaders have been wise in acting on the principle that "who sups with the Devil needs a long spoon." At the very moment when the Totalitarian State was saying "Peace, peace" to the Confessional leaders, it showed its teeth by procuring the dismissal of the famous Protestant theologian, Dr. Karl Barth, from his chair in the University of Bonn. A professor in a German university to-day is required to take a personal oath to Herr Hitler and to give the Hitler salute at the beginning of each of his lectures. Dr. Barth has refused to give the salute—as being tantamount to recognising the supremacy of the State in the domain of theology—and he has insisted, if he is to take the oath, in reserving, either explicitly or implicitly, his overriding loyalty to his duties as a Christian. This is precisely the stand that was taken by the early Church against the demands of the Roman Government, and the omen is auspicious. The issue between Dr. Barth and the pagan Third Reich is substantially the old issue between the primitive Christians and the pagan Roman Empire; and it is something much bigger than a parochial German affair. It concerns us all, for Karl Barth is fighting the battle of our generation against that idolatry of the State, tribe, class or race which is now attempting to impose itself, as the religion of the future, in some degree

throughout the world. The superstition which Karl Barth is defying on our behalf to-day is the idolisation of the State. He is on the side of the angels.

* * *

The Thaw in Yugoslavia.—During these critical days in Yugoslavia the news continues to be good. The ice is breaking, the frost is thawing. King Alexander is serving his country in death even better than in life, as he prayed with his last breath. Although, in one sense, Prince Paul's policy is a reversal of King Alexander's, it will achieve, if successful, the late King's ultimate aim of ensuring the maintenance of Yugoslav unity by grounding it on a broader basis than that of dictatorship. The most striking and encouraging feature in the new situation is the increasing success of the new Prime Minister, M. Yevitch. When the formation of his Ministry was announced he had been unable to secure the co-operation of the recognised leaders of the Serb Radicals, the Slovenes and the Croats. On the other side, M. Ouzounovitch and the other leaders of the late King Alexander's Yugoslav National Party remained openly hostile to M. Yevitch's enterprise. Every day, however, has been adding to M. Yevitch's strength. The free pardon for the Croat Peasant leader, Dr. Matchek, which was signed by the three Regents on Saturday, has been a milestone on the road towards reconciliation with the most important single element in the widespread opposition to the policy of unifying Yugoslavia by a process of centralisation by force. On the same day, the Inner Council of the Serb Radical Party passed a resolution in favour of co-operating with M. Yevitch and recognising his Finance Minister, Dr. Stoyadinovitch, who is one of the prominent personalities in the Government and the party's official representative in the Cabinet. This has reversed the decision not to participate, which was previously taken in the Radical Party's Executive Council. Meanwhile, Prince Paul has been having further conversations with the Slovene leader, Dr. Koroshetz, and also with the leader of the Serb Democratic Party, M. Davidovitch. The latest news is that twenty Serb and Bosniak political prisoners have been amnestied and that M. Ouzounovitch is showing signs of abating his hostility to the new Administration. This may even enable the new Ministry to meet the Skupshchina, in which M. Ouzounovitch and his friends of course still command a majority. It is a happy circumstance that M. Yevitch himself is a Serb of Macedonian origin. Can we dare to look forward, now, to a solution of Yugoslavia's internal problem and, therewith, to a *détente* between Yugoslavia and Bulgaria?

* * *

Conspiracy in Russia.—The murder of M. Kirov has had a sensational sequel in the arrest and banishment to remote corners of the Soviet territory of seven leaders of "the Old Guard" of the Communist Party, including two whose names are so well known as Zinoviev and Kamenev. It is a tradition of the Russian Communist political terror that "Elder Statesmen" should suffer something less than capital punishment when they fall out with the powers that be. Indeed, in this case it does not seem to be alleged that the seven venerable deportees were directly implicated in the plot of which M. Kirov was the victim. Nor, apparently, is the guilt now laid at the door of the *bourgeois* counter-revolutionaries, of whom 103 were shot out of hand after the assassination—apparently as a kind of blood-offering to Kirov's *mans*, in the spirit in which Achilles sacrificed his Trojan captives on Patroclus' tomb. Nikolaev and his thirteen fellow-prisoners who are now on trial are all of them men of the younger generation within the Party; and their purpose is said to have been to follow up the murder of Kirov by striking down one after another of the present masters of the Soviet Government in order to reverse M. Stalin's policy and revert to the policy of world-revolution for which Zinoviev, as well as Trotsky, has stood. It is alleged that they were in league with the consular representative of a foreign Power. Though such accusations of foreign complicity in internal disturbances in the U.S.S.R. have become almost common form, Russia has three powerful neighbours who at this moment are under shrewd

suspicion of harbouring aggressive designs at her expense. Moreover, it is significant that the drive against the alleged conspiracy inside the Communist Party is being accompanied by a local purge of Liberal-Nationalist elements in the Ukraine: the second largest of the eight republics of which the Soviet Union is composed, and a potent cause of anti-Russian propaganda abroad. Was the secession of the Ukraine from the Union, and its acceptance of the protectorate of some other Power, one of the corollaries of a projected revolution at Moscow? The Soviet Government has a right to be on its guard, though we deplore the characteristic ruthlessness of the measures by which it seeks to defend itself. In any case, it is curious to see history repeating itself by forcing a revolution back on to pre-revolutionary lines. As the Communist Revolution in Russia devours one after another of its own children, we see Great Russian Nationalism standing up once more against a combination of Ukrainian Nationalism with Polish, German and Japanese ambitions.

* * *

A Timely Protest.—The T.U.C. and the Labour Party have done well to protest publicly and unequivocally against the execution which have followed M. Kirov's assassination in Leningrad. The terroristic methods practised by Europe's Fascist dictatorships have been frequently and loudly deplored by the T.U.C. and the Labour Party; but it has sometimes been suggested that the Soviet Government, when it exploited the same methods, would not be included in their condemnations. We are glad that this has proved to be untrue. A joint declaration was issued on Thursday by the T.U.C. and the Executive of the Labour Party containing the following words:—

While fully appreciating the sense of loss felt throughout the U.S.S.R., and the outraged feeling provoked by this criminal act, the General Council and the National Executive Committee are also profoundly shocked and alarmed by the reprisals which followed in the form of widespread summary executions.

By this statement the T.U.C. and the Labour Party have shown their attachment to democracy and abhorrence of terrorism to be disinterested and sincere. Their denunciation of Fascist methods, whether at home or abroad, will henceforward be all the more forceful. And, what is more, now that the leaders of the Labour Party have condemned dictatorships of the Left as decisively as the leaders of the Conservative Party have condemned dictatorships of the Right, the position of democracy in this country should be beyond dispute.

* * *

Agricultural Insurance.—At the end of last week two announcements were made which are of particular interest to agriculture in this country. The first and more important of these is that the Statutory Commission appointed to inquire into the possibilities of extending unemployment insurance to trades and occupations at present outside the scheme is going to put forward a special scheme to cover all agricultural workers. Every time that changes in the country's unemployment insurance system are discussed, the question of the inclusion of the agricultural worker is brought forward. It has always been opposed by the Farmers' Union; and the workers themselves, in so far as they are represented by the National Union of Agricultural Workers and by the Transport and General Workers' Union, did not advocate even a special scheme of agricultural insurance until the depression set in. Both employers and employees considered that insurance would be an unnecessary extravagance since, as unemployment in agriculture was insignificant, contributions would be a heavy burden and would adversely affect employment in the industry. Various committees which have reported on the subject have generally concluded that as one-third of those engaged in agriculture work on their own holdings or on those of relatives, and as the majority of the remainder are employed on long-term contracts, it is difficult to see who needs insurance. The number of casualties has been declining steadily since the war and amounted in 1930 to only 112,000. Of these,

many are seasonal workers from the towns, while others are skilled workers who are employed by various different employers and are not necessarily subject to periodic unemployment. There are two further general arguments against agricultural insurance. First, it would be difficult and costly to administer, owing to the scattered nature of the claimants; secondly, to subsidise such unemployment as exists in the industry would mean checking the natural movement into expanding manufacturing and distributive trades. But this last argument no longer holds, for there seems no immediate prospect of surplus agricultural labour getting work in the towns, and unemployment among "regular" agricultural workers has tended to increase. The Statutory Commission will now be supported by the National Union of Agricultural Workers and by the Transport and General Workers' Union in putting forward a scheme of insurance. It is suggested that contributions should be at the rate of 3d. per week for workers over twenty-one, 3d. for employers, and 6d. for the State. Proposed benefits are likely to be 12s. for a man, with 2s. extra for a wife or child. This seems very low, even when taken in relation to average agricultural earnings, but no very exact statistics are yet available of the extent of unemployment in agriculture. Indeed, it may still be found possible to keep the scheme on an actuarially sound basis at higher rates of benefit, if sufficient safeguards are devised to prevent abuses, such as false claims by relatives living on the same farm. We shall await with interest the statement of the reasons that have induced the present Committee to depart from the opinion that has hitherto prevailed and of the methods by which they propose to deal with the peculiar difficulties of the problem.

* * *

Land Settlement.—The second announcement was that by the Land Settlement Association, stating the principles on which the Association is prepared to consider financing schemes of land settlement for the unemployed. The Association was formed at the end of July by invitation of the Minister of Agriculture "to co-operate in carrying out an experimental scheme for the provision of small holdings for unemployed persons." The Government is prepared to subsidise this scheme to the extent of £1 for every £2 contributed from voluntary sources. Already Mr P. Malcolm Stewart has presented the Association with an estate valued at £25,000, and £10,000 has been received from the Carnegie Trust for the development of this estate. The principles formulated by the Association are as follows: assistance will only be given to groups, not to individuals; the buying of equipment, marketing of produce and general organisation are to be carried out on co-operative lines; holdings must be of a sufficient size to provide a full livelihood and not be used as a supplementary source of income; and, lastly, care must be taken to avoid competition with established producers. This need not necessarily mean that the small-holding communities are to become self support-

ing, but that they should attempt to cater for unsatisfied demand and to stimulate new demand by efficient marketing methods. The consumption of fruit and vegetables, for example, has very considerably expanded in recent years, but there is no reason why the public should not be offered a far greater variety of market garden produce. In carrying out schemes, the Land Settlement Association will co-operate both with the Commissioner for Depressed Areas for England and Wales, and with the Society of Friends, which has already assisted some 120,000 unemployed to cultivate allotments. In fact, it is probable that, in order to ensure that those who are placed on the smallholdings are capable of turning them to good account, a large number will be selected from among those who have cultivated allotments with some success under the Friends' schemes. Schemes will not be limited to the depressed areas, but clearly it is mainly in such areas that there are large numbers of men for whom there is no hope of speedy employment, either in their own industry or in any other local one, but who could usefully make a livelihood on a small holding if proper provision were made for training and instruction and for the determination of the types of produce most suitable for such cultivation.

* * *

Transvaal Output in November.—The output of gold by the mines of the Transvaal during November amounted to 878,847 ounces of fine gold at a value for purposes of declaration of £6 19s. per ounce, as compared with 885,627 ounces in October at £7 and 898,468 ounces in October last year at £6 5s. In the following table we show the monthly output since the beginning of 1928:—

Month of	1928	1929	1930	1931	1932	1933	1934
January ...	843,857	876,452	882,801	914,576	936,784	967,457	907,641
February ...	816,133	815,284	818,188	839,937	914,012	883,145	826,363
March ...	877,380	866,529	889,370	910,998	960,035	946,863	874,112
April ...	825,907	872,123	868,606	882,337	949,796	895,097	865,822

PRODUCTION RISING

THE year is closing, with production rising from the low point of September and, apparently, moving into the seasonal spring upturn; with the pressure of an expanded and expanding money system more visible in security markets than in productive activity, and with sentiment confused by uncertainties about the programme to be evolved in the Congressional session which opens immediately after the New Year.

The recovery from September, statistically speaking, is the result of the end of the textile strike, and of an increase in steel operations, which are now almost double those of

the low point in September. Collateral data, such as the index of electric power production and reports of retail trade, are making a favourable comparison with last year. The hope for the spring, beyond conventional seasonal expectations, lies in the motor industry, in residential building (in which something like a shortage is being increasingly felt), in the well-known under-maintenance of plant and equipment even among corporations with large cash resources, and in the possibilities of capital financing by methods which avoid the penalties of the Securities Act.

The pressure of expanding bank deposits has resulted in extremely low rates upon all types of paper which banks are willing to include in their portfolios. The chairman of a large New York bank recently stated that average current earnings on the bank's total loans and investments were 2.14

per cent., compared with 3.16 per cent. a year ago. In spite of this, the Reporting Member Banks on December 5th showed collateral loans \$460 millions below a year ago and commercial loans \$270 millions below a year ago; although net demand deposits were \$3,000 millions greater, and time and Government deposits only a trifle lower, on the year. The Federal Reserve Board's index for December production (not yet available) will probably be a bit above December, 1933, although the average for the last half of 1934 was substantially below that of the last half of 1933. It is the security markets which have benefited. The average of industrial equities is almost precisely at the level of a year ago, while that of railway equities is lower and of utility equities far lower. But the indices of fixed-income securities, bonds and preferred stock are about 20 per cent. higher.

With the indices of production and trade still at a low level, but apparently rising, and with capital and credit so abundant and cheap, one might expect that business sentiment would be enthusiastically optimistic. This is emphatically not the case. Sentiment is hopeful, but not confident; yet it is more affected by uncertainty than apprehension. At every point of contact between Government and private enterprise (and those points are now innumerable), the business man is absolutely in the dark about Governmental policy. For example, the dollar has been a stable gold currency for almost a year; but the agitation for further devaluation is still active. Bank deposits in the past year have risen about 30 per cent., without quieting the agitation for the issue of greenbacks, except to alter the form of the agitation, which is now to retire a considerable portion of the public debt with currency.

General Johnson, former Administrator of the N.R.A., declared this week that the N.R.A. is "as extinct as the dodo, deader than any doornail." But, almost the same day, the Press carried the account of the conviction of a manufacturer for violating a code provision on wages, and the imposition of what was, for the magnitude of the business, a very severe fine. The complaint had not been filed by his employees, who do not appear to have been parties to the case. It is estimated that several thousand Government officials are now vested with delegated authority to make rulings which are legally "the law of the land"; and that already 10,269 N.R.A. rulings have such a status.

The hopeless confusion of administrative rulings reached a peak of absurdity this week. Certain oil producers were indicted by the Federal Government for violation of the oil code, and at least one was imprisoned. They were duly tried by a court which declared the provision under which they were held was "unconstitutional." This decision brought the case to the Supreme Court, which discovered that the alleged provision under which they had been tried did not exist—the indictment had been based upon a provisional and unapproved draft of the code. Upon inquiry it transpired that nowhere, even in Washington, was there a complete file of all the multitudinous rulings issued by the N.R.A., A.A.A. and other agencies, although these rulings have all the force of statutes, and many carry severe penalties for violation.

THE SPENDING PROGRAMME

It is not expected that the Budget will be balanced, but the magnitude of the intended deficit is one of the most oppressive factors of uncertainty. With 20,000,000 persons on relief, and with an ever-increasing proportion of the relief falling on the Federal Treasury, the minimum deficit might be put at about \$1,000 millions; but the Relief Programme is now inextricably mingled with the Spending Programme, and estimates of the sums required to "prime the pump," based upon the priming effects of the deficit to date, run into indefinite figures. To complicate matters more, just as the Relief Programme has become mixed with the Spending Programme, the Spending Programme is turning more and more in the direction of Governmental enterprise competitive with private enterprise. For example, under the Spending Programme, municipalities now served by private utility plants (whose rates are fixed by State Commissions) may obtain from the Treasury funds to build a duplicate municipal utility plant. One of the great detriments to private building is the suggestion that the Spend-

ing Programme may take the form of direct Federal housing subsidies, whose form and scope have not yet been outlined. In a number of States formal protests have been made that the Federal Relief grants are so liberal as to cause a scarcity of labour.

None the less, as was said above, all these matters act as restraints upon recovery more by reason of uncertainty than apprehension, except possibly in the case of the utility industry. To a considerable extent this uncertainty should be resolved rather early in the Congressional session. The magnitude of the deficit; the additional taxation, if any; the particular form of spending into which the deficit is to be directed; housing policy—all these should be clearer early in the year. As the present National Industrial Recovery Act expires by Statute on June 16, 1935, the future status of N.R.A. must be determined by Congress; and the prospect is that a simpler and clearer N.R.A. will emerge.

The stratification of the new Congress is beginning to take form already. Although it will appear to have a conventional two-party organisation, it is quite clear that the population of the country is dividing into three rather distinct groups—a radical group, which seems to be coalescing about the block of "insurgent" Republican senators; a distinctly conservative group formally represented by the old guard Republicans; and the Democrats, who, by force of political circumstances, have now become a sort of middle-of-the-road centre party. The old two-party system seems to be crumbling. The Republican Party is now, as in 1912, distinctly split into its Right and Left wings; and it will require no little political dexterity to prevent the great Democratic majority in both houses from dividing into Right and Left wings. The chief issue of the new Congress is whether or not the President's personality will prevail against the centrifugal forces within the Democratic majority.

NEW YORK, December 14.

FRANCE

"PARLIAMENT WORKING BETTER"

PARLIAMENT has now voted the Budget, and the figures are as follows:—

	Francs
Expenditure	47,817,011,976
Revenue	46,991,968,737
Deficit	825,043,239

This deficit will be reduced by various savings on the indemnities, totalling 308 million francs. The Budget also includes 3,500 million francs for the sinking fund, and if this sum is taken into account there will actually be a surplus. The Wheat and Wine Bills have also been passed, and the Government has insisted on its policy of freeing markets in face of both the Senate Agriculture and Finance Committees, which favoured the maintenance of the fixed

price. And both Bills, as well as the Budget and the extra-military credits for equipment and stores, have been accepted by large majorities in both Chamber and Senate.

The rapid voting of these Bills, together with certain other measures, are considered as signs that the Parliamentary machine is working better. Also encouraging is the declaration of the Government that its first task at the beginning of the New Year will be to push down rates of interest. All these considerations have provoked a marked change in the general tendency of Stock Market prices. A strong rise in Rentes has occurred and prices are approaching the highest points of the year:—

1934					
	Highest	Lowest	Nov. 8	Dec. 9	Dec. 18
3% perpetual ...	79.40	63.75	70.80	72.50	75.35
4% 1918	87.00	71.60	77.30	79.55	83.30
4½% "A"	92.50	78.60	85.10	87.20	89.90
					91.45

Thus, at the end of the year, M. Flandin's Government after six weeks of office seems to be gaining ground. There are many snags ahead, however, including proposals for the State control of industry which have been brought to the front by the difficulties of the Citroën Company.

The Budget Bill has authorised the railway systems to issue debentures for the year 1935 for a total sum amounting provisionally to 5,222 million francs. The money will be spent on new lines and rolling stock and equipment; and 3,555 millions will be needed to cover the 1934 deficit.

SLIGHT RECOVERY IN FOREIGN TRADE

Foreign trade in the first eleven months of 1934 totalled 37,484 million francs, against 42,971 millions in 1933. Imports declined by 4,888 millions (21,241 millions, against 26,129 millions), or 19 per cent.; while exports fell by 598 millions (16,243 millions, against 16,841 millions), or 3½ per cent. only. The import surplus has therefore fallen to 4,998 millions from 9,287 millions. In volume, exports increased by 2,825,234 tons, or 12 per cent.

The following are the foreign trade values for the first 11 months of the year:—

('000 francs)			
	First eleven months of 1933	First eleven months of 1934	
Imports—			
Foodstuffs	8,831,784	6,870,020	— 1,961,764
Raw materials	12,541,997	10,459,594	— 2,182,403
Manufactured goods...	4,655,588	3,911,612	— 743,976
Totals	26,129,369	21,241,226	— 4,888,143
Exports—			
Foodstuffs	2,276,651	2,269,100	— 7,551
Raw materials	4,322,225	4,740,363	+ 418,138
Manufactured goods...	10,243,025	9,233,662	— 1,009,363
Totals	16,841,901	16,243,125	— 598,776

In November exports rose by 54 millions, while imports remained unchanged. Total trade in November was higher at 3,411 million francs, against 3,359 millions in October. The import surplus was 173 million francs, compared with 230 millions in October, 135 millions in September, 281 millions in August, 363 millions in July, 512 millions in June, 790 millions in January and 592 millions in November, 1933.

It seems that the multifarious restrictions on trade imposed in the past three years have at least succeeded in their dubious aim of reducing the import surplus; and exporters appear to have lowered their costs somewhat. Nevertheless, in comparison with November, 1931, the figures of foreign trade in November, 1934, show a fall of 1,108 million francs, or 38 per cent., in imports, and 772 millions, or 32 per cent., in exports.

The first result of the Franco-Russian negotiations in Moscow was the signature of a protocol on December 9th. This protocol provides for the temporary extension of the agreement concluded on January 11, 1934, which expires on December 31st. The main problem still to be solved is that of the credits to be allowed to Russia. There is no question of inter-Governmental credits or an issue on the French market. Nevertheless, French oil imports from Russia, which were used as a guarantee for the payment of French exporters have been declining steadily since the beginning of the year.

At the annual Savings Congress some interesting figures were summed up by the Syndic of the Paris Stockbrokers on France's capital and the proportion of it which is invested in stocks and bonds:—

('000,000,000 gold francs)		
	Total Capital*	Stocks and Bonds*
1853	125	33
1906-1908	223	99
1911-1913	290	156
1925	255	76

* According to de Foville-Colson-Théry.

The Syndic believes that the proportion should now be 3:1. He also gave the following information on the total stocks quoted on the official Stock Exchange:—

NOMINAL CAPITAL QUOTED ON THE OFFICIAL STOCK EXCHANGE			
('000,000 omitted)			
		of which	
		French	Foreign
1851	9,400	...	...
1908	133,000	65,000	68,000
1913	140,000	70,000	70,000
1925	282,000	202,000	80,000
March 31, 1933	440,000	359,000	81,000

The total of French bonds was 278,000 million francs out of a total of 359,000 millions of stocks and bonds.

PARIS, December 26.

GERMANY

CHANGES IN 1934

GERMANY'S political and economic story in the past year, even when judged by the special standards of National Socialism, was not very favourable. The political unity of the nation, by which, according to Party standards, is understood uniformity in thinking and acting in all cultural, moral and religious issues, has not been attained—indeed, it seems to have receded; and the discord was advertised much more to the public than in 1933, when at least open collisions within the Party were avoided. The attitude of the mass of non-party Germans to National Socialism remained an enigma owing to the complete suppression of independent opinion; the slight decline of favourable votes at the midsummer plebiscite implies no more than an increase in the favourable vote would have done. The Church conflict was much aggravated; and the successes obtained by the Opposition, which steadily grew in strength during the year, make very unlikely a settlement on the basis of subservience to the Nazis, the only settlement likely to pacify the Party.

Germany's economic development in 1934 shows both bright and gloomy sides. The revival in production and the decline of unemployment which automatically began in the summer of 1932 continued up to the end of 1934. Increases in production reported in the more important industrial branches were very substantial. Owing to special Government measures and unorthodox statistical methods, already practised in 1933, the real increase in employment is not determinable. Probably in no event could the rapid improvement of the first months have been maintained, because of the declining stimulus of the public credit measures, and of the numerous State measures, in the interest of existing producers, to hold up new industrial enterprise. The Government's policies of exchange regulation and foreign trade control proved complete failures. The scheme to accumulate fresh currency reserves, which was officially considered practicable in 1933 when the burden of foreign debt transfers was still considerable, was not realised, even though practically the entire debt service had been repudiated. Though import control was followed by equilibrium in the foreign trade balance, it almost eliminated Germany as a world trading country. Germany's prospects in 1935 in the latter sphere are not favourable; it seems that State regulation and restriction must go even farther, in the hope of making good the shortcomings of past regulations and restrictions.

The Reichsbank's return for the third December week (somewhat affected by being compiled for December 21st

and not, as is usual, for the 23rd) shows an increase in credits and investments of Rm. 28 millions, as against a decline of Rm. 103 millions in the corresponding week of 1933. The increase in credits was probably due to the heavy repayments early in the month of November month-end credits. Total circulation on December 21st was Rm. 5,406 millions, as against Rm. 5,343 millions on December 23, 1933. The Reich Minister of Finance has been authorised by a new law to grant guarantees of unlimited amount for the expansion of home raw material production.

HAMBURG AND AUTARKY

The autarky policy, of which this law is an expression, is sharply but indirectly criticised in some Chamber of Commerce annual reports. The annual reports of the Hamburg and Bremen Chambers are critical to a surprising degree. The Bremen report states that while the "New Plan" (regulation of import payments) has begun to work after its initial difficulties, it still gives numerous grounds of complaint. It is a mistake to aim at equilibrium in the trade balances with all countries. Export trade difficulties are due in part to measures taken in the interest of German agriculture; in particular it is regrettable that in some cases, e.g. Holland, Germany's exports declined while her agricultural imports increased. German transit trade, which, after export, is the most important source of foreign exchange, has been left without the necessary financial basis. The compensation trade, upon which the Government counts so much, has been injured by Government measures against profit-making. The Hamburg Chamber's report also complains of the neglect of transit trade. Transit trade cannot be conducted if it is not allowed (as at present) to dispose of working capital in foreign currencies.

In an analysis of the present foreign trade position a director of the Reich Statistical Bureau, Dr. Graevell, points out that, while exports have in general developed according to official plan, imports have not worked out satisfactorily. Comparing November, 1934, with November, 1933, he shows that exports of foodstuffs fell by 50.6 per cent., of raw materials by 16.5 per cent., and of manufactured goods by only 5.7 per cent. This is relatively satisfactory in view of Germany's need to keep foodstuffs and raw materials at home. But whereas the import of foodstuffs fell 1.4 per cent., and of raw materials 4.8 per cent., the import of manufactured goods rose 9.5 per cent.—"an unnecessary and harmful development."

THE PRICE-COMMISSAR AT WORK

The Reich Price-Commissar reports that 1,600 returns of price agreements concluded since July, 1933, by cartels and other price-fixing organisations have been received, embracing more than 1,600 categories of goods. Present fixed prices are based on the fact that production capacity in all branches is far from fully utilised; and if the business turnover fell, fixed prices would be raised in order to maintain the value of sales. This means that there must be "a more elastic adaptation of prices to the possibilities of the individual concern." Meantime, Dr. Goerdeler has unexpectedly issued a rigorous decree against price-cutting.

One provision of the price regulations in the textile trade is remarkable. While the price calculation for the different classes of goods is regulated in the most minute way, a seller may violate the regulations for one class if he makes good his offence in another. If according to the regulations (this example is officially given) he must sell one class of shirt at 6 marks each and another class at 10 marks, so that his "legal" account for 100 shirts at 6 marks and 50 at 10 marks would total 1,100 marks, he may instead sell 100 at 5 marks and 50 at 12 marks, charging the same 1,100 marks for the lot. But if he sells the 50 at 12 marks without selling 100 at 5 marks, he will get into gaol.

The percentage of possible hours worked in industry in November is returned at 58.8, against 57.8 in October. The average daily time worked was 7.56 hours, against 7.47. Retail turnover in November was 13 per cent. higher than in November, 1933. The pace of increase has declined, the corresponding figure for October having been 22 per cent. Ingot steel production in November was 1,086,000 tons, against 1,136,000 tons in October, a longer working month. Production in the first eleven months was

10,846,000 tons, against 6,855,000 tons in the same months of 1933. The export of toys in the first ten months had a value of Rm. 18,700,000, against Rm. 25,100,000 in the same months of 1933.

BERLIN, December 26.

ARGENTINA

NEW GRAIN ELEVATORS TO BE ERECTED

THE Grain Elevators Committee have provisionally approved a plan for the construction of 14 terminal elevators, with a total capacity of 660,000 tons. It is also intended to build 450 camp elevators with a total capacity of 650,000 tons. The plans and specifications for the terminal elevators have already been drawn up, and it is understood that tenders for their erection will shortly be called for. It is to be hoped that some enterprising British firm will be able to secure the contract. If the elevators are efficiently managed, they should make possible considerable savings in bagging, freight and handling.

The Chamber of Deputies has passed a Bill which will cost the Budget \$30 millions. The object of the Bill is to ease the desperate situation in the grape-growing district of the Province of Mendoza. This district is suffering from the effects of overproduction of wine, combined with poor marketing systems and heavy provincial taxation; and, as the whole Province mainly depends on wine production for its living, drastic steps must be taken. The present Bill provides for the substitution of part of the cultivation of wine grape for table grape vineyards; the purchase of surplus stocks of wine by a special board for the purpose of regulating prices; the suppression of certain vineyards considered to be unsuitable for the production of either table or wine grape and their substitution by fruit orchards; and the discouragement of new plantations by means of a tax of \$1,000 per hectare on all new vineyards. The disastrous position in which the wine industry finds itself is probably, to a great extent, due to the protection given to the industry by high tariffs on imported wines. Large profits were made by local concerns, and in consequence many people were attracted to the business. Five years later, however, the new plantations began to bear fruit and it was discovered that, with the increase in production and the decrease in consumption due to the crisis, heavy stocks were accumulating. These surplus stocks now amount to approximately two years' consumption.

The 1935 Budget is still under consideration by various special committees of Congress, but there is little doubt that in its main lines it will be similar to that of 1934.

The following figures show revenue and expenditure during the first eleven months of 1934 compared with those for a similar period of 1933.

	1933	1934	\$
Expenditure	870,094,815	864,086,650	-6,008,165
Revenue :-			
In cash	728,854,954	720,905,099	-7,949,855
From credit operations..	138,441,820	137,457,918	-983,902
Total	867,296,774	858,363,017	-8,933,757

Although revenue is lower by some \$8,900,000, it is satisfactory that land tax and income-tax receipts are larger. This suggests that either there has been an improvement in methods of collecting or an increase in incomes. The former is the more probable. On the expenditure side, both salaries and general expenditure show a reduction. A large sum has been spent in paying overdue accounts, and the amount apportioned to the National Council of Education has also been increased. These increases seem to be justifiable.

GREAT INCREASE IN EXPORTS

The following figures show exports for the first eleven months of 1934, compared with those for a similar period of 1933:—

	1933	1934	%
Quantities in tons :			
Pastoral products	1,040,496	987,326	-5.1
Agricultural products	11,057,290	12,638,138	+14.3
Total	12,575,430	14,156,116	+12.6
Value in pesos :			
Pastoral products	362,712,133	421,728,910	+16.3
Agricultural products ...	589,703,757	824,662,946	+39.8
Total	1,002,626,625	1,318,222,186	+31.5

The percentage of increase or decrease in the average prices of the main commodities exported by Argentina during the first eleven months of 1934 was as follows, compared with the corresponding period of 1933:—

	%		%
Chilled beef	+11.4	Butter	+6.4
Frozen beef	+1.3	Wheat	+11.7
Frozen mutton	+29.4	Maize	+41.2
Canned meat	+13.0	Linseed	+23.2
Unwashed sheepskins..	+74.4	Oats	+15.1
Salted cowhide	+6.5	Flour	+0.9
Unwashed wool	+114.8		

Both tonnage and value continue to increase as compared with the previous year. Dairy produce exports, which have hitherto been sluggish, increased in November. Wheat and maize shipments have increased by 734,000 tons and 728,000 tons, respectively. Meat exports show little change in tonnage, but, thanks to improved prices, have risen in value by 11.6 per cent. Prices in nearly every case have risen since last year; but these prices are, of course, quoted in depreciated pesos.

Harvest prospects are not now so good as they were at the end of October, since the weather has been less favourable. Linseed and maize, however, should show an improvement over last year. The peso remains fairly steady, and the money market shows little change.

BUENOS AIRES, December 15.

CANADA

MR BENNETT AND THE GENERAL ELECTION

MR BENNETT has now made it clear that he proposes to make the Ottawa Agreements the chief issue at the approaching General Election. He will claim a new mandate on the ground that these valuable pacts would be destroyed by the Liberals if they came to power. To this Mr Mackenzie King, at the annual meeting of the National Liberal Federation on December 11th, replied that the Liberals did not contemplate the scrapping of the Agreements, but rather intended to revise them after discussion and negotiations with the other parties to them on the basis of the principles suggested by Mr Baldwin in his opening speech at the Ottawa Conference.

The railway problem is still much discussed. Mr Euler, a Liberal ex-Minister, who has been a consistent advocate of the public ownership of railways, now suggests the creation of a holding company with a capital of \$1,600 million debentures and \$400 millions common stock to be allocated in equal shares to the C.P.R. and the C.N.R., which would retain their separate identities. The management of the single system would be carried on by a directorate of twelve, half appointed by the Government and half by the C.P.R., with the chairmanship vested in a Governmental nominee. Mr Beatty, President of the C.P.R., reserves judgment about this proposal, but admits that it merits study.

Both wholesale and retail merchants report business as quite satisfactory and considerably better than a year ago, and they anticipate good Christmas trade. The weekly economic index published by the Bureau of Statistics is as follows:—

Week ended	Car Loadings	Wholesale Prices	Bond Prices	Clearings	Common Stocks	Trading	Total
Dec. 2, 1933	60.9	...	104.8	76.7	82.7	151.0	82.4
Nov. 24, 1934	66.8	71.2	131.9	78.8	92.1	131.5	94.7
Dec. 1, 1934	65.4	71.2	134.9	76.9	93.3	159.7	95.3

Carloadings, however, for the week, at 45,515 cars, were down 2,233 cars compared with the previous week, although up 3,267 compared with the parallel week of 1933. Most of the natural industries, apart from farming, are doing fairly well; and the November output of newsprint showed a further gain, being 240,869 tons, as compared with 235,021 tons in October and 193,718 tons in November, 1933; the total output of newsprint for the first ten months of 1934 has been 2,358,098 tons, as compared with 1,833,722. The lumbermen have also made preparations for a substantial cut this winter, and the mining camps continue to show great activity. Canadian exporters who have dealings with Germany are finding the German exchange restrictions an almost insuperable obstacle to business, and the officials of the Department of Trade and Commerce at Ottawa have been considering the possibilities of the establishment of a trade clearing-house or a system of barter.

FRENCH WHEAT EXPORTS TO NEW YORK

The Bureau of Statistics has published a provisional estimate of the value of the field crops of Canada for 1934, which places it at \$536,498,600, as compared with \$423,597,000 in 1933, \$452,526,900 in 1932, \$435,966,400 in 1931, and \$662,040,900 in 1930. The Bank of Commerce, in its latest monthly survey, states that the purchasing power of the farming community is now roughly 10 per cent. higher than it was a year ago.

But the plight of the farmers, though better than it was a year ago, still remains serious. Mr Bennett, during a recent visit to the West, claimed that the Governmental policy of supporting the wheat market during the last three years had added \$200 millions to the income of the Prairie grain-growers, but the *Financial Post* and other papers are still strongly criticising this policy and contending that its ultimate results will not be satisfactory. It is argued that the artificially high Winnipeg price is slowing down exports. The export movement certainly remains slow, and for the week ending November 16 the volume of wheat exports was only 2,045,534 bushels, as compared with 3,673,783 bushels in the parallel week of 1933. Stocks are piling up in the elevators, and on November 16 had reached a total of 256,183,767 bushels, as compared with 247,657,057 bushels on the corresponding date of 1933. The United States, with its tariff barriers temporarily lowered, has been importing from Canada considerable quantities both of durum wheat and of low-grade ordinary wheat for feed purposes, but last week exporters were dismayed to find French interests offering nine million bushels of denatured wheat at 60 cents per bushel c.i.f. New York. To meet this competition demand has arisen in the West for special emergency rates from the railways to stimulate shipments of low-grade grain from the Canadian West to drought-stricken areas in the United States where it is needed.

OTTAWA, December 13.

NEW ZEALAND

MONETARY COMMITTEE AND DOUGLAS CREDIT

A SERIES of investigating committees have now reported. A Monetary Committee, composed of ten Members of Parliament, with a departmental secretariat, has examined the monetary system, and heard evidence incidentally both from Major C. H. Douglas and the Douglas Credit group. The majority report rejected the Douglas proposals, approved the Government's exchange policy, and concluded that the causes of depression were mainly non-monetary. A minority report, signed by three Labour members and one Independent, recommended the creation of money by the State "to close the existing gap between production and consumption." The inquiry, which took place while the Reserve Bank was being established, offered an opportunity to monetary reformers of many kinds to air their views, but was not taken very seriously by the country at large.

Much greater interest is being shown in the report and the proposals of the Dairy Commission whose recommendations are both drastic and unanimous. The report finds that dairy farm finance is in a critical condition and suggests that unless early and effective measures are taken, a general break-down may occur in the financial relations of mortgagors and mortgagees. This is the result of the low prices received in Great Britain for several years. The Commission recommends the establishment of a Rural Mortgage Corporation to provide long-term amortised loans at low rates, and to take over existing mortgages in exchange for bonds whose interest shall be guaranteed by the State. Provision is also made for suspense accounts and for compromise where mortgages cannot be regarded as sound. A second recommendation provides for the reconstruction of the Dairy Produce Control Board and for reorganisation within the industry, designed to improve both efficiency of production and quality of product. It is also proposed to set up a sort of permanent supreme council of agriculture to advise the Government on matters relating to production and marketing and to co-ordinate the activities of the various control boards supervising marketing in the major export industries. An Agriculture (Emergency Powers) Bill, as introduced to Parliament, provided for the setting up of an executive commission of agriculture, with extraordinarily wide powers.

INVESTMENT TRUST REFORM

There has also been a Companies' Commission concerned with the methods adopted in the promotion and operations of a group of investment companies linked up with the Investment Executive Trust of New Zealand, Ltd., and with certain land utilisation companies. Most of these were financed by small amounts of subscribed share capital and large issues of bonds, the control being in the hands of shareholders. The Commission distinguished between the sound methods of investment trusts on the British model and the methods adopted by these companies operating in New Zealand and Australia. It recommended a corporate investments bureau with wide powers of supervision and investigation, stricter control of company promotion methods, fuller published information, penalties against misleading information, prohibition of bond issues in series, limitation of debentures issued by investment trusts to twice the paid-up capital, and improved organisation of the stock exchanges. The Government has taken immediate action and appointed the Public Trustee receiver for the Investment Executive Trust of New Zealand and affiliated companies. A similar investigation has been made and similar action taken in Australia, where some of the companies concerned are domiciled. (Further reference to the Report of the Companies Commission is made in an Investment Note on page 1264.)

Finally, the Native Affairs Commission has reported on the control of various funds set aside for native purposes and administered by the Minister of Native Affairs. Lax control of expenditure, improper use of funds and some favouritism have been revealed, and the Minister has resigned his portfolio. The state of affairs disclosed is

deplored, but people familiar with native psychology understand how it has arisen. The ex-Minister is a Maori, the "father" of Parliament, and a recognised leader of his people, who has given great service in his efforts both to make the natives economically self-supporting by means such as land settlement, and to preserve their racial and tribal culture. Both the ex-Minister and his people were temperamentally opposed to red tape methods, means were found to escape the rigidity of control, and some waste and extravagance resulted. It is recommended that the Minister's powers be more clearly defined and that stricter departmental control be imposed.

Weekly returns published by the Reserve Bank, which opened on August 1st last, show that the changes consequent upon its establishment are nearly complete. Trading bank notes are steadily being replaced by Reserve Bank notes, the trading banks' gold, valued at nearly £4,500,000 at mint par, has been transferred, and about £1,000,000 has disappeared from the Reserve Bank's statement and has presumably been shipped for sale abroad. Against large trading bank and Government deposits in New Zealand, the Reserve Bank holds about £N.Z. 24 millions in sterling exchange, and a new monthly return by the trading banks shows that they hold net overseas assets on account of New Zealand business totalling a further £N.Z. 14 millions. These holdings are exceptionally large. Money is consequently abundant, and the leading banks have announced a reduction in the minimum overdraft rate to 4½ per cent., the lowest rate for thirty years at least. Despite some apprehension about wool prices for the coming season, and about the prospects for dairy produce, confidence seems to be improving, imports are expanding steadily, unemployment is slowly declining, bank debits remain high, and the Finance Minister has announced that, for the first six months of the current financial year, revenue exceeded last year's figures by £1,600,000, while expenditure, adjusted for certain changes, was lower than last year.

MONEY AND BANKING

THE MONEY MARKET IN 1934

THE year just closed has proved another difficult one for the money market. There have been three dominating factors, which were largely beyond the market's control. First came the continued absence of commercial bills. Even at the beginning of 1933 we estimated the total supply of commercial bills to have shrunk to about £120 millions, against £250 millions before the war, while by June, 1934, the supply had undergone a further contraction to under £100 millions, of which £32 millions were standstill bills. There has been no sign of any expansion during the subsequent six months, and, apart from the return to use of the inland bill (discussed in a subsequent paragraph), it is difficult to envisage any expansion so long as world trade remains restricted and depressed.

Next comes the year's diminution in the supply of Treasury bills. This is of such outstanding importance that we illustrate it in detail in the following table. For purposes of comparison the average tender rate for new Treasury bills is also included, the dates being adjusted to allow for the fact that new Treasury bills are paid for during the week succeeding each tender:—

Date	Treasury Bills		Ways and Means Advances by Public Depts.	Total Floating Debt	Floating Assets of Public Depts. etc.	Average Treasury Bill Tender Rate
	Tender	Tap				
£ mn.	£ mn.	£ mn.	£ mn.	£ mn.	£ s. d.	
End of— 1933 Dec.	597.0	341.7	35.2	973.9	376.9	12 11 46
1934 Jan.	547.0	346.0	32.7	925.7	378.7	18 2 05

Dec.	449.9	442.0	30.9	932.5	472.9	10 2 79

* December 22nd.

The first two columns show the amount outstanding at each date of Treasury bills originally issued by tender to the banks and the money market, and Treasury bills issued through the tap to Public Departments, the Exchange Equalisation Account, and possibly to other official institutions. Ways and Means advances from Public Departments follow; but as there were none from the Bank of England except at the end of December, 1934, when £9,750,000 was borrowed, this item is omitted. Next comes the total floating debt, and then the "floating assets" of the Departments and other bodies. This last represents the sum total of tap issues of Treasury bills and Ways and Means Advances.

There were four main trends during the year. First, there was a net reduction of £41.1 millions in the floating debt, due to the 1933-34 Budget surplus, the April Funding Loan issue and other funding operations of the Government. Next, the Departments increased their floating assets by £96.0 millions. This was not primarily due to the operations of the Exchange Equalisation Account; for while the Account was a seller of gold and *devisen* and an acquirer of Treasury bills during the late spring and summer, it worked in the reverse direction during much of the autumn. It is impossible to give any definite explanation, but the table shows a marked increase in these floating assets during the autumn, when the Exchange Equalisation Account was on the whole disposing of Treasury bills. The explanation may be that the Departments have been placing themselves in a more liquid condition with a view to being in a position to support a fresh funding operation in the near future.

Be that as it may, the third trend followed automatically from the first two. This was the heavy reduction of £147.1 millions in the number of Treasury bills issued by tender

and available for the banks and the money market. This was the most serious difficulty with which the market was faced during the year.

The fourth dominating factor was the continuance and the intensification of the policy of cheap and plentiful credit. Bankers' deposits at the Bank of England frequently exceeded £100 millions, against £50 or £60 millions six years ago. Clearing bank cash has run in excess of £200 millions, against £180 and £190 millions prior to the slump in 1929. Call and short loans have expanded since November, 1933, from just under £100 millions to £130 millions. The banks' ratio of cash to deposits has risen above its traditional figure of 10 per cent.

All this implied that more funds were available for employment in the money market at a time when the supply of bills was rapidly contracting. This is the real explanation both of the difficulties of the money market and of the changes which occurred during the year. To summarise these, first and foremost bill-brokers have, until the last few weeks, been consistently working at a loss in so far as their bill holdings are concerned. Until the end of October their loans from the clearing banks, which form the bulk of their funds, cost them 1 per cent., while both the tender rate for Treasury bills and the rates offered by the banks and other buyers were below that figure. As a secondary, but equally important, consequence, the discount market was driven to invest a growing quantity of its funds in Treasury bonds and other gilt-edged securities in place of bills. The motive here was to obtain a better yield; but, apart from the fact that the yield on Treasury bonds has become extremely low, this change in policy exposed the discount market in a greater degree to the risk of price fluctuations in the gilt-edged market. This risk has become intensified by the recent rise in gilt-edged prices, in itself the direct consequence of the cheapness of money and the diversion of short-term funds from bills to bonds. To-day the position is not without an element of danger, which will be increased if there is any serious setback in the gilt-edged market.

Nor were the banks immune from the consequences of the pressure of idle funds and the dearth of bills. In September, 1933, when the rate of discount on Treasury bills fell below $\frac{1}{2}$ per cent., certain of the banks were driven into an agreement to quote minimum rates at which they would buy Treasury bills. This agreement proved successful, and by the New Year a buying rate of 1 per cent. had been established. This rate, however, was not held, for the supply of Treasury bills at once began to contract, and throughout the year other buyers were consistently quoting lower rates. By August the banks had had to reduce their rate to $\frac{1}{8}$ per cent., and, after they had re-established a rate of $\frac{1}{16}$ in October, some of the banks suddenly broke away from the agreement, and it came to an abrupt end. The market discount rate at once collapsed to below $\frac{1}{2}$ per cent., and the banks felt bound to reduce their loan rates against Treasury bills and other bills eligible for discount at the Bank of England from 1 to $\frac{1}{2}$ per cent. The 1 per cent. rate remained in force for loans against non-eligible bills and bonds. At the end of November the increase in the Treasury bill issue needed to finance the War Loan dividend payment helped the market discount rate to harden to $\frac{1}{2}$ per cent., but notwithstanding a record Christmas note circulation of over £405 millions, leading to a withdrawal of some £40 millions from the market, rates had eased by Christmas to about $\frac{1}{8}$ per cent.

The year's redemptions of Treasury bills out of the proceeds of debt funding and the Budget surplus also reduced the total deposits at the clearing banks. The money used in this way originally consisted of cheques drawn by the tax-paying and investing public against their deposits, and to the extent that it went to redeem Treasury bills held by the banks, it led to a contraction in deposits. The banks' addi-

tional purchases of securities or loans against securities to some extent countered this contraction, but on balance the banks lost more than they gained. During the year ended November, 1934, the banks' holdings of Treasury bills fell by £84.4 millions, while call loans rose by £36.2 millions and investments by £21.2 millions. The net reduction spread over these three items was £27.0 millions, which compares fairly closely with the simultaneous reduction of £17.0 millions in deposits. What has really happened is that the redemption of Treasury bills has for the moment absorbed part of the supplies of idle credit. The banks, however, can re-create this supply, if only they can find credit-worthy borrowers who are willing to borrow.

Meanwhile there is little prospect of a change in the condition of the money market. The period of heavy tax collection is at hand, while there are indications that a further funding operation may be impending. For both these reasons a further reduction in the already attenuated supply of bills seems inevitable. The Government can hardly be expected to modify seriously its long-term financial policy simply to meet the needs of the money market, even though it must be recognised that the money market is an essential part of our financial machine.

The real question is, What can the banks and the money market do to help themselves? One possibility is the revival of the inland bill, and on several occasions during the past year we have pointed out that the banks could be more helpful in this direction. Another point is whether the banks would not be well advised to revert to their former practice of buying their Treasury bills from the market instead of tendering direct. Last year has shown how illogical it is for the banks to fix a minimum rate for loans against Treasury bills and then to tender at lower rates in competition with the discount market, who are the actual people who borrow that money. Were the banks to decide to cease tendering, for a time admittedly they would have surplus cash left on their hands, but their action would give discounts rates an upward thrust and might stabilise them at a level more remunerative to holders of bills. This course admittedly has some disadvantages, but the broad facts remain that the banks and the discount market have another difficult year before them, that a rise in rates is both improbable and against the public interest, and that if the discount market is going to survive it is high time that it began seeking out a solution for its own troubles.

FINANCIAL NOTES

The Money Market.—This week the market has been dominated by the approach of December 31st. On Monday, the 24th, a small amount was borrowed from the Bank of England, while on Thursday it was believed that a fair amount was borrowed. The rate for loans into the New Year had risen by Thursday afternoon to a full 2 per cent., and higher rates were anticipated before the end of the year.

	Dec. 6, 1934	Dec. 13, 1934	Dec. 20, 1934	Dec. 27, 1934
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills.....	$\frac{1}{16}$ - $\frac{1}{8}$	$\frac{1}{16}$	$\frac{1}{16}$ - $\frac{1}{8}$	$\frac{1}{16}$ - $\frac{1}{8}$
Three months' bank bills	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$

There has been practically no business in bills this week, as most people are ready to sell, while few are anxious to buy. March Treasury bills were on offer at rates running from $\frac{1}{16}$ up to $\frac{1}{2}$ per cent., while three months' bank bills were nominally quoted at $\frac{1}{16}$ per cent. Treasury bills maturing at the end of January or during February were quoted at $\frac{1}{8}$ per cent. It is noticeable that almost for the first time this year the Government has been during the past four weeks a consistent borrower on Ways and Means from the Bank of England. The money so released to the market has helped to smooth out the effects of the heavy Christmas currency withdrawals, and conceivably the authorities had that object in view. Another possibility is that it was thought desirable to render less abrupt the contraction in the Treasury bill tender issues that usually occurs during the last quarter

of the financial year. Certainly by borrowing on Ways and Means during the past few weeks, the Government has cut off the top of the seasonal peak in the Treasury bill issue.

The Bank Return.—In this week's Bank return, which relates to the position at the close of business on December 24th, the note circulation has reached the Christmas peak, which this year is the record figure of £405.2 millions.

	BANK OF ENGLAND				
	Dec. 27, 1933	Dec. 5, 1934	Dec. 12, 1934	Dec. 19, 1934	Dec. 26, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.7	192.2	192.2	192.2	192.3
Note circulation.....	392.0	385.4	393.2	402.0	405.2
Banking Department:—					
Reserve	59.7	67.3	59.5	50.8	47.6
Public deposits.....	22.2	8.6	7.9	8.4	9.9
Bankers' deposits	101.2	108.9	103.3	90.7	89.1
Government securities ...	88.0	84.8	85.8	83.8	87.5
Discounts and advances	16.8	9.6	10.1	7.0	7.6
Proportion	37.3%	43.7%	40.1%	37.3%	35.1%

In the banking department Government securities have risen by £3.7 millions, possibly as a result of additional borrowing upon Ways and Means. Discounts and advances are only £600,000 higher, so that Monday's borrowings from the Bank were very small indeed. Bankers' deposits have only fallen by £1.6 millions, so that the Government's new borrowings have nearly neutralised the week's expansion in the note circulation.

The Foreign Exchanges.—Sterling has been steady since a week ago at \$4.93 $\frac{1}{2}$ against the dollar and Frs. 74 $\frac{1}{2}$ against the franc, but on Thursday afternoon it was expected to weaken slightly during the last few days of the year. The reason was that many Continental forward sales of gold *bloc* currencies are now due to be covered, which means that either the positions now opened must be closed down outright, or else fresh forward sales must be made against spot purchases. In either case spot gold currencies must be bought, and as many Continental banks are making up their balance sheets for the end of the year there are few sellers of gold currencies. Evidence of this was to be found last Wednesday in Paris and New York, which were the main centres open on that day. Belgian operators came in and bought up all the belgas on offer, with the result that the belga, after closing on Monday in London at Bel. 21.10, opened on Thursday morning at Bel. 21.02. This anticipated weakness of sterling will be purely temporary and technical, and the pound should tend to strengthen once the New Year has begun. Seasonal purchases of dollars must now be at an end, and there has been no fundamental change in the position of the gold currencies since a few weeks ago.

New York Money and Banking.—New York money rates are unchanged. The official call rate is 1 per cent., but call money is available at $\frac{1}{2}$ - $\frac{3}{4}$ per cent. Open market quotations for 90-day bankers' acceptances are $\frac{1}{16}$ - $\frac{1}{8}$ per cent. Further evidence of the prevalence of cheap money is found in reductions this month of the Atlanta Reserve Bank's rediscount rate from 3 to 2 $\frac{1}{2}$ per cent. on December 16th, and the Kansas City Reserve Bank's rediscount rate from 3 to 2 $\frac{1}{2}$ per cent. on December 19th. During the week ended December 19th member banks' loans to brokers rose from \$633 to \$658 millions, but other loans against securities fell from \$823 millions to \$817 millions. Gold continues to arrive from Europe in small quantities. At the end of last week \$7.9 millions came from France, \$4.5 millions from England, and \$1.1 millions from Holland. According to widespread reports, Christmas trade this year has been the best since 1929. As an illustration of the improvement over last year, bank clearings for the week ended December 19th, 1934, were \$6,161 millions, against only \$4,631 millions in the corresponding week in 1933. This is an increase of 33 per cent., and while to some extent it may be due to the intervening rise in prices, it mainly represents a larger volume of business.

THE STOCK EXCHANGE

R.M.S.P.—THE FINAL ACT

THE scheme for the formation of realisation companies to dispose of the assets of the Royal Mail Steam Packet and Elder Dempster Companies, unavoidably presented at the season of peace and goodwill, is, in effect, an "account rendered" for dictatorship. That the R.M.S.P., as a chartered company, has failed to reach its centenary by a matter of four years is to be attributed less to the hazards of shipping trade depression—which other large British ship-owning groups have been able to survive—than to the hopelessly insolvent position built up in the crucial years following the war. In this group of companies, constitutional government was superseded by a personal autocracy on which boards of directors appeared to impose no check. A host of shipping properties was purchased, their acquisition being apparently regarded as of greater moment than their price, when every new bargain involved a fresh drain on the liquid resources and credit of the existing companies of the group. The outcome was a scheme of arrangement, summarised in the *Economist* of March 5, 1932, under which a three-years' moratorium was granted, after control had passed into other hands. That scheme may be held to have fulfilled its main purpose. The Royal Mail and Elder Dempster fleets have been maintained, rationalised and perpetuated under the aegis of separate operating companies. The hoped-for revival in shipping prosperity, however, has failed to materialise, and on the expiry of the moratorium on December 31st the winding up of the original companies can no longer be avoided.

The present scheme, accordingly, is designed to ensure a "nursed" rather than a forced realisation of the assets, lest any equity which may remain be lost in a creditors' *saute qui peut*. Briefly, the R.M.S.P. and Elder Dempster Companies, under the scheme, will be wound up, and their assets (but not their liabilities, other than certain "preferable" claims, of relatively small amount) will be taken over by two companies, to be designated R.M. Realisation Company, Ltd., and E.D. Realisation Company, Ltd., respectively. The former's capitalisation will include £2,000,000 of 4 per cent. first debenture stock, of which £1,750,000 will be issued, at the outset, to repay the R.M.S.P. 4½ per cent. debenture stock. The public holders of the latter stock will have the option of taking cash or exchanging into equal amounts of Realisation Company first debenture stock, which will be redeemable up to January, 1938, at 102 and thereafter at 103, with final redemption on January 1, 1945. Any stock unconverted will be paid off by a public issue of the Realisation Company's stock, which certain well-known firms of City stockbrokers have agreed to underwrite for a commission of 1 per cent. The Second Debenture stockholders of R.M.S.P. will receive £2,550,000 of 5 per cent. Income Debenture stock in the Realisation Company and £765,000 of the latter company's Ordinary share capital of £1,000,000, while the unsecured creditors will receive £235,000 of Ordinary capital. Thus, every holder of £100 of R.M.S.P. 5 per cent. (Second) Debenture will receive, in satisfaction of his claims to principal and arrears of interest, some £50 of Income Debenture stock and 15 £1 shares in R.M.S.P. Realisation Company. The Income Debenture stock is not expected to obtain any appreciable interest payments, but is to be redeemable in whole or part at 110 up to January, 1940, and thereafter at 115 to final redemption on January 1, 1945.

The E.D. Realisation Company's capital will include £700,000 of 4 per cent. First Debenture stock, of which £500,000 will be issued, at the outset, to holders of Elder Dempster 5 per cent. "A" (Second) Debenture stock, holders of Elder Dempster 5 per cent. (First) Debenture stock being repaid at 103, with accrued interest in cash. The "A" Debenture holders will also receive £500,000 of 5 per cent. Income Debenture stock in the Realisation Company, together with £300,000 of the latter company's

Ordinary share capital of £1,000,000, the remaining £700,000 going to Elder Dempster creditors. Thus, every holder of £100 Elder Dempster "A" Debenture will receive, in the Realisation Company, £50 of 4 per cent. First Debenture, £50 of 5 per cent. Income Debenture (redeemable at 110 up to January, 1940, and finally redeemable at 115 by January 1, 1945), and 30 £1 Ordinary shares. The R.M.S.P. creditors will hold 23½ per cent. and the Elder Dempster creditors 70 per cent. of the equity in their respective Realisation Companies. The latter will not have a life longer than ten years. Their object is to realise available assets, and not to become permanent shipping finance organisations. Their directors will be appointed by the Governor of the Bank of England, and will give their services without remuneration.

Of the fundamental concept of the scheme there can be no criticism. It may be that under an ordinary receivership a general "scramble" might conceivably have been avoided. The Royal Mail failure, however, has been so immense and disastrous that its wider repercussions on opinion, both inside and outside this country, must needs be carefully considered. For this reason alone it behoves the City of London, whose reputation is implicated—illogically, perhaps, but no less inevitably—to adopt every possible procedure in order to convince public opinion that no precaution has been omitted to safeguard the interests of all affected, and to give the whole scheme the *imprimatur* of the highest authority. Criticisms of detail should, in our opinion, be subordinated to this main objective. For example, the Second Debenture holders in R.M.S.P. might otherwise argue that the scheme ought to have provided for their eventual repayment in full, if the assets permitted, before the unsecured creditors were allowed any *locus standi*. Again, both Second Debenture holders and creditors in each company might feel that the schemes should have been accompanied by a detailed schedule of assets, with some idea of the possible value of each item. In the general interest, however, it may be advisable to temper justice with mercy by giving unsecured creditors some hope for the future in the case of Royal Mail, and giving Second Debenture holders some inducement not to press for speedy asset realisation in the case of Elder Dempster. Again, it may be sound tactics not to tie the hands of the Realisation Companies in advance, by the publication of any hypothetical schedule of asset values which, in the hands of possible buyers, might tend to become *maximum* figures.

What the assets will, in effect, fetch is entirely problematical. Assets like shares in Royal Mail Lines and Elder Dempster Lines (the operating companies whose continued existence, it may be well to repeat, is independent of the present negotiations) depend for their eventual value on two sets of factors. The first are general economic conditions, including a possible revival in world shipping prosperity. The second are of semi-strategic character, and are bound up with the identity of potential purchasers. The selling price of other assets may be governed by considerations even more difficult to determine. For example, the holdings of Union-Castle Ordinary stock might be worth comparatively little if the present Union-Castle directors' plans succeeded and the Ordinary stock conferred merely a deferred minority interest in the company. If, on the other hand, the proposals were not sanctioned by the Courts, or it were found possible to buy out 75 per cent. or more of the present Union-Castle Preference stockholders, to restore the *status quo* as regards voting power, and to perpetuate the Ordinary stockholders' control, the stock might clearly be attractive to some established British shipping organisation, of the highest repute, with ample liquid resources for its purchase.

All this, however, lies in the future. At present, those who are financially interested in the winding-up of R.M.S.P. and Elder Dempster have no option but to base

their calculations on the provisional realisation totals suggested by the directors after careful consideration, and with full knowledge of all existing facts. These, unfortunately, prove beyond peradventure that the Preference and Ordinary stockholders in R.M.S.P. have no hope of recovering a penny from the wreck of their fortunes. The stockholders in Elder Dempster may feel that the queue of creditors which bars them from the door, in the ultimate sharing out, is less lengthy than in the case of the R.M.S.P. stockholders. A critical and dispassionate study of the last Elder Dempster balance sheet, however, leads to the regrettable conclusion that the difference in the two cases is only of degree and not of kind.

If the directors' estimates are finally realised, the final position of all the parties will be as shown below:—

Nature of Claim	Total Amount (principal only)	To be given in Realisation Company Stocks	Return ultimately Receivable, on basis of present Estimates*
R.M.S.P.—			
4½% 1st Deb.—			
Bankers'	700,000(a)	Repaid in cash	Full
Public	1,400,000	Repaid or converted (optionally) into 4½% Deb. at par.	Full or 20s. 7d. in £ in 1945.
5% 2nd Deb.	5,100,000	£2,550,000 5% Income Deb.; £765,000 Ord. shares.	14s. 6d. in £.
Creditors	15,000,000 approx.	£235,000 Ord. shares	4d. in £.
5% Non-Cum. Pref. Stk.	900,000		
6½% Cum. Pref. Stk.	2,900,000		
Ord. Stk.	5,000,000	Nil	Nil
ELDER DEMPSTER:—			
5% 1st Deb.	1,000,000(b)	Repaid at 103	Full
5% "A" Deb.	1,000,000	£500,000 4½% 1st Deb. £500,000 5% Inc. Deb. £300,000 Ord. shares £700,000 Ord. shares	27s. 10d. in £.
Creditors	4,100,000		3s. 5d. in £.
5½% Cum. Pref. shares	425,000		
6% Cum. Pref. shares	3,750,000		
6½% "A" Cum. Pref. shs.	2,500,000	Nil	Nil
Ord. shares	1,810,000		

* Principal only, presuming repayment of Realisation Company stocks at par, or specified premiums, at latest dates. (a) £700,000 owing to bankers, secured by £1,500,000 of debenture stock. (b) Some £600,000 of these debentures have already been repaid.

NOTE.—R.M.S.P. is a debenture holders' scheme only, the creditors having no voting powers on it. Elder Dempster, however, is both a debenture holders' and creditors' scheme.

It will be seen that, unless present estimates prove unduly conservative, the total loss of share capital in the two companies will reach a nominal total of £17,285,000 millions. This figure, however, includes numerous inter-group holdings, and the total "public" loss will be appreciably smaller. The eventual loss which will fall on creditors (other than debenture holders), after all provisions and adjustments, will be of the order of £15,000,000. These are melancholy figures. Investors may rightly ask whether it is beyond the wisdom of the community to insure against a repetition of the causes which projected this disaster. At the same time, a word of appreciation is due to those who, called in after the damage had been done, have endeavoured, with no small share of patience and technical skill, to conserve such assets as remain. Perhaps the best tribute to the value of their services is the following table, which contrasts the present prices of all the stocks of the two companies, with those prevailing when the first Scheme of Arrangement was announced in 1932:—

Name	Price, Feb. 29, 1932	Price, Dec. 27, 1934
Royal Mail Steam Packet ord. stk.	6½	2½
Do. 5% non-cum. pref. stk.	7½	2½
Do. 6½% cum. pref. stock	7½	2½
Do. 4½% 1st deb. stk. red.	62	97½ xd
Do. 5% deb. stk. red.	25	53½
Elder Dempster and Co., 5½% cum. pref. £1	1s. 6d.	1s. 0d.
Do. 6% cum. pref. £1	1s. 6d.	6d.
Do. 6½% "A" cum. pref. £1	1s. 6d.	6d.
Do. 5% deb. stock red.	48	101½ xd
Do. 5% "A" deb. stock red.	15	101½

The market has correctly perceived the remoteness, to the point of invisibility, of any return on the capital stocks, and has written down their quotations to token values. It has, however, favourably revised its attitude towards the debenture stocks. The First Debenture, in each case, has risen to the neighbourhood of par. The Second Debenture stock of R.M.S.P. has more than doubled in value, while

that of Elder Dempster has risen from 15 to as much as 101½. It is suggested that the 5 per cent. Income Debenture stock of the R.M. Realisation Company will command a price somewhere in the nineties, while the Ordinary shares may be quoted around par—though whether the latter price will be justified, on the basis of present values and possibilities, is a matter on which there may be room for difference of opinion. Prices of 90 and par, respectively, would be equivalent to a quotation of 60 for the existing R.M.S.P. 5 per cent. Debenture, against a current market price of 53½. The schemes, in fact, ingeniously capitalise the contemporary market popularity of equity shares, as a class, in favour of debenture holders who may wish speedily to realise their interests, through the medium of the Stock Exchange.

INVESTMENT NOTES

European Conversion Possibilities.—The reception of the Austrian League Loan Conversion has suggested to the market that other European Governments and Corporations may be the next beneficiaries in the present era of low interest rates. Such operations, of course, would be subject to two contingencies. They would involve the maintenance, and in some cases the further strengthening, of fixed interest security levels. Further, any optional conversions which involved a net transfer of funds to gold-standard countries would presumably require the goodwill of the Treasury. Since the new issues would not be of trustee status and would presumably fall outside the Chancellor's request of January, 1933, it may be assumed that conversions for sterling-area countries would fall within the permitted range of operations given by the Chancellor of the Exchequer last July. We have compiled the following table setting out a selection of European Government and Municipal bonds which, subject to these remarks, may be regarded as within or near the conversion zone:—

Loan	Amount Outstanding	Earliest Optional Redemption Date	Redemption Price	Quotation	Flat Yield† (%)
Foreign Government					
Belgium 7% Stabilisation ...	7,802,000	May 1, 1936	105	110	6 8 0

† Allowing for accrued interest and income tax at 4s. 6d. in £1. (a) Called for redemption on July 1, 1935.

The amounts involved are not large, by comparison with the successful operations of Australia, Argentina and Canada. Nevertheless, it may be presumed that, granted favourable conditions, some at least of these faithful borrowers may obtain due reward. Immediate action doubtless might be premature, in view of the possibility of a fairly large Treasury operation in the near future. The City of Bergen has shown the way by its announcement of conversion of the 1922 sterling loan from 5½ to 4 per cent. Again, this year Finland and Iceland have been able to reduce the rate on the 1923 and 1921 loans to 5 per cent. by offering holders the alternative of reduced terms or repayment. The way may be open for other borrowers, with good credit standing and adequate sterling

resources, to achieve similar reductions, in cases where the amounts involved are not so large as to require the underwriting of a conversion issue.

Bulgaria's League Loans.—The League Loans Committee (London) has issued this week a declaration by M. Todoroff, the Bulgarian Finance Minister, following the negotiations mentioned in the *Economist* of December 15th, page 1156. The declaration outlines a temporary arrangement for the transfer of monthly instalments of the half-yearly coupons. The Bulgarian Government undertakes to maintain the agreed rate of 3½ per cent. for the League and Pre-War loans, but it proposes to transfer any balance in "effective levas" at the National Bank. This arrangement is purely temporary, and will cover those monthly instalments which fall due pending the negotiation of a new agreement. The Financial Committee of the League, which has been inquiring into the Bulgarian economic position, is due to meet on January 7, 1935. Its report will provide a basis for any new negotiations, and the amounts due for transfer under the declaration will count towards whatever new percentage is agreed with the bondholders. Broadly, therefore, the arrangement proposed has the advantage of yielding some current payment, pending negotiations, and of requiring better conditions than were initially proposed by the Bulgarian Government to cover the period, viz., 20 per cent. of current service in "effective levas," of which 10 per cent. were to be transferred. Since the agreed rate of 3½ per cent. is covered between ten and twenty times by the particular assigned revenues, and since the service requires at most 4 per cent. of the budget revenue, the bondholders' representatives could legitimately argue that a concrete case of inability to make full budgetary provision had not been made out, although admittedly the exchange situation is more difficult. The League Loans Committee has "taken note" of the declaration, which may be described as an offer "on account," acknowledged, but technically unaccepted. Bondholders will hope that a full review of the facts will enable any financial misdirection to be promptly righted, for they have already made generous concessions, and have a clear interest in maintaining the prestige of the League.

The Five Shilling Share.—The heightened activity of the new issue market during the last few weeks has attracted attention to a new "common form" capital structure which issuing houses are now adopting. One of the least commendable features of the 1928-29 new issue boom was the exploitation of the preference-cum-shilling ordinary capitalisation. The shilling ordinary was acceptable to the stags as a gambling counter and facilitated the successful placing of the preference issue, from which the large proportion of the companies' capitals was derived. With few exceptions, recent prospectuses have eschewed this British equivalent of the no-par share, and have adopted the 5s. ordinary share as a representative denomination for the speculative industrial issue. The following table sets out some recent mixed and straight issues of this type:—

	Preference Shares of £1	Ordinary Shares of 5s.	Total Capital raised (excluding premiums)	Proportion Pref. to Ord.*
Bethley Flettons	No. 185,000	No. 185,000	£ 231,250	4:1
Broadway (Retailers)	...	500,000	125,000	...
Hillman's Airways	...	400,000	100,000	...
National Star Brick and Tile	100,000	200,000	150,000	2:1
Sale Lido	16,000	53,000	23,250	0.75:1
S.G.B. (Dudley)	125,000	500,000	135,000	1:1
Tecumseh	...	480,000	120,000	...
Vacuum-Packed Produce	100,000	100,000	125,000	4:1
Vactric	...	400,000	100,000	...
Woodlands Chemists	...	...	...	...

* Based on respective amounts of capital, at par value.

Those responsible for these issues may be commended for having applied one of the lessons of the boom period, although the gearing factor in some cases is still relatively high. Whether the 5s. denomination will serve to "sell" their speculative wares, over the long period, is not certain.

The majority of these prospectuses have cited a profits record, since the issues have largely been made for the acquisition of existing businesses, and the 5s. denomination has not been greatly tested as a vehicle for the "prospects" issue. It may have the salutary effect that such issues, being less attractive to those whose savings are best invested outside the Stock Exchange, must maintain a higher standard of quality if they are to appeal successfully to a more substantial and more discriminating section of the speculative investment public.

Trust Companies' Equity Holdings.—In our Investment Trust Supplement of December 1st last, we suggested that, other things being equal, a comparatively large holding of equity as distinct from fixed-interest securities might, under present conditions, give an element of resiliency to a trust company's portfolio. We publish below a list of companies which, at the date of their last report, had more than the average proportion of their total portfolio invested in ordinary and deferred securities:—

PERCENTAGE OF TOTAL PORTFOLIO INVESTED IN ORDINARY AND DEFERRED STOCKS—As shown in latest report.
(Percentages based on market values shown in italics; all other percentages based on book values)

(1) Including 23.4 per cent. in insurance shares. (2) Head office, London.
* Included in list of companies with high percentage in Great Britain and Empire. (See *Economist*, December 8, page 1100). † Included in list with high percentage in utility and general industrial investments. (See *Economist*, December 15, page 1156).

The companies marked with an asterisk and dagger have more than the average proportion in Great Britain and the Empire and in utility and industrial stocks, respectively. They offer a three-fold case for closer investment examination. We repeat, however, the caveat entered in earlier Notes on this subject. Many other factors must be taken into consideration in assessing the future possibilities of any individual investment trust stock. The analysis, further, takes no account of companies whose directors do not see their way to furnish particulars regarding the nature of their holdings.

Company Developments in New Zealand.—"L'Affaire-McArthur" (whose earlier developments were described in the *Economist* of October 6, 1934, page 642 and November 17, 1934, page 932) has eventuated, in New Zealand, in a lengthy report by a Commission appointed to "enquire into and report upon tendencies and developments apparent in the Dominion in relation to the promotion, financial methods, control and operations of certain companies and other corporations which seek to raise capital and loan funds in the Dominion." Copies of the report which have reached London show that an almost unbelievable state of affairs existed among the seventeen companies in the McArthur group, thirteen of which were incorporated in New Zealand. The Commission has taken a serious view of the effect of such scandals on New Zealand's international credit and has made a series of far-reaching recommendations. Its major conclusion is that New Zealand should proceed to set up a Corporate Investment Bureau, whose functions should include supervision of prospectuses, prosecution for breaches of the law, application for injunctions against "unconscionable and specious

schemes," and the keeping of a register of all concerned with public issues, including promoters, directors, brokers, salesmen and valuers. Other recommendations include the compulsory furnishing of annual statements by companies formed for forestry purposes, the prohibition of the raising of capital by means of so-called "bonds" issued in a series, and a very considerable tightening up of the Dominion's company law. Some of the latter recommendations go well beyond the British system. It is proposed, for example, that the signatories of a company's memorandum of association be required to subscribe for a substantial holding of shares, and that no company shall increase its share capital within twelve months of incorporation without the consent of the Minister of Finance. If the Government accepts a substantial part of the Commission's recommendations, New Zealand will have a machinery for control of new issues whose ramifications will be even more intimate and far-reaching than those of the present American system. Further reference to the Commission's report is made by our New Zealand correspondent in a letter on page 1259. We are also informed that legislation is pending in New South Wales, for a new Companies Act which will include drastic provision against the hawking of shares.

A Securities Index from 1867.—An enterprising piece of research has recently been carried out by the London and Cambridge Economic Service, which throws considerable light on the course of security markets from 1867 to 1914. The Service has published, as a special memorandum,* a monthly index of fixed interest securities and industrial shares during that period, using June, 1890, as base. The latter series in particular will remove an awkward gap in the range of accurate investment information. As the memorandum points out, the index is primarily of interest to the investor, for it has proved impossible satisfactorily to weight the component series either for their economic importance or for their market interest. The limited number of securities for which quotations are available over the longest possible period gives the index a necessarily narrow base during the early years. Thus, the groups included only 17 securities in 1867, of which nine were iron and steel shares, but in 1913 the total of 72 shares was satisfactorily distributed over the whole range. The special considerations relating to the wide fluctuations in certain shares and the arguments in favour of the base date suggest that the best use has been made of material, which in the early stages at least must have proved particularly intractable. By permission of the Service we reproduce below the chart of annual averages of the two series, extended to 1933 by deduction from the corresponding indices published in earlier monthly bulletins:—

These curves fit the facts of pre-war economic development with remarkable fidelity. The effects of the Glasgow Bank crash, after the depression of the 'seventies, followed by unsettled conditions abroad in the 'eighties and the Baring crisis are well shown. Thereafter the equities index rises sharply to cut the fixed interest curve for the first time in over a decade, at the commencement of a period of general prosperity and rising interest rates which lasted broadly

* Obtainable at the office of the Service, c/o London School of Economics, Houghton Street, W.C.2. Price 5s.

Is offered by an investment in

Investors Gas & Electric Trust

An investment in 14 outstanding companies in the gas and electrical industries.

This gross yield of £4 2s. 6d. per cent. does not take into account any new-issue rights. The proceeds of sale of these rights based on the average of the last five years would represent an additional annual yield of approximately 15s. 0d. per cent.

These are the Companies:

Gas Light & Coke Company
County of London Electric Supply Co. Ltd.
Callender's Cable & Construction Co. Ltd.
Victoria Falls & Transvaal Power Co. Ltd.
Electrical Distribution of Yorkshire, Ltd.
Calcutta Electric Supply Corporation, Ltd.
Scottish Power Co. Ltd.
Lancashire Electric Light & Power Co. Ltd.
British Columbia Power Corporation, Ltd.
Imperial Continental Gas Association
South Metropolitan Gas Co.
Consolidated Gas, Electric Light & Power Co. of Baltimore
Midland Counties Electric Supply Co. Ltd.
Metropolitan Electric Supply Co. Ltd.

Sub-units can be bought or sold through any bank or stockbroker. Full particulars may be obtained through

until the outbreak of the war. The wider fluctuation of the share index in post-war years is particularly noteworthy. The sudden incidence of the 1921 and 1929 depressions inevitably suggests that a wider basis of Stock Exchange business has rendered markets more, rather than less, subject to economic fluctuations.

COMPANY NOTES

Musical Instrument Companies.—Apart from the wireless set or the gramophone (which, from the investor's point of view, are the basis of distinct and individual industries), the only musical instrument with a sufficiently wide popular appeal to support a group of public companies is the piano. The problems of the piano trade are readily discernible. Although the piano retains its attraction for many homes, its former quasi-monopoly as a purveyor of domestic music has been broken, first by the gramophone and more recently by the wireless set. The market for the piano, therefore, though by no means closed, has been severely narrowed. This development has been sufficiently rapid to cause serious inconvenience to the piano makers, for whom the normal problems of a shrinking market have been aggravated by a revolution in the prime cost of the average "music-producing" instrument. Even a cheap piano may cost twice or three times as much as a gramophone or wireless set of plain but serviceable specification. To meet their difficulties the piano manufacturers have reduced their costs, and have cut their prices in even greater proportion. Individual companies, nevertheless, have tended to seek their salvation outside the piano trade.

† Broken period equated to 12 months.

Thus, S.D.H. Pianos, Limited, have taken up the manufacture of wireless sets. Associated Piano has opened departments for woodworking and furniture. John G. Murdoch combine a baby carriage and laundry machinery business with their piano and musical instrument trade. It is unlikely, altogether, that musical instruments will provide a very favourable opening for investment in the near future. Among the latest figures for representative companies, summarised in the annexed table, those of Herrburger Brooks, John G. Murdoch and Associated Piano show signs of the recovery in profits which may be looked for at the beginning of revival in a trade which deals in relatively expensive units of output. Allowing, however, for the vigorous advance of the "wireless" habit during the depression period, it is somewhat difficult to see how the pre-depression profits of the piano manufacturers can be speedily recovered. Even the gramophone companies proper have felt the effects of wireless competition during the last few years.

Canadian Pacific Dividend Prospects.—The hopes of ordinary shareholders in the Canadian Pacific Railway of receiving a dividend appear to be doomed once again to disappointment. The company's experience in the matter

of receipts this year, indeed, has many points of resemblance with that of the four main-line British railways. In the early part of the year, when the takings of the system afforded comparison with those of depressed months in 1933, gross receipts showed increases ranging from 12 to 19 per cent. Expenses did not rise in proportion, and more than half the increase was retained as net revenue. From May, however, the "pluses" began to fall away. The autumn weeks of seasonally heavy traffic movement and revenue have yielded only modest further gains, for the figures have tended increasingly to compare with "recovery returns" in 1933. The course of receipts, month by month, is summarised below:—

RAILWAY RECEIPTS, 1934						
	Gross			Net		
	Receipts, 1934	Change, compared 1933		Receipts, 1934	Change, compared 1933	
		Amount	Per cent.		Amount	Per cent.

Total, 10 mos.	103,653	+ 9,685	+ 10.3	17,771	+ 3,741	+ 26.7
November	11,183	+ 793	+ 7.8	...	...	...
December 1-21	7,543	+ 552	+ 7.9	...	...	...
Total, to date..	122,379	+ 11,030	+ 9.9	...	...	...

It appears that the total increase in net earnings this year, as compared with 1933, will be under rather than over \$4,000,000. In 1933, after allowing for fixed charges and allotting \$1,438,811 for pensions, the company earned \$1,257,161 towards preference requirements of \$5,490,277, though no dividend was paid. The figure, however, included \$6,222,481 of "special income"—by way of net receipts from steamers, hotels, telegraphs, investments, etc.—which was shown before allowance for depreciation on ocean and coastal steamships. The latter, in fact, was charged against surplus revenue account to a total of \$3,854,481. How far the board will again be willing to "stretch a point" is unpredictable. If "special income" rises sufficiently to allow for writing-off steamship depreciation direct, and to leave the net total at last year's level, something between 2½ and 3½ per cent. may be shown as earned on the preference stock. In that event the board may decide to declare a half-year's dividend. Everything turns, however, on the dimensions of "special income," and as this has been somewhat generously computed in recent years, the directors may take the view that the first year of recovery offers a favourable opportunity to conserve a modest increase in earnings. In this connection it may not be irrelevant to point out that the President of the C.P.R. has strongly taken the line that "unification" with the Canadian National, "for the purpose of administration" is essential to the solution of Canada's railway problems. Any decision which might be construed as suggesting that the Canadian Pacific was well on the way to recovery under the present regime would scarcely be consistent with this view. Further, the board may be faced with an increase in the wages bill as a result of last month's decision gradually to reduce to 10 per cent., from January 1, 1935, onwards, the cut of 15 per cent. put into effect two years ago.

Citroën Developments.—Shortly after we went to press last week it was learned that arrangements were in progress to avoid the threatened bankruptcy proceedings against the Citroën Company. The company's petition for judicial liquidation was upheld, and the plants, which give employment to some 20,000 workpeople, will continue to operate. Circumstantial reports from Paris suggest that a stringent financial policy is overdue, and negotiations for reorganisation have been proceeding for over a year. It is known

that the Michelin Tyre Company, one of the largest creditors, has assisted the Citroën concern with finance and reconstruction plans. The latter, however, proved unacceptable to certain other creditors, while M. Citroën resisted alternative schemes drawn up by the banking creditors. A provisional balance sheet, dated October 1, 1934, shows how unmanageable the current position has become. Short-term liabilities amount to Frs. 528 millions, of which bankers rank for Frs. 76 millions, trade creditors for Frs. 134 millions, and bills for Frs. 208 millions. Against these sums the company has nearly Frs. 141 millions in cash and securities, Frs. 373 millions in stock and Frs. 420 millions owing by various debtors. It is further reported that the company sustained a loss of Frs. 83,050,940 for the year to June 30th last, while the deficit for the subsequent quarter was as much as Frs. 57,613,870. In view of the present financial circumstances it may be prudent to accept these figures with due reserve. From the general point of view it remains to be seen whether the Flandin Government will be considerably affected. It has already encouraged prompt steps to prevent closure of the works, but there is no likelihood, in view of previous refusals, of Government assistance for the concern. The Paris Bourse has taken the disclosures calmly, and Citroën shares closed at 63 on Wednesday, above the worst. Nevertheless, the potential effects of the incident on the Paris bill market and on the solvency of creditors, whose claims are frozen, may be considerable.

Burma Corporation.—At the annual meeting, in Rangoon, writes our mining correspondent, the acting chairman of the Burma Corporation foreshadowed a return of capital out of accumulated surplus assets. At first a favourable market interpretation was placed upon this announcement, but an entirely different view resulted from consideration of the reason for the return—that further large sums would not be required for development. In our Note on the company's annual report (see the *Economist*, November 24th, page 993) we stressed the adverse effect of the persistence of "the unfavourable Yunnan sediments" upon the position at depth practically throughout the mine. The capital decision, indeed, has been interpreted as an intimation that a definite limit must be placed upon the mine's expectation of life, while exploration of outside areas in Burma has given negative results. The fall in the market price of the shares, however, suggests that pessimism has been overdone. The proved ore reserves at June 30th represented over eight years' supply for the mill, at the 1933-34 rate of output. Exploration of the upper levels will doubtless reveal some further tonnage of payable ore. Any material recovery in the price of the company's products (other than silver, which has recently had a substantial advance) would confer payability on appreciable quantities of ore which cannot be profitably dealt with at present. The market expects the proposed return of capital to be one rupee, or rs. 6d. per share, which would absorb about £1,000,000 out of the surplus of £1,654,400 shown by the last balance sheet. The latter total includes £690,260 of investments, composed mainly of gilt-edged stocks, brought in below market value.

Rand Selection.—Last year's profits showed slight change from those of the year to September, 1933, net earnings being £367,200 and £354,800 respectively. For the three years to 1933, however, no dividend was paid, whereas in 1934 shareholders have received dividends totalling 50 per cent., of which 20 per cent. related to the previous year. Some £215,630 from share premiums, etc., is brought into the appropriation account. An appropriation of £250,000 raises the reserve to £800,000, and leaves £199,900 to be carried forward, against £397,700 brought in. The portfolio shows an increase of £310,350, at £2,011,650.

Other Company Results.—In the Christmas "closed season" our weekly profit and loss summary table, on page 277, musters only thirteen companies. There are, however, some features of interest in the short list. The

Fairey Aviation accounts, for instance, confirmed the market's disappointment with a halved ordinary dividend. Net profits amount to £47,534, against £116,683 for the previous year. The Riley figures also convey a warning that record activity in an industry is no necessary criterion of rising profits for individual companies during a period of rapid technical change and rising material costs. Profits have fallen sharply from £77,910 to £40,504, but the repeated dividend of 20 per cent. has been covered satisfactorily. Four rubber companies which show improved profits include Malay Rubber Planters (£16,565, against £2,435) and Waterfall (Selangor) (£6,784, against Dr. £18,413). In the textile group, John Barran and Sons and Willsons (London and Provinces) show a satisfactory increase in profits and dividends. Among industrial concerns, Chinese Engineering and Mining report a loss of £2,719 for a year of serious competition, labour unrest and depression, compared with £19,377 for the previous year. Another overseas company, East India Distilleries and Sugar Factories reports sharply reduced profits (£11,408, against £29,070) and pays 7½ against 10 per cent. The net profits of British and Dominion Film amount to £47,480 for the period April 29, 1933, to October 27, 1934. A preliminary statement from United Tobacco Companies (South) discloses net profits of £616,837 for the year to September 30th, compared with £548,492 for the previous year. Last year's 20 per cent. dividend has been increased to 22½ per cent., and 3½ per cent. special bonus from exchange profits is also being paid.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Ionian Bank, Scottish Australian Company, Stoll Theatres Corporation, and Appollonia Gold Fields. The chairman of the Ionian Bank declared that a fresh improvement in conditions had induced the bank to increase its activity in Greece, and that the reduction in cash and expansion in "live" assets were due to this cause. Mr J. C. Inglis informed the shareholders of the Scottish Australian Company that the company's acquisition of an important freehold property in New South Wales had been made in view of the impending resumption of certain properties held on lease. The current year's woolclip was large, and seasonal conditions for the most part were good, but the ultimate result depended on the course of the wool market and the relief of "drought" stations. At the Stoll Theatres Corporation meeting, the chairman declared that the incidence of the entertainments tax gave cinemas a differential advantage over theatres. Shareholders of Appollonia Gold Fields were informed that development of the company's Obomeng and Prestea-Ashanti areas gave promise of satisfactory flotations in due course.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS	
TICKET	ACCOUNT
JANUARY 8	JANUARY 10

WITH two days' break for the Christmas holiday the week in the market boils down to little important business. To the serious-minded Scrooges, Monday was a day largely devoted to lamentable frivolity. Most of the market had cleared up its business by noon, and the rest of the day was dedicated to toasts and trivialities. Although Monday rested uneasily between the two holiday breaks, it was characterised by a cheerful undertone which was well maintained when the market reassembled on Thursday. With business at seasonable levels, the high spirited had ample opportunity to mark the Christmas occasion.

The chief factor in the gilt-edged market was provided by the Chancellor of the Exchequer's statements indicating a continued cheap money policy. Prices made a prompt

COMPANY MEETINGS, &c.

STOLL THEATRES CORPORATION, LIMITED

SERIOUS BURDEN OF ENTERTAINMENTS TAX

UNFAIR COMPETITION BETWEEN THEATRES AND CINEMAS

SIR OSWALD STOLL'S INTERESTING ADDRESS

The sixth ordinary general meeting of the Stoll Theatres Corporation, Limited, was held, on the 21st instant, at the London Coliseum, St. Martin's Lane, London, Sir Oswald Stoll (chairman and managing director) presiding.

The secretary (Mr Roland J. Bentley) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—I rise to move the adoption of the report and accounts, which I assume may be taken as read. (Agreed.) In the balance-sheet the total figure is two and a-half million pounds odd, which is £34,484 8s. 10d. higher than last year. On the assets side all the items are good, and they could justifiably be written up.

As the report states, one of our subsidiaries has already sold some property in London, completion of the sale of which has partly taken place. Our Manchester subsidiary has also made a contract for the sale of an important theatre in Manchester, completion of the purchase of which is scheduled for next March. This property is to be converted by the purchasers into a great cinema.

THEATRES AND ENTERTAINMENTS DUTY

There are two paragraphs in the report which I consider are of special importance, and I can be forgiven if in this speech I now repeat them. They are: "As to earning power, we must place ourselves among the optimists whom the Chancellor of the Exchequer at Manchester last month tended to discourage. In the past our subsidiary companies have paid approximately £2,000,000 in dividends, and such companies have accumulated good assets, in addition to the 565,543 ordinary shares of £1 each which they now hold in this company. This is a good record. The fact, also, that nearly £3,000,000 of their revenue has gone in entertainments duty is sufficient reason why this good business, with its good record of dividends and progress, should no longer be forced to mark time seriously handicapped by this unwarrantable taxation."

"The effect that entertainments duty would have (if it were imposed on business apart from entertainment business) is well borne out by statistics relating to 197 Investment Trust companies. In the case of seventy-two of these Trust companies, of which investment statistics are available, it is said that approximately 80 per cent. of the investments relate to industrial and similar miscellaneous companies. If these companies in which the investments were made had been subjected to deduction of one-sixth of their main revenue, hardly one of the Trust companies would ever have paid a dividend, and the Trust capital, as well as the capital of the companies in which the investments were made, would have been reduced to trifling values. Even a Government department, such as the Post Office (which is virtually a trading concern and is making huge profits) would have made a loss instead of a profit if it had been subjected to a tax equivalent to entertainments duty."

CHANCELLOR OF EXCHEQUER'S ADMISSION

Mr Chamberlain has admitted that entertainments duty in its present form is unsatisfactory in many ways, both theoretically and practically. That admission was made on June 11th last. He said at the same time that those who are affected by entertainments duty are at the top of the queue for relief, and he said that, should his resources permit, he might grant relief, not merely to the extent of a restoration of the particular imposts which were increased in 1931, but also by remodelling the whole tax. It is clear that a Chancellor of the Exchequer has at last taken the trouble to understand this tax.

Theory assumes that entertainments duty may be imposed upon the people being entertained, i.e. the paying public—without being inevitably imposed upon the industry which does the entertaining. Practice in regard to entertainments of the stage has proved this theory to be false. It is wrong to suppose that the public pay except as the public always pay for everything in every kind of business. The obligation really falls upon

theatres, cinemas, artists, musicians, employees and shareholders who are deprived of participation in one-sixth of the revenue, or the productive use of it.

DISTINCTION BETWEEN THEATRES AND CINEMAS

While I am on the question of entertainments duty I must say that if any of such duty is to be continued, whether in a remodelled form or not, there certainly ought to be a distinction drawn in favour of the stage as distinct from cinemas.

Mechanisation and duplication have gone far in entertainment and are going farther. For all that, entertainment depends now, as ever, upon the maintenance, development and continuous supply of living artistes, and obviously a higher revenue is required to meet the costs of a performance given by artistes in person with scenery, costumes, supernumeraries, orchestra and stage and electrical staff, than the necessary revenue required to meet the costs of a performance of a copy of a film run through the sprocket wheels of a lantern in charge of a single operator. Ten shillings to £1 is an ample allowance for the necessary cost, as distinct from administration costs, of such a film performance. This has to be compared with £25 to £250 as the necessary costs, also as distinct from administration costs, of a stage performance. The costs in relation to necessary revenue in the two cases indicate the extraordinary preference over the stage given to the screen by the tax in its present form. Whatever the revenue, the tax amounts to one-sixth. Taking the higher essential revenue in each case, the tax on the screen is one-sixth of £1, i.e. 3s. 4d., while the tax on the stage is one-sixth of £250, or £41 13s. 4d.

PRIVILEGED POSITION OF CINEMAS

In other words, the tax in relation to necessary revenue on a single stage performance is 249 times greater than the tax on a single film performance. Whatever be the theory of preference, the practice is therefore entirely unsatisfactory.

It is not surprising that cinemas have multiplied under such a preference, while theatres have become either cinemas or petered out under the handicap.

If theatres are allowed to prosper again, employing more artistes and more experts in all the arts of the stage: if theatres which are now cinemas are allowed to revert successfully to their proper avocation, so reducing cinema competition, the future of the cinema itself will be brighter, because more and better pictures, with a wider range of favourites and fewer identical programmes will follow.

THEATRES AND TELEVISION

It is now being found that the preservation of the stage and studio performer is also a *sine qua non* to the success of television. The reference in the report to visatone and television indicates where a new way to substantial profits may be found by the subsidiaries of this company. Televised programmes will call for the rehabilitation of entertainments of the stage.

Practical, commercial, and inevitable television is ready. Recently, reports reached me that large supplies of television receiving sets had been stocked at certain factories. This was found to be true. It is also a fact that the chairman of Electric and Musical Industries, Limited, made an announcement at the annual meeting, reported on November 17th, in the following words:—"The research engineers of your company have developed and demonstrated a complete and entirely successful system of high-definition television of undoubted entertainment value. This system includes both transmission, or broadcasting, and reception by sets suitable for use in the home. These sets can be placed before the public at a reasonable cost."

Television is no longer a possibility. It is an accomplished fact. It means that great advances in the entertainment world are imminent, and that they are advances which, so far as we are concerned, will involve preservation of, and co-operation with, the stage.

I should like to conclude by saying that it is important to remember that our enterprises are not alone in failing to make the

profits to which we were accustomed for many years. The depression over the last few years has adversely affected all kinds of entertainment enterprises, not only in London, but in the provinces. This is due to causes well known, such as diminished spending power on the part of the general public, a good deal of fine weather, which has naturally diminished audiences who usually attend indoor places of entertainment, and last, but not least, the continuance of the imposition of the entertainments duty.

It would be invidious on my part to refer by name to other entertainment enterprises, and I am not going to do so. Through no fault on the part of their very efficient managements, they continue to run under very difficult conditions, many of them at a loss, and in some cases owing to an additional adverse factor, namely, the difficulty of getting hold of attractions which at the same time interest the public and yield a remunerative profit to the producers. This comparison between our enterprises and other similar enterprises is important. We have the great satisfaction of knowing that our group of theatres is second to none.

GOOD PROSPECTS AND NORMAL CONDITIONS

I can say with confidence that our group of theatres will be in the forefront as substantial profit-making concerns when the prevailing depression disappears, as I am confident it will before long. The main drawback is the great loss which we sustain by reason of the Entertainments Duty. We have every reason for believing that this will in a few months' time be substantially reduced as regards cinemas and removed as regards theatres. Our theatres are well equipped and are thoroughly efficient and up-to-date, and I repeat that, when normal conditions are restored, we shall again reap very substantial profits.

I now beg to move: "That the directors' report and balance sheet at 30th September, 1934, and profit and loss account for year ending that date be approved and adopted, and that the balance of £97,116 17s. at credit of profit and loss account be carried forward to the current year's accounts."

Mr. Douglas McCraith seconded the resolution, which was put to the meeting by the Chairman and carried by a large majority.

The retiring directors were re-elected and the auditors were reappointed.

"A CATALOGUE OF FACTS"

A vote of thanks to the Chairman having been put to the meeting and carried unanimously, the Chairman returned thanks, and said: Our report is not a lecture on economics. It is a catalogue of facts. My speech has not been a lecture on economics. It has been a speech strictly pertinent to our business.

I say that because of a letter from Cardiff, which appeared in the *Financial Times* on Saturday, the 15th instant. The letter reminded me, however, of a great friend that I once had in Cardiff. I used to talk economics with him as they affected questions of the day because he knew something about the vitals of the subject, besides being a double gold medallist in law. He arranged a meeting between me and the Attorney-General of the day, whose friend he also was. That Attorney-General was an expert in financial law, and he examined me for three and a-half hours on an economic remedy designed to protect many interests and injure none. At the end of that examination he said to me: "I believe you have found a complete solution of a very grave problem." That Attorney-General was none other than the great little gentleman who now happens to be the Lord Chief Justice of England.

THE IONIAN BANK, LIMITED

INCREASE IN BUSINESS MAINTAINED

The ninety-fifth annual general meeting of the Ionian Bank, Limited, was held, on the 21st instant, at 25-31, Moorgate, London, Sir John Stavridi (chairman of the company) presiding.

The Secretary (Mr R. H. Fry) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that conditions in Greece, which had begun to improve in 1932-33, had continued to do so during 1933-34, although the improvement had not been sufficiently large to create any great demand for accommodation from the banks. Unfortunately, her credit had seriously suffered abroad, and more particularly in this country, which had in the past been her main financial, as well as trading market, owing to the fact that the agreement reached by her last year with the Bondholders' Committee had not been carried out in its entirety.

The Greek Government and the Bondholders' Committees having agreed to meet again before January, 1935, to settle pending questions between them, it was sincerely to be hoped that that meeting would be arranged at the earliest possible moment, and that, with the necessary frank goodwill on both sides, an equitable understanding might be reached.

Most of the indices available confirmed that conditions had improved in Greece during the past year. The further improvement in conditions which became evident towards the end of the financial year under review induced them to increase their activity in Greece, and that was reflected in their balance sheet through a reduction in the large cash balance as compared with the previous year and an increase in the live items of their assets.

Egypt continued to be overbanked. Competition was therefore most keen, and profits continued to be affected by low rates.

The decrease in the gross profits caused could only be compensated by an increase in business, and that increase, notwithstanding the still abnormal conditions, had begun to show itself and was still continuing.

Prior to the shrinkage in the bank's operations, due to the world crisis, the gross profits amounted to £408,167, an average of 7.7 per cent. on the total assets. For the subsequent years the comparative figures were:—

		Balance sheet	Gross Profits	Ratio
		£	£	%
1931	...	4,908,344	355,766	7.2
1932	...	4,087,070	274,097	6.7
1933	...	3,910,412	243,349	6.2
1934	...	4,468,018	224,414	5.0

The steady fall in the ratio was therefore sharply accentuated last year, with the result that, notwithstanding the satisfactory increase in the bank's deposits and other funds, the gross profits were not as large as those of the previous year. That was, he thought, a clear indication of what the fall in the value of money had meant to them. The decrease in the percentage of gross profits could only be offset by one or all of three means: (a) Increase of deposits—here the increase had begun, and they had every hope of its continuance, although the rates banks could offer could hardly be attractive to depositors; (b) decrease of expenses—he went into this matter at some length last year and showed them how, thanks to the constant watchfulness for all means of economy, the expenses had been decreased since 1930 by no less than 33 per cent., or £75,000. They would, therefore, he thought, appreciate the further effectiveness of the directors' policy when they noticed that, notwithstanding the increase of over half a million sterling in the figures, there had been a further reduction in the expenses of £4,167; (c) decrease of interest paid—here they were, as far as Greece was concerned, bound by the tariff of the Hellenic Bankers' Union, but they would notice that, notwithstanding a substantial increase in the deposits, from £2,592,677 to £2,768,933, the total interest paid had amounted to only £61,743, as against £73,822. Thus, out of the falling off in gross profits of £18,935, £4,167 had been recovered in reduced expenses and £12,079 had been recovered in reduced interest paid. Those figures, he submitted, spoke for themselves.

His personal belief was that in their main field of activity, Greece had made progress on the road to recovery, but he realised that there were still many difficulties and perplexities in her path.

Notwithstanding the reduction in the net profits, the directors, having regard to the present somewhat more favourable outlook, had decided to recommend the payment of a dividend at the same rate as for the last three years.

The report was unanimously adopted.

SCOTTISH AUSTRALIAN COMPANY, LIMITED

EFFECT OF BETTER WOOL PRICES

The annual general meeting of this company was held, on the 21st instant, at Winchester House, London.

Mr J. C. Inglis (chairman and managing director), in the course of his speech, said: In spite of all local drawbacks, our pastoral and farming operations had on the whole quite successful results, for, though the crop of wheat was smaller, the wool clip came within 700 bales of that of the previous year.

The bulk of our wool comes to market in London between the months of September and April, and during the whole of that period in 1933/34 there was a remarkable improvement in prices, with the result that our wool clip, although slightly smaller, produced nearly double the amount that was encashed in the previous year.

It is mainly owing to this improvement in the price of wool that we are able to show you such satisfactory results. Whereas in the previous year, after crediting as a windfall the bonus on the conversion of our 5 per cent. War Loan, there was a loss of £2,574, in the year ending June 30th last we are able to show a profit, without the help of any windfalls, of no less than £91,412, to which falls to be added £19,692, brought forward from the previous year. Under these circumstances, the directors were pleased to be able to advise an increase in the total distribution on the ordinary stock to 7½ per cent., by recommending a bonus of 2½ per cent., in addition to the dividend of 5 per cent. After payment of the final dividends and bonus and a special bonus to the staffs, there remains £40,005 to be carried forward.

Now as to the future, I have referred in grateful terms to the splendid improvement in the price of wool which prevailed during the greater part of last year's selling campaign. Unfortunately, the picture has since then considerably changed. The first signs of falling back began in May of this year, while in July the fall in values had reached formidable dimensions. September told the same story, and it was not till November that any real revival of strength in the market showed itself. I think the present position may be fairly described as one of continued firmness, though with no particular indication of the further rise that is necessary before prices can be said to be anything like remunerative. A very substantial recovery in the world price of wool is necessary before we can look for results such as we attained in the year under review. It is for that reason, also, we have considered it wise to carry forward the substantial sum of £40,000.

Reference is made in the report to the acquisition of an important freehold property in New South Wales. We had for some time past been making search for such a property, in view of the impending resumption of parts of our leasehold properties in Queensland and New South Wales. The property in question (its name is Goolhi) was most carefully examined by our trusted officials before the purchase was made, and they are quite satisfied that in Goolhi we have got a property of the highest quality, and one that over a series of years ought to give us satisfactory returns.

As to the present position and the general prospects for the immediate future, practically the whole of our wool clip has been shipped, the estimated total being somewhat in excess of that for last year. Approximately half has already been sold. Our wool has met keen competition, and has been readily disposed of, though at prices substantially below those ruling a year ago.

As regards weather conditions, our latest information is that droughty conditions prevail in North Queensland, which are causing our managers great anxiety and which can only be relieved by good rainfalls in the near future. At two other stations in Queensland rain is badly needed, though there is at the moment no cause for anxiety. By way of contrast, there has been excessive rainfall on one of our smaller properties in New South Wales, which caused some considerable damage, though the situation is now well in hand. In all other cases the manager's most recent telegram states that the season is quite normal and prospects are satisfactory.

To sum up, the position is that for the current year we have a large clip of wool, and in most cases good seasonal conditions. The ultimate result of the current year's working must necessarily depend on the course of the wool market and the relief by rainfall of the droughty stations.

Sir Percy G. Mackinnon gave an interesting account of the visit he paid to representative properties of the company in Australia in the early part of the present year, stating that he was much impressed with them and with the way they were managed.

The report was unanimously adopted, and the dividend and bonus recommended were declared.

APOLLONIA GOLD FIELDS, LIMITED

DEVELOPMENT OF PROPERTIES PROCEEDING

The ordinary general meeting of the Appollonia Gold Fields, Limited, was held, on the 27th instant, at Winchester House, London.

Mr M. L. Innes Browne (the Chairman) said: At the last general meeting we told you our company had sufficient money to maintain its titles but would require more working capital to be able to develop and equip mines. The company to-day has a cash working capital of £114,000, and is at length able to undertake the development of its properties with a view to the formation of subsidiary companies when sufficient work has been done to warrant flotation.

This company is, I think, the oldest mining company operating in the Gold Coast Colony. It has in the past always been hampered by totally inadequate working capital. Its properties cover a large area and have been well reported upon and now that it has working capital it should take a part with the other successful companies in developing the mining industry and in the profits to be made from the gold mines of the Colony.

During the past year work has been mainly confined to the Obomeng Option Concession. A great deal of the work was necessarily of a preliminary nature having for its object the location of the main line of reef and subsequent selection of mining areas covering it. Prospecting necessitated the examination of many ore occurrences in a country densely covered with tropical growth. The work has been very thoroughly done and a mining lease selected, upon which work in that district is now being concentrated. The results to date are satisfactory and justify further development and give promise that it will warrant flotation when the additional development work has been done.

The company is also engaged with others in examining certain areas on the Prestea-Ashanti line of reef with a view to joining in the flotation of these areas. There is a great deal of information available regarding the Prestea-Ashanti reefs formation and work can be confidently undertaken there owing to the great strength and persistence of the main ore channels and the auriferous contents of the lodes.

The mines on this line of reef have produced in the past and are still producing most of the gold won in West Africa. The gold-bearing reefs here have been proved to continue in depths and to maintain their values and the Prestea-Ashanti line of reef is to-day the centre of activity of the big mining groups interested in West Africa. The programme of development now being carried out is giving excellent results, and it is probable these areas will be the first that will be ready for flotation.

During the coming year it is intended also to examine the gold-bearing reefs on the company's Mankwadi properties. These properties cover a large area and have only been partially prospected in the past. Now that we have adequate working capital some of the occurrences favourably reported upon by the officers of the Geological Survey can be prospected. The company's Mankwadi Concessions cover a large area: they are highly mineralised and it would take time thoroughly to prospect them.

We propose to confine the work to prospecting and partly-developing the gold discoveries made on these properties, while continuing the development of the Odumassie reef on our Obomeng Concessions and the development work in conjunction with others on the mining areas situated on the Prestea-Ashanti line of reef.

We shall benefit this year from the work done in the past year, and, with the ample working capital the company now has, good work can now be done and I look forward to a successful year for the company.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 22, 1934, amounted to £10,201,000 against ordinary expenditure of £8,078,000. After allowing for a reduction in Exchequer Balances of £303,437, the operations for the week, as shown below, reduced the National Debt by £2,426,000 to approximately £8,144 millions.*

(000's omitted)			
Treasury Bills	+ 3,352	Public Department Advances	- 5,820
National Savings Certificates	+ 250	Road Fund Temp. Advances	- 186
		N. Atlantic Shipping Issues	- 22
	+ 3,602		- 6,028

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at September 30, 1934, appeared in *The Economist* for October 6, 1934.

REPORTS AND NOTICES

BANKS

THE CANADIAN BANK OF COMMERCE.—The general statement, dated November 30, 1934, shows following major items: total assets, \$575 millions, including \$315 millions quick assets, of which \$92 1/2 millions cash holding, comprising gold coin, Dominion notes, other currencies, cheques on and balances due by other banks. Total security holdings also included in quick assets, \$163 1/2 millions, of which \$82 millions Dominion and provincial securities maturing within two years and \$53 millions Dominion and provincial securities longer term. Call loans also included in quick assets, about \$58 millions. Total quick assets 60 per cent. of liabilities to public. Other current loans and discounts, \$220 millions; letters of credit, about \$13 millions. Non-current loans, \$3 1/2 millions; other assets practically same as last year. Among liabilities, notes in circulation, \$26 millions. Deposits by public and Governments, \$470 millions. Balances due other banks, \$8 millions. Advances under Finance Act, \$7 millions. Net profit, \$3,413,654, and balance brought forward from last year, \$662,000. Appropriations, dividends, \$2,400,000, and Government taxes, transfer to pension fund and written-off bank premises, \$997,000, leaving balance profit and loss account, \$679,000.

STABLE PRICES OR NEUTRAL MONEY?

ORTHODOX opinion about the money and trade cycle problem has undergone a remarkable change in the last five years, as these three books* amply illustrate. Five years ago stability of the general price level was the agreed ideal, and control of the volume of credit and currency was the accepted method of achieving it. Two main attacks on this position have been made in the intervening years. It has been argued first that the "general price level" and "the value of money" are meaningless expressions; and, secondly, that the trade cycle is fundamentally a matter not of price levels at all, but of changes in saving and investment and their relation to one another.

The theoretical attack on the "general price level," though elaborated by various wings of the Austrian school, propagated by Mr Keynes in his Treatise, and at one time accepted by Mr Cole, seems, nevertheless, to have failed. We may still conceive, if we like, of the purchasing power of money as represented by all the commodities which could be bought at existing prices by a given unit of that money at a definite time. This conception, though hypothetical, is not necessarily contradictory; and we may consequently acquit ourselves of the logical absurdity of talking in practice about something, while theoretically denying its existence—an absurdity of which some economists are still guilty.

What recent discussion does seem to have established is that the general price level in this sense is neither measured by any of our existing index numbers nor relevant to the trade cycle problem. This conclusion is accepted by Mr Roll, Mr Abrams and Mr Cole, all of whom discuss the puzzle of the "general price level." Mr Roll points out that there is no possible solution if we wish to measure "the value of money" in terms of any group of persons' demand and not merely in physical volumes of commodities. But he also quotes Dr. Haberler's conclusions that it is legitimate for statistical reasons to speak of a movement in general purchasing power, as well as Mr Keynes's view that the price level of finished consumption goods is the one that is relevant to the trade cycle. Mr Abrams, who is also inclined to be scornful about the general price level, admits that stabilisation of particular price levels is not fundamentally impossible; and he also quotes Mr Keynes's view. Mr Cole, in his new essay on "Dr. Hayek's Triangle" in this book,* rejects price stabilisation as an object of practical policy; but refuses to admit the "unreality" of the general price level as a theoretical conception.

The second attack on the monetary orthodoxy of five years ago seems to have gained its point. It is now

* "About Money." By Erich Roll. Faber and Faber. 248 pages. 7s. 6d.; "Money." By M. A. Abrams. Bodley Head. 124 pages. 2s. 6d.; "Studies in World Economics." By G. D. H. Cole. Macmillan. 285 pages. 12s. 6d.

generally agreed that if the trade cycle is to be evened out, it will have to be done by the adjustment of saving and investment to one another rather than by direct management of "the" (or any) price level. This change of view is the result of the insistence on the possibility and dangers of divergencies between saving and investment which is common to both Mr Keynes and Professor Hayek. At the moment it is the latter who seems to be in the public eye. Of these three books, Mr Abrams's is a straight, not to say dogmatic, and cocksure promulgation of the Hayek viewpoint; Mr Roll's is a sympathetic, if critical exposition; while the principal new chapter in Mr Cole's book (which otherwise consists mostly of reprints) is a detailed and interesting criticism.

Mr Abrams's book, if dogmatic, is at least intelligible; and those who have risen sadder but no wiser from a perusal of Professor Hayek's own "Prices and Production" will be grateful for it. The main argument is this: The natural state of affairs in a "progressive" economy, where money is "neutral," would be a price level falling in proportion to the increase in general productivity. Suppose, however, that the banking system, in the attempt to stabilise prices, issues a volume of loans greater than the volume of savings available, the market rate of interest will fall below the equilibrium rate, and "over-investment," that is investment out of forced and not voluntary saving, will take place. This may go on while the general price level is stable. When the process has begun, there are only two possible ways of escape. Either it must be continued and develop into high inflation; or, if it is stopped, the destruction of the capital based on forced saving must take place.

Now the first half of this argument would probably not be denied to-day by any but a few economists. It is taken for granted by Mr Cole, Mr Abrams and Mr Roll. If we try to stop the natural fall in prices which is due to increased productivity by credit inflation, then forced saving and over-investment (in the above sense) will result. This is not in the least inconsistent with Mr Keynes's position; for equilibrium between saving and investment, in his view, implies falling prices, if productivity is increasing. But this does not prove the second thesis that "over-investment" must involve a destruction of capital; and that the boom must be followed by a depression. The point is of enormous practical importance. For no other rational argument, besides the Austrian one, has yet been put forward to show that general capital destruction is necessary after a boom. If it is not necessary, practical monetary policy at the top of a boom should aim at an immediate return to equilibrium involving full employment of all the existing factors of production. If it is necessary, there must be unemployment and depression.

Why should a volume of voluntary saving, which is insufficient to create a certain volume of new capital, be also insufficient to maintain that capital in existence when once it has been created? Mr Abrams, who swallows Professor Hayek's case whole, argues that it must be insufficient. Mr Roll, who is very sympathetic to the Austrian view, flatly denies this. Mr Abrams, despite the use of much irritating jargon about "roundaboutness" of production, "intermediate products," the "structure of production," etc., is at least clear on this point. A volume of voluntary saving, he argues, which bears the same ratio to the volume of spending as existed before the over-investment took place, will be insufficient to maintain the new capital. But surely this simply does not follow. All the saving necessary to maintain the new capital is saving for working capital and depreciation. No saving for new investment is necessary. Yet it is probable that some saving for new investment was going on before the over-investment took place. In that case a return to the old ratio surely need not result in any insufficiency of saving.

This seems to be the greatest theoretical weakness in the Austrian case. It is odd, therefore, that Mr Cole omits it from his extremely valuable critical essay on "Dr. Hayek's Triangle." The essay, however, contains several other very interesting criticisms. Some of these rest, it must be admitted, on a misunderstanding of the phrase "period of production," which Mr Cole interprets in the popular sense and not in the peculiar sense in which it is used by followers of Böhm-Bawerk. Apart from this, however, Mr Cole's criticisms are very effective. He points out that the whole of Professor Hayek's analysis falls to the ground if the inflation of credit starts from a point in which some of the factors of production are unemployed. Professor Hayek's argument is not valid at all against the policy of inflating credit up to the point at which all the factors of production are fully employed. Further, Mr Cole points out, it is extremely doubtful whether the Hayek analysis is applicable if the new credit is used to finance, not new fixed capital, but working capital or, alternatively, durable consumption goods. Is it really a practical possibility that "over-investment" in houses should necessitate capital destruction?

The three books here reviewed should provide unprejudiced inquirers with an excellent opportunity for judging the Austrian thesis. In Mr Roll's book, in particular, we have clear statement and balanced criticism combined. Impartial opinion will probably endorse his conclusion that the second part of Professor Hayek's case remains unproven—and that the onus of proof consequently still lies on the protagonists of a thesis which is, on the face of it, contrary to common sense.

ENGLAND AND WALES

THESE two books* make an apt contrast: they both, in different ways, attempt to give a picture of a particular locality, the first industrial, the second agricultural. The first is an elaborate economic and social analysis of a South Wales mining town and the second records the experiences of a Member of Parliament as he explored on foot his Hertfordshire constituency. Miss Jennings' generalisations, whether true or false, are always relevant to her particular problem and follow naturally from her detail: Sir Arnold Wilson's are often somewhat irrational conclusions to which plausibility is given by a tolerant and cultivated impressionism.

Miss Jennings gives an admirable analysis of the economic, social, and cultural relations of the South Wales mining town of Brynmawr, which stands on the extreme northern edge of the South Wales coalfield. Her book is "the story of Brynmawr . . . based on facts obtained in the course of a social study undertaken during the three years from September, 1929, to August, 1932, in the hope of finding a basis for reconstruction." The inquiry covers the history of Brynmawr, its social and cultural back-

* "Brynmawr: A Study of a Distressed Area." By Hilda Jennings, M.A. Allenson. 246 pages. 10s. 6d.
"Walks and Talks: The Diary of a Member of Parliament in 1933-34." By Sir Arnold Wilson. Oxford University Press. 244 pages. 5s.

ground, local administration and political movements, transport, communications and trade, extent and effects of unemployment, private and public finance, agricultural and industrial possibilities, experiments in reconstruction. It is the entire life of a town reconstructed by a method of social introspection: its extreme interest to the economist is increased by the large number of admirable graphs, maps and statistical appendices. It may be taken as a sign of the book's success that the picture it gives is concrete and localised: those who do not know the Welsh coalfield, the villages that are one interminable street of squalid houses huddled at the foot of the valley, the idle machinery at the pit heads and the grey slag heaps, the lounging miners in the street kicking their feet among empty cigarette packets, will be able to imagine it from this book, which gives the anatomy on which its life is built.

Since 1923 Brynmawr has suffered unbroken and increasing industrial depression: in 1929 the percentage of miners unemployed was 59.17, and of other insurable workers 71.63: the depression in the coal industry has meant that the town has become a slowly dying animal, deprived of its subsistence, and, as Miss Jennings shows, with little hope of recovering it unless new sources are discovered. Unemployment among the miners has meant bankrupt or debt-ridden tradesmen, high rates (in 1931-32 a general rate of 23s. in the £), deterioration in housing, decline in transport activity, bankruptcy of public finance, psychological demoralisation. But the purpose of the book is not merely the analysis of misery and decay, but the discovery of possible ways back to prosperity: hence the discussion of Brynmawr's natural advantages, its admirable position as a possible distributing centre, the agricultural potentialities of the neighbouring country, its beautiful surroundings that fit it to be a recreational centre; the possibilities are analysed of establishing new small industries and of reviving handicrafts: an account is given of the work already done by the Society of Friends in organising and financing, on a co-operative basis, bootmaking, furniture making, and weaving, and the setting up of the Brynmawr and Clydach Valleys Industries, Ltd.

Miss Jennings emphasises the necessity for co-operative work, for growth of unselfish devotion, for idealism; and these are no doubt necessary. She blames Socialism and Trade Unionism for fostering class-feeling and self-interest, as if these were feelings and not facts born of the endless and ruthless industrial struggle in South Wales: the trade unions are merely the organised attempt of the miners to defend themselves against an employing class whose indifference and incompetence are never once held responsible by Miss Jennings for present conditions. There is no adequate account in the book of the growth of the local trade union and Labour party branches; one would have liked to have had graphs and statistics of industrial conflict in Brynmawr. There is none of this: though Miss Jennings recognises the courage and devotion which the miners have shown in their trade union activity. There is a photograph of the new garden and swimming bath built on the site of a rubbish dump by voluntary labour: it is admirable, and typical of the efforts made by the Society of Friends to improve Brynmawr, but it will not wash its misery away.

After Miss Jennings' book, Sir Arnold Wilson's seems superficial. His honest farmers, struggling with adversity, and looking with hope to Mr Elliot, and, if possible, a "straight" tariff, his schoolmasters, policemen, butchers, "men of all classes," are no doubt as true as Sir Arnold can make them: his walks in his constituency should be imitated by every member of Parliament, though not all of them would be so broadminded and enlightened, especially in sexual problems, or possess Sir Arnold's facility for making friends: he makes excellent suggestions for improvements in administration and is admirably aware of the scandal of the casual ward, and of the monopoly of the rich in contraceptives: yet his book does not convince one that it paints the reality. It is the *faux bon*: and when, in one of his general reflections, Sir Arnold, impressed by the necessity of restoring England's agriculture and the moral virtues that only grow in earth, tells us that we must accept a lower standard of life, we can only ask, Why? There is no national answer. Must we go still lower than Brynmawr? Sir Arnold and the honest farmers have their answer. Mr Elliot will do it yet!

THE SLUMP IN PRIMARY PRODUCTS

THE apparent over-production of primary products, which is popularly attributed to technological progress, is in fact largely due to "autarkic" policies which have cut up the markets of the world into small compartments. It is also, of course, partly due to the fact that farmers react to falling prices in a different way from industrialists. Agricultural production does not lend itself to rapid re-adjustment. The reasons are twofold. Once a given area is sown to a particular crop, it cannot normally be varied until the following year. Moreover, production of wheat and other crops depends not only on the area sown and on the intensity of cultivation, but also on the weather. Further, farmers frequently attempt to maintain their incomes during a period of falling prices by an increase in production. Hence, the downward movement of the curve of industrial production during a period of depression is usually much more pronounced than the decline in agricultural output; and agricultural prices consequently fall further.

The six volumes* here reviewed are a heterogeneous collection. M. de Hevesy traces the roots of the wheat problem back to the war. Before 1914, Russia and the Danubian countries supplied a large proportion of the wheat requirements of normally importing countries. When these countries disappeared from the market during the war, their place was taken by the United States, Canada, Australia and Argentina. A few years ago Russia dramatically re-entered the world market and prices suffered a slump from which they have not yet recovered. M. de Hevesy has evolved a plan which, in his view, provides a simple solution of the world's wheat problem. There would be a new international wheat agreement, and a national wheat office would be set up in each country with the power to fix internal prices. Upon this regional structure would be superimposed an international wheat office in London which would have a monopoly of foreign trade in wheat. The international wheat office would determine the price of wheat entering international trade a year before the harvest. This world wheat price would be fixed at a level which would be neither too high for importing countries nor too low for wheat exporting countries.

M. de Hevesy's scheme is no doubt both attractive and ingenious. But would it work in practice? Price control is impossible without production control. Yet, even if a comprehensive world wheat agreement, providing for the regulation of the area to be cultivated could be brought about, it must be remembered that the yield per acre, and therefore production, cannot be effectively controlled. Although world production does not vary widely from year to year, the harvest of individual countries does vary considerably, and as the recent case of Argentina has demonstrated, a relatively slight increase in exports beyond market expectations may depress world prices appreciably. Moreover, the fact that Argentina, whose crop was bigger than expected, did not hesitate to exceed her export quota fixed under the International Wheat Agreement concluded in London in the summer of 1933, illustrates the difficulty of international control of a commodity produced by numerous small units.

The persistence of the wheat problem is, of course, largely due to the uneconomic redistribution of production brought about in recent years by artificial means in a craze for national self-sufficiency in all normally wheat-importing countries. This is convincingly demonstrated by the detailed statistics of production, trade and prices of wheat and other grains given by Mr G. J. S. Broomhall in the 1934 issue of the "Corn Trade Year Book."

The chaotic state of the raw sugar market can be traced to similar causes. Subsidised beet production in Europe

Robertson; John Bale, Sons and Danielsson, Ltd.; 142 pages; 5s. *Coffee*, by B. B. Keable; Sir Isaac Pitman and Sons, Ltd.; 124 pages; 3s. *Tea and Tea Dealing*, by F. W. F. Staveacre; Sir Isaac Pitman and Sons, Ltd.; 139 pages; 7s. 6d. *Kautschuk*, by Dr. Gustav Karl Huebner; Chemisch-Technischer Verlag Dr. Bodenbender, Berlin-Steglitz; 258 pages; Rm. 15.

and elsewhere has almost driven Cuba and Java, the great cane-growing countries, off the field. The duration of the sugar and wheat problems will last just so long as the craze for self-sufficiency persists. After painstaking examination of the sugar-growing industry in the principal countries of the world, Mr C. J. Robertson reaches the conclusion "that the actual and prospective position of cane is very much stronger than that of beet and that, were the high protection of beet withdrawn, its production would shrink to very small dimensions and in many countries disappear."

The two books on coffee and tea give a useful description of the production, preparation and marketing of these two commodities. Dr. Gustav Karl Huebner's book on rubber is a comprehensive and lucid survey of the history and present position of the rubber industry. Dr. Huebner wrote his book before the inception of the International Rubber Restriction scheme, and he expressed the view that in present circumstances the lack of adjustment between production and consumption could scarcely be overcome by individual or international action. Over-production in the case of rubber has, of course, been due not to protection but to artificial price-raising schemes. If the second scheme is not pushed too far, it is possible that it may correct without reproducing the errors of the first.

THE SOUTH AMERICAN SCENE

A COMPREHENSIVE review of the crisis in South America in a form likely to appeal to the average reader has so far been lacking. The gap has now been filled by the Royal Institute of International Affairs in No. 10 of their "Information Department Papers,"† and congratulations are due to the Institute, as well as to the author responsible, Mr Kenneth G. Grubb, whose previous volumes on South America—based upon intimate personal knowledge—are well known. He has produced a compendium of South American affairs which is not only of interest to the general reader but of distinct value to the student of sociology and politics, the investor, the financier and the trader.

Part I describes in detail the salient geographical and climatic features of South America, its communications and the nature and distribution of the population. On the subject of immigration—which is of special importance to the East Coast Republics—the conclusion is reached that, apparently before the present world depression, the era of greatest expansion in the Argentine had been passed and that at present immigrants are returning to Europe. At the same time, the long and steady immigration, dating back for a hundred years, of Germans to South Brazil is continuing, and immigration to Brazil from Asiatic countries, mainly Japan, has also begun.

Clearly, both the cultural and economic development of Latin-America is closely connected with ethnological factors, and the pages dealing with the latter are particularly interesting. The varying degrees of white, Indian or mixed blood—and particularly the preponderating Indian population of the Andean Republics—have direct relation to the culture and progress of the respective Republics, while the conclusion might be drawn that, apart from the historical connection with the Latin countries of Europe the term "Latin-America" is one which now serves general utility of nomenclature rather than strict accuracy. Ethnological considerations also have direct bearing upon the vexed agrarian problem, which is here reviewed in relation to the various systems of land tenure from their earliest beginnings in the individual countries, and which—in view of the primary dependence of South America upon agricultural products—must have increasing importance as time passes. While urgent consideration of the agrarian problem is needed, the author rightly concludes that it would be unreasonable to anticipate any real benefit from sub-division of land unless this were accompanied by (1) far more widespread agricultural education of the people, so that the *peon* may use rightly his new-

† "The Republics of South America." Information Papers No. 10. Royal Institute of International Affairs. 153 pages. 3s.

found liberty; and (2) the provision of agricultural credits and marketing facilities by the Governments concerned.

Part II, which examines economic conditions, approaches more closely to the outstanding difficulties with which the South American countries are confronted at the moment. It is pointed out that South America is dependent upon exports of raw materials or primary foodstuffs, which—although of great value—are relatively few in number. This renders the economic structure particularly vulnerable in times of crisis. Moreover, production—particularly of minerals—has been over-stimulated in directions which have not made ultimately for the stable prosperity of the countries concerned. The lack of coal, except in Chile, is possibly to some extent responsible for the absence of industrial development, although the development of oil deposits and, ultimately, of hydro-electric power may be of great moment in the future.

Mr Grubb also discusses the import trade—although not exhaustively—and points out that, due to poverty, there is a greater demand to-day in most categories for the cheaper article irrespective of quality—a fact which doubtless explains the success of present Japanese trading efforts in South America, except in markets which are protected by special trade agreements. The chief aspects of the major economic difficulties encountered in recent years, and the various efforts which have been made to counteract them, are also summarised. Emphasis is laid upon the very extensive borrowing, particularly in the New York market, during the post-war “boom” period, and the subsequent difficulties of the defaulting States. Probably not unconnected with these loan operations is the general attitude of suspicion towards the United States, which the author mentions, assisted largely by fears of “economic imperialism,” whereas there is undoubtedly considerable goodwill towards Great Britain.

Part III reviews in detail the mesh of political influences and personalities in the various Republics, as well as the attitude of informed thought in South America towards world affairs, while a special section is devoted to Pan-Americanism. There is also an examination of the Leticia dispute between Peru and Colombia and the Gran Chaco dispute between Bolivia and Paraguay. The Labour movement in South America, social and labour legislation, the influence of Communism and modern revolutionary ideas, and with cultural and educational developments—including the relations between the Church and the various States—are outlined in an adequate and unbiased manner. Mr Grubb does not sufficiently emphasise, however, the fact that the basic difficulties of South America are mainly due to circumstances outside her control, not the least of these being the violent economic nationalism observable in so many other countries.

BRITISH PUBLIC UTILITIES

DURING the last few years there has been a very noticeable growth of interest on the part of English economists in the problems of those types of enterprise that are now commonly called public utilities. Unfortunately, however, the student in this field is still handicapped by a lack of suitable material in a convenient form. He has been forced to content himself with fragmentary and *ad hoc* discussions on the one hand and American text-books on the other, both of which substitutes have proved unsatisfactory—the former for obvious reasons, the latter for reasons which, if less obvious, are no less cogent. For while American texts are legion, and in some cases excellent, they refer to a set of conditions which, in spite of a great deal of superficial similarity and a growing identity of nomenclature, are in some ways fundamentally different from those which interest English readers. Any attempt to provide a guide to English conditions must therefore be heartily welcomed.

The author of this book* has made such an attempt. During a nine months' residence in this country he has

* “British Public Utilities and National Development,” by Professor Marshall Dimock. Allen and Unwin, 349 pages. 10s. 6d. net.

produced a study which he characterises as “an effort to reunite economics, public administration, law, and philosophy in the consideration of British public utilities.” The expectations that are naturally aroused by the announcement of this gallant effort are amply fulfilled.

The most significant thing about this book, next to the complexity of its subject-matter and the catholicity of its points of view, is the way in which the former has been subordinated to the latter. For Professor Dimock has dispensed with the methodological restrictions that might have handicapped a specialist, and freely assumes throughout the course of his argument that conclusion which he intends to establish at the close of it. In fairness to Professor Dimock it should be stated that this main thesis of his is nowhere stated categorically. Rather, it is indirectly suggested by such things as his interest in “mixed” forms of management and in what he calls “the public utility trust,” and by the distribution of his space among different types of enterprise (4½ pp. to water supply, 3½ pp. to gas undertakings, 3½ pp. to tramways, 77 pp. to the Post Office, and 38 pp. to the B.B.C., for example).

Professor Dimock, in fact, understands by “public utility,” not a particular type of undertaking, but a particular way of organising any kind of undertaking. He discusses the concept in terms of rationalisation, national planning, the creation of monopolies, and the like, rather than with reference to any economic characteristics. He is, of course, fully entitled to his own interpretation, but it is not that of the majority of writers; and in particular it is not that of the majority of economists. Properly speaking, Professor Dimock has no economic concept of a public utility: and in the light of this general argument this appears to be rather a serious deficiency. It is perfectly allowable and in some ways obligatory for a writer to be not only the builder of his own argument, but also the maker of the bricks which compose the edifice. But he will be unwise to try to make the bricks without straw.

In his chapters on the railways and on electricity Professor Dimock gives evidence of a lively appreciation of some of the extremely difficult problems to which the peculiar economic characteristics of these industries give rise. But he has no economic principles in the light of which to review these problems, no economic criteria by which to judge his solutions of them. And, as might be expected in consequence, some of these solutions are not such as are likely to satisfy “the public utility official, the labour leader, the person in public office, and the university student,” who, together with “the intelligent citizen who is interested in public affairs,” are the persons for whom Professor Dimock has written his book. It is a safe guess, for instance, that if there is one question in which readers of all these classes will be interested it is that of price-discrimination; but vague references to “business principles” and standards of fairness will not tell them very much. And if their interest extends, as it should, to questions of market areas, competition, overhead costs, depreciation, and so forth, they will find this book still less helpful, and it would not make up for their disappointment to say that, in its attempt to preserve “an intimate and non-technical manner,” the book has renounced any pretensions to scientific economic analysis.

It is as a purely descriptive manual that Professor Dimock's book will have its chief uses, although even the reader who is only in search of facts will have to be on his guard against misprints and other kinds of small error, and against certain evident consequences of the author's having secured some of his information *too* straight from the horse's mouth. But despite these minor shortcomings, Professor Dimock's historical accounts of the regulation of the railways and the electricity-supply industry and of the management of the Post Office and the B.B.C. constitute perhaps the handiest compendium of the essential facts that has yet been published. Considering the limited time that he had at his disposal for collecting his material, he is to be congratulated on having produced a book which will undoubtedly be widely read, perhaps more so in America than in England, and which no future writer on the subject will be able to ignore. But the really comprehensive work on British public utilities remains to be written.

SHORTER NOTICES

MONEY AND FINANCE

“Dollars.” By Lionel D. Edie. (New Haven) Yale University Press. (London) Humphrey Milford. 293 pages. \$2.50; 11s. 6d.

In the flood of books on American economic policy which has been coming across the Atlantic, impartiality has not been particularly noticeable. Nearly every book has been more concerned with extolling or denouncing than with expounding or reconciling. Dr Edie's book, which resolutely refuses to take sides, will therefore be the more welcome. His views, on the whole, are refreshingly sane. He denounces the “sadistic economics” of the liquidation school, but he is fully awake to the dangers of inflation. Indeed, one of his main theses is that the recent crop of devaluations and the quickened rate of gold mining are likely to lead to a falling value of gold for the next decade or so. In the next cycle of monetary history, in his view, rising prices are likely to prove a greater threat to equilibrium than falling prices. In domestic policy, he comes down on the side of the “confidence” school. Open market operations can put the banking system into a position to finance a revival of enterprise, but neither they nor any other device can force prices up if the community is still in the grip of deflation.

In the external sphere, Dr Edie takes it for granted, without argument, that “public opinion will gradually veer toward a return to gold in some form.” He is concerned that the dollar shall be stabilised at the right rate, which he conceives to be one which somewhat undervalues it (on the grounds that prices are likely to rise in the United States and that sterling will fall when the exodus of capital now taking refuge in London begins). It is unlikely that anybody on this side of the Atlantic would accept this very selfish argument; Dr Edie appears to forget that the fixation of the exchange rate between two currencies needs the consent of both parties. It is a pity that the book did not discuss the prior question of the advisability of a restored gold standard. Dr Edie believes that “reasonable stability” should be sought both of the domestic price-level and of the exchanges, but he himself, in an excellent chapter on the task of central bankers, gives a long list of reasons for believing that in fact neither will be attained. Moreover, he does not seem to be sure whether he wants a new parity fixed for all time or “a provisional level, subject to change if subsequent developments so warrant.”

Dr Edie appears to be suffering from a severe inferiority complex so far as British economists are concerned. He has apparently heard some Englishman refer to Americans as “economic illiterates” (a phrase repeated many times in the book), and as a result every reference to Great Britain is characterised by a savage bias which is entirely foreign to the rest of the book. Two examples of this are illustrative. Dr Edie apparently believes that the continued deflation in the gold countries is largely due to the existence of an open market for gold in London, where hoarders can corner the supply. In so far as this deflation is due to a shortage of gold—an untenable hypothesis—the enormous and unnecessary imports of the United States in the early months of 1934 are surely far more important than any increase of hoarding in London. Secondly, Dr Edie several times repeats the charge that the setback to American recovery in the autumn of 1932 was at least in part due to the fact that the Exchange Equalisation Account was unduly depressing the value of sterling. But he must know that this period is the only one of which we know as a fact that the account was exhausting itself in the attempt to keep sterling up. Unfortunately, these are only two of many deplorable superficialities in a well written—and remarkably well-produced—volume.

“Exchange Control.” By Paul Einzig. Macmillan. 195 pages. 7s. 6d.

Dr Einzig's books fall into two categories. The first are admirably lucid and informative explanations of the technicalities of foreign exchange. The second are equally well-written melodramatic histories of high finance *à la Ruritanienne*. In the present volume Dr Einzig makes a very welcome return to the former category. Exchange control is not as new a matter as might be thought; almost every act of conscious economic policy has some sort of effect upon the foreign exchanges. Even if attention be confined to those measures which are adopted with the conscious intention of influencing the exchange rate, such services as bank rate policy, foreign loan embargoes and “pegging” were familiar before the present depression. Nevertheless, the weapons of control forged in the last few years are so numerous as to swamp the older methods, and it is with these newer abnormal methods

that any study of the subject must of necessity largely concern itself.

A large part (perhaps too large) of Dr Einzig's book is taken up with definitions and distinctions. There are four chief ways of direct control: Intervention, which can be either active (i.e. taking the initiative), or passive; exchange restrictions (of which Dr Einzig distinguishes sixteen sub-species); gold policy and exchange clearing. These are, of course, in addition to such indirect measures as export subsidies, import restrictions, etc. Dr Einzig is an advocate of exchange clearing. According to him, clearing agreements have the effect of increasing the volume of trade between the participating countries, while the obvious necessity for “matching” payments brings home their obligations to creditors. The examples he quotes, however, are hardly sufficient foundation for the generalisations he founds on them. Where one of the countries concerned has previously subjected trade and payments to rigorous restriction, it is only natural that the volume of trade should increase as the result of an agreement; but that is not to say that exchange clearing is the solution for the present *impasse* of the whole world's commerce.

Furthermore, the benefits of three-cornered trade—which would be most unlikely to survive an outbreak of exchange clearing arrangements, in spite of Dr Einzig's somewhat fanciful theorising to the contrary—cannot be dismissed with a sneer at its “dubious advantages” and with a shower of abuse of Free Traders. Would Dr Einzig deny that three-cornered—or even more polygonal—trade has been the foundation of British commercial prosperity? Exchange clearing is a *pis aller*, and in his excitement at the fact that it does work, Dr Einzig should not allow himself to forget what a miserable travesty of genuine commerce it is.

“The Economics of Saving.” By J. Harry Jones. Reed and Company. 171 pages. 4s. 6d.

Bees have hives, writes Mr Jones, and ants have heaps. He is anxious that no one should accept or misunderstand modern theories of over-saving in such a way as to think that the hive demands no honey. He points out that the opportunity for saving accompanied by investment once lost cannot be regained. “Nor is the Government free from responsibility,” he says. “In wasting material and human resources now available it is worse than the spendthrift.”

But Mr Jones fails to sustain his thesis that individuals must voluntarily provide the necessary flow of savings. “If everyone tried to spend the whole of his income, such income would be competing for the existing supply of goods ready, or nearly ready, for consumption. The rate of supplies could not be increased, for, by consumption, there would be no savings or capital available for the erection of new factories or the preparation of new sources of supply.” This proves that capital goods must somehow be paid for out of monetary receipts; it does not prove that individuals' savings invested directly in industry are the only impulse for the making of plant. Indeed, Mr Jones goes on to admit that “the desire to spend would itself compel people to create fresh appliances of production in order that supplies should be forthcoming.”

Mr Jones defends the existence and policy of the building societies. It is possible to finance the creation of capital goods through building societies, but it would be possible in a socialist-rentier state to finance the whole of industry permanently by gigantic public loans on the Roosevelt scale. Mr Jones does not prove that the building societies, however excellent they may be as savings banks for the small investor, are the only means of financing a housing programme.

“The Depreciation of Capital.” By R. F. Fowler. P. and S. King. 143 pages. 1s.

Mr Fowler's main purpose in this closely-reasoned book is to develop Jevons's theory of capital. This theory is that the real rate of interest in a community must be derived from the rate of increase in satisfaction furnished by any commodity over a given time compared with the satisfaction that would have been furnished by the commodity if it had been at once consumed, or if the energy available to produce it had been at once used up. Thus the rate of interest should more largely be determined by the actual technical advantages available at any time than by the size of private monetary savings, which may have no relation to the real needs of the community.

Mr Fowler describes the equilibrium established in firms so that capital may be maintained. His formula is that “the number of ‘years’ which must elapse before equilibrium is

reached is equal to the total period of investment plus disinvestment for one machine [i.e. the total period for producing and using up a machine], minus one 'year.' If returns have been adequate to enable a firm to pass this critical period, the machines will be sufficient in number to balance the capital disinvested by wear and tear. True equilibrium for the whole community cannot be attained if capital is not correctly valued. "To stifle this new and cheaper form of transport [the road-vehicles], for example, in order to maintain the capital value of the railways, is to refuse to take advantage of technical progress and to encourage waste." Again, "it is difficult to see why, on *economic grounds*, capital invested in public utilities should be made more secure than that invested in competitive industry."

Mr Fowler compares the purpose of the annuity and sinking-fund methods of computing depreciation. He points out also that under the company laws, although capital cannot be applied to paying dividends, "there is no law which compels companies in all cases to recoup losses shown by the capital account out of receipts shown in the profit and loss account." Mr Fowler suggests a scheme of share-cancellation which would solve the difficulty of maintaining equipment, for the company would then be enabled to re-issue shares for replacing plant.

"Money-Lending in Great Britain." By Dorothy Johnson Orchard and Geoffrey May. (New York, Russel Sage Foundation.) 185 pages. \$2.

Although this book traces the development of British money-lending chronologically, the object of its authors is more ambitious than that of the mere chronicler. Their aim, they state, has been "to show the devices whereby the enterprise of money-lending has adapted itself to its changing legal, economic and social environments." They define their subject rather strictly and narrowly, in consonance with American legal usage, so as only to include loans for purposes of consumption and then not such as are made by pawnbrokers on tangible security, and their point of view is that of the lender or borrower rather than that of the community as a whole. Within these limits, however, the authors are to be congratulated upon having produced a most usable book.

The keynote of the book is set by the word "restraint," which occurs, once rather oddly, in the titles of each of its five chapters. Indeed, the legal and ethical aspects of the subject receive far greater attention than its economic aspect. A hasty reader might almost conclude that the authors had overlooked the existence of its economic aspect altogether. But this may be partly explicable by the fact that "Money-lending in Great Britain" is only one volume of a whole series of studies on small loans, some other members of which touch upon some of the more important questions, such as that of the demand for loans, which Drs. Orchard and May ignore.

The authors have probably done wisely in making their book a sort of glorified preamble to and commentary on the 1927 Moneylenders Act. Judged by this standard, their chapter on "Administrative Restraint" is the most useful, since it covers the least familiar ground. The chapter on "Religious Restraint" is a little too inclined to support the usual view that it was extremely *fortunate* that events turned out as they did at the hands of the casuists and others. That the creditors of this period should themselves have such difficulty now in getting credit where it is due is perhaps good poetic justice, but it is bad economic history. In the more secular atmosphere of the chapter on "Commercial Restraint" the authors give freer rein to their own views, but their originality (especially in the sphere of economic doctrine) sometimes assumes startling forms, as when they gravely state, for instance, that "legal limitation of the rate of interest failed to stem the demand for credit." The chapter entitled "Lack of Restraint," which is really a quite unsensational discussion of the absence of Government restriction during the period 1854-1900, is chiefly concerned with the abuses connected with bills of sale and promissory notes which the Act of 1900 was largely intended to prevent. The disappointing results of this Act are dealt with in the chapter on "Judicial Restraint," and the as yet problematic results of the 1927 Act in a final chapter which draws upon material not to be found in any other published work that we know.

The book is solid and well balanced, and its documentation in particular is excellent. There is only one serious adverse criticism that can be made. For from no point of view can it appear desirable that economic considerations should be obscured or misunderstood in a work that attempts to deal with one of the most complex of all problems of price-regulation; still less that such implicit economics as it does contain should be so out of date and, in some cases, even so naive, as that which occasionally betrays its presence in this otherwise admirable book.

"Converting a Business into a Private Company." By Herbert W. Jordan. Jordan & Sons. 50 pages. 1s. 6d.

The growth of private limited companies, which are now estimated to number over 100,000, out of a total live Register of 115,000 companies, constitutes a major revolution in economic organisation during the present century. The tenth edition of this small book points out the advantages of the private company, and describes, within its compass, the *modus operandi* of the conversion of the personal business. The outline will be of service to traders who contemplate conversion, although most persons will prefer also to take competent legal advice in such highly technical matters as the memorandum and articles of association, and the procedure of registration.

"Overhead Costs in Theory and Practice." By F. Bradshaw Makin. 75 pages. 3s. 6d.

"Cost Accounts." By L. Whitem Hawkins. Gee and Company. 103 pages. 10s. 6d.

The importance of problems of cost in modern productive technique has been emphasised by economists and cost accountants during recent years. Although these two handbooks exhibit an empirical approach to the manufacturer's problem, they throw considerable light upon the relation of marginal and average cost computations. Mr. Makin attempts a time analysis of cost elements, and examines the relations of the "differential" costs attributable to variations in output to the movements in average costs, while the second book is a more generalised survey of costing technique which points out the necessity for integration of cost records with financial accounts in order to obtain the fullest measure of control.

"Partnership Accounts." By R. C. de Zouche and B. J. Davis. Gee. 180 pages. 7s. 6d. "Depreciation, Reserves, and Reserve Funds." (Dicksee). Sixth Edition by Stanley W. Rowland. Gee. 85 pages. 5s. "Structure of Business Management." By Robert Ashworth. Gee. 48 pages. 3s. "Executorship Law and Accounts (including Scots Law and Practice)." Taxation Library. 139 pages. 4s. "Amalgamations, Reconstructions, Holding Companies." Taxation Library. 66 pages. 3s. 6d.

These small handbooks will be welcomed by students preparing for accountancy examinations, and by business and professional men who require knowledge of specialised branches of accountancy which the larger text-books must necessarily treat somewhat scantily. The revised edition of the late Professor Dicksee's "Depreciation" prepared by Mr Rowland, his student and partner, is particularly welcome. The new Taxation Library, whose first two volumes consist of reprinted articles from *Taxation*, is a promising new venture. The discussions well deserve republication in their more permanent form.

THE CASE FOR DEMOCRACY

"Civitas Dei." By Lionel Curtis. Macmillan. 10s. 6d.

It is fairer to regard "Civitas Dei" as mythology than history: as history it is but uncritical conclusions based on insufficient evidence. The historical detail itself is, as Mr Curtis says, "familiar to every child who has passed through a high school." In Mr Curtis' history the defect is not so much inaccuracy of detail as the discrepancy between his facts and his conclusions. The argument of his book is admirably clear: the social principles enunciated by Jesus, the instruments of government discovered by the Greeks, were adopted and distorted, first by the Roman Empire, later by the Roman Church, and eventually united and applied in the instrument of government known as Magna Charta. This is not history but myth, a Christian myth made acceptable to modern politicians. And the myth is employed to embody parables of recent events. Thus, in his account of Judea in the first century, Mr Curtis succeeds in giving a description of Ireland in the twentieth without mentioning the I.R.A., the "trouble," or English imperialism, but they are all there.

The guiding principle in politics which Mr Curtis discovers is this: "Love one another," which is the principle of the City of God. "'Seek ye first the Kingdom of God and all things else shall be added unto you' is the greatest of all contributions to constructive thought." The justice of Mr Curtis' proposition is seen when we realise that he identifies the Kingdom of God with a liberal, constitutional society. "I see in these commonplace details (of English constitutional history) the first beginnings in the Christian era of the process whereby that creative and potent idea, the Kingdom of God, as viewed and expounded by Jesus of Nazareth, is destined to

be realised." Mr Curtis' principle is a scientific hypothesis justified by history: to the blasphemous materialists who suggest that history does not justify it, there is a sufficient answer. "Belief, in the true sense of the word, is not the assertion of knowledge or dogma, but courage to act on the best hypothesis we are able to conceive. Unbelievers are those too timid or idle to guess at the truth or act on the guess."

The timid and idle unbeliever will hardly persist in his unbelief before Mr Curtis' final argument:

"No political science will furnish guidance unless it proceeds from a definite conception of ultimate values. The system propounded by Jesus proceeds from its faith that right and wrong are valid distinctions of infinite importance. It therefore regards mind as the ultimate reality and indestructible. Death is conceived as no more than a physical incident in the endless life of the spirit."

So brief a review cannot do justice to the wide spaces of Mr Curtis' historical knowledge; but it is to be hoped that the quotations sufficiently suggest the levels on which his philosophy moves.

"Crisis Government." By Lindsay Rogers. (New York) W. W. Norton and Company, Inc. 166 pages. \$1.75.

The title of Professor Lindsay Rogers' book is somewhat misleading. He has not written a critique of the new methods of government called forth by the political and economic crisis of the last few years so much as jotted down a few of his reflections on democracy and dictatorship. His conclusions are, in brief, that dictatorship is a product of special times and circumstances. There is, indeed, a necessity for greater freedom of action for the executive, but that can equally well be secured within the bounds of a democratic constitution—*exempli gratia*, Franklin D. Roosevelt. On the whole, democracy has not come badly out of the experiences of the last few years. Where it has failed, there never was any real reason to anticipate success. And in other countries it has shown itself tolerably efficient in a crisis and more ready to reward courage and common-sense in its leaders than might have been feared.

It is interesting, however, to notice this American writer making an exception of the British National Government, of which he says that "few now, even of its beneficiaries, would deny that it has lowered the tone of public discussion, and has sacrificed principle to compromise, or would maintain that it serves as much more than camouflage for a Tory administration." Professor Rogers writes wittily and well but with an overdose of allusions. It would be helpful if he were to identify his quotations—and also to get them accurate; it is surprising to find a conversation between Mr Pickwick and Mr Snodgrass ascribed to "the famous occasion of the Eatonsville election."

BRITISH EMPIRE

"India's Social Heritage." By L. S. S. O'Malley. Oxford University Press. 190 pages. 5s.

Mr O'Malley has fulfilled admirably his object of giving "a simple statement of the principal features of the social system of India." His book is clear, concise, eminently readable, and presents a vivid picture (by means of his descriptions and explanations of the caste, family, tribal, marriage, purdah and village systems) of the fundamental social ties and duties which affect, and to a great extent control, the daily life and social behaviour of the great majority of Indians. In addition, his chapters on "Frontier Tribes" and "Tribes of the Interior" bring together much interesting material not otherwise obtainable except in much longer and more specialised works.

The reader is left with two main and strongly contrasted impressions. On the one hand it is shown what great advance has recently been made by certain classes and in certain areas towards social reform. Traditional customs and institutions which have lost their former functions and utility, and can only act as shackles on progress under modern conditions, are being rapidly cast off. The women's movement, in particular, has made astonishing strides, partly as a result of Mr Gandhi's influence. But, on the other hand, the continuance and great strength of other customs and institutions characteristic of an early stage of social growth is remarkable. There are still 50 million members of the "external" (or depressed) castes, to whom serious social disabilities apply. In the whole of India, in 1930-31, there were only 235 women studying in medical colleges, and 186 in training colleges for teachers. Debt slavery and a form of serfdom survive in a number of areas. Some of the more remote tribes are still "in an elementary stage of progress as the aborigines of Australia."

The net conclusion is that social reform has so far touched only the fringe of the population. The village still forms the essential communal unit, and the family the fundamental social unit. As far as caste is concerned, "there are some changes of practice in minor matters, particularly as regards food and occupations, but the main structure of caste remains intact with its mutually exclusive communities, its carefully regulated gradations of rank, and the ban on intermarriage which prevents any fusion of classes."

It is necessarily difficult to gauge the extent of social changes, where by their very nature the data are not amenable to actual measurement, but one wonders whether Mr O'Malley has not perhaps over-emphasised the lack of change. For instance, in discussing the village community, he omits any account of the recent increase in the number of persons divorced from the soil and dependent on wages, although in another context he recognises the existence of this important phenomenon. However, it can safely be added that Mr O'Malley's book can be warmly recommended to all who wish to understand the social background of India.

"The Population Problem in India." By P. K. Wattal. Bennett, Coleman. 185 pages. Rs. 3-8-0.

A warm welcome should be accorded to this new edition of Mr Wattal's book on India's most vital and urgent problem—i.e. the population problem. The work has been almost completely rewritten, and the new edition takes the form of a study of the recent Indian Census. At a time when students of the population problem in the West are emphasising the danger of under-population and race suicide, it is an interesting contrast to turn to the study of the problem in a country where over-population is still to be feared, and where appallingly high birth, death and infant mortality rates persist. It seems probable that the Indian vital statistics are simply characteristic of a stage in social development, and that India will eventually follow in the footsteps of the West in this respect; but at the present moment there is undoubtedly need for the replacement of positive by preventive checks.

Mr Wattal gives a clear and concise summary of the existing state of affairs in India. He approaches his subject from the point of view of social reform, and discusses the relevant statistics in relation to the "law of population," marriage, public-health, differential fertility, migration and the pressure of population on the means of subsistence. He stresses the urgent need for birth-control, makes useful recommendations for improvements in the collection of statistics (India's vital statistics are particularly unreliable), and suggests that an inquiry should be instituted into the alarming growth of population. His book can be warmly recommended to all who are interested in the world population problem, or in the welfare of the masses in India.

"Economics for Ourselves." By the Goban Saor. Dundalgan Press. Dundalk. 39 pages. 6d.

It is a pity that this little pamphlet on Irish economic problems should open with the familiar complaint of the shortage of money to purchase the proceeds of industrial production, since the author's grasp of monetary problems is not very strong. The reader should not, however, be deterred from proceeding further, as, once the wild currency oats have been sown, the pamphlet greatly improves and becomes interesting and constructive. The author pleads for a long period policy for the development of the resources of the Free State, based on a considered survey of probable future conditions at home and abroad. He is under no illusions about the outcome of the present policy of small holdings and indiscriminate industrial protection, and urges the necessity for a settlement of the dispute with Great Britain, the restoration of the export trade, assisted by the moderate depreciation of the Irish pound, and the need for an improvement in the efficiency of agricultural production.

OTHER NOTICES

"La Politique Commerciale de la Belgique." By C. De Leener. 85 pages. (Recueil Sirey, Paris.)

Belgian Customs policy is the more interesting since Belgium is still trying to remain as faithful as possible to the principle of Free Trade, when the whole world has turned Protectionist. M. G. De Leener, Professor at Brussels University, is also chairman of the Committee for the Defence of Free Trade. In this small volume is contained the text of the lectures given by him at Geneva in November, 1933. These lectures describe the commercial policy which Belgium has followed for a century and analyse some of its present

tendencies. M. De Leener discusses the question of the economic union which some people say France offered to establish with Belgium in 1916. Certain authors assert that such a proposal was made formally to Belgian Ministers, at that moment refugees at Le Havre. M. G. De Leener shows from reliable sources that the question of a commercial union has never been faced. A French Minister discussed it one day with a Belgian Minister; but all endeavours remained fruitless. It is not, therefore, true to say that Belgium "refused" to enter into a commercial union with France at that moment.

M. De Leener is, of course, a supporter of the convention agreed upon in 1932 between Holland and Belgium. The policy followed since then constitutes, he admits, some departure from the principle of commercial liberty. Most of the measures taken, however, are intended not so much to protect the home market as to enforce the lowering of other countries' tariffs. The general opinion in Belgium is, M. De Leener says, that free trade, restricted as it has been, has produced better results for Belgium than a systematic protectionism would have done. By a lowering of home prices imports have been held back in Belgium more effectively than in many protectionist countries.

"The Economics of Advertising." By F. W. Taylor. George Allen and Unwin, Ltd. 248 pages. 7s. 6d.

"Advertisements," remarked Doctor Johnson, "are now so numerous that they are negligently perused, and it is therefore become necessary to gain attention by magnificence of promises." Readers of this book will probably feel that the Doctor's dictum has lost little of its truth. The scope of the book is wider than the title suggests, and indeed the most valuable section is that discussing the social significance of advertising. Although the economic discussions are in the nature of prolegomena to more exhaustive treatment, they open up some promising lines of inquiry. The relation of advertising to the theoretical problems of partial monopoly and imperfect competition, and to the perfect knowledge assumption underlying consumers' choice has been inadequately treated by most theoretical economists. Mr Taylor has some suggestive, but inconclusive, remarks on the significance of advertising in cyclical fluctuations which would repay further investigation, while a fuller discussion of the effect of advertisement upon the shape and position of the demand curve would have been welcome.

The author has some forceful views on the organisation of the advertising industry. He shows the relation between the growth of large scale manufacture, the disappearance of the wholesaler's specialised function, and the growth of the popular press, and he criticises the claims made for advertising both from economic and social standpoints. To the layman probably the most revealing discussions are those dealing with the organisation of the advertising industry and its relations with the press, and with the effects on the expression of opinion in the general press which have resulted from deference to large advertisers. Without wasting time in philosophic discussions on social values, Mr Taylor reaches the conclusion that a considerable part of modern advertising is wasteful and anti-social, and supports his case with some choice examples of fatuity. Most readers, however, will doubt whether his anticipation of a higher standard (in which information will gradually replace emotional suggestion) is likely to be realised under present economic conditions.

"Prelude to Economics." By W. A. Orton. Pitman. 285 pages. 5s.

It is notoriously difficult to write an elementary economic text book which both imparts some basic principles and appears to the ordinary man to have some connection with the real world. Mr Orton certainly comes near to success. He starts with a brief history of the growth of modern capitalism. He then describes in realistic and concrete terms the "building of the heap," i.e., the production of the national income. Next, he introduces demand and so proceeds to the general theoretical principles of value and price. Finally, distribution, or the "sharing of the heap," and the simple elements of monetary theory, are approached and worked on in the same way. The book is clearly thought out, and intelligibly expounded, and it deserves the notice of the general reader as well as that of the student for whom it is primarily intended. To economists, as Mr Orton remarks, its methodology will be its principal interest.

"The Agricultural Register, 1933-34." Agricultural Economics Research Institute, Oxford. 229 pages. 3s. 6d.

Since the advent of Mr Elliot as our food dictator the structure and organisation of British agriculture has under-

gone such profound changes, as the result of legislative and administrative action, that it has become almost impossible to find one's way about the labyrinth of our agricultural policy without a compendious guide. Fortunately such a guide has been provided by the Agricultural Economics Research Institute at Oxford. The new "Agricultural Register," which is to be issued annually, gives a summary of recent agricultural legislation, of the various marketing schemes, as well as of recent developments in production, prices and employment in agriculture. While the arrangement of the section on Administrative Action dealing with Reorganisation Commissions, Marketing Schemes and Marketing Boards might perhaps be improved, the "Agricultural Register" is an excellent and, indeed, indispensable compilation. The Research Institute is to be most heartily congratulated on it.

"The Statesman's Yearbook, 1934." Edited by M. Epstein, M.A., Ph.D. Seventy-first Annual Issue. Macmillan. 1478 pages. 20s. net.

No one whose sphere of activity lies in world affairs can afford to do without "The Statesman's Yearbook." The latest edition contrives to include trade returns for 1933 in most cases; and all the kaleidoscopic political changes in the world in 1933 are faithfully recorded. As a standard work of reference, the yearbook is certainly in the front rank; and Dr Epstein is to be congratulated both on the speed with which he gives us the necessary information, and on the comprehensiveness of his work.

BRITAIN'S POLITICAL FUTURE

THE political season which opens with this week's Labour and Conservative Conferences has the air of looking to the future rather than to the past, to the next General Election rather than to the now legendary days of 1931. Have we any clue to that future in the latest round of literature let loose by our increasingly prolific political pamphleteers? The most striking feature of British political literature since 1931 has been its markedly Left-wing tendency. And of the four authors here reviewed,* none are farther to the Right than Mr Ramsay Muir (however far that may be). Should we take this outburst of literary activity as a sign of a coming political movement to the Left? Or is it merely the normal reaction of a group of politicians who are suffering from temporary frustration and infertility in the practical field?

Lord Allen looks to the future because he is disappointed, if not disgusted, with the past and present. We all remember the remarkable enthusiasm with which he greeted the birth of the National Government and the earlier utterances of the Prime Minister. Mr MacDonald is not mentioned in this book, but Lord Allen's verdict on his Government is unambiguous. That Government, Lord Allen says, has "allowed the Conservative Party to create party advantage for itself out of a national endeavour." In particular he laments "the complete breakdown" of the Government's foreign policy:—

This Government will go down to history as the Government which was always wise too late. It has spent months in vain attempts to conciliate nations which need never have become so anxious or so angry; in trying to bring Germany back to the League instead of preventing her from leaving it. By acting too late we have given Germany a Government of violence, and have been compelled to concede rearmament to dictatorship. . . . By acting always too late we have killed all hopes of substantial disarmament, so that now the world is faced with the appalling extravagance and peril of a competitive race in arms.

Coming from one of the most influential of the Government's disinterested friends, this is a formidable indictment.

Disappointed as Lord Allen is, however, he is far from disillusioned. Indeed, the main purpose of his book is to proclaim an indomitable, and some would say incurable, faith in the power of reason to conquer in the practical

world. What Lord Allen now wants is a Government of reasonable and moderate men to pursue a foreign policy of peace and disarmament and a domestic policy of industrial and social reorganisation. There will probably be a stalemate, Lord Allen thinks, at the next General Election, and the only way of saving democracy will "in all probability" be "an association of the younger generation of Conservatives with the Liberal and Labour Parties, and with Labour at the helm." Mr Herbert Morrison, Mr Elliot and Dr. Addison, among others, are mentioned as promising candidates for admission to the proposed Government of ability and reason.

A cynic might perhaps express surprise that, after experiencing one National Government, Lord Allen should be asking for another; though it is true that he calls it neither a National Government nor a Coalition, but an "Association." There is much in a name, it seems, despite all the rationality of man. And even the mildest sceptic will question whether the differences between us are really so narrow as to be easily bridgable by nothing more than a little sweet reasonableness. Are there not interests, for one thing, that divide us? No doubt the activities of both Mr Morrison and Mr Elliot can be superficially described as "planning." But is it not of some importance to ask in whose interest they plan? And, interests apart, there are surely philosophical differences dividing men to-day as profoundly as ever in history. Do not some of us believe in freedom and equality, and others in order and discipline, just as firmly and irreconcilably as did Athenians and Spartans two thousand years ago? Lord Allen's affirmation of faith in the rationality of the common man will command respect; but on being told that, as a result of science, "at long last the mind of man seems capable of freeing itself from ancient bondages and becoming an independent agency of influence," some readers will surely inquire whether Lord Allen has ever heard of the Nazi Revolution. And was it really nothing but laziness and incompetence that seduced the National Government from the pursuit of Lord Allen's ideals?

Many would like to believe that British political parties to-day (or at least those on the Left) are reaching agreement on the necessity and method of immediate economic reform. But a comparison of the other three books now under review unfortunately suggests no such thing. "The Liberal Way" consists of an amplification, with a foreword by Mr Ramsay Muir, of the recent Liberal Manifesto already summarised in the *Economist*. "The First Workers' Government," though ostensibly the individual production of a member of the Socialist League, carries the blessing of Mr Lansbury and Lord Passfield, as well as Sir Stafford Cripps and Mr Cole. The two books may therefore be taken as fairly

reliable statement, of the outlook and intentions of the Liberal and Labour Parties. Yet Mr Mitchison's book is a description of the beneficent extension of State control and ownership over the major part of the British economic system; while Mr Ramsay Muir writes that the aim of the Labour Party is "to bring all the industrial and commercial activities of the country . . . under the dead hand of the State." And both Mr Elliot and Dr. Addison are roundly condemned by Mr Ramsay Muir.

Even if Mr Mitchison's programme does not commend itself to Liberals of the Ramsay Muir school, however, it should be of great interest not only to them but to all who are concerned with Britain's political future. The "First Workers' Government" is a "history" written in the lucid and unadorned style of Mr Cole, of the socialisation of Britain in ten years following the election of a Labour majority in the House of Commons in 1936. Mr Mitchison is determined above all to eschew generalities; and he describes in concrete and often statistical detail, and in the past tense, the whole process of reform, from the revision of Parliamentary procedure to the reorganisation of the iron and steel trade. This laudable if ambitious attempt inevitably leads to occasional minor inaccuracies, such as the statement that no statistics exist of the uninsured unemployed; and one often feels that a clear enunciation of the actual principles on which wages, prices, investment and employment were planned in the new Socialist State would be more valuable than the enumeration of any number of picturesquely named institutions. Some readers, it must be admitted, will find the complete capitulation of the Opposition before Mr Mitchison's Government as improbable as the violent uprising of Sir Stafford Cripps's imagination or the complete harmony of Lord Allen's dreams. Nevertheless, as an essay in practical Social-Democracy Mr Mitchison's book is a competent and original performance.

If there is anything on which Lord Allen, Mr Muir and Mr Mitchison are all agreed it is the necessity for preserving democracy. We are consequently pleased to find the Socialist League, in their new manifesto, "Problems of the Socialist Transition," also affirming the purity of their democratic aspirations. Apart from this there is little that is new or interesting in the book; though we might perhaps point out to Sir Stafford Cripps that he has misquoted (on page 11) our statistics of industrial profits. The truth about the members of the Socialist League would seem to be that, though they value both democracy and social reform, they would be prepared in the last resort, if one or the other had to be sacrificed, to let democracy go.

In general, however, it is fair to place the Socialist League, with Lord Allen, Mr Muir and Mr Mitchison, within the democratic camp. But is a mere belief in democratic methods likely to be an adequate basis on which to found a coalition? Only, one would have thought, at a moment when democracy itself is threatened.

THE JEWS

DR. RUPPIN is already well known to students of Jewish demography by his earlier work on "The Jews of Today" published in 1904 and by his elaborate and richly documented survey of Jewish sociology published in German in 1930-31. His new book* brings the discussion up to date, and it may be safely recommended as an authoritative guide. It deals with the racial composition of the Jews, their numbers, territorial and historical distribution, migrations, economic structure and occupational differentiation. With these facts before him Dr. Ruppín discusses in a most illuminating and temperate manner the major social and political problems with which the Jew is confronted in the modern world. The work forms part of a series of "Studies in Modern History," and the general editor, Professor L. B. Namier, has added greatly to its value by his cogent and moving introduction.

Dr. Ruppín accepts the view, widely current among anthropologists, that the Jews are essentially a mixture of the "Alpine" and "Mediterranean" races, the Mediter-

anean element predominating in the Spanish or Sephardic branch and the Alpine in the Ashkenazic—that is, the Central and East-European Jews and their derivatives. He thinks that while until the fifteenth century the Sephardic Jews exceeded the Ashkenazim in numbers, the latter have since increased enormously and now constitute 92 per cent. of world Jewry. Dr. Ruppín emphasises the ethnic heterogeneity of the Jews at all times, and points out that such uniformity in physical traits as is now observed is due to the fact that in the course of Jewish history there have occurred important periods of relative isolation during which some stability of type has been secured. It must be remembered, of course, that the whole classification of European races is now in the melting pot, and that anthropologists are becoming increasingly sceptical of race classifications which purport to trace the genealogical affinities of peoples.

In discussing population, Dr. Ruppín endorses the estimate that in A.D. 70 the Jews numbered about four and a half millions. There was a decrease during the following centuries, the lowest point of one and a half million being reached at the end of the fifteenth century. In the eighteenth century there was a gradual rise to two and a half millions, and during the nineteenth century there was a rapid increase; for 1933 the figure of sixteen millions is given. The increase is attributed mainly to a decline in the death rate. Since 1914 the growth has slowed down, and the rate of natural increase has fallen from about 16 per thousand in 1914 to 8 in 1932. Dr. Ruppín's figures show that the Jewish birth rate decreases from East to West and that it declines with the disappearance or weakening of the old Jewish traditions. Even in Eastern Europe there has recently been a decline, and as the drop continues the difference between Central and Eastern Europe will probably disappear. The difficult problems with which the Jews are now faced everywhere are due largely to their rapid growth in the nineteenth century. Without that increase the East European Jews would probably have adapted themselves economically without mass emigration, and possibly have become assimilated to their neighbours at least to the same extent as the Jews of Central Europe. To-day one of the most serious problems which confront the Jewish people is the difficulty of knowing what will become of the growing Jewish population in Poland and elsewhere in Eastern Europe—a problem in many ways more acute than that produced by recent events in Germany.

Since 1880 a great change has taken place in the local distribution of the Jews. Between 1881 and 1933 approximately four million Jews left Eastern Europe, the majority for the United States and other overseas countries and 150,000 for Palestine. Dr. Ruppín sums up the change thus:—

At the end of the eighteenth century the Jews changed from a predominantly Oriental into a European nation; and now they tend to change from East Europeans into West Europeans and Americans.

It is interesting to note that almost a third of world Jewry now lives in English-speaking countries, and that whereas in 1870 less than 20 per cent. inhabited "areas of higher culture," by 1933 the percentage had risen to 48.1. This fact, together with the progress in education which is now occurring in Eastern Europe and the Near East, may have important consequences in strengthening the tendencies to assimilation.

Dr. Ruppín has much of interest to say on the occupational distribution of the Jews and of the part they play in the economic life of the peoples among whom they live. He brings out the tragic fate of the older generation of Jews in Soviet Russia, hundreds of thousands of whom were utterly ruined owing to their inability to adapt themselves to the new conditions. He also shows that, while the economic crisis in America has hit the Jews hard, there is no reason to doubt that their position will improve with the general revival of trade. On the other hand, the change in the economic position of the Jews which has occurred in Germany and Poland is to be traced to a change in the structure of the national economy caused by the growing nationalisation and syndicalisation of many trades and by the extension of co-operatives. It consequently presents a problem the solution of which cannot now be foreseen.

It is clear from Dr. Ruppín's work that the Jewish people are now faced with a crisis of unexampled severity. The period of mass migration is over; and apart from the relatively small numbers emigrating to Palestine, the Jews must solve their problems in the various countries in which they are now settled. Will the American Jews who form the largest unit in world Jewry manage to survive as a distinguishable cultural group, or will they, now that the older traditions are no longer reinforced by immigrants from Eastern Europe, become completely Americanised? What, again, is to be the effect upon the survival power of the Jews of the rapid assimilation now going on in Russia, hitherto a most important reservoir of Jewish energy and vitality? Will the efforts of the Zionists to revive the Jewish people in the land of its fathers, even though they succeed beyond their present hopes, suffice to bring about a measure of national reintegration outside Palestine? These questions none can answer at present, but anyone who wishes to tackle them seriously will derive help and illumination from Dr. Ruppín's book.

KNUT WICKSELL*

PROFESSOR ROBBINS has done good service in editing an English translation of Professor Wicksell's Lectures on Political Economy. This, the first, volume—and we hope that a second will follow—comprises the whole of Professor Wicksell's Lectures (originally published 1901), less that section dealing with Money, together with two critical reviews, one of Professor Cassel's famous Theory of Social Economy, the other of Dr. Akerman's *Realkapital u. Kapitalzins*.

Professor Wicksell holds a high place among economists. He belongs to the small class of those who have assisted in that reconstruction and restatement of the foundations of economic theory which has taken place in the last, shall we say, sixty-three years. Two main reasons why such reconstruction was necessary may be mentioned. One was the discovery and general acceptance of the fact that the "marginal" principle was much more widely applicable in economic analysis than was formerly suspected. The second was the gradual recognition that the classical system unwarrantably presupposed certain factors in the situation to be constant, and that at many points constants must be replaced by variables. The consequent development of thought had more than one effect. On the one hand, there was an immense improvement and clearing up; the theoretical system became much more coherent and logical. But, on the other hand, recognition of the interdependence of the various elements in the system made it much more difficult to expound it clearly in literary language. Moreover, the limitations of pure theory and the difficulty of deducing cut and dried conclusions of practical applicability were better understood. Economics ceased to be a subject which every educated man could master with a little effort. It ceased, moreover, to offer clear-cut recipes. The labour of understanding became greater and the proffered fruits less attractive. The economists themselves—among whom cannot unfortunately be included the main hordes of economic writers—acquired a more substantial basis of authoritative doctrine than they had had before, but were debarred by its nature from their old habit of propounding dogmatic maxims of action. Advocates of conflicting expedients could no longer be checked by reference to a rule of right advanced by economists of standing, and in consequence the economists who should have been given credit for their recent advance were supposed to have lapsed into a state of discord and confusion.

Professor Wicksell was concerned with expounding the inner core of theory. The Lectures are written with a sobriety and modesty that must delight the scholar's heart. He eschews claims to originality or novelty, he writes simply and without ornament, he is determined to tell the reader the truth, as best he can, without pretentiousness or fuss.

Formally the Lectures cover the whole of Economic

Theory. But the reader used to Marshall's Principles will have an acute sense of incompleteness. For instance, there is no mention, except by parentheses, of the relation of the long to the short period. Of profit there is nothing except a demonstration that in competition there is no residual profit. "Marshall, in his Principles," he writes, "has endeavoured to set up a fourth class of agents of production . . . namely organisation . . . The new agency thus introduced, unlike the old, lacks quantitative precision, except in some special cases. Such a case would arise when organising talent or technical discovery is incorporated in certain individuals of outstanding gifts or specialised education. But in that case 'organisation' cannot be distinguished from 'labour.'" So much for organisation. Of the part played by entrepreneurial ability and the co-ordinating function and the relation of these to the size of firms in the long and short periods, of risk and uncertainty, there is nothing. Professor Wicksell has some good things to say on decreasing and increasing returns, of very modern flavour; but his remarks on these are mainly subordinate again to the demonstration that there are no residual profits.

Indeed, the whole book has the appearance rather of a series of brilliant essays than a systematic treatise. In systematising power Professor Wicksell seems deficient. Not that this implies a lack of synthesising power—quite the contrary, as Professor Robbins rightly claims. No one excels him in grasping the interconnection of theories, whether belonging to diverse parts of the field or advanced by diverse writers. One of his most valuable qualities is his clear grasp of the substance of the old classical theories, which he summarises with masterly relevance, and to which his modest and scholarly habit of mind allows him to assign their due importance in the development of the subject. In this he resembles Marshall. But he has not succeeded in translating his own coherent system of thought into a systematic treatise.

It must not be supposed that the Lectures consist of a series of original contributions to the subject loosely strung together. On the contrary, his main purpose seems to be expository. He takes a few subjects, of central importance certainly, to which he has devoted much thought, and strives to present them in a way which will be absolutely cogent and correct. He is not presenting new solutions, but mainly restating established solutions in a form that will re-solve apparent conflicts and be immune to logomachistic critics. In doing this he throws out any number of original ideas on minor points.

The reader will not find in this volume a systematic treatise; he will not find doctrines of substantial importance that Marshall was too early to embody in his Principles. Will he find superlative clarity? Not even that. It must be confessed that though Professor Wicksell has the right spirit and intention, he has not those pre-eminent gifts of style and imagination which are required for the clear literary expression of these complex ideas. What will he find then? He will find new and sound methods of approach to various important topics. He will have the sense of security of being in the hands of a safe guide who knows the ground thoroughly, who will not lure him on by false prospects or endeavour to beguile him with fabulous tales of his exploits, who will show him many interesting and peculiar things by the wayside, who will speak with truthfulness of the great exploits of others.

There is little in common between this temperament and that of his compatriot, Professor Cassel. And it is not surprising that his verdict on the latter as an economist, delayed till late in the life of both, is on the whole hostile. It appears as an appendix to this volume and is a welcome draught of humanity coming at the end of a well-conducted journey through somewhat arid country. The great and distinguished gifts of Professor Cassel are widely known. Like Marshall, he has tried to retrieve modern economics for the general reader. He has outstanding gifts qualifying him for this task. Moreover, his *magnum opus*, though falling far short of Marshall's Principles in this respect, has claims to be considered as a systematic treatise. But of his fabulous exploits we hear much, and of the great pioneer work of the earlier economists little appreciation or understanding, and of the more recent little recognition. Wicksell felt it incumbent upon him to register in a dignified way, but not without a touch of malice, the protest of a seeker after truth.

* "The Jews in the Modern World." By Arthur Ruppín. Macmillan. 423 pages. 15s.

* "Lectures on Political Economy." By Knut Wicksell. Translated from the Swedish by E. Classen, and edited with an introduction by Professor Lionel Robbins. Volume I. General Theory. George Routledge and Sons. Pages xxiv + 299. 8s. 6d.

GERMANY TO-DAY

THE spate of books on Germany continues unabated. Of the five here reviewed, all are written by bitter enemies of the regime, three by Communists, one by an English Liberal who found it necessary to make a public recantation of his previous pro-German attitude, and one by Otto Strasser, who in 1931, finding the Nazis not Socialist enough for his taste, left the Party and founded the Black Front. All five must therefore be regarded as propaganda and read with every possible caution.

"Berlin Diaries" purports to be the jottings of a German officer still in Berlin. How he contrives to retain his position in spite of these sensational descriptions of dinner parties with persons in high places, and his disclosures of the deadliest secrets of the German Army, is not explained by Dr. Klotz. The declared authorship of the book will be questioned by many, particularly in view of its ingenious way of making its fictitious author disparage Social-Democracy and express his admiration for the German Communist Party of which Dr. Klotz was a member. Treated, however, as a work of imaginative fiction, it gives a fair picture of the sort of intrigue which *may* have centred round the Papen Government, and its account of the Schleicher regime suggests that Dr Klotz has on this point obtained some reliable information.

"Germany's Secret Armaments," on the other hand, is a book of no value whatever. The fact that Germany is re-arming is already common knowledge. But Dr. Klotz's pretensions, all without a shadow of documentary evidence, to an acquaintance with the details of this re-armament, will convince nobody, particularly since he has left as it

"Berlin Diaries." (Ed.) Helmut Klotz. Jarrolds. 18s.
"Germany's Secret Armaments." By Helmut Klotz. Jarrolds.

5s.
"The Reichstag Fire Trial." The Second Brown Book of the Hitler Terror. John Lane. 7s. 6d.

"Sonabend, Juni 30." By Otto Strasser. (Prague) Grunow. 10d.

stood a chapter on the relations of the S.A. and the Reichswehr, whose falsity has already been demonstrated by the events of June 30th. Dr. Klotz apparently considers it a dastardly crime for the German General Staff to do what it is paid to do and what every other General Staff is doing, prepare for war; and he produces no evidence for his assertion (which may very well be true) that the German Government is now planning an aggressive "war of surprise." The vital issue of the political alignment of the Reichswehr and its attitude to the Nazi Party is never even touched upon. Such books as this and Mr Dell's emotional recantation will do little good to the causes they set out to further.

It is a relief to turn to the last two books on the list. Apart from a few pages of rhodomontade at the beginning by Dimitrov, the second Brown Book is of some historical value, and the trial is vividly described. But it is still a considerably inferior book to Mr Douglas Reed's recent "Reichstag Fire Trial."

Herr Otto Strasser's pamphlet, on the other hand, is a valuable document which any student of modern Germany should at once obtain. Besides a very plausible reconstruction of the events leading up to June 30, 1934, it includes the first account of the negotiations between his brother Gregor Strasser and General von Schleicher in 1932. Herr Otto Strasser asserts that the facts here described were related to him by his brother, and if this is true, we have a detailed account of the one moment when there was a chance of defeating the Nazis and strengthening the position of Social-Democracy in Germany. The Schleicher-Strasser plan, however, according to Herr Strasser's account, was balked by the intrigues of Papen and Hindenburg, who wanted to give Hitler a shadow power and then push him aside. This pamphlet, and also an earlier work of the same author, "*Ministersessel oder Revolution*," should be in the library of anyone interested in the backstage history of National-Socialism, without an understanding of which Herr Hitler's success must remain totally inexplicable.

SHORTER NOTICES

MONEY AND FINANCE

"The Financiers and the Nation." By the Rt. Hon. Thomas Johnston. Methuen. 201 pages. 5s. net.

On the lines of a film, with a pen steeped in acid, and in a trenchant, staccato style, Mr Thomas Johnston, Parliamentary Under-Secretary for Scotland, and then Lord Privy Seal in the 1929-31 Labour Government, has written a *chronique scandaleuse* of financial rogues, swindlers and fleecers of the poor investor. That the more modest investor can be so gulled as to provide such a chronicle of financial impropriety, the author ascribes to the system which has prevailed since the Napoleonic wars, whereby company promotion is made so easy a method of fleecing the uninstructed investor. What strikes the reader most from Mr Johnston's narrative is not the author's invective against the "system," nor his surprising moderation when it comes to discussion of proposed remedies, but the attractiveness of the financial blackguards—"the Prince of Darkness is a gentleman"—and the chronic credulity of the gull. Much of Mr Johnston's analysis of the piling up of the National Debt in the war is in the nature of too much protesting against a kind of perpetual bankers' ramp. The hot pace of Mr Johnston's narrative seems to slacken to a vague dawdling when it comes to a real examination of the measures to prevent the continued fleecing of investors—nationalisation of the Bank, National Investment Board, Post Office cheques, short-circuiting of the money market and Big Five for industrial financing—these would prevent, in the author's view, both the need for nationalising the Big Five and the continued rake's progress of the fleecer.

But Mr Johnston's book should be read. His "shots" of the big rogues are remarkably well done. The story of Bottomley includes the highly diverting event when Bottomley paid Bigland to arrange a "libel suit" with one Greaney, who was to publish a libel of Bottomley and then "cave in" in the courts. Unfortunately, Bottomley was sued by Bigland, long after winning his case against Greaney; and the whole story came out, to the amazement of the judge in the later case, who had actually awarded Bottomley £500 and costs in the earlier case—damages which Bottomley paid himself by the route Bigland-Greaney.

We imagine that few will question the need for reforms in the financing of enterprise which will, as far as possible and more than at present, safeguard investors, and save the nation its waste of savings upon plausible rogues' incomes. For the "system" as we know it, the popularity accruing to Mr Roosevelt in his assaults upon Wall Street is significant. The time when investors and savers formed a close social corporation has passed; and to-day we are all—or nearly all—savers and voters.

"Money, Foreign Trade and Exchange from a National Point of View." By H. J. Welch. Allen and Unwin. 152 pages. 4s. 6d.

Mr Welch deals in this short book with three groups of problems: the nature of money, particularly bank money, and the problem of its "creation"; the foreign exchanges, with special reference to the question of international lending and borrowing; and the gold standard controversy. The last of the three sections is clearly and attractively written, but it contains nothing new except the suggestion, which is not elaborated, that an Exchange Bank of England should be founded to take over the Exchange Equalisation Account.

The middle section is the most valuable. Mr Welch puts the case for the freedom of international trade with the greatest common-sense, but with moderation. He recognises, for example, that international lending is not an unmixed blessing. Indeed, he would limit it to loans made "specifically for the construction or making of permanent assets or improvements which are likely to be so beneficial economically to the borrowing nation as to make it possible for such nation to export in future years more than it imports to the extent of the interest and amortisation payments required by the loans." This is undoubtedly sound doctrine; but it is a pity that Mr Welch did not indicate how he thinks such loans can be encouraged whilst the exchanges fluctuate.

The first section of the book undoubtedly detracts seriously from the merits of the later chapters, for it contains only a few sound points surrounded by a great deal of nonsense. Mr Welch does not believe that, in the words of the Macmillan Committee, "the bulk of (bank) deposits arise out of the

action of the banks themselves." But in arguing against the theory of "credit creation" he spends most of his time denying what no one has ever asserted. For example, the making of loans does not always increase deposits, but only when other things (e.g. investments) are equal. Nor has anyone ever said that the banks can increase their own deposits without the consent of the public. Obviously, if they can get no one to take their advances or to sell them investments, they are powerless. But the banks take the initiative, nevertheless.

Mr Welch fails to notice that every one of the arguments he advances to prove that the banks' assets are limited by their deposits could be used to prove that their deposits are limited by their assets. He does, however, observe the dilemma that if he denies the "creation" of deposits he must explain where they came from, but his explanation, that the present total of deposits represents the past savings of the community, confuses the entirely separate concepts of money and income. Indeed, he does not seem to have a clear idea of what he means by money, for he frequently makes statements to the effect that money is "that portion of the wealth belonging to the public which they in their discretion desire to keep in fluid form"; but this is the *value* of the money stock of the community. The confusion between the quantity of money, which is determined, *pace* Mr Welch, by the banks, and its value, which is determined by the public, runs right through his analysis.

"Sommes-nous sur la Bonne Route?" By Germain-Martin. (Paris) Payot. 198 pages. 12 frs.

The new book by the French Minister of Finance, which includes reprints of several articles and official reports, is a description of financial events in France during the last four years. The first chapter contains a critique of devaluation (or inflation) and a defence of deflation. This is the only theoretical discussion in the book. The rest is devoted to M. Germain-Martin's experience of practical finance, and it constitutes an invaluable handbook for the student of French public finances. Of particular interest is the thorough analysis of the much-talked-of "self-multiplication" of public expenditure, the origin of which can be traced back to the pre-war period, as well as the detailed description of the activities of the Treasury since 1930.

There is no little dramatic value in the history of a people which came out of the inflation crisis with prosperous public finances, and for a few years did not feel the full weight of its fiscal charges, thanks to the upward business trend, and perhaps also because the burden of direct taxes was carried only by a limited number of citizens. When the redundant Treasury figures became known, generous appropriations were continuously made until the long delayed tax reductions were finally carried out (at the beginning of 1930). But it was too late, and the period of deficits had already begun. Equally dramatic is the struggle of successive Finance Ministers to cope with automatically increasing credits while expenditure climbed the hill automatically.

The last part of the book describes the events of the spring of 1934, including the adoption of the economising decree-laws. It is argued that these were unavoidable. That they have succeeded in entirely wiping out the deficit appears much less certain, especially when the increased expenditure foreseen for 1935 are considered. M. Germain-Martin's volume was published too early to include a forecast of the effect of the "fiscal reform" on budgetary receipts, but the ostensible objects of the "reform" are fully set out, and M. Germain-Martin's critique of the present fiscal system of France will certainly be approved in French financial circles.

The question whether the fiscal reform measures were in fact a "class" measure is hardly considered by M. Germain-Martin, although one of them (that tending to lower the exemption limit for income-tax) was eventually withdrawn in face of opposition in the Chamber. Students of French public finance will also regret that among the numerous and valuable suggestions which the present Finance Minister offers his readers, and in spite of the interesting figures which he has compiled, no hint is made of the importance of publicity in public finance. In this matter the tradition of French officials seems to remain strongly in favour of secrecy.

"The Economics of Consumers' Credit." By Ferdynand Zweig. P. S. King and Son. 112 pages. 5s.

Dr. Zweig discusses with great clarity the merits of those experiments in advancing credits to consumers that have been made in recent years, especially in Germany and America. He limits "consumers' credit" to mean the financing of the purchase of durable and movable consumption goods such as motor-cars and gramophones. He admits that consumers' credit "creates a possibility of raising the standard of consumption amongst the masses," because the worker may by this means be able to pay from his earnings for "a higher type of durable goods"; this "enables the manufacture of

these goods on a large scale and lowers the cost of production, which makes a higher consumption still more accessible to the people." But on examination of actual examples in Germany Dr. Zweig concludes that the costs of financing consumption are very high "owing to the large number of defaulters and heavy overhead charges."

On a long view, Dr. Zweig correctly points out, consumers' credit must depend on the platitude that "to save all goods for the future may be just as harmful to both the individual and the community, as would be the immediate consumption of all goods at present." In other words, there is an optimum proportion between saving (accompanied by corresponding investment in goods and plant) and consumption. Dr. Zweig draws the odd conclusion that consumers' credit is only of real benefit where the masses have a high income. A more logical result of his own argument would surely have been that, as consumers' credit checks over-saving (and over-investment in plant), it is for that reason appropriate where urgent needs require immediate satisfaction.

Dr. Zweig's analysis is not profound nor altogether satisfactory, but his conclusions are well-informed and cautious. He rightly condemns projects of wild inflation masked under the name of extending consumers' credits, but he does not go sufficiently far into monetary or banking theory, or the theory of wages, to define the extent to which such an inflation is safe.

"Histoire du Travail et de la Vie Economique." "Le Credit." By Louis Baudin. (Paris) Fernand Aubier. 264 pages. 15 frs.

The first book of a new "serie de vulgarisation économique," this general survey of credit omits theory and confines itself to history and fact. The book has four sections. Three deal with the nature of credit, its technical and historical development, and its great expansion throughout the nineteenth century. The concluding section is an up-to-date study of the present crisis. The book has the format of a French novel, and it is a great feat of clarity to survey such a wide field in so limited a space. M. Baudin's information is extensive and accurate. He belongs to the "orthodox" school of monetary economists, which remains very strong in France. The conclusion of his essay contains a warning to those who "experiment" in economics that an expansion of credit which is not regulated by common sense and moderation, and a due regard to moral integrity, leads to disaster. Mr Roosevelt must beware!

TRADE AND INDUSTRY

"International Combines in Modern Industry." By Alfred Plummer. Pitman. 7s. 6d.

Dr. Plummer has added a very lucid book to the existing literature on cartels and combines. Following closely upon the lines of Liefmann, Macgregor and Fitzgerald, Dr. Plummer brings the story of the various combines up to 1932, and has therefore been able to describe their experiences during the crisis. Although nobody will find fault with the story, many will question Dr. Plummer's theoretical premises and conclusions. He believes that the two classical economic assumptions of free competition and scarcity no longer hold good. Competition is rapidly disappearing, and the world is no longer suffering from scarcity, but oppressed by abundance. Cartels and combines are the result of organised economic planning to remove from the world the curse of plenty.

But to assume that free competition is disappearing because competition within certain industries has declined is logically indefensible, and the statement that the world is suffering from abundance is a confusion of terms. It is true that combines and cartels have tended to diminish competition between their members, but from this it in no wise follows that an increasing percentage of total trade turnover is now handled by trusts. Nor does it follow that members of combines have ceased to bid independently for the factors of production or that there exists a widespread agreement between combines to exclude price considerations in the exchange of their products. Moreover, abundance only exists to-day in the sense that supply, at certain artificially maintained prices, exceeds demand.

Although Dr. Plummer clearly realises that certain cartels and combines founded to maintain uneconomic prices have miserably failed, he does not draw the obvious lesson that "abundance" is solely a question of price. In using the words "cartels" and "combines" almost indiscriminately in the general chapters, he also tends to confuse the question of the effects of cartels on consumers and wage-earners. There is nowhere a discussion of the distinction between transferable and non-transferable goods and services such as, for instance, dyestuffs or the supply of gas, nor does it appear clearly that in so far as combines and trusts enjoy monopolistic or quasi-monopolistic positions, they can only be maintained with the

help of State protection. No international agreement between manufacturers or producers in a free trade area could possibly maintain prices at uneconomic levels, however strong their capital resources. Under conditions of free trade there would always be capital available to produce substitutes, and there would always be a chance for labour to find employment elsewhere. It cannot be denied *a priori* that cartels ruled by omniscient geniuses might organise the world better than a swarm of small business men proceeding slowly by trial and error; but the history of cartels, particularly in the State-planned countries, does not lead one to believe that life would be better in the cartelised world for which Dr. Plummer seems to hope so ardently. But, however much one may question Dr. Plummer's theories, his book may be recommended as an excellent study of the facts.

"Coal and Men." By Harold M. Watkins. With a Foreword by Professor John R. Commons. Allen and Unwin. 441 pages. 18s. net.

Mr Watkins's book is one in which the gold has to be carefully sifted from the dross. Let it be said at the outset that there is gold in it, and that it is worth the sifting. But lack of experience, or intuition, in the making of books has caused Mr Watkins to include much material irrelevant to his main theme, and to labour points not only to the conviction but often to the exhaustion of the reader. With greater skill his book could have been reduced to half its size and sold—even with all the excellent illustrations retained—at half-a-guinea.

The half which would have been left would be well worth close reading by all interested in coal. But it would be of unequal value. Mr Watkins has attempted an economic and social study of the British and American coalfields. The spectator of a perplexed industry is not likely to be greatly helped on the economic side, not because the book is erroneous, for such occasional mistakes as it contains are natural and easily detected, but because the scene has shifted so rapidly since Mr Watkins first took pen in hand. As a Fellow of the Rockefeller Foundation, he spent the years 1928 to 1930 in the United States studying its coal industry. But the rapid changes in American industry since 1930 makes superfluous much that Mr Watkins has written, even when in footnotes an attempt is made to bring the subject to the present day.

On the social side, however, Mr Watkins's book is invaluable. It is, indeed, the only book which compares at all adequately the social life of British and American miners. Mr Watkins, who is a travelling lecturer in economics for the Glamorgan County Council, knows intimately the miners of Great Britain, and especially of South Wales; illuminating extracts from his pupils' essays are an interesting feature of his book. He has also lived for long periods among the miners of the United States. The comparison is very favourable to Great Britain. The British miners are a compact, well-organised body. Though they are still seeking holidays with pay, the Miners' Welfare Fund, with provision for pithead baths, recreation and scholarships for them and their children, has immensely improved their condition. The American miners are drawn from almost every race under the sun, and nearly every attempt to overcome their natural centrifugal tendencies by unionisation has been fiercely, even murderously, resisted. Company housing puts many of them hopelessly at the mercy of their employers, and Mr Watkins has no difficulty in setting in its proper perspective the nominally high wages which they have received.

On all such questions Mr Watkins is an admirable and sympathetic guide. This side of his book more than outweighs all the defects noticed above, and makes it well worth close study.

THE EUROPEAN SCENE

"Some Aspects of the Covenant of the League of Nations." By Sir John Fischer Williams. Milford. 317 pages. 10s. 6d. net.

Political constitutions are hard to analyse, and hard to make into good reading. But Sir John Fischer Williams, in describing the birth of the Covenant of the League, and in analysing, with altogether exceptional clarity, the Articles of that Covenant and their implications in international affairs since the war, has contrived to give us a book which is not only very well written but holds our attention throughout. Sir John contrasts the idea of a League of Nations with that of the Holy Alliance at the beginning of last century; refers to Theodore Roosevelt's speech in 1910 on a "League of Peace"; and describes the different attitudes in 1918 and 1919 to the League idea. After discussing the general scheme of the Covenant and describing the organisation of the League and the Permanent Court of International Justice, Sir John comes to the main features of the book in an examination of the prevention of war by the League, interpretations of

Article X, difficulties of defining the aggressor, treaties and their alteration, and minorities.

It is interesting to observe that Sir John provides a good defence for those who want to alter the "unanimity" requirement for most League decisions; and he has a very penetrating section on the working of the Council in disputes. In four appendices are given President Wilson's fourteen points, the Covenant in the French and English texts, the Kellogg Pact text in the same two languages, and a brilliant piece of analysis from the author's pen, reprinted from the *Cambridge Law Journal*, on "The Covenant of the League of Nations and War." Sir John's book should be closely studied by all who desire to have that more than nodding acquaintance with League questions which is called for in these days of international contention over the League's functions.

"Labour's Foreign Policy." New Fabian Research Bureau Publication No. 18. N.F.R.B. and Gollancz. 26 pages. 6d.

The international section of the N.F.R.B., under the chairmanship of Mr Leonard Woolf, has here put forth a cogent examination of the present conflicting policies for peace and security. The writers are under two sombre shadows: the threat of Fascism to Labour, arising from a failure of disarmament and a relapse into nationalistic policies, and, in the second place, the threat to world peace exerted by Nazi Germany. The latter shadow is not so apparent, but its influence is unmistakable. Indeed, it has manifestly effected a kind of *volte face* in British Labour circles already—witness the recent T.U.C. decision on the question of a general strike to prevent war. The present pamphlet courageously admits that its policy may split the Labour Party, or that voters may not ratify it, but honestly faces the issue. The next Labour Government, according to the authors, should have a threefold foreign policy. This policy is as follows: (1) Compulsory judicial settlement of disputes; (2) precise definition of aggression; and (3) collective aid to aggresses and collective sanctions against aggressors.

To achieve this, the Labour Government would have to get an agreement between States to adopt these heads, and would, further, have to get the voters in this country to back the policy. The authors state that in the present situation, probably such a Labour Government could only secure the agreement of the democratic States, but they say it would be preferable (a) to split the League and start again if there is no alternative way to reach a truly collective security system; and (b) it is possible to start the truly collective security system now, by agreement between only such League States as will agree to the above three heads. What the authors do not consider is the reactions upon Imperial relations which such a European policy of a British Government would entail. Moreover, they do not seem to have worked out what degree of rearmament might be involved for this country under a Socialist Government, if the country became head of a small "security group," while Italy, Germany, and their satellites "kept out." But the pamphlet is a timely and forceful piece of work.

"Per la Ripresa dell'Esportazione." By Oeconomicus. (Castello) Società Tipografica "Leonardo Da Vinci." Seven pages.

In a recent article Senator Agnelli declared that certain imports are essential to Italy, that these imports must be paid for with exports, that Italian costs cannot be reduced to a competitive level, and that hence exports must be subsidised by means of special duties on imports. That is, in order to maintain certain essential imports it is necessary to discourage the importation of these very imports. This paradoxical position is disputed by Oeconomicus, who points out that further duties on imports will reduce both imports and exports. In order to increase exports he therefore proposes an exactly opposite course: an increase of imports to be effected by a reduction in import duties. Provided that Italy acted first, other countries would in turn take more of Italy's exports. If only this attitude prevailed generally in official circles, we might look forward to an early recovery in world trade. The temporary fall in the lira which would accompany an expansion in Italy's imports would not, the writer adds, produce inflation.

IMPERIAL ECONOMICS

"Imperial Economy and Its Place in the Formation of Economic Doctrine. 1600-1932." By C. R. Fay. Milford. 151 pages. 6s.

This book consists of the six Beit lectures delivered at Oxford in 1933 by Dr. C. R. Fay. Adam Smith was willing, Dr. Fay points out, that the American colonies should leave the Empire if this was necessary for their freedom to carry

out the experiment of an agricultural system after his own ideal; "but he (Adam Smith) pleaded passionately for imperial partnership in what we call now a commonwealth of nations." Dr. Fay attempts to apply the same economic realism and the same broad spirit of liberal Imperialism as Adam Smith, but he is lacking in a conclusion that would inspire him with the same unity and restraint of style. His best points are made incidentally.

He shows for what good reasons our island Empire tended to remain an island Empire when disease combined with the continental climate as the chief obstacle to empire-builders. The Navigation Acts were workable only so long as the triangle of trade between Britain and America and the West Indies provided adequate markets for each party to it. When the export of provisions to the West Indies was not a sufficient outlet, evasion, smuggling and unrest brought revolt to the American colonies; but Canada's staples, especially furs, and later lumber, wheat and nickel, bound her more firmly and permanently to the Mother Country.

It is surely mere optimism to hold, as Dr. Fay does, that the Ottawa and other recent trade agreements are progress and not reaction because they are a step towards "planning." This advantage scarcely outweighs the defect which Dr. Fay rightly exposes. "I especially lament," he writes, "the effort to correct the trade account of Imperial England with that of each small foreign country by economic *force majeure*. For by our own strength in shipping, finance, and overseas investment we create a situation in which the so-called unfavourable balance of trade is natural and normal."

"Quotas or Stable Money? Three Essays on the Ottawa and London Conferences, 1932-33." By E. O. G. Shann. Angus and Robertson. 3s. 6d. net.

It is a tribute to Professor Shann's acumen that the arguments advanced in these three essays over a year ago have just as great a relevance to-day as they had when the Ottawa and London conferences were fresh in retrospect. In one respect they are even more pointed, for the interval since Ottawa has witnessed elaborations of the policy of trade "quotas" which at the time could only be suspected. Not that such a development can have surprised Professor Shann; he was present at Ottawa and is ready with no ambiguous interpretation of what that gathering portended. The main drive, as he observed it, came from the British delegation, and its real aim was a "sheltered market for British farmers and landlords, as well as for British industrialists." Nothing that has happened since weakens this opinion, to say the least. On balance, perhaps, "good may yet be won" from the Ottawa tariff manipulations. But in the Ottawa quotas and threats of quotas there is no economic basis for the general recovery which Ottawa was acclaimed as heralding. Great Britain may by this policy strike a new internal balance, with lower standards of living, but diminished consumer's income can only bring the prospect of still stricter quotas. And restriction has certainly no attractions for the exporting countries.

With some sarcasm, Professor Shann traces the contradiction inherent in both the Ottawa and the London conferences—the search for means to raise the price-level, the pursuit of economic nationalism. Neither conference discovered a way of reconciliation, and at both it was economic nationalism which won. Australian policy, it is suggested, has consistently been aware of the contradiction and has only opposed restriction, either of the Ottawa or the wheat agreement type, in the absence of assurance that the general price level could be raised in this way at all. The contradiction still persists, notably in British policy. How is it to be resolved? We are invited to consider the strong chances that after all the liberal principles on which British financial leadership was based in the past will in the end predominate; that the experience gained in the regulation of the sterling exchange after 1931 will be brought into accepted use; and that the need for stable (and higher) price-levels admitted at both Ottawa and London will lead away from autarky to a slow freeing of trade, beginning with the Anglo-Saxon bloc, through a growing technique of credit control.

But there is meanwhile a hardly avoidable course for Australia: the more Great Britain tends to forsake the interests of her world trade and investments, the more must the Commonwealth establish itself in the markets still open, especially in the Far East. This is a view corroborated by other voices than Professor Shann's, and by events as well.

"Industrial Policy of India." By C. N. Vakil and M. C. Munshi. Longmans Green. 286 pages. 9s.

In their "Industrial Policy of India," Professor Vakil and Mr Munshi continue the task, outlined by Professor Vakil and his collaborators in an earlier volume ("Growth of Trade and Industry of Modern India"), of analysing the economic

condition of India and discussing the policy that should be pursued in various economic spheres. The problem of Indian industrial development is here discussed with special reference to the customs tariff. The authors deliberately avoid the theoretical aspect, and start from the assumption that protection is inevitable. The main theses are that the goal of industrial development is "maximum production with a view to increase the national dividend and to raise the standard of living of the people of the country concerned" (although it is not demonstrated how protection can promote these ends); that rapid industrialisation is desirable to "relieve the pressure of population upon agriculture," diversify employment and lead to a better balanced economic organisation; that the existing "Discrimination Protection" is quite inadequate; and that both the principles and machinery of the Indian Tariff System need drastic overhauling, so that protection may be made "comprehensive, prompt and effective."

Having surveyed the development of the Indian Tariff System and made suggestions for an industrial policy for India, the authors offer three main criticisms of the existing "discriminating protection." First, it is suggested that the conditions laid down before protection can be granted to any industry are unduly restrictive. In particular, it is asserted that it is necessary to prove the existence of a large home market, whereas, industries which may have to depend mainly on foreign markets ought also to be stimulated. The authors' idea seems to be that India should attempt to develop any and every industry for which she possesses the principal raw materials, and it is argued that the existence of a foreign market for the raw materials is evidence of the existence of a market for the finished products. But surely this follows only on the assumption that India has a monopoly of the raw materials, and that there are no substitutes?

Secondly, it is suggested that in practice "discrimination" has meant "discrimination in favour of British goods." The authors object strongly to the preference on British cotton and steel goods, and to the Ottawa preferences, and appear to think that preference is incompatible with protection. On the other hand, they advocate reciprocity, and it is suggested that Imperial preference would be innocuous if it arose out of treaty bargaining. Do they not really object to the way in which preference has been introduced rather than to the principle? Thirdly, it is suggested that the Tariff Board has been dilatory and unsatisfactory in various other respects, and sensible suggestions are made for its reform.

The rest of the book is devoted to a study of the technique of tariffs and tariff methods, including an analysis of the systems in force in India and in various other countries. These chapters form by far the most novel and stimulating part of the book, and include many interesting suggestions, including a proposed new schedule of tariffs for India. The latter is well calculated to provide a basis for the discussion of the reform of the Indian Tariff System which the authors hope and deserve to provoke.

MORE ABOUT PLANNING

"Plan We Must." G. John Stanfield. Hamish Hamilton. 174 pages. 3s. 6d.

It is perfectly possible to define clearly what we mean by planning, and it is even possible to advance good arguments why we should, in certain circumstances, "plan." Mrs Wootton, in her recent book "Plan or No Plan," has done both these things. Mr Stanfield unfortunately does neither. One gathers from the title of his book that he is in favour of something called planning, but he never clearly tells us what

World Economic Survey

it is, nor why we should adopt it. Indeed, there is really nothing in common between the various forms of economic policy he discusses besides the catchword "planning," which covers a multitude of schemes, particularly, it seems, those of Stalin, Mussolini, Hitler, Mr Elliot and President Roosevelt. Nor is any clear argument advanced by Mr Stanfield to show why we ought to plan—except the fact that various people are alleged to be doing so.

Two instances will suffice to show the muddled and misleading character of Mr Stanfield's arguments. Increased productivity he apparently regards as a reason for "planning" because, in his opinion, it creates permanent unemployment. To prove this, he tells us that "the Austin motor works now employ eight men per car manufactured as against 55 in 1922." He does not tell us (because he does not know) that the Austin motor works now employ a total of some 16,000 men as against 3,000 in 1922! Later, Mr Stanfield is discussing agricultural protection, which used to be called taxing the poor, but is now called "self-sufficiency" or "national planning." He first informs us that Mr Elliot "has grasped more clearly than any of his colleagues the implications both of general economic tendencies to-day, and of his own share in giving them expression." On the next page, however, in a surprising burst of common sense, he observes that—

The planning of home agriculture therefore results in a lower standard of living—for, whether the increased costs are reflected in rising prices or higher taxation, they must be met somehow or other from the national income.

Mr Stanfield then tries bravely to hide his argument from the light of this truth by concluding that "the development of national planned economy will involve a transitional period of great distress before the process of adjustment attains a measure of balance and stability." The distress is obvious enough, but where the "balance and stability" are to come from is not so apparent.

The arguments in Mr Stanfield's book are mostly nonsense; but they are dangerous nonsense because they play into the hands of Mussolinis, Mosleys, Elliots and monopoly-hunting industrialists.

"The Road to Planned Economy." By W. F. Bruck. University of Wales. 148 pages. 3s. 6d.

This series of lectures given by Dr. Bruck in the University of Wales, is a history rather than a criticism of economic planning. Dr. Bruck tells us explicitly that he is merely recording facts and not making economic or ethical judgments. The result is an informative and reliable account of "planning" tendencies in Germany from before the War up to and including the Nazi Revolution. Population, self-sufficiency and the "cartel" problem are each discussed in detail. It is only a pity that Dr. Bruck's rather diffuse and pedantic style makes heavy reading of a really very instructive story.

Particularly interesting and relevant is Dr. Bruck's analysis of the possibility of "self-sufficiency" in Germany. He points out that "it is impossible at present to produce more than a small amount of the raw material Germany needs," and that "the motor industry," for instance, "is based on iron, rubber, textiles, varnishes, oils, all of them being materials which the country can only supply in insignificant quantities, or not at all." More important still, various food products "can never be cultivated in Germany" in adequate quantities, including not only fruits from the South, but "wheat, milk products and eggs." The outlook this winter for the long-trying German working class is certainly not a pleasant one.

LETTER TO THE EDITOR BANKING POLICY AND STABLE PRICES

TO THE EDITOR OF THE ECONOMIST

SIR,—I have noticed that recently your paper has sometimes seemed inclined to lend its support to a view, which I regard as unsound. It concerns the theory of money; I would not venture to write to you on a theoretical subject were it not one, views on which are liable, if they become prevalent, to seep through and influence public policy in important respects. I quote an example from your last Book Supplement (page 1):

The main argument is this: The natural state of affairs in a "progressive" economy, where money is "neutral," would be a price level falling in proportion to the increase in general productivity. Suppose, however, that the banking system, in the attempt to stabilise prices, issues a volume of loans greater than the volume of savings available, the market rate of interest will fall below the equilibrium rate, and "over-investment" . . .

will take place. This may go on while the general price level is stable. . . . This argument would probably not be denied to-day by any but a few economists.

If there are but few, I am one of those few. But I hope and believe that the majority would deny it. You correctly observe that this argument results from some very interesting speculations of Professor Hayek's. But in this particular matter the argument, I venture to affirm, goes astray.

According to this reasoning, it is important that the total of funds coming into the loan market should not exceed the volume of current savings; but if, to keep prices up, banks have to make additional loans, total loans will exceed current savings, the rate of interest will be unduly depressed, investment unduly stimulated and an aftermath of trouble ensue. The reasoning is ingenious and plausible, but, unfortunately, it leaves out of account one important factor in the situation. In the normal course of progress the community will require from time to time to add to the value of its holding of cash (bank deposits and currency). Now, this means that a certain part of its savings (income not spent on consumption) does not come forward into the loan market, but is used to supplement the value of its holding of money. While, on the one hand, the total flow of loans is supplemented by additional bank loans, it is depleted by part of the community's savings being held off the loan market in order to supplement the value of its holding of money.

Total loans will be equal to savings, not if the banks make no loans at all, but if the value of the loans they make is equal to the value of savings which people hold off the loan market in order to supplement the value of their monetary holding. The other view that any bank loans will serve to make total loans exceed savings is so unsymmetrical that its advocates might well have been led to suspect that some cross-entry in their national book-keeping had been omitted. And so, in fact, it had.

Now, it might be objected that if the community learns to turn its money over more effectively, it will not need to supplement the value of its money holding when its real income increases. That is perfectly true. But if that happens, it follows that the policy of stable prices will not require the banks to make additional loans. The entry, as well as the cross-entry, will be zero, and prices will be effectively kept stable.

But in the (probably) more normal case when the community does require to add to the value of its monetary holding, some savings are side-tracked to this purpose, and unless the banks make some additional loans, total loanable funds will be less than the savings of the community, and the market rate of interest will be unduly elevated. (N.B.—The community in this case gets the extra value in the form of money, which it requires, through the enhancement of the value of its existing stock, due to the fall of prices. This process, though in a sense illicit, none the less absorbs savings.)

I am not prepared to argue that the equating of loanable funds to savings is the sole, sufficient, or even necessarily the proper objective of banking policy. What I do contend is that if this be taken as an objective, the view that the banks should make no additional loans is untenable. This brings me to my final point. If it is required to equate loanable funds to savings, this entails that additional bank loans should be equal to the value of savings side-tracked into the holding of additional value in the form of money. This equality can only be secured on one condition, and that is that the banks make sufficient additional loans to keep prices stable!

This last proposition is susceptible of rigorous proof, but one which demands, I fear, a close effort of attention. It is required that the value of additional bank loans should be equal to the value of the increment in the value of the community's holding of money. (I suppose for this argument a non-gold money.) If prices are stable, the value of additional bank loans is equal to the value of the increment in the value of the community's monetary holding. If prices are rising, the former value is greater than the latter, and if prices are falling, the former value is less. E.g. if the banks make additional loans worth £100, when prices are rising, the increase in the value of the community's holding of money must be something less than £100. For since it only has £100 of new money, and since each unit of money is worth less, the addition to the value of its total stock of money must be less than £100. By similar reasoning, if prices are falling, the addition to the value of its total stock of money must be more than £100, for it has 100 new pounds, and the value of every pound it already had is also enhanced.

It follows that sufficient additional bank loans to keep prices stable will alone serve to achieve the desired equation of loanable funds to savings.—I am, Sir, etc.,

Christ Church, Oxford.

CHANGE IN EUROPE

RECENTLY, and with great rapidity, a number of excellent studies of the various danger-spots in Europe has been published, and the English reader has at least a chance of following the tide of European events a little behind its crest. The outstanding European issue remains the course of events inside Nazi Germany and in her relations with her neighbours. Mr Hamilton Fish Armstrong, editor of the *American Foreign Affairs*, has followed up his *Hitler's Reich* with a new volume, ** Europe Between Wars*. It makes good, quick reading, and in it he traces the European reactions to the German Nazi regime. If his account of these alarms and excursions seems to those nearer the arena a trifle "detached," that is hardly surprising; but he examines in praiseworthy fashion the very different alignments in France between home politics and foreign affairs, and Germany under Hitler, he thinks, may be reckoning without her host if she is bent on a war; for the French host numbers many peoples whose national ambitions are incompatible with Nazism in the long run—Russia, Central Europe (not Austria and Hungary, of course), the Balkans and—strange newcomer—Fascist Italy.

In a more academic vein another well-known American, Mr Henry L. Stimson, reprints his Stafford Little lectures at Princeton University in April of this year, under the title *Democracy and Nationalism in Europe*.† Mr Stimson pays much more regard to the twin forces of industrialism and nationalism on the Continent. He believes that European democracy will obtain a new lease of life with the probably inevitable inception of a more equitable economic system. Meanwhile, in his view, we are in a transition period, in which the culmination of seven centuries of long striving for unified national States in Europe has coincided with a much more rapid growth in the technical apparatus of living, so that, despite the culmination of the political movement in a Peace which, Mr Stimson thinks, was fair on balance, nation-holic politicians can now utilise so much more of the economic and cultural apparatus of life for their purposes.

We come down to earth with a bump when we pick up two cheap but useful little paper-backs: *Hitler's Official Programme*‡ and *Fascist Germany Explains*.§ The former is

* *Europe Between Wars*. By Hamilton Fish Armstrong. Macmillan (London and New York). 115 pages. 6s.

† *Democracy and Nationalism in Europe*. Henry L. Stimson. Oxford University Press, Milford. 6s.

‡ *Hitler's Official Programme*. By Gottfried Feder. Allen and Unwin. 125 pages. 2s. 6d.

§ *Fascist Germany Explains*. By Celia Strachey and John Gustav Werner. Gollancz. 135 pages. 1s.

a timely translation of Gottfried Feder's 1927 Programme for the Nazi Party. It is composed first of the Twenty-Five Points laid down at Munich in 1920, then of the Programme of 1927, then of the official commentary of the Party. It is interesting, now the Party has been in power nearly two years, to see how fast and far it has travelled from the Leftward Twenty-Five Points. Perhaps only the "tyranny of interest" point has been met—and then only the "tyranny" of the foreign lenders' interest! To what extent the full Programme was inspired by Communist technique may be gathered from the following: "We refuse to do as other Parties do—to adapt our Programme, on grounds of expediency, to the so-called circumstances. We shall simply adapt the circumstances to our Party by making ourselves the masters of circumstances." That last promise has certainly been carried out in Germany; but the Programme has been brushed aside in the doing of it, and the Nazi Party, after June 30th last, appears more obviously dependent than ever upon the Reichswehr and "Big Business." The second little book is an anthology of German published utterances under the Nazi regime, newspaper cuttings, proclamations, extracts from speeches—all cunningly juxtaposed. The following is a sample from a pamphlet by Dr. Goebbels: "We know where we began, but only God knows where we will one day end!"

And so to Germany's two neighbouring danger-spots—Austria and the Saar. The Austrian Government has published its official record of the precedents and actual events of the July revolt.* The book contains photographs of gelignite and bombs on which appear the labels of the Reichswehr Munition Depot, Berlin; there are also pictures of the notorious Austrian Legion in Bavaria, and of the secret code found on a German Nazi agent, caught in Austrian territory; and the account of the July revolt and of the murder of Chancellor Dollfuss for excitement in reading would seem quite in a class by itself. One gets the impression that Dr. Dollfuss's death was due to extraordinarily widespread sympathy with the Nazi cause among the Viennese police authorities. But the Saar is now Germany's chief concern. Major Reynolds's book† is a short but comprehensive account of the whole Saar problem since it was placed under the League. Major Reynolds himself has had ten years of military and commercial experience in

* *Beiträge zur Vorgeschichte und Geschichte der Julirevolte*. Bundeskommissariat für Heimatdienst, Wien. 121 pages. Price not stated.

† *The Saar and the Franco-German Problem*. By B. T. Reynolds. Arnold. 279 pages. 7s. 6d.

or about the Saar since 1920; his account is, in the main, pro-German, but he is not anti-French, and he marshals his facts, and the two opposing national contentions, with commendable impartiality. Some of Major Reynolds's figures, notably those on capital participation in the Saar mines, are clearly out of date. But his book, together with the Special Memorandum on the Saar published by the Royal Institute of International Affairs and reviewed in the *Economist* of May 12th, are the most reliable accounts of the Saar problem that we have yet seen in French, German or English.

Documentation of quite a different category is provided by *Documents on International Affairs, 1933*.* This is the first time that this valuable annual has been published separately from, and before, its companion volume, Professor Toynbee's annual *Survey of International Affairs*. This is a welcome departure, for we now have full documentation of America's recognition of Russia at the end of last year, of the German-Polish Pact of Non-Aggression, of the Statute of the Little Entente, of the long Disarmament negotiations, of the World Monetary and Economic Conference, of the Anglo-American War Debts negotiations, and of German aggression against Austria.

In quite a different class from all the books so far mentioned is Mr G. A. Macartney's volume on *Hungary*.† The great revolutions of high policy in Europe since the German Nazis began their aggression against Austria have placed Hungary in the Caudine Forks. There is a very real danger that Hungary will perpetrate yet once again Stephen Tisza's great mistake of 1914, and join forces in foreign policy with the German *Mittleuropa* system. Here is a pretty problem which those who glibly talk of "the Hungarian question" might do well to follow up. They can best do so in all the history, politics, ethnology, and sociology which Mr Macartney has been able to compress into a vivid, yet erudite, account of a European nation which is a stranger in our European land. It is natural that the author of *The Magyars in the Ninth Century* and of the more recent *National States and National Minorities*‡ should write most concisely of Hungary. Mr Macartney, as his editor reminds us, has lived in Hungary and has mastered the Magyar tongue, which are further commendations. He compresses into 125 of his 367 pages the entire political and social history of Hungary, from the days before it became Pannonia to the formation of the present Government. His treatment of the interplay between the geographical factor and the ethnographical factor in the relations of the Magyars with the Slavs, Germans and Turks is extended and unique. Between pages 125 and 367 he describes those remarkable features of Magyar law and custom which show so extraordinary a parallel, on the broad issues, with our own: the association of freemen, the elective principle, the importance of local government, the Golden Bull (or Magna Carta of Hungary, only seven years after our own)—all of these, save the last, existing before the year 1100 among a wandering Turki people of Mongol stock from the Great Steppes! As to recent times, Mr Macartney gives us a commendably succinct, but a profoundly disturbing, account of the way in which the French and Little Entente States imposed the dismemberment upon Count Károlyi's Government in 1918-19, and so overturned it, letting in the wave of Communism under Bela Kun, and the hardly less brutal reaction of the White Terror in the winter of 1919-20 after the collapse of the Kun regime. Mr Macartney is equally good on the social problems of Hungary—e.g. above all the need for agrarian reform, and on the passionately patrioticism which alone keeps a poor, isolated and small population of non-European stock together.

As conclusion to our look round Europe, there are two good and cheap new volumes.§ They are both on coun-

tries which are "in the news"—Poland and Spain. Mr Patterson's volume on Poland is not very inspiringly written, but it gives an adequate account of Old and New Poland. Unfortunately it gives no more than a mention to the re-orientation of Poland towards Germany since the advent of the Nazis, and the consequent effects on France and Russia. Sir Charles Petrie's book on Spain is written with greater breadth of outlook. He has an excellent chapter on the Spanish genius and another on the economic situation. He concludes that Spain's hope for the future is in "economics playing a far greater, and politics a much smaller, part in the government of the country."

AMERICAN BANKING

The share of the American banking system in the prolongation, even if not in the causation, of the world financial crisis is so large that discussions of its reform are of interest outside the boundaries of the United States. Strangely enough, American banking writers seem to be more interested in its elucidation than its improvement and suggestions are allowed to come from outside. The authors of both these books* are aware of the vital and urgent need for reform, but each of them prefers to put the question aside with an incidental mention. Both, in this respect, look backward rather than forward.

Professor Chapman has written a detailed and painstaking study of the progress that has been made away from the old idea of absolutely independent unit banks, and the book will be for some time the obvious source of reference for facts bearing on the subject. The greater part of the book is devoted to branch banking. There is a chapter on early branch banking, which is shown to have been widespread in the earlier half of last century; but Professor Chapman nowhere explains to the satisfaction of the foreign reader exactly how the belief grew up that branch banking was unsound, unethical and "un-American." He himself appears at times to slip into the belief that branch banks are some unnatural organism which has to be supported by special pleading. The remainder of the chapters on branch banking give a very clear picture of the present status of the problem. Even those who are tolerably familiar with American banking will be surprised at the extent of the restrictions. Apart from branches within the "home town" of the bank (and even they are prohibited in many States, including such financial centres as Illinois), State-wide branches are permitted in only 18 of the 48 States, and in only one of them, California, is there a real system of branches. Even in California, banks are allowed only to purchase existing businesses and not to set up entirely new branches. No bank is allowed in any case to have branches outside its own State.

The epidemic of failures of small banks in the past decade is bringing public opinion round to acceptance of branch banking. But hatred of the large City banks is holding the matter up and last year's Banking Act went no further than to permit National banks to enjoy the same liberty as State banks of the State in which they are situated. Meanwhile, where branches are prohibited, banks are organising themselves in "groups" and "chains" through common ownership by a holding company or by a dominant stockholder or by mutual exchange of capital. These systems are, of course, merely unsatisfactory substitutes for branch banking. Professor Chapman's book would have gained in interest and value if he had formulated definite proposals for amending the law.

Dr. Currie is also concerned with one narrow aspect of American banking—namely, the complex factors which bear

* *Concentration of Banking*. By John M. Chapman. (New York) Columbia University Press; (London) Humphrey Milford. 388 pages. 25s. *The Supply and Control of Money in the United States*. By Lauchlin Currie, Ph.D. Harvard Economic Studies, Vol. XLVII. (Cambridge, Mass.) Harvard University Press; (London) Humphrey Milford. 194 pages. 10s. 6d.

upon the supply of money. Having defined money as currency in circulation plus demand deposits standing to the credit of the public, he applies his definition to the complexity of American banking law. Since there are three varieties of banks—National, State member and State non-member—and reserves are held in different proportions against different types of deposits in different varieties of banks in different geographical localities, and since the position is further complicated by extensive inter-bank deposits and by Government deposits (all with their varying reserve regulations) it will be seen that there is no lack of complications. A given change in the total reserves of the system may have different results on the supply of money in different circumstances. Having set out all his variables, Dr. Currie plays with them, much as the compiler of bridge problems would do.

Dr. Currie is an unrepentant Quantity Theorist (though he recognises in incidental asides that "the rate and type of spending are of greater importance than changes in the money supply") and he criticises strongly the various attempts of the Federal Reserve Board to concern itself with the quality, as opposed to the quantity, of credit. This prepossession with quantity leads him to the remarkable conclusion that "the period from 1925 on was one of increasing monetary stringency, reaching an acute stage in 1929"!

The greater part of the book will be of value to those—but only those—who are interested in the details of American banking operation. But at the end there are a few chapters dealing with the general problem of the control of credit which are of wider interest. The most interesting suggestion is that the functions now performed by commercial banks should be entirely split in two—deposit banks having deposits subject to cheque and maintaining their assets entirely in cash and gilt-edged securities; lending banks making loans but having deposits subject neither to cheque nor to withdrawal on demand. It is not improbable that banking in the United States—and, indeed, in other countries—may have to move in this direction.

THE PACIFIC

"ECONOMIC CONFLICT AND CONTROL" is the sub-title of this book,* and was the general heading of the agenda of the conference whose proceedings it records. Many of those who prepared for the Banff Conference of the Institute of Pacific Relations may have been puzzled to know what exactly that phrase meant. The answer one must give on reflection is that it did not mean anything *exactly* (as the Red Queen might have said). "Conflict" covers all kinds of clashes and rivalry, beyond the free economic competition of non-monopolistic traders and producers. In some cases conflict is aggravated, as in others it is tempered or prevented, by the interference of Governments or the combination of traders or producers for their mutual advantage. Thus conflict and control are sometimes complementary, sometimes antithetical terms. The lack of any clear line of thought in the title of the agenda was reflected in the wide miscellany of subjects that were discussed at Banff and that fill the pages of the proceedings. They range from the Chadbourne sugar scheme to Japanese emigration, from the Ottawa Conference to the American recovery programme, from shipping subsidies to the silver standard.

On all these subjects there is a great deal of valuable material in the recorded discussions and in the data-papers of the conference. But it was inevitable that with such a diffuse agenda the treatment of some topics should have been rather amateur, or else dominated by the dicta of a few specialists. Moreover, a great deal of the subject-

matter, though it undoubtedly concerned the nations that border on the Pacific Ocean, was of worldwide scope, and the Pacific aspect of it was rather an artificial abstraction. It is to be hoped that the officials of the Institute of Pacific Relations will profit by this experience, and will choose for its next conference a more precise objective and one that is primarily Pacific in character.

It is not surprising, therefore, that the most interesting and valuable parts of the recorded proceedings are those which either concern countries whose only seaboard is the Pacific or apply with unique force or urgency to that area. Of the first kind are the Japanese economic expansion and the programme of reconstruction in China; and of the second kind is the problem of differences in national standards of living and labour standards. On these subjects the members and secretariat of the conference assembled a quantity of facts that will be fresh and interesting to the general reader; but the main purpose of such a gathering is not the arrangement of facts but the exchange of ideas, and by this the success of the conference must be judged. The test gives a by no means uncomplimentary result; for there is much in these pages that is stimulating as well as instructive.

A certain lack of definition is apparent in the commentaries and conclusions, but that was inevitable in the absence of resolutions or agreed reports. The reader of the chapter on Japanese expansion, for instance, will eagerly seek the answer to the question that is posed under the heading of "possibilities of international action": what is to be the upshot of Japan's trade expansion? But he will not gain much enlightenment from what is recorded here. A Japanese member related that during their voyage to Canada the Japanese delegation had discussed several proposals on this topic, and that they had thought well of a division of world markets between the various national producers. But was it not Lancashire that proposed such a plan in the recent Anglo-Japanese cotton negotiations, and did not the Japanese delegates reject the idea out of hand? They were aware, no doubt, that Lancashire's view of a fair division of markets would be very different from their own. Thus the Japanese spokesman at Banff went on:—

As the Indian people need more cotton, not so fine as Lancashire goods, and as Japan is nearer to Java and Sumatra, why not arrange with Lancashire to sell its produce some place else, and let Japan take India and the south-east of Asia? This would do away with useless friction.

Indeed, why not do away with Lancashire altogether? That would reduce the friction to a minimum. But not all the discussion was on this plane, and there was in particular an extremely interesting debate on the potentialities of Manchuria both as a market for Japan and as an outlet for her population.

Messrs Bruno Lasker and W. L. Holland, who edited the material, had no easy task, and their success is all the more praiseworthy. With careful skill they wielded both the scissors of selection and the paste of description and summary. It is no slight upon them to say that the possessor of this volume will probably take it down again from its shelf less for the records of the discussions than for the documents, prepared beforehand for the conference, which are reproduced textually or with slight omissions. These include memoranda on the control of industry in Japan, the agrarian problem of China, Chinese rural industries, economic planning and reconstruction by the Chinese Government, population and land utilisation in the Philippines, notes on the economic consequences of recent events in Manchuria, and a draft Security Pact for the Pacific area (prepared by two Japanese delegates of academic distinction). In view of the critical importance of political issues in the pending naval conference, the plan of a regional pact deserved more attention than the official agenda allowed it. Indeed, it is a great pity that the Institute of Pacific Relations did not devote a larger proportion of its energies at Banff, and in the months of preparation, to the fundamental structure of security in the Pacific; for the structure that was established at the Washington Conference is now threatened both by Japan's militarism and by her intended repudiation of the naval ratios.

SHORTER NOTICES

SOCIAL AND POLITICAL

"Some Relations between Political and Economic Theory."
By G. D. H. Cole. Macmillan. 92 pages. 4s. 6d.

What a nose Mr Cole has for scenting the latest and most up-to-date tendencies in people's minds—before they themselves are hardly even aware of them! At the universities there is a feeling of dissatisfaction with the rigid divisions existing between politics and economics, between the various branches of the social sciences, in fact; a growing interest in the boundary areas between them is offering the most fruitful field of study, and some discussion of possible lines of reintegration. Mr Cole's essay is a contribution towards the latter object. He starts from a consideration of the Modern Greats School at Oxford; but even at the London School of Economics, that rising hope of a stern, unbending orthodoxy, some desire has been known to be expressed for a measure of co-ordination between the social sciences, for common discussion of methods and comparison of results.

Mr Cole regards the question from a historical and so a relativist point of view:

In the nineteenth century (he says), above all in Great Britain, the predominant academic theories in both fields of study were conceived in terms of a situation in which the State was being constantly warned to keep out of the economic sphere, and politics was regarded as a matter which ought to have as little concern as possible with the economic system.

From this point of view he examines the absolutist theories of Kant and Rousseau—he is particularly good in his destructive criticism of the assumptions of the latter about sovereignty; his chapter on Hegel is excellent, and contains a most original section in which he shows how the Hegelian notions about the priority of politics over economics are borne out in Fascist doctrine and practice. In his treatment of utilitarianism, similarly, there is a striking passage (pages 55-6) developing the idea of social utility as the basic principle of a collective economy. He examines further, from a common-sense angle, the attitude of Marxism towards this dualism of politics and economics, and finds, in conclusion, that only in a doctrine resting upon a theory of history (such as Marxism has at its back) can this unsatisfactory dualism be resolved.

"The Question of the House of Lords." By A. L. Rowse. Hogarth Press. 64 pages. 7s. 6d.

Is the House of Lords a mere innocuous or even beneficial excrescence, whose sting was removed by the Parliament Act? Or is it a constant obstruction to progress and a possible menace to liberty? Mr Rowse, in this light but learned pamphlet, argues, and argues convincingly, that it is the latter. His text is Walter Bagehot's saying that "whatever is unnecessary in Government is pernicious"; and his thesis is that the history of the House of Lords in the last century has been "a record of legislative obstruction." So far, Mr Rowse argues, from rejecting hasty and ill-considered legislation and allowing beneficial legislation to pass, the Upper House has almost invariably passed the hasty measures when supported by Conservative Governments and obstructed the most beneficial when proposed by Liberal Governments. Again and again legislation which the Lords has obstructed has had subsequently to be passed; and legislation which it has accepted has had subsequently to be repealed.

Mr Rowse has marshalled a wealth of historical illustration to substantiate the justice of this charge. Between 1828 and 1866, he shows, for instance, the admission of Jews to Parliament was nine times accepted by the Commons and nine times rejected by the Lords. In 1842 a Mines Act, limiting the age and hours of work of children in mines, was passed by the Commons. The Lords, led by Lord Londonderry, rejected it. And so on, again and again. On the other hand, "all the ill-considered and unsuccessful legislation that came up from the Lower House, like the Encumbered Estates Act of 1848, the foolish Ecclesiastical Titles Act of 1851, the ritualistic prohibition of Russian imports so soon gone back upon, had no difficulty in passing through the Lords." But it is in its most appalling record. Time and time again reforms which might have remedied distress and allayed bitterness were passed by the Commons and rejected by the Upper House;

there would have been no need for a final solution by violence and bloodshed, in Mr Rowse's opinion, if there had been no Lords.

It is possible that a little more historical research as diligent as Mr Rowse's might work up a slightly better case for the Lords than he is inclined to allow. But few will deny that since the War the Upper House has acted as little more than a wing of the Conservative Party. Only during periods of Labour rule has it come to life—and only one-sixth of it, on the average, at that. What is to be done with the Lords? Should it be ended or mended? Mended, in Mr Rowse's view. He would make it consultative, and design it to expedite, and not encumber, existing Parliamentary procedure. He consequently proposes a body of 100 or 120, half or a third of whom would be elected by the Commons, and the rest nominated by the Crown. The details are comparatively unimportant. But Mr Rowse seems substantially right in laying down the two principles that our future Upper House should contain those acknowledged experts on public affairs who do not excel at the demagogic arts; and secondly, that it should be designed to simplify and not complicate the process of legislation.

"Race and Economics in South Africa." By W. G. Ballinger. Hogarth Press. 67 pages. 1s. 6d. paper, 2s. 6d. cloth.

The author of this little book, which is No. 21 of the Hogarth Press "Day to Day Pamphlets," went to South Africa in 1928 as adviser to the native Industrial and Commercial Workers' Union, and has since gained by his work there the respect and sympathy of many who are by no means in full agreement with his political and economic views. He gives here a brief but effective outline of the desperate position of the Bantu urban workers. These workers, excluded from any effective participation in the election of those who govern them, are practically debarred by law, prejudice and the policy of the white trades unions from rising above the status of unskilled labourers, while even there their position is continually threatened by subsidised competition from the poor whites and the continual influx of fresh native immigrants from the hopelessly overcrowded native reserves.

The author points out the inevitable danger to the whole country to which a continuation of the present policy must ultimately lead, and implores South African white trades unionists to realise that it is only by improving the position of the natives that the future of the white workers can be made secure. He wisely recognises that the arbitrary raising of unskilled wage rates would make things worse rather than better, and as a solution looks first to increased native education, the gradual removal of the artificial barriers to native advancement, and the spread of co-operative methods among natives; while, as a more distant objective, he urges the establishment of a system of native peasant proprietorship through a redistribution of land.

This pamphlet may be strongly recommended to those who wish to obtain an outline of the position of native workers in South Africa; it would have been an advantage if a short bibliography had been included for the benefit of those who may wish to pursue their study of the subject further.

"Fascism and Social Revolution." By R. Palme Dutt. Martin Lawrence. 289 pages. 5s.

This is a conventionally dogmatic statement of the orthodox Communist creed. It would have been reasonably well-written had Mr Dutt sprinkled the words "revolutionary," "dialectic" and "reformist" a little less lavishly and meaninglessly about his pages. Here and there he reveals flashes of intelligence and even common sense; and his account of Fascism leaves very little to be desired.

But the ranting note and the periodic lapses into sheer ineptitude—both inevitable ingredients, it seems, of Communist writing—are to be found here as usual. Mr Arthur Henderson (among others) is described at one point as "actively pushing on preparations for imperialist war"! And, writing of the Corporate State, Mr Dutt remarks that "the great part of the Liberal Yellow Book, of Labour and the Nation and of the Fascist Labour Charter could be interchanged without noticeable difference." If Mr Dutt really does not notice the difference, it is high time, one would have thought, that he gave up writing about politics.

MONEY AND FINANCE

"The Trade Balance." By Lieut.-Colonel K. E. Edgeworth. Allen and Unwin. 135 pages. 3s. 6d.
"The Pound's Progress." By F. J. Scanlan. P. S. King and Son. 35 pages. 1s.

These two small books are both concerned with the balance of payments and with the future course of the exchange value of the pound sterling, though from rather different standpoints. Mr Scanlan attempts to expound British financial policy in the past three years and to defend it in particular from trans-Atlantic attacks. His treatment is clear and convincing, though it necessarily suffers a little from self-righteousness. It is rather a pity that he should have added a final chapter on "Politics and Prospects," which attempts in half a dozen pages to assimilate to one another the policies of the Democratic Administration in Washington and the National Government in London, and succeeds only in drawing a rather schoolboyish, and wholly unconvincing, parallel between Mr Roosevelt and Mr MacDonald.

Lieut.-Col. Edgeworth is concerned with the wider question of the future relations between currencies, with particular reference to foreign lending. He appears to have rather a curious dislike of foreign lending, on the apparent ground that it benefits only the borrowing country; but he does not ban it altogether, and we may agree with him that international lending should be limited to the amounts which can be repaid in goods by the borrower and accepted in goods by the creditor.

Like many other people, Lieut.-Col. Edgeworth has concluded that the international monetary system of the future will be a gold standard with movable parities, but, unlike many other people, he has seen the technical difficulties of such a standard and attempted to circumvent them. His solution is that Governments should be permitted to vary the gold parity of their currencies by not more than 0.04 per cent. per week, or 2.08 per cent. per annum. This rate of variation should be known as the "gold rate," and the suggestion is that it should be publicly announced and the change made regularly, week after week, over long periods of time (Lieut.-Col. Edgeworth implies that he has periods of ten years in mind).

It is possible that this system would be slow enough in its movements to circumvent the speculator, who is the chief menace to any other system of movable parities. One cannot feel quite convinced, however, that it is practicable. Parities should be moved with the sole object of accommodating the "favourable" balance on current account of the balance of payments to the amount of foreign lending or borrowing that is considered advisable. Lieut.-Col. Edgeworth does not clearly recognise the fact that this would not set the monetary authorities completely free from the dominance of the world price-level. He makes the further interesting suggestion that foreign loans should be made payable, as to principal and interest, half in the borrower's currency and half in the lender's currency. Here again it is doubtful whether an idea which is excellent in theory would be practicable in fact. In spite of these doubts, however, Lieut.-Col. Edgeworth's book is a decidedly stimulating and interesting essay which in many directions breaks entirely new ground.

"Corporate Enterprise in Modern Economic Life." By Paul M. O'Leary. Harper. 134 pages. 4s. 6d.

In spite of its title, the scope of this book is confined to the United States. According to the publishers' note, the book provides the answer to many questions about financial organisations and the basis of their distribution of profits. It contains nothing, however, that is either searching or original. After a time-worn explanation of the origin of corporations, the author deals with what he calls the managerial, bankers', wage-earners' and investors' segments. His criterion is that rather vague standard of fairness with which all readers of Mr Roosevelt's speeches are familiar. The remuneration of the managers should be reduced to such a level as would keep them as willing servants of the company; if capital must earn any return at all, it should be reduced to the barest minimum at which investors will part with their money, though there should be a break with the old practice which put the interests of capital before those of labour. Corporations must realise their responsibility towards society; and this should entail a complete elimination of the bankers' influence, since the bankers' power over the corporation is regarded by Mr O'Leary as particularly sinister.

His practical conclusion is that a federal corporation court should be set up and administered by a "national" holding company which would not only finance as many enterprises as could be conveniently financed out of the savings of the community but would also decide the right time and destination for such financing. This national corporation would not interfere with individuals who desired to hazard their own

funds, but only with the corporations who must raise their funds from widely scattered sources. To the author of this book, as to the Nazi and Communist, the word "national" spells infallibility.

"The Role of Money." By Frederick Soddy. Routledge. 220 pages. 5s.

In this book Professor Soddy repeats his well-known argument that the banks' power of creating money by increasing the total volume of bank deposits should be taken away from them and vested in the State. Having eliminated the "coining" power of the privately owned banks, and the gold standard, he would aim at an orthodox price stabilisation policy. He would incline towards the issue of new money, however, when that was necessary, by remissions of taxation rather than producers' credits. It is noteworthy that Professor Soddy declares categorically that "all costs of production are distributed to consumers"; and that he dismisses the idea of a perpetual "national dividend" of new money with the words: "It is positively amazing how ready some people are to believe in magic still."

TRADE AND INDUSTRY

"Britain Under Protection." By Ranald M. Findlay. Allen and Unwin. 218 pages. 6s.

Ultimately the fiscal issue cannot be decided on mere empirical grounds. The strength of the free trade case must in the end rest on the general principle that, as long as any possibility of transferring resources from one industry to another remains, a country will always become richer by producing the things it can produce most cheaply, and exchanging them for others, than by trying to produce everything itself. Nothing conclusive can ever be proved by this or that "practical experiment" in free trade or protection; for the argument always assumes that other things are equal, and they never are or can be. Nevertheless, since Protectionists will not in fact refrain from making a plausible empirical case, it is well for free traders to make a similar attempt, for what it is worth—though neither is in the least likely to convince the other side.

In this book, Mr Findlay examines the present Government's protectionist policy; and accumulates a mass of facts, figures, documents, quotations and arguments to show that Protection has fulfilled all the worst fears of free traders, that in most instances it has done harm, and that where it appears to have been beneficial the benefit will only be temporary. It is true that Mr Findlay's book is likely to be of more value to electioneers than to economists; but since economists do not win elections, it would be foolish to quarrel with him for that.

Having first shown that the whole tariff policy was contrary to election pledges, Mr Findlay gives an account of the actual measures introduced. He then proceeds to demonstrate in turn that the policy has been attended by extensive log-rolling from the start; that it has provoked foreign retaliation against exports; that tariff "bargaining" has almost always reduced the total volume of trade; that our "scientific" tariff is cluttered with anomalies and injustices; that prices over a wide area have been raised or prevented from falling; that shipping has been ruined; and that the "reorganisation" which was to have accompanied tariffs, as in the case of iron and steel, has vanished into smoke. The Ottawa Agreements are discussed exhaustively by Mr Findlay; and he has no difficulty in establishing that they have resulted in practically no single instance in a substantial reduction of Dominion tariffs on British goods. Finally, Mr Findlay shows that Mr Elliot's agricultural quota policy has already begun to raise the price of most of the necessities of life.

Mr Findlay's method is to mow down the tariff case with machine-gun fire rather than to destroy it with a single shell; and his book is consequently full of modern instances rather than wise saws. He shows us Protection in practice—where it has always claimed to excel. He cannot hope by this method to establish irrefutably the free trade case. But he has riddled the case for protection.

"The Economic Consequences of Progress." By Roy Glenday. Routledge. 12s. 6d.

Since Mr Glenday's intention is to expose the futility of orthodox economic thought, it can hardly be counted against him that he has rejected the deductive method in favour of argument by analogy. Any other method would rob us of the biological examples from which he demonstrates the inherent tendency for natural development to be conditioned by external factors such as food and climate, and his argument that beyond these limits a settled mode of life results. By inference, the limits of economic specialisation depend upon the capacity of the social structure to accommodate the

growth of productive power. Mr Glenday is impressed by the discontinuity of economic expansion, and it seems clear that his insistence upon the limitations of such expansion rests on the assumption that other things, in the Marshallian sense, for ever remain equal. This is a position which no economist whom Mr Glenday criticises—and there are many, of all shades of opinion—would accept for one moment. The "S" curve itself, which figures so largely in these pages, has long been generalised in economic theory, particularly by Professor Knight in "Risk Uncertainty and Profit." But although economists have insisted that the tendency towards diminishing returns is always operative, they have also admitted that over time, the assumption of *ceteris paribus* becomes irrelevant, and that a historical path of increasing returns will result as increased factor supplies and technical knowledge becomes available.

Since Mr Glenday is disposed to the view that progress itself is subject to diminishing returns, he declares that the productive structure must be reorganised to relieve our dependence on an investment system, whose excesses, in his view, are largely responsible for our present discontents. His solution is a somewhat inchoate system of planning, in which individual choice would be replaced by new functional groups (whose composition is not defined), and in which interest rates would slowly decline towards eventual stabilisation. He argues that the inevitable reduction in the standard of living might have considerable advantages. Among so much mysticism there are occasional glimpses of important truths. An austere Austrian flavour is suggested by the arguments for strict monetary control and a falling price-level during periods of expansion. But the discussion on the increased costs of "roundabout" production and the inevitable distortion of monetary streams resulting from it soon dispel the impression. It is well that the philosophy of economic negation is argued with such heretical liveliness.

"Society and Enterprise." By A. T. K. Grant. Routledge. 5s.

This book of just over 200 pages presents a valuable summary of many recent contributions to the solution of economic difficulties. Mr Grant's own argument is even more interesting.

He holds that within the limits imposed by really serious obstacles incomes should be equalised by the State. He quotes Mr Colin Clark that "even at the present time the equal distribution of the national income, not including income from overseas, and with maintenance of the existing rate of investment, would give an average family income of some £270 per annum to all, including the unemployed." In other words, redistribution, if practicable, would bring a substantial improvement to the mass of the people. But how can redistribution of incomes be effected without diminishing total income and production by cutting down the incentive of profits?

To this question Mr Grant answers, first, that the State should provide a direct stimulus to the flow of goods and services *pari passu* with the redistribution of income; secondly, that risk is already spread in the case of large businesses, over the vast number of ordinary shareholders. Management and direct responsibility of enterprise tends to fall already into the hands of competent managing directors, salaried staffs, etc.; and these tendencies would only be generalised and encouraged if the State—that is ultimately the whole people—accepted ownership and risk more directly itself.

This programme implies, Mr Grant points out, that the State should enter upon new activities, and he criticises socialists of the present day for insisting too much on socialisation and too little on the vitally important undertaking by the State of new enterprises. He defends this idea against the criticism that guesses by the State about the prospect of new investment will be approximations, by arguing that similar guesses by private enterprise are at least equally approximations. He thinks that State encroachment would not create more difficulties than it solves if "the greatest freedom in the matter of management" (as contrasted with risk-bearing) is preserved. It is not clear, however, why Mr Grant's risk-bearing State should eliminate those business fluctuations which he attributes to "the irregular nature of the demand for capital goods," an irregularity inherent in progress.

LABOUR

"Trade Unions and The State." By W. Milne-Bailey. Allen and Unwin. 389 pages. 12s. 6d.

This comprehensive and interesting book is worthy of the attention of all serious students of social institutions, for, though nominally and, in fact, mainly concerned with a particular type of organisation within the State, it raises by implication the whole question of the future of associations.

Inevitably, in days like these, it is out of date in some particulars—and must have been even before it appeared. Mr Milne-Bailey's description of Italian corporative institutions is already incorrect, and it is surely remarkable that a chapter could appear at this moment entitled "The Eclipse of Sovereignty." Does Mr Milne-Bailey really think that the idea of sovereignty is on the wane, and, if so, where? Not, assuredly, in the countries which have given most social sanction to Trade Union bodies.

Mr Milne-Bailey casts his net wide. His main interest, naturally, is in British trade unionism at the present time and in the near future, but he also discusses trade unionism in other countries and its history in general. On both subjects there are points on which his interpretation is open to discussion: on the question of the 1926 strike, for example, he takes too easily the T.U.C. view that the Strike was simply a protest on a large scale, such as any Government might have bowed to without losing prestige. Many will say, however, that it was not, simply because it had been foreseen (though not foreplanned) well in advance, and because it was directed, even if directed very unwittingly, by a central authority. Potentially, it may be argued, the General Council of the T.U.C., whatever they and Mr Milne-Bailey thought, were a rival government, and unless events had shown, as they did not, that a considerable section of its own supporters were likely to change sides, the Government was politically bound to trample on them. Again, the phrases which suggest that membership of a union is becoming more and more of a passive acquiescence and less of an expression of class feeling may apply to England, but applies much less to many of the Continental countries, where joining a union is still, as it always has been, a political act.

These points of criticism, however, do not in the least detract from the value of the book, to which many, in the light of recent events, will turn in the hope of discovering what is now the official policy of British Trade Unionism. They will not find a definite statement, which, indeed, would hardly have been possible in view of the age-old reluctance of British Trade Unionism to commit itself to any doctrinal dogmatism; but they will find a distinct leaning towards "corporation-with-democracy," if that can be achieved, and an anti-individualism which may well make Liberals shudder. It may be that these differences will yet be fought out within the fold of the Labour Party—as to whose present difficulties Mr Milne-Bailey is, perhaps wisely, silent.

"The Shorter Working Week." By H. M. Vernon. Routledge. 201 pages. 8s. 6d.

In this study of a shorter working week, Dr Vernon has made good use both of the documents published by the International Labour Office during the past year, and of the results of his own and his colleagues' investigations for the Industrial Health Research Board and the National Institute of Industrial Psychology. Recognising the strength of the economic objections to a shortening of the working week under the existing conditions, Dr Vernon considers, and on the whole strongly approves, the alternative of a wider introduction of the two-shift system. He makes a study of the operation of this system in the cases in which it has been approved under the Act of 1920, and brings out clearly the great increase in orders made under this Act which accompanied the suspension of the gold standard in 1931. Dr Vernon believes that the two-shift system is not really unpopular with those who have experience of it, though its introduction is usually opposed at the outset. His book is in effect a plea for a fuller study of the possibilities of this system as a means of counteracting the alleged tendency of increasing mechanisation to create a surplus of labour.

"The Worker and Wage Incentives." By W. F. Watson. Hogarth Press. Day-to-Day Pamphlets, No. 20. 46 pages. 1s. 6d.

The series of Day-to-Day Pamphlets, published by the Hogarth Press, have provided readers with a number of interesting sidelights upon the reactions of various types of person to modern life, and No. 20 is not the least interesting. Mr Watson, who is an engineer by trade, and whom some may remember as one of the pioneers of "Industrial Unionism" in Great Britain before the War, here analyses various systems of piecework, payment by results, and scientific management, and how they appear to the man in the shop who has to work under them. As regards particular systems, the chief villain, as might be expected, appears to be the Bedaux system, of which there is a savage analysis, and the white-headed boys Messrs. Priestman of Hull. Mr Watson has a pleasant and easy style, and his booklet is very readable. It is interesting to observe that he comes down definitely on the side of individual piece rather than time work, and against all collective systems.

LOCAL GOVERNMENT

"Where Labour Rules." By H. R. S. Phillpott. With a Foreword by the Rt. Hon. Herbert Morrison. Methuen. 114 pages. 2s. 6d.

"Local Government." By H. Lloyd Parry. P. S. King and Son. 251 pages. 6s.

The victory of the Labour party in the Municipal Elections will raise in many people's minds the question what Labour is likely to do with its power. It is doubtful if any party can yet claim a superiority of energy or intelligence in local government, but it is certain that the few councils blessed with a Labour majority have shown themselves possessed of great initiative, not only in exercising their own powers, but also in resisting the encroachment of the Ministry of Health upon their autonomy.

Mr Phillpott was sent by the *Daily Herald* to visit the places "where Labour rules," and to write a series of articles about their achievements. He has now published his articles in book form. The reader does not expect an impartial account of the consequences of Labour government. He finds, as he expected, that increases of rates are due to bad financial administration by Tory predecessors, whereas, reductions of rates, where they have been brought about, have been due, not to the fall in interest rates or the increase of rateable values, but to the competence of the Labour chairmen of finance committees. Also, the emphasis varies; sometimes Mr Phillpott is concerned primarily with finance, sometimes with education, and sometimes with housing. In some cases this is clearly due to the special problems of the places visited, for it is natural that the councils with Labour majorities should be found mainly in the depressed industrial areas. In other cases it is due to the natural tendency of the author's informants to emphasise their successes and to ignore their failures.

Mr Lloyd Parry's book is of a different kind. It consists of a course of University Extension Lectures delivered at Exeter. It is, therefore, one more addition to what is now a long list of students' books on local government. Unlike most of the books in the bibliography, however, it does not emphasise the organisation and working of local authorities. It is concerned rather with the services which local authorities exercise. This departure from custom is to be welcomed. It has been assumed too easily by other writers that Workers' Educational Association students and others are interested primarily in institutions. It is quite clear that the ordinary reader is not. He is concerned rather with the part which local government can play in the development and improvement of social and economic life. It is doubtful if Mr Lloyd Parry has quite met the need; for he treats every service historically. Though quite frequently he brings in information which is not to be found in the statutes, his exposition is too like the many students' books which do little more than summarise Acts of Parliament.

"The Review of Economic Studies." Edited by A. P. Lerner, P. M. Sweezy, U. K. Webb and others. Vol. I. Nos. 1-4. Vol. II, No. 1. The London School of Economics, Houghton Street, Aldwych, London, W.C.2.

We have received copies of the first four issues of this periodical, which first appeared in October, 1933. The declared objects of the "Review" are to publish contributions to research, particularly by post-graduate students, and to co-ordinate "research work in progress in economics and political theory, at home and abroad." The subjects of the articles printed vary from highly academic topics such as "The Elasticity of Substitution" and "The Diagrammatical Representation of Elasticity of Demand" to questions of a less abstract kind. Mr A. P. Lerner's article on "Economic Theory and Socialist Economy (Vol. II, No. 1) and Mr G. L. S. Shackle's "Notes on Monetary Theories of the Trade Cycle" (Vol. I, No. 1) should both be of interest to the non-academic reader.

LETTERS TO THE EDITOR

BANKING POLICY AND STABLE PRICES

TO THE EDITOR OF THE ECONOMIST

SIR,—In his letter published in your Book Supplement of October 6th, Mr Harrod argues (as against the views of Professor Hayek and some other economists) that in times when real productivity (per head) is increasing only a policy of credit expansion to the extent of keeping prices stable will equate the volume of current savings with investment, since individuals intend to keep a constant proportion of their real income in the form of money. Consequently, under such a policy they will tend to increase the value (in terms of goods) of their monetary holding by the same amount as the value of the additional money created per unit period.

I suggest that the difference between Professor Hayek's and Mr Harrod's views can be resolved to a difference in the implicit assumptions concerning producers' price-expectations. Professor Hayek is assuming (cf. "Monetary Theory and the Trade Cycle," pages 71-72) that producers, as a group, expect the *right prices*; which implies that with a policy of falling money prices they all expect lower money prices for the future than are ruling at present (i.e., they expect stable money-incomes). In this case they will not tend to increase the volume of their monetary holding, since they will keep the proportion of their real income held in the form of money constant by keeping the volume of their monetary holding unchanged. (In other words, they will expect the value of their present monetary holding to increase in the same proportion as their real income.) In such a case a policy of keeping the amount of money in circulation constant will bring about the desired end of equating the volume of loanable funds with current savings.

Mr Harrod, on the other hand, is tacitly assuming that producers, as a group, expect the same money prices in the future as are ruling at present (i.e., they expect their money incomes, and not merely their real incomes, to rise), and, consequently, they will intend to add to their monetary holding whenever their real incomes are increasing or are expected to increase. In this case, a policy of keeping commodity prices stable will equate savings with investment. Such a policy, of course, will only secure full equilibrium if the producers are correctly foreseeing the necessary changes in price-relationships and not merely the general level of prices. Professor Hayek and Mr Harrod are thus both right on their own assumptions.—I am, Sir, yours faithfully,

15 Mecklenburgh Square, W.C.1. NICHOLAS KALDOR.
October 10, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—The social importance of appropriate monetary policy makes it appear desirable to make two objections to the views expressed by Mr Harrod. His conclusions are too significant to be left resting upon an argument falling short of the conclusive.

Mr Harrod's sense of symmetry will, perhaps, have led him to anticipate the first. If it is true "that the value of additional bank loans should be equal to the value of the increment in the value of the community's holding of money," then it is important to specify how these values shall be measured, and, therefore, which price level, out of an infinite number, should remain unchanged. If we measure the values in terms, say, of given wages, then fluctuations in wholesale or retail prices cease to be significant in this connection. And it may remain true that stability is achieved with falling (wholesale) prices. Whether one should use some such method of measurement I am not prepared to say.

This leads to my second objection. Even if the values *are* measured against a given selection of goods, fluctuations in the prices of these goods will not make impossible equality between the two values. The proof of this is not easily expressed in a summary fashion. Perhaps illustration will serve as an indication of proof. If the community hoards £10 of its receipts, the banking system can make this good by lending £10 for "investment" purposes. Equality is obtained. The price level then falls as the result of increased efficiency. A further £10 is hoarded and £10 lent. Equality is again achieved, but at a different price level; and so on, until £100 is abstracted from circulation and £100 put into circulation. I am by no means prepared to say that this equality between the values is as easy to achieve in practice as in the lecture room. And perhaps, with reasonable assumptions, a closer approximation is more likely than strict equality. But without knowing the assumptions made, can equality be said to be utterly impossible?

Unless Mr Harrod's letter is in the nature of a protest against the too facile use of the concepts of saving and price levels, it does seem desirable to know how opposite conclusions can be reconciled.—I am, Sir, Yours, etc.,

The Victoria University of Manchester. J. STAFFORD.
October 11, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Harrod attempts with no little ingenuity to prove that, even in the face of rising productivity, the stabilisation of commodity prices is still compatible with equality between the supply of loanable funds and the volume of current savings. In this task it does not seem to me that he has succeeded. Mr Harrod is no doubt right in supposing that, as real incomes rise, the public will wish to add to the commodity value of its cash holdings. But if prices are allowed to fall, as Mr D. H. Robertson and others have shown, this will take place automatically. There is no incentive to hoard cash, and savings are not, in fact, being "side-tracked into the holding of additional value in the form of money." Mr Harrod's position

rests, in fact, upon a confusion between an increase in the commodity value of the public's money stocks which is due to saving (or hoarding) and a similar increase which is the mere reflection of a rise in general productivity.

Moreover, if for some reason the public *does* decide to hoard, it is, of course, generally admitted that, to preserve equality between savings and investment, the banks should expand their lending. But here the action of the banks will merely offset a tendency for prices to fall *more rapidly* than productivity is rising. Mr Harrod does not seem to realise that the hoarding of cash involves a fall in the velocity of circulation—a phenomenon which has no necessary connection with an increase of productivity. If he wishes to stabilise prices at a time when both of these things are happening simultaneously, he must not only provide enough money (1) to offset the fall in velocity due to hoarding, but must further increase the money supply (2) in proportion to the rise of productivity. The first of these prevents deflation; the second is definitely inflationary.—I am, Sir, etc.,

HAROLD BARGER.
University College, Gower Street, London, W.C.1.
October 9, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—I was most interested in the letter written by Mr Harrod which appears in your Book Supplement, and while chary of challenging an economist of his distinction, I feel some doubt as to whether the argument he puts forward covers the case of an expansion of bank loans which is employed to finance rising price levels in a stock-exchange boom. Have not Professor Robbins and others shown that such an inflation of credit is consistent with stable commodity prices—e.g., America in 1928-9?—Yours faithfully,

HUBERT BLAKE.
181/189 Palmerston House,
Old Broad Street, London, E.C.2.
October 10, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—Without trying to answer the general question what the criterion of monetary policy in a progressive economy should be, I should like to show that the argument advanced by Mr Harrod in favour of stabilising the price level is fallacious.

Mr Harrod's argument is brought out most clearly in the case of an economy in which the volume of output increases continuously owing to improved methods of production. Other cases of an increase in the volume of production (e.g., where this increase is due to a growing of the population) give rise to special problems which have nothing to do with Mr Harrod's argument.

His argument is this: In the course of progress the community will require to add to the value of its holding of cash. . . . This means that a certain part of its savings . . . does not come forward into the loan market, but is used to supplement the value of its holding of money, and unless the banks make some additional loans, total loanable funds will be less than the savings of the community.

What does the phrase "the community wants to add to the value of its monetary holding" exactly mean? One would think at first that this is equivalent to saying that an act of hoarding takes place; in other words, that the velocity of circulation of money decreases. This is not, however, what Mr Harrod really means. The situation is this: Money income per unit of time is the same as before, the flow of money per unit of time, demand for goods in terms of money are all unchanged. Real income has risen, the same money income buys a larger real income; in other words, prices have fallen and the purchasing power of money has gone up. What, then, does it mean to say that an addition has been made to the value of the community's holding of cash? "The community . . . gets the extra value in the form of money, which it requires, through the enhancement of the value of its existing stock, due to the fall of prices." In other words: the value in terms of goods of the total existing stock of money has increased. Mr Harrod goes on to say that this appreciation *absorbs savings*. Clearly, it does not absorb any savings. No money is hoarded, people spend the same amount of money per unit of time, although the same amount now buys a larger volume of goods (real income). If anybody wants to save a certain proportion of his income, it is impossible to see why a part of this amount should be "held off the loan market" by the fact that "the value of the monetary holding" in the above-defined sense has risen.

I suggest that Mr Harrod has mixed up two completely different things, the "real value of monetary holdings" in the above-defined sense, on the one hand, and the proportion of real income or resources which the community chooses to keep in form of money (i.e., "k" in the Cambridge equation) on the other. Clearly, it is quite possible for the real value of monetary holdings to rise, while "k" remains unchanged,

and this is precisely what happens in the case discussed by Mr Harrod; "k" is the reciprocal of (income-) velocity of money. An increase of "k" is equivalent to a decrease in "v"; it involves an act of hoarding, a decrease in consumers' outlay, in the flow of money per unit of time. Of an increase in "k" one can, in fact, say that it absorbs savings, but an addition to the value of monetary holding in the above-defined sense does not involve an increase of "k." The real value of the existing stock of money has risen, but the real income of the community has risen too, in the same proportion. The ratio:

$$\frac{\text{Real value of monetary stock}}{\text{Real income}} = \frac{\text{Money stock}}{\text{Money income}} = k = \frac{1}{v}$$

has remained constant.

I fear that, far from having supplied any missing cross-entry in the national book-keeping, Mr Harrod wants to enter an addition to the monetary stock (additional loans) on one side, to compensate for a fictitious act of hoarding on the other side, and he asks us to believe, in the name of "symmetry," that the books now balance.—I am, Sir, yours faithfully,
G. HABERLER.
Geneva, October 18, 1934.

TO THE EDITOR OF THE ECONOMIST

SIR,—May I reply briefly to my critics?

I am in complete agreement with Mr Stafford's first point. In fact, I made it in the first draft of my original letter to you, but deleted it out of respect for your space. Owing to the plurality of possible index numbers, my principle does not exclude general prices falling as productivity increases. Whether this or stable prices in the ordinary sense is desirable depends on a wide variety of considerations, which I shall not attempt to summarise. What I do claim to have shown is that the dictum that new loanable funds should be equated to new savings cannot validly be employed as an objection to a regime of stable prices in the ordinary sense. Mr Stafford's second point I am afraid I am unable to apprehend, perhaps owing to the brevity of his exposition.

With Dr Kaldor's interesting letter I am in entire agreement. It reinforces my point that the dictum that new loanable funds should be equated to new savings cannot serve to decide whether prices should be held stable or allowed to fall as productivity per head increases—i.e., in Mr Stafford's language, cannot serve to determine which index number of prices should be held stable.

Mr Barger's letter, on the other hand, I must regretfully characterise as fallacious. If the banks are pursuing a policy of stable prices, then, if the public decides to add to its holding of money—in Mr Barger's words, "decides to hoard"—this does not involve a fall in the velocity of circulation. It follows that his last two sentences are incorrect and his conclusion does not stand.

Dr Haberler propounds a criticism based on the view that if the value of the community's money stock rises as the consequence of a price fall, this does not absorb savings. This criticism requires a definition of savings somewhat different from, and perhaps more natural than, that implied by my first letter. I accept the criticism, but observe that Dr Haberler does not trace out its consequences.

On his definition of savings, the dictum that new loanable funds should be equated to new savings becomes completely sterile, because it is satisfied *whatever banking policy is adopted*; it cannot, therefore, be used as an objection to the policy of stable prices. The value of savings absorbed in extra monetary holding (other than gold) must always be equal to the value of the new bank credit extended in any period. The cross-entry must always be equal to the entry.

Dr Haberler is correct in supposing that, on his definition, if there is no fresh extension of credit, there will be no cross-entry, and the dictum will be satisfied. But he does not consider a regime of stable prices, and thus avoids having to admit that then there would be a cross-entry for absorption of saving in monetary holdings equal to the entry for expansion of credit, and that the dictum would be satisfied in that case too. He says nothing to rebut my contention that the objection to stable prices under consideration omits the cross-entry and is therefore fallacious.

My reason for implying a somewhat curious definition of savings in my first letter was that I supposed that those who sought to use this dictum as a criterion of banking policy must wish to imply a definition of terms such as that the dictum is not satisfied by any and every banking policy. But I find that Dr Haberler, at any rate, does not so wish. I joyfully accept his position and only point the moral. We must abandon all attempts to use this dictum to judge between banking policies, since it necessarily acquiesces them all, and we must revert to more effective methods of tackling the problem of banking policy.—I am, Sir, etc.,

CHRIST CHURCH, OXFORD.

THE NEW AMERICA

AMERICAN writers have not been slow to capitalise the public interest in the political and economic experiments of the New Deal; on the contrary, the difficulty has been to keep up with their outpourings. But foreign observers have been singularly reticent about committing themselves on the subject. As a result it has not been easy for the Englishman who does not know America to form a clear and coherent view of what is being done by President Roosevelt's Administration. All but a few of the American books suffer from partisanship, and all of them take for granted a knowledge of the background and structure of American political and economic life which is hard for an Englishman to acquire.

Sir Arthur Steel-Maitland's book* will therefore be particularly welcome. Sir Arthur has not written a book for economists or for *cognoscenti* in American affairs, but he has written an excellent introductory guide for those whose knowledge of the New Deal has hitherto been derived from the British Press. He does not hide his opinions, but his main task is description, in which he has succeeded admirably. The facets of the Recovery Programme are so numerous that their enumeration alone would take a fair-sized book. Unfortunately they cannot be understood without some appreciation of American conditions, and they cannot be discussed without some reference to economic principles. It is in sketching these two elements of the essential background that Sir Arthur is perhaps least successful. His first chapter, entitled "The Political Stage and the National Background," is an admirably succinct review of some of the outstanding differences between the two branches of the Anglo-Saxon race, but fourteen pages, even as excellent as these, are insufficient to prevent the British reader from drawing false analogies. The second chapter is also somewhat inadequate as a description of the depression years between September, 1929, and March, 1933. It is a pity that Sir Arthur did not devote more space to these introductory chapters, even at the cost of lengthening his book.

But this complaint must not be taken as detracting from the general excellence of Sir Arthur's accomplishment of a very difficult task. The successive chapters in which he reviews the different departments of the programme are admirably balanced between fact and comment. Two chapters are devoted to the N.I.R.A. Sir Arthur first describes the various interests and opinions which contributed to the creation of this *horrible mélange*; he then

* "The New America." By Sir Arthur Steel-Maitland, M.P. Macmillan. 238 pages. 10s. 6d.

very briefly outlines the way in which the Act has worked and explains the necessity for the "blanket code" of July, 1933. The effects of the Act are discussed under the three heads of the conditions of work, the relations of Capital and Labour, and the problem of price control. Sir Arthur finds that real weekly earnings have increased in spite of the limitations upon hours, but he is unable to judge how much of this was due to N.I.R.A. and how much to the general improvement in conditions. So far as women and children are concerned, the gain from the codes is manifest. The conflict between the labour union and the company union might have been dealt with a little more fully. Sir Arthur shows that most of the strikes of the last two years have been concerned with the recognition of unions and the right of collective bargaining, but he holds that an increase in labour disputes was in any case inevitable. His final judgment of N.I.R.A. as a whole is that from a material point of view it was more of a hindrance than a help to recovery.

The chapter on the agricultural programme brings out very clearly the difficulties of the farmer caught between lower prices for his crops and a heavy burden of debt. The programme has been to raise prices by restricting production while at the same time refinancing existing mortgages and providing cheap Government credit for all the financial needs of the farmer. For the financial side of this programme Sir Arthur has nothing but praise, but he is doubtful of the merits of restriction. On the subject of relief to the unemployed he draws upon his own experience as Minister of Labour. Three methods have been tried in America: direct relief, public works and the so-called "civil works" programme, which was part relief and part public works. Sir Arthur has no confidence in public works as a means to recovery; as a method of relief he points out that they are extravagantly expensive. Relief expenditure averaged \$18 per month, expenditure under the Civil Works Administration \$52 per month per employee, and under the Public Works Administration between \$150 and \$200 per month. For the future, he believes that the United States will come to unemployment insurance. But the time is not at present opportune, as he believes that a scheme could only be a success if it gave "unswerving adherence to the insurance principle."

Sir Arthur finds the greatest weakness of Mr Roosevelt's programme in its monetary policy. His account of the changes in this policy does not always make clear the objections to the various expedients adopted, but his conclusions are definite enough. The situation in the United States presents features which for the future "are significant and

somewhat disquieting"; there is considerable danger of inflation, which can only be warded off by a re-establishment of the international gold standard. Monetary policy cannot be entirely dissociated from the internal banking position, which Sir Arthur discusses under the heading of "Wall Street." He draws a distinction between the defects of the banking system as such and the unsoundness of High Finance in New York. His criticisms are severe on both counts: "Finance at headquarters," he says, "may be said to have played a greater part in helping to cause the depression, while the weakness of the commercial banks provided the culminating and dramatic débâcle." The remedies are the gradual growth of a branch banking system in the country and a "more puritanical convention forming itself into a tradition on the part of bankers" in New York. Sir Arthur does not believe that the Securities Act, though badly drafted, is altogether responsible for the stagnation in the capital goods industries; that, he says, "is an exaggeration of aggrieved imaginations." It will be seen that it is on this subject that Sir Arthur is in closest agreement with the defenders of the New Deal.

Finally, Sir Arthur attempts to sum up. He is severe with the monetary policy, whose gains are not commensurate with the disadvantages and which has given rise to legitimate misgivings for the future, though not to serious anxiety in the present. Taking the programme as a whole, he concludes that "the actual achievements of the present American Administration, although not startling, are substantial." Progress in the future will depend on the maintenance of Federal credit and the recovery of confidence. The last few years mark, he thinks, a new chapter in American history. The third dynasty, that of the financiers, has followed those of the farmers and the big industrialists into the darkness. The present programme is an example of "empiricism in the dynamics of change," and it is its element of "something new" which gives it its attraction. What the new America will be Sir Arthur does not venture to predict with any precision. But he is clear that the old era of effortless expansion is over. In the structure of politics and in the government of industry America will tread much the same path that Great Britain has followed. The analogy between the United States of the 1930's and Britain of the 1880's applies also in the international sphere, and Sir Arthur expects America to find herself drawn more closely into international affairs: "The Atlantic will soon be no greater guarantee of isolation than the English Channel is to-day."

RATIONAL INVESTMENT

INVESTORS who give these books* the attention which they deserve will be left with one significant impression. Is the financial reform which has been imposed by the Roosevelt Administration on a disgruntled Wall Street as important as the change of heart which has overtaken the investing public in America? The first of these works has an almost Victorian austerity by comparison with the market sentiment of the boom period which culminated in 1929. The excesses of that period, not only in the stock market but also in the realm of company finance, are fully exposed, and the English reader of the many stories of cynical accounting practice can certainly offer thanks for the protection afforded by the Companies Act.

The authors of "Security Analysis" place earning power as the first criterion of security, although they offer some interesting balance-sheet measurements for use in abnormal market conditions. There are, naturally, some sections which have a predominantly American interest, and cannot be readily related to English practice. Moreover, both works reflect the historical development of American finance. Government loans, both home and foreign, still appear as matters of relatively minor interest, while the

sharp distinction between the investment standing of utility issues in America and this country is made very clear. Messrs. Graham and Dodd, however, address themselves to a more expert section of the investing public, and their book certainly achieves its concern with criticism rather than with description. The illusions of specific security for bond issues are calmly despatched, and replaced by the more satisfactory criterion of the adequate earning power of the issuer. The ever-higher ceiling for "blue-chip" issues in the boom period, which ultimately involved the whole Continent in devastating losses, is replaced by an eminently conservative valuation for common stocks, based, not on current earnings, but on an average of ten years' results. These canons, though rigorous, must undoubtedly be applauded, and English investors, under present market conditions, might do well to give them due attention.

Professor Jordan's work appears in its third revised edition, in consequence of the already vast changes in American financial legislation. He, also, is at pains to emphasise that conservation of capital can only be achieved with modest expectations of income, and that a mixture of high-yielding but risky securities is never worth while as an investment policy, despite its speculative attractions. This book is more general in scope, and lacks the elaborate statistical treatment given in "Security Analysis." The arrangement of the discussions by reference to the issuer of the securities will assist the general reader, but throughout proper emphasis is laid upon earning power.

Confronted by these books, the general investor may be inclined to complain that a friend among the directors may be worth more than all the statistical tests which can be devised. This complaint, however, becomes less and less true as companies can be persuaded, by legislation or good example, to publish prompt and full information regarding their current position. The quarterly reports issued by many American concerns are an obvious improvement on standard British practice, although the quality of their accountancy has not always been impeccable.

Moreover, the quality of financial journalism, inspired by many of the objectives which these authors set out, has greatly improved with the wider interest in financial affairs in all classes of society. There is now little reason why the modest country investor should be less well informed about the general affairs of the concerns in which he is interested than the larger operator in the Metropolis. Doubtless, investment will never develop into an exact science; the imponderable elements in any given market situation always defy analysis. But if savings are to be invested in the most economical directions, it is clear that the self-interest of the investor should sensibly contribute to the social advantage. Towards this more happy state of affairs these authors have useful suggestions to offer.

THE SEARCH FOR SECURITY

We are now as far from the Armistice as the Reform Bill was from Waterloo. The post-war epoch itself is becoming history. What lessons can we learn to-day from the history of the world between 1918 and 1934? The Royal Institute of International Affairs, the Oxford University Press and Mr G. M. Gathorne-Hardy have combined to provide us with some of the lessons in admirable form, style and compass.*

Mr Gathorne-Hardy draws his own conclusions from the events, and inserts a thread of cause and consequence—of moral, almost—in post-war history. He divides international affairs in the post-war epoch into three periods: the period of settlement, 1920-25; the period of fulfilment, 1925-29; the period of crisis, 1930-34. He treats the first

THE BUSINESS CYCLE

ECONOMISTS have long been intrigued by the mysterious "ups" and "downs" of business activity known as the trade cycle. In the past the problem has been frequently approached by inductive studies, but Dr. Clark's* book contains the results of a special study, sponsored by the Committee on Recent Economic Changes, "to endeavour to disclose, so far as might be possible, what factors play an active role in throwing the economic mechanism out of balance and what factors adapt themselves passively to the changes produced by the active factors." Dr. Clark, well aware of the pitfalls of the purely statistical approach, has attempted to steer a middle course by combining deductive reasoning with a study of the behaviour of "those factors which seem to have the greatest strategic importance." According to Dr. Clark, "a factor may be said to have strategic importance if it has real power to control other factors, and to determine the general character of the result; and it has peculiar strategic importance if, in addition, we have power to control it; if it is not, like the weather, beyond the reach of anything we can do."

Among the factors of dominant importance in the business cycle, Dr. Clark distinguishes three groups. These are firstly what he terms "originating causes," such as the weather in its effect on crops, wars and other chance disturbances, as well as the emergence of new wants and new processes and methods of production, which are not subject to control. The second group consists of "business responses controlling the short cycle," and includes (among other factors) the intensified fluctuations of demand for productive equipment, and, secondarily, the demand for durable consumers' goods, price movements, movements of unit costs and of personal incomes, and the movement and distribution of credit. In Dr. Clark's view, the all-important factor of profits is itself controlled, in its cyclical movements, by these other elements which condition it. Although Dr. Clark recognises the impossibility of controlling the distribution of consumers' expenditure and of business confidence, he expects much from the control of the demand for producers' goods and durable consumers' goods. "If it could be controlled, in all its manifestations, the primary result would be a great stabilisation of the average rate of productive activity by cutting off those fluctuations of production which exceed the fluctuations of consumers' current expenditures." Consumers' expenditures would then be more stable and the "back of the business cycle would be broken."

The third group of factors are those responsible for "longer trends." These comprise the following: the development of new processes of production, calling for more capital per worker; the development of new goods; the balance between consumption and saving; the distribution of the national income; the relation between wages and interest in terms of their influence on the relative costs of labour and capital; the distribution of increased productive power between goods and leisure; the after-effects of wars; and the larger psychological swings from excessive pessimism to excessive optimism.

Dr. Clark is driven by his reasoning to accept a measure of control as inevitable if the business curve is to be smoothed out. But Dr. Clark is alive to the implications of his policy, though he does not follow them out in detail, for he recognises that the control of capital expenditure, for example, requires the forming of new types of organisation and a broader and more collective view than is common in business.

There is (he says) a mutual interest which should be strong enough to produce fairly adequate action, if industry can be organised in such a way as to make this interest effective. Whether this degree of organisation can be brought about without going so far as to make the system of private enterprise impossible is a question which can be answered only by the process of experiment.

Such is Dr. Clark's general conclusion.

SHORTER NOTICES

MONEY AND FINANCE

"The Gold Standard and Its Future." By T. E. Gregory. Methuen. 183 pages. 6s.

"The Gold Standard and its future" was originally published by Professor Gregory in December, 1931. This is the third edition, thoroughly revised, with two entirely new chapters on "The case of the U.S.A." and "The Gold Standard in recent official literature."

The chapter on the consequences of the breakdown of the Gold Standard in Great Britain is also virtually new. In this chapter Professor Gregory traces the history of sterling and dollar prices since 1931 from both the theoretical and statistical point of view. He concludes that—

Great Britain's departure from the Gold Standard had consequences both inside and outside the country, which were not anticipated at the time. . . . The fact that Great Britain's example encouraged many important suppliers of foodstuffs and raw materials to follow her, added to the circumstance that in a nationalistic tariff-ridden world the country was a quasi-monopolistic buyer, resulted in a smaller rise of prices, direct and indirect, than most instructed persons would have thought possible in 1931.

Professor Gregory's rigidly orthodox standpoint, however, leads him to belittle the impetus to recovery which this country derived from abandoning gold, though his computation of comparative price levels shows that the pound was under-valued against the dollar up till April, 1933.

The abandonment of gold by the U.S.A., Professor Gregory regards as "an arbitrary act of statesmanship which may indeed be justified on political or psychological grounds, but which was certainly not inevitable on technical economic grounds." The "gold-buying" policy of Professors Warren and Pearson, he finds even less justifiable. It would only have worked if the total volume of purchasing power increased as the gold value of the dollar was diminished; but this could only happen "if every time the dollar value of gold rose, the gold stocks of the Central bank were re-valued, and the increased purchasing power which could have been created on the basis of this re-valuation had been at once put into circulation."

For the future, Professor Gregory still looks to an orthodox international gold standard in which fixity of exchange rates will be regarded as more important than the management of price levels. "Movable parities" as a permanent system, he would not apparently approve, but he is willing to accept some temporary "movability" during the stabilisation period. The following three stages of currency reconstruction are consequently suggested:—(a) Currencies fluctuating within defined limits; (b) *de facto* stabilisation on gold; (c) *de jure* stabilisation on gold.

After that, Professor Gregory would seek not so much stabilisation of prices as "increased stability in general."

"The Principles of Currency, Credit and Exchange." By William A. Shaw and Alfred Wigglesworth. Pitman. 118 pages. 3s. 6d.

A variety of interesting material is contained in this clearly-written little book, which describes a monetary system designed to eliminate the "ever-recurring cycle of 'over-trading' followed by disaster and depression." The problem is attacked in three unrelated sections, which discuss respectively the principles of currency, credit and exchange. The first section urges the superiority of the "self-regulating" English currency system (with 100 per cent. cover for additional notes) over the patchwork American system, with its rediscounting provisions, and the Continental systems of partial cover. To the English system is attributed not mere relative preferability but an absolute rightness, on the ground that under the "full-cost" principle the quantum of currency is determined by the public alone. The legitimacy of this conception of a "demand for currency" independent of credit policy is not discussed.

In an admirable preface the authors criticise the currency experiments of the New Deal, and argue that Mr Roosevelt missed an excellent opportunity for thorough-going banking reforms in March, 1933. With regard to credit, they recommend that a policy of cheap money should be pursued until "economically employable labour" has been reabsorbed, and that the banks should then ruthlessly check any incipient "over-trading." Rising retail prices are apparently to be the index of "over-trading." In the authors' view this policy could be carried out by a banking monopoly controlling the qualitative distribution of credit. They also hold that the rate for advances should be determined by purely domestic considerations, the international position being

regulated by an independent Bank of England discount rate. "The two rates have no intrinsic relationship."

The third section condemns exchange control of the ordinary type and advocates the maintenance of fixed parities by reciprocal central bank credits up to agreed limits. Should the credits be exhausted, the discount on further finance drawings would represent a virtual movement of the exchange, which would be smaller, however, than in a free foreign exchange market. While this system would doubtless prove workable under the more or less static conditions which appear to be envisaged, it is questionable whether the necessary degree of Central Bank co-operation could be achieved, or that, if instituted, the scheme would long withstand the stresses of a changing world.

"Le Systeme Bancaire Anglais et la Place de Londres." By R. J. Truhtil. Recueil Sirey (S.A.), (Paris). 30 frs.

While Bagehot's "Lombard Street" still remains unrivalled as a general description of the City, an up-to-date survey has long been lacking. This gap is well filled by M. Truhtil's admirable study. He is the French manager of a French bank in London and his book, written from the Frenchman's point of view, sets out to answer questions of detail as well as to give a comprehensive survey of the whole mechanism. There is a detailed description of the functions of the Bank of England, the commercial banks, the private bankers, the bill market and the foreign bankers, and of the types of business in which they engage. While the description of the Bank of England and the commercial banks follows traditional lines, M. Truhtil breaks new ground in his chapters on the principal scope and business of the leading acceptance houses. There is also an extensive description of the bill and money market and the foreign banks, and of the various types of paper and securities which are dealt in by the banks and the bill market.

M. Truhtil, also for the first time, makes an estimate of the volume of the merchant bankers' acceptances since 1928, and he suggests that on the basis of the figure for total acceptances, a combined balance sheet for all the acceptance houses can be worked out. This statistical investigation and a similar study on the balance sheets of the private discount houses and the resources of the money market form the most interesting part of the book. They are, of course, based upon the findings of the Macmillan Committee, of which M. Truhtil has made the most extensive use. But his methods of calculating the changes since 1928 form a real contribution to our knowledge of the internal structure of the City and the vexed problem of the status of the acceptance houses and the volume of short-term loans.

M. Truhtil's investigation of the development of the balance sheets of the acceptance houses and the bill market since the crisis lead him to the conclusion that the worst is passed and that a new basis of stability has been reached—a conclusion which will no doubt be welcomed by those who advocate a return to the gold standard. M. Truhtil's final chapter on what may be termed the spirit of the City is a study deftly and discreetly drawn by a man who knows his work thoroughly and is sympathetic to his surroundings. An English translation of the book would be most welcome.

"Theories of the Trade Cycle." By Alec L. Macfie. Macmillan. 187 pages. 7s. 6d.

Mr Macfie's object in this book is to lead the student from the comparative smooth paths of static economic theory to the steeplechase-like intricacies of the trade cycle. He sets out to expound, and in moderation to criticise, the principal theories held by leading present-day economists. In particular, Mr Hawtrey, Dr Hayek, Mr Keynes and Mr Hobson are considered—though it must be confessed that the argument, and the phraseology, have a predominantly Austrian flavour throughout.

The greater part of the book is interesting and careful. But Mr Macfie has not been blessed with a conspicuous gift either of clarity or lucidity. He is apt to mix exposition confusedly with criticism. And the inexperienced economic student will most certainly be muddled by the sudden appearance of such technical phrases as the "period of production," "round-aboutness," and "oncosts" in the midst of the argument.

In general, Mr Macfie is balanced and avoids extremes. But one discerns, running through the whole book, a semi-superstitious belief in something called "over-investment" which

is bound inevitably to lead to depression. Mr Macfie never asks himself clearly enough whether "over-investment" is not, in most senses, self-contradictory. And when he asks himself why the boom must lead to the depression, he takes refuge in the suggestion that there may be an absolute shortage of real working capital (raw materials) in a boom—a suggestion which is certainly not borne out by fact. It does not seem to occur to him that prosperity may have been succeeded by depression in the past simply because the gold standard has restricted credit, and that there may be no *a priori* reason at all why boom periods should ever have ended.

"La Crise de la Monnaie Anglaise, 1931." By S. J. Catiforis. Sirey (Paris). 210 pages. 30 frs.

This book, which won the prize awarded for the best work of Economic Science in the Faculté de Droit in the University of Paris for 1934, is a very useful history of monetary events in Great Britain since 1914. There is nothing quite like it in the English language, and it should be most useful to English readers. We understand that an English translation is in preparation, and we hope to review the book at greater length when this is published.

"La Finanza Italiana nel ventennio, 1913-1932." By F. A. Répaci. Edited by G. Einaudi. Turin. 316 pages. Lire 40.

Until now any economist or politician who wished to obtain statistical material on Italian public finance found himself confronted with almost insurmountable difficulties. Dozens of official accounts based on hundreds of different accounting methods supplied several tens of thousands of pages of figures which still were not comparable until they had been reduced to a common denominator. This labyrinth of statistics compelled anybody who would not or could not devote at least two years' exclusive work to it to give up any hope of ever arriving at practical conclusions on the Italian financial situation.

This is now changed. Professor Répaci took up the immense task of presenting and analysing the history of Italian public finance during the last twenty years. The fruit of several years' conscientious and thoroughgoing work is an excellent book: "La Finanza Italiana." Signor Répaci presents in the most clear and complete way the whole of the statistical material available (and largely, also, material which until now was not available) reducing the ocean of statistics to 316 pages, which give an exhaustive picture of Italian public finance.

The statistics of the different accounts are made comparable; the special difficulty in Italy's case originating from violent variations in the exchange value of the lira in the last twenty years is met by calculating all the relevant figures in gold lire as well as in paper lire. The construction of the work shows the author to be not only a statistician but also an expert economist who knows how to arrange and read the statistics. Perhaps the point of immediate interest is the statistical analysis of the Italian public debt; the total amount as well as the debt burden per head of population have steadily increased since 1926.

It is most useful to have all this material so well presented in one volume. Whoever wants to deal with Italian public finance in the future need not look up all the original sources; he will find everything until 1932-33 collected and worked out in Professor Répaci's book. It is to be hoped that this excellent work will have a sequel for the years after 1932-33.

BUSINESS AND TRADE

"British Sugar Beet." By A. Bridges and R. N. Dixey. University of Oxford Agricultural Economics Research Institute. 92 pages. 2s. 6d.

This latest publication in the admirable series issued by the Oxford Agricultural Research Institute is a full statistical survey of the sugar beet problem. The authors begin with the Selborne Committee's recommendations in 1916, and tell in full detail the story of the British Sugar (Subsidy) Act of 1925, and the three subsequent subsidy periods, 1924-27, 1928-30, and 1931-33. The effect of sugar beet on farming is then discussed, in the light of ten years' experience, and finally an exhaustive analysis is given of costs and returns over the whole period. This analysis shows that great technical progress has been made and costs considerably reduced.

In a lucid summary of their conclusions the authors observe that "as a relief policy to arable farming the sugar beet industry failed to achieve success in a great many arable farms, partly because the soil was unsuited to beet and partly because there were no factories in the areas concerned."

Moreover, agricultural employment has not increased in sugar-beet areas. Most important of all, the industry was completely uneconomic in 1932-33—after nearly ten years of "infancy." In the year 1932-33 "the total income of the factories per ton of beet was 61s. 6d. Of this the subsidy contributed 21s. 4d. or 35 per cent. Trading profits, however, were only 5s. 11d. per ton. It is quite clear, therefore, if the figures of the year 1932-33 are taken as a guide, that the industry cannot continue on a profit-earning basis without the aid of the subsidy." "The farmer's price per ton of beets in 1932-33 was 42s. 8d., and the total subsidy paid represents exactly one-half of this sum."

The authors' final suggestion is that, if public assistance is continued, it should embody certain principles:—

Firstly, it should be based on a price at which suitable growers alone will be able to produce; secondly, the quantity of the produce which it is proposed to subsidise should be determined; thirdly, the subsidy should be related to the price of sugar; and, finally, it should be renewed at short intervals.

It was not within the province of this pamphlet to suggest that the subsidy should be abolished.

"Higher Control." By T. G. Rose. Pitman. 269 pages. 12s. 6d.

Students of economics who attempt to relate the general principles of diminishing returns to the obvious fact of increasing returns in industry as a whole, often fail to give adequate recognition to the wider scope and increasing effectiveness of management. Mr Rose's book is intended for the company manager and director, but in its turn it throws interesting light on the general problem of large-scale enterprises and their specialised administration. Higher control, it is explained, is a new technique, by which the basic facts of the business can be presented in standardised and rapidly assimilable form, and can therefore be promptly applied in policy.

Mr Rose sets out his problem in its simplest terms by discussing an imaginary case of a business in financial straits, and develops its solution at length from the business, trading, and financial aspects. He points out that the presentation of the monthly figures should not involve extra work, provided that the accountancy system can be made sufficiently elastic.

A comprehensive series of *pro forma* charts and tables is given, to assist businesses in setting up their own control system. It might be remarked, however, that "higher control" for the large industrial concern is greatly facilitated by two further features. The speedy preparation of general facts for the board in these firms is increasingly dependent upon the integration of the costing and general accounting organisations, in both of which mechanisation and the punched-card system seem destined to play a larger part. This book is of real importance for all who are concerned with industrial administration.

"Il Boicottaggio." By Roberto Michels. (Turin) Giulio Einaudi. 135 pages. 12 lire.

In this book Signor Michels has collected together many interesting examples of economic boycott. He cites the Chinese boycott of American goods in 1905, which is estimated to have cost about £100,000,000; the boycott of Hungarian goods organised by the international syndicalists in Amsterdam as a protest against the treatment of Hungarian communists in 1920; and the Indian boycott of British goods in recent years. The author is aware that boycott involves a loss to those abstaining from consuming, as well as to those prevented from selling, the commodity in question. But he argues that the economic loss may be the cost of a political gain—for example the strengthening of the national unit.

Yet in many cases of virtual boycott—such as the protectionist policies of the States set up at Versailles, the "political gain" is surely rather illusory. A measure which hampers the exchange of goods and destroys the balance of industry in Europe must weaken, not strengthen, the various nations. The famous Austrian wood industry can no longer obtain its raw material in Austria. Signor Michels himself observes that while 36 per cent. of Austria's pre-war clothing industry was in Vienna, 90 per cent. of her textile industry lay in what is now Czechoslovakia. It is curious, therefore, that he is not forced to the conclusion that the division of Europe into "self-sufficing" states must ruin large sections of industry.

In Signor Michels's discussion of the type of goods most easily boycotted, we would have welcomed a more specific treatment. Again, one would like to know to what extent the fear of boycott has in fact led to forced sales and the aggravation of the crisis. This factor may have been a considerable one in recent years, particularly in Germany. The book supplies the raw material for an interesting study.

EUROPE

"The Nazi Dictatorship." By Roy Pascal. Routledge. 270 pages. 10s. 6d. net.

"The German Revolution." By H. Powys Greenwood. Routledge. 321 pages. 12s. 6d. net.

These two books differ widely. Mr Pascal is concerned to lay bare the basis of Nazism in Germany, as it has been suspected ever since June 30th, i.e., the dependence of the Nazi party upon "big business." He therefore deals rapidly, and very superficially, with the revolution of 1918 and the Weimar Constitution, and comes very quickly to a description of, and running commentary on, the present organisation of the Nazi Party-State. The author's conclusion is that Nazism is German capitalism one stage advanced; that "frozen in its monopolies (to-day), German capitalism sees only one way out of its economic and social impasse—a war. Only by winning colonies, where it can find its raw materials and also a market for its goods, does the Government believe it can be delivered. Thus, all the 'reforms' in Germany to-day serve, directly or indirectly, the cause of militarism." And again, on the same page (268): "The main force in Germany to-day is Monopoly-Capitalism. Its policy is war." Therefore the "big business" and Junker (agrarian) interests can as easily overset Herr Hitler and the Nazi Party and rule any other way, with the main objective of war before them.

This exaggerated conclusion is not adequately supported in Mr Pascal's book. Are all the "men of June 30th" in Germany dead, or congenial idiots? Can one easily eradicate a party of many millions, organised and armed; and would civil war ease the way for external war? On the whole, Mr Pascal's book appears to have been hastily put together.

Mr Greenwood's book is quite different. He has tried, as he says, to understand the inner, German sense of the Nazi revolution; he knows his Germany well, having lived there; and he does not make the mistake of thinking that Nazism is a sudden efflorescence. Mr Greenwood has many penetrating observations to make on the mission of Prussia, its symbolism for Germany as a whole, the weakness of the Weimar regime, and the overwhelming desire in Germany for what a German sociologist of the Weimar regime called *das verbindende Etwas—die Brücke des Gefühls*—"that something which links together—the bridge of common feeling." To Mr Greenwood, the Nazi revolution and the Nazi State show very little of clear-cut, planned development. It is, perhaps, not too startling to say that he sees both as rather an English evolution, higgledy-piggledy, opportunist, paradoxical. Mr Greenwood writes with sound appreciation of the conflicts, strains and stresses set up in the body of the Nazi State by antithetical economic measures: but he is careful to point out that many of these were evident in the Weimar system—e.g. agrarian protectionism and the dear-food policy. Perhaps the best sections of his book are those examining the significance of the Nazi revolution in the sociological spheres—art, culture, social life, associations, institutions, youth, religion. Mr Greenwood does not believe in the imminence of Nazi Germany's economic collapse, but he says, in effect, that "events are in the saddle, and ride mankind."

"France's Crisis." By Paul Einzig. Macmillan. 139 pages. 7s. 6d.

In his latest book on France, Dr Einzig correctly traces the source of France's difficulties to the over-valuation of the franc and to the defensive policies adopted by successive French Governments. These, as he says, have transformed the gold standard from a method of ensuring international purchasing power parity, and of minimising fluctuations in business into a sterile end in itself. There can be no doubt that the French Government has been deluded by its own and its experts' intense propaganda against devaluation based on exactly the same arguments as those produced by Professors Warren and Fisher in America in favour of devaluation. The result is that the parity has been saved, but the equalising function of the gold standard has been paralysed by the imposition of tariffs and quotas which have isolated the internal French market from the deflationary influence of the fall in prices in terms of gold in England and America. By means of this paralysis a complete breakdown in the French credit system, built up on a previous and higher price level, has been averted. But the contraction in the credit system has gone far enough to uncover certain weak (and criminal) sections and thereby to shatter the confidence of the investor.

Dr Einzig analyses France's economic disequilibrium in its internal, international, and political aspects, and there will be many who will agree with him that a devaluation of the franc is now necessary if business is to be made profitable once more. Unfortunately, however, political prejudices, and the

vested interest of the *rentier* may be stronger than rational considerations. And, as the technical power of France to defend the gold value of her currency is tremendously strong, it may well be that the whole French economic system will be still further distorted in an isolationist, interventionist, and ultimately, state-capitalist direction in order to retain the shallow prestige of an unchanged gold parity.

To some extent Dr Einzig forgets that, with luck and determination, France could start some sort of an internal revival by reducing interest rates, and so tide herself over to the period when a revival in America and England carries the world price level higher. While there can be no doubt that the intransigent French anti-inflationist policy before 1931 did much to aggravate the world economic position, one must not forget that the unwillingness of England after the fateful September to enter into any international economic, or political arrangement gave a new impetus to the vicious spiral of the crisis.

"The Saar." By Margaret Lambert. Faber and Faber. 319 pages. 7s. 6d. net.

Herr Hitler said, not long ago, that the Saar question was the only source of friction between Germany and France; that once it was settled, there was nothing likely to come between the two countries which need cause war. Why did the Saar emerge as a problem? Why was it taken from Germany and put under the League Commission? How will the plebiscite of January 13th next alter things? Has France or Germany the better case?

For the answering of these and many other questions, Miss Lambert's careful and well-documented book is most apt and timely. She writes clearly and appreciatively of all the vexed issues in the Saar problem; and her section on the history of the Saar since Versailles is concise without being superficial. She is at pains to give her own interpretations of the various points as they arise, and the result is a vigorous, entertaining book.

The Saar problem arose because France wanted an asset of relatively durable worth as an offset to her losses in the coal-mines of the Pas-de-Calais during the war; but the French demands nearly drove President Wilson to telegraph for his ship, as the Russian attitude at the 1878 Congress of Berlin drove Disraeli to order up the special train home. France had to agree to League dominion over the Saar on a fifteen-year lease, terminable or renewable at the tenants' option. Thus, Wilson's "principles" were put into practice. But was the practice good? There are many to-day who will doubt the wisdom of the whole experiment with an incontestably German territory. Miss Lambert thinks it was worth while, for the League has dealt fairly by the Saarlanders, while contending French and Germans disputed over the heads of inhabitants and Governing Commission alike. She describes in full detail the devices and stratagems to which both claimants of the territory resorted in their unremitting efforts to sway the population's sympathies, as the fatal year 1935 drew nearer.

On economic questions Miss Lambert throws a great deal of light. She examines the external indebtedness of the territory, the extravagance of the Saar local government bodies, the production of the mines and ironworks, the budget, social services, hours of work, and many other points in comparative tables in an Appendix. Her conclusion is striking: "We may confidently predict an era of even worse complications after the plebiscite than we are experiencing before-hand." Since last June, however, Baron Aloisi's Committee of Three have rendered signal service to the cause of Franco-German understanding over the Saar plebiscite, its conditions and results. It may yet be that the plebiscite will put to sleep, for good and all, a problem which need never have arisen, but which, having arisen, has been so fertile of international misunderstanding.

BRITISH EMPIRE

"Consultation and Co-operation in the British Commonwealth." Compiled by Gerald E. H. Palmer. With an Introduction by Professor A. Berriedale Keith. Oxford University Press. 264 pages. 12s. 6d.

The constitution of the British Commonwealth of Nations is even less tangible, even less accessible in text-books and commentaries, than that of the United Kingdom itself; it is to be found, if anywhere, in a miscellany of Imperial Conference reports, official documents, parliamentary pronouncements and recorded precedents. "Dominion status" does not derive from a formal definition; on the contrary, it can be defined only by description of the status of the several Dominions as it exists in practice. Even the question, which

countries are Dominions, does not admit of a straightforward answer. Newfoundland, for instance, has been temporarily deprived of autonomy in certain particulars—but she certainly could not be described as a Crown colony, and presumably the Ottawa Agreement between her and the United Kingdom remains binding upon both parties and can only be abrogated with their common consent.

A valuable service has been done by Mr Gerald Palmer, on behalf of the Royal Institute of International Affairs, in compiling this "handbook on the methods and practice of communication and consultation between the members of the British Commonwealth of Nations." He has gathered up the fragments of the imperial constitution. The assistance of eminent civil servants and others, both here and in the Dominions, has given the volume an authoritativeness on which the reader can confidently rely. There are inevitably some repetitions, and in certain fields (notably the Indian constitution and the series of economic bodies reviewed by the Skelton Committee) imminent or very recent changes made topical precision impossible; but within practicable limits both order and up-to-dateness have been achieved out of the mass of tangled and shifting facts.

Apart from its value as a work of reference, this strictly factual compilation irresistibly forces upon the reader's notice a number of urgent and difficult problems that face the nations of the Commonwealth in their relations with one another. The position of India and of Ireland comes first to mind; the former is in the forefront of parliamentary attention, whereas the latter seems to have been relegated, in this country, to a place of very desultory interest. Another more general problem is that of economic relations; there is the accepted principle of Imperial Preference unaffected by most-favoured-nation treaties with foreign Powers; there are the "equalisation-of-costs" clause and other general clauses of the Ottawa agreements (though these have proved of dubious practical value); there has been a certain small measure of industrial specialisation by agreement among producers; otherwise, where can we turn for the guiding aims of imperial economic policy, and where is the machinery for conducting it to be found? Even less clarity exists in the field of imperial defence. The principles laid down by the Imperial Conference of 1923 presumably still hold good, but the fundamental assumptions behind the whole idea of imperial defence as a co-operative concern are in the Dominions a matter of controversy amounting at times almost to derision. On this subject the material in Mr Palmer's book is particularly full and particularly valuable.

"National Economic Planning." By W. M. Ball and others. Edited by W. G. K. Duncan. Angus and Robertson (Sydney). Australian Book Company (London). 217 pages. 5s.

The compendious title of this volume hardly finds a precise reflection in such conclusions as are desirable from the various contributors. The question, what, in any new sense, is national economic planning, does not seem to have been squarely asked or answered. Professor Portus, in the introductory paper, hints at it by way of Russia, Italy and America; thereafter the discussion, on its economic side, runs off at tangents. On the political side, it is true, Mr Macmahon Ball neatly outlines the limits to the co-ordinated State intervention which he defines as the requisite of planning, and this suggests what might have been the most profitable line of approach to the whole subject. The economists are necessarily at a disadvantage while they are uncertain whether planning is to be regarded as something short of Communism, a fact which would explain the remarkable reticence observed towards the Soviet example.

One or two are sure, however, that planning is not compatible with capitalism and are evidently inclined to confine the term to the commonly accepted Socialist programme. Others, like Dr Wilson, who treats specifically of the economic implications of planning, regard planning as a kind of negative system designed to counteract the serious, but remediable, faults which the capitalist economy has displayed. In one way, Dr Walker comes most closely to the point with a discussion of national self-sufficiency. He thinks that some "planners" are at heart advocates of self-sufficiency first and urge economic planning as a means to that end, but argues acutely (though here again it is not quite clear what the term conveys) that a planned economy would in fact tend away from rather than towards economic nationalism.

It is significant that even in the case of Australia, the discussions betray a minimum of agreement. Has Australia to any degree a planned economy? The more cautious tentatively put forward the protectionist method as planning, though not of a notable type. Others deny all such claims

in toto. Professor Giblin, investigating this question, starts straight from facts. There is "no agreed aim for Australian development" and therefore no planned economy, but incipient planning is well founded in the national policy in the shape of a tariff for secondary industry and subsidies for primary industry. On this basis a comprehensive plan could be erected, involving control of production, rationing of investment, and price-fixing. But it would have to be remembered that the corollary would be the reversion of a large part of the land to "subsistence" production. This prospect had so little attraction for other speakers that Professor Giblin's contribution seems to have had far less attention than it deserves. But it is by no means an essay in the academic, and some must have contrasted the ideal of the limited and practical objective which it offers the planner with the endeavours recounted by Professor Shann in his study of "Planning at the World Conference." Here the difficulties of large-scale economic control are depicted by a sceptical observer, whose conclusion is that "our worst danger is in planning by those who fear alike managed money and low prices. They may, through their nerves, realise their worst fears."

AMERICA AND WAR DEBTS

"Depression and Recovery." By Dale Yoder, Ph.D., and George R. Davies, Ph.D. McGraw-Hill Publishing Company, Ltd. 298 pages. 12s.

"The New Monetary System of the United States." Published by the National Industrial Conference Board, Inc., New York. 147 pages. \$2.

"Stable Money: A History of the Movement." By Irving Fisher, LL.D. (New York) Adelphi Company. 484 pages.

"Outline of the New Deal Legislation of 1933-1934." By Howard S. Piquet. McGraw-Hill Publishing Company, Ltd. 154 pages. 6s.

The spate of books on the economic aspects of President Roosevelt's recovery programme continues without abatement. The quality of the books is, however, definitely improving. The earlier volumes were either undigested catalogues of enactments or else controversial tracts. Both types of book have their uses; in fact, the four volumes now under review include a specimen of each. Mr Piquet's book does not pretend to be anything but a digest of laws designed to serve as a reference work rather than as a book to be read. As such it will be of invaluable assistance to all who need accurate information on the legislative framework of the New Deal. Mr Piquet has selected 61 Acts, Resolutions and Executive Orders and given the gist of each. In an Appendix he has included brief notes on the activities of 22 of the new emergency administrations.

Professor Irving Fisher's book falls into the category of propaganda, though it is almost entirely retrospective. President Roosevelt's "avowed Monetary Policy" is declared on the first page to be "the goal at which the stable money movement has aimed" and the book is, in effect, an acknowledgment to all those who consciously or unconsciously have contributed to the victory which under Professor Fisher's generalship has now apparently been won. The book will be valuable for its references to the idea of stabilising the general price-level in economic literature dating back as far as Sir William Petty. The reader should be warned, however, that Professor Fisher's review is, in many respects, both indiscriminating and uncritical.

The other two books are excellent examples of the type which avoids both catalogue and propaganda. The book by Drs. Yoder and Davies is one of the most satisfactory simple introductions to recent American economic history that has appeared. The authors disclaim any intention of describing the details of the recovery legislation or of criticising it. This does not mean that they adopt an entirely neutral attitude, but their concern is with the underlying economic principles and when they criticise it is because they disagree with the fundamental assumptions of the remedies applied rather than with the details of the application. In contrast to the generality of books on the New Deal, however, the great virtue of the book is that it seeks to explain the causes of the economic collapse in America before describing the remedies. The process of disintegration is discussed under the three heads of the credit system, consumption and production. After an interesting chapter on emergency relief measures, the elements of the recovery programme are analysed under the same three heads. In a book of fewer than 70,000 words, this treatment necessarily involves a certain amount of superficiality, but the book can be highly recommended to anybody who wishes to understand the main tendencies of depression and recovery in the United States.

The volume published by the National Industrial Conference Board sets itself the much narrower task of analysing the new monetary system set up by the legislation of 1933-34, especially by the Gold Reserve Act of last January. The attitude adopted is definitely conservative, but not unreasonably so, and criticisms of the enactments are not sustained merely by appeal to dogma, as is the case with so many "orthodox" writers in the United States. The study concludes that the new system "stripped of its gold and silver trappings and adornments . . . is a 'managed' inconvertible gold currency system." Its ultimate object is conceived to be not so much the attainment of the 1926 level of prices as the full employment of productive resources; the system is "for the most part merely a practical expression of the extremist quantitative theory of the modern currency management school." The book points out the theoretical defects and practical dangers of such a policy. The scope for internal inflation is shown to be very large: on the present base the monetary supply of the country, which is now about \$21,000 millions, could be increased by no less than \$45,000 millions. But the authors are inclined to find a greater danger in the fact that the American system, by discouraging the re-establishment of an international monetary system, may open the way to a world-wide inflation of large dimensions and catastrophic effects.

"The European War Debts and Their Settlement." By Wildon Lloyd. (New York) Committee for the Consideration of Inter-Governmental Debts. 86 pages. \$1.50.

This book is published under the auspices, though not with the express endorsement, of the American "Committee for the Consideration of Inter-Governmental Debts," which is headed by such prominent revisionists as Dr. Nicholas Murray Butler and Mr. Alfred Smith. As an expression of unattached American opinion it must be taken with a big pinch of salt. It sets out, however, not to represent but to educate opinion in the United States. Briefly, Mr. Lloyd's practical proposal is to halve the amounts of the credits given to the Allies for the purchase of supplies in 1917-20, in recognition of the fact that they were sold at immensely inflated war-time prices; to add the full value of the silver bullion bought by the Allies, and of the private American bank loans and interest thereon included in the funding agreements; to charge no interest at all, and to deduct all payments, whether on account of interest or of capital, already made by the borrowers.

This process, according to his schedules, would reduce the British debt to no more than \$707 millions, the French debt to \$909 millions, the Italian debt to \$741 millions, and the Belgian debt to \$138 millions. The last it is proposed should be expunged altogether. The arguments used to support these suggestions are for the most part familiar on this side of the Atlantic, especially the contention that United States economy would be completely upset if the payments due were actually effected in goods and services. It will come as a disturbing surprise, however, to many British readers to learn that "a persistent opinion prevails throughout the United States that the war debts contracted before the Armistice were generously cancelled by Secretary Mellon." Mr. Lloyd betrays a certain degree of exaggeration which will not help his cause, but British opinion will wish his book a wide circulation, for it is vigorous and shrewd.

THE FAR EAST

"China's Problems and Their Solution." By Wang Ching-Wei. 198 pages. (Shanghai) China United Press. \$4.50.

This book is included in the "China To-day" series, and as it is published also in Chinese, German, French and Dutch, the propagandist object is plain. Written by one who, after the death of Dr. Sun Yat-Sen, became the official leader of the national revolutionary party in China, the book is an interesting study of China's struggles under a diversity of so-called Governments. In the past, whenever there has been a relatively strong Government in China, it has generally been imposed by foreign conquerors, Mongols, Manchus, etc., but here we have a record of a slow, yet irresistible advance towards government by China's own nationals.

Mr. Wang Ching-Wei himself is playing a very active part in the attainment of the democratic State. A poet-politician, he is now president of the executive Yuan, and officiating Minister of Foreign Affairs in the National Government of China, and in his study of the political, economic and social problems now confronting his country, and the manner of their solution, he reveals himself as something more than an idealist. Indeed, the record of his fight for the emancipation of the people, shows that he was imbued with a fanaticism

that led him to face incredible hardships with equanimity: semi-starvation, imprisonment and death held no terrors for him. In the light of his experiences, it is perhaps natural that prominence should be given to the revolutionary spirit of China, though he urges that the country needs peace at home and hopes for peace abroad.

China's most pressing task is national reconstruction, and this can be accomplished only in an atmosphere of peace and tranquillity. Yet, Mr. Wang Ching-Wei's manner of seeking peace and ensuring it is not very tactfully expressed. "China," he says, "must rely on herself, and not merely trust to fate, for it is only when we are in a position to fight others that we can become friends with them." Nevertheless, there is only one course open for the Chinese, and that is to consolidate the country's national strength and vitality, and thus strengthen the foundations of peace in the Far East.

Briefly summarised, the principal problems facing China, as the author sees them, are the following: the suppression of internal strife; the increase of production; the development of her lines of communication, and the extension of her overseas trade. The author has no illusions about the difficulty of solution, though he shows the future to be full of hope. He is also optimistic about finance, and says there is no question of China's evading her obligations, but that she is anxious to find ways of meeting them. An essential requirement is a revival of railway business. With increased revenues available, the interests of foreign creditors will be fully protected, and the best proof of China's intentions is that during the last two years she has met a number of her obligations.

On foreign policy Mr. Wang Ching-Wei's gospel is definitely China for the Chinese, though his discussion of Sino-Japanese relations is, on the whole, fair and moderate in tone.

"Population Theories and Their Application with Special Reference to Japan." By E. F. Penrose. Published by the Food Research Institute, Stanford University, California. 347 pages. \$3.50.

This book is one of the products of a programme of research laid down by the Institute of Pacific Relations at its conference at Honolulu in 1927. It is primarily a study of the population problem of Japan, but in view of the confusion which invariably arises when a particular problem of population is discussed without a clear statement of premises, the author has done well to devote nearly a third of his writing to abstract theory. In the first chapter he criticises Malthus, in the second and third he compares "income" and "welfare" concepts of the optimum of population, taking it as a principle that the object of population studies is "to determine the lines of rational population policies, and thus to serve as a guide to action."

The main conclusion which emerges from the book as a whole is that population problems are inseparably bound up with general economic, and ultimately with political, problems, and that at the present rate of progress in the productive arts there can be no question of "overpopulation" for the world as a whole; such a term has significance only in relation to actual unevenness between the distribution of population and the distribution of natural resources in the world. The maladjustments which exist are denied their obvious solution by means of the free flow of capital, labour and goods because of adverse factors which operate in virtue of national State sovereignty.

In discussing Japan, the author makes short work of certain widespread misconceptions, and renders valuable service in so doing; he deals mercilessly with the myth of Japan as "la terre prolifique et pullulante par excellence." The Japanese birth-rate is no higher than was that of England in 1880 or that of Germany in 1904; it is below that which still prevails in more than one European country, and it is falling in response to the same influences which have affected the birth-rate in the West. The present sharp increase of population in Japan is a late example of a phenomenon which has been characteristic of Western countries in the recent past; the death-rate—and especially the infantile mortality rate—has been brought down, while the birth-rate remains high. There would be no tragedy in this, were it not for Japan's poverty in natural resources combined with the prevalence of cut-throat economic nationalism in the modern world. Mr. Penrose points out that Japan's troubles could easily be solved under conditions of international free trade plus certain suitable outlets for emigration; but in a world of White Australias, Hawley-Smoot Tariffs, British Empire Preferences, Kuomintang Boycotts and Soviet Five-Year Plans, he might as well ask for the moon as for any far-sighted international co-operation for relief of humanity's congested areas. If Japan, in the face of such a world, has entered on a dangerous path of self-assertion, there is no State which is without responsibility.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JULY 28, 1934

No. 134

THE STATE OF TRADE

THE latest evidence of the state of trade in this country remains moderately encouraging. At this time of the year there is usually a lull in business activity, but the seasonal recession has so far been less pronounced than usual, and manufacturers and merchants confidently expect a normal revival in the autumn. But in view of the fact that the major international problems remain unsolved and that developments in some foreign countries have been unfavourable, prospects of a rapid expansion of business activity in this country in the autumn are somewhat uncertain. Although there are at present no indications of a serious setback in the United Kingdom, the real test will come a month or two hence when order books are due to be replenished.

The improvement in employment continued during June in most industries, but the total number of insured workers unemployed showed a slight rise owing to an abnormal increase in the unemployment figure for coal-mining. If the seasonal fall in employment in the mines had been as small as it was a year

ago, total unemployment would have shown, not an increase, but a decline of 51,613. Among other general indicators, the *Economist's* index of Business Activity, which allows for variations in trade due to holidays and other seasonal influences, rose sharply between May and June to the highest level registered since March, 1930. Although the figure for June is less than 2 per cent. below the highest level reached in November, 1929, it must be remembered that the index does not make allowance for the increase in population and in productivity per head. Moreover, some of its component series, such as those relating to raw material imports and building activity, are not a record of the past, but indicators of developments in the near future.

Of the sixteen series for which June figures are available only those relating to employment in heavy industries and iron and steel consumption show a decline. But as these two indices are not adjusted for the seasonal lull in activity at this time of the year, too much importance should not be attached to the decline. The indices for coal and electricity consumption and for bank clearings all show an appreciable rise. The advance in the index of exports of manufactures indicates that we are gradually gaining ground in foreign markets. Most encouraging, however, is the steep rise in the figures for imports of raw materials and for the value of building plans passed, for these two indices point to an expansion in activity in coming months. The value of building plans passed in June was the highest on record.

Among the branches of activity providing industry with its equipment, the iron and steel trade has experienced a seasonal decline in new orders, but production in June

was well maintained and manufacturers confidently expect a normal increase in business after the holidays. Engineering has made further headway and new business has so far been coming in at a satisfactory rate, but there are as yet no indications of a further rapid improvement in the autumn. Sales of industrial chemicals, which are used in most branches of activity, were satisfactory in June. The boom in dwelling-house building, which brought about a revival in allied industries, shows no signs of a collapse. On the contrary, the latest evidence points to a further expansion in activity. Moreover, if general economic conditions continue to improve, demand for additional factory space and for replacement of obsolete works will increase, thus providing a further stimulus to the building trade.

As far as industries furnishing consumers' goods are concerned, the majority of the textile industries, the clothing trades including boot and shoe manufacture, and the motor vehicle industry experienced the usual decline in demand in recent weeks. But only the wool textile industry showed

a really serious recession in business, not only as compared with May, but also as compared with conditions a year ago.

The improvement in retail distribution continued during June. The official statistics reveal an increase of 2 per cent. in the value of retail sales as com-

pared with June, 1933. The improvement was well spread geographically and among different classes of trades.

Reports from the "sterling area" are fairly good. There has been a further improvement in Denmark and Norway. Latin-America, and especially Argentina and Chile, are gradually making headway, and there has not been any noticeable deterioration in Japan. Among British Dominions, Canada and South Africa continue on the path to recovery, but there has been a slight setback in Australia, partly as a result of the precipitous decline in wool prices. Wheat exporting countries generally have benefited from the recent rise in the price of this cereal. The improvement in the international wheat situation and the consequent expectation of a higher level of quotations should strengthen the position of these countries during the next year.

The news from France and other "gold" countries is not encouraging. France has so far made no headway, and the situation in Belgium and Holland is no better than it was a month ago. In Germany the expansion in business activity appears to have been arrested at the end of June. Moreover, the United States experienced a sharp recession in recent weeks, and a combination of unfavourable factors, including labour difficulties, high manufacturing costs, the possibility of further governmental interference with business, restrictions on new capital issues, and fears of increased taxation, appear to preclude a substantial measure of recovery in the near future.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of July; in the remainder they relate to the month of June.

COAL

Production and employment in the coal trade declined steeply during June, but output rose a little during the first week of July. Demand for house-coal is now at its lowest level, but merchants have already begun to place new orders with collieries in anticipation of restocking by consumers. Demand for industrial fuel was fairly well maintained in June, and both exports and coal shipped for the use of steamers in the past month show an appreciable increase compared with the corresponding period in the past two years. But, according to reports from mining districts, business tapered off in July. In the third week of that month the South Yorkshire coal market was inactive, and very little new business was arranged in Scotland and in South Wales.

IRON AND STEEL

Production was well maintained in June, if allowance is made for the usual seasonal decline in business, holidays and the varying lengths of months. Actually, the daily output of pig iron in June showed an increase of one per cent. and stocks are understood to have risen a little. Exports rose to 204,100 tons in June, the highest figure since October, 1930. On the other hand, imports were the lowest of the year. The volume of new orders has fallen off, as is usual at this time of the year, but this seasonal decline has so far not been very pronounced. A revival of new business in the near future is confidently expected by manufacturers, especially as the engineering industry has so far shown no signs of losing ground.

ENGINEERING

Engineering as a whole continued to make headway in June, for all sections of the industry, listed separately in the *Ministry of Labour Gazette*, showed a further fall in unemployment during that month. The volume of exports, though slightly lower than in May, was well above the level of a year ago. Imports also were lower than in May. Individual branches of the industry which showed an improvement in recent weeks including lifting, excavating, textile and electrical machinery. Manufacturers of marine engines and boilers have reported satisfactory progress, and demand for machine tools was fair, but business in agricultural machinery has fallen off a little. While there are no signs of a setback in the near future, prospects for a further expansion in activity are somewhat uncertain.

MOTOR INDUSTRY

Conditions in this industry remain satisfactory, and production is being maintained at a high level. Many firms are still experiencing difficulty in coping with the demand for their products. Several concerns are engaged in building additional workshops, and one manufacturer of components announces that the building of an entirely new factory will shortly be commenced. The number of motor vehicles of all kinds registered for the first time in May, 1934, totalled 35,051 compared with 29,466 in May, 1933, while the total number of vehicles current on May 31st was approximately 2,234,068 compared with 2,130,043 for the same period of last year.

CHEMICAL INDUSTRY

A fairly satisfactory business was transacted in most sections of the chemical market during June, industrial chemicals being about the most active items. A steady trade was maintained in wood distillation products, and demand for pharmaceutical chemicals was on a better scale than in recent months. The coal tar products market was fairly active generally, but was rather dull in certain directions. A further increase was shown in overseas trade in June, the value of exports of chemicals, drugs, dyes and colours being £46,403 greater, and imports £87,712 greater, than in June last year.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)
(Monthly Average, 1923-24 = 100)

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

The index of the volume of new export orders received by the heavy electrical manufacturing industry showed an appreciable increase in June, partly owing to one large order from South Africa. The improvement in new home orders was maintained.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*

(1920 = 100)

Period	Home	Export	Total
1926—June	82	110	89
1927	94	234	128

The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

COTTON

Owing to unsatisfactory weather reports from the American cotton belt, the price of raw cotton continued to advance in recent weeks. But trade has not been stimulated by the hardening tendency of prices, as most buyers have distrusted the upward movement. Although general inquiry in piece-goods for abroad has been fair, very few manufacturers have been able to report a satisfactory turnover and business done has comprised small lots to meet urgent wants. Demand for India has continued quieter. There has not been any favourable development in the offtake for China. Only a sorting up business has been done for the Near East. Buying for the markets of Central and South America has been patchy. There has been a little more activity in coloured goods for West Africa, and the Dominions generally have provided moderate orders. Political news from the Continent has checked trade developments in that quarter. On the other hand, better reports have been received from the home trade. The hot weather has resulted in better clearances of light fancy materials. But in general most firms have lost ground since a month ago. Yarn quotations have been advanced in sympathy with the rise in raw cotton prices, but there has been a poor response from buyers with a tendency for margins to be narrowed. Complaints from spinners in the American section have increased and contracts for more than retail lots have been of rare occurrence. Shipping yarns have continued slow. Some ground has been lost by spinners of Egyptian yarns, and more mills have been compelled to curtail production. The percentage of spinning spindles in full production at the end of June was 77, against 81 in May and 75 a year ago.

WOOL

Raw wool quotations continued to decline in recent weeks, and prices realised at the auctions held in London at the beginning of July were 15 to 20 per cent. lower than those obtained at the May auctions. The fall in prices has been responsible for a severe setback in all sections of the British wool textile industry. New business is limited to urgent requirements. Next to coal-mining, the wool textile industry suffered the biggest increase in unemployment between May and June. The figure for June showed an increase of 5.4 per cent. over May and one of 7.0 per cent. as compared with June, 1933. The deterioration has been most pronounced in the worsted section. At the end of the third week of July the yarn trade was still dull and new business in piece-goods was small in volume.

JUTE

As a result of a rise in the price of its raw material, the jute industry in Dundee experienced an improvement in business towards the end of June. But although business declined again towards the middle of July, the volume of new orders received will ensure fairly active conditions for at least two months.

RAYON

Business is very restricted on account of the changes in the excise duty. These came at a time when stocks were fairly heavy, and the effect of the depreciation of values has been to restrict new business in both the weaving and the hosiery sections of the trade. In the circumstances the general outlook is rather unsettled, and it will be some time before business is restored to normal.

LINEN

Both the Soviet and Baltic flax monopolies have practically withdrawn from the market. Prices are moving strongly against consumers and are likely to advance further. While a fair amount

of new yarn business has been arranged, spinners were obliged to turn down proposals owing to the difficulty of securing raw material cover at anywhere near price parity. Seasonal requirements for cloth are coming in, but buyers both for the home and overseas markets are reluctant to concede any advance to manufacturers. Fancy linens are in good demand.

BOOTS AND SHOES

Unemployment in the footwear industry in June showed a further appreciable increase both as compared with May and with the corresponding month a year ago. Trade is most irregular, for some manufacturers are quite active while others have little to do. Retail sales in this country in June were a little better than a year ago, but the general situation remains far from satisfactory.

POTTERY

The pottery trade is experiencing a normal seasonal decline, but the general situation in this branch of activity remains quite encouraging. Exports of general earthenware in June were appreciably larger than a year ago.

AGRICULTURE

According to an official report, the condition of the wheat crop at the end of June indicated a fully average yield, but it is not expected that a full average yield of barley or of oats will be obtained. Where lifted, early potatoes in most districts produced a light yield. Main crops need rain to produce a full average yield. Turnips and mangolds to a lesser extent have suffered from fly, and are generally backward. Hop bines are strong and healthy in most cases. Until the work was hindered by showers, hay was being secured in excellent condition. The present "forecast" of the yield of both seeds and meadow hay is below the ten years' average. In the circumstances, cattle and sheep have generally done well, except where shortage of grass and water has been serious.

SHIPPING

While demand for shipping tonnage is by no means satisfactory, the slight improvement noticeable since April has been maintained and the *Economist's* index of freight rates showed a further, though modest, rise in June. The River Plate section remains active, but European and Far Eastern routes showed little improvement.

BUILDING

Although building activity did not increase further in June, the value of building plans passed in that month was the highest on record. This suggests a renewed expansion in the near future. The percentage of unemployed in the building trade on June 25th, at 15.6, shows a rise of 0.1 per cent. on May. Unemployment in public works contracting, at 42.7 per cent., shows a fall of 0.1 per cent., as compared with May, and one of 0.4 per cent. on June last year. Returns from 142 urban authorities (excluding the London County Council area), with a population of 17,166,000, show that plans passed for new buildings in June comprised a total cost of £9,364,900, against £7,059,600 in June, 1933. Of last June's total, dwelling-houses accounted for £7,018,000; factories and workshops for £734,900; shops, offices, warehouses and other business premises for £493,100.

RETAIL TRADE

The official retail trade statistics for June show a rise of 2.0 per cent. in the value of sales as compared with the corresponding month a year ago. The improvement was again well spread geographically and as between different categories of merchandise. The value of sales of foodstuffs increased by 1.2 per cent., and that of other merchandise by 3.0 per cent. More recent information suggests that the results of the London sales were satisfactory. An important London store reports a good increase in business during the last few weeks.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—The slight deterioration in trade turnover, noted a month ago, continued in June. Nevertheless, activity remained above the level of a year ago, and the improvement in the building trade was maintained. Wheat crop prospects are good in Western Australia, but poor in South Australia and Victoria and below average in New South Wales. Pastoral conditions are unfavourable in some parts of the country and output of butter is declining. The value of imports in May was above, but that of exports below, the figure for May, 1933.

Canada.—Despite the setback experienced by the United States, the improvement in Canadian business conditions has been well maintained. A slight seasonal recession in certain branches of activity during June was offset by an expansion in building construction and by the sustained improvement in the coal and steel industries and in gold mining. Moreover, the agricultural situation has improved considerably under the influence of rainfall and a steep rise in grain prices.

India.—Reports from local trading centres are fairly favourable. The market in piece-goods was quiet but steady in June. The mill strike in Bombay came to an end in mid-June and work has since been resumed. The monsoon appears to have broken favourably. According to the preliminary official forecast, the area under the jute crop is somewhat smaller than a year ago. Quotations for raw cotton and jute rose slightly during the past month.

South Africa.—Business activity continued to make headway in June. The building trade maintained a high level of activity, especially in Johannesburg, and manufacturing concerns generally gained further ground. Agricultural conditions remained favourable except for the setback in the market for wool. Unsold stocks at the end of the season (June 30th) were appreciably larger than a year ago. The maize crop is provisionally estimated at 19,417,000 bags.

EUROPE

France.—Although statistical evidence for June is not yet available, business appears to have made no headway in that month. The official index of production declined from 103 (1913=100) in April to 101 in May. A year ago the figure stood at 109. The number of persons in receipt of unemployment benefit declined slightly from 315,606 on June 9th to 310,934 on June 30th, but rose again to 312,532 during the first week of July. Among individual branches of activity, business in the coal and iron and steel industries was at a low level in June and there was no improvement in the demand for textiles.

Germany.—The expansion in business activity appears to have been arrested at the end of June. The official statistics show a further decline in the number of unemployed from 2,529,000 at the end of May to 2,482,000 at the end of June. Carloadings rose from 116,300 per day in the last week in May to 119,300 per day during the corresponding period in June, but the first week of July witnessed a sharp decline to 114,400 per day. Following a spurt towards the end of June, coal production in the Ruhr district tended to decline. Although industrial production was, on the whole, well maintained in June, there are indications that the restriction of raw-material imports will react unfavourably on business conditions. Owing to a slight decline in the value of imports and a small rise in exports, the unfavourable trade balance declined from Rm. 42 millions in May to Rm. 38 millions in June. Wholesale prices continued to advance, and the rise in indices of stock exchange securities was maintained.

Norway.—According to the Bureau of Statistics, the industrial production index rose from 101 in April to 105 in May. There are indications of a further rise in June, especially as regards the home industries. Customs receipts in June amount to 5 million kroner, which is about 650,000 kroner more than in June, 1933. Bank deposits decreased slightly, but the bank clearing figure rose by 39 million kroner from the preceding month, and the turnover of bonds on the Bourse rose sharply from 1.9 million kroner in May to 4.5 millions in June. The turnover of shares was insignificant and almost exclusively related to whaling shares. A new law has recently been passed laying down very strict rules as to regard to their utilisation. The number of laid-up vessels continues to decrease in spite of the slump on the freight markets, and notwithstanding an increase in the number of idle tankers.

Denmark.—The index of production for Denmark, which stood at 114 (1913=100) in May, reveals an upward movement in industrial activity since the beginning of the year. Moreover, it is believed that this trend is continuing. To take the most conspicuous example, the building trade is expected to remain fully occupied until the end of the year. In view of the fact that foreign trade and shipping have considerably improved as compared with last year, it may not be considered unreasonable to expect that the problems of agriculture could be solved if this country were saved from further readjustments forced upon it from abroad.

Greece.—Crops have deteriorated under the influence of unsatisfactory weather. But output of olive oil is expected to be satisfactory. Foreign trade in May showed a small decline in quantity and value of both exports and imports as compared with May, 1933. Conditions on the tobacco market were favourable in June, but trade in currants is still suffering from low prices and diminished demand. Domestic trade was lively and the financial situation remains good. Revenue receipts are satisfactory. Business on the Stock Exchange was slack and prices declined on the whole.

Jugoslavia.—June brought a marked improvement both in trade and economic conditions. Employment figures are rising steadily,

and the Bourse is buoyant. And even more important, agricultural prices are rising for the first time against falling industrial prices, so that the economic scissors are slightly closing. This has greatly encouraged imports, and these are favourably reacting on exports. Bank rate was reduced from 7 per cent. to 6½ per cent. on July 16th.

UNITED STATES OF AMERICA

The index of business activity, compiled by the *New York Times*, declined abruptly during the first week of July and the volume of business is well below the level of a year ago. This was followed by a slight improvement in the second week, but a combination of unfavourable factors appears to preclude a substantial measure of recovery in the near future. An expansion in building activity in America, an important feature of recovery in the United Kingdom, is hampered by the high level of building costs. Moreover, the United States is still in the grip of labour difficulties, and the possibility of further governmental interference with business and of further devaluation of the dollar, together with high manufacturing costs, restrictions on new capital issues, on Stock Exchange activity, and fears of increased taxation, all tend to hinder progress. On the other hand, the agricultural situation has improved under the influence of a sharp rise in the prices of cereals and cotton.

LATIN AMERICA

Argentine foreign trade figures for the first five months of 1934 show a definite increase in exports—even after allowing for the 20 per cent. depreciation in the peso this year—whilst the export surplus is some 80 per cent. above that of last year. Moreover, the strength of world grain markets following drought has resulted in sharp advances in grain prices in Buenos Aires, and it is apparently the intention of Argentina to endeavour to export the whole of the present wheat crop despite international pacts. Following withdrawal of official intervention in the Santos market, Brazilian coffee prices have fallen considerably, and the National Coffee Department has made no announcement regarding elimination of surplus from the current crop. Nevertheless, June coffee shipments may total over 1,000,000 bags, and inquiry from consuming markets has improved. Chilean foreign trade shows definite improvement, with total exports for the first four months of 1934 nearly double those of last year and the export surplus trebled. Some relief from restrictions in the exchange market is foreshadowed in semi-official quarters.

THE FAR EAST

Cabled reports from Japan reveal little change in the situation in that country. The market in raw silk has been quiet, but prices of cotton yarn rose in sympathy with the rise in quotations for raw cotton. The value of imports in June was 189 million yen, as compared with 134 million yen in the corresponding month of 1933. Exports rose from 160 million yen to 181 million yen during the same period. The value of China's imports in June was 86,260,000 dollars, as compared with 94,980,000 dollars in May, and 110,100,000 dollars in June, 1933. Exports in June were 49,170,000 dollars, against 49,320,000 in May and 50,200,000 a year ago.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen & Unwin, Ltd.).

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of August; in the remainder they relate to the month of July.

COAL

The Board of Trade figures for employment in coal mining continued to decline until the first week in August. But since these take no account of the number of shifts worked per week, they may present an unduly pessimistic picture; for the percentage of insured workers unemployed on July 23rd (Ministry of Labour figure) was smaller than a month earlier, while the curve of output turned upwards about the middle of last month. Exports, which have been hampered by the reduction in the French import quota and by exchange restrictions in Germany, were 178,000 tons less during July than in the previous month, although they were 108,000 tons above the corresponding figure last year. Trade in washed fuels continues strong and the industrial offtake is reported to be fair, while demand for domestic fuel, which had been very poor, is beginning to expand.

IRON AND STEEL

Employment in the pig iron industry showed little change during July, but output continued to expand and is stated to have been well absorbed. The number of furnaces in blast at the end of the month was 99, or one less than a month earlier. In the iron and steel industry employment showed a trifling increase and a further improvement occurred in the tinplate and sheet steel branches. The production of crude steel is practically stationary. Exports of iron and steel manufactures, although well up on last year, were about 3 per cent. smaller in July than in the previous month. Holiday influences continued until well into August, but the recession has not been so marked as in previous years; it is anticipated that buying on a fairly substantial scale will develop within the next few weeks, for stocks are now probably very low.

ENGINEERING

Taken as a whole, the engineering trades appear to have shown a slight further improvement during the month of July. In general and electrical engineering employment continued to increase, while an expansion was also registered in marine engineering, although unemployment here still remains at a high level. In constructional engineering and in motor vehicle manufacture there was a decline during the month, partly owing to seasonal influences. Nevertheless, exports of machines were appreciably larger than in the month of June. Conditions are fairly favourable in Scotland, and a number of general engineering contracts have recently been secured, with some additional work for shipyards; a Glasgow firm is reported to be making preparations for the manufacture of electrodes for electric welding. Marine engineers at Birkenhead are busier, and annual holidays have been curtailed. An improvement has also been noted in the heavy sections of the Sheffield steel industry.

MOTOR INDUSTRY

Despite a certain seasonal slackness reports concerning the motor industry are favourable and production is well maintained. Manufacturers are now chiefly concerned with new models, which have so far been well received. The Chancellor's reduction in the horsepower tax is being taken advantage of and there is a tendency to increase the capacity of engines in new models. Exports of motor vehicles and chassis during July were substantially larger than in the previous month. The total number of motor vehicles of all kinds registered for the first time during June was 27,972, against 35,051 in May. This is, however, less than the normal seasonal reduction.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)
(Monthly Average, 1923-24 = 100)

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

The increase in the index of home orders received by the electrical manufacturing industry in July is largely due to contracts placed by the C.E.B. The increase in export orders is unlikely to be fully maintained, but, on the whole, the outlook is good.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1926—July	80	79	80
1927	93	231	126

May	47	112	67
June	47	119	70
July	56	123	77

* Copyright of the British Electrical and Allied Manufacturers' Association.
The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

CHEMICAL INDUSTRY

Trade was fairly active during July and, although the price of iodides was reduced, most quotations were well maintained. Business in pharmaceutical products was fair, while in the industrial chemicals sections the best items were oxalic and formic acids, formaldehyde, acetone and ammonium chloride; barium chloride, lithopone, sodium chlorate and arsenic were, however, dull. Wood distillation products are steady at unchanged rates, and there is a good demand for charcoal. Coal tar products have been rather quiet, but a good business continues in creosote oil and cresylic acid. There was an improvement in the demand for coal tar pitch towards the end of the month. Exports of chemicals, drugs, dyes and colours showed an increase of £105,160 over last July, while imports were greater by £130,940.

COTTON

Business has been unsatisfactory during the past month. The estimate of 9,195,000 bales for the American cotton crop was the lowest for thirty years and led to an advance of about 1d. per lb. in prices, but liquidation by "longs" subsequently caused this rise to be lost. Demand from the trade is slow and world consumption of American cotton is lower than for some time back. Orders for piece goods have been small. A fairly persistent demand has been experienced for India, but only isolated transactions have been reported for China and the minor outlets of the Far East. Shippers to Egypt and the Near East have provided a moderate turnover, chiefly in bleaching categories. Demand from Central and South America has been irregular and very little has been done for the Continent. Makers of heavy goods for Australia have been concerned at the rise in the tariff, while home trade buying has been unimportant. Yarn quotations have been more irregular, and only a restricted business has been done in American counts for home use. In the Egyptian section, Germany's system of import restrictions and default on yarns already delivered have been the important factors; and spinners have decided to withhold deliveries of yarn pending a settlement of past debts. The percentage of spinning spindles in full production on July 31st was 73, against 77 a month earlier.

WOOL

Employment in the wool textile industry suffered a further reduction during July—the worsted section being chiefly affected—to below the level of a year ago. Imports of raw wool were heavily reduced last month, but exports of yarns and tissues showed an improvement over June. At the beginning of August a number of factors tending to depress raw wool prices appeared. Exporters were encountering difficulties in Germany, Italy and France; while the carry-over in the main producing areas showed an excess of more than 70,000 bales over the previous year's figure. Australian selling interests have provisionally decided to restrict their offers before Christmas to 1,350,000 bales, and it is thought that this has exerted a steadying effect on prices here. The Brisbane wool sales opened on August 20th in fairly favourable circumstances, with quotations showing a slight advance over recent rates. Latest reports from Bradford indicate that the demand for merino tops is now improving somewhat.

JUTE

The rise in the price of raw jute continued during July and the first half of August, and buyers were reported to be more active than of late. More interest is now being taken in jute manufactures, hessians being the brightest spot in the Dundee cloth market. Calcutta prices have been advanced appreciably.

RAYON

The last month has seen many changes and the outlook is now much brighter. Demand for most classes of yarns and fabrics has broadened out considerably, and the outlook for the autumn trade is distinctly encouraging. The announcement of the dates when the Excise duty drawback expires is giving an added fillip to the export trade. Home trade continues very good.

LINEN

Prices of all classes of raw flax and tow continue to move against consumers and Russian fibre is quite beyond the reach of U.K. spinners. As this source constitutes 80 per cent. of world supplies, its influence dominates the markets. It is stated that new crop Soviet fibre has been sold to Mid-European mills at current rates, for November-December delivery. Under these circumstances, spinners are not disposed to sell their production ahead of actual cover. Cloth manufacturers for the same reasons have been unable to accept new business except at advanced prices, which buyers for both home and foreign markets declare they cannot obtain.

BOOTS AND SHOES

Partly for seasonal reasons, and especially the continuance of fine weather, employment declined by about 4 per cent. during July and there was a considerable increase in the amount of short time worked; the position was worse than at the same time last year. Since the holidays, however, demand has improved and it is reported from Northampton that most factories will be running on full time for some weeks.

AGRICULTURE

According to an official report, the corn harvest had commenced before the end of July, and it is estimated that the yield of wheat will be above, but that of barley and oats below, the ten years' average. Present appearances indicate that the yield of main crop potatoes and of other root crops may be a little below average. The yield of both seeds and meadow hay is estimated to be under average, but the condition and quality of the greater part of the crop is good. The yield of hops is expected to be about average. In spite of the shortage of keep, cattle have done moderately well where a sufficient water supply has been available, and sheep are

in very fair condition. Milk yields are falling more quickly than usual.

SHIPPING

Although shipping is still depressed, the *Economist* index of whole cargo shipping freights (1898-1913=100) rose by 1.8 points to 85.3 during July, following a slight increase in the previous month. There is a steady demand for outward coal tonnage, but the North American trade is disappointing and the coastwise market inactive.

BUILDING

Employment in the building trades as a whole declined slightly during July, but an analysis of the Ministry of Labour's figures shows that the setback was chiefly among painters and "other occupations" rather than in those branches directly concerned with new building. The recession was of slightly larger proportions than the normal seasonal movement, but it must be remembered that the seasonal reduction in June was smaller than usual this year. Returns from the 142 urban authorities (excluding the L.C.C.), with a total population of over 17 millions, show that the value of building plans approved during July was substantially less than in the previous month, the figures being £8,720,000 and £9,364,000 respectively; dwelling houses accounted for 71 per cent. of this total. While some reduction in activity may, therefore, be expected in the immediate future, the outlook for the autumn is not regarded as unfavourable.

RETAIL TRADE

Despite the normal summer-holiday recession, retail sales have generally been good, and, although official statistics are not available at the time of writing, the improvement noted a month ago appears to have been maintained. Several important London stores report that business has shown an increase during the last few weeks, and summer sales have been successful.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Trade reports from the Empire are encouraging. Australia's Budget surplus of £1,300,000 reported on July 24th, coincided with a slight upturn in wool prices after their long decline. Japan is taking more Australian wool, as a result of Mr Latham's "good-taking more" to Tokio. July rains improved the outlook for wheat, and the rise in world wheat prices is likely to prove a boon to Australia, as she will have to carry over 58 million bushels into 1934-35. Building and constructional industries are active; retail trade is at its normal winter level; and there is growing activity in the West Australian goldfield. Canada expects a much greater farmers' income from now on, owing to more favourable wheat prospects than in the United States, where the drought has been disastrous. The United States is expected to import duty-free fodder, and perhaps cheap grain, from Canada, for drought relief. Canadian steel and heavy industries, as well as building, coal and gold mining, are active, thus counterbalancing the seasonal decline in other industries; and foreign trade shows a greater favourable balance than in the first half of 1933. Railway traffic and earnings have increased considerably; and employment is generally good. The share of the Empire in Canada's trade continues to increase, offsetting the decline in trade with the European continent. In South Africa, too, constructional activity is maintained; railway earnings show an increase over estimates; retail trade is good; and the value of gold output is still rising, though the volume is slightly below June and July of last year. The low wool quotations have caused a congestion of wool stocks; but the wholesale price level is steady, and business prospects are favourable. Higher prices of meat and dairy produce, coupled with the exchange premium, have improved New Zealand's prospects.

EUROPE

France.—Nearly all indices available for France in July revealed a further decline in business. Estimates of the total number of unemployed are well above the million mark. The number of railway wagons loaded showed a further decline; while railway receipts, except for the usual rise in the week of July 14 (public holiday), remained low. The general index of wholesale prices fell from 363 on July 7th to 361 on July 28th; but the wholesale price indices of minerals, metals, industrial raw materials and textiles rose slightly during the month. Industrial production, which rose sharply between July, 1932, and July of last year, is still declining; textiles in the North are particularly hard hit; statistics of business failures were a little lower in July than in June, but they are still considerable. Retail trade is weak. Imports have been cut down by new quota measures; exports are being fairly well maintained at a level slightly below the corresponding period last year; but they are below the monthly average for 1933.

Germany.—Economic developments in Germany in July were overshadowed by the difficulties of importing raw materials. The textile industry was virtually controlled; imports of yarns, etc., were rationed; and the extent of capacity workable by individual mills was fixed. Stocks were thought to be fairly heavy, but rationing was applied to iron, steel, ore, alloys, etc., and a control board was set up; rubber was rationed earlier, and the rationing system was extended to non-ferrous metals in early August, and control boards were set up. A decrease in unemployment of only 54,000 was recorded in July from the June figure, against a decrease last year of 240,000. The heavy trades did fairly well in July. Exports in July fell by 17 per cent. (at Rm. 321 millions), a much greater than seasonal decline. Imports were, naturally, very much lower: imports of foodstuffs rose by 17 per cent., but those of raw materials declined more than seasonally by 10 per cent. Emergency economic measures—e.g. the ordering of a reduction of 30 per cent. in the hours worked in the textile industry—obscure the trend of business; but there is little doubt that the reaction of business to the stimulus of cheap money by the Reichsbank's rediscounting of "work-creation" bills, and to the Government's "work-creation" programme for roads and construction, has flagged. Wholesale prices continue the upward trend of the last year. This applies to manufactures as well as to foodstuffs, though the rise in the prices of the latter is much steeper. Retail trade in June was good, and this has apparently been maintained in July. The total cost-of-living index of the *Konjunktur Institut*, however, has risen from 120.3 in May to 122.9 in July (1913=100); while the same institute's index of retail food prices rose from 113.3 in May to 117.8 in July.

Scandinavia.—Business in Sweden is still expanding, thanks to the Government's "forward" economic programme. Unemployment reached its lowest point at the end of June. Foreign trade is improving, especially in exports of machinery and of timber, pulp and paper, and iron ore. The Government's policy has developed the home market and the consumption industries to a very great extent since January. In Denmark, rising prices of meat and dairy produce are benefiting farmers; but the general economic position has changed little since our last report. In Norway, industrial production has increased with exports, but imports have decreased. Unemployment has declined.

UNITED STATES OF AMERICA

The summer recession in business activity went beyond all expectations in July owing in the main to the effects of the drought in the Middle-West. The wheat harvest will be about half the normal, pre-crisis figure. The cotton crop is the lowest for thirty years. The cost of living is rising fast, and demands for increased wages are being made. Labour disputes are threatened

in the aluminium and textile industries—in the latter affecting almost a million workers. Rail traffic is below expectations; steel capacity worked is back at 22-25 per cent.; and business, though not as badly hit as the steel industry, certainly slumped in July, as a result of rising costs and regulated prices. The automobile industry is less active. There has been general dullness on the Stock Exchange. Business is hesitant, waiting for the autumn trade indication and the Congressional elections. Inflationary demands are being voiced again, and there is much talk of revising N.R.A., but the President's silence as to any new economic measures, and his declaration in Wisconsin that he does not intend to return to "the ancient law of tooth and claw," has only increased the general uncertainty about America's economic prospects.

LATIN AMERICA

It is too early to gauge the prospects for fine cereals in Argentina, but the crops already above the ground are in good condition. In view of increased export demand, the carry-over of maize should not be heavy. The recent substantial advance in grain prices in Buenos Aires should be reflected in favourable returns of the export trade; the total value of exports in the first half of 1934 was nearly 20 per cent. higher than last year, and the export surplus 30 per cent. higher, at 212 million paper pesos. Exchange has been stabilised officially at 15 paper pesos per £ sterling since January last, and the "tender" and "free" market rates have been distinctly firm during the past month, with the margin between them steadily lessening. The improvement in the Brazilian situation also continues; increased freedom is being permitted in exchange operations, and the value of the milreis in the "free" market is higher than a month ago. The estimated coffee crop for 1934-35 is only 14 million bags, against nearly 30 million last year, whilst the export demand is again expanding and prices advancing. Constitutional Government was restored by the election of President Vargas last month. A steady recovery is proceeding in Chilean conditions, and the "export" rate is maintained at around 127 pesos per £ sterling. Peruvian trade is more active, and the exchange is benefiting from the rise in cotton prices. Following the floods, fine weather conditions have been restored in Central America, and coffee crop prospects have improved, especially in Guatemala.

THE FAR EAST

The outstanding feature of Far Eastern trade is still the economic progress of Japan. Japan's import surplus for the period January to July of this year shows a decrease of about 14 per cent., at 145 million yen, from the figure last year. An export surplus of 9 million yen emerged in July, which is about half of the export surplus for July, 1933. Business in July was fairly well maintained; but the quota restrictions in the British and Dutch colonies damped down the Japanese textile, china and porcelain industries. Despite a decrease in the spring cocoon output, the raw silk trade was dull; cotton yarn output was maintained, but prices weakened. Cereal harvests are larger than last year. The index of wholesale prices in Tokyo was 174.1 in July, against 182.1 in July last year; but retail prices are rising. Heavy industry is doing well, largely on Government contracts. The Stock Exchange has been definitely weaker. The trade of China remains stagnant. The drain of silver from the interior for export at higher world prices continues, with deflationary effects on Chinese prices of agricultural produce. China's grain and rice harvests are deficient, and she will probably be an importer of wheat during 1934-35.

TRADE SUPPLEMENT

New Series

SATURDAY, SEPTEMBER 29, 1934

No. 136

THE STATE OF TRADE

THE lull in business activity noticeable in July and early August has since given way to a normal seasonal upward turn. But although the immediate outlook for trade in this country is moderately encouraging, progress is likely to be much slower than during the past year. The rapid upward movement of the business curve between April, 1933, and June, 1934, was due mainly to an improvement in industries supplying the home market, such as the building industry. Although much remains to be done to modernise the capital equipment of British industry, the scope for further rapid expansion depends very largely on a revival of international trade. Unfortunately the exchange of commodities and services between countries has so far made little headway, and although the outlook in certain channels is a little better, the main routes have yet to be opened.

The number of insured workers in employment in Great Britain rose by 34,000 between July and August and shows an increase of 376,000 as compared with the corresponding

month a year ago. The total number unemployed increased slightly owing to the registration for employment of juveniles who had left school at the end of July. The branches of activity in which the improvement was most pronounced include coal mining, shipbuilding and ship-repairing, tube manufacture, and cocoa and chocolate manufacture. On the other hand, there was a further reduction in employment in the boot and shoe industry, and in the clothing, cotton, and motor vehicle industries.

Among other general indicators, the *Economist's* Index of Business Activity, which allows for variations in trade due to holidays and other seasonal influences, shows an appreciable rise in August, though not quite up to the June level. In interpreting the index it must be remembered that it does not make allowance for the increase in population and in productivity per head. Moreover, some of its component series, such as those relating to raw-material imports and building activity, are not a record of the past, but indicators of developments in the near future. Of the sixteen series for which August figures are available, only those relating to electricity and iron and steel consumption, exports of British manufactures, and provincial bank clearings show a decline as compared with July, and the figures for cotton consumption and provincial bank clearings are the only two which are lower than a year ago. Moreover, too much importance should not be attached to the fall in the index for iron and steel consumption, for this index is not adjusted for the seasonal lull in activity in August. The steep rises in the indices of imports of raw materials and of the value of building plans passed are encouraging, for they point to an expansion of activity in the near future.

The building industry remains one of the most important factors in the revival of trade in this country. The high level of activity in building is likely to be maintained in coming months, for there has been as yet no decline in the value of building plans passed, if allowance is made for the usual seasonal decline in August. The building boom is reflected in the sustained improvement of the allied trades. The autumn revival in the iron and steel industry is well under way, and new orders are coming in more freely. The engineering industry experienced a slight setback in business in August. This was, however, partly seasonal and does not indicate a turning point for the worse. Another encouraging feature is a fairly active demand for industrial chemicals. Coal production has tended to increase and remains above the level of a year ago.

The tendency of the branches of activity furnishing consumers' goods has been somewhat irregular. The household equipment and furnishing sections remain active and reports from the motor vehicle industry are also encouraging.

On the other hand, the cotton, woollen, jute and footwear industries have so far made little headway. The trend of retail trade remained upwards in August. The improvement was again well spread geographically, and, with the exception of piece goods, sales of all classes of goods showed an increase on the corresponding month a year ago.

Trade developments abroad continue to be very uneven. Owing to the recession of business activity in the United States, the stagnation of trade in France and the restrictions on imports into Germany, prices of a number of industrial raw materials have tended to decline. On the other hand, cereals rose in price owing to reduced crops, and this should benefit the principal agricultural countries. In the United States, the business situation continued to deteriorate until about the middle of September. The latest reports are a little more encouraging, but although the late autumn may witness a slight improvement, a sustained and substantial revival is not expected in the near future.

The situation in France continued to deteriorate during August, and a revival is not yet in sight. Reports from Belgium and Holland are not very encouraging. So far Germany has not experienced a setback, but it is doubtful whether she will be able to maintain the current level of activity over the winter. There has been a slight upward turn in Italy. The news from the sterling area remains good. South America, and especially Argentina, is gradually gaining ground. The improvement in the Dominions has been maintained. China has been embarrassed by the rise in the price of silver, but reports from Japan remain favourable.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of September; in the remainder they relate to the month of August.

COAL

The past month has witnessed a modest improvement in activity, and output continued to increase until the end of the first week in September. Relatively to other industries, employment in coal mining is still poor, but the official figures for August show some progress compared both with the previous month and with August, 1933. The seasonal increase in the price of domestic coal was followed by a marked decline in demand, but there was some expansion later, and the trade is now awaiting the stimulus of colder weather. Industrial fuels have been in moderate request of coal during the past few weeks. Exports and trade has been steady during the past few weeks. Although suffered a further slight contraction during August, although they were a little above last year's corresponding figure. The threat of labour troubles in South Wales has hampered business, and shipments have been too small to re-establish regular work at the pits in that area; the anthracite section has been the least depressed. In spite of the throttling of trade with Germany, the Northern coalfields have reported moderate business and have derived some benefit from the trade agreements with Scandinavian countries.

IRON AND STEEL

Iron and steel production showed a normal seasonal decline in August. But since the beginning of September new orders have come in more freely and the autumn recovery is well under way and up to expectations. Exports in August were slightly, and imports appreciably, lower than in July, but both showed a substantial increase as compared with a year ago. There has been no decline in the activity of the principal steel consuming industries. Sheffield specialities continue to make headway. In general, production is expected to increase during coming months, but not as rapidly as last year. Reorganisation has so far made little headway.

ENGINEERING

For the first time in many months the engineering industry experienced a slight recession in business in August. This was, however, partly seasonal and does not indicate a turning point for the industry. The state of order books is still quite favourable. The improvement in exports has not been fully maintained. The steady rise in imports, especially from the United States and Germany, is causing some anxiety. As far as individual branches of the industry are concerned, business in prime movers, marine engines, boilers and power equipment, lifting and excavating machinery and locomotives is quite good. Demand for agricultural machinery has fallen off a little. The machine tool section is quiet and there have been complaints concerning an increase in imports.

MOTOR INDUSTRY

The motor industry continues to improve and manufacturers are looking forward to the new season with confidence. Makers have not been slow to take advantage of the forthcoming reduction in the horse-power tax, and, although prices on the whole show little reduction, makers have developed and improved their models. The increased importation of cars during August is to some extent due to foreign makers sending new models for show purposes, but the figure is much higher than that recorded a year ago. Exports of British cars continue well above last year's level, and it is stated that overseas purchasers are taking considerable interest in the forthcoming Exhibition—which is to be on a larger scale than ever this year.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

The index of the volume of new home orders received by the heavy electrical manufacturing industry showed a substantial increase in August owing to contracts placed by the Central Electricity Board.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

* Copyright of the British Electrical and Allied Manufacturers' Association.
The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

CHEMICAL INDUSTRY

During August business in the home chemical market was fairly satisfactory for the time of year and most prices were well maintained. The best demand was for industrial chemicals, formic and oxalic acids, formaldehyde and sal-ammoniac being particularly active. Trade in wood distillation products showed a decrease just after the holiday, but by the end of the month an improvement took place with good orders passing for all materials except wood creosote and wood tar. The coal tar products market was rather quiet, although cresylic acid and creosote oil continued in good demand. Only a very limited business was transacted in pharmaceutical chemicals and essential oils. Exports of chemicals, drugs and dyes during August were £113,303 greater in value than in August, 1933, aluminium compounds, coal tar products, disinfectants, insecticides, drugs and medicines being amongst the items showing appreciable increases.

COTTON

Business has again been unsatisfactory—partly owing to holiday influences. Cloth exports have been more encouraging, but it is feared that shipments will fall off during the remainder of the year. A settlement of the German debt question is still awaited. Partly owing to labour troubles in the United States, and partly as a result of the bearish nature of the latest American crop estimate, raw cotton prices have declined. Sales of piece-goods for abroad have been disappointing, demand from India and China being very poor. Of the smaller markets, the bulk of the support has come from Australia, South Africa and Canada, while a fair business has been done for South America; fine fabrics have attracted rather more attention for the Continent, and necessary purchasing has taken place in home trade fabrics. But production is smaller than a month ago. The yarn market is very depressed, and there is a tendency towards further curtailment of output. The price control agreement for coarse American yarns has been legalised, with severe penalties for infringement. The percentage of spinning spindles in operation declined from 73 at the end of July to 70 on August 31st. A year ago the figure stood at 75.

WOOL

Employment in the wool textile industry as a whole showed a small improvement during August, but continued much worse than a year ago; to some extent the position has been affected by local holidays. Conditions in the worsted section are particularly bad, exports of both yarns and tissues during August being well below last year's level. Sales of woollen yarns and tissues abroad are, however, larger than at the same time last year. The carpet section is the brightest spot in the industry at the present time. Raw wool prices remain at a low level, stocks both in London and Australia being large and support from Germany being absent. The fifth series of wool sales, which opened in London on September 18th, has, however, been well attended, and, although prices are substantially below those ruling at the close of the last series, competition for the home market has been fairly keen.

JUTE

The final Government forecast of the jute crop, published early in September, was larger than was anticipated and has led to a decline in prices. Buyers of yarn and cloth have withheld their orders and, with the exception of hessians, the cloth market has been dull. It is now reported that the Government of Bengal is taking more active steps to reduce the area under jute.

RAYON

The demand for viscose yarns continues on a high level and it is difficult to obtain delivery of certain qualities. The bulk of this demand is for the weaving trade, but business in hosiery yarns is also showing an improvement. Trade in acetate, although increasing, is still below normal.

LINEN

Sterling quotations for flax have again been higher. On the whole, crop reports are favourable. Yarn quotations are firm, but sales are restricted. Inquiry for cloth is nominal, as is usual at

this time of year, but production is being readily absorbed. Exporters are experiencing difficulties in the American market; total exports of piece goods showed a slight reduction during August, and were substantially less than in the same month of last year.

BOOTS AND SHOES

The August unemployment statistics reveal a further worsening of the situation in the footwear industry compared both with the previous month and with August, 1933. Conditions in the producing areas are not uniform, but increasing output appears to have become fairly general during the last few weeks. Exporters may benefit from a tariff reduction in New Zealand and Jamaica and from an increase in the Netherlands import quota.

POTTERY

The percentage of insured workpeople unemployed on August 20th showed a further seasonal increase compared with the previous month, but exports of general earthenware during August were larger than in July and continued well above last year's level. The concessions granted by the New Zealand Government to British pottery exporters have given satisfaction in Staffordshire.

AGRICULTURE

According to an official report, the corn harvest was almost completed at the end of August, the grain being mostly in good condition and of fair quality. The yield of wheat is expected to be above, but that of barley and oats below, average. Except on the best fen land, the potato yield will probably be below average and that of turnips and swedes substantially so. Mangolds have made good progress since the rain, and sugar beet promises to yield almost up to average. Present indications are that hops will be in more abundant supply than average. Hay is stated to be

of good quality but is expected to yield less than normal. Cattle have done only moderately well, but sheep have withstood the drought very well. Milk yields now show a seasonal decline.

SHIPPING

The *Economist* index of whole cargo shipping freights (1898-1913=100) recorded a further rise of 5 per cent. during August, the index being 89.6, as against 81.4 a year earlier. Rates for outward tonnage have, on the whole, remained firm, but the North Atlantic trade continues dull.

BUILDING

Compared both with the previous month and with August of last year employment in the building trades showed a modest improvement during August—the increase being fairly well spread over the individual occupations concerned. Returns from 141 Local Authorities show a seasonal reduction in the value of building plans approved in these areas during August, although the total is almost 10 per cent. in excess of last year's corresponding figure; the revival of building activity has now spread to commercial and business premises. Compared with last year, the value of plans approved showed the largest relative increase in Wales and in Lancashire and Cheshire, while a reduction occurred in the South-Western counties and in Outer London.

RETAIL TRADE

The improvement in retail sales continued during August and was well spread geographically and as between different classes of merchandise. The official retail trade statistics for August show a rise of 4.8 per cent. in the value of sales as compared with the corresponding month a year ago. Suburban London again led with an increase of 6.3 per cent. in sales.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—In general, business activity continues above last year's level, although some irregularities occurred during August on account of the uncertainties of the Federal General Election. Favourable factors are improved conditions over most of the pastoral areas and a large proportion of the wheat-producing districts, and substantial expenditure on buildings and the development of gold mines. The Stock Exchanges were buoyant during August, quotations for most classes of securities recording an advance over those of the previous month.

South Africa.—Activity in the building trades continues at a high level, railway earnings are increasing steadily and the soft goods trade is reported active. The Transvaal gold output declined during August and was below the level of a year ago. The maize crop is now being marketed and wholesale traders report a steady volume of orders. Farming conditions generally are satisfactory and agricultural machinery is selling well. The wool market at Port Elizabeth reopened on September 14th, but sales were restricted and prices lower than of late.

Canada.—The seasonal decline in business activity in August was more pronounced than in the previous month and affected a wide range of industries. An encouraging feature is the expansion of the building trade. Contracts awarded in August were valued at \$13,543,900, an increase of 21 per cent. over the previous month. The 1934 wheat crop is estimated at 277 million bushels, as compared with 270 million bushels harvested a year ago.

India.—Reports from local trading centres are moderately encouraging. The output of jute goods and paper compares favourably with that of a year ago, and iron and steel production shows an appreciable increase. The value of imports in July, at 96.4 million rupees, compares with 94.8 million rupees in June and 86.2 million rupees a year ago. Exports rose from 122.4 million rupees in July, 1933, to 125.8 million rupees in the corresponding month in 1934.

EUROPE

France.—The official indices of industrial production for July (the latest available) show a further decline in the activity of the textile, building, paper and rubber industries. On the other hand, the figures for the engineering and motor car industries show a slight rise. Preliminary information for August fails to reveal signs of a definite improvement. The number of bankruptcies declined from 860 in July to 747 in August, and carloadings increased from 40,100 per day during the week ended August 4th to 41,400 per day during the week ended September 8th. The number of persons in receipt of unemployment benefit rose from 318,242 at the beginning of August to 329,021 in the second week of September. Wholesale prices are scarcely changed on the month, but the value of industrial securities tended to decline.

Germany.—The improvement in business activity earlier in the year has so far been maintained despite the restrictions on imports of raw materials. The official statistics show a further decline in unemployment from 2,426,000 at the end of July to 2,398,000 at the end of August. Reports from iron and steel centres for August are favourable and indicate an increase in foreign orders. Pig-iron production rose from 767,200 tons in July to 798,550 in August. There has been an increase in the volume of new business placed with the engineering industry both from German and foreign buyers. Carloadings rose from 111,600 per day during the week ended August 11th to 120,200 per day during the week ended September 8th. Nevertheless, it is doubtful whether Germany will be able to maintain the current level of activity over the winter.

Norway.—The outstanding events of the month are the sale of about 150,000 tons (900,000 barrels) of whale oil to Germany at a price of 10 pounds per ton, and the re-financing of the large industrial concern, Union Company, through a loan in England of £1,150,000 at 5½ per cent. The index figure of Norway's industrial output in July indicates a considerable contraction since June, but the position is considerably better than in July last year. Exports were well maintained, showing an increase in value of about 6 million kroner compared with July, and imports rose by a similar amount. Laid-up tonnage continued to decrease, but freights obtained were not very encouraging. Favourable weather conditions prevailed during the month, and crops of hay and grain are satisfactory.

Greece.—The recent improvement seems to have been arrested. Production of cereals and tobacco is somewhat inferior to that of last year. Conditions in the market for tobacco continue favourable. The situation in the currants area is bad. An excellent oil production is expected. Foreign trade for July was smaller, both in quantity and value, than in July, 1933. Equally smaller was the shipping movement in the ports. The Bank of Greece's reserves are again rising, as is also the index number for wholesale prices. Conditions on the Stock Exchange were dull in August.

Jugoslavia.—During July recovery speeded up considerably. The figures for employment, 572,000, and for unemployment, 8,200, were the best for three years. All industrial reports show expansion, except in timber and chemicals. Mining figures for iron, chrome, pyrites and copper have reached new high levels. Export trade has become very brisk, and imports are over 30 per cent. above last year's level. The dinar is very firm, and the "black bourse" rate is now about 30 per cent., as against the official premium of 28.5 per cent.

UNITED STATES OF AMERICA

Business activity continued to decline throughout August and early September. The *New York Times* index of activity declined from 85.2 during the week ended June 2nd to 71.9 during the week ended September 15th, the lowest level reached since the beginning of November, 1933. The whole of the improvement experienced earlier in the year has, therefore, been lost. The textile strike which began at the beginning of September tended to aggravate the situation, but fortunately a settlement was reached on September 23rd. The latest reports are a little more encouraging, but although the late autumn may witness a slight improvement, a sustained and substantial revival is not expected in the near future. For example, an appreciable expansion in the building industry, the backbone of recovery in this country, is prevented by the high level of building costs, but the home renovation and building campaign should lead to a slight improvement in this branch of activity.

LATIN AMERICA

Following the benefits which have accrued to Argentina from increased shipments of grain at better prices, her economic position is improving. The foreign trade figures of the Republic for the first seven months of 1934 show that expansion is beginning to take place in the import trade, whilst the correspondingly greater increase in exports is again reflected in a higher export surplus compared with the corresponding returns for last year. The import trades should be assisted by the relief to the exchange market which will result from the current conversion of outstanding Argentine Government sterling loans; under the Roca Agreement, the advantage will accrue chiefly to British nationals. The newly sown grain crops generally are developing well. In Brazil the foreign trade returns show a considerable increase in the milreis value of both imports and exports, as well as in the export surplus, a feature being the growth of cotton shipments. Brazilian exchange derived from export bills—except coffee—has been released from control. In Chile also recovery is occurring in the export trade, and it appears possible that in the future more exchange may be available to replenish imports. Steady growth continues to occur in Peruvian imports and exports, whilst in the Central American coffee-growing countries flood damage has been largely nullified by fine weather and the crop outlook is generally satisfactory.

THE FAR EAST

Cabled reports from Japan suggest that business activity has been well maintained. The market in raw silk has been dull owing to a reduction in foreign demand, and cotton yarn was dull because of the decline in American raw cotton quotations. Production of cotton yarn during August marked a new high record. The value of imports in August was 183 million yen, as compared with 131 million yen in the corresponding month of 1933. Exports rose from 183 million yen to 209 million yen during the same period. China has been embarrassed by the rise in the price of silver. Exports declined from 51,350,000 dollars in August, 1933, to 44,910,000 dollars in July, and 44,060,000 dollars in August, 1934. The value of imports in August was 74,250,000 dollars, as compared with 100,230,000 dollars a year ago.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen & Unwin, Ltd.).

* Inc live-stock. (f) † Reimbursement.

The deterioration in France seems to have been arrested, but there is as yet no evidence of an improvement in France and the other gold countries. Both wholesale prices and Stock Exchange securities continued to decline in France. The news from the sterling area remains encouraging, and the improvement in Latin America and in the British Dominions has been maintained. The outlook in Australia is, however, less favourable owing to the fall in wool prices and a small wheat crop. Trade in China has been adversely affected by the rise in the price of silver, but the expansion of industrial activity in Japan has been maintained.

* For method of construction and earlier figures (1920-31), see Supplement to the *Economist* of October 21, 1933. (a) Corrected for seasonal fluctuations.
(b) Partly corrected for seasonal fluctuations. (c) Provisional.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Internal trade during September continued above last year's level, but the value of exports suffered a contraction, largely owing to the fall in wool prices. Imports, however, especially of textiles and machinery, were substantially higher than in the previous month. Output of butter, which is already heavy, is likely to show a substantial increase, and it is reported that late lambs are expected to be plentiful and good. Building activity continues well above last year's level, but the general outlook is affected by the low prices of primary products, unfavourable prospects for wheat and poor conditions in certain pastoral areas.

South Africa.—Despite a setback on some of the agricultural produce markets, business in general has shown an improvement during the past month. Falling wool prices were an adverse factor during September, but a firmer tendency is now in evidence and buying has increased. Gold mining continues prosperous, and building activity remains at a high level. Crop prospects were considerably improved by rains in the early part of October. Retailers are expecting a good Christmas season.

Canada.—After expanding steadily during August and holding its own in the first half of September, business activity took a downward turn in the last week of the month. The Bureau of Statistics' index of the physical volume of business, which had reached a peak figure for the year on September 8th, was 95.9 for the week ending September 29th, as compared with 97.6 for the preceding week. But it was still roughly 10 per cent. higher than the figure of 86.9 recorded for the corresponding date in September, 1933.

India.—Imports during August were heavier than in the same month of last year, but exports declined. The slump in cotton prices early in September exercised an unfavourable influence, but some improvement took place later. Quotations for rice also became firmer towards the end of the month. Sales of piece-goods have not been very satisfactory. Monsoon reports during September were favourable, but at the end of the month final rains were still badly needed in many areas.

EUROPE

France.—The latest official statistics of industrial production indicate that the downward movement in the business curve was arrested in August. The latest evidence is somewhat conflicting. The number of persons in receipt of unemployment relief rose slightly from 329,021 on September 8th to 334,051 on October 13th. Carloadings rose from 41,400 per day during the week ending September 1st to 44,500 per day during the week ending October 6th. Wholesale prices declined during the past four weeks. Stock exchange securities fell during September and early October, recovered towards the middle of the month, and subsequently declined again. The new Government loan, which was launched four weeks ago, proved a success.

Germany.—There is evidence of a slight setback in economic activity. The index of industrial production published by the Institut für Konjunkturforschung declined from 88.8 (1928=100) in July to 86.6 in August. While output of production goods rose slightly from 82.8 to 83.1, the output of consumption goods fell from 97.9 to 91.9, of which that of textiles fell from 103.2 to 87.9 in consequence of the reduction of hours prescribed in expectation of raw material shortage. But the official figures show a further decline in the number unemployed during the past month, from 2,398,000 at the end of August to 2,282,000 at the end of September. The value of imports rose from Rm. 342 millions in August to Rm. 352 millions in September. But as exports increased from Rm. 334 millions to Rm. 350 millions, the adverse balance of trade was reduced from Rm. 8 millions in August to Rm. 2 millions in the past month.

Norway.—Foreign trade figures indicate a considerable expansion compared with last year, the increase in the turnover during the first eight months being about 8.5 per cent. There are indications of a further rise in September. The industrial production index rose from 98 in July to 106 in August, as against 91 in August last year, home industries showing the largest expansion. Unemployment figures reveal a small seasonal increase since August 15th, but are slightly below those of August 15th last year. Laid-up tonnage was reduced by about 127,000 tons dead weight, 14 tankers having found employment during the month. Favourable weather conditions gave satisfactory crops of cereals and hay, and the price level for these and most other agricultural products is considerably higher than last year.

Greece.—Further progress in the economic field is being retarded by the uncertainty of the political situation, and the steady rise of the indices of wholesale prices and of the cost of living gives rise to some anxiety. Nevertheless, the foreign exchange position of the central bank is still improving, and public revenue receipts are satisfactory. Foreign trade returns for August show an increase of both imports and exports on the corresponding month last year. Production of tobacco is estimated at 27,200,000 kg., as against 31,200,000 kg. for the preceding year, while exports for the first six months of 1934 amounted to 15,336,000 kg., against 17,586,000 kg. for the same period of 1933.

Denmark.—Considerable recovery of trade and industry has taken place since last year. But during the last few weeks a volume of unemployment has become apparent in some trades. The in excess of what was expected at the present juncture. Laid-up shipping tonnage is now down to 36,966, the lowest figure for several years.

UNITED STATES OF AMERICA

Business activity in the United States rose a little towards the end of September, but the improvement has been less marked than usual at this time of the year. The *New York Times* index of activity rose from 71.8 during the week ended September 15th to 74.7 during the week ended October 6th, but a year ago the figure stood at 78.9. Despite the relatively low level of business activity, there are as yet no indications of a sustained and substantial improvement before the turn of the year. The increase of costs brought about by N.R.A. has dislocated price relationships, and, as a considerable time is required before the necessary readjustments can be effected, the stagnation of business is scarcely surprising.

LATIN AMERICA

The present season is always a critical period for the Argentine fine cereal crops. Prospects are reported to be favourable. The exportable surplus from old crops likely to be carried over to next season are expected to be light, and there is a more optimistic feeling in business circles. Foreign trade continues to show an improvement compared with last year. The average tender rate in the official foreign exchange market continues to show steady improvement in the sterling value of the peso, and arrangements are being made to meet overdue payments in respect of certain imports made prior to February 1, 1933. The improvement in Chile is progressing. Budgetary equilibrium appears likely to be achieved this year, and the Finance Minister has under consideration a measure for utilising future Government revenue from the nitrate and copper industries to effect partial payments on the external debt. Shipments of nitrate, and to a lesser degree of copper, are increasing. In Brazil, the commercial markets have responded promptly to the further relaxation of the exchange control regulations. Exports of coffee in September exceeded 1,000,000 bags, and it appears that at present no further surplus stocks are available for destruction. Improvement has occurred in the value of the milreis in the "free" market, and owing to the extremely low level of stocks of imported goods, purchases from abroad tend to increase. Sales of coffee from the forthcoming crop have already taken place in Guatemala at prices slightly higher than last year.

THE FAR EAST

Economic activity in Japan remains well above the level of a year ago, but the scope for further rapid expansion is somewhat limited. At the beginning of October the market in raw silk was steady owing to the decrease in the production of autumn cocoon, but later the market turned dull. Rice tended to rise in price on the publication of estimates indicating a reduction of 16 per cent. in yield. Imports in September, at 156 million yen, showed an increase of 24 million yen on the corresponding month a year ago. On the other hand, exports declined by 7 million yen to 171 million yen during the same period. Trade in China has been adversely affected by the rise in the price of silver. Exports fell from \$48,630,000 in September, 1933, to \$44,060,000 in August and \$41,690,000 in September, 1934. The value of imports in September was \$77,480,000, against \$74,259,000 in August and \$88,720,000 a year ago.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations (published by George Allen & Unwin, Ltd.).

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of November; in the remainder they relate to the month of October.

COAL

On balance, conditions in the coal trade showed little change during October. As compared with the previous month, the employment figures registered a substantial increase, but this was chiefly in the numbers temporarily stopped, and probably does not imply any real deterioration in the employment position. Indeed, the Board of Trade statistics of the number of wage-earners at the mines tended upwards during October, although output showed no expansion. More recently, however, a seasonal improvement in demand for house coal has been manifested, and although orders have hitherto been met largely from stock, a continuance of the cold weather should soon increase employment at the pits. Contracts for industrial fuel have amounted to a fair tonnage, and exports during October were larger than in September and were above last year's level. The increase in the French import quota and the resumption of trade with Germany should bring about some increase in exports.

IRON AND STEEL

The iron and steel industry continued to make headway during October and early November. Steel production in October was higher than in any month since March. At the beginning of November the volume of new business tended to increase, and although most transactions are for the home market, export trade has also been better. It now appears that the volume of orders on hand is sufficient for the maintenance of the current level of output well into the New Year. Buying of pig iron has increased, and there has been a fair volume of forward purchases. Several blast-furnaces are apparently to be restarted on the North-East coast. There has been a slight improvement in the semi-finished steel section, and most of the works engaged in the production of finished materials are well placed with orders.

ENGINEERING

Following a quiet period in August and September, the engineering industry experienced a normal autumn revival in the past month. The volume of inquiry has broadened and activity has increased. Moreover, the state of order-books will ensure the maintenance of the present level of activity for several months. The improvement has been felt in all the individual branches of the industry with the exception of that engaged in the production of agricultural machinery. There has been an increase in the demand for power equipment, electrical machinery, and excavating and mining machinery. Business in sugar crushing and refining machinery has been quite good. The marine engine section is fairly well placed with orders. Demand for machine tools has been fair, and business in textile machinery has tended to improve. Exports of machinery in October were higher than in any month since April, 1932.

MOTOR INDUSTRY

A further improvement in employment was recorded during October and the industry continues to show progress. Registrations of private cars during September were over 30 per cent. in excess of the figure for the same month of last year, while the number of commercial vehicles in use also recorded an increase. Imports continue to run well above last year's level, but are still relatively small, and it is satisfactory to note that the growth of exports shows no sign of curtailment. In October, the growth of vehicles and chassis amounted to 6,195, against 5,094 in the previous month and 4,747 in October of last year. An expansion of business is looked for in the coming months.

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

The volume of new home business continued to expand in October, largely owing to municipal orders, and the improvement in the export market was maintained.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

* Copyright of the British Electrical and Allied Manufacturers' Association.
The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

CHEMICALS

The home market for chemicals was moderately active during October, chief interest being shown in industrial chemicals, in particular acetic acid, acetone, formaldehyde, formic and oxalic acids and sal ammoniac. The arsenic market, however, continued to be dull, and very little interest was shown in barium chloride, lithopone and zinc oxide. The coal tar products market was rather slack for the time of year, but most prices remained unchanged. Business in pharmaceutical chemicals was also on a somewhat limited scale. Quite a good trade was transacted in most wood distillation products, although wood creosote and wood tar are still dull items. Both exports and imports of chemicals in October showed an appreciable increase in value over the corresponding month last year.

COTTON

Raw cotton prices have fluctuated little during the past month, and the American 12-cent loan has been a means of keeping up quotations. Much now depends upon the acreage plans for next season. The ballot on the reconstruction schemes for the spinning section should have been completed on November 10th, but an extension of time was granted. Exports of piece-goods suffered a slight contraction in October but were above last year's corresponding figure. There has been an increased inquiry for India, but operations for China have been decidedly limited. Conditions, however, appear to be very uneven, and some Lancashire towns are much better placed than others. Irregular buying has taken place for the home trade in dress materials, poplins, casement cloths and linings. A slightly better turnover is reported in American yarns for home use, while the Egyptian section has benefited from the Anglo-German agreement. At the end of October the percentage of spinning spindles in operation was unchanged on the month at 70, compared with 83 a year ago.

WOOL

Employment in the wool textile industry again improved during October, this being especially marked in the worsted section. With the exception of the carpet section, however, the industry is worse off than at this time last year, although the outlook is now more promising than for some time past. Imports of raw wool and exports of tops and yarns were larger than in September, but less than in October, 1933; exports of tissues declined further during the month. There is evidence, however, that the fall in the price of wool has now been checked and quotations are steadier. This has called forth a better demand for piece-goods, especially for the home trade. The conclusion of the agreement with Germany led to a large volume of inquiries and to the marking up of prices, but actual business has not been large and there has subsequently been some weakening in quotations for merino tops.

JUTE

Quotations for the raw material have been very firm during the past month and spinners and manufacturers have maintained their prices. With the exception of hessian cloth, new business has been confined to small orders, but the outlook continues favourable.

RAYON

There is marked activity in most sections of the rayon trade, and difficulty with deliveries is still a pronounced problem in the case of warp yarns on beam and crepe yarns. Despite an improvement in demand, acetate yarns are not selling as well as a year ago. Interest in spun rayon yarns made from staple fibre is growing, especially for knitting purposes, and important developments are foreshadowed.

LINEN

All grades of flax continued to advance in price, with Continental buyers most in evidence. Home spinners did not operate, as they are unable to pass on to consumers the increase in the price of the raw material. Nevertheless, there has been a considerable volume of business in yarns at higher prices. The various cloth markets have responded satisfactorily with the

exception of the United States, but the latest information from that country is more favourable.

BOOTS AND SHOES

Employment showed a further seasonal improvement during October, affecting most of the producing areas, and exports were rather higher than in September. The outlook continues fair.

POTTERY

The month of October witnessed a further improvement in employment, especially in the earthenware, sanitary ware and glazed tile sections of the pottery industry. Exports increased substantially during October and were well above the total for the same month of last year.

AGRICULTURE

According to an official report, the bulk of the potato crop had been lifted by the end of October, mainly in good condition. Except in the extreme south-west the crop was free from disease, and generally tubers are expected to keep well. Potatoes are on the small side, but the yield, estimated at 6.7 tons per acre, is equal to that of last year. Root crops improved considerably during October, but many areas of turnips and swedes had already been ploughed out as complete failures. As far as could be estimated, the yield per acre will be 8.7 tons. The mangold crop was satisfactory and its yield is estimated at 18.3 tons per acre. The sugar beet crop increased considerably in weight during the past month, and a yield of 8½ to 9 tons per acre of washed and topped roots is anticipated. Cultivation and sowing were well advanced by the end of last month, and it seems probable

that an area larger than usual will be sown to wheat. The supply of winter keep is likely to be smaller than usual, but has not been appreciably drawn upon so far. Cattle and sheep have done fairly well during the past month and milk yields were about normal for the time of year.

SHIPPING

The position in the freight market deteriorated during October, and the *Economist* monthly index of whole cargo shipping freights fell 2.7 per cent. to 87.5 (1898-1913 = 100). The reluctance of owners to keep ships laid up has led to severe competition for cargo, while the demand for tonnage is very quiet. The River Plate section has, however, shown signs of improvement, and owners are hoping for increased business from the grain trade.

BUILDING

Employment suffered a slight seasonal recession during October, the movement being general, but most marked in the case of painters. The London area suffered most, the change in other districts being relatively small. After making allowance for seasonal influences, the value of building plans approved by 140 local authorities scored a substantial increase during October and was about 20 per cent. above the figure for the same month of last year. The increase was well spread between the different classes of buildings, but was of unequal incidence geographically.

RETAIL TRADE

Although the official retail trade statistics for October are not available as we go to press, preliminary information suggests that the previous improvement has been maintained.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Cabled information indicates that good rains have recently fallen over most of Australia and have improved crop prospects generally. The wheat crop is provisionally estimated at 130 million bushels. Low prices for exports continue to check progress, but quotations for wool have recently tended to rise. During the September quarter, imports were larger and exports smaller than in the same period of last year, thus giving rise to an adverse trade balance. Internal trade is reported to be above last year's level. Sales of motor cars are improving, but building activity shows signs of slackening.

South Africa.—There has been evidence recently of a slowing down in the rate of business expansion, partly traceable to the set back on the wool markets. Imports during October showed a substantial increase, but exports a decrease, compared with the same month of last year. Building continues active and railway tramways are still moving upward. Farming prospects improved considerably as a result of abundant rainfall in October. Mining continues prosperous.

Canada.—Although economic activity continues above last year's level, the autumn expansion has not been all that was hoped for, and there is evidence of a fall in the rate of progress. The uncertain economic outlook in the U.S.A. is an adverse factor and is tending to check development. According to preliminary estimates issued by the Dominion Bureau of Statistics, the area sown to winter wheat and winter rye crops shows a reduction compared with the revised estimates for last season. The condition of the crops is reported to be good.

India.—Both imports and exports showed a slight contraction during September, but were well in excess of the figures for the corresponding month of 1933. Rainfall has been light to moderate in most of the provinces and standing crops are reported to be in fair condition generally. It is estimated that the total area under rice is 75,261,000 acres, an increase of 75,000 acres over the 1933-34 figure. In regard to the area sown to cotton, this year's total is reported to be 20,365,000 acres, or 3 per cent. more than last season.

EUROPE

France.—The official index of industrial production declined from 110 (1913 = 100) in September, 1933, to 97 in August and 95 in September, 1934. Preliminary information suggests that industrial activity is still declining. Car-loadings rose slightly from 44,500 per day during the week ended October 6th to 46,700 per day during the last week of October, but the number of persons in receipt of unemployment benefit increased from 323,365 on September 29th to 347,804 on November 3rd. Another indication of the deterioration is the continued decline in the value of industrial securities. Wholesale prices also continued their downward movement throughout October and early November. Moreover, farmers are suffering from depression on the wheat and wine markets.

Germany.—Although the volume of business has declined a little, there is as yet no evidence of a definite setback. The index of industrial production published by the Institut für Konjunkturforschung declined from 87.4 (1928=100) in August to 86.3 in September. A year ago the figure stood at 71.0. The number of unemployed declined further from 2,282,000 at the end of September to 2,268,000 at the end of the past month. Car-loadings rose from 125,700 per day during the week ended September 29th to 136,700 per day during the week ended November 3rd. Recent reports from individual industries are fairly favourable, improvements having taken place in machinery, ironware and cutlery and in building materials. Industrial securities tended to decline, and wholesale prices to rise, in value. Imports declined (mainly raw materials), and exports rose, slightly in October, resulting in an export surplus of Rm. 16.4 millions.

Norway.—Industrial production showed further improvement in September, although to some extent this improvement was the result of seasonal influences. The index rose from 106 in August to 112 in September. Car-loadings have increased quite appreciably during recent weeks. Unemployment rose by 9 per cent. between September 15th and October 15th, chiefly owing to a seasonal increase of unemployed agricultural workers. Customs receipts in October were 3 million kroner higher than October last year, and bank clearings rose from 190 million kr. in September to 235 million kr. in October. Laid-up tonnage decreased by about 50,000 tons during October, but there was no recovery in the slump on the freight markets.

Greece.—Agriculture continues to benefit from favourable weather, all the crops being equal to or better than last year's. Industrial conditions are also good, most branches reaping record profits under the privileged situation created for them by State protection, import restrictions and currency depreciation. Foreign trade returns for September disclosed a further increase in both exports and imports. Market conditions for tobacco and currants have improved, but those for wines and olive oil remained unsatisfactory. The financial situation remains satisfactory. Price indices continued their upward movement.

Denmark.—Business activity was well maintained in September. The index of production for that month, at 124.5 (1927=100) was the same as for August, and compares with a figure of 102.9 for January. But during October there was a slight increase in the number unemployed from 81,098 to 85,595.

UNITED STATES OF AMERICA

During October and early November the tendency of business activity has been upwards, but the improvement has so far been small and uneven. Retail trade was well maintained in October. But the experience of different industries has been conflicting. The *New York Times* index of activity rose from 74.7 during the week ended October 6th to 76.0 during the week ended November 10th. A year ago the figure stood at 72.9. There are signs of a slight improvement in house building and in the iron and steel industry, but towards the middle of November steel production was still only at the rate of 27½ per cent. of capacity. While the improvement is expected to continue at a slow rate, President Roosevelt may attempt to speed up recovery by further devaluation, increased Government expenditure, a stimulus to building and the conclusion of bilateral tariff agreements.

LATIN AMERICA

Prospects for the Argentine cereal crops on the whole are satisfactory. The monthly official trade figures continue to compare favourably with those of last year; the value of both imports and exports is higher, and the export surplus has increased further. An important exchange concession has been granted to wool exporters, who are being permitted this season to sell their export drafts to the *Control Commission* at the official remittance rate, less 5 per cent.—i.e. about 17 pesos per £ sterling, instead of 15 pesos as hitherto. The Brazilian coffee markets are quiet, although stocks are reduced, and the volume of shipments continues fair. Arrivals of new crop coffee are late and dealers are reluctant to sell at current prices. The statistical position of the commodity is strong, and the National Coffee Department is actively continuing the destruction of all surplus stocks of low-grade coffees. The commercial situation generally is better and imports tend to increase. The improvement in Chilean conditions is maintained, although severe weather has adversely affected the crops. Further recovery is recorded in Peruvian foreign trade, with marked expansion in imports. The outlook for the Central American coffee crops remains favourable; forward sales continue to be negotiated, but prices are easier owing to import restrictions in Germany—one of the principal markets.

THE FAR EAST

Japanese commodity markets have not been very active in recent weeks, but the raw silk situation has improved a little owing to the anticipation of a decline in the autumn crop and a better inquiry from abroad. Industrial activity has apparently been maintained. The value of Japan's foreign trade in October showed a sharp increase on September and on the corresponding month last year. Imports rose from 170 million yen in October, 1933, to 171 million yen and 200 million yen in October, 1934. Exports rose from 139 million yen in September, 1933, to 156 million yen in September and 178 million yen in October, 1934. China's imports in September, at \$77,480,000, compare with \$74,250,000 in August, and \$83,720,000 in the corresponding month last year. Exports declined from \$48,630,000 in September, 1933, to \$44,060,000 in August and \$41,690,000 in September, 1934.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen & Unwin, Ltd.).

No. 139

ensure continuation of the current level of activity for several months. The same can be said of the engineering industry. Production of motor vehicles also remains at a high level and prospects are quite good. The iron and steel, engineering and motor vehicle industries are largely responsible for the increase of £1,606,710 in our exports of manufactures between November, 1933, and the past month. The building and allied industries have contributed substantially to recovery. The decline in building activity in November is seasonal, and the high level of building plans passed suggests a resumption of activity on a large scale next spring. The improvement in the heavy industries has resulted in increased consumption of raw materials and fuel.

Some of the industries furnishing consumers' goods have also made headway. The rise in wool prices has brought out a considerable number of orders in recent weeks. The cotton trade is also a little more active, and there are at last prospects of some measure of reorganisation. Produc-

The increase in consumers' purchasing power is also revealed in the substantial rise of the note circulation to a record level.

A survey of developments abroad still reveals a number of bad spots, but the latest news is not altogether discouraging. After declining from 95.5 (1928 = 100) in April to 85.5 in September, the index of world industrial production, compiled by the Institut für Konjunkturforschung, rose to 86.7 in October. Similarly, the volume of international trade has recently tended to rise again, and the downward movement of the prices of a number of important raw materials has given way to a firmer tendency.

Nevertheless both world production and trade are still somewhat lower than a year ago. The latest evidence points to a slight improvement in business activity in the United States, but the durable goods industries, the backbone of British recovery, remain prostrate. Moreover, with the exception of motor-car production, there are as yet no signs of an early and substantial revival of these industries in the United States. There has been no improvement in the situation of the gold bloc, and Italy is experiencing difficulties in maintaining the gold standard. Germany has so far been able to maintain the previous improvement, but there are signs of a lull in the recovery of Scandinavia, Canada and Australia. Reports from South Africa and South America remain quite encouraging, and there has been little change in the situation of Japan.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of December; in the remainder they relate to the month of November.

COAL

Employment in coal mining improved slightly during November and was better than in the corresponding month of last year. The output of coal expanded during the same period and continued to increase in December. On the other hand, exports suffered a reduction last month to below the 1933 level, South Wales being chiefly affected by this adverse movement. Present indications, however, point to a gradual improvement in the position during the present month, the North East having benefited from Spanish purchases, while the slight increase in the French import quota has been to the advantage of Welsh anthracite shippers. No change in the quota for January is anticipated. The demand for house coal during recent weeks has experienced less than the normal seasonal increase, and stocks have accumulated, on account of the mild weather. Industrial demand has, however, been well maintained and consumption by gas and electricity undertakings has increased seasonally. Production in most areas was speeded up prior to the Christmas stoppage and prices were firm.

IRON AND STEEL

Production and exports of iron and steel have been well maintained during November and early December. As usual the approach of Christmas led to a contraction in new business towards the middle of December, and it is unlikely that trading will be resumed on a normal scale until about the middle of January. But most producers have sufficient orders on hand to ensure continuation of the current level of activity for several months. A number of concerns in the semi-finished steel section have suspended deliveries until after the holidays, but, according to the Iron and Steel Exchange, prospects for the New Year are favourable to an expansion of business. The finished steel section is also expected to make a good start in 1935, for consumers have recently placed good contracts.

ENGINEERING

The improvement in activity noticeable in October was maintained in November. Exports, though slightly lower than in the previous month, remained well above the level of the corresponding month a year ago. British India, South Africa and Australia continue to be the best overseas customers of the industry. Although inquiry is as active as ever, there has recently been a lull in the volume of new business placed. There has been an improvement in the demand for excavating and lifting machinery. The sections engaged in the production of boilers and prime movers are also doing well. Demand for textile machinery from India has improved, and makers of agricultural machinery are busy on spring orders. There was no change in the machine tool and marine engine sections, and business in sugar-crushing and refining machinery has fallen off a little.

MOTOR INDUSTRY

The motor industry is still active and employment continues on a high level. New registrations of private cars increased substantially during October and were 40 per cent. above the corresponding figure for 1933. The number of commercial vehicles in use also recorded a considerable increase. During November there was a decline in exports of motor vehicles and chassis to 5,754—this being rather more than in November last year. The reduction is, however, small, and it is not possible to draw any definite conclusions from it, especially in view of the fact that exports are usually irregular at this time of the year. Imports continue to run well above the 1933 level.

ELECTRICITY

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

While the volume of new export business experienced a slight fall in November, the home market continued to expand in the past month; but there are now signs that the pace of the expansion is slowing down.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*

The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

CHEMICALS

On the whole, business continued fair during the past month and a number of industrial chemicals—especially acetone, formaldehyde, formic and oxalic acids—have been in good demand. Sales of wood distillation products have been good, while a fairly satisfactory business has been transacted in rubber chemicals, dyes and intermediates. Conditions have been rather difficult in the coal tar products market, but creosote oil, pharmaceutical chemicals and essential oils have been in moderate demand. Owing largely to smaller sales of aluminium compounds, ammonium sulphate, salt, drugs and medicines, exports of chemicals in November were below last year's level. But some items—notably coal tar products, caustic soda, dyes and dyestuffs—recorded an increase. For the first time this year imports were less than in the corresponding month of 1933.

COTTON

Raw cotton prices have fluctuated little during the past month. The United States crop is now expected to be about 9,750,000 bales, while official announcements regarding next season indicate that the area under cultivation will be about 32 million acres, from which a crop of 12 million bales is expected. It is understood that the farmers have supported by ballot a continuance of the Bankhead Act. Lancashire cloth manufacturers have experienced a fairly substantial inquiry, although actual business has been patchy. Sales to India have been moderate, but no increased business with China can be recorded. Fair sales of cloths for printing and dyeing have been made to South America and Scandinavia, while freer buying in dress materials has taken place for South Africa and Australia. Home trade advances have been fairly encouraging and activity in the weaving towns shows little alteration. Irregular business has been done in the yarn market. Trade in the Egyptian section has improved slightly, but most of the demand in the American branch has run on the coarser counts. At the end of November the percentage of spinning spindles in operation was 72, against 70 in October and 86 in November, 1933.

WOOL

The conclusion of the Anglo-German debts agreement led to a large volume of inquiries and the temporary marking up of prices, but, as we pointed out a month ago, there was a reaction towards the end of November. Subsequently, however, a recovery set in and the final series of London wool auctions for this year yielded a satisfactory volume of business. The firmness of raw wool prices has been accompanied by an improvement in quotations for tops and yarns, and it is reported that prices at the Australian and New Zealand sales have also hardened recently. As regards employment in the wool textile industry, there was a further slight improvement in the worsted section during November, but a slight decline in the woollen section; in both branches the position was worse than a year ago. Employment in the carpet section continues good. Activity has increased during December, and trade is relatively good. Spinners and manufacturers are fairly well placed for orders in the New Year.

JUTE

The raw material has been firm in price during recent weeks, but demand has continued rather quiet. A good volume of inquiries for yarn and cloth has been experienced, but business has been slow except for hessians. Prices are firm for early delivery, but weaker for future positions.

RAYON

Despite a slight falling off of new orders, production has been well maintained in recent weeks—especially on the weaving side, where deliveries of viscose yarns continue on a high level. Acetate output, however, is still considerably lower than at the same period of last year.

LINEN

Flax continued its spectacular rise in price and now costs almost twice as much as a year ago. Supplies of this textile fibre are, of course, largely controlled by the Soviet and Baltic monopolies. The advance in prices has tended to check new business. Yarns are in good demand, but spinners are not inclined to enter into

forward engagements. A satisfactory volume of new business has been arranged for both home and foreign consumers.

BOOTS AND SHOES

Employment again improved slightly during November, but short time is still being largely worked in the industry. Exports showed a reduction compared with both the previous month and with November, 1933, while imports displayed a similar movement. The provisional agreement regarding wages and working conditions was accepted by a large majority and will come into force on January 1st next.

POTTERY

The employment position deteriorated during November and was below the level of a year ago. Short-time working continues to be common in North Staffordshire. Exports of general earthenware, although still in excess of last year's corresponding figure, suffered a reduction last month.

AGRICULTURE

An official report states that land work generally was well forward on December 1st, and that autumn-sown corn has every appearance of being strong and healthy. Total production of potatoes is estimated at about 3,439,000 tons. On good soils the tubers are, on the whole, of a fair size, but on lighter lands the proportion of smalls is above the average. Disease appears to be less prevalent than usual. The total production of mangolds is estimated to be about 4,733,000 tons, and the roots appear to be sound and of good keeping quality. Turnips and swedes are poor crops, and the estimated yield per acre of 9.0 tons compares unfavourably with the average yield of 12.4 tons for the last ten years. The yield of sugar beet is well up to expectation, and the

sugar content is generally higher than usual. Cattle and sheep have done fairly well during November. Winter keep has not been drawn upon to any appreciable extent. Milk yields are about normal.

SHIPPING

As measured by our monthly index number, the general level of whole cargo shipping freights fell by a further 1.6 per cent. during November, the figure being 86.2 (1898-1913 = 100), as against 85.5 at the same time a year ago. There has been little demand for tonnage except in the Plate section. It is reported that considerable forward business has been booked in this branch during recent weeks.

BUILDING

The month of November witnessed a further seasonal decline in employment in the building trades, the movement affecting all the sub-groups except plumbing, and being particularly severe in the case of painters. The decline was very evenly spread geographically. The position in practically all sections was, however, substantially better than a year ago, but the weather during recent weeks has been particularly unfavourable for outside work and no improvement is likely this month. If allowance is made for seasonal influences, there was an appreciable rise in the value of building plans approved during November, the total being about 20 per cent. above last year's corresponding figure.

RETAIL TRADE

The value of retail sales in November was about 3 per cent. greater than in October and almost 4 per cent. in excess of last year's corresponding figure. The improvement was well spread geographically; furniture was the best category, but sales of piece-goods were appreciably less than a year ago.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—The prospects of the pastoral industries improved during the past month, but the wheat harvest will be substantially smaller than in the previous season. The output of butter increased seasonally during November, and was in excess of last year's level, but the arrangement for spreading shipments has prevented exports from increasing correspondingly. Prices for the chief export commodities continue low, although quotations for wool have hardened at the recent auctions.

South Africa.—Trade is still on the up-grade; unemployment is rapidly disappearing and there is a shortage of skilled artisans. Retail stores are reported to be busy and a record Christmas trade is anticipated. Building continues active and gold mining is prosperous, while railway earnings are at a higher level than for five years. Maize is in short supply. The wheat crop is now provisionally estimated at about 834 million lbs.

Canada.—Trading in livestock was brisk during last month and the butter markets exhibited a firmer tendency. Wholesale prices show little change. Production of the steel mills is maintained at a fairly steady level, but demand for constructional and railway materials continues poor, although building is a little more active. Carloadings continue above last year's level. Both wholesalers and retailers report a rather better volume of business and there is evidence that the depression in the primary industries has now been checked. Although wheat exports continue below the level of a year ago, overseas trade returns in general show an improvement over 1933.

India.—The available information points to a slight further improvement in the general economic position. Trading in cotton was active during November, heavy buying by Japanese interests being a prominent feature. Prices have considerably improved. Colder weather has stimulated the demand for heavier types of piece-goods, and business in some centres has been brisk. Jute prices have shown a tendency to harden recently.

EUROPE

France.—The official index of industrial production declined from 108 (1913 = 100) in October, 1933, to 95 in September and 94 in October, 1934. The decline was fairly general, only textiles showing a slight improvement. Moreover, unemployment continued to increase rapidly in recent weeks. The number of persons in receipt of unemployment benefit rose from 347,804 on November 3rd to 395,680 on December 15th. Car-loadings have failed to increase, but reports from the iron and steel industry are a little better. Wholesale prices continued to decline almost without interruption. There are no definite signs of an early revival, though the rise in Stock Exchange securities in recent weeks reflects an improvement in confidence.

Germany.—Productive activity has so far been well maintained. The index of industrial production of the Institut für Konjunkturforschung for October was 86.3 (1928 = 100), against 86.0 in September and 71.9 in October, 1933. The rise in unemployment from 2,267,700 at the end of October, to 2,353,600 at the end of November is largely seasonal. Carloadings increased during the first three weeks of November, but declined during the fortnight ended December 8th. Production of pig-iron in November was 829,155 tons, against 842,484 tons in October. The machinery construction industry was occupied to 63 per cent. of normal, as compared with 60 per cent. in October. Both imports and exports declined in November and the excess of exports over imports was reduced from Rm. 17 millions in October to 10 millions in November. Quotations for industrial securities tended to decline.

Norway.—The improvement in business has been fairly well maintained. The volume of imports and exports in October showed a rise of 24 per cent. and 9 per cent., respectively, on the corresponding month last year. Despite a slight seasonal increase, the number of unemployed is much smaller than a year ago.

Greece.—The areas sown with cereals are larger this year than in 1933. Exports of currants and tobacco increased in November. There was a slight rise in imports in October, but a fall in exports. Movements at the ports were also smaller, though the number of laid-up ships and of unemployed seamen declined. For the first time after several months the gold and exchange reserves of the bank of issue show a decline, due apparently to revival of the illicit exchange market. Budget receipts continue satisfactory.

Sweden.—Although there has been no further increase in industrial activity, the previous improvement has, on the whole, been well maintained. Shipments of timber products remained active until the beginning of December. The market in paper pulp has recently been firmer, but the situation in the paper industry shows little change. Despite a slight decline in the volume of new orders, activity in the iron and steel industry has so far been well maintained.

Denmark.—Autumn-sown crops and seed crops have made favourable progress. The market in butter improved during November, but towards the end of the month demand slackened and quotations declined. Trade in bacon was slow. The index of industrial production for October, at 115 (1913 = 100) showed no change on the month. The proportion of unemployed workers in November was 22.7, against 25.7 in the corresponding month in 1933. Foreign trade in November showed an expansion on the year.

Holland.—Industrial activity in Holland continued at a low level and there are no signs of an early improvement. Unemployment has risen in recent weeks. Imports have declined sharply since last year, but exports are at about last year's level.

UNITED STATES OF AMERICA

Business activity continued to increase slowly during November and early December, but progress was uneven. The *New York Times* index of activity rose from 76.0 during the week ended November 10th to 82.1 during the week ended December 15th. A year ago the figure stood at 77.1. A rise in Stock Exchange securities and in commodity prices reflects the improvement in confidence among business men. Retail trade has been well maintained and wholesale houses also report a larger turnover. Moreover, there are indications of a slight revival in some of the heavy industries. Production of electricity, steel and motor vehicles has tended to rise in recent weeks. Present indications point to a further, but slow, improvement in the near future.

AMERICAN TRADE STATISTICS—NOVEMBER, 1934

LATIN AMERICA

Climatic conditions in Argentina tended to delay harvesting of the fine cereal crops, although favouring the growth of maize. Argentina's foreign trade returns continue to compare favourably with those of last year. A statement has now been issued of the profits on purchases and sales of Argentine official exchange, showing that the total to the end of September last was 91.2 million paper pesos, of which 24.6 millions were required to meet Government "losses on exchange," whilst the losses of the Grain Regulating Board were only 8.8 millions. A large part of the Fund has been deposited in London to form an Exchange Equalisation Fund, and modification of the exchange control system is envisaged "as soon as conditions improve." As from December 10th, official exchange in Brazil is being allotted to foreign countries proportionately to their purchases of coffee; this tends to favour imports from the United States at the expense of other countries. Brazilian and Chilean foreign trade figures are better than last year. A Bill to provide for a partial resumption of the external debt service is before the Chilean Congress. Peruvian conditions are affected by difficulties in the sugar industry, and relief measures are afforded under a Law recently passed. Liquidation of frozen commercial credits is proceeding in Colombia and also in Ecuador, and both countries appear to be working towards abolition of exchange control.

THE FAR EAST

The failure of the Japanese rice crop early in November gave rise to widespread distress and the Government had to organise relief measures on a large scale. The announcement by the Finance Minister that taxation was to be increased caused a setback on the Stock Exchange and conditions have subsequently been very quiet. Cotton remains steady in price, but raw silk quotations continue at a low level and exports of the latter commodity have been on a small scale recently. Overseas trade continues to show an improvement when compared with a year ago, imports during November amounting to 184 million yen and exports to 197 million yen, as compared with 169 and 163 million yen, respectively, in November, 1933. China's trade remains below last year's level. Imports rose from \$79,000,000 in October to \$83,520,000 in November, and exports increased from \$42,660,000 to \$49,770,000. In November, 1933, the value of imports and exports was \$96,180,000 and \$54,210,000, respectively.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen & Unwin, Ltd.).

ACTUARIES' INVESTMENT INDEX

To meet the needs of large, institutional investors, such as insurance companies, banks and investment trusts, the *Economist*, by arrangement with the Institute of Actuaries and the Faculty of Actuaries in Scotland, now publishes exclusive weekly extracts from 'The Actuaries' Investment Index'—a compact, continuous, up-to-date and really representative index of British security movements.

This index which is used as a basis for judgment by institutions controlling millions of investment funds, will be found of the greatest utility by the private investor.

INSURANCE IN 1933

A REVIEW OF PROGRESS AND PROSPECTS

GENERAL RESULTS OF THE YEAR

The varying prosperity of insurance companies, whose function it is to supply necessary services to all forms of industry, must reflect in a broad way the healthiness and activity of trade in general. This is true of all insurance companies, but, owing to their important international interests, applies in the case of British offices over a much wider area and creates for them special technical and financial problems. In the circumstances, the 1933 results, as set out in the annual reports and enlarged upon at the meetings, must be considered as very satisfactory, and are a tribute to the efficiency with which the affairs of the companies are conducted. Before dealing with the individual branches of insurance, we are presenting, in accordance with our usual practice, a table showing the general results of 22 of the most important companies in respect of all branches combined. The figures in the table have been arrived at on a uniform basis for all the offices.

The reserve for unexpired risks—except in the marine branch—has been taken in all cases at 40 per cent. of the premium income of the year, which is the basis used by the majority of the offices. It is not possible to use a uniform method of arriving at the underwriting profits in the case of the marine accounts, and the method of the company concerned has been followed. Special attention is drawn to the headings of each column in the table below, for these explain the principles upon which our calculations are made. These calculations may differ from the published results of individual companies, as is only to be expected, when reducing various data to comparability; and this fact should be borne in mind.

The trading surplus shown in column 2 has been obtained after deduction of all allocations to investment, contingency, etc., reserves, as it is not possible to state in any instance how much of the transfer (if any) may be

regarded simply as an addition to free reserve, and how much is required by ordinary business prudence. Some slight injustice may be introduced in individual cases by this system, which, on the whole, however, is probably the fairest to adopt.

Column 4 indicates the amount of the contribution to the net trading surplus derived from the operations of the life department; such profits emerge from actuarial valuations, and in the majority of cases these valuations take place only at quinquennial intervals. It may be mentioned that some companies set aside the shareholders' proportion of surplus revealed at a quinquennial valuation, and in each year of the new quinquennium credit one-fifth of such surplus to profit and loss. This practice is not universal, however, and hence the absence of any figure in this column for those companies which transact life business merely means that no valuation was due to be made. The Prudential, incidentally, is in a special position, since the life profits belong entirely to the "A" shareholders, and the table is concerned only with the "B" shareholders, whose interest is confined to the remaining departments, and who have no rights to any share in the surplus of the life department. The interest shown in Column 6 is arrived at after deducting income

tax at 5s. in the £, but the figures in Column 7, which are taken from the published accounts of the offices, allow in some cases for income tax at the present rate of 4s. 6d.

DIVIDEND POSITION

It will be seen that during 1933 80 per cent. of the dividends was met out of interest earnings, or, excluding the Pearl, whose activities are confined mainly to life assurance, 86 per cent. By the policy of meeting the cost of at least a very substantial part of the dividend from interest earnings, a considerable portion of the underwriting profits is available to augment reserves. As a result of this practice the offices are in a very strong financial position.

The following table gives the aggregate results of the 22 offices for each of the last five years, as compiled from previous issues of the Supplement. The premium income has again fallen, but the net trading surplus shows considerable expansion. The fall in the interest income—by rather less than 5 per cent.—is significant but is, in any case, much smaller than the increase in trading surplus. In most cases the rate of dividend has remained the same as in 1932, and for the rest the number of increases exceeds the number of decreases.

Year	Total Premium Income (Excl. Life Annuity and Sinking Fund)	Underwriting Profits		Dividend Position		
		Net Trading Surplus (Excl. Life Annuity and Sinking Fund)		Total Net Interest Earnings	Cost of Ordinary Share Dividend	Proportion of Dividend Met out of Interest Earnings
		Amount	Percentage of Premium Income			
1929	119,734,910	2,851,132	2.4	7,368,926	8,219,274	90
1930	114,944,401	1,986,275	1.7	7,320,575	8,322,312	88
1931	111,077,136	1,729,815	1.6	7,082,694	8,056,895	88
1932	106,901,260	1,291,704	1.2	6,834,987	8,086,479	85
1933	102,240,852	2,339,247	2.3	6,507,391	8,153,563	80

LIFE ASSURANCE

In 1932, following on the Government conversion operations, very substantial appreciation took place in the market value of the assets of life offices; probably the whole of the heavy depreciation of the previous year was recovered. In 1933 further appreciation took place, though to a much modified degree. While this appreciation is gratifying and by no means to be despised, it is really of much less importance to offices than the fall in the rate of interest obtainable on investments. Last year practically all companies experienced a substantial fall in the net rate of interest on the life funds, but the amount of the fall varied considerably. In the main, it was due, no doubt, to the different methods used in the valuation of the assets. The rate is likely to fall still further with the continuous investment of new money in spite of the welcome alteration in the rate of income tax to 4s. 6d. in the £. In view of the altered investment conditions, annuity rates have been made much more stringent during the last two years, but, even so, the amount received in purchase money last year, excluding Dominion offices, was practically the same as in 1932, when a phenomenal increase took place—from £4,753,000 in 1931 to £13,281,000. While the changes made in single premium life assurance quotations have not been so general or so drastic, offices have shown no desire to cultivate this class of business. Nevertheless, the single premiums in 1933 were considerably in excess of those received in 1932. With the publication this year by the Institute and Faculty of Actuaries of new tables based on recent mortality experience of the British life offices, it is not unlikely that in the near future considerable modifications

will take place in the premium rates for new policies. These modifications will vary according to the class of policy and the age of the life assured. One office—the Clerical, Medical and General—has already altered all its published rates, taking into account the new mortality tables and the altered investment conditions. The summary of the returns made by the British life offices to the Board of Trade for 1932 shows that exclusive of industrial insurance policies there were 5,318,000 policies in force at the end of that year, representing sums assured and existing bonuses of £1,705,858,000. The total interest income in 1932 was £33,945,000 and the premium income £73,137,000, while the accumulated funds totalled £792,651,000. The following table is compiled from the same official source.

Year	Aggregate Net New Sums Assured under New Policies	Increase or Decrease per cent. compared with preceding Year

We have omitted the figures of the Dominion offices, as there are no published figures of new business in this country, and information is available from private sources in a few cases only. The total production of each office is, of course, available, but this item is not relevant to our present purpose.

It will be seen that the new business last year was very substantially in excess of the previous year's figure, and the increase was most marked in the industrial type of office, led by the impressive totals of the Prudential. This is a reversal of the experience in 1932—when the new business of this type of office showed a decrease—and the favourable results have doubtless been made possible by the improvement in the unemployment position.

(b) ANNUITY BUSINESS

In view of the abnormal amounts received in the purchase of annuities, the following table is of topical interest. As will be seen, the total consideration money was slightly greater in 1933 than in 1932. As annuity rates were made much more stringent during these years, this result illustrates the insistent demand for annuities, and so long as the rates of interest on gilt-edged investments remain at the present low level, that demand is likely to persist. Among individual offices the Prudential, the Legal and

General, and the Equity and Law showed marked increases; on the other hand, large decreases took place in the case of the North British and Mercantile and the Standard.

EXPENSE RATIOS

In the following table of the ratio of expenses and commission to premium income, an allowance has been made in order to eliminate the disturbing effect of single premiums; these have been omitted from the premium income, and 4 per cent. of their amount treated as a deduction from expenses. A few companies show their annuity expenses separately, but where, as is generally the case, the annuity expenses are not separately shown, the total commission and expenses have been used, in accordance with our usual practice. The abnormal flow of annuity business in each of the last two years suggests the desirability of showing annuity expenses separately. Expense ratios can only be interpreted as indicative of broad tendencies, and cannot by themselves be taken as a measure of the relative efficiency of different offices. They are affected by the proportion of new business and by the type of policy mainly favoured by each office, and, in the case of composite offices, by the method of allocating overhead expenses between the various branches. It will be seen that the average expense ratio in 1933 was somewhat higher than in 1932, a result which can be readily explained by the increase in the new business. For purposes of comparison, the corresponding ratios for the last pre-war year are given in the table, and it will be seen that the figures for the last three years are, in the majority of cases, considerably higher than for 1913.

MORTALITY

The published figures of the companies do not enable any exact conclusions to be formed in regard to the mortality experienced. However, it would appear from a

EXPENSE RATIOS. (Adjusted for Single Premiums by deducting 4 per cent. of their Amount from the Expenses)

study of the accounts and from indications given at some of the annual meetings that the mortality in 1933 was normal—on the whole rather more favourable than in some recent years. The standard mortality tables used by the majority of the offices, based, as they are, on the experience of British offices during the 30 years 1863-1893, have long ceased to represent even approximately present-day conditions, and consequently statements of the percentage which actual mortality bears to that expected according to the standard tables are largely meaningless, and even misleading. In last year's Supplement we hazarded the opinion that modern assurance mortality was "probably only about 50 per cent. of this standard, except at the more advanced ages," and added that valuable light would be thrown on this point when the results of the joint investigation of the Institute and

Faculty of Actuaries was published. These results are now known, and refer to the general experience of the offices in this country during the six years 1924-1929. Now that the offices are in possession of up-to-date statistics of a solid nature various questions of importance—which have been somewhat shelved for lack of reliable data—will be the subject of close study by the companies' actuaries. The following table gives a comparison of the mortality shown by the new tables with that under the 1863-1893 experience:—

Age	DEATHS AT VARIOUS AGES PER 10,000 LIVING AT THESE AGES		
	1863-1893	1924-1929	(2) × 100
30	(1) 75	(2) 24	32
40	98	39	40
50	154	76	49
60	292	197	67
70	622	533	86

INTEREST EARNINGS

The rate of interest earned on the funds of a life assurance company is the most important indication of its profit-earning capacity. Income tax is charged on the gross interest earned less expenses, so that the effective rate of tax on the gross interest is considerably lower than the standard rate. Under present conditions this effective rate is probably about three-quarters of the standard rate.

In comparing the figures in the appended table, it should be borne in mind that the difference between the rates earned by two offices is not due entirely to the particular distribution of the investments, and may arise, for example, from one office taking the book values of its assets on a more stringent basis, or to the fact that the interest credited to the life account includes interest from investment or other specific reserves, not forming part of the life funds. The net rate of interest expressed in terms of the actuarial liabilities would be a more valuable measure of the profit-earning capacity of the existing business, but in most cases published data is not available for obtaining this rate.

* Adjusted figures. Reversionary securities are assumed to earn 6 per cent. net.

It will be seen that in 1933 there was a further fall in the average rate of interest earned, and in spite of the reduction in the rate of income tax some further decline is probable during the present year. Modifications in premium rates have become urgent through the fall in the rate of interest earned on new money, and now that monetary

tables based on up-to-date mortality are available, they are likely to be made in the near future.

LIFE OFFICE INVESTMENTS

The table which follows shows in some detail the exact classification of the assets of the principal companies in groups:—

LIFE ASSURANCE SOCIETY
18, LINCOLN'S INN FIELDS, W.C.2

Established 1844

Funds Exceed £15,000,000

In the construction of any lasting edifice the most vital necessity is that of

STRENGTH

STRENGTH
Before erecting the Forth Bridge the engineers calculated the maximum strain the bridge would require to stand with wind at the highest velocity ever experienced in this country. They multiplied this result by three. On such principle the STANDARD Life is founded.

The present impregnable position of the "Standard" has been achieved by many years of strict adherence to this most important consideration.

Owing to the lower rates of interest prevailing, increasing difficulty has been experienced in the last few years in obtaining satisfactory mortgages, and the proportion of assets so invested, which so recently as 1930 was 29.3 per cent., fell by the end of last year to 24.2 per cent. The drop last year was in part due to a substantial reduction in the amount of policy loans. Concurrently with the reduction in mortgages there has been an increase in British Government securities from 16.9 per cent. in 1930 to 22.0 per cent. in 1933. It will be seen that the fall in the former class has been counterbalanced by an equal rise in the latter class. A notable increase took place last year in the proportion invested in ordinary stocks. According to the Actuaries' Investment Index, all classes of Stock Exchange securities appreciated in value in 1933, but in the case of British Government securities the increase was relatively small. The market values of the assets of most companies appreciated in 1933, but owing to the differences in the investment policy the results must have varied considerably with individual offices. From the above table it will be seen that while British Government securities in the aggregate form the largest single item, excluding mortgages, the proportions invested in this class of security varied from under 5 per cent. in the case of the Clerical, Medical and General to over 40 per cent. in the case of the Pearl and the Scottish Provident. Again, 7 of the 39 offices in the table have over 10 per cent. of their funds invested in ordinary shares, the proportion being, as in previous years, considerably higher for the group of mutual offices than amongst the remainder. For the purpose of comparison we give below the aggregate figures relating to each of the past four years:—

Class of Assets	Year			
	1930	1931	1932	1933
Mortgages, including loans on policies	29.3	28.8	27.2	24.2

LIFE OFFICE VALUATIONS

The Assurance Companies Act, 1909, provides that every life office "shall cause an investigation to be made into its financial position including a valuation of its liabilities" at least once in every five years, and these investigations mark the occasion for the distribution of bonuses to policyholders. The usual complete analyses of the results of the valuations made at the end of last year appear below. In most cases the rates of bonus remained unchanged. It has for some time been generally acknowledged that the peak years of post-war bonuses had been reached, but apparently the offices intend to move slowly in reducing their bonuses. Only in a very few cases were the declarations on a smaller scale than on previous occasions, the largest reduction taking place in the Caledonian bonus, which fell from 50s. to 42s. per cent. per annum for whole life, and from 48s. to 40s. per cent. per annum in the endowment assurance class.

In the ordinary branch of the Britannic the rate of bonus declared, which applies also to policies of the British Legal a company taken over some years ago, was again at the rate of 38s. per cent. calculated on the sum assured. In the industrial branch of the Britannic provision was made in 1932 for bonuses on claims occurring prior to April 1, 1935, and the allocation of £200,000 now made will be applied as from that date on terms to be announced later. The amount

allocated to British Legal industrial policies was £11,600, and will be applied to provide bonuses on claims occurring before April 1, 1935, on the same basis as for Britannic policies.

Co-operative Insurance Society

The annual valuation of both of the life branches of the Co-operative was made as at December 31, 1933. As a result the rate of immediate reversionary bonus in the ordinary branch is again 36s. per cent.; in the deferred bonus class and in the industrial branch the rates of bonus were also on the same basis as in 1932. In various ways the bases of valuation were altered, principally in the use of a lower valuation rate of interest. The surplus brought out for 1933—and the same is true for 1932—was arrived at after meeting the cost (of which unfortunately no indication is given in the published returns) of the various valuation changes, and in the circumstances no useful purpose would be served by the usual table of valuation results.

In 1931 the London Life altered its basis of valuation from the net premium system to the bonus reserve system. In 1932 a change in basis was made in the use of interest at the rate of 3½ per cent. instead of 4 per cent. in the

valuation of the assurance contracts; this rate was again assumed in the valuation last year. The future rate of bonus reserved is 30s. per cent. per annum compound, while in the reduction of premium class future increases in the rate of reduction were taken at 1½ per cent. per annum. The bonus rates declared, namely 35s. per cent. compound in the reversionary bonus class and an increase of 2 per cent. in the reduction of premium class, were the same as in 1932.

The usual annual valuation was made in both the ordinary and industrial branches of the Pearl, the bases adopted being similar to those used in 1932 except for some increased stringency in the valuation of the latter branch. As in 1932, the rate of bonus declared in the ordinary branch was 40s. per cent.; the rate in the industrial branch also remained unchanged.

In the ordinary branch of the Prudential the rates of reversionary bonus for 1933—as for 1932—are 46s. per

cent. for whole life cases and 40s. per cent. for endowment assurances, calculated in both cases on the sum assured. In the industrial branch the policies issued since January 1, 1903, received a reversionary bonus of 30s. per cent., while policies issued between 1889 and 1903 also received a definite bonus addition instead of, as previously, a bonus payable only on the occurrence of a claim within a specified number of years. This is very generous treatment, as such policies have no contractual right to any addition at all. The directors anticipate that in the near future they will be able to go a step further and bring policies issued prior to 1889 under the reversionary bonus method.

The negative surplus shown above for 1932 arose from the greatly increased stringency of the valuation bases used in that year as compared with 1931. In 1933 there was some further strengthening of reserves in the industrial branch, and the surplus shown above is brought out after providing for this. The rate of bonus in the ordinary branch is again 38s. per cent., calculated on the sum assured, and in the industrial branch an allocation has been made which will be applied to increase the amount payable, where necessary, under claims occurring in the current twelve months to that which would have been payable under the latest scale of benefits.

The Standard has declared in respect of the year ended November 15, 1933, its customary annual compound bonus of 42s. per cent. The actuarial liabilities have been valued on the same stringent basis as before—a basis which is probably unsurpassed anywhere. There is a large hidden reserve in the value of the assets, and to all intents and purposes £850,000 of the guarantee fund of £1,700,000 may be regarded as an investment reserve. In 1933 the net interest on this fund was over £80,000, only £32,000 of which was required for the service of the 5 per cent. perpetual stock

for which the fund exists and which was issued in exchange for the company's share capital when the company was mutualised. £40,000 of the remaining £48,000 was transferred to swell the surplus of the life fund.

	313,788	256,897

The rate of reversionary bonus declared in the ordinary branch of the Wesleyan and General is 46s. per cent. for whole life policies and 40s. per cent. for endowment assurances, contrasted with 50s. per cent. and 44s. per cent. re-

spectively in 1932. The reduction in the rates of bonus is more apparent than real, and has its origin in certain difficulties which arose as to the legality of transferring surplus in the industrial branch to the ordinary branch. In 1931, when these difficulties first arose, the transfer of industrial surplus was suspended, but in 1932, after the position had been clarified in the courts, the equivalent of two years' transfer was made, and was reflected in an addition of 8s. per cent. in the rate of bonus paid from the surplus of the ordinary branch. Last year being normal in regard to this matter, only 4s. per cent. bonus was added as an equivalent of one year's transfer from the industrial branch surplus. In reality, therefore, the true rate of annual bonus was the same last year as in 1932.

Triennial Valuations

Caledonian Insurance Company

	1928-30 £	1931-33 £
Trading surplus earned during triennium	466,032	384,214
Profits from securities	186,000	...
Brought forward	80,176	100,398

„ Carried forward	100,398	103,174
	732,208	484,612

The rate of bonus declared in the whole life class is 42s. per cent., and in the endowment assurance class is 40s. per cent., both calculated on the sum assured. These rates are 8s. per cent. less than were declared in respect of the preceding triennium, and the cost of the bonus was covered by

DEFERRED ADVANCES

Some Advantages of the Deferred Advance Plan

under the

HOUSE PURCHASE PLAN

of the

WESLEYAN & GENERAL ASSURANCE SOCIETY

- If you take up a policy at once, you can obtain it at a cheaper rate than you will have to pay in the future. "DO IT NOW."
- You may be insurable now, but not insurable in the future, when an advance for House Purchase would prove of great service to you.
- The Life Assurance comes into force immediately the first premium is paid; the policy is a sound investment even if the privilege of obtaining an advance is never exercised.
- You can take out your policy now and defer the selection of the house until a suitable property is available.
- The premiums paid under these policies enable you to obtain statutory rebate of income tax.
- The policy entitles the assured to all the benefits of an ordinary Endowment Assurance Policy with the additional advantage of being available for House Purchase.

PROSPECTUS ON APPLICATION

the trading surplus earned. Interim bonus on policies which become claims during the year 1934 will be at the same rate as declared for the past triennium. The rate of bonus for policies becoming claims in 1935 and 1936 will be determined at the beginning of each of these years.

Life Association of Scotland

	Apr. 7, 1927– Dec. 31, 1930	Jan. 1, 1931– Dec. 31, 1933
Trading surplus earned during valuation period	£ 585,944	£ 443,815
Brought forward	147,767	154,309
	733,711	598,124
Allocations—		
To Bonuses to policyholders	499,402	399,553
„ Shareholders	50,000	38,000
„ Staff pension fund	30,000	25,000
„ Carried forward	154,309	135,571
	733,711	598,124

The Association has two separate bonus plans, one being the ordinary reversionary system in which a bonus of 40s. per cent. per annum, calculated on the sum assured, has been declared, which compares with 44s. per cent. for the previous triennium. Under the other plan, in which the premiums are smaller, the bonuses added do not vest until attainment of the expectation of life. The rate declared in this plan is £2 per cent., or £3 per cent. per annum, calculated on the sum assured, according as the expectation of life has or has not yet been attained; in addition, a special reversionary bonus of £3 per cent. of the sum assured has been given. For the triennium ending December 31, 1930, the corresponding rates of bonus were 44s. per cent. and £3 per cent., while the special bonus was £5 per cent. Interim bonuses until further notice will be calculated on the basis of the rates declared for the past triennium.

National Provident Institution

	Nov. 21, 1927– Dec. 31, 1930	Jan. 1, 1931– Dec. 31, 1933
Trading profits earned during valuation period	£ 1,002,042	£ 898,146
Brought forward	392,261	409,695
	1,394,303	1,307,841
Allocations—		
To Bonuses to policyholders	964,608	929,151
„ Staff superannuation fund	20,000	20,000
„ Carried forward	409,695	358,690
	1,394,303	1,307,841

The bonuses allotted to whole life policies remain at the previous basic rate of £3 per cent. per annum, calculated on the sum assured. To this a varying addition is made at the same rates as in 1930 in those cases where the life assured has survived the expectation of life. The endowment assurance bonuses vary with the maturity age and duration, and in addition to the ordinary bonus payable at death or survival an additional amount is payable on survival only.

ANNUAL REVERSIONARY BONUS (CALCULATED ON THE SUM ASSURED) DECLARED IN 1930 AND 1933		
Endowment Assurances	Duration 15 years or less	Duration 21 years and over
Age at maturity—	%	%
50	39/-	49/-
55	43/-	53/-
60	48/-	58/-
65	53/-	63/-

Where the duration exceeds sixteen years but is less than twenty-one years the 1933 rates were smaller than in 1930. For all durations the rate of bonus payable on survival only also fell from 10s. per cent. to 8s. per cent. per annum. On the whole, such reductions in bonus as have been made seem to be unimportant, and the chief interest attaches to the announcement that, owing to the general reduction in

interest rates, the maintenance of present rates of bonus should not be anticipated. Meantime, the interim bonus on claims by death or survival before December 31, 1936, will be calculated at 2s. per cent. less than now declared, and the bonus on survival only will be 5s. per cent. per annum, against 8s. per cent. as above mentioned.

Quinquennial Valuations

	1924–28	1929–33
Surplus earned during the quinquennium....	£ 1,884,218	£ 2,431,095
Brought forward	272,476	380,960
	2,156,694	2,812,055
Allocations—		
To Bonuses to policyholders	1,598,161	1,789,846
„ Shareholders	177,573	198,872
„ Carried forward to next quinquennium	380,960	823,337
	2,156,694	2,812,055

The valuation basis of the Alliance for assurances was the same as that employed five years previously, while for annuities a substantial strengthening was made. In view of the outlook with regard to the rate of interest, a substantially larger proportion of the surplus was carried forward, and although the trading surplus of the quinquennium was quite sufficient to meet the cost of a repetition of the 1928 rate of bonus, the rate for the past five years was reduced to 38s. per cent. per annum, calculated on the sum assured and bonuses, compared with 42s. per cent. in 1928 and 34s. per cent. in 1923.

Liverpool and London and Globe Insurance Company

The quinquennial valuation of the liabilities and assets of the life branch was made as at December 31, 1933, on the same basis as in 1928. The rate of interest used in

valuing future liabilities is only 2½ per cent., but the valuation is even more stringent than this suggests, since the net premiums credited are on a 3 per cent. basis. This basis is considerably stronger than is adopted by the majority of offices. The rates of bonus declared are 45s. per cent. per annum for whole life policies and 40s. per cent. per annum for endowment assurances, calculated in both cases on the sum assured; at the 1928 valuation the corresponding rates were 42s. per cent. and 40s. per cent. respectively. It is of special interest in these days to find an office increasing its bonus rates, and apparently the directors view the maintenance of the present rates with some confidence as interim bonuses in 1934 are to be at the rates now declared. Unfortunately, the report does not furnish the necessary information to enable us to give our customary analysis of the valuation results.

Scottish Equitable Life Assurance Society

	1923–28	1928–33
Surplus earned during quinquennium	£ 1,014,133	£ 1,316,572
Brought forward	104,391	125,282
	1,118,524	1,441,854
Allocations—		
To Bonuses to policyholders	867,434	1,038,218
„ Strengthening of reserves	125,808	22,438
„ Reserve account	...	250,000
„ Carry-forward	125,282	131,198
	1,118,524	1,441,854

The rate of bonus declared is £2 per cent., calculated on the sums assured and bonuses and compares with 38s. per cent. on the previous occasion. It has been decided "until otherwise resolved" to pay interim bonuses at the rate now declared in the case of policies becoming claims by death or survival before the next quinquennial valuation.

„ Investment reserve fund	...	199,811
„ Written off assets	100,363	328,247
„ Carried forward.....	363,651	378,826
	2,281,486	2,757,886

The results of the quinquennial valuation of the Scottish Provident are shown above. Practically the whole of the sums brought and carried forward consist of amounts reserved in respect of whole life policies not yet entitled to participate. The allocations of £267,059 and £160,000 are stated to be for additional reserves "to provide for the valuation on the present basis of new business at the revised premium rates." The rates referred to are the present scale of whole life premiums instituted in 1928, and are lower than those previously in force. Whole life policies commence to participate in profits when the premiums accumulated at 4 per cent. per annum compounded amount to the sum assured. Whole life policies effected on the old scale of premiums and now participating for the first time receive bonuses at the rate of 30s. per cent., calculated on the sum assured, for each year of duration, excluding the war years 1914 to 1918; policies participating for the second and third times respectively receive bonuses of 30s. per cent. and 35s. per cent., while policies which have already participated on at least three occasions receive bonuses at the rate of £2 per cent., these rates being in each case in respect of each year

of the past quinquennium. The corresponding rates at the 1928 distribution were 30s. per cent., 35s. per cent., £2 per cent. and £2 per cent. respectively. Under the present series of policies, which started in 1928, policies participating for the first time are allotted bonuses at the rate of 15s. per cent. in respect of each year of duration. In the endowment assurance class bonuses are at the rate of 38s. per cent. per annum compound, contrasted with 40s. per cent. on the previous occasion.

Scottish Widows' Fund

	1924-28	1929-33
	£	£
Surplus earned during quinquennium	3,364,064	3,791,388
Brought forward from previous quinquennium	62,126	81,247
	3,426,190	3,872,635
Allocations—

„ Carried forward to next valuation	81,247	162,936
	3,426,190	3,872,635

The quinquennial valuation of the Scottish Widows' was made on the same stringent basis as in 1928, both for assurances and for annuities. Indeed, in some minor respects the basis was strengthened at a cost in excess of £200,000. The rate of bonus declared is again 42s. per cent. per annum, calculated on the sums assured and declared bonuses; a clear warning is given that if current investment conditions persist a continuation of the present high bonus rates cannot be expected. The interim bonus on claims is meantime to be at the full rate of 42s. per cent., but the position is to be reviewed from time to time.

Yorkshire Insurance Company

	1924-28	1929-33
	£	£
Surplus earned during quinquennium	522,241	877,106

„ Investment and contingency reserve	...	50,000
„ Carried forward to next quinquennium.....	111,949	260,555
	592,449	989,055

The bonuses to policyholders in the life department of the Yorkshire are at the same rates as were declared five years ago, and have never been exceeded in the company's record. The shareholders receive one-ninth of the amount of the allocation to policyholders, and in each year of the present quinquennium profit and loss will be credited on this account with £13,570, compared with £9,610 in each year of the preceding quinquennium. The shareholders are also entitled to a proportion of the profit on reversions; in respect of the five years 1929-1933 the amount so credited was £28,000.

FIRE INSURANCE

The total premium income further declined by about 6 per cent.; the reduction in that portion derived from the United States, which forms practically one-half of the total, was not so great, and it is interesting to note that the percentage fall in the case of all the companies operating in the United States was considerably greater than amongst the British offices there. The underwriting profits, on the other hand, showed a great improvement, and were almost double those attained in the previous year. The explanation for this improvement seems to have lain entirely in the much smaller fire losses in America. The total amount of underwriting profit, both home and foreign, exclusive of U.S.A., did not differ greatly in the two years. It will be seen from the table given below that the premium income has fallen in each

of the past five years; expenses have fallen concurrently but not in the same proportion, as overhead costs are to a certain extent independent of changes in premium income. An increase of premium income will automatically improve the position. There are signs that the rise in the commission percentage is being checked, but there seems a strong case for co-ordinated effort on the part of the offices to effect a reduction in this item.

Turning to the results of individual offices, the Alliance again shows the largest percentage profits, but the Royal obtained the largest absolute figures, while the Commercial Union is to be congratulated on converting a small loss into a handsome profit. It will be seen that notwithstanding the fall in the premium income, all the offices except two obtained larger profits in 1933 than in 1932.

MARINE INSURANCE

MARINE insurance claims occur over a period of years following the payment of the relative premiums, and it is the practice of those companies who confine their activities mainly to this class of business to leave the underwriting account open for two years. The account is then closed by taking the unexpired balance of the first year's premiums to profit and loss, after making suitable provision for further claims by a transfer to a suspense account. Hence the 1933 report shows the profit which, it is estimated, emerges from the 1932 premiums. The following table gives the results obtained during the past five years by representative marine companies:—

Office	Account	Premiums	Claims and Suspense	Expenses	Surplus or Deficit
British and Foreign	1928	611,729	461,141	99,239	51,349
	1929	550,408	435,158	95,222	20,028
	1930	454,580	308,045	95,391	51,144
	1931	481,573	345,603	97,855	38,115

	1930	279,225	237,110	42,115	Def. 10,000
	1931	247,396	192,491	40,571	14,334
	1932	225,328	171,719	37,741	15,868
Sea	1928	541,721	465,555	43,685	32,481
	1929	614,850	537,027	42,781	34,842
	1930	586,334	501,632	44,337	40,363
	1931	521,004	409,845	44,890	66,269
	1932	536,793	438,007	47,089	51,697

It is the general practice of composite offices to present their marine accounts in the form used for their fire and

accident business; the claims are thus to a large extent unrelated to the premiums appearing in the same account. The amount transferred to profit and loss does not represent the underwriting profit of any particular year or years; the results can be gauged approximately by comparison of the total premiums received over a period of years with the total claims and expenses in the same period. Where, however, there is a steady increase year by year in the premium income this comparison will show the results in too favourable a light owing to the time-lag in the claims. The converse is true when the premium income has been decreasing steadily, and the following table illustrates the steep decline during the past six years. Nevertheless, the 1933 claims formed a smaller percentage of the premium income than the corresponding figure for the combined period. Thus, in respect of the five companies, the total premiums received during the six years 1928-1933 were £19,914,000, and the claims were £15,337,000, giving a claims ratio of 77 per cent. In 1933 alone the figure was 71 per cent., and the claims experience in that year may be taken as unusually satisfactory, and as a consequence probably of the higher average efficiency in recent years of the vessels in service. As will be seen from the table, the expenses have formed an increasing percentage of the premiums, which is unavoidable in the circumstances. The fall in the premium income is primarily due, of course, to the general shrinkage in international trade, and not to any loss of hold on the world market. Rates have been cut through the excessive insuring capacity to handle the reduced business, and if the cost of repairs rises in this country—the cost in the United States has risen considerably—much of the business written may prove unfavourable. The reserves built up by the companies over many years are very strong, and have automatically formed an increasing percentage of the reduced premium income. The outlook is somewhat obscure, but there are some hopeful portents. The "Respect the Lead" clause in the

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

Established 1849 in Australia

THE LARGEST BRITISH MUTUAL LIFE OFFICE

New Business for 1933 shows an INCREASE of over £2,000,000 on 1932 figures.

Assets at 31st December, 1933, amounted to over £93,000,000, an INCREASE of £3,340,000 for year.

Individual Reversionary Bonuses allotted to participating policies for 1933 mainly show an increase on Bonuses for 1932.

Joint Hull agreement has been reinstated as the result of the chaotic market conditions following its suspension, and there has been a large reduction in the amount of tonnage laid up, although, of course, some of this reduction is due simply to the breaking up of tonnage.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

MISCELLANEOUS INSURANCE

The accident and miscellaneous premium income in 1933 was somewhat less than in 1932, and, as will be seen from the following table giving the experience of 22 of the principal companies, the underwriting profit fell from 3.2 per cent. of the premiums to 2.8 per cent. The experience in the United States was again unsatisfactory, and the results of the companies varied to a large extent according to the proportion of business transacted in that country. In particular, workmen's compensation rates in the United States have been a source of trouble. Higher rates of premium for this class of business have been sanctioned in certain States, and as the experience of the American offices has also been

bad, it is not unreasonable to hope for more remunerative rates of premium. Better employment conditions should also tend to some improvement in the loss experienced. As in its fire department, the Alliance shows a high profit ratio, but the North British and Mercantile results are, if anything, even more favourable. It will be seen that each of the six companies having a premium income in excess of £3,000,000 were less fortunate than the average of the remaining companies.

The aggregate experience of these 22 offices in each of the last five years is given on page 19.

THE BRITISH BANKING POSITION

THREE months ago, on July 21st, we discussed the half-yearly balance sheets of the leading British banks, and reached the conclusion that the decline of £100 millions in deposits during the preceding three months was entirely the result of Treasury bill repayments amounting to approximately the same amount. These movements, we suggested, were not deflationary, but merely consisted of the disappearance of unwanted credit, which banking action could easily call into being again if only the demand for it arose. Since the end of June last no such change has occurred. Treasury bills held by the banks and the money market have continued to be repaid, for between June 30th and September 29th the total of tender issues fell from £487 millions to £424 millions. Since the end of June there has been no increase in bank advances, and so deposits have again fallen. The decline was accentuated in August by holiday withdrawals of currency by the public, and there was some recovery in September.

The publication of our annual summary of British bank balance sheets, printed on the opposite page, enables the banking trend to be viewed in better perspective; for the table covers the years from 1928 onwards, and so roughly embraces the period of the depression. From this table it is possible to calculate the net changes which occurred (a) during the period of acute depression, which ended on June 30, 1932; and (b) during the subsequent two years of limited recovery. These calculations are reproduced below:—

Changes	1928 to 1932 £ mill.	1932 to 1934 £ mill.	1928 to 1934 £ mill.
Liabilities—			
Capital and reserves	— 7.5	+ 0.5	— 7.0
Acceptances, etc.	— 61.2	+ 20.6	— 40.6
Deposits	— 12.6	+ 98.1	+ 85.5
Assets—			
Cash, etc.....	— 27.0	— 8.8	— 35.8
Call and short loans	— 24.5	+ 24.6	+ 0.1
Discounts	+ 31.0	— 50.4	— 19.4
Investments.....	+ 105.4	+ 206.6	+ 312.0
Advances	— 118.9	— 84.6	— 203.5
Ratio of cash, etc., to deposits	— 0.8%	— 1.2%	— 2.0%

The first thing to notice is that this long-range view places the recent contraction in the Treasury bill issue in its proper perspective. In 1932, and still more in 1933, the Treasury bills held by the banks had risen to an abnormal figure, and since then all that has happened is a restoration of the *status quo*. The banks and the money market, therefore, have so far had little right to complain that the repayment of Treasury bills is involving them in unnecessary difficulties. This view, however, would need modification were the contraction in the Treasury bill issue to proceed much further.

The real lesson of the table is that the supply of credit has outstripped the demands of trade. Notwithstanding a reduction in bank cash, credit had become redundant in 1932, and is still more redundant to-day. The salient features of this table are the increase since 1928 of nearly £100 millions in deposits, the decline of £200 millions in advances, and the consequent expansion of £300 millions in investments. This last increase served a useful purpose during the past two years, for it undoubtedly facilitated debt conversion. This purpose, however, possesses less importance to-day, when the Government's refunding operations are practically complete.

The fact is that credit remains extremely plentiful and easy, and the banks by reducing their aggregate cash ratio by 2 per cent. have added to the abundance. Theoretically the banks could expand their advances by £220 millions without exceeding their 1928 ratio of advances to total liabilities, and from their own point of view they would be only too glad to find sufficient credit-worthy borrowers to enable them to do so. In practice, even a moderate expansion in advances would before

long necessitate some reduction in the bank's investments. In one sense this would not be a bad thing, for the bank's holdings of securities to-day stand abnormally high. On the other hand, were the banks to press long-dated securities on the market or even to allow "shorts" to run off, they would create certain problems for themselves, the gilt-edged market and the Treasury. A relapse in gilt-edged prices and some stiffening of short-term interest rates might easily be among the consequences which would follow too rapid a reduction in the bank's securities. This is a point which all those concerned in the fortunes of the gilt-edged market would be wise to bear in mind.

As previous experience has shown, the partition between eras of cheap and dear money can be very narrow indeed, and it must not be assumed that the present regime of very cheap money will last indefinitely. Admittedly, there are no indications of a rise in money rates as yet. Still if the trade revival reaches a point where there is a substantial new demand for bank credit, the banks may have to reduce their holdings of both short-term and long-term Government securities, and this may quickly have an effect in the money market as well as on the Stock Exchange.

Three further points may be deduced from the above table. The first is that the troubles of the past six years only affected the banks' capital and reserves to a very minor degree, and that a small part of their loss has since been made good. The remaining loss has been more than offset by further appropriations to inner reserves. Secondly, the contraction in international trade has seriously affected the volume of the banks' acceptances. The increase in this omnibus item during the past two years cannot be attributed to new acceptance business, for those banks which apparently confine this item to acceptances and confirmed credits record no expansion in their accounts. It is almost certainly due to the big increase in forward exchange business which always occurs during periods of currency instability. The third point is the substantial recovery in call and short loans, which occurred during the past two years (actually during the past year). As the banks' minimum rate is above the rates charged by other lenders, including foreign banks, it is legitimate to infer that bank money has been replacing foreign floating balances which have been withdrawn from London during the past year. This helps to explain the recent weakness of sterling.

Meanwhile there is no evidence that the banks have yet succeeded in improving their profits. We repeat below the table which we publish periodically, giving approximate estimates of the rates paid on the various classes of bank deposits or earned on the chief assets held by the banks. This table has been extended to cover July last:—

	July, 1923 %	Jan., 1932 %	July, 1932 %	July, 1933 %	Feb., 1934 %	July, 1934 %
Bank rate	4½	6	2	2	2	2
<i>Rates Payable</i>						
Deposits:-						
(a) Current accounts	Nil	Nil	Nil	Nil	Nil	Nil
(b) London deposits	2½	4	½	½	½	½
(c) Country deposits	2½	2½	2½	1½	1½	1½
(d) Other accounts	Nil	Nil	Nil	Nil	Nil	Nil
Estimated average	1·6	1·9	0·8	0·6	0·6	0·6
<i>Rates Receivable</i>						
Cash	Nil	Nil	Nil	Nil	Nil	Nil
Call money	3½	5	1	1	1	1
Discounts	4	5½	½	¾	1	½
Investments	4½	4½	3½	3½	3	3
Advances	5½	7	4½	4½	4½	4½
Estimated average	4·4	5·5	3·0	2·8	2·8	2·7
Estimated margin	2·8	3·6	2·2	2·2	2·2	2·1

The main change is a reduction in the yield on bills, as represented by the Treasury bill tender rate averaged over May and July inclusive, from $\frac{3}{8}$ to $\frac{1}{8}$ per cent. This has lowered by 0.1 per cent. (in actual fact by

rather less) the average rate of interest earned by the banks and also the margin between rates payable and receivable. Again their total assets and liabilities have been reduced from just over £1,900 millions to just over £1,800 millions, and this alone means a loss of about £2.1 millions in gross income. There are economies, it is true, to be set against this loss, including the progress of mechanisation and further adjustments in salaries. Still the completion of new housing schemes and the growth of new industrial areas mean that new branch banks are required, and the closing down by mutual agreement of

redundant branches here and there hardly compensates for this additional activity. A more favourable factor is the improvement in trade, with its reduction in losses due to bad debts. Even so, it is difficult to see how this year's profits will show an improvement over those for 1933, or that any increase in dividends or reduction in advance rates will be practicable. British banks have maintained their strength and security beyond all doubt. They have hardly yet begun to restore their earning powers towards the point at which they stood prior to the depression.

COMMERCIAL BANKING IN THE DOMINIONS

NOTABLE advances have been made in the past year towards the establishment of closer financial relations between the self-governing member States of the British Commonwealth. To the existing central banks in Australia and South Africa there has been added the Reserve Bank of New Zealand, while similar institutions are in process of creation in Canada and India, which must now be regarded as in transition to a state of self-government. The New Zealand bank is already in active operation, the necessary legislation has been passed in Canada and India, and the first Governors of the Canadian and Indian Banks have been appointed.

The developments in New Zealand may be taken as illustrative of what may be expected from the establishment of these institutions. The opening of the Reserve Bank marked an important stage in the Dominion's financial development, and it so happened that other simultaneous currency changes emphasised the main fact that the Dominion was establishing a truly independent and national control over currency and exchange. The depreciation of the New Zealand pound had placed a premium upon the export to Great Britain of the token silver coins, which were identical with those of the Motherland. It became necessary, therefore, to institute a new and distinctive subsidiary coinage. The right of note issue formerly possessed by the commercial banks lapsed also, and a new standard currency was issued in the form of Reserve Bank notes.

The independence of the New Zealand pound was further emphasised when, before actually opening the Bank for business, the directors announced that the exchange rate on sterling would be fixed at the existing rate (representing a depreciation of 25 per cent.) "for a long time." In effect, therefore, the New Zealand pound was devalued and pegged to sterling at a parity which approximates to £5 N.Z. being equivalent to £4 sterling.

The importance of this decision, which was taken after the Governor of the Reserve Bank had paid a visit to the Commonwealth Bank in Australia, may be more fully appreciated by a consideration of the surrounding circumstances. The depreciation of the New Zealand and Australian currencies, aided by the substantial rise in raw material, especially wool, prices during 1933, had resulted in a very substantial accumulation of sterling assets to the credit of those Dominions in London. South Africa, after abandoning the gold standard and pegging its currency to sterling at parity, had achieved the same result largely because of a sharp rise in the price of gold. The amount so accumulated in London was £23 millions sterling to the credit of New Zealand and about double that amount in the case of each of the other Dominions. The transference of these assets from London was strictly rationed and controlled in order to prevent speculation in anticipation of a movement of the Australian and New Zealand rates towards parity with sterling.

The prompt announcement of the Reserve Bank of New Zealand not only destroyed, at least for the time being, any likelihood of such speculation; but achieved two other important results. The maintenance of the lower parity ensures an inflationary price trend in the

Dominion in the period immediately ahead. Some part at least of the sterling assets will be transferred and used, ultimately, to purchase the notes of the Reserve Bank. Indeed, the prospects of more abundant credit in the Dominion have already brought substantial reductions of short- and medium-term interest rates. Since 1930 the bank deposit rate had fallen (for two-year deposits) from 5 to 3 per cent., the overdraft rate from 7 to 5 per cent., and the yield on Government loans from 5½ to 3½ per cent. On July 4th the banks further reduced these rates by ½ per cent. to ½ per cent. according to the term of deposits, the two-year deposit rate thus becoming 2½ per cent. Deposits are high; but as the effect of the new situation is felt there must come an era of very cheap and abundant credit, increased advances and large imports.

It was probably inevitable that the Reserve Bank should avoid the psychological difficulty of making its first important policy decision in a deflationary direction. If the exchange rate had been moved towards parity it might have proved difficult to restrain speculation from forcing it further up. There were already signs of a black market developing outside the control. The short-run effect of the decision will clearly be to stimulate credit expansion and rising prices in the Dominion. The long-run effect is of more doubtful character in view of the heavy burden of external debt and the impossibility at present of converting a large part of it; but increased taxable capacity must be set against the heavier external charges.

The action of the Reserve Bank in taking over the sterling assets which had been bought from the commercial banks by the Government has also brought a considerable relief to the Budget. The Bank itself is fortunate at the beginning of its work to have such a large sterling fund on which to operate the sterling exchange standard. The Government, which paid for its sterling purchases by issuing Treasury bills to the commercial banks amounting to nearly £29 millions (N.Z.) at 5 per cent. will be enabled to repay these bills by cheques drawn on its deposit with the Reserve Bank against the sterling fund. The cheques so drawn will be used partly to purchase sterling against increased imports, and partly to expand credit in the Dominion, and it is this possibility that has led the commercial banks to reduce their overdraft and interest rates.

These developments in New Zealand have been described first, not because they are the most important aspect of the new central banking organisation in the Dominions but because they represent the first fruits of the new institutions created during the year. The situation in Australia is broadly similar to that in New Zealand, but not quite so clear, since the Commonwealth Bank has been operating as a Central Bank at least since 1932. It is assumed that the declaration of the Reserve Bank of New Zealand concerning the fixation of the exchange rate at its present level "for a long time" was taken in consultation with the Commonwealth Bank and is indicative of Australian policy as well.

South Africa has already gained enormously from

pegging its currency to sterling and reaping the benefit of the higher price of gold. The Government has, in fact, been able to discharge its remaining war debt to Great Britain by payment of a lump sum. The public finances are buoyant and there is a large accumulation of sterling assets, betokening the probability of increasing imports.

India has for many years regulated its currency by reference to sterling; but the new Reserve Bank, in taking over the regulation of exchange, has the opportunity, if it cares to do so, of economising the gold fund held in London, by utilising, as the Dominions already do, interest-earning sterling assets as at least part of its exchange reserve. The new system will also give the commercial banks, as those in the Dominions, a central reservoir of credit which may be of inestimable value in times of financial difficulty. In all these countries the comparatively undeveloped state of the money market limits somewhat the functions of the central banks. For some time to come it is probable that their chief reliance must be upon persuasion and guidance rather than upon technical controls of credit issues within their markets; but experience elsewhere has shown that central banks when prudently conducted are able to gain a real influence over credit policy even in financially undeveloped countries.

One of the greatest gains to be expected from the extension of central banking throughout the Commonwealth is the stabilisation of exchange rates. In this respect the Canadian Bank faces peculiarly difficult problems. Since the abandonment of the gold standard in South Africa, all the Dominions except Canada have been operating a sterling exchange standard, and India has long kept the rupee at parity with sterling. The Canadian dollar, however, has followed an independent course, greatly influenced, though not wholly governed, by the United States dollar. It appears clear from an article recently contributed by Sir Charles Addis to the *Quarterly Review* that the Royal Commission, of which he was a member, had clearly in mind, in suggesting the creation of the Reserve Bank, the desirability of pegging the Canadian dollar to sterling and thereby definitely joining the sterling commonwealth. The financial connections of the commercial banks with the United States clearly offer obstacles to such a policy, but these difficulties are not, in his judgment, insurmountable. It is abundantly clear, however, that the administration of the Canadian Bank will present the most interesting and important problems of the whole chain.

It is too soon, before the chain of central banks is yet in working order, to speculate upon the technique of central bank co-operation and the financial results that may be expected to flow from it. The gain in each Dominion from the cohesion and resilience imparted to the local banking system should prove considerable, and the maintenance of stable exchanges will facilitate trade and investment. The measure of stability already secured has been an important factor in the recovery experienced in 1933 and 1934, and all experience goes to prove that fixed exchanges are an indispensable foundation for international economic and financial co-operation, even within a comparatively homogeneous region such as the British Commonwealth.

AMERICAN BANKING

(BY A CORRESPONDENT)

DURING the past five months the most striking fact has been the continuous and large increase in the demand deposits of the commercial banks and the continued expansion of their cash reserves. During the year ending June 30, 1934, member bank deposits rose \$4,400 millions. During this recent period there was little in the way of legal innovation. Certain provisions of the Banking Act of 1933 became final in June, the most notable being the separation of investment from deposit banking, but they had been anticipated. Congress, under the impression that the banks were niggardly in

BANCA COMMERCIALE ITALIANA

(Limited Company incorporated in Italy.)

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserves 144,244,500 Lire.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Istanbul and Izmir.

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc. Representative in Berlin.

financing business, authorised both the R.F.C. and the reserve banks to make "direct loans"; but the results have been minute. The provision of the Housing Act guaranteeing 20 per cent. of bank loans made for home renovation does not seem to have elicited much response, although in the month of August there was a substantial increase in "other loans" of the Reporting Member Banks. The bank deposit guarantee, which was for the first year limited to deposits of \$2,500 on July 1st, became applicable to deposits of \$5,000; and a small number of banks withdrew from the insurance scheme. There were only one or two bank failures during the period, and most of the "unlicensed" banks have now been reopened. On June 13th the R.F.C. held preferred stock or capital notes of banks to an amount of \$800 millions, and was under arrangement to purchase about \$250 millions more; some 6,300 banks (out of slightly over 14,000) have participated in the scheme. On the first permissible date numerous banks repurchased their obligations from the R.F.C. Except for the rise in deposits it was the most uneventful half-year that American banking has known for a long time.

Practically speaking, there is no money market. Short-term paper is scarce, acceptances continuing to shrink and commercial paper increasing slightly. Short-term Government paper is quoted almost without interest. Rates on long-term bonds, especially Treasuries, continued to fall up to August, when a combination of circumstances, including the silver schemes and doubts about the next Budget, provoked a sharp reaction.

The statistical record of the period begins with a table of Reserve Bank and Treasury items:—

RESERVE BANK AND TREASURY ITEMS				
	Mar. 28, 1934	Aug. 29, 1934	Intervening	Change
	\$ mill.	\$ mill.	\$ mill.	\$ mill.
Bills discounted.....	53	21	—	32
Bills bought	29	5	—	24
U.S. securities.....	2,432	2,432	...	...
Monetary gold stock.....	7,681	7,981	+	300
Gold certificates in Reserve Bank.....	4,281	4,979	+	698
Money in circulation	5,336	5,345	+	9
Member Bank Reserve balances.....	3,439	4,127	+	688
Federal reserve notes	2,997	3,103	+	106
Federal Reserve Bank notes	123	32	—	91
Industrial advances	0	1	+	1

In the five months under review the principal change in the Reserve Bank statement is the growth of member bank reserve balances. Excess reserves were in the vicinity of \$1,200 millions at the end of March, and, although the deposits of the member banks have risen since that date, most of the increase in reserve balances has gone into "excess reserves," which now amount to about \$1,900 millions. That is, the cash item of the member banks is approximately double the legal requirements. Since in the period under review the Reserve System has conducted no open-market operations, and the volume of discounts and acceptances has actually fallen, these reserves since March have been fed almost entirely from the deposit of "gold certificates" by the Treasury. In part these gold certificates derive from gold bought from domestic producers, from purchases of scrap gold, and from gold imports—the last being, of course, the largest item of the three. But since the increase in the monetary gold stock amounts to but \$300 millions, while the gold certificates have risen some \$698 millions, one can infer that perhaps \$400 millions of the "gold profit" has been monetised. Whether this has been charged to the \$2,000 millions stabilisation fund or to the \$800 millions of unallocated profit is not clear; nor does the market know whether these sums have been employed in transactions in foreign exchange or in the purchase of Government securities. The market inclines to the latter view, since on occasions when the Government market was weak the Treasury has intervened on a large scale. Here again inferences should be accepted with caution, since some of these Treasury purchases were undoubtedly for sinking fund.

With reference to the currency, it will be noted that there has been a small increase in the total—an increase

of less than seasonal proportions, indeed. But analysis of the "Paper Currency" return indicates that there has been a continuing, although gradual, reflux of the large denomination currency that was hoarded some years back. The currency is showing a number of minor changes of detail. The above table shows the tendency of the system to retire Federal Reserve bank notes; only two districts—New York and Boston—now reporting any of this emergency currency outstanding. National bank notes also show a small reduction. Up to the end of July the Circulation Statement showed no increase in standard silver dollars or in silver certificates. In August the new silver certificates began to appear; the old certificates bore the legend "This certifies that there has been deposited . . . one silver dollar payable to the bearer on demand." The new form reads "that there is on deposit . . . one dollar in silver payable, etc." The circulation of silver certificates increased by \$38,765,108 in August. As a practical fact, the standard silver dollar has long since disappeared from circulation in the Eastern States; and few have been minted in the past decade.

The gold certificates shown in the Reserve Statement are not in use as currency. As they are convertible only at the discretion of the Secretary of the Treasury, there was a question in August if, with the dollar at the gold export point, gold would be released by (or through) the reserve banks for export. The question was answered in the affirmative.

The following table shows the Reporting Member Banks' position:—

REPORTING MEMBER BANKS				
	Aug. 28, 1929	Mar. 28, 1934	Aug. 29, 1934	Change since March 1934
	\$ mill.	\$ mill.	\$ mill.	\$ mill.
Total loans and investments	22,405	17,472	17,708	+ 236
Loans on securities	7,515	3,514	3,247	— 267
Other loans	9,434	4,647	4,555	— 92
U.S. securities.....	2,707	6,227	6,627	+ 400
Other securities	2,748	3,084	3,279	+ 195
Reserves with F.R. banks.....	1,663	2,572	3,132	+ 560
Net demand deposits.....	12,985	11,794	12,926	+ 1,132
Time deposits	6,766	4,419	4,510	+ 91
Government deposits.....	37	1,413	1,203	— 210
Borrowings from F.R. banks	685	9	5	— 4

The table for the Reporting Member banks shows rather wide changes. The familiar increase in reserves was noted above, but the increase in demand deposits, of \$1,100 millions, follows an approximately equal increase in the preceding six-month period. On the other hand, the increase in total loans and investments is smaller than from September to March, principally because banks were less receptive to Government securities. The increase of \$195 millions of "other securities" is attributed largely to the appearance of the new Government guaranteed issues. The decline in commercial loans during the past five months is hardly more than nominal, and in recent weeks they have shown a marked tendency to increase—a fact which has been interpreted by some as encouraging.

The table showing the statement as at the end of August, 1929, is included for the purpose of showing the trends of a five-year period. In 1929 101 cities were represented, whereas now there are but 90; yet it will be noted that bank cash is double what it was in 1929, net demand deposits are practically as large, while the decline in time deposits is about equal to the increase in Government deposits. Among the assets, holdings of Government securities have doubled, and other investments have also increased, while each of the two types of loans have fallen to half. It will be recalled that even in 1929 it was often remarked that the term "commercial" banks was a misnomer; at the present time, with only a quarter of the assets of these banks in commercial loans, and less than half in loans of any kind, it is certainly so.

For many months "inflation" has been one of the common topics of discussion. Since the great open-market campaign of the spring of 1932, credit expansion, whether termed inflation or reflation, has been the avowed policy of the Government and of the Reserve System. Statistically, the programme has achieved no

little success. Excess reserves have been created by open-market operations, by amplification of the issue of National Bank notes and lately of silver certificates, and by gold revaluation. For many months, the existence of excess reserves not only failed to cause an expansion of bank credit, but failed to check the decline. Apart from the interlude after the bank holiday episode, this situation did not change until the end of last year. Since December of 1933 deposits of the member banks have been rising continuously, as well as their total loans and investments. The increase in deposits has been greater, owing to the large accumulation of excess cash. The result is that total loans and investments are about \$1,000 millions higher than a year ago, reserves are about \$1,000 millions higher than a year ago, and net demand deposits are about \$2,000 millions higher than a year ago.

Statistically, an increase in net demand deposits of about 20 per cent. in less than a year would be accepted as evidence of inflation. Statistically, a rise of 100 per cent. in an index of primary commodity from February, 1933, to the present, and an advance of the Bureau of Labour Statistics index from 60 in early 1933 to about 78 at present, would be accepted as evidence of inflation.

On the other hand, business statistics do not show what might be called comparable improvement, and the corresponding monetary statistics can be seen in the figures of debits to individual accounts. The following table covers the cities outside New York, the New York figures being dominated by the activity of the Stock Exchange.

DEBITS TO INDIVIDUAL ACCOUNTS (140 cities, excluding New York City)						
	1929	1930	1931	1932	1933	1934
July.....	28,416	23,145	18,444	12,511	13,878	13,910
August.....	28,310	20,941	16,526	11,756	12,376	13,421

Considering that deposits subject to check are about as high now as in 1929, and very much higher than in 1933, it is rather surprising that debits should remain so low. In short, it is difficult to associate the expansion of bank deposits, which is primarily a reflection of the Treasury deficit, either with the advance in commodity prices or with the recession in business.

BANKING PROBLEMS IN FRANCE, SWITZERLAND AND BELGIUM

(BY A CORRESPONDENT)

THE banking situation of the three countries under review has been characterised during the last few years by two apparently contradictory movements. On the one hand the gold reserves of the central banks have been considerably increased. This was due mainly to the abandonment of the gold exchange standard, to large repatriation of funds invested abroad, and at times also

to imports of foreign capital into France and Switzerland. The increase in gold holdings was not accompanied by any expansion of credit and no "gold inflation" was noticeable, but the metal was on the whole simply exchanged against notes or sight deposits with the central banks. This resulted in such an increase of reserve ratios that the monetary stability could be

adhered to without undue strain. On the other hand, the contraction of economic activity, hoarding and withdrawal of foreign short-term funds brought about large decreases of banking deposits, especially in 1930-31 during the world-wide banking crisis and in 1933 and 1934 during the depreciation of the dollar, and after the stabilisation of the dollar during the political and financial troubles in France. The reaction of the banking system in the three countries has been very different in view of their different banking organisations, and they should therefore be examined separately.

In France the concentration of the banking system has gone rapidly forward. The smaller local banks which had survived the concentration movement of the pre-war period and flourished during the inflation, are dying away with extraordinary rapidity; the months which followed the banking panic of 1931, and the year 1934 which witnessed an aggravation of the trade depression, were particularly rich in smaller bank failures. But the large institutions have weathered the storm in a most encouraging manner. Losses incurred on account of investments abroad were few, partly due to the fact that much of the foreign business was carried out through the intermediary of London. Furthermore, long-term investments are not in the tradition of the big French banks. Of the three "banques d'affaires," i.e. banks carrying on a large investment securities business, one is now being drastically reorganised (Union Parisienne), and the two others (Banque de Paris and Crédit Commercial) have now concentrated their activity on commercial banking. On the whole, it is understood that the losses incurred both in France and abroad have now been amortised by the large banks (especially the four big banks which publish monthly statements). It is true, of course, that they still might be called upon to prevent large failures as in the case of the Citroën Works, but, sound as they appear to be now, this should not entail too great sacrifices.

The withdrawal of deposits made itself felt first with the secondary banks (1929 to 1931), while the four big commercial banks registered stable or even increased deposits; but in 1933 the movement spread to the four large banks, and from December, 1932, to March, 1934, they lost over seven billion deposit and acceptance liabilities. Hoarding and foreign withdrawals (due to monetary troubles and not to banking difficulties) were the main causes. This trend has been reversed since April, and a distinct increase in deposits is now noticeable, partly following the return of confidence in France and partly because of the last decline of the pound sterling. Borrowing of francs on the exchange market has also contributed largely to this return flow of funds, and this may cease as soon as the exchange market appears more settled. The large withdrawals of deposits mentioned above have been met without difficulty, thanks both to the traditionally conservative policy of the French banks and to their abnormally strong liquid position. The maintaining of high liquidity ratios ever since 1931 is not only an obvious sign of the anxiety of the banks in face of unsettled conditions to provide a good margin of safety for their depositors, but also reveals the relative disappearance of commercial paper and of short-term self-liquidating investments. Truly enough, this has been partly offset by large issues of Treasury bills, but up to the present the Bank of France does not consider itself bound to accept them for re-discount.

Thus the French banking system appears to have stood the test remarkably well, and has been able to avoid any kind of Government interference—except for the 3,000 million francs of ready cash which the Treasury bought up in 1930 and 1931 to meet the liabilities of the Banque d'Alsace-Lorraine and of the Banque Nationale de Crédit.

In Switzerland the main problem arose from the marked developments of the banking activity which took place after the war, when foreign deposits sought in the large Swiss banks a harbour of safety. In view of the limited possibilities for investing at short-term at home (this has lately become so acute that it has been suggested that the Swiss Government should issue Treasury bills in

order to provide the banks with a good short-term investment) the banks were tempted into lending on real estate mortgages and into granting foreign credits. Relatively long-term investments in Switzerland could not be considered dangerous, thanks to the method of the Swiss banks of issuing two- to five-year bonds and of accepting savings deposits, as this reduces the liquidity requirements to a certain extent. But the exchange troubles and the moratoriums in Central Europe brought about at least virtual losses. In addition, difficulties arose in certain national industries (watch manufacturing, embroidery and the hotel trade), and a special rediscounting institute (Caisse Fédérale de Prêts et de Dépôts) had to be set up with the help of the banks and the Government. This enjoys special credit facilities at the National Bank. Foreign deposits were recalled (it is contended that those which remain now are too small to be considered dangerous), while hoarding in Switzerland grew to unprecedented proportions and was encouraged by monetary discussion. It should be mentioned, however, that a considerable part of the National Bank's notes were hoarded by foreigners.

The great sufferers were the secondary commercial banks. This is evidenced by the painful liquidation of the Banque d'Escompte Suisse and the heavy contribution which the Government had to offer to the Banque Populaire Suisse. The cantonal banks, on the contrary, which are semi-official savings and mortgage banks, and therefore are only in touch with Swiss debtors and creditors, fared better, and their deposits have rather been on the increase. But the large commercial banks had their business so drastically curtailed that most of them, in order to bring it into line with their diminished activity, reduced their capital, while it is rumoured that mergers will have to be contemplated. It is, of course, impossible to know whether or not their losses have been amortised. At any rate, their liquidity appears very ample and has remained so ever since 1931, although inter-bank deposits are so large as to aggravate perhaps the inevitable interdependence existing between large banks. Here the State has not been content with extending material help when necessary. A law is now being discussed providing for a certain control of banking institutions and for fixed relations between their capital and their borrowed funds. It has even been proposed recently that a system similar to the one in force in Belgium be organised in order to "liquidate" frozen credits.

In Belgium the State had to intervene energetically to reorganise the whole banking structure, even though no large bank failure had to be recorded. But for a few exceptions (e.g. the Société Belge de Banque), the Belgian banks used to invest a large part of their liabilities in industrial or other participations (nearly one-third in the case of the two larger banks). Being at the same time commercial banks and holding companies, they were extremely powerful, but, as one annual report put it, they were "intimately linked to the country's prosperity." Hoarding and perhaps export of capital, the depreciation of the banks' investments, progressive freezing of their industrial credits, coupled with important losses on the pound sterling (as much of their Treasury operations are made in London), all called for Government action. Decrees taken in August authorise the Société Nationale de Crédit à l'Industrie to take over from the banks up to 2,000 million francs of frozen but "sound" credits in exchange for its own 20-year 3 per cent. Government guaranteed bonds which the National Bank will accept as collateral for 80 per cent. of their face value. This will reduce the banks' profits but add to their liquidity, and if carried out slowly should prove most beneficial both to the banks and to their prospective borrowers. On the other hand, a certain Government supervision is to be exercised both when accepting the exchange of credits against bonds and when granting a collateral loan against the bonds. Another decree aims at segregating commercial banks from holding companies. As this measure has been accepted practically without protest, it seems that the banks themselves agree with it, but it cannot as yet be foreseen how the many difficulties involved by such a far-reaching reform will be overcome.

GERMAN BANKING IN THE NATIONAL SOCIALIST STATE

(BY A CORRESPONDENT)

THE balance sheet figures of the Big Five banks in Germany have for some time been shrinking, and most articles and discussions on German banking lay special stress on this fact. One should not, however, overlook the fact that German banking has nevertheless become sounder, and that the criticisms of the past few years have been taken into practical consideration. In an article on German banking since the war, which appeared in the *Economist*, March 3, 1934, page 460, it was pointed out that the German banks based the calculations of their expenditure on insufficient data and unreliable methods in the past, and that the allocation of credits was not carried out on a sound basis, since it favoured the big concerns too much, leaving the smaller and medium-sized undertakings with insufficient means to carry on business. The position would since appear to have become sounder, and even though the profit-earning capacity of the banks is still insufficient, the basis for sounder and more profitable business, both from the point of view of the banks and German economic life as a whole, has been laid. The relation of business expenses to earnings has become more favourable in spite of increases in staff. This may be seen from the following:—

In the D.D. Bank the staff numbered 16,789 in 1933, against 16,614 in 1932. The earnings were Rm. 145 millions in 1933, against Rm. 143 millions in 1932, and the expenses were Rm. 88 millions in 1933, against Rm. 92 millions in 1932. Similarly, the Commerzbank increased their staff from 6,617 in 1932 to 6,740 in 1933; their earnings in 1933, amounting to Rm. 55 millions, were lower by Rm. 5 millions than in 1932, but in spite of the increase in staff expenses were reduced by the same amount of Rm. 5 millions, from Rm. 46 millions in 1932 to Rm. 41 millions in 1933. The Dresdner Bank increased their staff during 1933 from 10,994 to 11,157. Their earnings for the same period were reduced from Rm. 95 millions in 1932 to Rm. 87 millions in 1933, but expenses were reduced even more, from Rm. 81 millions in 1932 to Rm. 71 millions in 1933. The expenses of the Berliner Handelsgesellschaft were at Rm. 5 millions, the same as in 1932, and only in the case of the Reichskreditgesellschaft was there an increase: from Rm. 6 millions in 1932 to Rm. 7 millions in 1933.

Depreciations and transfers to reserve have been increased, so that it may be assumed that the effects of the crisis on the Big Five have to a great extent spent themselves.

According to several publications issued by banking

circles during the last few months, it is clear that the small business man's share of the total number of credits has increased. It is true that from the evidence available it is not yet possible to answer the question what portion of the total value of credits applies to small and medium-sized business firms, i.e. firms with a capital of 20,000 to 50,000 reichsmarks, and 50,000 to 150,000 reichsmarks. These small undertakings are of very great, and sometimes even of decisive, importance in the economic development of the manufacturing industries in some parts of Germany, for instance in Saxony, Thuringia and so on, and it would be a great help to German economics if these undertakings, which work largely for export, could be adequately financed. Up to now the publications referred to above have only given figures in regard to the development of small and medium credits and the proportion of the number (not the amount) of these small credits to the total number of credits given. These figures do not provide sufficient material for an exhaustive inquiry into the present question of financing small and medium-sized undertakings. There are doubtless a large number of bank debtors who have received credits to the amount of 5,000 to 20,000 marks, but who have nothing whatever to do with small business undertakings. In spite of this, the publications give the impression that things are much better, and that, in accordance with the changed structure of German business as a whole, a greater number of credits were granted than in past years.

In 1933 the D.D. Bank showed 83,058 debtors, and 63,618 of these, i.e. about 75 per cent., were in receipt of credits up to Rm. 5,000. Out of 55,640 debtors to the Dresdner Bank, 40,394, i.e. also more than 70 per cent., received credits up to Rm. 5,000. As indicated above, this does not in any way explain the relations that the value of the small credits as a whole bear to the value of the big credits, but the figures are of interest, particularly as another publication shows that the average credit given by the Big Five in 1933 was Rm. 25,190, as against Rm. 35,698 in 1928. The average credit given by the provincial banks and by private bankers has decreased still more. In the provincial banks in 1933 it was Rm. 7,449, against Rm. 28,057 in 1928, and for private bankers Rm. 13,616 in 1933, against Rm. 72,784 in 1928. It is therefore not surprising that the share of the Big Five in small credits (up to Rm. 20,000) and in medium-sized credits (between Rm. 20,000 and Rm. 100,000) decreased from 71.3 per cent. of the whole of these credits in 1928 to 54.8 per cent. in 1933, while that

Erlangers Ltd.

Bankers,

4, Moorgate,
London,
E.C.2

of the provincial banks increased over the same period from 16.2 per cent. to 26.5 per cent., and that of the private bankers from 12.5 per cent. to 14.2 per cent..

Apart from the actual bank credits, another important type of financial assistance was given, mainly to the medium-sized undertakings, by the Bank für Deutsche Industrie-Obligationen. This bank gives long-term credits to industrial firms in so far as their profit-earning capacity makes it possible. Up to the end of the last financial year industrial credits to the amount of Rm. 102 millions were given. This sum represents an increase of Rm. 59 millions over the previous year. The increase of this type of credit was made possible by the improvement in the position of small and medium-sized undertakings, thanks to certain governmental measures. The Bank für Deutsche Industrie-Obligationen carries out its work with the help of certain provincial credit institutions (municipal bank institutes, private bankers, branches of the big banks, etc.), which are well acquainted with the situation of the industrial concerns in their district and which can, therefore, bring special knowledge to bear in helping the Bank für Deutsche Industrie-Obligationen to arrive at its decisions.

The proportion in which the different banks share in the new credits given in 1933 varies greatly. The Dresdner Bank gave new credits to the amount of Rm. 742 millions, i.e. 47 per cent. of the whole debtors and advances on goods; the percentage in the D.D. Bank was 42 per cent. of its debtors and advances, while the Adca (Allgemeine Deutsche Credit-Anstalt) in Leipzig only received Rm. 24.9 millions, or 15.75 per cent. The reason for this is that business is worse in Saxony than in any other parts of the Reich, and that there is much more unemployment there.

The deposits of the Big Five show a practically continuous decline, as the following table illustrates:—

DEPOSITS OF THE GERMAN BIG FIVE
(Rm. millions)

	1932	1933	1934
February	...	7,159	6,434
March	...	7,106	6,411
April	...	6,934	6,417
May	...	6,797	6,414
June	...	6,737	6,420
July	...	6,594	6,314
August	...	6,488	...
September	7,439	6,436	...
October	7,401	6,430	...
November	7,307	6,415	...

With a few unimportant exceptions, these figures show a continuous decline in the deposits of the Big Five, which is also reflected in the corresponding items on the assets side. The debtors, amounting to Rm. 4,212 millions on June 30, 1933, and a month later still to Rm. 4,727 millions, had diminished to Rm. 3,873 mil-

lions in June of this year, and on July 31st still further to Rm. 3,843 millions. In June and July, 1933, advances on goods amounted to Rm. 762 millions and Rm. 702 millions respectively, and for the same months this year only to Rm. 537 millions and Rm. 526 millions respectively. In June and July of this year bills of exchange, however, at Rm. 1,829 millions and Rm. 1,840 millions respectively, reached a higher figure than they did in the same months of last year (Rm. 1,660 millions and Rm. 1,636 millions respectively). This rise is not, however, sufficient to prevent a shrinkage of the balance sheets taken as a whole, and a reduction both in creditors and loans made by the big banks in the first seven months of this year must be recorded. In spite of this, the development in the last few months does not by any means seem unfavourable, as expenses have been reduced both relatively and absolutely, turnovers have in some cases increased, and the need for writings off has momentarily become less. It is therefore not altogether surprising that the balance sheet of the D.D. Bank for the first half of the current year gives a very satisfactory impression and that the turnover has increased. In spite of this it was not possible for the board of the D.D. Bank at the time of the publication of their half-yearly balance sheet to express an opinion on the probable result of the whole financial year.

The shrinkage of German bank balance sheets is due to several causes, of which the decline in German foreign trade is obviously not the least. How much the growing difficulties in German export trade have affected the banking business can be seen very clearly from the development of the Deutsche Golddiskontbank, which deals largely with the financing of German exports. This bank gave direct export credits amounting to Rm. 355 millions at the end of 1931, Rm. 212 millions at the end of 1932 and Rm. 126 millions at the end of 1933, while the number of bills of exchange bought by the Bank decreased from Rm. 462 millions in 1931 to Rm. 268.4 millions in 1932 and to Rm. 194.9 millions in 1933.

Attention should be drawn to a further possibility of increasing the number of credits given by the banks. At the last general meeting of the Dresdner Bank, in the spring of this year, one of the directors pointed out the necessity for using bills of exchange more than in the past. From the point of view of the liquidity of the bank, as well as from that of the costs, bankers would much prefer to buy bills of exchange than to give credits on current account. It is an old complaint, very frequently heard in the last few years, that German firms do not avail themselves sufficiently of bills of exchange. Their use is a matter of confidence, and it will be interesting to study the future development of business in bills of exchange in view of the light this development will throw upon the return of confidence in the German business world.

BANKING IN SOUTH AMERICA

(BY A CORRESPONDENT)

THE past year has undoubtedly witnessed a gradual tendency towards recovery in South American conditions, and this has been more particularly observable during the past few months. The economic fabric in the Southern Continent is particularly vulnerable, inasmuch as, whilst the primary commodities produced mainly for export are of considerable value, they are but few in number; consequently both the economic crisis of the past few years and the present resurgence of commercial activity are directly traceable to the relative state of affairs in world markets for the commodities concerned. Nevertheless, the banking industry has continued to be conducted under difficulties, mainly due to restrictive influences arising either indirectly from the depression or directly from regulations and legislation—varying in incidence in the various republics—principal among which have been the decrees favouring debtors as well as the continued official control in many of the foreign exchange markets, particularly in respect of the remittances abroad. These restrictions have brought in their train a considerable amount of unremunerative

routine work side by side with the necessity for conducting business on cautious lines. Moreover, the widespread growth of a strong nationalist spirit—which has resulted in quotas in consuming markets, unilateral agreements, and other steps aimed at preserving the economic balances of each country—as well as uncertainty regarding the principal world trading currencies, are engaging increasing preoccupation in South America as elsewhere. On the other hand—apart from uncertainty as to future currency values—a great deal has recently been achieved towards the restoration of freedom in the principal South American foreign exchange markets, which gives rise to hopes of further recovery in the volume of international trade and a consequent expansion of the necessary financing resulting in a return to more normal banking conditions. Real efforts have been made on the part of the principal administrations to restore their credit standing, while the almost inevitable political troubles attendant upon the crisis have given way to more stable conditions.

The widely-held view that Argentina, on account of

the inherent strength of her resources, would probably take the lead in any commercial revival in South America has proved justified in the event. A combination of circumstances—partly due to wise and energetic administration and partly to external events, such as the serious drought in the United States—have resulted in the Argentine situation to-day being vastly different from the gloomy outlook at the opening of the export season in October last year. For three consecutive months, from September to November, 1933, the total value of Argentine exports was actually below that of imports, and it became apparent that co-ordinated measures were necessary to ensure the disposal of the grain crops without loss to the producers as well as to restore equilibrium in the balance of payments. Argentina has invariably followed the policy of disposing of the grain crops each season and refraining from accumulating stocks, for which, indeed, the storage capacity is strictly limited. At the end of November last year, therefore, a Grain Regulating Board was created with powers to purchase wheat, maize and linseed at certain basic prices for resale to exporters at prices conforming to the international market quotations. At the same time, the exchange control regulations were modified; exporters were still obliged to sell exchange to the Exchange Control Commission at the official rates, but these export bills were subsequently sold by tender to importers holding the necessary permits. Furthermore, the official exchange value of the peso was depreciated to the extent of about 20 per cent. when the present basic rate of 15 paper pesos per £ sterling was established as the price obtained by exporters for their bills. The intention was to utilise the fund arising from profits upon the official purchase and sale of exchange as compensation to the Grain Regulating Board for potential losses. The course of events, however, has been such that, in practice, exchange profits to date must amount to a very large sum—conservatively placed in the region of 150 million paper pesos up to end July—whilst it is believed that the recovery in grain prices has been so

great as to enable the Grain Regulating Board to secure profits on the sale of such stocks of grain as were purchased from the farmers before the price recovery set in.

Although Argentine foreign trade returns during the current year have to be viewed in the light of the 20 per cent. depreciation in the exchange value of the peso, nevertheless there has been more than an off-setting recovery, the "real" value of exports for the first eight months of 1934 showing, at 980.8 million pesos, an increase of 24.5 per cent. over those for the corresponding period of 1933, whilst imports, at 690.0 million pesos, show an expansion of nearly 20 per cent. The actual total of the export surplus for the eight months is 289.9 million paper pesos, against 206.5 millions.

An outstanding event in Argentina's recovery has been the comprehensive scheme successfully carried through by the present Minister of Finance for the consolidation of the national debt. Partly by the utilisation of funds released through the "unfreezing" of peso balances, the internal debt was converted to a unified 5 per cent. basis in the autumn of last year, and, in May last, and again in September, the Argentine Government Sterling 4½ per Cent. Conversion Loan issues made their appearance in the London market in replacement of maturing debt. The cordial reception accorded to these last-mentioned issues has been justifiably taken as an expression of confidence in Argentina's position and recognition of her unbroken credit record. If—as at present promises—the next crops are good the general Argentine position at the end of this year should represent a gratifying step forward. The banking position is sound, any inflationary methods or other experiments having been avoided. Money is in plentiful supply, and the banks are in a good position to finance an increasing volume of trade.

Official recognition was accorded to the "free" exchange market in Argentina at end-November last, and the Government has operated therein to the extent necessary to smooth out violent fluctuations. With the sharp improvement in the export trade, the value of the peso

in both the official and "free" markets has improved in recent months, whilst the two rates have tended to converge. The trend should normally be towards modifying the present exchange regime—set up in a time of stress—and action in this direction is advocated by importers and other interests desirous of seeing a higher value for the peso and greater freedom of remittance at a true economic rate. The Government will probably desire to wait until it is reasonably sure that the present recovery will continue before taking any precipitate step to alter the present interlocked grain and exchange regime, but there is certainly much speculation in Buenos Aires as to the utilisation of the unbudgeted receipts by the Exchange Control and the necessity for continuing the present system.

In Brazil, also, the "free" exchange market has been recognised—since May last—whilst the monopoly of exchange exercised by the Bank of Brazil has been gradually relaxed, so that it now applies only to coffee export bills. It is to be presumed that eventually the "free" market will supplant the official rates, and it is to be noted that the "free" milreis rate has appreciated since May last from 92 to about 70 milreis per £ sterling. The returns in currency of Brazilian foreign trade show expansion in both imports and exports, as well as in the export surplus. The gold value of the latter, however, was equivalent to only £5.3 millions (gold) for the first half of 1934, which, although somewhat higher than a year previously, is not yet sufficient to hold out hopes of any favourable modification of the external debt funding scheme before its maturity in March, 1938, especially in the absence of gold reserves. As in the case of Argentina, nature has also helped Brazil in regard to her crop difficulties, the drought having served to rectify the statistical position of coffee by reducing the probable yield this season. Better prices are being secured for coffee, and there are definite prospects of a free market at last being possible. Generally the Brazilian situation shows recovery, assisted by the development of other resources, particularly cotton, which is emerging as a decidedly important secondary export crop. Constitutional Government was restored in July last.

The Chilean situation shows steady improvement, and while exchange control continues the quotation in the "barter" market has improved in recent months to about 123 pesos per £ sterling. Negotiations have taken place in an endeavour to secure permits to remit frozen funds at this rate, and a concession on these lines has already been made in respect to funds arising from dividends and rentals. Chile has been particularly successful in fostering new lines of exports, whilst shipments of her chief product, nitrate of soda, rose to 678,000 tons, worth 74,662,000 pesos of 6d. (gold), in the first half of 1934, against only 237,000 tons, valued at 37,209,000 pesos, in the corresponding period of 1933, and exports of bar copper were 101,000 tons,

worth 77,129,000 pesos, against 64,000 tons, worth 51,827,000 pesos. Total exports were 255.3 million pesos of 6d. (gold), against 171.9 millions, the export surplus expanding to 167.2 million pesos, against 83.3 millions. The inflationary tendencies observable during the worst period of the depression in Chile have now been definitely checked. The note issue is stable at 900 million pesos, and the Central Bank is known to be seeking the restoration of its powers of control over the circulating media. In regard to the foreign debt service, whilst negotiations with creditors may be inaugurated, it is thought that considerable further progress must take place in the general recovery before additional charges upon the Budget could be contemplated, whilst the provision of remittances across the exchange even on a much attenuated basis could only be provided from income arising in foreign currency from exports of copper and nitrate, the proceeds of which, for the time being, are largely earmarked against outstanding trade debts through the numerous "compensation" agreements between Chile and European countries. The resuscitation of trade is reflected in the banking position. The advances of the commercial banks increased in the first half of 1934 by 137 million pesos to a total of 1,367 millions, and have now reached the level at which they stood in the middle of 1931. Bank deposits were augmented by some 131 millions. The increase in credit operations has extended to both the national and foreign banks, whilst cash holdings have shown a progressive decline.

In Mexico, the Government six-year plan of economic reconstruction embodies a strongly nationalistic and radical programme, and the discouragement to foreign capital is evidenced in the withdrawal of foreign banks. The protracted hostilities unhappily continue between Paraguay and Bolivia, thereby off-setting to a large extent the benefit which the latter country derives from higher tin prices. The frontier dispute between Peru and Colombia has fortunately been brought to a peaceful settlement, with great relief to the economic situation in both republics. Further improvement is looked for also in the Central American "coffee" countries, which are benefiting from the rise in prices of that commodity.

To sum up, the South American outlook is admittedly brighter consequent upon the recovery in world commodity markets, although the position is still much inferior to that existing before the crisis, and a great deal will depend upon the restoration of a more rational spirit in international commercial conditions. Decided progress has been made towards freeing the exchange markets both in respect to current business and "blocked" funds on foreign account, but, particularly from the point of view of the banking industry, it is hoped that early modifications may be made in the restrictive legislation introduced in certain republics—admittedly as emergency measures—but which in some of their aspects can only be described as inequitable.

TRENDS IN AUSTRALIAN BANKING

(BY A CORRESPONDENT)

THE outstanding changes in Australian banking figures during the financial year 1933-34 have been—

- (i) a marked rise in the Commonwealth Bank's London balances;
- (ii) sharp rises in the trading banks' cash reserves in Australia and in their deposits, both interest-bearing and in current accounts;
- (iii) a continued slow fall in all interest rates; and
- (iv) a very modest rise in trading banks' advances.

As we work on a sterling exchange standard, and the banking department of the Commonwealth Bank naturally treats its London balances as a main part of its reserve, while the trading banks work primarily on their cash with the Commonwealth Bank—the first and second changes hang closely together. They must be read in the light of the Commonwealth Bank's regulation of the

exchanges and as the direct effect of the rise, by twenty millions sterling, in the value of the 1933 Australian wool-clip. Nine-tenths of the clip goes to overseas buyers. The London funds they paid for drafts and letters of credit have been sold by our trading banks to the Commonwealth Bank. The proceeds in Australian credit have built up the balances of the trading banks in the books of the Commonwealth Bank. Meanwhile the pastoralists in receipt of bigger wool-cheques have spent more freely and have paid old debts.

Comparing the trading banks' deposits in the June quarter of 1934 with the corresponding figures for earlier years, fixed or interest-bearing deposits have grown from £178.8 millions in 1930 to £185.7 millions in June, 1933, and to a record level of £195.6 millions in the June quarter of this year. More impressive still are the figures for current deposits not bearing interest—the

active money of business. From £107.8 millions in June, 1929, these tumbled to £81.1 millions in June, 1931, the date of the adoption of the Premiers' Plan. By the June quarter of 1933 current deposits had recovered to £89.0 millions. In the last year they have grown to £101.3 millions. The rise in advances to private borrowers accompanying this increase of deposits has been very moderate, viz. from £234.1 millions in June, 1933, to £236.9 millions in June, 1934. The explanation of its comparatively small amount is to be found in the increase of advances that took place when current deposits fell and confidence froze. In June, 1929, advances for the quarter averaged £223.1 millions. By June of 1930 they were averaging £262.8 millions. From 1930 to 1932 the June quarterly averages of advances showed a slow decline, which may reasonably be interpreted as the liquidation of the increased debts incurred during the first impact of the depression. Since 1932 advances have slowly increased again. But behind the increase as between the June quarters of 1933 and 1934—less than £3,000,000—there has obviously been a considerable thawing of trading banks' assets. Both the totals of

similar reduction in the New Zealand banks' three months' rate. A Queensland student of bank interest rates calculates that, after making due allowance for the lag in the incidence of reduced rates, the banks were paying 5.12 per cent. for two years' deposits in 1930, 4.71 per cent. in 1931, 3.59 per cent. in 1932, and 3.03 per cent. in 1933. They are now paying less than 3 per cent. If further allowance is made for the average term of all time-deposits and if current deposits on which no interest is paid are also included, the average paid by the banks for all deposits, according to the same inquirer, was 3.11 per cent. in 1930, 3.29 per cent. in 1931, 3.12 per cent. in 1932, 2.30 per cent. in 1933, and is 1.82 per cent. at present.

The rates charged by the banks on advances have been steadily falling since June, 1931. From July 1st this year the trading banks' maximum charge to primary producers has been 5 per cent. and to public institutions 4½ per cent. The two Sydney banks have announced a maximum rate on all overdrafts of 5 per cent. The Commonwealth Bank, though not active in lending to private customers, announces an overdraft rate of 4½ per

current deposits and of clearing house transactions tell of a more rapid turnover in business. In liquidity trading bank advances have made strong progress during the past year and it is likely that what happened during 1933-34 to pastoral advances may happen, in minor degree, to wheat growers' accounts in 1934-35.

The generally easier position of the trading banks, with bigger Australian reserves and more active trading in prospect, has made lower interest rates appropriate and safe. Further reductions have been made in the rates paid by the banks on fixed deposits. In April of this year these rates were brought down to 2½ per cent. on deposits for two years and 2½ per cent. on deposits for one year. In August the less important three months' rate was further reduced from 2 to 1½ per cent. This cut was made shortly after the announcement of a

cent. and a charge of 3½ per cent. for credits to organisations marketing Australian rural products.

At more than one stage in the reduction of interest rates, both on fixed deposits and on advances, the Commonwealth Bank has given a lead to the divided and mutually critical trading banks. In doing so it has confirmed the wisdom of Sir Ernest Harvey's evidence before the Macmillan Committee. Sir Ernest, it may be remembered, showed some sympathy with the argument he had heard in Australia "that the existence in the Central Bank of the power to do ordinary commercial banking would be an assurance of protection against excessive demands from other banks." Some think that the Commonwealth Bank Board, holding a position of exceptionally wide authority over savings bank rates, trading bank rates and central

banking functions, has made but a hesitating use of the classic solvent of depression—cheap money. Fixed deposits are at record height, and Australia is once again proving an attractive field for investment. There is little doubt the Bank Board could have pressed deposit rates and bank charges still lower. Australian Consols in July showed a strength that was in part due to an expectation of lower deposit rates. On the announcement of an isolated cut in the rate on three months' deposits the market fell sharply and yields rose. It is now regaining strength.

This argument as to the policy the Central Bank should pursue in its control of interest rates bears witness to the progress in compactness that Australian banking has made during the battle with the depression. In general, the year 1933-34 has seen the prompt response to a rise in overseas prices for which the writing down of 1931 was a preparation. All parts of the economy have got quickly into their stride. Within the framework of the improved banking totals reviewed above employment has increased, building operations have been resumed in normal volume, iron and steel output and electricity consumption have mounted, manufactures have increased in turnover and range, and the share markets have become buoyant. One may guess that the Bank Board is reasoning that this is, in the main, a satisfactory showing and that before attempting to attain a degree of activity even more strongly contrasted with the conditions still prevalent in other lands, the Commonwealth Bank must be sure of its power to restrain as well as to stimulate. If it be true that the only way to prevent future slumps is to nip in the bud unbalanced credit expansions that bolster up weak industries, its caution line on interest rates is intelligible enough.

The Board may have been the more drawn towards caution because its grip over the trading banks is a loose one so long as the short-term debt is at its present volume. It has continued to oppose, during the past year, the habit of easy finance by the issue of Commonwealth Treasury Bills. The slight fall in the trading banks' holdings of securities, from £52.8 millions to £52.1 millions, bears witness to a considerable funding of Treasury Bills, not quite offset by banks' subscriptions to the loans raised in the Australian market. Early in 1933 the Loan Council, representing the borrowing Governments, came to an understanding with the Bank Board—

- (i) that, for the future, only deficits were to be financed with Treasury Bills, and
- (ii) that, after provision for public works out of long-term borrowing from the public, some funding of Treasury bills should be done.

It was then expected that the deficits on ordinary budgets would be reduced to small figures during 1934-35. But the June, 1934, Loan Council sanctioned a continuance of State deficits in that year up to a total of nearly six

millions. This persistence with deficits and the expansion of the public works programme for 1934-35 by about five millions has postponed any substantial reduction of the Treasury Bills outstanding. It is already evident that, at the Loan Council session in June, 1935, the Bank Board, assuming its continued existence, will resist the financing even of ordinary deficits by further Treasury Bill issues.

It objects to them as potential claims to cash which are in great part added to the trading banks' reserves. The trading banks hold, at present, some 25 millions of Treasury Bills. Though the Commonwealth Bank determines from time to time the amount of bills that individual trading banks may have, every increase in the volume of such bills weakens its power to restrict their holdings and the size of their reserves. As yet no market for Treasury Bills outside the banks has been developed. If the Commonwealth Bank takes up bills itself the Government cheques directly swell trading bank deposits with it.

Considerations of central banking technique as well as of sound public finance may support the Bank Board's zeal to limit Treasury Bill issues. But will the tax-paying capacity of Australians, the amount of savings offering for long-term bonds and the volume of private employment all grow fast enough to enable Federal and State Governments to balance their budgets in the near future, to cut down public works programmes, and to fund the excessive floating debt? All these things are implied in the Bank Board's policy. Notwithstanding the result of the recent general election, if the tempo of recovery which satisfies the Bank Board should prove too slow for the understanding and patience of the Australian people, an electoral storm may sweep away the admirable banking structure we had almost built. Then we should rue the measured use we made in 1934 of golden chances.

On the first day of this year died Sir Robert Gibson, who had presided over the Bank Board throughout the depression. With great courage and an impressive sense of realities he joined a Scottish flair for the rôle of superior disinterestedness. In a country rather given to anthropomorphism he thereby turned into a personal merit the essential thing about central bank control of credit. To interpret the Banks' policy since his departure as one of quiescence might be to miss the possibility that the tide is at the turn in international trade. Central bankers must perhaps swim against the current; but, with the index numbers of Australian export prices moving up and then down again as sharply as they have done of late, who can say whether we are in an eddy or on the flowing tide? Wisdom may lie "in masterful administration of the unforeseen." It is doubtful, however, if the metaphor of the tides does not beg the question of the central bank's responsibility for the direction of the movement, even in a Dominion economy. This is a problem which must be solved within the near future.

CANADIAN BANKING

(BY A CORRESPONDENT)

THE outstanding events in the Canadian banking year were the publication of the Macmillan Report on Banking and Currency in Canada and the legislation which has followed that Report. The most important recommendation was that concerning the establishment of a Central Bank, reference to which is made in another article. The Royal Commission heard much evidence about banking practice not relating to the central banking question. Complaints from the Western farmers were particularly important. Much controversy centred round Section 91 (1) of the Bank Act, which provided: "The bank may stipulate for, take, reserve or exact any rate of interest or discount not exceeding 7 per cent. per annum, and may receive and take in advance any such rate, but no higher rate of interest shall be recoverable." The intention of this section was clearly the prohibition of rates exceeding 7 per cent., but banks, on the basis of a legal opinion (erroneous in the judgment of the Commission), have habitually evaded the restriction, and rates ranging up to about 10 per cent. have been commonly charged. The majority of the Commission recommended the repeal of the section; but the Government accepted the recommendation of Mr Brownlee, and the new Bank Act makes the meaning of the section indisputable and imposes a penalty for contravention. Canadian bankers assert that business under this restriction will be unprofitable in the less developed parts of the country and forecast a reduction of banking facilities in the West. The Commission sympathised with farmers' complaints of the discrepancy between the currency of loans and the period of farming operations, but felt that such matters should be adjusted not through legislation but "through mutual

A minor legal change has been the adoption of the Commission's recommendation that the restriction of married women's banking rights in the Province of Quebec should be removed.

The Commission was generally satisfied with the functioning of the chartered banks as *commercial banks* and recognised the great strength of the Canadian system. The two important gaps which it found in the system—the absence of a Central Bank and of special rural credit facilities—are gaps which it is universally recognised cannot be adequately filled by ordinary trading banks. The Canadian banks may well congratulate themselves on having survived a major crisis and a rigorous inquiry without the discovery of any serious deficiencies in their conduct of the business which is their proper sphere.

Since the general upturn in American business eighteen months ago the Canadian economy has been full of contradictions. During the spring and summer of last year Canadian industrial activity expanded rapidly, and this particular tendency has continued, though with lessened force, in the current year. Some industrial indices, e.g. output of electrical power, are reaching new high records. The general Employment Index (seasonally adjusted) rose from 80.9 in July, 1933, to 97.4 in March, 1934, falling back somewhat to 94.2 in June. The slight setback in these indices in the spring of this year has now apparently been reversed. In spite of this the bank returns show definite contraction. Current loans have fallen from \$900 millions in June, 1933, to \$862 millions in June, 1934, and demand deposits have fallen from \$535 millions to \$486 millions in the same period. Savings deposits have declined very slightly.

goodwill, with such moral suasion as may be exerted through some central authority duly qualified to exercise a regulating influence."

On other matters which were the source of Western complaints the Commission on the whole vindicated the banks. They found no fault with the rates of interest charged on loans to Provincial Governments and Municipalities, loans which were and which remain uncomfortably large. The publication of the banks' methods of dealing with loan applications should help to allay the Westerners' hostility. The Commission concluded that more generous recruiting of directors from the West would also be a step in this direction.

The Commission received protests from investment bankers and others against the chartered banks' activities in security dealings. The banks' defence was that their aid is necessary to the successful issue of any large block of securities, and that dealing therein is a recognised part of banking business generally. The Commission recognised the usefulness of the banks in this field, but "could not fail to be impressed by evidence of abuses" and strongly urged "upon the Canadian banks the advisability of refraining from dealing in, or distributing for their own account, any but the highest class securities available." Insurance agents made similar protest against infringement by bank officers on their business. The Commission held that the existing law gives the insurance agents sufficient protection.

The decline in loans outstanding, which has occurred entirely during the first half of the current year, is probably due to the changed situation in agriculture. In the first place the acreage sown was appreciably less this year than last. Secondly, with higher wheat prices farmers may have been paying off their indebtedness more rapidly than usual, though the incidence of the drought makes it difficult to assess the financial situation of the farmers. Thirdly, the condition of the world's wheat markets has made possible some liquidation of the enormous wheat carry-over, with consequent paying-off of bank advances. The reduction in Canadian bank loans at a time of business revival is thus not unlike the experience of the English banks. But the Canadian authorities must also reckon with the possibility that the shrinkage of bank loans may indicate that the tendency for resources to decline in agriculture and to increase in industry involves a relative decline in the economy's demand for bank credit. The 1933-34 increase in Canadian business has perhaps been largely dependent on a transfer (impelled by British and Canadian tariff laws) of factories from the U.S.A. to Canada, the new developments being financed by private capital rather than bank credit.

Security markets have been strong, apart from a period of hesitation last autumn. In the current year quotations have again advanced. The bond yield, after rising from 4.65 per cent. to 4.72 per cent. in the second half of last year, has fallen to 4.09 per cent. in the first half of 1934,

although the banks have been reducing their investments somewhat.

The balance of international payment for 1933 shows a heavy decline in net tourist receipts. The expenditure of Canadian tourists in other countries has hardly changed, but the expenditure of foreign tourists in Canada has fallen by about \$100 millions. This change, in the face of the improvement in American business, appears to justify the view that Canada's tourist income depended largely upon American prohibition. Alternatively, it may be claimed as an indication that the fruits of American revival have not been reaped by classes who would take their money across the frontier. Against this adverse change there was some decline in commodity imports and some rise in the value of exports (despite the small 1933 wheat crop), and a capital inflow

of about \$60 millions. This capital influx has probably been associated with the tariff-stimulated transfer of industries into Canada, and with lack of confidence in the U.S.A. dollar. In the current year, with tourist traffic at least no worse and the prospect of an unloading of a substantial part of the wheat carry-over at favourable prices, the balance of payments is likely to be just as strong. In view of this prospect and of the strong gold position in Canada now, the new Bank of Canada will be able, if it so chooses, to pursue an easy money policy to encourage revival for some time to come—perhaps too long. On the other hand, it must never be forgotten how dependent Canada is on the wheat markets. In the absence of other changes, a combination of good harvests elsewhere and a poor harvest in Canada could make things very difficult in 1935.

INDIAN BANKING AND FINANCE

(BY A CORRESPONDENT)

THE past year has seen no fundamental change in the Indian financial situation. The export of gold continues to dominate external trade. In the year ended March 31st last the net export of gold amounted to 57 crores (about £43 millions), against 65 crores in the previous financial year. This enormous movement has a two-fold origin. In part it is a symptom of economic distress, agriculturists being obliged to sell their gold to finance losses. At the same time, the high premium on gold has induced many of the more wealthy Indians to realise their gold holdings and invest the proceeds in local industries and in Government securities. The slackening of the rate of gold exports during the fiscal year 1933-34 was probably mainly the result of the higher prices realised for some of the staple export crops, and should therefore be hailed as a sign of economic development. The rate of gold exports may also, however, have been affected by last autumn's temporary disturbance in Bombay's stock markets, which may have checked the tendency to replace gold hoards by stocks and shares. During the first half of the current fiscal year the rate of gold exports has reverted to approximately its 1932-33

rate, the higher price of the last two months especially having led to some liquidation of stocks of gold held speculatively in Bombay.

The recent spurt in gold exports has revived discussion of the question, how long will these exports of gold last? In favour of their continuance on a large scale mention is often made of some apparently stupendous figures of India's remaining gold stocks. Yet when regard is paid to the population of India the figures are not so very large. The remaining gold stock probably averages appreciably less than half an ounce per head of the population, an amount which can hardly be considered large in a country with such primitive banking conditions. The amount of gold which may still be released by the relatively wealthy who are prepared to invest their wealth in a modern way must be dwindling rapidly, and when abatement of agricultural distress does come it is not unlikely that there will be a reversal in the net movement of gold. But until agricultural returns are much increased, the export of gold will continue, varying inversely with the crops and—as Bombay speculators' stocks respond—directly with the price of gold.

In external commodity trade imports have been reduced slightly, largely owing to defensive measures against Japanese cotton goods—and perhaps to the steadier yen exchange allowing Indian producers to adjust themselves somewhat to Japanese competition. Exports have risen, linseed having benefited by the Ottawa Agreement and tea by the restriction scheme. A fairly good monsoon in 1933 and the slightly higher prices of primary commodities generally helped India. In the current year weather conditions have not been so favourable; but the further slight rise in prices may entirely offset that adverse factor.

The Government financial position remains relatively satisfactory. The annual provision for debt redemption has been reduced, but owing to a further expected decline in Customs revenue and an increase in expenditure it has been necessary to impose some fresh taxation in 1934-35. Actually the financial position has improved much more than is apparent during the last two years. For with the higher value of exports the commodity balance of trade is now for the first time since the crisis almost sufficient to provide for India's invisible imports (about 50 crores) without the help of the gold exports. There is consequently every prospect that India will be able at least to maintain her current volume of imports even without any general world revival. A general world revival would allow an immediate increase in India's imports, with corresponding improvement in the Customs revenue upon which the Government of India largely relies.

In spite of the much greater strength of the external trading situation there was last autumn a period of serious weakness in the exchange situation. This was due to the Legislature's debates on the Reserve Bank Bill, when an effort was made to commit the authorities to a depreciation of the rupee. For about six weeks the flight of funds was very marked, but when it became apparent that the attempt had failed the exchange market soon regained the strength which it derives from the gold exports and the improved commodity trade.

Security markets have been active throughout the year. Government bonds rose from their low point in June 1933, until October, when the failure of an important firm of cotton mill managing agents in Bombay caused a disturbance from which the markets did not

recover until the turn of the year. During 1934 prices have risen rapidly, and the Government has been able to do its financing on more favourable terms than ever before. The Imperial Bank rate has remained at 3½ per cent. throughout the year. The call money rate has been consistently low in Calcutta, but somewhat erratic in Bombay, which was more sensitive to the flight from the rupee last autumn, as well as to the general disturbance mentioned above, which occasioned a small run on a few local banks.

In 1933 the exchange banks experienced a slight improvement in conditions. Trade demands for funds reflected the improvement in trade, slight though it was, and the effects, on cotton trade financing, of Japanese inroads soon disappeared. On the other hand, the yields of gilt-edged securities were lower than ever. The net result was a small increase in total profits, and all dividends were maintained unchanged. But the National Bank of India has recently announced a reduction in its interim dividend, from 10 per cent. to 9 per cent. The lower dividend may not reflect any serious decline in profits, but merely a failure of profits to revive sufficiently. Since 1930 the dividend has been unchanged, in spite of lower profits, and the chairman had warned shareholders that the 20 per cent. per annum dividend could not be maintained unless conditions improved appreciably. The decision may be partly due to a fear that the Imperial Bank when it enters the exchange market will prevent the existing exchange banks from reaping the benefit of improving business.

The establishment of the Reserve Bank, besides providing India with a central banking organisation, is likely to be the herald of some development of commercial banking in the interior. The Reserve Bank is bound, in the interests of its own efficiency as a central bank, to take some steps to increase the use of hundis (bills of exchange), which have tended to decline in favour for some years. A marked extension in the re-discounting of hundis would make possible that unification of India's money markets which has so long been desired. It is understood further that a special department of the Reserve Bank will concern itself with problems of agricultural credit. Some improvement in, and unification of, the work of co-operative banks would be a useful contribution to the growth of India's banking system.

IRISH FREE STATE BANKING

(BY A CORRESPONDENT)

THE strength and excellence of the Free State banking system are displayed by the fact that the major dislocation to agriculture and trade caused by the "economic war" has not shaken its position in the slightest degree. Indeed, it is very largely owing to the banks that the country is able to weather a storm of such magnitude

without serious inconvenience. It is the banks that provide the sterling necessary to pay for the imports, which, though declining, are declining less rapidly than the exports, so that the adverse balance is widening; it is the banks that are assisting the local authorities to carry on in spite of accumulating arrears of rates; and,

finally, it is the banks that are taking up the greater part of the Government's new loans. If the banks were suddenly to take fright at the course which events are taking, and to refuse further accommodation, the whole financial and political situation would be drastically affected.

Attention has been drawn more than once in these columns to the so-called "divided balance sheet" of the Free State banks, in which their principal assets and liabilities are divided according to their location in the Free State or elsewhere; and it has been explained that the movement of the figure showing the excess of external assets over external liabilities affords an excellent indication of the movement of funds in and out of the country. Between the second quarter of 1932 and the second quarter of 1933 this figure increased from £83.6 millions to £88.3 millions, showing that the balance of payments in 1932 must have been very favourable. A peak figure of £91.9 millions was recorded in the first quarter of 1933. A glance at the later figures printed below shows that this favourable tendency has been replaced by a distinctly unfavourable trend, and the Free State balance of payments appears to have become definitely adverse. This conclusion is corroborated by the statistics of visible and invisible imports, but there is so wide a margin of error in some of the estimates of the invisible payments that it would be unsafe to rely on them without qualification. The curious thing is that well-informed bankers and public officials in Dublin deny that the balance of payments is adverse, but such optimistic observers of the situation have not attempted to explain away the unmistakable drain of sterling resources shown by the banking returns.

However opinions may differ regarding the interpretation of the available statistics, there is no doubt about the fact that the banks' excess of external assets over external liabilities has steadily diminished. Of course, it would be possible to attach too much importance to this movement, as the Free State is possessed of very large sterling assets held by private individuals, trustees and corporations, and its capacity to sustain an adverse balance (assuming such to exist) is not to be measured merely by an examination of the banks' sterling resources. Nevertheless, the banks' assets are the first line of defence, and any sign of their being materially reduced invites attention, if not anxiety. It is rumoured that the whole monetary and banking system will shortly be reviewed by a commission of inquiry, and, if this rumour proves to be correct, there is no doubt that the question of the external balance of payments will be exhaustively investigated.

From the trading standpoint the year has been satisfactory for the banks, both profits and dividends having been maintained. The rise in the price of gilt-edged securities must have greatly benefited the banks, which hold such a large proportion of their assets in this form. During the year, as will be seen from the "divided balance sheet," the amount held in cash and in money at call and short notice was reduced. The tendency to increase the proportion of investments in the Free State continues. In the first quarter of 1932 the percentage of the banks' investments located in the Free State was 4.65, while in the second quarter of this year the corresponding figure was 8.57. The increase was largely the result of the assistance given by the banks to the flotation of the Government's more recent loans.

The withdrawal from circulation of the old Irish banknotes issued prior to the Free State's currency legislation in 1927 continues. It is estimated that the total of such notes outstanding on March 31, 1934, was £1,573,085. A substantial part of this figure represents "dead" notes, that is notes which have been outstanding so long that they might be regarded as lost and as never likely to be presented. The profit arising from these "dead" notes has always belonged to the Government, and a dispute has arisen between the Free State and the British Government as to which should reap the profit on these pre-Treaty notes. In the correspondence which took place between the two Governments in 1932 it was agreed that this matter should form the subject of further discussion, but no such discussion has been held, and the controversy remains unsettled.

The Report of the Currency Commission for the year ending March 31, 1934, states that the surplus income of the Commission for the year amounted to £188,267. The earnings of the Commission, which is bound to confine its investments to British Government securities, were adversely affected by the prevailing low money rates.

The Currency Commission has begun to publish a quarterly statistical bulletin containing many valuable tables relating to the monetary and financial affairs of the Free State. Of particular interest is the table showing bank debits, divided into ordinary and Government accounts. The total debits for the first half of 1934 were £311,610,000, as compared with £317,407,000 for the corresponding period of last year.

SOUTH AFRICAN BANKING

(BY A CORRESPONDENT)

SINCE the beginning of last year the South African banking situation has remained largely under the influence of the economic forces put into motion by the abandonment of the gold standard at the end of 1932 and by the subsequent pegging of the currency at the seriously undervalued level of parity with sterling. As will be remembered, the immediate effects of these steps were the return of large amounts of South African money (estimated at not less than £15 millions) which had left the country during the preceding period of uncertainty, and a great increase in the already large surplus of visible exports over visible imports. These developments in turn resulted in very large increases in the South African

deposits of the commercial banks, in the commercial banks' deposits with the South African Reserve Bank, and in the gold and sterling bill holdings of the South African Reserve Bank (which alone was guaranteed by the Government against exchange losses).

During the past year, however, there have developed certain secondary forces which have checked, though not as yet reversed, the expansionary tendencies shown in the banking figures as an immediate effect of the depreciation of the currency. The great increase in the currency value of gold, whether accruing to the benefit of the Government, the South African shareholders, or the additional workers who have found employment on

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

BERTRAM LOWNDES, London Manager.

gold mines, old and new, together with the disappearance of the former financial stringency and its replacement by extremely easy money conditions, has greatly stimulated business activity, especially in the Transvaal. One result of this has been a rapid and continuous rise in imports, which for the first six months of 1934 totalled nearly £30 millions, as compared with less than £22 millions in the first half of 1933. Meanwhile exports have remained nearly stationary, for the further increase in the sterling value of gold has been offset by the decrease in the quantity produced, due to a further reduction in the average grade of ore milled. The excess of visible exports, which was over £25 millions in the first half of 1933, therefore fell to under £19 millions in the first half of 1934.

Meanwhile the net balance of invisible imports has increased substantially in consequence of larger freight charges on imports, increased gold-mining and other dividends payable overseas, greater expenditure by South African visitors overseas, etc. In consequence the net surplus of international receipts over payments during the first half of 1934 may have been only about £6 millions, compared with perhaps £15 millions (in addition to perhaps £15 millions of returning capital) in the first half of 1933.

The smaller favourable balance of international payments is reflected in a substantial slowing down in the

rate of expansion of the commercial banking figures. Cash reserves and deposits in the Union, which rose in the first six months of 1933 by £22 millions and £20 millions, respectively, rose in the twelve months ending June 30, 1934, only by a further £3.0 millions and £13.0 millions. Advances, which at the first onset of the period of easy money contracted fairly sharply, have since shown some modest signs of expansion, though they still remain at a very low level; but the great bulk of the immense increase in deposits which has been thrust upon the commercial banks still lies idle in their hands. It is at first sight rather remarkable that, in contrast to the banks in this country and in the United States, they seem to have made so little attempt to find a use for these additional funds in the purchase of securities, either in South Africa or in London.

The chief reason for this is, presumably, that the financial position of the South African Government has been so greatly improved by receipts from gold-mining taxation that no short-dated Government securities are available in South Africa; the banks, if they wished to invest funds locally, would be obliged to purchase long-dated securities. The effect of such purchases would be to expand deposits in the Union still further, to increase the local monetary ease, and to force down long-term interest rates still lower; the banks would run the risk of considerable losses in the event of any subsequent rise

in interest rates and consequent depreciation in the value of long-dated securities.

Alternatively, the banks might have used part of their surplus deposits with the Reserve Bank to purchase sterling from it with which to buy securities in London. The purchase of long-dated securities would obviously have been more remunerative as regards current income (an investment of, say, £10 millions at a net yield of 2½ per cent. would have given an additional income equivalent to 3 per cent. on the banks' paid-up capital), but would have involved two risks—a rise in the British rate of interest and a rise in the sterling value of the South African pound. An investment in British short-term securities would have been far less remunerative, but would have involved the latter risk only. In either case, an investment by the South African commercial banks in sterling securities would have compelled the South African Reserve Bank to part with some of its own sterling bills, thus losing a portion of its already falling income. It is possible that the commercial banks were unwilling to take any action which might have this result.

While the greatly excessive cash reserves of the com-

whole of their exchange dealings through the banks, even going so far as to propose the imposition of a special charge for keeping the accounts of customers who dealt in exchange outside the banks. This proposal provoked much opposition, and a compromise was reached, according to which customers were not to be penalised for putting their exchange business outside the banks provided that they undertook that all dealings should be at the official rates.

As might have been expected, this curious arrangement does not seem to have been successful in practice, and during July the banks raised their buying rate per £100 sterling from S.A. £99 17s. 6d. to S.A. £100 2s. 6d. It is regrettable that the banks could not see their way to taking this action earlier, and so avoiding the loss of an appreciable amount of goodwill, which even businesses in a monopoly position cannot continue to sacrifice with impunity. In this connection it may be noted that the margin between the buying and selling rates is still 50 per cent. higher than in September, 1931; it is therefore possible that outside dealings still remain sufficiently profitable to attract exchange business away from the banks.

mercial banks have recently been growing only slowly, and while they have as yet been used for the expansion of credit only to a negligible extent, yet their continued existence renders possible an almost unlimited expansion of bank credit as soon as the demand for bank advances increases. The dangers of such a situation were commented upon last year. There is therefore reason to welcome, from the South African as well as from the British point of view, the action of the South African Government in repaying at the end of August the outstanding balance of £7½ millions of its war debt to the British Government. This transaction has appreciably reduced both the deposits and the cash reserves of the commercial banks, while the steady rise in imports without a corresponding rise in exports seems likely in due course to turn the balance of payments against South Africa and to reduce the banks' cash reserves still further towards normal.

An interesting though minor development which has recently occurred is the narrowing of the margin between the banks' buying and selling rates for telegraphic transfers from 1 per cent. to ½ per cent. Prior to September, 1931, the margin between the rates was ½ per cent.; during the period of fluctuating exchange rates which followed it was naturally widened, and when the South African pound was pegged by the South African Reserve Bank at approximate parity with sterling the wider margin of 1 per cent. was maintained. As confidence in the stability of the exchange rates returned, this wide margin naturally led to considerable dealings outside the banks. Since the South African selling rate for sterling was controlled by the rate at which the South African Reserve Bank was prepared to sell the sterling proceeds of the gold which it bought from the mines under its exclusive contract, the commercial banks could not lower their selling rates for sterling; but there seems to have been no reason (other than their natural wish to maintain profits and possibly a desire not to offend the Reserve Bank) why they should not have narrowed the margin by raising their buying rates for sterling. Instead, however, they endeavoured in various ways to bring pressure to bear on their customers to put the

NOTES.—(a) Not available.

(b) Including throughout balances with the South African Reserve Bank.

(c) Excluding Money at Call, which for this year is included with other assets.

The change in the figures between 1925 and 1926 is due to the incorporation of the National Bank of South Africa, Ltd., with Barclays Bank (Dominion, Colonial and Overseas).

SALMON P. CHASE
Secretary of the U. S. Treasury—1861-1864.

Current and deposit accounts invited.
Terms may be obtained from the
management on application. Complete
facilities for handling all foreign ex-
change transactions.

THE
CHASE NATIONAL BANK
of the City of New York

LONDON OFFICES:
10 MOORGATE, E.C.2 & BUSH HOUSE, W.C.2

(Incorporated with Limited Liability under
the National Bank Act of the U.S.A.)

BANK SHARES

THE progress of industrial recovery during the present year has been accompanied by a rapid advance in leading industrial shares to levels at which, to judge from present trade indications, future earnings prospects seem likely to be adequately discounted. *Prima facie*, the increased tempo of industrial activity might be calculated, in due course, to be reflected in the earning power of the British banking system as a whole. The disposition of the assets of the clearing banks, however, suggests in unmistakable fashion that economic recovery has, in large measure, been financed from the "hump" of liquid resources which the majority of soundly-placed industrial concerns had conserved during the depressed conditions of the preceding three years. The operation of this time lag has always been recognised as a factor making for steadiness of bank earnings, while any minor recession in profits during depression, for similar reasons, has normally been accompanied by limited reductions in dividends.

Bank shares, although in the equity class, are accordingly widely acknowledged to afford a hedge against the broader risks of equity movements during periods of depression. The "interest factor" may be expected to limit fluctuations in capital value during a regime of lower earnings, and to ensure, in the first stage of recovery at least, that bank shares take their place in the general upward movement. The extent of this movement is illustrated in the following table, which compares the trend of bank and industrial shares during recent periods:—

ACTUARIES' INVESTMENT INDEX

	Price Index. (Dec. 31, 1923 = 100)						
	Dec. 30, 1930	Dec. 31, 1931	Sept. 20, 1932	Dec. 28, 1932	Sept. 26, 1933	Dec. 27, 1933	Sept. 25, 1934
Bank and Discount Company shares	96.8	68.2	94.5	96.0	100.9	104.3	112.3
Industrial shares	64.3	49.3	57.9	56.7	67.6	69.6	72.7
Average Yields (per cent.)							
Bank and Discount Company shares	5.38	7.43	4.99	4.93	4.64	4.49	4.18
Industrial shares	7.21	6.94	4.60	4.38	3.61	3.47	3.65

The rapid recovery in bank share quotations in the year following the financial crisis of 1931 has been followed by steady appreciation reflecting the continued fall in long-term interest rates. The recent check to industrial shares has left bank stocks, generally speaking, unaffected, the rise since the beginning of the year amounting to 7.7 per cent., compared with 4.5 per cent. for representative ordinary shares. Although the average yield obtainable at current quotations is still higher than the average industrial return, increased dividends in the latter class have reduced the margin from 1 per cent. at the end of 1933 to a little over 0.5 per cent.

The apparent disparity in yields testifies to the willingness of speculative investors to pledge their faith in a further upswing in industrial profits, and to their reluctance, at this stage of the recovery phase, to budget for any significant advance in the general level of banking profits. Pending the reversal of this trend, bank shares are likely to remain faithful satellites of the gilt-edged planetary system, isolated from the meteoric movements of the industrial market. Whether the earnings factor will make its influence felt before any rise in long-term interest rates occurs is a long-period question which can only be decided when the "shape" of the present recovery cycle is indicated in a more certain fashion. Present indications suggest that the trough in long-term rates

has yet to be reached, and this feeling is endorsed by the investment policy of the banks themselves.

The tables which follow below confirm these considerations so far as they apply to British bank shares. This year's interim dividends have been maintained at last year's levels, but quotations have made steady response to the pressure of investment funds seeking reasonable current yields with a possible promise of further fruits in due season. On the whole, banks operating overseas have also maintained their distributions, but the National Bank of India has reduced its interim payment from 10 per cent. to 9 per cent., while the Bank of New South Wales has paid 5 per cent. for the latest year, against 5½ per cent. for the previous year. The improvement in South American conditions has been marked by the higher quotation for Bank of London and South America £5 shares, although no interim dividend has been declared. Australian and New Zealand issues have shown some appreciable recession during the year, which has fully recognised the dependence of these countries upon primary products, but in recent weeks the success of the United Australia Party at the polls has set at rest apprehensions of financial experimentation in that country.

MIDLAND BANK

LIMITED

Safe Deposit Service

This service is available at the Head Office building in Poultry for the convenience of individuals, limited companies, firms and associations. Among its advantages are those of **ECONOMY**: The annual fee ranges from 10s. to £3, according to the size of safe selected.

PRIVACY: Renters may examine the contents of their boxes, deal with correspondence and conduct interviews in comfortable private rooms each equipped with telephone.

SECURITY: A specially constructed strong room, with a 35-ton circular door and frame, contains several thousand private safes each fitted with a deed box. A renter is supplied with the only two keys of his safe to which he has sole access as often as he desires.

INSPECTION IS INVITED

A leaflet entitled "SAFE DEPOSIT SERVICE" and containing illustrations is obtainable at any of the 2100 branches of the Bank

Similar facilities are provided at the office at 140 Leadenhall Street, London, E.C.3

HEAD OFFICE: POULTRY, LONDON, E.C.2

Treasuries and Central Banks

By D. W. DODWELL, Ph.D., with a Foreword by SIR BASIL P. BLACKETT, K.C.B., K.C.S.I. 10s. 6d.

The relations between Governments and their Central Banks are usually shrouded in mystery for all but the few persons directly concerned. The author throws light on this difficult and most important subject by tracing the growth of these relations historically in England and the United States, and suggesting some general conclusions. He discusses from this point of view the sensational developments of monetary policy in recent years and the prospects for the future.

The Economics of Consumers' Credit

By FERDYNAND ZWIG, Docent in the University of Cracow 5s.

In view of the discussion going on at present on the subject of reviving the economic life by various schemes of financing consumption, this book of Dr. Zwig's is timely and will prove valuable to economists, financiers and politicians. The book is divided into eight parts: I. Theory of Consumers' Credit; II. Financing Consumption; III. Ideas underlying the Financing of Consumption; IV. Theoretical Justification; V. Effects on Trade; VI. Effects on Saving; VII. Applicability and Working; VIII. Conclusion.

In the Press

Insurance of Foreign Credits

By ELIA M. SHENKMAN, Ph.D.(Econ.) 15s.

PART ONE. Principles and Business Organisation of Credit Insurance: The Organisation, Methods and Risks of Financing International Trade—Economic Analysis of Credit Risks—Ways of Meeting Credit Risks—Origin and Development of Credit Insurance.

PART TWO. The State as Guarantor of Credit Risks: Credit Insurance as an Instrument of Commercial Policy—International State Guarantee Schemes—British Government Schemes of Export Credit Insurance—The System of Credit Guarantees in the German Reich—State Credit Insurance in France, Belgium, Italy, Spain, Holland, Japan, Sweden, Denmark, Austria, United States of America.

New Work by
Professor Lionel Robbins

THE GREAT DEPRESSION 8s. 6d. net

"Professor Robbins has written a powerful and persuasive work, which is moreover a joy to read, whatever the opinions of the reader."—Sir Josiah Stamp (*Time and Tide*).

"No banker or student of finance who is interested in the principles of monetary control can afford to miss reading Professor Lionel Robbins's book."—*Manchester Guardian*.

"Illuminating and eminently readable."—*The Banker*.

Professor Robbins has outlined his views of the origin and course of the crisis and of the necessary conditions if we are to emerge from it. Though the reader may not share his emphasis and may differ from his conclusions, there is no one who will not find this compact and brilliant sketch unusually stimulating and provocative."—*The Economist*.

New Work by G. D. H. Cole SOME RELATIONS BETWEEN POLITICAL AND ECONOMIC THEORY 4s. 6d. net

THE EMPLOYMENT EXCHANGE SERVICE OF GREAT BRITAIN:

An Outline of the Administration of
Placing and Unemployment Insurance.

By T. S. CHEGWIDDEN and G. MYRDDIN-EVANS.
With a Foreword by the RT. HON. WINSTON
S. CHURCHILL, C.H., M.P. 14/- net.

This work gives in broad outline an account of the Employment Exchange system of Great Britain and of the problems with which it is called upon to deal. In the main it is a statement of fact, but in so far as opinions are expressed they are the views of the authors.

MACMILLAN & CO. LONDON W.C.2

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

THE P. & O. BANKING CORPORATION, LIMITED

BALANCE SHEET—March 31, 1934

BANK OF LONDON AND SOUTH AMERICA, LIMITED

The profit for the year, after deducting all expenses and charges, provision for bad and doubtful debts having been made partly out of the profits of the year and partly out of contingency reserve, amounts to £337,379. To this sum has to be added £192,251 brought forward from last year, making a total of £529,630. From this unappropriated balance the directors recommend the following distribution: To dividend of 3 per cent., payable December 18, 1933, subject to income tax, £106,200; to contingency reserve, £230,000; to profit and loss carried forward, £193,430—£529,630.

BALANCE SHEET—September 30, 1933

In countries where exchange restrictions are in force conversions have been made at the official rates ruling on September 30, 1933.

LIABILITIES	ASSETS

57,854,312	57,854,312

THE BANK OF ROUMANIA, LIMITED

BALANCE SHEET—December 31, 1933

LIABILITIES	ASSETS
Capital 300,000	Cash in hand and at bankers—London 16,980
Current accounts, sight drafts, contingency account, in sterling, etc. 161,593	Bucarest—Lei 144,728,279 at 549 per £ 263,622
Current accounts, sight drafts, etc., in Lei—390,212,797 at 549 per £ 710,770	Balances with other bankers abroad 21,060
Guarantees, etc., for account of customers, 42,800,214 at 549 per £ 77,050	Money at call and short notice, London 30,000
Subsidiary companies current accounts—In sterling 6,581	British Treasury bills 350,000
In Lei, 668,900 at 549 per £ 1,218	Investments (at market value) 5,996
There is a contingent liability in respect of investments amounting to Lei 1,500,000. Further provision for doubtful debts, etc., is necessary. Due to the existing conditions in Roumania the value of certain debts cannot be ascertained.	Investments, Lei 3,501,000 at 549 per £ 6,377
	Investments in subsidiary companies (at cost, less amounts written off)—In sterling 13,131
	In Lei 650,000 at 549 per £ 1,184
	Bills receivable, loans, current and other accounts, in sterling, etc. 30,857
	Bills receivable, loans, current accounts, etc., in Lei—236,383,106 at 549 per £ 430,579
	Liability of customers for guarantees, etc., per contra—Lei 42,800,214 at 549 per £ 77,050
	Property account at cost, less depreciation—Lei 2,366,770 at 549 per £ 4,311
	Furniture at cost, less amounts written off 500
	Profit and loss account 5,885
1,257,212	1,257,212

The accounts for the year 1933 show that after charging current expenses, but before making any provision for

doubtful debts, etc., there is a loss of £5,885. The further provision which is necessary for doubtful debts, etc., cannot be ascertained, due to the effect of the prevailing conditions in Roumania on the value of certain of the assets. The accounts in Bucarest have been converted into sterling at the rate current on December 31, 1933.

THE BRITISH BANK OF SOUTH AMERICA,
LIMITED

The report for the financial year ended December 31st last shows that the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and after making provision for bad and doubtful debts other than provided for out of contingencies account, amount to £174,991; this, with the balance of £118,933 brought forward from the previous year, makes £293,924. After deducting all charges at the head office and branches, including directors' remuneration, Government taxes in Brazil, etc., amounting to £124,828, there remains available the sum of £169,096. A dividend for the year of 4s. per share, or 2 per cent., amounting to £20,000, was paid on June 8th last, subject to income tax, on the paid-up capital of the bank of £1,000,000. After paying this dividend, there will remain the sum of £149,096, of which the directors propose to transfer the sum of £30,000 to contingencies account and to carry forward the balance of £119,096.

HAMBROS BANK, LIMITED

According to the report of the directors for the year ending March 31, 1934, after payment of all expenses, making provision for rebate on bills discounted, bad debts, and income tax, the accounts show a profit of £319,248. Deducting the directors' remuneration of £15,096, and adding the balance brought forward from last year of £94,293, there remains an available total of £398,445. After transferring £150,000 to contingency reserve account and allowing the sum of £48,750 for interim dividend on the £10 shares and £9,000 for interim dividend on the £1 "A" shares paid on October 31, 1933, the directors now recommend the payment of a further dividend of 1½ per cent., less income tax, on the £10 shares, making a total of 18 per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £92,270 be carried forward. The transfer of £150,000 to the contingency fund, after allowing for the appropriation which has been made for doubtful debts, will result in a considerable addition to this fund.

THE IMPERIAL BANK OF PERSIA

The profits for the year ended March 20th last, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, contingencies, and bad and doubtful debts, amount to £77,169, to which has to be added £46,889 brought forward from last account, making a total of £124,058. The assets and liabilities of the branches in Persia have been converted at the rate of exchange of Rials 77 per £ sterling, being the rate on March 20, 1934. The rate last year was Rials 103. The directors recommended payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. It was also proposed to add £10,000 to reserve, which is thereby increased to £720,000 and to carry forward £49,058.

SWISS BANK CORPORATION

According to the report, and after deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1933, amounts to £382,158. The board propose to pay a dividend of 5 per cent. on the paid-up capital (according to Art. 36 of the Articles of Association), £320,000, leaving a balance of £62,158. After deduction of the statutory participation of directors, £6,215, the remainder, £55,943, together with the amount carried forward from last year, £52,083, viz., in all £108,026, is at the disposal of the general meeting. The board propose to pay a further dividend of 1 per cent. (making in all 6 per cent. for the year 1933) which will absorb £64,000, and to carry forward £44,026.

THE YOKOHAMA SPECIE BANK, LIMITED

The report for the half-year ending December 31, 1933, states that the net profit of the bank for the past half-year, after providing for all bad and doubtful debts, rebate on bills, etc., shows 14,148,164 yen, inclusive of 6,869,039 yen brought forward from last account. The directors propose that 1,500,000 yen be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb 5,000,000 yen. The balance, 7,648,164 yen, will be carried forward to the credit of next account.

VI. FOREIGN COUNTRIES IN THE STERLING AREA	10		

I.—AIM AND METHOD

ALTHOUGH it is obviously too early yet to form any final judgment on the effects of the Ottawa agreements,* nevertheless the time is approaching when it will be necessary to review the whole range of policy which has come to be regarded by the public as the outcome of the Ottawa Conference. Indeed the necessity is, in a sense, already arising from day to day as the policy adopted in various countries of the British Commonwealth reacts on the economic relations between its members. The underlying purpose of the present article is to emphasise that, when any review is carried out, it is essential that the issues should be considered against the widest possible background, and that public opinion in every country should have an accurate appreciation of the whole of the relevant circumstances.

One of the greatest dangers in the discussion of trade agreements, or, indeed, of any kind of fiscal policy, is the danger which lies in considering the position of particular trades and industries in isolation and not in relation to the economic organism as a whole. Planning or discussion on such a restricted basis is not only likely to ignore reactions on what may be more important functions, but also renders agreement between two countries more difficult, inasmuch as the special interests of those who are engaged in the same fields of industry in different countries may be extremely difficult to reconcile. It is only when the complete range of economic activities of a country is brought under comprehensive review that its statesmen may feel justified in sacrificing the development of a particular function for the sake of the well-being of the whole, and that the steps involved in rationalisation of economic effort throughout a group like the British Commonwealth may find justification both in fact and in the eyes of the public of each constituent country.

The study embodied in these pages and in the statistical tables on which they are based† represents an attempt to sketch the picture as a whole and to bring out some of its main characteristics. It does not claim to be more than a preliminary outline sketch to be tested and elaborated as the records become more complete both by the passage of time and by the improvement of the statistical evidence which it is hoped that the Governments concerned will provide.

Another reservation also must be made at the outset. Although the treatment adopted is one of comparing the positions before and after Ottawa, this method must not be

* The Government of one important Empire country, India, has, in accordance with a promise given to the Legislature, attempted a comprehensive review of the working of the Agreements, and has produced an interesting report (dated June 27, 1934). But that report has itself emphasised that the available data are incomplete and that only the most tentative conclusions can be drawn.

† The statistical tables in the Appendices have been prepared by Mr A. Emanuel, B.Sc. (Econ.) (Lond.), to whom the author's acknowledgments are due.

given too much significance. On the one hand, as already stated, it is too early yet to make any final assessment of the effects of the Ottawa agreements; on the other hand, it would be a great mistake to attribute to their influence all the developments in Empire trade relations since 1932. Many other factors have combined to operate on the situation. One important factor which just about the same time came to bear on Empire trade (both trade within the Empire and trade between the Empire countries and the outside world) was the departure of sterling from gold and the linking of most of the Empire countries to sterling, which has resulted in the gradual creation of a distinctive area within which the Empire countries can trade together on a basis of relative exchange stability—a circumstance which must have tended, at least, to facilitate their trading relations together in comparison with their trading relations with countries not included in the sterling area.*

Then again it must be remembered that the granting of tariff preferences at Ottawa by the United Kingdom to the Empire countries was only made possible by the change in the United Kingdom fiscal policy after the crisis of 1931, a change which must obviously have had its own wider reactions. Together with this there must also be taken into account the reactions of the whole United Kingdom economic policy since 1932 (and particularly agricultural policy), with its quotas, bounties and bilateral trade agreements with non-Empire countries. Outside the United Kingdom there have also been well-known changes which must in various degrees have been influencing the course of trade in one direction or another, among which may be mentioned the all-round increases in tariffs supplemented by quotas and other restrictions and the special currency policy of Australia and New Zealand. Lastly, it is important to appreciate that the Ottawa agreements (at least on the Dominions' side) very largely represented no more than a confirmation of previously existing policies as regards tariff preferences,† and that the discussions and resolutions covered general principles of economic co-operation and

* It is, of course, common knowledge that the whole of the Empire did not immediately come on to the sterling basis, and also that what may for practical purposes be regarded as the "sterling area" is not exclusively confined to the Empire countries. South Africa remained for some time on gold, Canada has only gradually come to orient herself towards sterling, and is still not entirely outside the orbit of the United States dollar. As to the countries outside the Empire which have either *de jure* or *de facto* based their currency on sterling, a cursory examination of the figures seems to indicate that the basis of mutual exchange stability has favourably affected their trading relations with the United Kingdom. (See below.)

† The most substantial new ground in regard to tariff preferences was broken in the agreements with India, and it is perhaps significant that the most marked change in the trend of trade after Ottawa has occurred in the case of India, particularly in the improvement of the United Kingdom market for India's exports.

were not confined to tariff preferences, although public attention was, perhaps naturally, mainly concentrated on the latter. Indeed, it may well prove that the most valuable work of the Conference was done in those committees which were more concerned with the general principles of economic unity and plans for the rationalisation of Empire production.

As has already been stated, the purpose of the present review is to present a comprehensive factual statement which can be used as a background to the discussion of particular issues. The background is mainly supplied by the tables of figures in the appendices. As to these, exigencies of space have prevented the printing of the full figures for a great number of years, and a method of selection has been adopted which may perhaps be claimed to show up the main outlines in a clear light, although what has already been said about the significance of the Ottawa agreements must be borne in mind. Four periods have been selected for comparison:—

- The pre-war period.* For which the year 1913* has been taken as sufficiently representative for the present purpose, though covering what must generally be regarded as an optimum pre-war level of trade.
- The period of post-war prosperity* closed by the slump at the end of 1929. For this an average has been taken of the six years 1924 to 1929 inclusive.*
- A slump year—pre-Ottawa—1931.*
- A slump year—post-Ottawa—taking the latest full year for which statistics are available, 1933.*

It is fully recognised that the periods are very differently spaced, and it is not claimed that they afford any basis for studying a "trend" in the statistician's sense. The first space of eleven years between 1913 and 1924-29 might indeed be suitable for such a purpose, but that space covers the cataclysmic disturbances of the war which would vitiate any calculation of a normal trend. Again, it is recognised that the economist, examining a series such as is here presented, would look to it as indicating both trend and cyclical fluctuation, and would see in the changes in the third and fourth periods signs of a decline and recovery in which it might normally be expected that trade in the raw materials and foodstuffs comprising Empire exports would behave differently from trade in manufactured articles. These wider influences must, of course, be borne in mind, but they do not affect the main conclusions.

Something must also be said about the figures in the tables. If one is attempting to weld into one comprehensive picture the trade statistics supplied by a number of different countries, it is impossible to avoid very serious discrepan-

* There is some difficulty in getting identical periods for comparison, as the various Empire countries compile their statistics for different calendar periods. Some (United Kingdom, South Africa, New Zealand) use the calendar year; others (India, Canada) work from April 1st to March 31st; while Australia works from July 1st to June 30th. In the case of Australia the last figures available have been to June 30, 1933, whereas in the case of India figures have been given for the period ending March 31, 1934. In the tables which follow 1933 accordingly means for United Kingdom, South Africa, and New Zealand the calendar year 1933; for India and Canada the year 1933-34 ending March 31, 1934, and for Australia the year 1932-33 ending June 30, 1933. The same applies, *mutatis mutandis*, to all other years mentioned.

II. THE DISTRIBUTION OF EMPIRE TRADE

Making every allowance for the reservations stated above, the tables present a picture which at least points to certain definite conclusions. One point which emerges most clearly is that after the shifting of the trade channels effected by the disturbances of the war (a change which in general reduced the reliance of the main Empire countries on the United Kingdom both as a supplier of their imports and consumer of their exports) there has, since the slump, and particularly since the Ottawa Conference, been a striking

increase in the relative importance to the main Empire countries of the United Kingdom as a market for their exports. The stability of the United Kingdom market for Empire products and its increasing importance are tendencies which stand out more clearly than the converse tendency of increasing importance to the United Kingdom of the Empire markets for her own exports. One may first examine the position as it looks from the point of view of the United Kingdom on the basis of the

increase in the relative importance to the main Empire countries of the United Kingdom as a market for their exports. The stability of the United Kingdom market for Empire products and its increasing importance are tendencies which stand out more clearly than the converse tendency of increasing importance to the United Kingdom of the Empire markets for her own exports. One may first examine the position as it looks from the point of view of the United Kingdom on the basis of the

United Kingdom trade figures. This is shown in the following table:—

TABLE I UNITED KINGDOM TRADE WITH EMPIRE COUNTRIES									
Values in £m.				Percentage of Total Trade					
Imports:	1924-29	1931	1933	1913	1924-29	1931	1933		
1913	1924-29	1931	1933	1913	1924-29	1931	1933		
380	247	249	249	24.9	30.6	28.8	36.9		
192	335	209	232		26.8	23.2	34.3		
Exports:	1924-29	1931	1933	1913	1924-29	1931	1933		
209	352	187	174	32.9	40.9	41.1	41.8		
	303	148	150		35.2	32.6	36.0		

In this table the figures in italics show the position *excluding* trade with the Irish Free State. This gives the better basis of comparison with the pre-war figures, for, of course, in that period the Irish Free State was part of the United Kingdom. It is an inaccurate basis only to the extent of the fraction of trade which was carried on before the war between the territory which is now the Irish Free State and countries outside the United Kingdom.

This table shows that although there has been in the last period a slight increase in the percentage of United Kingdom exports going to the Empire countries, as compared with the pre-war percentage, this is merely a relative improvement, for the total exports are much less. On the other hand, United Kingdom imports from Empire countries—even in the recent slump years—show a substantial increase in value over the pre-war figures, both absolutely and relatively to other countries; and this increase (omitting the Irish Free State) has been particularly marked in the fourth period.

We may next examine the position as it looks from the point of view of the Empire countries themselves, using the figures from their returns.* The picture is given with a good deal of detail in the full tables in the Appendices,† but in the following paragraphs an attempt is made to bring out the main features by comparing the position over the four periods of the five most important Empire countries—India, Canada, Australia, New Zealand and South Africa.‡ These five countries have, roughly speaking three-quarters of the trade of the Empire countries,§ so that an examination of their position covers the greater part of the field. The position as regards trade with the Crown Colonies is, of course, extremely important, and in some ways the field here remains the most open for a complementary plan of development. But it is a field which requires a special study by itself.¶ For the five main countries selected for special consideration, we may first consider the distribution of their trade as shown by the percentages of total trade done with various countries. This is summarised in the two tables on page 5.

These figures bring out the following points: (i) In the

* The figures have been corrected in all cases to the common basis of sterling, and the method of conversion adopted has been that employed by the Board of Trade. For reasons already explained the picture drawn from this side cannot be reconciled with that drawn from the United Kingdom figures.

† A very useful comparison is contained in the official publication, "Statistical Tables Relating to British and Foreign Trade and Industry (1924-30)," Cmd. 3737—see especially Tables 6 and 7. That publication, however, only carries the comparison up to 1929. In the tables in the Appendices an attempt is made to bring it up to 1933-34, and to give a good deal more detail as regards the distribution of trade among the various Empire and foreign countries.

‡ The Irish Free State has been omitted partly because there is no basis for comparison with 1913, and partly because its trade is so predominantly with the United Kingdom, and has been so affected by the recent dispute over the Land Loan payments, that for the present purpose a comparison is not very instructive.

§ Omitting trade with the Irish Free State these five countries account for the following percentages of United Kingdom trade with Empire countries in the four periods covered by the present review:—Imports, 78.5, 77, 78.2, 79; exports, 83, 77.4, 71, 72.5. Again, taking the total trade as compiled in Tables 6 and 7 of Cmd. 3737 (omitting the trade of the Irish Free State), these five countries account for the following percentages:—1913, imports, 79, exports 83.7; 1929, imports 73, exports 76.8.

¶ Full details, so far as these are available, have been included in the Appendices; but there have been special difficulties about bringing them into the general survey in the text. In the first place, full figures beyond 1932 have not yet been published. In the second place, the trade of British Malaya and Hong Kong, which comprises a very important part of the total, requires special analysis, for it includes a large quantity of entrepôt trade which cannot be regarded as part of the normal Empire trade for the purposes of this review.

case of all the five countries the relative importance of their trade with the United Kingdom had declined in the period of post-war revival (1924-29) as compared with pre-war conditions. Since then, however, there has been (except only in the case of South Africa, which requires special explanation*) a marked increase all round in the relative importance of their United Kingdom trade, and this increase has been more important in the case of their exports to, than in the case of their imports from, the United Kingdom. The combined table shows that the United Kingdom share of their imports has gone up from 36.7 to 38.7 per cent. and of their exports from 35 to nearly 43 per cent. The percentages of trade as between the Empire countries themselves have remained relatively stable. (ii) The two countries which show the most marked differences between the third and fourth periods (i.e. between pre-Ottawa and post-Ottawa "slump" years) are India and Canada. In the case of India the percentage of her imports from the United Kingdom has gone up from 36.7 per cent. to 41.2 per cent., and of her exports to the United Kingdom from 22.8 per cent. to 31.8 per cent. The comparison as regards imports is, however, affected by special non-economic circumstances, for British imports into India in 1931-32 were still influenced by the political boycott of British goods. The increase in exports is a more natural and therefore significant phenomenon, and does seem to indicate that the Ottawa preferences have been of direct and immediate benefit to India. In the case of Canada, the United Kingdom share in her imports has gone up since 1931 from 18 to 24 per cent. and in her exports from 30 to 39 per cent. This, again, has a special significance, for Canada divides the bulk of her trade between the United States and the United Kingdom, and the disturbances in the markets of the former may perhaps be regarded as influencing her to orient herself more towards the relatively stable opportunities in the British area.

The comparison made up to this point has been on the basis of the percentages of trade, and, though this is a convenient method for showing up changes in distribution and in the relative importance of various markets, the recording of merely relative changes is a method which has obvious limitations. In order to appreciate the position fully it is necessary also to examine the absolute figures given in the tables in Appendix I. Table 4 provides a picture in a convenient form for bringing out the main points relevant to the present arguments.

The table brings out some interesting points, such as the enormous balance of trade in favour of the United Kingdom with India in pre-war conditions and the change over in the last years to a nearly even balance, or, again, the enormous value of the United Kingdom market to Canada, Australia and New Zealand and the striking recent change in the balance as regards Australia. But the main

* In the case of South Africa we have the most glaring discrepancy between the picture of its trade with the United Kingdom as presented in its own returns and the picture given in the United Kingdom returns. This is shown in the following figures. (In this and all the other tables exports of gold are excluded):—

(£ millions)				
<i>South Africa to United Kingdom</i>				
	1913	1924-9	1931	1933
U.K. imports from S.A. (U.K. figures)	12.30	21.95	13.12	14.43
S.A. exports to U.K. (S.A. figures)	21.43	22.84	9.40	8.68

It will be seen that there is a fairly close correspondence in the case of United Kingdom goods to South Africa, but a complete divergence as regards South African goods to the United Kingdom, for the South African returns show that exports to the United Kingdom in 1933 were less than half the value of the 1913 exports, whereas the United Kingdom figures show that 1933 was actually higher. Inquiries at the Board of Trade have elicited that the difference arises in the main owing to different treatment of diamonds and wool. As regards diamonds, these are excluded from the United Kingdom figures but included in the South African returns, while the figures contained in the South African returns show such remarkable variations as regards distribution (cf. table in Appendix IV) that it looks as if there had been some change in the method of recording. As regards wool, the South African figures attempt to follow out the final destination and treat a large proportion of the wool exported to the United Kingdom (and so treated in the United Kingdom returns) as exports to Continental countries. The position requires further checking in detail, but the discrepancy is an illustration of the difficulties caused by the lack of any uniform system of classification.

TABLE 2.—TRADE OF INDIA, CANADA, AUSTRALIA, NEW ZEALAND, AND SOUTH AFRICA

point which emerges (South Africa, as already noted, alone showing different results) is the comparatively stable nature of the United Kingdom market and its increasing value to these Empire countries. India, for example, in comparison with 1913, showed in 1933 a loss of only £4 millions in her exports to the United Kingdom, as compared with a loss of £44 millions to foreign countries. Or, making the comparison with the period of post-war prosperity, India has lost £105 millions of trade to foreign countries, as compared with a drop of only £24 millions in her exports to the United Kingdom. Canada, again, has, since the period of post-war prosperity, lost £37 millions of trade to the United Kingdom and £87 millions to foreign countries, and Australia, on the same basis, £17 millions to the United Kingdom and £33 millions to foreign countries. The same point is clearly brought out by measuring the percentage fall of exports to the United Kingdom and foreign countries respectively for 1933 as compared with the average for 1924 to 1929, as shown in the following table:—

TABLE 5. PERCENTAGE FALLS IN VALUE OF EXPORTS FOR 1933
AS COMPARED WITH 1924-29

	Exports to United Kingdom	Exports to Foreign Countries
India	- 40.9 per cent.	- 64.1 per cent.
Canada	- 44.4 per cent.	- 57.5 per cent.
Australia	- 31 per cent.	- 49.4 per cent.
New Zealand ...	- 28.9 per cent.	- 60.3 per cent.

The statistics, indeed, support the proposition that the more a country has been dependent on foreign markets, the more acutely has it felt the depression and the slower is its recovery proving. Thus India, of all the Empire countries which we are considering, has relied most on foreign markets and is most dependent on their recovery, having only placed about 23 per cent. of her exports with the United Kingdom

in the pre-war period and up to 1929; and India shows the worst fall in her exports and the slowest recovery. In 1933, in fact, the total value of her exports of merchandise was only 66 per cent. of the value for 1913 and 42 per cent. of the average value for 1924-29. New Zealand, on the other hand, which relies on the United Kingdom market for about 80 per cent. of her exports, had in 1933 exports which represented 156 per cent. of the 1913 figure and 64½ per cent. of the 1924-29 value. Canada and Australia, which, as regards reliance on the United Kingdom market, come about halfway between these two extremes, exported in 1933 goods of a value representing respectively 129 and 106½ per cent. of their 1913, and 47.7 and 58.2 per cent. of their 1924-29 exports. It may of course be said, in answer to this presentation of the case, that the better position of Canada, Australia and New Zealand is due not so much to their greater reliance on the United Kingdom market as to the nature of the goods which they export, inasmuch as they rely to a greater extent than India on the export of foodstuffs, which have had a comparatively good market throughout the slump, especially in England, where the policy of unemployment relief has resulted in a remarkable maintenance of the standard of living. But to the extent that this is true it merely serves to bring out one of the chief factors of stability in the United Kingdom market. Moreover, even if the argument ought not to be pressed too far, the comparison is worth making if only to meet the point of those who argue that it is dangerous for a country to rely, as New Zealand does, preponderantly on one country for its export market. If the country relied on is a stable one, and if there is some variety in the commodities exported, that is probably a safer position than to rely preponderantly on the export of one or two commodities which cannot be absorbed unless the whole world is prospering and which are liable to be replaced by substitutes.

III.—VARIATIONS OF TRADE WITH FOREIGN COUNTRIES

(a) *Europe and the United States.*—The point made about the comparative stability of the United Kingdom market leads naturally to the next point for inquiry—what foreign countries have been the chief causes of declining trade? Considering the effects of the war and of post-war upheavals on European countries—and especially on Germany—combined with the high standard of development of these countries and their previous importance in international trade, one would expect to find that the European countries—and, again, especially Germany—had been the most upsetting factors. But a review of the position as a whole seems to indicate that fluctuations in trade with the United States have been responsible for just as great, if not greater, disturbance. One may examine first the position of the United Kingdom.

TABLE 6. PERCENTAGES OF TOTAL TRADE OF UNITED KINGDOM

From or To	Imports				Exports			
	1913	1924-9	1931	1933	1913	1924-9	1931	1933
Germany.....	10.5	4.7	7.4	4.4	9.5	7.4	7.0	5.9
Europe	40.1	33.9	42.6	33.0	37.3	32.6	37.2	35.8
U.S.A.	18.4	17.4	12.1	11.2	9.3	8.4	5.4	6.3

It is remarkable that in the case of both imports and exports the figures for 1933 show a greater variation both in comparison with pre-war figures and the 1924-29 period in trade with the United States than with the European countries as a whole. On the other hand, among the European countries, trade with Germany has suffered specially, but more in the case of imports from, than of exports to, that country. Even Germany as a consumer of United Kingdom goods had fallen away by 1933 only slightly more than the United States in comparison with the pre-war period, and less in comparison with 1924-29.

The trade figures for the five main Empire countries (India, Canada, Australia, New Zealand and South Africa) indicate somewhat similar results. The combined position for these five Empire countries is shown in the following table:—

TABLE 7. PERCENTAGES OF TOTAL TRADE OF INDIA, CANADA, AUSTRALIA, NEW ZEALAND AND SOUTH AFRICA COMBINED

From or To	Imports				Exports			
	1913	1924-29	1931	1933	1913	1924-29	1931	1933
Germany.....	5.7	3.5	4.7	4.7	7.3	5.6	3.9	4.2
Europe.....	12.8	12.3	15.1	14.2	23.4	19.9	16.6	17.7
U.S.A.....	25.5	31.7	29.7	23.5	14.3	18.9	17.0	14.8
United Kingdom and other Em- pire countries...	54.9	46.4	43.5	49.6	51.5	45.8	50.9	53.7
Rest	6.8	9.6	11.7	12.7	10.8	15.4	15.5	13.8
Total	100	100	100	100	100	100	100	100

This table brings out that the European countries as a whole—and even Germany separately—as suppliers of goods to the main Empire countries have maintained a remarkably steady share of trade, while as consumers of the Empire countries' exports their share fell substantially after the war and again at the beginning of the slump, but had recovered somewhat in 1933. The United States, on the other hand, jumped up after the war both as a supplier and consumer of goods, but has since then dropped heavily, the falling off on both sides being substantially steeper during the post-war period than in the case of Europe. The figures indeed suggest that the greater intervention after the war of the United States in international trade and finance (as a lender), followed by her subsequent failure to maintain this part, must have had much to do both with the post-war boom and the collapse after 1929.

The combined table is convenient as giving a general conspectus; but for a full appreciation of the position it is

necessary to study the figures for each of the five countries separately, as shown in the tables in Appendix I.

(b) *Trade with Japan.*—Another factor of disturbance which has been a subject of much public discussion throughout the Empire, is the course of trade with Japan. In order to appreciate the relative importance of this factor the following tables may be of interest:—

TABLE 8. TRADE OF JAPAN WITH BRITISH COUNTRIES
(A) VALUES OF TRADE (in £ millions)

From or To	Imports				Exports			
	1913	1924-29	1931	1933	1913	1924-29	1931	1933
United Kingdom...	14.82	16.92	6.33	4.58	4.39	7.99	6.95	7.22
India	15.13	31.06	10.40	9.46	3.19	13.87	10.00	12.27
Canada	0.33	6.58	3.40	2.85	0.54	2.26	1.23	0.68
Australia.....	1.42	10.57	9.15	9.17	0.95	4.48	2.40	3.54
New Zealand	...	0.34	0.27	0.28	0.15	0.59	0.30	0.54
South Africa.....	...	0.09	0.10	0.26	0.11	1.06	2.45	2.07
Total value of trade of above four Em- pire countries and India	16.88	48.64	23.50	22.02	4.94	22.26	16.38	19.10

(B) PERCENTAGES OF TOTAL TRADE OF THE COUNTRIES
CONCERNED

From or To	Imports				Exports			
	1913	1924-29	1931	1933	1913	1924-29	1931	1933
United Kingdom ..	2.3	2.0	1.4	1.1	0.6	0.6	0.8	1.1
India	9.1	11.9	8.6	8.6	2.5	7.3	10.2	14.1
Canada	0.3	2.6	2.8	2.4	0.4	1.0	1.0	0.7
Australia.....	1.9	7.8	12.2	11.6	1.2	3.1	5.6	6.4
New Zealand	...	0.7	0.8	0.8	0.7	1.2	1.2	2.6
South Africa.....	...	0.2	0.4	1.1	0.3	1.4	4.7	4.2
Percentage of total trade of the above four Empire countries and India	4.4	6.5	6.2	6.0	1.25	3.3	4.9	6.3

These tables indicate that, although in relation to special trades and special countries—notably the cotton-piece goods trade with India—the Japanese incursion into markets may have been a seriously disturbing factor, the problem in relation to the Empire's position as a whole is, quantitatively at least, of minor importance. In fact, trade with Japan in 1933 only covered about 1 per cent. of the exports and imports respectively of the United Kingdom and only 6 per cent. on both sides in the case of the combined trade of the five principal Empire countries. As against this method of presentation those who feel alarm on this subject will make the points (a) that the exceptionally low price level of Japanese imports has an upsetting effect out of all proportion to the absolute quantity of such imports; (b) that it is rather the rate of increase in the imports of Japanese manufactures than the actual figure yet attained which is alarming; (c) that although the total percentage of these five Empire countries may not be large, the figures of imports into India and Australia are already very substantial. A full discussion of all that is involved in these issues would be beyond the purpose of the present article, which is merely to present the various parts of a factual picture in their proper relation to the whole. For this purpose it is necessary to appreciate the importance of Japan as a market for the produce of the Empire countries; and, in connection with this particular point, it is interesting to note that Japan's relative importance to India as an export market has diminished while her importance as a supplier of imports has greatly increased, whereas in the case of Australia her importance as an export market has increased more than as a supplier of imports. For a further study of the relations of Japan with the Empire as a whole, reference may be made to a table in Appendix III, showing the total trade as based on Japanese returns. These show that the Empire countries as a whole still have a favourable balance of trade with Japan, and the balance is still slightly favourable even if the United Kingdom is included.

(c) *Trade with Russia.*—Another factor of disturbance which has always attracted much attention is Russia, and it may be convenient to record figures for Russian trade in this part of the picture. Russia's direct trade with Empire countries has been of negligible importance. Her trade with the United Kingdom is summarised in the following table, which indicates that falling off in trade with Russia has certainly been a serious factor.

TABLE 9. RUSSIAN TRADE WITH UNITED KINGDOM
(in £ millions)

(Figures in brackets indicate percentage of Britain's total trade)			
Imports into United Kingdom	Total Exports from United Kingdom	1913	1933
1913 1924-29 1931 1933	1913 1924-29 1931 1933		
40.27 23.06 32.28 17.43	27.69 10.89 9.20 4.26		
(5.2) (1.93) (3.75) (2.57)	(4.36) (1.26) (2.03) (1.02)		

(d) *Other Questions.*—The special trading relations of the Empire with Japan have already been mentioned and reference has been made to a table in Appendix III. Similar tables showing the trading relations between the

Empire as a whole and other important countries are included in the same Appendix.

As a further means for studying similar questions, a set of tables has been prepared and is included in Appendix IV setting out the main heads of exports of the important Empire countries, and showing what proportion of the trade in each article is done with each important country. Questions are frequently arising (e.g. what will be the effect on Australia of Germany's recently developing policy for restricting imports?) which can at least be partially answered from these tables.*

* It must, of course, always be remembered that simple quantitative statements of this kind do not tell the whole story. Thus, in the case of Australian wool exports to Germany, it is not merely the direct trade which has to be taken into account, for a large proportion of Australian wool may find its way to Germany via Bradford in the guise of tops and noils. Again, a particular commodity, even if it only represents a moderate percentage of a particular country's exports, may be of vital importance to its economic well-being.

IV.—NATURE OF BRITAIN'S TRADE WITH EMPIRE AND FOREIGN COUNTRIES RESPECTIVELY

Comparisons have been made hitherto of the value of United Kingdom trade with British and foreign countries, but does a comparison on a mere quantitative basis of values tell the whole story? Is it the case that some kinds of trade are more beneficial to a particular country than others and are therefore worth while encouraging by special measures? Should this encouragement be given to trade between the United Kingdom and the Empire countries on the ground that their activities are of a more complementary and less competitive nature with the United Kingdom than those of highly-industrialised units like the European countries or the U.S.A.? These questions raise important issues on which, however familiar they may be, clear thinking is necessary. The man in the street might be inclined to argue that if the United Kingdom exports a million pounds' worth of "articles mainly unmanufactured," say, to Germany, which only represent a hundred thousand pounds paid in British wages, and against this export imports from Germany a million pounds' worth of goods, which compete with United Kingdom manufactures, this will be a less advantageous transaction than if the United Kingdom exports, say, to Australia, a million pounds' worth of machinery made in England mainly from British raw materials, and thus practically all representing wages paid in the United Kingdom, and takes as a corresponding import from Australia a million pounds' worth of wheat, representing necessary food to supplement the supplies than can be grown in the United Kingdom, or of wool which is a raw material for an important British industry. The economist, on the other hand, may say that this is an entirely fallacious view; that in the example given, if the export to Germany only represents £100,000 paid in British wages, the balance must represent raw material imported from outside, and that in paying for this to some other country the United Kingdom has created purchasing power for other British exports on which British wages will have been paid. The economist will argue, in fact, that we cannot isolate our production for export from our production as a whole, nor our export to one country (or balance of trade with one country) from our export (and balance) as a whole; that they are all interdependent and dovetailed, and, if we try to manipulate one without regard to the others, we are bound to get into difficulties.

It is not intended here to argue out this issue, though it is hoped that its statement in the somewhat crude form adopted may lead to further discussion which will enlighten public opinion on the matter. Probably

everyone would agree that if we attempt to manipulate one section of our trade without regard to the whole we shall get into difficulties, and, indeed, such a proposition is the keynote of the present article. Probably also everyone would agree that in a world where natural economic forces have free play the "economist's" argument is unanswerable, so far at least as long-run effects are concerned. But from a practical point of view it has to be recognised that in the world at present economic forces have nothing approaching free play; and also that important interests may be ruined while waiting for long-run effects to operate. For the purpose of the present article it is sufficient to assert that trading transactions having the same quantitative value may differ widely in their immediate significance, even though it may be unsafe to frame fiscal policy merely according to such immediate significance and without regard to ultimate reactions. An analysis of United Kingdom trade in order to examine this kind of difference may therefore be of interest.

For this purpose a full table is given in Appendix II, showing the amounts of United Kingdom trade with British and foreign countries respectively, divided into the five main classes which are used in the Board of Trade returns, namely, Class I, food, drink and tobacco; Class II, raw materials and articles mainly unmanufactured; Class III, articles wholly or mainly manufactured; and Classes IV and V, which include animals and articles conveyed by post.

A simplified picture is presented in the following table:—

TABLE 10. TRADE OF UNITED KINGDOM WITH BRITISH AND FOREIGN COUNTRIES SHOWING PERCENTAGES UNDER VARIOUS CLASSES

	Average 1927-32				
	Class I	Class II	Class III	IV & V	Total
Imports from—					
(a) British countries	64.6	23.4	9.7	2.3	100
(b) Foreign countries	41.9	23.2	34.0	0.9	100
Exports to—					
(a) British countries	10.0	3.5	82.0	4.5	100
(b) Foreign countries	6.3	17.4	73.6	2.7	100

This table brings out clearly how much greater a proportion of imports from foreign countries is represented by fully manufactured goods as compared with those from the British countries, and, conversely, how, in the case of exports, those to the British countries contain a substantially larger proportion of fully manufactured goods.

V.—A CONSTRUCTIVE POLICY FOR EMPIRE TRADE?

The foregoing sections have dealt with the position on very broad lines and have attempted no more than a bird's-eye view in order to bring out the main features and their scale of magnitude. While they reveal the increasing importance of inter-Empire trade, it has been claimed that they demonstrate chiefly the value to the Empire countries of the United Kingdom market. Obviously the value of the United Kingdom market must tend to increase proportionately to United Kingdom purchasing power, which itself depends on the placing of United Kingdom exports, so that a policy of complementary development should be advantageous to both sides. In order to work out such a policy a close study of the conditions in each country is necessary; for even the broad survey already undertaken indicates how widely conditions differ from country to country, while for practical purposes it has to be realised that trade, although it may be greatly affected by the general policy of Governments, or national sentiment, actually consists of a mass of individual transactions between hard-headed business men, each operating for his own profit. A detailed review of the conditions in the United Kingdom itself and in each of the Empire countries would extend this study into a formidable volume, but in order to indicate the general lines on which each position might be examined, the special case of India might be of value as an illustration.

A complementary policy for India, as for any country, must be based on mutual advantage, and therefore the points to examine are whether it is possible on the one hand to increase the United Kingdom offtake of articles which India can most suitably produce for export, and on the other to discover hopeful lines on which United Kingdom exports to India can be increased in articles which India needs in any case to import from outside.

In order to form an estimate of the practical possibilities in this field a close examination of every item of trade is necessary,* but for the present purpose it will suffice to call attention to certain main features in India's import and export trade. The figures already given have shown what a tremendous drop there has been since the slump in the value of India's exports, and if an effort were to be made to devise a special policy for improving her purchasing power, attention would naturally be concentrated on those articles which have suffered worst. For this purpose the Annual Review of Trade published by the Government of India is a convenient source, and the latest published volume for 1932-33 gives for the present purpose the best picture, as that year represents the lowest point of depression in exports hitherto reached. According to this volume the value of India's exports fell in 1932-33 to 132.4 crores of rupees from a "pre-war average" (1909-14) of 219.6 crores—a fall of 87 crores.

The heads of important exports which have suffered in comparison with pre-war levels may be summarised as follows:—

TABLE 11. FALL IN VALUE (IN CRORES OF RUPEES) OF INDIA'S 1932-33 EXPORTS AS COMPARED WITH PRE-WAR

Grain, pulse, and flour :—		
Wheat	13.94	
Rice	11.48	
Barley	1.83	
Others	2.48	
Total	29.7	
Seeds (including nuts for oil)	13.1	
Cotton { Raw	12.6	
Manufactures	8.1	
Jute { Raw	12.5	
Manufactures (increase)	1.5	
Hides and skins (undressed)	11	
Chemicals, drugs, and medicines (chiefly opium)	7.5	
The above items account for	6.2	
On the other side there have been some increases, the most important being tea ...	88.2 crores	
	+ 6.6 crores	

* In the following paragraphs the figures will be given in rupees from the *Government of India Review*, but it must be remembered that the pre-war parity of the rupee was 1s. 4d. sterling (or gold) whereas the present parity is 1s. 6d. sterling. If therefore the figures were converted into sterling the falls would appear less.

As stated above, if India is to be helped to strengthen her purchasing power for imports, the summary given above indicates the obvious field in which one would first look for improving markets, but it is, of course, necessary also to consider possibilities under important heads like jute manufactures, tea, and leather, which have kept up well. Special considerations affect each article, and the power of the British Government or of British business men to do anything depends on a number of considerations. But, as an illustration of what can be done on these lines, mention should be made of the special efforts now being made by the Lancashire cotton interests to increase British consumption of Indian cotton. The figures in Appendix IV, in fact, show that the United Kingdom's share of India's cotton exports increased from 6.5 per cent. in 1931-32 to 12.5 per cent. in 1933-34.

The next point to consider is whether a broad survey of the course of Indian imports indicates in what main directions British manufacturers might hopefully look for increased markets in India.

The following table, covering the principal heads of manufactured articles, brings out some interesting points:—

TABLE 12. VALUE OF IMPORTS FROM ALL SOURCES (in Crores of Rupees)

	Pre-war average (1909-14)	1932-33	Inc. or Dec. 1932-33 compared with Pre-war
Cotton yarns and manufactures ...	52.18	26.82	- 25.36
Textile yarns and fabrics other than cotton	7.71	10.89	+ 3.18
Metals, iron and steel and manufactures thereof	11.15	5.29	- 5.86
Metals, other than iron and steel and manufactures	4.58	4.42	- 0.16
Chemicals, drugs and medicines ...	2.12	4.90	+ 2.78
Cutlery, hardware, etc.	4.36	4.89	+ 0.53
Dyes and colours	2.06	3.50	+ 1.44
Electrical goods (other than machinery)	0.70	2.34	+ 1.64
Machinery	5.80	11.16	+ 5.36
Paper, pasteboard and stationery..	1.84	3.58	+ 1.74
Rubber manufactures	0.23	1.98	+ 1.75
Motor cars, etc.	1.75	3.82	+ 2.07

This table brings out:—

- The very striking decreases in cotton textiles and iron and steel manufactures.
- That, on the other hand, there are quite encouraging signs of growth in the consumption of other manufactured articles. In fact, as regards the eight important heads given at the end of the above table, the total value of imports in 1932-33 was 36.17 crores, as compared with a pre-war average of 17.86 crores—an increase of over 100 per cent. (without allowing for the increase in the sterling value of the rupee).

The adverse effects of the decreases in imports of cotton manufactures and iron and steel products have fallen with concentrated force on British manufacturers who before the war were the main suppliers of the Indian market, and whose loss in the case of cotton goods has, as is well known, been further increased by the capture of part of the reduced trade by Japan. The main cause of the decrease in imports has been the development of Indian manufacture, and it has to be recognised that in developing the cotton and steel industries India is taking advantage of her own natural facilities—in the case of cotton, growth of the raw material, cheap labour, and a huge home market, and, in the case of iron and steel, uniquely favourable proximity of coal and iron ore—and that nothing could stop the national demand for such developments. However disastrous the immediate effects may have been to the British industries which relied on the Indian market, their ultimate effects—if proper use is made of India's natural advantages—ought to be an increase in India's prosperity which ought to create openings for trade in other directions, for there will remain a mass of manufactures which India cannot profitably supply herself, and for which, with increasing prosperity, the demand

will grow. There is an enormous margin for the improvement of the standard of living in India, and therefore a vast potential demand. In these circumstances there is surely hope that a complementary plan could be worked out in co-operation between British and Indian interests if each side realises that co-operation may prove more profitable than competition, and that an increase in the exchange of goods will increase the purchasing power of both sides. The figures

given above indicate the broad lines of expanding demand along which new openings may hopefully be sought, but even in the case of cotton textiles there is also room for co-operation and for trade based on the specialised capacity of British manufacturers to produce certain classes of goods. It is most important that this whole field should be studied with a vision concentrated on the future rather than the past.

VI.—FOREIGN COUNTRIES IN THE STERLING AREA

This review would be incomplete if it did not recognise that the economic factors which make for favourable trading relations between the United Kingdom and the Empire countries may exist in the case of other countries also, and that such natural influences may in these cases also be reinforced by trade agreements or other special arrangements. Amongst the latter the possibility of trade being facilitated with countries which have *de facto* or *de jure* based their currencies on sterling has already been mentioned. It is interesting to examine typical cases of the operation of these factors, and for this purpose we may take the Scandinavian countries, Egypt, and the Argentine, trade with which illustrates in varying degrees the effects of relative exchange stability and trade agreements.

The trade between the United Kingdom and these countries is summarised in the table in the next column. On the basis of these figures it will be seen that trading arrangements with Denmark have produced exceptionally favourable results to the United Kingdom, for Denmark has responded not merely as a supplier of goods to the United Kingdom market but also as a consumer of United Kingdom exports. Trade with Norway and Sweden has also improved satisfactorily, but in the case of the Argentine the advantage to British manufacturers in the Argen-

tine market has hitherto hardly been equivalent to that which Argentine exporters have enjoyed in the United Kingdom market. United Kingdom imports from the Argentine in 1933 were almost equivalent to the pre-war figure, whereas the value of United Kingdom exports had fallen from £23 to £13 millions.

TABLE 13. UNITED KINGDOM TRADE WITH "STERLING AREA"

VII.—CONCLUSION

The study embodied in these pages and the attached tables has been undertaken with only a modest purpose. It did not set out to defend any particular thesis or to reach final conclusions. It puts forward a plea that, when fiscal issues are discussed, they should be viewed in their full setting against a wide background, and it represents an attempt to provide in outline such a background for the consideration of Empire trade questions. It is hoped that this may prove useful, as a form of record which can be kept up to date, for watching the further development of the situation, and for the discussion of particular issues as they arise. If inferences have been drawn, this has been done rather with a view to stimulate discussion, and for this purpose alone it may be desirable, in conclusion, to state tentatively certain propositions, although the line of reasoning on which they are based has not been fully developed in the text.

The figures may be used in widely differing ways. Some may see in them such evidence of the growing importance of inter-Empire trade that they would advocate measures for its development regardless of the effects on trade with other countries. Others may be so impressed by the magnitude of the share of trade which is still done with non-British countries that they would regard it as fatal folly to take any artificial measures to encourage trade with the Empire. They would perhaps argue that at best such measures can only displace trade from one channel to another, and that mere displacement must do more harm than good, for, while in the long run it will not increase the volume or advantage of trade even for those in whose favour displacements are made, the dislocations

resulting elsewhere will still further weaken the world as a whole. Is it not possible to find between the two extremes a more hopeful view on which a constructive policy can be based? International trade at present is suffering from a general move towards self-sufficiency in all countries, for it is tending to be restricted to the exchange of products which cannot be produced *at all* in the importing country, instead of covering the much wider range of products which can be produced in the exporting country more economically than elsewhere. For the world in general—and for every country individually—this involves losing the advantage of the principle of specialisation according to natural advantage. That the world can go back to the unlimited operation of this principle is of course wide beyond the range of practicable possibilities. But that it is desirable to move in that direction is probably recognised by the great mass of public opinion in all countries. The question then is—Cannot the Empire countries make a start in this direction and make an oasis of comparative economic sanity which will serve as an example to the rest of the world and gradually attract others into its orbit? Such a policy obviously means that each country cannot develop every possible section of economic activity equally, and demands courage on the part of political leaders to resist the demands of some sectional interests. But is it unreasonable to hope that such a broad and mutually advantageous course might be more easily agreed within the Empire between the United Kingdom on the one side, which offers the greatest market in the world for food products and raw materials, and the Empire countries on the other, which are essentially adapted for

the production of these articles? If any conclusion emerges from the figures here collected it is the enormous value of the consideration which the United Kingdom has to offer through the strength and stability of its consuming market. Surely the present is a time when this power can be used to advantage. But it cannot be used unless the United Kingdom itself has a definite and consistent policy which fits into this sort of complementary plan.

Apart from the generally complementary nature of their activities, there are special grounds for hoping that such a policy can best be started as between the Empire countries. One of the driving forces towards economic nationalism has been fear of insecurity. Amid the shocks through which the world has passed countries are afraid to have their economic life dependent upon others, and even those who recognise that a free international exchange of goods may produce a higher standard of living all round are prepared to sacrifice a certain amount of this advantage for a certain amount of security. But this is an argument which applies with much less force as between the Empire countries, for they at least need not contemplate a disturbance of their economic relations by war, while if they work together on a definite understanding, that ought to give each of them a solid nucleus of trade protected at least from that form of insecurity which results from sudden changes of policy. Then again trade in Empire channels may prove more fruitful. It may be possible to supplement the general trade policy of Governments by special programmes worked out by private enterprise, which by their own operation will generate more business. The possibility of this has been suggested above in the case of India, and it ought to be easier to work out such arrangements among those who speak the same language, have the same business traditions, and feel the common tie of membership of the British Commonwealth. Lastly there is one very important piece of machinery on which the development of trade throughout the world has in the past greatly depended—the machinery of finance working through the granting of loans from the highly developed to the less developed countries. If this article had attempted a full diagnosis of the causes for the variations of trade which it has recorded, it would have been necessary to lay stress on the effects of variation in the policy of foreign lending.* In spite of recent difficulties such machinery has continued to work freely as between the United Kingdom and the Empire countries, and only those who have been responsible for the finances of debtor countries in recent times can fully appreciate the value of the

* Such variations have undoubtedly greatly influenced the course of the trade of the United States since the war—to take the clearest example.

methods and resources of the London investment market. Co-operation in financial policy may be a powerful aid to co-operation in the commercial field and render it more fruitful, and such financial co-operation is undoubtedly easier among the British nations. If all these conditions are taken into account, there surely is reason for members of the British group wishing to do as much as possible of their business together, and on these conditions even mere displacement of trade may prove beneficial.

Such a conclusion need not depend on any illusion that the activities of the various nations of the British Commonwealth are so entirely complementary that there will be no competition between them. Important industries have in the past been developed in Empire countries which have dealt heavy blows to existing interests in the United Kingdom. In some cases these developments have had sound economic justification, and even when that has not been the case it would be folly to suppose that steps already taken can be easily retraced. But there is still a very wide field which can—given a broad outlook and a common purpose—be preserved for complementary activity in a way which will benefit the main interests of both sides. Nor must the line of reasoning indicated above be taken to imply any disregard of the importance of trade with the outside world. It is only if trade within the British Commonwealth can be developed in a way which leads to the greater prosperity of its members that its encouragement by special measures can be justified, and on that condition each of its members will be the better able to trade with the rest of the world, for in the long run all countries are better for the prosperity of their neighbours. If the principle that the exchange of goods in trade is more beneficial than mere self-sufficiency is put into practice as between an important group of countries like the British Commonwealth, and if such a group is willing to encourage others to come within its orbit, that must not only strengthen the British Commonwealth but be of advantage to the whole world.

The essential question is whether these conditions can be satisfied, and that is a question which must be realistically faced. One thing is certain—that an affirmative answer will not be given unless a comprehensive view is taken of all the interests. Perhaps the most practical conclusion which emerges from a study of the figures and from all that has happened since Ottawa is the need, first, for a wide appreciation of the picture as a whole by the public in all countries, and secondly for a comprehensive policy. The subject matter is of immense complexity with all its parts inextricably dovetailed one into the other. If it is viewed only in sections, and if sectional interests are allowed to speak separately, that can only lead to confusion and increasing friction.

APPENDIX I

NOTES ON THE STATISTICS

I—In Appendix I, the figures represent in all cases "general trade," i.e. *total imports*, whether for domestic consumption or re-export, and *total exports*, i.e. exports of domestic produce and re-exports of imported merchandise. In Appendix III, unless otherwise stated, the figures represent "special trade," i.e. *retained imports*, and *exports of domestic produce only*. Bullion and specie have been excluded throughout.

II—Sources:—

(a) General:—

The Statistical Abstract of the United Kingdom.
The Statistical Abstract of the British Empire.

The Foreign Trade and Commerce Accounts.

(b) The Tables in Appendix I have been compiled from the Empire and United Kingdom Abstracts for the years preceding 1933. For 1933 reference has been made to the Annual Statements of the foreign trade of the countries concerned. In the case of India, the monthly accounts (March, 1934) have been used; and in the case of Canada, use has been made of the quarterly trade report (March, 1934).

The tables in Appendix III have been compiled in the main from the official publications (Annual Statements, etc.) of the countries concerned. Use has been made also of certain other sources indicated on the respective tables.

Appendix IV has been compiled from the Annual Statements for the respective years, with the exception of the Canadian table, for which the quarterly reports have been used throughout.

Other sources not mentioned here are indicated beneath the tables concerned.

III—Throughout these Appendices, the term "Total Empire" denotes all British countries, excluding the United Kingdom, and the term "Total British" denotes all British countries including the United Kingdom.

out if total earnings, pre-equity charges and equity earnings are equated respectively to 100 in 1929 and set out side by side.

PRE-WAR TRUSTS: CHANGES IN EQUITY POSITION SUMMARISED
(1929 = 100 throughout)

Year	56 Pre-War English Trusts			36 Pre-War Scottish Trusts			92 Pre-War Trusts		
	Total Earnings	Pre-Equity Charges	Equity Earnings	Total Earnings	Pre-Equity Charges	Equity Earnings	Total Earnings	Pre-Equity Charges	Equity Earnings
1924	66	66	66	52	44	58	61	59	63
1929	100	100	100	100	100	100	100	100	100
1930	101	100	101	107	105	109	103	102	104
1931	91	99	85	98	107	91	93	102	87
1932	75	97	60	83	108	64	78	101	61
1933	66	98	43	69	107	41	67	102	42

Taking all pre-war trusts together, the index rose, between 1924 and 1930, by 42 points for total profits, by 43 points for pre-equity fixed charges, and by 41 points for equity earnings. When the trend of profits was sharply reversed, between 1930 and 1933, the index for all profits fell by 36 points, while the index of pre-equity charges remained stable at 102 points. The index of earnings available for equity stockholders, consequently, fell by no less than 62 points.

It would appear that this inherent susceptibility of investment trust equity earnings to wide fluctuation was not fully appreciated by many stockholders before the depression of 1930-33 drove the lesson home. The capital losses suffered by investors in the last few years have, therefore, been correspondingly severe. The computations of the Institute of Actuaries and the Faculty of Actuaries in Scotland disclose that between December, 1928 and 1933, representative investment trust debenture stocks showed a net appreciation in market value of 26.1 per cent. and preference stocks of 16.5 per cent. Interest and dividends, with few exceptions, have continued to be paid throughout the depression, and these securities have shared in the appreciation of gilt-edged stocks during a regime of lower interest rates. Representative investment trust equity stocks, on the other hand, fell in market value, according to the Actuaries' computations, by 49.4 per cent. between the end of 1928 and 1933. The net fall in market values would have been considerably greater but for the effect of cheap money on market quotations for equity shares as well as for fixed-interest securities. The Actuaries' Index shows that, while investment trust ordinary stocks were priced to give a dividend yield of 5.07 per cent. at the end of 1929, the corresponding dividend yield at the present time is only 3.68 per cent. If market values had fallen in full proportion to the decline in earning power, the lot of equity stockholders would indeed have been unenviable.

The following table shows unweighted averages of the percentage earnings of all the pre-war investment trusts on their equity capital outstanding at the end of each year at par:—

PRE-WAR TRUSTS: PERCENTAGE EARNINGS FOR ORDINARY STOCKS
(UNWEIGHTED AVERAGES)

Year	Pre-War English Trusts		Pre-War Scottish Trusts		All Pre-War Trusts	
	1929=100	1933=100	1929=100	1933=100	1929=100	1933=100
1924	13.1	17.1	14.7			
1929	16.7	20.2	18.1			
1930	15.8	20.8	17.8			
1931	13.1	18.1	15.1			
1932	7.9	12.7	9.7			
1933	4.4	8.2	5.9			

It is unsafe to draw over-precise conclusions from unweighted average figures. Nevertheless, the table suggests that if the effect of declining earnings on market values over the last three years had not been cushioned by market factors unconnected with the investment trust movement itself, and prices had fallen in proportion to average earnings, the stockholder who invested £100 in the ordinary stock of every English and Scottish pre-war trust in 1930, would have suffered a depreciation of something like 67 per cent. in his portfolio three years later.

For many years past, however, it has been the practice of the directors of British investment trusts to endeavour to minimise the effects of high capital "gearing" by conservatism in dividend distribution. When profits are rising, large sums are "retained in the business" instead of being divided. When profits fall, it is not customary to draw on reserves, but the annual margin between earnings and dividends is allowed to contract. Our analysis discloses the fact that the pre-war trusts paid out 75 per cent. of their total equity earnings in dividends (net, after tax), in 1929 and 1930, against 71.5 per cent. in 1924. By 1933, however, the proportion had risen to 96 per cent. Detailed figures are shown below:—

PRE-WAR TRUSTS: DIVIDEND DISTRIBUTION POLICY

Year	Pre-War English Trusts		Pre-War Scottish Trusts		All Pre-War Trusts	
	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings
1924	£'000 1,773.9	73	£'000 795.0	69	£'000 2,568.9	71.5
1929	2,820.1	76	1,410.0	71	4,230.1	75
1930	2,906.2	78	1,486.2	69	4,392.4	75
1931	2,688.0	85	1,443.0	81	4,131.0	83
1932	1,925.8	87	1,120.0	89	3,045.0	88
1933	1,560.9	98	746.7	93	2,307.6	96

On the whole, the Scottish trusts have tended to follow a more conservative dividend policy than the English trusts. The extent to which dividend policy has protected stockholders' incomes from the more extreme effects of fluctuation in earning power may be gathered from the next table:—

PRE-WAR TRUSTS: EARNINGS AND DIVIDENDS SUMMARISED
(1929 = 100 in each case)

Year	Pre-War English Trusts			Pre-War Scottish Trusts			All Pre-War Trusts		
	All Earnings	Earnings Available for Ord.	Ord. Dividends	All Earnings	Earnings Available for Ord.	Ord. Dividends	All Earnings	Earnings Available for Ord.	Ord. Dividends
1924	66	66	63	52	58	56	61	63	61
1929	100	100	100	100	100	100	100	100	100
1930	101	101	103	107	109	105	103	104	104
1931	91	85	95	98	91	102	93	87	98
1932	75	60	68	83	64	79	78	61	72
1933	66	43	55	69	41	53	67	42	54.5

The conclusion suggested by the figures is that the "protection" afforded by conservative profits distribution is only partial, in periods when earnings are subject to wide variation. Taking all trusts together, the "policy" factor is obviously insufficient, at such times, to offset the effects on available earnings of the "gearing" factor.

The extent to which average rates of dividend rose during the years of prosperity and have subsequently fallen may be gathered from the following unweighted averages, which are shown before tax in all cases:—

PRE-WAR TRUSTS: UNWEIGHTED AVERAGES OF DIVIDENDS ON EQUITY STOCKS

Year	56 Pre-War English Trusts		36 Pre-War Scottish Trusts		92 Pre-War Trusts	
	1929=100	1933=100	1929=100	1933=100	1929=100	1933=100
1924	9.4	11.9	10.4			
1929	11.8	14.6	12.9			
1930	11.8	14.8	12.9			
1931	10.8	14.0	12.1			
1932	7.4	11.3	9.0			
1933	6.0	7.5	6.6			

So much for the earnings and dividend record of the investment trusts which, having the benefit of from twenty to fifty years' experience before the onset of the World Economic Crisis, were best provided, by way of knowledge and accumulated financial resources, with the means of resisting its worst effects. We may next consider the record of those companies which, having undertaken investment trust business since the war, had had least opportunity to build up their reserves when the storm broke.

POST-WAR COMPANY PROFITS AND DIVIDENDS

Of the 197 companies with £295,582,000 of paid-up capital, debenture, preference and ordinary, doing an investment trust business in Great Britain, 103, with a total capital of £115,507,000 (at the date of the last balance sheet) were formed, or first undertook this form of business, after the war. The years 1926 to 1929 were the most active as regards post-war trust company promotion, as the following table suggests:—

INVESTMENT TRUST FORMATIONS SINCE THE WAR
(including companies of earlier registration, which first undertook general investment trust business after the war)

Year	Post-War English Trusts		Post-War Scottish Trusts		All Post-War Trusts	
	No.	Total Capital (deb. pref. and ord.), 1933, including terminable Debentures	No.	Total Capital (deb. pref. and ord.), 1933, including terminable Debentures	No.	Total Capital (deb. pref. and ord.), 1933, including terminable Debentures
1922	3	£'000 4,925	...	£'000 2,000	3	£'000 4,925
1923	1	1,500	1	2,000	2	3,500
1924	6	8,820	5	10,421	11	18,941
1925	5	6,030	4	5,623	9	11,653
1926	6	8,719	6	7,439	12	16,158
1927	8	7,951	10	9,804	18	17,755

1929	13	12,743	4	3,225	17	15,968
1930	2	1,250	1	500	3	1,750
1931	2	1,600	...	...	2	1,600
Total ...	65	71,609	38	43,893	103	115,507

It will be seen that the average age of the post-war trusts, in 1930, on the eve of the most searching crisis in the history of the movement since the 'nineties, was 3.2 years. Only 16 per cent. of the total post-war companies, owning 23.7 per cent. of the total paid-up capital, had enjoyed, in 1930, more than five years' experience, and 45 per cent., holding 35.5 per cent. of the total capital, had had less than three years' experience. The effects of the subsequent depression were inevitably more severe in the case of the post-war companies, which had scarcely had time to pass from infancy to adolescence, than in that of the seasoned pre-war companies. The present survey is concerned mainly with the measurement of the impact of depression on the post-war companies. The results of the prosperous years to 1929 are of limited historical value, but may be summarised as follows, in the case of 83 companies for which complete data are available:—

Year	Number of Companies issuing Reports	Total Profits (after tax and terminable debenture interest) (£'000)
1924	6	271.4
1925	18	623.8
1926	26	942.0
1927	38	1,435.2
1928	57	2,341.8
1929	83	3,998.6

What happened subsequently may be seen from the next table, in which the number of companies is constant throughout:—

PROFITS OF POST-WAR TRUSTS

Year	Post-War English Trusts (50)		Post-War Scottish Trusts (33)		Post War Trusts (83)	
	Total Profits after Tax	1929=100	Total Profits after Tax and terminable debenture interest	1929=100	Total Profits	1929=100
1929	£'000 2,426.6	100	£'000 1,572.0	100	£'000 3,998.6	100
1930	2,805.3	116	1,744.6	111	4,549.9	113
1931	2,410.6	99	1,529.5	104	4,040.1	101
1932	1,926.0	79	1,334.1	85	3,260.1	82
1933	1,729.4	71	1,163.3	74	2,892.7	72

The profits index for the post-war English trusts fell in the period 1930 to 1933 by 45 points (against 35 points for the pre-war English trusts, whose results are given on page 3), while the fall of the index for the post-war

Scottish trusts was 37 points (against 38 points). The decline in the total index was 41 points, against 36 points. The book value of the securities held by these post-war trusts was £100,619,000 in 1929 and £103,578,000 in 1933. Thus every £100 of investments held by the post-war trusts gave a total income (including miscellaneous revenue and after charging terminable debenture interest), of £3 19s. 6d. in 1929 and £2 15s. 9d. in 1933. The figures for the English and Scottish trusts, respectively, are as follows:—

POST-WAR TRUSTS: RETURN ON SECURITY HOLDINGS

Year	50 Post-War English Trusts			33 Post-War Scottish Trusts			83 Post-War Trusts		
	Securities at Book Value	Income from all Sources	Income per £100 Securities	Securities at Book Value	Income from all Sources	Income per £100 Securities	Securities at Book Value	Income from all Sources	Income per £100 Securities
1929	£'000 58,180	£'000 2,426.6	£ s. d. 4 3 6	£'000 42,439	£'000 1,572.0	£ s. d. 3 14 3	£'000 100,619	£'000 3,998.6	£ s. d. 3 19 6
1933	60,514	1,729.4	2 17 8	43,064	1,163.3	2 14 0	103,578	2,892.7	2 15 9

NOTE.—All income figures are shown after tax.

After deducting expenses, debenture interest and preference dividends (with full allowance for the amounts necessary to cover the last-named, in cases where dividends were not paid), the amounts earned for the ordinary stocks on these post-war investment trusts rose from £1,993,400 in 1929 to £2,197,700 in 1930, but had fallen precipitately in 1933 to £375,800. Results are shown in detail below:—

POST-WAR TRUSTS: AMOUNTS EARNED FOR ORDINARY STOCKS, AFTER TAX

Year	50 Post-War English Trusts		33 Post-War Scottish Trusts		83 Post-War Trusts	
	Total	1929=100	Total	1929=100	Total	1929=100
1929	£'000 1,350.1	100	£'000 643.3	100	£'000 1,993.4	100
1930	1,450.0	107	747.7	116	2,197.7	110
1931	1,070.0	79	520.4	81	1,590.4	80
1932	494.1	37	262.2	41	756.3	38
1933	288.3	21	87.5	14	375.8	19

The fall of 91 points in the index between 1930, the year of maximum earnings, and 1933, compares with a fall of 62 points in the corresponding index for the pre-war trusts.

The post-war investment trusts, which were formed in many cases under the same auspices as the pre-war companies, have a similar financial structure. Of the total capital, in 1933, of these 83 post-war trusts, viz. £97,795,000, debenture stocks (including the terminable debentures of the Scottish and, in a few cases, English companies), accounted for £34,502,000, preference stocks for £33,569,000, and equity stocks for £29,724,000, the amount of fixed-interest capital to that of equity capital being in the ratio of 2.3:1. For the English trusts the ratio was 1.9:1 and for the Scottish trusts 3.2:1. The division of profits in every year since 1930 has been as follows:—

POST-WAR TRUSTS: PRE-EQUITY PAYMENTS

Year	50 Post-War English Trusts		33 Post-War Scottish Trusts		83 Post-War Trusts	
	Total Earnings Absorbed by Pre-Equity Payments	Proportion of Total Earnings in each Year	Total Earnings Absorbed by Pre-Equity Payments	Proportion of Total Earnings in each Year	Total Earnings Absorbed by Pre-Equity Payments	Proportion of Total Earnings in each Year
1929	£'000 1,076.5	(%) 44	£'000 928.7	(%) 59	£'000 2,005.2	(%) 50
1930	1,355.3	48	996.9	57	2,352.2	52
1931	1,340.6	56	1,109.1	68	2,449.7	61
1932	1,431.9	74	1,071.9	80	2,503.8	77
1933	1,441.1	83	1,075.8	93	2,516.9	87

Taking all the post-war trusts together, the proportion of total earnings available for equity stockholders was 50 per cent. in 1929 and 13 per cent. in 1933. For the pre-war trusts the corresponding percentages were 60 per cent. and 36 per cent. The much smaller proportionate "equity margin" of total earnings over expenses and fixed-interest

requirements, in the case of the post-war trusts, is a measure of their difference in average age, rather than a reflection on the quality of their management. The same remark applies to the lower apparent ratio of total earnings to book value of securities of the post-war trusts, to which reference was made above. In "normal" times the steady "ploughing back" of earnings, year by year, progressively strengthens the "earnings cover" of a trust company's fixed-interest stocks and augments the "earnings ratio" of its equity stock year by year. The strength of investment trusts, like that of spirituous liquors, increases normally with their average age.

Setting side by side the total earnings, pre-equity charges and equity earnings of the post-war trusts, equated to 100 in 1929 in every case, we have the following figures:—

POST-WAR TRUSTS: CHANGES IN EQUITY POSITION SUMMARISED
(1929 = 100 throughout)

Year	50 Post-War English Trusts			33 Post-War Scottish Trusts			83 Post-War Trusts		
	Total Earnings	Total Pre-Equity Charges	Total Equity Earnings	Total Earnings	Total Pre-Equity Charges	Total Equity Earnings	Total Earnings	Total Pre-Equity Charges	Total Equity Earnings
1929	100	100	100	100	100	100	100	100	100
1930	116	126	107	111	107	116	113	117	110
1931	99	126	79	104	119	81	101	122	80
1932	79	134	37	85	115	41	82	125	38
1933	71	155	21	74	116	14	72	126	19

During the depression years, between 1930 and 1933, it will be seen that, while the index for all profits fell by 41 points, the index for pre-equity charges rose by 9 points, and the index of earnings available for equity stockholders fell by as much as 91 points.

It will be observed that, although the "capital gearing" of the post-war investment trusts follows much the same lines as that of the pre-war trusts, the "profits gearing" has been much more extreme. The reason is, obviously, that the post-war trusts have not had as yet any adequate opportunity to "fill out" their equity shares by retaining large amounts of profits, over a long period of years, to form additional working capital, the income on which accrues entirely to ordinary shareholders. This, like youth itself, is a condition which time can be relied on to cure, once profits are on the upgrade again, provided that directors resist the temptation to distribute earnings up to or near the hilt. The process, however, will require an appreciable number of years for its working out, and, in the meantime, the position both of pre-equity and equity stocks of the trust companies formed since the war will differ from that of the companies formed before the war in certain important respects, of which investors should take due note. The status of the debenture and, still more, the preference stocks of the post-war trusts cannot be regarded as on a par with that of the pre-war trusts, for their "earnings cover" is much less ample. The equity stocks of the post-war companies, however, may be, from the speculative investor's point of view, a more *sensitive* "recovery medium" than those of the pre-war trusts. If both are subjected to the same stimulus towards higher or lower earnings on their total capital (the validity of this assumption will be discussed later), the *proportionate* earnings of the post-war trust companies' ordinary stocks will rise or fall much more rapidly than those of the pre-war companies.

The effect of this tendency in years of depression can be seen by contrasting the unweighted averages of percentage earnings between 1929 and 1933 of the two groups. The figures for the pre-war trusts were given on page 4. The corresponding figures for the post-war companies are shown:—

POST-WAR TRUSTS: PERCENTAGE EARNINGS FOR ORDINARY STOCKS
(UNWEIGHTED AVERAGES)

(Rates before tax in all cases)

Year	50 Post-War English Trusts	33 Post-War Scottish Trusts	83 Post-War Trusts
1929	8.5	9.5	8.9
1930	8.7	9.8	9.1
1931	6.5	7.3	6.8
1932	2.8	3.4	3.1
1933	1.5	1.0	1.3

While the unweighted average of equity earnings fell, between 1930 and 1933, from 17.8 per cent. to 5.9 per cent. in the case of the pre-war trusts, that of the post-war companies declined from 9.1 per cent. to 1.3 per cent.

The tendency is even more marked as regards dividends than earnings. Directors are not only more disposed to be conservative, but also find conservatism a good deal easier, when they have a large reservoir from which to draw. To retain profits equal, say, to 5 per cent. of one's ordinary capital requires only a moderate exercise of self-denial when total profits are 25 per cent., but it is asking a great deal more of stockholders cheerfully to acquiesce in the passing of a dividend when 5 per cent. has been earned. This factor has been strongly at work during the last few years of declining investment trust earnings. In 1929 the post-war trusts paid out 72 per cent. of their total equity earnings in dividends (net after tax), and in 1930 the proportion was 70 per cent. By 1933, however, they were paying out 110 per cent. of their equity earnings. In other words, though the total amount received in dividends by ordinary stockholders declined by 71 per cent. between 1929 and 1933, even the reduced payments of the latter year were short-earned by 9 per cent. The corresponding percentages of equity earnings paid out by the pre-war trusts in 1929, 1930 and 1933 were 75, 75 and 96. Detailed figures for the post-war trusts are shown below:—

POST-WAR TRUSTS: DIVIDEND DISTRIBUTION POLICY

Year	50 Post-War English Trusts		33 Post-War Scottish Trusts		83 Post-War Trusts	
	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings in each Year	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings in each Year	Total of Ordinary Dividends	Per Cent. of Total Equity Earnings in each Year
1929	(£'000) 1,001.2	74	(£'000) 424.4	66	(£'000) 1,425.6	72
1930	1,052.9	73	483.3	65	1,536.2	70
1931	766.7	72	364.4	70	1,131.1	71
1932	433.6	88	170.5	65	604.1	80
1933	323.1	12†	89.6	2†	412.7	10†

† Amount short-earned expressed as percentage of total equity earnings.

The effect of the conditions which have been described in the preceding paragraphs is summed up in the following table, which shows the proportionate movement of total earnings, equity earnings and equity dividends, since 1929, the figures for that year being represented by 100 in every case:—

POST-WAR TRUSTS: EARNINGS AND DIVIDENDS SUMMARISED
(1929 = 100 in each case)

Year	50 Post-War English Trusts			33 Post-War Scottish Trusts			83 Post-War Trusts		
	All Earnings	Earnings Available for Ord.	Ord. Dividends	All Earnings	Earnings Available for Ord.	Ord. Dividends	All Earnings	Earnings Available for Ord.	Ord. Dividends
1929	100	100	100	100	100	100	100	100	100
1930	116	107	104	111	116	114	113	110	108
1931	99	79	78	104	81	86	101	80	79
1932	79	37	43	85	41	40	82	38	42
1933	71	21	32	74	14	21	72	19	29

The extent of the fall in average rates of dividend during the years of depression may be inferred from the following unweighted averages, which are shown before tax in all cases.

POST-WAR TRUSTS: UNWEIGHTED AVERAGES OF DIVIDENDS ON EQUITY STOCKS

(Rates per cent. before tax)

Year	Post-War English Trusts	Post-War Scottish Trusts	All Post-War Trusts
1929	6.3	6.1	6.2
1930	6.4	6.3	6.4
1931	4.6	4.8	4.7
1932	2.4	2.2	2.3
1933	1.7	1.2	1.5

The post-war trusts, in fact, have been compelled to pass through the fiery furnace of depression at much the same early stage of their career as their forbears in the Baring

Crisis. In all probability they will show similar recuperative powers, if and when more favourable conditions return. The present survey, however, clearly demonstrates, so far, that in periods of declining profits the balance of advantage from an investor's point of view undoubtedly lies on the side of the older trusts. Age, in this respect, is a powerfully stabilising influence. So far, however, the inquiry has been restricted to an analysis of fluctuations in earnings and dividends, and the extent to which these have been influenced by differences of capital structure. This influence

GEOGRAPHICAL DISTRIBUTION OF INVESTMENTS

The following table sets out the geographical distribution of the assets of 97 investment trusts in 1933:—

GEOGRAPHICAL DISTRIBUTION OF INVESTMENTS
1933
(Amounts in £'000)

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
<i>Calculated at market values:</i>								
Pre-war: English.....	6	10,522	2,402	1,591	3,088	2,888	897	21,388
Pre-war: Scottish.....	7	7,771	1,943	2,244	2,121	1,283	1,201	16,563
Post-war: English.....	12	3,573	1,136	1,713	858	1,459	479	9,238
Post-war: Scottish.....	16	8,569	1,640	1,934	1,221	1,751	970	16,185
Total pre-war.....	13	18,293	4,345	3,835	5,209	4,171	2,098	37,951
Total post-war.....	28	12,142	2,826	3,647	2,179	3,210	1,449	25,453
Grand total.....	41	30,435	7,171	7,482	7,388	7,381	3,547	63,404
<i>Calculated on book values:</i>								
Pre-war: English.....	16	19,691	6,044	2,952	8,678	5,004	3,197	45,566
Pre-war: Scottish.....	12	7,632	3,505	1,866	2,365	2,371	1,973	19,773
Post-war: English.....	19	7,754	3,283	2,070	2,927	4,019	1,605	21,588
Post-war: Scottish.....	9	3,724	1,113	1,299	1,197	1,204	419	8,956
Total pre-war.....	28	27,323	9,548	4,818	10,544	7,369	5,168	65,539
Total post-war.....	28	11,478	4,396	3,369	4,124	5,223	2,024	30,614
Grand total.....	56	38,801	12,674	8,286	14,668	12,592	7,192	96,153

The 97 companies whose results are shown above comprise about half the total number of trust companies in operation, and hold approximately 53 per cent. of the movement's total investments.* The "total" figures are, naturally, more representative of the movement as a whole than those of separate groups. Broadly, however, the sample appears sufficiently large to give a fairly reliable picture of the world distribution of investment trust resources.

Our next table shows the distribution figures for (a) pre-war, (b) post-war and (c) all trusts, on a percentage basis:—

GEOGRAPHICAL DISTRIBUTION
1933
(Percentages)

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
<i>Calculated at market values:</i>								
Total pre-war.....	13	48.2	11.5	10.1	13.7	11.0	5.5	100
Total post-war.....	28	47.7	11.1	14.3	8.6	12.6	6.7	100
Grand total.....	41	48.0	11.3	11.8	11.7	11.6	6.6	100
<i>Calculated on book values:</i>								
Total pre-war.....	28	41.7	12.6	9.9	16.1	11.2	8.5	100
Total post-war.....	28	37.5	14.3	11.0	13.5	17.1	6.6	100
Grand total, all trusts	56	40.4	13.2	10.2	15.2	13.1	7.9	100

The "market value" figures are obviously the more reliable index of current conditions. As will be shown subsequently, present "market value" figures show a considerable depreciation below book value, which has been by no means uniformly distributed between investments in

* In arriving at this, and subsequent computations of the approximate proportion of the total field covered by our samples, we have converted the "market value" portfolio figures to a "book value" basis by the application of the "depreciation percentages" for 1933, for pre-war and post-war trusts (14.6 and 28.2 per cent. respectively) shown in the "Cover" table on page 16. We have then compared the total "portfolio book value" for the entire sample with the corresponding total (£332,253,000) for 197 investment trusts shown on page 1.

THE Great Depression of 1930-33, whose effects on investment trust company profits have been considered in the preceding sections of this Supplement, was notoriously uneven in its geographical and industrial distribution. Broadly speaking, countries whose prosperity was dependent mainly on the production of raw materials and foodstuffs suffered earlier, and suffered more, than those with a mainly "manufacturing" economy. In the secondary phase of the depression—when a currency crisis was superimposed upon a price crisis—the world-wide adoption of new tariffs, prohibitions, quotas, and exchange "controls" had a peculiarly malign influence on foreign as distinct from domestic trade. "Recovery" has proceeded faster and farther in Great Britain than in most other countries. The computations of the League of Nations suggest that, in 1933, industrial production was about 12 per cent. below the 1929 level in this country, while the corresponding percentages were about 23 for France and 31 for Germany. The decline in the United States was as much as 36 per cent. During the twelve months to the middle of the current calendar year the volume of British industrial production, as measured by the Board of Trade index for all industries (including mining), has been 6 per cent. below the level of the calendar year 1929, but the volume of British overseas trade, in the same period, has been as much as 18 per cent. below the 1929 level. For 1933, the League of Nations computes the world's manufacturing industry at 78 per cent. of the 1929 level, its production of primary products at 91 per cent., and its international trade at only 75 per cent. in volume and 35 per cent. in value, in terms of 1929. It is clear, therefore, that the question of the geographical distribution of investment trust assets is of crucial importance both as regards the extent of past losses in earnings, and the time-table of future recovery.

There are two obstacles to a thoroughgoing inquiry into the distribution of trust company investments. In the first place, many companies disclose no particulars of "distribution," and the number of those who do becomes much smaller if one goes back even a few years. In the second place, the basis of calculation is not uniform in all cases. Some companies base their figures on the market value and others on the book value of their securities at a given date. Any attempt to reduce the two sets of data to a uniform basis involves dangerous and almost certainly misleading assumptions. We have considered it advisable, therefore, completely to segregate them in the three succeeding chapters of this survey. We have endeavoured first to present our readers with a "distribution" picture as complete as possible for the latest year, 1933, by drawing on the reports of all companies which afford the necessary information. Subsequently, we have endeavoured to elicit particulars of any significant change of trend during recent years of depression by comparing the figures for 1929 and 1933 of a (necessarily) smaller sample of companies whose results have been available for both periods. In a very small number of cases the original data have been based on market values in one year and book values in another. In every such instance we have treated 1929 book values as market values. This assumption, though arbitrary, is conservative, since in practically all cases book values in 1929 were well below market values. The number of companies to which this condition applies is, in any case, of minor importance. In the "geographical distribution" section, which follows, for example, it is no more than five.

different areas, and has been greater, e.g. in the case of foreign than of home investments. Taking first, therefore, the figures for 41 companies, which are based on "market values," it will be observed that there is a remarkable uniformity in the distribution of the pre-war and post-war portfolios. Broadly, rather less than half (48 per cent.) of the total investments are in the United Kingdom. Rather more than one-tenth are in other countries within the British Empire, and approximately the same proportion in the European Continent. The post-war trusts have gone rather more to the United States and rather less to Central and South America than the pre-war trusts, but neither group has gone to Far Eastern countries like Japan and China (included in the "Rest of the World" column in the table) for much more than one-twentieth of its total investments.

The figures calculated on "book values" show results varying slightly in detail from those based on "market values," but these are mainly explicable by the "price distortion factor," to which reference has already been made, and in general the figures confirm the conclusions reached in the preceding paragraph. It is improbable, in the conditions of the last four years, that book values have been written down very considerably.

Much the most important fact revealed by our analysis is that over half the total portfolio assets of British investment trusts are invested abroad. This "geographical spreading" of risks may have been calculated in normal times to lessen the risk of earnings fluctuations. In the peculiar conditions of the present depression, unfortunately, it has been a source of embarrassment. Of the "overseas" holdings, those in the "Empire" have presumably given most satisfactory results, for the British Dominions and Colonies form the most important part of the "sterling area," where recovery from depression has so far been most speedy and currency restriction, which has limited the remittance of interest and dividends, has been least in evidence.

"Empire" holdings, however (outside the United Kingdom), represent only about one-fifth of the trust companies' total overseas holdings. At least as large a proportion of their total investments, on the average, is held in Europe, where exchange "controls" and restrictions are numerous, or in the United States, where the fall in market values since 1929 has been severe, or in South America, where default has been all but endemic. Argentina, alone among South American countries, has maintained the full service of her Federal Government bonds, but the Argentine investments of most trust companies are less in Federal bonds than in those of the provinces and municipalities, or those of industrial undertakings, especially railways, whose interest and dividend payments have, in fact, fallen off very considerably.

In the light of these figures there is a strong presumption that the geographical distribution of investment trust assets has contributed materially to the downward trend of earnings during the depression of the last four years. The latter's peculiar incidence, as between Great Britain and foreign countries, and between home trade and foreign trade, could not, of course, have been foreseen by the most prescient investment trust managements. Investors, however, may ask how far the managements have been able to "switch" from securities in the more to those in the less depressed areas once the characteristic features of the depression have been clearly established. How do current percentage distribution figures compare with those, say, of 1929? Unfortunately, only about one-third of the companies whose reports show geographical distribution in 1933 give similar particulars for 1929. The following table summarises the available data:—

GEOGRAPHICAL DISTRIBUTION
1929 and 1933
(Amounts in £'000)

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated at market value:								
Total pre-war	5	7,825	1,476	2,769	4,738	3,338	843	21,489
Total post-war	9	2,538	939	1,341	1,744	2,379	461	9,422
Grand total	14	10,363	2,415	4,110	6,482	5,717	1,304	30,911

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated at market values:								
Total pre-war	5	7,613	1,467	1,967	2,476	2,373	700	16,596
Total post-war	9	2,755	1,008	1,221	1,062	1,177	431	7,654
Grand total	14	10,368	2,475	3,188	3,538	3,550	1,131	24,250

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated on book values:								
Total pre-war	8	11,875	2,622	1,248	4,540	2,645	1,707	24,637
Total post-war	12	5,095	2,508	1,738	2,224	3,830	884	16,279
Grand total	20	16,970	5,130	2,986	6,764	6,475	2,591	40,916

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated on book values:								
Total pre-war	8	11,829	3,921	1,584	4,389	2,444	1,847	26,014
Total post-war	12	5,773	2,640	1,604	2,085	3,176	918	16,196
Grand total	20	17,602	6,561	3,188	6,474	5,620	2,765	42,210

The total figures cover approximately 22 per cent. of the 1933 holdings of the entire trust movement, and may therefore be regarded, within limits, as fairly representative. The figures in the preceding table may be summarised thus, on a percentage basis:—

GEOGRAPHICAL DISTRIBUTION
1929 and 1933
(Percentages)

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated at market values:								
Total pre-war	5	36.4	6.9	12.9	22.0	17.9	3.9	100
Total post-war	9	27.2	10.0	14.2	18.5	23.2	4.9	100
Grand total	14	33.6	7.8	13.3	21.0	20.1	4.2	100

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated at market values:								
Total pre-war	5	45.9	8.8	11.9	14.9	14.3	4.2	100
Total post-war	9	36.0	13.2	15.9	13.9	15.4	5.6	100
Grand total	14	42.8	10.2	13.1	14.6	14.6	4.7	100

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated on book values:

Total post-war	12	31.3	15.4	10.7	13.7	23.5	5.4	100
Grand total	20	41.5	12.6	7.3	16.5	15.8	6.3	100

	No. of Cos.	United Kingdom	Empire	U.S.A.	Central and S. America	Europe	Rest of World	Total
Calculated on book values:								
Total pre-war	8	45.4	15.1	6.1	16.9	9.4	7.1	100
Total post-war	12	35.6	16.3	9.9	12.9	19.6	5.7	100
Grand total	20	41.7	15.6	7.6	15.3	13.3	6.5	100

As regards policy in the matter of "switching" from one group to another during depression, the "book value" figures are most informative. They suggest a degree of rigidity in geographical distribution which may come as a surprise to investors who may have attached importance to the ability of the companies to trim their sails to the prevailing wind. The figures suggest a certain desire to "fly" from devastated areas, like South America and Europe, for more profitable territories like Great Britain and the Empire; but the effect on the general distribution of assets has been relatively small.

If the desire to "switch geographically" be inferred from the "book value" figures, the "market value" percentages may be regarded as a reflection of its concrete effects in the conditions of the last four years. The post-war trust sample appears to include companies whose investments are less in the United Kingdom and more in Europe than the average. Subject to this qualification, it would appear that a larger proportion of investment trust holdings, at market values, was in Great Britain and the Empire in 1933 than in 1929, but that this was less a result of deliberate policy than of fact that the "foreign" securities had depreciated more rapidly in value than the "home" and "Empire" trust securities.

These conclusions may have a direct bearing on the policy of individual investors in trust company shares during a

Two Investments suitable for the prudent Investor:

1. Investors General Fixed Trust

An investment in
24 of the soundest
and strongest
companies in British
industry.

List of Companies:

Boots Pure Drug Co., Ltd.
Burma Corporation, Ltd.
Burmah Oil Co., Ltd.
J. & P. Coats Ltd.
Courtaulds Ltd.
Distillers Co., Ltd.
F. W. Woolworth & Co., Ltd.
Gas Light & Coke Co.
Government Gold Mining Areas Ltd.
Arthur Guinness, Son & Co., Ltd.
Imperial Chemical Industries Ltd.
Imperial Continental Gas Association.
Imperial Tobacco Co., Ltd.
J. Lyons & Co., Ltd.
London Brick Company and Forders Ltd.
London County Freehold and Leasehold Properties Ltd.
L. M. & S. Railway Co.
Marks & Spencer Ltd.
Robinson Deep Ltd.
Southern Railway Co.
Spillers Ltd.
Springs Mines Ltd.
Tube Investments Ltd.
United Dairies Ltd.

Yield: £4 - 12 - 0 per cent.

This gross yield of £4 12s. 0d. is based on actual dividends declared by the above-named companies in the past financial year. It does not include special capital bonuses declared amounting to a further £1 6s. 0d. per cent. which may not recur.

2. Investors Gas & Electric Trust

An investment in
14 outstanding
companies in the
gas and electrical
industries.

List of Companies:

Gas Light & Coke Co.
County of London Electric Supply Co., Ltd.
Callender's Cable & Construction Co., Ltd.
Victoria Falls & Transvaal Power Co. Ltd.
Electrical Distribution of Yorkshire, Ltd.
Calcutta Electric Supply Corporation, Ltd.
Scottish Power Co., Ltd.
Lancashire Electric Light & Power Co., Ltd.
British Columbia Power Corporation, Ltd.
Imperial Continental Gas Association.
South Metropolitan Gas Co.
Consolidated Gas, Electric Light & Power Co. of Baltimore.
Midland Counties Electric Supply Co., Ltd.
Metropolitan Electric Supply Co., Ltd.

Yield: £4 - 2 - 6 per cent.

This gross yield of £4 2s. 6d. does not take into account any new-issue rights. The proceeds of sale of these rights, based on the average of the last five years would represent an additional annual yield of approximately 15s. 0d. per cent.

Sub-units in either of these investments may be bought or sold through any Bank or Stockbroker, or through

period of recovery. Other things being equal, it may be assumed that these companies must stand or fall by their present holdings. If the trusts made few significant changes in the distribution of their investments, under the spur of the fiercest depression the movement has known for nearly forty years, investors may be reluctant to assume the probability of dramatic developments of such a character in the near future. So far as the relative rate of revival in profits is concerned, those companies with more than the "normal" percentage of their investments in Great Britain and the Empire have the best prospects of early recovery in earnings, in view of the peculiar geographical distribution of industrial recovery so far. Other deductions of the same nature may be drawn. South America, in due course, may

INDUSTRIAL DISTRIBUTION OF INVESTMENTS

In the section which follows we have segregated the investments of all trust companies whose reports afford a sufficiently detailed basis for analysis under four heads, according to the manner of their employment. The four categories are: Government and Municipal Activities, Railways, Public Utilities, and General Industry.

For the year 1933 some 72 company reports are capable of dissection in this way. Of these, 29 companies base their figures on market values to a total of £46,965,000. Some 43 companies base their figures on book values to a total of £70,772,000. The same comprises approximately 39 per cent. of the total security holdings of all trust companies.

The industrial distribution of security holdings in 1933 is shown below:—

INDUSTRIAL DISTRIBUTION OF INVESTMENTS
1933

(Amounts in £'000)

	No. of Cos.	Govt. and Corp.	Railways	Public Utilities	Indus- trial and Miscel- laneous	Total
<i>Calculated at market values:</i>						
Pre-war English	5	2,454	3,686	2,853	9,779	18,752
Pre-war Scottish	4	1,331	1,547	1,349	7,362	11,589
Post-war English	14	1,276	1,148	964	6,193	9,581
Post-war Scottish	6	550	487	446	5,560	7,043
Total pre-war	9	3,785	5,233	4,202	17,141	30,341
Total post-war	20	1,826	1,635	1,410	11,753	18,624
Grand total	29	5,611	6,868	5,612	28,894	46,965
<i>Calculated on book values:</i>						
Pre-war English	14	4,838	5,341	2,723	22,464	35,366
Pre-war Scottish	5	319	522	648	4,360	5,849
Post-war English	21	3,580	3,002	2,164	18,110	26,856
Post-war Scottish	3	306	229	209	1,957	2,701
Total pre-war	19	5,157	5,863	3,371	26,824	41,215
Total post-war	24	3,886	3,231	2,373	20,067	29,557
Grand total	43	9,043	9,094	5,744	46,891	70,772

The results, on a percentage basis, may be summarised as follows:—

INDUSTRIAL DISTRIBUTION

1933

(Percentages)

	No. of Cos.	Govt. and Corp.	Railways	Public Utilities	Indus- trial and Miscel- laneous	Total
<i>Calculated at market values:</i>						
Total pre-war	9	12.5	17.2	13.8	56.5	100
Total post-war	20	11.0	9.8	8.5	70.7	100
Grand total	29	11.9	14.6	11.9	61.6	100
<i>Calculated on book values:</i>						
Total pre-war	19	12.5	14.2	8.2	65.1	100
Total post-war	24	13.1	10.9	8.0	68.0	100
Grand total	43	12.8	12.9	8.1	66.2	100

In some cases the heading "railways" includes tramways, but the amounts involved are of minor importance. It will be seen that, in the case of companies whose figures are based on book values, approximately two-thirds of the

enter the "recovery zone." Trusts with a large "European" portfolio may, to that extent, be slow to recover. Trusts with more than the average stake in America may be receiving a higher dollar income this year than last, but will have a considerably lower dollar exchange rate to reckon with.

Whatever variants on this theme may be suggested by individual ingenuity, however, the all-important consideration is that, as a "recovery yardstick," present investment distribution is much more reliable than past achievement; under world economic conditions which may not be reproduced for years to come. Accordingly, the analysis of distribution may be carried a stage further to cover investment by industries as distinct from geographical areas.

total portfolios have been invested in general industrial securities. The proportion is a little higher in the case of the post-war than of the pre-war trusts, but the difference is not considerable. The "Government and Corporation" column includes about one-eighth of the total, and the "Railways" column about the same proportion, the relative stake of the pre-war companies in the latter group being somewhat higher than that of the post-war companies. Only about 8 per cent. of the total in both classes is invested in public utility securities.

The smaller sample of companies whose figures are based on market values shows much the same general distribution, but important differences are revealed as regards the position of the pre-war and post-war companies. A larger proportion of the pre-war companies' investments, at market values, is in railway and public utility stocks and a smaller proportion in general industrial securities than in the case of the post-war companies.

The figures, on the whole, are reassuring for investors. They suggest, it is true, that trust companies, having few Government or Corporation security holdings, have participated only to a minor extent in the all-round rise in gilt-edged security values since 1932. On the other hand, defaults in interest payments by foreign Governments and municipalities cannot have harmed them seriously, for their stake in securities of this category, contrary to the popular impression, is not of major importance. Investment trust directors have also had reason to congratulate themselves on the sale, during and since the war, of numerous home and foreign railway stocks whose value has depreciated heavily of recent years. The proportion of railway securities was undoubtedly much larger before the war than at present. The war-time repatriation of many American railroad securities and the absence of inducement to post-war trusts to invest in an industry which was already making heavy weather before 1929 have preserved the trust companies from considerable losses. This does not apply, however, to a number of somewhat specialised trusts which have invested fairly heavily, e.g. in Argentine railways. On the other hand, the investment trust movement has no very large stake as yet in public utility industries, like gas and electricity, whose shares have made, perhaps, the best showing of any during the depression.

Clearly, the larger part of investment trust revenue must necessarily vary with the earning power of general industry. In due course the revival of industrial activity in the last few months will be reflected in investment trust profits. The unequal distribution of increased activity, however, among different countries, to which reference has already been made, will prevent all trusts from benefiting identically and simultaneously. In the near future the speediest recovery may be looked for (other things being equal) in the earnings of companies which have the largest percentage of their resources invested (a) at home, and (b) in general industrial securities.

How far have the trust companies been able, or willing, to "switch" from one industrial group to another during the period of depression? Data for 1929 are available, under all four industrial categories, for 23 companies whose figures are based on "book values," but for only eight companies using "market values." The former group, in 1933, held approximately 13½ per cent. of the total securities

of the movement, and their results are reasonably representative. The "market values" sample, however, included only 7 per cent. of the total, and the figures must be interpreted with caution. The results are given:—

INDUSTRIAL DISTRIBUTION, 1929 AND 1933
(Amounts in £'000)

	No. of Cos.	Govt. and Corp.	Rail- ways	Public Utilities	Industrial and Mis- cellaneous	Total

Total post-war	4	10.4	9.9	9.9	69.8	100
Grand total	8	13.0	19.4	14.9	52.7	100

	No. of Cos.	Govt. and Corp.	Railways	Public Utilities	Indus- trial and Miscel- laneous	Total
<i>Calculated on book values:</i>						
Total pre-war	10	13.4	16.1	3.8	66.7	100
Total post-war	13	15.1	10.3	9.7	64.9	100
Grand total	23	14.2	13.6	6.4	65.8	100

	No. of Cos.	Govt. and Corp.	Railways	Public Utilities	Indus- trial and Miscel- laneous	Total
<i>Calculated on book values:</i>						
Total pre-war	10	13.8	14.5	5.9	65.8	100
Total post-war	13	14.5	10.1	8.1	67.3	100
Grand total	23	14.2	12.5	6.8	66.5	100

The "book values" percentages for the two years suggest that there have been no important "switches" during the depression from one main category to another. On the whole, there may have been a slight movement out of railways into public utilities and general industrials, but its effects in the aggregate are hardly noticeable.

The "market value" figures can be supplemented, to a useful extent, by those of companies whose 1929 reports show industrial distribution, but include railways and public utilities under a single heading. The list can further be extended by bringing in the figures of five companies which based their results on "market values" in 1933 and "book values" in 1929. The same conservative assumption may be made as before, i.e. that 1929 "book

values" were equivalent to "market values." These additions raise the total number of "market value" results, available for the two years, to 16, representing about 11 per cent. of all trust company holdings. The combined figures, in amounts and percentages, are as follows:—

INDUSTRIAL DISTRIBUTION, 1929 AND 1933

"Market Values" Extended Sample

(Amounts in £'000)

	No. of Cos.	Govt. and Corp.	Railways and Public Utilities	Industrial and Mis- cellaneous	Total
<i>Calculated at market values:</i>					
Total pre-war	7	3,456	10,951	14,475	28,882
Total post-war	9	992	2,277	5,627	8,896
Grand total	16	4,448	13,228	20,102	37,778

	No. of Cos.	Govt. and Corp.	Railways and Public Utilities	Industrial and Mis- cellaneous	Total
<i>Calculated at market values:</i>					
Total pre-war	7	2,652	7,554	12,533	22,739
Total post-war	9	841	1,554	4,763	7,158
Grand total	16	3,493	9,108	17,296	29,897

"Market Values" Extended Sample

(Percentages)

	No. of Cos.	Govt. and Corp.	Railways and Public Utilities	Industrial and Mis- cellaneous	Total
<i>Calculated at market values:</i>					
Total pre-war	7	12.0	37.9	50.1	100
Total post-war	9	11.1	25.6	63.3	100
Grand total	16	11.8	35.0	53.2	100

The market value of the securities held by the 16 companies has fallen, between 1929 and 1933, from £37,778,000 to £29,897,000, or by 20.8 per cent. On the other hand, the "book value" of the securities of the 23 companies whose results were shown in an earlier table declined, over the same period, only from £45,220,000 to £44,524,000, or by 1.4 per cent. Examination of the same earlier table will show, further, that the "book value" figures for the 23 companies as a whole were much the same in 1929 and 1933, even in individual groups. Under "Government and Corporation" the respective totals were £6,405,000 and £6,302,000. Under "Railways and Public Utilities" (taken together), they were £9,038,000 and £8,630,000. Under "Industrial and Miscellaneous," they were £29,777,000 and £29,592,000, respectively.

These facts, placed in juxtaposition, afford a very approximate basis for calculating the incidence of market depreciation on the three main groups of securities. For the purposes of this highly tentative but instructive measurement, let us assume (a) that the 16 "market value" companies similarly made no change in the general industrial distribution of their portfolios between 1929 and 1933; and that, therefore, (b) the fall in the 1933 "market value" total in each group is, roughly, proportionate to the extent of market depreciation. The results are given:—

CHANGES IN MARKET VALUE OF SIXTEEN TRUST PORTFOLIOS

Nature of Securities	Change 1933 compared 1929 Per cent.
Government and corporation	-23.2
Railways and public utilities	-30.9
Industrial and miscellaneous	-13.3
All securities	-21.3

Though the figures must be interpreted with the greatest possible caution, they certainly go some way to suggest that the trusts have suffered most depreciation, since 1929, on their railway holdings, and least depreciation on their general industrial holdings. Even after allowance for a certain tendency to "switch" from the one group to the other, this general conclusion seems largely to hold good.

A further analysis of "distribution" remains to be made. This is concerned with the market classification of investments, and is discussed in the succeeding section.

FORM OF INVESTMENTS (DEBENTURES, PREFERENCE, etc.)

SOME 113 trust companies published figures for 1933 showing the distribution of their investment portfolios as between debenture, preference and ordinary stocks. Of these, some 46 with a total portfolio valued at £63,812,000 based their figures on "market values," while 67 with a total portfolio of £114,905,000 based theirs on "book values." The sample covers rather more than 58 per cent. of total investment trust holdings.

The results of our analysis are shown below:—

NATURE OF INVESTMENTS
1933

Amounts in £'000

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated at market values:					
Pre-war English.....	5	3,318	4,704	4,576	17,598
Pre-war Scottish.....	10	3,104	5,573	6,986	20,663
Post-war English.....	15	4,043	2,950	3,283	10,281
Post-war Scottish.....	16	4,395	6,822	15,270	26,487
Total pre-war.....	15	16,422	10,277	11,562	38,261
Total post-war.....	31	8,443	7,003	10,105	25,551
Grand total.....	46	24,865	17,280	21,667	63,812
Calculated on book values:					
Pre-war English.....	19	23,585	10,896	17,337	51,818
Pre-war Scottish.....	11	5,184	8,117	13,440	26,741
Post-war English.....	30	14,552	8,021	15,955	38,528
Post-war Scottish.....	7	1,830	1,451	2,838	6,119
Total pre-war.....	30	28,769	16,035	25,454	70,258
Total post-war.....	37	16,382	9,472	18,793	44,647
Grand total.....	67	45,151	25,507	44,247	114,905

On a percentage basis, the figures may be summarised as follows:—

NATURE OF INVESTMENTS
1933

Percentages

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated at market values:					
Total pre-war.....	15	42.9	26.9	30.2	100
Total post-war.....	31	33.0	27.4	39.6	100
Grand total.....	46	38.9	27.1	34.0	100
Calculated on book values:					
Total pre-war.....	30	41.0	22.8	36.2	100
Total post-war.....	37	36.7	21.2	42.1	100
Grand total.....	67	39.3	22.2	38.5	100

Taking the "book value" figures first, it appears that both the pre-war and the post-war trusts have slightly more than one-fifth of their funds invested in preference stocks and shares. There is strong evidence, however, of difference of policy as regards debenture stocks (including bonds) and ordinary stocks respectively. The older trusts have over two-fifths of their investments, at book values, in debentures and bonds. They have only a little more than one-third invested in "equity" stocks. In the case of the post-war companies, these proportions are almost exactly reversed. Taking both groups of trusts together, there were £160 of "fixed interest" stocks, in 1933, for every £100 of "variable dividend stocks." The respective "fixed" holdings of the pre-war and post-war trusts were £177 and £138. The newer trust companies, clearly have a larger stake in equity stocks than the older companies.

Our analysis of the portfolios of 46 companies whose figures are based on market values shows a broadly similar distribution, if allowance be made for the fact that depreciation in market prices since 1929 has been heavier in equities than in fixed-interest securities.

If all the resources of British trust companies had been invested in home industry, this "spread" between the three classes of security, and predominance of fixed-interest investments, would have tended to mitigate the fall both in revenue and capital values during the last four years. Part of the case lately urged for the "fixed trust," as distinct from the "management trust," rests on the contention that the former's concentration on equity stocks must necessarily

be an advantage. This assumption, however, is valid only under special conditions. It is true (a) when industrial earnings and dividends are rising; and (b) when equity quotations, consequently, are rising faster than debenture or preference quotations. These conditions, normally, are encountered only in a single phase of the Stock Exchange cycle. At other times the absence of "ballast" may be a serious disadvantage. For example, here are the fluctuations in the representative market values of British securities, between December, 1928, and December, 1933, according to the Actuaries Index:—

CHANGES IN MARKET VALUES

Group	Average Value— End 1933 compared End 1928
Industrial debentures.....	+15.5
" preference.....	+4.2
" ordinary.....	-30.4

If the 67 investment trusts, shown in a preceding table as holders of "book value" securities to a 1933 total of £114,905,000, had invested that amount, at the end of 1928, entirely in home equities, on "fixed trust" lines, their holding would have shown a depreciation of £35 millions (30.4 per cent.) by the end of 1933. If the same amount, however, had been divided between domestic debenture, preference and equity stocks, in the proportions actually outstanding for these companies in 1933 (39.3, 22.2 and 38.5 per cent., respectively), the total 1933 depreciation would have been under £5½ millions (4.6 per cent.). So much for the claim that exclusive investment in equities is beneficial under all conditions.

Actually, the average depreciation of investment trust portfolios, in 1933, below book values, was approximately 19½ per cent. (see page 16). This relatively unfavourable showing suggests that other factors besides "investment classification" have had a depressing influence on portfolio values. Foreign investments, which are over half the whole, have depreciated more than home investments. Non-industrial holdings, as we showed in the preceding section, have shown considerably greater depreciation than industrial stocks. In short, we may conclude that the distribution of investments as between debentures, preference stocks, etc., is calculated in itself to make for stability in periods of depression. The trusts' policy of geographical distribution, however, has had an opposite effect. The one type of "spreading" has been a source of strength, and the other of weakness.

Whether, under a regime of recovery, the exact converse will apply is a more doubtful question. Foreign holdings may be a serious drag on earning power and capital values if the world's leading nations maintain a restrictionist attitude towards international trade. Further, income from debenture stocks may not return to the pre-depression level. Many industrial companies have converted their prior charges to lower interest rates in the last two years. Reduction, by default and otherwise, has been even more drastic in the case of foreign bonds, and an eventual scaling down of interest and principal on many foreign obligations seems inevitable.

It is unlikely that the trust companies will be able to switch over, on a large scale, from fixed-interest stocks to equities in the near future. There is little evidence of "switching" during the last four years.

The table below contrasts the figures for 1929 and 1933 of 17 available companies on a "market values" basis and of 29 companies on a "book values" basis:—

NATURE OF INVESTMENTS

1929 and 1933

Amounts in £'000

1929

"Market Values"

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated at market values:					
Pre-war Trusts.....	9	17,856	9,001	8,400	35,257
Post-war Trusts.....	8	3,017	1,700	2,456	7,203
Grand total.....	17	20,873	10,701	10,856	42,430

1933
"Market Values"

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated at market values:

1929
"Book Values"

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated on book values:					
Pre-war Trusts.....	13	17,747	7,684	11,439	36,870
Post-war Trusts.....	16	10,321	4,455	8,626	23,402
Grand total.....	29	28,068	12,139	20,065	60,272

1933
"Book Values"

	No. of Cos.	Debenture	Preference	Ordinary	Total
Calculated on book values:					
Pre-war Trusts.....	13	17,049	7,747	12,987	37,783
Post-war Trusts.....	16	8,682	4,699	9,472	22,853
Grand total.....	29	25,731	12,446	22,459	60,636

The following table expresses these results on a percentage basis:—

Percentages

	No. of Cos.	Debenture	Preference	Ordinary
Calculated at market values:				
Pre-war Trusts.....	9	50.7	25.5	23.8
Post-war Trusts.....	8	42.3	23.6	34.1
Grand total.....	17	49.2	25.2	25.6

	No. of Cos.	Debenture	Preference	Ordinary
Calculated at market values:				
Pre-war Trusts.....	9	49.3	28.0	22.7
Post-war Trusts.....	8	38.3	27.8	33.9
Grand total.....	17	47.4	28.0	24.6

	No. of Cos.	Debenture	Preference	Ordinary
Calculated on book values:				
Pre-war Trusts.....	13	48.1	20.8	31.1
Post-war Trusts.....	16	44.1	19.1	36.8
Grand total.....	29	46.6	20.1	33.3

	No. of Cos.	Debenture	Preference	Ordinary
Calculated on book values:				
Pre-war Trusts.....	13	45.1	20.5	34.4
Post-war Trusts.....	16	38.0	20.5	41.5
Grand total.....	29	42.5	20.5	37.0

The figures afford *prima facie* evidence of a movement from bonds and debentures to ordinary stocks (rather more marked, possibly, in the post-war than the pre-war companies), but the general distribution of assets has been modified to a very slight extent.

It has been found possible to obtain only a very small but interesting sample of companies (all of pre-war formation) whose distribution figures go back to 1924. Their results are given below:—

NATURE OF INVESTMENTS

1924, 1929 and 1933

Amounts in £'000

	Year	Debenture	Preference	Ordinary	Total
Calculated at market values:

This sample of companies is minute, and may not necessarily be representative. So far as it goes, however, it suggests that, over the last decade, there has been a perceptible movement away from debentures and bonds. During the "prosperity period," however, between 1924 and 1929, the companies shown in the table tended to switch, not primarily (in some cases not at all), into equities, but into preference stocks. The term "switch," however, is misleading, for the change in percentage distribution arose mainly from new additions to total portfolios. These appear to have been distributed fairly evenly, in absolute amounts, between the three categories of stocks, but to have represented varying *proportionate* additions to each class, in view of the pre-existing unequal distribution of resources.

INVESTMENT TRUST CAPITALISATION

In earlier sections of this Review, frequent reference has been made to the effect of investment trust company capitalisation on profits and dividends, in prosperity and depression. It has been shown that the existence of a large *corpus* of "fixed" payments on debenture and preference stocks has tended to transmit the entire effects of earnings' fluctuations to equity stockholders, and thus to accentuate the element of instability in their position. For example, it has been shown that whereas the total earnings of 92 pre-war trusts in 1933 were 33 per cent. below the 1929 level, the earnings available for ordinary stocks were as much as 58 per cent. below 1929. In the case of 83 post-war trusts, the net decline in total earnings over the same period was 28 per cent.; the decline in equity earnings was no less than 81 per cent. If the period of depression is at or near its end, and improving conditions may be looked for over the next few years, this question of "leverage" may be of major importance to investors who are comparing the relative "recovery expectations" of various trust company junior stocks. Accordingly, in the present chapter we propose to examine the capitalisation figures of a large sample of companies, embracing, for the latest year (1933), some 126 concerns, holding securities to a total book value of £208,808,000, i.e. nearly two-thirds of the total holdings of all investment trust companies. The companies chosen include all those whose "distribution" figures have been previously analysed in earlier sections, with a few additions.

These companies, in 1933, had short-term debentures outstanding (redeemable compulsorily within twelve years) to a total of £6,929,000 and long-term debentures outstanding to a total of £71,539,000. The aggregate amount of their preference stocks was £65,403,000, and of their ordinary stocks £54,574,000.* Thus, of a total capitalisation of £198,445,000 some 3.5 per cent. was represented by short-term debenture stocks, 36.0 per cent. by long-term debenture stocks, 33.0 per cent. by preference stocks, and 27.5 per cent. by ordinary stocks. Fixed-interest stocks, in other words, were to ordinary stocks in the ratio of 72.5:27.5, or 2.635:1.

What proportion of the total "fixed-interest" capital is convertible to a cheaper basis if general interest rates continue low? What are the average rates payable on the remainder? The short-term debenture has not found favour with English trust companies, but the Scottish companies have resorted to the short-term debenture more widely. Thirty out of fifty companies in our analysis had, in 1933, debentures with a compulsory maturity date in the next twelve years, the customary periods being two, three or five years. These, as they mature, are being replaced by issues at lower rates of interest. Short-term debentures, however, account for only a minor part of the movement's capitalisation. For the whole 126 companies in our sample, short-term debentures total only £6,747,000, equivalent to only 8.8 per cent. of the total debenture stocks outstanding, and only 4.8 per cent. of the total "fixed capital" (debenture and preference). For the Scottish companies the proportions are about one-fifth and rather more than one-tenth respectively.

* Throughout the analysis, the expression "preference stocks" includes preferred ordinary stocks, and "ordinary" includes deferred ordinary stocks.

On the other hand, the tendency to increase the "equity" proportion, between 1929 and 1933, would seem to have reflected a conscious desire to "switch," in a period when total available resources showed little or no expansion. The actual change in percentage distribution, however, was slight. The figures, in fact, confirm the impression of "rigidity" given by earlier figures, based on a larger number of companies. Our investigation, indeed, strongly suggests that "management" and "fixity" as applied to investment trust practice, are relative terms. The popular impression that trust company managers can rapidly alter the composition of their portfolios, to secure themselves against unfavourable contingencies, is certainly not confirmed by the results of these analyses.

What is the position as regards long-term debentures? Under this category we include debentures which are (a) irredeemable, and (b) redeemable only at the companies' option before a given date. The great majority of trust company debentures are "redeemable." Some 102 of our 126 companies had long-term debentures outstanding in 1933, as many as 97 companies having redeemable debentures, while only 11 had issued irredeemable debentures. (These totals include 6 companies which had both redeemable and irredeemable issues outstanding.) It will be seen that the "perpetual" debenture is not a characteristic capital medium of the investment trust movement. The post-war trusts have avoided it almost altogether. Out of 51 such companies in our sample, 50 have no irredeemable debentures whatsoever. Among 51 pre-war companies, 47 have redeemable and 10 have irredeemable debenture stocks outstanding (6 companies having both). As regards this aspect of "policy," there is little difference in practice between the English and the Scottish companies. The following table summarises the position in 1933:—

LONG-TERM DEBENTURE STOCKS, 1933

	No. of Companies Analysed	No. of Companies with Long- Term Debenture Stocks	No. of Companies with Redeemable Debenture Stocks	No. of Companies with Irredeemable Debenture Stocks	Total Re- deemable Debenture Stocks	Total Irredeemable Debenture Stocks	Total All Debenture Stocks
Pre-war Trusts.....	54	51	47	10	£'000 39,244	£'000 7,168	£'000 46,412
Post-war Trusts ...	72	51	50	1	24,527	600	25,127
English Trusts.....	76	58	54	6	40,784	4,175	44,959
Scottish Trusts	50	44	43	5	22,987	3,593	26,580
Grand total.....	126	102	97	11	63,771	7,768	71,539

The 126 companies have over a third of their total capitalisation* in long-term debenture stocks, but nearly nine-tenths of the debenture total can be redeemed or converted to lower interest rates *eventually*. But how long is the average period before *earliest* redemption? Data on this question are not readily accessible in all cases. An unweighted average of 47 English trust companies, however, gives thirty years as the average period of earliest redemption. A similar unweighted average for 29 Scottish companies gives 31.1 years. For the 76 companies the average is just under 30½ years. As this sample covers at least a third of the entire trust company field, it may reasonably be concluded that the present level of long-term debenture interest is "permanent" so far as the present generation of investors is concerned.

How heavy, then, is this quasi-permanent burden?

A group of investment trust companies recently "placed" new 3½ per cent. debenture stock at 94½, to yield approximately 3¾ per cent. to a thirty-one year maturity. The average yield on the mixed bag of 35 industrial debentures included in the Actuaries' Index is just under 4 per cent. The investment trusts are paying considerably more than "replacement rates" on their debenture stocks, as the tables on the following page suggest.

* See page 15-16.

ANNUAL DEBENTURE INTEREST REQUIREMENTS, 1933
(Gross, before Tax)

(a) Redeemable Long-Term Debenture Stocks			
	Number of Companies	Total Required for Annual Interest (£'000)	Average Rate of Interest (%)
Pre-war Trusts	47	1,778	4.53
Post-war Trusts	50	1,165	4.75
English Trusts	54	1,855	4.55
Scottish Trusts	43	1,088	4.74
Grand Total ...	97	2,943	4.61
(b) Irredeemable Long-Term Debenture Stocks			
	Number of Companies	Total Required for Annual Interest (£'000)	Average Rate of Interest (%)
Pre-war Trusts	10	310	4.33
Post-war Trusts	1	30	5.00
English Trusts	6	174	4.17
Scottish Trusts	5	166	4.62
Grand Total ...	11	340	4.38
(c) All Long-Term Debenture Stocks			
	Number of Companies	Total Required for Annual Interest (£'000)	Average Rate of Interest (%)
Pre-war Trusts	51	2,088	4.50
Post-war Trusts	51	1,195	4.76
English Trusts	58	2,029	4.51
Scottish Trusts	44	1,254	4.72
Grand Total ...	102	3,283	4.59

As might be expected, the post-war companies are paying more on their debenture stocks than the pre-war companies, their average rate being about 4½ per cent., against 4¼ per cent. The same phenomenon, curiously enough, is disclosed by a geographical analysis, the Scottish companies on the whole having a long-term debenture rate of interest about ½ of 1 per cent. above the English trusts. The average for the whole 102 companies is 4.59 per cent. This rate is 0.60 per cent. above the current yield level of investment trust debenture stocks in the market (according to the Actuaries' Index).

The figures offer a partial explanation of the "rigidity" in portfolio distribution, to which reference has already been made. The trusts cannot replace any part of their existing portfolios by new purchases of home industrial debentures, at current market prices, to yield them as much as they are paying on their own debentures.

Approximately one-third of the total 1933 capitalisation of the companies under examination was in the form of preference stocks. These, having been almost entirely issued before the Companies' Act of 1929 legalised the redeemable preference share, were irredeemable, except in liquidation. In practically every case dividends are "cumulative," our sample yielding only one instance of a non-cumulative preference share. Details of the position in 1933 follow:—

PREFERENCE STOCKS, 1933

	Number of Companies	Total Preference Stocks	Total required for Annual Dividends, Gross	Average Rate of Dividend, Gross
Pre-war Trusts	54	£'000 36,830	£'000 1,773	% 4.81
Post-war Trusts	65	28,573	1,455	5.09
English Trusts	70	39,877	1,979	4.96
Scottish Trusts	49	25,526	1,249	4.89
Grand total	119	65,403	3,228	4.94

The post-war trusts have issued their preference stocks, like their debenture stocks, at a higher rate than the pre-war trusts. The average for all the companies is just under 5 per cent. The yield on industrial preference stocks at current market prices, according to the Actuaries' Index, is 4.21 per cent. The trusts, therefore, cannot "switch" into either home debentures or preference stocks to cover the requirements of their own stocks.

Their total outstanding ordinary stocks are analysed in the table at the head of the following column.

TOTAL ORDINARY STOCKS, 1933

	Number of Companies	Total Ordinary Stocks Outstanding (£'000)
Pre-war Trusts	54	29,900
Post-war Trusts	72	24,674
English Trusts	76	38,373
Scottish Trusts	50	16,201
Grand total	126	54,574

We may now summarise the results disclosed in this chapter. The following table sets out the total capitalisation of the companies, and the proportion of each class of capital to the whole:—

INVESTMENT TRUST CAPITALISATION, 1933
PERCENTAGE SUMMARY

	No. of Companies Analysed	Total Capitali- sation	Distribution				
			Debenture		Preference	Ordinary	All Stocks
			Short- Term	Long Term			
Pre-war Trusts.....	54	£'000 118,319	% 4.4	% 39.3	% 31.1	% 25.2	% 100
Post-war Trusts ...	72	80,126	2.2	31.3	35.7	30.8	100
English Trusts.....	76	123,389	Nil	36.5	32.3	31.2	100
Scottish Trusts	50	75,056	9.0	35.4	34.0	21.6	100
Grand total.....	126	198,445	3.5	36.0	33.0	27.5	100

The Scottish trust companies, which have nearly one-tenth of their issued capital in the form of short-term debenture stocks, have little more than a fifth of their total capitalisation in equity stocks. The English trusts are somewhat "lower geared," but even in their case ordinary stocks account for less than a third of the total capitalisation. The post-war trusts are "lower geared," on the average, than the pre-war.

The effect of "high gearing" may be gathered from the concluding table of this section, which follows:—

EFFECT OF "GEARING" (1933)

	Number of Companies	Total required for Debenture Interest and Preference Dividends*	Percentage on Total Capitalisation*	Every Additional 1% Earned on Total Capitalisation is equivalent to following Earnings on Ordinary
Pre-war Trusts	54	£'000 3,861	3.42	% 3.79
Post-war Trusts	72	2,650	3.38	3.18
English Trusts	76	4,008	3.25	3.22
Scottish Trusts	50	2,503	3.66	4.22
Grand total	126	6,511	3.40	3.51

* Excluding short-term debentures.

The "capitalisation" figures used in this table exclude short-term debentures, and thus embrace all the quasi-permanent capital obligations of the 126 companies which, as we have seen, cannot normally be "reduced" for the next generation. It will be seen that the movement as a whole can meet its fixed obligations so long as its net earnings (after expenses) remain somewhat above the current yield level of long-term British Government stocks (about 3 per cent.), but below the yield level of home industrial debentures (3.99 per cent.) and preference shares (4.21 per cent.). This is a reassuring conclusion for holders of investment trust debenture and preference stocks.

So long as total earnings are fluctuating, however, the position of investment trust ordinary stocks has an element of the speculative. Every rise or fall of 1 per cent., in the ratio of earnings to total capitalisation (excluding short-term debentures), is equivalent on the average to 3½ per cent. on the ordinary capital.

There may be ground for the belief that investment trust profits are now at or near their nadir, and that the "time-lag" between changes in industrial profits and their reflection in investment trust reports will henceforth operate in their favour. If so, the rate of recovery in equity earnings and dividends will be considerably expedited by high "gearing." Due allowance must be made, however, for the facts, previously revealed, (a) that more than half the investments of the movement are held abroad, and (b) that nearly two-thirds are in fixed-interest securities.

MARKET VALUES AND CAPITAL "COVER"

IN one sense the market valuation of an investment trust's portfolio, at any particular moment, is of secondary concern. Every company stands or falls by its ability to earn profits, and every stockholder values his security from the viewpoint of income, with only a passing reference to the extent to which his capital would be covered in an imaginary "break-up." Prudent managers, however, in an imaginary "break-up," in normal times, to avoid depreciation in their security holdings, and to create a substantial "inner reserve" by writing down their book values below market values. No survey of investment values, therefore, would be comprehensive without a description of the extent to which recent conditions have tended to "uncover" investment trust capital.

It has been shown, first, that the portfolio of the average investment trust, in 1933, consisted, as to more than half, of "foreign" securities, as to about two-thirds of general industrial holdings, and to much the same extent of non-equity stocks; and, secondly, that the distribution was broadly similar both for pre-war and post-war companies. How far have these conditions affected the capital position, in view of the very considerable fall in the market value of many securities between 1929 and 1933?

Taking the same sample of 126 companies analysed in earlier sections, we find that market values compared as follows with book values in 1933:—

BOOK AND MARKET VALUES COMPARED
1933

	No. of Companies	Total Book Value of Securities	Total Market Value of Securities	Market Value Compared with Book Value
Pre-war English	29	£'000 84,388	£'000 73,794	-12.5
Pre-war Scottish	25	56,011	46,305	-17.3
Post-war English	47	53,575	39,227	-26.9
Post-war Scottish	25	30,929	22,491	-27.3
Total pre-war	54	140,399	120,099	-14.6
Total post-war	72	84,504	60,718	-28.2
Grand total	126	224,903	180,817	-19.6

The pre-war English trusts have an appreciably lower "depreciation percentage" than the pre-war Scottish trusts. Both have a much lower percentage than the post-war companies. The explanation is twofold. First, the pre-war companies appear to have purchased their holdings at a lower average market level than the post-war companies, many of whom were formed in the period of high values which broke so dramatically in 1929. Secondly, the pre-war companies have made good use of their opportunities to apply capital and revenue profits, over many years, in writing down the book value of their portfolios. They started, as it were, "below scratch," at the outset of depression.

We have already pointed out (see page 12) that an imaginary "fixed trust," established at the end of 1928 to hold the stocks of the Actuaries' Index in the proportions revealed by a large sample of investment trusts in 1933, would, last year, have suffered depreciation in market values of some 4½ per cent. The percentages disclosed in the preceding table are much more considerable, particularly in the case of the post-war companies. It is difficult to dissociate this result from the geographical location of a large proportion of trust company investments, with its emphasis on foreign rather than domestic "placing."

It has not been found possible to go back further than 1929, in this inquiry, as regards any considerable number of post-war trust companies. Figures for 1924, however, are available for as many as 48 of the 54 pre-war companies included in our original sample, and throw an interesting light on changes in portfolio values over the last decade. They are subject, however, to one important qualification. A large proportion of the pre-war trust companies recorded in their 1929 reports that the market value of their securities was higher than the book value. In many cases, unfortunately, the extent of this excess was indicated only by general terms,

e.g. "substantial appreciation" or "considerably in excess. . . ." In these instances it has been impossible even to guess at its amount, and we have been compelled to base our market value figures on book values. The totals for 1924 and 1929, therefore, in the table which follows, may be regarded as affording an understatement of aggregate market values at those dates, while the decline since 1929 has certainly been greater than the table suggests:—

TOTAL BOOK VALUES

	Number of Cos.	Amounts (£'000)			1929 = 100		
		1924	1929	1933	1924	1929	1933
Pre-war English	26	53,463	74,692	77,079	71.6	100.0	103.2
Pre-war Scottish	22	29,930	48,689	51,485	61.5	100.0	105.8
Total pre-war	48	83,393	123,381	128,564	67.6	100.0	104.3

CALCULATED MARKET VALUES

	Number of Cos.	Amounts (£'000)			1929 = 100		
		1924*	1929*	1933	1924*	1929*	1933
Pre-war English	26	54,305	78,171	66,289	69.5	100.0	84.8
Pre-war Scottish	22	31,674	52,682	42,311	60.2	100.0	80.4
Total pre-war	48	85,979	130,853	108,600	65.7	100.0	83.0

* These figures probably understate actual market values.

Neglecting the factor of "conservatism" in 1924 and 1929 aggregate valuations, it would appear that both book values and market values increased *pari passu* between 1924 and 1929, but that thereafter, while book values increased by a further 4.3 per cent., market values declined by 17.0 per cent. It is clear, furthermore, that a wide expansion in investment trust operations occurred between 1924 and 1929, as a result of which something like 30 or 40 per cent. of the "older" trusts' portfolios (at book values), in the latter year, consisted of "new" securities. The Scottish companies, which followed a perceptibly more forward policy than the English in the period of expansion, suffered—as might be expected—rather more considerably in the period of depression. Further implications of this difference in pre-depression policy will appear in subsequent analysis.

How far has depression left the issued stocks of the trust companies "uncovered" by assets? The next table supplies an answer. We have ascertained, for our sample of 126 companies, (a) the total requirements, in a break-up, of each of the three classes of issued capital, inclusive of any premiums payable on the redemption of debenture stocks, and (b) the total available assets in 1933, including (i) investment portfolios at market value, and (ii) any surplus or deficiency in net current assets. §

"BREAK-UP COVER" FOR SENIOR STOCKS
1933

	Number of Cos.	Break-up Value of Assets*	Total Debenture Stocks†	No. of Times "Covered"‡	Total Preference Stocks	Number of Times "Covered"‡
Pre-war English	29	£'000 72,994	£'000 31,281	2.33	£'000 21,034	1.39
Pre-war Scottish	25	44,424	21,557	2.06	15,796	1.19
Post-war English	47	36,029	14,796	2.44	18,843	1.07
Post-war Scottish	25	21,438	12,130	1.77	9,730	0.98
Total pre-war	54	117,418	52,838	2.22	36,830	1.31
Total post-war	72	57,467	26,926	2.13	28,573	1.04
Grand total	126	174,885	79,764	2.19	65,403	1.21

* After allowing, in each case, for surplus on deficiency of current assets.
† Including premiums, if any, on redemption.
‡ Requirements taken "cumulatively," i.e., total debenture and preference requirements are added, and compared with total assets, in order to ascertain "cover."

Debenture stocks are still twice covered by assets, on the average, and preference stocks about one and a-quarter times. The "cover," however, is smaller in the case of the Scottish than the English, and in that of the post-war companies, as a whole, than of the pre-war companies. The

§ Amounts under this heading are usually small in relation to total "break-up" asset values.

post-war English concerns, however, emerge more satisfactorily from this test than their Scottish counterparts, particularly as regards their debenture "cover." The preference stocks of the post-war Scottish companies, alone of any group shown in the table, are not quite "covered" by 1933 break-up values.

These, however, are average results, which mask considerable differences among the component items. There are, in fact, frequent instances of "uncovered" preference stocks in 1933. The pre-war trusts have a fairly clean record, only eight companies out of 54 revealing incomplete "cover." The showing made by the post-war companies, however, is much less satisfactory, for 20 out of 47 English and 16 out of 25 Scottish concerns had partly "uncovered" preference stocks last year:—

"UNCOVERED" PREFERENCE STOCKS

	Number of Cos. Analysed	Number of Companies with Preference Capital not fully "Covered"	Total Preference Capital of these Companies	Total Deficiency in "Cover"	Percentage Deficiency in "Cover"	Total Ordinary Capital of same Companies (All "Uncovered")
Pre-war English	29	3	£'000 1,850	£'000 276	14.9	£'000 1,400
Pre-war Scottish	25	5	3,950	987	25.0	1,150
Post-war English	47	20	9,557	2,510	26.3	6,258
Post-war Scottish	25	16	6,390	1,763	27.6	4,135
Total pre-war	54	8	5,800	1,263	21.8	2,550
Total post-war	72	36	15,947	4,273	26.8	10,393
Grand total	126	44	21,747	5,538	25.5	12,943

Approximately one-seventh of the pre-war and no less than half the post-war companies have preference stocks which are incompletely "covered," the deficiency being equivalent to about one-fourth of the total preference capital involved. On the whole it may be regarded as fairly satisfactory that, out of the entire sample of 126 companies, with a total preference capital of £65.4 millions, some 44 companies have only £5.5 millions of preference capital which is not "covered."

What, however, is the position of ordinary stockholders?

In their case the distinction between the pre- and post-war companies is of crucial importance:—

"COVER" FOR ORDINARY CAPITAL
1933

	Number of Cos.	Issued Ordinary Capital	Amount of "Cover" at Break-up Values	Percentage of Ordinary Capital which is "covered"
Pre-war English	29	£'000 20,794	£'000 20,679	99.5
Pre-war Scottish	25	9,106	7,071	77.7
Post-war English	47	17,579	2,390	13.6
Post-war Scottish	25	7,095	—422	—5.9
Total pre-war	54	29,900	27,750	92.8
Total post-war	72	24,674	1,968	8.0
Grand total	126	54,574	29,718	54.5

The pre-war English trusts emerge with distinction from this severe ordeal. Practically all their ordinary capital, on the average, is "covered" at break-up values, against little more than three-fourths in the case of the pre-war Scottish trusts. The status of the ordinary stockholder in the post-war companies, however, is much less enviable. Depreciation in market values has wiped out nearly all the "cover" as regards the English, and more than all as regards the Scottish companies.

These, however, are aggregate figures. There are, of course, individual companies in both groups whose ordinary stocks still have substantial "cover." To them the observations made in this Survey, which are based on averages and aggregates for large numbers of companies, do not necessarily apply. This caveat should be read *passim*.

Taking the figures as a whole, however, the effect of capital "gearing" is again apparent. As we have shown in an earlier section (see page 15), the Scottish companies, both pre- and post-war, have issued a larger proportion of their total capital in the form of non-equity stocks than the English companies.

How far were ordinary stocks "covered" in 1929, when market values were near their peak? The next table (which is based on the figures of 106 companies for which data for (Continued on page 24)

SECURITY
OF CAPITALSTABILITY
OF INCOMENational Fixed Trust Certificates
UNIT 'D'

These Certificates give stability of income with security of capital by spreading an investment over twenty-two Industrial and Commercial Companies of the highest standing. At the current price of sub-units and on the basis of dividends received during the past twelve months, the yield is £4 18s. 0d. per cent., with prospects of an additional yield from the sale of Bonuses and Rights, which in the same period amounted to £2 17s. 5d. per cent. Sums of approximately £20 upwards can be invested.

COMPARATIVE

In the following tables we set out for 197 companies: (a) the year of registration; (b) the book value of investments for 1924 (where available), 1929 and 1933; (c) the total income for every available year from 1924 to 1933; (d) the amounts and percentages earned and paid, respectively, for 1924 (where available) and 1929-33; and (e) the paid-up capital, debenture, preference and ordinary, for 1933. The companies in each of the four main groups have been arranged alphabetically. References to footnotes will usually be found in front of items to which attention is drawn, except in certain cases where considerations of space have necessitated their being placed below the figures concerned.

So far as possible, we have endeavoured to arrive at a common basis for all the figures shown. This, in some cases, has necessitated a slight adjustment of the data in the original reports, in accordance with certain canons which may be slightly arbitrary

in certain instances but may, on the whole, be described as sound and reasonable.

Thus, all reports made up to dates falling between January 1 and 31 are regarded as falling within the preceding calendar year throughout. All other reports are shown under the years in which their accounting dates fall. In a few special cases, earnings for broken periods have been adjusted to a twelve-months' basis by simple proportion. The initial results of post-war trusts for broken periods, however, are shown without alteration.

Dates of actual registration are specified, throughout, in the appropriate column, but pre-war companies whose actual transaction of general investment trust business has been confined to the post-war period have been included in the "post-war" lists.

The most serious difficulty in securing a common basis for analysis arises out of lack of uniformity in individual treatment of

Subject to what was said above regarding market values before the depression, the ordinary stocks of the pre-war English companies were apparently covered nearly twice, and those of the pre-war Scottish companies two and three-quarter times, in 1929, but the post-war companies had little or no margin when depression started. In both classes the Scottish companies subsequently exhausted their "cover" much more rapidly and completely than the English companies. It may be well to reiterate that these conclusions refer to the various groups as a whole, and do not necessarily apply to individual companies, whose results may be well above the average. It may have been well, however, for many ordinary stockholders that the fall in revenue has not been proportionate to the decline in capital values, and that the market has continued to base its quotations for investment trust stocks on earnings and not on "cover."

In the case of 45 companies, we have succeeded in obtaining figures going back to 1924. All the companies are of pre-war formation. The results throw an interesting light on the extent to which "cover" tended to increase during the period of rising profits and market values between 1924 and 1929, and are given at the head of the following column.

CONCLUSION

69246

THE conclusions suggested by this detailed survey of investment trust finance, in prosperity and depression, can best be viewed in an historical context. The investment trust movement first attained importance between 1879 and 1890—a period of outstanding activity in British international trade and the London capital market, near the zenith of the most active phase of railway construction in the New World, and shortly before the discovery of the Rand gold deposits. The conceptions of co-operative subscription of non-withdrawable capital, specialised management, and scientific "spreading" of investment risks were basically and permanently valid. The direction taken by investment trust policy, however, created two traditions which, though they may have been exalted to the level of cardinal principles, were in fact dictated largely by the economic environment into which the movement was born.

The first of these principles was the investment of a dominant part of the trusts' resources outside Great Britain—in the New World generally, where the demand for new capital was greatest, and the potential return highest. The second was the adoption of a capital structure which involved the placing of a relatively large amount of debenture and preference capital in front of a relatively small equity capital. The trusts, having a large volume of negotiable instruments to pledge, were readily able to borrow by way of debentures, though not at the lowest rates reserved for companies with extensive "fixed assets," such as land, buildings and machinery, which could be charged to provide specific security.

From the outset, therefore, the trusts were virtually compelled to find investments outside the range of low-yielding "first line" securities, and to develop a specialised technique in the selection of stocks carrying a

"COVER" FOR ORDINARY 1924, 1929 and 1933

Total pre-war	45	1924 1929 1933	18,082 25,117 26,785	32,899 50,773 23,118	181.7 202.3 86.3

In prosperity, as in depression, the portfolios of the Scottish companies experienced greater fluctuation in market values than those of the English companies. Between 1924 and 1929 the "cover percentage" for the English companies fell slightly from 171.6 to 170.4. The Scottish companies, on the other hand, showed an increase in their "cover percentage" in the same years, from 201.7 to 272.8. By 1933 the English "cover" had fallen to 90.7 per cent. and the Scottish to 76.4 per cent. This phenomenon may be directly related to the policy pursued by the two groups in the 1924-29 period of expansion. It has already been pointed out (see page 16) that the Scottish trusts increased their total security holdings (at book values) more rapidly than the English companies. Their issued ordinary capital, however, rose only by 27 per cent. (from £6,178,000 to £7,840,000), while that of the English companies increased by 45 per cent. (from £11,904,000 to £17,277,000). In other words, the Scottish companies relied on prior stocks (chiefly debentures) to finance a larger part of their expansion than the English trusts, and their capitalisation tended to become more highly "geared." A subsidiary cause of the rapid rise and fall of the Scottish companies' portfolio values may have been the tendency of some companies, between 1924 and 1929, to invest in American securities.

The question of "gearing" runs like a thread through the whole of the present Survey. It would seem that in the past even those most closely connected with the Investment Trust movement may not have fully realised the far-reaching nature of its implication.

higher risk in return for a more generous income. The ownership of investment trust stocks simultaneously became localised within a somewhat narrower circle of "firm" holders than that of many other types of security. Their market on the Stock Exchange was a very "free." The new investment trusts, formed after the war, were administered largely under auspices connected with the older trusts. They inherited these traditions, but had had a shorter time to put them into practice when the economic blizzard of the nineteen-thirties burst in full fury.

Already the movement may be at or near the beginning of better times. Security portfolios have begun their ascent from Avernus. The falling tendency of profits has been checked, and, in a few instances, reversed, though earnings as a whole are still near the bottom of the trough. The movement shows every sign of weathering the storm, as it survived the depression of the 'nineties. Its senior stocks, even to-day, enjoy high investment status, and it may be only a matter of months—or weeks—before the "recovery" appeal of their junior stocks is engaging the attention of many investors.

The figures given in preceding pages suggest certain basic tests which may facilitate the task of differentiation, for investment purposes, between the stocks of individual investment trusts. In applying them, investors may bear in mind that the depression of the last five years has not merely reduced security earnings the world over, but has been accompanied, on the one hand, by ultra-nationalistic conceptions which have threatened the bases of international economic relations, and, on the other, by a reduction of interest rates, by agreement or default, which has seriously reduced the income of all fixed-interest security holders.
