The election situation this year is extremely curious. In what are called off-year elections it is conventional for the party in power to lose a part of and often all its majority in Congress. This year it is expected that the Democratic Party will lose few seats in the House, and add to its majority in the Senate, as well as taking most local offices. Should the election result as expected, it might convey the impression of a unanimity of opinion that does not exist. The Republican Party is so demoralised that in some States it is waging no more than a perfunctory campaign. In Maryland, for example, the Republican Party is supporting the New Deal, and the Democratic Party figures as the Opposition. In California the Democratic Party has effected a sort of personal union with the Socialists by the nomination of Mr Upton Sinclair. In short, the old party labels have become meaningless. It is more accurate to picture the electorate as divided between New Dealers and anti-New Dealers; with the New Dealers probably in a majority, but in turn divided into Right and Left Wings. All New Dealers are to be classed for electoral purposes as Democrats, but not all "life-long" Democrats are New Dealers; many Republicans have become New Dealers, but not all anti-New Dealers are Republicans.

NEW YORK, October 23.

FRANCE

THE RADICAL-SOCIALISTS AND M. DOUMERGUE

M. HERRIOT has succeeded, in face of the Young Radical-Socialists, in wresting from the Party Congress at Nantes a motion giving him complete freedom of action on the Government's constitutional reform policy. The Congress had merely to pronounce on the main lines of the policy, which are as follows:—

- (1) Strengthening of the authority of the Prime Minister;
- (2) Extension of the right of dissolution; (3) Removal from the Chamber of the initiative power; (4) Introduction into the Constitution of a Statute for civil servants; (5) Reorganisation of the National Economic Council.

The Congress approved (3) and (5). But on (1) and (2), which were the crucial questions, it declared that "the Radical-Socialist Party is ready for any reform which will ensure Ministerial stability and result in a better functioning of the Constitution; but it will never admit, in any form, measures which may prove favourable to the exercise of personal power in defiance of the Republican principle." About (4), on which M. Doumergue himself had kept silence in his last speech, the Congress said nothing.

The Congress also declared itself a staunch enemy of the devaluation of the franc, which, it said, "would ruin honest work for the benefit of speculation alone." But it nevertheless regretted that the Government had not proposed "a positive programme for combating the economic crisis."

The import surplus in September was the lowest for many years. It was only 135 million francs, compared with 280 millions in August and 563 millions in July. The foreign trade figures for the year have been as follows:—

	(000 francs)	Imports	Exports	Import Surplus
1934—				
January.....	2,302	1,512	790	
February.....	2,063	1,512	551	
March.....	2,291	1,489	802	
April.....	2,035	1,469	566	
May.....	1,959	1,365	594	
June.....	1,964	1,451	513	
July.....	1,714	1,451	563	
August.....	1,672	1,391	281	
September.....	1,653	1,518	135	

The reduction in the import surplus is wholly due to a fall in imports. The following are the figures of exports and

imports (global value) for the first nine months of the two last years:—

	First Nine Months of 1933	First Nine Months of 1934	Difference for 1934
Imports—			
Foodstuffs	7,310,235	5,578,154	—1,732,081
Raw materials.....	10,474,494	8,830,177	—1,644,317
Manufactured goods	3,830,107	3,245,443	—584,664
Total	21,614,836	17,653,774	—3,961,062
Exports—			
Foodstuffs	1,706,642	1,707,786	+ 1,144
Raw materials.....	3,465,535	3,863,465	+ 397,930
Manufactured goods	8,300,327	7,488,314	—812,013
Total	13,472,504	13,059,565	—412,939

Exports show a slight diminution of only 413 millions, or 3 per cent. Imports, however, are lower by 4,000 millions, or 18 per cent. The reduction of 1,644 millions in imports of raw materials appears to be very serious, as the activity of these imports is a forecast of industrial production. In general, the reduction of imports is a consequence of the tightening of tariffs and quotas. As a result, the total trade turnover for the first three quarters is 30,713 millions, compared with 35,087 millions last year; and the import surplus, which was 8,142 millions last year, is only 4,594 millions in 1934.

GENERAL SLACKENING OF TRADE

The general slackening of economic activity is proved by other statistics. On October 20th there were 339,822 unemployed in France, compared with 231,755 a year ago. The following table shows the number of persons employed in various industries on October 1, 1933 and 1934:—

Category	Number of Firms	Employed 1933	Employed 1934
Foodstuffs	455	91,840	82,917
Chemicals.....	460	110,257	109,886
Textiles.....	2,040	493,509	464,249
Iron and steel	190	151,411	150,892
Ordinary metals	1,607	487,414	476,778
Transport.....	44	8,578	8,790

Capital issues are dwindling steadily, as the following table shows:—

	(000 francs)	Firms Formerly Registered	Firms Newly Registered	Total
Monthly Average		Shares	Bonds	
1913	47	96	76	220
1929	610	531	83	1,224
1933	59	221	20	300
1934—January	30	11	54	95
February.....	20	918	8	946
March.....	2	29	3	34
April.....	28	1,169	9	1,206
May.....	194	78	14	286
June.....	138	17	6	161
July.....	165	478	10	653
August.....	29	88	13	130
September.....	3	130*	1	134

* Not including certain important State and Railways Issues.

The total of issued capital in September, at 134 millions, is one of the worst for many years, and is much lower than that of September, 1933 (593 millions).

PARIS, October 31.

GERMANY

THE NEW TAXATION LAWS

THE taxation reform laws, summarised last week, have since been promulgated. Increased power is given to the Finance Minister to supplement the laws, to determine the extent of exemptions and abatements, to adapt the capital-flight law to new conditions, and to amend the motor-car tax. The electoral tax councils are abolished on the ground that they represent parliamentarianism. They are replaced on "the leadership principle" by "Beirat," advisory councils, partly *ex officio*, partly appointed by the directors of the finance offices. Jews may not be members. In certain respects the new laws affect public companies and large undertakings unfavourably. Formerly share capital newly issued on the absorption of an undertaking by an existing company bore only a 1 per cent. company

Increased Private Income, with Substantial Cash amount, later, for dependents

(Incorporated in Canada in 1865 as a Limited Company)

tax as against the 2 per cent. levied on other share issues. The aim of this discrimination was to encourage fusions which might lead to rationalisation. This discrimination now disappears. The right of share companies to deduct for assessment purposes, from their new profits, carried-over losses not older than two years is also abolished. The objection which, on competition grounds, private business had for many years raised to the tax exemption of publicly-owned undertakings has been met by making such undertakings henceforth "tax-liable without limit" like private undertakings; but corporation income-tax paid by municipally-owned undertakings will in future be returned to the municipal treasuries.

The increased abatement for taxpayers with families reported last week constitutes only one of numerous changes in the income-tax law. Entirely new schedules have been issued both for the wages and for the assessed income taxes. The new schedules cannot be summarily compared with the old. Formerly, besides income-tax proper, several depression income-taxes were levied: supplementary tax, crisis tax, unemployed relief tax, and bachelors' tax, in addition to the citizens' (really income) tax. The new law fuses all these except the last, which, being municipal, remains independent. The new Reich schedule retains the old feature of taxation of incomes at or below the minimum existence level; and this feature is not substantially changed by the increase in the abatements for families. The assessed tax schedule starts with an annual income of Rm. 560-675, on which an unmarried person pays Rm. 10, a married person nothing; and rises to Rm. 119,500, on which an unmarried person pays Rm. 59,500, a married person Rm. 47,600, with no abatement for children fewer than six, and so on. The wages tax, which is deducted at source, starts with a monthly tax of Rm. 0.78 on a monthly wage of Rm. 80.08-91 in the case of unmarried persons; a married person becomes first liable on a monthly wage of Rm. 104-117, and then pays Rm. 1.30 a month.

"AUTARKY" AND FOREIGN DEBTS

In a speech at Weimar, Dr. Schacht has just given a rosy account of the progress made with substitute commodities. He stated that in the last few weeks complete success has been attained in the synthetic production of rubber; but added that "in the end all these things are naturally very much costlier than natural raw materials from abroad." Although this speech revolved entirely around the subjects of foreign trade and foreign exchange, the effect on trade and currency of working on a great scale with very much costlier raw materials was ignored. As always, the elimination of an import was treated as inevitably causing an improvement in the trade balance and the Reichsbank's reserve status. Dr. Schacht again criticised Clearing, and said that the question whether its continuation had any object was being considered both here and in the Clearing countries. His speech, as most of recent date, contained sharp attacks on foreign countries. Germany, he stated, is in a state of "prolonged war," which "is being conducted with very many treacherous methods." He declaimed

BERLIN, *October 31.*

BELGIUM

THE DEVALUATION MOVEMENT

Industry remains in the precarious position which it has maintained for the last few years. Though the heavy industries have recovered slightly, the textile and building industries are worse off than ever. The coal mines were threatened with a strike in September, and the danger of a conflict has not yet been eliminated. The good mines are certainly in a slightly better position than before; but the situation of the poorer mines is deteriorating. The mines in the vicinity of Charleroi, which produce chiefly for domestic consumption, are feeling the competition of coke. Unemployment is a little less serious than in 1932, but a little worse than in 1933.

THE BANKS' INDUSTRIAL ASSETS

LOUVAIN, *October 30.*

HUNGARY

PARLIAMENT AND ELECTORAL REFORM

The foreign trade returns are fairly satisfactory:—

	January-August, 1933	January-August, 1934
	(In million pengő)	
Exports	224.2	247.7
Imports	196.1	225.6
Export surplus	28.1	22.1

The wheat crop of 1934 is much smaller than it was in 1933, and the absence of a wheat¹ export surplus as great as that of 1933 will certainly diminish the general export surplus in the coming months. But it is hoped that the

The depreciation of the pound and the dollar has brought about a further decrease in the pengő equivalent, at official rates, of Hungary's funded foreign debt (State debts only), which stood at 930.2 million pengő on June 30th last, compared with 1,064.2 million pengő a year before. Domestic funded debts over the same period decreased from 123.2 million pengő to 116 million pengő.

THE FOREIGN CREDITORS' FUND

The following table shows the position of the Foreign Creditors' Fund as on June 30, 1934. The Transfer Suspension Decree requires pengő in respect of non-transferred debt services since December 22, 1931, to be paid into this Fund.

Payments into the Fund :—		In million pence
(a) In cash		+ 170·4
(b) In Treasury Bills		+ 46·2
Total		+ 216·6
Interest paid to the fund		+ 4·25
		+ 220·85
Payments out of the Fund :—		
(a) Coupons and bonds redeemed ..	101·8	
(b) Refunded to debtor		9·1—110·9
Balance		109·9

The amounts in pengö deposited under the Standstill Agreement with the National Bank to cover interest and commission on short-term banking debts, not able to be satisfied in foreign exchange, totalled 41.5 million pengö on June 30, 1934. Out of this, 36.4 million pengö had been paid to creditors accepting such payment in full satisfaction. The balance held by the National Bank thus amounted to 5.1 million pengö.

BUDAPEST, *October 28.*

ARGENTINA

LOWERING INTERNAL TARIFFS

It has been rumoured that Argentina is considering the raising of a loan in London, the proceeds of which would be utilised to cancel her debt to the United States. From the Argentine point of view such a step would seem sensible, since Argentina would consolidate all her foreign debt in one country and probably, at the same time, effect a reduction in interest charges. It must not be forgotten, however, that so far as Great Britain is concerned, the service of the new

The following figures of revenue and expenditure show a slight net improvement for the first nine months of 1934, compared with the similar period of 1933 :—

	First Nine Months of 1933	1934	Increase or Decrease in 1934 over 1933
Revenue—	\$	\$	
In cash	603,506,228	590,096,285	— 13,409,943
From credit operations ..	109,138,495	118,909,003	+ 9,770,508
Total	712,644,723	709,005,288	— 3,639,435
Expenditure	716,976,629	710,652,310	— 6,324,319

Exports during the nine months ended September last increased by 27.5 per cent. in value compared with the similar nine months of 1933, as the following figures show:—

	Exports during the first nine months of		% Increase or Decrease in 1934 over 1933
Quantity in tons—	1933	1934	
Pastoral products	868,549	818,650	— 5·7
Agricultural products....	9,613,900	10,617,265	+ 10·4
Total exports	10,863,705	11,862,322	+ 9·2
Value of exports in paper pesos—			
Pastoral products	298,344,442	352,884,007	+ 18·3
Agricultural products....	524,001,997	688,509,178	+ 31·4
Total exports	862,485,729	1,099,963,233	+ 27·5

The total increase in the value of exports was \$237,477,504 paper pesos.

ever; for the first nine months of the present year show a decline of 6,000 tons as compared with those for a similar period of last year; but, as a result of better prices obtained, the value of these shipments shows an increase. In nearly every case the price obtained by Argentina for her exports shows a substantial increase, which, although due to some extent to the depreciation of the currency, cannot be wholly attributed to that cause. World prices for agricultural and pastoral products are firmer, and this country, whose livelihood depends on the sale of such products, must necessarily reap the benefit.

AUSTRALIA

CHEAP MONEY AND CONVERSIONS

WHILE there is still some lack of enterprise in industry, supplies of money continue plentiful, and the banks are unwilling to accept fixed deposits to any great additional extent. The Melbourne and Metropolitan Board of Works has raised at par a conversion loan of £352,000 with twelve years' currency at 3½ per cent. This is the lowest rate on record for the Board of Works, and the real difference as compared with old 3½ per cent. loans is greater on the net than on the gross rate owing to the heavier income-tax. During the 1934-35 season, however, there will be less opportunity for fresh accumulation of money than in 1933-34 owing to the low prices now ruling for wool and butter and the smaller wheat harvest in view. With good October rains the Australian wheat crop may be estimated at 120 million bushels, but with unfavourable weather in October it would probably not exceed 100 million bushels.

A compilation of the accounts of life assurance offices with headquarters in Australia and New Zealand shows that ordinary department new business for 1933 in Australia, New Zealand, Great Britain and elsewhere amounted to approximately £44 millions, against £40 millions for 1932 and £39 millions for 1931. The recovery in new business has been accompanied by a reduction in surrenders and a little mitigation in taxation, which has fallen from £1,552,364 for 1932 to £1,380,712 for 1933. The gross interest yield for 1933 was approximately 4.84 per cent., and the net yield after deducting all taxation was 4.02 per cent. The premium income in the ordinary department for 1933 was £15,813,269, against £15,352,536 for the previous year; and in the industrial department £4,775,064, against £4,654,420. The total funds of the ordinary department are now £175,620,345 and of the industrial department £29,622,272. The balance sheets, including life, accident, and occasionally fire and general insurance business, show total assets of £218,383,422 (or £217,301,505 exclusive of establishment and similar accounts in the case of the newer companies). The three principal groups of assets are Government and municipal securities £120,011,654, mortgages £44,456,298, and loans on policies £30,938,082. Nearly the whole of the year's increase in assets has gone into securities, which are larger by £6,925,288, while mortgages show an increase of £66,234.

MELBOURNE, October 1.

LETTER TO THE EDITOR

THE SPANISH REVOLT

TO THE EDITOR OF THE ECONOMIST

DEAR SIR,—As an observer—and writer—on conditions in Spain, I have in the past followed with great interest your articles on Spanish affairs. Their *acierto* has been uncanny and they could only have come from the pen of that rare kind of person, a correspondent in a foreign country with a knack for exploring below the surface of things.

I was much surprised, however, to read your article of October 20th which, while perfectly correct in its statement of facts, errs in a failure to appreciate all the facts and in a further failure to appreciate the significance of such facts as were presented. In Spain one must always look under the surface and be particularly wary of taking things at their face value. It is perfectly true that Señor Gil Robles has said that he could accept the Republic, but he has said nothing to prevent him from accepting some other form of government. He is a known monarchist. The Spaniard further asks: "Suppose he does accept the Republic—what kind of Republic?" He has said enough to make them certain it would not be the Republic of the Revolution. Moreover, promises of this kind never deceive a Spaniard. They are far too accustomed to their political leaders making all kind of promises which by interpretation and in practice fade away into thin air.

Your criticism of the Socialists, *et al.*, for taking the offensive is too harsh. Please do not understand me as apologising for the Socialists' tactics. They were certainly bad tactics

and destined to get them nowhere. In this matter Señor Azafra was the one man who had clear vision—as you said in one of your previous articles. He desired another alliance between the Socialists and the Left and foresaw eventual victory by parliamentary means. But however bad the Socialists' tactics may have been, there is such a thing as understanding them. From the Socialist viewpoint the attitude of the Right was already an incipient offensive. The Right's battle lines were forming before their eyes. The challenge of battle had already been given. There was a moral certainty that the promise of respecting the Republic meant nothing. From the viewpoint of the left, therefore, the necessary tactic was to strike before it was too late.

At the beginning I had some faith in Señor Gil Robles, but after observing him for a year I am forced to say that under him I see no hope for Liberalism in Spain—absolutely none. He is merely going back to the old regime of absolutism and intolerance. He cannot kill Liberalism or that revolutionary spirit which created the Republic. Somewhere along the line they will break out, and Spain will have to have her revolutionary experience over again.

Yours faithfully,

A CORRESPONDENT IN SPAIN.

MONEY AND BANKING

OVERSEAS LENDING

THERE have recently been signs of a further modification in the attitude of the authorities and of City opinion towards the issue of foreign loans in the London market. For some time after the crisis of 1931 there was an almost total prohibition on public loans to overseas borrowers, and even private transfers of capital were frowned upon. The present declared policy of the Chancellor of the Exchequer is to permit loans to countries in the sterling area which will be used to increase the sterling assets of those countries, and loans the proceeds of which will be devoted wholly to the purchase of British goods. More recently a loan has been authorised for the repurchase of a British undertaking from its American owners. But even with these gradual expansions of the permitted field its limits are still very narrow, and overseas lending in the general sense is still under the ban.

The question is, however, being raised whether the time has not come to initiate a more liberal attitude towards the international capital market. Some comments in the City columns of *The Times* on Monday of this week put the case for a resumption of foreign lending. The writer was chiefly concerned to show that the extension of foreign loans would not endanger the stability of sterling, and he relied upon the familiar thesis that the proceeds of every loan granted by the London market to an overseas country are spent directly or indirectly upon British goods. "It would not be," he urged, "the amount of foreign loans that this country might make that would endanger the exchanges, for the greater the loans the larger the favourable balance would be. Real danger would arise if foreign loans were made in excess of actual savings."

It has always been recognised that a renewal of international lending must form part of the restoration to normality of the world's trading and financial relations. Many of the raw material producing countries of the world have founded their national economies upon the assumption of being able to secure a more or less steady stream of loans. Without them they cannot pay interest on their past borrowings, they cannot continue the process of national development which could alone justify those past borrowings, they cannot, in some cases, even maintain their imports of consumption goods at the desirable level. There cannot be any doubt that the cessation of lending by the industrial countries to the undeveloped areas of the world helped to precipitate the headlong fall of raw material prices, or that the failure of overseas lending to revive has delayed and hindered the gradual recovery of these areas, which is the most hopeful sign in the world to-day.

The evil consequences of this breakdown upon our domestic interests are easy to trace. The holder of bonds arising from past loans has, in many cases, lost his interest; the industries exporting capital goods have been brought almost to a standstill, while our other export industries engaged in selling consumption goods, notably the cotton and woollen textile industries, have also been very badly hit. So long as the investment of capital in undeveloped areas will produce a return larger than that obtainable at home by more than enough to compensate the investor for the added risk and inconvenience of investing abroad, the case for international lending is unassailable, and if the machinery of lending did not exist, it would be desirable to create it. But in the circumstances of Great Britain as they are, the case is even stronger. The financial institutions of the City and the large export industries have been built up on the basis of a steady investment of British capital in the outer world. To transfer these resources into other uses would be a slow, wasteful and costly proceeding. In present conditions it is impossible to conceive of a prosperous Britain without some degree of international lending.

Nevertheless, it is permissible to doubt whether the cause of overseas lending is advanced by statements quite so sweeping as that which we have quoted above from *The Times*. There is very little reason to believe that "the

greater the loans the larger the balance available for lending" is true even in the long run; and there is no reason to agree with it in the short run. Probably the clearest enunciation of the theory of foreign lending is to be found in the Report of the Macmillan Committee. Section 176 of that Report, after remarking that "the supply of capital to overseas areas is for some countries an indispensable element in their development and, in so far as it is itself subject to irregularity, imports irregularity also into their economic life," goes on to explain that though part of the proceeds of the average loan are spent in the lending country, part is normally expended in the borrowing country. The exchange thus moves in favour of the borrowing country, and against the lending country. An expansion of loans by the London market to countries not in the sterling area, the loans not being subject to the present limitations, could therefore be expected to have the effect of depressing the exchange value of sterling.

This is, of course, a short-term effect. In the more distant future, as the same Section of the Report points out, the payment of interest on the loans will lead to a demand for the currency of the lending country, although, if the loan has been wisely expended, the increased export production of the borrowing country should provide the foreign exchange resources to accomplish the transfer of interest. But we are rightly concerned at the moment with the short-term effects of a resumption of foreign lending. Most shades of opinion would be agreed that a sudden downward plunge of sterling would be a new unsettling influence in the world economy.

The danger once recognised, however, it can for all practical purposes be disregarded. In the present mood of the investing public it is very unlikely that there would be a boom in overseas issues. The record of foreign issues in the last few years is not as much worse than that of capital invested at home as is generally believed. But it is the public impression that counts, and there is no doubt that foreign issues are for the time being unpopular. There would be no rush of issues if the ban were lifted. Furthermore, a large proportion of any issues that were floated would in the normal course of things be for countries in the sterling area and the remittance abroad of even the whole proceeds of such loans could not affect the exchange value of sterling. So far as the technical and economic factors are concerned, there appears to be no valid reason against throwing the market open to such foreign issues as can be made to appeal to the investor. The trickle of issues that could be expected at once would doubtless in time swell to more imposing dimensions, and if it did so, sterling would, it is true, be lower than it would otherwise have been. But there is no need for alarm at this, as the ultimate equilibrium at which sterling settles down must provide for a certain amount of foreign lending unless we are to be as self-contained in finance as some would have us be in trade.

The mention of self-sufficiency, however, brings up the only real long-term obstacle to a renewal of foreign lending. Borrowing countries cannot both pay and transfer the interest on their borrowings, still less sinking fund and redemption payments, unless they can provide themselves with the foreign exchange for the purpose by building up a sufficiently large favourable balance of payments on current account. In theory, this can be done either by restricting imports or by expanding exports. But there are limits to the restriction of imports, and in most cases the limits have already been reached, to the distress of our exporting industries. In practice, therefore, the resumption of full service on past borrowings and *a fortiori* the initiation of new borrowings, depend entirely upon the ability of the borrowing nations to expand their exports. Most of these countries are producers of raw materials and food-stuffs, and the United Kingdom is in nearly every case their best market. The continuance of foreign lending thus turns absolutely on the willingness of Great Britain to allow

her imports to expand. In a sane world it would not be necessary to call in question the willingness of the lender to receive interest on his loan in the form of goods and services which he can consume to the advantage of his standard of living. But our national economic policy is no longer governed by the principles of economic sanity, and the further developments of our agricultural policy are unpredictable. Before London can develop again into a free and willing purveyor of capital, the Government must establish a reasonable balance between the claims of home and overseas providers of our necessities. Until this question has been decided, a resumption of foreign lending would run the risk of a further collapse within a few years.

FINANCIAL NOTES

The Money Market.—The breakdown of the agreement between the clearing banks to maintain minimum discount rates has unsettled the market. The clearing banks continue to charge 1 per cent. for their loans, but it is rumoured that they may decide only to charge 1 per cent. for weekly loans, and to obtain such rates as they can get for day-to-day money. Meanwhile some outside lenders have reduced their rates to $\frac{1}{2}$ per cent., while others are still charging $\frac{3}{4}$ per cent. for renewals and only taking $\frac{1}{2}$ per cent. on new money. Funds have been very plentiful, and on Thursday, when the Stock Exchange was closed, money was unlendable at a nominal $\frac{1}{2}$ per cent.:

	Oct. 11, 1934	Oct. 18, 1934	Oct. 25, 1934	Nov. 1, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Discount rates have fallen heavily. Last week the tender rate for Treasury bills fell from 14s. 3.72d. to 9s. 7.42d. per cent. Early this week January Treasury bills were dealt in at $\frac{1}{8}$ per cent., but buying pressure has driven the rate down to $\frac{1}{16}$ per cent. This year's maturities have fallen to $\frac{1}{16}$ per cent. One or two of the banks have bought a few short bills, but some banks are unwilling to buy at the present low rates.

The Bank Return.—Currency withdrawals by the public at the end of the month explain an expansion of £3.7 millions in the note circulation and a corresponding reduction in the Reserve.

BANK OF ENGLAND

	Nov. 1, 1933	Dec. 27, 1933	Oct. 17, 1934	Oct. 24, 1934	Oct. 31, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.4	190.7	191.9	192.0	192.0

Proportion 49.1% 37.3% 47.2% 48.5% 47.2%
Government disbursements have reduced public deposits by £5.5 millions, while preparation for dividend payments is the probable explanation of an increase of £2.2 millions in other deposits. Bankers' deposits are unchanged.

The Foreign Exchanges.—The leading rates have been unstable this week, and the London market is unsettled. No one is quite certain if the recent sharp recovery in sterling has reached its end, and while some operators

have been selling sterling and taking their profits others have been purchasing. News from the Continent has also been of a disturbing character, and both political difficulties in France and the break-up of the gold bloc are counted among possible developments during the near future. It is significant that on Wednesday the New York-Paris cross-rate moved practically to the point where gold could be shipped from France, and it is rumoured that a small amount was actually withdrawn from the Banque de France for shipment. Sondermarks are quoted at Rm. 12.61, against a free mark rate of Rm. 12.37. Registered marks are weak at 46 $\frac{1}{2}$ per cent. discount. Demand is less than it was, and it is difficult to put through business.

New York Money and Banking.—New York money and discount rates are unchanged. There has been a further increase in brokers' loans from \$626 to \$636 millions. A fresh issue of \$75 millions of Treasury bills has been placed at an average rate of 99.905 per cent. Only \$50 millions of this issue was used to replace maturities, and the balance represents new money required for other purposes. September exports are returned at \$191 millions, against \$171 millions in August and \$160 millions in September last year. Imports were \$131 millions, against \$119 millions in August and \$146 millions in September last year. Gold exports for last September were \$22.2 millions (against \$58.2 millions a year ago). Imports were negligible. September imports of silver amounted to \$20.8 millions. Comparing the first nine months of 1933 and 1934, exports for 1934 were \$1,561 against \$1,105 millions, and imports \$1,241 against \$938 millions. Gold exports were \$50.1 against \$318.8 millions, and imports \$960.2 against \$187.6 millions. Silver exports were \$12.7 against \$15.7 millions, and imports \$64.6 against \$47.1 millions. Estimates of capital movements for the first six months of this year are now available. The net influx of long-term capital is returned at \$310 millions, and that of short-term capital at \$250 millions.

The Volume of Credit.—Interest continues to be shown in the City in the state of the discount market, which we have discussed on several occasions in recent months. The anxiety of the joint-stock banks to secure bills in order so far as possible to maintain their accustomed ratios of discounts to deposits has led to the breakdown of the "gentlemen's agreement" and a still further decline in rates. This is, of course, adding to the difficulties of the discount houses, and it has been suggested in one quarter, which is usually regarded as authoritative, that in order to save what the Governor of the Bank of England recently called an essential cog in the financial machinery of London, the joint-stock banks should allow their cash ratios to rise. Cash would then take the place of discounts, the banks would no longer compete for the very small available supply of bills, and rates would rise, to the greater comfort of the market. This proposal was supported by the argument that trade and industry would derive as much benefit from cheap money if the prevailing rates in the discount market were twice as high as they are now; in other words, that the policy of cheap money has gone too far. There is something to be said for this argument, though discount rates have a direct effect upon the gilt-edged market, which in its turn influences other sections of the Stock Exchange; a fall in gilt-edged prices would certainly not encourage an increase of issues for industrial purposes. But, whatever there is to be said for the proposal, its effect on the public could hardly fail to be most unfortunate. Cheap money is the chief reliance of the Government for stimulating a revival, and the public will hardly believe that it has gone too far while the new issue market is still sluggish. Moreover, an increase in cash ratios would almost certainly mean a further reduction in the deposits of the joint-stock banks. The reduction which has already taken place has been dubbed deflation, and if any further reduction were deliberately undertaken there would be a storm of protest. If, further, its objects were to restore the profits of the discount market, the City would certainly be accused of putting its own interests before those of the community. We believe the proposal to be tactless and ill-conceived, and trust that it will not be accepted.

THE STOCK EXCHANGE

THE STRENGTH OF GILT-EDGED

LAST week's break-down of the "gentlemen's agreement" between certain London clearing bankers to maintain discount rates has been quickly followed by the expected re-entry of the bankers into the gilt-edged market. A further upward surge in quotations has resulted. The persistence of the demand for sound fixed-interest stocks has hitherto confounded all prophets of an inevitable decline on the establishment of recovery in British industry. After two years of revival have brought our Index of Business Activity within hailing distance of its 1929 level, post-war British Government securities are still making new "record" prices and pre-war issues are at the highest figures for twenty-four years. British Government credit is broadly established on a 3 per cent. basis. Conversion 3 per cent., 1948-53, are at 103 $\frac{1}{2}$, Newfoundland 3 per cent., 1943-63, at 101 $\frac{1}{2}$, and Transvaal 3 per cent., 1923-53, at 102. Funding 3 per cent., 1959-69, crossed the par line on Monday, and Conversion 2 $\frac{1}{2}$ per cent., 1944-49, have reached 99 $\frac{1}{2}$. What forces are sustaining the market? Are there any signs of an early break?

We may approach these questions by considering the behaviour of the gilt-edged market in the last few years:—

PRICES OF LONG-DATED BRITISH GOVERNMENT SECURITIES
(Actuaries' Index, December 31st, 1928=100)

End of Month	1931	1932	1933	1934
January	104.7	96.2	122.7	125.7
February	99.2	99.1	122.1	127.8
March	102.0	107.9	126.1	129.0
April	104.6	107.8	125.0	129.5
May	108.0	111.9	121.6	127.7
June	108.4	115.0	121.3	129.0
July	103.3	123.1	121.2	129.9
August	102.2	121.6	121.6	130.2
September	90.0	123.1	123.5	132.2
October	98.5	123.7	123.7	133.5
November	91.8	120.1	123.9	
December	92.9	123.0	124.8	

The rise in gilt-edged prices, at the outset, appeared to contemporary commentators no more than a normal phase in the early stages of a somewhat severe depression cycle. It was interrupted by the psychological consequences of the pound's departure from gold in September, 1931, but had strongly reasserted itself by the spring of 1932, fully three months before Mr Chamberlain announced his War Loan conversion at the end of June. That operation appears to have anticipated from four to six months of a "normal" rise. After the first three months of 1933 the advance showed perceptible signs of weakening. The failure of gilt-edged prices to make headway during the greater part of last year coincided with a rapid recovery movement in British industry and a rise of 23 per cent. in ordinary share values, according to the Actuaries' Index. So far, the market had moved, generally, according to accepted theory, industrial revival having been attended by strong buying of equities and a perceptible reaction in gilt-edged. The same can scarcely be said, however, of the market's subsequent behaviour. During 1934, ordinary share values, on the average, have risen by only 4 per cent. Gilt-edged, simultaneously, have resumed their advance. Finally, in recent months, the pace of economic revival appears to have definitely slowed down.

The concurrence of these three phenomena can scarcely be due to pure coincidence. Is there a common explanation? The price of securities, whose market is one of the freest in the world, is the resultant of opposite forces of supply and demand. Whatever may have been the case last year, the recent course of prices suggests a lack of conviction that industry's demand for additional capital resources will speedily reduce the level of the monetary reservoir. Investors may examine more closely the conditions governing the latter's inflow and outflow.

That the volume of the national resources in cash and in credit has been significantly enhanced during the period of economic depression is common knowledge. Over the last four years the Bank of England's gold has increased by

£33 millions and its note circulation by £23 millions. Bankers' deposits at the Bank of England have risen by £45 millions. The London clearing banks, in the same period, have increased their cash and Bank of England balances by £21 millions and their deposits by £58 millions. Their advances to customers, however, have declined by as much as £188 millions, while their "investments" (i.e. gilt-edged securities) have risen by £292 millions.

The reservoir, in short, has been considerably augmented, during a period of considerably reduced national income, by an inflow of new resources, whose origin and volume have been alike outside the market's control. A tributary source has been the tendency of foreign money to seek safe keeping in London. Finally, the fact that gilt-edged prices are to-day 33 $\frac{1}{2}$ per cent. above and ordinary share values 28 per cent. below their end 1928 levels itself argues a considerable transfer of money to the one, from the other, in the meantime.

So much for the supply side of the capital equation. From what quarter may investors reasonably expect an early expansion on the demand side? Not from industry, whose recovery has been based, not on increased borrowing, but on cheaper raw materials, lower internal costs, reduced stocks, and lower prior charges. Industry entered on its "revival" phase with much idle plant which had not had time to become obsolete, and has asked for little in the way either of short-term or long-term assistance from outside in financing a predominantly "domestic" revival. It has, indeed, been redeeming its debentures and reducing its bank indebtedness. The net liquid assets of many companies have actually increased since revival began. That conclusion is certainly suggested by the analysis, given below, of the figures of ten large companies whose reports have appeared within the last few weeks. These companies operate, for the most part, in branches of industry like steel, motors, brewing, building, etc., where revival has made impressive headway:—

LIQUID ASSETS OF BRITISH COMPANIES
(000's omitted)

Company	Date of Balance Sheet	Net Liquid Assets 1932	1934
United Dairies	June 30	2,884	2,032
United Steel	June 30	1,081	1,656
Staveley	June 30	609	845
Austin Motor	July 31	1,228	1,535
Joseph Lucas	Aug. 7	577	1,127
Arthur Guinness	June 30	7,001	6,574
Distillers	May 15	1,051	2,031
Eastwoods	Mar. 31	228	226
British Celanese	June 30	1,714	1,887
Calico Printers	June 30	2,923	3,041
Total, 10 companies		19,296	20,954

From what other quarter can increased demand be discerned? From the British Government? The Treasury is preoccupied with debt funding possibilities and has set its face against the association of the State with debt-financed capital works of any kind. Corporations and public bodies are not anxious to borrow extensively on long term, except to convert existing obligations. Even if they were, they would come up sharply against the "rationing" of capital market facilities by the higher authorities. Great national constructional schemes, like the grid system of electrical transmission, are all but complete. The Bankers Industrial Development Company is prepared to be an intermediate financier for developments like the Stewarts and Lloyds' works at Corby and the British (Guest Keen Baldwins) extensions in South Wales. Practicable schemes of this order, however, are conspicuously few. Company prospectuses are numerous, but relate mostly to the funding of existing obligations, or the transfer of ownership of existing businesses from one set of persons to another. British export trade is still nearly 20 per cent. both in volume and in value below the 1929 level. Foreign lending is under a

Treasury embargo (which has recently shown slight signs of relaxation) and under an even more effective economic "embargo." The number of credit-worthy foreign borrowers (outside the British Empire, where retrenchment is still the predominant *motif*) can be counted on one hand.

High gilt-edged prices, in short, are a species of monetary unemployment index. The gilt-edged market has become a virtual bank of deposit—a "cloakroom"—for resources which cannot be more profitably used elsewhere. Looking ahead, it is difficult to perceive any early sign of a fundamental change in underlying conditions. In due course industry may draw on its liquid assets to carry a larger stock-in-trade and on the new issue market for plant extensions. A New York stock market boom may conceivably attract some of the more volatile resources now in London. There may even be a change of heart and policy at Westminster. Outside the Treasury there is a growing desire to turn to constructive national advantage—e.g. for better housing conditions—the opportunity presented by the cheapest borrowing rates for a generation. None of these means of making cheap money effective, however, is likely, under present indications, to be either speedy or spectacular. There is growing support for the view that, ultimately, a revival of demand for money may be contingent on a return to more normal conditions of foreign trade and foreign lending. To these, in turn, the re-tying of sterling to gold may be an essential preliminary.

For the present, therefore, we may conclude that an early break in the firmness of gilt-edged stocks is improbable. If the same time-table were to operate to-day as in the 'nineties of last century, gilt-edged prices would now be not far from their peak. They would, however, continue to show narrow fluctuations at a high mean level until the middle of 1936. We have previously drawn attention to the general similarity of the two periods (see the *Economist*, April 1, 1934, page 880). History's repetitions are, perhaps, a dangerous subject for the prophet. On general grounds, however, it is difficult to foresee any early and sizeable reaction in the gilt-edged market.

INVESTMENT NOTES

Course of Share Values.—During October British equity share values again essayed to break through what, since March of this year, has been their *ultima thule*. Once again, as the annexed chart shows, reaction inter-

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS.

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

vened immediately the objective was attained. The technical position may have been somewhat affected by the weakness of the more speculative markets, especially those of gold-mining shares. The upward trend of general

industry, if not entirely checked, is much less pronounced. For reasons discussed in the preceding article, market strength is mainly concentrated on gilt-edged stocks. Speculative interest in ordinary shares is tending to resolve itself into a species of inspired guesswork as to which companies will show more than an average increase in earnings and dividends—concerns like Mitchells and Butlers and Whitehead Iron, during the past month, having been cases in point. This is a very different matter from the sustained buying which carried the prices of practically all shares upward last year. It is characteristic of a movement which has lost its motive power, for the time being at least. Meanwhile, in America, the long-awaited boom, despite the injunctions of market soothsayers, refuses to get under way. Talk of further currency devaluation, early in the month, and a "conservative" interpretation of the President's speech to the bankers, subsequently, both failed to produce more than a flicker of new buying. The index remains close to the "low" of twelve months ago, and well below the "high" of last January. Whether increased activity will follow the election remains to be seen. Meanwhile, on this side, the trend of interest rates is still perceptibly downward, as the following table suggests:—

ACTUARIES' INVESTMENT INDEX

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (Oct. 31, 1933)	Month Ago (Sept. 25, 1934)	This Week (Oct. 30, 1934)	Year Ago (Oct. 31, 1933)	Month Ago (Sept. 25, 1934)	This Week (Oct. 30, 1934)
Fixed Interest Stocks:—						
British Government (2)	123.7	132.2	133.5	3.48	3.26	3.23
Misc. Industrial Deb. (12)	118.5	122.7	122.7	4.51	4.10	4.08
Misc. Industrial Pref. (42)	111.7	117.1	116.6	4.52	4.35	4.37
Ordinary Stocks:—						
(Higher Last Month)						
Insurance Co.'s (24)	102.9	110.7	112.1	4.12	3.78	3.74
Coal (6)	101.9	89.2	91.1	2.50	4.17	4.05
Breweries and Distill. (6)	92.6	113.7	115.2	4.45	3.88	3.81
(Lower Last Month)						
Building Materials (4)	71.8	84.1	80.6	3.60	4.24	4.43
Oil (5)	68.8	62.6	58.8	3.45	4.70	4.93
Home Rails (4)	85.3	78.3	72.8	1.31	1.49	1.51
Cotton (6)	57.3	46.0	44.1	2.19	2.23	2.35

The index for the 144 industrial ordinary stocks in the Actuaries' Index stood at 72.0 on October 30th, compared with 72.7 a month ago and 70.9 a year ago. The corresponding yield figures were 3.68, 3.65 and 3.45 per cent., respectively.

* * *

The Auditor's Function.—The annual report of Philips' Incandescent Lamp Company, whose results were set out in last week's *Economist*, page 790, includes, as in former years, an auditor's report of commendable detail. In certain respects this merely makes explicit the scope of the audit carried out, which so far as test and checking work is concerned, differs very little from the audit programme of any responsible British firm of accountants. The Philips' balance sheet certificate, however, is worded more strongly than the usual formula in this country. The auditors "are satisfied that the balance sheet . . . correctly exhibits the true position of the company's affairs." The usual British certificate is to the effect that "in our opinion the balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the company's affairs." This disclaims any suggestion of true valuation of individual items, but implies that where hidden reserves have been made, they are intended for the well-being of the company. On the question of depreciation of fixed assets, the Dutch report makes the positive statement that ample reserves have been made for assets not already included at a nominal figure, whereas typical practice in this country limits itself to an oblique reservation in cases of suspected overvaluation, intended to put members on inquiry. As to stocks, it was laid down in the Kingston Cotton Mill case that it was no part of the auditor's duty to take stock, although good practice dictates a thorough test of stock sheets and a comparison of prices, where possible, with cost prices. The Dutch firm, however, have carried out a periodical inventory, taken final stocks at the Eindhoven plants, which agreed with the lists checked by the Philips'

GOLD MINES of KALGOORLIE LIMITED

SHARE CAPITAL (Authorised) £1,000,000

DIVIDED INTO 2,000,000 Shares of 10/- each.

DIRECTORS:

ROBERT ANNAN, Esq., of 49, Moorgate, E.C.2, Mining Engineer, nominated by New Consolidated Gold Fields, Limited.

*ALFRED JEAFFRESON BRETT, Esq., of 1, London Wall Buildings, E.C.2, Director of Central Mining and Investment Corporation, Limited.

*PERCY EDWARD MARMION, Esq., of 95, Gresham Street, E.C.2, Director of Imperial Smelting Corporation, Limited.

*CYRUS THOMAS POTT, Esq., of 95, Gresham Street, E.C.2, Director of Union Corporation, Limited.

*WILLIAM SYDNEY ROBINSON, Esq., of 360, Collins Street, Melbourne, Director of Zinc Corporation, Limited.

CHARLES AUGUSTUS WHITFIELD, Esq., of 4, Lloyd's Avenue, E.C.3, Chairman of North Kalgurli (1912), Limited.

* Directors of Gold Exploration and Finance Company of Australia, Limited.

The Company has been incorporated for the purpose of developing and financing Gold Mining in Western Australia, and in particular, to acquire from Gold Exploration and Finance Company of Australia, Limited, for the sum of £120,000, payable in cash, certain leases and options on leases held by that Company on the Kalgoorlie Gold Field.

The Prospectus showed, inter alia, that:—

The Vendor (Gold Exploration and Finance Company of Australia, Ltd.) agreed—

- To subscribe for and take firm 300,000 shares for cash at par.
- To underwrite the whole issue free of cost to the Company.
- To pay all the expenses of formation of the Company and of the issue.

An issue of 1,200,000 shares of 10/- each was made on WEDNESDAY last and the Subscription Lists were closed at 9.15 a.m. on that day. The amount was oversubscribed.

Secretaries and Registered Office: AUSTRAL DEVELOPMENT, LTD.,

audit department, and report that "we may be held fully responsible for the existence of these stocks." They define the basis of valuation, and give their opinion that sufficient provision has been made for obsolescent materials. They are, moreover, satisfied that the amounts written off participations and advances are to be considered adequate in present economic conditions. There is much in this report which conforms with best practice in this country, but the statements of opinion will raise controversy. How, it may be asked, can an accountant possess the necessary technical information to express any reliable opinion regarding depreciation of plant and stocks? As to the latter, must he not largely rely on the company's officials to the limits of the *dicta* in the Kingston Cotton Mill case? These points were made by Mr A. E. Cutforth in his presidential address to the Institute of Chartered Accountants three weeks ago. He contended that the accountant was not a specialist in any particular business and that he could not presume to assess the policy of the board. Although the personnel of the board might receive enlightenment by the admission of an accountant to its deliberations, Mr Cutforth felt that the lack of effective criticism and appointment of directors by shareholders stood in the way of rapid improvement in the quality of company administration. On the question of accounting reforms, Mr Cutforth made it clear that, while the Institute would be happy to submit evidence relevant to any amendment of the Companies Act, he regarded voluntary improvement of general practice as more satisfactory than enforced reforms by legislation. Some investors will regard this negative attitude regarding the holding company problem as disappointing. The arguments against consolidated balance sheets and earnings statements increasingly lose validity as more important and ramified groups publish these documents, and it might well have been hoped that the president would have permitted himself the expression of somewhat more advanced views than those of the Greene Committee in 1926.

* * *

South African "Gold Law."—It may seem surprising, at first sight, that although it is now nearly two years since South Africa abandoned the gold standard, some of the most promising properties on the Rand remain to be opened up. The reason has been the desire of their owners to await the new "Gold Law," which only came into force on July 1, 1934. The text of the law as it now stands, together with explanatory notes, has been admirably set out in a new edition of a book by Mr Manfred Nathan, K.C.* The Act of 1908 remains the basis of the legislation on the subject, but it has been materially modified by the 1934 amendments. The principle that the right to mine precious, as opposed to base, metals is fundamentally vested in the State is retained. The new Act, however, modifies to an important extent the terms on which this right may be disposed of to other persons. Thus, under earlier Acts, the owner of land, or, if he had disposed of them, the owner of the mineral rights over such land, had the right to exercise exclusive mining rights over a mynpatch, consisting of an area or two areas aggregating one-fifth of the land. The mynpatch has now been extended to a single area covering one-quarter of it. If this area is not considered sufficient to make a mine the owner may in effect abandon it in exchange for a Government lease over the whole area. In order to encourage the opening up of new mines, the owner may, under the new Act, settle the terms of a mining lease before he embarks on "large expenditure" on prospecting. The owner of the land, also, cannot prevent it being prospected, even if he is engaged in farming it, though he must be paid compensation for surface damage. Again, the lessee of new mining rights is now entitled to set off capital expenditure incurred up till the start of production against the share of the profits payable to the Government under the lease. It is impossible in a brief note to do more than touch on some

of the most important points of the new "Gold Law." The serious investor in South African mines will find the purchase of the new edition of Mr Nathan's book a profitable proposition.

"Cosach" Bond Offer.—Holders of "Cosach" Prior Secured 7 per cent. sterling bonds should have little hesitation in accepting the offer of exchange, now officially made, into 5 per cent. sterling income debentures, par for par, of the Chilean Nitrate and Iodine Sales Corporation. The determination of the Chilean Government to cut the Gordian knot of conflicting claims in the nitrate industry has resulted in the liquidation (which will shortly be completed) of "Cosach," and the transfer to a new corporation of its assets. Henceforth, the export of Chilean nitrate and iodine will be a monopoly of the Chilean Government, which has leased its rights to the Sales Corporation until June 30, 1968. The new bonds will be an obligation of this Corporation as from January last. Holders who deposit their "Cosach" bonds for cancellation with the London agents, Messrs J. Henry Schroder and Company (or with the various Continental agents), at any time in the next eighteen months, will receive payment forthwith of 2½ per cent. interest for the half-year to June last. They will also receive a receipt exchangeable for a certificate authorising the bearer to receive definitive 5 per cent. sterling income debentures and a second certificate covering participation in any distribution out of moneys held by the trustee for the original "Cosach" bonds. The total issue of the new 5 per cent. debentures will be £2,726,100 in sterling and \$35,036,000 in dollars. Interest, though payable only out of available net earnings, will be cumulative. The service will include a cumulative sinking fund of 1 per cent., for redemption of debentures at diminishing premiums until 1947, and at par thereafter till final maturity in 1968. If the industry maintains its present policy of avoiding competition *à outrance* with the synthetic producers, the security for the debentures may be attractive. They should eventually command a higher price than 66½, the current level of the existing "Cosach" bonds.

* * *

A Rubber Hitch?—A meeting of the International Rubber Regulation Committee, last Tuesday, was followed by a statement recording the welcome news of the completion of the Consumers' Advisory Panel by the appointment of a United States representative, and the less happy tidings of the Committee's inability to agree on percentage quotas of production for 1935. The British members of the Committee are understood to favour the maintenance of a restriction rate of not less than the 30 per cent. which will be operative for the last month of the present year. The Dutch representatives, however, desire a lower percentage of restriction, not because the statistical position is deemed to warrant it, but because of threatened difficulties in the enforcement of the scheme upon Dutch native producers. Events have quickly exposed the Achilles heel of the restriction plan, upon which the British representatives laid reiterated stress in the preliminary negotiations. The doubts then expressed were only partially allayed by the unqualified undertaking of the Dutch authorities to assume responsibility for the scheme's enforcement. By imposing an export tax, and raising it successively and drastically, they are believed to have brought native exports in October approximately within the then existing level of 80 per cent. A further quasi-permanent cut, they maintain, would provoke unrest. The suggestion that the estate producers should shoulder any native excess, by way of lower output or purchase and destruction of the surplus, is held to involve undue hardship. The Dutch representatives on the International Committee control more than the 25 per cent. of voting power which is necessary to render a majority decision nugatory. Ultimately, the British producers may have unwillingly to acquiesce in a regime of relatively "small" cuts, which may destroy the scheme's main operative conception. Meanwhile, the news has depressed the market for rubber, whose London price has fallen to 6½d., against a peak of 7½d. a short time ago.

COMPANY NOTES

Cycle and Motor Cycle Companies.—The transport development of the past decade has been achieved partially at the expense of the motor bicycle. Ten years ago the motor bicycle could show an economy in first cost, tax, running expenses and maintenance which, to a wide class of purchasers, gave it a decisive advantage over the cheapest car then available. To an age still accustomed, moreover, to the open car, the open-top bus and the open charabanc, the lack of weather protection on the motor bicycle was less noticeable than to-day. The popularising of the cheap, low-powered, all-weather car in the last six or seven years, and its subsequent percolation to the cheaper ranges of the second-hand market, have reacted unfavourably on the motor cycle. Simultaneously, the development of the country and suburban bus services has invaded the utility market (as opposed to the luxury market) open to the motor-cycle manufacturers. Consequently, while the census of all other forms of mechanical road transport has risen rapidly in recent years, the motor-cycle census has actually fallen. A fairly steady market remains among young employees who find the motor cycle the quickest and cheapest way of reaching their work. As Sir Alexander Roger suggested at the recent B.S.A. meeting, this market may expand with rising employment.

There has, in fact, already been some improvement in motor-cycle registrations. In the larger market, however, the motor cycle is faced with formidably increased competition on the two vital points of comfort and relative price. The manufacturers may be able to solve this problem by bringing out new products—the "Raleigh" and "James" three-wheeler vans and passenger cars are a step in this direction. Nevertheless, the dilemma of combining improved comfort with a reduced price is most difficult. The pedal cycle meanwhile, after a period of partial eclipse, has somewhat suddenly returned to favour. Its popularity appears to be based on its possibilities for pleasure rather than for pure utility. The "hiking" habit has developed the "cycling" habit. The latter may prove to be lasting. The rising export of cycles at least suggests that it is not confined to this country. Nevertheless, a rather rapid rise to popularity must inevitably suggest the risk of a "craze" which will pass. Our table of profits shows that though the most recent accounts have shown signs of improvement, there are still sufficient firms in unfavourable circumstances to indicate a possibility of price-cutting. The conclusion must be that, though good profits may be earned by the leaders, the cycle and motor-cycle industry is at present in a somewhat difficult and speculative phase.

Revised Dorman Long Scheme.—The revised reconstruction scheme of Dorman Long & Company, issued this week, bears internal evidence of prolonged effort to reduce the burden of prior charges, and to secure the assent of

debenture holders and bankers to the company's continuance as a going concern. Fixed charges (excluding special accounts for specific contracts) are, in fact, to be lowered, as compared with the year to September 30, 1933, by £287,000 a year for the first four years and £255,000 thereafter. The company's bankers have agreed (a) to accept redeemable debenture stocks and first preference shares in satisfaction of £420,250 of indebtedness; (b) to allow a further £1,717,598 to remain outstanding, charged on pledged securities, at reduced interest rates; and (c) to receive part interest and amortisation out of the company's profits. The 5½ per cent. debenture holders, for their part, are asked to consent (a) to the cancellation of interest arrears; (b) to the creation of £1,250,000 of stock ranking in priority to their own stock, and a maximum of £780,250 ranking *pari passu* with it; (c) to the postponement of final redemption from 1963 to 1975; (d) to various minor changes of status; and (e) to the exchange of every £100 of their present holding for £60 of 5 per cent. debenture stock and £50 of 6½ per cent. preference stock. The latter will rank after debenture charges, depreciation not exceeding £130,000 on the present assets, and bankers' interest and amortisation. Its dividend will be non-cumulative, but any available surplus profits (after taking account of any balance brought forward) *must* be paid, unless the auditors deem this inadvisable in view of "the financial position." In that case, the percentage earned but unpaid will become cumulative. The Debenture Holders' Committee will have the right to elect three directors for three years, and other rights. The proposed capital arrangements are contrasted with those of the abortive scheme of last year:—

	Amount Outstanding	Old Scheme (July, 1933)	New Scheme (Oct., 1934)
4% 1st mort. deb. stk.	£400,000	Unchanged	Unchanged
5½% 1st mort. red. deb. stock	5,135,944	£50 5½% deb., £30 6% pref., and £30 pfd. ord. per £100.	£60 5% deb. and £50 6½% first pref. per £100.
6% cum. pref. (£1)	883,918	15s. of 6% pfd. ord.	15s. of 8% 2nd pref.
8% pfd. ord. (£1)	2,052,746	2s. 6d. of 6% pfd. ord.	5s. of 8% pfd. ord.*
Ordinary (£1)	8,311,482	2s. of deferred ord.	2s. of ordinary.

* Participating up to 24% in surplus profits with ordinary.

The scheme, on the whole, appears balanced and equitable. Existing preference shareholders are, in effect, confirmed in their preferential income rights, while preferred and ordinary shareholders retain their equity in the business, whatever that may eventually be worth. The scheme, however, is not free from blemishes, the most serious of which is its insistence that the company must

Roan Antelope.—A considerable expansion occurred last year in the operations of this Northern Rhodesian copper enterprise, writes our mining correspondent. The treatment of an increased tonnage of ore was accompanied by a reduction in costs and by an improvement in the ratio of recovery. Production totalled 55,150 long tons of blister copper, against 37,710 in the preceding year. Net profit was £387,940, as against £62,460. The depreciation reserve received £150,000 as before. As a result, however, of the conversion scheme carried through last year, debenture interest required only £93,720, against £105,000. Some £82,500 has been placed to the reserve for taxation, and the divisible surplus is £327,890. The market expected the payment of a dividend of 20 per cent., which, in fact, was fully covered by the year's profits. In view, however, of the low price of copper and other uncertainties, the directors have recommended the passing of a dividend. This policy appears decidedly conservative in view of the fact that net cash assets, at the date of the balance sheet, were over £1½ millions, including £½ million of cash and Government securities. By the addition of last year's appropriation the depreciation reserve has been increased to £400,000. Some £233,320 of premiums on share issues during the year, plus a small amount from realisations on investments, have raised the general reserve to £2,098,620. A total of 2,543,100 short tons was withdrawn from the ore reserves during the period, raising the aggregate to 6,615,000 tons since the beginning of operations, and leaving 101,385,000 tons available. Even on a 20 per cent. dividend, the 5s. shares at their current price of 25s. would have yielded no more than 4 per cent. The market is apparently discounting a further improvement in results and in the general copper position, and may be relying somewhat optimistically on the favourable outcome of recent moves for a new restriction agreement.

Other Company Results.—Our Summary table of profit and loss account, printed on page 856, includes results of 43 companies whose results are not discussed in foregoing notes. This week's results are generally satisfactory, and there are several good individual recoveries. The preliminary profit statement of Wall Paper Manufacturers shows earnings of £742,468, against £635,656. The total dividend on the deferred stock is raised from 11½ per cent. to 12½ per cent. Further rubber reports continue the story of progress, the outstanding feature in this week's group being Lenggeng, whose profits have risen sharply from Dr. 1,603 to £11,693, ample to cover the resumed dividend of 10 per cent. Three tea companies also show satisfactory increases in earnings. An interesting batch of investment trust reports confirms our impression of the trend of revenues. Of nine companies reporting principally to September 30th, six are Scottish trusts whose earnings position, broadly speaking, is indicative of first recovery or a stabilisation of earnings at the previous year's level. Thus Second Investors Mortgage Security shows net revenues of £64,031 against £66,533, Securities Trust of Scotland £22,892 against £23,918, while Second Edinburgh Investment has made positive progress from £15,285 to £22,058. In the miscellaneous group, Imperial Airways report indicates a rise in profits from £37,894 to £78,572, the dividend being increased to 6 per cent. These figures, however, have a limited usefulness, since the amount credited in respect of subsidies is not separately shown—a regrettable omission in a report which is otherwise admirably comprehensive. Profits of Venesta, plywood manufacturers, have shown a great advance from £11,807 to £95,120, enabling two and a-half years' preference arrears to be met. The trading experience of Burberys has been unfortunate, particularly in overseas markets, where exchange difficulties have been severely felt. Horden Collieries profit is £134,948, an increase of £44,330. Guest, Keen and Nettlesolds is paying 1s. per share, tax free, on account of arrears of dividend on second preference.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bengal-Nagpur Railway, Assam Railways and Trading, El Oro Mining and Railway, Wiluna Gold Corporation, Consolidated African Selection Trust, United Dairies, Herrburger Brooks, Gaumont-British Picture Cor-

poration, Phoenix Investment Trust, Broome Rubber Plantations, Sumatra Para Rubber Plantations, Killinghall (Rubber) Development Syndicate, and North British Rayon. At the United Dairies meeting, Mr Joseph H. Maggs disclosed that £160,000 had been spent during the year on new plant for milk manufactures, while sales of milk, butter and eggs had recorded substantial increases. Mr Mark Ostrer informed Gaumont-British shareholders that the new distributing organisation in the United States was already bringing its fruits, and he regarded the potential American market as three or four times as large as the domestic market. The chairman of Herrburger, Brooks declared that broadcasting seemed likely to increase a knowledge and appreciation of music, with consequent gain to the piano trade, which was largely dependent upon their products. Mr John A. Agnew gave shareholders of Wiluna Corporation his opinion that, if the gold *blow* abandoned gold, it would be more likely to increase, than diminish, the price of the metal. The chairman of El Oro Mining attributed the improved results to the American silver purchase policy, but looked forward to a more liberal policy on the part of Mexico towards the company. Mr Chester Beatty informed shareholders in Consolidated African Selection Trust that the new Sierra Leone subsidiary, although in an early stage, was on a profitable basis, and would, in the future, rank among important alluvial diamond producers. The rubber company chairman were concerned largely with restriction. The chairman of Killinghall (Rubber) Development Syndicate regarded its success as not completely assured, while the chairman of Sumatra Para expressed full confidence in the International Committee. At the Broome Rubber meeting the chairman outlined the purchase of the Balau Planting Syndicate. At the Assam Railways meeting Mr E. A. A. Joseph showed that the trading subsidiaries had enjoyed a better year. The chairman of Bengal-Nagpur Railway discussed the increased revenue resulting from the Vizagapatam Harbour and the Tata Company rates revision. The Phoenix Investment portfolio, it was shown, disclosed an appreciation compared with last year. Mr Ernest Walls explained that the reduction in Excise Duty had affected the North British Rayon, but that plant extension had continued.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
November 6	November 8

THURSDAY'S Stock Exchange holiday afforded members their normal opportunity to vote at the Municipal Elections, whose imminence had been an occasion for mild profit-taking in Gilt-edged stocks on the previous afternoon. The latter was the first check to the upward sweep of prices for the Funds which started immediately upon last week's abandonment of the "bankers' pact" on discount rates. On Monday, the last of the British Government's Three per Cent. "redeemables," Funding Loan 3 per cent., crossed the par line, and Conversion 2½ per cent. came near it at 99½. The equity share market opened inauspiciously, but by mid-week appeared to have made good progress in clearing up a somewhat unwieldy open position. Even the mining markets ventured a little cautious buying on Wednesday, though the weather prophets were not entirely reassured as regards the course of depressions from Australasia and South Africa. The unkindest cut of all was reserved for the rubber industry, which learned that the Dutch natives' intractability might fundamentally restrict restriction's operation.

Heavy "institutional" buying of Gilt-edged stocks was well spread through the List, though Conversion issues were particularly firm. The movement inevitably attracted the professional speculator who, being unused to the market's peculiar conditions and traditions, tended to take his profits before Thursday's holiday. All the week's new issues were heartily "staged." India stocks were somewhat more subdued, in view of the imminence of the report. A fair business was done at firm prices in Dominion loans. The bond market, by contrast, was quiet. San Paulo Coffee

7½ per Cents. were bought at the outset, on reports of an early announcement regarding unpaid coupons. A fairly heavy reaction, however, occurred subsequently. Argentine issues were firm on improving internal conditions. Among European bonds, Potash showed a slight recovery. The market was closed when the details of the German agreement were made known, on Thursday.

Home rail senior stocks benefited from the strength of the Funds. The marginal issues, after a dull start, were better in mid-week, though the traffic figures were not particularly inspiring, except, possibly, on the Southern. The Argentine railway reports for the year to last June (summarised on pages 838 and 839), made anything but cheerful reading, and the stocks were somewhat depressed. Considerable buying activity was seen, however, in the case of Cordoba Central issues, on resuscitated rumours of the taking over of the line by the Government.

Steel and brewery shares were the high-lights of the industrial market. The Whitehead half-yearly profit figures and interim dividend stimulated activity both before and after the announcement, the shares having a spectacular rise on Monday. Favourable reports of conditions in the heavy trades stimulated business in a long list of shares, including Weardale, Guest Keen, South Durham and Allied Ironfounders. The market found some difficulty in valuing Dorman Long 5½ per cent. debenture stock on the publication of the revised reconstruction scheme (analysed on page 837), but the stock closed higher after wide fluctuations. Coal shares were firm, Powell Duffryn being in request on news of increased South Wales shipments. The spark which ignited the brewery market came from Birmingham; where the report of Mitchells and Butlers (summarised on page 838) showed an impressive advance in earnings and dividends. Taylor Walker were especially active on revived amalgamation rumours, which coupled the company's name with Benskins. Tobacco shares also showed signs of renewed popularity, demand centring mainly on Imperial and Gallaher. In the store group, Marks and Spencer were again supported. Textile shares were dull and irregular. Courtaulds were fairly steady, but British Celanese tended to lose ground. Only a small business was done in electric supply shares and little interest was taken in equipment issues, with the exception of Crompton Parkinson, which advanced steadily in the first part of the week. Profit-taking was in progress in motor shares, though Dennis Brothers reflected a "House tip" regarding the forthcoming dividend. A moderate business in bank shares left prices mainly unchanged. Prudential were in demand in a steady insurance market.

Oil shares had a firmer tone, after their previous heavy selling. A somewhat less depressed view was taken of American possibilities. The Trinidad Leaseholds' dividend was regarded as satisfactory, and V.O.C. remained firm on the maintenance of the interim payment. Rubber shares opened weak and were further marked down on Wednesday after the announcement of disagreement between British and Dutch representatives on the matter of restriction percentages for 1935. This question is discussed on page 836. There was a tendency, however, to regard the lower prices as not unattractive, and the market finished slightly firmer before the holiday. Tea shares remained in a friendless condition, price declines being general in the entire absence of support against a moderate but persistent stream of sales.

After a thoroughly dispirited opening, the mining market became stronger as the week progressed. Some of the weaker speculative positions had been closed, and the tentative re-entry of some of the more influential inside operators synchronised with reports that the "higher grading" policy of the mines would find expression in the October profit figures, and with a firmer tendency in the franc. West African shares had a rather better tone, but Australians commanded little increased support. Tin shares had a downward tendency, on the absence of a recovery in the price of the metal. Mawchi, however, were strong on reported buying from a special source. Among copper shares Roan Antelope obtained no benefit from the report, though the latter confirmed the view that the passing of the dividend was a matter of choice, not necessity. Tinto were weak on fears of the passing of the preference dividend.

FOREIGN STOCK EXCHANGES

NEW YORK

THE market continues to belie its major prophet. With turnover running at little over 400,000 shares on each of the first three days, the incipient boom is yet to seek. Next Tuesday's elections, naturally, have provided the market with excuse, and possibly reason, for hesitancy. By general consent, the closing of the polls is zero hour for the Administration's winter programme, when less equivocal signs should be apparent as to the trend of the Presidential mind. The market, becoming tired of putting a doleful interpretation on oracular statements, has acquired a fatalist *solvitur ambulando* outlook. If there is a veer to the right after the elections, it will be grateful, but the approaching winter and the limited expansion of business are regarded doubtfully from the budgetary and monetary points of view. This week's idle markets have accordingly been logical rather than perverse, in view of the virtual absence of recovery symptoms. The operating deficit of \$7,712,000 reported by the United States Steel Corporation for the third quarter had been generally anticipated, and the market has derived little encouragement from the hopeful outlook to which the report alludes and to this week's increase in steel mill capacity from 24.5 to 26.0 per cent. Two estimates of unemployment, one slightly under and another well over the ten-million mark, have attracted attention to the scope of prospective unemployment insurance legislation, on which the President is reported to be determined. Government bonds have been

affected by reports of further public works expenditure, and building stocks are finding purchasers in consequence of housing loan reports. Industrial stocks have made slight headway during the week, but utilities remain out of favour. Signs of partial alleviation of the oil problem have encouraged a firmer tone in the shares; but, although a complete collapse of prices is now thought unlikely, the situation still presents serious weakness.

* Two-hour Session.

PARIS

The Bourse has been a prey to political influences this week. The uncertain outcome of the Radical Congress regarding M. Doumergue's programme of constitutional reforms, M. Petain's speech on Monday on re-armament, and the heavy shadow of the Saar problem were responsible for some precipitate selling on Tuesday. The technical position in some cases also restrained new business. Rentes lost ground, but steadied a little on Wednesday. Industrials were particularly uncertain, and only international hedging counters could be described as firm in tone. Gold shares were in more active demand, but the rubber and oil groups. The market was closed on Thursday for All Saints' Day.

BERLIN

Last week's share market was in general weaker. Some brewery and engineering stocks, in particular Maschinenbau-Unternehmungen, were bought, but most high-priced shares declined. The cut in potash prices caused a fall in the shares, and lignite issues resumed their decline after publication of the law requiring the companies to capitalise benzene production. Home bonds were undecided, and dollar bonds in most cases weaker. The new week opened with a further drop in potash and lignite issues, and share prices in general sagged. Tuesday closed with a slight partial recovery, although bonds were irregular.

AMSTERDAM

Business this week has been at low ebb and, despite a better tone on Tuesday, the market has made no positive headway. Primary commodity shares have been under a cloud. Sugar shares displayed early weakness, Amsterdam Trading losing three points on Monday, while rubber issues were weak on the inability of the Dutch and English representatives to reach agreement regarding the 1935 quota percentage. Leading industrial shares showed little movement on balance, and limited interest was devoted to oil share dealings.

CAPITAL ISSUES

OVERSUBSCRIPTION of any first-grade issue was so inevitable in view of the strength of the gilt-edged market, that dealers heard with little surprise of the overwhelming success of this week's two senior offers. *Brentford and Chiswick Corporation*, a new borough with a small net debt, made a first issue of 3 per cent. twenty-year stock at 98½. Although the terms reflected the strengthening of the market since the recent Nottingham and Lanarkshire issues, they proved very acceptable to a market which is always seeking loans with fixed redemption at a discount. The *Mersey Docks and Harbour Board* issue of 3½ per cent. stock at £97 per cent., having a minimum life of forty years, was a conversion operation, but the scale of cash applications, of which £1 million had been received before the opening, left its success in no doubt. The stock offers the attractive flat yield of £3 7s. per cent. and £3 7s. 9d. per cent. to latest redemption, and is adequately covered by revenues which are showing definite signs of recovery. The issue of *Prices Trust Company* 5½ per cent. cumulative preference shares at a small premium may be regarded as a partial and indirect encashment of the equity of the operating company, Prices Tailors. The erection of a preference interest on an equity basis has, in the past, been accompanied by certain disadvantages, but the record of ordinary earnings in the operating company, in normal years, has sufficed to cover the issue by a satisfactory margin. The ordinary shares of *Boulton Paul Aircraft* will appeal primarily to the speculative investor who is prepared to undertake the risks inherent in the development of the company's range of aircraft patents and designs. The *Gold Mines of Kalgoorlie* is the first subsidiary of the recently formed Gold Exploration and Finance Company of Australia. The prospectus gives rather limited particulars of the properties acquired, but the auspices under which the issue appears will certainly appeal to the speculative mining investor. A tender issue by *Luton Water Company* has been announced this week. Market introductions include 3½ per cent. debenture issues of the

associated *First, Second and Third Scottish American Trust Companies* and *Tano Gold Dredging, Ltd.*, a Gold Coast venture under the auspices of Anglo-Oriental Mining Corporation.

(Continued from page 843)

The Central Portland Cement Company, Ltd.—A resolution has been passed to increase the capital to £325,000 by the creation of 250,000 ordinary shares of 4s. each. These are being offered to shareholders at 4s. 3d. per share, together with the unissued 25,000 6 per cent. cumulative redeemable preference shares of £1 each, which are offered at 22s. 6d. per share.

CONVERSIONS AND REPAYMENTS

R. and R. Clark.—An extraordinary meeting will be held in Edinburgh on November 16th for the purpose of considering special resolutions to reduce the capital from £150,000 to £127,500 by repaying the 22,500 £1 preference shares. Conditional upon confirmation of such reduction, it is proposed to simultaneously increase the capital by the creation of 22,500 £1 shares.

Trust and Loan Company of Canada.—For the purpose of paying off debenture stock or debentures a call of 5s. per share will be made on members, payable at Glyn Mills and Company, 67 Lombard Street, E.C. A first instalment of 2s. 6d. per share is due on February 6, 1935, and the second—and similar—instalment on May 1, 1935. There is outstanding £735,484 4 per cent. debenture stock and debenture bonds to the amount of £1,464,501.

River Wear Commissioners (Sunderland).—The River Wear Commissioners (Sunderland) are converting £1,500,000 5 per cent. second mortgage funded debt into a 3½ per cent. issue.

PRIVATE PLACINGS

Rootes Securities.—An issue on October 24, 1934, of £250,000 debentures, being part of a series already registered, has been recorded at Somerset House.

OFFERS ABROAD

Swedish Treasury Bill Issue.—The State Debt Office on October 29th invited offers for Kr. 15,000,000 in three months' Treasury bills; this resulted in Kr. 79,200,000 being taken up. The average discount asked for was only 0.476 per cent.

FORTHCOMING ISSUES

Australian Internal Loan.—The Federal Loan Council has decided to raise a new 3 per cent. internal loan of £15,000,000 redeemable in 14 years. The Commonwealth Bank has agreed to underwrite the issue. The interest rate is the lowest in the history of the Commonwealth. Applications will be received late in November or early in December.

Central Perak Rubber.—It is understood that underwriting has been arranged of a share issue by the Central Perak Rubber Company. The issue will take the form of rights to existing shareholders.

Erinoid, Ltd.—Erinoid is shortly to make an issue of preference shares. The issue will consist of 55,000 6 per cent. redeemable preference shares of £1 each at par. The shares will be offered to the shareholders. The proportion is one preference share for every 20 ordinary shares held.

Iford Corporation.—The Iford Corporation is said to be discussing the issue of a new loan of £500,000 in order to pay off high interest bearing loans.

John Dickinson and Company.—It is understood that arrangements are in hand for an issue of £800,000 new 3½ per cent. first mortgage debenture stock in John Dickinson and Company. The issue price is 96½.

Motor Fuel Proprietary Limited.—Underwriting has been completed for an issue of 300,000 shares of 5s. at 15s. per share. The issue will be confined to shareholders, who will have an option for 12 months for one share at 15s. for every three shares.

RESULTS OF ISSUES

Beryl Gold Corporation.—The lists for the issue of 1,000,000 shares were closed October 29th. The issue was fully subscribed.

Brentford and Chiswick Corporation.—The list of applications in connection with the issue of £500,000 3 per cent. redeemable stock, 1954, at £98 15s. per cent., for Brentford and Chiswick Corporation, was closed at 9.5 a.m., October 30th, the issue being heavily over-subscribed.

Galapitakande Estates.—The issue of 20,000 6 per cent. cumulative preference shares of £1 each at 21s. per share and 40,000 ordinary shares of £1 each at par has been over-subscribed.

Liverpool Bill Tenders.—The tenders for £1,000,000 bills due March 30, 1935, were opened October 30th at the Bank of England. The total amount applied for was £3,160,000, and the total amount allotted £1,000,000. Tenders at

£99 16s. 6d. and above were allotted in full. The average rate per cent. per annum was 8s. 0.18d.

Prices Trust Company.—The British Shareholders Trust, Ltd., announces that the list of applications in connection with the issue of 500,000 5½ per cent. cumulative preference shares of £1 each at 20s. 6d. per share for Prices Trust Company, Ltd., was closed at 9.5 a.m., October 30th, the issue being over-subscribed.

William Hancock and Company.—Subscription lists in respect of the issue, at 99, of £500,000 4½ per cent. first mortgage debenture stock were closed on October 26th at 9.10 a.m., owing to heavy over-subscription.

Gold Mines of Kalgoorlie.—The subscription list for the issue at par of 1,200,000 shares of 10s. each was closed at 9.15 a.m., October 31st, the issue having been over-subscribed.

Mersey Docks and Harbour Board.—The list of cash applications in connection with the issue of £2,062,628 3½ per cent. redeemable debenture stock, 1975-85, was closed at 9.5 a.m., October 31st, the issue being heavily over-subscribed. Applications exceeded £21,000,000.

Boulton Paul Aircraft.—The subscription list in connection with the issue of 1,000,000 shares of 5s. each at par was closed at 9.55 a.m., October 31st.

CALLS DUE NOVEMBER 5 TO NOVEMBER 10, 1934

The grand total of calls falling due in November, 1934, is £8,049,212, which compares with £4,888,830 which fell due in November, 1933. The following calls fall due from November 5, 1934, to November 10, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid
4/-	Central Portland Cement, Ltd. (250,000 Ordinary Shares, at 4s. 3d.)	6d p.s.	Nov. 7	6d. p.s.
£1	Central Portland Cement, Ltd. (25,000 6% cumulative redeemable preference shares, at 22s. 6d.)	1/- p.s.	Nov. 7	1/- p.s.
10/-	Kalgoorlie Electric Power and Lighting Corporation, Ltd. (49,990 ordinary shares at 14s.)	5/- p.s.	Nov. 5	5/- p.s.
5/-	Lund & Co., Ltd. (192,000 ordinary shares, at par)	1/3 p.s.	Nov. 5	All
£1	Oxford and Berkshire Cinemas, Ltd. (150,000 7% cum. part. pref. shares, at par)	10/- p.s.	Nov. 5	All
Stock	Salford Corporation 3½% redeemable stock, 1954-64 (£1,000,000, at £100%)	£30%	Nov. 6	£60%
£1	Stanton Ironworks, Ltd. (461,894 6% cum. pref. shares, at 25s.)	7/8 p.s.	Nov. 8	All

COMPANY MEETINGS, &c.

WILUNA GOLD CORPORATION, LIMITED

DIVIDEND OF 22½ PER CENT.

The ordinary general meeting of the Wiluna Gold Corporation, Limited, was held on the 26th ultimo, in London, Mr. John A. Agnew (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the Australian operating company had made a net profit for the year of £410,452, which, together with the amount brought forward, namely, £307,786, made a total of £718,238. Out of this they had declared dividends totalling £540,000 (Australian currency), the sterling equivalent of which was reflected in the profit and loss account of the English corporation by the item of £430,278.

Dealing with the accounts of the corporation, he pointed out that the net profit amounted to £403,427, and after allowing for the interim dividend paid in January there was an available balance of £247,586, out of which they recommended the payment of a final dividend of 22½ per cent. (making 22½ per cent. for the year), leaving £52,709 to be carried forward.

During the year under review the mines had treated 469,362 tons of ore, averaging 29s. 1.6d. per ton, a monthly average of 39,114 tons. In the six months subsequent to the close of the accounts the mines had treated 252,688 tons, averaging 28s. 4d. per ton, a monthly average of 42,114 tons. Working costs had been reduced to 18s. 6d. (Australian currency) per ton, including provision for development.

Dealing with mine development, he referred to an important development on the 625 ft. level, where driving south had resulted in disclosing an ore body nearly 600 ft. long, averaging 30s. 6d. per ton over 11 ft. The face, which was approximately 400 ft. south, still showed very strong ore. The development of this ore body at lower levels would be undertaken as soon as possible. They regarded this as an extremely important and valuable development. The substantial gain of 253,900 tons in the ore reserves to a total of 1,786,000, averaging 28s. 6d., reflected not only a strong technical position at the mine but the soundness of the development policy.

In this tonnage no allowance had been made for probable or possible ore. The diamond drill boreholes on the Bulletin Lease at the northern end of the property had intersected a shear and disclosed ore of varying widths. While it was difficult to compute with accuracy from these results the average widths and value of the ore body, they anticipated opening up a very large tonnage of ore averaging not less than 18 ft. in width and at least approximating the grade of the main mine.

After referring further to the developments on their northern boundary, the chairman said they had agreed to take an interest in Goldfields Australian Development Company, Limited, who were operating in the adjoining "Moonlight" property, and where recent developments had been most encouraging.

He stated that the proposed new Western Australian tax on gold-mining profits was the result of discussions between representatives of the gold-mining industry and of the State Government. The latter were anxious to be relieved of their liability of the payment due under the Phthisis Act. The amount involved was stated to be a maximum of £80,000 (Australian currency) per annum, which was a relatively small amount.

Concluding, he stated that the recent rise in the price of gold to over 140s. appeared to have caused in certain quarters some uneasiness as to whether the price would ultimately amount to a figure beyond reason. In their opinion the rise was a natural one, based on the exchange existing between sterling on one hand and the United States dollar or French franc on the other. Speculation was rife as to what might happen to the price of gold if France left the gold standard, or if the value of the American dollar were increased in terms of gold. In the former case, it was reasonably certain that other countries in the gold bloc would follow suit, and while this would cause brief or temporary dislocation of exchanges, in their opinion the effect would be more likely ultimately to increase than diminish the price of gold. It was scarcely reasonable to expect, concurrent with any such happening to countries at present on the gold standard as that referred to, that any attempt would be made to increase the gold value of the American dollar; so far as it was possible for them to judge, the tendency would appear to be the other way. If their reasoning was correct, they had nothing to fear by way of any marked decrease, even temporarily, in the value of their product. He was content to express those reasons, inadequate though they might be, for their confidence that they would see a substantial premium on the old price of gold for many years to come.

The report and accounts were unanimously adopted.

UNITED DAIRIES, LIMITED

SUCCESSFUL YEAR—RECORD EARNINGS

The nineteenth ordinary general meeting of United Dairies, Limited, was held, on the 30th ultimo, at the Connaught Rooms, London, Mr. Joseph H. Maggs, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The net profit is £600,486, which establishes a new record for earnings. It is proposed to pay a final dividend on the ordinary stock of 7½ per cent., making 12½ per cent. for the year, and to transfer £170,000 to reserve, bringing that fund up to £900,000. It is then proposed to transfer £224,000 from the reserve fund to a share capital account and to distribute one new ordinary share, or as nearly as may be, for each ten ordinary shares now held.

As regards the trading of the subsidiary companies, whose results, as you know, are made up to March 31st in each year, it is of interest to note that, in spite of the dry summer of 1933, we dealt with over 5,000,000 gallons of milk more than in the previous year. Last year's increase, you may remember, was something over 4,000,000.

Our butter sales increased by over 4,000,000 lb., sales of English eggs were up by more than 17 millions, whilst our sale of imported eggs actually declined by 543,000.

Encouraged by the practical steps taken by Mr. Elliot to restrict imports of foreign processed milks we have greatly increased our manufacturing plants, in fact altogether during the trading year we spent some £160,000 on new plant, apart from buildings. I have faith in the Government's declared policy, an essential factor in all its marketing schemes, that further restrictions on imports will be enforced as we at home show ourselves capable of producing more. We as manufacturers, and indeed the agricultural community as a whole, ought to express deep appreciation of the many measures which the present Minister of Agriculture has carried through for the benefit of the home producer. These benefits reach far beyond the farm, for if the primary producer is able to increase his production or his spending, it means more employment all round.

At the moment in the processed milk industry, home production has gone ahead rather faster than restriction of imports. Further substantial cuts in imports are vitally necessary if we are to market the ever-increasing supplies of milk produced in this country. Tariffs alone would be useless, as will be realised when you consider the prices at which our competitors abroad obtain their supplies. For months this year in Holland condensed milk manufacturers have, I am told on good authority, actually been charged less than twopence per gallon for fresh milk. In order that this may be done, the Dutch consumer has to pay at least double the price for his butter that the Londoner pays.

It is indeed a strange anomaly that in many of the great dairying countries of Europe, and also in some of our Dominions, the home price of butter should be artificially maintained at 100 per cent. to 300 per cent. above the prices obtainable for their exported butter. I cannot help feeling that if these countries allowed their own nationals to purchase butter at the world price, the apparent glut of this important article of food would soon disappear and the world price would rise.

In my address to you last year I referred to the large extension of undercutting in the retail milk trade. The operations of the Milk Marketing Board have resulted in the elimination of some of the "pirates," but, particularly during the summer months, we have had quite a considerable amount of price cutting. This has been possible owing to supplies of milk dumped on the London market by areas in Scotland outside the jurisdiction of either the English or the Scottish Milk Marketing Boards. This weakness in the schemes will, I trust, be remedied either by statute or by negotiations between the English and Scottish Boards.

I am glad to say that a growing understanding of each other's problems has developed in our continual conferences with the Board, and that a contract, this time covering twelve months, has been agreed between the parties without outside assistance. I sincerely hope that this spirit of co-operation will continue to grow as time goes on and that the Milk Marketing Board will prove to be all that its sponsors prophesied.

The Milk Marketing Board has this to its credit—it has "stopped the rot." How nearly the milk producer was to actual disaster is not generally appreciated. Those people who grumble at the Milk Marketing Board have conveniently short memories. The Board has further secured that the prices negotiated with the trade are actually the prices which are paid. I need hardly tell you that so far as United Dairies are concerned we always paid our producers the prices agreed upon.

The report was unanimously adopted, and resolutions were passed providing for the distribution of bonus shares.

EL ORO MINING AND RAILWAY COMPANY, LIMITED

GREATLY IMPROVED RESULTS

The thirty-fifth annual general meeting of the El Oro Mining and Railway Company, Limited, was held, on the 26th ultimo, in London. Mr J. H. M. Shaw (the chairman) presiding.

The Chairman, in the course of his speech, said that the report presented was the best which they had been able to put before the shareholders for many years. That was a matter of great congratulation. The factors in their situation of essential importance were the price of silver and the management of their affairs in Mexico. As to silver, fortunately the United States Government had decided to buy large further quantities, and therefore the price had combined with the excellent work of the manager and his staff to put the company in its present happy position.

With regard to the profit and loss account, the railway showed a profit of £12,356. The interest paid by the Inversiones Company, whose principal—almost its only—business was working the La Noria Mine, came to the very satisfactory figure of £63,000, from which they had to deduct Mexican taxes, £8,325, giving them a revenue for the year of £54,674. That was an extremely satisfactory result, and on June 30, 1933, the Inversiones had had in transit only \$22,304, against \$81,225 on June 30th this year. To that extent they would benefit in the current 12 months, and it was a very nice nest-egg with which to begin the year.

The available distributable profit was £70,716. In view of the fact that their large cash resources were sufficient in the opinion of the board for any business that they might elect to undertake in the future under the plan of campaign put before the last general meeting, the directors felt fully justified in recommending a distribution as divided in the fullest possible measure—namely, 1s. 2d. per share, less income tax.

They had for the year under review paid a very much larger sum in taxes than in the previous year, partly in respect of the larger amount of the profits, but also at a much higher rate. They must hope that when the affairs of a troubled world settled down a little more Mexico would adopt a broad-minded liberal policy towards those working, as this company did, in her country.

The report was unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED

IMPROVED REVENUE POSITION

The fifty-fourth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 31st ultimo, at Winchester House, Old Broad Street, London.

Mr E. A. A. Joseph (the chairman) said that, while the revenue side of the railway accounts had shown a further falling off of £14,000, this had been offset to the extent of £3,000 by a reduction in expenditure, although the train miles run were increased by 12 per cent. In the trading accounts the company's collieries about held their own in sales, but they were able to maintain the reduction in expenses. The Veneer Mills did very well during the year in their business of producing tea chests, and gave them the largest credit they had yet earned from that department. Their other subsidiary undertakings, the sawmills and the brickworks, both did better than in the previous year. On the important question of their coal stocks, he was glad to say that the stocks were back at normal.

Taking the figures all through, the balance of net revenue account, after allowing for the extra charge for interest on the 6 per cent. notes, showed an improvement of approximately £5,800 as compared with last year.

Their holding in the Rivers Steam Navigation Company remained as before, and he was glad to say that that company resumed dividends during the year and paid 2 per cent. free of tax. On their Makum investment they also had a dividend this year—10 per cent.—which was encouraging after its recent pause. Their shareholding in the Namdang Company was the same as before, and the company itself was in a very much improved position, and the figure at which their interest was valued in the balance sheet was now well below the current estimate, but they had taken advantage of the improved conditions to realise their debenture holding at a small profit.

The cash position of their own company was now very considerably improved, following on a general improvement in earnings and a smaller amount locked up in stocks. Their returns for the first half of the current year showed decided improvement. Railway earnings were substantially ahead of last year, the earnings to date being Rs. 71,000 to the good. Coal sales in the more important of their markets were on the upgrade.

The report and accounts were unanimously adopted.

BROOME RUBBER PLANTATIONS, LIMITED

PURCHASE OF BALAU PROPERTY

The first annual general meeting of Broome Rubber Plantations, Limited, was held, on the 30th ultimo, at Winchester House, London, E.C.

Sir Lionel Smith-Gordon, Bart. (chairman), presided, and, in moving the adoption of the report, said that the net profit from July 15, 1933—the date of incorporation—to June 30, 1934, was £5,167, and it was proposed to pay a dividend of 8½ per cent., less tax, which would absorb £3,437, and to carry forward £899, subject to staff bonus in respect of the past season.

The crop of rubber was 772,032 lbs., which was obtained at an f.o.b. cost of 2.52d. per lb., while the net average selling price was 4.46d., or equivalent to 5.06d. London landed terms.

After considerable negotiations a provisional agreement was signed on August 29th covering the terms of the proposed purchase of the Balau Planting Syndicate. The agreement was approved by the Balau shareholders in Kuala Lumpur on the 17th instant, and, subject to the resolution for increasing the Broome share capital being passed and the merger confirmed at the second Balau meeting called for November 1st, the agreement would come into operation.

The Balau Estate consisted of 1,353 acres, of which 1,210 were planted with rubber. The purchase price was £36,000, to be satisfied by the allotment of 360,000 fully-paid shares of 2s. each, ranking for dividend from July 1, 1934, the net revenue as from that date being for account of the Broome company. The Balau Syndicate would pay over also a sum in respect of working capital approximating to £3,000, thus reducing the purchase price to £33,000. The reputation of Balau for good yields and cheap working stood high in Malaya, and it was conveniently situated for working as a division of Broome, and so should enable a reduction to be made in combined working costs. Balau's standard production had been assessed provisionally at 575,000 lbs., so that combined standard production would be 1,388,000 lbs., and the 3,013 acres of planted rubber would be capitalised at £93,750. Net liquid assets would amount to £24,150—£8 per acre—so that the position was very strong indeed.

The report was unanimously adopted, and a resolution to increase the capital of the company to £150,000 by the creation of 900,000 new shares of 2s. each was approved.

SUMATRA PARA RUBBER PLANTATIONS, LIMITED

EFFECT OF EXCHANGE ON PROFITS

The twenty-seventh annual ordinary general meeting of the Sumatra Para Rubber Plantations, Ltd., was held on the 30th ultimo at the offices of the company, 30 Mincing Lane, London, Mr H. A. Barrett (chairman) presiding.

The Chairman, in moving the adoption of the report, said that during the year under review the exchange position had become considerably worse than in the previous year, averaging 7.8 guilders to the £ only, compared with 8.5 guilders to the £ in 1932-33, while the normal exchange was 12.10 guilders to the £. This adverse exchange had cost the company no less a sum than £4,740, and it was gratifying that, despite this handicap, they were able to record a profit on the year's working of £2,229, against a loss for last year of £4,162. Had this loss on exchange not occurred they might even have been able to suggest a small dividend, but owing to the continuance of the adverse rate they now recommended that this sum should be added to the carry-forward. It had been mooted that the Dutch might consider the devaluation of the guilder, and that, of course, would be a great advantage to the company.

With regard to the property, the estate had been visited by Mr J. Murray, the well-known Malayan planter, who was accompanied by their visiting agent, Mr Friedlander. Mr Murray was very pleased with their young immature rubber and considered the future of these areas, some 1,205 acres in extent, to be most encouraging. Mr Friedlander reported that the property was being very well and efficiently looked after, and good progressive work had been done during the year.

We should all be most deeply grateful to those who with untiring patience and skill were able to bring about the international regulation of production of rubber, and our gratitude is due to the various Governments concerned.

In conclusion, the Chairman said that at the moment output was greater than consumption, but he thought they might feel confident that the international committee for regulation of rubber exports would deal faithfully with that position.

The report was unanimously adopted.

PHOENIX INVESTMENT TRUST, LIMITED

DIVIDEND MAINTAINED

The twentieth ordinary general meeting of the Phoenix Investment Trust, Limited (formerly The Russian Corporation, Limited), was held, on the 1st instant, at 25/31 Moorgate, London.

Mr Walter W. Ffennell, who presided, said: The net revenue is £13,769, being approximately £1,315 less than that of the previous year. After providing for the preference dividend there remains a balance of £3,285, which represents 1.7 per cent. on the ordinary stock. The management have, to the best of their ability, made an estimate of the revenue we may expect to receive in our present year, and, unless something very unforeseen occurs, the dividend on the preference stock should be at least covered, and in view of this fact your directors felt that it would not be endangering that cover by drawing on the carry-forward in order to maintain the dividend on the ordinary stock, which is recommended at the rate of 2 per cent., thus reducing the available balance by £589.

There has been an improvement in the value of our investments. The percentage of depreciation as shown in the report is 38.58 per cent., whereas last year it was 41.7 per cent., an improvement of over 3 per cent., which would have been even better if the dollar had not depreciated further.

I mentioned a few minutes ago an estimate of earnings for the present year. In the past such internal estimates have been extraordinarily accurate, and I cannot congratulate the management too highly on their power of prophecy, but I feel bound to say that, in my opinion, forecasts of the future are becoming more and more difficult. Every day some still more abnormal control quota or subsidy is produced in one country or another, and we can only hope that the near future will see an improvement in this direction and that the business world will be able to settle down again to productive work under conditions comparatively free from laws and barriers.

The report and accounts were unanimously adopted.

CONSOLIDATED AFRICAN SELECTION TRUST, LIMITED

LARGE INCREASE IN PROFITS

The tenth annual general meeting of Consolidated African Trust, Limited, was held, on the 31st ultimo, at the Institute of Chartered Accountants, Moorgate Place, London, Mr A. Chester Beatty (the chairman) presiding.

The Chairman, in the course of his speech, said: The accounts show a profit of £234,204, an increase of £72,798 over the preceding year. We paid a dividend of 1s. 3d. per share in February last, and a further dividend of 1s. 9d. per share in August, representing a total of 3s. per share, which absorbed a gross amount of £150,392. A further £25,000 has been transferred to general reserve, bringing the total of the reserve up to £225,000.

Our investments and advances now stand at a book value of a little over £202,000, and we regard that figure as a very conservative measure of the value of our holdings. Our liquid position is a strong one, the total current assets amounting to £348,000, against current liabilities of about £82,000.

Our principal source of revenue continues to be from the production of diamonds from our mines in the Gold Coast Colony, and work there has proceeded steadily.

At our meeting last year I informed you that we had concluded negotiations with the Sierra Leone Government for the grant of exclusive rights in diamond mining over practically the whole Colony and Protectorate of Sierra Leone. We formed in April last a subsidiary company, called Sierra Leone Selection Trust, Limited. This subsidiary company, the capital of which is wholly owned by us, took over the business on May 1, 1934.

The business in Sierra Leone is still in its early stage of development, and the output of diamonds was on a relatively small, but profitable, basis. We are confident that the Sierra Leone deposits, when fully developed and equipped, will rank among the important alluvial diamond fields of the world.

The demand for the special class of diamonds produced from our Gold Coast mines has continued to be very satisfactory.

Reviewing the company's position, I think we may regard with great satisfaction the steady expansion and financial strength of the business. In spite of adverse general conditions in the diamond trade, our profits increased substantially during the past financial year, and I feel we may look forward with confidence to the continued success of our enterprise.

The report and accounts were unanimously adopted.

KILLINGHALL (RUBBER) DEVELOPMENT SYNDICATE, LIMITED

DIVIDEND OF 12½ PER CENT.

PROFITS FROM TIN AND RUBBER

The twenty-fifth annual general meeting of Killinghall (Rubber) Development Syndicate, Limited, was held, on the 31st ultimo, at the registered offices of the company, 7 Martin's Lane, Cannon Street, London, E.C.

Mr W. Arthur Addinsell (chairman of the company) presided.

Mr J. Lewis, on behalf of the secretaries (Bright and Galbraith, Limited), read the notice convening the meeting, and Mr Ash (of James, Edwards and Company) read their report as auditors.

The Chairman said: Gentlemen, I move: "That the directors' report and accounts for the year ended June 30, 1934, as submitted to this meeting, be approved and adopted, and that a dividend of 12½ per cent. for the year be declared and paid."

You have probably noticed that this is the twenty-fifth annual general meeting—our silver anniversary. Therefore, it is gratifying to your directors to present a report and accounts with financial results which justify the recommendation of a dividend of 12½ per cent. for the year, prudent transfers to reserves, and an appreciable carry-forward.

In the course of my remarks at our last meeting I foreshadowed an increase in revenue from Tin Tribute, the receipt of dividends from our shareholdings in the tin companies, and—although at the time with no great confidence—an improvement in the results from the production of rubber.

Tribute from Killinghall Tin, Limited, was £5,670, an increase of £2,643 over the previous year. A profit of £2,764 arose on rubber, against a loss of £592. The amount received by way of dividends is comparatively small, but in the case of Killinghall Tin it includes 5 per cent. interim maiden dividend.

CURRENT YEAR'S PROSPECTS

For the year now current the prospects as I see them are that we can expect no increase in receipts from Tribute unless there is a higher rate of export allowance under the Tin Restriction Enactment, or the price of the metal improves. Roughly, I think we can look for about the same figure as last year, which must be regarded as quite satisfactory.

I am, however, justified in predicting a substantial rise in the profits from rubber. You will see that the average net price realised last year was 4.7d. a lb. Since June 30th the market price for rubber has averaged nearer 7d. a lb., and the year's crop should not be materially reduced.

We can also look forward to an addition to the amount of income from investments. If my remarks so far have led you to anticipate a higher rate of dividend for the year to June 30, 1935, I do not think you will be disappointed. Provided the prospects in the early months of next year are no worse than I see them to-day, the board will consider the payment of an interim dividend.

Our tin interests have indeed served us well during the years of the depression and slump in the rubber market. They have, combined with the strong financial position and minimum loss on rubber during the lean years—owing to the agricultural excellence of our estate—relieved us of many anxieties. Nevertheless, we were deeply concerned in the critical days which preceded the declaration that an international scheme for rubber restriction was an accomplished fact.

It is perhaps early yet to acclaim the scheme as an unqualified success, but during the next four years I am confident we can look forward to a fair measure of prosperity for the rubber industry, which will provide an equitable return to shareholders.

Mr Harold C. Rendle seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected and the proceedings terminated.

HERRBURGER, BROOKS, LIMITED

TRADE IMPROVEMENT MAINTAINED

The fourteenth annual general meeting of Herrburger, Brooks, Limited, was held, on the 31st ultimo, at the Midland Grand Hotel, London, Mr Louis Sterling (the chairman) presiding.

The Chairman, in the course of his speech, said: The improvement in trade, to which I referred at the last meeting, was maintained throughout the year, and this improvement is, of course, reflected in the figure of gross profit, which is £13,600 better than in the previous year.

After taking into account the dividend paid last year, the sum of £75,660 remained as "carry forward" in the profit and loss appropriation account. £22,205 is brought in this year, making £97,865. After charging the dividends this year, namely, 7 per cent., or £19,600, the sum of £78,265 remains as a balance in this account. In view of the fact that £71,883 appears on the other side as goodwill item, it would never be possible, or at any rate advisable, to reduce the "carry forward" below that amount until this goodwill item has been extinguished. We consider, therefore, that it would be sound finance, and give the balance sheet a much healthier appearance, if £71,882 of this "carry forward" were applied to reduce the item of goodwill to the nominal amount of £1, and I feel sure we shall have your approval of this proposal.

While referring to goodwill, it is worthy of mention that since the incorporation of the company no less than £206,798 has appeared in that account, and of this sum £134,915 has been written off, £110,841 out of actual profits made, and the balance of £24,074 from a premium on shares account, which resulted when certain purchases made by the company some years ago were paid for partly by the issue of shares at a premium.

In connection with the trade revival experienced last year, the improvement has continued during the early portion of the present financial year. The piano trade has suffered in recent years from various circumstances, but there is considerable optimism in the trade itself as to the return of the piano to its former popularity. The improvement already experienced is small but progressive, and seems to bear out that view; and although the progress may be slow, the piano will undoubtedly return eventually to its prominent place in the home. Wireless appears likely to prove of great benefit in this direction, as it has undoubtedly fostered a much wider knowledge and appreciation of music, and the fact that children are being taught to play the piano in largely increasing numbers, alone furnishes an indication that the future of the piano can be viewed with every satisfaction.

The quality of our products has never been higher than at present. They are, of course, known the world over as the best made, and, although we are manufacturers and suppliers to the trade only, the fact that so many manufacturers are specifying in their advertisements that our products are included in their pianos shows that the piano dealer also realises the advisability of ensuring that the articles made by us are incorporated in the pianos they buy.

I am happy to say that our manufacturing arrangements, as well as our overhead expenditure, are on very healthy bases, and, granted that no unexpected recurrence of trade depression takes place, particularly of the heavy nature experienced in the last few years, the directors can once more say that they view the future with every confidence.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED

SATISFACTORY RESULTS

The annual meeting of the Gaumont-British Picture Corporation, Limited, was held, on the 29th ultimo, at 142 Wardour Street, London.

Mr Mark Ostrer (the chairman) said that the net profit for the year ending March 31, 1934, amounted to £692,214, and the directors recommended a final dividend of 4 per cent., making 7 per cent. for the year, the same as in the previous year. He thought it would be agreed that the result was satisfactory. The Corporation continued to occupy a predominant position in the industry in this country. The building of new theatres and the reconstructing of existing theatres on up-to-date lines were still being prudently developed.

Their studios at Shepherds Bush had continued to be fully employed during the year, and had been responsible for some of the best British films shown during the year. In this connection it must be very pleasing to shareholders to know that their pictures now enjoyed a wide international reputation.

It has been apparent that a further development of the Corporation's activities should be directed towards its export business. With that object in view he, together with other executive officers of the Corporation, had visited the United States of America, which, as a potential market for films, was some three or four times as large as the domestic market. Up to the present the sale of the British product in America had been of no great importance. They had decided to set up their own distributing organisation, and, although they had been established in the United States less than three months, already four of their pictures had played or were playing on Broadway with great success, and he expected three or four more to be shown before the end of the year.

As to the prospects for the current year, they had reason to believe, having regard to the figures available, that the results would be considerably better than those for the past twelve months. As shareholders know, they were interested in every branch of the cinema business, including television. Not only were they the largest company in the industry in Europe, but they were probably the most self-contained company in the business throughout the world.

The report was unanimously adopted.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED

IMPROVED FINANCIAL POSITION

The seventy-sixth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held, on the 1st instant, at 132 Gresham House, London.

Sir Trevredyn Wynne, K.C.S.I., K.C.S.E. (chairman and managing director), said that since their last meeting the financial position of the railway had considerably improved. For the year 1933-34 they had an increase in gross earnings as compared with 1932-33, and their net earnings were Rs. 38.51 lakhs better than the net earnings of the previous year. Further, their gross earnings for the current year to the end of September, as compared with the corresponding period of the year 1933-34, showed an increase of Rs. 32.21 lakhs.

Last year he had referred to two new sources of revenue which would come into operation during the year under review. The first had been the opening of Vizagapatam Harbour. There had been a distinct increase of tonnage to and from the port since October, 1933, the date the port had been opened, which would further develop as trade in India improved.

The second source from which he hoped their railway receipts would improve was the revision in the rates paid by the Tata Iron and Steel Company for the carriage of its raw materials and products. A new agreement had been made with the Steel Company under which the railway would receive an approximate increase of 25 lakhs of rupees annually based on its old tonnage, and as the Steel Company had largely increased its output during the past year that figure would be further increased.

The policy which the Government of India, who provided all the capital required for railway expenditure, had followed for many years had been that when the earnings of both State and company railways were more than their interest charges and were sufficient to add something to the general revenues of India, they were prepared to find funds for the construction of new lines and improvements to open lines of railways. At the present time, with reduced railway revenue, the policy was to reduce both capital and revenue expenditure.

He felt justified in thinking that at the end of the year 1934-35 they ought to look forward to improved earnings.

The report was unanimously adopted.

NORTH BRITISH RAYON, LIMITED

A POLICY OF PROGRESS

The ordinary general meeting of North British Rayon, Limited, was held, on the 1st instant, at the Incorporated Accountants' Hall, Victoria Embankment, London, W.C.

Mr Ernest Walls (the chairman) said that the reduction in price in January and of Excise Duty in July had brought losses on stocks both to consumers and producers. In the case of Excise Duty, in his opinion co-operation amongst the producers could have softened the blow.

The present structure of the viscose rayon industry appeared to represent a stable phase in its progress, and all components, large and small, ought to be able to work together in a spirit of harmony and co-operation.

The 30 per cent. increase of capacity announced by the largest producers at the same time as the price reduction compelled their own company to find a similar increase of capacity; otherwise they would be unable to maintain their relative competitive efficiency.

The company's profit balance was the largest recorded in 1934 by any of the "competitive" viscose rayon companies, but it was an inadequate return, whether in relation to the real capital values employed, the turnover, or the nature of the industry.

The work of extension and development at Jedburgh had continued during the whole of the year, involving a large capital expenditure. Output had been maintained at the highest possible level throughout the period.

A progressive increase in the company's profits could be looked for in the future, but the rate of increase would be governed by the amount of finance available for the further development of output and technique.

The remarkable natural growth of rayon could be expected to continue. If lower prices induced demand, demand should be very good, since prices were 25 per cent. below last year. It was reasonable to expect that a good deal of the twelve million pounds of rayon formerly imported as rayon goods would be diverted to home production.

The report and accounts were adopted unanimously, and the proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 27, 1934, amounted to £11,833,000, against ordinary expenditure of £7,772,500. After allowing for a decrease in Exchequer Balances of £181,186, the operations for the week, as shown below, decreased the National Debt by £3,879,000 to approximately £8,097 millions.* (000's omitted)

Treasury Bills	£ 578	Public Department Advances ..	£ 7,550
National Savings Certificates ..	50	N. Atlantic Shipping Issues	272
		P.O. and Teleg. Capital Expend.	450

GOLD

Messrs Samuel Montagu and Company write on October 31, 1934 as follows :—

The Bank of England gold reserve against notes amounted to £192,001,187 on the 24th instant, as compared with £191,938,544 on the previous Wednesday. In the open market business has been on a smaller scale, the amount disposed of during the week being about £1,200,000. The demand was general, and movements in the gold exchanges caused somewhat wide fluctuations in prices, which, however, were maintained at a premium over the parities.

SILVER

The market has been active, but with an easier tendency. The Indian Bazaars have made further purchases, but speculative demand has been less in evidence, buyers on the whole having been more hesitant. Moderate offerings from China and speculative re-selling were sufficient to ease prices, but America has been willing to give support at about fixed prices on most afternoons.

The undertone appears steady, but the market may continue to be influenced by movements in the dollar exchange.

Quotations during the week:—

these exceptions quotations are on the scheduled minimum basis. As from the beginning of next month the new scheme for the allocation of inland and export as well as output coal quotas will become operative formally, although they will not take real effect till the beginning of next year. The award of the Arbitration Tribunal in the wages dispute in the coalfield will not be announced till the end of the week.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE main feature in the commodity markets is the irregular trend of quotations, a reflection of the stagnation of business activity and the uncertain outlook in a number of important countries. Wheat prices continued to decline during the week ended Wednesday owing to the low level of demand by importing countries, coupled with further sales of French wheat and improved crop prospects in the southern hemisphere. Quotations for raw sugar also tended to decline, but the improvement in the market for tea was maintained. At the London Provision Exchange, butter prices registered a further rise and quotations of eggs were marked up owing to the seasonal decrease in supplies.

The market in rubber was dull, and on Wednesday prices collapsed following the announcement that the International Rubber Regulation Committee had failed to reach agreement on export quotas in 1935. Both linseed and linseed oil continued to decline in price owing to the low level of demand and favourable crop reports from Argentina. Quotations for non-ferrous metals rose appreciably towards the end of last week, but by Wednesday practically the whole gain had been wiped out. Tin, in particular, showed a weak tendency, which is not surprising in view of the fact that deliveries in October were lower than in any month since January, 1933. Moreover, stocks registered a substantial increase in the past month. Raw cotton, too, was again marked down in the past week, but the improvement in wool prices was maintained.

An examination of the trend of the prices of primary products in the United States reveals a further marked downward movement. Moody's index of the dollar prices of staple commodities fell from 145.0 (December 31, 1931 = 100) on October 24th to 142.7 on October 31st. A month ago the index stood at 148.9 and a year ago at 123.9.

COAL

SHEFFIELD.—Shipments to Germany have been curtailed owing to the suspension of payment of commercial debts in that country. Export business generally continues quiet, alike on prompt and forward account. Supplies are ample, especially of secondary qualities. Inland consumption is heavy and best quality steams are scarce. Boiler fuel sells freely but the tonnage of house coal going away is greatly below the average for late October. Trade in coke maintains its strength and the ovens are working at full capacity. Best steams are quoted at 16s. 6d. to 17s. f.o.b., blast furnace coke 14s. and 14s. 6d. at ovens, and best brands of house coal 21s. to 23s. at pits.

BANKS

THE UNION BANK OF AUSTRALIA, LTD.--The board of directors have had under consideration for some considerable time past the desirability of altering the date of the bank's annual balance from the last day of February each year to a date between seasons in order to facilitate the preparation of the balance sheet. They have, therefore, resolved that the bank's financial year shall terminate on the last day of August in each year, and to present to the shareholders at a general meeting to be held in January or February, 1935, the accounts for the six months from March 1, 1934, to August 31, 1934. Subsequent annual general meetings of the bank will be held in January or February in each year, when the balance sheet, statement of profits and report of directors for the immediately preceding 12 months from September 1st to August 31st will be submitted. Decisions as to interim dividends will be announced in July, and as to final dividends in January in each year.

MISCELLANEOUS

THE ASSOCIATION OF BRITISH CREDITORS OF RUSSIA.—The thirteenth annual report of this Association shows that the claims, excluding interest, as notified to the Russian Claims Department, are as follows: (a) Properties and concessions, £180,000,000; (b) bonds and securities—Sterling, £41,350,798; roubles 300,415,269; marks 9,543,200; francs 6,657,428; dollars 3,304,000; (c) Miscellaneous claims—Sterling £40,646,453; roubles 628,371,763. These amounts do not include British Government claims of any description whatever and are limited entirely to ordinary commercial and private claims. They include sums due for confiscated British industrial properties, commercial undertakings and trading concerns and for repudiated debts, as well as for bank balances, trade debts, private debts, requisitioned private goods and confiscated private properties and claims for personal injury, imprisonment and other damages.

NEWCASTLE-ON-TYNE.—There has been a better arrival of tonnage this week and with the colder weather of the last few days a better inquiry for prompt steam coals is in evidence. Northumberland screened steam remains steady, and there is a better demand for graded coals suitable for domestic purposes. In the Durham section, apart from screened steam, the market remains quiet, there being little inquiry from abroad for coking or gas coals, and collieries producing these classes continue to have difficulty in working a full week.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime large, 13s. 6d.; smalls, 11s.; Hartley Main large, 13s. 6d.; smalls, 11s. DURHAM—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 20s.; Newcastle and district gas coke, 20s. 3d.

GLASGOW.—Business is moving steadily, and the collieries are able to maintain a fairly satisfactory rate of production. A good all-round demand is an encouraging feature. In the export field, Scandinavian business has fallen off somewhat owing, it is stated, to keener Polish competition. German trade remains poor, but there has been a better inquiry from one or two of the Mediterranean ports and also from the Bay. London buyers are still in the market for nuts. Most qualities of coal are obtainable for early shipment, with prices about steady.

Current export prices f.o.b. district ports :—LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s. 6d.; splint second, 14s. 6d. to 14s. 9d.; navigation, screened, 15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s., all per ton f.o.b. Glasgow; steam, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d. to 12s. 9d.; pearls, 11s. 6d. to 12s.; dross, 10s., all per ton f.o.b. Grangemouth. FIRE.—Best unscreened navigation, 13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. to 13s. 3d.; third-class steam, 12s. 6d. to 13s.; trebles, 14s. to 15s.; doubles, 12s. 9d. to 13s.; singles, 12s. 6d.; pearls, 11s. 9d. to 12s., all per ton f.o.b. Burntisland or Methil. LOTHIAN.—Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 9d. to 12s.; unscreened navigation, 12s. 9d.; trebles, 13s. 6d. to 14s.; doubles, 12s. 6d.; singles, 12s. 3d. to 12s. 6d.; pearls, 11s. 9d., all per ton f.o.b. Leith. AYRSHIRE.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s.; trebles, 15s.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 10s., all per ton f.o.b. Ayr or Troon.

CARDIFF.—There has been very little business on the Cardiff coal market this week. A number of contracts, relating chiefly to the supply of locomotive coals, are in course of negotiation, but current inquiries have been limited, and deliveries in the inland and export trades only moderately active. Last week shipments in the foreign and coasting trades were slightly in excess of the recent weekly average figures, totalling 417,200 tons, compared with 367,000 tons the previous week, and 393,543 tons in the corresponding week last year. Trade at Cardiff and Barry expanded by over 60,000 tons, while at Swansea all the berths were occupied owing to the pressure of the closing phase of the Canadian seasonal demand. Sized and washed classes remain firm, and, in some cases, are commanding prices above the minimum schedule, but with

IRON AND STEEL

MIDDLESBROUGH.—A fair amount of business has been transacted during the past week in foundry and hematite pig iron both for home use and for export. Makers are inclined to be firm in their quotations for export and, although there are still difficulties to be surmounted, further business has been done with foreign buyers. Prices to home consumers are firm on the basis of 67s. 6d. per ton for No. 3 Cleveland foundry iron and 69s. per ton for No. 1 East Coast hematite, both delivered at Middlesbrough; but makers of hematite are not prepared to sell too far ahead at to-day's quotation. During the past week there have been shipments of pig iron to Italy and Germany, while a quantity of 1,150 tons has just been sent to Finland. The total quantity of pig iron shipped from the Tees up to October 30th was 16,081 tons, against 12,331 tons to September 29th.

Good Durham blast furnace coke is obtainable at 20s. delivered at the furnaces, whilst foreign ore continues firm with the tendency to higher prices for forward delivery.

Steelworks continue busy on both semis and finished material, and it is expected that this district will benefit from the orders which are very shortly to be placed in the North-East area for five steamers. Constructional steel departments are busy. There is a good demand for heavy steel scrap at 50s. per ton delivered works. It is announced that Messrs Dorman Long and Company will light another furnace for the production of ferro-manganese at their South Bank works towards the end of this year.

SHEFFIELD.—Reports from steelmakers are generally favourable, with continued expansion in certain departments. The steel foundries, which a couple of years ago were badly depressed, have now a fair amount of work on hand. The demand for ordinary qualities of high-speed tool steel does not come up to the capacity of the plants, but the recently developed super brands find a ready market. Exports of such material are only moderate. Russian purchases of tool steel have been declining for some years and in view of the heavy shipments of British tungsten to that country it is presumed that Russia is now producing an increasing proportion of the tool steel used in her engineering works. Further expansion is reported from the Lincolnshire steel works, which are taxed to meet the present heavy demand for semi basic steel and tinplate bars. Unemployment in this area is now negligible. The Sheffield basic furnaces are also working to capacity, although the acid steel furnaces are not so well placed. In the finished steel department, works are busy on supplies to the automobile, aircraft, electric, wireless and building industries. Toolmakers are generally busy and the seasonal trade in cutlery and plate is broadening somewhat. The market for steel scrap has been depressed for a long period, although consumption now tends to increase.

GLASGOW.—Conditions continue to improve in the West of Scotland iron and steel industries. Steel makers are busy and the tonnage at present on books gives every prospect of a continuance of full-time working for some time to come. Makers of semis are also doing an increased amount of business with local users and plants are busy at present. In the sheet trade, makers are able to keep plant running to near capacity, but most of the work on hand is for prompt delivery. There is also some improvement in the bookings of galvanised sheets for export. In both branches home trade is particularly good. Bookings at the shipyards during the present month cover a very considerable tonnage; there are a large number of tenders out and shipbuilders seem confident that a number of these will result in business for Clyde yards. In the manufacturing trades the situation is unchanged, most branches being fairly busy.

CARDIFF.—The Welsh tinplate market is quite steady, with conditions a little more active in the export trade. Prices remain on the f.o.b. basis of from 18s. 2d. to 18s. 7½d. per box, with wasters quoted at from 16s. 3d. to 17s. per box f.o.b. Galvanised sheets are firmer under the influence of a better foreign demand, but prices are unaltered at from £11 5s. to £11 15s. per ton. Steel bars are also unchanged at 5s 7s. 6d. per ton. Shipments of tinplates at Swansea last week totalled 125,591 boxes compared with 77,383 boxes the previous week, but arrivals from the works were heavier than usual and stocks still amount to 131,888 boxes, compared with 122,389 boxes at the corresponding period of last year.

OTHER METALS

After a good start on Monday, quotations on the metal markets again relapsed, this development being understandable in view of the suddenness of the previous rise. Copper was the chief sufferer, despite increased restriction in the United States—which had been the main factor in the improvement. The Phelps Dodge Corporation, the third largest copper concern in the United States, has joined the Guggenheim group (Kennecott) in its restriction policy,

and it is anticipated that the other important producers will follow in the course of the next few days. Rumours regarding a world copper conference are again in evidence. But the recent announcement of the Roan Antelope Copper Mines, Ltd. (N. Rhodesia) that during the year ended June 30th they had been able to reduce their costs per ton of blister copper, delivered Europe, by £1 1s. to £21 5s. 5d., shows that the collapse in copper prices need not force the low-cost producers to come to terms with the Americans. The United States primary producers have now decided to hand over the domestic market to the "customs smelters" during November—a step which will probably diminish the selling pressure of the latter to normal proportions, and thus improve American prospects. European markets are not directly affected by this new move, for they have recently been suffering mainly from sales of non-blue eagle copper, whereas the arrangements mentioned above cover only blue eagle metal. Indirectly, however, some slight advantage may accrue to European markets as a result of any improvement in the American position. Meanwhile, the outlook for the London market during the next few days is not too good, for there are still some disappointed bulls who will probably liquidate their contracts shortly.

The tin market has been dull, operators having waited during the first half of the week for the new monthly statistics, which were of importance because they will probably influence the International Tin Committee in the fixing of quotas. According to A. Strauss and Company, world deliveries declined from 6,648 tons in September to 5,768 tons in October—the lowest level in two years. Moreover, stocks rose by 1,712 tons from 16,919 tons at the end of September to 18,631 tons at the end of October.

The markets in lead and spelter have moved in sympathy with those of the other non-ferrous metals. The British lead manufacturers have formed a new "Lead Sheet and Pipe Development Council," to stimulate the use of this metal, which will work on the same lines as the development councils for copper and tin. Since lead prices are now rather low, relatively to those of other metals, the prospects of success are fairly good. Zinc production is still rather restricted. According to the *Metallgesellschaft*, the world output of smelter zinc amounted to 94,256 metric tons during September, compared with 94,740 metric tons in August. The German Government proposes to subsidise lead and spelter producers. According to the *Frankfurter Zeitung*, the State will pay the difference between prices and production costs, including a normal depreciation allowance. This will remove all incentive for the German producers to co-operate with the International Cartel, for they will be interested, not in high prices, but in a high level of output during the coming months.

TIN.—Sales on the London Metal Exchange: 280 tons on Monday, against 140 tons last week; 285 tons on Tuesday, against 115 last week; 490 tons on Wednesday, against 310 tons last week. The New York quotation on Wednesday was 51.15 cents per lb., against 51.25 cents a week ago and 50.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £229 7s. 6d. to £229 10s., compared with £230 7s. 6d. to £230 10s. last week. Stocks in London and Liverpool at the end of last week were 5,294 tons, an increase of 133 tons on the week.

COPPER.—Sales on the London Metal Exchange: 4,200 tons on Monday, against 2,350 tons last week; 3,800 tons on Tuesday, against 2,850 tons last week; 1,925 tons on Wednesday, against 3,300 tons last week. Domestic spot was quoted at 6-72½ cents per lb. in New York on Wednesday, against 6-32½ cents a week ago and 6-50 cents a month ago. Wednesday's official closing price for standard cash in London was £27 18s. 9d. to £28, compared with £27 17s. 6d. to £28 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 34,580 tons, show an increase of 37 tons, and stocks of rough copper, at 7,664 tons, a decrease of 10 tons.

LEAD.—Sales on the London Metal Exchange: 650 tons on Monday, against 550 tons last week; 800 tons on Tuesday, against 400 tons last week; 250 tons on Wednesday, against 650 tons last week. The New York quotation on Wednesday was 3·70 cents per lb., against 3·70 cents a week ago and 3·60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 13s. 9d. for shipment during the current month, compared with £10 12s. 6d. a week ago.

VIENNA : IX. PORZELLANGASSE 27

SPELTER.—Sales on the London Metal Exchange: 300 tons on Monday, against 450 tons last week; 450 tons on Tuesday, against 1,400 tons last week; 250 tons on Wednesday, against 600 tons last week. Wednesday's quotation in East St. Louis was 3.85 cents per lb., against 3.85 cents the week before, and 3.87½ cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £12 13s. 9d. for shipment during the current month, against £12 15s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £45 to £45 10s. per ton, as against £43 per ton last week. Chinese wolfram was again quoted at 40s. to 40s. 9d. per unit, c.i.f., as against 41s. to 42s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. The level of raw cotton prices has tended to decline. A stalemate has almost been reached in trading, owing to the holding policy of farmers in the United States through the 12-cent loan plan of the Washington Government. The basis remains very high and importing is exceedingly difficult. American cotton being considered dear in relation to the prices ruling for other growths. No particular change in the situation is likely until some announcement is made relating to the production programme for next season. In the meantime, climatic conditions continue generally favourable for picking the present crop and an increase in the estimate of the yield is expected in the next Government report.

The general inquiry in piece-goods has continued on a rather larger scale. Probably manufacturers have sold a little more freely, but buying has been decidedly patchy. Demand in light fabrics and fancies for India has broadened, but a substantial part of the business offering has been at unworkable rates and dealers abroad are slow in raising limits. Only isolated transactions have been reported for China and the minor outlets of the Far East. A steady business has been done in cloths for printing and dyeing for South America and the Dominions. Although home trade purchases have not been important a fair business has been done in a variety of cloths and some cases are reported of looms running out of work. In the yarn market demand has again run chiefly on the finer numbers in American and Egyptian qualities, and most users have been in the mood to restrict their purchases. Some special contracts have been arranged in Bolton spinnings for thread manufacturing.

COTTON PRICES

	1934				Corresponding Date	
	Oct. 10	Oct. 17	Oct. 24	Oct. 31	1932	1933

RAW COTTON SITUATION.—The raw cotton situation presents several interesting features. The outstanding factor is the scheme of the United States Government to impose a minimum price for cotton to world users. This has been done by means of the 12-cent loan plan of the Government, which means that the price has been pegged around this level. During the last two or three months buyers have held aloof, with the result that it is estimated that out of the crop this season of about 9½ million bales, quite 7 million bales will go into the hands of the Government, which will increase their holdings to about 10 million bales. This state of affairs has had an important bearing upon exports from the United States, for during the past three months shipments have been only 1,216,000 bales, as compared with 2,219,000 bales in the same period of last year. Owing to the difficulty of importing, the stock in Liverpool is only 269,000 bales, against 451,000 bales a year ago.

There has been an increasing demand for cotton grown in other countries. For instance, imports of Brazilian qualities into Great Britain during the last three months have totalled 141,000 bales against only 9,000 bales a year ago. In the same period receipts of Argentine cotton have been 50,000 bales, against 22,000 bales. Although there is some anxiety amongst the officials at Washington as to the tendency of world consumption, they believe that before very long world spinners will be compelled to buy American cotton. The present position of affairs, however, will undoubtedly stimulate production in many foreign countries, including the British Empire. The present price of American cotton in Liverpool, of around 6½d. per lb., is considered artificial, and in the circumstances buyers of manufactured goods are restricting their purchases. There is ground for believing that if this "peg" in the United States were removed, American cotton would fall by at least 1d. per lb. The consumption of American cotton last season was about 13,500,000 bales, and on the present basis the requirements of users during the current twelve months will not be more than 11,000,000 bales.

JUTE.—Dundee. Though spinners and manufacturers in Dundee are all very busy with orders on hand, there is little fresh business

coming in at the moment, and the market has returned to a much quieter state. Prices of yarns and cloth, however, are firmly held and likely to be for some time to come, as producers are fully booked up for the next three months at least. The raw material position is very sensitive, with quite a steady undertone prevailing, and prices are ruling round about the level which has been maintained for several months past. The Calcutta market is perturbed by rumours of new jute mills being built and these have been justified to some extent by the registration in Calcutta of a new company called the Loyalka Jute Mills Company, Ltd., with a capital of 1½ million rupees; prices have been none too steady of late owing to the mills unsealing about 1,500 looms in accordance with their agreement arranged six months ago. The Indian jute mills are therefore now working 40 hours per week, with 12½ per cent. of their looms sealed up, instead of 15 per cent. as hitherto. There has been some talk in Calcutta that the mills may consider the unsealing of a further 2½ per cent. as from February 1st next, but these rumours so far seem to be without foundation.

Dundee spinners have purchased the full group of Daisee-2/3 at £13 12s. 6d. and the mark Mohan at the same figure, while Daisee-4 has been offered at £12 15s., Tossa-2/3 at £14 10s. for the full group and fours sold at £13 15s., November/December. White jute of good quality is very difficult to obtain in Calcutta, so that offers are not freely made. First Marks are quoted at £18 for short group and good Lightnings at from £16, with Hearts at from £14 15s., November/December. Yarns are quiet, but prices are very firm at 1s. 10d. for common 8 lb. cops and 1s. 10½d. to 1s. 11d. for 8 lb. spools, and spinners are well enough sold to be able to refuse anything less. Twist is steady at 3½d. for 3 ply 8 lb., and sacking yarns are unchanged at 2½d. for 24 lb. web and 3d. for 8 lb. chains, while rove continues at from £17 for 48 lb. and £14 for 200 lb. Rio yarns are firm, but quiet again at 2s. 4d. paid for third quality 8 lb. warp and 2s. 1d. quoted for fourth.

A good inquiry prevails for jute cloth, Argentina being in need of further good quantities of hessians for meat wrappers. Business, however, is confined to small lots for delivery as early as possible, which is not soon, as manufacturers are harassed to give delivery of orders already in hand. Prices are firm at 2½d. for 10½ oz. 40 in. and 2½d. for 8 oz. Calcutta goods have eased off slightly and are quoted at 19s. for 10 oz. 40 in. and 15s. 6d. for 8 oz., Liverpool twills at 51s. and "B" twills at 45s. 3d., November/December.

GRAIN MARKETS

WHEAT.—Wheat prices continued to decline during the past week. At the present time price movements are strongly influenced by crop reports from the southern Hemisphere. Australian crop prospects have improved a little, and Argentina's crop appears to be in fairly good condition. As demand by importing countries remained relatively small, and as France has again appeared as a seller, the downward trend of quotations is not surprising. According to Mr G. Broomhall, total shipments during the past week were 1,177,000 quarters, against 1,208,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 95½ cents per bushel, against 98½ cents the week before and 95½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver ex ship, 30s. 9d. per 496 lbs., against 31s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s., against 29s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 25s. to 26s. 6d., against 26s. to 27s. a week ago.

FLOUR.—North American shipments were 135,000 sacks in the past week, as compared with 182,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 3d. to 26s. 3d., against 24s. 6d. to 26s. 6d.; Australian ex store, 20s. 3d. to 20s. 9d., against 20s. 6d. to 21s.

BARLEY.—October futures were 50½ cents per bushel in Winnipeg on Wednesday, against 52½ cents last week and 48½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 30s. to 55s., against 32s. to 55s. a week before.

OATS.—On Wednesday, "December" futures were quoted at 49½ cents per bushel in Chicago, against 50½ cents a week ago and 47 cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. per 320 lb., against 22s. a week ago; "Chilean White," landed, 23s. 6d., against 23s. 6d. a week earlier.

MAIZE.—"December" futures were quoted on Wednesday at 75½ cents per bushel in Chicago, against 75 cents a week ago and 73½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate" landed, 20s. 9d. per 480 lbs., compared with 22s. 6d. last week; "Plate" ex-ship, 19s. 9d. as against 21s. 6d.; "Plate," "November," 20s. as against 22s. 6d. Yellow maize meal, ex wharf, was quoted £5 17s. 6d. to £6 per ton, against £6 to £6 7s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to October 27.....	Cwts. 107,437	Cwts. 324,418	Cwts. 275,027	Cwts. 368,019
9 weeks to October 27.....	655,299	2,195,734	3,281,739	4,384,047
Average price of English wheat per cwt.	s. d. 6 5	s. d. 5 7	s. d. 4 9	s. d. 5 0

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Oct. 25, 1930.....	Cwts. 132,210	Cwts. 528,955	Cwts. 55,159	s. d. 7 0	s. d. 10 0	s. d. 6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Nov. 1, 1933	Jan. 3, 1934	Oct. 24, 1934	Oct. 31, 1934
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	62½	46½	61½	65½	76½	74½
Chicago (No. 2 Winter) —Cents per 60 lb.	65½	46½	83½	84½	98½	95½

The visible supply of wheat in Canada, at 118,108,000 bushels, shows an increase of 1,404,000 bushels. Supplies a year ago stood at 118,182,000 bushels.

OTHER FOODS

SUGAR.—After an upward spurt at the end of last week, New York quotations, both spot and future, reacted somewhat, but became steadier at the lower level. On Wednesday, American prices showed a rise, and London a fall, compared with those ruling a week earlier. The spot price in New York on Wednesday was 2.82 cents per lb., as compared with 2.75 cents per lb. last week and 3.00 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 0½d. to 4s. 1¼d., against 4s. 2½d. to 4s. 3d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London	...	...	1,193	581	19,162	22,370
Liverpool	7,902	5,701	13,946	13,242	104,802	79,629
Total tons	7,902	5,701	15,139	13,823	123,964	101,999
Last week	29,349	1,758	15,720	14,608	131,201	110,122

COFFEE.—The New York market was dull to quiet during the week ended Wednesday, with quotations showing little change. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London market has ruled quietly steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 674 bags; delivered, for home consumption, 23 bags; exported, 20 bags; stocks, 28,131 bags, against 27,210 bags a year ago. Central American, landed, 697 packages; delivered, for home consumption, 1,728 packages; exported, 881 packages; stocks, 83,903 packages, against 76,491 packages last year. Other kinds: Landed, 114 packages; delivered, for home consumption, 2,132 packages; exported, 303 packages; stocks, 76,456 packages, against 91,275 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 20s. 6d. to 20s. per 50 kilos, c.i.f. Continent, as against 19s. 9d. to 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, nil; delivered, for home consumption, 6,861 bags; exported, 2,360 bags; stocks, 170,875 bags, against 129,342 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 52,405 packages of Indian and 21,366 packages of Ceylon tea. The former met a good trade, and on Wednesday the cheaper grades showed a tendency to rise in price. Tippy teas were in active request. Competition for the Ceylon grades at Tuesday's auction was not quite so good, but quotations showed little change on the week. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	Northern India		Southern India		Ceylon		Java		Sumatra		Nyasa-land		Total
	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	
Oct. 26, 1933	13-76		13-14		16-98		10-77		10-62		11-32		14-38
Sept. 27, 1934	12-95		11-17		12-70		9-85		9-38		11-06		12-38
Oct. 4,	13-08		11-62		13-84		10-19		9-76		11-00		12-89
Oct. 11,	13-10		11-48		14-20		10-00		9-52		10-98		12-94
Oct. 18,	12-63		11-58		14-32		10-15		9-77		10-98		12-76
Oct. 25,	12-49		11-35		14-63		9-96		9-29		10-85		12-73

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 4½d. per cwt., shows a fall of 4½d. on the week.

FIRE LIFE ACCIDENT MARINE
 Edinburgh: 35 St. Andrew Square
 London: 5 Walbrook, E.C.4, and 4, St. James's Street, S.W.1

Movements in London during the past week were as follows: Landed, nil; delivered, 362 tons; stocks, 3,720 tons, against 4,480 tons a year ago.

POTATOES.—Ample supplies of potatoes have been available this week, and have generally encountered a good demand. Quotations for the majority of varieties remain unchanged. At the London Borough Market on Tuesday, "King Edward" again sold at 6s. to 6s. 6d. per cwt.

SPICES.—"Lampong" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 24 tons; stocks, 416 tons, against 410 tons a year ago. White, landed, 57 tons; delivered, 49 tons; stocks, 8,536 tons, against 1,180 tons a year ago.

MEAT.—Beef and mutton have encountered a fairly steady demand, fresh meat having been a rather better market. Trade in veal and pork, however, remains rather quiet. On Wednesday, prices showed a slight reduction on those of a week ago, the quotation for Argentine beef, chilled hindquarters, being 3s. 4d. to 3s. 10d. per 8 lbs., as compared with 3s. 8d. to 4s. last week. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. 2d. to 3s. 8d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,495 tons, against 9,460 tons in the corresponding week last year. Imported beef, principally Argentine, formed 81.5 per cent. of the beef supplies, against 80.9 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 74.2 per cent. of the total supply of mutton and lamb, against 70.6 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets are very quiet and with falling grain markets there is but little disposition to engage in business. Linseed continues to decline and with the approach of the end of the season the premium of old seed over new is gradually narrowing. Despite reports of rains and frost here and there, the outlook for the new crop in Argentina remains favourable, and if private estimates of the area under seed are to be relied upon a still larger outturn than that officially estimated appears likely. New seed for January-February shipment has declined to £8 10s. per ton and old seed for November to £9 2s. 6d. Indian linseed is also easier but demand negligible. The quantity afloat for Europe is now 133,700 tons (including 18,800 tons from India), 2,300 tons less than last week, and for the United States and Canada 32,900 tons against 62,000 tons a year ago. Cottonseed is steady but demand slow. Black Egyptian for shipment to the end of the year is quoted around £4 15s. (sellers).

Linseed oil is easy and in fair demand at the lower level which is now the lowest figure quoted at any time this year. Raw oil for delivery to April ex Hull has declined to £17 5s. per ton (naked). Cotton oil is steadier on an improved export demand. Egyptian crude ex Hull is offered at £15 10s. and refined at £17 5s. Oil-cakes are steady and in normal demand for the time of year.

HIDES AND LEATHER.—A fairly satisfactory business has again been forthcoming in regard to hides, leather and leather goods, although, of course, there is still room for considerable improvement. Generally speaking, the markets have remained steady. Although there has been a slight decline in the price of English market hides, quotations for imported descriptions show a slightly firmer tendency. Quotations for the finished product have been maintained at recent levels to a fractional advance on certain lines which are in most request.

At the sales of hides and skins from home-slaughtered cattle this week, prices for ox and heifers were unchanged to a reduction of ½d. per lb. First clears are now changing hands at from 5d. per lb. for heavies down to 4d. per lb. for lights, with seconds making from 4½d. to 3½d. per lb. First warbled are realising similar prices to the latter, while seconds are obtainable at from 4d. per lb. for heavies down to 3½d. for lights. The market for calfskins rules steady, with best heavies selling at 4½d. per lb. and lights at 5½d. Additional interest has been taken in the market for imported hides and as a result South Americans have been selling at slight advances. A moderate trade has been passing also in Africans at unchanged rates, although prices asked for dry Capes are higher. Only a limited amount of business, however, is possible in Australians and quotations are, generally speaking, nominal.

Sales of sole leather have been concerned mainly with light and medium weight English and wetsalted bends and light and heavy dry hide selections. Rough shoulders and bellies also have been dealt in fairly freely, but the trade in pinned sorts has not been quite so active. In the upper leather section, box and willow calf and glacé kid continue to account for the bulk of the business, but there is a call for other descriptions in limited quantities, particularly for reptiles and patent leather, and the turnover of both these sorts is reported to be increasing.

RUBBER.—The market in rubber was dull in the past week. On Wednesday prices declined sharply following the announcement that the International Rubber Regulation Committee had failed to come to an agreement on export quotas from January, 1934.

In New York, Wednesday's spot price for rubber, at 12½ cents per lb., compared with 14 cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 7d. for January-March, 1935, as against 7d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 120,002 tons, show an increase of 1,545 tons as compared with the preceding week.

LONDON FUR AUCTIONS.—The autumn series closed on Monday last with a very weak tendency. Business during the last few days was mainly confined to American goods. As compared with prices realised at the spring series, quotations showed the following reductions: Skunks, 20 per cent.; opossum, 15; mink, 15 to 20; brown

musquash, 10. On the other hand, southern musquashes were unchanged in price, the demand for these furs being quite good. In our issue next week we propose to publish a list of average prices realised for the different qualities of the various furs. Market operators are naturally disappointed at the unsatisfactory outcome of the autumn auctions, especially in view of the fact that a large part of the offerings were withdrawn. These will, of course, increase supplies on the free market and at the next auctions. Some improvement in sentiment may, however, result from the special silver fox sales, to be held early in December. The decline in silver fox prices has been less marked than in the case of most other furs. A speculative trade, such as that in raw furs, recovers from disappointments more quickly than those dealing in standard raw materials.

WHOLESALE COMMODITY PRICES

would mean virtually suspending Parliament's powers. The attitude of the Lower House became evident when the Chamber met on Tuesday afternoon to deal with formal business; for, in effect, the session became an occasion for a demonstration of hostility towards M. Doumergue rather than for a demonstration of sorrow for King Alexander, M. Barthou and M. Poincaré; and M. Doumergue, with his usual straightforwardness, publicly acknowledged the change in the Chamber's temper, and changed his own tactics accordingly. With a divided Cabinet, and with the practical certainty of a hostile majority in the Chamber, he abandoned his intention of demanding a dissolution and decided that, if he again failed to carry all his colleagues with him at the next Cabinet meeting, he would take the alternative course of handing in his own resignation. By the time when M. Doumergue let this decision be known, on Wednesday evening, the "if" had become rather an empty particle; for by that time the Socialist-Radical group in the Chamber had taken the responsibility—from which the Socialist-Radical Ministers had shied away at the week-end—of deciding to oppose the Prime Minister.

What is to come next? Both the President of the Republic and the Socialist-Radical Ministers would like to see the effects of the crisis limited in range to M. Doumergue's own person. As he has now retired again from the political scene, cannot his National Government be reconstructed *de toutes pièces*, with the sole exception of the Prime Minister himself? Is it not possible that his successor may be willing to show himself "available" in the American political sense of the word? This solution would be very simple; and, with the plebiscite in the Saar just ahead, and the general international situation as uncertain as it is to-day, there is the strongest incentive for patching up the French National Government and carrying on as if nothing had happened. Unhappily, however, the elimination of M. Doumergue cannot automatically conjure away the very real and urgent problem, in French political life, with which he has been trying to grapple. The politicians whom he has castigated have sent him back to Tournefeuille; but there remains a skeleton which they cannot put back into the cupboard. For M. Doumergue's constitutional proposals have not, after all, been just a wanton and uncalled-for whim of an elder statesman. They are an honest attempt to deal, in a straightforward way, with the crisis in which French political democracy now finds itself. It may be true that M. Doumergue's solution is too academic, or too superficial; but that only means that a fresh and perhaps more radical solution must be found for the problem of democratic organisation and that to this end all other considerations must be subordinated.

For what is the alternative? If deadlocks such as that which has recently arisen between two sections of Parliamentary opinion cannot be resolved without paralysing Government at a moment of political crisis or threatening to leave her finances in suspense at the end of the year, many Frenchmen may draw the moral that the country is unfit for parliamentary government and may therefore be ready to listen to those who have quite other solutions to offer.

When we arrive at this point, we pass over into the realm of unpleasant—and, for the moment, unprofitable—conjectures. Is there likely to be a repetition of February's scenes in the streets of Paris? If the Croix de Feu take direct action again, will they take up the cudgels in favour of M. Doumergue's honest attempt to make Parliament work? Or will they adopt some more violent and sensational political nostrum? If the militant organisations of the Right come out on the streets of Paris, will the Socialists and the Communists descend into the arena from the suburbs? What is the balance of forces in Paris, if it comes to a trial of brute strength? Is Parisian feeling any guide to that of the provinces? And, if it is not, will the provinces acquiesce in what Paris does, or will they persist in their own course and ultimately bring Paris to heel? These questions can no longer be ignored, but they cannot yet be answered. We can only testify to an uncomfortable feeling that the situation in France is as unstable again to-day as it was in February, and that the gravest responsibility not merely for meeting this emergency, but for saving democracy in France, rests on her leading politicians. We trust they will now rise to the occasion.

CRUSHING AND COMPLETE

THE victory of the Democratic Party in the United States Congressional elections has, indeed, been crushing and complete. These were the so-called "off-year" elections, half-way through the President's term. Mr Roosevelt's own tenure of office was not in question, but one-third of the Senate and the whole House of Representatives had to be renewed and, in addition, many of the States of the Union were choosing Governors and Legislatures. It has hitherto been the absolute rule that in the off-year election the President's party loses seats in Congress; indeed, on the average of the last seventy years, the President has had Congressional following in the second half of his term of more than 48 per cent. of the members. The question, therefore, appeared to be limited to the number of seats the Democrats would lose, especially as they already had the largest majority since the carpet-bag days of President Johnson. They were conceded a few gains in the Senate, since the Senators now retiring were elected with Mr Hoover in 1928, but it was agreed that a loss of no more than 30 seats in the House would be a Democratic victory. "Straw votes" and similar attempts to read in advance the popular oracle had foretold a slackening of support for the President. The most widely followed of them predicted, with deceptive precision, that the Roosevelt vote would fall from 69.03 per cent. in 1932 to 50.97 per cent. in 1934.

The results, the latest of which are still being announced as we go to press, are such as to confound the prophets and shatter all records. In the Senate the Democrats have won 10 seats from the Republicans out of 32 contests and in a chamber whose total membership is only 96. In the House, so far from losing any seats, they will have gained from 10 to 15. Their party, for the first time in its history, has a two-thirds majority in both Houses—a fact of great importance, not only for the ratification of treaties by the Senate, but also for the control of procedure in the House.

Results like these cannot be achieved without the fall of many citadels of Republicanism hitherto considered impregnable. In Pennsylvania, which has been Republican ever since the days of Lincoln, Senator Reed was beaten for reelection by his Democratic opponent. Connecticut, another of the select band of States which voted for Mr Hoover in 1932, chose Democrats as Governor and Senator. The most amazing result was in New York State, where the State outside the City has hitherto clung to Republicanism both because of its opinions on National politics and also because of its rural repugnance for the Tammany-ridden metropolis. Mr Lehman, Mr Roosevelt's successor as Governor of the State, has been re-elected by majorities both inside and outside the City and he has been given the almost unprecedented assistance of a Democratic legislature. Mr Roosevelt has thus been able, as President and by proxy, to do what neither he nor Mr Al Smith in his heyday was ever able to achieve. In New York City the Democratic tide has even restored the seriously discredited fortunes of Tammany Hall. In West Virginia it has elected to the Senate a candidate who, like Henry Clay a hundred years ago, is under the constitutional age and will have to await his thirtieth birthday before taking his seat.

The consolations of the Republicans have been few and far between. In Vermont they have elected all their candidates and in Kansas nearly all. These two States, the one in its mountains, the other transplanted to the Middle Western prairies, are the last refuges of Yankee Puritanism, which has always been the backbone of Republicanism. The victory of the Republicans in Michigan, especially that of Senator Vandenberg, cannot be so easily explained, and it is perhaps for them the most encouraging news of this day of disasters. A Republican Governor was also elected in California, but his Democratic opponent was Mr Upton Sinclair, whose Socialistic project to End Poverty in California made him a follower of Mr Roosevelt in nothing but name. As it was, Mr Sinclair polled more votes than any Democrat has ever done in California, and he was defeated only by the most strenuous and frantic efforts of the frightened capitalists of the State. But though EPIC failed in California, EPIW won in the State of Washington where the new Senator, Mr Schwelienbach, is described as "Leftier than Left," while in Minnesota the very Radical Farmer-Labour Party carried all before it.

To interpret this amazing victory is not so easy as to record it. One thing, however, is as clear as daylight: it is an immense personal triumph for Mr Roosevelt. That can be seen not only in the victories of Democrats but in the fate of Republicans. Those who had attacked him, such as Senators Reed of Pennsylvania, Fess of Ohio and Robinson of Indiana, and Congressman Britten of Illinois, have been rejected. In Wisconsin, his personal support was sufficient to elect the brothers La Follette, one to the Senate and one to the Governorship, even though they had both Republican and Democratic opponents. There can be no doubt that the electorate has applied to every candidate the touchstone of his loyalty to the President.

Whether the election is a specific endorsement of the President's policies is rather more open to doubt. This was the first test of the New Deal. Two years ago the voters did not vote for the New Deal, which at that time had a name but no substance; they did not even vote for Mr Roosevelt so much as *against* Mr Hoover, and it is possible that if the details of the New Deal had been revealed to them they would have rejected it in advance. This, then, was their first opportunity of passing a vote of thanks to Mr Roosevelt for being better than Mr Hoover and for making 1934 better than 1932. Reopened banks, higher agricultural incomes, increased employment, the swelling stream of relief—all these undoubtedly helped to swell the voice of gratitude. The New Deal as a whole has been endorsed. Indeed, it could not have been otherwise, for no alternative was offered, and the people will always prefer somebody with some policy to nobody with no policy.

But if the President seeks to draw from this expression of the popular will any indication whether he should drive his policies forward to new and unexplored fields of Radicalism, or return gradually towards Conservatism, or keep in the middle of the road, he will find very little guidance. Conservatives like Senators Byrd and Gerry, provided they were Democrats, were elected just as triumphantly in the East as "wild men" like Senators Bilbo and Schwelienbach were elected in the Deep South or the Far West. The Democratic Senate will embrace elements as incompatible as Carter Glass and Huey Long. Mr Roosevelt has collected all opinions behind his banner rather than forged a new instrument of consistent policy.

This fact makes the victory in a sense even more remarkable, for it strengthens the impression that the vote was a Roosevelt vote rather than a Democratic vote or even a New Deal vote. No one man has ever, in the face of free opposition, won such unconditional support from so many millions. After this election, even more than before it, everything depends on the personal policies of Franklin Roosevelt.

The President appears to be emerging as a sincere and powerful Liberal. There has been very little monetary experimentation and no currency manipulation for nine months, and Mr Roosevelt has let it be known that he does not wish to reopen this phase of his earlier policy. The N.R.A. is no longer an attempt to lift the country into immediate prosperity by its own boot-straps but an agency for the social control of business. The President's policies, as they appear at the moment, consist of relief of the destitute, social reform and controlled expansion of individual business—a platform on which any Liberal in any country would be proud to stand. An extension of the public works scheme is foreshadowed, the White House has already announced a great development of its housing plans, and a comprehensive system of social insurance has been promised for many months. These are likely to be the main lines of progress in the immediate future. They are less Radical, but at the same time less frightening, than those of 1933. There is the major hazard of monetary disturbance, arising either out of the excessive supplies of credit already available to the banking system or out of some possible inflationary move forced on the President by an impatient Congress. But apart from this, the United States has now the prospect of sound progressive leadership such as neither it nor any other nation has known since the days before the war.

The mention of Congressional impatience brings up the other threatening danger. The very size of the Democratic

The Hall-mark of INSURANCE SECURITY

7 Chancery Lane, London

majority and the diversity of opinions it embraces may make it very unamenable to control. The opposition of the Right has been annihilated and thrown to the winds; the opposition of the Left, solidly entrenched within the Democratic Party, has still to arise. The probability is increasing that when the time comes for Mr Roosevelt himself to go to the people he will do so as the champion of moderation.

THE BUILDING BOOM

RECOVERY in the building of houses has long been regarded as one of the first indications of an upward movement of the trade cycle, for this branch of activity is normally very sensitive to changes in the rate of interest and in the costs of production. The experience of the past two years has confirmed this view so far as this country is concerned. Both interest rates and construction costs declined appreciably between 1929 and 1932 and facilitated the translation of the social need of houses into effective demand at such a rate that the building trade experienced an expansion in 1933 and in the first half of 1934 to a level never before reached.

The comparative development of the building industry in a number of countries is shown by the following indices, compiled by the Economic and Financial Organisation of the League of Nations. With the exception of the figures for the United Kingdom, which are based on the estimated cost of building plans passed, the statistics relate either to the number or floorspace of buildings:—

INDICES OF BUILDING ACTIVITY
(Based on Building Plans Passed)
(1928 = 100)

	Union of South Africa	France	Germany (Dwell-ing Houses only)	Italy	Great Britain		United States	
					Dwell-ing Houses	Others	Dwell-ing Houses	Others

(a) Contracts awarded.

(b) Adjusted for seasonal variations.

The divergences in the development of the building industry in these countries are remarkable. Most countries, with the exception of the United States and France, experienced an improvement in 1933; but the expansion of dwelling-house construction in Great Britain in 1933 and in the first half of 1934 was unequalled by any other country. Since the beginning of the current year South Africa has made progress, and Italy and Germany have forged ahead under the stimulus of official encouragement. On the other hand, the position in France has recently continued to deteriorate and the volume of construction in Canada and in the United States, which had fallen from "sky-scraper" to "log-cabin" proportions between 1929 and 1933, remains at an insignificant level.

In the absence of Government subsidies, a revival in house-building during a period of general industrial depression can only take place if there is a social demand for houses and if there has been a sufficient decline in interest rates and in costs of construction to permit the translation of potential into effective demand. The first of these conditions is undoubtedly present in all countries, and particularly in the United States, whose population is still increasing by over a million per annum. But one or both of the other two conditions are still absent in many countries. In the United States, for example, an appreciable expansion in the building industry has so far been prevented by the high level of building costs, due in a large measure to the operation of the National Recovery Act.

The importance of the revival in dwelling-house construction in Britain's recovery since the beginning of 1933 can hardly be exaggerated. Moreover, although the revival has been largely financed by money borrowed from the building societies and other credit institutions, it took place virtually without official stimuli in the shape of subsidies. The extent of the improvement can be illustrated by the fact that whereas the *Economist* index of general business activity rose from 95.7 (1924 = 100) in February, 1932, to 111.3 in June, 1934, our index of building activity, which includes industrial construction, advanced from 110 to 226 during the same period. There is no doubt that the revival in dwelling-house construction forms the backbone of British recovery, for the money spent on buildings and household equipment represents a fairly substantial proportion of total expenditure. Moreover, building and construction usually represents more than one-half of the amount annually invested in fixed capital. The following table shows the ramifications of the building industry in this country and the extent of the improvement in the various trades directly connected with this branch of activity:—

EMPLOYMENT IN BUILDING AND ALLIED TRADES: GREAT BRITAIN

Trade	Estimated Number of Insured Persons, aged 16-64		Percentage of Insured Persons Unemployed		Increase (+) or Decrease (-) as compared with
	July, 1929	July, 1933	Sept., 1934	Sept., 1932	
	(000's)	(000's)			
Public works contracting.....	164.4	277.6	44.6	+ 2.7	- 1.6
Building	826.0	883.8	17.6	-11.2	- 2.1
Stone quarrying and mining	42.7	46.7	21.5	- 8.7	- 4.1
State quarrying and mining	10.5	10.1	7.9	- 7.1	- 5.7
Artificial stone and concrete	17.4	22.3	21.8	- 5.9	- 1.1
Brick, tile, pipe making	82.0	89.6	12.3	-11.1	- 2.3
Pottery, earthenware	72.9	75.8	16.4	-12.9	- 4.4
Glass	27.5	28.2	12.0	- 8.0	- 3.4
Paint and varnish	18.9	21.1	6.8	- 3.8	- 1.3
Stove, grate, pipe, etc., and general iron founding	88.7	91.5	14.1	-15.3	- 5.1
Electric cable, apparatus, lamps.....	94.0	125.6	7.5	- 3.3	- 2.8
Brass and allied metal wares	28.1	25.2	9.9	-10.8	- 4.4
Heating and ventilating apparatus ..	8.7	9.8	10.2	-10.1	- 3.7
Carpets	120.3	132.9	12.1	- 5.2	- 3.3
Furniture making, upholstery	6.2	6.2	7.8	- 7.6	- 2.9
Wall paper making	13.8	14.5	8.6	- 3.5	+ 0.7
Oilcloth, linoleum	10.2	13.0	12.2	- 8.7	- 2.7
Brushes and brooms					- 1.8
All Trades enumerated in Ministry of Labour Gazette	12,094	12,883	16.1	- 6.7	- 2.3

It will be seen that the number of insured persons increased between 1929 and 1933 in all but three of the trades

enumerated above. Despite this influx of labour into the building and allied trades, unemployment declined by more than the average of all trades between September, 1932, and the corresponding month of 1933, in all but a few of the less important industries shown separately. The percentage of the total number of insured persons represented by the above list of trades (which is by no means comprehensive) rose from 13.7 in July, 1929, to 14.8 in the corresponding month a year ago.

In the *Economist* of March 31, 1934, we estimated that from five to six million houses would have to be built between 1931 and 1951 in order to ensure that by 1951 none of the population is housed more densely than three persons to two rooms and that old and out-of-date houses are replaced at a reasonable rate. The attainment of the standard indicated by 1951 would require the construction of an average of 250,000 to 300,000 per annum for the next seventeen years. During the twelve months ended September 30, 1934, no less than 240,000 houses were constructed by private enterprise without subsidy—an increase of 73,000 as compared with the preceding year. During the same period the number of houses completed with State assistance rose from 50,433 to 51,497. The level of dwelling-house construction in the past twelve months was, therefore, at the record rate of just under 300,000 per annum.

But will this record level of building be steadily maintained? The answer to this question is of the utmost importance for those connected with the industry, for a mis-judgment might easily lead to wasteful over-expansion of the productive capacity of these trades and ultimately to a severe slump in profits. Although both interest rates and building costs remain as low as ever, and are not likely to increase in the near future, there are signs that the peak in building middle-class dwelling-houses has, for the moment, been passed. On the other hand, an appreciable decline in the rate of construction of this category of houses is improbable in coming months. Moreover, commercial construction has tended to increase, and this development, together with the Government's slum-clearing programme, will probably compensate for a moderate decline in the building of dwelling-houses of the middle-class type.

RECOVERY IN SOUTH AFRICA

(BY A CORRESPONDENT)

It is now nearly two years since South Africa so suddenly abandoned the gold standard, after maintaining it under conditions of great difficulty for fifteen months longer than Great Britain. To those who supported the policy of going off gold, subsequent developments have apparently confirmed their contention that this step would be wise. All the available economic indices show that the country has made a striking recovery from the deep depression which existed in 1932:—

	1932	1933	1934
Employment in mines (July):			
Europeans	30,651	34,951	39,518
Total	305,423	333,972	365,430
Index of industrial employment (July) (July, 1925=100):			
Europeans	93	104	122
Total	83	91	109
Bank debits (Jan.-July):	£ mn.	£ mn.	£ mn.
Johannesburg	197	343	455
Rest of country	392	432	558
New buildings commenced (Jan.-July)	£ mn. 2.6	£ mn. 2.7	£ mn. 6.6
Imports (Jan.-July):	£ mn.	£ mn.	£ mn.
S.A. currency value	18.9	25.8	35.4
Gold value		18.5	22.2

There are, however, still a certain number of cautious observers who feel a sense of distrust about the apparent benefits of currency depreciation. They feel that prosperity obtained by currency manipulation has something fictitious about it, and, however striking in the short run, may not be permanent. They distrust the easily made fortunes of the gold boom, and regard with apprehension

the growth of speculation and the numerous flotations of doubtful gold-mining companies, to restrain which the Government is understood to be contemplating changes in the law. To such observers the excessive cash reserves of the banks threaten a credit expansion which would carry the speculative boom to further heights and in the end give rise to a new crisis, which would leave the country once again staggering beneath the burden of lightly incurred debts.

Before proceeding to decide which, if either, of these two points of view is correct, it is necessary to consider the nature and causes of the depression in South Africa from which the present recovery has taken place. Very broadly, this depression was due to two main causes. The first of these was the heavy fall in the prices of exports other than gold. In an endeavour to maintain the world price of diamonds, diamond mining was practically discontinued and exports of diamonds fell to a small fraction of their previous total. Exports of farm products were quantitatively fairly well maintained, but their value fell by nearly two-thirds. Consequently the total of South African exports, other than gold, fell from £50 millions in 1929 to £20 millions in 1932. Total exports in 1932 were valued at £69 millions, which, after providing for interest and other payments due abroad, would probably have been sufficient to cover nearly £50 millions of imports, as compared with over £80 millions in 1929. The fall in volume would naturally have been less owing to the fall in import prices.

Meanwhile, however, a second and aggravating cause of the depression had supervened. When Britain left the gold standard a flight from the South African pound commenced, due principally to the belief that South Africa would shortly follow Britain's example. This flight from the currency, for which the policy of the then Parliamentary Opposition must take its share of blame, provided one of the best examples on record of the deflationary effects of currency uncertainty. The banks' reserves of gold and foreign exchange were rapidly depleted, and they were compelled to institute drastic restriction of credit, which in turn resulted in a rapid fall in imports. The effect of the action of those who transferred their balances to London was to force banks and others to call up loans and thus to impose on the country as a whole compulsory saving at the extraordinary rate of something like £15 millions a year. The funds so saved were mainly accumulated at short term in London. The effect of this further curtailment of the purchasing power of the community was greatly to intensify the local depression, and in particular to reduce imports (which in South Africa consist largely of finished goods) to the very low total of £33 millions in 1932, or some £17 millions less than the amount which the country could probably have afforded in the absence of any flight from the currency.

It is clear that this additional measure of deflation was, so to speak, artificial, and that, as soon as confidence in the currency returned and the export of capital ceased, interest rates would fall and recovery would commence. There were indeed signs towards the end of 1932 that such a recovery was beginning to develop. In December, however, the course of events was dramatically changed by political developments, and a renewed flight from the currency forced the Government to give up the struggle, abandon the gold standard, and, after a short interval, peg the exchange at parity with sterling by means of a Government guarantee to the Reserve Bank against exchange losses. It is probably true that the monetary ease and low interest rates which almost immediately followed were due, not to the actual depreciation of the currency, but to the removal of fears of future depreciation in terms of sterling. It was the restoration of confidence in the future of the currency which caused the export of capital suddenly to cease and caused owners of balances in London to take their profits with the re-import of the amounts previously exported. Any other factor which restored confidence would have had, in the main, the same effects—a rise in the gold holdings and foreign exchange reserves of the Reserve Bank, rises in the cash

reserves and deposits of the commercial banks, a heavy fall in interest rates, and an accompanying rise in prices of securities, a gradual recovery in business, especially in the building and allied trades, and an upward tendency in imports.

The fact that the restoration of confidence in the currency was accompanied by devaluation has, of course, modified subsequent developments in several ways. Its immediate effect was to depress the total gold value of imports and so temporarily to increase the monthly export surplus, and it was not until the middle of 1933 that imports regained their former gold level. If there had been no devaluation it is probable that the gold value of imports would have risen sooner and possibly faster.

On the other hand, it is probable that the increase in employment was considerably accelerated by the devaluation. In a country where exports are equal to half the national dividend the effect of a sharp rise in the currency value of exports without a corresponding rise in costs is to give recipients of residual incomes a much larger share, and recipients of more or less fixed incomes, such as interest, rent and wages, a much smaller share, of the total national output. To most producers of exported farm produce this redistribution of income did no more, even with the addition of Government subsidies, than restore a part of what they had previously lost; and even after the subsequent rise in world prices it is doubtful if many additional resources have been attracted to the export (farming) industries. To the owners of the gold mines, on the other hand, it gave, despite heavy new taxation, profits on a scale never before dreamed of. There naturally followed a great rush of investment into gold-mining shares, new and old, and a rapid increase in employment both in the mines themselves and in the many industries throughout the country which, directly or indirectly, serve them. At the same time, the Government was able to use its share of the profits in relief, subsidies and public works, while at the same time reducing taxation to the ordinary taxpayer.

With regard to the future, there is no reason why South African imports should not rise in due course to the full level which could be paid for by the current value of exports. This level is at present somewhat below the figure of £50 million gold, mentioned above as justified for 1932. Owing to the fall in the average grade of ore milled, the output of gold has fallen, while a large share of the increased profits has to be paid over to overseas shareholders, so that it is estimated that the present level of exports justifies imports at an annual rate of about £43 million gold, or, say, S.A. £70 millions. To judge from imports during recent months, this level will shortly be reached.

So long as the banking system holds large surplus reserves of gold and foreign exchange, there is no reason why imports should not for a time rise above this level. If the banks continue to exercise their present careful advance policy the excess of imports will probably be moderate, and the consequent depletion of the excess reserves slow. Under these conditions, bank deposits would slowly sink towards

a normal figure, and ultimately a moderate and gradual rise in interest rates would probably be sufficient to check the depletion of reserves and stabilise the position without any very serious setback to business. If, however, the banks, forgetting the lessons of 1919-20, were to embark on a very active advance policy on the strength of their present overabundant supplies of cash, the import surplus would be larger and the rapid depletion of the cash reserves would be accompanied by a rise in advances rather than a fall in deposits. The exhaustion of the banks' excess reserves would then not only come sooner, but would give rise to a much sharper and more violent rise in interest rates and would cause a much severer business setback.

The decision on the policy to be pursued rests with the commercial banks, for the assets of the Reserve Bank are almost wholly in the form of gold and foreign exchange, and it is therefore powerless to offset an expansion of credit by sales of securities. If the rise in imports above the level justified by current exports is sufficiently gradual, it is even possible that no setback at all may occur. For in that case it is probable that, by the time that the banks' reserves have been depleted to normal, at least some fraction of the recent new gold-mining investments will be bearing fruit. And in consequence the balance of current payments may be restored by an increase in exports of gold, which would check the drain on the banks' reserves and allow imports to be maintained permanently at the somewhat higher level then existing.

CHALLENGE AND RESPONSE

THERE have been many historians but few students of history—few, at least, in Professor Toynbee's sense. The first three volumes of this study* cover Parts I-III of the thirteen indicated in the "plan of the book"; other volumes are to follow later. This is indeed a work in the grand manner, and one may gather from the introduction that the author has for tactical reasons deliberately chosen a very large canvas. He proclaims himself on the side of the reaction against the ever-subdividing specialisation of modern historical scholarship—against what he calls "the industrial system in book form with its division of labour and its sustained maximum output of articles manufactured from raw materials mechanically." In opposition to the cult of specialised "research" he sets out to view human history—or at least the history of "civilised" humanity—as a whole; and to make "a comparative study of the successive civilisations—the experiments in civilisation—that mankind has achieved."

Whoever ventures on the writing of such universal history invites the reproach of superficiality from the specialists in each field that he traverses, unless he can mass the big guns of erudition in sufficient force to enable him to hold his own. Professor Toynbee has been well aware of the danger, and his artillery is formidable. His equipment of detailed historical knowledge is incomparably superior to that possessed by either Mr H. G. Wells or Spengler, the two most notable of his recent predecessors in this kind of enterprise, and he knows how to use it with skill and relevance. The result, however, is rather more substantial, quantitatively, than readers outside a very narrow circle are likely to find themselves able to cope with; and if the work is to reach the wider public which its quality deserves, it will have sooner or later to appear in an abridged edition.

The book, as its wrapper explains, "is not itself a history, but a study of history, taking its material and illustrations from the whole range of history, wherever the author happens to find them." In other words, the approach is sociological rather than purely historical. Professor Toynbee does not, like Mr Wells in his "Outline of History," start somewhere in past time and work forward to the present; he takes his stand in the present and makes excursions into the past as far as it interests him to go. This procedure determines the lines of division in the his-

torical scheme. Starting with the history of England, Professor Toynbee finds that it is not intelligible in isolation, but must be considered as a part of a larger whole, namely, the history of Western Europe since Charlemagne, which forms an "intelligible field of historical study," and is also one "civilisation" or "society"—all these three terms being used interchangeably in the course of the book. But if we go on "working outwards and backwards from the standpoint of our own country in our own day" we do not reach a yet larger unity; the point of maximum intelligibility has been passed, and a law of diminishing returns begins to operate. Outside our own "society" spatially, or prior to it in time, we come across others—twenty in number according to Professor Toynbee's classification—which resemble ours sufficiently to be assigned to the species "civilised." Beyond these again, in prehistory or in corners of the modern world, are "primitive" societies which form a dim horizon to the historical landscape; it is with the civilised foreground, however, that Professor Toynbee is mainly concerned.

The conception of an "intelligible field of historical study" intermediate between the national State and mankind is in itself valuable; by it we can be emancipated from the supremacy of insular, nationalist histories without losing ourselves in the indefinite vastness of the total history of humanity. But the attempt to represent the flux of history by a certain number of clear-cut entities called civilisations is one that is fraught with dangers and difficulties, which Professor Toynbee does not altogether escape. His method works well when he is dealing with such relatively compact and isolated cultures as those of ancient Egypt, early China or Peru; it is less effective when confronted with those phenomena of interaction and interpenetration which are so important for cultural progress. Professor Toynbee recognises a relation between civilisations which he calls appresentation-and-affiliation; thus we have two civilisations, the Western and the Orthodox Christian affiliated to the Hellenic, and two others, the Arabic and the Iranic, affiliated to the Syriac, the affiliations taking place through the "chrysalis-churches" of Christianity and Islam. But it is hard to admit that we have here four new civilisations arising, for there is a continuation of four culture-provinces, the Latin, Greek, Semitic and Persian, which were already well differentiated before the beginning of our era. These cultures, however, were not self-contained but developed in contact and interaction with one another, and it is from their mutual exchanges and assimilations that the most striking historical changes occur. The "intelligible field of historical study" in the first few centuries of our era really extends from Spain to India; there are in fact some periods of history when cultures are sharply differentiated and others when they are to a great extent fused together. But a scheme which treats civilisations as solid, permanently self-identical units is inadequate to the motion of history no less than is a doctrine which treats nationalities in the same way. Nor does Professor Toynbee's scheme provide a satisfactory criterion for deciding at what point in development one civilisation ceases to be itself and becomes another.

The classification of cultures, however, is only a subsidiary part of Professor Toynbee's work; his main theme is the interpretation of human progress in terms of "Challenge-and-Response," a theme which he treats with great brilliance of exposition and examples drawn from the whole range of history. Challenge-and-Response is presented to us as the master-key for the understanding of cultural evolution. In the formation of a civilisation, an economic system or a great political power we are shown always a problem to be solved, a difficulty to be met, a challenge from the physical or human environment, and the effort of a society to cope with the situation. If there is no severe challenge, if there is a perfect adjustment between a society and its environment, the society is stagnant and unprogressive; if the challenge is too severe, man is destroyed or gives way to despair or is only just able to hold on; with a challenge of medium severity man is stimulated without being overwhelmed, develops his faculties and makes progress.

The author studies the conditions under which great initial advances in civilisation have been made, and concludes that the most favourable environment for human

achievement is a fairly hard one. We have chapters on the "stimulus of hard countries," "the stimulus of new ground," "the stimulus of blows," "the stimulus of pressures," and "the stimulus of penalisation." The argument is worked out in a most original and illuminating way. What the author appears to ignore, however, is that ease and prosperity challenge men no less than hardship and adversity, though in a different way. If Capua demoralised the soldiers who had followed Hannibal across the Alps, does it not show that this was just the one

challenge which they were unable to meet? If our civilisation with all the gifts of science and machinery now appears to be in danger of a breakdown, does it not prove that the age of mechanical progress demands as much of man's intelligence and virtue as did the primeval wilderness, if he is to live in it successfully? The challenge of our time is the challenge of Capua; and, if we can distribute the abundance of wealth that we produce and use it for civilised living, we shall be doing about as well as any hillbillies, frontiersmen or hardy pioneer stock have ever done.

NOTES OF THE WEEK

Disaffection Debated.—The Incitement to Disaffection Bill passed its third reading in the Commons on Friday, November 2nd, by 241 votes to 65. The debate provided the best defences of the measure hitherto adduced, in the speeches of the two law officers of the Crown. At the close of the debate the Attorney-General assembled a few references to the subversive activities of such presumably influential bodies as the Young Communists International and the Anti-War Committee. The Solicitor-General, Sir Donald Somervell, contended that when the Bill becomes law it will not interfere with the liberty of political opinion, "if one takes the words in their ordinary meaning." But what will the liberty of political opinion of soldiers, and of those seeking to express their views to soldiers, then amount to? The Solicitor-General twitted Liberals with their "fanatical views" on Free Trade, and asked if anyone could "draw the inference from the fact that they hold those views, that they were intending to incite Customs officials not to collect the protective duties which are at present imposed by Parliament? The analogy," he said, "is complete." Hardly. Anyone will be able to have copies of a Free Trade pamphlet, with intent to disseminate them among Customs officials after the Disaffection Bill becomes law. Anyone can do so now. But propagation of political views will not be taken as inciting Customs officials to disaffection or disobedience. Yet, once the present Bill becomes law, anyone publishing, or possessing, any political or religious views calculated to reach a soldier and seduce him from his "duty or allegiance" will be in danger of imprisonment, as long as a jury, on a prosecution under the forthcoming Act, finds an intent so to do. Many will ask how far the expression of any views to a soldier will be held to have the natural and probable consequence of seducing him from his duty or allegiance, and so to prove the criminal intent of the accused. On Tuesday the Bill passed its second reading in the Lords, where it was sponsored by Viscount Hailsham, Secretary for War. Lord Reading stated that, in his opinion, the whole purpose of the Bill was to give the right for the search warrant, and that, "however strongly the Government might say that it was not intended to prevent the expression of political opinion, it could not be true that the Bill would never do so." Lord Allen begged the Government to suspend the Bill for the present. But the Government's measure, with the Government's weight behind it, went on its unfortunate, disquieting way.

Another Labour Victory.—As with recent Parliamentary by-elections, the main features of last week's Municipal elections were the success of the Labour Party and the further elimination of all other parties but Municipal Reform (Conservative) and Labour. Municipal councillors are elected for three years, but while in London the whole council is elected every three years, in the rest of the country a third of the council is elected each year. This year Labour gained a net total of 698 seats in England and Wales, compared with a net loss of 404 in the crisis year of 1931. But the Labour victory this year was much greater in London than in the rest of the country. In London 457 seats were won, compared with a loss of 210 in 1931; while outside London 253 were won, compared

with a loss also of 210 in 1931. Labour now controls 15 councils in London out of 28, or one more than in the previous record year of 1919; and the total Municipal representation in London boroughs now consists of 729 Labour members, 656 Municipal Reformers, no Progressives and one Independent. Municipal elections, in which the poll is lamentably small, are usually regarded as affording no evidence of Parliamentary voting prospects. In 1931, however, there was a close correspondence between the two; and the marked coincidence this year between L.C.C., Parliamentary and Municipal election tendencies suggests that Labour can now claim about the same general voting strength in the country as in 1929. It is also hard to resist the conclusion that the trend towards a two-party system is gaining ground. The fact that Labour's victory was much greater in London than in the provinces is partly due, no doubt, to Mr Herbert Morrison's influence and authority, and partly, perhaps, to the not very scrupulous Press campaign carried on against the Labour Party in London. It also would appear to confirm the general impression that Labour's fortunes tend to fail in times of depression and gloom and revive with prosperity and optimism.

Depressed Areas.—The reports of the four special commissioners appointed by the Government to investigate conditions in the depressed areas have at last been published, but they appeared too late to be commented on *in extenso* this week. The areas investigated were West Cumberland; Haltwhistle, Durham and Tyneside; South Wales and Monmouthshire; and Scotland. It cannot be said that the proposals contained in these four reports reveal anything particularly novel or striking, and it is difficult to imagine why the Government should have hesitated so long in authorising their publication. Mr J. C. C. Davidson, who deals with Cumberland, attaches greatest weight to land settlement on the basis of large-scale cultivation, and is opposed to relief schemes. Captain Euan Wallace, who had to investigate the more formidable problem of Tyneside and Durham, makes several interesting suggestions, and his report is much the boldest and most constructive. His proposals include the unification of mining royalties and of local government areas, Exchequer assistance to bring down the charge on the rates for poor relief, the inauguration of a land settlement scheme on the lines of that at present operated by the Durham County Council, a special housing scheme, and various schemes for public works, including a road tunnel under the Tyne. Sir Wyndham Portal places his chief hope for revival of the South Wales coal industry in the exploitation of new uses for coal. He also advocates a coal agreement with Italy on the lines of the Scandinavian agreement, which he contends has indirectly penalised South Wales. Sir Arthur Rose draws attention to the keen desire for land among the unemployed, and accordingly advocates land settlement and land reclamation; he also looks to the development of low-temperature carbonisation as a hopeful prospect for the Lanarkshire coalfield. No one who understands the facts will blame the commissioners for failing to produce rabbits out of a hat, but, with the exception of Captain Wallace, none of them has anything very novel to say.

* "A Study of History." By Arnold J. Toynbee. Oxford University Press. 3 volumes, 476, 452 and 489 pages. £2 12s. 6d.

The Anglo-German Agreement.—Both in Germany and England the conclusion of the new Anglo-German Payments Agreement, upon which we commented last week, has been received with a sense of relief. The relief is tempered in this country with a cautious disinclination to optimism, which was reinforced, if not inculcated, by Mr Runciman's warning words in the House on Thursday of last week—tempered also among British exporters with a sense that, for resumed and new business with Germany from now onwards, an open weather-eye on the evolution of Germany's "dictated" economy is only common prudence. As anticipated, the Anglo-German agreement for the settlement of trade debts has resulted in Lancashire cotton spinners lifting the ban on yarn exports. This decision was reached in Manchester last Tuesday at a meeting attended by about 150 spinners and exporters. According to our Manchester correspondent, the resolution put forward described the agreement as acceptable to cotton textile interests, and it was recommended that trading with Germany should be resumed, bearing in mind the caution already advised by the Government. The opinion was expressed, and echoed elsewhere this week, that it was extremely advisable that trading in the future should be undertaken only on very short credit terms. The trade's embargo on the export of cotton yarns to Germany was announced on August 3rd, and since then there has been a drastic decline in shipments to that country. It is believed that as a result of the suspension of trade, Lancashire spinners have lost business amounting to £400,000, and thousands of operatives have been unemployed for many weeks. In contrast, substantial inquiries have been received from Germany during the last few days and some large contracts have been arranged. On the German side, according to our Berlin correspondent, the conclusion of the new agreement was well received, and induced a temporary recovery on the Stock Exchange. Doubts, however, are being expressed whether the Reichsbank will long be able to maintain the unrestricted issue of exchange certificates for British goods. Although the Reichsbank in withdrawing its offer of last May to redeem interest coupons at 40 per cent. in cash refers only to "the unfavourable development of the exchange situation," the Press remarks that a factor in this decision was the new obligation to provide £400,000 for liquidation of outstanding trade debts to British exporters. The apparent advantages to Britain of the new agreement had a speedy effect in Holland; and the Dutch Government denounced the clearing agreement of September 21st, which expires on November 16th. It has presented in the Dutch Parliament a Bill supplementing and apparently making more rigorous the existing clearing regulations. The working of the clearing agreements with France and Holland has been quite other than was expected by their creditors of Germany. Exporters to Germany, thinking that their proceeds were to be automatically converted into their own currency by their own Government, increased their deliveries far beyond the limit of current German export proceeds; and the creditors' mark balances soared in Berlin. As we said last week, proof of our new Agreement's efficacy in paying British exporters and creditors must emerge from its working.

* * *

Keeping Order in the Saar.—Last week the French Government let it be known that the general commanding the troops on that part of the French frontier which adjoins the Saar territory had been given instructions how to act if the President of the Governing Commission of the Saar were to call for his assistance in case of emergency. It was intimated, at the same time, that the French troops in question would be able to take their action, if the case arose, at very short notice. This precautionary measure follows upon the public warning, given by M. Barthou in September, that France would fulfil the obligations into which she has entered for seeing that the plebiscite in the Saar is conducted without intimidation or disorder. M. Barthou's declaration refers to an international transaction which took place in 1926. In that year the Saar Governing Commission stated to the Council of the League that it would regard itself as entitled, in case of absolute necessity, to call upon troops stationed outside the territory and in the vicinity of its frontiers to assist in maintaining

order. The Council of the League took note of—and thereby implicitly acquiesced in—the Governing Commission's report to this effect; and since France was, and is, a member of the Council, while the troops indicated by the Governing Commission could hardly mean any but French troops, M. Doumergue may fairly claim that France did then enter into a positive obligation which devolves especially upon her. In reminding the House of Commons of these facts last Monday, Sir John Simon declared for the British Government's part that "there never has been any question of the use of British troops, and nothing of the sort on our part is contemplated." Be that as it may, the moral responsibility of His Majesty's Government is not less great than that of any of the other Principal Allied Powers who drafted, signed and ratified the Versailles Treaty. However, the French dispositions, even by themselves, have already had a salutary effect. On November 2nd Herr Hitler's plenipotentiary for the Saar, Gauleiter Bürckel, issued an order to the S.A. and S.S. formations in parts of Germany adjoining the Saar frontier, forbidding the wearing of any uniforms within a twenty-five miles' distance of the frontier between January 10th and February 10th next, and likewise forbidding all parades, processions or gatherings of any kind in the same zone. On Wednesday the German Government instructed their diplomatic representatives in Paris, Rome, Brussels and London—the capitals of the Locarno Powers—to explain the German view of the Saar problem and the German objections to any employment of French troops in the Saar territory. They contend that the French are not empowered by the League Council so to act, and that therefore any such action by the French would hardly be in keeping with the spirit of the Locarno Treaty. It is to be hoped that the necessity for French intervention will never arise; for, as Sir John Simon pointed out on Monday, "the responsibility for maintaining order in the Saar rests with the Governing Commission," and this responsibility continues to be successfully discharged by the Commission.

* * *

Japanese Diplomacy.—We recorded last week the announcement in the "Manchukuo" Government's name of the Japanese Government's intention to give a monopoly of the oil business in Manchuria to a company financed with Japanese capital. This declaration led the British, Dutch and American Governments to protest formally in Tokyo. To this protest the Japanese Government has now replied. The text has not yet been made public, but the drift of it may be gathered from the forecasts in the Japanese Press and from the comments of the Japanese "official spokesman." According to the Japanese Press, the Japanese Government bases its case on the two theses that it is for "Manchukuo" to determine whether or not she is bound by the Washington Nine-Power Treaty relating to China; and that in any case any promises that may have been given—either by "Manchukuo" or by Japan—that the establishment of "Manchukuo" shall not affect the maintenance of the Open Door principle, are only binding *vis-à-vis* countries that have given "Manchukuo" their official recognition. Possibly the unofficial announcement of these theses is a kite to test which way the wind blows—like the notorious announcement, earlier in the year, of a "Japanese Monroe Doctrine." But there can be no real doubt that this is, in fact, the Japanese Government's policy, whatever discreet silences the present official note may observe. All that is positively known about the note is that it refers to the "Manchukuo" oil control law as an instrument which does not permit discrimination against the interests of any particular foreign nation, and that it excuses the Japanese Government from interfering in a question that lies between the Government of "Manchukuo" and a number of private foreign oil companies! "Manchukuo" is playing Mr. Jorkins' part for Japan with such admirable effect that it will be surprising if every imperial power in the world does not follow Japan's example and turn its subject territories into "independent States." And as for non-discrimination, the Japanese argument seems to imply that the Manchurian door would still remain technically open so long as it was barred and bolted impartially in everybody's face. Meanwhile it is

interesting—and ominous—to observe that Nanking is watching Japan's manoeuvres for establishing an oil monopoly in "Manchukuo" with a more sympathetic eye than she has given to anything that the Japanese have done in Manchuria so far. If Japan establishes a precedent, China may follow suit—and so obtain some grain of incidental benefit, at last, from the Japanese seizure of her three Eastern Provinces.

* * *

—And Some Reasons.—Meanwhile, Sir John Simon has announced that the controversy of last summer, which we reported in the *Economist* of July 28th, between the "Manchukuo" authorities and the British military command in North China, as to whether the British troops there should continue to carry out their summer exercises on the north side of the Great Wall in "Manchukuo" territory, has been settled as the Japanese desire. There being equally good ground on the south side, our troops, in future, are to use that instead! This is a good omen for the Japanese. More surprising still, however—at what Japan and our own Federation of British Industries must regard as a particularly opportune moment—is the letter of Professor H. A. Smith in *The Times* of Thursday. In that letter he suggests, by urging the analogy of the secession of the Spanish colonies a century ago and their recognition by Canning, that there was no rape of Manchuria, but that Manchuria "seceded"; that therefore we cannot really be bound by the League Assembly resolution for non-recognition in March, 1932, and that we may justifiably proceed to emulate Canning by recognising "Manchukuo" and so securing "chances of commercial intercourse in that country upon favourable terms." "The accepted rules of international law and practice," which Professor Smith prays in aid, were never stretched so far by Canning as to permit us to annex the Spanish colonies, to administer them, and then to exclude other countries from trading with them, unless or until recognition of their "independence" were granted. Indeed, to put the 1934 case back into the days of Canning, we may ask what Canning would have done if a powerful third party—say, the United States or France—had annexed the Spanish colonies on the plea of their secession, had administered them, and had closed the doors of trade to us until we recognised their "independent" status? If such are "the accepted rules of international law and practice," they savour more of practice than of law; and the Assembly resolution of March, 1932, denying recognition to Japan's rape of Manchuria, was an overdue step in the right direction.

* * *

Aftermath in Spain.—An uneasy calm reigns in Spain. The Army, which upheld the Lerroux Government in its hour of trial, has evidently no intention of relaxing its grip. Stringent censorship makes it very difficult to obtain reliable news; but there seems to be no doubt that, for the time being, the forces of the Left are routed. The Cortes met on Monday, and an able speech by Señor Gil Robles, the leader of the Catholic groups, secured a vote of confidence for the Government. The 235 deputies who voted included Basque Nationalists and the Catalan Right Party, the *Lliga* of Señor Cambo. Republican parties of the Left and Socialists took no part in the proceedings, and the extreme Right—Traditionalists and Fascists—also abstained from voting. The situation therefore remains delicate; for the Government is only a middle *bloc*, and its two main sections, Catholic Agrarians and Radicals, cannot for long hold together, with trouble likely to break out at any time either on the Right or Left. Thus the Army holds a decisive position. Magnanimity being an old Spanish custom, the Cabinet agreed to pardon twenty-one of those condemned to death for their share in the recent rebellion. The news that two leaders of the Asturias rebellion were being executed, however, produced an abortive attempt at a general strike on the part of the Syndicalist and Anarchist organisations. The ex-Prime Minister, Señor Azáña, and his assistant, Señor Luis Bello, are being tried by a civil court. The two Socialist ringleaders have been handed over to military jurisdiction. That Señor Lerroux still expects trouble is clear from his decision to form a special

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK
LIMITED

Head Office: 41 LOTHBURY, LONDON, E.C.2

military corps of paid volunteers as additional reserves for the ordinary police; but this is hardly likely to please the Army. Although for the present Señor Gil Robles seems to be moderation itself, it looks as if the Government will be forced more and more into reactionary measures, which cannot but be distasteful to the vast majority of Republicans. As Sir George Young has said, "Spain is not yet in social revolution, but she is in secular revolution," and the emergence of the old Church and Army combination is bound to act like a red rag to the majority of self-respecting Republicans.

* * *

South Wales Wages Award.—The arbitrators appointed to adjudicate in the wages dispute in the South Wales coalfield—Lord Bridgeman, Sir David Shackleton and Mr Warner—issued their award last week-end. The award raises the minimum percentage on basis rates from 20 to 22½ per cent., as well as increasing slightly the subsistence rate, which will be raised from 7s. to 7s. 8d. a day. The flat-rate subsistence wage is restored and the discrimination made in the Schiller award of 1931 between married and unmarried men, which has always been resented by the miners, is abolished. The net result of this award is a slight increase in wages all round, though not so large an increase as that recommended by the National Industrial Board set up under the Coal Mines Act of 1930, on which the owners, it will be remembered, declined to be represented. In justifying the smallness of the increase the arbitrators state that the outlook for the coal trade is so uncertain that they do not feel at liberty to propose any great variation in the charges on the colliery undertakings. But they are careful to explain that the figures obtainable from the ascertainment tables in their present form "do not give any complete picture of the profits and losses in the coalfield under the conditions which now prevail." Both sides have confessed a willingness to reconsider the form of these returns, and it is therefore to be hoped that before this award comes up for reconsideration next September a form of accounts will have been agreed on which will show the real profits earned by the colliery undertakings which are the owners of the distributive organisations. The miners have always contended that these organisations have been making large profits even when colliery accounts have been showing losses, and the suspicion that they were not being given a square deal has been one of the principal causes of the bad feeling which has unfortunately characterised the relations between masters and men for a long time.

* * *

Sterling and International Prices.—The past fortnight has witnessed a renewal of the decline in sterling prices, but the movement is very small. The *Economist's*

complete British index number has fallen by 0.7 per cent., while sterling prices of primary products have fallen by 0.9 per cent. American prices are somewhat firmer. Primary products have risen by 1.0 per cent., while there is only an insignificant decline in the Irving Fisher general index number. Price increases in the United States include wheat, oats, maize, bacon, lard and sugar, but coffee, cotton, lead, rubber and petroleum have fallen. The slight divergence between the course of British and American prices may not be unrelated to the recent improvement in sterling. Continental wholesale prices are practically unchanged:—

* These figures refer to Oct. 31st.

Details of the group indices comprising the complete *Economist* index number are given below:—

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	Oct. 10, 1931	Oct. 24, 1931	Nov. 7, 1931
Cereals and meat	64.5	72.1	70.4	68.3
Other foods	62.2	58.7	58.5	59.1
Textiles	43.7	50.9	51.5	51.7
Minerals	67.4	75.0	76.4	75.8
Miscellaneous	65.8	67.8	69.1	68.7
Complete index	60.4	65.2	65.2	64.7
1913 = 100	83.1	89.6	89.7	89.0
1924 = 100	52.2	56.3	56.3	55.9

Grain prices show little change on balance, Canadian wheat being a shade firmer, but there were appreciable reductions in meat and bacon prices. Among other foodstuffs, refined sugar was cheaper, but there was a sharp advance in butter. In the textile group, American cotton declined, but Egyptian cotton continued to advance. Wool was firm, and there were moderate price increases in flax and jute. Non-ferrous metal prices were all lower. Among miscellaneous materials, hides, rubber and linseed oil all declined, but there were advances in sulphate of ammonia and creosote.

Idle Shipping.—The quarterly return of the Chamber of Shipping reveals a further appreciable reduction in the tonnage of ships laid up in Great Britain and Ireland. Changes in the net tonnage of idle shipping since 1932 are shown below:—

	No. Net. tons of ships. (000's)		No. Net. tons of ships. (000's)
Oct. 1, 1932	871	Jan. 1, 1934	482
Jan. 1, 1933	760	April 1, 1934	453
April 1, 1933	760	July 1, 1934	421
July 1, 1933	793	Oct. 1, 1934	330
Oct. 1, 1933	612		818

Not all of the 91 vessels which were removed from their "rusting places" during the third quarter of this year found employment on the high seas under the British flag, for 49 British ships have been reported as sold to foreign

traders and to British and foreign ship-breakers. But the figures suggest that there has been an increase of about 155,000 gross tons in British shipping in commission between July 1st and October 1st. This, at least, is a sign of a welcome, if meagre, improvement.

Employment in October.—According to the latest statement of the Ministry of Labour, there were approximately 10,206,000 insured persons aged 16-64 in employment in Great Britain on October 22, 1934, as compared with a revised figure for September 24 of 10,243,000, and with 9,927,000 for October 23, 1933. There was an increase during the month of 37,648 in the number of persons on the registers of the Employment Exchanges, of which 35,344 is the increase in the number of men wholly unemployed. The total number on the registers was 2,119,635, of whom 1,695,897 were wholly unemployed, 338,199 temporarily stopped and 85,539 classified as "normally in casual employment." There was a slight reduction in the number of girls and boys registered, although they are now more by 25 per cent. than a year ago owing to the coming into force of the new juvenile unemployment legislation. The number of unemployed women also fell slightly during the month, but is about 7 per cent. higher than a year ago. The total figure, however, is 179,118 less than in October, 1933. The following table shows changes in the number and percentage of insured persons unemployed in various industries:—

	Increase (+) or Decrease (—) since		Sept. 24, 1934		Oct. 23, 1933	
	Number	%	Number	%	Number	%
Coal mining	+ 22,304	+ 8.6	— 48,194	— 14.6		
Iron and steel	— 2,402	— 5.2	— 17,746	— 29.0		
Engineering	— 1,280	— 1.7	— 53,828	— 34.2		
Shipbuilding and repairing	+ 3,994	+ 5.4	— 19,356	— 20.0		
Metal goods manufacture	— 2,316	— 3.4	— 15,008	— 18.6		
Motor vehicles, cycles and aircraft	— 4,883	+ 15.9	— 7,601	— 22.7		
Building	+ 9,591	+ 6.6	— 9,111	— 5.2		
Public works contracting	+ 2,137	+ 1.7	— 3,447	— 2.7		
Cotton	— 4,536	— 4.0	+ 1,158	+ 1.1		
Woollen and worsted	— 7,515	— 18.5	+ 12,635	+ 62.3		
Tailoring	— 5,704	— 16.0	— 1,918	— 6.0		
Distributive trades	+ 8,028	+ 3.7	— 6,714	— 2.9		
Shipping service	+ 5,730	+ 13.5	— 5,341	— 10.0		
Hotel and boarding house	+ 14,686	+ 25.0	+ 2,270	+ 3.2		
All industries	+ 37,648	+ 1.8	— 179,118	— 7.8		

The apparent heavy increase in unemployment among coal-miners, mainly in South Wales and South Yorkshire, is a purely fortuitous result of the choice of date. According to the Board of Trade the number of wage-earners at mines on October 20th was 2,000 more than a month earlier and 4,700 more than on October 21, 1933. It is probable, therefore, that October 22nd, the date of the Ministry of Labour return, was a day on which short-time was being worked in a large number of mines, so that the number of persons temporarily stopped was unduly increased. The other large increases in unemployment, in building, distribution, boarding house services, etc., although in some measure seasonal, are mostly more marked than at the same time last year. The textile trades have shown improvement during the month; but the woollen and worsted industry has still far to go to recover from the setback of the spring and early summer. Other clothing industries—tailoring, boot and shoe and hosiery—have also shown improved activity. In the following table of changes in the various administrative divisions it will be seen that the Midland district is the only one to register a decrease in unemployment during the month:—

London	+ 7,132	North East	+ 6,691
South East	+ 6,849	North West	+ 503
South West	+ 7,072	Scotland	+ 886
Midlands	— 7,105	Wales	+ 15,620

The contraction of business in the Southern districts is due to the seasonal recession in building, distribution and the holiday trades; that in the North-East and Wales largely to the apparent increase in unemployment in mining and in shipping. The Midland figure chiefly reflects the improvement in the metal and clothing industries.

MONETARY AND BUDGET POLICY

THE much-anticipated speech of the President before the Bankers' Convention answered no questions about the programme which may be presented to the new Congress in January. Indeed, it is doubtful if a programme has yet been prepared. Yet, in a way, the immediate questions were answered by the distinguished banker who preceded the President on the programme, namely, that one should not expect an early balancing of the Budget nor any formal declaration about the currency.

Although these two questions—the balancing of the Budget and the currency—are uppermost in discussion, they are probably secondary questions. First of all, for nearly a year the dollar has been on a *de facto* gold bullion standard, with gold at \$35 an ounce. Furthermore, there is comparatively little agitation for altering this international valuation, although it must be admitted that the nervousness exhibited in official Washington on any weakness of the pound suggests that the Government is more concerned about the dollar-pound relation than the price of gold. As for the ever-recurring threat of "greenbacks," one may surmise that if these are resorted to, it will be because of fiscal difficulties rather than monetary policy.

The crux of the Budget question is not the balancing of the Budget, but the reasons for unbalancing it. The major part of the deficit comes from a "spending policy" adopted on the conviction that such spending would "prime the pump" of private enterprise. This policy has been pursued liberally, even extravagantly, for eighteen months, and to many persons its success is questionable. That is, what is called the demand for a balanced Budget is actually a demand for the abandonment of a formal policy of large deficits as a recovery measure; and it is based on the belief that this policy is not expediting recovery.

"SPENDING FOR RECOVERY"

The vote of the American Legion for the payment of the bonus was a comment on this spending policy as it is viewed by its proponents! "... Since the Government of the United States is now definitely committed to the policy of spending additional sums of money for the purpose of hastening recovery from the present economic crisis, the American Legion recommends immediate cash payment at face value of the adjusted service certificates, with cancellation of interest accrued and refund of interest paid, as a most effective means to that end." Such a payment would entail a distribution of about \$2,000 millions among about four million men. Granting the soundness of the premise (and it is the premise underlying a large part of the Federal deficit) the argument is irrefutable.

The Federal Reserve Indices of business for September reaffirm the magnitude of the slump since last spring, and continue the unfavourable comparisons with a year ago:—

FEDERAL RESERVE BOARD BUSINESS INDICES

(1923-5=100. Adjusted for seasonal)

	Sept., 1933	May, 1934	Sept., 1934
Industrial production (total)	84	86	71
Manufactures	83	86	69
Minerals	87	89	81
Construction contracts (total)	30	26	27
Residential	12	11	10
Others	45	39	42
Factory employment	78	82.4	73.9
Factory payrolls	59.1	67.1	57.9
Freight car loadings	60	63	59
Department store sales	70	77	76

The index of production was at the lowest point since April, 1933, and even if one recalls that the May, 1934, figures were rather exaggerated by temporary conditions, the fact that employment and payrolls were below the level of September, 1933, is disconcerting. It is this sort of fact

that has cast so much doubt upon the validity of the idea of the deficit as a recovery measure. On the other hand, the demand of the American Legion for \$2,000 millions is typical of the pressures which will be brought upon the incoming Congress.

It is already obvious that certain important measures will emerge in the near future. First, the A.A.A.; the essence of the Agricultural programme has been crop curtailment. All the evidence points to a revulsion of feeling against this in agricultural areas, and even in Washington itself. But if the theory of restricted agricultural output is abandoned and the insistence upon domestic agricultural prices above the world level is maintained, a new agricultural programme must be devised. In N.R.A. all the evidence points to the abandonment of the price cartel system; yet the principle of price and production control is written into many of the approved codes. The N.I.R.A. expires by Statute on June 16, 1935, unless its life is extended; and it is quite uncertain what radical changes must be introduced in order to secure Congressional support for its continuance. Finally, there is a growing conviction that in place of the present Federal dole, some systematic scheme for the unemployed and the destitute will be adopted.

NEW YORK, October 26.

FRANCE

REPAYING THE PUBLIC DEBT

[The political crisis is discussed in a leading article on page 863.]

THE annual report which the "Caisse Autonome d'Amortissement" makes to the Minister of Finance has been just published. The task of the Caisse is twofold: It has to take in charge the service of the National Defence bonds, which weighed heavily in the past on the Treasury, and to secure the amortisation of the National Debt. The Caisse has at its disposal certain fiscal resources, including the yield of the Tobacco Monopoly. On October 1, 1926, the Caisse took over 48,385 million francs of short-term bonds, mostly National Defence Bonds. This sum had been reduced to 26,481 millions by December 31, 1933. Since then repayments have exceeded new issues by 1,939 millions. Monthly maturities have fallen from 7,000 millions or 8,000 millions in 1926 to an average of 1,080 millions in 1933; they will stand at 1,270 millions in 1934 and 919 millions in 1935. The interest burden was reduced from 2,700 millions in 1926 to 1,465 millions in 1932. It was higher during 1933, at 1,676 millions, as a result of the tightening of money. The rate of interest on bonds, which was originally 6 per cent., had been lowered to 2½ per cent. by June, 1932; but it then increased to 3 per cent. on March 1, 1933, and 4 per cent. on March 6, 1934, but was reduced thereafter to 3½ per cent. on May 19th and 3 per cent. on June 8th.

In spite of a reduction in its revenues the Caisse was able to reimburse in 1933 a total slightly higher than the contractual one. Actually 4,547 millions was devoted to amortising the National Debt, against 8,822 millions in 1932. A further 319 millions allocated to the Caisse from profits on silver money coinage was used for the supplementary reimbursement of recent bonds. The grand total

War annuities repaid in anticipation	875,412,718
Treasury and Crédit National bonds repaid	6,338,744,300
Contractual amortisation (Agreements of 1930 and 1932)	4,277,314,999
Total	31,460,542,617

COAL PRODUCTION AND EMPLOYMENT

Production at French coal mines during September totalled 3,913,356 tons in 25 working days, against 3,918,839 tons in 26 working days in August, and 3,979,214 tons in 26 working days in September, 1933. The average daily production was therefore 156,534 tons in September, 1934, against 150,725 in August and 153,047 in September, 1933. The number of men employed was 232,192 at the end of September, against 233,606 at the end of August and 246,753 at the end of September, 1933. The production of coke was 329,734 tons in September, against 343,058 in August and 328,591 in September, 1933. For the first time for ten months stocks have fallen by 80,000 tons, as a consequence of seasonal needs. But the industrial demand remains very low. Indeed, the index of industrial production shows that France is the sole country in which industrial production fell during the first six months of 1934. Consumption of coal, which had increased by 282,000 tons in the first quarter of 1934, compared with the same period of 1933, fell by 248,000 tons during the second quarter and by 468,000 tons during the third quarter. The persistent reduction in the average price of imported coal partially explains this fall:—

PRICE PER TON OF IMPORTED COAL

	Coal alone	Coal, Coke, Briquette
	Francs	Francs
1930 (max.)	140.95	144.52
1932 (average)	114.92	114.83
1933 (average)	104.77	103.91
September, 1933 ..	103.15	102.05
August, 1934	97.13	96.95
October, 1934	96.30	96.05

This table illustrates very clearly the deflationary influence which has been exerted on French industry by external forces.

PARIS, November 7.

GERMANY

THE DECLINE IN REAL WAGES

THE serious rise in the cost of living became acute last week, and compelled the Government to take measures to propitiate consumers. These measures are likely to have little effect, however, as long as the general economic policy is unchanged. The individual citizen noticed the price rise many months ago and felt it heavily; but the existence of a price problem was not officially admitted. Official zeal for the consumer was merely shown in outbursts by local Nazi authorities against tradesmen "pests" and "vermin," by which means it was sought to convince citizens that prices were reasonable where individual profiteers did not crop up. Now that the Government is obliged to take general measures, the existence of a price grievance felt by the whole urban, in particular by the industrial, population cannot be concealed.

Primarily this is a question of real wages, or rather of real wage-earnings. Numerous Nazi announcements agree that

no increase in money wages can be contemplated as long as serious unemployment remains; and collective wage agreements, which expired last April, were summarily extended. According to the last official return, which is long out of date, nominal wages have declined by about 1 per cent. since the Nazis attained office. But the nominal wage returned is the average wage fixed by collective agreement. In the past two years the average nominal earned wage has fallen, at least in many important branches, owing to "stretching out" of limited work, and to compulsory reductions of working hours. Hence the effective real earned wage has fallen much more than would appear on a mere basis of the small decline in collective agreement wages and of the rise in the cost-of-living index.

According to the old Reich index the cost of living rose from 116.6 in April, 1933, to 122.5 in September, 1934; the new index, as revised retrospectively, shows a rise from 115.9 in April, 1933, to 121.6 in September, 1934, and 122.0 in October, 1934. Ever since 1925, when it was first compiled, the old index was criticised as misleading, as underestimating, in times of rising prices, the advance in the cost of living. Though the weighting of the new index differs in some respects considerably from those of the old, the results do not materially differ. It is certain that neither expresses the recent movement. This is particularly true in the case of all those families which, owing to the official unemployment measures, are not earning the full standard wage. Foodstuffs, which for this class are of the utmost importance, such as potatoes, some fats, and vegetables, have lately risen enormously in price; in some cases by 200-300 per cent. The price of bread is still determined by the rye and wheat prices fixed in 1933; this year, when farmers' prices of these cereals had to be increased in order to compensate for the reduced crop, it was declared that bread prices must not be changed, and that the miller and baker would bear the reduced margin remaining between first producer and consumer.

PRICE REGULATION AND CHAOS

The substantial rise in the cost of living and the fall in real wages are primarily due, not to profiteering by middlemen or retailers, but to deliberate policy based on the theory that there are permanent "fair" prices for farmers, guaranteeing them security, and that price-determination by demand and supply is an outworn "Manchester" superstition. This theory was officially maintained even after it had broken down and the "fair price" to farmers had proved unfair owing to the reduced supply resulting from the crop failure. To-day, in the urban produce markets, which are largely stocked by small farmer-producers, shortage of goods often prevails, and the sellers compensate themselves for their reduced turnovers, and ration consumers, by putting prices up. Prices of manufactured consumption-goods are also rising rapidly; the wholesale index for these has risen by 0.5 per cent. in two successive weeks; and retail prices have risen still further.

The number of price regulation laws and authorities is already considerable. The Reichsnährstand, the corporative organisation for agricultural products, including industrial raw materials produced by farmers, is itself a great price-fixing organ. It has increased of late the number of price-fixed commodities. In general it may be said that the most burdensome of the recent price rises are official or "corporative" in origin; and cannot be revoked or abated except by a reversal of policy. There are innumerable price supervision authorities throughout the Reich.

The campaign for lower prices was opened last week by the Nazi Party; and a general price investigation is to be conducted by the Nazi Hago. This is the first general admission of public unrest, but continued official references to "hoarding" and "lack of economic discipline" still attempt to suggest that individuals and not the system are at fault. The Party's investigation, it is promised, is to be merely for information purposes, and the data collected will be handed over to the Ministry of Economy. A few days ago the Prussian Minister-President issued a decree requiring the local authorities, provincial presidents and police presidents to take immediate sharp action against price advances not officially authorised. This decree again speaks of "an artificially induced shortage of goods"; and

severe punishments are threatened. Simultaneously, a number of retail food shops have been closed. The next step was the appointment as Reich Commissar for Price Supervision of Dr Goerdeler, Oberbürgermeister of Leipzig, who held the same post under Dr. Brüning. The reappointment of an official who had been employed for the same purpose by "the System" indicates that the Government discerns the public distrust of its own, and its Party's, price measures.

THE REICHSBANK RETURN

The Reichsbank's return for August 31st shows a new delivery of Dutch arbitrage gold caused by the shortage abroad of free marks. The gold reserve is now Rm. 8 millions above its lowest level, without any decline in the foreign exchange reserve. The Reichsbank's month-end credit expansion was moderate, and as the very large September month-end credits were repaid to 98 per cent. before the new month-end demand set in, November opened with an improved status. The money demand at the turn of the month was moderate, and day-loan rates began immediately to decline. The recent money market liquidity has been largely due to the temporary availability of public funds.

Reich receipts from taxes in September totalled Rm. 750.3 millions, against Rm. 661.5 millions in September, 1933; and in April-September (half of the financial year) totalled Rm. 3,963.7 millions, against Rm. 3,391.8 millions in 1933. The official estimate is that of the Rm. 572 millions' increased yield only Rm. 136.8 millions resulted from taxation changes or special circumstances, and that there was an effective increased yield of Rm. 435.2 millions (of which Rm. 190 millions goes to the States). Owing to the post-dated liabilities arising out of the public works programmes, the increased yield is of course not available for expenditure.

Savings bank deposits show a new rise to Rm. 12,213 millions at the end of September, and are Rm. 2½ milliards higher than in September, 1932, when there had been a heavy decline due to the banking crisis of 1931. Savings banks in the first half of 1934 invested Rm. 390 millions in public works credits.

Comment has been caused by a statement of the President of the Reich Board for Unemployment that this institution may henceforth invest its funds in competitive private industry. Hitherto, for various reasons, including "a desire to keep the export industries free from the suspicion of dumping," it has seemed undesirable to dislocate the natural competition of business by using public funds. But as the exchange situation compels the home production, or replacement by substitutes, of hitherto imported raw materials, and as this imposes on private industry a risk which it cannot always bear, the question must be raised whether unemployment funds should not go "into the sector of private industry." This intimation has not been well received by private manufacturers.

BERLIN, November 7.

AUSTRIA

PUBLIC WORKS PROGRAMME

REPORTS of trade and industry are not unsatisfactory. Business in the heavy industry has improved, mainly owing to the public works programme and the improvement in export trade, which affects steel, electric goods and other articles, including munitions. Iron ore output amounted in September to 46,000 tons, compared with 30,000 tons last year. The index of crude iron output decreased from 49 in the previous month to 43, crude steel output from 71 to 57, and rolled goods output from 75 to 51; yet the figures are much higher than they were last year. The fall is probably in part seasonal. Latest figures show an increase in cotton yarn output in August from 110 to 118, and in the orders on hand from 77 to 95. The weaving mills are fully occupied.

Unemployment has continued to decrease until late in the autumn. In the middle of October the unemployed

Branches and Agencies throughout the East

in receipt of relief numbered 243,000, against 280,000 last year. The City of Vienna is comparatively worse off than the Federal States. In August Vienna had 180,000 unemployed in receipt of benefit, against 177,000 last year; while the total of wages and salaries paid went down from 89 to 84 million schillings, which figures, however, also reflect wage cuts. It is assumed that the City of Vienna will shortly put into rapid execution the big public works programme which has been decided on. In placing its orders, the Municipality is giving special attention to the interests of the trades and industries affected. The protection of middle-sized firms is also sought by a new trade law, which, though abolishing the prohibition of new businesses, still makes it very difficult to open a shop. Whereas in previous years the law was hard on profiteering, there is now a special legal apparatus to prevent price-cutting. This is of particular significance to the consumer, as free competition among traders is being constantly narrowed.

CHEAPER MONEY

For several weeks the Stock Exchange has been remarkably firm. In the gilt-edged market there have been very lively turnovers and considerable rises. The tone of the share market is also favourable; but the chief interest is devoted to gilt-edged securities, which enjoyed rises in October as follows:—

	Oct. 1st	Oct. 27th
7% League of Nations loan (Austrian tranche)...	506	526.50
7% International Federal Loan, 1930 (Austrian tranche)	109.60	114.15
7% International Federal Loan 1930 (English tranche).....	2,070	2,222
7% Housing Loan.....	76.75	81.65

The rise is due partly to very easy money and the low rates being paid on bank deposits. The Government desires a still further cheapening of money, however, to assist industry on the one hand and the public debt service on the other. The rise in building shares is particularly welcome in view of the negotiations now taking place for the conversion of the League of Nations Loan. Another factor making for cheap money is the reluctance of the banks to take money on current account from other monetary institutions, and especially from the savings banks; the banks do not know what to do with the money. As a result, the savings banks and other institutions are becoming stronger buyers of bonds, and the consequent rising tendency is bringing purchasers from the general public to the market.

VIENNA, November 5.

HOLLAND

THE ANTI-GOLD MOVEMENT

A GREAT many pressing problems await solution by the Government, and it is becoming evident that dissensions exist in the Cabinet. The agitation against the gold standard is now being conducted in public, but the opinion still prevails that the Government will maintain their opposition to devaluation, especially as the negotiations between the gold bloc countries are still in progress. In the annual re-

ports of various industrial undertakings, however, it is openly declared that the process of price deflation in Holland is not making any progress, and competition with foreign countries is thereby being rendered impossible. Others argue that devaluation would not afford the slightest relief to an importing country like Holland, since she would have to pay higher prices for all her imports. And there is no sign at present of the balance of trade growing more passive.

The German-Dutch Commercial Treaty expires at the end of this year, and negotiations for a renewal were to have been begun by November at the latest. It is now stated that no negotiations for a new treaty can be resumed for the present, as it is considered that the character of a new treaty would be entirely dependent upon the way the clearing agreement works in practice. Discussions will therefore only concern the extension of the Treaty for a short period, and a few minor amendments.

FOREIGN TRADE STILL FALLING

The most striking feature of the foreign trade returns for September is the unprecedentedly high proportion which exports bear to imports, namely, 88.4 per cent. In the preceding month this percentage was 77.2, and in September last year 66.4. The value of imports in September was 77,745,000 guilders (in August 89,378,000) and of exports 68,698,000 guilders (in August 68,851,000), leaving an import surplus of 9,047,000 guilders (in August 20,527,000). During the first nine months of the years 1931-1934 the value of imports and exports has been as below:—

	(Million guilders)			
	January-September		1933	1934
	1931	1932		
Imports	1,454	970	884	791
Exports	1,019	625	547	534
Import surplus.....	435	345	337	257

The serious decline in Dutch trade with Great Britain, due to the Protectionist policy of that country and the extremely low prices prevailing there, will be seen from the following table:—

[January-September	Imports from Great Britain		Exports to Great Britain	
	Tons (thous. omitted)	Value (mill. guilders)	Tons (thous. omitted)	Value (mill. guilders)
1931	1,565	120	1,457	250
1932	1,286	88	1,074	124
1933	1,198	80	768	96
1934	1,329	74	861	106

Holland's active balance of trade with Great Britain has dropped from 130 million guilders in the first nine months of 1931 to 32 millions this year.

The Amsterdam capital and money market continues to be very liquid. Numerous 4 per cent. conversion loans of some of the big municipalities have been successfully launched, and a new 4 per cent. Netherlands Indies loan is expected shortly, of which 250 million guilders is earmarked for consolidation of the floating debt, and further amounts for conversion of some 4½ per cent. loans.

In order to relieve the distress in dairy and cattle farming in the Netherlands the Minister of Economic Affairs has issued a decree of far-reaching importance. The most drastic of the decisions is to order the slaughtering of 150,000 cows; the meat is to be tinned for distribution to the unemployed and to large families in needy circumstances. Through the policies being pursued by foreign countries the prospects of exporting Dutch dairy produce on any scale have become more and more remote; so that drastic measures had to be adopted if our dairy and meat industry was to be saved from extinction. In addition, it has been decreed that the levy on beef is to be reduced from 20 per cent. to 10 per cent. as from to-day for a period of two years. This should lower prices and consequently stimulate consumption.

AMSTERDAM, November 6.

JAPAN

ECONOMIC CONSEQUENCES OF THE TYPHOON

THE Kamsai district, which was visited by the typhoon of September 21st, is by far the most important commercial and industrial centre in this country. The effects of the devastation are apparent in a number of economic indices. Foreign trade was affected largely by the dislocation, caused by the high wind and tidal wave, of port facilities in Kobe and Osaka. The September returns show that, as compared with the preceding month, imports and exports fell by 27 million yen and 38 million yen respectively. In comparison with September, 1933, however, imports advanced by 20.4 million yen, while exports decreased by 10 million yen. Industrial production also suffered. The output of cotton yarn and rayon yarn declined by 1,059,000 lbs. and 610,000 lbs. respectively as against the preceding month's figures. Commodity prices have advanced sharply. The Bank of Japan's wholesale index number for September registered a rise of 1.3 per cent. on the month. Cereals and building materials contributed largely to the advance, reflecting the immediate effects of the typhoon. The aggregate value of all shares listed at the Tokyo Stock Exchange on October 1st declined by 187.2 million yen, or 3.1 per cent., as against a month ago.

Damage done by the typhoon to factories in Osaka is officially estimated at 27.9 million yen, the number of factories affected being 1,230. Though it will take a couple of months in some cases to restore equipment, rehabilitation is generally making rapid progress, and operations have been resumed in many cases. Agriculture suffered far more heavily. Damage to the rice crop is placed at 250 million yen. This, together with drought and flood damage amounting to 269 million yen in other districts and a loss of 300 million yen from a poor cocoon crop and a lower price for cocoons, brings the total loss in the farmers' income for the year to far above 800 million yen, according to tentative official estimates.

The Department of Agriculture and Forestry forecasts the rice crop for the country as at September 20th at 57,026,000 koku, or a decrease of 13,801,000 koku (19.5 per cent.) upon the actual yield of last year, and 5,539,000 koku (8.9 per cent.) below the five years' average. When damage done to the crop by the typhoon is taken into account, the year's crop shows a further decrease of 4,672,000 koku, bringing the total reduction up to 26 per cent. upon the actual yield of 1933 and to 16 per cent. below the quinquennial average. This is the smallest crop since 1913. The Korean crop prospects are also reported to be remarkably poor, and are put at 16,711,000 koku, a material decline of 1,481,000 koku (8.1 per cent.) upon last year's actual harvest. The wheat and rye crops, however, have been very good this year, though the barley crop has again been poor. The total yield of wheat and allied grains (excluding that of Hokkaido) amounted to 21,925,000 koku, an increase of 2,042,000 koku (10.3 per cent.) as against last year, and 2,081,000 koku (10.5 per cent.) above the average for the last five years.

The output of spring cocoons totalled 48,379,000 kamme, a decrease of 1,639,000 kamme (3.3 per cent.) against last year, and their value was estimated at 117,310,000 yen, disclosing a disastrous decline of 181,093,000 yen (61 per cent.). The estimated crop of summer and autumn cocoons was placed at 36,644,000 kamme, a decrease of 14,500,000 kamme (28.4 per cent.) upon the actual output of a year ago. Their value is put at only 80,616,000 yen, showing a substantial reduction of 121,109,000 yen (60 per cent.). The combined cocoon production for the year amounted to 85,023,000 kamme, valued at 197,926,000 yen, compared with 101,162,000 kamme, at 500,128,000 yen, for 1933.

BIG INCREASE IN PROFITS

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit-and-loss accounts of Japanese joint-stock banks and industrial joint-stock undertakings, aggregate net profits of 250 banks for the first half of this year totalled 84,495,000 yen, an increase of 7,024,000 yen upon the second half of last year. The total net earnings of 1,000 industrial companies for the June half-year amounted to 299,659,000 yen,

representing a marked increase of 20,404,000 yen as against those earned by the same concerns in the December half-year of 1933. The great majority of the categories, particularly textiles, sugar, mining, shipping and rubber, showed considerable increases in profits, while the earnings of tanneries, paper, stock and produce exchanges, warehouses, and railways and tramways disclose decreases, big or little. The ratio of net profits to capital was 9.19 per cent., and that of amounts put to reserve was 1.15 per cent. of capital. In the preceding half-year the profit percentage was 8.72 per cent. and the reserve percentage was 1.23 per cent. Out of the total, 73 industrial companies reported deficits for the June half-year, aggregate net losses amounting to 12.6 million yen, as compared with 88 companies having the combined loss of 6.2 million yen in the December half-year of 1933. The following table gives the comparison for profits in the last three half-years:—

	(000's omitted)			
	No. of Companies	1st half-year, 1933	2nd half-year, 1933	1st half-year, 1934
		Yen	Yen	Yen
Banks	250	73,935	77,471	84,495
Industrial companies	1,000	242,208	279,255	299,659
Total	1,250	316,143	356,726	384,155

The rise has been steady and also fairly widely diffused. TOKYO, October 20.

CANADA

BUSINESS QUIET AND PATCHY

BUSINESS is experiencing a lull. The Statistical Bureau's "physical volume of business" index for the week ending October 6th was 94.1, compared with 85.2 for the parallel week of 1933 and a high point of 102.3 reached on September 8th. The carloading figure for the week ending October 6th at 53,050 cars, showed a gain of 2,503 cars over the figure for the previous week, but was 148 cars below the figure for the parallel week of 1933. In the West wheat marketings have suffered from adverse weather. The export demand is still disappointing, and visible stocks of Canadian wheat on October 5th were placed at 230 million bushels, compared with 235 million bushels at the corresponding date in 1933. Grain prices are more or less stationary, but farmers' purchasing power will undoubtedly be higher during the coming winter than last year, as the prices of many farm products have risen.

Industrial activity is somewhat patchy, but some of the iron and steel plants have been helped by orders for rails. Building construction, which enjoyed a slight spurt in August, fell off in September. The mining industry continues to expand, and Canadian production of gold in August, at 264,870 oz., showed a gain of roughly 19,000 oz. over the July figure, and was the highest monthly output since June, 1932. The prospects for the silver-mining industry have also been improving. In the lumber business export trade is still fairly good.

The Federal Government, within a fortnight after the opening of the books, had its refunding loan of \$250 millions oversubscribed by some \$33 millions. Full allotments have been given to subscriptions up to \$25,000, and subscribers of larger sums have been allotted quotas ranging from 50 per cent. upwards. The banks, feeling that their holdings of Governmental securities were sufficiently big, did not take nearly as large a proportion of this loan as of its predecessors, and the impression prevails that American investors, anxious about the financial outlook in their own country, contributed very substantially.

AN "ANTI-DEFLATIONARY" POLICY

The Government intends to persevere with what is called in Ottawa an "anti-deflationary" policy of currency expansion. In September there was a drop of \$2,847,000 in advances to the banks under the Finance Act, and new currency to the extent of \$11,521,660 was issued as Dominion Notes, which meant a net expansion of \$8,674,660. The total increase in Dominion Notes since authority was given to expand the currency in June amounts to nearly \$36 millions.

BARCLAYS BANK (CANADA)
MONTREAL & TORONTO

In pursuance of its easy money policy the Government has induced the banks and other financial institutions to lower their rates of interest on savings deposits. Mr Rhodes, the Finance Minister, has announced that on November 1st all the chartered banks, the Federal Post Office Savings Bank and the Ontario Provincial Savings Banks will cut their interest rate on deposits, which had been reduced from 3 to 2½ per cent. on May 1, 1933, to 2 per cent. Other banks, chiefly savings banks in Quebec, will make a similar reduction on December 1st, and trust and loan companies, which take deposits, will reduce their rates from 3 to 2½ per cent. on January 2, 1934. It is also understood that the majority of the banks will lower their call loan rates by one-half per cent.

Fresh trouble has developed in the newsprint industry. The leaders of the industry, faced with rising costs and demands for higher wages, had planned to secure an increase of the price of newsprint in 1935 contracts. But one of the larger producers, the St. Lawrence Pulp and Paper, was suddenly found to have made commitments with a newspaper organisation in the United States which is a large consumer on the basis of the old price. So the other producers have made strong representations to Mr Taschereau, Premier of Quebec, and he has declared that he believes an increase in the price of newsprint to be imperative, and that if any Quebec company continues to ignore the common good his Government will withdraw from it special concessions recently made and take all measures necessary to protect the interest of the province.

Former features, e.g. curves of price movements in the various markets, are retained, but the new Review appears in a coloured cover, is copiously illustrated, and very much more presentable in form.

MONEY AND BANKING

SHOULD BANK RATE BE REDUCED?

ON Monday last the clearing banks announced that they had decided to reduce their minimum rates for loans to the money market from 1 per cent. to $\frac{1}{2}$ per cent. in the case of loans against Treasury bills and other bills discountable at the Bank of England—loans against bills ineligible for discount or against Treasury bonds or other short-dated securities remaining at the old rate of 1 per cent. The reduction was to apply to both day-to-day money and weekly fixtures, and new loans and renewals.

In view of the breakdown of the clearing banks' agreement to maintain minimum buying rates for Treasury bills, this reduction in their loan rates was only a recognition of the facts. It was clearly absurd for the clearing banks to continue to charge the discount market 1 per cent. for loans when the bills against which the loans were made were yielding the borrowers less than $\frac{1}{2}$ per cent. Had the clearing banks continued to charge the higher rates, two consequences must have followed. Every effort would have been made by the market to borrow from other lenders instead of the clearing banks: and some members of the market would have ceased to operate in the market before further inroads were made into their capital.

The collapse of discount rates and this partial reduction of loan rates raise the important question whether there is still any justification for maintaining Bank rate at as high a figure as 2 per cent. Under normal conditions Bank rate can be compared to the North Pole. Every other interest or discount rate revolves round it, but business is very rarely done at it. To-day the analogy is truer than ever. The market is so swamped with money that resort to the Bank is only necessary upon exceptional occasions such as the end of the banking half-year. The old rule that short loan rates were a point below Bank rate with market discount rates somewhere in between has also gone by the board. No one to-day pays any attention to Bank rate, and many people have by now almost forgotten where it stands.

Nevertheless, it is worth while discussing the arguments for and against a reduction. In favour of a reduction, it may be said that Bank rate has obviously become ineffective and bears no relation to the facts. The only result of maintaining it at 2 per cent. is to penalise the market by charging them $2\frac{1}{2}$ per cent. when twice a year they have to come to the Bank. With discount rates at $\frac{1}{2}$ per cent., this is a severe, unnecessary and unmerited penalty. Again, ought Bank rate to become purely conventional and remain unchanged for months or years at a time? It is a strong objection to this protracted rigidity that when a change does occur it exercises a psychological influence out of all proportion to its real importance.

There are, however, still weightier arguments in favour of a reduction in Bank rate. First and foremost, the Government is avowedly relying upon cheap money to provide the necessary stimulus to trade. The chain of cause and effect is well known. When short money is cheap and plentiful and the tender issues of Treasury bills diminished, market discount rates are driven down and the banks and discount houses are forced out of bills into gilt-edged stocks. There may be some danger in this excessive holding of securities which can only be realised on the Stock Exchange; but its immediate consequence is a boom in the gilt-edged market. In the present case this has already reached the point where it is driving investors in increasing numbers into securities of a more industrial character; it has already brought down the cost of new capital to industry and is slowly reviving the new issue market. Equally it is paving the way for new issues of Government and municipal stocks at lower rates to finance public works. A cheap money policy of this kind may have its dangers, or alternatively may be slow and

ineffective; but at least it is both an intelligible and a reasonable policy. Human nature being what it is, a reduction in Bank rate would come as a powerful psychological aid to its fruition and might even provide a stimulus to the trade revival just when it seems to be lagging. If the time is approaching for the issue of fresh loans for housing and other constructive purposes, the case for a reduction in Bank rate receives further strength.

The other argument in favour of a reduction relates to our external position. It is generally agreed that one source of difficulty has been the ebb and flow of foreign panic money, and it is also agreed that the presence in London of an excessive amount of this money has definite disadvantages. A reduction in Bank rate would be interpreted abroad as a signal both that our financial position was assured and that London was an unremunerative centre for idle money. The result might be that such foreign money as was already in London might remain here, especially as its holders already realise that its earnings have for long been commensurate with a Bank rate of $1\frac{1}{2}$ rather than 2 per cent. On the other hand, fresh and unwanted supplies of foreign money might well be deterred from coming here.

What are the arguments against a reduction? It can be argued that neither the international situation nor the immediate outlook for sterling is clear enough to justify a reduction. We are not convinced that there is much force in this argument, but the situation of the foreign exchanges must not, of course, be left out of account. A more pertinent argument lies in the likely effect of a reduction upon the City of London and the average investor. It is already being suggested in the City that bill-brokers are loaded up with Government securities to such an extent as to be a potential danger to the technical stability of the gilt-edged market; and this was a strong argument against the rupture of the banks' agreement to maintain discount rates. The banks, too, have raised their investments to the unusually high proportion of 30 per cent. of their deposits; and while their deposits have been sinking during the last year, their total of investments remains unchanged. Already $2\frac{1}{2}$ per cent. Consols have risen to the point where they begin to yield less than 3 per cent. We must seriously consider whether it is advisable to stimulate still further the existing boom in the gilt-edged market.

We must also consider the psychological effects of a reduction in Bank rate upon the general public. When some seven years ago the American Reserve Banks lowered their rates they gave the signal for one of the most stupendous and disastrous stock market booms in American history. It is not suggested that parallel conditions exist in England to-day, but we should ask ourselves if there would be any danger of starting a wave of barren speculation, quite other than sound and productive investment for enterprise. It would be disastrous if the savings of the nation were dissipated in speculation just when they were needed to finance measures of sound progress and reconstruction.

Such are the main arguments on either side. What is to be the final verdict? On balance, it is wisest in our view to recognise well-established facts; and the central fact to-day is that short-loan and discount rates correspond far more closely to a Bank rate of $1\frac{1}{2}$ per cent. than to the existing rate of 2 per cent. There is no obvious reason for long delay. If a lower Bank rate appears to be having any undesirable repercussions, it can always be restored to 2 per cent., and, as we have said, it would not be at all a bad thing if Bank rate were subject to more frequent changes. In the meantime we think that a case for reducing Bank rate from 2 to $1\frac{1}{2}$ per cent. is well grounded, and it is a little surprising that a decision to that effect was not reached last Thursday.

FINANCIAL NOTES

The Money Market.—On Thursday morning the decision of the clearing banks to lend money at $\frac{1}{2}$ per cent. against Treasury bills and other bills discountable at the Bank of England took effect. The sole test for commercial bills eligible for discount is that they should bear two good English names, one of which is the acceptor. The bills can be of any reasonable maturity. As Treasury bills predominate in the market to-day, it is probable that in practice the banks will make the bulk of their loans at $\frac{1}{2}$ per cent. Several large outside lenders are quoting $\frac{1}{2}$ per cent. for loans against all bills and "shorts" without distinction, and so it will be natural for bill-brokers to lodge Treasury and other eligible bills at the banks, and to borrow against other forms of security elsewhere. But outside lenders will still have regard to the merits of each security lodged as collateral, and will not necessarily be prepared to renew loans indefinitely against Treasury bonds.

	Oct. 18, 1934	Oct. 25, 1934	Nov. 1, 1934	Nov. 8, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	$1\frac{1}{2}$
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$1\frac{1}{2}$	$1\frac{1}{2}$ – $1\frac{3}{4}$	—	—
(b) Others.....	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ – $1\frac{3}{4}$	$1\frac{1}{2}$
Three months' bank bills	$1\frac{1}{2}$ – $1\frac{3}{4}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ – $1\frac{3}{4}$

Money is easy at $\frac{1}{2}$ per cent. Early in the week there was very little business in bills, as buyers were waiting for the new loan rates to take effect. Last week the Treasury bill tender rate fell sharply from 9s. 7.42d. to 6s. 7.66d. per cent., and this week hot Treasury bills have been quoted at $7\frac{1}{2}$ per cent. and this year's maturities at $\frac{1}{2}$ per cent. Bank bills are $1\frac{1}{2}$ – $1\frac{3}{4}$ per cent.

The Bank Return.—Currency withdrawals at the end of the month explain the further slight increase in the circulation. A similar movement occurred a year ago, and was followed by a contraction in mid-November. The Christmas expansion in the note circulation is not due to begin for another three weeks.

	BANK OF ENGLAND				
	Nov. 8, 1933	Dec. 27, 1933	Oct. 24, 1934	Oct. 31, 1934	Nov. 7, 1934

Proportion 50.1% 37.3% 48.5% 47.2% 46.9%
In the banking department, public deposits have fallen by £6.9 millions as the result of the 5 per cent. Conversion Loan and 4 per cent. Funding Loan dividend payments on November 1st. Other deposits are also lower as a result of dividend payments by some of the Bank's private customers. In consequence there has been an increase of £6.8 millions in bankers' deposits.

The Foreign Exchanges.—French political difficulties have naturally weakened the franc, but business in London was limited, and on Thursday the rate was steadied by British official support and by the covering of part of the insurance money due on the loss of *l'Atlantique*. The market closed at Frs. 76 $\frac{1}{2}$ spot, and 16 centimes discount for three months' francs. Dollars have been a more active market, but although commercial buying of dollars continues, sterling has improved during the week from \$4.98 to \$5.00 $\frac{1}{2}$. It is difficult to trace the origin of the sales of

Foreign exchange dealers

Messrs. Marmolin, Rydberg, Holmberg, and Markland, of the SKANDINAVISKA KREDITAKTIEBOLAGET, Stockholm, offer you a complete foreign exchange service. Call Stockholm 0101.

dollars, but there may have been some American selling due to fears of inflation and also French buying of sterling through New York. There is still an active demand for gold in London, and in addition to the demand from hoarders, it is believed that gold is being bought forward as a hedge against bear forward sales of gold bloc currencies, as an appreciation of the latter would be accompanied by a rise in the London price of gold, while a depreciation need not entail a fall in the price of gold.

Supporting the Franc.—Early on Thursday morning it became known in the City that the British Control was buying francs at a rate of Frs. 76 $\frac{1}{2}$. Apart from rumours of a very limited intervention on the day following the Marseilles assassinations, this is the first time for many months that the Exchange Equalisation Account can have been a buyer instead of a seller of francs. As was inevitable, French political uncertainties have driven the franc down against both the pound and dollar, and last Wednesday the movement was accentuated by a reaction after abortive bull operations the previous day. The result was that on Wednesday the dollar appreciated in Paris to Frs. 15.18 $\frac{1}{2}$, or to beyond the export gold point, and withdrawals of gold from the Banque de France for shipment to New York were promptly arranged. A serious efflux of gold from France might under existing conditions have undesirable political repercussions, and so it is conceivable that co-operation between London and Paris to support the franc was at once arranged. As there is now no pressure upon the pound from New York, any attempt to support the franc against the pound would probably succeed in supporting the franc against the dollar as well. The advantages to us of assisting the franc need not be emphasised. From the wider standpoint we have everything to gain from trying to prevent the addition of monetary difficulties to the present French political difficulties. From a narrower point of view these operations enable us to make good some of the Exchange Equalisation Account's recent losses of gold and devises.

New York Money and Banking.—Money is easier than ever. The official call rate is unchanged at 1 per cent., but the open market rate for 90-day bankers' acceptances has been reduced from $1\frac{1}{2}$ – $1\frac{3}{4}$ per cent. to $1\frac{1}{2}$ – $1\frac{1}{2}$ per cent. Six months' bills are unchanged at $1\frac{1}{2}$ – $1\frac{3}{4}$ per cent. \$75 millions of six months' Treasury bills were placed at the week-end at an average price of \$99.89 per cent., equivalent to just under $\frac{1}{2}$ per cent. per annum. Brokers' loans are returned at \$1.435 millions. Owing to changes in the method of compilation, this figure is not comparable with the previous week's figure of \$636 millions, but it is believed that there was a reduction of \$18 millions on the week. Following the decision of the American Bankers' Association, the Investment Bankers' Association have

appointed a liaison committee to co-operate with the Administration in order to hasten recovery and reopen the capital markets. Security issues for the first nine months of 1934 totalled \$1,033 millions. This is double the corresponding figure for 1933, but one-fifth of the 1925-28 average. This year's increase is mainly the result of State and municipal issues. Silver remains steady at 53 cents an ounce. An executive order issued this week grants permanent exemption from nationalisation to all silver which hitherto has been temporarily exempt. The latest monthly Treasury returns show that the net balance in the general fund fell during October from \$2,193 to \$1,812 millions, while total cash assets fell from \$10,325 to \$10,065 millions. It is rumoured that the American authorities have been supporting the franc. Mr Peek, the special adviser to the President on foreign trade policy, in an address to the National Foreign Trade Convention, emphasised the importance of the Government's stabilisation fund as an instrument for regulating the exchanges and facilitating foreign trade, and invited the Convention to appoint a committee of traders to co-operate with the import and export banks. Nevertheless, in view of the general financial position of the Government, opinion in New York felt even before the result of the elections was known that it would be difficult to avoid further inflation and devaluation.

* * *

The End of the Sondermark.—The Anglo-German Payments Agreement of November 1st brings to an end the sondermark experiment which was begun under the Anglo-German Exchange Agreement of August 10th. The new Agreement provides that the Exchange Agreement shall terminate as from November 1st, except as regards payments which fell due before that date. All reichsmark sums notified in respect of such payments for acceptance into the special account of the Bank of England shall be paid into that account. This proviso apparently embraces not only the unsold balance in the special account, but also the larger sum awaiting transfer to that account. Sondermarks as defined above will continue to be sold by the Bank of England for the account of United Kingdom exporters up to the time limit of February 1, 1935. Any sondermarks left over at that date shall, to such extent as the United Kingdom may request, be liquidated by means of, and as a first charge upon, the foreign exchange earmarked under the principal article of the new Agreement for the payment for United Kingdom exports. In effect they will rank *pari passu* with other outstanding commercial debts due from Germany. The sondermark position during the last few weeks is illustrated in the following table:—

Date	Unsold Balance Rm.	Awaiting Transfer to Special Account Rm.	Sondermark Sales Rm.
October 13	5,200,000	11,400,000	...
" 17	5,600,000	11,400,000	1,027,000
" 20	5,550,000	11,600,000	676,000
" 24	5,450,000	13,750,000	1,201,000
" 27	5,100,000	14,765,000	784,000
" 31	4,650,000	14,750,000	1,184,000
November 3	4,750,000	14,150,000	615,000
" 7	4,850,000	13,975,000	1,045,000

This table shows that the original Exchange Agreement was on the whole proving unsuccessful, for reichsmarks awaiting transfer to the special account have been "unremittably" accumulating. It is also open to question whether the total quantity of actual and potential sondermarks, amounting on November 7th to Rm. 18.8 millions, will be entirely liquidated when the time limit is reached three months hence.

Chile's Debt Proposals.—The Bill presented by the Chilean Finance Minister to Congress in Extraordinary Session on October 22nd provides—in brief—for the handing over to the Caja Autonoma de Amortisation de la Deuda Publica (created in September, 1932, for the purpose of attending technically to the Chilean public debt) of revenue from the Government profits from the Nitrate Sales Corporation as well as from taxation on copper ore-mining companies in Chile. Of the total amount available, 50 per cent.

is to be used for the payment of interest on the external debt, and the balance—after deduction of certain expenses—applied to the amortisation of the capital amount. The terms of such amortisation are to be agreed upon between the bondholders and the Caja de Amortisation; but, apparently, once such an agreement has been arrived at, bondholders' rights will be limited to the stipulations of such agreement. While fully recognising Chile's special difficulties, and the obvious desire to regain her credit prestige, bondholders may need considerable persuasion to forgo entirely their present full rights for more limited claims, especially when a waiting policy might bring better terms. On the other hand, while accepting the genuineness of Chile's gesture, it may be stated that there is an important body of opinion in Chile itself which holds the view that conditions there have not yet improved sufficiently to justify consideration of foreign debt proposals. The all-important question of exchange resources depends upon the favourable balance of trade; while this, owing to greater exports, has expanded markedly, on the other hand imports also now show a relatively important increase, it being obviously necessary for Chile to make import concessions in order to expand foreign markets for her own products. Indeed, in its latest report, the Central Bank of Chile states that the present position justifies prudence in judging future prospects, and appears to be of opinion that the Chilean internal recovery may reach its limit in the not distant future. The point of view of the British bondholder is discussed in an Investment Note on page 883. Briefly, the future of Chile depends upon international recovery with increased markets for nitrate, etc., in order further to assist the internal recovery which has mainly resulted from compensation treaties with eleven nations. Government income from nitrate cannot yet be computed, but the situation in the copper market holds out little hope of much, if any, taxation income from that source.

* * *

British and Continental Banking Company.—The results of this banking house for the past few years show that, even in these days of international restriction and uncertainty, the smaller international institutions are able to do a certain amount of business and earn a reasonable profit. Rather over a year ago this bank realised that the scope for its activities had become narrowed, and it very wisely reduced its capital. In the previous year, too, it had earned a net profit large enough to wipe out accumulated losses of £13,000 and to leave £16,000 over for allocation to reserve and payment of a small dividend. Since then it has consistently earned the very reasonable return of £14,000 on a capital of £100,000. The accounts of the bank are summarised below:—

	(£'000)	September 30th;	
	1932	1933	1934
Liabilities—			
Capital.....	350	100	100
Reserve	60	65	75
Current accounts	280	214	164
Deposits, etc.	187	405	403
Acceptances	Nil	Nil	134
Assets—			
Cash	242	131	156
British Treasury bills, etc.	120	154	45
Other bills	197	226	250
Investments.....	Nil	109	184
Advances, etc.....	317	165	107
Net profits	29	14	14
To reserve	5	10	10
Dividends.....	3%	3½%	4%

The latest accounts show a very liquid position. Current accounts are more than balanced by cash in hand and at call and by British Treasury bills (including short-dated Government securities). Investments consist of £80,000 in French railway sterling bonds, guaranteed by the French Government, and £104,000 in other securities, mostly French securities quoted in Paris. The item "advances, etc.," includes deposits in London and Paris, and so is more liquid than this omnibus title suggests. The report states that, owing to the uncertainties of the foreign exchange market, there has recently been some decline in deposits by French customers. Current events suggest that there may be a return of French money to this and other London houses.

THE STOCK EXCHANGE

ARGENTINE RAILWAYS

INVESTORS who have duly applauded Argentina's good faith with her bondholders may spare a little sympathy for those who have helped to pay the bill. This year's Argentine railway reports, indeed, are in the nature of an "account rendered" for the achievement of a 4½-5 per cent. yield basis for the Government's credit in London. With relentless clarity, they set out the economic consequences, to the companies, of last year's deliberate re-depreciation of the peso and the restriction of exchange facilities. Last November, almost in a night, the value of the peso was reduced by 20 per cent. Subsequently, the Government has been compulsorily buying export bills at 15 pesos to the £, and selling them at rates fixed by tender, averaging over 17 pesos to the £. The railways, in the queue of applicants, have yielded precedence to Government debt remittances and "essential imports," and even after recourse to the limited and still more unfavourable "unofficial market," have been unable completely to fulfil their requirements.

There is an academic air about the managers' reports this year, with their customary detailed analyses of small percentage changes in receipts and expenses. What is the significance to stockholders of a rise of £25,386 in last year's net working receipts on the B.A. Great Southern Railway, when exchange losses increased by £933,844 and totalled £1,447,734? Even the latter figure takes no account of £601,920, which has been charged to the General Reserve Fund, and of yet another potential loss for which no balance sheet reserve has yet been created. The crushing weight of exchange "differences" may be inferred from the following table, for the four largest railways:—

Year to June 30, 1934	B.A. Gt. Southern	B.A. Western	Central Argentine	B.A. and Pacific
Loss on remittances	£896,589	258,242	1,004,819	£664,719

† After adjustments for earlier years. ‡ Of which £317,047 has been charged to general reserve in respect of previous years. § Provision to write down "C" Convention Trust Certificates. || General exchange provision. (a) In addition £601,920 loss on conversion of "Roca" bonds and "C" Certificates charged direct to general reserve fund.

The total exchange differences charged against net revenue last year on the four lines (excluding amounts charged to reserve), were £3,957,038, against £1,184,997 for 1932-33 and £77,270 in the last "prosperity" year. In its absence, 1933-34 would have ranked as a moderate "recovery" year, for net operating receipts were higher than in 1932-33 on every line (particularly on the Central Argentine), despite the failure of last season's harvest to realise early expectations, and the continued impoverishment of many areas. Exchange losses alone bear responsibility for the fact that the Great Southern, which earned 1 per cent. on its ordinary capital in 1932-33, failed to earn more than one-third of its preference requirements last year. The Western earned 83 per cent. and the Central Argentine only 7 per cent. of preference requirements, but the Central's balance was struck after using £306,906 to write down Convention Trust "C" certificates to par. The Southern and the Western are generously distributing full preference payments. The Central Argentine, however, has passed them all, thereby leaving the senior preference stockholders, whose rights are non-cumulative, in a worse position than the second preference, which are cumulative. Only half the first preference dividend, declared last year, is actually being paid this time. The unhappy Pacific company, part of whose Transandine system was obliterated by

a natural calamity last January, has again been compelled to default on part of its debenture requirements, and to add to the accumulated debit balances carried forward under a scheme of arrangement. The general results achieved by the four companies last year are contrasted with those of earlier periods in the following table:—

	B.A. Great Southern	B.A. Western	Central Argentine	B.A. and Pacific

* After adding other income and deducting other expenses and exchange losses. † £601,920 loss on conversion of "Roca" and "C" Trust Securities charged direct to general reserve. (c) Before charging provision for writing down "C" Convention Trust Certificates, £306,906.

Such improvement as occurred in net currency receipts last year was due to the carriage of rather more goods (but fewer passengers) and to decreased working expenditure. Receipts were better in the second than the first half of the year. Lower running expenses (with some exceptions) were due mainly to further economies, to wage cuts, and to subnormal additions to renewals funds. Differences between individual systems, in this important respect, vitiate direct comparison between so-called "net receipts." The Great Southern charged revenue with only £246,585 for the General Renewal Fund last year, while the Western made no revenue allocation to the Fund. The Central Argentine provided £600,000 for renewals, against £908,012 in the previous year. Maintenance allowances, generally, have been severely cut. How far "physical" arrears will be a first charge on more prosperous times is a matter for conjecture. Receipts and expenditure are analysed in the table overleaf.

Stockholders, in short, may write off 1933-34 as an unexpectedly disappointing year, which left the railways much where they were as regards operating revenue, but considerably put back the "earnings line," as a result of exchange factors outside their control. What are the prospects for 1934-35? The Argentine economic position shows indubitable signs of improvement. Wheat growers have been helped by the rise in prices, and current crop reports are favourable. Argentina, indeed, is exhibiting many characteristic signs of a primary-producing country in the first stages of recovery. Unless matters take an unexpectedly unfavourable turn, the railways may look, perhaps, for some little alleviation rather than an accentuation of their exchange difficulties. How far the increase in Argentine exports from 580.7 million paper pesos in the first half of 1933 to 717.6 millions in the first half of 1934, has been stimulated by the depreciation of the currency, and how far it has reflected conditions outside Argentina's control (e.g. the drought in North America) is

a matter of controversy. The railways, however, may recoup a modest part of their exchange losses by the future "traffic consequences" of the export premium. The Government, in any case, has the less excuse for maintaining a considerable margin between its buying and selling rate for foreign exchange now that world conditions have rendered less urgent the amassing of a substantial fund for wheat relief measures.

Some rise in railway costs, however, is inevitable. The wages award, announced last month, involves the sharing of the fruits of "recovery" with the workers, and the restoration of wage cuts before further preference dividends can be paid. Maintenance and renewals allowances, again, will rise as and when earnings increase. The concessions, if any, which the companies may obtain from the official Committee which is investigating the entire transport problem, are an unknown quantity. At the moment, London market quotations for "assured" interest-paying Argentine railway stocks are near their highest levels for the year. Those of "doubtful" stocks, while well below the year's best, are sufficiently above the lowest depression points to argue a lively discounting of future benefits which may take some time to mature:—

	Highest, 1929-34	Lowest, 1929-34	1934			Yield (%)

† Allowing for accrued dividends.

Except, possibly, for Western ordinary (whose lower quotation than Great Southern ordinary seems anomalous), no ordinary stock will earn a dividend in the near future—quite apart from the incidence of the wages award. Pending an inevitable future reconstruction scheme, the price of every B.A. and Pacific stock shown in the table is to be regarded as in the nature of option money. For the rest, stocks like Central Argentine 5 per cent. redeemable

debenture and Western 5 per cent. preference, whose payments were covered by last year's earnings with a small margin, do not seem likely to be uncovered unless the outlook changes for the worse. The immediate position of marginal stocks, like Great Southern 6 per cent. preference, Western 4½ per cent. preference and Central 4½ per cent. preference, whose dividend is non-cumulative and was not fully earned last year, is more doubtful. The year 1934-35 will include twelve months, against seven, of the lower peso rate, though the railways actually obtained little exchange at the higher rates prevailing until November last year. The weekly traffic figures of the four railways for the eighteen weeks of this year so far show a rise of 13½ per cent. in gross currency receipts and a decline of 17 per cent. in their sterling equivalents. The latter comparison, however, is utterly misleading, for the railways do not remit their gross receipts. Investors must needs wait for the early months of 1935, to learn how far "recovery" is likely to be able to carry its heavy pre-natal burdens.

INVESTMENT NOTES

Gilt-Edged Strength.—The forces making for strength in the Gilt-edged market, which we analysed last week, gathered fresh impetus from the announcement, on Monday, that the clearing banks had decided to reduce their call money rates. Foreign demand for "cloakroom" facilities, in view of the French political crisis, was a contributory source of pressure. It must be long since any direct British Government stock was quoted over 120, as is 5 per Cent. Conversion Loan to-day, though a guaranteed loan (Canadian Intercolonial, 4 per cent, 1878) touched 122½ in 1896. A rise of an entire point in 2½ per Cent. Consols in a single day, again, is a sufficiently rare phenomenon to suggest an element of abnormality in the market. Wednesday's announcement of the Australian conversions, though obviously well-timed, momentarily arrested a movement which in any case would soon have been checked by its own rapidity. That prices, however, have largely held their gains is shown by the following table:—

	Redemption Dates	Month Ago, (Oct. 9) 1934	Week Ago, (Oct. 30) 1934	This Week, (Nov. 6) 1934	Latest Price, (Nov. 8) 1934	Redemption Yield, (Nov. 8) 1934

The *Financial Times* Government Securities Index (October, 1926 = 100) rose from 120.9 on October 9th to 121.9 on October 30th, and 122.9 on November 6th, the latest figure (November 8th) being 122.8. The downward readjustment of long-term interest rates is producing the inevitable "levering up" of prices for securities in the outer ring, including industrial and railway debenture and preference

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

stocks, and even equities. The latter, after a month's reaction, have risen this week against the economic trend, for the increased October unemployment figures and the decreasing traffic "gains" on the railways alike suggest that industrial recovery is limping. The Actuaries' Index of 144 industrial shares (December 31, 1928 = 100) had risen to 72.5 on Tuesday last, as compared with 72.0 a week earlier, after declining from 73.2 a month earlier. The current average yield on this group of equities is 3.67 per cent., against 3.68 per cent. and 3.47 per cent. respectively. Movements in important sub-groups are set out below:—

Group (and No. of Securities)	Prices (Dec. 31, '28 = 100)			Yield (%)		
	Month Ago (Oct. 9)	Week Ago (Oct. 30)	This Week (Nov. 6)	Month Ago (Oct. 9)	Week Ago (Oct. 30)	This Week (Nov. 6)
Banks and discount co.'s (12)	112.3	112.1	112.4	4.18	4.18	4.17
Coal (9)	92.0	91.1	92.4	4.05	4.05	3.99
Cotton (6)	45.8	44.1	45.5	2.30	2.35	2.32
Iron and steel (8)	54.4	51.8	55.0	1.25	1.29	1.23
Home rails (4)	79.4	72.8	74.3	1.43	1.51	1.52
Stores and catering (15)	82.0	81.1	81.9	4.03	4.07	4.06
Brewers and distilleries (16)	114.6	115.2	117.1	3.85	3.81	3.81

For the present, earnings considerations, in the equity share market, are subordinate to the "interest factor." The former, however, will reassert themselves in due course.

* * *

Further Australian Conversions.—By a happy coincidence for Australia, Mr Lyons's Cabinet bargain with Dr. Earle Page, which secures a moderate Government of the Right in office for the next few years, has been simultaneous with a strong upward movement in gilt-edged prices in London. The moment, therefore, is particularly favourable for a fresh instalment of Australia's long-term debt conversion operations. Accordingly, the British Treasury consenting, the cash lists opened and closed on Friday for an offer of up to £14,601,806, in connection with the conversion of nine State issues into a Commonwealth 3½ per cent. stock, 1964-74, the conversion price being 100 and the cash price 99. The loans in question are:—

Maturity Dates	Original Borrower	Amount Outstanding	Present Rate of Interest
1934	South Australia	789,400	3½
1935	Tasmania	137,750	4½
1916/35	South Australia	1,559,150	4
1915/35	Western Australia	2,235,007	3
1915/35	Western Australia	463,110	3½
1920/35	Western Australia	2,496,711	3½
1917/36	South Australia	2,175,815	4
1935/45	Western Australia	3,744,863	5
1920/40	Tasmania	1,000,000	4
		14,601,806	

The list includes stocks with interest rates ranging from 3 per cent. to 5 per cent., the weighted average rate being 4.13 per cent. Six loans to a total of £7,681,128 are compulsory 1934-35 maturities, while three, to a total of £6,920,678, are optional maturities. A further £58,676,633 of Australian stocks will be optionally convertible in 1935, but Australia has so far gained a good deal by following the tactics of Fabius. Since October, 1932, her successive conversions have been made at increasingly favourable rates, as the following table shows:—

Date of Conversion	Amount of Stock	Former Rate of Interest	New Rate of Interest	Issue Price	Maturity Dates of New Stocks
1932—Oct 3	12,360,950	5½	3½	97½	1936-37
1933—Feb. 24	9,621,848	4	3½	100	1935-70
May 30	11,409,965	6	3½	99	1937-38
July 15	17,221,191	6	3½	99	1943-48
Sept. 14	20,951,226	5½ and 6	3½	98	1948-53
Dec. 6	16,647,349	5 and 5½	3½	99	1946-49
Nov. 9	21,636,550	5 and 5½	3½	97	1954-59
	14,601,806	3 to 5	3½	99	1964-74
Total	124,450,892	...	...	...	...

The latest operation involves an annual interest saving of £126,481 in Australian currency and raises the total saving to £2,589,300 Australian, equivalent to £2,065,244 sterling.

Take a Common Problem

—one of greatest importance if you have a family or relatives who rely on your support. It may be disturbing to you to think of them without it. Home comforts, food, clothes, education... all so vitally dependent on your ability to live. Don't gamble with their future welfare—the stake's too big. Play for safety now and SAFEGUARD them. They deserve to be protected from the rigours of reduced circumstances.

THE SAFEGUARD

policy of the Legal & General will provide:—

- 1 A guaranteed income of £3, £6 or £9 per week tax free for a period of years and a cash sum if desired when the income commences.
 - 2 A cash payment of £1,000, £2,000 or £3,000 when the income ceases.
 - 3 For yourself. If you survive the period of your family responsibilities the cash sum of £1,000, £2,000 or £3,000 is payable to you.
- These are, briefly, the "Safeguard" benefits, but they can be moulded to your own individual needs. The cost of this remarkable provision is very moderate and may be reduced by the valuable rebate of income tax which may be claimed. Does "Safeguard" solve your problem? Obtain further details by returning the enquiry form.

German Debt Service.—A rather uncertain market hailed with relief the assurance of full debt service on the "Dawes" and "Young" Loans under the terms of the trade agreement (outlined in last week's *Economist*, page 824) by marking up the loans by ten points on Friday of last week. This week has seen further steady advance in these issues, but the non-Reich loans have been weaker. The Reichsbank announced over the week-end that its option, under the Transfer Agreement, to withdraw the offer of a 40 per cent. cash payment on coupons of these loans falling due between July, 1934, and June 30th next year would be exercised. This act confirms the scepticism with which the original alternative offer of partial cash payment or 3 per cent. Funding bonds was received in London in June. Under the new agreement the moratorium on interest transfers for these loans is to be extended to June, 1936, but the Funding bonds are now to carry interest at 4 per cent. These bonds are guaranteed and are exempt from transfer restrictions during their ten-year currency. As we suggested in a Note on June 16th, page 1322, they may well become the senior German security, in view of their explicit safeguards.

* * *

Chilean Bond Proposals.—During the depression Chile's creditors have been ready to make full allowances for the exceptional difficulties which the country has had to face, with its two dominant export industries of nitrate and copper reduced to a shadow of their normal stature. An excellent credit record in the past had given hopes that Chile would make a strong effort to meet her obligations as soon as her position allowed. These hopes have been perceptibly damped by the introduction of legislation in Chile which, so far as can be judged from cabled reports, proposes to earmark for the bond service the Government's share of profits earned by the new nitrate sales corporation, together with the proceeds of the copper export tax. Of these services one-half is to be applied as interest and one-half as amortisation. Three objectionable principles are

involved in these proposals. First Chile is following the worst precedents of 1934, those of Brazil and Germany, in seeking to impose a settlement on her creditors by unilateral action. Secondly, despite the fact that even the total assigned revenues can only provide a fraction of the normal interest requirement, one-half of the amount is to be applied in redemption at "waste-paper" rates. Chile, apparently, proposes to substitute for her word and bond a deferred equity in a commodity trust of doubtful earnings value. If Chile is content to abdicate her responsibility for a bonded obligation in this way, her future credit will be the slower to recover its high status. Bondholders, while willing to concede a generous settlement, would appreciate a free and spontaneous effort to provide a fixed service. This, in general, is the market value. We discuss the repercussions of Chile's foreign trade position on her debt problem in a Note on page 880.

A Rubber Compromise.—In last week's issue of the *Economist*, page 836, we described a threatened rift in the lute of the rubber restriction scheme, owing to the refusal of the Dutch representatives on the International Committee to agree to a continuance, in 1935, of the 30 per cent. "cut" operative, under an earlier agreement, for the month of December next. The Dutch were insistent that 20 per cent. was the uttermost limit of practicable restriction in their "native" areas, if dangerous social and political consequences were to be avoided. The Committee held a further meeting on Friday, November 2nd, at which a compromise was agreed upon. Export quotas for the first three months of next year were fixed at 75 per cent. of standard allowances. This means, in fact, that permissible exports will be appreciably above the level of December, since the additional 5 per cent. will be calculated on a more generous "quota" basis. The quota allotted to the Dutch East Indies rises from 352,000 tons in 1932 to 400,000 tons in 1935, while Malaya's quota rises from 504,000 tons to 538,000 tons. For the eight areas which have adhered to the scheme the difference between 70 per cent. of the 1934 quota and the 75 per cent. of the 1935 quota is equivalent to an additional exportable 118,450 tons. It may be presumed, therefore, that unless world demand increases with unexpected rapidity, the establishment of a rubber price of 10d. to 1s. per pound, as recently suggested in some quarters, is no longer practical politics. The current price, which recovered from 6½d. to 6¾d. on the announcement of the new agreement, still stands at 6¾d. The implications of last week's events are far-reaching. Unless and until the Dutch authorities solve the problem of enforcing restriction in their native areas, the scheme's practical working will be governed, not by what the majority of members of the International Committee regards as desirable, but by the maximum strain which can be imposed on restriction's weakest link.

The Oil War Composed?—In a review of the American oil "war" in an Investment Note in our issue of October 27th (page 787), we arrived at the conclusion that unless the Federal Government found new ways and means of enforcing restriction at the source of supply—or unless the Texas State authorities co-operated in enforcing the existing restriction orders—the war would shortly be extended to the crude oil market. This danger has for the present been averted, new ways and means having been found by Mr. Ickes, the Oil Administrator, for eliminating the "hot oil" production in East Texas. Mr. Ickes appointed a "Federal Tender Commission" to inquire into the legality of all crude oil and refined products before granting permission to ship in inter-State commerce. This Commission immediately instructed the railroads to refuse to accept any inter-State shipments of oil from East Texas. To the amazement of the oil industry the railroads complied with this order. As permits are not being issued by the Tender Commission for East Texas, the "hot oil" producers and refiners have been forced to close down. The legality of the Tender Commission's orders is, of course, to be tested in the Courts and the hearing is fixed for November 15th. It is doubtful whether the Com-

mission will be upheld, but in the meantime the elimination of "hot oil" has had a salutary effect upon markets. Gasoline price cuts have been restored and the major companies have resumed purchases of "distress" gasoline in Texas under the recent agreements with the Texas refiners. The oil industry is always liable to violent changes in fortune, but the recent *volte face* in Texas seems to have surprised everyone. Until the lawsuits are heard it would be unwise to say that the "hot oil" trouble has been permanently overcome, but the outlook is undoubtedly brighter.

Insurance Share Index.—During the third quarter of this year market quotations for insurance shares showed further improvement, though their average rise was less than in either of the two preceding quarters. This tendency is illustrated by the following table, which portrays the course of an investment in 1913 of £1,000 in the ordinary shares of each of the twenty-four leading insurance companies:—

	1920	1932	1933	March 1934	June 29, 1934	Sept. 28, 1934
Alliance	1,018	1,638	1,979	2,121	2,142	2,226
Atlas	2,059	3,000	3,182	3,397	3,333	3,397
Caledonian	1,776	4,183	4,655	4,780	4,718	4,780
Commercial Union	2,453	3,352	3,918	4,310	4,245	4,517
Employers' Liability	3,558	1,775	2,162	2,252	2,252	2,432

Scottish Life	1,129	2,533	3,174	3,371	3,371	3,596
Scottish Union and National	2,764	3,803	4,335	4,363	4,584	4,658
Sun Fire	1,159	2,364	2,889	2,933	3,156	3,111
Sun Life	645	2,040	2,349	2,519	2,620	2,569
Yorkshire	2,293	2,731	3,212	3,298	3,401	3,453
Average	1,766	2,911	3,535	3,744	3,943	4,092

The figures are based on the mean of the highest and lowest prices in each year, except in the case of the quarterly quotations for 1934, which relate to the middle market prices on the respective dates. In all cases where an issue of bonus shares has been offered, due allowance has been made by assuming that the rights are sold, and the proceeds utilised to purchase an additional holding in the original shares. It will be seen that, in the September quarter, nineteen companies show a rise, and only two a fall, in market quotations, while three show no change.

COMPANY NOTES

Theatre Companies.—The theatre business on the whole is more suited to private ownership than to public joint-stock investment. In conditions of normal prosperity it is possible for a well-conducted theatre to return fair profits over a series of years. As the profit record of theatre-owning companies demonstrates, however, there are very substantial fluctuations in the earnings from one year to another, and investors have no recognisable means of foreseeing which way the next move will be. Since a great part of the expenses of producing a play or entertainment is incurred before the "first night" can test its commercial appeal, production must essentially be a speculative business. An effort to overcome the risk by "spreading" has been made by such concerns as Associated Theatre Properties and Moss' Empires, which own a number of theatres. Multiple ownership, however, is still far from having eliminated fluctuations. Moreover, as the theatre is a luxury which can fairly easily be forgone, economic depression has a rapid and serious effect on profits. With the exception of the London Pavilion (which is nearer to a real estate business than to a theatre business proper) all

the concerns in the accompanying table have shown either a precipitous fall in profits, or (more usually) considerable losses, during recent years. It happens that the introduction of the "talkie" has approximately coincided with the onset of depression. How far difficulties in the theatre business are due to depression alone and how far to intensified competition from the "talkie" cinema, has yet to be tested in normal conditions. In the past a rising standard of living combined with rather greater leisure has left room for the vigorous expansion of the cinema without stifling the theatre. Possibly the slight incipient recovery shown in

* After allowing for full preference dividend.

some recent theatre accounts may indicate that there will still be room for profitable theatre businesses in the future—indeed, it is hardly likely that the "legitimate" theatre will ever be extinguished. A serious commercial problem had arisen, however, through the competition of cheaper cinema seats, even before the introduction of the "talkies." The problem is scarcely likely to grow less serious now. The sluggish response of theatre share prices to bumper-year profits in the past indicates that investors are not unconscious of the implications of the facts discussed in this Note.

Union-Castle Scheme.—The Union-Castle Mail Steamship Company proposes to amend its Articles of Association so as to prevent control passing to foreigners, and to perpetuate the voting power of the 6 per cent. "A" cumulative preference shareholders when their dividend arrears have been paid off. From 1912, when the Royal Mail and Elder Dempster companies purchased the ordinary shares, until 1930, the control by the Royal Mail group was absolute. The present board by careful management has gone far to rehabilitate the company's position, and is pardonably reluctant to risk a second experiment in outside "control." If the present proposals are sanctioned, and the Union-Castle's ordinary stock comes under the hammer in a Royal Mail liquidation, its purchasers will obtain only 274,000 votes against the "A" preference shareholders' 2,500,000. The "A" preference shares at present carry one vote per £1 share, while the ordinary stock has only one vote per £10—the denomination of the original shares. Inclusive of the 4½ per cent. preference shares, preference holders, who have subscribed 50 per cent. of the capital, will exercise 90 per cent. of the voting power. As a general

principle, there is much to be said for the granting of wider representational power to preference shareholders. It is doubtful, however, how far the courts would be prepared to uphold a proposal by one class of shareholders to use the powers conferred on them for a strictly defined period of semi-crisis to lower the status of another class of shareholders. It will scarcely be disputed that the price originally paid for the Union-Castle shares (namely £32 ros. per £10 ordinary share) took account of the fact that control was being obtained. In any subsequent sale the price will certainly be prejudicially affected by inability of the sellers to pass on the rights they originally purchased. The difference between the *cum-* and *ex-*control price of the Royal Mail group's best asset may well be considerable.

Electric and Musical Industries.—The expansion in profits of Electric and Musical Industries for the year to September 30th is so remarkable that the directors had good reason to ignore the logic of the calendar by announcing the results two days before the close of the financial year. The full report shows that total income amounted to £514,386, of which £409,411 was received in gross dividends from the operating companies. A comparative table illustrates the rapid improvement during the past year:—

	Period from April, 1931, to Sept., 1932	Years to Sept. 30 1933	1934
Income	115,064	82,649	514,386†
General expenses	95,972	79,739	91,276
Directors' fees	2,977	2,008	2,400
Income tax	...	...	95,677
Earned for dividends	16,115	902	325,034
Preference dividend	13,800‡	Nil	57,442§
Ordinary shares { Earned	Nil	Nil	267,592
Paid	Nil	Nil	224,973
{ Earned %	Nil	Nil	11.9
Paid %	Nil	Nil	10
Carried forward	2,315	3,217††	42,619

† Dividends received, before tax, £409,411; contributions for management, etc., £104,975. ‡ For six months to December, 1931. § Paid and accrued to date, after tax. †† Applied to writing down of assets under scheme sanctioned March 28, 1934.

Although the capital reduction of March involved no real sacrifice, the results of a first recovery year suggest that the scheme has related asset value to earning power satisfactorily. Since the ratio of preference to ordinary capital is 1:6.3 the earnings for ordinary shares, even after two and three-quarter years of preference arrears, are equivalent to 11.9 per cent. The consolidated balance sheet of the two principal operating companies gives clear evidence of trading expansion in the "turnover" items. This statement, however, illustrates the desirability of including subsidiary companies to the third and fourth generation, for out of total subsidiary assets of nearly £4 millions (after deduction of gilt-edged investments), investments in and advances to their subsidiary companies total well over £1 million. The ordinary shares have appreciated this year from 17s. in the old £1 denomination to 31s. 3d. after the 50 per cent. reduction, at which price they yield £3 4s. per cent.

Imperial Smelting Corporation.—In spite of a decline in the prices of metals in which this Corporation is chiefly interested, during the latter half of the trading year to June 30th last, an increase in profits of £25,104 to £154,984 was achieved. The 6½ per cent. preference dividend was met with a margin of about £20,000, whereas in the previous year there was a shortfall of £4,658. No dividend has been paid on the ordinary shares since 1930. In the following comparison of results for the last three years, net profits are struck after providing for directors' remuneration and general expenses:—

	Years to June 30,		
	1932	1933	1934
Net profits	137,472*	129,880	154,984
Preference dividend.....	134,538	134,538	134,538
Carried forward	17,338	12,680	33,126

* Including £24,598 profit on exchange.

Consideration of the very comprehensive information set forth in the report suggests an essential fact—namely, that the Corporation's future earnings will depend upon the prices of the metals it handles. Last year, price declines adversely affected operating results, despite increased production. Given reasonable world trade, however, and a gradual increase in the consumption of lead and spelter, the Corporation should take full advantage of the slightest upward curve in the trade barometer. The £1 6½ per cent. preference shares are quoted at 21s. 6d. to yield 6 per cent. The £1 ordinary shares have fallen to 9s. 9d. on realisation of the distance the company has yet to go before they regain the dividend stage.

* * *

Trinidad Leaseholds.—The oil price situation has unfavourably affected the earnings of this large independent producer. Both the well output and purchased tonnages have increased during the year to June last, the crude oil throughput amounting to 1,084,696 tons, an increase of over 15 per cent. Oil profits, however, have fallen by over 14 per cent. to £430,679. A comparative profit and loss analysis follows:—

	Years to June 30,		
	1932	1933	1934
Oil profit	486,776	502,874	430,679
London revenues	12,303	18,313	12,971
Total profit	499,079	521,187	443,650
Expenses and directors' fees	26,250	26,640	28,391
Depreciation	208,307	210,976	209,948
Provision for subsidiary cos. losses or writing down shares	24,729	31,823	25,808
Taxation	42,000	55,000	15,000
Earned for dividends.....	197,793	196,748	164,503
Paid	163,945	196,734	163,945
Earned %	15.1	15.0	12.5
Paid %	12½	15	12½
Carried forward	63,999	68,992†	69,550

† After writing back £4,979 reserve for claim against subsidiary not required.

Although the company is not primarily a holding concern, the close relation of earning power to dividend payments suggests an element of "policy" in the disclosed profits. Surplus liquid assets have increased, roundly, from £805,000 to £888,000. Despite falling prices, stocks are being carried at considerably higher levels. Capital expenditure during the year amounted to £147,958, mainly for Trinidad plant extensions and increased distribution facilities in this country. Shareholders must needs await the general meeting for indications of the board's attitude towards the crude oil situation. The £1 shares are quoted at 52s. 6d. ex dividend to yield £4 15s. 3d. per cent.

* * *

Lena Goldfields Agreement.—The announcement that an agreement had been signed between the company's representatives and the Soviet Government was welcomed in the City this week. A positive outcome had been expected since the statement in the House of Commons in

January that discussions on the basis of materially amended terms, on both sides, would be acceptable to the Concessions Committee. Under the agreement the Soviet Government will pay a sum of £3,000,000 in varying half-yearly instalments over a period of twenty years, commencing from May 1, 1935. The company's Russian indebtedness, which amounted to £874,500 at December, 1928, is to be cancelled. Broadly, therefore, the settlement is on the basis of capital expenditure less deduction of Russian claims, and the cost of the concession, which is carried in the books at £2,772,898, is not covered by the payment. Formal ratification of a settlement on the basis of three times the original offer made by the Soviet is unlikely to be withheld, and the market has been actively engaged in valuing the notes, of which £750,000 are outstanding. These estimates must be conjectural, since no information as to expenses incurred since the last accounts for 1928 is available. At that date net current liabilities in London amounted roundly to £375,000, and this figure has undoubtedly been substantially increased in the interim. If the payments are capitalised on a 4 per cent. basis it would appear that the present value of the award amounts to some £1,100,000. On the equally arbitrary basis that present liabilities, excluding accrued note interest, amount to, say, £750,000, the net present value of the notes would amount to £350,000. This present worth would be equivalent to about 47 per cent. of their face value, against a current quotation of 37½. A rough computation indicates that after settlement of liabilities on this arbitrary basis, the payments would be insufficient to meet the principal and accruing interest at 10 per cent. on the Notes. It is anticipated that a compromise settlement will be proposed, both to creditors and Noteholders, offering a capital sum in full liquidation of outstanding claims, to be paid off as instalments are received by the company. The ordinary shares at about 1s. thus have a purely conjectural value.

* * *

Nigel Van Ryn Reefs.—The report of this gold-mining finance concern for the period October 1, 1932, to June 30th last shows the effect of the capital reduction scheme sanctioned in May, 1933. In view of the extension of the company's sphere of operation, comparison with previous reports is a difficult and unenlightening procedure. The total of the balance sheet now stands at £161,225, of which cash accounts for £101,990. The company's original asset of 257 mining claims on the East Rand, formerly valued at £30,000, has been written down to £1 out of share premium account, which, after other appropriations, now stands at £5,453. The report, however, records the board's opinion that the Nigel Reef underlies these claims, and sets out the new Australian interests which have been acquired, including the Lamplough, Monument Hill and Castlemaine properties. The 1s. shares are quoted at 2s. 9d.

* * *

Rand Ore Policy.—The ore-grading policy of the Rand was specifically defined by Mr John Martin, at the meeting of Modderfontein East, Limited, on November 1st. Mr Martin strongly deprecated the argument that mining should be designed to secure maximum immediate dividends for shareholders, since this practice would undermine the stability of the companies and involve the danger of a subsequent decline to a low-grade basis which would imperil the future of the industry. This view has been endorsed by the South African Minister of Mines. A correspondent writes to us, however, to point out that the principles on which Mr Martin bases his defence of low-grade milling do not appear to cover the present milling policy of all important mines. Without disputing Mr Martin's contention that it is a universally recognised practice of sound mining to mill a grade of ore which represents the average grade of the ore reserves, the writer adduces the case of the Randfontein mine. Last month the grade of ore milled at Randfontein was 3.48 dwts., whereas the value of the ore reserves, including low-grade, on December 31, 1933, was 5.1 dwts. Even on the assumption that not all the low-grade ore which is payable with

gold at 140s. an oz. was included in the ore reserves, it cannot, he declares, be imagined that its inclusion would reduce the ore reserves by more than 1½ dwts. The average value on the stoping width of 43 ins. of the developments at Randfontein this year is 7 dwts. The average for the preceding three years was over 8 dwts. It would therefore appear that on any calculation Randfontein is milling well below the average of its ore reserves. It is true that as a result of this and the altered basis of taxation the percentage of total taxation on profits has been reduced from over 50 per cent. in 1933 to under 20 per cent. in 1934. Any increase of profits above the present rate of 6s. 4d. per ton would be subject to an increased E.P.D. of 12 per cent. for each shilling up to 2s., and, according to the formula, for each further shilling. All mines, however, suffer from this disability.

* * *

Other Company Results.—The report of 34 other companies will be found, in usual summary form, on page 903. They follow fairly closely the trend of recent reports. The breweries group continues to make a good showing. The results of Bristol Brewery, Georges, which put new life into a dull market recently, have disclosed an improvement from £209,016 to £233,826, and the smaller Bristol United has shown an equally satisfactory proportionate expansion. Increased dividend payments, including Anells, have been declared this week. Among plantation companies, Sudan Plantations, before charging depreciation and reserve items, have shown lower earning power. In the previous year, however, reserve against advances absorbed £135,109, and net earnings for the year to June last have consequently advanced from £85,348 to £137,584. S. Smith and Sons (Motor Accessories) have increased their earnings to a new record, and the dividends on the increased capital, although maintained, have been earned with an increased margin. The rubber companies, with one unfortunate exception, continue to show an improved position. This week's results include Rubana (£10,639, against Dr. £530) and Tali Ayer (£13,031, against £286), the dividends being 3½ and 4½ per cent. respectively, against nil. Joshua Hoyle have somewhat improved their trading profits, and earnings for shares, after partial debenture payments, amount to £54,965, against £29,463 for the previous year. As in 1932-33, earnings have been largely applied to Renewals Reserve. A further batch of investment trust reports to September 30, mainly from Scotland, will give encouragement to stockholders. A recital of the net revenues of such companies as Clydesdale Investment (£38,354, against £39,337), Railway and General (£18,411, against £18,219), Scottish National (£28,125, against £31,923), Second Industrial (£20,219, against £20,061), and London and Colonial (£16,383, against £15,521) suggests unmistakably that the revenue trough has been reached. In the miscellaneous group, S. and W. Berisford have fared better, and the dividend is increased from 13 to 15 per cent. The final dividend of 16½ per cent. announced by Tate and Lyle exceeded even optimistic estimates. Some 22½ per cent. is thus paid for the year, against 17 per cent., and reserve allocations total £375,000 against £300,000.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Buenos Ayres and Pacific Railway, Buenos Ayres Great Southern Railway, London Maritime Investment, Imperial Airways, and Raphael Tuck and Sons. At the Buenos Ayres and Pacific meeting Lord St. Davids pointed out that the company had experienced great difficulty in obtaining their minimum sterling requirements. The cost of the disastrous flood on the Argentine Transandine railway could not be estimated, but he regarded it as beyond the capacity of the railway to make good without assistance from the Governments concerned. Sir Follett Holt, at the Buenos Ayres Great Southern meeting, regarded Argentine prospects as encouraging, and suggested that the company had turned the corner. He referred with satisfaction to the running of the Diesel engines. Sir Eric Geddes gave shareholders of Imperial Airways valuable indications of future developments. Although the speeds of the Air Race

could not be reproduced under normal conditions, the company had plans for a seven-day service to Australia. At the London Maritime Investment meeting, Sir F. Vernon Thompson pointed out that although the Company's shipping investments showed a heavy depreciation, other holdings showed compensating appreciation. Mr Gustave Tuck, at the Raphael Tuck meeting, drew attention to the prospective increase in business which was expected to result from the Silver Jubilee celebrations.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
November 20	November 22

THE fire which was lit in the Gilt-edged market last week received fresh fuel on Monday, when the clearing banks announced the much-debated reduction in their call money rates. The subsequent announcement of another large Australian conversion operation, however, had a damping influence. The French crisis also tended slightly to unsettle the market, and the rise in prices was checked. Meanwhile, the process of adjustment to the new ruling interest basis was reflected in an upward tendency in a wide range of securities. The slow decline in industrial ordinary shares was thus arrested, at a moment when the recognised trade "pointers" confirmed its wisdom. The employment figures suggested a rather more than seasonal decline in activity, and the railway traffic gains made the least impressive showing for many weeks past. Current interest levels, however, are concerned less with trade activity than with its absence, and the firmer tendency of prices, though it may not go very far, is at least logical.

There was a large turnover in the Gilt-edged market at the beginning of the week, but business tended to slow down after Tuesday. Two-and-a-half per cent. Conversion Loan just failed to reach 100. The activity of 4 per cent. Funding Loan was attributed in part to buying on foreign account. Australian loans were exceptionally strong on the announcement of the conversion offer. Commonwealth 3½ per cent., 1954-59, rose by as much as 1½ on Wednesday. India stocks, particularly the so-called "irredeemable" issues, remained in strong demand.

In the foreign bond market, "Dawes" and "Young," which were marked sharply upwards on last week's news of the Anglo-German agreement, made further net headway this week, despite a little profit-taking. Chinese bonds were active, and Japanese obtained investment support after a weak start. Brazilian loans were in fair request, but the new Chilean debt proposals (discussed on pages 880 and 883) aroused no enthusiasm.

In the home rail market increased activity spread downwards, on Tuesday, from the debenture and guaranteed stocks to the marginal preference and equity issues. The movement, being a "lower interest" phenomenon, had no relation to earnings prospects, and the junior stocks became easier (except on the Southern) on the issue of traffic returns revealing the virtual disappearance of the "plus signs" on two of the four lines. The foreign railway market was quiet. The large exchange losses of the Argentine companies (discussed in a leading article on page 887) had a sobering effect, and investors were inclined to stress the restraint rather than the long-term confidence of the chairmen's reviews of the outlook.

Industrial shares, in the new Account, were firm and active. A perceptible tendency towards profit-taking, however, occurred before the end of the week. Though iron

and steel shares continued to make headway—Babcock and Wilcox and Stanton being particularly in request—the centres of chief interest were tobacco and brewery shares. Imperial Tobacco rose steadily on reports of a further increase in trading. Provincial buying was spread over a long list of brewery shares, including Guinness, Threlfalls, Mitchells and Butlers, and Watney. Even Distillers advanced, though their rise was checked in the middle of the week. Newspaper shares were harder, Daily Mail Trust rising in anticipation of a satisfactory report. Among store shares, Marks and Spencer made fresh headway. Investment demand for electric supply shares again became evident, after a period of quietude, Edmundsons being especially firm on the group's good October returns. Motor shares received further attention on a new upward movement in the registration figures. Textile shares were in better demand, Patons and Baldwins reflecting buying orders from the North of England. Courtaulds were also well supported and British Celanese improved. Tate and Lyle rose 5s. on the increased dividend. Bank shares were quiet, but continued investment demand was evident for insurance shares.

Despite the improvement in the American outlook (described on page 884), the oil share market was quiet as a result, mainly, of unsettlement in Paris. Rubber shares remained steady, though business was somewhat restricted. The compromise between the British and Dutch views was received with equanimity, the market preferring a slight reduction in the January percentage to the prospect of indefinite disagreement. Tea shares opened weak, but the market had a slightly oversold appearance. A little selective buying, subsequently, was sufficient appreciably to strengthen the market's undertone.

Kaffirs opened quietly, but confidence tended to increase as the view gained ground that no serious trouble in connection with the settlement was to be apprehended. Paris, however, was disturbed by the political situation, and the market had an uncertain tone on Thursday. The fall in West African shares was checked, but no appreciable revival occurred. Australians were firm at the outset, helped by reports of important discoveries in the Yellowknife district. Among base metal shares, Rio Tinto had a sharp improvement on the board's decision to pay the preference dividend. Business in tin shares, however, remained dull.

FOREIGN STOCK EXCHANGES

NEW YORK

It is somewhat paradoxical that this week's Democratic landslide has been received by the Stock Exchange with complacency and even satisfaction. The confirmation of the President's immense popularity and influence might have been expected to generate a further attack of those vapours which have beset the market since the reformist ambitions of the Administration were set to work on the Public Enemy called Wall Street. Since the Senate as well as Congress now musters a two-thirds Democrat majority, the power of the party has been extended in fact beyond the lifetime of the present Administration. The market would appear to be budgeting for a recrudescence of inflationary measures, despite some tentative recent indications that the President was veering slightly towards financial orthodoxy, and it may be that the reassembling of Congress will be accompanied by noisy demands for new expenditure. Such reasoning, assisted by a sharp advance in grain prices, supplied the pretext for a strong burst of activity in stocks in late dealings on Wednesday, when building shares in particular were in speculative demand. Utility stocks recovered slightly from Monday's lower levels on some rather vague interpretations of the polls. While turnover in stocks was running over the million mark for the first time in recent weeks, the bond market was in a distinctly nervous condition. Federal loans continued their easier course, while industrial bonds were irregular. This week's business news suggests that seasonal revival is slowly proceeding. Steel mill output for the week is estimated at 26.3 per cent. of capacity, against 25.0 last week, while ingot production for October totalled 1,462,000 tons, against 1,252,000 tons in the previous month.

PARIS

The Bourse was under heavy political weather this week, which culminated on Thursday with the resignation of the Cabinet. A continued element of forced liquidation suggested that the technical position was further being clarified. Speculative interests were quick to appear on Tuesday and Wednesday, however, on the argument that prices had reached their trough, but their steadying effect was only transient. Rentes and bank shares followed a downward course. Under early selling Royal Dutch fluctuated considerably but later showed net gains, while movements among gold mines were narrow.

	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934

BERLIN

After a partial recovery on Wednesday and Thursday last week's share market closed with a general decline in which internal commodity price movements and the withdrawal of the Reichsbank's offer to buy interest coupons for cash were the main influences. The new week opened with a still sharper decline. Farbenindustrie, the active engineering shares and some lignite issues lost several points and minor stocks in the "cash market" were up to five points lower. A general recovery took place on Tuesday, and the firmer tone was continued on Wednesday. Bonds which were irregular last week opened the new week predominantly lower, and on Tuesday were uncertain. The official index for stock-quotations for October was 83.22 against 83.12 for September, and for bonds 91.55 against 88.97.

	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934

AMSTERDAM

Although European political factors exerted a depressing influence early in the week, the temper of the Bourse improved, even if business showed no great expansion. Home industrials showed moderate improvement. Royal Dutch, after a weak opening session, improved noticeably in mid-week. Rubber shares registered pessimism regarding the effectiveness of the new restriction percentage, but subsequently improved. Sugar and tobacco shares were lifeless.

	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934	Oct. 31, 1934	Nov. 5, 1934	Nov. 7, 1934

CAPITAL ISSUES

The reduction in the banks' short-loan rates gave additional impetus to the vigorous rise in gilt-edged quotations and provided a most auspicious background for this week's senior issues. Some commentators, with an eye on the steady rise in Local Loans towards par, are discussing intriguing possibilities of further conversion operations if the present trend maintains its recent strength. Australia, however, has been this week's principal beneficiary, and the terms of her latest conversion offer are set out on page 883. The market ensured complete success for the

Bank Line debenture conversion operation. The terms of the 2½ per cent. stock were nicely calculated fractionally below the level of 2½ per cent. conversion, which has a similar life to earliest redemption, with a further five years to latest date. The cumulative sinking fund provision attracted applications to an issue whose terms for short industrial borrowing with Treasury guarantee must constitute a record. The *Butterley Company* preference issue was also a re-financing operation which will provide an over-all interest saving of ¼ per cent. and redeem all prior charges. The profits and depreciation record during depression is highly satisfactory, and the shares may be regarded as a first-class industrial preference issue. The prospectus for the mixed *Aldford House (Park Lane)* issue employs the misleading "prior deductions" methods of computing cover requirements for the preference shares, and the prospective increase in retails is subject to tenants' option to determine existing agreements. The shares will appeal to the more speculative type of investor. This week's "introductions" include another property company, *Western and Mersey Estates*, which has a high-gear capital structure, *General Cable Manufacturing*, *Rhodesian Anglo-American* sterling debentures, and *Chippa-tooah Java Rubber*, whose latest accounts show a loss of £331.

LONDON ACTIVE SECURITY PRICES 1912-1914

NOTE—Shares with a New York Quotation or with definite American interest are listing in New York.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the date of payment is the date of redemption. The yield on ordinary dividend-paying shares is calculated by reference to the latest dividend when the stock stands at a discount or the earliest date when the quotation is above par. The return on ordinary dividend-paying shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(a) Interim dividend.	(b) Final dividend.	(c) Last two years dividends.	(d) Paid in New Zealand Currency.	(e) Allowed for rate of exchange.
	(1) Flat yield without allowance for redemption.	(2) Based on interest payment of 2½ per cent.	(f) For 15 months. Yield worked on a 15% basis.	(g) Yield worked on redemption at par on December 1, 1952.
	(1) par on Feb. 1, 1957.	(2) par on April 1, 1961.	† Free of Income Tax.	

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Yield worked on last year's dividend, viz., 12½ per cent, free of tax. (e) Cash bonus from capital accretions. (f) Includes 1½% from capital accretions. (g) Including bonus 5% free of tax. (h) Dividend for 15 months yield worked on a 5½ per cent. basis. (i) Based on a dividend of 15 per cent. (j) Calculated on basis of 5 annas dividend per share paid for 1933-34. Taken at 16 annas to one rupee. (k) Annas per share. (l) Also bonus 300 per cent. from reserves in A shares. Yield worked on a 25 per cent. basis. Highest price 1934 on capital before the bonus distribution. † Free of Income Tax.

PUBLIC OFFERS

Australian Government.—Issue of £14,601,806 3½ per cent. stock, 1964-74, at £99 per cent. Holders of nine State loans totalling above amount are offered conversion into equal nominal amount of new stock, plus cash payment of £1 per cent. Stock will be repaid at par on July 1, 1974, or after July 1, 1964, on three months' notice. Total public debt (including State loans taken over) £1,222.6 millions, of which £547.3 millions is held in this country. Excess exports, year to June, 1934, £37,592,000.

The Bank Line, Ltd.—Issue of £1,165,200 2½ per cent. guaranteed debenture stock, 1944, at £99 10s. per cent. The stock will be repaid by cumulative sinking fund between 1935 to 1944. Secured by statutory mortgage on ships forming present security for 5 per cent. stock, holders of which may convert at par, plus cash payment of 10s. Issue is guaranteed by H.M. Treasury. Profits for years to December 31: 1931, £255,228; 1932, £374,618; 1933, £316,433.

Aldford House (Park Lane), Ltd.—Issue of 100,000 6 per cent. cumulative preference shares and 70,000 ordinary shares of £1 each at par. Company acquired property of similar name erected 1932, held on 99 years lease. Present gross income, £32,258, leaving after ground rent (£2,750), rates, and expenses, £20,757 net. Property is held subject to fixed ten-year mortgage at 4½ per cent. of £165,000, and valued at £346,700. Purchase price, subject to mortgage, £151,000.

Butterley Company, Ltd.—Issue of 500,000 4½ per cent. cumulative £1 preference shares at par. Business founded 1790, and owns ten collieries with standard output of 3,487,469 tons, iron and brick works. Net profits, after depreciation, years to March 31: 1932, £152,107; 1933, £147,488; 1934, £136,727. Proceeds required for redemption of £108,100 first debentures, and repayment of bank advances, £303,000. Net assets, at March 31, £2,362,325.

BY STOCK EXCHANGE INTRODUCTION

General Cable Manufacturing Company, Ltd.—Particulars of issued capital 150,000 6 per cent. cumulative preference shares of 10s. and 300,000 ordinary shares of 5s. each. Acquires goodwill and certain assets of company of similar name. Net profits of vendor for years to March 31: 1932, £8,330; 1933, £11,750; 1934, £18,268. Net tangible assets acquired, valued £113,000, for consideration of £140,000 payable £75,000 in cash and balance by allotment of 260,000 ordinary shares of 5s. Vendor secures subscription of 40,000 ordinary shares for cash. Preference shares have been subscribed at par.

Western and Mersey Estates, Ltd.—Issued capital, £260,000 4½ per cent. mortgage debenture stock, 67,000 5½ per cent. redeemable cumulative preference shares, and 68,000 ordinary shares of £1 each. Company formed in May, 1934, to acquire housing estate in Wirral, Cheshire, valued at £418,000, for £377,000 in cash. Property estimated to produce net income of £26,300. Debenture stock secured by first charge and redeemable at various rates up to 1974. Preference shares are redeemable by cumulative sinking fund of 1 per cent.

Rhodesian Anglo-American, Ltd.—Particulars of issue of £750,000 5 per cent. 20-year sterling debentures. Secured by floating charge, and redeemable at various premiums to 1944, and thereafter at par. Options on 10s. shares have been granted pro rata to subscribers, exercisable up to July 1, 1938, at 20s.

Chipatoojah Java Rubber Company, Ltd.—Issued capital 750,000 shares of 2s. each. Owns entire capital of Dutch company of similar name, having estate of 1,556 acres. Estimated crop, 1934, 42,000 lbs. Combined assets, £69,198. Loss, for 1933, £331.

BY TENDER

Great Marlow Water Company, Ltd.—Messrs A. & W. Richards offer for sale by tender 700 £10 additional ordinary "B" shares at minimum price of £17 per share. Profits: 1931, £4,036; 1932, £3,588; 1933, £3,873. After net interest on loan capital, £3,272 was available for ordinary shares for 1933. Maximum 7 per cent. dividends have been paid on "B" ordinary shares since 1929.

ISSUES TO SHAREHOLDERS ONLY

Beechams Pills, Ltd.—The directors offer to shareholders 238,293 8 per cent. cumulative participating preferred shares of £1 at 32s. per share.

Central Perak Rubber.—This company has entered into a contract to purchase (for \$480,000) an estate in Johore. To provide the necessary funds for the purchase, the directors have decided to issue 620,000 2s. shares at par to shareholders registered on October 31st in proportion of one new share for each three shares held.

Johnson and Phillips.—100,000 ordinary £1 shares are offered to shareholders registered on November 1st at 24s. per share in the proportion of one new share for every six shares held.

Simmer and Jack Mines, Ltd.—The resolution increasing the capital from £625,000 to £750,000 by the creation of 1,000,000 new shares of 2s. 6d. each, ranking *pari passu* with the existing 5,000,000 shares, has been duly passed. The new shares will be offered at 7s. 6d. per share on the basis of one new share for every five shares held.

Associated Mining and Finance and Associated Gold Mines of Western Australia.—The directors have circulated details, subject to shareholders' confirmation, of an amalgamation scheme agreed by the boards of both companies. This provides for the liquidation of the Associated Gold Company, and for a cash distribution to its shareholders of 2s. per 4s. share, plus the allotment of one fully paid 8s. share in the Associated Mining and Finance Company for every two shares held in the Associated Gold Mines of Western Australia (New), Ltd.

PRIVATE PLACINGS

Kennards, Ltd.—This company has recently issued a further 65,000 7½ per cent. cumulative preference shares, being the balance of an authorised issue of 175,000 of such shares. The new shares will rank *pari passu* with those already in issue as from December 1, 1934. They have been purchased and are being placed by a syndicate headed by the Charterhouse Investment Trust, Ltd.

Third Guardian Trust.—The directors have decided to create and issue a further £50,000 4 per cent. redeemable debenture stock. They have also confirmed the arrangement to leave this amount of stock for sale with Messrs Cazenove Akroyds and Greenwood and Company until December 31, 1934, at 103 net, plus accrued interest from June 15, 1934.

Gaumont-British Picture Corporation.—An issue of £500,000 4½ per cent. first mortgage debenture stock has been placed privately.

CONVERSIONS AND REPAYMENTS

R. W. Crabtree and Sons.—Shareholders have authorised the directors to issue £125,000 4½ per cent. debentures at 97½ per cent., redeemable at 101 in thirty years. The proceeds are to be used to repay bank loans, to provide for further extensions and additional working capital.

Neuchatel Asphalte Company.—This company will repay its £194,950 of 6 per cent. 10-year convertible debenture stock on December 1, 1934, to finance the redemption £200,000 of 4½ per cent. debenture stock, repayable in 1944-46, of which £160,000 is being issued at 97½ per cent., is being created. The balance will be met out of the company's cash resources. No public issue will be made.

Belgian 6½ per Cent. Loan, 1923.—The Government has been authorised to repay at par on February 15, 1935, the outstanding portion of its 6½ per cent., 1923, loan.

Hoscote Rubber Estates.—The £31,250 outstanding 7 per cent. debenture stock will be repaid on December 1, 1934.

Stockton-on-Tees Corporation.—The outstanding 3 per cent. stock, 1915-1935, will be repaid at par on April 1, 1935.

Sudan Plantations.—In order that the syndicate may be in a position to repay its loan secured by a debenture of £400,000, which involves an annual charge of £23,933 6s. 8d., and to finance extensions in the Gezira of 20,000 feddans agreed for the season 1935-36 and of a similar or larger area under consideration for the season 1936-37, the directors have decided to issue forthwith 225,000 of the unissued £1 shares at 21s. per share to shareholders registered on November 5th in the proportion of one new share for every ten shares then held.

Danish Refunding Loan.—A conversion Bill was introduced in the Danish Folketing on November 6th by the Prime Minister, M. Stauning. The new Bill authorises the compulsory conversion to 4 per cent. of all existing 4½ per cent. and 5 per cent. Credit Union bonds, whether issued for the mortgaging of agriculture or of town properties. The total involved is about Kr.2,600,000,000 (at present rates £116,000,000).

OFFERS ABROAD

Norwegian Municipalities Bank.—A Swedish banking group, headed by Stockholms Intecknings Garanti Aktiebolag Bank, issued on November 6th on behalf of the Norges Kommunalbank—Norwegian Municipalities Bank—a Kr. 15,000,000 (£833,330) loan at 96, carrying 4 per cent. interest. The loan is guaranteed by the Norwegian Government.

Dutch East Indian Bonds.—The Minister of Colonies has officially announced an issue of 50,000,000 florins of 4 per cent. Dutch East Indian bonds at par.

FORTHCOMING ISSUES

South African Torbanite Mining and Refining.—Issue of 1,000,000 shares, 10s. each, has been underwritten.

York Corporation.—An issue of £500,000 3 per cent. stock is about to be made for the purpose of repaying mortgages carrying a higher rate of interest.

Thos. W. Ward, Ltd.—Shareholders have sanctioned the creation of 350,000 5 per cent. first cumulative preference shares of £1 each, which will be offered to the public at par on November 20th. Preference in allotment will be given to present shareholders.

Bletchley Flettons.—Bletchley Flettons, Ltd., is expected to make a public offering shortly.

RESULTS OF ISSUES

Aldford House (Park Lane).—Preference issue over-subscribed.

The Bank Line, Ltd., 2½ per Cent. Guaranteed Debenture Stock, 1944.—The lists for cash applications were closed at 9.5 a.m., November 6th. Conversion lists close November 12th.

Trafford Park Estates, Ltd.—Holders of over nine-tenths of the existing 5 per cent. first mortgage debentures availed themselves of the opportunity to convert into the new stock.

Irish Sugar Company.—The lists for issue of 6 per cent. cumulative preference shares closed at noon, November 5th. The issue was over-subscribed.

Beechams Pills.—The recent offer to shareholders of 238,293 8 per cent. cumulative participating preferred shares £1 at 32s. has been over-subscribed several times.

REPORTS AND NOTICES

GOVERNMENT, &c.

STATE OF BAHIA EXTERNAL LOANS.—The Ethelburga Syndicate announces that, as the result of its protest the loans of the State of Bahia have been removed from Category 8 and placed in Category 7. In this category no payments on account of amortisation are made, but the following proportions of the full interest will be paid: First year, 17½ per cent.; second year, 20 per cent.; third year, 22½ per cent.; fourth year, 32½ per cent.

BANKS

MIDLAND BANK (New Denomination of Travellers' Cheques).—The Midland Bank announces that travellers' cheques of the denomination of £2 are now available at all branches of that institution in addition to those already obtainable for £5, £10 and £20. These cheques are not only encashable at banking offices at home and abroad, but are accepted in payment of accounts at hotels in most countries, in liners cruising to all parts, at the chief railway booking offices and at numerous London stores.

BANCO ESPAÑOL DEL RIO DE LA PLATA AND BANCO CENTRAL AGREEMENT.—A new development in Spanish-American interests is to be seen in the announcement made by the Banco Español del Rio de la Plata and the Banco Central of an agreement mutually entered into between these two important institutions. Under this agreement, the Banco Español del Rio de la Plata passes all its branches in Spain to the control of the Banco Central, which latter institution takes charge of all the assets and liabilities of those branches and, in future, will continue as sole representatives to handle all the business in Spain of the Banco Español del Rio de la Plata. The Banco Central, in turn, will entrust all their operations to the Banco Español del Rio de la Plata. To cement the connection, the Banco Español del Rio de la Plata has taken an important interest in the capital of the Banco Central and personal collaboration is provided by the appointment to the board of the Banco Central of the vice-president and another director of the Banco Español del Rio de la Plata.

INSURANCE

PHOENIX ASSURANCE COMPANY, LTD.—LONDON GUARANTEE AND ACCIDENT COMPANY, LTD.—Mr Andrew Kirkland, F.C.I.I., hitherto fire manager for Scotland, having been promoted to an important position in the fire department at head office, and Colonel Colin MacLeod Robertson, C.B., D.S.O., T.D., Phoenix secretary in Glasgow, having expressed a wish to retire, the directors have appointed Mr F. W. Bryant, F.C.I.I., hitherto branch manager at Newcastle-upon-Tyne, to be manager for Scotland in all departments as from December 1st next. Mr Bryant will have the assistance of Mr Roderick Fraser, who continues as accident manager for Scotland; further, Colonel Robertson has been good enough to express his willingness to lend his active help and will accordingly postpone his retirement to a date early in the New Year. The directors have appointed Mr W. B. Thomson, hitherto at the head office of the company, to be manager of the Newcastle-upon-Tyne branch as from December 1st next, in succession to Mr F. W. Bryant, F.C.I.I. Mr Percy Potts continues as branch life manager, and Mr R. W. Parker, the branch accident superintendent, is being promoted to be assistant branch manager.

COMPANY MEETINGS, &c.

IMPERIAL AIRWAYS, LIMITED

SIR E. GEDDES REPORTS FURTHER PROGRESS

The tenth ordinary general meeting of Imperial Airways, Limited, was held, on the 1st instant, in London.

The Rt. Hon. Sir Eric Geddes (the chairman) said that the gross profit had again increased and amounted to £314,661, compared with £266,150 in the previous year. A dividend of 6 per cent. was recommended, leaving £49,245 to be carried forward. The report recorded a further increase in the traffic carried by the company and all classes of traffic forming the bulk of the company's revenue had increased. Signs were noticeable that the Post Office was recognising the possibilities of the Air Mail, and he looked forward to much greater developments at the initiative of the present energetic Postmaster-General.

During the year the traffic carried on the European services had not only been maintained but improved. In spite of what was claimed for foreign aircraft the directors were convinced that the company's services were by far the quietest and most comfortable in the world and that their standard of efficiency, service and discipline was second to none. The extension of the India line from Karachi to Singapore was now being operated jointly with Indian Trans-Continental Airways. The traffic on the Indian and Malayan routes showed a gratifying and steady growth. They were satisfied with the new route down the southern shores of the Persian Gulf. Traffic on the extension to Singapore was showing a steady rate of growth and the last section of this great Empire route from Singapore to Australia would commence operations in December.

During the year the Africa service was operated entirely on the basis of a fleet rearrangement involving the use of the larger Hannibal class between Cairo and Kenya, and the success had been marked, the traffic on the whole route increasing by more than 40 per cent. over the previous year. The traffic still showed a steady rate of growth and the board intended to increase the frequency to twice weekly. They also had under immediate consideration the question of increasing the frequency of their Eastern service to twice weekly.

The company had under construction three new four-engined aircraft and four new twin-engine aircraft. The board had also decided some months ago to order two flying boats and two land planes as prototypes for experimental work. These latter aircraft would be much larger than anything at present in the company's service; they would have a carrying capacity of from 3½ to 5 tons and would, of course, be faster than the existing fleet. One of the new flying boats was required for the New York-Bermuda service.

When the company's present fleet was replaced the public might expect a substantial increase in speed as well as frequency. It would be idle, however, to hope that the speeds achieved in the recent Australia race could be reproduced in a normal commercial service. With load to carry, long non-stop stages could not be undertaken, and services that picked and set down mails and passengers all along the line could not avoid a certain amount of formality on the ground and consequent loss of time. The risks that were undertaken by competitors in that race could not possibly be undertaken by a responsible company for a regular passenger or even mail service. For a regular service the official regulations and Government formalities were not relaxed or waived, and for a commercial transport service it was essential that the men and material were worked as a routine well below their capacity.

The year marked the commencement of the second decade of the company's existence. In the first year of its life the company flew 853,000 miles and carried 391,000 ton miles of traffic; in the tenth year they flew 2,354,000 miles and carried 2,733,000 ton miles. In 1924-25 they completed 75 per cent. of the flights scheduled; in the tenth year they completed 98 per cent., while both their South Africa and India services had 100 per cent. regularity. With the opening of the Australian route the total route mileage of the system operated by the company and its allied companies would amount to 20,500 miles. In 1924 the route mileage was 1,760.

In conclusion, the Chairman said that the company had for many months had plans under consideration which would enable them to give a 7-day or 7½-day service to Australia, provided the aids to navigation, which were essential to operate a safe passenger service, were forthcoming.

After the Rt. Hon. J. W. Hills and Sir Harry Brittain had, as shareholders, given their wholehearted support to the policy of the board the report and accounts were unanimously adopted.

LONDON MARITIME INVESTMENT COMPANY, LIMITED

SATISFACTORY RESULTS AND SOUND POSITION

CONDITION OF BRITISH SHIPPING

SIR F. VERNON THOMSON'S VIEWS

The thirty-seventh annual ordinary general meeting of London Maritime Investment Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London, E.C., Sir F. Vernon Thomson, K.B.E. (chairman and managing director), presiding.

The Secretary (Mr O. A. Hall) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, the directors' report and statement of accounts for the year ended September 30, 1934, having been circulated to the stockholders some days ago, you will, I hope, take them as read. (Agreed.)

The net profit for the year was £36,813. With the £8,884 brought forward, there was thus available £45,698. After applying £2,000 to depreciation of investments and the payment of the dividend upon the £500,000 5 per cent. cumulative preference stock, the directors recommend the payment of a dividend upon the £500,000 ordinary stock of 4 per cent., less income tax, for the year, carrying forward the slightly increased balance of £9,135.

The company has no debts, debenture or otherwise, and has ample cash resources. The accounts show in the clearest possible form the position of the company, and, read in conjunction with the report, will, I imagine, be regarded as satisfactory.

VALUATION OF INVESTMENTS

The investments are set out in categories in the balance-sheet at or under cost. A valuation of the investments as at September 30, 1934, in the aggregate shows that the capital and the reserve fund of £250,000 are intact.

In this connection, as this company is so largely interested in shipping, I think it well again to remind stockholders that many of our shipping investments show a heavy depreciation in consequence of the continued world trade depression. As stockholders are aware, however, we have a very large holding in a most successful company outside of shipping, the appreciation upon which about balances the depreciation on the others.

Many of our investments have, in the circumstances of the time, and as anticipated at our last meeting, brought the company no revenue this year. There is unfortunately no sign yet of any marked improvement in shipping generally, but, subject to this, if nothing untoward happens, we have every hope that the company's revenue will be fairly well maintained in the current year.

TRADE OUTLOOK

During the past year, although the internal trade of Great Britain has been definitely better, the overseas trade, so vitally important to us all, has unfortunately shown little, if any, improvement. Since 1929 there has been an unprecedented shrinkage in the volume of the trade of the world. This in 1933 was less than the pre-war (1913) volume, while there was 41 per cent. more tonnage in 1933 than in 1914. It would seem that the decline in world trade volume has been arrested in 1934, but freights are still far from remunerative.

The world trade depression is now so acute and has been so prolonged that the British cargo shipping industry is making application to the Government for assistance, to take the form of a temporary subsidy, with a view to helping it to meet foreign State-aided competition pending a revival of trade. Although much might be said on this subject, as I happen to be Chairman of the Tramp Shipowners' Committee in their difficult and delicate negotiations with the Government, it would be inexpedient for me to say more at present upon the subject. But without an improvement in international trade, there can be no permanent and satisfactory improvement in the shipping industry.

If there are any questions, I shall be glad to answer them as far as I can.

I now beg to propose: "That the report and accounts for the year ended September 30, 1934, as submitted, be received and adopted, and that the dividends, as recommended therein, be declared and paid."

Mr George M. Dodd seconded the resolution, and, no questions being asked, it was carried unanimously.

The retiring director (Mr Arthur A. Baumann) was re-elected, and the auditors (Messrs. Fookes, Wyatt Williams & Hickman) were reappointed.

RAPHAEL TUCK AND SONS, LIMITED

REPUTATION FOR ARTISTIC PRODUCTIONS

The thirty-third annual general meeting of Raphael Tuck and Sons, Limited, was held, on the 6th instant, at Raphael House, London.

Mr Gustave Tuck (chairman and managing director) said that in considering the results of the past year's trade they were compelled to remember the difficulties which still dominated the commercial world, both in this country and abroad. To whatever part of the world we turned our eyes we found unrest, but it was a source of satisfaction to know that here in Great Britain we were on firmer ground. It had been their strong endeavour during the past year still further to develop and extend their productions in the home market. They felt that the plans they were making and the policy they were following would be fully rewarded, and that a return of confidence in the affairs of the world would be quickly reflected in the increased prosperity of their own company.

The Christmas and New Year cards department, a very old-established branch of their work, had maintained its output and its reputation for beauty and artistic originality, and it was a source of gratification to know that they were playing such an important part in the celebration of Christmas throughout the world.

Tuck's calendars were year by year eagerly anticipated by the public. The calendar was now universally recognised as part of the artistic decoration of every household, while as a gift it was a continual reminder of the giver.

The postcard department was taking on a fresh lease of life. They had just secured many thousands of excellent negatives of famous beauty spots of Great Britain, and these, added to their general collection, should be very advantageous to this department.

In the paperware department they could report good progress. They had made the charming designs of lace papers more attractive by enclosing them in dainty gift boxes. The new lace dress gift boxes depicting ladies in period costumes of delicate lace—the lace of the actual d'oyleys in the box—would become assured favourites in every household.

The evening became brighter and the troubles of the day (if any) disappeared as soon as one placed one of Tuck's "zag zaw" puzzles on the table. The excellent workmanship and the quaint

and fascinating shapes of the actual pieces added much to the joy of forming the picture.

Next year would be known as the Silver Jubilee Year, commemorating the twenty-fifth year of accession of their Majesties to the throne. To mark this joyful occasion the King and Queen had graciously consented that special Silver Jubilee photographic portraits of their Majesties should be taken, and he was proud to be able to inform shareholders that to Raphael Tuck and Sons had been entrusted the taking of these official portraits and the distribution of reproductions of them throughout the length and breadth of the Empire. Details would be announced in due course as to the exact forms these royal reproductions would take. It was to be anticipated that the demand for them would be very heavy, not merely by their Majesties' subjects individually but by schools, institutions, Government offices, and business firms. The company was proposing further to publish a special Silver Jubilee souvenir, to the character of which much thought and consideration had been given, and it would be fully worthy of the important event it celebrated and in keeping with the high traditions of their firm.

The Chairman concluded by moving the adoption of the report and accounts and the declaration of a dividend at the rate of 3 per cent., less income tax, which was seconded by Sir Reginald Tuck and carried unanimously.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED

IMPROVED RESULTS

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 6th instant, at Winchester House, London.

The Viscount St. Davids (the chairman) said that the receipts for the past year were only slightly in excess of those of the year before, but the receipts of the year before had included £150,000 of arrears of Government traffic, so that as a matter of fact the receipts of last year were a good deal better than they looked on their face. During the year they had had some reduction of working expenses, a decrease of £193,000, and when they knew that that followed on very substantial decreases in preceding years it was not ungratifying. Then there had been the difficulty of remittances and the loss suffered when those remittances were obtainable. Throughout the year the railway companies had continually pressed the Argentine Government and the Exchange Control Commission to allocate sterling to enable remittances to be made to England, but the Pacific had only succeeded in obtaining a very small proportion of the pesos balances which they had in Argentina and barely sufficient to meet their minimum requirements.

Turning to general matters, in January the Argentine Transandine Railway had been washed away. They had been used to floods and avalanches on the Argentine Transandine and expected them, but what had happened last January was something quite out of the common. It was a real disaster. What it would cost to repair he did not know, but he was quite certain that it was a sum quite beyond any possible efforts on the part of the Argentine Transandine Railway. If the line was built up again it could only be by assistance from the Governments concerned. Meanwhile, they were, after all, the Buenos Ayres and Pacific Railway, the railway built to carry people across the Andes, and to-day that was impossible.

When he had first gone to the Argentine forty years or more ago one never saw a pig on the territory their line went through. In 1925 the Argentine had exported only 700 tons of pig produce, but last year that had risen to 20,000 tons. Evidently it was a very rapidly growing business and a good deal of it seemed to be developing on their line.

As far as Argentina was concerned they could not forget that she was one of the very few countries in the world which had punctually fulfilled to the last atom all her financial commitments. Her credit was excellent, her balance of trade was satisfactory, but more than that one had in Argentina a population of 12,000,000 people; a population that was increasing by something like 200,000 a year and a people with an absolute belief that they were going to improve their position steadily. One had a country with one of the richest soils in the world, and if they looked to that and to the energy and enterprise of the people, they would agree that the prospects were not all black.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

BUENOS AIRES GREAT SOUTHERN RAILWAY, LIMITED

IMPROVING OUTLOOK

The ordinary general meeting of the Buenos Aires Great Southern Railway, Limited, was held, on the 7th instant, at River Plate House, London, E.C., Sir Follett Holt, K.B.E., M.Inst.C.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that during his recent visit to Argentina he found many encouraging signs, with progress and comparative prosperity evident in almost every direction. Money was beginning to circulate more freely, with good effect upon internal commerce, and more inquiries were being made for land. In contact with the President of the Republic and the high Ministers of State, it was not difficult for him to observe marked friendliness towards the British market and institutions.

With a view to reducing substantially the heavy cost of transport, trials had been made with the Diesel engine, which had produced valuable results, and there was no doubt that it would pay them to replace over a series of years all their steam locomotives with Diesels. Speaking generally, the policy forced on the board was one of consolidation, but they might under a concession have to deal with the construction of one short branch of fifty miles between Dolores and Ajo. They had been concerned with the completion of the State railway line to Nahuel Huapi.

After a cycle of comparative prosperity the Great Southern had had to suffer during the last four years—and not alone—a very lean period, but he considered they had now turned the corner, and as far as they had gone in the current financial year their results were better.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 3, 1934, amounted to £11,182,000, against ordinary expenditure of £30,515,000. After allowing for a decrease in Exchequer Balances of £19,273, the operations for the week, as shown below, increased the National Debt by £19,549,000 to approximately £8,116 millions.*

GOLD

Messrs Samuel Montagu and Company write on November 7, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £192,001,187 on the 31st ultimo, showing no change as compared with the previous Wednesday. During the week the Bank announced the purchase of bar gold to the amount of £49,143. In the open market offerings were rather restricted, the amount available during the week being about £970,000. The demand was again general and owing to the appreciation of sterling in terms of the gold exchanges, there was a decline in prices, which, however, were maintained at a premium over the parities.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
November 1	139s. 10d.	12s. 1.81d.
" 2	139s. 9d.	12s. 1.90d.
" 3	139s. 10d.	12s. 1.81d.
" 5	139s. 6 1/2d.	12s. 2.11d.
" 6	139s. 5 1/2d.	12s. 2.20d.
" 7	139s. 1 1/2d.	12s. 2.55d.
Average	139s. 7.08d.	12s. 2.06d.

Gold shipments from Bombay last week amounted to about £200,000. The s.s. "Comorin" and the s.s. "California" have respectively £109,000 and £65,000 consigned to London and the s.s. "President Johnson" has £26,000 consigned to New York.

The Southern Rhodesian gold output for September, 1934, amounted to 58,850 fine ounces, as compared with 59,471 fine ounces for August, 1934, and 56,790 for September, 1933.

SILVER

The market has been fairly active, the tendency towards the end of the week being easier, following the firmness of sterling in terms of the dollar; the undertone, however, remains firm. The Indian bazaars have been less active, but there has been some speculative demand, offset by China sales. America has bought and although not being disposed to press, generally offered good support at, or slightly below, current prices.

Quotations during the week:—

	IN LONDON	IN NEW YORK
Bar silver per oz. std.	Cash	Two Months'
November 1	23 1/2d.	23 1/2d.
" 2	23 1/2d.	23 1/2d.
" 3	23 1/2d.	23 1/2d.
" 5	23 1/2d.	23 1/2d.
" 6	23 1/2d.	23 1/2d.
" 7	23 1/2d.	23 1/2d.
Average	23.490d.	23.615d.

The highest rate of exchange on New York recorded during the period from the 1st instant to the 7th instant was \$5.00 1/2 and the lowest \$4.97 1/2.

The stocks in Shanghai on the 3rd instant consisted of about 39,800,000 ounces in sycee, 310,000,000 dollars and 37,500,000 ounces in bar silver, as compared with about 41,400,000 ounces in sycee, 312,000,000 dollars and 36,600,000 ounces in bar silver on the 27th ultimo.

Statistics for the month of October last are appended:—

GILLETTE SAFETY RAZOR COMPANY.—The net profit for nine months ended September 30, 1934, amounted to \$3,158,780.38. The earnings for the nine months are equivalent to \$10.19 per share of preference stock outstanding and after deducting the preference dividend requirement for the nine months to \$1.00 per share of common stock outstanding.

WESTS AND MOULTONS, LTD.—The directors have decided to make up the new company's first accounts to January 31, 1935, and to follow the conservative principle of distributing for the current year only such profits as may be earned from June 20, 1934, to January 31, 1935. An interim dividend on account of such profits at the rate of approximately 5 1/2 per cent. per annum is being paid. With regard to the profits earned prior to June 20, 1934, these will be available after payment of interest to the vendors of 4 1/2 per cent. per annum on the purchase price calculated to date of completion of sale as provided in sale agreement, for the purpose of extinguishing the preliminary expenses estimated at (£1,500) and for creating a reserve fund.

PHOENIX ASSURANCE COMPANY, LTD.—The directors of the Phoenix Assurance Company, Ltd., announce that the second instalment of the dividend for 1933 declared at the ordinary general meeting held on May 30, 1934, will be payable on December 15, 1934, to members on the register on November 15, 1934. The amount of this instalment is 6s. per share (less income tax at 4s. 3d. in the £). The share transfer books and the register of members will be closed from November 15th to 25th, inclusive. Interest for the half-year ending December 14th (less income tax at 4s. 6d. in the £) on the debenture stocks of the company will be payable on December 15th. The debenture stock transfer books and registers will be closed from December 1st to 14th, inclusive.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LTD.—A second interim dividend of 2 per cent. on the ordinary stock has been declared. The revenue balance for the half-year to September 30, 1934, after allowing for dividend at the same rate as last year on the additional capital in use, exceeds the figure for the corresponding period of last year.

SALTS (SAITAIRE), LTD.—Interim dividend on preference shares 3 1/2 per cent. less income tax in respect of year ending March 31, 1935. Warrants to be posted December 1st.

CANADIAN CELANESE, LTD.—The board has declared on the 7 per cent. cumulative participating preferred stock a dividend of \$1.75 per share from October 1 to December 31, 1934, payable December 31, 1934, to holders on books of the company at close of business December 14, 1934.

GUEST, KEEN & NETTLEFOLDS, LTD.—At their meeting on November 1, the directors of Guest, Keen & Nettlefolds, Ltd., declared an interim dividend for the six months ended September 30th last at the rate of 5 per cent. p.a. annum on the first preference shares, free of income tax; and in respect of the second preference shares a payment of one shilling per share, free of income tax, on account of arrears of dividend. The foregoing dividends to be paid on December 20th to shareholders registered in the books of the company on November 10th. The directors announce the resignation of Mr. Howell R. Jones from the board after his long service with the company. They have elected Mr. I. F. L. Elliot to a seat on the board.

CENTRAL ARGENTINE RAILWAY, LTD.—The directors have decided to pay one-half of the dividend declared in November, 1933, on the 4 1/2 per cent. preference stock. Warrants will be posted on November 15th to all holders on the registers on October 31, 1933.

PENNSYLVANIA WATER & POWER COMPANY.—

	Nine months ended Sept. 30, 1933	Nine months ended Sept. 30, 1934

INVESTORS GENERAL FIXED TRUST.—A second distribution amounting to £168 12s. 1d. net on each unit, or 9.99625d. net on each sub-unit, of Investors General Fixed Trust has been authorised by the trustees, Royal Exchange Assurance, and is payable to certificate-holders on December 1, 1934.

THE RIO TINTO COMPANY, LTD.—The half-year's dividend of two shillings and sixpence per share will be paid as usual on the 5 per cent. preference shares, less income tax, on November 15th. No interim dividend on the ordinary shares will be paid this year. The share transfer books will be closed from Thursday, November 8th, to Thursday, November 15th, both days inclusive. The share warrant coupon to be presented is No. 75 upon the preference shares.

ROYAL BULGARIAN GOVERNMENT 4 1/2 PER CENT. LOAN OF 1909.—Certificates issued by J. Henry Schroder and Company in connection with the partial payment of the collection, on or after November 10th, of an amount of Dutch Fls. 0.1334 per Coupon of Fls. 5.40 nominal in final settlement of the outstanding balance. Coupons due December 1, 1932, on which the first instalment of 16 per cent. of their nominal florin value has not yet been paid, will (in future) be payable at a rate of Dutch Fls. 0.9974 per coupon of Fls. 5.40 nominal in full settlement.

KINGDOM OF BULGARIA 5 PER CENT. 1902 AND 4 1/2 PER CENT. 1907 LOANS.—Fractional coupon receipts for untransferred portion of coupons which fell due between April 1, 1932, and April 14, 1934, inclusive, will be paid in Dutch florins at the rate of 10 per cent. of the amount of levas corresponding to these fractional coupon receipts, including accumulated interest. The fractional receipts in respect of coupons due March 14, 1933, of the Bulgarian 5 per cent. 1902 loan will be paid at Fl. 0.20849, and those in respect of coupons due February 1, 1933, of the Bulgarian 4 1/2 per cent. 1907 loan will be paid at Fl. 0.187139 in Amsterdam.

BULGARIAN 6 PER CENT. LOAN, 1892.—The Ottoman Bank have been instructed by the Bulgarian Government to pay the sum of Swiss francs 0.598 per unitary coupon in final settlement of coupon No. 89 due January, 1933, of the Bulgarian 6 per cent. loan, 1892. Payment will be made against presentation of the certificates which were issued to holders at the time the coupons in question received their first payment of 17 1/2 per cent.

KINGDOM OF BULGARIA 7 PER CENT. SETTLEMENT LOAN, 1928.—KINGDOM OF BULGARIA 7 1/2 PER CENT. STABILISATION LOAN, 1928.—Partly paid coupons of sterling tranches of these loans, due July 1, 1933, and November 15, 1932, may be surrendered for payment of the following amounts in full settlement:—

	1926 Loan (Coupon No. 13)	1928 Loan (Coupon No. 8)
£1,000	4 18 4	2 10 0
£500	2 9 2	1 5 0
£100	0 9 10	0 5 0

KINGDOM OF BULGARIA 7 1/2 PER CENT. STABILISATION LOAN, 1928.—The trustees of the above-named loan have received from the Bulgarian Government sufficient sums in foreign exchange to provide for the agreed payment of 3 1/2 per cent. of the interest coupon due on November 15, 1934. Bondholders may accordingly surrender their coupons for payment at this rate under the conditions described in the League Loans Committee's announcement of April 20, 1934. It will not be possible to provide any sums for sinking fund purposes, and drawings will therefore not take place.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

A FEATURE of the week ended Wednesday last was the rise in wheat prices, following increased buying by European importing countries and reports of crop deterioration in Argentina. According to the latest forecast of the International Institute of Agriculture, surplus wheat stocks in exporting countries will be reduced during the current season by 256 million bushels to 400 million bushels—the lowest level since 1928. Competition at the Mincing Lane tea auctions was keen on Monday and Tuesday, but on Wednesday lower prices were realised for common and low medium Indian grades. Raw sugar was again marked down in the past week. The quotation for Argentine beef at Smithfield Market was reduced a little. At the London Provision Exchange, Australian and New Zealand butter was dearer, but bacon slightly cheaper, than a week ago.

Among industrial raw materials, copper, lead, spelter and tin were all cheaper on Wednesday than a week ago, although copper had by then passed the lowest point of the week. The market in rubber was at first unsettled by the International Rubber Regulation Committee's decision, on November 2nd, to fix permissible exports to January-March, 1935, at 75 per cent. of the allotted quotas, but on Wednesday quotations moved to a higher level. The market in linseed experienced a slight improvement. Among textile raw materials, wool prices remained firm, but American cotton continued to decline in price.

Quotations for cereals experienced an appreciable rise in the past week. This improvement is reflected in an advance of Moody's index of the dollar prices of staple commodities from 142.7 (December 31, 1931 = 100) on October 31st to 143.5 on November 5th. A month ago the index stood at 144.6 and a year ago at 123.6.

COAL

SHEFFIELD.—The output quota in South Yorkshire, fixed at 57½ per cent. for October, is being continued throughout November. Inland trade is brisk, although sales of house coal have been considerably below former levels, until the recent cold snap. Although forward business for industrial fuel is better, the position still leaves room for improvement. Hards are in good request, and washed smalls and stocks are well taken up under existing contracts. Export conditions have improved, and there is a better outlook. Best steams are firm, but prices of other descriptions are not easily maintained. The position of coke is as strong as ever.

In the open market best steams are quoted at 16s. 6d. to 17s. f.o.b., best house at 21s. 6d. to 23s. at pits, and furnace coke at 14s. 6d.

NEWCASTLE-ON-TYNE.—Following the trading agreement made with Germany, local coal exporters are working cautiously, and are only gradually resuming shipments. There is an improving tendency in the steam section of the market, where screened grades are firmer and sized sorts are moving more freely. Little change is taking place in the coking and gas section of the Durham market, and more trade would be welcome. With the colder weather, coke of all descriptions is in better demand, and prices are inclined to harden. Current f.o.b. prices for export are as follows:—**NORTHUMBERLAND.**—D.C.B. screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 20s.; Newcastle and District Gas coke, 20s. 3d.

GLASGOW.—Conditions generally are steady. Home demand has developed on more active lines during the past few weeks, and this tends to render the collieries less dependent on export business. Some falling-off in overseas inquiry for prompt supplies is scarcely felt, and in any case order-books are satisfactory, and shipments continue on a satisfactory scale. Despite Polish competition, forward inquiry remains encouraging.

Shipment prices, f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 14s. 6d.; splint best, 16s. 6d.; splint second, 14s. 6d.—14s. 9d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 12s. 6d.; trebles, 13s. 9d.; 14s.; doubles, 13s.; singles, 12s. 9d.—13s.; pearls, 12s.; dross, 10s. **FIFE.**—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 3d.—12s. 6d.; first-class steam, 13s.; third-class steam, 12s. 6d.—13s.; trebles, 14s.—15s.; doubles, 12s. 9d.—13s.; singles, 12s. 3d.—12s. 6d.; pearls, 11s. 9d.—12s. **LOTHIANS.**—Prime steam, 12s. 6d.—13s.; secondary steam, 11s. 9d.—12s.; unscreened navigation, 12s. 6d.; trebles, 13s.—14s.; doubles, 12s. 9d.; singles, 12s.—12s. 3d.; pearls, 11s. 9d.—12s. **AYRSHIRE.**—Best unscreened navigation, 14s. 3d.; jewel, 16s.; steam, 13s.; trebles, 15s. 6d.; doubles, 12s. 9d.; singles, 12s. 9d.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—Under the award of the Arbitration Tribunal appointed by the Government, the minimum wage rate in the South Wales

coalfield has been increased from 20 per cent. to 22½ per cent. above the 1915 basis rates, and a flat subsistence wage of 7s. 8d. has been fixed in place of the subsistence rates of from 7s. to 7s. 6d. per shift, according to family responsibilities, which were operative under the old agreement. It is estimated that the award will increase labour costs by at least 4d. per ton. These new conditions will be subject to revision on the application of either side at the expiration of twelve months, but the agreement itself is operative for a period of three years.

The differences between the French pitwood exporters and South Wales coal exporters have been adjusted by an agreement under which the price for French pitwood under the barter agreement of last June was increased from 22s. 7½d. c.i.f. to 24s. 6d. The higher price is to apply to 60,000 tons of pitwood to be delivered over the next three months, and in exchange for this timber France is to take 120,000 tons of coal.

Conditions on the Cardiff market have shown very little change this week. There has been no improvement in the demand for large classes and work has been irregular at many of the pits, while quotations, except for some of the sized grades, have been ruling nominally at minimum schedule figures. Trade in anthracite is active, and loading pressure at Swansea and Port Talbot has been heavy throughout the week.

A disquieting position has been created in the coalfield by a decision of a conference of miners' delegates at Cardiff on Wednesday, recommending the service of a fortnight's notice from November 14th in support of a demand for the recognition of the South Wales Miners' Federation by the Taff Merthyr Colliery Company.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Western Valleys, 17s. 9d. to 18s.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 13s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 25s.; French nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 45s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. French, 24s. to 24s. 6d. Portuguese.

IRON AND STEEL

MIDDLESBROUGH.—There is a good deal of activity in the local iron market, and further business is being done, not only with home users, but also for export. Further parcels have been shipped during the past week to Norway, Denmark, and Finland, whilst shipments to Scotland continue to be heavy. A shipment to Germany is expected to be arranged very shortly.

To home users, prices are maintained on the basis of 67s. 6d. per ton for No. 3 Cleveland foundry pig iron, and 69s. per ton for No. 1 hematite iron, delivered locally. For export, hematite makers are holding for higher prices than have ruled for some time.

Shipments of all classes of pig iron from the Tees, between November 1st and November 6th, amounted to 5,243 tons, as compared with 4,586 tons in October.

Durham blastfurnace coke is changing hands at 20s. per ton delivered at the furnaces. Foreign ore is firm and based on 17s. per ton c.i.f. Middlesbrough for best Bilbao rubio ore.

In the steel department, manufacturers of semis and finished material continue busy, and have good order books. More ship-building material is being specified. Heavy steel scrap is in demand at 50s. per ton delivered works.

SHEFFIELD.—The majority of steel works continue to be well employed in all the important sections of the trade, and there are no signs of reaction. Certain authorities prophesy that there will be no general decline of activity for six and even twelve months. Basic steel furnaces are working to capacity. The same may be said of the mills and forges. The call for acid steel is not so good as could be desired. As regards the superior alloy steels, demand is rather easier than early in the year, although this department can be described as satisfactory. Exports are being curtailed by difficulties of finance in Germany and South Africa. The demand for stainless steel sheets is so great that the execution of orders has fallen into arrears. Sales of stainless steel in bar are fairly good. Cutlery and tool makers are troubled by Japanese competition in pruning shears, dressmakers' and tailors' shears. Large quantities of these goods have been unloaded on the British market at very low prices and are being sold in the sixpenny bazaars. Tool makers are busy, but severe internal competition keeps prices down to unsatisfactory levels. Considerable quantities of tools are being imported. Makers are agitating for an increase of the present 20 per cent. import duty on general tools.

The season trade for cutlery and plate is now in full swing. The volume of business is considerable, but not so large as a year ago. The electro- and silver-plate branches are uneven, and the trade appears to be going into fewer hands. Better quality knives, forks, spoons and table hollowware are selling more freely than for a long period.

GLASGOW.—Business appears to have been somewhat quieter in the West of Scotland this week. In the heavy trades works are fully employed and order books are well filled, but just at the moment there seems to be less buying. The position with makers of semis is very similar. At the tube plants conditions are very satisfactory—working to capacity being fairly general. Sheet makers are also quite busy. Home demand continues to expand and a good business is being done in both black and galvanised sheets. Export business has for the past few weeks been on a larger scale, but this business is almost entirely for prompt delivery and there is very little forward buying. There is still no improvement in the wrought iron trade nor in steel re-rolling.

CARDIFF.—Rather quiet conditions prevail in the tinplate trade, but manufacturers are kept fairly well employed at their quota allocations, and there appears every prospect of the present volume of trade being maintained. Under the new international agreement c.i.f. prices have been fixed for every port in the world, and those for Great Britain are based on a minimum of 18s. 2d. per basis box f.o.b., hooped, wired, or plain. For the home market the minimum price is 17s. 9d. plus 3d. for transport and 2d. for wiring, but preparations are being made for the adoption of a scheme of delivered prices as in the export trade.

Steel bars are unchanged at £5 2s. 6d. per ton delivered and galvanised sheets at from £11 5s. to £11 15s. f.o.b. Tinplate shipments at Swansea last week totalled 126,564 boxes, compared with 125,591 boxes the previous week, and as arrivals at the warehouse were slightly lower, stocks at the end of last week amounted to 113,701 boxes compared with 131,888 boxes the previous week, and 117,327 in the corresponding week last year.

OTHER METALS

Movements in the metal markets have been irregular during the past week. The conclusion of the exchange agreement with Germany gives ground for hoping that larger orders may soon be placed, while American copper prices appear to have passed their lowest point. On the other hand, the deterioration in the statistical position of tin and the uncertain future of the zinc cartel have exercised a bearish influence and tend to prevent a general improvement.

The copper market has profited from the improvement in the American position mentioned last week and prices are now tending slightly upwards. The danger is that this rise may go too far and result in further sharp reactions, as has been the case in the past. The tin market continues to lack interest. That the "group" has the market firmly in its hands is shown by the smallness of the price reaction which followed the publication of the unsatisfactory October statistics last week. Despite the disappointment of market operators and the quiet nature of the demand, it would appear, therefore, that fluctuations in tin prices are likely to be kept within narrow limits in the near future.

The lead and spelter markets have suffered from a deterioration in the statistical position of these metals. The cartel spelter stocks again increased by some 1,200 tons during the first half of October. Although this increase is not very significant in view of the moderate size of stocks, it has strengthened the opposition of certain important members of the cartel to the scheme whereby producers are allowed to exceed their quota on payment of a fine. According to the American Bureau of Metal Statistics, world output of refined lead amounted to 125,795 short tons during September, compared with only 114,158 short tons in August and 118,104 in September, 1933. This sharp increase in output does not, however, necessarily imply that a turning-point in the trend of lead production has been reached.

The opening of the Magdeburg smelter of the German Giesche Zinc Company has involved the Polish spelter industry in difficulties, for all the Giesche ores (mined in German Upper Silesia) had previously been smelted in Poland. Smelters in the latter country will probably try to compensate themselves for the loss of these German orders by increasing the output of zinc ore in Poland, but this necessitates the finding of new markets for their product. This tendency may have important repercussions on the world's spelter markets in the future.

Although aluminium prices in London have recently shown no change, the domestic price in Germany has just been reduced by 10 per cent. to 140 Rm. per quintal. The German authorities have been trying to stimulate home consumption of aluminium, but the electrical industry has been opposed to the substitution of aluminium for copper cables, in view of the increased cost involved. Foreign exchange for the import of bauxite is not subject to the severe restrictions which are usual in the case of other commodities, with the result that German imports of bauxite are now about 50 per cent. above the level of a year ago.

The nickel position remains unchanged. Demand is steady and production is now very profitable, as is shown by the fact that the International Nickel Company has just declared a quarterly dividend of 15 per cent., making a total of 50 per cent. for the whole year, as against nothing in the two previous years.

TIN.—Sales on the London Metal Exchange: 625 tons on Monday, against 280 tons last week; 265 tons on Tuesday, against 285 last week; 305 tons on Wednesday, against 490 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 51.15 cents a week ago and 50.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 7s. 6d. to £228 10s., compared with £229 7s. 6d. to £229 10s. last week. Stocks in London and Liverpool at the end of last week were 4,496 tons, an increase of 202 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,850 tons on Monday, against 4,200 tons last week; 850 tons on Tuesday, against 3,800 tons last week; 650 tons on Wednesday, against 1,925 tons last week. Domestic spot was quoted at 6.52½ cents per lb. in New York on Wednesday, against 6.72½ cents a week ago and 6.72½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 11s. 3d. to £27 12s. 6d., compared with £27 18s. 9d. to £28 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 35,683 tons, show an increase of 1,103 tons, and stocks of rough copper, at 8,573 tons, an increase of 909 tons.

LEAD.—Sales on the London Metal Exchange: 700 tons on Monday, against 650 tons last week; 350 tons on Tuesday, against 800 tons last week; 300 tons on Wednesday, against 250 tons last week. The New York quotation on Wednesday was 3.60 cents per lb., against 3.70 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft

foreign was £10 5s. for shipment during the current month, compared with £10 13s. 9d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 650 tons on Monday, against 300 tons last week; 200 tons on Tuesday, against 450 last week; 100 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 3.75 cents a per lb., against 3.85 cents the week before, and 3.80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £12 5s. for shipment during the current month, against £12 13s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £49 to £50 per ton, as against £45 to £45 10s. per ton last week. Chinese wolfram was again quoted at 40s. 6d. to 41s. 6d. per unit, c.i.f., as against 40s. to 40s. 9d. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. —The past week witnessed a further slight fall in American cotton prices. On the other hand, rates for the Egyptian staple have tended to harden. Operators have expected the American Government to increase the estimate of the crop, which was 9,443,000 bales a month ago. According to some advices, the basis in the Southern States is not quite so stiff as recently, but it is still most difficult to import to this country. Exports from the United States this season are 1,200,000 bales less than a year ago. There is not likely to be increased confidence in present prices for American cotton until information is available as to the acreage plans for next season.

Inquiry in piece goods has tended to increase and some manufacturers have sold a little more freely. A rather more hopeful feeling prevails with regard to trade for India, although merchants are somewhat cautious owing to the possibility of political trouble when the White Paper proposals are published. Clearances in the bazaars are reported to be improving. A fair amount of business has been done in dhooties for Calcutta and mulls for Karachi. Steady buying has taken place for South America and the Dominions in dyed and printed goods. Home-trade operations have been irregular. In the yarn market a feature of importance has been the agreement on the German debts question and the lifting of the ban on exports. Some encouraging contracts have been arranged in Egyptian yarns and further substantial business is under negotiation.

COTTON PRICES

	1934				Corresponding Date	
	Oct. 17	Oct. 24	Oct. 31	Nov. 7	1932	1933

WOOL.—Bradford. —According to our correspondent, confidence in the wool market has improved during the past fortnight. In the Australian primary markets brokers have increased offerings, and with the wider demand from Yorkshire and France these are being cleared satisfactorily. The arrival of these wools is anxiously awaited in Bradford, for hitherto sales of wool in Australia have been on a definitely subnormal scale, and this has created a position in Bradford in which topmakers find difficulty in securing sufficient raw material to meet the demand for spot delivery. There has been plenty of inquiry for, and some business in, wool in Bradford and London (where private sales have been made), but there is a marked absence of cheap fine wool, and it is on this account that Bradford prices are tending against the buyer in sympathy with the hardening of prices overseas. It would be difficult to buy any weight of good 64's warp tops at under 26½d., which represents replacement cost. For delivery in the New Year, too, it is indicative of the growing confidence that topmakers are becoming less disposed to quote any lower than for spot. Accompanying this firmer tendency there has been an appreciable improvement in turnover. Combers are reported to be busy, and especially during the first part of the past fortnight spinners covered fairly freely with topmakers, apparently fearing that if they continued to hold off much longer they might have to pay higher prices. Mill activity has increased, and a number of spinners are now working overtime in executing orders placed by manufacturers to cover spring business.

A feature of the market has been the much better movement of prices of crossbred qualities. A good deal of this appears to be due to inquiries on export account, which have mainly been put into motion by the more or less satisfactory conclusion of the negotiations with Germany over the question of payments. For some days it has been evident that firms "in the know" have anticipated the present Anglo-German agreement and have been preparing for freer German buying. It is too early yet to judge the full effects in connection with this development, but it seems fairly certain that the reopening of the German yarn and top

market—in which, incidentally, prices are far above Bradford parity—must have a decided "bull" effect on conditions in European wool-consuming centres, and especially Bradford.

GRAIN MARKETS

WHEAT.—The wheat markets were more active in the past week when European importing countries bought more freely. Owing to the better demand and because of adverse crop reports from Argentina, there was a slight rise in prices. The improvement in prices seems not unjustified in view of the fact that the International Institute of Agriculture now forecasts a fall in the carry-over of exporting countries from 656 million bushels at the end of the 1933-34 season to 400 million bushels at the end of the current season. If this forecast proves correct, stocks at the end of the current season will be lower than in any year since 1928. According to Mr. G. Broomhall, total shipments during the past week were 1,270,000 quarters, against 1,177,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 100½ cents per bushel, against 95½ cents the week before and 100½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 6d. per 496 lbs., against 30s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 6d., against 29s.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 26s. 6d., against 25s. to 26s. 6d. a week ago.

FLOUR.—North American shipments were 101,000 sacks in the past week, as compared with 135,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 24s. 3d. to 26s. 3d.; Australian, ex store, 20s. 3d. to 20s. 9d., against 20s. 3d. to 20s. 9d.

BARLEY.—October futures were 52½ cents per bushel in Winnipeg on Wednesday, against 50½ cents last week and 53½ cents a month ago. Quotations in London on Wednesday were: "English malting," i.e., per 448 lbs., 30s. to 55s., against 30s. to 55s. a week before.

OATS.—On Wednesday, "December" futures were quoted at 52 cents per bushel in Chicago, against 49½ cents a week ago and 51½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. per 320 lbs., against 22s. a week ago; "Chilean White," landed, 23s. 9d., against 23s. 6d. a week earlier.

MAIZE.—"December" futures were quoted on Wednesday at 78½ cents per bushel in Chicago, against 75½ cents a week ago and 75½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. per 480 lbs., compared with 20s. 9d. last week; "Plate," ex ship, 21s. to 21s. 6d., as against 19s. 9d.; "Plate," "November," 21s. 6d., as against 20s. Yellow maize meal, ex wharf, was quoted £6 to £6 2s. 6d. per ton, against £5 17s. 6d. to £6 per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to November 3	Cwts. 79,191	Cwts. 334,481	Cwts. 287,208	Cwts. 398,423
10 weeks to November 3	734,490	2,530,215	3,568,947	4,782,470
Average price of English wheat per cwt.	s. d. 6 7	s. d. 5 6	s. d. 4 8	s. d. 4 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 1, 1930.....	Cwts. 156,055	Cwts. 543,898	Cwts. 54,868	s. d. 6 11	s. d. 9 10	s. d. 6 0
Oct. 31, 1931.....	107,437	449,156	63,157	6 5	9 1	6 6
Nov. 5, 1932.....	334,481	408,323	56,941	5 6	7 7	6 0
Nov. 4, 1933.....	287,208	499,216	48,020	4 8	9 7	5 4
Oct. 27, 1934.....	368,019	428,997	46,273	5 0	9 2	6 7
Nov. 3, 1934.....	398,423	494,560	52,823	4 11	9 1	6 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Nov. 8, 1933	Jan. 3, 1934	Oct. 31, 1934	Nov. 7, 1934
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	62½	46½	63½	65½	74½	79½
Chicago (No. 2 Winter) Cents per 60 lb.	55½	46½	88½	84½	95½	100½

OTHER FOODS

SUGAR.—The market in raw sugar was again subjected to liquidation and prices continued to decline in this country. The spot price in New York on Wednesday was 2.82 cents per lb., as compared with 2.82 cents per lb. last week and 2.93 cents per lb. a month ago. Wednesday's sales of raw sugar in London

included "December delivery" at 3s. 11½d. to 4s. 0½d., against 4s. 0½d. to 4s. 1½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	1,213	65	1,050	1,987	19,325	20,448
Liverpool.....	6,740	19,164	15,715	13,588	95,827	85,205
Total tons	7,953	19,229	16,765	15,575	115,152	105,653
Last week	7,902	5,701	15,139	13,823	123,964	101,999

COFFEE.—The New York coffee market has been dull. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. Demand at Tuesday's London auctions was slow, but the small quantity sold realised steady prices. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 425 bags; exported, 105 bags; stocks, 27,601 bags, against 26,237 bags a year ago. Central American, landed, 402 packages; delivered, for home consumption, 1,693 packages; exported, 464 packages; stocks, 82,238 packages, against 73,387 packages last year. Other kinds: Landed, 1,900 packages; delivered, for home consumption, 2,420 packages; exported, 134 packages; stocks, 75,802 packages, against 92,908 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 20s. per 50 kilos, c.i.f. Continent, as against 20s. to 20s. 6d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 385 bags; delivered, for home consumption, 11,177 bags; exported, 138 bags; stocks, 159,945 bags, against 121,870 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 50,979 packages of Indian and 20,882 packages of Ceylon tea. At the auctions in London competition was keen, and prices firm, on Monday and Tuesday, but on Wednesday common and low medium Indian grades declined in price. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.							
Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Nov. 2, 1933	d. 13-48	d. 13-54	d. 16-22	d. 11-61	d. 10-90	d. Nil	d. 14-09
Oct. 4, 1934	13-08	11-62	13-84	10-19	11-00	12-89	12-89
Oct. 11, "	13-10	11-48	14-20	10-06	9-52	10-98	12-94
Oct. 18, "	12-63	11-58	14-32	10-15	9-77	10-98	12-76
Oct. 25, "	12-49	11-35	14-63	9-96	9-29	10-85	12-73
Nov. 1, "	12-33	11-44	14-27	10-69	9-28	10-67	12-58

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 6d. per cwt., shows a rise of 1½d. on the week. Movements in London during the past week were as follows: Landed, 12 tons; delivered, 205 tons; stocks, 3,527 tons, against 3,937 tons a year ago.

POTATOES.—Supplies were about equal to demand at last week's prices. At the London Borough Market on Tuesday, "King Edward" again sold at 6s. to 6s. 6d. per cwt.

SPICES.—"Lampoon" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 107 tons; delivered, 55 tons; stocks, 468 tons, against 398 tons a year ago. White, landed, 217 tons; delivered, 59 tons; stocks, 8,694 tons, against 1,146 tons a year ago.

MEAT.—The trend of meat prices at Smithfield market was downward. Argentine beef (chilled hindquarters), English mutton and pork were all slightly cheaper than a week ago, the quotation for Argentine beef, chilled hindquarters, being 3s. 2d. to 3s. 8d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. last week. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,587 tons, against 9,232 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84 per cent. of the beef supplies, against 81.6 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 69.8 per cent. of the total supply of mutton and lamb, against 62.9 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Rather steadier conditions have developed, but trade on the whole is within narrow limits. Linseed is a shade firmer in sympathy with wheat, but buyers are not following the advance, crushers' requirements having been met. Old crop Plate is still at a premium over new, the price being about 9 7s. 6d. for November shipment and 9 for December. For new seed 8 17s. 6d. is asked (January-February) after having been sold at 8 12s. 6d. Reports of American inquiries for Indian seed do not appear to have resulted in business. Calcutta to London is offered at 10 15s. and Bombay at 11 2s. 6d., November. The new crop in Argentina continues to progress favourably and optimistic private forecasts place the probable yield at over two million tons providing damage by frost and rain is avoided in the next few weeks. The balance of the old crop remaining for shipment is estimated at 115,000 tons. The quantity of linseed afloat

for Europe is 126,400 tons (including 16,000 tons from India) or 7,300 tons less than last week; and for the United States and Canada 24,400 tons against 65,400 tons a year ago. Cottonseed is in somewhat better request and steadier, black Egyptian to Hull having been sold at 4 17s. 6d. to 5 for shipment.

Linseed oil has been in fair demand from consumers at lower levels and closes a shade dearer. Raw oil ex Hull mill is quoted at 17 15s. per ton (naked) for delivery to April and £18 May-August. Cotton oil is quiet and Egyptian crude ex Hull is available at 15 5s. per ton and refined 17 prompt. Oilcakes are in better demand and steady.

RUBBER.—The market in rubber was somewhat unsettled in the past week. On November 2nd, the International Rubber

Regulation decided to fix exports during the first three months of 1935 at 75 per cent. of the allotted quotas. The implications of this decision are discussed in a Note in the Stock Exchange Section.

In New York, Wednesday's spot price for rubber, at 13½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6½d. for January-March, 1935, as against 6½d. to 6½d. a week ago. Stocks in London and Liverpool at the end of last week, at 122,612 tons, show an increase of 2,610 tons as compared with the preceding week.

Roneo Table-Bookcase

with
Vertical Filing Drawers

This unit, forming a combined bookcase, filing cabinet and table, is extremely useful in the up-to-date office, consulting room, study or library. It constitutes a veritable office-in-miniature for the home, in keeping with modern furnishing design. Made from best quality steel with a stove enamelled stippled finish in brown, maroon or bronze.

DIMENSIONS OF UNIT
Height 31½"
Width 22½"
Depth 22½"

FILING DRAWERS
Height 10½"
Width 12"
Depth (clear filing space) 16½"

Accommodates
7000 letters
in the 2 drawers

£7:0:0

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 12—THE DEPRESSED AREAS. An Industrial Correspondent discusses plans for dealing with the problem.

TUESDAY, NOVEMBER 13—"MINOTAUR," our Special Mining Correspondent, in his "Mines of the Rand" series, deals with CONSOLIDATED MAIN REEF.

WEDNESDAY, NOVEMBER 14—PROSPECTS IN THE COCOA MARKET. The position of this Commodity, the latest recipient of the professional speculator's attention, is examined by a Produce Market Correspondent.

THURSDAY, NOVEMBER 15—The Story of Famous Companies—No. 12—LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES LTD.

FRIDAY, NOVEMBER 16—THE COPPER OUTLOOK. The Special Metal Market Correspondent, whose articles on the Copper situation on June 30 and July 2, showed up the brewing weaknesses of the position when copper was still thought cheap at £31. 10. 0. once again takes a view on the prospects for the Metal.

VOX POPULI

THE sixteenth anniversary of the Armistice has furnished ample evidence of the deep-seated desire in this country for peace—a desire that is crystallising, under the influence of menacing events, into a more positive determination to strive for peace. That this matter has quite definitely become the outstanding topic in the public mind to-day is of course due to the realisation that though no nation may desire to set the world ablaze, though none is prepared or ready to face the consequences, and though a catastrophe may not be imminent this year or next, war, to use Mr Lloyd George's vivid phrase, is "lurking on the path along which humanity has got to tread, and any moment it may spring upon us." With this serious view of the situation dominant in men's minds, it is somewhat surprising—but typically British—that the issue has been confused by a regrettable and foolish wrangle, which finally blazed up in the House of Commons at the end of last week over a plan for sounding public opinion on the question.

And this was the cause of all the rumpus. A committee representative of peace societies, all three political parties and other organisations, formed on the initiative and under the guidance of that notorious fire-eater Lord Cecil, has organised a scheme for inviting every elector to answer five questions, to wit:—

1. Should Great Britain remain a member of the League of Nations?
2. Are you in favour of an all-round reduction of armaments by international agreement?
3. Are you in favour of the all-round abolition of national military and naval aircraft by international agreement?
4. Should the manufacture and sale of armaments for private profit be prohibited by international agreement?
5. Do you consider that if a nation insists on attacking another, the other nations should combine to compel it to stop by (a) economic and non-military measures? (b) if necessary, military measures?

An affirmative answer to all five questions would indicate approval of the policy which the League of Nations Union

has been urging in its propaganda throughout the country, though it is, of course, well known that many who would be willing to accept the obligation of 5 (a) as laid down in the Covenant would hesitate about 5 (b) (which is a voluntary matter in the Covenant) or even answer "No."

A ballot of this kind cannot, of course, be carried out without some explanation to those who are asked to vote, or, at all events, to the army of workers who are carrying out the canvass. A leaflet setting out the reasons for an affirmative answer and meeting objections was, therefore, prepared by the organising committee. But at an advanced stage of preparation Sir Austen Chamberlain and some of his Conservative friends objected that a simple answer cannot be given to some of these questions—notably the fourth—and claimed that the voter ought to be told that if he voted in favour of economic sanctions we should in all probability be drawn into military action whether we liked it or not. This is, of course, a point on which there is room for sharp difference of opinion. After much discussion, a second leaflet was prepared stating these objections, and the organisers are distributing it to all local societies to whom the original leaflet is being sent. Naturally, however, workers who have for years been urging a particular policy have, in practice, proved very unwilling to distribute literature throwing doubts on their arguments. Hence a third leaflet has been prepared merely setting out the object of the ballot. This procedure has been roundly denounced by Sir Austen Chamberlain and characterised as "little better than an attempt to obtain subscriptions by a fraudulent prospectus." On reflection, however, Sir Austen has written to the Chairman of the League of Nations Union regretting that his words should have been regarded as reflecting on the good faith of Lord Cecil or any of his colleagues.

Meanwhile Lord Beaverbrook, whose detestation of war is no doubt perfectly sincere, has jumped into the arena with much noise and fury. Day by day his leading journal endeavours to make our flesh creep with talk of the "Ballot of Blood," and begs us to plump for the ostrich-like policy of isolation. Finally, in the House last week Sir John

Simon joined the critics, and in a speech which ignored the human issues involved made great play with the difficulty of answering a simple "yes" or "no." Unfortunately his speech was not merely legalistic, but was marred by certain blatantly unfair attacks on the methods of the League of Nations Union and by a specific charge of political partisanship. The Union has been scrupulously careful to avoid any grounds for such an accusation. This speech has alienated wide sections of opinion in this country hitherto not unalterably opposed to Sir John Simon's foreign policy. Rightly or wrongly, it has given an impression of cynical indifference to the passionate desires of the mass of the public, which Sir John will find it difficult to efface.

The task of organising peace is, as no intelligent person will deny, a highly complex one and full of difficulties. But the critics have surely misunderstood the purpose of this ballot or its possible effects. One cannot use the device of the referendum, still less a "straw vote" of this kind, as a method of legislation or of laying down the details of policy. How it can be used, and used effectively—particularly between general elections, which are in any case fought on a multiplicity of other issues—is as a means of revealing the force and trend of public opinion on general principles. The plain man would have thought that an emphatic expression of national sentiment—which will almost certainly be forthcoming—in favour of the general ideas represented in the questionnaire would strengthen the hands of Sir John Simon and the Government in their efforts to ease the international situation and lessen the dangers of war. To pretend that these questions are too difficult to be answered by a democratic electorate is rank heresy in this country; for the electorate will have to decide them in the long run, and—to borrow Lord Beaverbrook's words—may indeed have to pay in blood and tears if in the end the right answers are not given. If our rulers really believe that they alone are competent to enunciate the general principles of foreign policy, let them say so plainly; but let them not pretend to believe in democracy and yet bedevil every attempt to educate the democratic electorate.

What the effect of this strange quarrel may have on internal and domestic politics is yet to be seen; but it is very much to be regretted that at a moment when public attention should be concentrated on essentials, this element of bathos should have been introduced. Fortunately, General Smuts' speech at the Royal Institute of International Affairs' dinner on Monday, by its understanding and statesmanlike penetration has dissipated some of these clouds and restored a sense of perspective. Not everyone will agree with all that General Smuts has said, but his words will undoubtedly be carefully weighed not merely in Great Britain, but throughout the civilised world.

To his mind the fear complex and the inferiority complex from which Europe is suffering so much, can only be dealt with "by dragging them from their hidden depths and exposing them to the light of day." This is the method of the League of Nations. General Smuts does not want to see the League transformed into a fighting machine, or Geneva into an International War Office, but where sanctions are needed he looks to regional agreements as a means of "but-tressing peace within the League." Regarding Germany, he expressed the view that, "To tell me that the German people really desire war and are deliberately preparing for it is asking me to believe that they are madder than any people could be to-day," and he made a most powerful appeal to Europe to grant real equality to Germany before it is too late. Similarly he addressed an appeal to Japan not to imperil the greatest contribution towards peace that has been made since the League was set up, namely, the Washington Agreements. The concert of the Pacific is in danger. It would be folly for any European Power to call in the East to aid them in their Western quarrels. Japan must read aright the lesson of the Great War, which showed that a position of isolation is one of acute danger even for the greatest of military powers. The attitude of the West towards Japan must be one of understanding—"the old Japanese alliance may have been, and in my opinion was, a mistake—a policy of friendliness and understanding can never be a mistake." Finally, General Smuts emphasised

that while the Empire must seek no exclusive alliances in any quarter, if ever the issue is posed, the British Commonwealth of nations must find its closest political affiliations with the United States.

Will there be a response abroad to General Smuts' appeal? The discussions of the last fortnight have shown that we in this country are awakening to the fact that these are the supreme issues; for unless they are rightly handled all efforts at economic improvement at home must prove in vain. The task before us, therefore, is to make perfectly clear the national will for peace and our readiness to make sacrifices if necessary to attain it, and to approach all the difficulties in the spirit of understanding. Just a year ago Herr Hitler obtained an overwhelming poll of the German people for "Peace with Equality"; last month he gave an earnest of his intentions by ordering that no uniforms should be worn or provocative meetings held in the German territory bordering the Saar until the plebiscite is over. If there could be forthcoming from France a new proof that her public feel the same urge to break through the thickets of suspicion and uneasiness, that is increasingly evident in this country, General Smuts' appeal to pick up the threads where they were dropped in 1933 may not have been made entirely in vain.

THE DEPRESSED AREAS

THE publication by the Government of the reports of the four Commissioners on the depressed areas and the debate in the House of Commons once again raise the important question whether the Government really can do anything to solve the problem which these areas present, except by continuing to pay out a "dole." The authors of the four reports have evidently made a sincere attempt to envisage the problem in its true perspective without any particular political bias; but with the exception of Captain Euan Wallace their reports, though valuable as diagnosis, do not contain very much in the way of imaginative proposals.

All the reports are ultimately confronted with variations on a single lugubrious theme, the existence—after all the probabilities of recovery from the present slump have been discounted and all the possibilities of transference fully exploited—of a surplus population of substantial magnitude. But besides this hard resistant core, which though solid enough is after all of limited dimensions, there is, to change our metaphor, a larger penumbra of unemployed persons who by appropriate measures of social planning may reasonably look forward to a chance of re-occupation, even if only on a subsistence level, which will save them from the slow decay of idleness. Neglecting for the moment the potentialities of transference, which must obviously be determined by the industrial recovery of the country as a whole, the chances of finding re-employment in the depressed areas themselves must depend upon the possibility of either reviving existing industries or of replacing them by new industries or industries which have hitherto not been located in the district. There remains, too, the residual possibility of finding further employment on the land—a possibility which politicians of all kinds are perhaps inclined to contemplate through too rosy spectacles.

In surveying conditions in West Cumberland Mr J. C. Davidson sees little prospect of any reabsorption of labour by the iron and steel industry or by the iron ore mining industry, the deposits of which are for the most part reaching the end of their economic life; but he holds out some hope of increased prosperity in the coal industry, which would be enhanced by the improvement of the dock facilities at Whitehaven. Unfortunately, the industrial structure of the area and its geographical situation do not make it a suitable field for the planting of new industries on any large scale, but the Cumberland miner has never entirely lost touch with the land, and Mr Davidson accordingly recommends a land settlement, not on small holdings, but on a large scale, for the cultivation of soft fruit and vegetables. In order to promote this settlement, as well as the establishment of minor industries, he urges the erection of a

development trust working with the assistance of a State guarantee.

Captain Wallace, whose area, namely Tyneside and County Durham, obviously presents a far larger and more complicated problem, has conceived a much more ambitious piece of social planning. He realises much more clearly than his colleague, Sir Wyndham Portal, that the whole machinery of local government has broken down under the burden of unemployment, and he recognises that the establishment of new industries on the North-East Coast can only be successful if the handicap imposed by the cost of public assistance is removed. He is consequently driven by the logic of the facts to proposals which will probably appear drastic, to say the least of it, to more conservative minds. Among the reforms he suggests are "some means of unification of the local authorities on Tyneside," if necessary by compulsion—for he sees clearly enough that without such unification anything in the shape of regional planning will be impossible; the appointment of special commissioners to administer ordinary outdoor relief in the administrative County of Durham; and an Exchequer grant to reduce the cost of public assistance in the county, including the county boroughs of Sunderland and West Hartlepool, to the average of the whole country. Though some element of local responsibility in the administration of poor relief must obviously be preserved, the Government in its Unemployment Act has already recognised the principle that the maintenance of the unemployed should be a national and not a local charge. Unfortunately our system of national unemployment insurance is still far from complete, and even after the passing of the Unemployment Act the poor rate in County Durham will still stand at 6s. in the pound as compared with an average of 1s. 1½d. for the whole country in 1932. Whether the abuses connected with public relief in County Durham warrant the appointment of special commissioners is a much more difficult question to decide, but Captain Wallace is undoubtedly on the right lines in seeking to abolish the handicaps which have hitherto discouraged new industries from settling in this area. A similar problem is presented by the rate burden in South Wales, where Merthyr Tydfil, for example, has to pay 15s. 7d. in the pound for public assistance.

The actual economic effect of these high rates since the Dering Act has probably been exaggerated, but the psychologically deterrent effect is certainly not unimportant. As a matter of public policy it is eminently desirable that the Government should do all that lies in its power to remove every handicap that checks the settlement of new industries in the depressed areas or hastens the disappearance of existing ones. In Tyneside, in particular, it is essential that measures should be taken to arrest the process of decay. Taking a long view, it would be more than pessimistic to assess the prospects of the shipbuilding industry on the calamitous basis of the past few years. There is therefore every reason, on purely economic grounds, for doing everything that lies in our power to preserve the industrial vitality of this area.

The remainder of Captain Wallace's programme also contains several constructive suggestions, such as the clearance of district factory sites, the encouragement of public improvements like the Jarrow Slate scheme, and the project for a road tunnel under the Tyne by grants-in-aid, the promotion of land settlement and land drainage schemes, a special housing scheme with Government assistance, and last, but not least, the appointment of a commissioner to co-ordinate all the Government schemes for the rehabilitation of the area.

Captain Wallace has made out a convincing case for vigorous Government action which would imply a complete reversal of the parsimonious policy in regard to public investment initiated under the stress of the financial crisis in 1931. *Mutatis mutandis* many of the ideas which he has suggested might well be applied in other areas, e.g. in Lancashire or South Wales, though in the latter region the problem is somewhat different owing to the almost entire dependence on two industries, coal and iron and steel, and the consequent existence of pockets of unemployment in areas which, industrially speaking, must be regarded as permanently derelict.

The broad impression left on reading these reports is that the general aim of the Government's policy must be to attack the whole problem of depressed areas on as many "fronts" as possible simultaneously. One obvious measure which suggests itself would be the reduction at both ends of the working population, first by eliminating the older age groups by lowering the pensionable age and, secondly, by raising the school age and so postponing the normal age of entry into employment. All the four reports lay special stress on the problem of juvenile unemployment, and the case for immediately raising the school age in the depressed areas is overwhelming. Thirdly, transference of the younger sections of the population should be stimulated by the liberal provision of suitable training schemes and other measures. The next step should be to endeavour to maintain as large a percentage as possible of the working population thus reduced by the encouragement of new industries on a self-supporting basis, and here housing schemes and public works on harbours, docks, roads, etc., should play an important part. Finally, the residual problem should be attacked, if necessary, partly by relief works, i.e. improvement schemes which are not of a strictly economic nature, and partly by various schemes of land settlement on small holdings and allotments.

But, even if all this be done, it should be remembered that in the last resort the maintenance of economic life on a healthy, if reduced, basis will only be possible in these areas if there is some recovery in our export trades, and this in turn depends on our general commercial policy. The limits to absorption of labour by the home market have already, it appears, been approached, and it is only through the expansion of international trade that a further industrial revival can be brought about. If our policy ignores these wider considerations, such remedial measures as are taken must be based on the assumption that the present exceptional conditions will persist indefinitely and therefore will call, sooner or later, for really drastic treatment.

Unfortunately, the policy of the Government as announced on Wednesday disappointed the hopes of the House of Commons that a bold scheme for attacking the problem was in preparation. Mr Chamberlain has, it is true, promised a special fund—with £2,000,000 to go on with—to be administered by a special commissioner and to be devoted to a variety of objects ranging from the clearing of derelict sites to the organisation of community settlements; but his proposals left the painful impression that the Government merely intends tinkering with the problem—a policy of "here a little and there a little." With no power of compulsion within the immense sphere at present covered by local authorities, the Government plan gives the impression that the Commissioner is to give, if he can, a little extra push to what is now being attempted rather than to organise and to lead a new campaign. But those who know the problem at first hand realise that nothing short of a bold attack, equipped if necessary with new weapons of administrative authority and financial backing, can arrest the dreadful progress of paralysis and decay.

THE CONTROL OF RAW PRODUCTS

THE years since the war have witnessed far-reaching developments in the technical production of primary products. As a result of biological research and mechanisation, the cost of producing crude foodstuffs and industrial raw materials of agricultural origin has been substantially reduced. Wheat, sugar, cotton and rubber are well-known examples. The improvement and large-scale application of the process of selective flotation has revolutionised the technique, and was responsible for a sharp decrease in the cost, of producing non-ferrous metals, such as copper, lead and zinc. A similar reduction in the cost of producing tin was achieved, not by a fundamental change in technique, but by mechanisation. In addition to the reduction in the cost of production of the older raw materials, the output of competitive synthetic raw materials, such as rayon and fertilisers, has made rapid headway.

In the case of many agricultural products, post-war technical improvements facilitated the extension of cultivation, at a profit, to new areas. In the case of non-ferrous metals it rendered possible the exploitation of hitherto unprofitable mineral deposits. But technical progress rendered obsolete much of the existing plant, and led to a geographical redistribution, both within and between national frontiers, of the centres at which costs were lowest. The difficulties of many raw material producing industries in the past decade were very largely due to their unwillingness to accept the implications of technical progress. High-cost producers did everything in their power to stem the oncoming tide, and at the same time low-cost producers increased their activities in the expectation of large profits. Productive capacity was enlarged to such an extent that the resulting increase in supplies could only be marketed at a gradually falling price, long before the onset of the world economic depression.

The trend of the prices of copper, lead, spelter and tin, for example, shows that in each case the advance from the low level of 1921 reached its highest point between 1923 and 1927. The trends of production, consumption and prices demonstrate that the prices took a downward turn at the moment when production tended to exceed demand at the existing level of prices. This point was reached by copper in 1923, by lead and spelter in 1925, and by tin a year later. The London quotations for lead and spelter declined by 35 per cent. and by 31 per cent. respectively between 1925 and 1929, and the price of tin fell by 30 per cent. between 1926 and 1929. A fall of similar magnitude in copper prices during this period was only prevented by deliberate restriction of supplies by Copper Exporters, Inc.

Subsequently the difficulties of producers of crude foodstuffs and raw materials were seriously aggravated by the reduction in demand which accompanied the world depression. As it was found impossible to equalise output with falling demand, stocks accumulated rapidly and prices declined to an unprofitable level. In the case of raw materials subject to continuous production a reduction in output was relatively easier than in the case of many agricultural commodities, for production of the latter has to be planned a year in advance. Moreover, the number of individual producers of agricultural commodities is generally much larger than the number of units furnishing industrial raw materials.

The unwillingness of producers of raw materials to accept the implications of technical progress was revealed in the imposition of tariffs designed to maintain internal prices above the level of world prices, and to prevent geographical redistribution from high-cost to low-cost centres. Equally pernicious was the formation of international agreements among producers in exporting countries designed to maintain or raise prices by deliberate restriction of supplies. Even before the depression the losses from attempts to maintain prices at unduly high levels were considerable. But the multiplication of restrictions since then has been phenomenal.

The plight of Brazilian coffee planters in recent years is the direct outcome of the Government's price stabilisation policy, which encouraged the plantation of new coffee trees beyond possible requirements. As a coffee tree takes from six to seven years to mature, the consequences of this policy

did not become apparent until the bumper crop of 1929-30, which caused the collapse of prices. It is noteworthy that 32 million bags of Brazilian coffee, representing more than two years' world consumption, have been destroyed within the past three years in an attempt to clear up the wreckage.

The recent history of sugar and wheat is scarcely more encouraging. Technical progress rendered production of sugar unprofitable in many countries, but as high-cost importing countries attempted not only to maintain but even to increase uneconomic production behind high tariff walls, the ground was literally cut from under the feet of the great low-cost producing countries, Cuba and Java.

Before the world depression, the geographical distribution of the world's wheat crop was largely, though not entirely, determined by cost of production, and the price of this staple food tended to decline in Argentina, Australia and in North America in consequence of improvements in cultivation and mechanisation. Yet many importing countries thought it undesirable that their populations should benefit from the decline in prices, and since 1929 the cost factor has been increasingly disregarded. By means of tariffs, quota schemes and subsidies, total production in importing countries was increased from an average of 1,059 million bushels during 1927-29 to 1,400 million bushels in 1933. During the same period the crop of the exporting countries, excluding the U.S.S.R., for which figures are not available, was reduced from 2,589 millions bushels to 2,055 million bushels. This large-scale geographical redistribution of the world's wheat crop could only be carried out at the expense of producers in exporting countries and of consumers in importing countries. An improvement in the demand of importing countries was effectively prevented by the maintenance of internal prices at a level far above free-market quotations. In an attempt to alleviate the plight of wheat growers in exporting countries, governments resorted to currency depreciation and subsidies. By 1933 the greater part of the world's wheat crop was subsidised in one way or another, both in exporting and importing countries, at the expense of their respective consumers.

Many examples might be cited of producers of industrial raw materials who attempted to deprive the consumer of the benefit of technical progress, to their own ultimate disadvantage. Until early in 1930, Copper Exporters, Inc., dominated by United States producers, succeeded in maintaining the price of copper at a level altogether out of relation to the costs of low-cost producers. As was to be expected, the high level of quotations led to the development of new deposits outside the United States. The result was that the proportion of world production mined in the United States declined from 46½ per cent. in 1929 to 17 per cent. in 1933. Had it not been for the imposition of a prohibitive import duty by the United States, the *débâcle* would have been even more complete. The tin-producing industry is at present pursuing a similar policy of depriving the consumer of the benefits of the reduction in costs achieved in recent years. The tin cartel is in a fairly strong position, for the bulk of the production of this metal is concentrated in relatively few countries, none of which is an important consumer, while all of them have to compete with each other in the world market. But if prices are maintained for long at about £230 per ton while demand could be satisfied with a profit at £100 per ton, the ultimate fate of the industry is hardly open to doubt; but meanwhile the high price is an impediment, if a secondary one, to world recovery. Although low-cost copper mining concerns are at present operating at a profit, a group of shareholders who are evidently envious of the achievement of the tin restrictionists, have recently proposed the formation of a Copper Shareholders' Association with the object of agitating for a curtailment of output. The ignominious end of Copper Exporters, Inc., has apparently already been forgotten.

It is usually argued by restrictionists that their particular raw material forms only a small proportion of the cost of the manufactured article. This may be true in individual cases, but not if applied to all materials. Further, the contention that "planning" guarantees stability of prices, if slightly above the level of fluctuating prices, has been disproved by the results of past restriction schemes. It is to be hoped, therefore, that the policy of restriction designed to maintain prices at artificial levels will be abandoned, for

in the long run such policies are detrimental to consumers and producers alike. The less tractable problem of the uneconomic distribution of the production of staple foodstuffs can only be solved if the authorities of importing countries realise that unless they are willing to accept the sugar or the wheat of exporting countries they cannot hope to sell their manufactures abroad, while exporting countries must equally appreciate that to keep out the manufactured products of their customers inevitably means sooner or later a shrinkage of their own primary production.

SMOKE AND FOG

(BY A CORRESPONDENT)

THE black and yellow fogs which descend on London in November are almost entirely the effect of smoke from coal fires, mixed with the normal white mists of autumn. The harmful effects of pollution of the atmosphere by smoke are not disputed, but they are unadvertised. Human life and property and the lives of animals and plants suffer in polluted atmospheres both by the loss of sunlight and by the active mischief of particles of soot. It is known that great density of population is associated with a high death-rate, especially from lung diseases; but even if no disease is directly caused, the corrosive influence of the sulphuric acid and the dirt which clogs the respiratory system will produce a state of vitality unable to withstand the assaults of germs. In any city the death-rate rises sharply after fog, and such diseases as rickets are more pronounced in urban than rural areas, although wages are generally higher in the former than in the latter.

It is not so much actual diseases as the conditions necessary to these diseases that are created by smoke. The centre of Manchester receives only 68.6 per cent. of the ultra-violet rays which come to Timperley seven miles south-west, while Monsall Hospital on the north-east side receives only 52.8 per cent. And as the following table (taken from J. R. Ashworth's "Smoke and the Atmosphere") shows, the loss is most disastrous just when it is most needed, in winter, probably because the factory smoke lasts the whole duration of the sunshine in winter and only three-quarters in the summer.

INTENSITY OF ULTRA-VIOLET RAYS			
	Summer	Winter	Whole Year
Hale (Cheshire)	85	35	57
Manchester—			
George Street	66	21	44
King Street	63	7	20
Rochdale—			
Outskirts	96	22	53
Town area	70	16	39

Every city sheds around itself an area of partial desolation, and as the polluted atmosphere is thrust out into the

countryside crops are reduced, germination becomes poor, the soil is embittered. Supplies of food must be brought from afar; the additional distribution cost is a chimney tax upon the community. The effect on buildings is no less marked. In 1924 Sir Frank Baines stated that almost 40 per cent. of the cost of maintaining Government buildings in London could be attributed to the corrosion of soot. If this proportion is true of the whole country the cost of that corrosion alone is about £30 millions a year. The additional cost of laundry work in Manchester has been estimated at £250,000. But the real loss to the community cannot be estimated in money. Deformities and death have no monetary equivalent nor can any assessment be made of the cost of medical attention due to minor ailments which more healthy bodies would have resisted. Still less is it possible to compute the loss of mental efficiency which must accompany physical debility. But even the material damage to buildings and materials, the additional illumination necessary in cities and the additional laundry work cannot be assessed at much less than £50 millions a year.

But the community suffers another loss. Smoke abatement is synonymous with fuel economy. Those products, sulphur and tar, which constitute this atmospheric menace, have a market value, as also have many of the components burnt in raw coal. It has been estimated that in Leeds alone the daily output of tar into the air is almost twenty-five tons. The two sources of this waste are the factory and the domestic chimneys. The effect of the former is the more obvious; but that of the latter is probably more harmful and certainly more wasteful, since the temperature at which coal is burnt for domestic use is lower than that used in industrial processes. Domestic chimneys are responsible for about 2.5 million tons of a total output of solids into the air of about 3 million tons. Primary responsibility for atmospheric pollution must therefore rest with the domestic chimney; though much of the harm done through the loss of sunlight must be laid to factory chimneys, since the smoke they emit is in dense clouds while that from domestic chimneys has a greater diffusion.

Parliament has not been unmindful of the evil of atmosphere pollution, but its defence of the community has been directed against factory chimneys. The Public Health (Smoke Abatement) Act of 1926 makes no attack on the domestic chimney. Yet there is no lack of cures offered to the consumer in place of raw coal; the use of anthracite, coke, semi-coke, oil, gas and electricity all tend to reduce the pollution of the atmosphere. They are cures not only for smoke, but also for waste. An efficient gasworks will send out in marketable form 86 per cent. of the calorific value of coal; the efficiency of utilisation of raw coal in the domestic grate is not more than 25 per cent. Electricity is smokeless, but its manufacture produces smoke and, compared with the gas industry, is extravagant with coal. But the only fuel whose cost for continuous operation throughout the day can compare with that of coal is the class of solid smokeless fuels. By these means there has been some improvement in recent years in large cities,

as is shown by the following table, which is also taken from Mr Ashworth's book:—

ANNUAL SOOT AND CARBON DEPOSITS					
British Tons per Square Mile

1930-31	289	278			

* More than one station.

† Average for first three years of period.

‡ Average of last three years of period.

\$ Not available.

Domestic consumption of coke has apparently increased from 4.0 million tons in 1924 to 6.4 millions in 1930. This estimate is borne out by the statement* that the sales of special open grates for coke are almost 60,000 a year and of domestic boilers for burning coke are 100,000 a year. But, however welcome this increase may be, the annual increase in appliances sold is substantially less than the annual increase of houses. The joint cause of smoke abatement and fuel economy has been advanced by two other factors, domestic cooking by gas, and the use of electricity for industrial power. It is asserted that 90 per cent. of the population now cooks by gas, and the gas industry hires about six million fires and a large number of water heaters and water boilers. Some cooking and heating is done by electricity, but the amount is probably unimportant. The sales of electricity for power have also increased greatly. The decline in the consumption of coal between 1924 and 1930 was about 13 per cent., although the Board of Trade Index of Production showed a rise of over 3 per cent. The bulk of this economy has been made by using coal to generate power instead of using it directly in general manufacturing industry. The decline in coal consumption in industries other than the coal mines, electricity, gas and coke ovens has been about 20 per cent. The "grid" system also represents an advance owing to the attendant economies of fuel and the isolation of smoke. The situation of large power stations is not always happy for the latter purpose, but if the treatment of smoke is possible this centralisation will ensure the use of some process where it would not be economical for the ordinary manufacturer. Some such treatment is practised at the Battersea Power Station in the interests of architecture rather than health. In this respect the complete electrification of the railways would be a great social asset.

It is a fine, if perhaps idle, dream to imagine that all the coal now used domestically, about 40 million tons, might be carbonised. The chief marketable products would be 600,000 million cubic feet of gas, 18 million tons of coke, 480 million gallons of tar, about 300,000 tons of sulphate of ammonia and 100 million gallons of benzole. The gas would do about three-quarters of the heating done now by the amount of coal used for all domestic purposes, the coke would heat all the water used in half the houses, and the tar, hydrogenated, with the benzole would provide almost one-third of our consumption of motor spirit, or alternatively make possible the production of a large amount of dyes or synthetic resins. Nor is this dream altogether idle. Where gas is bought in bulk from coke ovens it can be sold at a price at which it competes with raw coal. It remains for the gas industry to adjust its price policy to this possibility.

It has been shown that the reduction of atmospheric pollution in the last decade has been marked but moderate. It has been achieved with very little conscious effort from the community. There can be no smoke without fire, but with an energetic campaign of propaganda we might go far to prove that there can be fires without smoke.

* Symposium on Smokeless or Open Grate Fuels (E. W. Nichol), June 8, 1934.

WAR

(BY A CORRESPONDENT)

SIXTEEN years ago, at one in the morning, three or four men were sitting at a table in a little back room in France. One, a corporal, had a pair of headphones over his ears and occasionally twisted a condenser dial on the wireless set by his side. All were waiting, waiting, waiting "C Q . . . C Q . . . Summary of W/t news for distribution to the troops. . . . Intercepted message from Imperial Chancellor via German G.H.Q. to Erzberger authorises signature of armistice. . . ." The message went on to its end. The corporal stamped it "Y.L; 11:xi:18." And that was that.

One of those men kept that message and it hangs in his room to-day. And to-day the world is wondering uneasily whether that really was the end of the war and all it means. Possibly for us in England it is a fortunate thing that Armistice Day has coincided so closely with a debate in the House which has brought the nation's uneasiness up to the surface. In many ways the debate was disappointing; in some ways it was trivial. The impression it leaves with many of us is that there is a universal burning desire to peace, but a complete absence of any ability to give that desire practical expression. The problem we are left to face is becoming too big for us.

Have you ever seen one of your men shot through the head, with blood and grey ooze seeping from him? And have you known that he is still alive, but that if you tried to bring him in you will only kill two more men as well?

What does it matter whether the ballot on peace and armaments is fair or unfair? Or does it really get to the root of the question to discuss whether or not the private manufacture and sale of armaments is desirable? As long as the incentive to make and sell munitions of war for profit remains, so long will there be abuses and so long will there be agents whom it pays to work for war and not for peace. Nor can it be denied that it is repulsive to learn that the war between Bolivia and Paraguay has dragged on while armament firms have supplied both belligerents impartially. But all this is the aggravation, not the root cause, of the war spirit. Before we can ensure peace we must not only organise the world for peace. We must strive to remove the conditions, social, economic and political, which make peoples look on war as the sole solution of their troubles. Unless we do this, war becomes inevitable.

Did you see the scrub ablaze on Scimitar Hill? And did you think how many wounded, British and Turkish, were lying there?

Sixteen years have passed and gone, and how has the world used them? Few to-day regard the Versailles Treaty as paving the way for permanent peace. Few to-day can condemn the present spirit in Germany without feeling a share of responsibility for it. Look back only to 1931, when Germany, especially young Germany, felt how much she was denied the right and power to make that contribution to world thought and progress which she knew she could make. Think of the widespread poverty, want and underfeeding which the war, the peace treaties, reparations and the inflation, and the grinding years of 1924 to 1931 have inflicted upon Germany. Is it surprising that in the end she burst forth in a movement, which though deplorable in some of its ghastly excesses, had some kind of national ideal behind it? Is the world doing anything to make room for that movement and the spirit which inspires it, or is it just condemning its excesses and mistakes and seeking to repress it? All must grant that in many ways Nazi Germany is breaking bounds, but if we wish to avoid driving Germany to desperation we must go half-way to grant her the room she needs. You cannot compress sixty millions of people indefinitely. That is the fundamental fact.

Try sitting out a three days' blizzard, huddled round a brazier, verminous and suffering from jaundice, scabies and piles. Did it ever strike you that the real key to our withdrawal from Gallipoli with hardly a casualty was that neither side had sufficient strength left to interfere with the other?

It may be that the world in its search for peace and disarmament is tackling the problem at the wrong end. It is

not the power to make war which is the governing factor, but the causes which drive nations into war. Reduce war to its ultimate units, the man behind the machine-gun or the man with the bomb or bayonet, and the thing becomes a ridiculous tragedy. What personal quarrel did our Londoners or our county regiments have with Anatolian peasants or with men from the towns of Westphalia or the mountain villages of Bavaria? Once slaughter begins and the fight is on, personal feelings are roused as you see your friend drop dead, a bloody mess, by your side; but when the barrage lifts at zero hour, personal animosity is not there. It is national feelings that we have to assuage, and

in the present temper of the world the only national feeling which will drive people into war is the feeling of desperation.

That is the line for international co-operation. Disarmament is not enough. The real task for the world in council to-day is to seek out the points of pressure and discuss what can be done to relieve them. Admittedly this will involve much give and take, the abandonment of cherished beliefs, and an honest attempt to separate the good from the bad. To understand all is to forgive all. Have we, sixteen years after the cease fire, even tried to understand?

NOTES OF THE WEEK

"Close of Play."—This week marks the end of the parliamentary session, and the King will open the new chapter on Tuesday next. The last weeks of a session are usually marked by the hurried disposal of protracted, and often contentious, legislation. During the past few days the Commons and Lords have seen the last of the unfortunate Incitement to Disaffection Bill—not without considerable opposition in the Lords, which kept their Lordships up all night from Thursday to Friday of last week. Last Tuesday the Bill was read a third time, the Opposition Lords adhering to the principle not to vote against a Bill which had been passed by a majority of the representatives of the people in the Commons. On Wednesday, the Lords debated national defence needs, on a motion by Lord Mottistone, which called attention to the decline in recruiting for the Services. This elicited from Viscount Hailsham, the Minister for War, the admission that on October 1st there was a shortage of 1,046 officers and 30,313 other ranks as against our Army recruiting strength, and Viscount Hailsham went on to urge the importance of the Territorial Army, as well as to emphasise the needs of all three Services for expansion, if we were to become sufficiently strong in defence to make a great attack impossible. There was disquietingly little evidence in the speech by the Minister for War of any belief in international measures for collective security. In the Commons, the Poor Law Bill, which provides that the administrators of Poor Relief, in assessing applicants' private resources, can disregard the first 5s. of trade union sick pay, the first maternity benefit, and the first £1 of pension, was read a third time without division. On Monday, the Commons had an all-night debate on the Report stage of the Betting and Lotteries Bill, and on Tuesday night this measure, which had aroused the unyielding opposition of the vested interests, was read a third time. Wednesday and Thursday were given up to discussion of the Government's proposals for the distressed areas, upon which we comment in a Leading Article this week. So ends a contentious, and on the whole an unconstructive, session.

After the Landslide.—The final results of the American Congressional elections confirm the magnitude of the Democratic victory. In the new Congress, 68 out of 96 Senators and 323 out of 435 Representatives will be Democrats. In addition, the Farmer-Labour Congressmen and Senator La Follette's Progressives can be counted on to support the Administration. These crushing majorities exaggerate the popular vote, as approximately 13,000,000 individual voters voted Republican as compared with only 15,000,000 who voted Democratic. Indeed, the Democratic popular vote showed a larger decline from 1932 than the Republican. Nevertheless, President Roosevelt will have all the Congressional support he could desire, and his chief anxiety will be to hold his supporters in check. Mr Roosevelt himself has refrained from commenting on the result of the election and he has not issued the startling declaration of policy which was expected in some quarters. Some hints of the lines of policy to be followed have, however, been forthcoming. Special committees have been appointed to draw

up plans for old age pensions and unemployment insurance for presentation later in the New Year to the newly-elected Congress. Public opinion has been seized with the idea of pensioning off old workers in order to create jobs for the unemployed, and some of the extremist proposals, which envisage pensions of £10 a week, are obtaining a surprising degree of support in the Far West. The President's committee is unlikely to recommend anything of this nature, but it is evident that action of some sort will be politically expedient when Congress reassembles. Some significance has also been read into the appointment, on the morrow of the polls, of Mr Marriner S. Eccles as Governor of the Federal Reserve Board. Mr Eccles is believed to be an advocate of the unbalanced budget theory. The burden of relief would in any case have shattered any hopes of being able to carry out the President's intention of balancing the budget by next July. But there is now also reason to believe that the public works programme will be intensified rather than restricted.

★ ★ ★

The New French Government.—Early on Friday morning, November 9th, M. Flandin announced the composition of the Government he had formed to succeed that of M. Doumergue. The "national truce" is maintained by the inclusion of five Socialist-Radical deputies. M. Herriot is a Minister of State; M. Marchandeau is Minister of Commerce; M. Jacquier, Minister of Labour; M. Queille, Minister of Public Health; and M. Bertrand is put in charge of the Mercantile Marine. Three senators of the Democratic Left, which corresponds to the Socialist-Radical group in the Chamber, also have posts in the new Cabinet. The Socialist-Radical position is thus reinforced in the new Government; while M. Tardieu, who is reported to have inspired the constitutional reform proposals which brought down the Doumergue Government, of which he was a member, is not in the new Cabinet. M. Martin, also of the Right, is to take his place. Marshal Pétain has given way to General Maurin; and M. Marquet, the somewhat mercurial Socialist turned "neo-Socialist," refused to serve in the new Government when it became known that M. Mandel, a *bête noire* of the Left, for 30 years has pulled strings behind the political scenes, was for the first time to be a Minister. M. Laval retains the portfolio of Foreign Affairs. On Tuesday M. Flandin's new Government met the Chamber and obtained an overwhelming vote of confidence on its declaration of policy by 423 votes to 118. M. Flandin's declaration states that "the truce will continue"; that France will strengthen her defences, develop her alliances, but continue to work with the League; that the new Government will defend the Republic against any attempt at revolution or dictatorship; and that thorough reform of the administrative, judicial, departmental and administrative apparatus is required, together with reform of the State and restoration of the authority of the Executive. On the economic plane, the Government's declaration states "the system of controlled economy has failed everywhere. In order to overcome the evils of unemployment, low prices and shrinking trade we must return gradually to a more liberal system. . . . Poverty is the best ally of revolutions." The large measure of support given in the Chamber to this declaration is of

good augury for France. Indeed, the relatively easy transition from the Government of M. Doumergue to its successor, after so many prophecies of violent disaster, seems to indicate that the French public is reasserting its sound political sense and its aversion to desperate remedies. Most Englishmen will wish M. Flandin well; and it would not be surprising if, under a forceful, comparatively young, democrat's leadership, the new Government succeeds, where M. Doumergue's Government failed, in securing urgently necessary reforms without demolishing the edifice of national co-operation.

* * *

A Change of Government in Belgium.—On Tuesday the Prime Minister of Belgium, Count de Broqueville, announced the Cabinet's resignation, following the resignations of two Ministers without portfolio, M. van Zeeland, vice-governor of the National Bank, and M. Ingenbleck, Budget *rappporteur* in the Senate, on the question of emergency cuts in expenditure. Since last June the Broqueville Cabinet had been directing economic and financial affairs by special powers granted by Parliament; and under these special powers, which do not expire till early in the new year, the Government had issued, and the King had signed, 33 decrees, some imposing drastic economies, and one of which, probably the most important, reformed the Belgian banking system. Count de Broqueville elected to take the resignations of his two Ministers as an indication that the Government no longer possessed a mandate to continue to issue economic decrees under the special powers Act. The Government's resignation caused no little perturbation, both within Belgium and outside—notably in Paris and London—over Belgium's adherence to the gold standard. For some time the Socialist opposition, some taxpayers' organisations and certain business interests had been demanding devaluation; but the Government, secured by the Catholic and Liberal majority in the Lower House, had reiterated its intention to maintain the gold parity of the belga. It is significant that, immediately after the Government's resignation, the Catholic and Liberal groups in the Chamber met and declared that they would only support a Government which would pledge itself not to modify the monetary regime of Belgium. The mantle of Count de Broqueville has apparently fallen on M. Jaspar, until now Minister of Foreign Affairs; but anything other than a continuation of the present Catholic-Liberal coalition is hard to foresee.

The "Corporative State."—The Italian "Corporative State" is an unconscionably long time in coming to life. The word "Corporation" originally appeared in the early 'twenties, and was applied to the Fascist trade unions which had been designed to rival and eventually overthrow the original labour unions, or "confederations." In April, 1927, a "Labour charter" was promulgated by the Fascist Grand Council. This document enunciated the doctrine that labour and capital must combine harmoniously together, that the class war must end, and that "corporations" embracing employers and employed should be set up by the State. In 1928 it was announced that the corporations would have the effective power of nominating members to the Chamber of Deputies. A Bill actually creating the corporations was foreshadowed in 1929. In 1930 the Bill appeared, and it was heralded as establishing an "industrial parliament" which would organise the industrial life of the nation. A "National Council of Corporations" was also set up which was apparently to supersede the moribund Chamber of Deputies. But still nothing really happened, and the outside world had the vaguest ideas about what it all meant—if it meant anything at all. Three years later, in November, 1933, Signor Mussolini declared with great gravity before the National Council that the Corporative State was now about to come into existence, and that it would supersede all former economic systems whatever. This summer, 22 corporations were "created." And on Saturday, at long last, Signor Mussolini "formally installed in office" the 823 members of the councils of those corporations. The Duce referred to the ceremony as "perhaps the most imposing in the history of Italy," but he puzzled his hearers by apparently intimating that the National Council of Corporations would

not, after all, displace the Chamber of Deputies. Fascist commentators describe the new "system" as "the most comprehensive organisation of the economic life of a nation which has ever been attempted by any country." It is still a little difficult to discover, however, on what economic principles the corporations will work, if, indeed, they work at all. From such positive indications as exist, it would appear that the Corporative State is, economically, nothing more than a rather muddled combination of monopoly and protection. What is the real purpose of the whole elaborate and imposing façade? Is it merely to hide the stark reality of low wages, the abolition of the right to strike, and the destruction of all genuine instruments of collective bargaining? Our Italian correspondent reminds us this week that out of 888,560 unemployed in Italy, only 143,334 receive State assistance. If such are the hard facts behind the corporative system, the world must be forgiven for wondering whether that system is more than a theatrical fiction.

* * *

Church and State in Germany: Next Phase.—On November 5th, negotiations between Dr. Kinder, leader of the "German Christians," and the Confessional Synod, broke down; and there might seem no impediment in the way of a free reorganisation of the German Protestant Church on the initiative of genuine champions of religious freedom, with Dr. Kinder as well as Reichsbishop Müller left out. Dr. Müller, for his part, clings closer than ever to the German Christian group, and on November 7th received a "unanimous" vote of confidence from the Group Synod, after which he denied that he would resign. He has made Dr. Kinder his legal commissioner, *vice* Dr. Jäger, and he is returning to the attack on the free Confessional Church. In the "German Christians'" organ, *Evangelium im Dritten Reich*, Herr Hitler's decision to withdraw from the Church conflict is even welcomed, as leaving the outcome to be settled by "the right of the strongest." How this right is to be asserted was seen on Sunday, when some Berlin Confessional pastors called on Pastor Jakobi, one of the Confessional leaders, to collect some leaflets. When they left they were set upon by a Nazi official in uniform and by three "German Christians" in plain clothes, who tried to secure the leaflets. One of the Confessional pastors who managed to free himself was ordered to stand still at the point of a revolver by the Nazi official. In the meantime, the Roman Catholic Church in Germany has launched a counter-attack upon the Neo-Nordic paganism—in the shape of a reply from the Roman Catholic Bishop of Berlin, Dr. Bares, to Herr Rosenberg's doctrine, as this is set forth in *The Myth of the Twentieth Century*. At first sight, such pretentious nonsense as Herr Rosenberg's might seem hardly worth taking so seriously; but his case makes a certain appeal, and the ecclesiastical authorities are therefore perhaps well advised to expose it systematically. The most interesting feature in this controversy between two disputants who are so unevenly matched is Herr Rosenberg's unintended achievement of bringing the Catholics and the Protestants in Germany together in defence of their common Christianity. The Concordat negotiations between the Nazi State and the Vatican are still hanging fire, and are expected to continue until after the Saar plebiscite. Then, it is thought in certain circles, the Führer will re-enter the arena and terminate both disputes by "co-ordinating" both Churches in the one and indivisible Nazi State. One thing is certain: Herr Hitler's retirement from the Protestant Church dispute has not ended the dispute, nor drawn the teeth of the "co-ordinators."

* * *

"Cultural Harmony."—Herr von Papen, the German Minister in Vienna, made important pronouncements on Austro-German relations in his speech at an Anglo-American Press luncheon in Vienna on November 9th. He declared that all Germany wanted of Austria was not formal *Anschluss* but "cultural harmony."

There were 35,000,000 Germans living outside the Reich, and with them Germany aimed only at keeping in cultural touch, because she knew that the frontiers could not be

drawn so as to include all Germans. She had always instructed the Germans living abroad to be loyal to their Governments. It was true that Austria and other countries in which Germans lived had all belonged to the Holy Roman Empire of the German nation, but that was a historical idea, now of the past.

Herr von Papen went on to say that the Saar and the Austrian questions were not related; but the moderate tones of his speech are probably due in no small measure to the increasing tension over the Saar in recent weeks. Dr. Schuschnigg, the Austrian Chancellor, had a conference at Semmering—also on November 9th—with General Gömbös, the Hungarian Prime Minister, who was on his way back from seeing Signor Mussolini in Rome; and on Tuesday it was announced that the Austrian Chancellor and Foreign Minister would visit Rome at the end of this week. The official *communiqué* states that "conversations" will there be conducted on the Protocols of last March between Italy, Austria and Hungary. But it is only to be expected that, in view of the revival of Nazi activities in Austria this week, Dr. Schuschnigg will consult with the Duce on what steps can be taken to give Austria the internal cohesion which was destroyed by the Heimwehr attack on the Socialists last February. In this connection two remarkable articles in *The Times* of November 8th and 9th are significant. The writer urged that the Austrian Socialists should be conciliated, and that the Socialist and Clerical parties should forthwith collaborate. Yet all we hear from Austria is that Dr. Schuschnigg has so far not entered into any commitments with the Nazis or the Pan-Germans. Not negations of Nazidom, but affirmations by all Austrians, including the Socialists, that their national cause is worth all efforts, are most needed to-day. Dr. Schuschnigg's problem is to make Austria's national cause worth while to all Austrians.

* * *

The Proposed Sugar Monopoly.—Opposition to the extraordinary monopoly scheme proposed by the sugar refiners is growing rapidly. The scheme was prepared last spring, and a public inquiry into it was held in May. It apparently provides for the gift of a statutory monopoly without public control to the sugar refiners—and in effect to one large firm—and for the grant to that monopoly of the power to levy a tax on the consuming public. In return for this shameless exploitation of the consumer, which would enable the monopoly to subsidise uneconomic home beet production, the Government is to be enabled to relieve the direct taxpayer of the cost of the subsidy. Protests against the scheme have begun to appear from many directions. In a letter to *The Times* on Tuesday Professor Ernest Barker described it as "contrary to the principle of public policy entertained by our common law, which has always favoured the right of the subject to the exercise of his trade." He also pointed out that an uncontrolled monopoly of a staple food product was a very different thing from a publicly controlled transport monopoly like the London Transport Board. At a lunch held in London, also on Tuesday, the scheme was attacked by Sir Arnold Wilson, Mr J. G. Mathieson, Mr P. S. Cadbury and Mr S. O. Chivers. Sir Arnold Wilson said that sugar refining in this country was already virtually a monopoly, and the result was apparent in that day's newspaper. "£1 shares in Tate and Lyle stood two years ago at 54s.; they now stand at over 100s." "Planning," Sir Arnold added, in this connection, was "a scheme to give sectional advantages to particular industries." Mr Mathieson pointed out that the confectionery and chocolate trades, which might be seriously injured by the scheme, employed 74,000 persons, and the other trades affected certainly 100,000, a number "far in excess of any connected with the sugar-producing industry of this country, sugar refining, beet sugar manufacture and beet sugar growing." He also remarked that the proposed levy of 2s. 4d. a cwt. would in effect mean 30 per cent. addition to the net cost of sugar, since 9s. 4d. of the present manufacturing price of 17s. 1½d. is represented by the existing duty; and he questioned the propriety of using the Agricultural Marketing Acts to grant a monopoly to a manufacturing group most of whose raw materials are not produced by British agri-

culture at all. Mr Cadbury pointed out that a working class household with an income of 50s. had only a margin of a few pennies for purchasing chocolates, sweets and other small amenities. A levy of ¼d. per lb. on sugar would cost such a household 2½d. or 3½d. a week. Mr Chivers also observed how substantially the existing sugar duty raises the price of staple foodstuffs like jam and canned fruits. Altogether, the case against the scheme is so overwhelming that we can hardly believe anybody will be deceived this time by plausible nonsense about the need for "planning," "regulating," "stabilising," "safeguarding," "co-ordinating" or "integrating" the sugar industry. Indeed, the last word on the subject is contained in Lord Bacon's warning, quoted by Professor Ernest Barker, "that monopolies which are the canker of all trading be not admitted under specious colour of the public good."

* * *

The American Balance of Payments.—The United States Department of Commerce, not content with publishing by far the most informative annual estimate of the Balance of Payments issued by any country, has now compiled a tentative estimate of the American Balance of Payments during the first six months of the current year. The figures are necessarily approximate and include a large margin for errors and omissions, but they strikingly illustrate the tendencies which were at work during the first half of this year. The figures are given in the following table, a plus sign signifying a credit item or in-payment, a minus sign the reverse. For the sake of comparison the figures of the annual estimates for 1929 and 1933 have been halved and shown in the first two columns of the table. The first six months of one year are not strictly comparable with half of the whole-year figures for another year, as there may be seasonal irregularities. But the item of tourists' expenditures is probably the only one whose comparability is seriously affected.

	1929 (half)		1933 (half)		1934 (Jan.-June)
Merchandise trade	+ 420	+ 112	+ 112	+ 173	
Tourists' expenditures	- 319	- 110	- 110	- 80	
Immigrants' remittances	- 132	- 66	- 66	- 58	
Miscellaneous service items	- 28	- 51	- 51	- 36	
Interest and dividends	+ 282	+ 194	+ 194	+ 160	
Balance on current account ...	+ 223	+ 105	+ 105	+ 159	
Gold movements	- 60	+ 86	+ 86	- 920	
Currency movements	- 7	- 45	- 45	- 30	
Total	- 67	+ 41	+ 41	- 950	
Purchase and sale of securities ...	- 39	+ 5	+ 5	+ 225	
Sinking fund payments, direct investments, arbitrage, etc.	- 31	+ 19	+ 19	+ 85	
Short-term capital	- 40	- 192	- 192	+ 250	
Balance on capital account ...	- 110	- 168	- 168	+ 560	
Errors and omissions	- 46	+ 21	+ 21	+ 231	

The interest of this table lies in the fact that the dollar was stabilised at the end of January. In commenting in the *Economist* of October 13th on the estimate for 1933 we pointed out that the effects of a *depreciating* currency may be different from those of a *depreciated* currency. The new figures bear out this distinction. The positive balance on current account is considerably larger than last year, though the debit on account of tourist expenditures will be larger in the second half of the year. The very large inward flow of capital, and the even larger importation of gold by which it was accomplished, reflect the return of the funds which fled from the dollar in previous years. Judged by these figures, America is very far from playing the part she should in international financial transactions. A growing positive balance on current account is aggravated by a large net importation of capital at a rate faster than America has ever exported capital in peace time. The accounts could only be balanced by the inflow of gold in six months in an amount which is roughly equivalent to half the gold reserve of the Bank of England. These are the effects of combining a stabilisation at a ridiculously low figure with an embargo on foreign loans. The United States is smashing the post-crisis gold standard before it has been set up.

International Steel Production.—The accompanying chart shows the development of steel output since 1929 in the leading producing countries. As the level of production in different countries varies considerably, the chart has been drawn on a ratio scale. Thus, equal proportionate movements are of the same size on the chart, whatever their absolute magnitudes. British imports and exports of iron and steel have been added to indicate the effect of the depreciation of the pound and of the imposition of a high protective tariff in the spring of 1932:—

STEEL PRODUCTION (in thousands of tons).

The iron and steel industries of the principal countries experienced a severe contraction of output between 1929 and 1932. Both the recession between 1929 and 1932 and the subsequent improvement were most marked in the United States and in Germany. In the United Kingdom the downward movement was arrested in the autumn of 1931 as a result of the depreciation of sterling and the consequent decline in imports. Recovery in 1932 was assisted by the imposition of a tariff, which led to a further contraction of imports, and by the revival of internal demand. The setback was least pronounced in Belgium; but the improvement noticeable in other countries from 1932 onwards was not shared by Belgium, whose market was partly cut off by the British tariff on iron and steel. It is interesting to compare the present level of steel production with that prevailing in 1913:—

MONTHLY AVERAGE PRODUCTION OF STEEL
(In thousands of tons)

	1913	1929	1934 (Jan.-June)
Belgium.....	202	339	237
France.....	384	793†	524†
Germany.....	1,275*	1,333	909
United Kingdom.....	639	803	751
United States.....	2,608	4,514	2,728

* Including Lorraine.

† Including Lorraine.

It will be seen that, except in Germany, the rate of steel production in the first six months of 1934 was higher than in 1913. But in the case of France and Germany comparison is vitiated by the fact that the Lorraine was transferred to France after the war. On the other hand, production in most countries is still far below the level of 1929.

October Overseas Trade.—While showing no striking improvement, the trade returns for October are moderately encouraging. The value of both imports and British exports exceeded that of the corresponding months in 1932 and 1933. But it must be remembered that the past month contained one more working day than October, 1932 and 1933. Contrary to the trend since the beginning of 1934, the figures for September showed an increase in imports of only 0.02 per cent. on the corresponding month in 1933, while British exports registered a rise of 5.4 per cent. It is significant that the previous trend was resumed in October, when imports were 11.8 per cent. and exports 7.7 per cent. higher than a year ago. The excess of imports over exports during the first ten months of 1934 is now £235,965,000, an increase of £30,851,000 on 1933, but a decrease of £731,000 on 1932:—

	MONTH OF OCTOBER					
	1934		Increase (+) or Decrease (—) as compared with			
			October, 1933		October, 1932

Total exports.....	43,672	+ 2,096	+ 5.0	+ 952	+ 2.2	
Total.....	369,428	+ 25,324	+ 7.4	+ 25,160	+ 7.3	
Excess of imports over total exports.....	235,965	+ 30,851	+ 15.1	— 731	— 0.3	
Transshipments under bond.....	19,858	— 45	— 0.2	+ 1,668	+ 9.2	

Following a decline in September, the value of imports of food, drink and tobacco rose from £32,240,073 in October, 1933, to £35,682,125 in the past month. Tobacco alone contributed no less than £2,608,448 to the increase in the imports of this group of commodities. During the same period, imports of raw materials and mainly unmanufactured articles rose by £1,865,396, from £15,026,925 to £16,892,321. A decrease of £747,422 in our purchases abroad of raw wool and rags was more than offset by an increase of £1,468,437 in imports of rubber and one of £701,830 in wood and timber. Imports of manufactures, at £16,027,133, showed a rise of £1,834,868. Non-ferrous metals and oils, fats and resins contributed £677,098 and £208,085, respectively, to this increase.

TRADE IN IMPORTANT COMMODITIES

Raw rubber..... thous. cents	19	73	156

Exports of food, drink and tobacco, and also of materials and mainly manufactured articles show only a small increase as compared with October, 1933. On the

other hand, the value of exports of manufactures rose by £2,382,799 to £28,527,407. The increase was fairly general, amounting to £620,164 in the case of machinery, £480,583 in iron and steel, £332,487 in cotton yarns and manufactures, and £310,576 in vehicles. Non-ferrous metals is the only item to show an appreciable reduction, amounting to £237,330.

British Coal Consumption.—While total home consumption of coal in this country showed a further slight decline in 1933, there has been no violent shift in its distribution, analysed in the thirteenth annual report of the Secretary for Mines†:—

(In millions of tons)

Consumer	1913	1929	1931	1932	1933
Gas works (excluding the equivalent of gas coke exported).....	16.7	16.75	16.69	16.97	16.16
Electricity generating stations belonging to authorised undertakings and to railway and tramway authorities.....	4.9	9.84	9.61	9.81	10.33
Railway companies (for locomotive use).....	13.2	13.41	12.27	11.70	11.67
Vessels engaged in coastwise trade	1.9	1.37	1.19	1.19	1.21
Iron works (used in blast furnaces).....	21.2	14.51	7.11	6.53	7.37*
Other iron works and steel works	10.2	8.92	5.50	5.16	5.70*
Collieries (engine fuel).....	18.0	13.69	12.61	12.04	11.59
General manufactures and all other purposes (including domestic use).....	97.7	95.01	90.70	88.70	84.34
Total.....	183.8	173.50	155.68	149.50	148.37

* Provisional.

It will be seen that of the industries listed separately only electricity and iron and steel consumed larger quantities of coal in 1933. The electricity industry was the only branch of activity whose consumption in the past year exceeded that of 1913 and 1929. The figures also show that the consumption of coal in its crude state still predominates by a wide margin. Although the electricity industry has made rapid headway since 1913, its consumption of coal in 1933 was still only 64 per cent. of the consumption by the gas industry. The percentage of total home consumption used in the generation of electricity and in the production of gas, though still relatively small, rose from 11.8 in 1913 to 15.4 in 1929 and 17.9 in 1933. The residuary figure, which represented no less than 56.8 per cent. of total consumption in 1933, is subject to changes in the stocks of coal held by producers and consumers. Now figures of stocks of coal held by producers in Belgium, Germany, Poland, the Saar and in the United States are published regularly each month. It is a great pity that this information is not collected in this country. Moreover, there is not even an estimate of the annual consumption of coal for domestic purposes. The only available information, repeated each year in the annual report of the Secretary of Mines, is that the consumption of coal for domestic purposes in private houses, public buildings and institutions, including coal for domestic industries and miners' coal, was estimated after the war at 40 million tons a year. It is to be hoped that information concerning stocks of coal and domestic consumption will at last be collected and published.

Iron and Steel Production in October.—The figures issued a few days ago by the British Iron and Steel Federation suggest that the holiday influences are now spent. Steel production, at 812,000 tons, was higher than in any month since March (834,500 tons), while pig iron production, at 527,100 tons, was within 1,200 tons of the previous highest (July, 528,300 tons). Three blast furnaces were blown out and two resumed operations during the month, making the total "blowing" at the end of the month 97. The following table compares the output of pig iron and steel in the first nine months of this year with the corresponding period last year for the chief producing countries.

† H.M. Stationery Office. 236 pages. 3s. 6d. net.

An Income of 5% plus a return of Capital

The Society has devised a scheme whereby an income of 5 per cent. on the Capital invested is secured for life, and on death a return of a portion of the Capital is guaranteed. The investor, moreover, is entitled to participate in the profits of the Society in respect of this portion, and will thus obtain the benefit of any future favourable trend in the investment situation.

Total.....	25,546	37,336	32,966	45,081

The most significant feature is the increase in Germany's production, which in the case of pig iron was 67 per cent. higher this year than last, and in the case of steel 59 per cent. higher. Great Britain's production of pig iron this year was 49 per cent. higher than last, and of steel 34 per cent. higher. In France production both of pig iron and steel is definitely lower than last year. Imports of iron and steel into the United Kingdom in October amounted to 121,100 tons, compared with 89,500 tons in September and 88,900 tons last October. The principal increases took place in billets, blooms and slabs (from 26,900 tons to 40,900 tons), steel bars, rods, etc. (from 17,200 tons to 21,500 tons), and pig iron (from 9,400 tons to 13,100 tons). Exports of iron and steel amounted to 220,900 tons, and were the highest in any month since October, 1930. The chief increases took place in galvanised sheets (16,200 tons to 22,900 tons), pig iron (7,700 tons to 12,300 tons), cast tubes and pipes (5,500 tons to 10,400 tons). Of the total exports in October, 31,300 tons went to the Union of South Africa, 21,900 tons to India, 17,600 tons to Australia and 15,700 tons to Canada.

Shipping Freight Index.—As measured by our monthly index number, the general level of the whole cargo shipping freights fell by 2.7 per cent. during October, following a rise of 0.4 per cent. during September. The current figure of 87.5 compares with 84.1 in October last year and 87.3 in October, 1932. Details of the index number are as follows:—

(1898-1913 = 100)

	Average, 1913	October, 1933	August, 1934	September, 1934	October, 1934
European waters.....	110.0	85.6	91.1	90.3	87.8
North America.....	113.1	74.7	77.4	79.3	77.4
South America.....	123.4	80.5	85.4	82.8	78.1
India.....	106.3	92.4	96.1	98.6	96.3
Far East and Pacific.....	117.4	83.3	91.4	93.5	91.8
Australia.....	127.9	88.1	96.1	95.3	93.7
Total.....	116.3	84.1	89.6	89.9	87.5

Outward coal freights are easier, both at South Wales ports and at Newcastle. Demand for tonnage has fallen away. At Liverpool, Atlantic-America trade is dull, and there is

little business for Far East and Australian routes. Home-ward rates from South American ports have fallen appreciably. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home Trade	84.2	+ 2.1	South America :	65.2	- 1.9
Bay—outwards	99.1	- 5.5	Outwards	90.9	- 7.8
Bay—homewards	87.1	- 6.4	Homewards	73.7	- 0.7
Mediterranean :			India—outwards	119.0	- 3.7
Outwards	89.0	- 5.7	India—homewards	91.8	- 1.7
Homewards	83.3	- 1.3	Far East, etc.	93.7	- 1.6
North America	77.4	- 1.9			

Expressed as a percentage of the average for 1913, the total figure of our index number for October is 75.2, compared with 77.3 for September and 72.3 for October last year.

* * *

Transvaal Output in October.—The output of gold by the mines of the Transvaal during October amounted to 885,627 ounces of fine gold at a value for purposes of declaration of £7 per ounce, as compared with 857,442 ounces in September at £7 and 908,888 ounces in

October last year at £6 gs. In the following table we show the monthly output since the beginning of 1928:—

Month of	1928	1929	1930	1931	1932	1933	1934
January ...	843,857	876,452	882,801	914,576	936,784	967,457	907,641
February ...	816,133	815,284	818,188	839,937	914,012	883,145	826,365
March ...	877,380	866,529	880,370	910,998	960,035	946,863	874,112
April ...	825,907	872,123	868,606	882,337	949,796	895,097	865,822
May ...	886,186	897,598	916,213	910,279	965,644	944,604	898,418
June ...	862,363	856,029	887,867	897,750	959,011	918,633	868,129
July ...	867,211	889,480	912,652	916,843	981,160	923,671	876,094
August ...	891,863	889,601	921,081	916,425	991,322	934,714	881,861
September ...	857,731	849,553	903,176	916,024	961,501	901,799	857,442
October ...	897,720	888,690	926,561	945,113	974,965	908,888	885,627
November ...	872,484	861,593	884,753	900,510	978,716	898,468	...
December ...	859,761	851,134	908,492	923,353	980,618	894,156	...
Total ...	10,358,596	10,414,066	10,719,760	10,874,145	11,553,564	11,017,485	8,741,509

The following table shows the number of natives employed at the mines during the past nine months:—

	Feb., 1934	Mar., 1934	April, 1934	May, 1934	June, 1934	July, 1934	Aug., 1934	Sept., 1933	Oct., 1934
Gold mines	242,594	242,577	243,059	243,579	244,857	245,918	248,436	248,024	249,169
Coal mines	12,120	12,434	12,452	12,461	12,800	12,845	12,745	12,879	12,789
Total...	254,714	255,011	255,511	256,060	257,657	258,763	261,181	260,903	261,958

The number of natives employed at the gold mines showed a further increase on the month.

UNITED STATES

THE RECOVERY IN FOREIGN TRADE

A CERTAIN conservative temper seems apparent in the country. It expresses itself in diverse ways; in the South there is strong opposition to the A.A.A. cotton programme because it is at last realised that it involves the permanent loss of our export market for cotton. In industry it expresses itself in the general relief over the "truce"; which is perhaps rather more of an armistice. No terms of truce have been formulated, yet strikes are on the wane. One should not interpret this change as an expression of popular aversion to the New Deal; rather it appears to be a sort of ascendancy of the right wing of the New Deal.

The publication of the foreign trade figures for September again emphasised the remarkable gain in that branch of economic activity. Indeed, our export trade shows a greater recovery from the low points of the depression than any other part of our economy. In part these figures reflect higher dollar prices resulting from devaluation and price advances; but a good part of it clearly represents increased volume. For September our "purely domestic" exports amounted to \$189 millions, the highest since September, 1930, compared with \$170 millions in September, 1933, and \$130 millions in September, 1932. Imports were \$132 millions in September, 1934, compared with \$147 millions in 1933 and \$98 millions in 1932. For the nine months of the calendar year exports have totalled \$1,561 millions and imports \$1,242 millions, giving an active trade balance of \$320 millions, compared with \$67 millions last year, \$172 millions in 1932 and \$223 millions in 1931. The nine-month average for the five years 1926-30 was just under \$400 millions, and at that time we were lending abroad in enormous volume, whereas foreign loans have since disappeared.

The following table shows exports and imports up to August for the years 1933 and 1934:—

EXPORTS FOR EIGHT MONTHS (\$000,000)			
	1933	1934	
Europe	462	610	
North America	211	322	
South America	66	104	
Asia	161	248	
Oceania	21	37	
Africa	24	49	

While all elements of our export trade have shared in this increase, the big gains have come in the exports of "metals and manufactures" and "machinery and vehicles." These are the groups that have definitely benefited by devaluation, for the domestic price has risen little, while the foreign price has fallen. Of these, motor cars are the outstanding example. In other words, our increase in exports is largely the result of devaluation, not in the sense that thereby we have gained new markets, but that we have re-entered markets which had been closed by the currency differentials created by the earlier devaluation of other units. On the other hand, the increase in imports is relatively small, and is largely traceable to higher dollar prices.

Needless to say, although the increase of exports is gratifying, the widening disparity between exports and imports is by no means welcome to those who consider the problems of America as a creditor nation. While the announced Treasury scheme of converting the trade balance into silver is interesting, it is obvious that it has rather narrow limitations. One hesitates to pursue to extremes deductions from a trade movement which is of recent development, but the elements are clear. The United States is a creditor nation; it has an active trade balance, and by devaluation it has increased its exports without correspondingly increasing its imports. From January to August this balance was equilibrated by imports of gold, and in recent months of silver; yet at the present time the dollar is still strong. The movement of capital, of course, constituted a fluctuating variable. On the basis of the year's data, one can elaborate a rather strong argument that the revaluation of gold at \$35 undervalued the dollar internationally, and that, although our prices have risen this year, it may be still undervalued.

BANKING MOVEMENTS SINCE JUNE

The movement of banking items continues to be interesting. The following table gives items from the statements of the reporting member banks. The first date (May 10, 1933) was the first date of publication after the bank

suspension; the second date, the end of June a year later, and the last, the most recent statement:—

ITEMS OF THE REPORTING MEMBER BANKS (\$000,000)

	May 10, 1933	June 27, 1934	Oct. 24, 1934
Net demand deposits	10,509	12,504	13,402
Borrowings from F.R. banks	80	5	1
Reserves with F.R. banks	1,536	2,901	2,996
U.S. securities	4,908	6,665	6,654
U.S. guaranteed obligations	...	...	463
Other securities	3,006	3,058	2,899
Other loans	4,689	4,485	4,759
Collateral loans	3,715	3,529	3,075

It will be noted that up to June, 1934, the banks (a) reduced their borrowings at the reserve banks, (b) increased their cash reserves at the reserve banks, and (c) bought Government securities, presumably mostly short-term issues; during this period loans of both kinds were falling. Since June, 1934, they have taken almost \$500 millions of the recently created guaranteed issues, which were scarcely a factor in June, and they have increased their "other loans"; the magnitude of the decline in collateral loans is surprising, but it may be associated either with liquidation or possibly with the rise in the holdings of guaranteed securities. At all events, it is noteworthy that June marks a milestone in our banking developments. Up to June the increase in deposits had been almost evenly divided between excess reserves and United States securities. Since June an increase of \$900 millions of deposits has gone mostly into the long-term guaranteed issues and into "other loans," holdings of United States securities being unchanged and excess reserves rising only moderately.

NEW YORK, November 5.

FRANCE

THE FLANDIN GOVERNMENT'S POLICY

THE formation of the Flandin Cabinet has been greeted with a strong rise in rentes. The 3 per cent. perpetual rose from 70.60 to 72.50; the 4½ per cent. 1932 (last conversion loan) from 85.75 to 87.70. This recovery shows the confidence which the rentier class places in the new Cabinet. It is also a consequence of the rapidity with which the recent crisis has been solved. But it was chiefly due to the fact that the retirement of M. Doumergue had not put an end to the "truce." On the Right the Flandin Cabinet extends as far as its predecessor, that is as far as the "Union Républicaine Démocratique," but it includes on the Left the large group of Radical-Socialists. Its character as a "truce Government," with a majority in the Chamber, is emphasised by the presence of the two State Ministers M. Herriot, leader of the Radical-Socialists, and M. Marin, leader of the Union Républicaine Démocratique.

M. Doumergue's failure and resignation were really due to the bad choice he made of the ground he was to fight on. He had become accustomed to place settled decisions before his Ministers, and this caused discontent. M. Doumergue actually prepared on his own initiative his project for provisional credits at the very moment when M. Germain-Martin, his Minister for Finances, was urging the Committee of the Chamber to conclude the examination of the financial law in order to avoid any recourse to provisional credits. This question of the provisional credits, which divided M. Doumergue from the majority of his colleagues, was not a good issue on which to fight. For this reason M. Doumergue's resignation did not provoke the disturbances which might otherwise have occurred. Moreover, although the Doumergue Cabinet succeeded in restoring to the country the sentiment of calm and confidence which the riots of February had profoundly disturbed, the Government's action against the economic crisis was not so successful. The farmers are suffering from depression on the wheat and wine markets. Unemployment is increasing. Industrial activity is still declining.

M. Flandin consequently intends to make his principal efforts on the economic field. He favours a solution which will avoid the methods of a "managed economy," and he intends to return progressively to economic liberalism.

On the eve of accepting the Premiership, M. Flandin declared in a speech at Arras:—

I have the right to remember that I was the first to stigmatise the abandonment of liberty as a principal cause of economic disorder. "Managed economy" has won the support of those who look to a neo-capitalism in which the interest of the community is supposed to replace individual profit. But now that Liberty, as an injured Caryatid, has ceased to support the world's economy, now that the temples of managed economy are falling to pieces, I observe a general return to an economic order founded on liberty. . . . Nothing is more urgent than to fight against taxation, fixed prices, price rules and monopolies.

The new Government has declared that its foreign policy will follow the lines of its predecessor. M. Flandin's Foreign Minister is M. Pierre Laval, who occupied the same post in the preceding Cabinet.

DECLINE IN BUDGET REVENUE

The total of Budgetary revenue for July, August and September, 1934, was 8,905,980,100 francs. Ordinary and permanent revenue reached 8,692,559,000 francs:—

	Francs
Direct contributions.....	1,809,569,000
Taxes and monopolies.....	6,826,361,000
Estates	56,629,000

These figures show a diminution of 1,056,882,700 francs compared with those of last year. For the first nine months of 1934 the revenue deficit in comparison with the estimates was as follows:—

Revenue	Estimates	Receipts	Deficit
(000,000 francs)			
Registration	2,938	2,435	— 503
Stamps	1,715	1,600	— 115
Tax on Stock Exchange transactions.....	99	91	— 8
Securities income tax.....	2,213	2,188	— 25
Customs	4,274	3,640	— 634
Taxes and duties	4,535	3,955	— 580
Turnover tax	5,313	4,847	— 466
Custom and indirect taxes	1,842	1,512	— 330
	22,929	20,268	— 2,661

The revenue for 1934 shows a diminution of 949 millions in comparison with 1933.

INDUSTRIAL PRODUCTION STILL FALLING

The Statistique Générale has just published its monthly figures showing industrial production in September:—

	1913 = 100	Sept., 1933	July, 1934	Aug., 1934	Sept., 1934
General index	110	98	97	95	95
Engineering	113	99	100	99	99
Iron and steel.....	85	80	81	79	79
Textiles	78	58	55	54	54
Mines	99	102	101	103	103
Building (adjusted figures).....	90	81	81	80	80
Leather (" ").....	103	98	96	90	90
Paper (" ").....	129	157	149	141	141
Rubber (" ").....	964	856	856	856	856
Motors (" ").....	430	463	468	466	466

In the motor industry 8,541 automobiles have been put on the road, compared with 7,217 in September, 1933. The figures for the cotton industry are as follows:—

	1934			
	June	July	August	Sept.
Spinning (average per spindle in kilograms):				
Production.....	1.453	1.370	1.343	1.277
Deliveries	1.411	1.364	1.282	1.352
Stocks.....	2.423	2.482	2.541	2.503
Unfulfilled orders	4.568	4.459	4.408	4.076
Weaving (average per loom in pieces of 100 metres):				
Production.....	4.95	4.49	4.20	3.66
Deliveries	4.85	4.30	4.19	3.17
Stocks.....	9.09	9.87	9.82	10.64
Unfulfilled orders	12.63	11.74	10.21	9.74

The figures of bankruptcies in October was 896, compared with 596 in September and 751 in August; bankruptcies and judicial liquidations were 1,331, compared with 893 in September and 1,093 in August. Pig-iron output in September was 499,000 tons, compared with 532,000 tons in August and 538,000 tons in September, 1933. Ingot steel output was 494,000 tons, compared with 533,000 tons in August and 550,000 tons in September, 1933.

PARIS, November 15.

GERMANY

THE COST OF AUTARKY

THE Reich Commissar for Price Supervision, Dr. Goerdeler, has opened his campaign with a long Press statement which endorses the Government view that the rapid advance in the cost of living is due to individual abuses. There is no good ground, Dr. Goerdeler holds, for this advance, since wages, interest, taxation and the working costs of producers have not risen. This, of course, leaves out of account changes in the prices of home and imported raw materials resulting from recent changes in foreign trade policy. Dr. Goerdeler admitted that foodstuffs have risen in price "for reasons which the Reich Government, entirely openly and with a deliberate aim, from the beginning made clear to the German nation. . . . This important aim (i.e. the protection of farmers as a nationally-necessary class) must not be abandoned." From the last utterance it appears that, although the new Commissar has competence (for supervision only) in the matter of those food prices which are determined by the "Reichsnährstand," he will not advocate any general reduction of the minimum prices guaranteed to agricultural producers. It is, therefore, unlikely that prices to consumers will be materially reduced, although Dr. Goerdeler has protested against certain kinds of minimum pricing. He admits, however, that the rising price-level of manufactured goods was in part due to the "autarky" policy. He appears to regard this policy as not permanent:—

Many occurrences in the domain of trade-policy justify the expectation that we shall soon be in possession of large quantities of important raw materials; when these raw materials come in at the lower world-market prices, and are converted into manufactured goods, we shall see that the prices of the finished articles are made to fall.

This statement is hardly consistent with the preparations now being made for large, permanent capital investments in plant for the production of substitutes. On the decisive question of real wages, Dr. Goerdeler merely remarks that nominal wages cannot be raised because the resources for the State public works programmes must be taken out of earnings, since reserves of capital are not available.

Dr. Goerdeler's first price ordinance deals exclusively with questions of price agreements, profit and distribution, and not with prices or costs of production. Associations, including associations of public law, the ordinance prescribes, may not fix prices, margins of profit, maximum rebates, or minimum price supplements without his permission. This is in substance a repetition of the Minister of Economy's ordinance of May 16th. Producers and wholesale dealers may not fix retail prices or change them to the disadvantage of consumers without permission. This regulation prevents the marketing of new proprietary articles without official authorisation.

FALL IN IMPORT SURPLUS

The official report on foreign trade for the third quarter of the year shows a radical displacement, mainly due to reduced imports of raw materials. Whereas the active balance with Europe declined by only about one-third, the much larger passive balance with overseas countries fell by half. As a result the fall in the total passive balance was from Rm. 161 millions in April-June to Rm. 52 millions in July-September. It must be noted, however, that imports of materials were heavy in the first half of this year, and that in the third quarter stocks were being eaten into. The decline in total imports was relatively small at 8 per cent., those from Europe having risen 11 per cent., those from overseas having declined by 30 per cent. The chief decline in imports was in wool and cotton. Total imports from Australia dropped 62 per cent., from Uruguay 66 per cent., from Argentina 27 per cent., from British South Africa 27 per cent. from the United States 28 per cent., and from British India 25 per cent. Imports from Great Britain dropped considerably to Rm. 39 millions. Exports to Great Britain were Rm. 95 millions. Owing to the reduced import of materials, the trade balance with the British Empire was active for the first time since 1931. The active balance with Europe was Rm. 120 millions, and to Europe, without

Russia, Rm. 164 millions. Exports to Russia were only Rm. 13 million, and imports from Russia were Rm. 57 millions.

The wholesale price-index number for November 7th was 101.4, against 101.3 for October 31st. Agricultural products show a new sharp rise; industrial products are unchanged. The number of unemployed declined in October by 13,800 to 2,268,000. In October, 1933, the unemployed dropped by 105,000. The Konjunkturinstitut's industrial production index for September shows a decline to 86.3, as against 87.4 in August, and a high point of 89.8 in July. The value of production fell to 4,310 millions, against 4,440 millions in July. Reports from individual industries are fairly favourable, improvement having taken place in machinery, ironware and cutlery, also in the investment goods and building material branches, in particular cement. Among consumption branches, toys are active, and the output exceeds that of a year ago. Total turnover in department stores continues to increase, however, at a slower pace than that of the specialised retail shops. The quarterly report for July-September of I.G. Farbenindustrie reports domestic improvement, and stable exports of dyes and chemicals.

Owing to temporary superfluity of cash in the hands of public bodies, the money market has been extraordinarily fluid. On Monday the market discount rate was reduced by $\frac{1}{8}$ per cent. to $3\frac{1}{8}$ per cent., after remaining unchanged since June 2nd. Despite the market's fluidity, the Reichsbank's holding of public works bills has increased. The growth of foreign special deposits in the Reichsbank, however has ended. The first month (September) of clearing with Sweden shows the already familiar movement toward a passive German trade balance. Sweden's exports to Germany rose 43 per cent.; imports from Germany fell 7 per cent. On this basis the assumption of the Clearing Agreement of an active German balance of Rm. 90 millions a year will hardly be realised.

BERLIN, November 14.

ITALY

A DRIVE AGAINST UNEMPLOYMENT

SIGNOR PIRELLI and Signor Cianetti, commissioners of the Confederations of Industrial Employers and Employees, respectively, have signed an agreement intended to reduce unemployment. The unemployment figures show that there has been a slight decrease since 1933:—

	1933	1934
August.....	888,560	866,570
September.....	907,463	887,345

This improvement, however, is thought too slow; and it is hoped to accelerate it by increasing the number of men absorbed by public works above the present high-water mark average figure of 321,501 for September. The present big drive against unemployment includes the following features: (1) weekly hours of labour to be reduced to 40 in all cases where the reduction is technically possible; (2) a fund to subsidise men with big families, who are working only part-time, the fund to be maintained by a levy of 1 per cent. on the wages of fully-employed men. The levy is 5 per cent. on wages received for hours worked above 40. A corresponding payment of 1 and 5 per cent. is made by employers; (3) wage-rates are reduced in proportion to the reduction of hours worked; (4) overtime to be abolished; (5) women of all ages and men under 21 years must be, if possible, gradually discharged in all lines where adult men are more efficient; (6) the above rules about overtime and the employment of women and young men apply also to clerks and other non-manual workers.

The real meaning of the unemployment statistics is uncertain, as the figures include both assisted and non-assisted unemployed. In August, 1933 (the last month for which we possess the figures of assisted men), against a total, as above, of 888,560 unemployed, the assisted unemployed amount only to 143,334. The difference is partly due to the fact that the real unemployed, after 90 or 120 days of

assistance, are no more qualified for assistance; but it is partly due to the usual mass, existing in all countries, of men not qualified for regular employment.

The latest indices of industrial production point to an improvement:—

	Increase or Decrease per cent. in 1934 over the corresponding figure for 1933	
	August	January to August
Textiles	-10.3	-9.2
Iron and steel.....	+4.4	+4.8
Engineering	+6.2	+4.8
Paper	+17.9	+8.2
Building.....	+43.0	+40.7
Electricity, gas, etc.	+1.0	+6.0
General index	+5.2	+5.0

In the depressed textile group rayon is a cheerful exception, with an increase of 42.4 per cent. for August and 27.2 per cent. for the first eight months of the year. The big increase in the building industry is transient, as on December 31, 1935, the 25-years' tax exemption for new building expires, and everybody is trying feverishly to complete building operations before that date.

INCREASING IMPORT SURPLUS

Public opinion is much concerned about the state of foreign trade. The statistics for the period January-September, 1934, are as follows:—

	1933	1934
	(000,000 lire)	
Imports	5,551.2	5,649.1
Exports	4,484.3	3,818.2
Import surplus	1,066.9	1,830.8

The Protectionists are alarmed at the big excess of imports, and impute to it the decrease of the gold reserve of the Bank of Italy from 7,396.7 million lire on December 31, 1933, to 6,098.8 millions on October 31, 1934. Their alarm is unfounded, as the only serious cause of concern should be the difficulty of importing much-needed raw materials and half-finished products. That some imports have risen as follows in the first eight months of the year should be a matter of gratification:—

	1933	1934
Coal, tons	6,020,870	7,583,438
Petrol, tons.....	79,891	83,580
Rubber, raw, tons	13,706	15,139
Cellulose, tons	145,165	166,784
Broken iron and steel, tons ..	390,545	477,458
Iron and steel, bars and ingots, tons.....	70,776	91,040

The reduction in other raw material imports, however, is disquieting:—

	1933	1934
Raw cotton, tons	145,730	133,166
Raw wool, tons.	68,619	55,556

Industrialists are complaining at the present restrictions on imports of wool, especially Australian, and the difficulties in obtaining foreign *devisen* payments. Clearings mean heavy delay in getting payments for goods sold. As the number of foreign tourists entering Italy from April to August, 1934, has been 1,619,937, against 1,370,083 in the corresponding period of the past year, the good results obtained by offering facilities to foreign travellers should be evidence of the much more favourable results which would follow the gradual opening of the frontier to foreign goods.

A very interesting study by Professor Repaci in the last September-October issue of *La Riforma Sociale* on the incidence of tariffs in Italy concludes that in the case of treaty-goods, i.e. goods taxed in virtue of commercial treaties with foreign countries, the present incidence is only 71.8 per cent. of the General 1921 Tariff. But, as the General 1921 Tariff was greatly increased as against pre-war general and conventional tariffs, to compare 1933 with 1914, the increase in the general tariff (in old gold lire) is from 100 to 219.12, and in the effective average tariff, conventional and general, from 100 to 222.43. There is, therefore, ample scope for the removal of obstructions to foreign trade.

TURIN, November 13.

CZECHOSLOVAKIA

THE EFFECTS OF DEVALUATION

PARLIAMENT reassembled on October 25th, and one of its principal tasks will be the passing of the 1935 Budget. In presenting the Budget Bill to Parliament the Minister of Finance made a speech attributing the improvement in the economic situation mainly to the devaluation which was carried through in February and stopped the process of deflation. Economy, he said, however, was still necessary.

The Budget is as follows:—

	(000,000 Cz.K.)		
	1933	1934	1935
Expenditure	8,632	7,631	7,983
Revenue	8,634	7,632	7,985

The Budget of the State undertakings shows expenditure at 7,175 million Cz.K. and revenue at 8,003 million Cz.K.; profit being 828 million Cz.K. The biggest revenue and profit is derived from the tobacco monopoly. The biggest deficit comes from the State railways.

The National Debt figures are as follows:—

	(000,000 Cz.K.)		
	1934	1935	
Internal debt.....	28,684	29,033	
External debt.....	7,453	8,235	
State note debt	2,600	2,100	
Service and amortisation	1,697	1,975	

Regular drawings and amortisation of the internal debt, which had been postponed to the end of 1934, are to be deferred further to the end of 1935, and are to be replaced in part by purchases of stock on the free market up to 150 million Cz.K.

The Government intend to reorganise the money market and to cheapen credit. The first step in this direction was devaluation and the second the operations of the Rediscount and Lombard Institute and the facilitating of loans on Government securities. To improve the liquidity of financial institutions a further reduction of overhead charges will be sought. The next problem is the direct encouragement of production and the reduction of unemployment. This is to be sought by a public investment policy. The Ministry of Finance is to be empowered to guarantee hypothecated loans for industry up to 50 million Cz.K., and communal loans for public works also up to 50 million Cz.K. Foreign trade is to be assisted by the removal of obstacles to exporters, the revision of import controls and of the permits system, and by the building up of the new Export Institute for information and research.

SLIGHT RISE IN UNEMPLOYMENT

In industry there has been no great change lately. Unemployment rose in August to 572,428 and in September to 573,624. Production of iron in September was 54,749 tons, a decline compared with August, and of raw steel 81,115 tons, also a decline compared with August, but a substantial rise compared with last year, when production of pig iron in September was 43,952 tons and of steel 61,333 tons. The situation in the exporting industries has slightly improved. The wholesale price index in gold for September stood at 84, against 83.9 in August; the index of manufactured goods was lower than the index of agricultural products.

The money market was calm throughout the summer months; after the harvest deposits rose slightly. During the autumn the demand for ready money became much more pronounced and was accompanied by an increase in bank notes. The Stock Exchange—after temporary slackening—also exhibits a firmer tone.

Imports in the period January-September, 1932, amounted to 4,614 million Cz.K., against 4,406 million Cz.K. for the same period in 1933. Exports were 5,118 million Cz.K., against 4,194 million Cz.K. in 1933. The active balance of trade for the first nine months of 1934 was 505 million Cz.K., compared with an active balance of 212 million Cz.K. in 1933.

Commercial negotiations with France have resulted in a mutual adjustment of quotas. Negotiations with Germany and Hungary are now going on.

The harvest is finished. Owing to the drought the yield was substantially less than last year. The final figures are as follows:—

	(000 Cwt.)	1933	1934
Wheat		19,846	13,611
Rye		20,855	15,232
Barley		13,505	10,343
Oats		15,771	11,790

About 13,000 trucks of wheat will have to be imported for home consumption. But there will be a substantial export surplus of rye, barley and oats. A marked lack of fodder induced the farmers to sell large numbers of cattle, but conditions improved after the autumn rains.

PRAGUE, November 13.

BULGARIA

REORGANISATION OF THE BANKING SYSTEM

A new banking institution, "Banque Crédit Bulgare," has been recently formed by the fusion of twelve Bulgarian commercial banks, and the State has participated with a capital of 50 million leva. At present the capital of the bank amounts to 147 million leva, with deposits of nearly 500 million leva. The gradual amalgamation in the new bank of another thirty-five provincial banks is expected. When this has been achieved the bank will include the greater number of Bulgarian banks, and there will only remain in the country four foreign banks, four Bulgarian, and some small provincial banks. The new institution, "Banque Crédit Bulgare," is expected to be pre-eminent in its resources and scope.

A new law has also been passed which amalgamates the two State banks, the Agricultural Bank of Bulgaria and the Central Co-operative Bank of Bulgaria, as from October 18th. The new bank will operate under the name of the Agricultural and Co-operative Bank of Bulgaria, and will have at its disposal a capital of 900 million leva and deposits amounting to nearly 6,000 million leva. The main object of this reform is to co-ordinate the financing of agriculture and of the co-operative societies. The new bank will have authority to construct elevators and to control the actions of the credit co-operative societies which it finances, discharging, if necessary, their boards of directors and providing for the regulation of their finances. The fusion of 250 popular banks is also pending.

Meanwhile the Government has instituted the State monopolies recently announced. The monopoly of the production, sale, import and export of alcohol has already been organised, and the organisation of the monopoly of the manufacture and sale of cigarettes has been recently instituted.

The foreign trade results for the first nine months of 1934 are less favourable than those for the corresponding period of 1933:—

	Nine Months of 1933	Nine Months of 1934
	(Millions of leva)	(Millions of leva)
Imports	1,677	1,632
Exports	1,964	1,637
Export surplus	287	5

The decline in exports by 16 per cent. in a period when imports have not changed has reacted unfavourably on the balance of payments. This has resulted in an increase in the outstanding commercial debt of the country from 600 million leva at the beginning of the year to 800 millions at the end of October. Besides, since nearly 75 per cent. of Bulgaria's foreign trade is settled by means of clearing arrangements and private compensations, the available foreign exchange reserve of the country has shrunk considerably and renders foreign debt transfers

difficult. In order to meet the engagements of the State on this debt, the National Bank of Bulgaria has already had to borrow abroad over 150 million leva in foreign exchange. The slight improvement in the export trade which is expected during the last quarter of the year will hardly change the situation, since the export of cereals, which is the chief source of free foreign exchange, is unsatisfactory.

SOFIA, November 12.

ARGENTINA

THE BUDGET AND THE PESO

The Budget estimates are being studied and should be ready for publication shortly. Although efforts are being made to reduce expenditure to a minimum, it is possible that an increase will take place during the coming year. Argentina is a growing country, and Government expenditure cannot, therefore, be expected to remain stationary. There is great room for improvement in roads and various social services; and it is to this end that any increase in expenditure should be devoted.

It has been rumoured from time to time that the Government were contemplating stabilising the peso at 20 to the £. It would surely be unwise, however, for Argentina to link its currency definitely with sterling until the economic and political situation in Europe becomes more clearly defined. An important signpost of general recovery in the past few months has been the steady falling off in bankruptcies which, for the first ten months of 1934, showed liabilities of \$129,860,092, as against \$211,353,686 for 1933.

THE RECOVERY IN FOREIGN TRADE

The following figures show Argentine imports in the first nine months of 1934, compared with those for a similar period of 1933:—

	1933	1934	Increase or Decrease %
Total	5,090,572	5,219,791	+ 2.5

A large increase was shown in the figures for iron by-products and fuel and lubricants, whereas foodstuffs, and stones, glass and earthenware show a considerable decline. The following was the distribution of imports and exports by countries:—

	1933	1934	Percentages of Total	1933	1934
United Kingdom	152,353,427	166,832,959	21.5	23.0	
United States ...	85,806,664	110,980,530	12.1	15.3	
Germany	74,870,568	74,070,643	10.6	10.2	
Italy	67,367,080	51,622,943	9.5	7.1	
France	37,673,811	38,203,698	5.3	5.3	

MARKET VALUE OF ARGENTINE EXPORTS, ACCORDING TO DESTINATION, IN FIRST NINE MONTHS OF 1933 AND 1934

	1933	1934	1933	1934
	\$	\$		
United Kingdom	311,750,917	352,989,502	36.2	32.1
Belgium	88,890,449	90,873,470	10.4	8.3
Holland	84,769,170	87,009,684	9.8	7.9
Germany	61,912,968	78,551,332	7.2	7.1
France	53,748,411	59,179,186	6.2	5.4
United States ...	69,191,020	55,334,754	8.0	5.0

Imports continue to increase, and the United Kingdom appears to be getting its share of this improvement; the United States, however, are still more favourably placed. Actually, even without taking into account the interest on her foreign debt, Argentina's trade with the United States shows a large passive balance. This should not be overlooked by British exporters to Argentina, as it is clear that, from the point of view of exchange facilities, they must be more favourably placed than America. Owing to lack of exchange permits many American products have to be paid for at the free market rate, whereas exchange for similar products bought from Great Britain can often be obtained at the official rate, which is nearly 10 per cent. less.

As the following figures show, both revenue and expenditure are down as compared with 1933:—

	REVENUE AND EXPENDITURE FIGURES FOR THE FIRST TEN MONTHS OF 1933 AND 1934	
	1933	1934
Revenue in cash	668,751,096	653,582,017
Revenue from credit operations	127,926,570	133,582,713
Total	796,677,666	787,164,730
Expenditure	805,972,399	787,370,783
		— 18,601,616

Revenue in cash has fallen off considerably, mainly owing to the reduction under the heading of custom house receipts and participation in profits. The latter item, which represents Government participation in the profits of autonomous bodies such as the National Bank, shows a falling off of \$11 millions. Revenue from income tax, land tax and licences, however, all show a substantial rise. Revenue from credit operations shows a small increase due to the employment of funds resulting from the Roca and other exchange loans; short-term loans, however, show a reduction. The decline in expenditure is chiefly due to the reduction, as a result of the conversion operations, in the amount required for public debt services.

BUENOS AIRES, November 2.

CHINA

CANTON JEALOUSY OF NANKING

The Fifth Plenary Congress of the Kuomintang is to be held in Nanking during November. Whether the Canton party will be represented appears doubtful, for jealousy of the growing strength of the Central Government and fears that they may find themselves in a hopeless minority are moving the Canton politicians to discuss the possibilities of a rival conference in the South. During the past few weeks telegrams have been despatched to Nanking making various demands in the name of the South West Political Council, and considerable annoyance has been caused in Canton because the Northern papers have not been allowed to publish the messages. Canton is filled with righteous indignation and has appealed for sympathy to every War Lord who is at variance with Chiang Kai Shek. In most cases the appeal has been responded to by whole-hearted denunciation of the Central Government, and this has helped to work up a thoroughly anti-Nanking atmosphere.

There is a strong suspicion that the Canton authorities are privy to the diversion of Customs duties from the proper channels. Although Canton is allowed to retain a large portion of the revenue of the port, the duties collected have to be accounted for to Nanking, and the big decrease in receipts, which has become very serious, cannot be entirely due to trade depression. The Central Government has suggested that Customs duties on goods shipped from Hong Kong to the neighbouring provinces of China should be collected here, and it is understood that the Hong Kong Government would raise no objection. The Canton authorities, however, are indignant at the idea of Chinese dues being paid in foreign territory, quite ignoring the fact that for many years past the Chinese Maritime Customs have functioned at the Kowloon terminus of the railway to Canton. Unfortunately there are well-established vested interests in Canton who are in a position to import on a large scale without Customs examination, and their influence in political circles is probably strong enough to defeat the efforts of Nanking to tighten up Customs regulations.

THE HONG KONG BUDGET

The Hong Kong Government has presented its annual Budget, which, considering the depressing state of the Colony's trade, shows a comparatively healthy financial position. Expenditure for 1935 is estimated at \$26,400,000, which is expected to leave a deficit of \$1,390,000, but as

the rate of exchange for sterling commitments has been taken at the conservative figure of 1s. 4d., there is every prospect of ending the year with a surplus. In any case there is a balance of over \$10 millions in hand. No addition has been made to the existing taxes.

The Economic Commission of Inquiry, appointed two months ago by the Hong Kong Government, has held some 14 or 15 sittings and should shortly be considering its report. It has collected evidence over a wide field, and it is understood that a good deal of attention has been given to the question of Hong Kong's local industries. These are now of some importance, and as their products enjoy Imperial preference on entering the Crown Colonies the institution of the quota system has naturally encouraged the products of Hong Kong factories at the expense of similar Japanese goods. Now, however, the Hong Kong rubber shoe factories are threatened with a quota by Great Britain. The Imperial Government has asked for the views of the local administration on a tentative quota allotting imports of rubber shoes from Hong Kong to the extent of one and a half million pairs per annum, in the event of imports from Singapore being limited to one million pairs. At the rate of recent development 1,500,000 pairs is far below the ideas of local manufacturers, who probably hope to approach 5,000,000 pairs for the current year. Representations have been made with a view to staving off the quota on the grounds that all the raw material is of Empire origin.

Just Published— THE PRINCIPLES OF CURRENCY, CREDIT AND EXCHANGE

By Wm. A. S. Law, Litt.D.,
and Alfred Wigglesworth

Every economist and student of economy should read this brilliant analysis of modern currency experiments, and lucid exposition of the true principles of currency control and credit management. The authors advocate a simple system of exchange control capable of supplying a steady par exchange all the year round, and utterly defeating exchange gambling and manipulation. 124 pages. 3/6 net

MONEY AND BANKING

THE DEVITALISED GOLD STANDARD

(BY A CORRESPONDENT)

How far is the monetary standard which is being maintained by the gold *bloc* still the gold standard? The gold standard, in any effective sense, must comply with certain "rules of the game." For instance, gold must be bought and sold at fixed prices in more than one country; if one country's price level rises above the level of the others, gold must be allowed to flow out, as the cheapest article of export; deflationary influences must then be set in motion in that country, and inflationary tendencies in the other gold standard countries; and gold must function by such movements to level out the relative purchasing power of the various currencies on that standard.

In the world to-day we have, in effect, some sort of gold standard, plus a comparatively stable sterling standard, and, as a doubtful free-lance, a dollar standard; and both the present and future relations of the "off-gold" currencies to gold itself are, to say the least, vague. Prices in dollars and sterling have not risen proportionately to the effective depreciation of those currencies in relation to gold. Their depreciation has therefore lowered the price levels in U.S.A. and Great Britain, measured in terms of gold. This must press down prices in gold *bloc* countries so long as they maintain their present exchange parities and sell gold at the present prices. Indeed, one might just as well say that gold and the gold *bloc* currencies have been raised in value against dollars and pounds, as say that dollars and pounds have been depreciated; for over 90 per cent. of the world's total turnover is now being reckoned in the depreciated currencies.

In these conditions, how have the gold *bloc* been working their gold standard? Their central banks till now have, formally at any rate, given gold or gold exchange to anyone who presented eligible banknotes; and their currencies have, therefore, never fallen substantially below the gold export point. But such free deliveries of gold have nearly always been for "panic" or "capital flight" purposes, and not for the purposes implied by the normal working of a gold standard. So far as gold losses to equalise purchasing powers are concerned, the only instances have been when gold has gone out to redress an unfavourable trade balance. But the unfavourable trade balances of the gold *bloc* countries bear little or no relation to the differences of purchasing power between their countries and, say, U.S.A. or Britain; for the imports into the gold *bloc* which would, under a normal gold standard, have flooded in as a result of the differences in purchasing power, were dammed from the first by a refined and complicated system of quotas, tariffs, etc. An unfavourable trade balance of the proportions which would normally have been anticipated was thus prevented. Measures of commercial policy have rendered the monetary measures, which should have followed upon the relative over-valuation of the "on-gold" currencies, unnecessary; but in the event they have made of this gold standard a mere formality, devoid of efficacy. The differences of purchasing power, which the normal gold standard would have evened out, still remain. The internal price level of the gold *bloc* countries is kept up. The gold standard, which was originally a means to the end of parity, becomes a formal end in itself; parity is even hindered; and the gold standard is turned into a formal "national" standard, like the pound sterling. In fact, the gold in the gold *bloc* can only exert its full international purchasing power in the pocket of an emigrant to a dollar or sterling country—but never if it remains in the pocket of a gold *bloc* citizen. The gold standard of the gold *bloc* is thus subjected to controls which, though different in form, are the same in effect as the "controls" of countries with compulsory exchange regulations.

But is stabilisation of the foreign exchanges really worth all these painful efforts? It is arguable that to bring the

exchange values of the various currencies into equilibrium with their respective purchasing powers should be our goal, rather than outright stabilisation. Exchange instability is the effect and not the cause of many disturbances which have destroyed international confidence; and these causal disturbances must first be removed. If all currencies stood approximately at their purchasing power parities, exchange fluctuations would give no more warrant than the gold standard for trade barriers.

Exchanges can be brought into equilibrium with the purchasing powers of national currencies in various ways. First, one can allow the automatic gold standard to work automatically. But the magnitude of the unemployment problem bequeathed to the gold *bloc* by such a method puts it out of court at once. Moreover, the outflow of gold from these countries would be enormous. Public opinion cannot easily be convinced that large gold reserves are built up merely to be reduced when an economic crisis supervenes. Secondly, the internal price levels of the gold *bloc* countries can be reduced by national action, to accord with the outside world's price and cost levels. This proposal is like that for disarmament; everyone wants it, but for the other fellow! If any central banker in the gold *bloc* were to initiate a really deflationary policy, he would be stoned. Again, any adequate cut in money wages is a political impossibility; and, moreover, it is questionable whether cuts in *present* wages would suffice, for final products contain costs of machinery, etc., in which former wages are already crystallised, and only a parallel cut in all forms of indebtedness will solve this difficulty. How can one advocate adequate deflationary measures for the gold *bloc* to-day, when the existing, inadequate deflation has proved well-nigh unbearable, when it has provoked political crises and bloodshed, and when "Public Works Programmes" are being demanded on all sides? These very programmes, if they do not merely supplant private enterprise, must expand purchasing power if they are to be successful—and that is the opposite to deflation. Thirdly, the gold *bloc* can devalue, i.e. can bring their currencies back to purchasing power parity by lowering the gold content of their currencies, which would automatically lower their currencies in terms of sterling and dollars. It seems, however, that statesmen of the gold *bloc* are irrevocably set against such a method. The creditor class in the gold countries must feel the pinch much more seriously before it will agree to such a step. Yet while creditors make currency laws, debtors can make revolutions; and it remains to be seen how far each class in the gold *bloc* countries will drive the other.

Thus we can set out the following rough conclusions for what they are worth. The gold *bloc* countries will not devalue yet; they still prefer stabilisation on gold to stabilisation on a see-saw between sterling and dollars. Secondly, real and adequate deflation in the gold *bloc* will not take place. Rather will certain inflationary tendencies emerge as the over-valuation of their currencies weighs more heavily upon them. Their large gold stocks will then aggravate these inflationary tendencies and not, as hitherto, merely render the money markets more liquid for Government borrowing without stimulating issues for new private enterprise. Moreover, if world trade shrinks any more the gold *bloc* countries will tend to pay it no further attention. Then the demand for purely domestic expansion will be irresistible—that is, as long as the public is convinced that the advantages of a currency stable on gold outweigh the disadvantages of a currency over-valued in terms of goods.

If all this is a correct diagnosis, it means that in future we are likely to have two gold standard areas in the world: the gold *bloc* and the sterling-dollar area. The dollar is on gold now, and, even if it is further devalued, it will

probably be anchored again. Sterling has a rather elastic link with gold, for the Bank of England still buys and sells gold, though the prices vary within wider limits than when the pound was legally on gold. The purchasing power of sterling and dollars on the one hand, and of the gold *bloc* currencies on the other, cannot be equalised for all the foregoing reasons. It has been only too easy to constrict imports into the gold countries, but impossible to expand their exports; and even attempts to equalise exports with imports by compensation and reciprocity agreements have only limited or reduced unfavourable trade balances by drastically reducing the total turnover of foreign trade. In time, "dumping" becomes the only solution; and it is uncertain at whose cost any "dumped" foreign trade would be carried on. If it is to be at the cost of the broad mass of home consumers, that involves some rise of the internal price level, which will only prevent their prices coming down to competitive levels. If exports are to be subsidised from a levy on the foreign exchange requirements of importers, this means, in effect, that foreign currencies will become dearer—in short, it would be a kind of devaluation of gold *bloc* currencies, and it would inevitably lead to a thoroughgoing devaluation.

All we can say at present is that there are now in the world two largely autarkic economic groups, with different currency standards. How far "recovery" can go anywhere is an open question to-day, but it will certainly take different roads in these two economic areas. Moreover, in the gold *bloc* recovery can only proceed with great divergences in each component country. Till the tide of recovery reaches the gold *bloc* countries they will continue in a depression not unlike that in which Great Britain struggled in the post-war era, as a result of stabilising her currency at too high a level. Britain, however, was then a free-trading community, and could maintain a fairly high level of production and standard of living. To-day the world is parcelled up into on-gold and off-gold countries, and these two broad groups are subdivided into small units trying hard to maintain independent national economies and price levels. Many will ask if any international economic system can be reconstructed on such anarchic foundations. All one can say is, that if some such attempt is not made, and made soon, "economic possibilities for our grandchildren" would not seem to be unlimited.

FINANCIAL NOTES

The Money Market.—Credit remains very cheap. The clearing banks are charging $\frac{1}{2}$ or 1 per cent. for loans to the money market according to the nature of the collateral and 1 per cent. to the Stock Exchange for loans against bonds. Their own deposit rates are unaltered. London deposit rate is $\frac{1}{2}$ per cent. and country deposit rates $\frac{1}{2}$ per cent. for old money and 1 per cent. for new money. Up to 1 per cent. is paid on foreign money fixed for three months, but the banks are not competing for foreign fixtures. The stronger outside lenders are charging $\frac{1}{2}$ per cent. for money market loans, but are at times willing to lend over-night balances at $\frac{1}{4}$ per cent.

	Oct. 25, 1934	Nov. 1, 1934	Nov. 8, 1934	Nov. 15, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate :—				
Clearing banks	1	1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills :—				
(a) Clearing banks.....	$\frac{1}{2}$ - $\frac{1}{4}$	—	—	—
(b) Others.....	$\frac{3}{4}$	$\frac{3}{4}$ - $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{3}{4}$	$\frac{1}{2}$	$\frac{1}{2}$ - $\frac{1}{4}$	$\frac{1}{2}$

The discount market is very idle. Rates for Treasury bills are nominally $\frac{1}{2}$ per cent. for this year's maturities and $\frac{1}{4}$ per cent. for January and February bills. Some banks,

however, are not buying, as it pays them better to lend against Treasury bills as collateral rather than buy them and hold them as discounts. The tender rate last week was down to 5s. 2.65d. per cent., against 6s. 7.66d. per cent. the week before, and this rate is low enough to check clearing bank applications. £32 millions of bills were allotted, but even this low figure was one million in excess of maturities, so that the total tender issue has risen from £421 to £422 millions. Three months' bank bills are a weak $\frac{3}{4}$ per cent. The usual rate for standstills is $\frac{3}{4}$ - $\frac{1}{2}$ per cent., but while some houses are holding out for as much as $1\frac{1}{4}$ per cent., others are prepared to take bills with a first-class London name at as little as $\frac{1}{2}$ per cent.

* * *

The Bank Return.—This week's return records a slight decline in the note circulation and an increase in the Reserve. No further movement need be expected until the Christmas expansion begins in about a fortnight's time.

BANK OF ENGLAND

	Nov. 15, 1933	Dec. 27, 1933	Oct. 31, 1934	Nov. 7, 1934	Nov. 14, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold.....	190.5	190.7	192.0	192.0	192.0
Note circulation.....	369.1	392.0	378.4	379.8	378.9
Banking Department :—					
Reserve	82.7	59.7	74.3	72.9	73.8
Public deposits.....	18.7	22.2	16.9	10.0	20.9
Bankers' deposits	104.0	101.2	100.4	107.2	97.9
Government securities ...	17.2	88.0	80.9	79.8	79.1
Discounts and advances	8.6	16.8	8.9	9.6	9.6
Proportion	51.7%	37.3%	47.2%	46.9%	47.4%

In the banking department there has been a transfer of about £10 millions from bankers' to public deposits. To a small extent this is due to the increase in the tender Treasury bill issue, but the main cause is probably discrepancies between the dates of Treasury bill payments and maturities. The Proportion at 47.4 per cent. compares with 51.7 per cent. a year ago. The decline is due to the contraction in the Reserve, which in turn is a direct consequence of the rise in the note circulation.

* * *

The Foreign Exchanges.—Notwithstanding the nervousness regarding some of the gold *bloc* countries, the London exchange market has been very dull. Business in dollars was limited, with the spot rate at a fraction under \$5 and three months' dollars at $\frac{3}{4}$ cent discount. Francs have been steady at just under Frs. 76, but the New York-Paris cross-rate has been at the export gold point, and further shipments of gold from France have been arranged. Three months' francs have been weak in London at rates ranging up to 16 centimes discount, but strengthened to 12 $\frac{1}{2}$ centimes discount on Thursday afternoon. Forward belgas have been very weak and unsteady. Early in the week the three months' rate widened to about 75 cents discount, equivalent to 14 per cent. per annum, but French buying then brought the rate back to 40 cents discount. On Thursday the rate was nominally 65 cents discount. The Belgian position is discussed in two subsequent notes, but City opinion feels that the new Government will continue to make efforts to maintain the gold standard. Some authorities go so far as to say that the belga will only be devalued as a last resort, and that before that point is reached an attempt will be made to raise a loan abroad. Free reichsmarks are quoted at Rm. 12.42 and sondermarks at Rm. 12.67, or a discount of 2 per cent.

* * *

New York Money and Banking.—Money remains very easy. During the week ended November 7th brokers' loans made by New York member banks for their own account fell from \$614 to \$576 millions, while total loans, including those on account of others, fell from

\$1,435 to \$1,381 millions. The amount of money in circulation on October 31st last is estimated at \$5,454 millions, against \$5,456 millions a month before and \$5,635 millions a year before. Silver receipts by the Treasury under the nationalisation order up to November 9th are returned at 108.9 million ounces, to which must be added 17.0 millions of newly mined silver. The time limit for transferring domestic-owned silver to the Treasury ended on November 7th, so that the figure of 108.9 million ounces is a rough measure of domestic stocks. The Treasury has announced a general blanket licence to permit of the exportation of currency (except gold certificates) and capital without any need for official sanction. In practice, the transfer of funds abroad has been freely permitted for some time past, so that too much should not be read into this decision. The first foreign dollar bond issue under the new Securities Act is announced. It is sponsored by a banking group headed by Brown Brothers, Harriman and Co., and consists of \$10 million to \$15 million Finland Serial Notes for the purpose of providing for the retirement of 7 per cent. and 5½ per cent. Finland bonds. Gold is now arriving from France. Early this week it was stated that shipments amounting to \$50 millions had either been made or were arranged, including small amounts from Belgium and Holland. The Dutch shipment is apparently experimental, and much will depend on whether the American Treasury exerts its right to deduct ½ per cent. from the official price. If so, the export gold point would be raised from Fl. 1.48 to Fl. 1.48½ to the dollar, against a current exchange of about Fl. 1.48 to the dollar.

The New Federal Reserve Governor.—President Roosevelt has filled the vacancy in the Governorship of the Federal Reserve Board by appointing Mr Marriner S. Eccles. It will be remembered that no permanent appointment has been made since Mr Eugene Meyer resigned soon after the end of Mr Hoover's Presidency. Mr Eugene Black, Governor of the Federal Reserve Bank of Atlanta, held the office for some months, but he was unwilling to assume it permanently and returned to Atlanta early this summer. Mr Eccles has been President of a bank in a small town in Utah, but he is best known as an industrialist. For some time he has been acting as Assistant to the Secretary of the Treasury, and in view of the lowly place accorded to the Federal Reserve system in the new scheme of things, the new appointment can be regarded as a change of title rather than of function. Nevertheless, there is naturally some regret that the President did not see fit to appoint someone with more extended banking experience or with some knowledge of central banking problems. Should a monetary inflation ever get under way in the United States, the powers of the Federal Reserve system will be the only brake on the process, and it will not increase confidence to have at the head of the Board a Governor who is believed to be an advocate of large Treasury expenditures as a means of restoring prosperity.

Belgian Economic Conditions.—The uncertain outlook for the belga invests two recent studies of Belgian economic conditions with particular interest. The first, published by the Institut des Sciences Economiques at Louvain, concludes that the depression shows no sign of lifting. Conditions are particularly severe in the sheltered industries, and in marked contrast to both the sterling area and other members of the gold bloc, commercial interest rates show a tendency to rise. Security price index numbers have fallen to new low records. Whereas between July, 1931, and December, 1933, British industrial shares rose by 25 per cent., there was a fall in Belgium of 44 per cent. Unemployment has fallen in England by 7 per cent. and risen in Belgium by 55 per cent. The volume of British exports has expanded by 5 per cent, while Belgian exports have shrunk in volume by 27 per cent. It is calculated that since 1928 relative movements of prices and exchanges have been such as to cause the belga to be overvalued by 20 per cent. against both the pound and the dollar, but as Belgian prices were initially too low in the

base-year, 1928, a decline of less than 20 per cent. would suffice to restore equilibrium. This report is definitely pessimistic in tone, and makes it clear that the belga can only be maintained at its present parity at the cost of a severe economic struggle.

Belgium: a Banking View.—The second study is issued by the Société Belge de Banque. It rather optimistically claims that Belgian industries have to a great extent adapted themselves to the new conditions, but admits that since 1929 raw material prices have fallen by 42 per cent., fuel prices by 34 per cent., and prices of semi-manufactured and manufactured goods by 35 per cent. On the other hand, retail prices have fallen by 22 per cent., the cost of living by 20 per cent., and wages by 18 per cent., and the study argues from these figures that wages have shown a considerable degree of elasticity. Unfortunately, there is evidence that the fall in prices has outstripped the fall in costs, and even rationalisation in the heavy industries has not served to bridge this gap. Again the decline in wages has been insufficient to induce an increased demand for labour or to arrest the growth of unemployment. The Société Belge de Banque's study admits that the cost of social services has increased, and that it is now weighing heavily upon industry. Reading these two studies together, it is clear that the process of readjustment is far from complete, and it is probable that both Belgian industry and labour have already made all the sacrifices they are prepared to make. This explains both the present Ministerial crisis and the lack of confidence in the maintenance of the gold standard at its present parity. Whether Belgium can succeed in her efforts to remain on gold remains to be seen, and in many ways the answer lies beyond control. For example, should Holland go off gold, Belgium could not remain on gold a day longer. Conversely, France cannot remain indifferent to Belgium's struggle to remain on gold, and this week has already witnessed unofficial French support of the belga. All this makes it extremely difficult to forecast the future.

October Clearing Bank Averages.—Both cash and deposits have risen since September, the former by £6.3 millions and the latter by £31.8 millions. The increase in clearing bank cash results mainly from an average increase between September and October of £10.5 millions in bankers' deposits at the Bank of England. This in turn was due to a decline of £8.0 millions in public deposits, which had stood at unusually high levels during September.

	Oct., 1933	July, 1934	Aug., 1934	Sept. 1934	Oct., 1934
Capital and reserves.....	123.3	123.4	123.4	123.4	123.4
Acceptances, etc.	105.3	106.7	108.7	112.1	117.6
Deposits (including undivided profits, etc.).....	1,912.3	1,832.9	1,818.5	1,821.1	1,853.2
Total liabilities	2,140.9	2,063.0	2,050.6	2,056.6	2,094.2
Cash	215.3	207.1	193.4	203.9	210.2
Cheques, balances and items in transit	50.7	47.2	43.4	43.2	51.8
Money at call	84.9	133.9	135.2	133.2	132.1
Discounts	341.0	222.7	220.0	210.9	214.2
Investments	541.6	533.0	540.2	545.6	558.5
Loans and advances.....	732.9	743.4	740.7	738.6	740.4
Investments in affiliated banks.....	24.8	24.6	24.6	24.7	24.9
Cover for acceptances, premises, etc.	149.7	151.1	153.1	156.5	162.1
Total assets	2,140.9	2,063.0	2,050.6	2,056.6	2,094.2

Among the banks' assets there has been an increase of £8.6 millions in cheques, balances and items in transit, which suggests that autumn trade has got well into its stride after the holidays. Call money and discounts showed little change, but investments have risen by £12.9 millions. In view of the recent reduction in money rates and the further purchases by the banks of gilt-edged stocks, the November returns should be interesting. Advances were very much the same as in September, and it is clear that many traders are still able to draw upon their own resources.

THE STOCK EXCHANGE

AMERICAN RAILROAD PROSPECTS

THE London market for American railroad securities, which shrunk, during and after the war, to less than a tithe of its earlier dimensions, cannot be expected to make a widespread appeal to British investors until America's economic future is more settled. Conditions have changed with such kaleidoscopic suddenness during the last eighteen months that the best informed market quarters, on this side of the Atlantic, have been unable to keep pace with them. Certain recent events, however, have gone far to clarify the railroad situation so far as the immediate future is concerned, and investors should be cognisant of their importance.

The last Congress of the United States of America dissolved without giving effect to the recommendations of the Federal Co-ordinator, Commissioner J. B. Eastman. These were designed to "even up" the competitive situation between road and rail transport. For the moment, therefore, inter-State road services are subject only to the National Recovery Act codes for regulation purposes. It is generally believed, however, that the plight of the railway industry is sufficiently urgent to compel President Roosevelt to give it his detailed attention, and that the new Congress, when it meets early in 1935, will undoubtedly discuss bills aiming at more adequate regulation of inter-State road services.

Meanwhile, the general results of railroad operations this year can already be fairly closely estimated. Car-loadings, which are still a leading index of American railway prosperity, touched the bottom of the depression in August, 1932, when they totalled only 48 per cent. of the 1925-29 average. The subsequent steady rise continued until March of this year. Since then, however, loadings have again fallen. By October, the aggregate increase for the year, as compared with the previous year, had dropped to only 7 per cent., while the current weekly figures were recording decreases of about 4 per cent. So far as can be judged, the position at the close of 1934 will not be materially different from that at the end of 1933, as measured by gross receipts. The latest detailed financial figures cover the first eight months of 1934. They reveal a 9 per cent. increase in gross revenue, with an 11 per cent. rise in operating expenses. An official estimate, given in evidence before the Interstate Commerce Commission in September, placed the net deficit, after payment of fixed charges, at \$73 millions for 1934, against only \$6 millions for 1933.

Three main causes have contributed to this definite retrogression in financial health. Together they have involved an annual increase in expenditure of no less than \$300 millions. The first has been the higher cost of fuel, materials and stores, as a result of higher wage scales and shorter hours in the various fuel and supply industries. This policy has been part and parcel of the New Deal. Its estimated additional cost to the railroads is placed at over \$134 millions in a full year. A second source of increased charges is the gradual abolition of the 10 per cent. temporary deduction effected in railway wages during the depression. The deduction was lowered to 7½ per cent. as from July 1st last. It will be further reduced to 5 per cent. on January 1st next, and will disappear altogether as from April 1st. This concession, in a full year, with the 1934 payroll, will raise operating expenses by about \$156 millions. Finally, a new Railroad Pension Law was estimated to cost the companies about \$15 millions per annum.

On October 24th the Supreme Court of the District of Columbia declared the new Pension Law unconstitutional. This decision, if upheld, will remove one difficulty of the American lines, but they are still faced with more formidable problems resulting from an increased wages bill and higher costs of fuel and stores. These were mainly responsible for their decision, late last summer, to apply for an increase in certain freight rates, sufficient to raise total revenues by \$170 millions in a full year. The proposed changes were not flat increases, but were to apply to certain

traffics least subject to road and water competition. They covered, in fact, practically all traffics which were capable of yielding a net increase in receipts. The Interstate Commerce Commission hearing on this application opened on October 1st and still continues. The date of the final hearing has been set for November 26th in Washington. Though it is not possible to guess at the outcome, it is considered unlikely that the full railway request will be granted.

Meanwhile, the contemporary position is anything but encouraging. On August 1st last no fewer than 26 railways, covering over 40,000 route miles, were in the hands of receivers or trustees in bankruptcy. Enormous working economies, however, have been achieved since 1929 and still further efforts are now being made. Between June, 1933, and June, 1934, the number of employees increased by 100,000. Last July, however, saw a reduction of 6,500, and by September 15th the total figure had fallen to 1,023,313, compared with a minimum of about 970,000 at the worst period of the depression. How far has past capital expenditure on improvements contributed to present difficulties? The railroads have been severely criticised in this connection, and their capital structure, admittedly, may be a source of embarrassment to-day in some cases. Between 1916 and 1932 their total capital investment increased by no less than \$8,250 millions (though their funded debt rose by only about \$2,000 millions). Much of this enormous capital expenditure, however, was in fact made by the Government during the period of Federal control. Responsibility cannot legitimately be laid at the door of the railway managements. There is more than a superficial similarity between the course of events in America and in Great Britain, where the so-called National Agreements, made in the period of Government control, have ever since been a heavy charge on the railway system. The results, however, have not been purely negative. The railways of the United States could not have carried the peak traffics of 1929, nor could they have reduced their operating expenses as they have done since 1930, but for the very heavy expenditure made during and after Federal control. Even their 1923 programme of capital improvements was of material assistance in securing economies in working expenses. The policy, further, has reduced the need for capital expenditure in the years to come, when new capital may be less readily obtainable. Much of the work, in any case, could not have been put off indefinitely, for the American railways, unlike those of Great Britain, usually laid down their original lines as cheaply as possible to open up largely virgin country.

The following figures, setting out the trend of capital expenditure during the last decade, show how large a proportion has been devoted to permanent way and works:—

CAPITAL EXPENDITURE OF AMERICAN RAILWAYS, 1923-33.

Year	Annual Capital Expenditure \$	Per Cent of Total—	
		To Rolling Stock	To Way and Works
1923	1,059,149,426	64	36
1924	874,743,228	56	44
1925	781,191,000	45	55
1926	875,000,000	43	57
1927	771,552,000	37	63
1928	676,665,000	33	67
1929	853,721,000	38	62
1930	872,608,000	38	62
1931	361,912,000	20	80
1932	167,194,000	22	78
1933	103,947,000	15	85

The official index of operating efficiency of the American railways, in spite of the deferred maintenance which has admittedly accumulated over the last three years, is almost as high to-day as in the boom period of 1929-30. Measured by the standard of technical achievement, or of the satisfactory service offered, the American railways have never been in a better position. The rate of return on

their "property investment," however, for the first eight months of 1934 was no more than 1.88 per cent., against 1.74 per cent. for the same months of 1933. Such a situation cannot continue indefinitely. The threat of Government ownership, which Mr Eastman, the Commissioner, has openly favoured for many years, has undoubtedly occasioned a feeling of uncertainty as regards the whole position. This must needs continue until President Roosevelt or the Federal Co-ordinator issues some definite statement of the Administration's policy regarding the entire transport problem.

"Critical" may not be too strong an adjective to apply to the financial situation of the American railway system as a whole. Nevertheless, certain of its component parts have faced their problems with considerable success and remain comparatively prosperous, as the world measures prosperity these days. For instance, the Chesapeake and Ohio and the Norfolk and Western—commonly known as "the Pocahontas lines," from the coal region they serve—have, thanks largely to excellent management, been consistent revenue producers. The former company, with its 3,000-mile system, had a net railway operating income for the first eight months of 1934 far in excess of the 11,400-mile New York Central system. The 2,200-mile Norfolk and Western Railway had a net railway operating income not much smaller than that of the 6,400-mile Baltimore and Ohio Railroad. The Pennsylvania Railroad for the first eight months both of 1933 and 1934 earned a net railway operating income of approximately \$40 millions. With the help of Government loans, the company has now almost completed its enormous capital betterment programme, which has involved the electrification of its main line to Washington. The financial position of the Delaware and Hudson has shown great improvement this year, and the same, to a lesser extent, may be said of the Lackawanna, the Erie, the Lehigh Valley, the Reading and the Wabash railways in the east. In the north-west the Northern Pacific and Great Northern have materially improved their positions. In the south-west, a remarkable improvement has been recorded both by the Southern Pacific and the Santa Fé, and it is unlikely that the whole of this betterment will have been lost by the close of the year. The Union Pacific has almost preserved its net income of 1933. Early last month this company declared its regular quarterly dividend of \$1.50.

The current prices of leading stocks of the companies mentioned are shown in the following table:—

Company	Stock (and Current Div. Rate)	Prices of 1934		
		Highest	Lowest	Latest
Chesapeake and Ohio	4½% G. Gold Bonds, 1992 ... Common (\$2-80)	111½ 48½	98½ 39½	111½ 43½

	Preferred (\$4)	88	71½	80
	Common (\$6)	133½	91	105½

To the investor the fortunes of individual roads are more important than the financial results of the American railway network as a whole. Some of the strongest lines appear to be emerging from the depression without serious impairment of their properties or undue straitening of their finances. Provided there are no further disturbing influences as a result of legislation at Washington, increased trade activity would be quickly reflected in increased gross revenues. For the best companies, such an increase will be automatically followed by a rise in net income.

INVESTMENT NOTES

Again Gilt-edged.—The stock markets are still in the throes of a new downward readjustment of interest rates. Gilt-edged securities, normally a market of dignity and breadth, in which dealings running into six or seven figures can be executed without a tremor, have been exhibiting many of the traditional characteristics of a common "boom." Certain stocks have been in relatively short supply, and the necessity of finding cash for purchases—for there are no "account" dealings in the gilt-edged market—has not prevented the building up of a fairly considerable bull position in some instances. The Treasury's decision to draw 40 per cent. instead of 10 per cent. of its 3 per cent. Bonds (discussed in a succeeding Note), has served to give a further fillip to the movement, which had temporarily halted on a little profit-taking. All the stocks which are well above par have risen further, but the greatest gain this week has been scored by 2½ per cent. Consols, which have reached 91½. The latter price is within two points of the "record for all time" of 93½ in 1903. When the quotation of 113½ was registered in 1896, "Consols" were a 2½ per cent. stock. Few British Government stockholders have seen their capital rise by as much as 113 per cent., like those who were fortunate enough to buy 2½ per cent. Consols under 43 fourteen years ago.

	Redemption Dates	Oct. 9	Oct. 30	Nov. 6	Close Nov. 15	Red. Yield (%) at Latest Price
"Consols" 2½%	...	81½	82½	84½	91½	2 15 0

Local Loans 3%	...	94½	95½	96½	97½	3 1 9

x=ex dividend.

Apart from secondary speculative setbacks, a major reaction is bound to come eventually. The present movement is directly traceable to conditions which cannot be expected to endure indefinitely. Sooner or later, home industry will have a more normal appetite for new capital, foreign trade will show at least a partial revival, foreign lending will be resumed, and the British Government may be induced to relax some of its restrictions, which prevent large public borrowers from taking maximum advantage of the opportunities provided by the lowest interest rates for a generation. Official restriction appears increasingly anomalous as the pressure of unemployed investment resources becomes more severe. Its persistence can scarcely be justified by the alleged desire of the authorities, whose major maturity requirements are already covered for some years ahead, to effect "extraordinary" conversions on the lines suggested in a succeeding Note. For the present, however, there is no evidence of early relaxation, and firm markets may be expected to continue.

Drawing of "Treasury Threes"—The announcement, in Tuesday's *London Gazette*, that 40 per cent. of the total nominal amount of the original issue of 3 per cent. Treasury bonds, 1933-42, would be drawn on November 26th and succeeding days was forecast in the *Economist* of September 22nd last, page 544. A list of the drawn bonds, which will be paid off on April 15, 1935, will be published on or before December 15th. The announcement was not received with enthusiasm in the money market, where it will tend still further to reduce the amount of discountable paper. The Treasury's decision, however, scarcely comes as a surprise. Part of the market had clung to the hope that the drawing would not exceed 10 per cent., but the semi-inspired disclaimer given to the confident assertion of that prophecy by a daily newspaper had already provided a clue to the working of the official mind. The authorities, doubtless, regard the decision as a moderate compromise, for they are calling in only half the outstanding total,

instead of the whole. Some £110 millions of bonds were originally issued in April, 1932 (i.e. more than two months before Mr Chamberlain's War Loan conversion announcement), at an average price of £97 16s. 1.97d. At that time an early drawing held out a quasi-lottery prospect of capital profit, which was doubtless reflected in the price at which the bonds were placed. Both the Treasury and the subscribers, however, may be deemed to have accepted the "risk" that general interest levels might change, one way or the other, before the last bond had been paid off. The "change," in fact, has been against the market. The latter cannot, in fairness, reproach the authorities for their decision to act on the recognised principle that a borrower is entitled, both legally and morally, to construe in his favour any "optional clause" in a bond, by interpreting the phrase "not less than 10 per cent." to cover a 40 per cent. drawing. It is true that the two previous drawings have been limited to 10 per cent. each, but "then was then and now is now." Neither in logic, law nor equity can the words "not less" be held to mean their exact opposite—"not more." The decision leaves the Treasury with £44 millions of cash to find before next April. There are, further, £150,000,000 of two per cent. Bonds, which can, and almost certainly will, be called for next April. A sizeable funding issue is indicated. More nebulous "conversion" rumours include a possible reduction in the interest rate on £429 millions of 3 per cent. Local Loans, which are now quoted at 97½, and voluntary offers of long-term stocks to holders of 4½ per cent. Conversion Loan, 1940-44 (£375 millions), 5 per cent. Conversion Loan, 1944-64 (£323 millions), and even 4 per cent. Funding Loan, 1960-90 (364 millions). The Treasury, however, is a master of the art of keeping its own secrets.

Home Railway Traffic Trends.—Home railway stockholders who confine their inspection of the weekly traffic figures to a mere comparison between this year and last may be liable seriously to misapprehend their meaning. Recent figures have given the impression that the upward trend of receipts has been arrested, since the "gains" made

by comparison with last year have tended to taper off. The current week's figures, indeed, show that the one company, the Great Western, actually obtained slightly lower receipts than in the corresponding week of last year. The comparison, however, is unfair, since the returns for the autumn and winter period of last year were in the full flush of "recovery." Although contemporary figures may not be maintaining the fine upward sweep of that period, their movement is not necessarily retrogressive. A more reliable impression of current trends may be obtained by comparing the weekly returns of 1933 and 1934 with those of 1929, the last railway year which was even approximately "normal." The following table shows results since the turn of the half-year:—

TOTAL GROSS RAILWAY RECEIPTS
(1929 = 100 Throughout)

	L.M.S.R.		L.N.E.R.		G.W.R.		S.R.	
	1933	1934	1933	1934	1933	1934	1933	1934
Weeks 27 to 39 ...	78.9	81.5	76.1	78.9	79.5	81.1	85.4	87.0
40th week	78.1	79.1	76.0	78.7	78.9	80.1	82.6	83.3
41st week	78.9	81.2	80.4	84.0	77.7	80.8	84.5	86.3
42nd week	80.0	81.4	80.1	81.7	83.6	85.3	86.2	87.2
43rd week	80.4	82.2	81.2	82.5	80.3	82.5	84.1	85.1
44th week	82.9	82.9	81.8	82.5	81.2	81.2	85.9	88.6
45th week	80.9	82.2	84.3	84.3	82.3	82.0	89.3	89.5

The 1929 figures had themselves a rising trend in the first part of the year, which tended subsequently to flatten out. Subject to this proviso, it would seem that receipts in the last few weeks have certainly not been losing ground, on the average, in terms of a normal year. They have, in fact, been steadily making up the leeway of the early summer. Stockholders, however, who must needs base their estimates of 1934 dividends on a comparison of this year's receipts with those of last year, may be unwise to reckon upon any very substantial addition to total traffic "gains" between now and December 31st. Allowing for wage increases and the scale of expenses revealed by the half-year's statements, it would appear that the London, Midland and Scottish Railway is covering its senior preferences

National Fixed Trust Certificates UNIT 'D'

These Certificates give stability of income with security of capital by spreading an investment over twenty-two Industrial and Commercial Companies of the highest standing. At the current price of sub-units and on the basis of dividends received during the past twelve months, the yield is £5.2.0 per cent., with prospects of an additional yield from the sale of Bonuses and Rights, which in the same period amounted to £2.7.6 per cent. Sums of approximately £20 upwards can be invested.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest

full debenture requirements is hardly auspicious for stockholders. From an operating point of view, the companies, with the exception of Argentine N.E., have fared little better than in their previous year, and revenue renewals allocations have been made only by Cordoba Central. Exchange difficulties have beset the South American companies. The Argentine N.E. and Entre Rios traffics were handicapped by locust swarms, which particularly affected the fruit harvest. All the Argentine companies, however, refer to the progress of Argentine recovery. The wheat and linseed crops are reported in normal condition, and no locust damage has yet been sustained. The prospects for these companies may be assessed in the light of a leading article on Argentine Railways in last week's *Economist*, page 881. The United Railways of the Havana and Regla Warehouses have been subjected to a vicious combination of depression, damage by cyclones, and political unrest. The net deficit on operating, however, is lower at £74,413, against £111,240 for the previous year. The new Govern-

ment has encouraged confidence during this year, but competition by road transport has made it difficult to retain passenger and remunerative goods freights. The sugar freights have been smaller by quantity, though not in value, and considerable assistance to the industry is expected from the 55 per cent. reduction in the American duty. This policy, it is stated, will increase the value of the production normally shipped to the United States by \$40 millions per annum. Since expenditure has been increased, however, particularly on wages, the net improvement of the company's prospective revenue is likely to be slow. A debit balance of £3,445,751 and unpaid debenture interest of £2,656,091 suggests that the company may, ultimately, have to seek some solution of financial rehabilitation apart from the slight improvement in Cuban conditions which has been realised this year. Since payments of interest on all stocks except Argentine N.E. 5 per cent. "A" are withheld under moratorium arrangements, which may conceivably require further extension, current quotations give due recognition to the indifferent outlook.

Bass Progress.—In view of the enviable earnings record of this company—which is in the front rank of brewing concerns the world over—a pronounced upswing in profits was only to be expected for a year in which fiscal favour has been adequately associated with trade recovery and good summer weather. Trading profits have advanced from £598,205 to £676,963 (an increase of 13 per cent.), while rents, interest and dividends are some £70,000 higher at £574,790. Total profits accordingly have advanced by well over 13 per cent. from £1,103,159 to £1,251,753. Both the parent company and its subsidiaries thus show approximately proportionate expansion in disclosed profits. In view of the increased cost of barley and hops during the past year, these results must be regarded as highly satis-

factory. A three-year analysis of profit and loss figures follows:—

	Years to September 30		
	1932	1933	1934
Sales, less manufacturing expenses, duty, etc.	1,016,276	1,078,189	...
Trading and management expenses	462,446	479,984	...
Trading profits	553,830	598,205	676,963
Rents, dividends and other income	533,927	504,954	574,790
Total profits	1,087,757	1,103,159	1,251,753
Rents, taxes, rates, etc.	232,222	221,329	226,775
Repairs and renewals	115,175	113,054	122,349
Depreciation	76,502	76,944	130,990
Directors' fees, bad debts, etc.	14,763	18,135	11,986
Debt interest	203,302	202,544	200,739
Preference dividend	68,000	68,000	68,000
Ordinary shares { Earned	377,293	403,153	490,914
Paid	312,990	335,346	447,129
Earned %	16.9	18.0	22.0
Paid %	14	15	20
Carried forward	458,484	526,291	570,077

Although depreciation provision is over £64,000 higher at £130,990, the earnings percentage for ordinary shares is calculated at 22 per cent., tax free, and the increased dividend and bonus of 20 per cent., tax free, has thus been comfortably earned. The balance sheet, as usual, is an object lesson in financial strength. Net liquid assets are again approaching the £2,000,000 mark, and all the current items except debtors show marked expansion during the year. Since advances to subsidiary companies show no movement, it may be presumed that their resources have been ample to finance a similar expansion of turnover. Fixed asset items are broadly unchanged, but the company has always pursued a generous depreciation policy. The £1 ordinary shares, which rose from 105s. 6d. to 115s. on Thursday, yield £3 11s. 6d. per cent., tax free.

Ansells Brewery.—Recent impressive evidence of expanding brewery profits in the Midlands has been augmented this week by the excellent showing of this Birmingham concern. An increase of no less than 60 per cent. brings this year's trading profit and dividends receipts up to £368,533, easily the largest figure during the past ten years. This amount includes £17,395 received from the holding in Holt Brewery ordinary shares, acquired in May this year, for the nine months to September 30th. This transaction is also reflected in the appropriation of £21,293 for writing off expenses of the share exchange and in the dividend payable on the Ansells shares allotted. This item amounts to £22,179, and covers the same nine-month period. Comparative figures for the last three years are set out below:—

	Years to September 30		
	1932	1933	1934
Balance from trading account, after depreciation, contingencies, including sundry income and dividends...	155,559	230,198	368,533
Income tax	10,500	28,500	37,000
Directors' fees	3,657	3,869	3,011
Other charges	...	23,804 [†]	22,293 [‡]
Debt interest and redemption...	20,250	31,917	44,234
Earned for dividends	121,152	142,108	261,994
Preference dividends	17,500	17,500	17,500
Ordinary shares { Earned	103,652	124,608	244,494
Paid	80,000	80,000	142,179 [§]

Carried forward	265,452	266,060	312,375

† £15,000 repairs to properties; £1,000 licences insurance; £7,804 debenture stock issue expenses written off. ‡ £21,293 expenses of exchange of shares with Holt Brewery w.o.; £1,000 licences insurance. § Being 15 per cent. p.a. on former capital of £800,000, and 15 per cent. p.a. for nine months from January 1, 1934, on 197,150 £1 shares issued in exchange for Holt Brewery shares.

Shareholders will be gratified to know that the consumption of Midland customers has expanded with improving trade and a fine summer, although due credit must also be given for the economies effected by the company in recent less auspicious years. The board has preferred to limit this year's distribution to 15 per cent., the rate paid from 1925 to 1931, although earnings amount to 28.9 per cent. The balance sheet shows a marked expansion in cash and stocks, while the omnibus "Creditors, beer duty, loans and reserves" item has increased correspondingly. The profits of Holt Brewery, the new subsidiary, for the nine months to September 30 amount to £79,661, against £92,551 for the previous year. The directors of Ansells report that the results of the last four months are such as to justify the acquisition, which promises to be very successful. The £1 ordinary shares are quoted at 75s. to yield £4 2s. 3d. per cent.

Imperial Smelting Meeting.—Sir Robert Horne, whose speeches in the City, as at Westminster, are distinguished by constructive thought and forthright expression, had a challenging field of discussion at the annual meeting of the Imperial Smelting Corporation last Monday. The Corporation, as we showed in a Note last week (page 886), was unable to pay an ordinary dividend, despite increased production, as a result of an unexpected fall in the price of non-ferrous metals. Spelter, which averaged £16 7s. 6d. per ton in the first half of the company's year, fell to £14 16s. 5d. in the second half, and has subsequently declined to £12, the lowest price on a gold basis on record. Since the close of the financial year, the new vertical retort plant at Avonmouth has been brought into active operation, and is moving up to its capacity of over 20,000 tons, but improvement and extension in the North-Eastern districts have been checked by the heavy fall in prices. Sir Robert is anything but satisfied with the effect on the Corporation of tariff policy in general, and the Ottawa Agreements in particular. Since 1932, when Mr Chamberlain announced the Government's tariff policy, the Corporation claims to have almost completely reorganised the British zinc industry, by eliminating old and obsolete and building new plants, raising the quality of the metal produced, and increasing its zinc output from 24,000 tons to a present rate of nearly 70,000 tons per annum. In three years the company has spent over £500,000 on capital account. Its expenditure last year on stores, plant, coal, materials, wages, etc., aggregated over £2,000,000. It claims, however, that its position is prejudiced by clauses in the Ottawa Agreements under which Empire producers outside the United Kingdom are relieved from the zinc import duty of 10 per cent. provided they sell their metal in Great Britain at "the world price." The latter is defined as the London Metal Exchange official quotation, which is fixed on the basis that the duty is "for buyers' account." Sir Robert claims that an article on which duty is still to be calculated cannot in an official market have the same value as an article quoted "duty free." Any effort to secure price equality between the two, he contends, must have a continuously deflationary influence on the price of the "duty free" article. Sir Robert, in fact, expressly claims that the Corporation should not be expected to sell its product at the same level as "residual foreign metal produced with wages 25 per cent. lower," and that the Empire's zinc consumption should be a close preserve of producers in the Empire—which in effect means that a definite proportion of British consumption should be reserved for smelters in the United Kingdom. These, however, are matters of high policy, and the implications of their official recognition, on the lines Sir Robert advocates, might be uncomfortably far-reaching, at a moment when the enthusiasm of some members of the Government for the "Ottawa idea" may no longer be burning at a white heat.

Cam and Motor.—Our mining correspondent writes:—As the policy followed last year by this Rhodesian enterprise of treating lower grade ore was accompanied by increased expenditure upon development, earnings fell below the 1932-33 level. The net working profit at the mine was £156,280, against £198,590. Depreciation absorbed £21,700

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 19—RECOVERY IN CANADA. The second of two Special Articles mailed from Canada by H. E. Arnold. (The first article appears in our issue of Saturday, November 17th.)

TUESDAY, NOVEMBER 20—"MINOTAUR," our Special Mining Correspondent, in his "Mines of the Rand" series, deals with SUB NIGEL.

WEDNESDAY, NOVEMBER 21—THE ZINC CARTEL. A Special Metal Trade Correspondent reviews the prospects following the expiration of the present Cartel Agreement.

THURSDAY, NOVEMBER 22—The Story of Famous Companies, No. 13—BOOTS PURE DRUG CO., LTD.

FRIDAY, NOVEMBER 23—WALL STREET UNDER THE NEW DEAL. A member of a well-known firm of London Stockbrokers, recently returned from New York, describes the reactions of Wall Street to the Securities Act and the Stock Exchange Bill—what they are and what they ought to be.

SATURDAY, NOVEMBER 24—AUSTRALIA'S PROGRESS by Professor Douglas Copland, one of the leading originators of the famous "Premiers' Plan."

THE FINANCIAL NEWS

(Twopence Daily)

The first financial and commercial daily newspaper in the World—and still the best!

as compared with £47,200. The final dividend of 3s. 6d. per share raises the year's total payment to 6s., which is 6d. less than in 1932-33. The directors' report contains no reference to the authorised expenditure of £80,000 on shaft-sinking mentioned in the dividend announcement by way of explanation of the small decrease in the rate. Doubtless, this subject will be fully dealt with at the annual meeting. Study of the balance sheet throws little light on the means by which the substantial sum will be provided, the amounts owing at date largely exceeding the cash resources. The ore reserves stood at 1,204,000 tons, value 40s., as at June 30th. They show an increase of 94,000 tons in quantity and a decrease of 1s. in average value. The latter, incidentally, has been calculated on the basis of a gold price of 84s. 10d. per oz. The tonnage represents about three years' supply for the mill. Recent developments at depth are reported to have been highly satisfactory. On the basis of last year's dividends the yield indicated is approximately 10 per cent. gross.

Other Company Results.—This week's reports have been somewhat eclipsed by the large brewery results, but our table on page 960, which summarises the results of 29 other companies, contains several interesting features. Other brewing concerns in general show marked expansion of earning power. Northampton Brewery, however, which reports net profits of £37,666 against £36,492, has evidently been affected by indifferent trade conditions and strong competition in its area. Among malting companies, Associated British Maltsters (£90,656 against £54,585) and Hugh Baird (£5,286 against £147) have shown satisfactory improvement, and the former resumes dividend payments with a distribution of 10 per cent. A number of overseas land companies reveal considerable recovery powers. Argentine Southern reports net profits of £36,811 against £1,328, and pays 4 per cent. against nil, while Australian Mercantile Land and Finance (£79,466 against £54,262) and New Zealand and Australian Land (£197,146 against Dr. £73,769

and 4 per cent. against nil) illustrate the effectiveness of measures to promote expansion of pastoral revenues and relief from onerous debt charges. Home property concerns such as Pinner's Hall and Town Investments report slightly lower net incomes. Four investment trust companies reveal expansion in revenue, including East of Scotland (£16,170 against £13,975) and Second Co-operative (£18,390 for the half-year to September 30th against £16,342). In the miscellaneous section, Provincial Cinematograph Theatres, the Gaumont-British subsidiary, reports net profits of £508,648 for the year to January 31st last, compared with £459,490. The remaining companies, of such varied character as Birmingham Aluminium Castings, W. G. Clarke and Sons, Hughes-Johnson Stampings and Roneo, show satisfactory improvement in profits, which has found due reflection in increased dividend payments. Points of interest in this week's dividend announcements include the general reduction in tea company interim payments, and the equally general increase in rubber company payments. The J. Lyons interim is unchanged at 1s. 8d. per share, while Royal Dutch and "Shell" Transport, as last year, have decided not to pay an interim dividend. The Daily Mail Trust total payment has been increased from 10 to 11½ per cent. An interim dividend of 3½ per cent. has been declared by Unilever against 3 per cent. last year, reflecting the increased sterling value of the Dutch distribution of 24 cents. London Brick third interim brings the total payments to 15 per cent. against 14 per cent. Dennis Brothers final dividend is, making 133 per cent., against 100 per cent. Burma Corporation net profit £332,776, against £312,836.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Central Argentine Railway, Buenos Ayres Western Railway, Imperial Smelting, John Delaney, Wankie Colliery, Kassala Cotton, Sudan Plantations, Motor Fuel Proprietary, Trinidad Leaseholds, Mitchells and Butlers, Lake View and Star, Marlu Gold Mining Areas, Nigel Van Ryn Reefs, S. Smith and Sons (Motor Accessories), and Consolidated Tin Mines of Burma. Sir Follett Holt, at the B.A. Western meeting, laid emphasis upon the internal recovery in the Argentine, and declared that the board retained full faith in the potentialities of the line. At the Central Argentine meeting Mr W. K. Whigham discussed the scope of Governmental intervention in the matter of wages and road competition. Sir W. W. Butler's address to Mitchells and Butlers' shareholders surveyed the question of reduced duty and barley crops, and included some interesting conclusions suggested by his visit to the United States. Mr. Woolley-Hart informed shareholders of John Delaney that the freehold of the Threshfield quarry, formerly on lease, had been acquired during the year. The chairman of Sudan Plantations and Kassala Cotton informed their shareholders that crop indications were favourable, and that despite a certain amount of blackarm, leaf curl was negligible. Shareholders of S. Smith and Sons (Motor Accessories) were informed that a further increase in turnover had been effected during the first quarter of the current year. Mr F. C. Marten referred to the increase in capital of Motor Fuel Proprietary, which marked the first step towards commercial production from the plant completed in the summer. Interesting mining meetings have been held this week. Sir Edmund Davis, at the Wankie Colliery meeting, gave his personal impressions of the improvement in the properties, and pointed to the increased consumption of the Rhodesian copper mines. The speed and success of development work on the Lake View and Star property was emphasised by Mr John A. Agnew, who pointed out that ore developed had increased by 440,000 tons during the past year. Mr H. G. Latilla, reviewing the progress of Marlu Gold Mining Areas, suggested that increased ore tonnages probably compensated for a reduction in average grade. Sir Cyril K. Butler disclosed that 40,000 tons of ore reserves of Consolidated Tin Mines of Burma had been opened up, having a minimum assay value of 1½ per cent. Mr W. A. Willis gave a full review of Nigel Van Ryn Reefs developments in Australia. Mr W. A. Rogers, at the Trinidad Leaseholds meeting, made a plea for an Empire oil preference.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET November 20 ACCOUNT November 22

OFFICIAL hours were too short to contain mid-week business in Gilt-edged securities. Dealings continued on Wednesday long after the doors of the "House" had closed. Though all Gilt-edged prices advanced, chief attention was given to low-interest "optionals" below par. The market, while crediting the Treasury with having all manner of conversion schemes up its sleeve, professed to be taken aback by the decision to repay half the outstanding total of Treasury 3 per cent. Bonds by this month's drawing. It is long since Old Consols—saleable according to City tradition even on Sunday—were in such short supply, and moved by two or three points in a day. As rising Gilt-edged prices infer a new basis of valuation for any stock with even a remote prospect of income, equity shares were also firm. Even gold-mining shares, whose technical position is still not entirely satisfactory, had a better appearance as the week progressed.

After a strong opening and a phase of irregularity, the Gilt-edged market on Wednesday had one of its most active days within living memory. Although speculation centred largely on 2½ per cent. Consols. Local Loans were strong and all conversion issues remained active. Treasury Threes, however, declined on the announcement of increased drawings, whose implications are discussed on page 930. The market opened very firm on Thursday, but a temporary cessation of "big" buying induced a spell of profit-taking. India loans were a good market. Dominion stocks were firm, but rises were not proportionate to those in British Government issues. In the foreign market renewed attention was given to Chinese bonds, particularly the Salt issues. Publicity in advance of the Saar Plebiscite was not helpful to German bonds, though a sizeable recovery occurred in mid-week. Little interest was taken in South American issues, both Brazilian and Chilean bonds being reactionary.

Home rail prior charges were marked up by way of adjustments to prevailing interest levels, the market being not too well provided with supplies of stock. The marginal preference and ordinary stocks, however, were dull on the week's traffic figures. The misleading nature of current comparisons based on the 1933 returns is explained in a Note on page 931. Transport "C" stock, the subject of numerous "outside" recommendations, crossed the ninety line, and reached 95 on Thursday.

A fair turnover was recorded in industrial shares, the increasing urgency of the "search for income" bringing in new buyers for the leading domestic counters. Breweries were the most active section in the market, Bass rising sharply after the issue of the report, which is summarised on page 934. Electric supply shares, with their steady dividends, were in demand. Among electrical equipment shares, Johnson and Phillips were specially active. Coal shares strengthened further, and Staveley and South Durham were strong in a moderately active market for iron and steel shares. Among motor issues, quotations for Leyland and Dennis discounted dividend increases in the bush and Associated Equipment and Humber increases in the hand. Tobacco shares were somewhat undecided. Textile shares were also irregular, though Patons and Baldwins were fractionally better. British Celanese were dull and Courtaulds reacted slightly. United Dairies advanced further. Store shares were well maintained. The Continent was a buyer of the two Unilevers. Market favourites such as Boots, Murex and Wall Paper Deferred made fresh headway. Paint shares were marked up on the Lewis Berger dividend. Bank shares were quiet but steady, but insurance shares enjoyed a further rise in sympathy with gilt-edged market conditions. The oil share market became firmer after a quiet start, interest being chiefly concentrated on the preference shares of the leading concerns, whose yields were

considered attractive in view of conditions in another place. The absence of a "Shell" interim dividend had been generally foreseen, and the shares suffered no reaction. The rubber share market was dull, a certain difficulty being experienced in placing even small offerings. The view, however, that the 1935 restriction percentage was insufficient for the maintenance of the commodity's price level did not find general support. Tea shares, after a subdued opening, became depressed on the decision of several important companies to reduce or pass their interim dividends.

Evidence of forced selling of gold-mining shares was by no means absent in the early part of the week. A stronger tone, however, became established on Wednesday, helped by a cessation of selling from Johannesburg. Though Paris gave little support, professional bears of Kaffirs were induced to hold their hands. Fairly optimistic reports were circulated regarding December dividend prospects, but the more conservative section of the market did not admit that the technical position had been entirely cleared up. West African shares became strong after a depressed start, but Western Australian issues failed to share in the general revival. Tin shares tended to lose ground, but Rhodesian copper issues reflected the preliminary announcement of plans for the formation of a Copper Shareholders' Association with a policy apparently directed towards the inception of a restriction scheme.

FOREIGN STOCK EXCHANGES

NEW YORK

THE Stock Exchange, which remained closed on Monday in commemoration of Armistice Day, reopened in a mood of continued but cautious hope. Operators are not optimistic enough to adopt bull tactics until such time as the Administration chooses to show its hand, and the prospect of a large programme of social legislation inevitably restrains any buoyancy. Trading, however, continued more satisfactory, although Tuesday's turnover above the million mark was partly attributable to the Monday holiday. Industrial stocks remained steady, and in some sections, such as retail stores, moderate advances were registered. Utility stocks were this week's Cinderella, on a report by the New York Power Authority that supply

charges are twice as high as they should be. The market fears, despite the President's disavowal of plans for control, the inquiries to that end are now being instituted under the direction of that vigorous administrator, Mr Ickes. Moreover, the standing of the group, which has fallen rapidly in recent years, has again been lowered by the Insull trial proceedings. First-grade bonds were fairly firm, and a reasonable turnover was maintained. Second-grade issues, however, were noticeably weaker in mid-week under the lead of Rails, some of which are threatened with the possible cessation of Government financial aid. With this factor over the market, Mr Eastman's emphasis on potential working economies had little effect. This week's business news is favourable, though not exciting. Steel activity for the week is estimated at 27 per cent. of capacity, an increase of half of one per cent., and although demand from the automobile industry is slow to expand, the outlook is regarded as favourable. Cotton consumption and car loadings have advanced, and department store sales for October were 7 per cent. higher than in the same month last year.

* Two-hour Session.

PARIS

Restive conditions prevailed on the Bourse this week. The Belgian situation and the Saar prospect had an adverse effect, and the satisfactory *début* of the Flandin Cabinet inspired little enthusiasm. Rentes displayed a firmer tone, however, after initial doubts, and industrials, although quiet, were generally steady. International issues were active. Royal Dutch, after an early decline, showed a strong recovery on Tuesday, and Central Mining were in good demand. Diamond shares found buyers in mid-week on the Coudisse, and gold shares were steady. Oil and rubber shares were weak.

	Nov. 7, 1934	Nov. 12, 1934	Nov. 14, 1934		Nov. 7, 1934	Nov. 12, 1934	Nov. 14, 1934

BERLIN

Last week's share market was dull, the number of entirely unquoted stocks being the highest since July. Quotations were in general lower, with a slight improvement at the close. Reichsbank declined to a low level for the year, being 30 points below the highest. Farbenindustrie was weak, and steel, potash and machinery issues were mostly lower. The new week opened with a further general decline, but Tuesday was somewhat firmer, electrical issues being in demand. Home bonds last week were inactive, and slight declines predominated. Industrial bonds affected by the Reichsgericht's decision in the dollar-clause lawsuit advanced, Steel Trust gaining 7 points on Tuesday. Dollar bonds were little changed.

AMSTERDAM

Despite a recovery of sentiment on Tuesday, conditions were dull on the Bourse this week. Royal Dutch, which were offered from Paris, were a weak feature in the opening session, and despite Tuesday's recovery were still lifeless later in the week. Some industrial issues were moderately active, Unilever and Van Berkel (on the report) showing strength, but other leaders such as Philips' Lamps were irregular. Rubber shares were sold, on the unfavourable stocks position, and sugar shares, despite some activity on Tuesday, were lower. German loans were offered.

CAPITAL ISSUES

This week's activity in the new issue market has been largely eclipsed by conjecture and prophecy. The boisterous upswing in gilt-edged quotations has encouraged renewed speculation as to Treasury policy, since its tactics are obviously calculated to promote further strength in this section. This week's senior issue of *Wakefield Corporation* 3 per cent. stock, being priced no higher than the Brent-

ford loan a fortnight ago, was accordingly an assured success. Chesterfield have followed with a 3 per cent. Loan at 99½. The issue of *South African Torbanite Mining and Refining*, which has a straight ordinary capitalisation, is to develop torbanite deposits in the Transvaal and to extract and refine crude oil therefrom. The business is not without its speculative element, but on the basis of the informative estimates given in the prospectus, the shares should constitute a fair industrial risk, and its auspices are of good standing. The shares of *Voice Records*, which is the first issue to exploit an automatic machine patent for a considerable period, must be regarded as inherently speculative. Details of the number of rentals in prospect are lacking, and some closer indication of costs would have been welcome. The profits estimates are given, with zeal, to the nearest £, and are necessarily subject to the permanence of the public interest. Two tender issues have been announced this week. The *Severn Valley Gas Corporation* 4½ per cent. preference and ordinary shares offer at £1 2s. minimum per share is open until November 21st. The preference issue is adequately covered by income from associated companies, and a satisfactory surplus is available for ordinary shares. Statements "for information only" have been published by *Alpha Cement* in respect of a preference issue, and *Alfred Lockhart*, a timber business which has experienced rather wide fluctuations in earnings during depression, but is now showing improvement.

PUBLIC OFFERS

Wakefield Corporation.—Issue of £500,000 3 per cent. stock, 1955, at £98 15s. per cent. Short-term mortgages of £436,000 will be repaid out of the present issue and balance applied to new capital expenditure. Population, 60,160. Rateable value, £355,135; average total current rates, 16s. in the £. Net debt, £4,094,000, of which £1,431,000 is for trading undertakings and £1,747,000 for housing. Net assets at March 31, 1934, £1,597,174.

South African Torbanite Mining and Refining Company, Ltd.—Issue of 1,000,000 shares of 10s. each at par. Formed to acquire torbanite deposits in Transvaal and to extract crude oil therefrom and operate refineries. Estimated profits, £135,160 per annum, after depreciation. Lease, prospecting contracts, etc., have been acquired for £237,500, to be allotted in shares, and cash payment of £12,500. After cash consideration and preliminary expenses, £433,167 will be available for: mine buildings, £81,000; mine development, £24,000; retort and other plant, £154,167; working capital and marketing, £174,000.

FORTHCOMING ISSUES

Broadway Retailers.—An issue at par of 500,000 shares of 5s. each will be made next week.

The Shropshire, Worcestershire and Staffordshire Electric Power Company.—An extraordinary general meeting will be held at 11, Tothill Street, London, on November 27th, at 11.30 a.m., to consider a proposal that the company creates 500,000 new "B" shares of £1 and to rank *pari passu* with the existing "B" ordinary shares. The new shares will be issued when the directors determine.

Ward (Thomas W.).—Lists will open on November 20th for an issue of 350,000 5 per cent. cumulative preference shares of £1 at par.

Argentine Navigation Company.—The Argentine Navigation Company will shortly offer for subscription £1,500,000 of 5½ per cent. first mortgage sterling debentures at 99. The purpose of the issue is to redeem the present 6½ per cent. mortgage debentures, of which £1,350,045 are outstanding.

RESULTS OF ISSUES

Johnson and Phillips.—The issue of 100,000 ordinary shares of £1 each at 24s. per share has been very heavily over-subscribed.

Central Portland Cement.—The offer of 250,000 ordinary shares and 25,000 6 per cent. preference shares has been heavily over-applied for.

Commonwealth of Australia 3½ per cent. Loan.—Lists for cash applications were closed November 9th, at 11.15 a.m. Holders of the nine State issues which are to be repaid have until Monday, November 19th, to exercise their right to convert into the new stock.

Butterley Company.—The issue of 500,000 4½ per cent. cumulative preference shares of £1 each at 20s. per share was closed at 9.5 a.m., November 9th, the issue being heavily over-subscribed.

Farnham Gas and Electricity.—Allotment letters in respect of the recent issue by this company have been posted. The issue was heavily over-subscribed.

Wakefield Corporation.—Lists closed 9.5 a.m. November 14th owing to over-subscription.

Central Perak Rubber.—The recent issue of shares to existing holders has been heavily over-subscribed.

THE CHLORIDE ELECTRICAL STORAGE COMPANY, LTD.—The directors will pay on December 1st to shareholders on register November 9th, an interim dividend on the preference shares at the rate of 6 per cent. per annum, subject to tax, and on the ordinary shares, both "A" and "B," a dividend of 5 per cent., subject to tax. The progress of the company and of its associated companies, so far during this financial year, has been maintained. Trading continues to be subject to the influence of many factors, mainly of political origin, which hamper or unexpectedly nullify the traders' best efforts. Such conditions compel caution in speaking of the future, but it can be said that the immediate prospects are satisfactory. Mr H. W. Lee has been elected to a seat on the board.

SECOND CO-OPERATIVE INVESTMENT TRUST, LTD.—The accounts for half-year ended September 30, 1934, show a net revenue, after providing for preference dividend but before charging income tax (to which, under the Finance Act, 1933, the Trust is now liable) of £18,639 14s. 8d. This compares with net revenues of £16,474 4s. 4d. and £16,397 4s. 8d. for the half-years ended March 31, 1934, and September 30, 1933, respectively. The directors recommend a final dividend of 2 per cent. on the ordinary shares, making 3 per cent. for the year, the same as a year ago, and the amount carried forward is increased over the year from £5,612 15s. 9d. to £6,035 11s. 3d. According to a valuation of the investments at September 30, 1934, the depreciation (after allowing for reserve and the amount carried forward) was 41.75 per cent. compared with 46.95 per cent. a year ago. More than 98 per cent. (in value) of the investments have a published quotation.

TURKISH 7½ PER CENT. BONDS.—The Council of the Repartitioned Public Debt of the Former Ottoman Empire announces that coupon No. 3 of the three series of Turkish 7½ per cent. 1933 bonds, due on November 25, 1934, will be payable on and after that date in London and various other centres. This coupon will be paid at the rate of French francs 18.75 gross, under deduction of tax, if necessary, in accordance with the fiscal laws in force in the various countries. In Paris holders will receive this amount in French francs, and in the other places of payment the equivalent in local currency at the rate of the day of presentation of the coupons. The Council also inform bondholders that they have decided to maintain the French franc as the currency of payment for the coupon due May 25, 1935.

THE UNITED INSURANCE COMPANY, LTD.—The balance of the profit and! account for the year ended September 30, 1934, is £55,770. A dividend of 7½ per cent. has been declared. The total assets amount to £1,047,668.

THE ARGENTINE REFINERY CO. 6½ PER CENT. FIRST MORTGAGE DEBENTURES.—Messrs. Glynn, Mills and Compagnie state they are prepared to pay on December 3rd, coupons which are in arrears at the rate of 4 per cent. per annum, viz., Coupon No. 13, due March 1, 1933, No. 14, due September 1, 1933, No. 15, due March 1, 1934, and No. 16, due September 1, 1934.

BROWN, BAXLEY'S STEEL WORKS.—Profit for year ended August 4, 1934, was £43,503, in comparison with £2,252 for the previous period. A further twelve months of preference dividend is to be paid, thus discharging the arrears down to January 31, 1930, and including the £7,019 brought in. £25,516 is to be carried forward.

THE THIRD EDINBURGH INVESTMENT TRUST, LTD.—The board regret that the earnings for the year to November 5, 1934, do not justify them in recommending payment of a dividend on the deferred stock. (Same as last year.)

OIL OUTPUTS

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for October is cabled as 17,008 tons.

ANGLO-PERSIAN OIL COMPANY, LTD.—Production in Persia for the month of October amounted to 643,000 tons, making a total of 6,412,000 tons for the first 10 months of 1934.

APEX (TRINIDAD) OILFIELDS.—Results for October: Production of oil, 42,950 tons; deliveries, 36,270 tons.

ATTOCK OIL.—Production for October 6,785 barrels.

BRITISH BURMAH PETROLEUM.—Production of crude oil for the month of October was 27,919 barrels.

MEXICAN EAGLE OIL.—Production for the week ended October 27, 1934, was 380,000 barrels. Production for the week ended November 3, 1934, was 380,000 barrels.

COMPANY MEETINGS, &c.

IMPERIAL SMELTING CORPORATION, LIMITED

POSITION OF ZINC INDUSTRY

SIR ROBERT HORNE ON DEFECTS OF OTTAWA AGREEMENT

The fifth annual ordinary general meeting of Imperial Smelting Corporation, Limited, was held, on the 12th instant, in the hall of the Chartered Insurance Institute, Aldermanbury, E.C., the Rt. Hon. Sir Robert Horne, G.B.E., K.C., M.P. (chairman of the company), presiding.

The Secretary (Mr F. A. Crew, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said: The net profit of the corporation for the year was £154,984, compared with £129,880 in the year ended June 30, 1933, to which there falls to be added the balance of £12,680 brought forward from the preceding year, making the total amount at our disposal £167,664, or rather more than £20,000 in excess of the figure at June 30, 1933. After meeting the preferential dividend for the year the balance to be carried forward is £33,126, compared with £12,680 brought forward from the previous year.

ZINC POSITION

The zinc industry, notwithstanding the expansion in our output, reduced cost and improved efficiencies, has not up till now given us anything like a fair return on our capital expenditure. You would scarcely expect anything else in view of the decline to the extent of 25 per cent. in the price of the metal in October this year as compared with the average of the last six months of 1933 (which was by no means high). There are special reasons for this difference, one of which, it is now clear, is the deflationary effect on markets of unwise methods of attempting to implement certain conditions of the Ottawa agreements. I desire to emphasise the fact that not only did the decline in prices deprive the ordinary shareholder of his dividend, but it has caused us to consider the possibility of a serious curtailment of employment by shutting down part of our plant. This difficulty, I regret to say, still exists, although our concern for the loyal body of employees who serve us would prevent us taking such action except in the very last resort.

EFFECTS OF THE TARIFF

On February 4, 1932, the Chancellor of the Exchequer, Mr Neville Chamberlain, made a statement in the House of Commons defining the Government's tariff policy which gave immense relief to those who, like ourselves, were deeply interested in British industry. Mr Chamberlain said that the Government proposed:

"... by a system of moderate protection scientifically adjusted to the needs of industry and agriculture to transfer to our own factories and our own fields work which is now done elsewhere, and thereby decrease unemployment in the only satisfactory way it can be diminished."

And Mr Chamberlain very rightly added that the Government "... have framed a policy which will bring new hope and a new heart to this country."

This statement gave us the necessary confidence to expand our activities in the belief that if we were efficient in our methods of production and gave added employment to the people, the zinc producing industry, like others, would receive reasonable protection as against cheaper and lower standards of living in other countries.

Our business is of national importance from an industrial standpoint quite apart from the fact that it is essential to the defence of the country. Let me give you a few facts. It is correct to say, and necessary for you to remember, that all the industries in which we are engaged are built on the successful production of zinc. In the past few years we have almost completely reorganised the zinc industry of this country. We have eliminated the old and obsolescent plants, modified and added to those worth keeping, built new ones, and adopted new processes and improved the quality of the metal we produce until it covers all grades from the most common to the very highest grade of spelter manufactured anywhere in the world, viz., over 99.99 per cent. of pure zinc.

In 1932, when Mr Chamberlain gave us the new hope to which he referred, our production of zinc was under 24,000 tons. In 1933 it was nearly 45,000 tons. For the first six months of this year it was at the rate of 50,000 tons, and with the new vertical retort plant in operation, it is now running at the rate of nearly 70,000 tons per annum. With fair prices we hoped it would soon reach 75,000 tons. This great expansion of British industry was

GROUP'S CONTRIBUTION TO EMPLOYMENT

Our group—exclusive of contractors and all indirect employment—gives work to over 2,000 men, and our salaries and wages in the last 12 months cost over £500,000. The work now in progress will, it is hoped, increase our direct employees to over 2,500 men and raise our salary and wages bill to over £600,000 per annum.

We have spent over £500,000 on capital account in the last three years quite apart from a sum of nearly £100,000 representing the cost of processes, patents and plants, which had to be acquired to bring methods of production up to the highest point of efficiency.

In the last financial year we expended £400,000 on stores, plant and machinery, and over £1,150,000 in coal and raw materials, and if we add salaries and wages these items alone give a total of over £2,000,000.

The requirements of transport by our group disclose figures also worthy of note. In the last financial year we employed British transport for the following cargoes: 220,000 tons overseas and 710,000 tons inland, and we expect to rise to 250,000 tons from overseas and 800,000 tons for inland traffic.

We consumed no less than 210,000 tons of coal and coke, and this year the total will be nearly 300,000 tons.

IMPRESSIVE FIGURES

These, I think you will agree, are impressive figures. We do not seek consideration in return for promises of what we will do—we ask to be judged on facts—the most important of which is the employment, direct and indirect, which we give to a large body of British workers. We have no need to cover up weaknesses in management or inefficiency in plant operation. In less than ten years our staff have raised the efficiency of the British zinc industry from the lowest in the world to an equality with the best.

We have, however, to meet a higher cost for wages, a higher cost for fuel, a higher cost for transport, and heavier taxation in this country as compared with foreign producers who compete with us.

There is an import duty of 10 per cent. on foreign zinc, and this import duty, if it had been made fully operative, would have given some help to all concerned. But at Ottawa in October, 1932, when the imposition of such a duty was under consideration, an error was made which had the effect—surely never intended—of weakening the position of the producer in the United Kingdom. We foresaw the difficulties which have arisen, and those who represented us stated their objections at the time, but without avail. In the result the price of zinc has been forced down far below anything previously known, and stands at a figure at which it is almost impossible to conduct the operations of a producer in this country to any profit.

The advice we gave was in favour of a simple system involving an operative import duty on foreign zinc, a substantially higher duty on manufactures of zinc, and a full drawback of the duty on any zinc used in manufactures which are exported from this country. This is still our point of view, and the experience which we have had since then reinforces its soundness and cogency. Our advice was unfortunately disregarded, and the British Government entered into complicating agreements with the Dominions which, when they began to be implemented, introduced into the market for zinc a deflationary influence on prices. The evil took time to develop, but in the last six or nine months it has knocked the price of our chief product down by 25 per cent. and threatened to undermine the employment of approximately 5,000 people.

DEFLATIONARY INFLUENCE OF "WORLD PRICE"

Under the Ottawa agreements the Empire producers—i.e. those outside the United Kingdom—are required to sell their metal in Great Britain at what is said to be the "world price," which is defined as the London Metal Exchange official quotation. This quotation is on the basis that the duty is "for buyers' account." Now it must be obvious that an article on which duty is still to be calculated cannot in an official market have the same value as an article quoted "duty free," and that any effort to secure price-equality between the two must have a continuously deflationary influence on the price of the duty-free article. This is exactly what we have been experiencing until we have now arrived at a stage when, on the basis of an artificial "World price" we are expected to sell at figures which no longer reflect the real state of supply and demand. It is a rare occurrence for what is here called the "World price" to be as high as that being paid for the metal in other parts of the world. We are, in fact, expected to sell our product on the same level as small sales here of residual

foreign metal produced with wages 25 per cent. lower than ours, while every single manufactured article we buy is priced at a cost based on the British standard of wages and living. That is an impossible situation which obviously cannot be suffered indefinitely.

By contrast with the situation in which we are placed in this country, it is worth while to note the importance which foreign countries attach to the zinc industry and the steps which are taken to aid and foster it. Almost without exception—and the exceptions are exporting countries—every other great nation is by some device or another restricting imports of zinc and fostering its zinc-producing industry by subsidies, by loans at low rates of interest, by reduction in taxation, by special transport charges, or other means.

Take Germany, for example. In August last the German Government decided to cover any eventual operating losses which might be incurred by the great new Magdeburg electrolytic zinc plant, the original capital for which was heavily subsidised by the State in one form or another. In addition, it was decided to grant subsidies which the mines and smelters need not refund.

Bonuses, too, are being paid for an increased production of zinc ore, while special deductions of 25 per cent. on railway tariffs have been granted by the Reich Railways to aid the zinc industry. Actions such as these are not limited to Germany; they are widespread. It cannot be wise or safe for this country to ignore them.

PLEA FOR REASONABLE TARIFF

We do not seek aids of the character I have described. We have built up a great industry despite many advantages over us enjoyed by our foreign competitors. All we ask is a reasonable tariff in the circumstances of the industry and that it shall be allowed to have effect according to its purpose, instead of being clogged with conditions which depress our prices below their normal or natural level. Of one thing I am certain, such a concession to our industry—which, it must be kept in mind, is one of the great key industries of the country—would in no wise jeopardise the prospects of those who use zinc for subsequent manufacturing processes.

In any case, if we are to be forced to sell the products of our labour at the lowest price in the world, we must have the right to buy what we use on the same basis. The only alternative is to close down.

And we can claim that we are steady and regular supporters of other British manufacturers. It is an unalterable rule of our group that British manufactures must have complete preference. Not a single pennyworth of goods is imported by us which can, to the satisfaction of the experts using them, be made in this country. We have never departed from the principle of buying the products of the British Empire in every possible case.

Most of you are aware, I think, that one of the important lessons which we learned in the War was the necessity of having a zinc industry of our own. It is unnecessary for me to go into all the details of what the various Governments of the Empire thought and did only a few years back, and I will content myself by saying that the Empire's zinc industry, and, in particular, the part your activities play in it, are the direct outcome of the actions of governments who realised the cost to the nation in blood and treasure incurred through our complacent reliance on foreign sources for the supply of metal. Far too many people are apt to forget the lessons of even the recent past. To-day, through your efforts along with others, the Empire zinc production is more than sufficient for Empire consumption. The United Kingdom by itself has a consumption at the moment of 140,000 to 150,000 tons per annum which can now be easily met by our domestic production and the surplus of the other countries of the Empire. This is an industry which can, and, in our opinion, should be organised on an Empire basis.

The Dominion producers have the whole of their domestic markets, which are very substantial, reserved for their own products. We desire only a definite proportion of British consumption to be reserved for the smelters in the United Kingdom. A scheme on this basis demands co-operation amongst the Empire producers, and we are ready and willing to co-operate provided there is reasonable regard for the interests of the British consumer; equally reasonable protection within the Dominion markets for Empire zinc re-imported there in manufactured form, and proper provision for the requirements of the export trade of the British manufacturer. On such a foundation there could be built up a healthy and powerful industry, affording regular and profitable employment to an important section of our people and adding strength to the industrial and defensive structure of the British Commonwealth of Nations.

Sir Cecil L. Budd, K.B.E., seconded the resolution, which was carried unanimously.

JOHN DELANEY, LIMITED

INCREASED PROFIT—DIVIDEND OF 5 PER CENT.

The ninth annual general meeting of John Delaney, Limited, was held at the Great Northern Hotel, Leeds, on Thursday, the 8th inst.

Mr A. Woolley-Hart, the chairman of the company, presided.

The Secretary (Mr John Jordan) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—The report and accounts have been in your hands for some days: may I assume that you will take them as read? (Agreed.)

I beg to move that the report of the directors and the audited accounts and balance sheet for the year ended July 31st last, as presented, be and they are hereby approved and adopted, and that a final dividend as recommended in the report of 2½ per cent., less tax, making with the interim dividend of 2½ per cent. already paid a total of 5 per cent. for the year, be paid, and I will ask one of my colleagues to second that resolution.

Mr J. H. W. Laverick: I have much pleasure in seconding the resolution.

The Chairman: You will see from the directors' report that there has been an improvement in trade in the year under consideration, and that, as stated, the net profits have exceeded the previous year by £4,168.

There is also a reference in the report to the conversion of the debentures, which will result in a saving in interest charges of approximately £1,300 per annum. This saving is putting the position in a very conservative way, and I think the clearest way of putting it before you is to state the general effect of the conversion.

Hitherto we have had to allocate a fixed sum of £12,500 per annum for interest and sinking fund, the arrangement in connection with the latter being that the interest on any debentures paid off in each year was not saved by the company but was used in further augmentation of the sinking fund, so that throughout the whole period of the debentures we had to pay the fixed annual sum of £12,500, as mentioned above.

The present arrangement, I am happy to say, is on much more satisfactory lines, as not only is the interest reduced from 7 per cent. to 5½ per cent., but a fixed sum is allocated for the purposes of redemption of £3,000 per annum, and each year as each £3,000 is paid off the company benefits by the saving of interest at the rate of 5½ per cent. thereon, leaving us in the position that from February 1st next, on which date the final carrying out of the debenture conversion takes place, we shall have to pay annually the maximum of £8,170, and with each successive year this sum will be diminished by the amount of the interest on the £3,000 of debentures redeemed.

The general effect of this, therefore, is that we shall be paying £8,170 as against £12,500 per annum.

It is also a satisfactory feature that whereas we originally had £125,000 debentures outstanding, the amount as at February 1st next will be only £94,000.

So far as trade is concerned in the interval since July 31st last, when the accounts before you were made up, the improvement shown in last year has continued, and although your directors are hoping that the now current year, apart from the above debenture saving, will show an improvement in earning power on last year, still we do not like to go any further at the moment than saying that the improvement reflected in the figures before you have been maintained up to the present.

With regard to the investments, these stood in the balance sheet last year at £74,581, and this year you will see they stand at £62,869 at cost. However, the market value of the investments at the end of October was approximately £65,000. The amount owing to bankers at the date of the last account was £23,465. During the year this has been reduced to £11,307, and it has since been further reduced to approximately £3,500.

During the year a very important addition has been made to the company's position, as a contract for the purchase of the freehold of the Threshfield quarry—formerly held on lease, and on which the company's plant is erected—has been signed.

It is proposed to subdivide the company's £1 shares into shares of 5s. each. Notices of an extra-ordinary general meeting to carry this out have been posted.

The Chairman then put the above resolution to the meeting, when it was carried unanimously.

The auditors, Messrs. Joshua Wortley and Sons, were re-appointed.

The meeting closed with a vote of thanks to the Chairman, management and staff.

LAKE VIEW AND STAR, LIMITED

INCREASED NET PROFITS

TOTAL DISTRIBUTION 57½ PER CENT.

The annual general meeting of Lake View and Star, Limited, was held, on the 12th instant, at River Plate House, Finsbury Circus, London, E.C.

Mr John A. Agnew (the chairman) said that it gave him great satisfaction to be able to report a further increase in the net profit, which amounted to £460,238, notwithstanding that operations had been adversely affected on three different occasions by labour disputes. Three dividends of 12½ per cent. each had been paid and they recommended a final dividend of 12½ per cent., plus a bonus of 7½ per cent., making a total distribution for the year of 57½ per cent. The balance sheet showed the company to be in a very satisfactory position so far as cash and reserves were concerned.

THE ORE RESERVES

The general mining results had been satisfactory, as, in spite of the greater tonnage milled, the reserves had been increased by 302,000 tons. Those ore reserves showed a net decrease of about 2s. per ton in grade compared with last year, against which the working costs show a reduction of 1s. 10d. per ton. The increase in tonnage did not fully represent the position as 140,000 tons, figuring in last year's estimate of positive and probable ore, had been eliminated for the time being. Of that amount 67,700 tons were in the Hannan's Star Section and would be inaccessible for some time; the remainder was in the form of pillars, which were also inaccessible and of such low grade as to make their recovery doubtful. Taking those figures into consideration, the ore actually developed during the past year had increased by approximately 440,000 tons.

DEVELOPMENT WORK

On the first occasion on which he had addressed the shareholders he had intimated the directors' intention of pressing on with development work until they had placed the mines in a position to deal with not less than 40,000 tons per month. The possibility of achieving that had been received in certain quarters with scepticism, the capacity aimed at being almost double what had hitherto been treated in any mine in Western Australia. To have accomplished that, and to have placed the property in a position where developments could be shown to be more than keeping pace with a capacity 25 per cent. in excess of what they had had in mind in the beginning spoke volumes for the work of the general manager and his staff.

Shareholders had been advised of the purchase of the mining property belonging to the Associated Gold Mines of Western Australia, Limited, and that property had been worked by the company since April 1st last. They had been very closely engaged in investigating the large dump of residues on the Associated property and were satisfied that there was a substantial profit to be won from the retreatment of this material. There were certainly not less than 1½ million tons that would yield a profit. They anticipated an appreciable profit over the next four or five years from the retreatment of this dump.

DR. MACLAREN'S VISIT

They had recently arranged for Dr. Malcolm MacLaren to visit Western Australia to confer with the general manager. They were desirous of ascertaining his views on the scheme of exploratory work in the lower levels of the Associated property and on the occurrence in the Lake View section of the so-called Cross Lode, between the 1,000-ft. and 1,800-ft. levels. He had always expressed his confidence that the development work in the deeper ground was likely to result very satisfactorily. Developments to date would appear to have confirmed his judgment. In view of the amount of work carried out since his last visit to the mine, it was felt that a consultation with him after he had had an opportunity of reviewing those results would be of immense benefit to the management.

The Chairman concluded by expressing his appreciation of the work done by the general manager, Mr J. F. Thorn, and the staff on the property, Mr H. E. Vail, the consulting engineer, and members of the London staff.

The report and accounts were unanimously adopted.

The retiring directors, Mr A. H. Collier and Mr G. Goldthorpe, were unanimously re-elected, and the meeting terminated with a cordial vote of thanks to the chairman, directors and staff.

MOTOR FUEL PROPRIETARY, LIMITED

POTENTIALITIES OF THE NEW PROCESS

The annual meeting of Motor Fuel Proprietary, Limited, was held, on the 14th instant, at Winchester House, London.

Mr F. C. Marten (the chairman) said that they were meeting under conditions that not only placed the company for the first time in a position to erect a commercial plant but in conditions also that fully justified them in looking forward to great prosperity.

The plant was completed early this summer. Many tons of coal had been treated with results far exceeding expectations, and the board had felt justified in approaching a financial group with a view to raising the capital to commercialise the process. That group requested the board to obtain an independent report, and, without elaborating very much on it, he could say he believed the yield of 27.3 gallons of light oils, as given, to be far greater than that of any of the known processes, while the chemicals produced had very great potentialities. The directors, in estimating the profits to be derived from a plant capable of treating 500 tons of coal per day to be over £250,000 per annum, felt they might have erred on the side of under-valuation. The future was more encouraging than at any previous time, and could be faced with full confidence. The capital was to be increased to £300,000 by the creation of 800,000 new 5s. shares, of which 300,000 were to be offered to shareholders at 15s., and those taking up the proportion to which they would be entitled would be enabled thereby to double their existing holdings.

Mr H. P. Stephenson said the company had a proved process, which had been subscribed to by independent authorities and which should produce substantial profits on the basis of semi-coke and petrol alone, with, in addition, very vast potential possibilities in valuable chemical products. The process was unique in that no mechanical difficulties were encountered in its operation. The semi-coke produced was without equal, and their motor spirit gave a greater mileage per gallon. Their company had been the first to realise the enormous possibilities of the production of fine chemicals from coal, and patents were being taken out in every country in the world.

The report and accounts were unanimously adopted and the proposed increase of capital was approved.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED

IMPROVED TRADING PROFIT

The twentieth ordinary general meeting of S. Smith and Sons (Motor Accessories), Limited, was held, on the 14th instant, at the Cricklewood Works, London.

Mr Walter Henderson-Cleland, M.C. (the chairman), said that the trading profit at £160,771 showed an increase of £29,108, or 22 per cent., as compared with last year, and of £74,938, or 87 per cent., as compared with two years ago. The net result of the year's trading was a profit of £125,355, which showed an improvement of £25,090 over last year. The various branches of the company's business had increased during the year. The motor-car side had prospered by virtue of the increased number of cars manufactured, and the company had added to its lines of products. The aircraft section had continued to develop, and it was of interest to record that all the British machines in the recent race to Melbourne were equipped with Smith's instruments, as well as K.L.G. plugs.

Their subsidiary companies, the K.L.G. Sparking Plug Company, British Jaeger Instruments, the All-British Escapement Company, and Smith's English Clocks, now contributed a considerable volume of business and a substantial portion of the revenue of the company. The motor accessory business, however, was still their main interest, and their position during the past 12 months had not only been fully maintained, but the turnover had considerably increased. At no time could he call to mind a period during which their instruments had given such complete satisfaction. The products they turned out to-day were better than ever, and it was their intention at all costs to maintain that high level.

The turnover for the first three months of the present financial year had been greater than in any corresponding period, and provided there was no setback in the prosperity of the country, the company's prospects in all departments were encouraging. They proposed to pay dividends of 2 per cent. and a further 7 per cent. on the non-cumulative preferred ordinary shares (making, with the interim dividend, 14 per cent. for the year), and a dividend of 25 per cent. on the deferred ordinary shares.

The report and accounts were unanimously adopted, and the meeting terminated with a vote of thanks to the chairman, directors and staff.

WANKIE COLLIERY COMPANY, LIMITED

IMPROVED RESULTS AND DIVIDEND OF 12 PER CENT. FOR YEAR

The eleventh ordinary general meeting of the Wankie Colliery Company, Limited, was held, on the 30th ultimo, at Abercorn Rooms, Liverpool Street Hotel, London.

Sir Edmund Davis (chairman and managing director) presided. The Chairman said: The authorised capital remains the same as at August 31, 1933. The issued capital, however, has been increased from £995,568 to £997,500 by the issue of 3,864 shares during the year. Creditors in London at £48,439 shows a considerable reduction when compared with the amount appearing under the same heading in our previous accounts, and is principally due to the reduction in our bankers' loan account, which, from its initial amount of approximately £150,000 borrowed to pay off the company's 6 per cent. debentures, stands in the accounts at £46,000, and at to-day's date is £27,000. Creditors, Africa, £14,391, show an increase of £2,000 chiefly owing to the amount due to trade creditors at the end of our financial year.

Provision for income tax, £11,331, is £7,952 less than shown in our accounts for the previous year, mainly accounted for by the fact that no tax in Rhodesia in respect of the previous year's profit was outstanding at the date of the present balance sheet.

Reserve and depreciation account stood in our previous balance sheet at £455,803. To this we have added depreciation written off for the year amounting to £40,811 and also £1,609, being the amount received in respect of premiums on 3,864 shares issued during the year, bringing the figure up to £507,223. We have written out of this account expenditure in connection with the temporary closing down of No. 2 colliery, cost of machinery dismantled, etc., less value of obsolete stores sold, previously written off, and amounting in all to £4,425, leaving a total to the credit of this account at August 31st last of £502,798.

It may interest you to know that of the amount of £502,798 standing to the credit of this account £454,129 is in respect of depreciation which has been reserved on the fixed assets of the company, which stand in the balance sheet at a cost of £998,799.

Debtors, £42,753, shows a satisfactory increase of £11,544, due, principally, to the larger supplies of fuel to the Belgian Congo and Northern Rhodesia Copper Mines.

Capital expenditure during the year amounted to £7,410, of which amount £4,943 is in respect of expenditure on buildings, £2,367 on machinery and plant, and £100 on permanent works.

Turning to the credit side of the profit and loss account, it will be noticed that the sale of coal, coke and other products amounted to £342,016, compared with £241,978 at the date of our previous year, an increase of £100,037. On the debit side of the profit and loss account we have the cost of mining of coal, and manufacture of coke and bricks, £155,967, as compared with £117,495 in 1933, an increase of £38,472, and we have written off £50,054 by way of depreciation this year, comparing with £44,943 in our previous accounts.

African general expenses, £5,430, compares with £4,746 last year.

London expenses, £8,587, compares with £8,620.

Directors' fees and additional remuneration, £4,600, compares with £1,996 last year—an increase of £2,604, the profit this year having been sufficient to justify the payment of the maximum additional remuneration provided for in the articles of association.

Rents and sundry receipts—Africa, £11,177, show a reduction of £187.

On the debit side of the balance sheet we have brought in the balance profit brought forward from August, 1933, £19,303, out of which a final dividend in respect of that year was paid, amounting to £9,955, leaving a balance to be carried forward of £9,348. To this we have added the profit for the year, £128,730, bringing the total up to £138,078, and deducted taxation reserve, £9,364, leaving a net total of £128,714.

After deducting the two interim dividends of 5 per cent. each in respect of the year under review paid on April 16th and August 17, 1934, amounting to £99,653, we have a balance of £29,061. Out of this balance we propose to recommend the payment of a further dividend of 2 per cent., less income tax, making 12 per cent., less income tax, for the year. This payment will amount to £19,950, and we propose to carry the balance of £9,111 forward to next year.

During the year under review I have visited the colliery, and was impressed with the improvements made since I was last on the property. The new offices which have been erected are as good as could be found anywhere and are in keeping with the excellent work throughout the property.

I suppose you wish me to say something of the future. In this respect I cannot do more than say that there is every reason to expect that the results of our current year's operations should

prove as satisfactory as those shown in our present accounts and to draw your particular attention to the increased consumption of coal by the Northern Rhodesia Copper Mines. Their total supplies during the year under review were 187,296 tons, comparing with 106,665 in the previous twelve months.

The report and accounts were unanimously adopted.

SUDAN PLANTATIONS SYNDICATE, LIMITED

IMPROVED OUTLOOK

PROPOSED SHARE ISSUE

The twenty-seventh ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 12th instant, at Winchester House, London, E.C.

Mr Alexander MacIntyre (chairman and managing director) said that their British Government securities amounted to approximately £830,000 and cash to approximately £350,000, which together totalled £1,180,000. The gross profit for the year amounted to £351,967, and, after deducting all expenses, amounts written off, and £30,000 placed to Gezira reserve, there remained a net profit of £137,584. The directors recommended a dividend of 6 per cent. for the year.

It had been decided to issue to shareholders 225,000 shares out of the 250,000 unissued share capital of the syndicate at a price of 21s. per share, and in the proportion of one new share for every ten now held. That issue, together with the syndicate's other resources, would place them in a position to pay back the loan of £400,000 which was secured by a debenture, unless the money could be more profitably utilised in a large extension of area or otherwise. It would also provide capital for the development and financing of the proposed extensions in the Gezira. Work on the extension of 20,000 feddans in the northern section of their concession had already begun, and they hoped to have it ready for next season's crop. A similar, or rather larger, extension was contemplated at the extreme southern end of the concession, which could be developed in time for the 1936-37 crop, but so far that extension had not been definitely agreed.

Regarding sales, all their cotton seed stocks had been disposed of. The prices had been lower than those obtained for the previous year, but they had been compensated to the extent of concessions obtained for lower sea freights. Cotton prices had not been too bad throughout the year, but owing to the difficulties of exchange and political uncertainties, manufacturers in the consuming countries had been compelled to adopt a policy of buying their immediate requirements from day to day, and were averse to entering into any large commitments. That was a great handicap to effecting sales of cotton stocks in any large quantities, and entailed the producer having to carry cotton stocks, which in the past used to be carried by the mills. Notwithstanding that, their cotton had been selling fairly well. The whole of last season's Zeidab crop and the remainder of the Gezira 1931-32 stocks had been disposed of, and the greater part of the 1932-33 and 1933-34 crops had been either sold or covered.

With regard to this year's Gezira crop, the area planted in cotton was about 156,000 feddans. Although rains had not started as early as last year, they had been above average, with several light rains in October and two light showers this month. He had always said that late rains encouraged any latent blackarm present in the crop. It was too early yet to predict the final yield, but a cable from their manager received on Friday indicated that, although there was a good deal of blackarm evident in many places, the prospects were better than at this time last year, and that the amount of leaf-curl present was negligible, which was very satisfactory. The cotton crop planted at Zeidab this season was about 5,850 feddans. He was afraid that they could not expect to have a bumper crop such as they had had last year. The indications were that the yield would be about 3 kantars per feddan.

With regard to the coming year, if present cotton prices held and an average crop was obtained, they should be in even a better position than they were at present.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

CENTRAL ARGENTINE RAILWAY, LIMITED

EXCHANGE DIFFICULTIES

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 15th instant, at River Plate House, Finsbury Circus, London.

Mr W. K. Whigham (the chairman) said that the gross receipts for the year amounted to £9,871,000, an increase of £122,000; working expenses at £7,211,000 showed a decrease of £638,000, the balance amounting to £2,660,000, an increase of £760,000 over the previous year. Those figures were, as usual, based upon the par of exchange. To set that right, one was forced to deduct from the £2,660,000 no less a sum than £1,005,000, being exchange differences for 1933-34, as against £365,000, leaving the actual net receipts at £1,655,000 compared with £1,535,000 last year, an increase of £120,000.

The labour position had required careful handling, because the men had seen progressive weekly increases in peso gross receipts and concluded that the improved financial situation measured in that currency should permit of the immediate restoration of the reduction in their wages. Those men had been thinking in pesos, completely overlooking the fact that those pesos had to be converted into sterling to allow of a just and reasonable return to the investors.

As soon as the results for the year ended June 30, 1933, were available, they had approached the Government, and with their intervention an agreement had been arrived at between the Labour Unions and their company. However, under the President's award, the reduction in wages must before long have to cease automatically, but the companies looked for any real benefit to the promise held out in that document of a better utilisation of labour and a modification in the regulations.

With respect to road competition, the position remained much as it was twelve months ago. As mentioned on previous occasions, they had organised a certain amount of road transport by bus and by lorry in order to counter competition, but the only true solution must be the establishment of equality in operating conditions as between road hauliers and railways, a problem which the Road Transport Bill alone could equitably solve.

In conclusion, he ventured to express the hope that, in the near future, they might have some tangible relief from the burden of exchange differences. It was too much to expect that the year 1934-35 should see a return to normality, but he was convinced that when the turn for the better did come, Argentina would be among the first to profit by the change.

The report was adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED

IMPROVING OUTLOOK

The forty-fifth ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 14th instant, at River Plate House, London.

Sir Follett Holt, K.B.E. (the chairman), said that the directors met the shareholders with a sense of great disappointment at being unable to recommend the payment of a dividend to some 20,000 holders of the £17,000,000 of ordinary stock of the company. They had survived the lack of marketability of wheat and maize and the devastating fall in their price level, but they had not been able to withstand the further fall in the exchange which had occurred. They also experienced in the early months great difficulty in securing remittances at the official rate. At a later date they came over more freely, and, having sold their holding in local Government bonds in Buenos Ayres, they had been able to meet all claims for income tax and provide for the payment of the preference dividends, thus maintaining an unbroken record without incurring an overdraft with their bankers. After referring to the problem of the untrammelled road transport competition, and stating that it was impossible to say at present how the award of H.E. the President in connection with wages and conditions of railway labour would work out in practice, he went on to say that during his recent visit to Argentina it had become evident that the period of crisis was passing, if it had not already passed. Through the depreciation in the value of the peso Argentina had undoubtedly been able not only to avoid any grave internal crisis but to resume its march of progress and development. The peso receipts of the railway so far this year were 5 per cent. higher than for the same period of the previous year, showing that some progress had been made. The directors had not lost any of their faith in the potentialities of the railway.

The report was unanimously adopted, and a cordial vote of thanks to the Chairman, directors and staff terminated the proceedings.

KASSALA COTTON COMPANY, LIMITED

CROP PROSPECTS

The eleventh ordinary general meeting of the Kassala Cotton Company, Limited, was held, on the 12th instant, at Winchester House, London.

The Hon. Arthur M. Asquith, D.S.O. (the chairman), in the course of his speech, said: The profit and loss account shows a net profit for the year of £1,398.

Now regarding the past season's crop, I told you last year that we had more late rains than we liked and that there was a good deal of blackarm about. Later in the season weather conditions were not such as to enable the cotton plants to make a complete recovery. Our practical immunity from leaf curl, we believe, was due to all the trouble given to taking the cotton out by the roots, instead of cutting it out with the hoe. In the upshot we had a yield of 2.61 kantars per feddan, or more than half a kantar better than in the previous season, and the quality of the cotton was good.

Regarding the current season's crop, Mr Fleming reports that all the old cotton was rooted up; that conditions for sowing in July and August were good; that sowing was completed by August 26; and that germination and early growth were satisfactory. No leaf curl worth mentioning is apparent. There is, as usual, a certain amount of blackarm throughout the area, but damage at present is very slight. Indications at the present early stage are rather better than last year, and granted favourable weather conditions from now onwards there is no reason why we should not obtain a satisfactory crop. Our area under cotton is 19,147 feddans, as against 18,991 last year.

Last spring we approached the Sudan Government with a view to obtaining an extension of the area of the company's concession, but the granting of our request would have entailed expenditure upon canalisation, which the Government was not at that time prepared to undertake. With cotton prices so much lower than they were at the time of our exchange of concessions, an extension of our area under cotton is badly needed to give prospects of a fair return upon the share capital of the company. Mr Macintyre and I are visiting the Sudan this winter, and we shall renew our application in the hope that circumstances may by then have become more favourable.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN MINES OF BURMA, LIMITED

AN IMPROVED POSITION

The sixth annual general meeting of the Consolidated Tin Mines of Burma, Limited, was held, on the 15th instant, at Winchester House, London.

Sir Cyril K. Butler, K.B.E. (the chairman) said that on that occasion it was not necessary to preface his remarks by a reference to unfavourable conditions or economic depressions. On the contrary, the accounts before them disclosed a material improvement in the position and affairs of the company compared with those of a year ago. The mining operations for the past year had resulted in a surplus of £43,229. After allowing for expenditure in England, the net surplus from the company's operations for the past year amounted to £40,206. The directors recommended a dividend of 6d. per share (less tax) in respect of the past year. The total current assets amounted to approximately £140,000, against liabilities of £15,477, which would be sufficient to indicate the substantial addition which had been made to their financial strength during the past year.

The output of mixed concentrates for the year, including purchased ore, was 956 tons, a decrease of 210 tons compared with the previous year.

As regarded the properties, at least 40,000 tons of ore had been opened up of a minimum assay value of 1½ per cent. The value of the concentrates in that developed ore at current metal prices was approximately £80,000, so that the expenditure to date on underground development had been fully justified. The board had authorised the continuance of the development programme. Since the close of the year the rate of progress in the underground development had been even more satisfactory than for the past year, and indications to date justified the view that an expansion of their milling plant would be warranted at some future date.

For the past four months the outputs, excluding purchased ore, had totalled 337 tons, and although up to date figures had not reached them, the profits of their operations for that period should not be less than those for the corresponding period of last year. The directors were pursuing a progressive policy. The sound financial position of the company, as well as current metal prices, justified that forward policy.

The report and accounts were unanimously adopted.

MITCHELLS AND BUTLERS, LIMITED

IMPROVED RESULTS—STRONG POSITION

LESSONS FROM UNITED STATES

SIR WILLIAM WATERS BUTLER'S INTERESTING ADDRESS

The forty-seventh annual general meeting of the shareholders of this company was held, on the 15th instant, at the White Horse Hotel, Birmingham, under the presidency of Sir William Waters Butler, Bart.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—I deeply regret that since our last annual meeting the company has suffered a grievous loss by the death of my brother, Mr Henry A. Butler.

TRIBUTE TO LATE MR. HENRY A. BUTLER

The service my brother rendered to this company as a managing director for 35 years, not only by his hard daily labour, but also by the sound advice he gave to his colleagues in regard to planning the policy of this great undertaking, contributed much to its success during that period.

He took his full share in defending our industry against the attacks of teetotal agitators. At one time and another he served as chairman of the various trade defence associations, and he gained the confidence not only of his fellow-brewers, but also of the licensed retailers, which conducted greatly to the amicable relations and smooth working which exist to-day in this district between the wholesale and retail sections of the trade.

The company will sorely miss him, although I am glad to say his son, Mr Robert H. Butler, is doing his utmost to worthily fill his place.

With reference to the balance sheet, I would recall to you that in my address last year—which in my absence, through illness, was read to you by the deputy chairman, Mr Arthur Mitchell—this statement was made: "We look forward to the relief afforded by Mr Neville Chamberlain—the more so if it is augmented by an improvement in general industry—to help to restore to us some measure of our former prosperity."

BENEFICIAL EFFECTS OF REDUCTION OF BEER DUTY

The trading results of the company for the 15 months ended September 30th last are, in the opinion of your board, satisfactory, and show more than a proportionate advance upon those of the previous 12 months, which is partly due to the benefit of the reduction of the Beer Duty having been received during the whole of the 15 months.

The reduction of the Beer Duty has enabled us to supply to the public a cheaper and a stronger beer, and, fortunately, there has been at the same time an improvement in the general trading of the country, which has resulted in an increase in the spending power of the public. It is mainly these factors combined with the great popularity of the company's products which have brought about a greater output and increased profits.

It has also been contributed to as the result of our great expenditure in the erection of new properties and the rebuilding and improvement of others, an expenditure which was made possible by the company having in good and adverse times distributed its profits wisely, and retained balances in the form of reserves. A hilt-division of profits might result in our not being able to obtain funds for maintaining output and profits in times of depression, or only being able to borrow at an uneconomic rate of interest or by adding to that portion of our capital which increases the amount of annual fixed charges against trading profits, which would tend to place the whole financial structure in an uncertain position should trading results fall.

COMPANY'S STRONG POSITION

Your company, however, is in a very strong financial position, as its capital is not top-heavy under a weight of debentures, mortgages and loans. It is a great temptation to borrow capital when it appears to be cheaper to do so than to use your own resources, but there is a danger zone into which such a financial course may lead. Your company has wisely avoided this course, and, I hope, will always do so.

Ladies and gentlemen, I do not hesitate to say that the balance sheet represents assets, the value of which should be maintained if we ensure that our products are such as will still continue to appeal to consumers—I do not think they were ever more popular

—and that the sale and consumption takes place under the best conditions, in accordance with the policy we have followed for so many years.

I must, however, remind shareholders when comparing the balance sheets, to remember that we are now dealing with the results of 15 months' trading, as against 12 months hitherto.

Under the prevailing conditions there is no reason why the present rate of profit should not be maintained, but in these difficult times, with a world so unsettled and the uncertainty of the economic position, one would naturally hesitate to predict the future financial results of any industrial undertaking.

The improvement in general industry we hope will continue to increase, and that the lamentable unemployment will consequently become less. At the same time, we must remember the number of the unemployed is not so great here as it is in some countries.

CHAIRMAN'S VISIT TO UNITED STATES

I have just returned from visiting the United States and Canada, where I heard nothing but admiration for the manner in which this country has grasped the situation, has kept steady, and has formulated and put into operation well-ordered plans for alleviating unemployment. During the past few years—through many diverse causes—this terrible problem has become a menace to the well-being of all the nations of the world, as the adverse effects following the failure of ill-conceived schemes to cope with it in one country are acutely felt in all other trading countries, depressing industry and increasing unemployment in them also.

In the United States I was anxious to see the effect of the abolition of what was called Prohibition, and also of the alteration in the distribution of alcoholic beverages in Canada. I gained the impression that brewers and retailers there are determined to prevent any repetition of the errors of the past, which being so greatly exaggerated by the enemies of the Trade, brought about such ill-conceived and ruinous legislation.

I had the privilege of being invited to a Convention of the United States Brewers' Association at New York and listened to speeches by the Mayor of New York and the Governor of the State couched in most friendly terms towards the industry, and exposing the deplorable defiance of the law and the great increase in crime which had resulted from the efforts to enforce Prohibition.

In the course of the short remarks I made at this Convention I mentioned the successful work we had accomplished in Birmingham in carrying out our policy of "fewer and better." I also emphasised that, in my opinion, the proper system of the distribution of alcoholic beverages, which would advance temperance, was that only sufficient retail distributing centres to meet the requirements of the public should be licensed, which would ensure an adequate return to the producer and retailer, enable them to give good value to the consumer, and make possible that beverages and food should be served under the best conditions and in pleasant surroundings. Unhealthy competition would thus be avoided and there could then be no excuse for questionable methods of trading, which not only would probably bring about disastrous economic results, but also such social evils as would cause an outcry from those who desire to maintain good public order.

A WARNING FROM PROHIBITION

When we realise the financial injury inflicted upon the old-established brewers of the United States by the imposition of Prohibition, many of whom were utterly wiped out and their stockholders ruined, it should be a serious warning to English brewers and licensed traders to maintain the vigilance and efficiency of trade defence organisations, so as to be ever ready to counter the attacks of our enemies, who in the United States under the guise of temperance reformers were able to bring about disastrous losses, and the absolute ruin of many traders.

We do not forget that people in this country, using a religious movement for their ends, visited the United States when Prohibition was in force, and then returned home and by exaggeration and false statements as to the beneficial results that had followed, did their utmost to induce the Government to impose the same restriction in the United Kingdom.

Fortunately, however, the evils which had been created by Prohibition were exposed. In fact, the last Royal Commission on Licensing did not even consider Prohibition as a step to Temperance Reform, nor have teetotal propagandists received the slightest encouragement from the Government of the day.

LOCAL OPTION A SHAM

In the official organ of the United Kingdom Alliance of October under a heading "Our Work in the Press," this illuminating statement appears for the guidance of its disciples: "Any direct tendency in favour of abstinence and the temperance movement should be avoided." They are thus led to practise deception and that is perhaps why nowadays one rarely hears them make any reference to Prohibition. On the contrary, their one endeavour appears to be to hide from the general public that their ultimate object is the total prohibition of the manufacture and sale of alcoholic beverages, while at the same time they are working to bring it about by what is called local option. This local option is nothing but a sham, as no option is to be permitted; it is local veto, and it is the same stratagem which was so successfully used in the United States to bring about what was described as "the noble experiment of Prohibition."

The only Parliamentary legislation affecting our trade has been in connection with agricultural matters affecting the supply and marketing of brewing materials. As you were informed last year brewers undertook to use as large a quantity as possible of British barley. This undertaking has been fulfilled, although as I have previously explained, the suitability of British barley for malting must always be dependent upon the harvest conditions of the year.

BARLEY CROPS AND FARMERS' COMPLAINTS

Fortunately, the barley harvest of 1933, in consequence of good climatic conditions and the increased output of beer, was readily sold, and at a much better price than usual, but this season, owing to farmers increasing their barley acreage and in consequence of the drought and early threshing, a large portion of the crop has not been suitable for malting, and, therefore, it has not been sold as readily as it was last year. Stocks are thus tending to accumulate, and farmers are unjustifiably complaining that brewers are not carrying out their promise to the Chancellor of the Exchequer to use as much English barley in their brewings as possible.

They are, therefore, seeking to make compulsory the use of a high percentage of English barley, no matter of what quality it may be or at what price it may be offered. This is an inequitable proposal; it would handicap the farmer growing and selling the best quality grain and it would make it difficult for the brewer to produce beer of uniformly good quality and stability.

MARKETING AND QUOTAS CRITICISED

I am opposed to marketing schemes and quotas of any home produce because I am of the same opinion as Mr Harold Cox, who wrote in the *Sunday Times* of October 21st as follows:—

"The wants of the human race are wide and varied, and there is a better chance of those wants being gratified if the business of deciding what to produce is left to the free judgment of individual enterprise, rather than to compulsory orders of committees backed by the authority of Acts of Parliament."

"At any rate the English practice of leaving these problems to be settled by the producers themselves at their own risk in pursuit of their own profit has worked well in the past. It was on that system that we built up the industrial development and the world-wide trade of Great Britain."

I believe such marketing schemes and quotas discourage the production of the best quality, encourage the formation of trading monopolies and injure the consumer, who is forced to pay higher prices for inferior products.

Let us have a free market at home, and by the imposition of appropriate tariffs stop the dumping of goods produced abroad under unfair competitive methods. The home trader would then have some incentive to produce and offer the best and cheapest in competition with his own countrymen.

It is hoped that the scheme which the brewers and the Minister of Agriculture have arranged with the hop growers will induce more to plant and cultivate the finest type of hops, which should lessen the foreign hops the brewer finds it necessary to purchase to meet his requirements; but this again, as in the case of barley, is entirely dependent on whether seasons are favourable or otherwise.

This growing tendency to bring about the "regimentation" of industry calls for very careful examination, and it should not be

extended in this country until we have fuller knowledge of what have been the results in the United States, where this policy is now being widely applied.

Ladies and Gentlemen, as I have already said, it is too risky in these uncertain times to attempt to prophesy what future trading results will be, but we are owners of a sound business which under normal conditions should enjoy prosperity, and which I assure you those in charge of the administration will do their utmost to maintain.

I beg to move that the report of the directors and the accounts annexed thereto be and the same are hereby adopted and that the dividends recommended by the directors in their report be and the same are hereby declared payable on November 20th, 1934, and I will ask Mr H. W. Bainbridge to second it.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

PRESENTATIONS TO

MR ARTHUR MITCHELL

AND

MR ROBERT H. BUTLER

(as representing the family of the late Mr Henry A. Butler)

At the conclusion of the general meeting, presentations were made to Mr Arthur Mitchell and to Mr Robert H. Butler, the latter as representing the family of the late Mr Henry A. Butler.

The Chairman recalled that at the last annual meeting Mr Bainbridge mentioned that Mr Arthur Mitchell and Mr Henry A. Butler had been engaged in the management of the firm for thirty-five years and suggested that their invaluable services should be recognised in a fitting manner. The Board decided that as a permanent record of their splendid work precedent should be followed and that they should be presented with portraits of themselves, replicas of which would be hung in the board room. To everyone's regret his brother passed away soon afterwards and a posthumous portrait had to be painted from a photograph. In the case of Mr Mitchell a commission was given to Mr Brockhurst, A.R.A., a native of Birmingham. Mr Mitchell had taken a great part in advancing the success of the company since he became a managing director thirty-six years ago, and the value of his work was thoroughly appreciated. He could testify to Mr Mitchell's high integrity and his consideration for the employees. As long as he took part in directing the policy of the business, shareholders might be confident that their interests and the good name of the company would be secure.

Mr Herbert W. Bainbridge said the time certainly seemed ripe to take notice of thirty-five years' continuous service on the part of both the gentlemen named. Mr Mitchell and he had been colleagues on the board for many years, and though almost of another generation in seniority he had enjoyed the good fortune of Mr Mitchell's friendship and alliance in other walks of life. When quite young Mr Mitchell had great responsibility put upon him, and it had been a satisfaction to watch his advance and his aptitude in taking a leading place in the counsels of the business. With regard to the late Mr Harry Butler, his death was a great loss to the company and caused lasting regret to all who knew and admired him. He died in harness in the service he loved, and whatever good work others had achieved for the firm, or might achieve in the future, none deserved to be more worthily honoured.

Major Samuel N. Thompson said he was in the unique position of having known four generations of the Mitchell family, all commanding the respect of their neighbours, and Mr Arthur Mitchell was maintaining that good reputation in the fullest sense. He was by nature and training an English gentleman. The late Mr Harry Butler won universal esteem in business, social and sporting circles. Amongst sportsmen he was a prince of good fellows, giving personal support and assisting with his purse.

Mr Alfred Aston said the shareholders generally were glad to do honour to two who had rendered the company valuable and loyal service. It was impossible to over-estimate the work of Mr Arthur Mitchell, who had played an important part in guiding the policy of the company. For many years the late Mr Harry Butler was a personal friend. He was the soul of geniality, always sympathetic, and ever generous in helping deserving causes.

Mr James Evans said Mr Arthur Mitchell had devoted his life to the business, and had played no small part in building up the reputation it now enjoyed. It was undoubtedly one of the best managed businesses in the country and they hoped Mr Mitchell would be long spared to continue his excellent work for it. Not only the company but the whole of Birmingham had sustained a loss by the death of Mr Harry Butler, who rendered great service to Mitchells and Butlers and supported most generously social and charitable institutions. He was sure Mr Robert Butler would be

proud to receive, on behalf of the family, a gift which would perpetuate the name of an English gentleman.

Mr F. Norton Lones said Mr Harry Butler had left behind him a record of good deeds and kindly acts. He could claim to have known Mr Arthur Mitchell longer than any of those present, with the exception of Mr Mitchell's brothers and sister, and could say confidently that of those who founded the business and those who followed, no member of the board had done more to promote the success of the company than Mr Mitchell. It was their fervent hope that he would be spared for many years to give the company the benefit of his sound judgment.

The Chairman then unveiled Mr Mitchell's portrait and asked him to accept it from the shareholders as an expression of deep gratitude for his services to the company.

In accepting the gift, Mr Arthur Mitchell said he felt sad at the thought that Mr Henry A. Butler, a colleague of thirty-five years' standing, was not beside him. Mr Butler was a great worker, as well as a true and steadfast friend. In thirty-six years as a managing director he had witnessed great changes and great advances. Never had the public better service and better conditions than it had to-day, and this was in part due to the policy of fewer and better houses, which had its cradle in Birmingham. The improvements that had taken place, and were taking place to-day, encouraged them to look with confidence to the future. The portrait would be treasured by his family as a valuable heirloom and would take its place between those of his father, Mr Henry Mitchell, and his brother, Sir John Edwin Mitchell, both of whom received a similarly gracious recognition.

The portrait of the late Mr H. A. Butler was unveiled by Mr Herbert W. Bainbridge, who offered it to Mr. R. H. Butler as a memorial of a good father.

Mr R. H. Butler, in accepting the gift, said it would be prized by himself and the family. He knew that his father, if he had been with them, would have accepted the portrait with sincere gratitude and would have referred with pride to his association with Mr Arthur Mitchell, for whom he entertained the greatest admiration. Those who had spoken knew his father throughout his business life and it was comforting to know that his warm and genial character was still held in revered memory.

TRINIDAD LEASEHOLDS, LIMITED

A PLEA FOR PREFERENCE

The twenty-first ordinary general meeting of Trinidad Leaseholds, Limited, was held, on the 15th instant, at Winchester House, London.

Mr. A. W. Rogers (the chairman) said that although the volume of sales for the year was 87,638 tons in excess of the previous year, oil profits and other revenue showed a reduction. The unappropriated balance was £172,835, and the directors proposed to pay a final dividend of 7½ per cent., less tax. Sales of Regent Petrols in the United Kingdom had increased considerably, and the company's distribution area now covered a large portion of the southern half of the kingdom.

Some months ago the Trinidad Legislative Council had unanimously passed a resolution urging the Home Government to grant a preference to Empire-produced oil products, and recently a deputation had visited England to lay the Council's views in support of the resolution before the Secretary of State for the Colonies. It was to be hoped that that resolution and the views of the representatives would receive the sympathetic consideration of His Majesty's Government.

In view of the highly competitive nature of the business, it was befitting that some measure of preference should be granted to the Island's petroleum products marketed in Great Britain. There were various districts in Trinidad where it was difficult to work the oil profitably. Assistance in the form of a preference could be expected to stimulate the development of such areas and also the search for oil in other places where there was evidence of its probable existence. Much of the Colony's petroleum was won from Crown lands, and producers, under their leases, were governed by certain conditions imposed by Imperial considerations. That was as it should be, but it also brought into prominence the advantage to the Empire of the production of oil in a British Colony and provided more than ordinary reason and justification for some help being given by Great Britain.

As to the outlook, their company was now in a better position than ever before to benefit by improved prices. Results for the current year to date could be considered as satisfactory under the existing circumstances.

The report was unanimously adopted.

NIGEL VAN RYN REEFS, LIMITED

A STRONG POSITION

The adjourned annual ordinary general meeting of Nigel Van Ryn Reefs, Ltd., was held, on the 15th instant, at Winchester House, London.

Mr W. A. Wills (the chairman), in the course of his speech, said: The balance sheet showed that the cash assets of the company were really liquid, but at the present moment, in addition to cash in hand, the following are our principal share assets:—6,400 Ashanti Goldfields; 99,850 Gold Corporation; 2,500 Wiluna Gold Corporation; 6,400 Vogelstruisbult Gold Mining; 6,000 Knight's; 5,000 Langlaagte Estates; 5,000 Bushtick Mines; 25,000 Camp Bird; 561,000 Lamplough Gold Mining; and 21,500 Monument Hill Consolidated (Bendigo).

We have no definite liabilities except a small contingent liability of £5,000 in respect of our Monument Hill shares. Most of our assets are quite liquid, and I make the following notes on our share interests:—Our Gold Corporation interest was acquired at par of issue in view of the fact that we are partners with that company in all our Australian interests except the Lamplough property. The Camp Bird Company is one of the Consolidated Goldfields group. When the company was recently reconstructed 6,000,000 of the shares were guaranteed at par by the Consolidated Goldfields, which we think relieves us of the necessity of any further comment.

We hold over half a million shares of 2s. each in the Lamplough Company, and their average cost to us is approximately 11d. This company is under the control of the Oroville Dredging group, but one of our directors, Mr Richard Humble, has been elected to the board. Our holding in the Monument Hill Company amounts to 21,500 shares of 10s. each of the total issued capital of 100,000 shares. The average cost to us is 4s. 3d., the last quotation we had being 6s. 6d.

Other assets include:—(1) 257 claims on the Nigel Reef, contiguous to the Nigel and Marievale Nigel Companies. The ground is too small to form a separate mining company, but will inevitably be amalgamated with one of the surrounding properties. Meantime, we have written this property—which is of very considerable value—down to the sum of £1, so that I think you have here a large prospective hidden reserve, and the practical certainty, from this one source alone, of a handsome dividend when the property is sold. (2) Lamplough—this property has been formed into a company by the Oroville Dredging group, with a capital of £150,000 in 2s. shares, in which £50,000 represents working capital subscribed by the Oroville Dredging, Camp Bird Company and ourselves. Circumstantial evidence suggests that the leads within the lease will be payable, and possibly rich. (3) Monument Hill—this is a property in the middle of the Bendigo field, with a small issued capital of £50,000 in 10s. shares. We hold on joint account with the Gold Corporation a 43 per cent. interest in this company. (4) Castlemaine Areas—Here we have jointly, with Gold Corporation, Limited, a business which may work up into something very important.

Since the report was issued we have received the first progress report on the Castlemaine Areas. It states that extra areas covering 1,730 acres have been pegged in the Taradale district, and lease applications have been lodged with the Mines Department. This brings up the total area to more than eleven square miles of mining ground. This morning, I may add, a further cable has been received, notifying that some further rather important properties have been secured.

Some small profits realised in the short interval between the reconstitution and the end of the financial year we propose to distribute as dividends, and the outlook generally is so good that I hope, with a great deal of confidence, that reasonably soon we may be able to make a much more substantial distribution. Our two hundred and fifty-seven claims adjoining the Nigel Company, and our expenditure on the Lamplough property up to the date of June 30th, were written down to the rather small sum of £2 from the share premium account, so that it is hardly possible that we should not make, out of these two assets, a very large profit, which would be available for the payment of dividends.

You might like us to express our views on the gold share market, which has been very depressed for a month or so, ending in something like a momentary collapse on Tuesday. The reasons, we think, are obvious enough. There have been far too many new companies created in London, there have been far too many doubtful propositions floated off in Johannesburg, and, finally, we believe strongly that the low-grade ore policy of the Johannesburg groups—supported by the South African Government—is being pushed too far.

The report was unanimously adopted.

MARLU GOLD MINING AREAS, LIMITED

SATISFACTORY RESULTS AND INDICATIONS

The statutory meeting of Marlu Gold Mining Areas, Limited, was held, on the 12th instant, at River Plate House, London, E.C.

Mr H. G. Latilla (the chairman) said that the company had been formed for the purpose of acquiring from the Gold Coast Selection Trust, Limited, Kwahu Mining Company (1925), Limited, and Tarkwa Banket West, Limited, certain concessions in the Gold Coast Colony totalling 6,551 acres. Those concessions had been partly prospected and developed and had been proved by eminent mining engineers and geologists to carry gold in payable mining values and quantities. The management was under the direction of Mr F. L. Thomas, who was working in close co-operation with Major D. Gilchrist, the general manager of the Gold Coast Selection Trust, Limited. The work was carried on under the supervision of the West African Gold Corporation, Limited, who acted as consulting engineers and technical managers.

A considerable amount of prospecting, etc., had been done, with satisfactory results. After spending £33,600, principally at the mines, they had in cash or its equivalent £475,000.

In the prospectus the following figures were published:—In the Bogosu North Crushed Zone and the Marlu Vein 1,300,000 tons of an average value of 4.9 dwts. Since the date on which the above report was made a considerable amount of work had been done in completely exposing ore that in that estimate had only been indicated. For that reason it was not to be expected that a large increase in the total ore exposed would be shown, but on the other hand more complete evidence of its true value would be provided. The total ore exposed on the portions already prospected was:—Bogosu Crush, 1,388,000 tons of an average value of 4.3 dwts.; Marlu Vein and Crush 470,000 tons of an average value of 5.5 dwts.; Dumasie 342,000 tons of an average value of 2.4 dwts., a total of 2,200,000 tons of an average value of 4.6 dwts.

From those figures it would be seen that as compared with the figures given in the prospectus, the probable tonnage had considerably increased as the result of operations to date, and, although the average grade had fallen from 4.9 dwts. to 4.6 dwts., the economic value of the tonnage in the Marlu section was not necessarily lowered. In the original estimate the Marlu quartz vein showed an indicated tonnage of 300,000 tons at 8 dwts. The southern extension of the vein had not been exposed, but work to prove the ore body in depth was now commencing. Two winzes sunk below water level were now penetrating the ore body and the results were very satisfactory, indicating the persistence of good values into the sulphide zone.

In the Bogosu mine, the reef, which had the same strike as the Marlu vein and was in all probability an extension of it 2,400 ft. away, had been intersected in No. 3 shaft at a depth of 215 ft. Two samples taken there over a width of 4 ft. of reef assayed 4 dwts. and 12 dwts. respectively.

Mr J. A. Agnew, in supplementing the chairman's remarks, said that so far as he was personally concerned—and he was not only interested on his own account, but on behalf of other people for whom he was acting—he was satisfied that everything that had been said about this property would be borne out and more than borne out in the future.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NOTICES

The directors of Martins Bank Limited announce that Mr Frederick James Marquis of Eastfield, Mossley Hill, Liverpool, has been elected to a seat on the general board of the bank.

At a meeting of directors of the Dominion Bank, held November 7th, His Honour Colonel the Honourable Herbert A. Bruce, M.D., F.R.C.S., Lieutenant Governor of Ontario, was elected to the board.

THE RUBBER REGENERATING COMPANY LIMITED

ABRIDGED DIRECTORS' REPORT

On September 28th control of the Company changed; over 95 per cent. of the issued capital and all the Management shares are now in British ownership.

ACCOUNTS

The Accounts now submitted cover the period from January 1 to September 30, 1934.

Nett profit for the period ...	£	s.	d.
Add balance brought forward from the previous year ...	6,661	17	10
	36,357	9	8

Deduct dividend paid on August 28, 1934

Leaving a balance available of ...	£	s.	d.
Amount written off Patent Applications, Improvements, extraordinary expenses, miscellaneous construction at Trafford Park, etc. ...	16,452	18	0
	15,223	0	10

After writing off these amounts there remains a balance of ... £1,229 17 2 which the Directors propose to carry forward.

On September 28, 1934, the Company acquired certain assets of the Thames Hard Rubber Corporation, Ltd., situated at Belvedere, Kent, also the sole right for the United Kingdom to the patent applications and inventions in connection with the Kaycee solvent reclaim process, and the benefit of an agreement by which the Company secured the right to manufacture in the United Kingdom certain chemical products of the Naugatuck Chemical Company. (Including £11,817 allocated from profit and loss account and £44,182 from general reserve, £55,999 in all has been written off the item Patent Applications, Improvements, etc., which now stands at the nominal figure of £1.)

In order to afford up-to-date information as to the progress of the Company it has been decided to issue audited accounts half yearly, as soon as possible after the end of the accounting period. The next accounts will, therefore, cover the six months to March 31, 1935. Having regard to the present volume of business in hand, and in prospect, the Directors anticipate that the results of the current half year will justify the declaration of a dividend.

FINANCE

At September 30th the position as regards current assets and liabilities was as follows:—

Cash ...	£	s.	d.
Sundry Debtors, etc., less reserve ...	6,175	9	8
Stocks at cost or market value, whichever is the lower ...	20,151	3	3
	20,165	0	10

Sundry Creditors, income tax reserve, etc. £46,491 13 9

Surplus of current Assets over current liabilities ...	£	s.	d.
	9,024	10	1
	£37,467	3	8

Shortly after the close of the financial period, the sum of £10,645 1s. 4d. was received from the insurers in part settlement of a claim.

During the present financial period the cash requirements in connection with Solvent and Solvent Reclaim processes will not be heavy, as much of the plant and equipment is already available at Trafford Park.

OUTLINE OF THE BUSINESS

In view of the fact that the present report is the first publicly issued by the Company, the following outline of business is given:—

THE ALKALI RECLAIM PLANT

The Company commenced operations as manufacturers of reclaimed rubber in 1909, and it is now the largest producer in the United Kingdom. Extensive alterations to the original production unit are about to commence, which will result in increased efficiency, flexibility and production capacity. The alkali reclaim products of the Company

enjoy an unsurpassed reputation for purity and consistent behaviour in manufacturing processes.

THE NEW ENTERPRISES

SOLVENT RECLAIM.—Among the new manufactures is a Solvent, the invention of Mr Pickett, which has a wide field of application. The first product to be commercially manufactured is Solvent Reclaim. It is anticipated that an increasing demand for the purpose of the mechanical and sole trades will be encountered as the merits of the new products become more widely appreciated.

Experiments have been undertaken with regard to reclamation of cotton from the used tyres which constitute the principal raw material for all reclaim. Carbon black and other fillers are also recovered by the Solvent process. A further product, derived from Solvent Reclaim, is Ebonite Dust, which is used for hard rubber products, e.g. accumulator boxes and other moulded articles.

SOLVENT—The Solvent itself in a refined form has extensive potentialities for use in other industries. It has already been used on an experimental scale with most encouraging results as a turpentine substitute for paints, varnishes, polishes, etc., and as a crude rubber solvent for the production of efficient and economical rubber spreaders.

Equipment suitable, with minor alterations, for production of the Solvent has been leased and it is anticipated that output on a commercial scale will be attained shortly.

OVERSEAS BANK RETURNS

NOTE.—The latest return of the State Bank of the U.S.S.R. appeared in the Economist for September 10, 1932. Chile in August 12, 1933. Canada, Egypt, Denmark, Estonia, Latvia, Lithuania, Finland, Danzig in November 10.

bankers at the date of the last account stood at £23,465. This has been reduced during the year to £11,307, and has since been further reduced to approximately £3,500.

CANADIAN CELANESE, LTD.—A special meeting of the 7 per cent cumulative participating preferred stockholders and common stockholders has been called for December 11, 1934, to sanction the issue of 90,000 income funding rights of the company and to agree to a scheme of arrangement providing *inter alia* for the cancellation of rights of preferred stock in respect of any period prior to October 1, 1934.

RUBBER REGENERATING CO., LTD.—The net profit for nine months ended September 30, 1934, was £6,661 17s. 10d. after all

provisions. After writing off extraordinary expenses in connection with the conversion of the company into a public company, etc., a balance of £1,229 17s. 2d. is carried forward. It is proposed in future to issue half-yearly accounts. Having regard to the present volume of business in hand and in prospect, the directors anticipate that results for the half-year ending March 31, 1935, will justify the declaration of a dividend. At the date of the balance sheet, the current assets showed a surplus of £37,467 3s. 8d. over current liabilities. Shortly after the close of the financial period the sum of £10,645 1s. 4d. was received from insurers in connection with a fire which occurred prior to September 28th. The meeting will be held at Westinghouse Road, Trafford Park, Manchester, on November 23rd, at 4.0 p.m.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

PRICE fluctuations on the principal commodity markets were relatively small during the week ended last Wednesday, although movements in this country and the United States have not in all cases coincided. An improvement in weather conditions in Argentina, coupled with heavy world shipments, caused a reaction on the wheat markets, and the rise recorded last week has been checked. The United States maize crop promises to be very short and quotations for this cereal have advanced, but other grain prices have weakened in sympathy with wheat. In spite of an upward revision of the American crop estimate, raw cotton prices in New York were firm, while quotations in this country have advanced; wool tops were, however, a shade cheaper. Crude rubber prices showed a marked decline this week. Non-ferrous metals were a trifle dearer on American mar-

kets, but have again been in poor demand here. The desire to raise prices by artificial means has been responsible this week for restrictionist agitation by a group of shareholders of copper undertakings.

Food prices in this country continued to fluctuate within narrow limits. With the exception of English mutton, meat has been a little cheaper at Smithfield, while the prices of bacon, butter and sugar on the London market were also lower than a week ago. On the other hand, eggs were seasonally dearer. Tea, coffee, cocoa, and potatoes are unchanged in price.

Moody's index of the dollar prices of staple commodities in the United States (December 31, 1931 = 100) recorded an increase from 142.7 on November 7th to 145.7 on Wednesday last, compared with 144.3 a month ago and 159.6 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for best steam coal is brisk, especially for inland consumption, and prices are firm. There is a fair prompt inquiry for export, with supplies somewhat short. Best brands command up to 17s. 3d. f.o.b. A falling off in sales of blast furnace coke is being made good by increased exports. Prices are slightly easier. Industrial works are taking heavy tonnages of fuel at firm prices. Increased interest is being taken in house coal, although the super brands tend to sag. Best ordinary house coal is quoted at 21s. to 23s. at pits.

NEWCASTLE-ON-TYNE.—Demand for all grades and sizes of Northumberland steam coal is increasing, and prices are slightly better, D.C.B. screened being firm at 14s. 3d., with Tyne Primes at 13s. 6d. and Hartley Main at 13s. 3d. per ton f.o.b. An active inquiry from the English coast continues for graded steams of all descriptions. There is a slight improvement in the gas and coking section of the Durham market, but supplies are plentiful and are offered freely at schedule minimums. Bunkers are steady, the prime brands being better placed. Coke of all descriptions remains a steady market under a more active home demand.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s. Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton South Hutton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special Gas, 15s.; Holmside, Ryhope Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened and or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 20s.; Newcastle and District Gas coke, 20s. 3d.

GLASGOW.—Following the tendency to easiness recently, the export market is again firmer, although the delayed arrival of vessels at loading ports owing to weather handicaps occasionally brings prompt parcels on the market at price concessions. Foreign inquiry is on a fair scale, but the main influence is the increase in home demand for domestic and industrial purposes and the consequent reduction in supplies available for shipment.

Shipment prices (f.o.b. district ports): **LANARKSHIRE.**—Ell best, 14s. 6d.; splint best, 16s. 6d.; splint second, 14s. 6d.—14s. 9d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 12s. 6d.; trebles, 14s.—14s. 6d.; doubles, 13s.; singles, 12s. 6d.—12s. 9d.; pearls, 12s.; dross, 10s. **FIFE.**—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 3d.—12s. 6d.; first-class steam, 13s.—13s. 6d.; third-class steam, 12s. 6d.—13s.; trebles, 14s.—16s.; doubles, 13s.—13s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 11s. 9d.—12s. **LOTHIANS.**—Prime steam, 12s. 6d.—13s.; secondary steam, 12s.—12s. 6d.; unscreened navigation, 12s. 6d.; trebles, 13s.—14s.; doubles, 13s.—13s. 6d.; singles, 12s.—12s. 3d.; pearls, 11s. 9d.—12s. **AYRSHIRE.**—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s.; trebles, 15s. 6d.—15s. 9d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—There are several important contract inquiries on the Cardiff market, including one for the supply of 230,000 tons for the Portuguese State Railways to be delivered over the first eight months of 1935, but comparatively little new business has been definitely arranged during the past week. Shipments, however, are a little more active. Last week the loadings in the foreign and coastwise trades totalled only 362,000 tons, compared with 382,200 tons the previous week, and 391,451 tons in the corresponding period last year, but during the first three days of this week the shipping position has been more favourable. A larger percentage of the loading berths have been occupied, and it is fully anticipated that total shipments for the current week will substantially exceed those for the past week. French licences have been refused as the result of the recent agreement on the new barter price for French pitwood, and shippers are hopeful of authorisations in respect of the deficiencies in the British import quota up to the end of October. The policy of greater commercial freedom announced by the new Government is also expected to have favourable repercussions on South Wales exports to France. Anthracite coals are firm, and one or two of the steam sized grades are also commanding prices above the minimum scale, but for practically all other classes current quotations are at the scheduled figures. Portuguese pitwood is quoted at 23s. 6d. per ton ex ship compared with 24s. 3d. a week ago; patent fuel shipments are fairly active and there is a steady demand for coke.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d. Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, French, 24s. 6d.; Portuguese, 23s. 3d. to 23s. 9d.

IRON AND STEEL

MIDDLESBROUGH.—Business continues steady in the local iron and steel market, further transactions having taken place both with home consumers and with buyers abroad. Most of the export business is being done through second hands and the price for hematite iron for export has been advanced by 1s. 6d. per ton, making the figure 62s. 6d. per ton f.o.b., and business has been done at this figure. There have been some heavy shipments of foundry iron to Scotland since the beginning of November, total shipments from the Tees from November 1st to 13th being 8,043

tons, against 7,593 tons in the corresponding period of October. To home users the minimum prices are maintained and are based on No. 3 Cleveland foundry iron at 67s. 6d. per ton and No. 1 East Coast hematite at 69s. per ton, delivered locally, with the usual differences for other areas. Good Durham blast-furnace coke is available at 20s. per ton delivered at the furnaces, whilst foreign ore for prompt shipment continues to be based on 17s. per ton c.i.f. Tees. There has been a rather better demand for heavy steel scrap, and it is understood that some fair-sized parcels have changed hands at 52s. 6d. per ton delivered works. Steel departments continue to maintain a good output. The order for a 9,000-ton steamer recently placed on the Tyne, together with a contract for two trawlers to be built by Messrs Smith's Dock Company, Ltd., Middlesbrough, should benefit the local steelmakers. Finished steel prices are maintained.

SHEFFIELD.—The easier conditions in the finished steel trade reported last week continue. Many firms now report shrinking order books, and if there is no revival of buying shortly, activity at the works will decline. Up to the present time the lessened bookings have not affected the conditions at plants, most of which are keeping good time.

The export trade fails to expand except with a few markets, and the recent loss of German trade is being felt by a good many firms. Germany has been a substantial buyer of Sheffield best steels and engineers' tools. The open-hearth furnaces producing basic steel are as busy as ever but the position of acid steel leaves something to be desired. The market for steel scrap has been flat for several months. The hand tool factories have plenty of work and orders, notwithstanding heavy imports of saws and engineers' small tools. The Christmas season trade in cutlery and plate is disappointing, the volume of orders booked to-day being below that of a year ago. Merchants appear to be overstocked.

GLASGOW.—Since writing last week a considerable amount of new work has been placed in the West of Scotland. Carriage and wagon builders have obtained further contracts and a number of Clyde yards have received orders, mainly for smaller vessels, but aggregating on the whole a quite important tonnage. There is rather more activity in the iron and steel markets. Steel makers are all busy and there is an increased demand for home semis. Sheetmakers are still finding export business largely for prompt delivery, but the tonnage placed, both for black and galvanised, is encouraging. Home demand shows no falling off and makers are able to keep a large proportion of their plant in operation. Tube makers also remain busy and have a sufficiency of work on hand for some weeks ahead. Machinery makers and other manufacturing concerns in the Glasgow district are all fully employed.

CARDIFF.—Conditions in the overseas tinplate trade are becoming more stabilised under the new international agreement, and on the Swansea Metal Exchange on Tuesday there were expanding tendencies in export business. One of the most important of the Canadian importing undertakings has increased its orders for next year. Prices are ruling at scheduled rates. Steel bars are unchanged in price at £5 2s. 6d. per ton and galvanised sheets at from £11 5s. to £11 15s. Shipments of tinplates from Swansea last week totalled 100,329 boxes, compared with 126,564 boxes the previous week, and as arrivals from works were less than usual, stocks at the end of last week totalled 97,597 boxes, compared with 113,701 boxes a week earlier.

OTHER METALS

Operators on the copper market are still hoping for something in the nature of a restriction scheme. So far, however, there is nothing concrete to report, although proposals have been advanced this week for the establishment of a Copper Shareholders' Asso-

ciation with the object of limiting the output of the metal. A more profitable aim would be the stimulation of demand, for no considerable improvement in prices will be possible until purchases expand.

Lack of demand continues to depress the tin market also. Although the British tinplate industry has received some large orders from North America, this increased need for tin will not be sufficient to counterbalance the reserve of United States buyers. It seems improbable that the American tinplate industry will re-enter the market for the metal before January. In the circumstances, attention is concentrated on the forthcoming meeting of the Tin Committee on November 22nd, but it is unlikely that the present quotas will be modified then.

Unfavourable statistical developments, coupled with uncertainty regarding the future of the zinc cartel, have adversely affected the lead and spelter markets. At present prices, however, an increase in production seems unlikely, while stocks of both metals are sufficient for only three or four months. Moreover, stocks are likely to show a considerable reduction when consumption expands seasonally in the spring. The position, therefore, is not so bad as might at first sight appear and there are reasonable grounds for anticipating a prolongation of the life of the cartel, although no decision has apparently been taken.

President Roosevelt's electoral triumph has been largely responsible for the strength of the silver market this week. Since the President has never been an enthusiastic supporter of the silver-buying policy, however, his victory may not be such a "bullish" factor as the market seems to suppose—especially in view of the fact that Treasury purchases of silver during the nationalisation campaign (which was concluded on Friday of last week) amounted to less than 109 million ounces, or barely one-half the quantity believed to be in the possession of United States silver owners. At the moment, however, it is impossible to forecast how far President Roosevelt is likely to pursue the silver-buying policy.

TIN.—Sales on the London Metal Exchange: 215 tons on Monday, against 625 tons last week; 155 tons on Tuesday, against 265 last week; 325 tons on Wednesday, against 305 tons last week. The New York quotation on Wednesday was 51.20 cents per lb., against 51.25 cents a week ago and 50.85 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 5s. to £228 10s., compared with £228 7s. 6d. to £228 10s. last week. Stocks in London and Liverpool at the end of last week were 4,405 tons, an increase of 91 tons on the week.

COPPER.—Sales on the London Metal Exchange: 675 tons on Monday, against 1,850 tons last week; 850 tons on Tuesday, against 850 tons last week; 2,000 tons on Wednesday, against 650 tons last week. Domestic spot was quoted at 6·65 cents per lb. in New York on Wednesday, against 6·52½ cents a week ago and 6·17½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 10s. to £27 12s. 6d., compared with £27 11s. 3d. to £27 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 35,995 tons, show an increase of 312 tons and stocks of rough copper, at 10,021 tons, an increase of 1,448 tons.

LEAD.—Sales on the London Metal Exchange: 650 tons on Monday, against 700 tons last week; 700 tons on Tuesday, against 350 tons last week; 350 tons on Wednesday, against 300 tons last week. The New York quotation on Wednesday was 3-60 cents per lb., against 3-60 cents a week ago and 3-65 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 6s. 3d. for shipment during the current month compared with £10 3s. a week ago.

SPELTER.—Sales on the London Metal Exchange, 350 tons on Monday, against 650 tons last week; 550 tons on Tuesday, against 200 last week; 200 tons on Wednesday, against 100 tons last week. Wednesday's quotation in East St. Louis was 3-75 cents per lb., against 3-75 cents the week before, and 3-80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was $\pounds$ 11 17s. 6d. for shipment during the current month, against $\pounds$ 12 5s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £55 per ton, as against £49 to £50 per ton last week. Chinese wolfram was again quoted at 40s. to 42s. per unit, c.i.f., as against 40s. 6d. to 41s. 6d. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—*Manchester.*—Raw cotton prices have tended to harden. The strength has been partly due to the proposal in the United States to exchange cotton for German goods, chiefly chemicals. The latest crop statistics, although rather bearish, have had practically no effect upon prices and most operators are waiting for some official announcement with regard to acreage plan for next season. In the meantime contracts are scarce and there is no disposition to sell short. Spot demand in Liverpool has been rather quieter, and is still chiefly centred on outside growths.

The general inquiry in piece-goods has broadened, a feature of interest being the larger demand for India. More encouraging contracts have been arranged for Calcutta and Karachi, chiefly in light bleaching descriptions, and local merchants are receiving more favourable advices from the other side. Transactions for China have been quite isolated. Steady buying has taken place

for South America, certain Empire markets and Scandinavia in printing and finishing styles. A fairly healthy business has been done in home trade fabrics, especially dress materials. Reports from Burnley remain unfavourable, but recently certain manufacturers in Blackburn and Preston have extended their order lists. The yarn market has been firmer. Users of American qualities cannot ignore the attempts to place the price agreements on a legal basis, and there has been a greater disposition to keep well covered. Some spinners have booked bigger weights. A fair amount of buying has been reported from day to day in Egyptian qualities for Germany. Taking the market as a whole the prospects are rather brighter and some leading buyers are now displaying more confidence in current prices. If the wages agreement in the weaving section is legalised there seems to be little probability of cheaper cloth.

AMERICAN COTTON CROP.—The cotton statistics published by the United States Government at the end of last week were rather bearish, but did not result in a significant change in prices. The estimate of the crop was 9,634,000 bales, against 9,443,000 bales a month ago. This increase was largely due to the yield per acre being raised from 165·9 lb. to 169·3 lb. The quantity ginned up to the end of October at 7,920,000 bales was about equal to expectations. It was officially announced that during October conditions in the belt were more favourable than usual and picking and ginning progressed rapidly with practically no losses of open cotton in the fields. Owing to the carry-over of American cotton from last season being about 10,500,000 bales, prospective supplies for the current twelve months are over 20,000,000 bales. Interest in the present crop is waning and attention is now being centred on the outlook for next season. It is believed that the Washington officials will decide upon a larger acreage, and according to some authorities this will be about 33,000,000 acres against 28,000,000 acres for the current season. The American Government continues its policy of holding back supplies, and exports are decidedly smaller than a year ago. World spinners have very little difficulty in finding outside growths to meet their requirements, and the price of American cotton is undoubtedly too high.

JUTE.—Dundee.—After a quiet spell, there are signs of returning activity in the jute industry and buyers of yarns and cloth are displaying more interest. Inquiries are coming in fairly freely, but there is hesitation in buying for forward delivery. Spinners and manufacturers are comfortably placed until the end of this year, but so far not much business has been done for later despatch. Prices are very firmly maintained for anything wanted this year, and producers are reluctant to give any concessions for forward delivery, though there would be a large volume of business if prices were shaded a little. Spinners and manufacturers have no wish to return to the unprofitable trading conditions which they have experienced for some years past, and now that prices for yarns and cloth are ruling at a level more in keeping with that of the raw material, they are determined that they should remain so.

Calcutta shippers are reluctant to allow prices of raw jute to decline and any little weakness is quickly followed by recovery. Fine qualities of jute are very scarce this season and quotations are steadily advancing owing to the difficulty experienced in obtaining suitable baling material. Good First Marks are now quoted at £18 7s. 6d. and good Lightnings at not less than £16 12s. 6d., with Hearts at £15 7s. 6d., November-December. Prices of Daisee and Tossa, however, continue to rule round about recent limits at £13 15s. for the full group of Daisee-2/3 and £14 2s. 6d. for good single marks, while Tossa-2/3 is named at £14 17s. 6d. for the group to £15 5s. for singles, with fours at from £13 17s. 6d. to £14 2s. 6d., November-December.

Jute yarns have been in rather better demand and business has been done in hessian descriptions at 1s. 10d. and also 1s. 9½d. for common 8 lb. cops and 1s. 10½d. for 8 lb. spools for January onwards delivery. Twist is firm at from 3½d. for 3 ply 8 lb., and mostly quoted at 3½d., while sacking yarns are in some request at from 2½d. for 24 lb. web and 3d. for 8 lb. chains. Rio yarns are very firm and some further business has been done, thus consolidating an already strong position of spinners of these qualities at 2s. 4d. for third quality 8 lb. warp and 2s. 1d. for fourth. Carpe yarns have been largely sold again at from 2½d. to 2½d. for 24 lb. yarn and rove is steady at from 17 for 48 lb. and 14 for 100 lb.

The price of 10½ oz. 40 in. hessians is not under 2½d. and 8 oz. 2½d., and sometimes more has to be paid if urgent delivery is required. Buyers are showing more interest and an improvement in business is expected in the near future. Lineoleum hessians are firm, with some further orders placed, while heavy goods are in quiet request. Calcutta goods have ruled more or less steady and unchaned for some weeks past.

GRAIN MARKETS

WHEAT.—Heavy shipments from several producing areas, coupled with favourable weather in Argentina, have caused certain operators this week to take a rather "bearish" view of the future. Buyers have shown some tendency to hold off and prices are a little below last week's level. On Friday of last week, the Dominion Bureau of Statistics issued a slightly reduced estimate of this year's Canadian crop, the figure being 275 million bushels. This is slightly above last year's total, but is almost 40 per cent. less than the 1932 crop. According to Mr G. Broomhall, total shipments during the past week were 1,546,000 quarters, against 1,270,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 99½ cents per bushel, against 100½ cents the week before and 100½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. 9d. per 496 lbs., against 32s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s. 3d. to 29s. 3d., against 30s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 26s., against 26s. 6d. a week ago.

FLOUR.—Demand has again been quiet this week. Northern American shipments were 91,000 sacks in the past week, as compared with 101,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 24s. 6d. to 26s. 6d.; Australian, ex store, 20s. 3d. to 20s. 6d., against 20s. 3d. to 20s. 9d.

BARLEY.—Imported feeding varieties have been a quiet market, but prices are steady. As regards English malting barley, a poor demand has been experienced for the inferior qualities, although brewers will pay up to 55s. for good samples. "December" futures were 50½ cents per bushel in Winnipeg on Wednesday, against 52½ cents last week and 52½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 55s., against 30s. to 55s., a week before.

OATS.—Imported oats continue to meet with little interest and prices have shown a tendency to decline this week. On Wednesday, "December" futures were quoted at 51 $\frac{1}{4}$ cents per bushel in Chicago, against 52 cents a week ago and 52 $\frac{1}{2}$ cents last month. Quotations

in London, Wednesday: "River Plate," landed, not quoted; "Chilean White," landed, 23s. 9d., against 23s. 9d. a week earlier.

MAIZE.—A revised official estimate published this week confirms the view that the American maize crop will be very short this year. Demand has broadened out this week, and prices, both here and in America, have moved upwards. "December" futures were quoted on Wednesday at 81 cents per bushel in Chicago, against 78½ cents a week ago and 77½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. per 480 lbs., compared with 22s. last week; "Plate," ex ship, 21s., as against 21s. 6d.; "Plate," "November," 21s. 6d., as against 21s. 6d. Yellow maize meal, ex wharf, was quoted 6s. 6d. per ton, against 6s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to November 10	Cwts. 89,271	Cwts. 317,953	Cwts. 256,735	Cwts. 352,853
11 weeks to November 10	823,761	2,343,138	3,825,682	5,135,923
Average price of English wheat per cwt.	s. d. 6 10	s. d. 5 6	s. d. 4 8	s. d. 4 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 8, 1930	Cwts. 124,248	Cwts. 526,468	Cwts. 55,204	s. d. 6 10	s. d. 9 8	s. d. 5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Nov. 15, 1933	Jan. 3, 1934	Nov. 7, 1934	Nov. 14, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	64½	65½	79½	78
Chicago (No. 2 Winter)	55½	46½	89½	84½	100½	99½

The visible supply of wheat in Canada, at 122,258,000 bushels, shows an increase of 1,972,000 bushels. Supplies a year ago amounted to 118,035,000 bushels.

OTHER FOODS

SUGAR.—The New York spot market has been quiet, with quotations showing a slight upward tendency. Futures have scored an advance over last week. Dullness has characterised the London market and quotations have weakened. The spot price in New York on Wednesday was 2.86 cents per lb., as compared with 2.82 cents per lb. last week and 2.91 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 3s. 9½d. to 3s. 10d., against 3s. 11½d. to 4s. 0½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons			Tons		Tons	
London	854	653	1,478	1,267	18,701	19,834
Liverpool	27,282	4,069	14,228	13,437	108,881	75,837
Total tons.....	28,136	4,722	15,706	14,704	127,582	95,671
Last week	7,953	19,229	16,765	15,575	115,152	105,653

COFFEE.—The market in New York has been quiet and prices remain unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London market has ruled quiet and steady this week. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, 27,422 bags, against 26,183 bags a year ago. Central American, landed, 570 packages; delivered, for home consumption, 1,856 packages; exported, 507 packages; stocks, 80,445 packages, against

70,964 packages last year. Other kinds: Landed, 308 packages; delivered, for home consumption, 2,469 packages; exported, 516 packages; stocks, 74,487 packages, against 93,796 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 20s. per 50 kilos, c.i.f. Continent, as against 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 889 bags; delivered, for home consumption, 7,381 bags; exported, 2,625 bags; stocks, 150,828 bags, against 117,721 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,771 packages of Indian and 19,808 packages of Ceylon tea. Competition was good and prices have generally been fully maintained, quotations for the lower Ceylon grades showing a slight advance over those of last week. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.						
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Nov. 9, 1933	d. 13-41	d. 13-20	d. 16-20	d. 11-75	d. 10-06	d. 10-79	d. 13-90
Oct. 11, 1934	13-10	11-48	14-29	10-00	9-52	10-88	12-94
Oct. 18, "	12-63	11-56	14-32	10-15	9-77	10-98	12-76
Oct. 25, "	12-49	11-35	14-63	9-96	9-29	10-85	12-73
Nov. 1, "	12-33	11-44	14-27	10-69	9-28	10-67	12-58
Nov. 8, "	13-21	11-62	14-39	10-23	9-28	10-75	12-51

RICE.—The "spot" price was 8s. 6d. per cwt on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., shows a rise of 3d. on the week. Movements in London during the past week were as follows: Landed, 30 tons; delivered, 174 tons; stocks, 3,367 tons, against 3,339 tons a year ago.

POTATOES.—The majority of quotations remained unaltered this week, although heavy supplies tended to cause a slightly easier movement. At the London Borough Market on Tuesday, light soil "King Edward" again sold at 6s. to 6s. 6d. per cwt.

SPICES.—"Lampong" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 171 tons; delivered, 48 tons; stocks, 591 tons, against 397 tons a year ago. White, landed, 631 tons; delivered, 38 tons; stocks, 9,287 tons, against 1,322 tons a year ago.

MEAT.—On Monday and Tuesday demand was quiet and supplies ample. On Wednesday, fresh mutton, lamb and pork were a better market, although the demand for frozen meat was still slow. Argentine beef, chilled hindquarters, was quoted at 3s. 2d. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 8d. last week. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 10,209 tons, against 9,342 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.1 per cent. of the beef supplies, against 81.9 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 69.7 per cent. of the total supply of mutton and lamb, against 67.1 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Markets have a steadier and more confident feeling. With the probability of the new Argentine linseed being delivered at up-river ports for shipment by the end of the month, demand has improved, though Continental buyers are foremost. Very little business, except in near parcels, is reported here and for old Plate, November shipment, 9s. 2s. 6d. has been conceded. New crop, January-February, is quoted around 9s. 15s. Indian is quiet and for Calcutta to London 10s. 12s. 6d. is required, with new crop, April-May, quoted 10s. 10s. The quantity now afloat for Europe is 115,700 tons (including 17,000 tons from India), or 10,700 tons less than last week; and for the United States 34,400 tons, against 50,600 tons a year ago. Cottonseed is firmer on good support, and up to 7s. 6d. has been paid for Egyptian for January shipment to Hull.

Linseed oil is in fair demand at the lower levels and is steadier in price. Raw oil for delivery to April is quoted at 18s. per ton (naked) ex Hull mill, after business done in Hull and London below this figure. Cotton oil is in active demand and is dearer, Egyptian crude ex Hull sells at 17s. and common edible at 18s. 10s. per ton prompt. Soya oil is also dearer. Oilcakes are in improving demand and are firm in price.

HIDES AND LEATHER.—The general state of trade in the hide, leather and associated industries continues fairly satisfactory. Although business in the main is still confined more or less to immediate requirements, a regular day-to-day inquiry for stock is experienced, which has every tendency to become larger. Prices are steadier, and although there has, so far, been no indication of a general advance, for certain lines of sole leather quotations are extremely firm to a slight appreciation.

At this week's auctions of hides and skins from home-slaughtered cattle, prices for most descriptions of ox and heifers were unchanged to an advance of ½d. per lb., while the market for cows and bulls was firm at last figures. Light-weight calfskins realised from ½d. to ¾d. per lb. more, the heavier weights changing hands at recent prices. Trade in imported hides continues fairly good for wet-salted descriptions and prices for these have ruled steady to a

fractional advance. Purchases of dry hides, however, have been rather limited, but so far this has had no effect on quotations.

Quite a good demand has been experienced for most descriptions of sole leather. For instance, demand for repairing types has been quite good, due, possibly, to the break in the weather. Good business has also been done in dry hide manufacturing bends, while the inquiry for bellies and shoulders, although, perhaps, not quite up to the level of recent weeks, has been fairly consistent. Sales of upper leather have again been confined in the main to willow calf and black and coloured glacé kid, but a fair amount of business has been done in suede and reptiles. Business in box calf and patent leather has improved a little, but the demand for heavier types of upper stock has continued on the small side.

RUBBER.—Messrs Symington and W. the week ended last Wednesday, the market, although prices remained fairly steady. Quotations for near delivery show a decline. In New York, Wednesday's spot price for per lb., compared with 13½ cents per lb. a week. The official closing price for standard ribbed smol was 6½d. per lb., as against 6½d. on the cor. week. In forward positions, business has been 6½d. for January-March, 1935, as against 6½d. to 6½d. Stocks in London and Liverpool at the end of last week, show an increase of 2,732 tons as compared with week.

THE NEW INDIA

THE mills of our Parliamentary procedure—like the mills of God—grind slowly, but after eighteen months of evidence, consultation and debate the Joint Committee on Indian Constitutional Reform has reached the end of its labours. Its report, published on Wednesday last, like the Report of the Simon Commission, is extremely voluminous; and while India can hardly be said to have been the field of many novel or epoch-making experiments in government, it can at least be said that her constitutional evolution has been the subject of many great State papers on political organisation. The present volumes deal with such an immense variety of topics that it is impossible to comment in detail upon the Report without careful study, and all that is possible at the moment is to record initial impressions.

In broad outline, the result of the Committee's labours is clear and unmistakable. This very authoritative Committee represented not merely what may without offence be called the more partisan aspects of British politics but was fortified by the presence of men who have occupied some of the highest positions in the State, including three ex-Viceroy of India, the Archbishop of Canterbury and independent-minded Conservative statesmen such as Lord Derby and Sir Austen Chamberlain. It has substantially endorsed the scheme of Constitutional reform elaborated after prolonged conference with representative Indian opinion and embodied in the famous White Paper. The weight of opinion behind this important decision is so impressive, and the arguments by which it is supported are so firmly grounded, that it is unthinkable that the British Parliament should fail to implement the broad conclusions of its own Committee. The decision has been reached not as a concession forced at the bayonet's point, or as a weak yielding to the forces of disorder, but on a fair weighing of the merits and with a full sense of our responsibility to a sub-continent with a population almost as large as that of Europe.

It may be thought, at the moment when the principle of democracy is being challenged in many great countries and Parliamentary institutions are the subject more often of

derision than of eulogy, that it is rash to set up responsible Government in a territory which contains a medley of nations, a largely illiterate population and a social structure torn by religious differences. This issue is frankly faced by the Committee. They have considered the dangers urged upon them by those "to whom the majestic spectacle of an Indian Empire makes so powerful an appeal that every concession appears to them almost as the betrayal of a trust." They have also weighed the arguments of those who urge that

No self-governing nation of the British Empire has ever been faced within its borders at one and the same time by all the problems with which India has to deal: by the ever-present risk of hostilities on her frontier, by the cleavage between communal interests, by innumerable differences of race and speech, by a financial system largely dependent for its credit on centres outside India, and by a vast population in every stage of civilisation.

But against all this they have set the consideration that India's demand for greater self-government "is essentially a plea to be allowed the opportunity of applying principles and doctrines which England herself has taught," and they add that all sections of opinion in this country are agreed in principle that the plea should be admitted.

This last observation perhaps requires some qualification, for the Report itself is not unanimous. On the Left, the four Labour Members put forward a draft, which is in effect a minority report, urging a fuller measure of responsibility and a more rapid approach to full Dominion status; while three Conservative Peers and two Conservative Members of the House of Commons present a draft which asks in effect that self-Government should for the present be limited to autonomy in the Provinces, supplemented by a Council of Greater India at the Centre which would have advisory functions only. Even this suggestion of Lord Salisbury and his friends would be an important advance on the present situation, for it would abolish dyarchy in the Provinces and would bring into being, for India as a whole, at least the outline of a Federal structure which would include the Indian States. The main Report, however, marshals a long series of convincing arguments that

provincial autonomy, over the wide field of Government which these subsidiary Parliaments would cover, would be neither real nor workable if these Parliaments were subsidiary to a Central Government divorced from popular control. This view is endorsed not merely by Liberal and Labour opinion on the Committee, but by the overwhelming vote of the Conservative Members. Out of 23 Government supporters on the Committee, 16 voted for the Report, to whom we may presumably add two of the absentees at the final division, Sir John Simon and Earl Winterton.

The general outline of the plan is now so well known that it is unnecessary to comment upon it here. The setting up of a Central Federal Government, which will include the Indian States, and the institution of Provincial Parliaments, are both to be included in one and the same Act, and every line of the Report makes it clear that the evolution of the Central Government and that of the Provinces is part and parcel of a single scheme. The Committee have done something, however, to strengthen the "safeguards"—of which so much has been heard—designed to prevent the breakdown of this great experiment. Defence and foreign affairs are to remain, as proposed in the White Paper, under the direct control of the Governor-General, while some new provisions are introduced in regard to law and order to enable a Provincial Governor to carry out his "special responsibilities." His consent, for example, is required not only to legislation affecting Police acts, and to rules made regarding organisation or discipline of the Police; records of the Intelligence department concerned with terrorism may not be disclosed outside the police force, except as he may determine; while for the purpose of combating terrorism he may take under his own control any branch of Government necessary for the purpose. Provisions are introduced, also, for giving the High Courts control over promotions and the posting of subordinate judges. Again, to meet the fear of legislative discrimination against British economic interests, the Governor-General is to have a "special responsibility" to prevent the imposition of penal tariffs on goods imported from the United Kingdom. As a modification of the proposed Provincial Constitution, Upper Chambers are to be established in Madras and Bombay, and not merely in Bengal, United Provinces and Bihar as proposed in the White Paper. A modification in a more liberal direction is an enlargement of the franchise for women voters, which will increase the estimated number of women on the register from 315,000 to over 6,000,000.

Finally, there is a change which may give rise to discussion, but which is to be regarded as an attempt to make the Constitution technically work more smoothly rather than to strengthen British control. This is the suggestion that the Central Parliament shall be elected by the Provincial Parliaments and not by direct ballot. Opinion on this matter is divided in India, and it is significant that the present proposal has the support of Mr Attlee, who was not only a member of the Simon Commission, but led the Labour representatives on the present Joint Committee. The objection to direct election is, of course, that in so large an area as India, members elected to the Central body would represent constituencies, many of which would contain several millions of persons. It is objected, on the other hand, that election by Provincial Parliaments might tend to emphasise the fissiparous tendencies that must in any case to a certain extent exist in India. The issue raised by this consideration is an inherent difficulty in setting up an Indian Federation.

The modification of some of the White Paper safeguards will doubtless be much criticised in India. They are, however, all of minor importance in comparison with the outstanding fact that the Committee has broadly endorsed the principles already laid down. At the same time, there is a matter on which both British and Indian opinion may reasonably feel strongly. If our present intentions towards India are to be carried out before India loses all patience, a real attempt must be made to speed up the time-table. It is apparently the intention of the Government that the new India Bill, which is to be drafted in December, shall pass into law before Parliament rises for the summer recess. That time-table will require a great effort on the part of the House of Lords as well as of the House of Commons. But even if that plan is carried out, Indians may well desire assurance

that there will be no undue delay before the Constitution is in being. It is now nearly seven years since the Simon Commission first went to India to draw up a fresh scheme of Constitutional Reform. Although Parliament is shortly to legislate on the institution both of Federal and Provincial Legislatures, the setting up of the Federal Government is only to take place by Royal Proclamation, following a resolution of Parliament when certain things have been done. These include the adhesion of a certain number of the Indian States—with whose princes separate negotiations have to be carried out—and an assurance that the financial situation has attained a certain degree of stability. The ultimate adhesion of a sufficient number of the States is not to be doubted, though it would be very irritating to Indian opinion if the financial negotiations with them were unduly prolonged. The financial conditions include the setting up of a Central Bank, the reduction of India's short-term obligations, and the reversion of her balance of trade to normal. These conditions are, of course, to ensure that the new Constitution should not find itself plunged into financial troubles at the moment of its inception. Fortunately, all these conditions have already been, or are in process of being, fulfilled. The stage is therefore set for implementing the policy laid down.

Speed is now the essence of the problem. India is more settled than for many years past. The time for further investigation has passed. There is nothing left to do but to act, and to act in the sense of the Committee's Report. It is for Parliament now to endorse it, and to endorse it quickly. For if the decision to grant responsible Government is now rejected, that rejection, as the Committee clearly points out, will be "generally regarded in India as a denial of the whole plea, and two consequences at least must be faced: the prospect of an All-India Federation will disappear, perhaps for ever, but certainly for many years to come, and the measure of harmony achieved in British India by the co-operative efforts of the last few years, together with that body of central opinion which we have described, will be irretrievably destroyed."

EUROPE HAS QUALMS

"For my part, I regard the next twelve to eighteen months of international relations as a time of decision for the destinies of Europe, and for Peace." These are not the words of a crank or an alarmist; they will be found in the speech which was delivered by Dr. Benesh on November 6th to the Czechoslovak Parliament. Dr. Benesh is one of the most cool-headed, resourceful and experienced Foreign Ministers in the world.

A year which is to open with the Saar plebiscite and is to see the next Naval Conference is manifestly going to be a critical one not only for Europe, but for the whole world. Czechoslovakia—a small, land-locked country in the centre of the European area—not unnaturally feels nervous, with the German giant rising to his feet on one side of her, Poland threatening to change camps on another side, Italy trying to build up an Italo-Austro-Hungarian *triplice* coupled with threats of a Habsburg restoration on Czechoslovakia's third flank, and her closest ally, Yugoslavia, playing bull-in-the-china-shop in her desire to expose the responsibilities of neighbouring Powers for the murder of King Alexander. In his peroration, Dr. Benesh calls on his countrymen to mount guard over their national independence with especial vigilance and determination during the coming year; and this call has been followed up by practical demands in the statement on the military estimates for 1935 which was made in the Budget Committee of the Czechoslovak Chamber by the Minister of National Defence. He demanded an extension of the term of military service from 14 months to two years, and asked, notwithstanding the present financial stringency, for additional fortifications, technical equipment and strategic communications.

In Paris, on November 9th, the *rapporteur* on the French War Budget gave a very alarming estimate of the increase in Germany's armaments both in trained man-power and in war material, and particularly in pilots and bombing planes. Patently, Dr. Benesh was justified in declaring the present

international situation to be grave because of its uncertainty, and in warning us that "any event—however unimportant in itself—can easily produce the effect of a bomb." The worst of it is that many tall-talkers, Signor Mussolini among them, have for years past been pointing ahead to 1935 as a year of crisis. Now that it is upon us, it certainly has a dubious look.

Considering the welter of folly and barbarism which makes up so large a part of the international landscape to-day, an observer from Mars might coldly pronounce that the sooner the catastrophe came, the better. Let these sixty or seventy fully self-governing and incorrigibly anti-social States exterminate one another. If the world cannot achieve international co-operation, it must be unified by force. It is a forcible unification—not the national aggrandisement of this or that aggressive Power—which will be the outcome of the next world war, if the madmen and criminals let it loose.

This prescription may commend itself to the rationalist at a distance, but not to the victim on the spot. If we look more closely at the situation as it is to-day, we shall see that although we may have beached our boats and filled them with tinder and soaked them in petrol, we have not, even yet, burned them. The keynote of the hour is still a note of uncertainty and not one of ineluctable doom. In concrete terms, the situation depends upon the behaviour of a few countries which have not yet made up their minds. Confining our attention for the moment to Europe—though our European powder magazine is linked with the Far Eastern one by a train of explosive along the track of the Trans-Siberian Railway—let us examine the present attitudes of Poland, Italy, Hungary and Yugoslavia.

Poland's change of orientation is not only a special source of anxiety to her neighbour Czechoslovakia; it is also one of the most momentous, for good or evil, of the changes now in progress in Europe. For good, it may mean a reconciliation between Poland and Germany which would remove the greatest obstacle to a reconciliation between Germany and France. For evil, it may mean a Polish-German conspiracy to divide a Russian bearskin with Japan. Dr. Benesh takes the Polish re-orientation very seriously, and sees in it "no mere momentary tactical move, but a set of important and enduring political facts which will have to be reckoned with coldly in the future as well as now." Yet, however irresponsible the present rulers of Poland may be, it seems hardly credible that they should offer a passage across their country to the Germans for the fighting of a German-Russian war in which Poland would inevitably be one of the spoils of victory, whichever of the two protagonists got the better of it. Moreover, there are indications that French diplomacy still has hopes of bringing Poland into an Eastern Locarno [as is testified by our Polish correspondent's letter on page 982]; and if, in the new situation, this can only be done by bringing Poland and Germany in together, then MM. Pilsudski and Beck will have performed a signal service to the cause of Peace.

If we look next at Italy, we seem to observe an unfortunate check in the progress of the Italo-French *rapprochement*, but at the moment it is hard to discern whether it is Signor Mussolini who is holding back, or M. Laval. The French Minister for Foreign Affairs may hesitate to make terms with Italy on what would look like an anti-German front until he has exhausted all the possibilities of bringing Germany and Poland into a genuine Eastern Locarno. On the other side, Signor Mussolini may be hesitating to make an arrangement with France in which Italy would be once again, as she was during the war, a junior partner. It is Italy who stands to lose most of all—at least in that rather useless commodity called national prestige—through the winding up of "the post-war period." After having held the initiative in Europe for a number of years, she suddenly finds herself confronted, by the recovery of Germany, with the choice of sinking to the rank of a second or of a third-class Power—second-class if she throws in her lot with France, third-class if she commits herself to Germany.

In this week's Italo-Austrian conversations in Rome we may see a last desperate attempt on Italy's part to maintain a third camp of her own in Europe. But the new Italian *triplice* is not so good as either a Franco-Russian or a German-Polish combination; and Italy is not even sure of the second of her two Danubian clients. Hungary

—anxious only to find the most potent allies to secure her claims to treaty revision—is manifestly now turning her eyes away from Rome towards Berlin and Warsaw. If Hungary joins the German camp, Italy certainly cannot prevent the *Anschluss* by her own unaided strength. And since she must prevent it, under pain of finding herself at Germany's mercy if Austria is swallowed by the Reich, it looks as though she would be driven, after all, into the arms of France as the less unpleasant of her alternative destinations.

As for Yugoslavia, she is straining at the leash, while her French and Czechoslovak allies and British mentors are imploring her not to present the League with a *dossier* which would incriminate Hungary and Italy in the crime of which Serbia herself was guilty in 1914. That crime is one of culpably tolerating, if not abetting, a criminal conspiracy against a neighbouring and nominally friendly State. Yugoslavia's glass house was shattered so long ago that we may fear she will not be deterred to-day from throwing stones by any solicitude for her own surviving panes. Her press campaign against Hungary and Italy and her expulsion of Hungarian strangers within her gates are alarming indications of the present very natural state of her feelings. On Thursday she presented a note at Geneva, couched in very strong terms against Hungary. She prefers a League "inquiry," thus testifying to her fear of parting company with Czechoslovakia and France in order to race with Hungary for the first place on Herr Hitler's door-mat.

Political wisdom in Europe, even now, is not quite beaten to the ground. And it is therefore still possible that, this time next year, our Continent may still figure on the map in a recognisable shape. Yet for this the apostles of reason and negotiation must be as quick and far-sighted as the misguided apostles of force. Where are the negotiators, and where the necessary initiative?

THE FIVE-DAY WEEK

THE question of the hours of work in industry has been exercising the mind of the public for some time past. In the United States shorter hours have been made one of the main pillars of recovery. Successive conferences of the International Labour Organisation at Geneva have revealed a wide measure of general support for the idea. The British Government has hitherto held aloof from the movement, but a statement by the Minister of Labour in the House of Commons last week shows that his department has not been taking a purely negative attitude. Mr Stanley announced that he had invited the National Confederation of Employers' Organisations and the General Council of the Trades Union Congress to discuss the subject with him. In particular they would be asked to advise on the following points:—

(1) To inquire, industry by industry, whether hours of employment could be reduced without reducing earnings;

- (2) If that is impossible, whether employers and work-people would make concessions to permit of a reduction of working hours and an increase in the number of workpeople;
- (3) Whether the result would be an appreciable increase in the numbers employed.

It is clear from Mr Stanley's announcement that the reduction of hours of work is looked upon by the Government as a possible means of reducing unemployment. It is particularly important, in discussions on this subject, to be quite clear from the outset about the objects which are sought to be attained. Reduction of hours may be undertaken for a variety of reasons and it may have a variety of effects, depending upon the circumstances of the industry to which it is applied.

An interesting case in point has come most opportunely to hand, in the form of a report by Sir Richard Redmayne on the experimental five-day week which has been in operation at the plant of Messrs Boots Pure Drug Company at Nottingham during recent months. Some years ago the company initiated a thorough system of rationalisation of production which involved the erection of a new factory. This new factory began to come into production in 1932, and during the period of transfer extra staff had to be taken on. By the beginning of this year the transfer was so far complete that it began to seem probable that the additional staff would become redundant. Rather than resort to dismissals, the company decided to abolish Saturday work. In most of the production departments the hours on week-days were not altered, so that weekly hours were reduced from 47½ to 42½. In some other departments, the week-day hours were slightly increased. But every employee had his weekly hours reduced, while weekly wages were left unchanged. The object of the move was thus clearly to provide more employment than would have been provided with a 5½-day week. It must therefore have been expected that less would, on the average, be produced per employee in five than in 5½ days; unless this were so, the change could not have been expected to be a substitute for dismissals. The firm was presumably willing to bear the added cost of leaving weekly wages unchanged and able to do so because labour cost is a very small fraction—in most products between 2.8 per cent. and 5.95 per cent.—of total cost.

Sir Richard Redmayne's report shows that this expectation was not realised. He qualifies his remarks with the statement that it is not possible to separate the effects of the rationalisation scheme and of the reduction in hours. But, broadly speaking, the employees have produced as much, or almost as much, in five days as they previously did in 5½. In the production departments, for example, although there was an increase in wages cost as compared with the period immediately before the institution of the five-day week, there was no increase, and in most cases a decline, in wages cost as compared with the period before the rationalisation scheme went into effect. It is interesting to observe that the increase in output per hour was greater in the less mechanical departments. But it extended over the whole plant, including even the office staff, and though the results varied, Sir Richard concludes "speaking generally . . . that the cost in the aggregate has not been enhanced." Nor was this result achieved at the expense of an increase in overtime, for in most departments there was actually less overtime than before.

The reasons given for this result are of particular importance. Sir Richard ascribes a great deal of it to the effects of the greater opportunities for rest and recreation, which are reflected in less absenteeism, less unpunctuality and less sickness, as well as in greater efficiency. But the reason which recurs in every department is that the half-day on Saturday was an uneconomic day in which comparatively little could be accomplished. Saturday morning is of greater use to the employer if used by his employees for rest and recreation than if used in the factory. That the advantage is mutual is shown by the fact that several groups of employees expressed a desire for longer hours on week-days rather than the re-institution of Saturday work if the experiment should be discontinued. It appears, therefore, as if the effects of eliminating Saturday morning may be different from those of reducing hours in general.

Sir Richard Redmayne is undoubtedly justified in calling the experiment "an unqualified success." But it is im-

portant to notice in what way it was a success. It was not a success in providing more employment than would otherwise have been available. For on the whole, on Sir Richard's showing, as much was produced in five days as in five and a-half, and the heads of most departments testified that if five and a-half-day working were re-instituted they would be unable to dispense with any employees. Much muddled thought would be avoided if it were realised that a scheme may be a success in maintaining weekly production per employee; or it may be a success in providing more employment, but that it is highly improbable that it can be a success in both directions at once. A scheme which provides more employment must increase labour costs unless weekly wages (i.e. the income of the individual worker) are reduced. The success of the Boots' scheme is therefore not evidence that reduction of hours is a cure for unemployment; it is evidence for the direct opposite.

Furthermore, Sir Richard points out a number of factors peculiar to Messrs Boots which played a large part in ensuring the success of the experiment. In the first place, there was the rationalisation scheme, which increased the efficiency of the whole plant; reduction of hours was in a sense a way of passing on to the employees the benefits of this increase of efficiency, although the elimination of Saturdays did induce a still further increase in efficiency. Secondly, Messrs Boots have the inestimable advantage of controlling their own distributive outlets, and they can plan their production to a schedule instead of being dependent upon orders from outside. And thirdly, labour cost is only a very small fraction of the total cost. These conditions clearly do not apply to the generality of firms. Sir Richard thinks they might apply to large printing works and "at works where the production and distribution are vested in the same concern and where the wages cost does not constitute a very high proportion of the selling price of the commodity." Thus the conditions of the Boots' experiment apply to only a fraction of manufacturing industry; and manufacturing industry itself is nowadays less than a third of all activities.

There are thus clearly two distinct "shorter-hours" questions. The Boots' experiment shows that in a certain number of firms, almost certainly a minority, Saturday working can be abandoned without any disadvantage either to employer or to worker—but equally without making any contribution to the unemployment problem. Some of the results mentioned by Sir Richard Redmayne make it appear possible that the field for reductions of hours of this nature may be wider than would be suspected at first sight. But within this field, whatever its extent, the five-day week should obviously be instituted as soon as possible.

Outside this limited field, however, a reduction of hours would mean a reduction of weekly output per head. Unless labour cost is to be increased, weekly wages must be reduced. If labour cost is increased, some firms—but certainly not the majority—will be both able and willing to meet it out of the profit margin. In the majority of cases, however, prices would have to be raised, setting in train an almost incalculable series of economic effects, not least of which would be an increase in the cost of living of the worker. Reduced production per head must mean reduced consumption per head; the only choice would be between rising prices, accompanied by considerable dislocation, and falling money wages.

Broadly speaking, therefore, employment can be increased by the medium of shorter hours only at the cost of reducing the standard of living of those now in work, and *pro tanto* putting upon their shoulders the burden of supporting those who are now unemployed but who would find work after hours were shortened. The question consequently becomes: How much of their standard of living are those who are in work prepared to sacrifice to give some extra employment to those now out of work? The answer can perhaps be indicated from Sir Richard Redmayne's report, for he mentions several times that overtime, with its concomitant extra earnings, is eagerly sought after and regarded as a privilege rather than a duty. If it comes to a square choice between present hours with present pay and shorter hours with less pay, it is likely that the Trade Unions will choose the former.

DIRECTION OF OVERSEAS TRADE

BRITISH overseas trade during the third quarter of this year has carried on the upward movement noticed in the preceding six months, though at a decreasing rate. Total turnover at £274 millions was one million more than in the second quarter, an increase of £4,000,000 in exports being largely offset by a decrease of £3,000,000 in imports; and the total turnover figure shows an increase of 5 per cent. as compared with the third quarter of 1933. As compared with 1929, however, the total volume of trade is still woefully small. Both for the third quarter and for the first nine months, total turnover was 57 per cent., imports were 60 per cent., and exports 53 per cent. of the corresponding figures in 1929. The quarterly analysis by the Board of Trade, showing the distribution of our trade by countries, gives a picture of the geographical changes which have accompanied first the slump and secondly the gradual, though fitful, recovery.

The following table shows our trade quarter by quarter with Europe, foreign countries outside Europe, and Empire countries respectively:—

TOTAL IMPORTS (£000,000)									
Imports from	Europe (including Dependencies)			Other Foreign Countries			Empire Countries		
	1929	1933	1934	1929	1933	1934	1929	1933	1934
1st quarter	99.9	51.9	58.7	107.9	45.5	53.0	98.2	61.8	72.1
2nd quarter	115.0	55.7	62.5	91.9	43.0	47.2	91.9	62.4	68.6

4th quarter	60.0	35.2	...	42.3	18.5	...	83.6	45.3	...

As compared with a year ago, imports during the third quarter increased by 5 per cent., but this increase was much more marked in imports from foreign countries than in those from the Empire. On the other hand, the rise of over 6 per cent. in exports was almost entirely to British countries. The improvement in our exports mainly reflects the greater measure of recovery now obtaining in British countries and the working of imperial preferences.

The following table analyses in greater detail our trade with European countries:—

BRITISH TRADE WITH EUROPEAN COUNTRIES First nine months (000's omitted)

OSLO

Established 1848

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.
Offering complete services to banks and firms
doing business on Norway.

Correspondence invited

These figures of our trade with European countries are not encouraging. Our own purchases have gone up, reflecting the improvement in our domestic economic activity, but our exports during the third quarter amounted to only £200,000 more than a year ago. Exports to the Scandinavian and Baltic countries continued to expand, but during the last quarter Germany's import restrictions successfully curtailed purchases from this country from £4.0 to £2.8 millions and, with the possible exception of Switzerland, there are no signs of expanding markets for our products in the gold bloc. Russian imports from Great Britain have in the aggregate remained stable, but there has been a change in composition, a reduction of £1,000,000 in imports of machinery being offset by an equivalent increase in imports of iron and steel manufactures. Meanwhile our imports from all European countries except Denmark, Italy, Roumania and Turkey have risen as compared with 1933, and in several cases exceeded the 1932 level.

The next table shows the development of our trade with foreign countries outside Europe:—

* Including dependencies.

These figures show much the same tendency as those for European countries. Our imports from all countries except Persia, Iraq and Cuba have increased, but there has been no general expansion of exports. Our exports to Japan and U.S.A. have suffered a disastrous contraction since 1929, which still continues, though our imports from these two countries have risen sharply. Indeed, the value of our imports from Japan stands now at the 1929 level, in exchange for which we only send to her less than one-third of the value of our exports to her in 1929. In the nine months the only substantial increase was in the Argentine, which took £1,000,000 more goods than in 1933, the increase being spread over all categories of commodities.

Finally we come to the figures of our trade with the Empire:—

BRITISH TRADE WITH EMPIRE COUNTRIES

Excluding Irish Free State	...	...	...	...	...	...	...	...

Here the tendency for imports to increase more than exports, which has been apparent ever since the conclusion of the Ottawa Agreements, is apparently being reversed. During the third quarter of 1934 imports increased by £2.2 millions and exports by £6.7 millions as compared with the corresponding quarter of 1933. This is attributable to the continued recovery in all the Dominions and particularly in South Africa, to which country our exports are rapidly approaching the 1929 level. The recovery is reflected in increased purchases of iron and steel manufactures, of machinery and of electrical apparatus. The continued falling off of our sales to West Africa and to "Other Possessions" is due partly to the still prevalent distress in the sugar and raw materials-producing Colonies, and partly to Japanese competition. Our exports of cotton piece-goods to these countries have fallen by nearly £1,000,000 as compared with a year ago. The marked increase in our imports from the Straits Settlements, which took place mainly in the third quarter of this year, but still leaves them far below the 1929 or pre-war level, is almost entirely due to the increase of £3.6 millions in the value of rubber imported, owing to the sharp rise in price as compared with 1933. Changes in prices, particularly in those of tea and shellac, have also accentuated the rise in the value of our imports from Ceylon and India, though there has also been an increase in volume. The increase in the volume of our purchases of cotton from India and Egypt has been indirectly stimulated by the raising of the price of American cotton through the U.S. Government's restriction scheme. In the case of raw wool, rising prices have raised the value of our imports from Australasia in spite of a fall in the volume of imports. But here also there has been a transference of custom—this time within the Empire and from natural causes—from South Africa to Australia and New Zealand, owing to last year's very small clip in the former country. For the first nine months of 1934 our imports of wool from South Africa were £1,000,000 less, and from Australia and New Zealand were £2.3 and £2.0 millions more respectively, than a year ago.

It will be seen from the following table that our re-export trade has not enjoyed quite the same degree of recovery during the year as our export of British goods, the increase being 6.7 as compared with 7.8 per cent. Re-exports, indeed, are still less than half their value in 1929.

RE-EXPORTS

First nine months
(000's omitted)

	1913	1927	1929	1931	1933	1934

Total	82,364	92,749	84,438	48,255	37,162	39,674

With one exception the redistribution of trade has followed almost identical lines in our two kinds of export: stagnation in the markets of the gold bloc and of the United States, and increased buying in the sterling countries. The latter countries are included under Other British Countries or under Other Foreign Countries. The exception is the Soviet Union, which has bought £1.7 million more of our re-exports in the nine months than in the same period of 1933, owing to greater purchases of rubber. Russia now actually imports more British re-exports than in 1929.

The latest figures of our trade with the various countries and geographical divisions of the world show that the increase in the trade of the "sterling area" is certainly advantageous to this country. But the dimensions of our advantage are meagre, not only in comparison with such recent years as 1931 or 1932, but much more so compared to the obviously greater advantages which we could derive from a recovery in world trade as a whole.

AUSTRALIA TO-DAY

WHILE the second city of Australia was preparing for its centenary, Canadians were celebrating the four hundredth anniversary of the founding of their country by the landing of Jacques Cartier at Gaspé. There is a significance in the contrast; for the comparative youth of Australia, and the geographical isolation that caused it, are reflected both in her national characteristics and in her international attitude. Thirty-six years must pass before Australia will celebrate the bicentenary of the landing of Captain Cook in Botany Bay. When she celebrated the centenary, in 1871, Australia already possessed a population of 1,700,000, whose agricultural, pastoral and mining output approached £40 millions a year in value. After a further score of years, in 1891, her population and the value of her primary production had alike been almost doubled. To-day the population has been doubled again, and even in the depression year of 1931-32 primary production reached a total of £193 millions. It was eclipsed, however, by her manufacturing output, which in the same year exceeded £281 millions. One further set of figures may be quoted to illustrate Australia's swift expansion. Whereas in 1871 her wool output totalled 179 million lbs., in 1931-32 it was no less than 1,006 million lbs.

Of wool Australia is, of course, by far the world's greatest supplier. Her wheat output, approaching 200 million bushels, or roughly one-half a good Canadian crop, is a vital factor in world markets. Her sales of dairy produce and of meat are likewise critically important for herself, her customers and her competitors. These four items formed in 1931-32 no less than 68 per cent. of her exports, of which gold formed a further 11 per cent.

Being so largely dependent upon exports of raw produce, Australia naturally felt the impact of the depression sharply and soon. She began to feel it, indeed, when the hey-day of prosperity in manufacturing countries had still to come. Australia fell upon difficulties at that time mainly because the flow of imported capital, upon which her internal as well as her external economy had come to depend, dried up almost completely. Thus, besides the task of righting her balance of payments—which she tackled, under the Scullin Government, by a thumping increase of protective tariffs, as well as by exchange control and depreciation—she was faced with an acute problem of governmental finance. The famous Premiers' Plan of 1931 was first and foremost a device for straightening budgets burdened by the high interest charges on former borrowing, though undoubtedly the economists who recommended and the Ministers who adopted the Plan had also wider ends in view. The elements of the financial *assainissement* that was thus performed were the progressive reduction of State and Commonwealth deficits; a 22½ per cent. cut in interest on internal loans; the lowering of wage scales by something like the same proportion; the financing of current budgetary deficits (and to some extent of public works) by Treasury Bills issued to the Commonwealth Bank; and the latter's adoption of responsibility for determining and maintaining the rate of exchange on London. This scheme represented, partly by accident and partly by design, a judicious combination of

inflationary with deflationary technique; for the issue of Treasury Bills kept up the circulation of money, not only directly, through the spending of the funds thus raised, but indirectly, too, by furnishing the commercial banks with semi-liquid but profit-earning assets, on the basis of which they could maintain the volume of their advances and keep down the rates of interest charged.

The recovery of Australia, though sometimes exaggerated by those with axes to grind, has been remarkable in view of the low prices still obtaining for her principal products. She has been helped, of course, by recovery elsewhere, by the depreciation of sterling, by the high price of gold, and by a succession of good seasons. But internal and manageable facts have played a very real part also. The Commonwealth Government has achieved Budget surpluses for the past three years, and though the States are still a considerable way from balancing their accounts, the aggregate deficit for all Governments in 1932-33 was only £5,600,000, which was more than covered by the £8,000,000 paid in sinking funds. The improvement of Australia's credit has been vividly illustrated by the record of her conversions in the London market.

But financial and economic revival have left Australia with many urgent problems to face. The contrast between the surpluses of the Commonwealth and the deficits of the States is more than a passing accident. It reflects a permanent uneasiness in the financial, and thus in the constitutional, relations between the States and the Commonwealth. The centralisation of loan finance and the necessity for federal subsidies alike press upon State rights and independence. The constitutional conference of last February broke up without finding any satisfactory solution for this problem. Western Australia's demand for secession is a symptom of lasting trouble. Perhaps, in these days of economic nationalism and paternal government, federal constitutions must inevitably yield more and more power to the centre. The course of events in Australia, hitherto and in the future, may be a valuable object lesson for the United States, for Canada, and most particularly for the new India.

A second serious problem cast up by the now receding tide of depression is that of monetary policy and organisation. The success of the anti-Labour parties at the recent federal election fortunately allows this problem to be tackled in a spirit of reason and caution; nevertheless, the insistence of Labour upon nationalisation of the banks, the difficulties of the Government in finding a really telling and popular reply, and even the considerable number of votes given to Douglas Credit candidates (though none was elected) are evidence of a serious national conflict in this politico-economic field. The central banking functions of the Commonwealth Bank have been greatly strengthened by the turn of events during the slump, especially by its control over the exchange market and by the growth of Treasury bill finance. The Bank's virtual veto over Treasury Bill issues and its option in re-selling bills to the commercial

banks give it the nearest possible substitute in present circumstances for an open-market power. But growing power brings greater public responsibilities and louder popular criticism, and it seems doubtful whether the Commonwealth Bank will remain for long as it is without reorganisation in the direction of greater public control.

A third great problem still to be really faced is that of the tariff. Australia has adjusted her external balance, for the time being at least, to the cessation of capital imports; indeed, in 1932-33 she had an estimated surplus of £8,450,000 sterling on current account (including gold) available for capital export. It might thus be held that the time is ripe for a more liberal tariff policy. On this issue the alliance between the United Australia and Country Parties is unlikely to run very smoothly; for the former derives considerable support from high tariff interests that are anathema to the latter. The Labour Party, of course, is traditionally high tariff. It protested that in signing the Ottawa agreements the Lyons Government had sold an Australian birthright for a mess of pottage. Although the subsequent restrictions imposed or impending upon agricultural imports may have justified that description of the British offer, the counterpart reckoned in the hard cash of prompt tariff reductions was not large. Australia's tariff remains extraordinarily high, and the "equalisation of costs" principle has naturally produced no amelioration in practice. The Lyons Administration, however, in its policy of doing away with the prohibitions and other excesses imposed under the previous regime, led the world by appreciably moderating restrictions on trade at a time when they were still rising in almost every other country. Australia's present commercial policy is to attempt to negotiate special agreements with foreign countries—particularly, it seems, in the East—which in return will accord favourable entry to Australian produce. British import restrictions and the outcry that they evoked in the Dominion have been the principal motive behind this development. Its success or failure will be a portent for the future both of our own economic policy and of international trade agreements generally.

It may also have a profound reaction upon political relations in the Pacific area. At present Japan looms more importantly in most Australian eyes as a market than as a menace. The implications of a possible Japanese hegemony in Eastern Asia have not, perhaps, been fully realised by Australian opinion; geographical isolation and the unimpeded success of the White Australia policy have encouraged a possibly unjustified sense of security in the Pacific. But, of course, there is no such thing as a unanimous and coherent Australian opinion on these matters, and the increased expenditure on national defence is evidence of a different line of thought, though it probably represents little more than a vague feeling that the difficulties of the League and the threat of international anarchy demand greater national "preparedness."

NOTES OF THE WEEK

The King's Speech.—In a fog no less dense than that which accompanied the day of the General Election three years ago the King opened the new session of Parliament on Wednesday. So inclement, indeed, was the weather that for the first time on record the traditional gilded State coach was discarded, and the King and Queen rode to Westminster in a closed car. There was nothing very sensational or unexpected in the King's Speech. In fact, almost every one of the measures included in it is likely to be criticised as inadequate rather than condemned outright by the Opposition. This applies both to the all-important India Bill and to foreign policy, which we discuss elsewhere this week. Of the Government's other proposals—relief for the distressed areas, a scheme to abolish overcrowding, the reorganisation of the herring industry, assistance for tramp shipping and the prevention of "ribbon" development—none will be opposed in principle by the Labour Party. Indeed, the chief charge of the Labour amendment to the

Address is that the Government has "no constructive policy" in the economic or international spheres. There were omissions as well as inadequacies in the King's Speech which will be regretted outside Government circles: for example, the absence of any plans for the substantial expansion of international trade and reduction of unemployment. The omission, it is true, of any mention of a Beef Levy Bill is to be welcomed; for it appears to mean that Mr Elliot has not found it so easy as he hoped to force a restrictionist policy on Argentina and the Dominions. In general, however, such negative criticism as the Government receives in the new session is likely to come from its own back-bench supporters. This means that the Cabinet has a great opportunity before it. If it wants to win back the popularity it has lost in the country as a whole, it has only to show a little more enterprise and determination in attacking the problems—and above all housing and disarmament—that lie to its hand.

Disarmament—New Style.—Disarmament (Old Style) is dead. On Tuesday, the Bureau of the Disarmament Conference met at Geneva, under Mr Henderson's chairmanship, to consider the expectancy of life of Disarmament (New Style). The President of the Conference had given the members of the Bureau some idea of "the new Disarmament's" vital prospects in his letter of November 5th in which he recommended that, in default of any chance of a comprehensive disarmament convention, the Conference should concentrate in future upon three things. These were: the question of the regulation of the manufacture of and trade in armaments; the question of budgetary publicity; and the setting up of the Permanent Disarmament Commission. All of these points, in Mr Henderson's submission, could be embodied in protocols which would come into force without waiting for a final convention. The United States delegation on Tuesday promptly produced a draft text on the first two points, leaving budgetary publicity alone. Mr Henderson's proposals were agreed by the Bureau, and so was the American draft as a basis of discussion. The special Committees to which the full Disarmament Conference left the study of the problem are to be approached—so far, the Air Committee has not even yet considered the questions left to it by the Conference—and the Bureau is expected to set to work on its more modest programme in January. Parts II and III of the new American Draft provide that the High Contracting Powers shall assume entire responsibility for the control of the manufacture of, and trade in, arms and implements of war. They set out "to bring the full light of publicity to bear upon production of arms, both State and private, and upon the import and export of arms, the information to be submitted to a permanent central organisation at Geneva." That organisation is to have the duty of inspecting the accuracy of such reports. This translation of the American attack on the private armaments traffic to the international plane is a welcome sign. It received the support of the British Government and of the French and Swedish Governments. The Italian Government reserved its attitude until agreement should be reached on the principles of qualitative and quantitative limitation—i.e. *ad Kalendas Graecas*—while the Russian Government urged the weakness of "universal" international agreements as long as Japan and Germany remained beyond their purview. But, if the Bureau secures one protocol on the control of the manufacture of and trade in arms, and another for a Permanent Disarmament Commission—including, perhaps, provisions for M. Litvinov's proposed Permanent Commission for Security and Peace—that would be more than "a very good beginning." America has acted as *accoucheur* for the new Disarmament negotiations. We may hope that the new system, of less imposing appearance, will turn out to be more robust than the old.

* * *

—**And the Government.**—Meanwhile Mr Eden, at Geneva on Tuesday, was right to emphasise the paucity of the results to which the Disarmament Conference seemed to be limiting itself. "Only by the conclusion of a convention for the reduction and limitation of armaments could they hope to meet some of the most stubborn political difficulties of the time and bring appeasement to the nations." This is no new note from Mr Eden; he has only too often seemed like a soloist on the great theme of disarmament; but it harmonised with two significant pronouncements in this country on the same day. The King's Speech stated that the Government

will continue to make the support and extension of the authority of the League of Nations a cardinal point in their policy. They earnestly trust that the general work of the Disarmament Conference may be actively resumed in a political atmosphere more favourable to the attainment of definite results. In the meantime, strenuous efforts will be made to secure international agreement on such matters as are capable of separate treatment.

And the Prime Minister's speech in the House on Tuesday evening seemed even more emphatic a statement of the Government's intentions:—

The Government propose to adhere strenuously to their co-operative work at Geneva through the League of Nations.

... The Government, through the League of Nations and using their own diplomatic channels and their own influences will continue to pursue peace and do everything possible to bring it about. ... We shall go to Geneva determined to make another try, or many tries if necessary, to get something substantial and international out of the deliberations of that (Disarmament) conference. We shall take certain points which we believe are ripe for solution, and which can be separated from a general international agreement—matters like the private manufacture of armaments and some of the conventions which are now in draft in Geneva.

This may seem handsome amends for the disastrous impression created by the Foreign Secretary's contribution to the recent Arms Debate—an effect which Sir John Simon himself admitted in the House on Thursday. But it is not enough to be "faint, yet pursuing" after peace. Do all these utterances this week indicate that the Government is really ready to take the initiative in foreign affairs? The Prime Minister assures us that foreign affairs were not put first in the King's Speech "out of traditional courtesy." If the Government were now to strike out a bold line of their own on disarmament, coupled with provisions for collective security, we believe they would capitalise not only the vast amount of public goodwill in this country, from which they have so far feared and failed to profit, but they would also receive overwhelming encouragement from a fear-ridden world.

* * *

Cause and Effect?—Simultaneously with Mr Elliot's renewed efforts to persuade Australia and New Zealand to limit their beef exports to this country, comes the news that Australia's tariff "concessions" to British cotton exporters are regarded by Lancashire as worthless. The cotton trade's reply to the Australian Government is being despatched this week. This reply, it is reported, condemns the Australian concessions as being only of a minor character, affecting only a small volume of trade. Indeed, they are alleged to amount to little more than a re-arrangement of classifications. The duties on cotton yarn, which work out at over 30 per cent. of landed value, are not to be altered—although the head of the largest spinning firm in Australia has stated that his firm needs little or no protection against British yarns, apart from differences in raw cotton. The new duties on drills, denims, dungarees and jeans are alleged to amount to nearly 80 per cent. of the British f.o.b. price; if freight, insurance, primage and exchange are allowed for, the protection for Australian producers is put at 120 per cent. This margin is not to be altered. Clearly the new Australian Government has no more intention than the last of fulfilling the spirit of Ottawa, as far as British cotton goods are concerned. But can it be blamed, when Mr Elliot is urging it to renounce the right given to Australia at Ottawa of importing beef freely into this country? It is true that Mr Elliot's efforts have failed this time. And there is no direct evidence that their coincidence with Australia's refusal to modify the cotton duties is a matter of cause and effect. But requests, none-the-less, to Australia to reduce her sales to this country are hardly the best way to persuade her to increase her purchases. The Government's foreign trade policy is contradictory and chaotic.

* * *

Two Voices from Japan.—The three-Power naval conversations in London were carried one step nearer deadlock last Monday when the Japanese Ambassador, Mr Matsudaira, communicated to Sir John Simon the Japanese Government's views on the suggestions which the British Government had put forward. The stumbling-block in the conversations has been the Japanese demand for parity; and the motive behind this demand is manifestly a consideration of prestige or "face," since the present ratio of approximately 3-5-5 gives Japan absolute *de facto* naval supremacy in her own home waters against all comers, even if the British and American "fives" were to be combined into a single hostile force with a numerical superiority of 10 to 3. Considering that Japan's home waters give Japan access to the continental territories of China and the Soviet Union, and make it possible for her to bring her formidable land-forces into action on the main-

land, her present position is strong indeed. The British Government therefore proposed to satisfy the Japanese sensitiveness on the point of status by an acknowledgment of Japan's right to parity in principle, in exchange for an undertaking on Japan's part to keep her actual construction within a stipulated limit well below the parity level for a certain period. This proposal has now been rejected by the Japanese Government, which abides by its claim to actual parity without any time limit for its achievement. "If Japan thinks she does not need to build up to the limit, she will stay below it," says the Japanese Government. But this is a truism. Evidently Japan insists upon having a free hand to attain effective parity forthwith; and at the end of the conversations, as at the beginning, the only contribution towards a limitation of naval armaments that she seems willing to make is a proposal to renounce offensive naval armaments as defined by Japan herself—which Japanese definition does not include submarines! If this were the final word of Japan, the outlook would be altogether dark. But this week has also brought a public pronouncement by the late Prime Minister of Japan, Admiral Saito—a pronouncement which takes our breath away by its courageousness in a country where, during the last few years, free speech has so often been answered by assassination. Admiral Saito, speaking with unrivalled authority, roundly describes the present official Japanese naval policy as the offspring of propaganda and party politics, and he declares that the outbreak of a fresh competition in naval armaments will be one of the great catastrophes of world history. In conclusion, he appeals over the heads of Japanese fanatics and the politicians to the Emperor himself, and in effect begs him to arrest a course of public policy which would be even more disastrous for Japan herself than it would be for the United States or for the British Empire. This strong, sane and courageous voice from so dark a quarter, and at such a critical moment, may revive and sustain our hopes.

* * *

The Chaco War Goes On.—The report of the Committee of the League Assembly which is in charge of the task of restoring peace between Bolivia and Paraguay was published last Sunday and was presented to the Assembly, sitting in special session, on Tuesday by Dr. Benesh. At the same moment, the news has come of a great Paraguayan victory. The day before the publication of the report at Geneva, the Paraguayan forces in the Chaco captured Fort Ballivian, the Bolivian stronghold on the left bank of the River Pilcomayo covering the Bolivian base at Villa Montes. The Paraguayans claim to have taken some 10,000 prisoners and quantities of munitions. They are energetically pursuing their opponents, and it is not impossible that in a few days they may hold almost the whole of the disputed territory. This inauspicious military success of one belligerent has promptly translated itself into his rejection of the League Committee's report. The report recommends the setting up of a neutral supervisory commission of six members, to be designated by the four nearest States which are members of the League—Argentina, Chile, Peru and Uruguay. Brazil is unfortunately now outside the League, as is the United States, but presumably it is intended that two of the six places on the Committee shall be occupied by a Brazilian and a United States citizen respectively. Under the supervision of this committee, the belligerents are to be called upon to cease hostilities and to withdraw respectively to a distance of fifty kilometres from the present front line. Thereafter, there is to be no strengthening of fortifications or increase in armaments on either side pending the negotiation of a peace treaty. The armistice line, or rather zone, is to be without prejudice to the ultimate territorial settlement. The Paraguayan counter-proposals—presented on the morrow of the Paraguayan victory—likewise envisage an immediate cessation of hostilities, but this on the actual front of to-day—or to-morrow. The armistice is to be followed by demobilisation and disarmament—the front-line troops on either side being replaced by police forces—and then the peace negotiations are to follow. Naturally all this suits the book of the belligerent who has just gained

With next week's issue of
THE ECONOMIST
will appear a Special Supplement:

BRITISH INVESTMENT TRUSTS

containing the most detailed analysis
yet published of their structure,
operations and results over the last
decade, with special reference to the
period 1929-33

the utmost military success that he can hope for, but who is much inferior in latent resources, and therefore in staying power. Paraguay has had the advantage of fighting near her base, and in a country and a climate in which her soldiers are at home, whereas Bolivia has been sending listless highland peasants to fight far away from home in tropical swamps. But in a war of attrition, Time would be on Bolivia's side. It is for the statesmanship of the world to see to it that this war of attrition does not work itself out to its destructive end. At the moment Paraguay must be saved from her own wrongheadedness. Later it may be Bolivia's turn. The strongest measures are needed now.

* * *

A New Government in Belgium.—The political life of Belgium is showing the strain which the country has imposed upon itself in determining to remain upon the gold standard. The new Cabinet, which has been formed by M. Theunis after M. Jaspar had tried and failed, contains five Ministers who are not members of Parliament; and this is said to be without precedent in a century of Belgian constitutional history. The new Government is committed to the same monetary policy as its predecessor, and it would hardly be surprising if the new administration had as short a life as the old, for the essence of the political situation remains as it was. The Catholic and the Liberal parliamentary parties are united in their insistence that the gold standard must be maintained; and it seems probable that, in this matter, the will of the Belgian Parliament is also the will of the country. On the other hand, neither country nor Parliament welcomes the rather Draconian measures which any Belgian Government must adopt if it is to carry out its monetary mandate successfully. The only constructive line along which it is possible to find relief is through the promotion of trade between the different gold standard countries. But, though M. Jaspar has been active in this direction during his recent tenure of the Belgian Ministry of Foreign Affairs, it is not a policy which can be expected to produce quick results. The immediate means of remaining on the gold standard can only be found in a policy of drastic retrenchment in public expenditure; Count de Broqueville's Government did what they had to do with energy; and, paradoxically, the actual cause of their fall was their very success—which other Governments might have been tempted to envy—in producing a surplus on the Budgetary estimates. M. Theunis believes that he will be able to persist in the Belgian national policy of remaining on the gold standard without maintaining the fatally unpopular points in Count de Broqueville's programme. He will now ask Parliament to confer on him the same special powers of provisional legislation by decree as were enjoyed by his predecessor. It remains to be seen whether his request will be granted, and also whether, if it is granted, he will be able to refrain from using such powers in a way that will be as little to the liking of Parliament and the country as the acts of Count de Broqueville and his colleagues. The crux of Belgian politics to-day lies in willing a difficult end, without willing the arduous means by which alone it can be attained.

—And Another in Egypt.—The new Egyptian Ministry which has been formed by Tewfik Pasha Nessim consists at present of eight Ministers only, and these, while men of mark and experience in public affairs, are none of them politicians. In fact, the new Government as it stands represents neither the Palace Cabinet nor the Wafd. The question is whether it is merely a Government of transition from the one regime to the other, or whether it may be expected to last and to hold its own—perhaps to become something in itself. The new Ministers have been enthusiastically received by the people—partly because of the deserved unpopularity of the regime which they have replaced, and partly because this suits the Wafd. Through years of adversity the Wafd have managed to retain their hold on the country—or at any rate their power of evolving political demonstrations—and they evidently feel that if they now acclaim Nessim Pasha as their own precursor, they may be able successfully to cast him for that post. In any event, Nessim Pasha may be counted upon to do one good thing which the Wafd equally desire, and that is to abrogate the reactionary constitution of 1930 which King Fuad forced upon the country at a time when Egypt was living under a virtual royal dictatorship. The Cabinet's first act, when it met on November 16th, is reported to have been a decision to recommend the King to suspend his constitution and to dissolve Parliament. It remains to be seen whether this step will be followed by a restoration of the exceedingly democratic constitution of 1924. The most plausible excuse for the 1930 constitution was that its predecessor was so ill-adjusted to the present realities of Egyptian political life that it had simply become the instrument of a one-party dictatorship. What we may hope for now is that there will be a full and friendly discussion of the whole situation between the new Prime Minister and Mustafa Pasha Nahas, the former Wafd Prime Minister, who wears Zaghlul Pasha's mantle. If Nahas Pasha has learnt something from adversity (and he has had a long and painful lesson) we may now look forward to seeing Egypt return to a constitutional parliamentary regime on a sounder basis than that which she constructed for herself ten years ago. After that will come the opportunity to make another attempt at negotiating a comprehensive Anglo-Egyptian Treaty. This time, the conditions are perhaps more auspicious than ever before; for, in giving the late Palace Prime Minister, Yehia Pasha, the advice which he asked for, the British High Commissioner has incidentally served the cause of constitutional government in Egypt, and this has been noted and appreciated by the Egyptians.

* * *

Mr Keynes and the Rate of Interest.—Mr Keynes stimulated the gilt-edged market last February with his prediction that the long-term rate of interest was likely to go down and down and down. Subsequent events, so far at any rate, seem to have vindicated his prophecy. And this week, in a broadcast talk in the "Poverty and Plenty" series, he restated the argument, though from a slightly different point of view. Mr Keynes not only believes that the rate of interest is going to remain low throughout the foreseeable future; he would like to push it still lower. Interest rates are likely to fall, he thinks, for two reasons: first, because the supply of savings will increase, and, secondly, because the demand for savings will diminish—or at least not increase proportionately. The probability of an increase in savings is based by Mr Keynes on the simple fact that real incomes in general will tend to rise. If we save even the same proportion of a rising income, we save more in the aggregate. Mr Keynes is very likely right in believing that savings will increase even if the rate of interest falls to 1 per cent.; the "dis-saving" of those who are induced by low yields to consume their capital may well be balanced by the increased saving of those who wish to assure for themselves or for their dependants a given future income. But even if we ignore the chance of a revival in foreign trade, is Mr Keynes justified in assuming that opportunities for investment will not increase to the same extent as savings? At an effective rate of interest of even 2 per cent., an enormous potential demand for houses

—not to mention roads, gas and electricity equipment, etc.—would surely become effective. And is it so certain that the "secondary" industries, on whose products we are likely to spend our increasing incomes, will require less capital than the staple industries of the past? Does a shilling spent on a cinema ticket really represent an indirect demand for less capital than a shilling spent on a shirt? No dogmatic answer to these questions would seem possible. We are wholly in agreement with Mr Keynes, however, in his view that unless the community's savings are fully expended on investment, unemployment will remain and the full possibilities of increasing prosperity will not be realised. And undoubtedly the market rate of interest does not always adjust the supply of savings to the demand in any tolerable space of time. This, as Mr Keynes urges, is the weakest point in the classical "self-adjusting" philosophy. Indeed, we may reasonably accept the principle that as long as labour and savings are extensively unemployed, the rate of interest ought to be pushed lower. At the moment, however, the problem is not so much to depress the yield on gilt-edged still further as to bring the rate charged to short-term business borrowers and to potential house-owners into something like adjustment with that yield. The rates charged to these classes of borrowers at present are still much nearer to 5 than to 2 per cent. This, as Mr Keynes would probably agree, is the immediate practical problem.

* * *

The Local Loans Fund.—There are rumours of an impending conversion of the 3 per cent. Local Loans which have shared in the recent boom in Gilt-edged securities, and are now approaching par. The status of this stock among Government securities is an unusual one, and it may therefore be convenient to explain its standing and the effect of its conversion to a lower interest basis. Local Loan stock, which is a charge against the Local Loans Fund and guaranteed by the Treasury, is now outstanding to a nominal value of £429 millions. The proceeds of the stock issued provide a fund from which the Public Works Loan Commission can make loans to local authorities secured on local rates or on property. To March, 1932, a total of £467 millions had been advanced by the Commissioners, and the amount then outstanding was £291 millions. Interest payments by the Public Works Commissioners into the Local Loans Fund exceed interest payments by the Fund on its stock, and a surplus income account has been built up. Up to 1917 the surplus income was invested or applied to meeting the discount of Local Loans stock issued which at present amounts to £142 millions. Since 1917 surplus income has been used to meet the requirements of the Local Loans Fund for further advances. Against its perpetual stock the Fund has as assets advances to the Public Works Commissioners secured on loans to local authorities which can be redeemed at various dates, but there is no specific provision for writing off the very considerable discount at which a large part of the Fund stock was issued. Conversion of the outstanding stock, which can be effected at one month's notice, would increase the surplus income of the Fund, and this would provide the resources for making further loans by the Public Works Commissioners, presumably at an interest rate lower than on outstanding loans. Reduction of interest rates charged to the local authorities has been made from time to time and it is clear that the main benefits of conversion would result in still further economies to new municipal borrowers. Conversion would thus have no direct effect upon the Budget; but it is obvious that the conversion to a lower interest basis of an important perpetual stock would be yet another landmark in the downward trend of interest rates.

* * *

Electricity Distribution in London.—Distribution is the bottle-neck of electricity supply. The high-voltage grid constructed and operated by the Central Electricity Board makes possible very great economies for users of electricity, but these economies will not be realised until the distributing concerns are thoroughly co-ordinated. The situation is chaotic enough over the whole country, but is probably worse in London than elsewhere. For electricity supply in London started off on the wrong lines. Com-

petition between companies was encouraged in the 'eighties by granting a franchise to a separate company in every parish, and some parishes were even provided with two companies. At the time when the grid scheme was devised London boasted of some 50 supply undertakings, each with its own generating plant, its own supply voltages and systems. It seemed almost as if each supply system were a trade-mark, which had to be different for each company. The grid scheme attacked the problem of electricity generation, and in recent years generation has been concentrated in large power stations. But the distribution of electricity is still in the hands of the old companies. For these reasons the news of the formation of a Central London Electricity Distribution Committee is welcome. Six companies, all of which take their bulk supply from the London Power Company, have agreed to co-ordinate their distribution systems. How far they will be able to go is not yet clear. The aim should be standardisation of a 230-volt 50-cycle alternating-current system, and an attractive rate policy which will stimulate increased consumption. There should be no great danger in a considerable reduction of rates, since the potential demand by consumers for electricity is ahead of the capacity of the companies to supply under existing conditions. It is hoped that other companies will join in this scheme, for it offers great benefits to suppliers and consumers. Before manufacturers can produce all our multifarious domestic and industrial electrical appliances cheaply, there must be the highest measure possible of standardisation of electricity distribution over the whole country. The present scheme for London is evidence that at last some companies are taking steps in the right direction. The bitter antagonism between consumers and suppliers of electricity in the United States should prove both a moral and a stimulus to British distributing concerns.

* * *

Another Wheat Conference.—The international wheat agreement, concluded on August 25, 1933, and summarised in the *Economist* of September 2, 1933, contributed very little to the solution of the world's wheat problem. The improvement in the wheat situation since then is due almost entirely to the short crop harvested in North America and in certain other countries this year. As a result of this crop failure, the world's exportable stocks are expected to be reduced from 656 million bushels at the end of July, 1934, to about 400 million bushels at the end of the current season. Stocks will thus be reduced to more manageable proportions—indeed, to the lowest level since 1928. But this improvement is largely fortuitous, for crop failures cannot be expected to continue indefinitely. The essence of the international wheat problem is the uneconomic redistribution of wheat cultivation in recent years. The international agreement of last year and the conferences of the Wheat Advisory Committee since then have done nothing to reverse this tendency. The proportion of the world's wheat crop (excluding the U.S.S.R.) produced in importing countries increased from 27.4 per cent. in 1928-29 to 40.5 per cent. in 1933-34. Moreover, the maintenance of prices in importing countries far above free-market quotations has tended to restrict consumption. If reports in the Press are correct, the International Wheat Conference, which opened at Budapest last Tuesday, is merely concerned with the extension of the wheat agreement from July 31, 1935, to the corresponding date in 1937; the revision of export quotas (which were not adhered to by all countries in 1933-34); and with the establishment of a quota reserve. But as long as importing countries persist in their policy of national self-sufficiency and dear bread, the wheat problem will remain unsolved—to the general detriment of two great populations in the world, the producers of wheat in normally exporting countries, and the consumers of wheat in normally importing countries.

* * *

Sterling and International Prices.—Sterling prices have continued to decline. Our complete index number has fallen by 0.4 per cent., while our primary products index number has fallen by as much as 2.1 per cent. This difference in part arises from the construction of the

primary products index number, which is based on those commodities, such as wheat, maize, rice, cotton, wool, copper and rubber, which occupy a leading position in the world markets. All these commodities, with the single exception of cotton, have declined during the past fortnight, but certain less important commodities, such as tea, cheese, silk, jute and spelter, have advanced. These increases, together with the movements of prices of semi-manufactured articles, explain the small decrease in the complete index number. The American wholesale price index numbers, both general and primary products, have again advanced, the former by 0.2 per cent. and the latter by 0.9 per cent. The divergence between the decrease in English prices and increase in American prices during the past month to some extent arises out of the simultaneous appreciation of sterling. French prices continue to fall, but German prices are steady and Italian prices fractionally higher.

Details of the group indices comprising the complete *Economist* index number are given below:—

"ECONOMIST" INDEX

(1927 = 100)

	Sept. 18, 1931	Oct. 24, 1931	Nov. 7, 1931	Nov. 21, 1931
Cereals and meat	64.5	70.4	68.3	67.5
Other foods	62.2	58.5	59.1	59.4
Textiles	43.7	51.5	51.7	52.0
Minerals	67.4	76.4	75.8	75.3
Miscellaneous	65.8	69.1	68.7	68.2
Complete index	60.4	65.2	64.7	64.4
1913 = 100	83.1	89.7	89.0	88.7
1924 = 100	52.2	56.3	55.9	55.7

In the cereals and meat group, all grain prices have fallen with the exception of oats. Argentine beef is cheaper, but English mutton and Danish bacon are higher. Among other foodstuffs, tea, refined sugar and cheese are dearer, but coffee, butter and coconut oil have fallen. Textile prices are mostly higher, but wool prices have declined. In the minerals group copper and lead have fallen. Among miscellaneous materials, hides, rubber and Swedish timber are all cheaper, but there were advances in linseed oil and sulphate of ammonia.

Shareholders Take the Initiative.—Despite the ignominious end of the international copper cartel (Copper Exporters, Inc.) the idea of copper restriction is once more

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)

Annual Income : : : : £5,600,000
Funds : : : : £23,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

to the fore. No doubt, Copper Exporters were able to maintain prices for a considerable time, at a level out of all proportion to costs of production in efficient units. But the subsequent decline was all the more pronounced. The price of copper (standard cash in London) declined from £75½ per ton in 1929 to £31½ in 1932. The high price not only failed to prevent, but actually stimulated the development of high-grade ores outside the United States. The proportion of world production mined in the United States declined from 46½ per cent. in 1929 to 17 per cent. in 1933. Moreover, the deliberate restriction of supplies did not prevent the enormous accumulation of stocks of this metal in North and South America. In 1933 prices rose a little as a result of an increase of demand, but during recent months the trend of prices has again been downward. The recent downward movement has been due chiefly to the recession in the world's industrial activity, but the situation has been aggravated by the existence of the heavy stocks in the United States and by the terms of the copper Code, which led to heavy American sales abroad. The renewed fall in prices has again led to an agitation for a price-raising scheme which would involve the deliberate curtailment of production. A number of British shareholders in the copper mining industry are anxious to obtain support for a new restriction scheme. It is proposed to form a Copper Shareholders Association, with the object of offering "the strongest support to directors to come to such arrangements with other copper producers as will bring an end to the existing ruinous conditions, and to impress upon them the urgency of restoring a reasonable degree of both confidence and prosperity to the industry." While we are far from suggesting that ownership should be divorced from control, we would remind these shareholders that the low-cost producers, especially in Rhodesia, are operating at a profit at the present level of prices; and that any attempt to raise prices by curtailing production would only benefit the high-cost producers elsewhere.

British Industrial Production.—The progress of industrial activity in this country has been a little fitful of late. The physical volume of production in the United Kingdom in the third quarter of 1934, as estimated by the Board of Trade, was 4 per cent. smaller than in the previous quarter, but 8.8 per cent. greater than in the corresponding period of 1933. Changes in the indices for various industrial groups are shown in the following table:—

INDEX OF PRODUCTION (1924=100)

Group	Year 1932	Year 1933	Sept. 1933	June 1934	Sept. 1934
1. Mines and quarries	77.5	76.9	70.2	78.8	76.9
2. Iron and steel and manufactures thereof	66.2	82.2	84.2	104.3	98.2
3. Non-ferrous metals	96.3	101.9	100.3	142.1	151.0
4. Engineering and shipbuilding	88.6	96.0	93.5	111.8	110.7
5. Textiles	85.1	89.8	88.8	91.0	85.9
6. Chemical and allied trades	98.1	101.0	99.8	107.3	103.9
7. Leather and boots and shoes	96.4	106.2	105.5	108.1	99.0
8. Food, drink and tobacco	97.6	99.2	102.5	107.6	104.8
9. Gas and electricity	147.0	156.2	(a)	(a)	(a)
Total of manufacturing industries (2-9)*	97.2	103.9	103.6	117.7	112.5
Total of all groups (1-9)*	93.3	98.6	96.8	109.7	105.3

* Including also various industries not specified above.
(a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

While the decline in industrial activity between the second and third quarters was largely seasonal, the downward movement suggests that the progress of recovery was arrested in the summer. A year ago the momentum of the upward movement was sufficient in the third quarter to counteract the normal seasonal decline. With the exception of the index for non-ferrous metals, which registered

a rise of 6 per cent. between the second and third quarters, all the indices showed a decline during this period. The recession was most marked in the case of leather, boots and shoes, iron and steel and textiles. But, as compared with a year ago, the indices for engineering and shipbuilding, and for iron and steel, show an increase of 18 per cent. and 17 per cent., respectively. The figure for non-ferrous metals, which is based on imports, registered a rise of over 50 per cent. In the case of chemicals and food, drink and tobacco the improvement was less pronounced. On the other hand, the output of textiles and of leather, boots and shoes declined by 3 per cent. and 6 per cent. respectively during this period. Fortunately, there is evidence of a renewed expansion of activity in October.

The National Income of Germany.—The national income of Germany seems to have passed the lowest point reached in 1932 and is now moving slowly upward. It remains, however, far below the level of the prosperity years and still below the pre-war level. The figures calculated by the Statistisches Reichsamt are:—

Period	Total Income		After deduction of Reparation Payments			
	Nominal Value		Nominal Value		In terms of purchasing power in 1928†	
	Aggregate (Millions of R.M.)	Per head of Population (R.M.)	Aggregate (Millions of R.M.)	Per head of Population (R.M.)	Aggregate (Millions of R.M.)	Per head of Population (R.M.)
1913*	45,693	766	45,693	766	69,326	1,162
1928	75,373	1,185	73,374	1,153	75,373	1,185
1929	75,949	1,187	73,448	1,148	74,915	1,171
1930	70,223	1,092	68,524	1,066	72,320	1,125
1931	57,458	889	56,466	874	64,142	992
1932†	45,286	697	45,083	695	56,795	875
1933†	46,419	714	46,238	711	59,428	914

* Present territory. † Provisional. ‡ Adjusted by official cost of living index.

There would not have been a higher national income in 1933 at all if the original figure for 1932—namely, Rm. 46,475 millions aggregate total income, or Rm. 716 per head—had not subsequently been reduced by Rm. 1,209 millions or Rm. 19 per head. Still more interesting, however, is the distribution of the national income in the last year, as it clearly reflects the results of the new economic policy of Germany. As shown in the table below, the labour income as a whole, which accounts for nearly three-quarters of the total sum of private income and investment income, has continued to fall off, whereas the profits from agriculture and trade and industry have gone up. As regards the labour income, the share of wages and salaries has slightly risen, but not to such an extent as pensions and payments out of the unemployment insurance and other funds have diminished.

(In millions of R.M.)

Period and Source of Income	1929	1930	1931	1932	1933
Wages, salaries	43,045	39,851	33,378	25,711	25,980
Pensions, etc.	9,188	9,994	10,090	9,014	8,395
Labour income	52,233	49,845	43,468	34,725	34,375
Trade and industry, etc.	11,768	9,950	7,500	6,000	6,500
Agriculture	5,487	4,950	4,375	3,825	4,045
Profit income	17,255	14,900	11,875	9,825	10,545
Dividends, interests, etc.	3,264	3,341	3,195	2,318	2,286
Rents	871	900	900	800	760
Investment income	4,135	4,241	4,095	3,118	3,046
Sum of private income	73,623	68,986	59,428	47,668	47,966

German authorities claim that unemployment has been greatly reduced, and that the level of wages and of doles has been maintained. But if the present figures are correct, it means that employed workers now get the same pay as they got when they were unemployed. The investment income, which was lowered in 1932 by the reduction of interest and rent by emergency decree, has again been affected by certain measures taken for the protection of debtors as well as by the exodus out of the larger residences. The increase of profits from trade, industry, etc., reflects the huge sums the Germans have spent for their Programme of Work Creating; the higher agricultural profits are due to an increase of food prices. No marked alteration in the distribution of the national income can be expected this year.

UNITED STATES

THE ELECTIONS ANALYSED

THE extent of the Democratic sweep in the elections was rather greater than generally expected, but it cannot be said that the election contained a single element of surprise. As yet the returns are not quite complete, but they may be summarised as follows:—

In thirty-four States voting for Governors seven elected Republicans, twenty-five elected Democrats, while the local Farmer-Labour Party re-elected Governor Olson in Minnesota and the local Progressive Party elected Mr Philip La Follette in Wisconsin. Mr La Follette is the brother of Senator Robert La Follette, also elected. At least two of the Republican Governors-elect ran as supporters of the New Deal; and at least one Democratic Governor-elect ran as an opponent of the New Deal.

The Senate will be constituted as follows:—

	Present (73rd)	New (74th)	
Democrats.....	60	69	+ 9
Republicans.....	34	24	- 10
Farmer-Labour.....	1	1	
Progressive.....	1	1	
	96	95 (1 uncertain)	
The House of Representatives is as follows:—			
Democrats.....	309	318	+ 9
Republicans.....	113	99	- 14
Farmer-Labour.....	5	4	- 1
Progressive.....	...	7	+ 7
Vacancies.....	8	...	...
Uncertain.....	...	7	...
	435	435	

There is no agreed interpretation of the significance of the election. Broadly speaking, such mooted points as the Agricultural Programme, the Monetary Programme, the N.R.A., etc., did not figure in the campaign. The Spending Programme was in instances attacked by the Republicans as an effort to corrupt the electorate, and acclaimed by the Democrats as evidence of their solicitude for the "under-privileged." But really the campaign centred upon the personality of Mr Roosevelt, and the real dividing line was between those who support him personally and those who do not. As such, the result was an enthusiastic endorsement of the President.

It is conventional to remark that an election clears the air; but the mists have not risen perceptibly. The future disposition of the elements of the New Deal, rather than being indicated by the election, is merely referred to the personal decision of the President. For example, it is nearly time for the Agricultural Adjustment Administration to announce its curtailment policies for 1935. Most of our agricultural products, thanks to the drought and curtailment, are priced far above an export basis. Cotton, which is valorised as well, is not above an export basis; but it is noted that our cotton is moving slowly and that foreign production is increasing rapidly. In other farm products, only the recurrence of another historic drought or a curtailment of great severity can avoid an export surplus in 1935. And curtailment is not popular in the agricultural districts. In the same way, the re-orientation of N.R.A. is not yet formulated, and the whole elaborate scheme of industrial organisation is merely drifting. In fiscal policy, it is generally supposed that spending will be continued liberally, but it is not yet known whether the spending programme is to be financed by increased taxes, by borrowing, or by the issue of fiat money. This combination of concrete uncertainties makes for continued sluggishness in business.

SIGNS OF A RECOVERY IN PRODUCTION

In spite of this, however, there is some evidence that the sharp slump that began in May and continued through September, and which ran to close to 20 per cent. in the

index of production, touched bottom in the latter month. Reports through October and into November to date indicate some recovery in steel owing to demand from the motor centres, and optimistic forecasts from Detroit suggest an early upturn in the manufacture of automobiles. Retail trade continues satisfactory, and oddly enough some of the best reports come from the luxury trades, such as jewellery. There are indications that the Florida winter resorts are anticipating an active season. Indeed, it is not at all easy to reconcile various economic data. For example, the few unemployment or employment figures we have neither correspond to the extreme fluctuations in the index of production nor to the obvious activity of retail trade. All reports from the south-eastern cotton States picture conditions which can almost be described as booming; yet freight-car loadings in that area are extremely low.

The weakness of the foreign currencies other than sterling has emphasised the significance of the September foreign trade figures, which are given below:—

FOREIGN TRADE OF THE UNITED STATES

	(\$000,000)	Sept., 1933	Sept., 1934
EXPORTS			
To Europe.....	82	87	
To Rest of World.....	78	105	
IMPORTS			
From Europe.....	50	39	
From Rest of World.....	97	93	

In comparison with last year, United States exports have risen and imports fallen, leaving the United States with a widening active balance towards Europe (\$32 millions in 1933, \$48 millions in September, 1934), and a passive balance towards the rest of the world (\$19 millions) in 1933 becoming an active balance of \$13 millions in 1934. The figures for the third quarter are as follows:—

THIRD QUARTER FIGURES, 1933

	Exports	Imports	Export surplus
Europe.....	213	145	+ 68
Rest of World.....	222	300	- 78

THIRD QUARTER FIGURES, 1934

	Exports	Imports	Export surplus
Europe.....	218	111	+ 107
Rest of World.....	308	268	+ 40

That is, in the third quarter of 1933 we had a passive trade balance of \$10 millions; in the same quarter of the current year we had an active trade balance of \$147 millions. It will be noted that our principal gain in exports has come in the non-European countries; the decline in imports from these countries in the third quarter of 1934 is from a very high level in 1933, which reflected speculative purchases. With Europe, our exports show little gain and our imports a large decline.

The following table shows our trade with the United Kingdom, also for the third quarter respectively of 1933 and 1934:—

UNITED STATES TRADE WITH EUROPE (\$000,000)

	Exports	Imports	Export surplus
United Kingdom.....	78	34	+ 39
Rest of Europe.....	135	106	+ 29

THIRD QUARTER, 1934

	Exports	Imports	Export surplus
United Kingdom.....	95	28	+ 67
Rest of Europe.....	123	83	+ 40

Between these periods, United States exports to the United Kingdom rose and to the Continent fell. United States imports both from the United Kingdom and the Continent were lower, but the decline of imports from the United Kingdom was proportionately greater. In short, the United States has a large active trade balance with the world and specifically with Europe. The largest single element is that with the United Kingdom. Although the passive trade balance of the third quarter of 1933 was exceptional, the change represented by the figures of the two periods is surprisingly great.

NEW YORK, November 9.

FRANCE

THE FLANDIN CABINET AND THE PUBLIC DEBT

THE first measures of the Flandin Cabinet have been greeted by a general rise of Government securities. This is mainly due to the fact that the Cabinet had a good reception in Parliament. The Opposition is neither important nor aggressive, and it is generally expected that the present Parliamentary calm will last for some time. From the financial point of view, the recovery of rentes has been assisted by the Treasury's intention to restrict its demands on the market. So far this year total public issues have been not lower than 24,000 million francs:—

(000,000 francs)		
Treasury Bonds 5 per cent.—5, 10, 15 years.....	4,065	January 5, 1934
P.T.T. Debentures 5 per cent.—15 years.....	1,192	February 19, 1934
Crédit National.....	1,000	April 23, 1934
Algérie 5 per cent.....	860	May 10, 1934
Treasury Bonds 4 per cent.....	3,000	July 12, 1934
Morocco 5 per cent.....	359	August 22, 1934
Crédit Agricole 5 per cent.....	21½	August 29, 1934
Treasury Bonds 4½ per cent.—3, 5, 10 years.....	8,770	September 24, 1934
Great Railways System.....	4,698	

The Public Debt, however, has not increased by a similar amount, since a fraction of the former debt has been repaid. The following table shows the evolution of the public debt from September 30, 1933, to August 31, 1934:—

(000,000 francs)		
	Sept. 30, 1933	Aug. 31, 1934
Internal Public Debt:—		
Perpetual.....	52,145	51,933
Amortisable.....	169,179	178,844
Middle and short term.....	19,004	22,302
Floating debt.....	54,279	53,929
Total.....	294,607	307,008
External debt.....	4,139	4,011
General total.....	298,746	311,019

This table, which takes no account of the War Debts on which payments are suspended, shows an increase of 12,273 million francs in eleven months. Between September 30, 1932, and September 30, 1933, the debt increased from 274,609 millions to 298,746 millions. The rate of increase was therefore half as rapid in 1933-34 as in 1932-33. The debt necessitated the following credits in the 1934 and 1935 Budgets:—

(000,000 francs)		
	1934 Budget	1935 Budget
Internal debt:—		
Perpetual.....	1,874	1,870
Amortisable.....	7,284	7,421
Middle and short term.....	1,025	1,373
Floating debt.....	379	385
Total.....	10,562	11,049

The deficit on the railway system for 1934 is now estimated at 3,938 million francs. It was 4,107 millions in 1932 and 4,395 millions in 1933. The improvement is due to economies in expenditure amounting to 965 millions.

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital and Reserves: D. Gulden 5,378,542

Chairman: Dr. Roman Górecki.

Vice-Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.

Joint Managers: Wacław Konderski and Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig. INQUIRIES SOLICITED.

This was offset, however, by a reduction of 390 millions in receipts and an increase of 152 millions in cost charges. The reduction in expenditure is due to temporary causes, which will tend to disappear in coming years. The total Railway deficit will reach 17,510 millions at the end of this year. It is covered up to 15,144 millions by loans which have been issued by the railways. The balance of 2,276 millions is covered by Treasury advances.

SIGNS OF FOREIGN TRADE RECOVERY

The aggregate value of French foreign trade in October was 3,359 millions (1,795 millions of imports and 1,504 millions of exports), against an aggregate of 3,171 millions in September. The increase of trade is thus 188 millions. As imports have risen more than exports, the monthly import surplus is higher at 230 millions, compared with 135 millions in September, 281 millions in August, 363 millions in July, 512 millions in June, 594 millions in May, 565 millions in April, and a record of 802 millions in March. The following is the volume of exports and imports for the first ten months of the last two years:—

	First Ten Months of 1933 (Metric tons)	First Ten Months of 1934 (Metric tons)	Increase (+) or Decrease (—) in 1934
Imports:—			
Foodstuffs.....	5,771,186	4,857,559	— 913,627
Raw materials.....	33,207,338	31,896,003	— 1,311,335
Manufactured goods.....	1,544,199	1,534,960	— 9,239
Total.....	40,522,723	38,288,522	— 2,234,201
Exports:—			
Foodstuffs.....	936,411	985,407	+ 48,996
Raw materials.....	17,400,495	19,409,157	+ 2,008,662
Manufactured goods.....	2,558,271	2,846,075	+ 287,804
Total.....	20,895,777	23,240,639	+ 2,345,462

While only exports increased in September, imports also increased in October. In aggregate values imports for the first ten months of 1934 were 19,448,702,000 francs and exports 14,624,173,000 francs, and the import surplus was therefore 4,824,529,000 francs. Exports have increased in volume, but fallen in value.

PARIS, November 20.

SWITZERLAND

UNEMPLOYMENT INCREASING

THE general economic situation of Switzerland has not greatly improved or deteriorated since the end of July, though there has been some slight recovery in the activity of a few industries. During the third quarter of the year imports totalled 343 million francs and exports 203.8 millions, leaving a passive balance of 139.1 millions. Compared with the second quarter exports show a drop of about two millions in value, but an important increase in volume. Swiss industry, however, is handicapped by the high value of the Swiss franc and by trade barriers. The devaluationists seem recently to have lost some ground, and the Government is stubbornly resolved to maintain the gold standard.

Unemployment is increasing. At the end of October there were 59,621 unemployed, compared with 51,587 at the end of September and 56,397 at the end of October, 1933.

Since the second quarter of the year the exports of the four chief industries have fallen by one million francs. The watchmaking industry is slowly improving its position, and its exports have increased by one million francs. The machines industry shows an increase of about two millions; but the silk industry shows a drop of three millions and the cotton industry of nearly two millions. Trade with Great Britain was comparatively active in the third quarter, imports from Great Britain totalled 23.4 millions, compared with 22.7 millions during the second quarter, and 27.1

HUNGARY

LEAGUE REPORT ON FINANCES

THE budgetary position appears, in the light of provisional returns for the first quarter of the financial year that began on July 1, 1934, to be stationary. There is no longer the marked improvement that was taking place at this time last year, as compared with the corresponding period of the year before, nor, according to the view expressed in the recent report of Mr Tyler, the representative of the League of Nations, is further progress to be expected without some economic revival. Comparative figures are as follows:—

July 1st-September 30th			
	1933	1934	
Expenditure			
	Million pengö		
Actual budgetary.....	166.3	174.7	194.1
Deferred budgetary	13.3	7.3	
Actual extra budgetary	9.1	12.1	
	188.7		
Receipts			
Actual budgetary.....	175.3	179.8	188.2
Refunds	2.1	1.3	
Borrowing	5.7	7.1	
	183.1		
Balance	-5.6	-5.9	

Results for the last three months, taken in conjunction with the mediocre grain crop and with other economic indications, show that the trend of trade is no longer upwards, as it was at this season last year.

Provisional results of the State undertakings (railways, etc.) for July and August confirm the impression conveyed by the Administrative budget figures, i.e. that the position is stationary here also. According to the estimates voted by Parliament for 1934-35, the State undertakings are expected to yield 343.9 million pengő, as compared with an estimated expenditure of 404 million pengő. There is little hope that the forecast deficit of 60 million pengő can be reduced in view of the results of July and August and the outlook for the coming months. Current receipts of the railways in July and August amounted to 35.4 millions, against 35.8 millions in the same months of 1933, those of the post, telegraph and telephone decreased from 16.2 million pengő to 15.2 million pengő. The ironworks now reveal a deficit approximately equal to what the State would have to pay annually in pensions if this undertaking were discontinued.

AGRICULTURE AND INDUSTRY

Although wheat prices on the open international markets have increased somewhat, the Hungarian internal price, at the official exchange rates, is more than double the price, less freight, obtainable for Hungarian wheat on those markets. This increase in the internal price is due in part to a small crop this year and in part to the Rome agreements concluded in April last, under which Italy and Austria agreed to take, at more than the open market price, amounts of Hungarian grain which together make up the greater part of this country's normal export surplus. The effects of the

CONDITION OF INDIA

"The Government of India had no alternative to banning the India League's report... The report is written with studious moderation, and it is quite as much concerned with the shocking economic conditions of the Indian village as with the... many abuses that naturally accompany unrestrained police rule."—*New Statesman and Nation*.

"... it serves to emphasise the diverse views that may be taken of the Indian problem."—*The Times*.

"I would urge everyone who is inclined to be complacent about the British connection with India to get this book and ponder over it."—*HORACE G. ALEXANDER, The Friend*.

"As a more forward statement, from the Indian standpoint, of India's needs, it makes the proposals of the White Paper seem rather over-moderate than over-conceding, and for that reason alone, at the present juncture, it is of political importance."—*LAURENCE HOUSMAN*.

Published by

ESSENTIAL NEWS, 18 Gordon Square, W.C. 1. 2s. 6d.

millions during the third quarter of 1933. Exports to Great Britain totalled 18.9 millions, compared with 22.1 millions in the second quarter and 21 millions during the third quarter of 1933.

In order to encourage exports, combat unemployment, and reduce differences between Swiss and foreign prices, the Government decided several years ago to grant so-called "manufacturing subsidies" to the industries which asked for State help. Disappointment at the failure of the policy is now reflected in a report issued by the Government.

A clearing agreement with Germany has been in operation since August 1st. According to the agreement all persons and companies established in Switzerland have to pay into the National Bank the sums they owe to German creditors, and German debtors have to pay into the Reichsbank the sums they owe to Switzerland. The agreement provided for the full transfer of the interests on the Dawes loans, but traders very soon recognised that it only benefited Germany. Actually, Swiss exports to Germany, which averaged about 13 millions a month until the end of July, suddenly rose to 14 millions in August, to 20 millions in September, and to 14 millions in October, while, at the same time, the imports of German goods dropped from a monthly average of 35 millions to about 31 millions. New negotiations have given no result. Swiss industrialists consider that they have been duped.

THE NEW BUDGET DEFICIT

The Budget of the Swiss Confederation for 1935—which has just been published—will not be received with satisfaction in the country. The figures are as follows:—

	1934	1935
(000 francs)		
Revenue.....	422,400	436,300
Expenditure.....	430,700	477,900
Deficit.....	8,300	41,600

The increase in the 1935 revenue is due to the fact that the "Crisis Tax," to be levied for the first time, is expected to produce about 100 millions. The rise in expenditure is due to several extraordinary expenses, most of which are a result of the crisis. First the yearly instalment of the repayment of the Public Debt is being brought up from 20,566,000 francs in 1934 to 30,480,000 francs. The interest on the Debt will be increased by about 4 millions and reach a total of 88 millions. While important savings are to be made in various Federal services, expenditure in certain directions is again increasing. That of the Military Department—totaling 94 millions—shows a rise of three millions over the 1934 Budget. The rise in State subsidies for assisting industry, trade and agriculture, will altogether amount to nearly 17 millions, while 1.5 millions is to be granted to the Federal Railways in compensation for losses sustained as a result of reductions in fares. Apart from these expenses, Parliament will be called upon to vote some extraordinary grants aggregating about 20 millions to be expended on public works designed to occupy the unemployed, and on subsidies to the home wheat grower.

In the comments which accompany the Budget the Federal Government insists that, despite the deficits recorded since 1932, the balance sheet of the Confederation has been improved by about 500 millions. From 1924 to 1932 the total of State loans was reduced from 2,200 millions to 1,700 millions. During the same period the floating debt rose from 104 to 249 millions, but this sum includes 178 millions appropriated for the pension fund for State officials—a long-term debt—and a debt of 71 millions to the Post service. On the other hand, the Government has at its disposal in the National Bank a sum of 83 millions.

Despite the unsatisfactory state of the Federal Budget, the investing public has not lost its confidence in the soundness of Swiss finances. This is shown by the unexpected success of the loan recently issued by the Federal Government: 100 million francs' worth of 4 per cent. bonds were issued at 98.65 per cent. and subscriptions totalled 243 millions.

GENEVA, November 20.

Rome agreement which came into force on July 1st cannot yet be measured in Hungary's trade with Italy and Austria. In the first half of 1934, the export surplus with Austria had fallen to 10.4 million pengő, as compared with 17.8 million pengő in the same period of 1933. And the export surplus of 3.5 million pengő with Italy in the first half of 1933 turned into an import surplus of 3.2 million pengő in the corresponding period of 1934.

Attempts have been made to raise internal prices of other agricultural commodities besides grain, e.g. milk, potatoes, firewood, but this has been done by burdening the internal consumer. There has been no assistance in the form of fixed quantities taken by foreign countries at higher prices than those obtainable on the free markets. The agricultural index after the rise of grain prices (wheat sells at 16 pengő per metric quintal, against 8 pengő a year ago) stood at 71 (1913 = 100) at the end of September, 1934, as compared with 54 a year ago. The disparity between agricultural and industrial prices is, however, very large, as the general industrial price index is still at 108, while in most countries it has dropped well below the pre-war level.

The cost-of-living index (1913 = 100) declined from 100.3 at the end of September, 1931, to 87.8 at the end of 1933, and stood at 89.3 in September, 1934. Consumption of the staple industrial articles has considerably increased in 1934 as compared with 1932 and 1933. The output of domestic iron and steel, as well as the importation of general articles from abroad, has been steadily on the increase during 1934 as compared with the two previous years. Saving deposits at the Post Office Savings Bank and at the twelve leading commercial banks amounted to 565.9 million pengő at the end of September, 1934, against 522.8 million pengő a year ago; current accounts at the same institutions decreased from 677.1 million pengő to 657.6 million pengő. The balance sheets of the banks do not disclose how much of their indebtedness is to foreigners. In any case, the position of the banks may now, with the dollar and sterling depreciated, appear in a better light than it did in the crisis of 1931.

BUDAPEST, November 16.

POLAND

PUBLIC OPINION AND FRANCE

In conformity with the Constitution, the Sejm and Senate assembled in ordinary session on November 6th to deal with the Budget proposals for the fiscal year beginning April 1, 1935. On the following day the legislatures were adjourned for one month. The brief debate on the Finance Bill, which the Sejm passed in the first reading, developed into an attack on the Government's foreign policy. It is quite unusual in Polish Parliamentary history for the Government of the day to be attacked on foreign policy, and it shows that there is uneasiness in the public mind over the course of events since the Polish-German Non-Aggression Pact was signed on January 26th last. This uneasiness is due, perhaps, more to uncertainty than to actual events; the extreme reticence of those responsible for the conduct of foreign relations has raised doubts in Poland no less than abroad about the Government's policy. The Government declared, in reply, that Poland "will be faithful to her alliances and friendships, and that Polish policy will always be one based on peace and not on prestige." The provocative tone which certain sections of the French and Polish Press adopted two or three months ago has happily disappeared; and the feeling here is that, without imperilling the "correct and friendly attitude" towards Germany, efforts will soon be made to lift Franco-Polish relations out of their present atmosphere of uncertainty. There can be little doubt that Polish public opinion is no less pro-French than it ever was.

The Government's intentions about the Constitutional Reform Bill, which is still with the Senate, have not yet been determined, but it is known that Marshal Pilsudski will not allow the Bill to become law in its present form.

The Budget estimates for the two current years are as follows:—

	1934-5	1935-6
	(zlotys)	
Expenditure	2,184,552,000	2,132,861,600
Ordinary revenue	1,961,254,000	1,983,743,700
Deficit	223,298,000	149,117,900

The deficit in 1932-33 was 242 million zlotys, and, in 1933-34, 337 millions. With the additional internal borrowing which will be needed to provide for next year's anticipated deficit, the public debt will have been increased by over 1,000 million zlotys since the crisis began in 1929-30, although expenditure has been successively reduced by 850 millions between 1930-31 and 1935-36. Conditions in the money market are (for Poland) exceptionally easy.

When presenting the 1935-36 estimates to the Sejm the Finance Minister stated that ordinary revenue may now be considered as having reached rock-bottom, and that the gap between revenue and expenditure will continue to narrow. It is not the Government's intention, however, to compress expenditure too rapidly, the official view being that such action is neither necessary nor desirable. In the next Budget public debt service (exclusive of autonomous bodies whose issues will require an additional 27.2 millions) is estimated at 202 million zlotys, as compared with 192,670,000 in the current year; the allowance for the Ministry of War remains unchanged at 761,700,000; while the Ministry of Education will be reduced from 311,558,000 to 293,500,000 zlotys.

DEFLATION TO BE CONTINUED

The Government's economic programme was recently outlined in a speech by the Prime Minister, who called particular attention to the measures already enacted by decree for relieving agricultural indebtedness; the voting of credits for railway, port, electrification and other classes of public works; the rise in grain prices brought about partly by official intervention; the lowering of railway rates; and the continuous pressure which is being maintained on the industrial cartels to reduce prices in the home market. The coal industry was compelled to lower its prices by about 12 per cent. on November 1st. The Government, in brief, will continue to maintain the present gold value of the zloty and to equalise as far as possible the consequent deflationary influences. The general index of wholesale prices in October (1928 = 100) was 54.9, of articles bought by farmers 69.0, and of products sold directly by farmers 36.4. A year previously the indices were 58.1, 72.5 and 41.1 respectively.

Foreign trade returns for October show exports valued at 91.4, imports at 71.3, and the active balance at 20.1 million zlotys. The corresponding figures for October, 1933, were 104.4, 91.0 and 13.4 millions. The figures for the first ten months of the year were as follows:—

	1933	1934
	(In millions of zlotys)	
Exports	774.7	805.3
Imports	699.6	663.3
Active balance	75.1	142.0

The negotiations still going on between Poland and Great Britain for a tariff agreement to supplement the existing commercial treaty, which are expected to be concluded before or soon after December 31st, will go far towards determining the size of the active trade balance next year. Concurrently with the trade treaty negotiations, discussions are taking place between the leaders of the coal industries of both countries over the possibility of controlling export tonnage and prices. A recent meeting in Warsaw has given promise of a successful outcome of these discussions, which may turn out to be a first step towards a general European agreement.

WARSAW, November 20.

GREECE

THE BALKAN ENTENTE

WITH the re-election of M. Zaimis as President of the Republic, a temporary lull has been reached in the keen struggle between the Government and the Opposition parties. Since fundamental political differences have not been settled, however, an acute situation may be expected sooner or later.

Constructive results were at least achieved by the Conference of the Balkan Entente in Angora. While the solidarity of the Balkan States in the cause of peace has been reaffirmed, the false step of amalgamating the Balkan Entente with the Little Entente has been avoided. Nevertheless, a Balkan Economic Council has been formed, which, if well directed, may render invaluable services to the member States, not only on the economic but on the political field.

Negotiations for the service of the foreign debt are expected to start early in January. The Prime Minister, M. Tsaldaris, will probably head the delegation which will come to London for the purpose. Since the last negotiations with the foreign bondholders in 1933, fresh taxation has been imposed, but expenditure has also increased, and little, if anything, remains for raising the percentages of interest paid on the foreign debt. In addition, there exist internal claims for compensation of damages, expropriated and exchanged property, etc., amounting to 4,000 million drachmas. Payment of these obligations, a legacy of the war, has been postponed until now.

This will naturally throw a fresh burden on the Budget, and lessen proportionately the chances of an increase in the percentage of the service paid on the foreign debt. According to the London agreement, 27½ per cent. for 1933 and 35 per cent. for 1934 of the normal interest has been fixed for payment. The Government will propose a continuance of the 35 per cent. share for each of the years 1935 and 1936. They will insist also on payment in sterling of the percentage to be finally agreed, or in sterling equivalent, whereas the bondholders demand part of the service of certain loans to be calculated in gold francs.

As regards the sterling mortgage bonds, which have been issued in London by the Mortgage Bank, reports from governmental sources mention that the bondholders have already accepted a reduction of the interest rate from 7 per cent. to 5 per cent., and that the Government are insisting on a reduction to 4 per cent. The aim of the authorities is both to enable the bank to lower by 2 per cent. the rate of interest charged to mortgage borrowers, and to oblige the latter to pay hereafter the interest and sinking fund service of their loans at the current rate of exchange (at present 535 drachmas to the £), instead of at the rate of 425 drachmas to the pound fixed by law. According to the same reports, the Government are determined, if an agreement with the mortgage bondholders has not been concluded by December 1st, to put new restrictions on the export of the blocked drachmas arising from the proceeds of coupons on mortgage bonds held abroad.

ATHENS, November 19.

BRAZIL

THE 1935 FEDERAL BUDGET

THE House of Representatives has passed the 1935 Federal Budget and dispatched it to the President of the Republic for approval. This is the first Budget since Brazil returned to a constitutional footing. The revenue in the new Budget is estimated at 2,169,577 contos de reis (£36,160,000) and the expenditure at 2,691,685 contos de reis (£44,860,000). The Budget deficit is therefore 522,107 contos de reis (£8,700,000).

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:
CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:

HELLENIC BANK TRUST COMPANY,
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

The distribution of the expenditure in the new Budget is as follows:—

	Contos de Reis
Finance	*1,010,508
Interior	123,566
Exterior	46,590
Education and Public Health	176,546
Labour, Industry and Commerce	19,708
Transport and Public Works	569,758
Marine	230,586
War	441,721
Agriculture	74,671

* Including service on public debt.

It is expected, however, that the Executive may make drastic cuts in some of the expenditure items.

The following statistics, recently published, show that cotton production in Brazil is steadily increasing:—

	1933	1934
Production in—	Tons	Tons
Northern Brazil	110,536	163,200
Southern Brazil	48,100	108,500
	158,636	271,700

The increase in production has mostly been in Sao Paulo, where the March-June harvest exceeded 90,000 tons; exports to European ports from Santos alone during September reached 43,000 bales, weighing 6,823 tons, with an estimated value of £357,000.

RIO DE JANEIRO, November 15.

CANADA

MR BENNETT AND MR STEVENS

MR H. H. STEVENS's resignation from the Cabinet has been followed by an acrimonious correspondence between himself and Mr Bennett, the Prime Minister, in which each challenges the veracity of the other. Mr Bennett avers that the grave impropriety of Mr Stevens's course in publishing under Ministerial authority a pamphlet which commented upon the unfinished proceedings of a committee, and made unfounded charges, rendered his retention of office impossible unless amends were made. Mr Stevens maintains that he has been forced out of office by reactionary colleagues acting under the pressure of "big business" interests affrighted at the exposure of their misdeeds, and that all through last session these colleagues had shown a lack of sympathy with his investigation. The Conservative Party, whose fortunes were already low, has been badly split by the quarrel. Conservative papers in Montreal and Toronto support Mr

Bennett, but most of the other Conservative papers support Mr Stevens. Moreover, Mr Stevens has received a flood of letters and telegrams commending his conduct.

Mr Bennett is understood to be contemplating the re-organisation of his Cabinet, several of whose older members want to leave office for the Senate or the Bench. Mr R. B. Hanson, K.C., of New Brunswick, will probably be given Mr Stevens's Department. But the Government has been badly shaken by Mr Stevens's resignation, and the *Ottawa Citizen* declares that the signs of the Ministry's disintegration are plainly visible.

Mr Phillips, the United States Under-Secretary of State, has been in Ottawa conferring with Mr Bennett about modifications of the St. Lawrence Waterway Treaty designed to appease American opponents of the project. But although the Bennett Ministry is anxious to go ahead with the scheme, the prospects of effective Canadian co-operation have been lessened by the advent of a Liberal Administration in Ontario. Its head, Mr Hepburn, has been a consistent opponent of the waterway scheme, and has lately declared that he will not countenance it, on the ground that it is uneconomic, that Ontario and Quebec have already more hydro-electric power than they can use, and that the institution of another avenue of transportation would merely aggravate the railway problem.

"BEAR RAIDS" ON THE WINNIPEG MARKET

The Bennett Ministry has been convinced by its agent in Winnipeg, Mr McFarland, that European importers and speculators have been conducting organised "bear" drives against the wheat price structure in Winnipeg, and under instructions from Ottawa the price of December wheat has been "pegged" at a minimum of 75 cents, and of May wheat at a minimum of 80 cents. This move is regarded as a temporary expedient until some plan of regulation of the operations of the Winnipeg Grain Exchange, such as Mr McFarland advocates, is brought into effect. Since the "pegs" were inserted, wheat prices have moved upward, and the spokesmen of the grain growers approve the Government's action. But the grain trade is dubious about its effects, and the *Financial Post* of Toronto ridicules the idea of "bear" raids by European interests and declares that the Government's immense holdings of wheat, which are still placed at between 150 and 200 million bushels, are the chief factor in keeping prices down. An absurdly large price spread, it is argued, is being maintained between Winnipeg and Liverpool.

During the second half of October business conditions in all the Eastern Provinces have shown some recession, but there has been an improvement in the Prairie region and in Manitoba. Both wholesale and retail trade remain at a satisfactory volume, and the movement of merchandise is being well maintained. The car-loading figure for the week ending October 20th was 56,873 cars, as compared with 51,560 cars for the previous week and 51,705 cars for the corresponding week of 1933. The Bureau of Statistics' employment index for October 1 showed a gain, not usual at this season, and it now stands at 100.0, compared with 98.8 on September 1, 1934, and 90.4, 86.7 and 103.9, respectively, on October 1, 1933, 1932 and 1931.

Commodity prices are virtually stationary, and the Bureau's wholesale index for the week ending October 19th was 71.4, compared with 71.5 for the previous week. The index of wholesale prices for the first eight months of 1934 has averaged 71.7, as compared with 66.4 in the parallel period of 1933, a gain of 8 per cent.; the increase in the price of farm products was 16 per cent., which implies a closing of the gap between agricultural and general prices. The index of the cost of living had only advanced in this period from 77.9 to 78.8. The earnings of both the railway systems for the first three quarters of 1934 show a gratifying improvement; in this period the net income of the C.P.R. is placed at \$13,670,107, a gain of \$3,698,656, and of the C.N.R. at \$7,142,505, a gain of \$6,235,133. The export movement of grain is still disappointing, and visible stocks of Canadian grain on October 19th were placed at 245,240,584 bushels, which is almost identical with the figure for the parallel date in 1933.

MONEY AND BANKING

THE STERLING AREA

THE term "sterling area" is necessarily extremely loose, for in no sense are the countries contained in it bound together in a formal monetary union, nor can the boundaries of the area be exactly defined. Yet it is common knowledge that since sterling has been divorced from gold, many countries both inside and outside the Empire have of their own free will endeavoured to link their currencies to sterling, and as a result the British Empire, the Scandinavian countries and part of South America are now joined together in this way. Even so, the sterling area has come into being in a more or less haphazard fashion, and few people have yet thought whether the countries in it are in equilibrium with each other, or whether the loose texture of the sterling area can crystallise out into something more permanent. Hence it may be opportune to examine how far internal equilibrium exists to-day.

The full list of the sterling area countries is far too long to permit of a complete examination, but a fair sample can be obtained by taking four of the Dominions, the three chief Scandinavian countries, and Argentina. The best starting point for an examination is by comparing the wholesale price levels of those countries, with that of the United Kingdom as a yard-stick. We began by assuming that equilibrium existed in September, 1931, and that no sterling area currency was then over-valued in terms of any other. This we freely admit is a very bold assumption. It overlooks the fact that Australia and New Zealand were driven by internal disequilibrium to break away from both gold and sterling prior to September, 1931, and it minimises the fact that all primary producing countries were suffering from the fall in prices before our own troubles became really acute. Unfortunately, it is impossible to calculate with any precision the relationship between prices and exchanges in the sterling area that existed immediately before we went off gold. We are therefore driven to make this sweeping assumption.

Using it as our starting point, we first take wholesale prices in September, 1931, as 100, and proceed to recalculate the subsequent movements of the wholesale price index for each country on that basis. The next step is to divide the British index number for any month into the Dominion or foreign index number for the same month. Obviously, if the quotient is greater than unity, then the Dominion or foreign wholesale price index stands above the British wholesale price index, and *vice versa*. Finally, we take the actual exchange rates of the various currencies last June, and calculate the undervaluation of each currency in terms of sterling at that date. The results are set out below:—

RELATIVE WHOLESALE PRICE-LEVELS IN STERLING AREA: 1931-34
(United Kingdom = 100 throughout)

	Norway	Sweden	Denmark	Australia	New Zealand	Canada	South Africa	Argentina
1931—Sept.	100	100	100	100	100	100	100	100
Dec. ...	96	95	100	94	93	93	90	99
1932—March	98	95	100	97	94	93	90	99
June	105	103	106	102	101	98	93	106
Sept.	99	97	103	98	94	91	84	96
Dec. ...	104	100	108	97	95	91	88	97
1933—March	105	100	115	98	101	94	94	100
June	96	92	104	96	92	90	90	91
Sept.	97	94	109	98	92	82	88	91
Dec. ...	98	97	112	97	94	94	102	102
1934—March	96	97	110	97	94	96	98	103
June (a)	97	98	108	97	94	96	92	105
Rate of exchange:— June, 1934: Per cent. of rate current Sept. 1931 (b)	Kr.19.90	Kr.19.40	Kr.22.40	£125	£125	\$5.00	£100	26½d
Under valuation of foreign currency*	-11.5%	-8.5%	-12.2%	-1.0%	-27.3%	-8.6%	-8.0%	-8.5%

* Relates to June, 1934, and arrived at by calculating the percentage divergence of line (a) below line (b).

The table shows that Norwegian and Swedish prices have stood consistently below British prices, except in June,

1932, when British prices reached their nadir, and in the winter of 1932-33, when British prices were again depressed. Both the Norwegian and Swedish kroner, however, were linked to sterling at a slight discount. Both currencies were then undervalued in terms of sterling; and it appears that last June the Norwegian krone was undervalued by 11.5 per cent. and the Swedish krona by 8.5 per cent.

The Danish price curve is roughly parallel to that of the other two Scandinavian nations, but it was shifted on to a higher plane by the depreciation of the kroner in January, 1933. This upward shift, however, was not sufficient to compensate for the depreciation of the exchange, and last June the kroner was undervalued by 12.2 per cent.

New Zealand wholesale prices can be usefully compared with the Danish. There is a rough parallel, though the level of New Zealand prices is definitely lower. The most significant fact is the failure of New Zealand prices to rise permanently above the sterling level after the heavy depreciation of the New Zealand pound in January, 1933. As a result of this failure, last June the New Zealand pound was undervalued in terms of sterling by as much as 27.5 per cent. Australian prices, on the other hand, have shown comparatively little variation from British prices, and in comparison with 1931 the Australian pound is in equilibrium with sterling.

South African prices fell a long way below British prices in 1932, when South Africa was still on gold. Since then the two curves have drawn closer together; but in June last the South African pound was still undervalued by about 8 per cent. Canadian prices have moved in much the same way, as the Canadian dollar depreciated with the American dollar. Last June the Canadian dollar was undervalued by 6.6 per cent. Finally, Argentine prices have recently risen above British prices as a result of depreciation of the peso during the past year. Even so, the peso is still undervalued by 8.5 per cent., but the change in the position of the peso is so recent that the process of readjustment is probably incomplete. It is also doubtful how far the wholesale prices of a primary producer such as the Argentine are comparable with an industrialised country like England. This qualifies the comparison to some extent.

The general impression left by this analysis is that, assuming equilibrium existed in September, 1931, the pound has since become overvalued by nearly 10 per cent. throughout the sterling area. In other words, British prices are 10 per cent. too high. It is important to know how far this is the result of our drift towards economic nationalism as expressed in our tariff, the Ottawa Agreements, and our control of agricultural imports. It must not be forgotten that we have concluded commercial treaties with every one of the countries mentioned, with the avowed object of mitigating the effects of our new protective policy. In spite of the tariff concessions embodied in these treaties, it appears that the pound is still overvalued, or in other words that British prices are relatively higher than those in these sterling area countries. It is reasonable to suspect that in the case of those sterling area countries with which we have not concluded commercial treaties the price level differential is greater still. As regards the relative level of British prices and those of countries now on gold, the position is complicated by the depreciation of sterling against the gold currencies, and also by the failure of many of the gold countries to lower their internal prices in full proportion to the depreciation of sterling.

In order to test this theory, some further evidence can be obtained by calculating the ratio of our imports from each sterling area country to our exports to that country, by values—that is, by dividing the value of our exports to it into the value of our imports from it. This procedure cancels out fluctuations affecting our total trade turnover,

on imports and exports alike. The results for the first nine months of the past five years are set out below:—

RATIOS OF IMPORTS FROM CERTAIN "STERLING AREA" COUNTRIES INTO BRITAIN TO BRITISH EXPORTS TO THOSE COUNTRIES, BY VALUE

Rates of British Imports to Exports*	Norway	Sweden	Denmark	Australia	New Zealand	Canada	South Africa	Argentina
First nine months:								
1930 ..	1.04	1.97	4.86	1.27	2.63	1.21	0.70	2.21
1931 ..	0.94	2.00	5.25	2.80	3.53	1.28	0.58	3.14
1932 ..	1.43	1.75	4.20	2.38	4.00	2.27	0.81	4.88
1933 ..	1.26	2.03	3.01	2.16	4.38	2.48	0.59	3.28
1934 ..	1.29	1.81	2.44	1.84	4.08	2.25	0.39	3.21

* i.e., of imports into, to exports from, Great Britain.

The Norwegian and Swedish ratios show little change. It appears that the undervaluation of these currencies has offset the British tariff. The Danish ratio has been halved. This is partly due to the development of our home agricultural policy, but the main cause is the expansion in the New Zealand ratio, due to the Ottawa Agreements and the marked undervaluation of the New Zealand pound. New Zealand has gained at Denmark's expense, for she now has the larger share of a restricted British market.

The Australian ratio has fallen from its 1931 peak, as Australia's ability to import has improved, but the ratio is still above the 1930 level. Canada steadily improved her position until this year, when the undervaluation of her dollar became less pronounced. The Argentine ratio has also fallen since 1932 after the debt agreement and the gradual relaxation of Argentine import restrictions. The South African ratios are so distorted by gold shipments as to be incapable of a strictly "commercial" interpretation.

These results confirm the view that the British tariff has led to the growth of a 10 per cent. price differential which is also true of those sterling countries, i.e. the Dominions, to whom we grant preferences. As an important point of detail, New Zealand has to some extent succeeded in ousting Denmark, but Denmark is now buying more British goods, absolutely, than New Zealand. In general, the sterling area has been, and still is, subject to certain internal stresses, but it is standing these well and has proved itself a useful and practicable system. It is stronger than the gold bloc and its currencies have been more stable than the American dollar. Yet our change in fiscal policy and subsequent measures of economic nationalism have necessitated certain off-setting readjustments, and these do not yet seem to have been provided for or achieved.

FINANCIAL NOTES

The Money Market.—Money and discount rates have been a shade firmer this week, partly because funds are being accumulated in public deposits at the Bank of England and partly because of an impending increase in tender issues of Treasury bills. On November 23rd £40.0 millions of bills are to be offered, and if the whole amount is allotted, there will be an increase of £10 millions in the total supply of bills. The Treasury, of course, is making preparations for the War Loan dividend payment on December 1st, and this largely explains both these changes in the position. In consequence, most outside lenders are now holding out for $\frac{1}{2}$ per cent. and in some cases are trying to secure $\frac{3}{4}$ per cent. for loans against bonds. A rate of $\frac{1}{2}$ per cent. is also charged for loans into the New Year.

	Nov. 1, 1934	Nov. 8, 1934	Nov. 15, 1934	Nov. 22, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ -1
Discount rates:—				
Treasury bills.....	$\frac{3}{8}$ - $\frac{7}{8}$	$\frac{5}{8}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{7}{8}$	$\frac{7}{8}$ -1	$\frac{1}{2}$	$\frac{1}{2}$

Discount rates have also become a shade firmer during this week. The Treasury bills issued on November 16th went at

an average tender rate of 4s. 9.46d. per cent., against 5s. 2.65d. per cent. the week before, but last week's applications were small, and this week January and February maturities have been offered at $\frac{1}{4}$ per cent., with few buyers. The rate for three months' bank bills has also changed from a weak to a firm $\frac{3}{8}$ per cent., and on Thursday afternoon the discount market was expecting an advance in the Treasury bill tender rate the following day. The position should become temporarily easier again in early December, after the War Loan dividend payment, but Christmas currency withdrawals should then begin to take money in appreciable quantities off the market.

The Bank Return.—There has been a further contraction in the note circulation, and as a result the Reserve has risen by £2,000,000. Next week the Christmas expansion in the circulation will begin, and by the end of a fortnight should be sufficient to affect the supply of credit.

BANK OF ENGLAND

	Nov. 22, 1933	Dec. 27, 1933	Nov. 7, 1934	Nov. 14, 1934	Nov. 21, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—

Proportion 53.2% 37.3% 46.9% 47.4% 47.6%
There has been a further expansion of £4.4 millions in public deposits, due in part to the excise payments which are always made in the middle of the month. As a result of this, bankers' deposits have fallen by £2,000,000 and are £11.3 millions less than a fortnight ago.

The Foreign Exchanges.—The London market has been idle this week, but profit-taking and the successful formation of new Governments in France and Belgium has caused some strengthening of the gold bloc currencies. French francs have been steady at Frs. 75 $\frac{1}{2}$, and early in the week the rate was strong enough to enable the British control to sell a few francs. Three months' francs have also been firmer. Belgas have also become stronger, the three months' rate in particular having narrowed to 37 $\frac{1}{2}$ cents discount,

THE STOCK EXCHANGE

INDIA GOVERNMENT STOCKS

THE Report of the Joint Select Committee on the proposed constitution for Indian government is of first-rate importance to the holders of the £295 millions of Indian sterling loans which enjoy an active London market. Its publication coincides with a period of strength in all gilt-edged stocks. Its implications as regards India's future borrowing status will demand careful consideration by trustees and other investors who, in the past, may have been attracted by the higher yields obtainable on Indian than on British Government stocks. On comparable long-term issues, the price differential has recently been as much as 10 to 15 points, equivalent to an interest differential of about one-half of 1 per cent.

A certain "margin" may be appropriate in the case of loans issued by primary producing countries. Quotations for Indian stocks, however, appear also to have taken account of pending political changes. These considerations have recently tended to obscure the extent of Indian economic recovery, which, since the crisis years of 1931 and 1932, has been considerable, though unspectacular. At the impact of financial strain, the linking of the rupee to sterling gave India the advantage of membership of the sterling area. The table which follows clearly shows, however, that extreme depression in the export trades was not immediately avoided by this policy. The rupee gold premium, in fact, supplied the solution to the problem of raising an adequate visible balance, since the export surplus on merchandise account shrank, in the fiscal year 1932-33 to as little as 3,36 lakhs of rupees. From September, 1931, India reversed her traditional "treasure" movements and became on balance a large exporter of gold. As a result, her total visible balance of trade, from 1931-32 onwards, was higher than in any year since 1925-26. Although there are signs that this adventurous benefit is slowing down, possibly owing to the difficulty of enticing further amounts from up-country hoards, there are also indications that the merchandise balance is once more slowly moving in the right direction.

† Net imports. ‡ Excluding value of railway materials imported direct by State Railways, which do not enter into balance of trade.

The merchandise export position, however, has still fully to recover from the effects of lower price levels. Quantitatively the returns for 1933 were not unsatisfactory. While low prices prevail the purchasing power of the pre-

dominantly agricultural population is necessarily straitened, and the real burden of their fixed indebtedness substantially increased. Wholesale prices, which varied only between 148 and 141 during the years 1926 to 1929 (July, 1914 = 100) fell sharply in 1930 and 1931, and are now steady at just under 90. This price factor, which has caused delay in payments and accumulation of rent and other arrears, was emphasised in the Finance Member's Budget speech in February last. That it has had serious repercussions on India's importing capacity cannot be questioned, although the fall in actual imports has been intensified by high import duties on silk, sugar and cotton goods.

Between 1921 and 1931, according to the Census returns, the number of persons engaged in pasture and agriculture in India rose by five millions. The number engaged in industry, mining and finance increased by eight millions. The total of cotton spindles in British India increased by over 27 per cent. in the decade 1921-30. The increase in looms was as much as 31 per cent. The growth of joint-stock capital employed by companies working in India, especially in manufacturing and mining industries, points to the same conclusion. India is actively developing a nucleus of basic industries. Although the production of pig iron fell considerably between 1929 and 1932, the trend during the last decade has reflected steady growth, and the current level of output is approaching the high level of 1929. The trade agreement with Japan, which was signed last January, establishes, until March, 1937, the principle that Japanese cotton goods, in excess of the agreed 125 million yards, will be allowed to enter only if corresponding purchases of Indian raw cotton are made.

Provided the progress of "industrialisation" is not artificially forced, it is calculated to enhance the national wealth and income, and, incidentally, to mitigate the element of "inelasticity" in the public revenues. The Budget estimates for the current financial year show that, of a tax revenue of 76,51 lakhs of rupees, some 47,76 lakhs are to be derived from Customs, 8,73 lakhs from salt, and only 17,25 lakhs from direct taxation. The tax revenue represents approximately 2 rupees per head, equivalent to about 3s. sterling. Holders of Indian stocks may find the Budget statements somewhat difficult to dissect. The effective charge for loan interest, for example, is largely concealed in the self-balancing railway budget. The total "interest on ordinary debt," budgeted for in the current financial year, is 39,77 lakhs, which has been immediately recharged to railways, posts and telegraphs, provincial loans fund, and other headings. The budget burden is therefore limited to "interest on other obligations," which for the most part are of purely domestic concern. The gross payment to England is estimated at 19,63 lakhs in the current year, of which interest on loans and railway annuities accounts for 17,56 lakhs. Of a gross budget revenue of 1,19,71 lakhs (including railway revenues) the interest service of Indian loans in London requires only some 16 per cent. The burden of lower prices, however, has necessitated a reduction in "debt avoidance" allocations to 3 crores for the past and current financial years. This, however, in view of the inability of the railways to contribute to the general revenue under present conditions, may doubtless be regarded as a justifiable temporary expedient. Broadly, British stockholders may conclude that interest on India's sterling obligations requires a relatively small proportion of a revenue which appears to have sound potentialities for long-term expansion.

In the recent past, however, India's credit in London has been somewhat strained by political rather than economic factors. At Christmas, 1929, thinly veiled threats from Lahore, which coincided with the discussions for a new system of government, not unnaturally suggested to some British investors that the security for their loans might be

INVESTMENT NOTES

endangered. In January, 1930, Mr Wedgwood Benn, then Secretary of State for India, declared that the Government of that time had no intention of allowing a state of affairs to arise in which repudiation of debt could become a practical possibility. This general principle has always been upheld, and the Report of the Joint Select Committee confirms the "special responsibilities" set out in the White Paper regarding financial and other matters. Ultimate control, in effect, is hereafter to vest in the Governor-General on all aspects of debt security and service, but the Report does not specifically provide that new borrowing must necessarily be utilised for productive purposes. The earlier history of Dominion finance suggests that overborrowing for non-productive purposes may proceed for some time before credit is "seriously prejudiced" in leading centres. It may be presumed, however, that there is slight substance in this proviso, as regards Federal borrowing. The wide powers of intervention

the profits of important companies whose accounts are made up to September 30th are running close to, and in some cases exceeding, the level of 1929:—

* On capital increased by amalgamation. † Free of tax. ‡ And 33½ per cent. capital bonus. § Figures shown after deduction of direct expenses. ¶ Fifteen months equated to twelve. (a) And capital bonus of 50 per cent. (b) Of which 7½ per cent. free of tax and 12½ per cent. subject to tax.

Brewery directors have shown willingness to pass on to ordinary shareholders the financial consequences both of depression and renewed prosperity. Of the seven companies shown, four are paying the same rates for 1934 as for 1929, and one is paying a higher rate. Bristol Brewery, Georges, which has the almost unique record of a constant dividend throughout the depression, is now distributing a capitalised bonus of 50 per cent. By every canon, the brewery industry, whose post-war finance has been a model of conservatism, is financially prosperous to-day. Investors, however, might be unwise to look for a dramatic rise in dividends next year. Consumption may have room for a further moderate increase if the curve of national activity continues to rise, and the economies of "rationalisation" are certainly not exhausted. But a third hot summer in succession would be a meteorological miracle. The remaining reports of 1934 may include a few more pleasant surprises for the market, but, for those companies whose 1934 dividends have been declared, the main harvest of recovery has now been reaped. In their case a somewhat lower yield level may be appropriate to-day than before their dividend declarations.

London Transport Prospects.—As the London Transport Board draws near to the end of the third half-year of its operations, investors are taking an increasingly favourable view of the long-term prospects of its junior ("C") stock. When the Board declared a 3 per cent. dividend on this stock last August, its market quotation fell to 78½. It has now risen to 91½. No detailed accounts for the year to June 30th last have yet been issued. The provisional figures avowedly included an element of approximation, and did not disclose the amount of revenue which had been "reserved" for sums eventually payable under the pooling scheme, or by way of interest on transport stock still to be issued. They were, in fact, obviously drawn up so as to cover a 3 per cent. "C" dividend to a penny. Subsequently, the Board has issued weekly gross traffic receipts for 1934-35, with a comparison for 1933-34 which eliminates non-comparable receipts due to the absorption of additional undertakings in the interim. Receipts on this basis appear to be slowly but surely rising. If it be assumed (a) that there has been a proportionate increase in expenses, and (b) that the 3 per cent. "C" dividend for 1933-34 was just earned, then current receipts would seem to be running at the rate of about 3½ per cent. on the "C" stock. The whole calculation is necessarily provisional, but the market is beginning to regard the "C" stock as being on a "safe" 4 per cent. dividend basis, with reasonable prospects of an eventual rise to the maximum of 6 per cent. laid down in the Act. This view, in the long run, may be essentially sound. At no time, before the passage of the Act, were we able to endorse the criticism of those who denounced the London Transport Board as being grossly over-capitalised. London Transport receipts do not fluctuate widely over short periods, and their general tendency over the next few years must almost inevitably be

upward. Whether the price of the "C" stock, however, will remain stable at its present level in the near future is another matter. Much may depend on the nature of the arbitration award in the Tilling Case, and the willingness or otherwise of those undertakings which have received, or will receive, "C" stock as part consideration for their assets, to retain their stock indefinitely.

Industrial Profits in October.—We received 165 company reports last month, showing an aggregate rise in profits of 49.70 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits %	Reports Published in	No. of Companies	Rise or Fall in Profits %
1933—			1934—		
August	45	-11.62	March	216	+6.34
September	102	-4.06	April	188	+12.96
October	121	+17.06	May	251	+23.43
November	185	+79.64	June	201	+20.44
December	138	+13.04	July	197	+27.10
1934—			August	30	+35.47
January	122	+3.02	September	89	+40.63
February	209	+5.02	October	165	+49.70

* After payment of debenture interest.

The reports of the month disclose net profits of £6,023,877, as compared with £4,023,803 in the preceding year. The increased percentage rise in profits reflects the inclusion of more and more "good" months in the earnings picture. Certain industrial groups show impressive absolute figures. Ten brewery companies report net profits of £940,173, against £497,419 for the previous year. Iron and steel profits continue their improved trend—14 companies earned £288,353, against Dr. £15,386—while a comparable swing-over is exhibited by 44 rubber companies (£214,526, against Dr. £13,725). The miscellaneous group has shown satisfactory but under-average improvement. Some important results of the month are shown below:—

technical efficiency. Less than a fortnight ago the Cargo Fleet Company brought into operation one of the finest new batteries of coke ovens in the country. The South Durham results are in striking contrast to those of another "Furness" concern, Weardale Steel, whose accounts to September 30th show a decline in total profits from £70,635 to £66,499. This is entirely due to a severe and unexplained drop in interest on investments. As these are mainly in Government securities, the reason is not obvious. A summary of South Durham and Weardale results for the last three years is given below:—

(AMOUNTS IN £'000; YEARS TO SEPT. 30)

	South Durham Steel			Weardale Steel		
	1932	1933	1934	1932	1933	1934

* Includes interest on investments, dividends from subsidiaries, and transfer and registration fees. † South Durham only. ‡ After bringing in £9,000 from income tax account. (a) Preferred ordinary. (b) On deferred, after allowing for participating rights of preferred shares. (c) For general reserve, including depreciation.

The South Durham figures may, perhaps, be regarded as measuring the claim which the company has been able to stake out against certain eventualities. Much water has flowed down the Tees since last year's agreement was abandoned. It would seem that the terms of any future scheme for the consolidation of iron and steel interests on the North-East Coast must be even more favourable to South Durham than those of last year. It remains to be seen whether a fusion which remains eminently desirable in the interests of the industry has been rendered any the less difficult, financially, by recent events.

Wall Paper Manufacturers.—There is a certain affinity of outlook between this company and Courtaulds. Phrases such as "rendering it less easy for new competitors, with machinery redundant to consumption, to commence operations, and for those in existence to increase their share of business obtainable" might equally apply to each. In pursuit of this policy of consolidation of interests, the Wall Paper Manufacturers have acquired seven additional businesses during the past year, whose profits are included in this year's accounts and thus render exact comparison with previous years impossible. The parent company's profits have increased by nearly £100,000 to £672,051, and interest and other receipts bring the total income to £742,468, against £635,056. The dividend on the deferred stock is increased to 12½ per cent., which is handsomely covered by earnings of 19.8 per cent. A three-year profit and loss analysis follows:—

	Years to August 31,		
	1932	1933	1934
Profit on trading, including dividends from subsidiaries, and after depreciation	553,403	572,884	672,051
Interest and other receipts	54,744	62,172	70,417

Earned %	16.1	17.9	19.8
Paid %	10	11½	12½
Goodwill, patents, etc., w.o.	100,000	98,815	...
Reserve fund	...	...	100,000
Carried forward	263,991	261,417	282,825

† Includes £30,262, interest payable under agreements for purchase of new businesses.

The balance sheet changes are of interest in view of the acquisitions of the past year. Goodwill standing in the last accounts has been written off by transfers from reserve and profit and loss accounts totalling £948,815. A new item appears, however, for valuation of businesses acquired, less premiums on shares taken in part consideration, amounting to £1,843,945, which is further reduced by £360,912, resulting from a revaluation of Government securities. Since the consideration for the new acquisitions had not been met at the balance-sheet date, a liability of £2,524,816 is shown to the vendors, of which £1,786,405 is to be met in cash, while the balance represents the nominal amount of shares to be issued. Since the disclosed net addition to fixed assets during the year is only £260,356, the inference may be drawn that the companies acquired had a considerable strategic importance in the industry, but it is impossible to compute the precise value of the assets and goodwill acquired. Payment of the cash consideration will leave the company with over £1,400,000 net current assets. The £1 units of deferred stock are quoted at 61s. 6d. to yield £4 2s. per cent.

United Molasses.—Welcome evidence of recovery is shown in the preliminary profits statement for the year to September 30th. The consolidated profits of the parent and subsidiary companies, after management and other charges, amount to £651,531, of which £283,806 has been allocated to depreciation. The balance available, after providing for debenture and other interest, preference dividends and redemption of income stock, amounts to £125,440, and £23,780 has been retained in subsidiary companies. The nearest comparable figure for the nine months to September 30, 1933, was a deficit of £156,314, excluding £501,880 specially allocated to meet capital losses. This turn of the tide will be encouraging to shareholders who have suffered the full force of depression in the

Monday's over-optimistic buying of industrial shares was not maintained. The market's ability to absorb profit-taking was generally reassuring, but appreciable irregularity developed as the week wore on. Further increased dividend declarations added speculative fuel to the brewery market's activity, but profit-taking reaction was evident

* Two-hour Session.

The Canadian stock markets have continued in an unsettled and unhealthy state, their weakness being attributed to the stagnation of the New York market. Uncertainty over the winter outlook for Canadian business has also been an adverse factor. The most popular market counters have been International Nickel, Brazilian and Ford of Canada. There has also been a certain interest in the brewery and oil stocks. The prospect of Federal intervention to assist the newsprint industry in obtaining a better export price has had a favourable effect on newsprint stocks. The Democratic victory in the United States improves the prospects of the St. Lawrence Waterway and has helped the construction stocks. Last month, however, witnessed a serious slump in most mining stocks, due to disappointment with the results of further exploration of some of the newer mining fields, and to investigations regarding the conduct of the boards of some well-known mining companies. The Commodity Exchange in Montreal, which claims to provide the only open market for silver futures in the world, is now

operating with over 200 members and doing a considerable business.

CAPITAL ISSUES

TRUSTEE borrowers have been entirely absent from the London market this week, but the less conservative investor has had ample opportunity of indulging his tastes. The first preference shares of *Thos. W. Ward*, for instance, offer an attractive yield, which is satisfactorily covered by present recovery earnings, although profits in the past have been subject to wide fluctuation. The prospectus profits, however, are stated before depreciation, provision for which should be regarded as a prior charge for long-term investment purposes. The issue of *Argentine Navigation* sterling debentures is a conversion operation. The debentures are not free from a certain risk element, which may be measured by their rate of 5½ per cent. This, however, attaches more to the exchange situation than to the internal position of the company and its subsidiaries, which has shown rapid improvement during the first six months of the year. The shares of *Vacuum-Packed Produce* must be valued largely on prospects, and although the packed dairy produce which is to be imported and distributed by the company has received favourable technical comment, income by way of commissions will depend on the achievement of a considerable turnover. *Broadways (Retailers)* has been formed to bring 6r confectionery shops under unified management, the benefits of which, to judge from the prospectus estimates, have not been underrated. *Kenning Estates* small preference issue is of rather local interest, and the difficulty of ready marketing would make the shares an unattractive general investment medium. The merits of *Motor Fuel Proprietary* issue to shareholders are discussed on page 989. Statements for information only have been published this week by *Shropshire Beet Sugar*, *R. W. Crabtree and Sons*, *Home and Foreign Investment Trust* and *Colony of Fiji*.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

goodwill, fixtures, stocks and leases of premises. Businesses mainly located in London suburbs. Premises, fixtures and goodwill, on going concern basis, valued £100,871 (exclusive of stocks). Profits before depreciation: 1932, 51 shops, £19,321; 1933, 61 shops, £22,363, or £18,262 after amortisation of leases and depreciation. Net profits for first financial year estimated at £30,000. Consideration £98,809, of which £73,809 payable in cash and balance by allotment of 100,000 5s. shares. Stock in trade estimated to cost £16,000. Amount estimated in respect of goodwill £53,909.

BY OFFER FOR SALE

Vacuum-Packed Produce, Ltd.—Offer of 480,000 ordinary shares of 5s. each at par. Formed September, 1934, to acquire interest in New Zealand company owning patents and to distribute packed produce. Company has option to subscribe at par for 60,000 shares of 10s. (N.Z.) in New Zealand company. Purchase consideration is £5,000 in shares for marketing rights of N.Z. company's produce. On estimated turnover of £954,000 per annum, average net profit is estimated at £20,600 per annum for first three years. Estates and Industrial Trust have purchased the issue at par, and pay expenses for consideration of £12,000.

BY STOCK EXCHANGE INTRODUCTION

Fiji Three per Cent. Stock, 1960-70.—The Crown Agents for the Colonies have issued on behalf of the Colony of Fiji, £182,496 3 per cent. inscribed stock. The money is required to meet the cost of road and bridge works. £120,000 has been sold to the market at 99. The balance has been placed privately.

Shropshire Beet Sugar Company, Ltd.—Issued share capital, 332,000 10 per cent. preferred ordinary shares of £1 and 332,000 deferred shares of 2s. 6d. each. Incorporated April, 1927, to trade as sugar refiners and manufacturers. Assets total £414,840, including land, buildings and machinery £370,000, debtors £25,778. Advances from Ministry, £18,532, profit and loss balance, £25,989. Total profit for year to March, 1934, £40,760, of which £21,339 provided for depreciation.

R. W. Crabtree and Sons, Ltd.—Particulars of issue of £125,000 4½ per cent. debenture stock. Secured by first charge, and redeemable by December 1, 1965, at or under 101 per cent. by sinking fund, or after December 1, 1945, on six months' notice. Carlton Greig and Company have subscribed for the issue at £97½ and £3,500 for expenses.

Home and Foreign Investment Trust, Ltd.—Particulars of issue of £150,000 4 per cent. debenture stock, 1953-63. Repayable on November 1, 1963, at par or from November 1, 1953, on three months' notice. Stock ranks *pari passu* with existing 5 per cent. stock. £50,000 of the issue has been placed at £97 per cent., £50,000 at £98 per cent., and £50,000 is on issue at £100.

ISSUES TO SHAREHOLDERS ONLY

Biting Rubber Estates.—Shareholders registered on November 15th are offered 160,000 ordinary 1s. shares at par (payable 6d. per share on application and allotment respectively) in the proportion of two ordinary shares for every five ordinary or preference shares held.

Neuchatel Asphalte.—An offer has been made to the 6 per cent. ten-year convertible debenture stockholders and preference and ordinary shareholders of £160,000 (part of £200,000) 4½ per cent. debenture stock, 1944-46, at 97½ per cent. The proceeds will be utilised to repay the 6 per cent. stock. The stock is redeemable on May 31, 1946, at par, with power to the company at its option to redeem on or after May 31, 1944, at par, or at 103 per cent. at any time between December 31, 1937, and May 31, 1944, on six months' notice.

Simmer and Jack Mines, Ltd.—1,000,000 2s. 6d. shares are now offered to holders registered on November 14th, at 7s. 6d. per share, on the basis of one new for every five shares held. Payment is in full on application.

Motor Fuel Proprietary, Ltd.—Issue of 300,000 shares of 5s. each at 15s. per share. Formed 1909, but has recently evolved new process for obtaining oil from coal. Production unit completed May, 1934, and reported to yield 27.3 gallons minimum light oil per ton, and 16 cwts. semi-coke. No "serious interference" with certain patents applications is expected, and a statement of claim has been provisionally accepted regarding the result of an official search following a further application. Estimated profits from 500 tons treatment per day, working 350 days continuously, £271,250; cost of plant estimated £150,000, and twelve months required for erection. 400,000 shares will be under option at various terms to subscribers and underwriters.

PRIVATE PLACINGS

Central Argentine Railway.—A further £100,000 Central Argentine Railway 5 per cent. redeemable debenture stock of 1967-87 has been placed privately.

CONVERSIONS AND REPAYMENTS

Buenos Ayres Western Railway.—£1,000,000 5 per cent. notes will be repaid in cash on January 1, 1935.

State of San Paulo 7 per cent. Realisation Loan, 1930.—Bonds for £320,200 nominal of the sterling issue and \$875,000 nominal of the U.S.A. dollar issue have been purchased towards the redemption requirements for the year ending March 31, 1935, and cancelled. A further adjustment of the stocks of pledged coffees has been made and such stocks are now as follows: 1,911,893 bags of Government coffee, 9,202,316 of planters' coffee.

United Molasses Company.—The directors have decided on repayment of income debenture stock, by offering ordinary shareholders right to subscribe to one 6s. 8d. share for every five shares held, at price of 10s. per share. This will provide £495,000, and will enable company promptly to repay balance of debenture stock. It is also intended to draw for repayment early in new year £100,000 4 per cent. funded income stock.

FIXED TRUSTS

First Provincial Fixed Trust.—The First Provincial Fixed Trust, 21, Spring Gardens, Manchester, 2, is making an issue of "B" unit certificates.

OFFERS ABROAD

Italian Loan.—The Italian Treasury is issuing a loan of 2,000,000,000 lire, bearing interest at 4 per cent., redeemable in nine years. The bonds will be issued at par and will carry prizes totalling 5,000,000 lire (£86,000) yearly for drawings in the first three years.

Spanish Treasury Bonds.—An issue of 300,000,000 pesetas of five-year 4½ per cent. Treasury bonds will be made on November 27th.

FORTHCOMING ISSUES

Marks and Spencer, Ltd.—An extraordinary general meeting will be held on December 14th, to consider (1) The sub-division of each ordinary and "A" ordinary share of 10s. into two shares of 5s.; (2) to increase nominal capital from £2,500,000 to £3,050,000 by creating 2,200,000 new "A" ordinary shares of 5s.; (3) early in January, 1935, to offer to holders of ordinary and "A" ordinary shares on register on December 17, 1934, one "A" ordinary share of 5s., nominal value, in respect of every five ordinary and "A" ordinary shares of 5s., at £1. These proposals will involve the issue of 869,675 "A" ordinary shares of 5s. each, and will augment the cash resources of the company by a sum of £869,675, of which £652,256 5s. will represent an addition to the reserve fund.

Oxendale and Company (Proprietors).—An extraordinary general meeting is to be held on November 28th to consider a resolution that the capital be increased from £350,000 to £400,000 by the creation of 50,000 new 5½ per cent. preference £1 shares.

South Wales Electric Power.—An extraordinary meeting of South Wales Electric Power will be held at Broad Sanctuary Chambers, S.W.1, on November 27th, at 11.45 a.m., to consider a resolution authorising the raising of additional capital by the creation and issue of £322,150 new ordinary stock *pari passu* with the existing ordinary. The new stock is to be disposed of as the directors think advantageous.

Spaarwater Gold Mining Company, Ltd.—East Rand Consolidated, Ltd., announces that it hopes to float the first subsidiary (Spaarwater Gold Mining Company, Ltd.) at the earliest possible date, which is expected to be the first week in December. Shareholders of East Consolidated will be offered 400,000 shares at 5s. each, and 200,000 shares at 7s. 6d. each, with options over 1,200 shares at 10s. per share for two years.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed income stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

REPORTS AND NOTICES

The Union Corporation, Limited, announces that Sir Reginald Mant, K.C.S.I., K.C.I.E., has been appointed a director of the Corporation, to fill the vacancy caused by the death of Earl Buxton.

Mr William Harold Bacon has been elected a director of the Manchester Ship Canal Company by the directors elected by the shareholders to fill the vacancy caused by the death of Mr F. A. Tomlinson.

Mr John Emmanuel Rodocanachi has been appointed Chairman of the City Offices Company, Limited, in succession to the late Mr George Stanhope Pitt.

MINES

THE WAIHI GOLD MINING COMPANY, LTD.—The New Zealand Government have given notice of their intention to tender payment of £12,500 for the Hora Hora hydro-electric works on November 1st next in New Zealand currency. The board of directors propose to accept this as a payment on account and under protest, reserving the company's rights to receive payment in sterling.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of September, 1934, amounted to: Witwatersrand, £2,472,337; outside districts, £192,101; total, £2,664,438. The estimated working profit in August, 1934, was: Witwatersrand, £2,490,406; outside districts, £192,035; total, £2,682,441.

MISCELLANEOUS

CABLE AND WIRELESS, LTD.—INDEX NUMBERS.—Index number 1929 = 100. Month of October, 1934 = 73.6; September, 1934 = 70.3; October, 1933 = 72.1.

COMPANHIA DE MOCAMBIQUE.—The Customs receipts for the Port of Beira during the month of September amounted to £24,204, as compared with £23,482 for the corresponding period of 1933.

COMPANIA ARGENTINA DE NAVEGACION MIHANOVICH LIMITADA.—Gross takings: October, 1933, \$1,762,933; October, 1934, \$2,284,000, showing an increase over 1933 of \$521,067 or 29.56 per cent. Of this, about \$200,000 is due to the Eucharistic Congress held at Buenos Aires in October, therefore the ordinary increase may be estimated at \$321,067 or 18.21 per cent. 1934, January to October (10 months), total \$21,714,556; 1933, January to October (10 months), total \$19,320,919, showing an increase of \$2,393,637 or 12.38 per cent.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of October, 1934, as compared with the corresponding month of 1933, show an increase of 15 per cent. of units sold.

LEX GARAGES' SCHEME.—With reference to a paragraph regarding this scheme on page 903 of the *Economist*, November 10, 1934, we are asked by the secretary and treasurer of the company to state that the original proposals have not been in any way revised. The second circular, which was issued to shareholders on October 25th, merely amplified the particulars given in the original circular dated October 12th.

COMPANY MEETINGS, &c.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

RECORD PROFITS FOR THE PAST YEAR
FINANCIAL POSITION FURTHER STRENGTHENED

MR H. J. JOEL'S REVIEW

The Johannesburg Consolidated Investment Company, Limited, announces the receipt from Johannesburg of the following summary of the Chairman's speech at the annual meeting of shareholders held, on the 20th instant, at which Mr H. J. Joel presided.

The Chairman, in his opening remarks, said: It gives me great pleasure to be in South Africa again after an absence of two years and to preside at this the forty-third annual meeting of shareholders of the company. I have been asked by my father, the permanent chairman of the company, to convey hearty greetings to you and to express his very great regret that he finds it impracticable at the present time to absent himself from London for a long enough period to enable him to visit South Africa. He still hopes that pleasure is merely postponed.

The financial position of the company continues strong and satisfactory. The total book value of the assets now amounts to £7,976,669—an increase of £1,177,387 over the previous year's figure.

This, it is important to bear in mind, is exclusive of the large appreciation in your investments in stocks and shares, of which no account is taken in the books.

The assets show a surplus over liabilities to the public, taking into account the dividend of 3s. and bonus of 1s. per share declared on July 11th and your contingent liabilities, of no less a sum than £5,815,878.

RECORD PROFIT

Turning to the profit and loss account, you will have noted with satisfaction that the profit for the year, after making provision for income tax and depreciation, amounted to the record figure of £1,347,576. A balance of £161,067 was carried forward from the previous year, giving an available balance of £1,508,643. As part of the increase in the profit for the year was regarded as of an exceptional nature, your directors considered it prudent to transfer to the reserve fund a sum of £450,000. The dividend of 3s. per share and bonus of 1s. per share, paid on September 20th, absorbed £790,000. The sum of £100,000 was set aside to institute a staff pension fund (to which I shall refer later), leaving a carry-forward to the current year of £168,642.

The figures which have been submitted to you reflect the strong and sound position of your company and the success which has attended its operations. Having concluded my review of the balance sheet and accounts, before dealing with the individual companies in which we are interested, I will touch upon one or two matters of general interest.

The era of prosperity which started with the departure of the Union of South Africa from the gold standard was maintained throughout the year, and there is every sign of continued prosperity.

EXPANSION UNDER NEW CONDITIONS

The higher price of gold has not only enabled the industry to work a lower grade of ore profitably but has led to an expansion which would have been impossible under the 1932 conditions.

The Witwatersrand mines to-day are crushing at the rate of nearly 40,000,000 tons per annum, an increase of approximately 13.5 per cent. over the 1932 figure, but the average grade of ore crushed has fallen by 1½ dwts. per ton. The extra tonnage, which amounts to approximately four and a-half million tons per annum, is drawn almost entirely from sources which were not payable in 1932 because the quantity of ore available on the old basis was not adequate for any expansion; thus the expansion of operations has caused a fall in the average grade of ore crushed.

Further, it has been the policy of some mines to draw to a greater or lesser extent on the great reserve that may be termed new pay ore. Again, in the course of development work a quantity of unsortable rock of low average value is broken, development faces must be cleared and the rock must be trammed and in most cases must be hoisted to the surface; thus, all underground expenditure having been incurred on this rock, the ques-

tion whether it should be milled or not depends upon its value and surface costs only.

EFFECT ON GRADE OF ORE MINED

Thus it is apparent that with gold worth 2s. 9d. per dwt. more than in 1932 rock which was hardly worth mill space then now shows a substantial profit, therefore a higher percentage of the development rock broken is now being milled than in 1932. This is obviously sound economics, but it lowers the average grade of ore crushed, reduces the working cost per ton and the cost per ounce of gold produced on nearly all mines.

In these respects I may mention that each individual mine has a problem of its own; a problem whose solution in the best interests of all concerned can be determined only by those most closely in touch with the circumstances. The three factors, together with the fact that in certain of the older mines a fall in grade was inevitable owing to the exhaustion of the higher grade ore, have resulted in the over-all fall mentioned before. The Government's expressed policy is to encourage the mining of lower grade ore, thereby lengthening the lives of the mines, and the method of taxation is based on that policy.

In effect, the Government prefers to take a diminishing percentage of the profit earned by means of direct taxation as the grade of ore crushed is lowered, and it is a fallacy for shareholders to assume that a percentage rise in profits caused either by mining higher grade ore or maintaining a given grade with a rising price of gold would be reflected in a proportionate increase in dividends.

ECONOMICALLY SOUND COURSE

It is sounder economically for most of the mining companies to maintain a given profit by crushing a greater tonnage and working to a lower average grade through the inclusion of new pay ore by that means the shareholders get a larger percentage of the profits through a reduction in taxation.

It might seem that the shareholders' gain is the Government's loss, and that is true in so far as direct taxation is concerned. The extra tonnage crushed, however, means additional employment to the Government and the country generally, with a loss in revenue from direct taxation, because it means additional employment and assists other industries.

It was brought out in evidence before the Low Grade Ore Commission in 1932 that the indirect revenue alone accruing to the Government through mining operations amounted to at least 6s. 3d. per ton crushed. This figure does not include railway profits on coal and other mining requirements, which are notoriously high.

POLICY OF THE INDUSTRY

Quite apart from all these considerations which determine to a greater or lesser extent the grade of ore mined, it is apparent that with a rising price of gold the payable ore reserves of a mine increase in quantity and decrease in average value, and it has always been the policy of the industry as a whole to stop to the average grade of the ore reserves as nearly as possible; in fact, in Lease Mines that is an accepted condition of the lease.

A departure from this customary practice might lead to spectacular temporary results on some mines, particularly if the argument of certain shareholders were deemed sound and the mines concentrated on working the highest grade ore as quickly as possible. Disillusionment would quickly follow and the violent fluctuations in results and general outlook would undermine all confidence in the industry and in those responsible for its direction.

The Excess Profits Duty Act introduced in 1933 was amended this year and many of the anomalies of the original Act were removed or modified. It is not suggested that perfection has been reached or even approached; nor does it seem possible to draft an Act which would be equitable as a whole or in its incidence as between mine and mine, while the profit from mining for taxation purposes is split into two classes—namely, standard and excess.

AMENDMENTS TO EXCESS PROFITS ACT

Under the Act as it stands to-day a mine which was struggling for existence in 1932 and making no profit has all its present profit taxed at the excess rate, whereas a mine which started production subsequent to the Act can deduct over 8s. per ton crushed from its profit before being assessed for excess profits duty.

Under the original Excess Profits Duty Act the Government gave some consideration to those mines which were making little or no profit when gold stood at 85s. per ounce, but the amended Act has withdrawn that consideration.

The expansion of the industry has naturally given rise to a great increase in employment, and the total working costs of the Witwatersrand mines are likely to be over £4,000,000 greater in 1934 than in 1932; a figure which takes no account of very large sums expended on capital account, principally on shaft sinking.

WORKING COSTS

Although the price of gold reckoned in our currency has appreciated approximately 65 per cent. since the end of 1932, it is most satisfactory to note that working costs per ton of ore crushed approximate closely to the 1932 figure, but, whereas the cost of producing an ounce of gold in 1932 was 59.36s., it is now approximately 77s.

The main reason why the industry has been able to maintain the cost per ton is that one pound buys as much to-day as it did in 1932. The future of the industry—its life, its expansion, its capacity to pay wages and purchase commodities, and its ability to maintain its position as the economic mainstay of the Union of South Africa—depends upon the price of gold and working costs.

The consensus of expert opinion is that gold will not cheapen in terms of currencies, and that gold was greatly undervalued in terms of other commodities in 1932 and for many years prior to that date. Is it then too much to say that an ounce of gold will at least for a long period purchase a great deal more than it did prior to 1932? Those responsible for the welfare of the industry, and in this respect the public have indirectly a large influence, have no control over the price of gold, but they have some say in the matter of working costs, and it is clear that any section of the community which sets in motion forces which tend progressively to increase the cost of operations must bear a very heavy responsibility.

PROVIDENT FUND

The complete change in the outlook of the industry had allowed employers to take a longer view; a direct result of which was the inauguration of a provident fund for mine employees. The object of the fund is to provide benefits for employees and dependants on death, retrenchment, retiral after reaching pensionable age and incapacity or invalidity.

The mines contributed £60,000 to start the fund on a sound basis, and in addition are contributing £14 8s. per white employee per annum; this latter sum equals approximately 4 per cent. of white wages. This scheme constitutes a distinct advance in the terms of employment, which have further been improved by additional holiday leave at a cost to the industry of over £200,000 per annum.

These improved conditions should go a long way towards maintaining the good relationship which has been evident between employers and employees; particularly when it is recalled that during the depression the mines maintained their high standard of wages, both white and native, although general reduction was the order of the day throughout the country.

Native welfare has not been overlooked; the industry donated £85,000 to assist the Government in a scheme to provide improved medical services in the territories.

AMPLE SUPPLY OF LABOUR

Throughout the year there has been an ample supply of native labour, and on September 30th last there were 248,024 native labourers employed, as compared with 220,183 at the end of 1932. With the increase in native labour, employment has been given to an additional number of Europeans, and at present the mines of the Rand are employing 28,290 Europeans, an increase of nearly 5,000 over the figure for December, 1932.

The ore crushed by the mines of the group for the year ended June 30, 1934, amounted to 9,821,000 tons; working costs totalled £9,528,799, and the gross profit made was £9,168,246. Dividends paid totalled the sum of £3,162,202.

The amount paid to the Government in respect of the leased areas was £3,731,130 for the year 1933, an increase of one and a half million pounds over the sum paid in respect of the year 1932.

The chairman, in conclusion, dealt in detail with the company's various interests.

WITWATERSRAND NIGEL, LIMITED

VERY ENCOURAGING OUTLOOK

The first ordinary general meeting of Witwatersrand Nigel, Limited, was held, on the 16th instant, at Johannesburg.

Lieut.-Colonel T. J. M. Macfarlane, C.M.G., the chairman of the company, said that the cash funds in hand at the date of the statutory meeting, just over eleven months ago, were £87,689. At June 30, 1934, they were £284,288, an increase of almost £200,000, achieved by the issue of shares from the reserve capital, at premiums over par value ranging from 100 to 200 per cent. The company had received during this period £218,510 from the issue of shares of the par value of only £87,524. None of the reserve capital is held under option and all premiums accrue to the company.

In connection with the placing of reserve shares great credit was due to the founder of the company, Mr Michael Haskel, and also to the Fanti Consolidated Investment Company, Limited, of which Sir Edmund Davis was chairman. Subsequent to June 30, a further 56,000 shares were issued at 15s. 3d. per share—a premium of 205 per cent.—bringing the company's cash funds to over £300,000.

NEW STRIKE ON NIGEL REEF

The existence of the Nigel Reef under the company's claims had been substantiated not only by the outcrop, but by exploratory work carried out at No. 4 Incline Shaft and the three completed boreholes on Houtpoort which had intersected the Nigel Reef and footwall shales at depths of 275 ft., 635 ft., and 909 ft. respectively. On October 25, 1934, a deeper borehole on the Heidelberg Townlands intersected the Nigel Reef and footwall shales at a depth of 1,978 ft. Four inches of the core assayed 0.4 dwt. The values were unimportant, but the borehole had definitely proved the persistence of the Nigel Reef at a point over three miles in dip from the outcrop, at workable mining depths.

The claims held on the Heidelberg Townlands numbered 2,907, on all of which no share of profits was payable to the Government. It constituted the largest area among the newer mines of the Witwatersrand not subject to payment to the State of a share of profits. Including the area held on Houtpoort, the total holding of the company was equivalent to 3,974 claims, an area which was sufficient for the layout of a large mine with considerable life.

No. 4 Incline Shaft on Houtpoort had been sunk to a depth of 655 ft., and at 641 ft. reef was intersected assaying 66.2 dwt. over 5 ins. A drive on reef from this point had been extended to 326 ft., of which 212 ft. showed pay values averaging 14.2 dwt. over 23.2 ins., equivalent to 329 inch-dwt., or 10.79 dwt. over 30 ins.

The dip of the reef was in an approximately north-westerly direction towards the H2 borehole, which was situated some 400 ft. from the shaft. Taking the appearance of the reef intersected in the H2 borehole in conjunction with the highly satisfactory values in the shaft and drive, it was not too optimistic to assume the presence of a valuable pay shoot traversing the company's property for a considerable distance. Encouraging as these results were, the main development would, however, be carried out from two three-compartment vertical shafts, each situated some 4,000 ft. in dip from the outcrop, and which would, in addition, be extended laterally right across the width of the Houtpoort section. Good progress had been made with the sinking of the shafts and the erection of European quarters and native compound. Provision had been made for domestic water supply from springs on the company's freehold.

MAJOR DEVELOPMENT WORK

A sum of £247,500 had been allocated for the major development work, and the company had more than sufficient funds for this purpose. A very important saving on power plant would be made possible by the supply of electric power by the Victoria Falls and Transvaal Power Company. The power mains would be carried on to Houtpoort from the Heidelberg Townlands, which were traversed by the main Nigel-Heidelberg power line. Transport would present no difficulties as the main Natal railway line traverses the Heidelberg Townlands and the Houtpoort property, with the Heidelberg Station and Houtpoort Siding at convenient points, and the main Natal road from Johannesburg, passing through the town of Heidelberg, ran midway through the Houtpoort property.

In view of the excellent results obtained in their development work on the Nigel Reef, the large claim area held by the company not subject to any Government lease payment, the progressive policy of the directors in the major development work, and in view of the splendid cash position of this company, there was every possibility of the Witwatersrand Nigel becoming one of the large gold producers of the Far East Rand.

The report was unanimously adopted.

ELECTRIC AND MUSICAL INDUSTRIES, LIMITED
PROFITABLE TRADING YEAR

The third ordinary general meeting of Electric and Musical Industries, Limited, was held on the 16th instant, at Winchester House, London, E.C.

The Chairman (Mr Alfred Clark), in the course of his speech, said:—We are able to present to you a profit and loss account showing a substantial profit for the year and a recommendation for the payment of a dividend on the ordinary shares. The dividends on the preference shares, including arrears, have been paid in full.

This profit of £408,095, compares with a loss in 1933 of £374,482. Thus their trading this year represents an increase over the previous year of some £782,578. This profit is the result principally of increased sales of the operating companies in certain territories, resulting in larger factory outputs.

As I informed you last year that the output of the Hayes factories was the largest of its kind in the country I should repeat that statement again, for this year it is equally true. The output of no other firm in our industry in this country approaches it.

In March last the shareholders were informed of the directors' proposals for the reduction of the ordinary share capital of the company to a figure corresponding with the diminished capital value of its holdings in the two operating companies, arrived at by an appraisal which had then been completed. An extraordinary general meeting was held to discuss the necessary resolutions, and they were unanimously approved. The confirmation of the Court was then obtained, but now that the details have been confirmed and the new figures are before you in the accounts, you will be able to judge for yourselves how much healthier appear both the balance sheet and the profit and loss account.

TELEVISION

The research engineers of your company have developed and demonstrated a complete and entirely successful system of high definition television of undoubted entertainment value. This system includes both transmission or broadcasting, and reception by sets suitable for use in the home. These sets can be placed before the public at a reasonable cost.

In view of the large experience of Marconi's Wireless Telegraph Company in the field of radio transmission and the rights they have retained in that field, arrangements were entered into with them, resulting in the formation of the Marconi-E.M.I. Television Company, Limited, in which both companies have contributed their interests in the transmission of television of high definition. The main business of the new undertaking will be to supply transmission apparatus to the broadcasting authorities, both here and in certain foreign countries.

Your company has, of course, retained all of its rights in the field of television receiving sets, and hopes that this may become a profitable feature of its business once television broadcasting has begun and a public demand been created.

It now remains for the Postmaster-General to decide under what conditions the broadcasting of television will be carried out and, of course, until this decision is known, there can be no commercial progress. The research engineers are actively engaged, and the satisfactory results so far obtained are of such a nature as to indicate that the story of television, like that of the broadcasting of sound, will be one of constant and sure advance.

REFRIGERATORS

There appeared in the Press during the year notice of the formation of a subsidiary called "H.M.V. Household Appliances, Limited," and shareholders will be interested to know about it. The electrical refrigerator seemed to us an article which could well be manufactured in our type of factory. We have acquired valuable patent rights and manufacturing information, and our well-tested models possess unique features which the public, we believe, will be quick to appreciate. Sales have therefore commenced in England and in several overseas territories, with results which so far fully confirm our belief that there is a growing demand for this type of article.

Your operating companies have now been trading for about four months in the new year, and from the nature of this trading we have in the past been able to form some idea of the trend of their business for the ensuing eight months. This year trade has begun well. Our new models have been most favourably received, and, in our opinion, represent a standard we have never before attained, while orders booked at the Radio Exhibitions at Olympia, Glasgow, and Manchester were considerably in excess of those of former years.

Sales for the first four months, beginning July, exceed those for the corresponding period of last year, and your directors face the coming months with confidence.

The report was unanimously adopted, and a dividend of 10 per cent. was declared.

ARGENTINE GREAT WESTERN RAILWAY
COMPANY, LIMITED

PROBLEM OF EXCHANGE

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held on the 20th instant, at Winchester House, Old Broad Street, London. The Hon. Sir Arthur Stanley presiding.

The Chairman, after apologising for the absence of Lord St. Davids, in the course of his speech, said:—The number of passengers has fallen off to some extent, which, of course, is due to road competition and the general depression of trade. The volume of the goods traffic has shown a little improvement, and the satisfactory thing is that that follows an improvement last year. It is progressing very slowly, but it is progressing.

Of course, the real difficulty of the whole situation lies in the exchange. We have earned money out there, but we cannot get it home, or, at least, by the time we get it home over here, the exchange is so much against us that what is a profit over there is turned into a loss here. One interesting figure is that in 1933 the total receipts of the Pacific system in Argentine paper dollars were \$65,600,000; in 1934 they were \$66,850,000—an increase of 1,250,000 paper dollars in the Argentine, and yet, owing to the exchange, when that is transferred over here, instead of being an increase it is a decrease. That shows you what exchange is doing. The loss on the exchange position a year ago on the seven Argentine railways was £1,300,000. Last year, on the same railways, the loss on exchange amounted to £4,200,000. As you will see, and as the chairman puts it, the railways are working and earning money, but, alas! not in British currency.

As regards prospects in general, those of you who read Lord St. Davids' speech at the Pacific meeting, where, as you all know, he always gives a very clear and very straightforward account of the position of trade and of our lines, and what he thinks is likely to happen, will have seen that at the end of his speech he finishes on a decidedly optimistic note, and I was very glad to note that Sir Follett Holt, the chairman of the Buenos Ayres Great Southern and of the Buenos Ayres Western also, in his two speeches to the stockholders, finished in this same optimistic tone. I think, therefore, I may do the same and say—after all, it can only be a hope—we do hope, and all the indications seem to show that the Argentine is steadily if slowly progressing, and we may hope that that progress will continue during the coming year.

The report and accounts were unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF
MONTE VIDEO, LIMITED

The ordinary general meeting of the Central Uruguay Railway Company, of Monte Video, Limited, was held on the 19th instant, at River Plate House, London.

Sir Brodie H. Henderson, K.C.M.G., C.B. (the chairman), after referring to the resignation from the chairmanship of Mr Frank Henderson and his own appointment as a director and election as chairman, in the course of his speech, said:—The Chairman then proceeded to read the speech prepared by Mr Frank Henderson, which stated that the gross receipts for the year in Uruguayan currency were just fractionally higher than in the previous year, but the working expenses were more by 3 per cent., which was due to the necessity for a more liberal expenditure to raise the condition of the property to a rather better standard. The resulting net profit of \$1,372,000 was \$124,000 less than in 1932-33, but as the official exchange value of the peso had appreciated by more than 3½d. during the year, it represented in sterling a decrease of only £4,444, or 2.12 per cent.

He was sorry to say the exchange situation, so far as it permitted the remittance of funds to London, had not improved. He felt that very difficult times lay ahead of them, but he saw no reason why the peso should not in due time recover at least some part of the value at which it had stood.

In conclusion, the chairman read a telegram from the general manager which stated that despite present deep commercial depression, he was hopeful of gradual improvement; that live stock traffic should improve considerably, and that prospects of Brazilian traffic were encouraging. Nothing, said the chairman, he could add could make their prospects more cheerful, as he thought that was as optimistic a view as could reasonably be taken of the situation.

The report was unanimously adopted.

At the ordinary general meetings of the Central Uruguay Eastern Extension Railway, Limited, and the Central Uruguay Northern Extension Railway Company, Limited, subsequently held, the reports and accounts were unanimously approved.

TANAMI GOLD MINING SYNDICATE, LIMITED **POTENTIALITIES OF ROSTERMAN PROPERTY**

The second annual general meeting of the Tanami Gold Mining Syndicate, Limited, was held, on the 22nd instant, at 20 Copthall Avenue, London.

Mr C. J. S. Scovell, C.B.E., who presided, said: Since we last met eight months ago much has been accomplished, and this remarkable progress is all due to the hard slogging work of our consulting engineers and general managers and their staff at home and in Kenya. Your board intends to continue pursuing a policy of great activity in Central Africa. This policy can be summed up in one sentence—an active policy of exploration and development combined with both financial prudence and great patience, and above all no pouring out of money into doubtful propositions.

And now I come to the remarkable gold discoveries in Kenya and Tanganyika which are attracting such world-wide attention.

Coming to the Rosterman property in Kenya, we hold, in equal partnership with another large group, an option over this property which we have decided to exercise, and we shall shortly be forming a separate company to equip and work this most promising of mines.

THREE REEFS

The three reefs on it all present exceptionally rich outcrops. To obtain, however, as much information as possible in the option period, developments were concentrated on the Horst and Ross Reefs. The No. 1 Reef so far has only been explored by the diamond drill and the open-cast workings of the owners.

As regards the Horst Reef, this has been exposed for a distance of about 1,000 feet. During the option period the owners have continued crushing ore from the surface workings of this, the Ross, and No. 1 Reefs, and to date 1,700 tons have been crushed for a return by amalgamation of 2,240 ounces of gold, which, with the value in the tailings (to be recovered later) denotes a head value of about two ounces to the ton.

The whole of the evidence from development and diamond drilling demonstrates that this reef is living strongly in depth and that there is every likelihood of its continuing to very much greater depths than have so far been attained.

As regards the Ross Reef, its outcrop has been exposed for a distance of about 400 feet, showing high values similar to those on the Horst Reef, and has been mined and crushed by the owners with highly satisfactory results. The No. 4 shaft has been sunk, and from this shaft a crosscut has been put out and has cut the reef at an inclined depth of 280 feet, at which depth driving on a 6-inch seam panning up to 1 oz. 5 dwts. has been commenced. The conditions here are similar to those on the Horst Reef, and it is anticipated that driving will be attended by equal success.

And with regard to No. 1 Reef, here the outcrop has been exposed for over 300 feet with results again similar to those from the Horst Reef. In all cases these results, as determined by sampling and by crushing, are equally encouraging, and except for variations in lengths of outcrop, the reefs appear equally attractive.

PAKANEUSI

Next, we have secured a substantial interest in the Pakaneusi Prospecting and Development Syndicate, Limited, which has recently been granted an exclusive prospecting licence on the Reserved Area No. 2 containing the Government Reef. This area, at the express wish of the Kenya Government, is to be developed under the supervision of our general managers, Messrs Bewick, Moreing and Company. The syndicate is a local one formed in Nairobi, with Lord Francis Scott as chairman, and a large number of the settlers in Kenya are interested in its fortunes.

Under the most extreme difficulties, operating in a new country, far from the sea, and most of them without any knowledge of mining, these pioneers have succeeded in attracting attention to the possibilities of gold development in the Colony. I cannot help feeling that it was a handsome and well merited gesture on the part of the Kenya Government to grant to this local company the reserved area, applications for which were pouring in to them from large and important mining houses outside the country. Passing from Pakaneusi, I can only say we have other propositions in view, but it is too early yet for me to give you any details.

Capt. A. H. Moreing was re-elected a director, and the auditors were reappointed.

The increase in the capital of the company from £20,000 to £100,000 by the creation of 1,600,000 shares of 1s. each to be offered to the existing at par in the proportion of four for every one share now held was unanimously approved.

DALGETY AND COMPANY, LIMITED **IMPROVED CONDITIONS IN AUSTRALIA**

The fiftieth annual general meeting of Dalgety and Company, Limited, was held, on the 22nd instant, at 65 Leadenhall Street, London.

The Hon. Edmund Parker (the chairman), in the course of his address, said: Regarding the situation in Australia, last year I paid a tribute to what had been accomplished under the Lyons Government, and I have again to congratulate the community on having further consolidated their financial position. Trade figures continue to be very satisfactory, and for the financial year ending 1933-34 exports exceeded imports by about £39,000,000, which, after providing for close on £27,000,000 for interest on external loans, leaves a substantial surplus. This brings me again to the question of exchange. The rates of exchange in operation to-day are materially the same as they were a year ago, and there seems no immediate prospect of any change. Since the marked depreciation of the Australian pound in 1931, and the subsequent depreciation of the New Zealand pound, the cost of remitting funds to London for the general purposes of the company has reached the large sum of £304,814. Until the year under review this burden was met by the use of some of the reserves which had been provided in more prosperous years. I am glad to say that for the last year the cost, which totalled £102,000, was met entirely from current earnings, and this obviated a further reduction in our internal reserves, which I want to see built up again.

I do not want it to be thought that in this matter I am criticising the exchange policy of either the Commonwealth Bank or any other overseas authority. I realise that this depreciation of the pound has helped the hard-pressed primary producer, and the help afforded him has reacted favourably on the earnings of the company for services rendered to its clients, and therefore the £102,000 which has been spent in remittances cannot, in its entirety, be regarded as a loss. There is, however, this difficulty. The company's capital has been largely invested in the financing of our clients' properties. This money has been borrowed here and remitted overseas at the par of exchange, or at small margins of difference. The interest rates obtainable on these capital sums have been reduced of recent years, both compulsorily and otherwise, to such a figure that they are equivalent, virtually, to the borrowing rate here, and have therefore ceased to be profitable. This is a burden to the company and affects profits adversely, and it is a burden which we may expect to remain with us for some time.

Regarding the situation in New Zealand, trade figures show a great improvement; the export surplus for the 12 months to June 30th last was £22,500,000 in New Zealand currency, against £12,000,000 for the preceding year. This means an accumulation of sterling balances in London which is more than is required for external interest payments. Here again the question of exchange becomes involved. There has been no alteration in the Telegraphic Transfer rate since last year, but, after the opening of the new Reserve Bank which maintained the carded rates, the trading banks slightly reduced their rate for bills of certain usances for commercial purposes. The Government, through the Reserve Bank, has announced its intention to maintain the present rate for an indefinite period.

As to our own operations, more satisfactory results have been shown by the New Zealand branches at practically every centre. This has been brought about by many of the accounts working themselves into a better position, and it has been found unnecessary to take such large sums as had been anticipated from profits to support them—the improvement, of course, being due to the rise in wool and meat prices.

As to the results of the past year, I regret we have not seen our way to advise any increase in the rate of dividend. You will realise that caution must still regulate our future policy. In any case 5 per cent. free of tax in these days is not a bad return to our original shareholders.

In regard to market conditions, as regards wool, the recovery of wool after a prolonged period of depression put new life into the wool industry, and had far-reaching effects in Australasian commercial activities generally. Taken as a whole, there was a far greater proportion of fine wools than had been the case for many years past, a fact that was fully appreciated by Continental buyers. The New Zealand clip varied in different parts of the Dominion. The extraordinary rise in prices gave growers a very handsome return, the season's wool cheque for Australia and New Zealand amounting to £62,617,343, an increase of £23,246,597 on the previous season, despite a fall in the volume of wool sold to the extent of 405,302 bales.

The report and accounts were unanimously adopted.

CAM AND MOTOR GOLD MINING COMPANY (1919)

RECORD TONNAGE MILLED

The ordinary general meeting of the shareholders of the Cam and Motor Gold Mining Company (1919), Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London.

Mr L. E. B. Homan (the chairman), in moving the adoption of the report and accounts, said that the receipts from bullion, after deducting royalty for the year, amounted to £435,871. That compared with £467,570 in the previous year.

Acting on advice, the directors had authorised an expenditure of £80,000 on internal equipment. That expenditure was being met as it occurred month by month, and would be spread over a period extending to June 30, 1936—so far as they could see this would in no way affect their dividend position, and the shareholders might even get a little more in December than last year. As soon as the expenditure was finished shareholders might look with confidence for increased dividends. Since the close of the financial year shaft sinking had been continued, attention being concentrated on getting the new sub-vertical shaft under way. A record development footage was accomplished during the year of 25,940 ft., and the cost per foot of approximately 44s. was very satisfactory. During October a record footage for the mine, for advancing a single space face, was accomplished, when on the 30th level, size 10 ft. by 7 ft., an advance of 236 ft. was achieved in 25 double-shift working days. That was also thought to be a record for Southern Rhodesia.

The values exposed during the year had already been given shareholders through the usual monthly and quarterly reports, and they were confirmed in the annual report now presented. He might emphasise that they were extremely satisfactory, and the persistence of the branches to the lowest depth yet reached was a pleasing feature. The tonnage milled during the year at 307,600 tons was also a record, and it was worth noting that, excluding the arbitrary figure of 3s. 9.5d. for development redemption, the working costs at under 14s. 5d. were the lowest yet achieved. Whilst congratulating the management on those figures, it was also a justification of the board's forward policy in recent years in sanctioning capital expenditure—even if it appeared considerable—such as changing to stamps from ball mills, installing modern steam turbine power plant, up-to-date compressors and drills, and so on. That capital expenditure had reduced costs, and he might add that it had encouraged the directors to embark on the further £80,000 capital expenditure. For the period under review the percentage of extraction was a trifle lower than last year and was explained in the consulting engineer's report. A point to be noticed in connection with the working of the mine was the large amount of tonnage—20 per cent.—obtained from reclamation, which was made possible by the price of gold and modern methods of handling.

Development rock also assisted to the large extent of 25 per cent. of the tonnage mined, leaving only 55 per cent. of the rock milled to be supplied from declared ore reserves. That figure was likely to increase gradually, but, even at the normal figure of, say, 80 per cent. or so, the ore reserves were nearly five years ahead of the mill, apart from the tonnage to be developed below the present workings. It was worthy of note that the total

tonnage milled now exceeded 4,000,000 tons, and the total paid to date in dividends exceeded £2,000,000, to which must be added £281,250 repaid to shareholders by way of reduction of capital.

Their thanks were due to their consulting engineers, the London and Rhodesian Mining and Land Company, Limited, represented by Mr D. V. Burnett, to the manager, Mr C. L. Dillon, and the staff at the mine, and also to Mr R. R. Meldrum, the secretary, and staff in London, and the local secretary, Mr G. C. Hards, and staff in Salisbury.

The report and accounts were unanimously adopted.

ROAN ANTELOPE COPPER MINES, LIMITED

QUESTION OF RESTRICTION

Mr A. Chester Beatty, presiding at the seventh ordinary general meeting of the Roan Antelope Copper Mines, Limited, held, on the 19th instant, in London, said that after allowing for debenture interest and all other items, the net profit was £387,940. He thought it would be agreed that the results obtained showed that there had been a gratifying continuance of the high standard of efficiency which had marked the administration and organisation at the mine from the beginning. The profits for the year were sufficient to permit the payment of a dividend, but, in view of the recent considerable fall in the price of copper, and the uncertainty of the market outlook, the directors had come to the conclusion that it would not be wise to recommend the payment of a dividend.

With regard to the general copper position, which had a prime bearing on the company's prospects, on the operating side they possessed very large ore reserves; they were splendidly equipped with up-to-date installations; their organisation was first-class, and their costs were low. On the sales side they found a strong demand for their Roan blister copper on account of its particular purity. Long-term contracts had been made for regular deliveries of substantial tonnages, and they were now supplying at a rate well over 50,000 tons per annum to English manufacturers apart from their Continental trade. The one troublesome factor was the price of copper.

Sir Henry Barwell, supported by Mr H. Rule and others, urged the directors to take immediate steps to reach an agreement with other producers for the restriction of production.

In reply, the chairman said that the board were entirely in accord with the policy of arriving at an international understanding between producers for the control of output.

Referring to the circular issued a few days ago by a firm of chartered accountants in regard to the proposal to form a copper shareholders' association, he said: "The proposed association is stated to have three definite objectives. The first is to offer the strongest support to directors to come to an arrangement with other copper producers. Gentlemen, we appreciate that shareholders are prepared to support us, but should like to point out that the best way to do this is to give us your entire confidence. There are men on your board who have been in the copper business for upwards of thirty years and thoroughly understand the complexities of this very involved business."

"The second objective is that someone should attend all copper-producing company meetings and obtain clear statements concerning profit and loss per ton at current prices. So far as this company is concerned, our figures are clearly ascertainable from the published accounts. For the first four months to October 31st in the current year the operating cost per ton of blister copper was £19 17s. 10d. and, adding debenture interest and depreciation, the inclusive cost for that period is £23 4s. per ton. The only item referred to in the circular and not included in this figure is taxation, which is, of course, assessed only when profits are made. The third objective is to secure statements of policy from the directors, but I think I have fully and fairly covered this in my speech."

"The agitation by Sir Henry Barwell and his associates raises a question of policy, which should be in the hands of directors, who, I can assure you, are thoroughly conversant with the position. The question of rationalisation of the industry is an international one and needs the most careful and diplomatic handling, otherwise your interests may be sacrificed. I view this agitation as untimely and against the best interests of shareholders."

The report and accounts were adopted, the retiring directors and auditors were re-elected, the special resolution altering the articles was duly passed. A vote of thanks to the chairman and directors recording full confidence in their management of the company's business was carried with acclamation, and the proceedings terminated.

TO RESERVE ACCOUNT	£30,000 0 0 £215,679 7 8
TO BE CARRIED FORWARD	£312,375 9 10

Points from the Chairman's Speech

It is with great pleasure that I have to report a **RECORD YEAR'S PROFITS.**

This is not only attributable to the reduction of the Beer Duty and better general trading conditions, but also to the acquisition of the Ordinary Share Capital of the Holt Brewery Co., Ltd.

Although we have only benefited by four months' trading in regard to the acquisition of the Holt Brewery Company, Limited, and subsidiary companies, that acquisition has proved an undoubted success.

The increased popularity of "THE BETTER BEER" has necessitated additions to plant to enable us to cope with the increased demand.

Extensions are being carried out at the Aston Brewery, Birmingham. A new Cask Drying and Cooling Department has already been built, and the site has been cleared for further extensions to our Bottling and Wine and Spirit Stores.

A great deal of attention has been paid to our Licensed Houses in the furtherance of our policy to make these more comfortable and convenient for our customers.

Your Company together with its subsidiaries have spent over £20,000 in this direction during the last twelve months.

The £100,000 offered to Ansell's Brewery Limited, Aston, Birmingham, 6, one share now

HALL'S OXFORD BREWERY COMPANY, LIMITED

TAX-FREE DIVIDEND OF 22½ PER CENT.

The annual general meeting of Hall's Oxford Brewery Company, Limited, was held, on the 19th instant, at Victoria House, Vernon Place, London, W.C.

Lieut.-Colonel Sir Rhys Williams, Bart., K.C., D.S.O. (chairman of the company), presided.

The Secretary (Mr D. C. Maxwell) having read the notice convening the meeting and Mr F. C. A. Ledsam the report of the auditors.

The Chairman said:—Gentlemen,—This is the thirty-eighth annual general meeting of the company, and I am glad to be able to report a substantial improvement in the profits earned for the year ended September 30th last.

The accounts show that our profits are up by another £10,000, and you will be pleased to note that the market value of our investments is £33,568 in excess of the book value.

The board has pursued its usual course in spending money freely in the repair and decoration of its houses in the belief that cleanliness and comfort make for increased trade. The board suggests that a final dividend of 12½ per cent. be paid on the ordinary shares, making 22½ per cent for the year.

We deeply regret the death of Major Quilter, one of our directors, and the resignation of Mr Davenport. The board will greatly miss their wise counsels.

Lieut.-Colonel Kingsmill and Mr Ronald Quilter have been selected to fill these vacancies, and I shall ask you to confirm these nominations. For the future the directors have decided to close the company's year on June 30th instead of on September 30th as heretofore.

I now beg to move "That the directors' report and accounts be adopted, that the preference dividend and interim dividend on the ordinary shares of 10 per cent. be confirmed, and that a final dividend on the ordinary shares of 12½ per cent., free of tax, making with the interim dividend of 10 per cent. already paid 22½ per cent. for the year (free of tax), be and it is hereby declared."

Capt. R. H. E. Hall seconded the resolution, which was carried unanimously.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 17, 1934, amounted to £11,983,000, against ordinary expenditure of £8,941,000. After allowing for an increase in Exchequer Balances of £37,805, the operations for the week, as shown below, decreased the National Debt by £2,769,000 to approximately £8,108 millions.*

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

A FURTHER slight decline in wheat prices occurred during the week ended last Wednesday, owing to selling pressure from Argentina and the continuance of subsidised exports from France. London quotations for other cereals have also weakened, although the tendency in the United States has been upward. The price of sugar, which had been falling steadily since the end of June, has risen sharply since last week. Meat and butter are both a little cheaper, but bacon and eggs are both seasonally dearer. Tea, coffee and cocoa are again practically unchanged on the week.

Among textile raw materials, cotton prices are firm and jute has appreciated. At the London wool auctions this week competition was good and quotations, both in London and Australia, now appear to have passed their lowest point. Stocks have been allowed to run down for some time, and an early expansion of demand is therefore

expected by selling interests. On the other hand, quotations for rubber have again fallen, while non-ferrous metals continued to exhibit weakness. The proposed Copper Shareholders' Association has given rise to lively discussion, but, so far, nothing definite has emerged. Business in oils and oilseeds is reported to have improved, and quotations for these commodities are higher than a week ago. The demand for house coal is now more encouraging, and the output of iron and steel continues to give satisfaction.

Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 146.4 on Wednesday last, compared with 145.7 a week ago and 128.0 on the corresponding date last year.

COAL

SHEFFIELD.—The market for steam coal has hardened, owing to somewhat short supplies, but it cannot be said that the export trade is better. Forward business, on the contrary, is distinctly quiet.

The inland demand for industrial fuel continues steady, specifications against contracts being heavy, but no great amount of new business is coming forward. The house-coal department is more active, but there are large stocks of such fuel at the pits. Best steams are quoted at 17s. to 17s. 6d. f.o.b.; best house, from 21s. to 23s. at pits; and blast-furnace coke, at 14s. to 14s. 6d. at ovens. All kinds of coke are in demand and the quantities going out large.

NEWCASTLE-ON-TYNE.—The outlook of the Northumberland steam market for the next few months is very healthy, and there is also a better feeling in Durham, where gas and coking coals are more active. Prime bunkers are a firm market, due to a more active coaling station demand and also to a better arrival of vessels taking bunkers only. Cokes of all descriptions are in good demand, producers of the blast-furnace grades being heavily sold in the inland trade.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. DURHAM.—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class gas, unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

WORKINGTON.—A welcome change has come over the coal trade. Demand is very little short of the level it reaches in mid-winter, and the collieries, all of them working full time, are disposing readily of their production. The Ulster market is brisk, the West Cumberland shipments to Belfast and Londonderry averaging from 7,000 to 10,000 tons a week. Local landsale is brisk, and West Cumberland collieries are taking all the supplies of smalls. The erection of a central coking plant of 120 modern by-product ovens is to be started soon at the United Steel Company's steel-works at Workington. At present coke for the furnaces there has to be hauled from Lowca, Rishow and Moresby. Prices are steady, with best round nominally 21s. 6d.; washed doubles, 20s.; washed singles, 18s., all f.o.b. Smalls, 15s. 6d. per ton. Best house coal, 30s. 8d.; and house nuts, 29s. at station. Gas coal, 27s. per ton. Local coke is from 15s. 6d. to 16s. 6d. per ton.

GLASGOW.—The market remains firm. Home demand is of considerable extent owing alike to the colder weather and to increased industrial activity, and this, of course, reduces the quantities available for shipment. Although still disappointing, new business with foreign buyers has improved lately, despite keen competition, and with the contracts on hand the collieries are able to dispose of production fairly readily.

Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s. 6d.; splint second, 14s. 9d. to 15s.; navigation, screened, 14s. 9d. to 15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 12s. 9d. to 13s.; trebles, 14s. to 14s. 6d.; doubles, 13s. 6d.; singles, 12s. 6d. to 12s. 9d.; pearls, 12s.; dross, 10s. FIFE.—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 3d. to 12s. 6d.; first-class steam, 13s. 6d. to 13s. 9d.; third-class steam, 12s. 6d. to 13s.; trebles, 14s. to 16s.; doubles, 13s. to 14s.; singles, 12s. 6d. to 12s. 9d.; pearls, 11s. 9d. to 12s. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 6d.; unscreened navigation, 12s. 6d.; trebles, 13s. 6d. to 14s. 6d.; doubles, 13s. to 13s. 6d.; singles, 12s. to 12s. 3d.; pearls, 11s. 9d. to 12s. Ayrshire.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s. 6d.; trebles, 15s. 6d. to 15s. 9d.; doubles, 13s. 6d.; singles, 13s.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—The two chief events in the South Wales coal trade this week have been the announcement of a large measure of agreement between Polish and British coalowners in regard to the regulation of prices and quantities in the coal export trade of the two countries, and the publication of the tenders for the Egyptian State Railways contract for 150,000 tons for delivery over the first four months of 1935. The terms discussed at Warsaw are subject to the consideration of the Central Council and district associations in this country, but although they are being treated as confidential for the moment, they are regarded by the British delegation as offering better prospects of ultimate agreement than any of the other discussions between the two countries in recent years. The lowest of the South Wales tenders for the Egyptian State Railways contract is 23s. 2½d. c.i.f. and 18s. 1½d. f.o.b., but a Polish tender is as low as 19s. c.i.f. and 11s. 6d. f.o.b., while Germany has tendered for the order on the basis of 22s. 6d. c.i.f. Under the previous contract both Polish and German offers were lower than those of British firms, but the business was retained by South Wales. Conditions on the coal market this week have shown very little change. There is a scarcity of some of the washed and sized coals but a glut of large classes, and there has been intermittent working at many of the collieries which are dependent almost entirely on the marketing of large and ordinary screened smalls.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; Western Valleys, 17s. 9d. to 18s.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. (French), 23s. 3d. to 23s. 9d. (Portuguese).

IRON AND STEEL

MIDDLESBROUGH.—The position in the local iron and steel market is fully maintained. The production of the three furnaces on Cleveland foundry pig iron is fully absorbed and regular shipments

are being made to Scotland. The price to home users is based on a minimum of 67s. 6d. per ton for No. 3 Cleveland foundry iron delivered locally. East Coast hematite is well taken up and merchants expect to arrange further parcels for overseas, although the prices are very much below the quotations to home consumers. Good deliveries are being made to Sheffield and the Midland areas, and the minimum price for No. 1 East Coast hematite is maintained at 69s. per ton for delivery locally. Shipments of all classes of pig iron from the Tees from November 1st to 20th amounted to 10,045 tons, against 10,577 tons for the corresponding period of October. Very little business in foreign ore is now being transacted, most buyers being well covered for the next two to three months, whilst good Durham blast furnace coke is obtainable at 20s. per ton delivered furnaces here.

The steel departments are busy and the recent order placed on the Tyne for the building of the hull of a new cruiser will be beneficial. Messrs Dorman's report that they have booked orders for 5,730 tons of tram rails for the London Passenger Transport Board and for constructional and other steel for Iraq. In addition to heavy steel, such as rails, plates, etc., manufacturers here are now producing special steels suitable for the manufacture of sheets for motor-car bodies, drill steel, etc., and it is anticipated that this will prove a valuable addition to their ordinary productions.

SHEFFIELD.—The export trade returns for October revealed increases in a number of Sheffield's steel products, notably hand and engineers' small tools. The export figures for tools during the present year have nearly reached the high record of 1929, and works engaged in the production of basic steel billets continue producing to capacity, but the acid steel department is rather weak and the booking of orders for quality steels has been tapering off for a lengthy period. Substantial new business will soon be needed to keep up the present activity of plants. The prevailing tone, however, is one of confidence. Several of the largest steel companies are obtaining fresh orders and can foresee sufficient work over the next six months.

The weakness of the market for steel scrap continues, notwithstanding the heavy consumption. Owing to restricted buying, the market value of basic steel scrap has eased some eighteen pence a ton. Large quantities of this material have been imported from America, and it is reported that negotiations are proceeding for further supplies from the same source. There has been but little development of the seasonal demand for cutlery and the output this month has fallen below that of November last year. Makers of silver and electro-plate are by no means busy, but their turnover is rather better than a year ago. Prices of all kinds of iron and steel materials are steady.

WORKINGTON.—There has been a turn for the better in the North-West Coast hematite pig-iron trade, forward business of considerable extent having been booked, so that makers anticipate the maintenance of production almost to the end of March. In part, the improvement is due to an expanding demand from the Midlands, South Wales and Scotland, and in part to the heavy absorption by Barrow and Workington steelmakers. Two furnaces at Workington are being prepared for the smelting of manganese alloys at the end of the year. East Coast competition has lost some of its sting and prices are hardening. Bessemer mixed numbers are quoted at £3 12s. 6d. per ton at Glasgow; £3 18s. 6d. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham, while special brands are an additional 2s. 6d. to 5s. per ton. Malleable iron, at £5 15s. per ton delivered at Birmingham, is a livelier Midland trade, and refined iron is in fair request. Ferro-manganese, at from £10 15s. to £11 5s. per ton home, is also in increased demand. The outlook in the steel trade is good. Orders have been obtained that promise to yield activity on the present scale throughout the winter. Barrow is engaged on rails and hoops. Native ore, at from 13s. 6d. to 14s. 6d. per ton, is wholly in local demand. Importations of North African and German ore at Workington during the past four weeks have totalled 13,520 tons.

CARDIFF.—Conditions in the tinplate trade are stable, but the factories are working at only about 65 per cent. of capacity, and there would appear no immediate prospect of any increase in the quota. Prices of tinplates are ruling at the schedule c.i.f. figures. Galvanised sheets are unchanged at from £11 5s. to £11 15s. per ton f.o.b., except for India and Scandinavia, and steel bars at £5 2s. 6d. per ton. Shipments of tinplates at Swansea last week totalled 85,311 boxes, compared with 100,329 boxes the previous week, and 51,544 boxes in the corresponding period last year. Stocks, however, were slightly lower at 93,234 boxes, as against 97,597 boxes at the end of the previous week and 132,234 boxes a year ago.

OTHER METALS

The copper market is at present mainly affected by a poor demand, which was not stimulated by the improvement in the statistical position and the conference discussions. According to the usual unofficial statistics, world copper stocks declined during October by 8,000 short tons, although output showed an increase of 4,500 tons and reached its peak point for the current year at 118,070 short tons. This improvement in the statistical position is difficult to reconcile with market tendencies during the past month, and it would appear that the statistics must be treated with some reserve, especially in view of the fact that they are really nothing but estimates. The efforts of the copper shareholders in the direction of restriction of output have occasioned some lively discussions, but, so far, no real progress has been made. The situation is complicated by the state of affairs in the United States. The American producers who agreed to the copper code have already considerably restricted their output, but exports from that country

consist almost exclusively of non-code copper produced by the "customs smelters." The production of the latter is virtually unfeasible in the United States, since the majority of the consumers have agreed to use only code copper; they are therefore compelled to export. In the circumstances, an agreement between world producers is not easy to accomplish.

Increased purchases have led to a firmer tendency in the tin market during the past few days, but buying is still at an unsatisfactory level. The International Tin Committee held its November meeting on Thursday, but we go to press too early to publish their decision regarding production quotas for the immediate future.

Quotations for lead and spelter have fluctuated within narrow limits during the past week. Demand for lead is improving, but heavy production and the adverse general position prevent a considerable price improvement. No further progress towards the prolongation of the zinc cartel has so far been reported. Despite an increase in production of about 3,500 metric tons during October, an increase in production of about 1,000 tons to 112,292 metric tons, stocks declined by about 1,000 tons at the present time.

Platinum is a good market at the present time. Its consumption has increased considerably during the past ten years as a result of the sharp decline in prices. Exports of the metal from Canada are rapidly increasing. From April 1 to September 30, 1934, Canada exported not less than 76,878 ozs. of platinum, but stocks have not increased. No increase in price is to be looked for at present, for costs of production in Canada are low since platinum is a by-product of the production of nickel.

TIN.—Sales on the London Metal Exchange: 250 tons on Monday, against 215 tons last week; 150 tons on Tuesday, against 155 tons last week; 250 tons on Wednesday, against 325 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 51.20 cents a week ago and 51.25 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 10s. to £228 12s. 6d., compared with £228 5s. to £228 10s. last week. Stocks in London and Liverpool at the end of last week were 3,997 tons, a decrease of 408 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,225 tons on Monday, against 675 tons last week; 1,300 tons on Tuesday, against 850 tons last week; 3,400 tons on Wednesday, against 2,000 tons last week. Domestic spot was quoted at 6.72½ cents per lb. in New York on Wednesday, against 6.65 cents a week ago and 6.82½ cents a month ago. Wednesday's official closing price for standard cash in London was £26 11s. 3d. to £26 12s. 6d., compared with £27 10s. to £27 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 38,007 tons, show an increase of 2,012 tons and stocks of rough copper, at 10,096 tons, an increase of 75 tons.

LEAD.—Sales on the London Metal Exchange: 150 tons on Monday, against 650 tons last week; 1,000 tons on Tuesday, against 700 tons last week; 150 tons on Wednesday, against 350 tons last week. The New York quotation on Wednesday was 3.50 cents per lb., against 3.60 cents a week ago and 3.70 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 8s. 9d. for shipment during the current month, compared with £10 6s. 3d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 150 tons on Monday, against 350 tons last week; 50 tons on Tuesday, against 550 tons last week; 300 tons on Wednesday, against 200 tons last week. Wednesday's quotation in East St. Louis was 3.70 cents per lb., against 3.75 cents the week before, and 3.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 16s. 3d. for shipment during the current month, against £11 17s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £60 per ton, as against £55 per ton last week. Chinese wolfram was again quoted at 40s. to 42s. per unit, c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. Raw cotton prices have continued steady. It is a long time since speculative interest was so dormant. Traders are still in the mood to act with caution, pending some information relating to the policy of the American Government for next season. Demand from spinners continues to run on outside growths, but there are reports of South American cotton being of rather poor quality. Rather more strength has shown itself in prices for the Egyptian staple.

The general inquiry in piece goods for export has shown some expansion. Numerous manufacturers, however, have expressed disappointment at the low bids and progress in certain directions has been difficult. With regard to India, a steady business has been put through in dhooties and mulls for Calcutta and rather more activity has shown itself in white shirtings for Karachi, whilst a useful trade has been reported in dyed fancies for the up-country outlets. Business in printing and finishing styles for South America, certain Empire markets and the Continent has been fairly encouraging. A little more activity has shown itself in home trade fabrics, chiefly in poplins and limbrics. The general position in weaving remains unsatisfactory, but some manufacturers are rather better situated than at the beginning of the month. For the most part, the turnover in yarns has consisted of small lots, yet now and again spinners have been able to sell rather larger weights than recently. Medium numbers in American qualities have attracted rather more attention. In Egyptian spinnings the home demand remains poor, but quite a good business has again been done for Germany.

COTTON PRICES

COTTON WEAVERS WAGES.—Although progress is rather slow, there now seems to be a probability of wage rates in the manufacturing section being legalised at an early date, under the Cotton Manufacturing Industry (Temporary Provisions) Act. At the end of last week the General Council of the Operative Weavers' Amalgamation approved the draft proposals which have been agreed upon by the employers and the leaders of the workpeople. It was also resolved that there should be a ballot of the operatives before the new wages agreement is either accepted or rejected. The officials of the Weavers' Amalgamation will not lose any time in taking this ballot, and they are now being asked to vote on the single question of:—"Are you in favour of giving the Central Committee authority and power to conclude a new wages agreement for submission to the Minister of Labour to make it legally enforceable?"

It will probably be a fortnight before the result is known, but it is understood that in the meantime negotiations between the employers and the trade union officials will be resumed. Owing to the opposition in certain districts to wage reductions under the new list the negotiating committee of the operatives has promised to make every effort to secure concessions where heavy reductions will take place. The industry as a whole will welcome the legalisation of wage rates. Wage cutting, which has been going on in several areas for some time, has resulted in much irregularity in cloth prices, and if buyers can be convinced that values are stabilised there is every likelihood of more business being done.

WOOL.—Bradford. The event of the week was the opening last Tuesday of the final series of Colonial sales in Coleman Street Wool Exchange. The initial auction demonstrated the soundness of values, and compared with the close of the previous series on October 3rd, there was not much change. A very good buying spirit developed, competition was keen, and the prices established are attractive for all sections of the trade. There should be an excellent series, because trade is good, consumption large, and prices are most reasonable for every quality of raw material. If prices are maintained, or hardened slightly, it will encourage a continuance of the present satisfactory conditions in most branches of the wool textile industry.

Although there is a large quantity for sale (176,500 bales), we anticipate a considerable amount going into users' hands. The strongest feature of the wool position to-day is undoubtedly the lightness of stocks in all manufacturing centres, for no country has bought anything like the same quantity of wool this year as in recent years. This has given users an opportunity of getting rid of all accumulations; in fact, Continental stocks of tops have greatly declined, while stocks of wool in topmakers' hands in the West Riding of Yorkshire have seldom been so low as during the past four to six months. This should all make for a well sustained demand for new wool in Coleman Street, while the same observation is applicable to overseas selling centres, particularly in Australia.

In manufacturing districts trade is good, especially in the West Riding. Most mills are running full time, and in some cases up to 54 hours per week. No doubt there is considerable activity in preparing next spring and summer fabrics, and the low prices at present ruling for merinos have undoubtedly given a real stimulus to fabrics made from fine wools. The position appears healthy, and at current prices consumption should be further stimulated.

GRAIN MARKETS

WHEAT.—Pressure to sell the new Plate crop, and the continuance of offers from France have caused a further weakening of quotations this week. The Argentine crop promises to be of fair size, but the Australian crop has been damaged by grasshoppers, by drought and by rust. The International Wheat Conference which met at Budapest on Tuesday is the subject of a Note of the Week. According to Mr G. Broomhall, total shipments during the past week were 1,298,000 quarters, against 1,546,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 98½ cents per bushel, against 99½ cents the week before and 98½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. per 496 lbs., against 31s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 27s. 9d. to 28s. 9d., against 28s. 3d. to 29s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 25s., against 23s. a week ago.

FLOUR.—Demand is generally quiet at unchanged prices. North American shipments were 123,000 sacks in the past week, as compared with 91,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d. as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 3d. to 26s. 3d., against 24s. 6d. to 26s. 6d.; Australian, ex store, 19s. 9d. to 20s., against 20s. 3d. to 20s. 6d.

MOTOR FUEL PROPRIETARY LIMITED

(Incorporated under the Companies Acts, 1862 to 1907).

Name to be changed to:

COAL AND ALLIED INDUSTRIES LIMITED

(If approved by Board of Trade.)

SHARE CAPITAL

Authorised. £300,000 in 1,200,000 Shares of 5s. each Issued. £175,000

DIRECTORS

Chairman: FREDERICK CHARLES MARTEN.

THE RT. HON. THE EARL OF ELDON.

THE HON. MICHAEL SIMON SCOTT.

J. HUGHES RICE.

J. A. DODERO.

BANKERS

WESTMINSTER BANK LIMITED, 27 St. Mary Axe, E.C.3.

SECRETARY AND REGISTERED OFFICE

GEO. W. ASKEW, F.C.I.S., 14 St. Mary Axe, E.C.3.

THE Company has developed an entirely new and unique process, evolved by Mr. H. P. Stephenson, for the treatment of raw Coal, Shale and Peat in Oil media, and the subsequent chemical treatment of the products by chlorination and other means. Patents have been taken out and are held in trust by Mr. Stephenson on behalf of the Company, and £225,000 additional capital has been provided for the erection of a commercial plant capable of treating 500 tons of coal per day.

A five-ton unit was completed at Slough in May, 1934, and such satisfactory results were obtained that the Directors invited Professor James William McBain, F.R.S., and Professor Christopher Kelk Ingold, F.R.S., two eminent and internationally known scientists, to investigate thoroughly and report on the process. Their report is now in the possession of the Directors, and the following letter dated October 10th, 1934, has also been received:—

Dear Sirs,

In connection with the investigation carried out by Prof. J. W. McBain, F.R.S., and myself, the following has been established:—

1. That the treatment of Coal and Oil mixtures in the manner indicated by the Company's Patents constitutes an important process.
2. That when Coal and Oil are processed together in this manner, valuable chemical products can be obtained.
3. That a yield of 27.3 gallons of Light Oil per ton of Coal processed can be obtained and should be a minimum.
4. That considerably increased yields of Light Oil per ton of Coal processed should be obtainable by Large Scale operations.
5. That the 16 cwts. of Semi-coke (Smokeless Fuel) produced by the process is of the highest quality.

Faithfully yours, (Signed) C. K. INGOLD.

Since this Report, further tests, from which considerably higher yields have been obtained, have been carried out by Mr. Stephenson.

After making full allowance for all overhead, administration and amortisation charges, the Directors, working on a minimum yield of 27 gallons of light oil, part of which is resolved into the valuable chemical products mentioned in the above Report, estimate the net profit per ton of coal processed at £1 11s. 0d. With a plant capable of treating 500 tons of coal per day, this would amount to £271,250 per annum. This is equivalent to over 150 per cent. per annum on an issued capital of £175,000, and in the Directors' opinion the demand at present existing for the products of the process will necessitate the erection of further similar plants.

Arrangements have been made for Mr. Stephenson to continue in his capacity as Technical Director. Prior to his joining the Company he was Assistant Chief Engineer, coal oil division, with Imperial Chemical Industries Limited, and is the joint registered holder of some of the key patents on hydrogenation owned by that Company.

The Company has an option on a site close to important coal fields with river and sea frontage and access to deep water. The report on this site by Messrs. Chambers, Haworth, Soissons and Partners is conclusive that the site is entirely suitable for the requirements of the Company.

The plant will be erected in units, each unit being put into operation on completion. Mr. Stephenson estimates that the cost of a plant capable of treating 500 tons of coal per day will not exceed £150,000, and most of the units should be in operation within 9 months, during which time the Directors will arrange for the marketing of the Company's products, for which there is an established and increasing world demand.

BARLEY.—Demand for feeding barley has been poor, and quotations have tended to weaken, except in the case of Canadian, which is firm on account of United States purchases. English malting has suffered a further decline in price. "December" futures have been 52½ cents per bushel in Winnipeg on Wednesday, against 50½ cents last week and 52½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 50s., against 30s. to 55s. a week before.

OATS.—Imported oats are in quiet demand at mainly unchanged rates. Prices for English oats continue firm. On Wednesday, "December" futures were quoted at 53 cents per bushel in Chicago, against 51½ cents a week ago and 50½ cents last month. Quotations in London, Wednesday: "River Plate," landed, not quoted; "Chilean White," landed, 23s. 9d., against 23s. 9d. a week earlier.

MAIZE.—Last week's strength has not been fully maintained, and prices have eased off a little. "December" futures were quoted on Wednesday at 84½ cents per bushel in Chicago, against 81 cents a week ago and 75 cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 21s. per 480 lbs., compared with 22s. last week; "Plate," ex ship, 20s., as against 21s.; "Plate," "November," 20s. 3d., as against 21s. 6d. Yellow maize meal, ex wharf, was quoted £5 15s. to £5 17s. 6d. per ton, against £6 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to November 17	Cwts. 73,670	Cwts. 313,073	Cwts. 257,789	Cwts. 322,498
12 weeks to November 17	Cwts. 73,670	Cwts. 313,073	Cwts. 257,789	Cwts. 322,498
Average price of English wheat per cwt.	s. d. 6 10	s. d. 5 5	s. d. 4 7	s. d. 4 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 15, 1930	Cwts. 124,662	Cwts. 456,323	Cwts. 46,198	s. d. 6 9	s. d. 9 8	s. d. 5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Nov. 22, 1933	Jan. 3, 1934	Nov. 14, 1934	Nov. 21, 1934
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	62½	46½	63½	65½	78	77½
Chicago (No. 2 Winter) —Cents per 60 lb.	55½	46½	87½	84½	99½	98½

The visible supply of wheat in Canada, at 123,743,000 bushels, shows an increase of 1,485,000 bushels. Supplies a year ago amounted to 115,765,000 bushels.

OTHER FOODS

SUGAR.—The decline in quotations has been checked this week and prices have moved to a higher level. The spot price in New York on Wednesday was 3-00 cents per lb., as compared with 2-86 cents per lb. last week and 2-74 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 1½d. to 4s. 2½d., against 3s. 9½d. to 3s. 10d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	1,005	25	1,443	1,179	18,263	18,680
Liverpool ...	31,941	25,826	14,183	13,571	126,639	88,092
Total tons....	32,946	25,851	15,626	14,750	144,902	106,772
Last week ...	28,136	4,722	15,706	14,704	127,582	95,671

COFFEE.—Demand on the New York spot market has been fair to quiet and quotations are again unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London market has again ruled quietly steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 978 bags; delivered, for home consumption, 4 bags; exported, 23 bags; stocks, 28,373 bags, against 26,202 bags a year ago. Central American, landed, 1,109 packages; delivered, for home consumption, 1,840 packages; exported, 771 packages; stocks, 78,943 packages, against 67,145 packages last

year. Other kinds: Landed, 293 packages; delivered, for home consumption, 2,065 packages; exported, 255 packages; stocks, 72,460 packages, against 100,234 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 19s. 9d. to 20s. 3d. per 50 kilos, c.i.f. Continent, as against 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 1,032 bags; delivered, for home consumption, 5,194 bags; exported, 280 bags; stocks, 146,590 bags, against 111,741 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,564 packages of Indian and 17,550 packages of Ceylon tea. Competition for the Indian grades was again keen, but prices were a shade lower on Wednesday. On the other hand, the rather smaller supplies of Ceylon met with a good trade and quotations showed a slight advance at Tuesday's auction. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.						
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Nov. 16, 1933	13-27	13-49	15-81	11-73	10-52	11-29	13-75
Oct. 18, 1934	12-63	11-56	14-32	10-15	9-77	10-98	12-76
Oct. 25, "	12-49	11-35	14-63	9-96	9-29	10-85	12-73
Nov. 1, "	12-33	11-44	14-27	10-69	9-28	10-67	12-58
Nov. 8, "	13-21	11-62	14-39	10-23	9-28	10-75	12-51
Nov. 15, "	13-10	11-51	14-15	10-29	9-57	10-69	12-39

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. per cwt. (new crop), shows a fall of 3d. on the week. Movements in London during the past week were as follows: Landed, 15 tons; delivered, 465 tons; stocks, 2,917 tons, against 2,823 tons a year ago.

POTATOES.—Supplies are ample for the current level of demand and, although quotations were generally maintained this week, one or two varieties made slightly lower prices. At the London Borough Market on Tuesday, light soil "King Edward" sold at 5s. 9d. to 6s. 3d. per cwt., ex market, as against 6s. to 6s. 6d. per cwt. last week.

SPICES.—"Lampong" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 78 tons; delivered, 61 tons; stocks, 608 tons, against 426 tons a year ago. White, landed, 481 tons; delivered, 66 tons; stocks, 9,702 tons, against 1,656 tons a year ago.

MEAT.—Trade in most descriptions has been only fair this week, but fog delayed the arrival of Irish pigs on Wednesday and English pigs were consequently in more active demand. At Smithfield on Wednesday, Argentine beef, chilled hindquarters, was quoted at 3s. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. last week. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,735 tons, against 9,091 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83·6 per cent. of the beef supplies, against 80·6 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 72·1 per cent. of the total supply of mutton and lamb, against 64 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OIL AND OILSEEDS.—A much steadier and even firmer tone has manifested itself in most sections. Linseed is in better demand and dealings in new crop have begun, up to £8 17s. 6d. per ton having been paid for January shipment, and £9 5s. for old crop, November. Reports of weather damage in Argentina have not seriously affected the market except to stimulate buying by crushers short of seed. There is but little business in Indian linseed, Calcutta to London November-December being held for £10 12s. 6d., and new crop April-May quoted £10 10s. The quantity afloat for Europe is now 114,000 tons (including 10,500 tons from India) or 1,700 tons less on the week; and for the United States 37,400 tons, against 27,700 tons a year ago. Cotton seed is still a rising market, and for black Egyptian to Hull, December loading, £5 12s. 6d. has been conceded and this remains the value.

After a period of firmness linseed oil is easier again, but shows a net gain on the week. Raw oil ex Hull mill for November-December delivery is quoted £17 15s., and for January-April £17 17s. 6d. per ton (naked). Cotton oil is firmer in sympathy with the strength of American edible oils. Crude Egyptian ex Hull is held for £17 and common edible for £19 prompt. Oilcakes are in improving demand and prices are steady. No news is yet to hand regarding the application for an increase in the import duty on foreign oilcakes and vegetable oils.

TIMBER.—Last month's imports of sawn softwoods for building and joinery work almost equalled the large total for the same month of 1933 and stocks in the United Kingdom remain heavy. Owing to weakness in shippers' prices and unfavourable weather for building work, the spot market has lacked tone this month. It is suggested, however, that the consumption outlook is brighter, since increased house-building may result from the recent Socialist gains in the municipal elections.

The furniture trades have been busier in preparation for the Christmas season and, in view of the large numbers of houses recently erected, demand for their products should be good. Mahogany logs and sawn woods have been in increasing supply and there is a large demand for the cheap lumber from British countries overseas. Shipments of other sawn wood from America and Canada are also heavier this year, but the N.R.A. code prices still create uncertainty on both sides of the Atlantic. A good demand is also being experienced for pitwood and for plywood.

RUBBER.—During the past week prices, both in London and New York, have further declined. Nervous selling brought quotations down on Monday, but trade buyers came in at the lower level

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following list are revised with the assistance of an eminent firm in each department.

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription 8s. 2d.

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

ARMS AND ISOLATION

This country is generally immune from those influences which periodically sweep the Continent of Europe. Never is that immunity more fortunate than when panic and unreason reign abroad. To-day there is plenty of unreason and irresponsibility on the Continent; and when so many European countries and their citizens live under dictatorships which control the news and substitute propaganda for national ends, rumours and fears have free play to foster panic. The widespread atmosphere of fear and distrust in Europe has engendered a panic psychology which, as General Smuts reminded us only a fortnight ago, does more to breed war than anything else.

It was therefore all to the good that, in the House of Commons on Wednesday, Mr Winston Churchill raised the issue of our intentions regarding armaments by moving an amendment to the Address on the King's speech to the effect that "in the present circumstances of the world, the strength of our national defences, and especially of our air defences, is no longer adequate to secure the peace, safety and freedom of your Majesty's subjects." Mr Churchill, in a speech which, though carefully considered, was pitched in a disquieting key, asked the Government to take the country into its confidence and to give it more precise details, both of their knowledge of Germany's rearmament and of their proposals for our own defences against aerial attack. "The great new fact which has broken upon us in the last eighteen months," he said, "is that Germany is re-arming." He contended that "the decision of a handful of men—the men of June 30th—is all that is required to launch an attack upon us, if such an attack were possible, and that only the shortest notice, or no notice at all, could be counted upon." If, he said, this country's and Germany's present air programmes proceeded at their present rates, by 1936 the German military air force would be 50 per cent. stronger than, and in 1937 almost double, that of our own—and this apart from Germany's large reserves of "dual purpose" civil aircraft. London, and much more than London, was easily vulnerable to a heavy air attack with incendiary bombs; the flight of three or four millions of people from the

capital would create administrative chaos; the Port of London could be completely disorganised. Our only effective defence was to build as great a military air force, and as rapidly, as Germany was preparing, to deter aggression. Only then could we "intervene usefully in sustaining the peace of Europe."

Mr Baldwin, in reply, informed the House that Germany was now expanding her long-service army of 100,000 men into a short-service army of 300,000; that her air force is now somewhere between 600 and 1,000 aircraft (though these are doubtless not all first-line machines); and that "great haste is being shown in the preparation of aerodromes and great secrecy in their construction and as to where they are." But our own first-line aircraft numbered 880, of which 687 were available at home, including 127 auxiliary machines in every way equal to our first-line aeroplanes; while there is "a far larger number" in reserve or available for training or to replace normal peace time wastage. Moreover, Germany laboured under the disadvantage of having to compress the three years of training for military pilots, which our pilots receive, into a shorter period. Our machines were of the most modern type, and research was continually going on, both for defensive measures and for the machines themselves. Whether we take the upper or the lower figures of Germany's aircraft, it was not correct to say, as Mr Winston Churchill had done, that Germany was approaching equality with us. Confining the comparison to aircraft immediately available in Europe and ignoring our substantial overseas forces, her strength at present was not half our own, and the experts estimate that this time next year our margin will still be nearly 50 per cent. Hence, there was, in Mr Baldwin's view, no ground for alarm—"still less for panic"—for "there is no immediate menace confronting us or anyone in Europe at this moment." Nevertheless, we must look ahead; we must have "regard to our own position and to our position as members of the League of Nations and as subscribers to Locarno." In 1935 and 1936, therefore, the Government proposed to advance its five-year air programme, to form 22 squadrons for home defence

and three for the Fleet, in addition to the four new squadrons this year. This would add 300 first-line aircraft to our strength, plus an increase in the reserves. New aerodromes were in process of formation. Next year's Air Force orders for new machines would be 80 to 90 per cent. above this year's figures; and a supplementary estimate would have to be presented next February.

Though the Opposition only replied in somewhat vague and general terms, there lay behind their speeches—as also behind those of most other speakers in the debate—the crucial question what is to be the guiding line of British policy? One thing is crystal clear: we cannot afford, either immediately or within measurable time, to burden ourselves with the prohibitive cost of a national defence system adequate for an isolationist policy of “ourselves alone.” Isolation means for us not only the tearing up of our present commitments, but also a voluntary exile from the comity of those nations who are willing to co-operate to resist forcible aggression by force. Can we afford to envisage such isolation with equanimity? If not, and if things go on as at present, the Government's proposed increase in our various defences is as nothing compared with what has yet to come. Is there no other way? The only effective, morally right, and economical solution is that we should “be prepared to play our part in resisting aggression”; that we should strengthen the League as the buttress of the collective system of peace and security; that we should win back those Powers who have left its councils; and that we should then press forward to disarmament, and secure the co-operation of the United States in the cause of collective peace.

Disarmament may be the safeguard of peace; but we shall not get any measure of controlled disarmament unless we work out a system of collective security to keep the peace. The claims of Germany evoke a response in this country, which was expressed by Mr Baldwin and Mr Lloyd George in the debate on Wednesday; but there is also sympathy with Germany's neighbours, great and small, when, at the same time as a new Germany is re-arming and inculcating martial ideals, they are merely called upon by well-meaning Englishmen, themselves re-arming, to disarm.

It is not yet too late to be ambitious—to devise a still more excellent way. Mr Baldwin appealed to the German Government to tear its veil of secrecy away and to “bring to light the things that are alarming Europe,” so as to revive the opportunity for calm deliberation on what might yet be achieved. Sir John Simon, in winding up the debate, reiterated the Government's desire for a disarmament agreement “at the lowest level at which it can be obtained.” He told the House that he had communicated the Government's statement on Germany's re-armament to the German Government, and to the Governments of France, Italy and the United States.

By taking this very unusual course the Government have lifted the debate out of the field of purely domestic politics and made it an affair of international significance. The responsible tone of most of the speeches shows that the House of Commons realised that fact. It is to be hoped that this gesture will be met in the spirit which animated it. If so, Mr Baldwin will be justified in his hope that it will prove “a first step once more to bring together the nations of Europe and . . . that, having learned some wisdom by the deterioration and the degeneration of the conditions of Europe in the last few years, the voice of wisdom and the voice of peace may prevail.”

THE GOOD NEIGHBOUR

In his inaugural speech nearly twenty months ago President Roosevelt dedicated his foreign policy to the ideal of the “good neighbour.” The implication was clear at the time that neighbourliness was not to be confined to purely diplomatic occasions; but in the economic sphere the progress of the New Deal has hitherto been marked by scant consideration of the interests of other nations. The World Economic Conference was all but disrupted last year by the President's blunt assertion that his own domestic programme was of greater importance than the stabilisation of the world's currencies or the reduction of the world's

tariffs. The depreciation of the dollar, initiated by the Inflation Amendment, egged on by the remarkable policy of purchasing gold at ever-rising prices, and crystallised by the 40 per cent. devaluation, was one of the clearest cases of deliberate economic aggression in the history of currencies. Alongside these accomplished facts the good intentions of Secretary Hull have been powerless to make much impression. Negotiations for reciprocal tariff concessions have been conducted with a number of States, and with some of them, notably Cuba, treaties have been concluded. But the President has applied to these negotiations the principles of the Yankee horse-trader rather than those of the good neighbour.

The symptoms of a change of heart in the last few weeks have consequently been all the more welcome. Secretary Wallace, by his insistence on the necessity for more international trade or less agriculture, has made his countrymen see, more clearly than previously, that they cannot ignore their foreign markets or their foreign customers. In part, too, the slackening of the pace of recovery has brought, in America as in England, realisation of the limits of purely domestic measures. Whatever may have been the causes, there have been some signs that the Administration is beginning to think once more of the outside world. The technical assistance recently given to the countries of the gold bloc is a clear case in point.

There is consequently reason to believe that the publication of a report drawn up by a group of non-partisan experts, and recommending action “as rapid and dramatic” as possible to promote the increasing interchange of goods and services between the United States and other nations, comes at a particularly timely moment. The commission of inquiry, which was financed by the Rockefeller Foundation and presided over by Mr R. M. Hutchins, President of the University of Chicago, took evidence in different parts of the country from authorities as eminent and as divergent as Mr John W. Davis and Senator Robert La Follette, Professors Irving Fisher and O. M. W. Sprague, Mr Russell Leffingwell and Dr. Charles A. Beard. The President is understood to have blessed the inquiry, but the blessing presumably does not indicate acceptance of the conclusions of the report.

The recommendation of rapid and dramatic action is certainly borne out by the detailed suggestions of the Commission. On the subject of the War Debts, for example, the Commission recommend that a body be established to negotiate a settlement and with authority to accept in payment the defaulted obligations of the States of the Union. The acceptance of any such proposal would be a considerable advance on the position previously taken by American Governments, which have always insisted that the defaulted State debts were no concern of the Administration at Washington. Any approach to reason on the problem of War Debts is to be welcomed, though it is to be doubted whether a mere exchange of defaulted bonds would be in every way a satisfactory solution. And, in any case, the difficulty of transfer—which has led to the suspension of payments—is a symptom of the underlying disease of lack of balance in America's international financial relationships rather than the cause, and the removal of irritating symptoms, however important, cannot be mistaken for a cure.

Fortunately, Mr Hutchins and his colleagues make no such mistake, for their second suggestion is that certain American tariff duties should be lowered “under proper safeguards” or abolished altogether. It is true that they add the qualification “where such action would not increase unemployment,” but they qualify the qualification by suggesting that in certain cases the general interest would be served by the removal of tariffs, even if it were necessary to pay a dismissal wage to the labour adversely affected. This is indeed a bold and dramatic proposal. It is not clear from the cabled summaries whether the Commission have nominated specific duties for the honour of removal, and one may profess scepticism about the possibility of drowning the shrieks of threatened vested interests with the gentler and less abusive voice of the general interest. But it is pure gain that the necessity of reducing tariff barriers by the simple method of removing duties should be so authoritatively restated. The Commission apparently have little confidence in the power given to the President by the last Congress to raise or lower duties by

50 per cent. in pursuance of reciprocal bargains, for they recommend the substitution for it of the 1930 proposal to give the Tariff Commission power to vary rates subject only to the joint veto of both houses of Congress. In so far as the aim of this proposed change is to get away from the rigidly bilateral nature of the President's present powers, it shows a laudable appreciation of the need for America to reduce her tariffs more rapidly than her neighbours. But the past record of the Tariff Commission does not encourage extravagant hopes of its boldness or liberality. The section on foreign lending further illustrates the Commission's anxiety to increase the debit side of the American balance of payments, for it is recommended that there should be no governmental restrictions on foreign long-term private loans or on the establishment of American branch factories abroad.

In the field of monetary policy the Commission profess disbelief in the theory that there is any but a minor relationship between the official price of gold and silver and the general price-level. They accordingly recommend that there should be no further devaluation. A world which is already suffering from the undervaluation of the dollar will applaud this particular recommendation without reserve. The Commission do not oppose the principle of raising prices by means of an unbalanced budget, but they remark that the deficit can be obtained as easily by reduced taxation as by increased expenditure. In view of the unremitting need for relief expenditure, the remark would seem to have more theoretical validity than practical relevance.

Concern for the United States' external relations is also shown in the Commission's suggestions on agricultural policy. They recommend that those parts of the agricultural programme which have tended to restrict agricultural exports should be abandoned as soon as possible. The reference is clearly to measures tending to raise agricultural prices in America above the world level, which, in the Commission's view, “will stimulate foreign production to the detriment of the farmer's export market.” In short, they have answered Mr Wallace's dilemma of more trade or less agriculture by boldly opting for more trade—the inevitable corollary of lower tariffs.

A re-examination of America's international position was very badly needed, and we can only hope that the Commission's recommendations will have an influence equal to their authority. The New Deal, so far from making the United States a “good neighbour” in the economic sense, has hitherto made her an even worse neighbour than in the ‘twenties. As is shown by the figures we printed a fortnight ago, the United States imported capital in the first six months of this year at a rate faster than any at which she ever exported capital in times of peace and prosperity, while in the same period she imported gold of a value equal to half the whole reserve of the Bank of England, even at its present inflated dimensions. The need for home truths has thus been particularly great. But it would be complacent to conclude that inquiries of this nature are of use only on the other side of the Atlantic. In our own country there is an urgent need for light of a similarly penetrating character to be shed on the chaos of foreign trade policy.

RECOVERY IN BRITISH STEEL—I

(BY A CORRESPONDENT)

FEW would have ventured to forecast in 1931 that the steel industry would lead the way in Britain's industrial recovery. Yet as early as 1932 the British industry escaped from the decline which continued to harass its competitors, and the 1934 output now shows promise of falling short of the record post-war level, in 1929, by no worse than 10 per cent. This recovery, however, has been far from equally shared by all branches of the industry. This is inevitable in any industry supplying as wide a range of consumers as steel. But any inequality so arising has been accentuated by the relative dependence of certain branches on the export trade, which has shown little improvement, and the varying degree to which vertical combination and technical integration have been achieved. The latter factors are important in connection with the degree to which the tariff has exerted a beneficial influence.

The improved domestic demand and the exclusion of foreign finished products have naturally tended to react to the immediate advantage of all domestic producers of finished products. But the exclusion of Continental semi-finished products has not had such a uniformly favourable effect; for while it has benefited plants which include all processes from the raw material to the finished product, it has prejudiced independent mills, for which the essential cheap semi-product has in the past been available only from Continental sources. An attempt is made below to show the relative importance of these factors.

Domestic consumption of finished products appears to have risen by as much as 37 per cent. since 1932, while imports of finished steel fell between 1931 and 1933 from a monthly average of 67,000 tons to 35,000 tons. Imports of semi-products, which were on an enormous scale in 1931, had fallen to 25 per cent. by the end of 1933. In the last twelve months, however, there has been a tendency for the price of British semi-products to rise, and the import of Continental billets and bars has been resumed on a fairly large scale, despite the tariff. Sheet and tinplate bars have risen from £4 15s. to £5 7s. 6d., delivered works, since October, 1933. Continental tinplate bars may be obtained delivered South Wales at 10s. below the latter figure.

*Main classes, excluding tubes, for which recent figures are not available.

The radical change in conditions since the 1929-31 period, and after the tariff, has had differential effects on the industry. The independent rollers, who are in any case a declining force, have naturally been hardest hit by the increased cost of semi-products. The function of this branch of the industry is to provide the shorter runs, particularly of non-standard sizes, which are not an economic product for the larger mills attached to steelworks, owing to their need of continuous runs. One possible solution of the rollers' difficulties is provided by Whiteheads, whose advancing prosperity has been one of the recent features of the industry. The close working agreement which this company has achieved with Richard Thomas, and the removal

of its Tredegar plant to the neighbourhood of the latter's plant at Redbourne in Lincolnshire, points to the necessity under present-day conditions for a closer connection between the independent mills and their suppliers of raw material, in order to minimise transport and handling costs and to ensure supplies at economic prices. This is tantamount to saying that for success under the tariff the independence of independent re-rollers must soon become a thing of the past.

The concentration of production is also proceeding faster than is sometimes realised in other branches of the industry. The impending concentration of a large part of the Stewart and Lloyds' production of semis and finished products (e.g. rods, bars and tubes) at Corby, and their withdrawal from Scotland, is a well-known example, as is their 1932 agreement with United Steel Companies to ensure co-operation in all branches of steel production in which both companies are interested.

Lysaght's (who mainly produce sheets) are also taking an interest in the development of cheap raw material supplies in Lincolnshire, and were one of the first firms to modernise their coke-oven plant and arrange for its heating with blast furnace gas. The Guest-Keen-Baldwin reorganisation at Cardiff will result in the concentration of the whole of the firm's heavy steel production in one plant. Progress is also being made with the difficult problem of rationalising the Scottish steel industry, and the control of Colvilles over the activities of the Clydesdale steel industry has been further extended by Sir James Lithgow's purchase of the Steel Company of Scotland, by the agreement with Stewart and Lloyds to take over that company's production of plates in Scotland, and by the acquisition of the Mossend plant at Beardmores, which marks the final withdrawal of the latter firm from the production of heavy rolled-steel products.

There is, moreover, an important tendency towards the modernisation of coke-oven plants and blast furnaces. In the face of growing imports of Continental semi-products during the post-war years this tendency had been allowed, in many instances, to fall farther behind the level of highest efficiency than was the case with finished products. The United Steel Company, which has spent over a million pounds in the modernisation of its equipment within the last four years, recently announced its intention of replacing the whole of its largest coke-oven plant at Orgreave, although it only dates from 1921. Similarly, the Cargo Fleet coking plant has been replaced, and the Irlam works of the Lancashire Steel Corporation have been modernised throughout. There are numerous other examples, but the continued high level of demand for coke is stimulating the extension of pithead cokeries—the latest case is the extension of the recently completed Manvers Main plant in Yorkshire by the addition of 15 new ovens.

Recovery in building activity, a slight though definite revival in shipbuilding, activity in the armaments trade, renewal of railway replacement programmes, and demand for light castings and sheets occasioned by the activity of the motor industry, have probably been the principal causes of increased domestic consumption. The output of bars and sections, principally on the North-East Coast, has especially benefited from the revival in constructional work and its coincidence with the decline in Continental imports; and the monthly output has risen by 70 per cent. since 1931 to within reach of the 1929 level. This has been furthered by several good constructional engineering orders abroad, and now it is understood that another bridge-building project in Australia, almost on the scale of the Sydney bridge, is on foot. Recovery in shipbuilding is reflected in an increased output of heavy plates from 40,000 tons monthly in 1931 to the present average of 71,000 tons. The Clyde has obtained more orders than Tyneside, but the North-East Coast has undoubtedly benefited from the agreement reached early in the year with the Continental producers, whereby the latter raised their prices and so reduced the competitive advantage of independent Continental shipbuilders, at the same time as British exporters of ship-plates were given a definite quota in the Dutch and Scandinavian markets. Forgings and boiler-plates also show a state of activity double that of 1931, and the increased output of the former largely

explains the improvement in the Sheffield district. While shipbuilding activity has thus played an important part in the returning fortunes of the British steel industry, increased armaments production and railway replacement have had their effect. The production of rails, sleepers and fishplates is not so satisfactory; but this is understandable in view of the dependence of this section on export markets, the absence of railway development abroad, and the continued exchange restrictions. The position would probably be very much worse but for the participation of British railmakers in the International Rail Makers' Association. Sheets have never suffered the same degree of depression as some other branches, and the continued activity of the motor industry is largely responsible for bringing output almost back to the 1929 level.

BACON SUPPLIES AND PRICES

WHAT has been the effect so far of our present restrictionist policy on food supplies and food prices? In a series of three articles on Agricultural Policy in the *Economist* of July 28, August 4 and August 11, we reviewed the different elements of the Government's policy, and observed that the occasion of its introduction was a fall in prices due as much to a falling off in demand as to an increase in supply. This was to be met by a restriction of imported supplies designed to raise prices. It remains to consider what effects this policy has actually produced up to date. Among the commodities easiest to examine for this purpose are bacon, beef and mutton, since in the case of these commodities Great Britain is substantially dependent on imports for its supply. Bacon is discussed in this article, and we hope to deal later with beef and mutton.

Two-thirds of our total supply of pigs and pig meat consisted of imports in the pre-depression years 1928-30, and of these imports about 80 per cent. were bacon. Of home supplies, about 30 per cent. were used as bacon and the remaining 70 per cent. as pork.

In the years 1928-30 bacon imports were more or less unchanged at an average figure a little under 9,000,000 cwt. a year. No very accurate statistics for home supply are available (strange though it may seem), but the Ministry of Agriculture estimates that a figure of 1,750,000 cwt. in 1930 would not be far from the truth. Average wholesale prices for the year 1930 were 107s. 3d. for Danish sides and 135s. 3d. for British (Wiltshire) dried. According to the Ministry of Labour's figure, which can be taken as giving a general indication of the course of prices, the average retail price for streaky bacon was 1s. 4d. per lb. in 1930.

In 1931 imports rose to 11,134,000 cwt. and in 1932 to 11,391,000 cwt.; and home supplies in 1932 are believed to have been greater than in 1930. Total supplies had consequently risen. In the case of bacon, therefore, the fall in prices between 1929 and 1932 was almost certainly due to some extent to an increase in supply as well as to the falling off in demand caused by the general depression. Actually wholesale prices fell by about 50 per cent. from a peak in August, 1929, until the beginning of 1932, from when onwards they remained more or less stable until restriction began in November, 1932. Monthly wholesale prices of Danish bacon fell from 139s. 6d. per cwt. in August, 1929, to 69s. in January, 1933, and of British from 148s. per cwt. to 87s. 6d. In the same period, according to the Ministry of Labour, the retail price of streaky bacon fell from 1s. 6½d. to 10½d. per lb., and the price of fat pigs fell meanwhile by about 50 per cent.

In 1932 the Pig Reorganisation Commission was appointed and reported, in effect, in favour of the raising of prices by import restriction and reorganisation of the home industry through the agency of two Marketing Boards (for pigs and bacon respectively). The main principle of the scheme was to restrict total supplies of bacon and hams to 10,670,000 cwt., the estimated average for the years 1925-30. The Commission apparently believed that this would restore prices to the 1925-30 level, the influence of demand being ignored. The superior quality of Danish to British bacon, and the consequent fact that the two are not entirely competitive, seems also to have been neglected by the Commission.

BACON PRICES.

The scheme did not actually come into force till November, 1933, but a voluntary restriction of imports was arranged a year earlier. By this arrangement imports of bacon and hams were to be reduced by 15 per cent. below the previous year's level in the two months after November 22 (1932); and the restriction was subsequently extended to February, 1933, and eventually to October. In November a further voluntary cut was refused by the exporting countries, and a compulsory order was made reducing imports by 16 per cent. of the current rate of importation. The effect of these restrictions was to reduce imports, which had averaged a monthly volume of about 700,000 cwt. in 1928 and about 950,000 in 1932, to 595,000 in December, 1933. The quota was increased by 3½ per cent. for the period March to July, 1934, and reduced by 4½ per cent. for the subsequent five months. Monthly imports rose to 706,000 cwt. in May, but then declined to 580,000 cwt. in September (a lower figure than in any month since June, 1926). Imports for the whole of 1933 were 9,084,933 cwt., a 20 per cent. reduction on 1932, and a lower figure than for 1930, though not

for 1929. Imports for the first nine months of 1934 were at the rate of 7,740,000 cwt. a year, a 32 per cent. reduction on 1932 and a lower figure than for any year since 1926.

Home supplies began greatly to increase as soon as the first "contract period," lasting nominally from November, 1933, to February, 1934, came into effective force in September, 1933. A price, varying only with the price of feeding stuffs, was to be offered by the curers for standard pigs; as a result production greatly increased and there was a shift from the pork to the bacon market. The supply sold to curers in the first contract period was considerably in excess of expectations; and, though the emergency import restrictions described above had been resorted to, prices had not risen sufficiently to reimburse the curers, and a Government loan was necessary to rescue them. During the second contract period, which lasts from March to December, 1934, there was a falling-off in the supply of bacon pigs, both because the high price in the pork market had attracted them thither, and for other reasons. The import quota was consequently relaxed, as stated above, and the "formula" price for home supplies was adjusted to allow for changes in bacon prices as well as the price of feeding stuffs. The result of this first bout of "planning" cannot be measured for 1933, since no figures exist of home production in that year. Home supplies in the first nine months of 1934, however, were 1,524,200 cwt., but the Ministry of Agriculture estimates that total home supplies for the whole year will be about 2,450,000 cwt. On this basis total supplies for the year will be about 10,190,000 cwt.—that is, much smaller than imports in 1932.

Prices have reacted in a rather surprising way. Wholesale prices of Danish sides, which had fallen from 139s. 6d. in August, 1929, to 69s. in January, 1933, had risen to 102s. by October, 1934—a rise of nearly 50 per cent. In the same period British prices rose from 87s. 6d. to 100s. 6d., a rise of about 15 per cent. Retail prices, meanwhile, had risen from 10½d. to 1s. 2½d., or 40 per cent. It is only too clear that, with the present quality of British bacon, Danish and British are to a considerable extent non-competitive. The net result of the whole scheme so far has been to reduce total supplies well below the pre-restriction level, and slightly below the pre-depression level; and imports far below the pre-depression level; and, secondly, to raise wholesale prices only a part of the way back to the pre-depression level, the margin between British and Danish prices being considerably narrowed meanwhile and now virtually extinguished.

In the case of bacon, in fact, the consumer has responded to restriction by paying more where he could afford it and eating less bacon where he could not. His standard of living has been definitely impaired by the scheme, since retail prices have risen steeply. It is true that they have not risen to the 1930 level. But this does not prove that there has been no exploitation, since the consumer should normally draw some benefit from the fall in the cost of production. The gain to the British farmer under the scheme is clearly not commensurate with the harm done to the consumer.

A VIEW OF IRELAND

AN English observer who pays his first visit to Dublin to-day, after having seen something of post-war conditions on the Continent, may receive the impression that he has taken the wrong boat and struck the seaboard, not of Hibernia, but of Bohemia. Or is he in Transylvania, when he sees Kingstown written Dunlaoghaire, and then hears it pronounced Dunleary by the ticket collectors? At first sight, at any rate, the Irish Free State will remind a visitor, in one feature after another, of her sister "successor states." There is the same appearance of a sharp break between new and old—the relics of the *ancien régime* still stand up massive and conspicuous against the sky-line, without any apparent relation to the brand-new social order which is being built up fast and furiously all around on a parochial plan.

If the traveller is an English Episcopalian Protestant, he can still spend a busy and sociable week in Dublin without being compelled to take notice that the Ascendency has come to an end. If he is an Irish-American or a Czechoslovak, he can move in a world in which the ascendency is already as though it had never been and the Irish national Commonwealth is the only visible reality—a magic world in which one is almost persuaded by green pillar boxes, and by Irish inscriptions on railway tickets, that the language that one is hearing spoken all around is the speech of the Gaedheal, and that the linguistic ascendency of the English is as dead as the political Union itself. And if the visitor is a Catholic, there is a third world which opens its doors to him when he turns down an inconspicuous alley between two Georgian houses in an eighteenth-century square and finds himself in a great church which is filled, at all hours of the day, with worshippers. Here are the 93 per cent. of the population of the Free State for whom the supreme social reality is still the Catholic Church, while the agitated pageant of Irish politics—Unionist or Nationalist, Fianna Fail or Cumann-na-n-Gaedheal—passes over the surface of their consciousness like a procession of fleeting shadows.

But are these three worlds really so far apart as are the corresponding social elements in, let us say, post-war Czechoslovakia? Not quite; for we never hear that the Czechs and the Bohemian Germans, proud as they are of being Slavs and Teutons, are prouder still of being Bohemians. Yet, if we substitute "Irish" for "Bohemian," that is the odd but hopeful situation in the Irish Free State to-day. The most diehard *ci-devant* Unionist will be as proud of being Irish as any member of the I.R.A., and as quick to bite off the head of the unwary Englishman who tries to claim him as English on the Hitlerian ground of his having no drop of Irish blood in his veins. The famous assimilative power of the Irish earth and air is as potent to-day as it was at the dawn of history; and among these latest converts to Irishry—descendants of the English immigrants of the last three centuries—the old heaven has worked, whether their conversion takes the form of asserting that the Protestant minority is Ireland (with Nationalists and Catholics serenely waved away and effaced), or the alternative form of becoming more fluent in the Irish language than those whose mother tongue it is, and locking up a Protestant pedigree in the cupboard as a deplorable skeleton.

The Ascendency, in its day, was of course so effective that the minority who enjoyed the privileges of it had to supply many of the leaders in the National camp as well as in their own. This odd fact testifies equally to the heaviness of the old English yoke and to the assimilative power of the permanent Irish environment; but, whatever light it may throw back upon the past, it is beyond all question a most fortunate circumstance for the future of Ireland. For the children of the Ascendency who have "gone Irish" are the bridge across which the separate communities in Ireland are to-day mingling with one another and preparing to fuse into one. Sociability and freedom from the irksomeness of stiff class divisions are virtues in which Irish people of all kinds surpass the English and are attuned to one another.

What do these intermingling Irishmen, of all groups and classes, talk about? Free State politics. And what does the talk revolve round? The personality of Mr de Valera. The President has the gift—the most precious of all gifts for a politician—of being a King Charles's head. You

may love him or hate him, but you can never keep him out of your conversation. How long will he stay in power? Nobody in Ireland is prepared to prophesy that his reign will be short; for his personality is only one of several very effective political assets. His party organisation is vigorous and has struck deep local roots. When he meets the delegates in an Ard-Fheis (meaning "caucus"), their devotion is only enhanced when he tells them straight that he feels no obligation to base his policy on their resolutions. If this policy ruins the farmers, it does not deprive Fianna Fail of the votes of the farmers' sons, who poll more heads on the electoral register than their disgruntled parents; nor does it alienate the people in the towns who receive a free dole of beef. Moreover, Ireland is astonished at her apparent incapacity to be ruined by the simultaneous stoppage of cattle exports to England and dollar remittances from America. To the Irish politician this problem is one of secondary importance; for it is pretty clear that, even if Ireland was really being ruined as badly as Mr Thomas says she ought to be, Mr Thomas has only to go on saying that for the Irish victims of the economic war to go on voting for Mr de Valera.

Apart from his personality, the real secret of Mr de Valera's power is that he stands for that sensitiveness about status which is always the obsession of the under-dog. There is a vicious circle here, for, when once the under-dog has taken a particular symbol as the test of inequality, he will continue to feel like an under-dog until the symbol has been removed. This point is not hid from Mr de Valera's Irish opponents. "For goodness sake persuade your Government in London," a Cosgraveite will say to an English visitor, "to make a public statement to the effect that, if the President wishes to declare a republic, that will be quite all right and entirely within the prerogative of a Dominion. By that simple act you will take the whole of the wind out of Mr. de Valera's sails." Nor is the case for this kind of response to Mr de Valera confined to mere tactical considerations; for there is also a substantial core of reason in his own presentation of his case. "In England," he says, "you tell us that, *vis-à-vis* Ireland, you have entirely and permanently renounced the old relation which rested on your English superiority of force. You tell us that the Dominion Status, which is the alternative basis that you offer, means complete equality and freedom. The essence of your Commonwealth is that the relations between its members depend on a voluntary association and on nothing else. And then you ask us, in token of this new freedom and mutual goodwill, to accept a symbol which stands, in Irish memories, for an English domination and an Irish resistance to it. If it were I who had proposed such a thing instead of you, I am sure you would make fun of it as a characteristically Irish proceeding." This statement of Mr de Valera's case is not easy for an Englishman to answer.

The pity of this barren quarrel over status is that it postpones or obstructs the solution of a number of urgent problems. What, for example, is the outlook for the young Irishmen and Irishwomen of the rising generation: those farmers' sons who are now debarred by American immigration laws from seeking their fortunes in the United States; or those students of Trinity College who have hitherto made their careers in administrative posts or in the professions all over the British Empire? Is Mr de Valera's new Citizenship Bill going to produce effects which will cut off these young Trinity men as well from their former outlets abroad? And what is going to happen to the graduates who are now being turned out in such large numbers by the National University? Is Ireland in danger of acquiring an intellectual proletariat—a formidable social incubus, as is witnessed by the present plight of a dozen other distressed countries, from Germany to Japan? And what are going to be the eventual relations between a rather nationalistic and paternalistic State and a Church which fills almost the whole of the social horizon in the vision of the majority of the population? At what point will the line be drawn between the sphere of the State, be it Saorstát or Republic, and the sphere of Catholic Action in the debatable territory of education and social service? These are, perhaps, the questions on which the future of Ireland really depends.

NOTES OF THE WEEK

The Government Under Fire.—Monday's debate on economic policy gave evidence of a widespread feeling among its own supporters that the Government is sinking into inactivity. The debate was concerned with a rather verbose and vacuous Labour amendment to the Address which regretted that:—

Heedless of the changed economic conditions in the modern world due to the application of science to production and transport, and ignoring the inability of capitalism to distribute abundance, your Majesty's advisers accept as inevitable the existence of mass unemployment and of poverty in the midst of plenty, etc., etc.

Mr Lunn's speech in favour of this amendment was less sterile than the amendment itself might have suggested; he at least urged on the Government the practical proposal to raise the school-leaving age. The feature of the debate, however, was the criticism forthcoming from the Conservative side of the House. Mr Molson complained that whereas the Government's supporters had originally found it "breathless work trying to keep up" with the Cabinet, they now found it a "back-breaking task trying to push behind." He urged the acceptance of Mr Harold Macmillan's industrial policy, which is euphemistically described as "self-government for industry" but appears to consist in the grant of a statutory monopoly to any group of producers that cares to ask for it. In support of this policy Mr Molson argued—fallaciously, in our opinion—from those few industries like cotton, where surplus capacity exists, to industry as a whole where it does not. Mr Kenneth Lindsay (National Labour) wanted "a lead from the Government on many questions—on financial policy and on industrial reorganisation." Almost the only defender of the Government outside the Cabinet was Sir Robert Horne, whose main point, in a rather partisan speech, was the need for developing new methods of using coal. The most disquieting feature of the whole debate was the absence of practically any reference to the desirability of reviving international trade—the only policy which has any practical chance of employing the workless and restoring internal purchasing power. It was left to Mr Runciman to remark that "the problem to-day is to get a sale for our goods abroad." Other speakers seemed to have been lulled by the intractability of the problem into something dangerously resembling despair.

Reactions in India.—The Joint Select Committee's report on Indian Constitutional Reform has had a very mixed reception in India. The Congress Party, as might have been expected, is opposed to it as a "reactionary edition of the reactionary White Paper." The loudest outcry of their opposition has been directed against the proposals for indirect election to the Central Legislature, for Second Chambers, for reserved powers and for "special responsibilities" of Governors and the Governor-General. The overwhelming feeling of Congress that the report must be rejected has been tempered, however, by a still, small voice within the ranks of Congress which urges that "half a loaf is better than no bread," and that a Constitution on the lines proposed is a definite advance on what went before, is capable of execution, and probably of extension later on. The opinions of the religious communities testify to the difficulties of pleasing all parties in India. Most Hindus, who were opposed to the Communal Award, have naturally rejected both the White Paper and the report. They are particularly incensed at the perpetuation of the Secretary of State's recruitment of the All-India Services, and at indirect election. The Moslems are, on the whole, pleased with the report, especially with the retention of the Communal Award and the separation of Sind from Bombay Presidency, though they claim more than one-third representation at the Centre. The approval of a sufficiency of the Indian States seems assured, though it is expected that negotiations with the Princes will take time. Indian Liberals have professed dissatisfaction that no definite time-

schedule for the introduction of Federation is included, and they strongly criticise, with equal justification, the absence from the report of any declaration about Dominion status. Indian merchants and industrialists of many racial and religious groups appear united in deprecating the inclusion of the provisions against "commercial discrimination," and view with misgiving the power of deciding what constitutes discrimination, which will be placed in the Governors' hands. On the whole, however, the inevitable outcry—though vociferous—is less convincing than might have been feared. Indeed, there is real ground for hoping that India may think again; and on further reflection may decide that the proposals should be carefully weighed with a view to their eventual execution. Certainly the continuation of the Die-hards' opposition to the report in this country is a most powerful inducement to all Indians to accept the report and to try out its proposals.

The Distressed Areas Bill.—The Government's Bill for relieving the distressed areas, which was published on Tuesday, adds very little to the statement made by Mr Chamberlain the week before last. The explanatory memorandum states that two Commissioners (one for England and Wales and one for Scotland) are to be appointed, "with wide powers to initiate, organise, prosecute and assist measures designed for the economic development and social improvement of the depressed areas." The Commissioners will act under the general control of the Minister of Labour and the Secretary of State for Scotland in close association with the Unemployment Assistance Board. They will have powers to acquire land compulsorily for settlements and to contribute financial assistance for the provision of small holdings and allotments, and in addition to receive gifts and bequests. They are also empowered to provide financial assistance to any undertaking carried on with the primary object of providing means of subsistence and occupation to unemployed persons with a view to making them wholly or partially independent of unemployment assistance benefit or poor relief. They may also contribute, by grant or loan to a local authority, towards the cost of any works for which no specific grant is payable by any Government department, but they may not provide any financial assistance to any undertaking carried on for financial gain or make general grants or loans to any local authority. The payments made by the Commissioners will be met by a Development Fund, which is to receive £2,000,000 from the Exchequer in the present financial year and thereafter such monies as Parliament may determine. The Bill will remain in force until March 31, 1937, unless otherwise determined by Parliament, and arrangements are made in it for transferring the functions of the Commissioners to the Unemployment Assistance Board. Until the amount of the monies to be provided for the Development Fund has been determined in the next Budget, it will, of course, be impossible to judge how effective the policy pursued by the Commissioners is capable of becoming. But the form in which the Bill is cast makes it clear enough that anything like a sweeping plan for dealing with the depressed areas as a whole is plainly beyond its scope. The Government appear to have shirked a big constructive programme such as that envisaged by one of its special Commissioners, Captain Wallace, for Tyneside and County Durham. There is no indication, for example, that the problem of local rates is to be tackled or that any systematic attempt is to be made to settle new industries in the depressed areas. Altogether the impression left by the measure is that the Government are once more trying to appease public opinion by a policy of makeshifts and a dispersion of *ad hoc* provisional assistance.

M. Flandin's Economic Plans.—M. Flandin's first speech on economic policy, in which he emphasised the need for greater economic "Liberalism," seemed to justify some hopes for the immediate future of France. These hopes

will be dashed by M. Flandin's new speech this week. He "refused to accept," he said, "the dilemma of deflation or devaluation; deflation in France was almost complete." If it is complete, however, it has surely been a singular failure. For French industry is acutely depressed to-day, and unemployment is at a higher level than it has ever been before. To the outside observer it would seem that deflation had completed its first stage of rendering production unprofitable at present costs, but not its second stage of reducing the cost of living and so enabling costs to be lowered. Moreover, the cost of living can only be reduced in France if the present policy of excessive agricultural protection is modified. But no such modification is apparently to be expected from M. Flandin. For he assured his hearers that his Government would "concentrate their efforts first on agriculture, which is the basis of all industry in France." More ominous still, the "planned rationalisation of industry" which M. Flandin contemplates is to include "for the period of the crisis only, compulsory production agreements between producers." Does this mean that a restrictionist policy, organised in cartel fashion, is to be spread over the whole field of industry? Apparently it does. For M. Flandin believes that "in the present cycle of human affairs and in France production must be adapted to consumption." If M. Flandin is here to be taken at his literal word, the outlook for France is dismal. The Plenty is to be removed and the Poverty is to remain! In arguing against devaluation M. Flandin maintained that "world prices expressed in gold are now tending towards the level of French prices," and that consequently "markets can be found for French goods and France can absorb foreign produce." We wish we could share his optimism. It is true that French prices have fallen, and that the off-gold currencies have appreciated somewhat, in recent weeks. But these movements will have to be much more pronounced than they have been so far if the ultimate devaluation of the franc is to be avoided.

* * *

Britain, America and Japan.—The naval conversations have come to nothing, despite the unwillingness of all parties to admit so formidable a fact. Japan has now approached Italy and France to discover their reactions in the event of her denouncing the Washington Treaty. Both these Powers, ill-content though they may be with the ratio of capital ships which they accepted twelve years ago, are reported to be extremely chary of lending countenance to a Japanese move which has much more behind it than the mere dislike of a proportional sum. The incident is significant in showing up the spirit in which the Japanese Government is acting; and further evidence of this spirit, just when the conversations have proved bankrupt, raises very momentous issues for this country. A moment has come when it cannot be said too emphatically, or repeated too often, that the cardinal point of our policy in the Pacific must be the maintenance, above everything else, of a frank and cordial friendship with the United States. One of the most far-sighted statesmen of the British Commonwealth, General Smuts, drove home this point in his speech in London the other day, which has justly commanded widespread attention. And there has been no moment since the war when intimations of goodwill from this side of the Atlantic have had so good a prospect of being reciprocated, perhaps even anticipated, in the United States. This is clear from things that the American Ambassador-at-large, Mr Norman Davis, has said; and the friendliness of the President himself towards this country is well known. This policy of a cordial understanding between the United States and the United Kingdom is, we believe, the policy of the vast majority of the citizens of the two countries; and it should rapidly become the policy of their Governments.

* * *

The Yugoslav Indictment.—The Yugoslav Government's note, requesting the Council of the League of Nations to take consideration of the murder of King Alexander as a crime constituting a danger to international peace under Article 11 of the Covenant, was presented on November 22nd. (The note is referred to by our League of

Nations correspondent on p. 1030.) It was backed by a pair of identic notes from the Czechoslovak and Roumanian Governments. The Hungarian Government replied on November 24th by asking the Council to deal with the Yugoslav accusation against Hungary as a matter of urgency; and this Hungarian move has been backed, in its turn, by an official statement on the Italian Government's part. General Gömbös's sudden week-end visit to join the members of the Austrian Government at a shooting party in Styria may perhaps have had the purpose of persuading Austria to form a common front with Hungary and Italy in this matter. Hungary is in a position to exert political pressure upon Austria; for, if Hungary were to desert the Italo-Austrian for the German camp, she would go some way towards making the present position of Austria untenable—a prospect which goes far to explain Italy's unfortunate support of Hungary in a cause in which Hungary may conceivably be hard put to it to rebut her accusers. Italian support of Hungary is natural, for Italy herself is hardly in a better position. On Monday, the Instrutory Division of the Turin Court of Appeal found that there was no case, under the Franco-Italian Extradition Treaty of 1870, for extraditing the two Croats who were placed under arrest at Turin, at the French Government's request, on suspicion of being concerned in the Marseilles crime. The ground of the finding is that the Treaty expressly excludes political crimes. This is a rather startling extension of the accepted definition of a political crime. The ordinary notion is that it means political action in the nature of high treason which does *not* involve acts that are regarded as crimes under ordinary criminal law. The Turin finding makes all the worse an impression when we are also told that there is no likelihood of the two Croats being prosecuted in Italy on Italian initiative. Meanwhile, Dr. Benesh has waived the presidency of the League Council, which would otherwise have fallen to him on this occasion, on the ground that he is a party to the dispute—a prompt and honourable step which, however, did not prevent the Hungarian Government from making a subsequent protest against his presidency and from asserting that this protest forced him to waive it! This is rather a bad start for a transaction which, at the best, will be very delicate. Finally, on Wednesday, the Yugoslav Government presented to the League a collection of evidence in support of its earlier note. This *dossier*, including photographs of Hungarian passports given to members of the terrorist gang which compassed King Alexander's assassination, seems disquieting evidence of an organisation on Hungarian soil, to which the Hungarian Government's attention had been repeatedly drawn. The obvious next step is the appointment of a League inquiry, with powers of examination. If such a proposal came to a vote by the Council, both parties and their supporters would be able to testify to their desire for an impartial inquiry.

* * *

Our Agricultural Policy.—Lord De La Warr, Parliamentary Secretary to the Ministry of Agriculture, made a most interesting and constructive speech on agricultural policy last Saturday. Unlike Mr Elliot, Lord De La Warr lays predominant emphasis on the need for increasing productive efficiency and expanding consumption rather than raising prices and restricting "glut." It is true that in his defence of the policy so far pursued by the Government, Lord De La Warr was hardly accurate. He said that the revival of farming had not been "at the expense of the consumer," on the ground that "the general level of retail prices had fallen three points since 1931." But it was at the beginning of 1933, and not in 1931, that the Government's food restriction schemes came into effective force; and the Ministry of Labour's index of retail food prices rose from 114 in March, 1933, to 127 in November, 1934. Retail prices of bacon, as the chart published on page 1025 of this issue shows, have risen by 40 per cent. In the positive part of his speech, however, Lord De La Warr revealed a commendably broad-minded and constructive view of the whole agricultural problem. "Agriculture and public health," he said, "must be considered as two aspects of the same problem"; any agricultural policy, if justifiable, must aim at increased consumption;

and this must involve a reduction of costs, both of production and distribution. In the case of the milk scheme, Lord De La Warr pointed out, a further attempt has been made to extend consumption by a grant of public funds for the provision of cheap milk in schools. This principle, he argued, might well be extended in all cases where malnutrition and a surplus of some staple foodstuff exist side by side. "If such a scheme proved possible for milk, why not for fruit, herrings or other foodstuffs of which there are so frequently said to be surpluses which have to be destroyed?" Why not, indeed. Lord De La Warr is to be warmly congratulated on his attempt to divert Mr Elliot from the restrictionist path towards a policy which would prove beneficial to farmer and consumer alike.

* * *

A Year of the Milk Board.—The Milk Marketing Board has now been in operation for thirteen months and it is consequently possible to make comparisons free from the disturbing factor of seasonal fluctuations. The volume of milk passing under the Board's control has increased considerably from 41,619,324 gallons in October, 1933, to 63,473,702 gallons in October, 1934. Not all of this increase represents additional production, as the Board has only gradually extended its control over the whole production of the industry. In October, 1934, for instance, 1,199,866 gallons of milk were used for farmhouse cheesemaking, while in the previous year this milk was not brought within the Board's sphere of operations. There has been an increase in milk sold by the Board for liquid consumption between October, 1933, and October, 1934, from 34,936,783 gallons to 46,643,246 gallons. There has not, of course, been a similar increase in the consumption of milk, and the swelling of the Board's figures is probably to be attributed in the main to the recent inclusion of the smaller producer-retailers. But when all these allowances have been made it is apparent that the production of milk is increasing more rapidly than the consumption. The "surplus" going to manufacture was 6,682,541 gallons in October, 1933, and 16,830,456 in October, 1934 (the later and larger figure including milk used for farm cheesemaking). The price obtained for this "surplus" milk, however, was higher, being 6.45d. per gallon, as against 5.65d. in October, 1933. The liquid milk price was also 1d. per gallon higher in 1934 in every region except the South-Eastern, where there was no change. These increases in price enabled the larger "surplus" to be absorbed without lowering the average pool price received by the farmer, which was 13½d. in each month. The unchanged average, however, conceals changes in the regions: those regions such as the Far Western and North Wales, where the "surplus" is very large, have experienced a fall in the pool price, while other regions such as the East Midland, where the "surplus" is a comparatively small proportion of the total production, have gained more by the increase in the liquid price than they have lost by the growth in the "surplus." The history of the Board's first year is, then, one of growing surplus encouraged by rising prices. Over the first twelve months the surplus amounted to 27 per cent. of the total, and it has increased from about 17 per cent. in October, 1933, to nearly 28 per cent. in October, 1934. The Milk Marketing Board has much to congratulate itself upon; but it has done nothing to remove the fundamental absurdity of the scheme, by which taxpayer and consumer are both mulcted in order to encourage the expansion of a "surplus" that has to be sold below cost of production.

* * *

The Supply of Houses.—The number of houses built in England and Wales in the six months ending September 30th was given by Mr Shakespeare, in the House of Commons on Monday, as 156,463. This compares with 113,332 in the six months ending September 30, 1933, and 140,000 in the six months ending March 30, 1934; and it accords with the figure of 300,000 built in the year ending September 30, 1934, which we gave in a recent article on the

Building Boom. Such a rate of building is certainly a remarkable achievement. It is commensurate with the rate which we estimated (*Economist*, March 31) as necessary if the housing needs of the population were to be fully supplied in the next 20 years. Nevertheless the last year's building must not be taken as evidence that the housing problem is being automatically solved. Quite the contrary. What has happened in the last two years is that low interest rates and costs, and the facilities provided by the building societies, have succeeded in tapping an enormous demand for houses, hitherto potential, among the middle classes and better-paid workers. The scale on which this potential demand has been made effective by changed economic conditions plainly indicates the still greater demand among the mass of the working class which still remains potential. The total number of houses built to let (which are generally taken to represent workers' houses) in the six months ending September 30th was given by Mr Shakespeare as only 37,000. Moreover, there is good reason to believe that the more or less middle-class demand for houses, which can be met by private enterprise at present economic costs, is no longer expanding. The need for Government assistance to make the lower-paid workers' demand effective, and so eliminate overcrowding, is consequently stronger than ever—even if the building societies see their way to some reduction of interest rates. An effective Over-crowding Bill is urgently necessary in the interests, not only of the still inadequately housed workers, but of the building industry and of general economic recovery.

* * *

The Wheat Delegates go Home.—The result of the meeting of the International Wheat Advisory Committee suggests that the attractions of the picturesque Hungarian capital have claimed most of the time of the visiting delegates. Who will blame them? The importing countries all agreed to the prolongation of the agreement for another two years; but there is as yet no sign that they are prepared to forego the policy of national self-sufficiency and dear bread. France even asked for an export quota and (according to the *Corn Trade News*) appears to have secured it in the shape of an allocation of 2,500,000 quarters. The export countries had not been able to come to terms concerning the division of what is left of international trade in wheat at the time of the adjournment of the Conference on November 28th. It has been found necessary to postpone final consideration by the overseas exporters on quarterly quotas, on quota reserves, and also on the quotas for the present crop year, until the fundamental problem of basic quotas for subsequent years has been settled. It is to be hoped that the seventh conference, to be held in "austere" London on March 5th, 1935, will produce more concrete results.

* * *

Progress of the British Motor Industry.—The motor industry has made a striking recovery from the pit of depression to levels far above those of 1929. The Statistical Department of the Society of Motor Manufacturers and Traders has recently begun publication of monthly statistics of production. The Society is to be commended

for this addition to the available information on the development of the British motor industry:—

Period	OUTPUT OF MOTOR VEHICLES		Commercial	
	Private Cars and Taxi Cabs	Number	Vehicles	Number
Year ended Sept., 1929	182,347		56,458	
" " 1931	158,997		67,310	
" " 1932	171,244		61,475	
	1932-33	1933-34	1932-33	1933-34
October	17,603	16,884	4,844	6,389
November	18,574	20,843	4,504	6,552
December	19,931	22,306	5,166	7,071
January	17,580	24,293	5,491	8,391
February	13,586	20,331	3,941	6,417
March	26,565	33,137	6,654	9,074
April	20,722	22,424	5,653	6,684
May	22,740	24,953	6,239	7,552
June	20,397	23,406	6,112	7,213
July	18,745	20,374	6,115	6,820
August	11,937	12,720	5,259	6,438
Total (11 months)...	208,380	241,671	59,978	78,601

The figures show that the industry is subject to considerable seasonal fluctuations, most marked in the case of private cars. With the exception of October, 1933, the output of private cars in each of the eleven months ended August last exceeded that of the corresponding months in the previous season. The increase in the output of commercial vehicles was even more pronounced. As compared with the corresponding period a year earlier, the output of commercial vehicles during the eleven months ended August, 1934, showed an increase of 31 per cent., as against an increase of 16 per cent. in the case of private cars. There are no indications so far that the industry has reached the peak of expansion. It looks as if motor transport of all kinds were becoming a genuine necessity.

An Italian Index of Production.—The Italian Ministry of Corporations has recently begun publication of an index of industrial production. The index is an important addition to the information available on the economic development of Italy. It is based on 32 individual series, of which those relating to the metal, paper, gas, electricity and textile industries (except spinning and weaving of flax, hemp and jute and silk-weaving) represent quantities produced. The series for all other industries are based on indirect measures, such as machinery activity, workers employed, and building permits delivered.

INDEX OF INDUSTRIAL PRODUCTION
(1928 = 100)

Period	Textiles (37 weights)	Metalurgy and Engineering (36 weights)	Paper Industry (3 weights)	Building and Public Works (16 weights)	Heat and Power (15 weights)	Complete Index
1929	101.7	104.6	106.8	139.6	106.5	109.1
1930	91.4	94.8	108.6	130.8	110.9	100.3
1931	81.9	82.5	98.7	87.7	109.6	84.7
1932	67.4	70.7	103.0	78.9	110.3	73.0
1933	76.3	72.8	110.5	93.4	119.2	80.5
1933 August ..	75.0	73.3	103.0	105.7	126.1	82.3
December ..	68.4	73.8	111.4	85.5	128.3	75.9
1934 March ..	73.9	73.8	114.0	123.8	117.3	84.4
June	64.2	77.0	126.3	154.6	129.9	85.6
July	73.6	78.5	126.2	162.7	131.8	91.6
August	67.3	77.7	121.4	151.2	127.4	86.6

Seasonal variations have not been eliminated owing to the limited number of years for which figures are available.

The trough of the depression was reached in the middle of 1932. Since then there has been an appreciable improvement in all groups of industries. The expansion of industrial production in Italy presents a striking contrast to the deterioration in Belgium and France—two of the other members of the gold bloc. But it is reflected in increased Italian purchases of raw materials, which have contributed to deterioration in her exchange position.

* * *

Retail Sales in October.—The "nation of shopkeepers" is still keeping up its shops by its shopping. The index of retail sales published in this week's *Board of Trade Journal* shows that the previous improvement was maintained in October. The money value of sales in that month was 3.2 per cent. greater than in October, 1933. While the percentage increase on the corresponding month a year ago was somewhat smaller than in August and September, it must be remembered that the expansion in retail sales began in the autumn of 1933. From now on the monthly percentage increases on the corresponding months last year may, therefore, be smaller than earlier in the year. The following index numbers are not adjusted for seasonal influences:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1933—October	99	105	102
November	102	105	104
December	118	146	131
1934—January	98	104	101
February	101	80	91
March	104	95	99
April	102	100	101
May	103	113	108
June	103	103	103
July	98	107	102
August	100	79	90
September	101	92	97
October	102	109	105

The value of sales of food and perishable articles in October was 2.8 per cent. higher than a year ago. Increases varied from 2.2 per cent. in the South of England to 4.8 per cent. in Suburban London. The only district to show a slight decrease (0.5 per cent.) was the West End of London. Sales of other merchandise increased by 3.6 per cent. during the period under consideration. As in the case of food and perishable articles, the improvement was most marked in Suburban London. Scotland registered the smallest increase (3.0 per cent.) in this group. With the exception of piece-goods, sales of all the different categories of merchandise were higher than a year ago; the improvement was most marked in the case of boots and shoes, men's and boys' wear, and furnishing materials. The increase in the value (at cost) of stocks as compared with the corresponding month in 1933, at 1.2 per cent., was smaller than in September (2.2 per cent.). The number of persons employed in the establishments making returns was 2.8 per cent. higher than in October, 1933. The outlook for retail trade is therefore still encouraging.

UNITED STATES

CONGRESS PROSPECTS

THE discord between the Right and Left Wings of the New Deal has broken out even in advance of the assembly of Congress. The first specific point at issue is the social programme. The President has appointed a rather large committee to make recommendations; and in opening its sessions, he proposed a limited programme. Exception to this was immediately taken by the Secretary of Labour (Miss Perkins) and the Relief Administrator (Mr Hopkins). It is clear that some sort of social legislation will be accepted early in the Session; but its form, scope and cost are still undefined. Perhaps the most active divergence of opinion, however, concerns the spending programme. Despatches from Washington have hinted at expenditures on a scale which would dwarf even the precedents of the current year. They have not been officially confirmed; indeed, they have been denied in detail. As for the monetary programme, although there is little public discussion, there is considerable Congressional support for the conversion of a part of the public debt into currency.

More interest than usual has attended developments in the Treasury in the past two weeks. The decline of the gold exchanges against the dollar has been accompanied by a wave of gold imports amounting to about \$100 millions. In the first nine months of the year our imports of merchandise amounted to \$1,240 millions and our gold and silver imports to \$930 millions. Presumably the Treasury has intervened to restrain the rising tendency of the dollar by buying silver, but if so, its activities seem to have been moderate. The last two statements of the reserve banks have reported items of loans against gold abroad. The relaxation of the control of the export of capital is regarded as a gesture in the same direction, although its practical significance is doubtful. The exchanges have now become firmer and are at present probably above their gold points. There have been rumours of a drift of capital from Europe into our security markets.

The week also brought the appointment of Mr Marriner Eccles of Utah as Governor of the Reserve Board. Mr Eccles is a comparatively young man (44 years of age), but he has had extensive experience in business enterprises, including mining, sugar beet culture and dairying, and in banking. He has been president of a banking chain in Utah and Idaho.

THE CAPITAL MARKET

There have been virtually no corporate securities publicly offered in the market for almost two years. During the early part of the period the markets were not propitious for new offerings, but in recent months the yield on gilt-edged bonds had become so low as to offer inducements for re-funding, and the continued absence of new offerings has been attributed to the Securities Act. In the past week the

andum containing photographic reproductions of documents involving the Hungarian Government. The latter, in its turn, has entered a spirited protest and asked that the whole matter be discussed forthwith in the Council. An interesting point is the extraordinarily close parallel with Serajevo, with the rôles of the Austro-Hungarian Empire and Serbia reversed. The Yugoslav Government is said to have made it clear behind the scenes that the alternative to effective League action is Yugoslavia's withdrawal from the League and the danger of war. Certainly the Yugoslav note declared that it was only the existence of the League that enabled the Yugoslav people to maintain calm and self-restraint. This has made a deep impression among the statesmen assembled at Geneva and not least on the Soviet delegation, which looks upon it as presumptive evidence justifying the belief on which the Soviet Union acted in September, namely, that the League is an influence restraining potential war-makers and should, therefore, be strengthened. A great responsibility rests on the League to devise some action that will give satisfaction to legitimate grievances, without victimising Hungary or condoning assassination.

THE SAAR DISCUSSIONS

Another matter on which the Council will have to take fateful decisions in the near future is the organisation of the Saar plebiscite. It looks as though the Franco-German discussions on the question of eventual payment for the mines were making progress. But the two big issues are the maintenance of order during the plebiscite, and the rights and duties of the Council in defining what is meant by the Peace Treaty provision that in case the inhabitants vote for the *status quo* the Council is to adapt the present provisional regime "to the permanent welfare of the territory and the general interest."

The French, it is reported, intend to bring home to the Council its collective responsibility on both issues. This is to be done with special reference to the British Government, which in French eyes has been somewhat prone, in answers in the House and otherwise, to talk as though the whole responsibility for the Saar arrangements were in the hands either of France or of the Committee of Three on the Saar technicalities. Under the Versailles Treaty, the Council as a whole is responsible for the Saar, and notably for the organisation of the plebiscite. The British Government as a permanent member of the Council and a principal author of the Versailles Treaty, including the Saar Annex, has a particular responsibility, not diminished by the fact that the Council in this matter takes decisions by majority. If, as a result of insufficient police arrangements or otherwise, there were grave disorder in the Saar, leading to Franco-German complications, a situation might easily arise in which the French would invoke the Locarno Treaty. This, again, emphasises the need for the British Government to take an active interest in the Saar plebiscite arrangements.

The Committee of Three sitting at Rome has, it is reported, pronounced on the legal right of the Council to define beforehand what it means by adapting the *status quo* "to the permanent interests of the territory and the general welfare." As on the hypothesis envisaged, the sovereignty over the territory will (by Article 49 of the Versailles Treaty and chapter 3 of the Saar Annex) be vested in the Council, the latter will have the legal right, if it chooses, to exercise its sovereignty by giving the inhabitants full self-government and granting them the right of self-determination if ever they choose, e.g. by a two-thirds majority, to vote for their return to Germany.

Views on the political expediency of such a course are divided, for some believe that peace can be had by coming to terms with Nazi Germany, even by winking at the persecution of dissident Saarlanders. Others, however, believe that the best guarantee of peace would be for the Saar inhabitants to vote now against the Nazi regime, and later for reunion with Germany after that regime had collapsed. This course of action would increase that discontent inside Germany which General Smuts adduced as the reason for his belief that Germany would not go to war. But, at any rate, the legal position is clear, and attempts to urge questions of political expediency under cover of legal complexity are therefore doomed to failure.

GENEVA, November 27.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

LEAGUE OF NATIONS

ARMS AND THE COUNCIL

THE first test of the growing desire by the United States to co-operate with the League for the preservation of peace is likely to come over the measures to tighten the arms embargo in connection with the Chaco war. The Assembly has adopted the report under paragraph 4 of Article XV, and there seems small chance of either belligerent accepting it unconditionally. In the circumstances the Members of the

League must endeavour to carry out the recommendation in that report for a tightening of the arms embargo. This is difficult, because of the leakages through the South American States and the international rivers, and the ill-concealed reluctance of Italy to give up the business of supplying Paraguay with aeroplanes and war material. The United States have been invited to take part in the Assembly Advisory Committee, which has been set up for the execution of the report.

The Yugoslavs have sent in their expected note accusing Hungary, and it will be supported by a detailed memor-

Consolidated Gas Company of Baltimore made an issue of \$18 millions 3½ per cent. bonds, refunding a 4½ per cent. issue; and the Standard Oil Company of New Jersey made plans for converting \$90 millions of 5 per cent. debentures into \$45 millions of bank loans and \$37 millions of serial debentures, the last series maturing in 1941. Owing to the impediments of the Securities Act, neither of these constituted a public offering, the sale being made to small groups of institutional buyers. Although these were not the first issues of this kind, it is hoped that their sale will encourage other issues and that they will demonstrate that progress is being made in the reopening of our capital markets to corporate issues. In the same week a small issue of Argentine Treasury Notes was offered, said to be the first foreign issue (other than Canadian) for four years. This was followed by the announcement of the refunding of Finnish bonds; and it is hoped that these issues, too, will constitute a precedent. The preference of the institutional market is for short-term securities, even at a nominal rate of interest; private investors have, however, taken a number of equity issues brought out under the terms of the Securities Act. The significant fact is that in the past week there has been more activity than for months in the new issue (in this case refunding) market.

In the past week the Standard Statistics index of public utility shares dropped below the lowest figure of 1932, although the figures of power output are not far from the best levels of pre-depression days. The insistence of the local authorities on lower rates is supported by the activity of the Federal Government in the establishment of Federal power projects or the encouragement given to municipal enterprises. So far the scene of greatest activity has been in the valley of the Tennessee River, and is based on the Federal hydro-electric development at Muscle Shoals; but the establishment of similar Federal enterprises is promised in other regions. Notable among these is the St. Lawrence project, combining the canalisation of the St. Lawrence River and large hydro-electric generation. This project, which would involve treaty relations with Canada, was defeated in the Senate last winter, but it will be re-submitted this winter, and little opposition is expected.

A BUILDING REVIVAL?

As far as one can judge from rather fragmentary data, the great decline in industrial activity from May touched bottom in September. October apparently showed some recovery, which has continued into November. Steel output, for example, has risen from a low of about 18 per cent. of capacity to about 28 per cent. Reports from Detroit indicate considerable optimism in the motor industry. Perhaps the most significant data are those for residential building permits, which appear to be considerably higher than a year ago. Residential building began to decline after 1928, and for the past four years it is questionable if the annual residential building has equalled the losses from fire, etc. At the present time, at least in localities under your correspondent's personal observation, there is no visible excess of residential space, and, in spite of the high costs, there is very fair reason to expect that the spring will see increased building activity, both renovation and new construction. The official home "renovising" campaign inaugurated last August has as yet produced results much inferior to the optimistic official expectations. From August 1st to November 5th the total guaranteed "renovising" loans amounted to about \$15 millions. This figure, of course, does not include cash outlays inspired by the campaign; these are understood to have run far higher.

Altogether, although current production figures are very low, several rather distinct forces seem to be giving promise of the spring—the faint stirrings in the new issue markets, and the prospect of building, partly because of what appears to be an actual shortage and partly because of the obviously neglected, if not dilapidated, condition of residences. Probably it is recognition of a few basic facts of this sort, rather than the much advertised *rapprochement* of business and Government, which has led to the improved sentiment of the moment.

NEW YORK, November 20.

FRANCE

UNEMPLOYMENT STILL INCREASING

POLITICAL sentiment is calm. The discussion of the 1935 Budget is continuing before the Chamber without serious incidents. The discussion of the War Vote alone provoked important speeches, following the "disclosures" made by speakers about the re-armament of Germany. As a consequence of these disclosures, the Government has laid before the Chamber a proposal for special credits of 800 million francs for military equipment.

Unemployment continues to increase, the official figure being 362,140 on November 17th, compared with 355,850 in the preceding week and 249,274 a year ago. This is mainly due to a steady reduction in internal purchasing power. Domestic demand enabled the iron and steel industry to maintain its production at 97 in 1930 and 81 in 1931 (1929 = 100), when world production had fallen to 57 (1929 = 100). Then French production fell to 58 in 1932, increased to 67 in 1933 and fell again to 63 in July, 1934, while world production was recovering to 71. In the last few months iron and steel production fell again in France, while it increased in Great Britain and Germany.

Production in French coal mines during October, 1934, totalled 4,192,902 tons in 27 working days, compared with 3,913,356 tons in September (25 working days) and 4,080,344 tons in October, 1933 (26 working days). Average daily production was therefore 155,293 tons, compared with 156,534 tons in September and 156,936 tons in October, 1933. The number of men employed was 230,433 at the end of October, compared with 232,192 at the end of September and 246,187 at the end of October, 1933.

EFFECT OF M. FLANDIN'S SPEECH

M. Flandin's broadcast speech on Tuesday [which we discuss in a Note of the Week] has improved public sentiment, at least on the Stock Exchange. Both Government securities and industrial stocks have risen. The actual level, however, is very low. In many cases 1934 prices are lower than those which were quoted before the war, in spite of the 80 per cent. devaluation of the franc which has occurred meanwhile. The security price index which the Statistique Générale establishes on the basis of 300 French stocks stood at the end of October at 174 (1913 = 100), compared with 180 in September and an average of 232 in 1933 and 345 in 1932. In the boom years 1928-30 it was above 500. The following table shows the fluctuations of various important groups of stocks:—

	1930	1931	1932	1933	1934			
					1st	2nd	3rd	Oct.
					Qr.	Qr.	Qr.	
	(average)							
Banks	324	244	190	186	173	167	154	145
Insurance companies	965	733	610	598	558	591	569	552
Coal mines in the North	510	312	230	220	188	178	153	138
Iron and steel	243	126	85	75	60	56	50	45
Building	582	424	308	197	132	140	123	105
Chemicals	412	260	200	208	196	194	173	160

Electricity	673	535	457	452	411	382	351	333

The traffic in the Suez Canal during the first nine months of 1934 reached 23,566,000 tons, that is 1,216,000 tons, or 5.4 per cent., more than in the corresponding period of 1933. Traffic in ballast shows the greatest increase at 6.9 per cent. Railway equipment (365,000 tons, against 94,000 tons) and cereals (163,000 tons, against 42,000 tons) also increased. The receipts of the Canal since the beginning of the year are 782,460,000 francs, compared with 775,090,000 francs in 1933.

PARIS, November 29.

GERMANY

THE PRICE-COMMISSAR AT WORK

THE measures of the new Reich Price-Commissar, Dr. Goerdeler, have so far been of a general character. The Cartels Board of the Reichsstand (formerly Federation) of German Industry has been directly subordinated to the "Leader" of National Business. The aim is to facilitate the Commissar's task of deciding what price agreements ought to be dissolved. Dr. Goerdeler has ordered that all direct and indirect agreements about prices, traders' margins, and rebates for both goods and services, entered into since June 1, 1933, should be reported to him. This involves reports of the official price-fixings of the Nährstand or the Kulturkammer, and also the agricultural prices of September, 1933. Price agreements or fixed prices not reported by December 15th will become invalid. Another ordinance subjects the future fixing of prices, traders' margins and price supplements to the Commissar, though so far as prices are determined by local conditions, they may be fixed by local administrative authorities in agreement with the Commissar. These measures centralise price policy entirely in the Commissar's hands. In future, even the Nährstand and the Kulturkammer, hitherto autonomous price-fixing organs, can at most bring their wishes before the Commissar. The Commissar's first important concrete measure is to dissolve the existing fixed prices for fish products used for human consumption. These prices were fixed by the "Economic Union of the German Fish Industry" on the ground of an authorisation in the Reich Nährstand law.

The Nährstand has always so far been officially advertised as an infallible organ for solving price questions, which would eliminate the unfairnesses and uncertainties of prices in the "Liberalistic" economic age. It now appears that one of the Nährstand's own fixed prices was "not fair to the consumer interest" and had to be annulled. The result has been a fall in prices. Dr. Goerdeler's intervention seems to have thrown all other Nährstand price policies into the melting-pot.

The wholesale price index number for November 20th was 101.3, showing little change. Manufactured goods prices have continued to rise. Measures have been taken to control the retail prices of textiles. Of the probable effect on the price level and on foreign trade of Autarky, which is being officially pressed with ever more vigour, *Die Bank* writes:—

Certainly Germany can replace with domestic substitutes much the greater part of her raw material imports. This, however, will probably in most cases involve a material increase in costs of production. The primary consequence of such "false investment" will be a further reduction of Germany's ability to compete, and therewith a further aggravation of the foreign exchange question.

Die Bank adds that in consequence of the increased cost the standard of living and the ability to save must decline.

INDUSTRIAL RECOVERY RESUMED

Industrial reports still speak of considerable increases in turnover. Receipts of the Reichspost for the third quarter of the year increased by 16½ per cent., compared with the same quarter of 1933. The Reich Board for Unemployment Insurance reports that receipts in the half-year April-September exceeded expenditure by Rm. 100 millions. The increase in wholesale turnover continues at a somewhat reduced rate. Retail turnover in October was 22 per cent. higher than in October, 1933, that of the department stores, according to their classification, between 10 and 17 per cent. higher. The Nazi Party has now formally withdrawn its promise to abolish these stores, on the ground that their abolition would cause a financial crash.

A distinct decline in the pace of industrial recovery is revealed by the official Konjunkturinstitut. The Institute's report for October shows a rise from 62.1 to 62.7 in the percentage of industrial capacity being utilised (an index based on the number of working places available); and it claims that the volume of labour at work is only 16 per cent. below that of October, 1929. After a long period during which the production goods branches, which suffered most from the depression, were catching up on the

consumption goods branches, the latter have now taken the lead. The textile industry is active again. Cotton spinners' and weavers' associations report for October as in the preceding months a continuing heavy demand which they are unable to meet. A building report for January-September shows a substantial recovery in the construction of both dwelling houses and business premises. Of new dwellings this year between 40 and 50 per cent. have been built with public financial support. Cement sales are 70 per cent. higher than a year ago. Coal output in October was 11,600,000 tons, against 9,800,000 tons in October, 1933; and in the first ten months 102,800,000 tons, against 90,000,000 tons in 1933. Pig-iron output in the first ten months was 7,080,000 tons, against 4,220,000 tons in 1933, and steel output 9,760,000 tons, against 6,130,000 tons in 1933. The engineering industry in October was operating at 60 per cent. of capacity.

ACTIVE TRADE BALANCE IN OCTOBER

The trade balance in October was active by Rm. 16 millions, the second monthly active balance of the year. Imports, which usually increase in October, were little changed. This, however, concealed an increase in food-stuff imports far exceeding the October normal. Imports of raw materials declined by Rm. 14 millions. Imports of manufactured goods also declined, probably as a consequence of the heavily swollen total of September. The various export groups are little changed except manufactured goods, which rose by Rm. 12 millions. Total export rose by Rm. 16 millions, as against a rise of Rm. 13 millions in October, 1933. Since July exports of manufactured goods have risen without a break; and the October total was, except for March, the highest of the year. The chief increases were: machine-tools, electrical goods, chemicals, and iron goods; but textile exports, as usual in October, declined sharply. Exports to Russia somewhat recovered. The Russian trade report for the first eight months shows Germany to have been Russia's chief customer, having replaced Great Britain, while Great Britain replaced Germany as chief seller. In August Russia's sales to Germany exceeded sixfold her purchases from Germany. Details of the German trade returns for October are: Imports, Rm. 350 millions, against Rm. 352 millions in September; exports, Rm. 366 millions, against Rm. 350 millions in September.

The market discount rate has again been reduced, this time to 3½ per cent. The day-loan rate advanced somewhat towards the month-end, and on Tuesday was 4-4½ per cent. The recent fluidity of the money market has been due to several causes, among them temporary abundance of unexpended public monies, the blocking of transfers to foreign creditors, and the realisation of stocks of raw materials in consequence of the restriction on import. The balance sheets for October 31st of the chief commercial banks show an increase in deposits of Rm. 16 millions, which is less than the September increase, but repayments of foreign credits were larger, totalling, according to private estimate, about Rm. 50 millions. The credit demand of business has declined. The two cuts in the market discount rate raised rumours of a coming reduction of the Bank rate. Reich tax revenue in October totalled Rm. 715.6 millions, as against Rm. 591.9 millions in October, 1933. In the first seven months of the financial year tax revenue totalled Rm. 4,679.4 millions, against Rm. 3,983.7 millions in the same months of the preceding financial year. The official estimate is that there has been an effective increase in tax receipts in the seven months of Rm. 542.7 millions.

BERLIN, November 28.

AUSTRIA

EMPLOYMENT AND PRODUCTION INCREASING

THE number of unemployed in receipt of benefit at the end of September was 35,000, or 12.6 per cent. lower than in September, 1933 (compared with a reduction of 54,700, or 15.6 per cent., at the end of May). But these figures cannot be unreservedly accepted as representing an

improvement in production. The employment programme of the Government has created work for a great many people. In June about 50,000 persons, including 23,760 unemployed formerly receiving benefit, were at work on various Government schemes.

The process of industrial liquidation seems to have ceased, and new companies are even being founded. Moreover, the general industrial situation seems to be improving. The largest firm in the Austrian heavy industry, the Alpine Montangesellschaft, reports that it is now employing 10 per cent. more hands than last year. The output of iron ore is bigger by 50 per cent., and that of crude iron, crude steel and rolled goods by 20 to 30 per cent. The Steyr Automobile Works are employing about 4,000 workmen compared with 700 in the summer of last year. They have big orders, particularly for automatic pistols, special motor-cars for military purposes, for ball-bearings and for passenger automobiles. The Government has given orders to a value of about 30 million schillings for signal apparatus, radio material, uniforms, boots and other textile munitions, and the textile mills are working to 85 per cent. of capacity. Cotton yarn output in Austria has for the last twelve months constantly been 10 to 25 per cent. higher than the average output from 1923 to 1931, which was the best period of the Austrian "boom."

Exports to Germany are growing, both of raw materials and semi-manufactured goods. The movement is regarded, however, by Austrian enterprises with mingled feelings, since there is great difficulty in collecting payments; the commercial balance due to Austria is taking the form of frozen credits in Germany. It is for this reason that the steel works and the Steyr Automobile Works, which had big orders from Germany, have received instructions from the banks to stop deliveries to Germany, as the frozen credits appear too large to permit further deliveries against credits. In general, Austrian claims against other countries are increasing, while those of foreign countries against Austria are steadily diminishing. A compilation made by the chief of the Statistical Department of the Austrian National Bank shows that the foreign commitments of Austria diminished during the year 1933 from 4,251 to 3,191 million schillings; 568 millions of the diminution being due to foreign currency depreciations and 491 million schillings to repayments. England still occupies the first place among Austria's creditors, and a portion of America's claims against Austria are being transferred to England.

CONVERSION OF THE LEAGUE LOAN

On November 30th notice is to be given of the redemption of ten tranches of the Austrian League of Nations Loan as from June 1, 1934, which means all tranches except the Spanish tranche. The conversion negotiations have been concluded with five States and before November 30th they will be concluded with the other five States. There is, therefore, the probability that the conversion itself will be completed in time for June 1, 1935, including the conversion of the Spanish tranche. The saving to the Austrian Budget will amount to nearly 100 million schillings in the year 1935. Repayment of other foreign loans has made further progress in the year 1934, and it is estimated that Austria's total of foreign indebtedness will total only 2,800 million schillings at the end of 1934.

The attempts of the State to "regulate" economic activity, after being directed to the quota and clearing systems, is now concentrated upon exports. Prohibitions of the export of textile materials and rags have been issued, and the export of hides and skins has been limited. These measures are chiefly due to transfer difficulties in the countries receiving the goods, and for the most part permission to export is given as soon as the amount of the invoice has been guaranteed. Within the last few weeks a law has been issued extending the State control of timber exportation to logs, hewn conifers, soft sawn timber and railway sleepers. Exporters are obliged to observe minutely the export conditions laid down by the public corporations. Timber exports are making remarkable progress, however.

The Budget for 1935 was anticipated with some anxiety, as the deficit of 110 million schillings for the first ten

months of 1934 increased the possibility of fresh taxes. The Government proposes, however, to leave taxation unchanged for the next few years. The provisional estimate for the 1935 Budget is as follows:—

	(million schillings)	Compared with 1934
Gross expenditure	1,994	+81
Gross revenue	1,881	-32.3

These figures would suggest a deficit of 113 million schillings. This will be decreased by about 100 million schillings by the saving, already mentioned, to be secured through the League Loan conversion.

The increase in expenditure is caused chiefly by the augmented cost of the national defence and security services; but the apparent increase shown in the Budget on this item is not real, since actual expenditure in 1934 was far larger than the Budget estimates.

VIENNA, November 26.

ROUMANIA

POLITICS AND THE NEW LOAN

INTERNAL political prospects are not encouraging; economic and financial problems still cause considerable anxiety. The Government has attacked with admirable courage the question of the simplification of the public services, which has been made urgent by the present bad state of the public finances. The Government has also refused all adjournment of the first payment due (on November 15th) by agricultural and urban debtors under the Conversion Act. These policies are laying the Government open to criticism, but it has a substantial majority in Parliament which renders it practically immune to attack. Nevertheless its foreign trade policy has caused widespread dissatisfaction, and it is on this question that it is liable to the most damaging criticisms.

The subscription lists for the new Government loan were opened on November 5th and are to be closed on or before November 30th. The amount of the loan is not fixed. It is issued in bonds of 1,000 lei each at the price of 88 per cent., bearing 4½ per cent. interest, and redeemable in forty years by quarterly drawings. Repayment of the drawn bonds will be effected at 120 per cent. Interest and redemption will be paid in lei of the gold value laid down by the Stabilisation Act of February 7, 1929, and the loan is exempt from all taxation, present or future. Up to the amount of 20 per cent. of the nominal value of bonds subscribed can be paid for with bonds of the existing Government loans at prices fixed in the prospectus, on the average at about 20 per cent. above the current market prices. To attract foreign subscriptions the National Bank of Roumania has been prevailed upon to allow the export of the bonds subscribed with lei held in banks for foreign account, and in respect of such bonds the transfer abroad of the proceeds of the coupons and drawn bonds is to be assured. Of all the advantages granted to holders of the loan, the gold clause unquestionably should carry most weight. It is an unfortunate sign of the times, however, that such promises are now looked upon with sceptical eyes. Moreover, the gold clause is being attacked by the political opponents of the Government.

NEW FOREIGN EXCHANGE REGULATIONS

The new export and import regulations establish the principle that every import must be preceded by an export and that imports should not exceed 60 per cent. of exports. Exports are to be paid for in foreign exchange only. They are divided into two classes: (a) Petroleum and its products, cereals and timber; (b) the other, so-called surplus, exports. All foreign exchange obtained from exports must be placed at the disposal of the National Bank. As regards class (a), the proceeds must be in the currency of a country without exchange restrictions, and 40 per cent. is reserved for the National Bank to provide currency for the payment of the Roumanian foreign debt service and other

needs of the State. The remaining 60 per cent. is available in the shape of import certificates, which are to be distributed to the importers in possession of import permits by the office created for the regulation of foreign trade.

The long delay in issuing the new export and import regulations has caused serious prejudice to foreign trade. Exports have slowed down considerably—in the principal export season. Imports have also diminished, as very little payment has been forthcoming for a long time. The new regulations do not appear likely to improve conditions; they are considered so impracticable as to render trade almost impossible. Under the former restrictions domestic industries in Roumania had become prosperous, although, owing to the difficulty of finding means of payment for imports, raw material has recently become scarce. The new regulations do not remedy this evil; on the contrary, the stoppage of exports must undoubtedly react on imports. Already many of the factories are faced with the necessity of having to close down soon through lack of raw material. At the same time, the new system seriously interferes with existing clearing arrangements.

BUCHAREST, November 24.

ARGENTINA

RUMOURED CABINET SPLIT

RUMOURS of a Cabinet split are in circulation here; a difference of opinion is believed to exist between the Minister of the Interior and the Minister of Finance. The utmost secrecy has been maintained, however, and there is no likelihood of a Cabinet crisis until the Budget and the Unification of Taxes Bill have received the consideration of Congress.

The following are the export figures for the first ten months of the present year as compared with those for the similar period of 1933:—

EXPORTS. QUANTITIES EXPORTED IN TONS DURING THE FIRST TEN MONTHS OF 1933 AND 1934

	1933	1934	Increase (+) or Decrease (—) per cent. in 1934
Pastoral products ...	956,592	906,278	- 5.3
Agricultural products	10,356,209	11,642,537	+12.4
Total (all products)	11,741,766	13,024,441	+10.9

VALUE OF EXPORTS DURING THE FIRST TEN MONTHS OF 1933 AND 1934

	\$	\$	Increase (+) or Decrease (—) per cent. in 1934
Pastoral products ...	328,953,944	388,183,864	+18.0
Agricultural products	558,028,651	759,087,055	+36.0
Total (all products)	931,884,977	1,212,212,924	+30.1

The percentage increase or decrease in the average prices of the main commodities exported during the first ten months of 1934, compared with a similar period of 1933, was as follows:—

Chilled beef	+ 11.9	Casein	+42.9
Frozen beef	- 1.9	Wheat	+11.5
Frozen mutton	+ 28.5	Maize	+38.9
Unwashed sheepskins...	+ 86.9	Linseed	+23.9
Salted and dried sheepskins	- 7.0	Oats	+13.0
Unwashed wool	+125.1	Barley	+13.0
Butter	- 9.4	Flour	- 1.0

The market values of exports for the first ten months of 1934 exceed the figure for the whole of 1933, despite the recent decline in the price of grain. The continued increase in both tonnage and value is most satisfactory. A continuance of the present policy, however, whereby the peso is maintained at a depreciated level despite the very favourable balance of trade, cannot but cause adverse comment from importers and large foreign owned interests who have to remit their profits out of this country.

NEW TAX ON FOREIGN COMPANIES' PROFITS

A new Bill has been presented to Congress proposing an additional tax of 5 per cent. on all remittances of profits of foreign limited liability companies. This Bill, if it is passed, will become law as from January 1, 1935. It is

to be hoped that the Government will not find it necessary to impose this additional burden on foreign firms, the shareholders of which are already complaining bitterly of the small dividends received during the last few years. Moreover, the opinion is expressed authoritatively here that this measure is unconstitutional, as it imposes special burdens on certain picked firms.

During the past ten days an internal loan has been floated to the value of \$50 million paper. Interest is at 4½ per cent., and amortisation ½ per cent., the issue price to the public is 85½ and to the underwriters 84. The object of the loan is to convert the remainder of the Credito Argentino Interno 1907, 1909 and 1910 bonds, which, notwithstanding their denomination, were really issued abroad. An arrangement was made with Messrs Baring Brothers to convert bonds of these denominations up to a total of £7,600,000; the present operation represents the conversion of the remainder. It is worthy of note that the loan has been floated in paper pesos, although the bonds will be partly placed amongst foreign bondholders. The future of the Argentine currency would, therefore, appear to be viewed with confidence. In order to facilitate the eventual quotation of the new bonds on the Paris Bourse they will also have a value in francs, the rate being 2.50 francs to the Argentine peso. The present free market rate is 3.86 francs to the peso, so that in reality both capital and interest will be paid in Argentine currency. The present operation is looked upon in some quarters as a trial by the Government of the idea of converting, gradually, the whole of Argentina's foreign indebtedness by means of internal loans.

BUENOS AIRES, November 17.

SOUTH AFRICA

MINIMUM WAGE BILL LIKELY

ONE of the most important measures of the Session which will open on January 11th is an Unemployment Insurance Bill, previously introduced, which failed to emerge from Select Committee in time to be dealt with last Session. It is also considered likely that the Minister of Labour may introduce a Bill to fix minimum percentages of workers in various industries, who must receive a wage of at least eight shillings per day. A further proposal is that some attempt be made to remedy the defects in agricultural co-operation—no doubt the result of the maize disaster and of the absurd position of the butter market here in the latter part of the winter. The Minister of Finance is expected to make a start with the reduction of export subsidies—a matter which, however obviously essential in the eyes of financial purists, will bring him into opposition with most of the rural members in a House in which rural interests predominate. A further simplification of the Excess Profits Duty Act is probable, but otherwise the only

legislation now anticipated as likely to affect mining interests is an extension of the Gold Law to the Orange Free State.

In an interesting speech at the banquet of the South African Institution of Electrical Engineers recently, the Minister of Defence referred at some length to the prospects of federation of all the African States who are members of the British Commonwealth. He said that:

The real problems in Africa are going to affect every white man in British Africa. I think that in the not too distant future British Africa south of the Sudan will crystallise into two great federations linked to the Union by a common native policy and a common African defence policy. No doubt existing economic relations will be expanded and strengthened until all parties realise what valuable markets their territories can be to each other.

GOLD MINING PROSPECTS

So far as local discussion of grade policy is concerned, Mr John Martin's speech at the annual meeting of Modderfontein East, Ltd., appears to have cleared the air fairly definitely. Although Mr Martin stated that he was speaking in his personal capacity and as chairman of that company, he also stated that he believed his views were substantially in accordance with the general attitude of the gold mining industry. There is no doubt that this is entirely correct, and that those interested in the mines may therefore look forward to a lengthened period of payment of moderately increased dividends, rather than to a brief period of greatly increased dividends. It is perhaps not fully understood outside South Africa that the pros and cons of this question are not entirely, or even mainly, of an accounting or actuarial nature. Gold mining is not merely the sole reliable support of the economic life of the Union as at present organised; it is likely to remain so for a fairly long period. The public and the Government therefore watch mining policy to an extent which is probably not appreciated elsewhere. The average yield of Transvaal gold mines in 1932 was (according to the Chamber of Mines published returns) 6.471 dwt. per ton milled. At, say, 6 dwt. per ton and the current price of gold the October profit would have been roughly £4,000,000. Any attempt to work the mines at this profit would result in immediate demands for very substantial increases in wages, and it is almost certain that those demands would, in the circumstances supposed, receive such backing as to render them irresistible. Furthermore, the Government attach the greatest importance to the mines as a field of employment. Any policy which tended to curtail the future of the industry, or which deliberately refrained from feasible extension thereof, would almost certainly receive marked official notice in the next succeeding Budget.

Protagonists of higher grade and higher dividends might therefore, if their agitation were successful, have the mortification of seeing their mines stripped for the benefit of others than themselves. The present policy undoubtedly has the support of the Government and of all sections of the public, whilst shareholders have the advantage of nearly 70 per cent. increase in dividends and of a prospect of a greatly extended period of dividend payment. For the reasons stated above, it is by no means certain that the comparison of this position with that at a higher working grade would, from the shareholders' point of view, be anything more than an arithmetical exercise. Shareholders may note that the numbers employed have increased from 24,194 Europeans and 229,665 others in December, 1932, to 30,076 Europeans and 266,165 others in September, 1934. The prospective tonnage to be mined and treated at a profit is more than doubled. Those facts are paramount considerations here.

Although the balance of trade is still heavily active, Union imports continue to increase, the figure for the first nine months of the year being £47.4 millions, or £12.8 millions more than for the same period in 1933. The total exports for the nine months' period are £63.4 millions and £69.4 millions for 1934 and 1933 respectively.

Railway earnings—an excellent guide to general prosperity in the Union—are at a level unsurpassed for five years, the figure for the first week in November being

£562,000. As the summer holiday season has yet to begin, these figures are likely to increase in the immediate future.

In spite of the excellent position in regard to trade and employment, prices are still steady. There are, however, some signs of a tendency for wages to rise, so that moderate increases in prices may not be long delayed.

JOHANNESBURG, November 15.

LETTER TO THE EDITOR

PLANNING PRODUCTION AHEAD

(TO THE EDITOR OF THE ECONOMIST)

SIR,—All those of your readers who are concerned with production planning will have read the article on the Five-Day Week in the *Economist* of November 24th with interest.

But with one sentence in your article—and it is not clear from the context whether the writer is expressing his own views or those of Sir Richard Redmayne—most of us who are engaged in forecasting will not agree. The sentence to which I refer reads as follows:—

Secondly, Messrs Boots have the inestimable advantage of controlling their own distributive outlets, and they can plan their production to a schedule instead of being dependent upon orders from outside.

I believe it is the present practice of most large firms of manufacturers, other than those engaged on contract orders such as heavy engineering or electrical engineering companies, to plan production ahead and work to a manufacturing schedule, whether they control their own distributive outlets or not. Certainly the company with which I have the privilege to be associated is engaged in one of the most highly seasonal industries, and yet has managed to budget production ahead for most of its activities with a very high degree of accuracy for some years past.—Yours faithfully,

T. W. WALDING,

November 26, 1934.

Statistician, Kodak Company.

MONEY AND BANKING

THE RATE OF INTEREST

THE recent reductions in short-loan and discount rates, and the consequent diversion of large quantities of funds from the money market to the gilt-edged market, have naturally stimulated a temporary boom in gilt-edged securities. Although prices of the latter now stand below their peak of early November, the net result has been the further lowering of the yield upon long- and medium-term Government securities. A gilt-edged yield of 3½ per cent., which only three years ago seemed an unattainable ideal, has given place to 3 per cent., and to-day 2½ per cent. is well within reach.

The initial impetus which brought about the collapse of discount rates was the reduction in the total of Treasury bill tender issues from a peak figure of £597 millions at the end of 1933 to a figure of £421 millions on November 10th. This reduction was largely, if not entirely, due to deliberate Government policy. Further, the Government, by announcing the redemption next April of 40 per cent. of the 3 per cent. Treasury bond issue, whereas it is only bound to redeem 10 per cent., has deliberately put itself in a position of having to raise £44 millions of fresh money. This is in addition to £150 millions which may be required for the 2 per cent. Treasury bond issue, which in all probability will be called for redemption next May. This implies that the Government sees its way to raise £194 millions at some date during the next six months.

The authorities must, therefore, have welcomed the recent fall in the gilt-edged yield, and indeed they are probably fostering it with a view to preparing the ground for further long-term or medium-term issues designed to clinch the establishment of a lower long-term rate of interest. Some evidence in support of this can be deduced from recent changes in the composition of the floating debt. Between the end of August and early November the total of "tap" issues of Treasury bills and Ways and Means Advances from Public Departments, that is the "floating assets" of the Departments, rose from £412 to £476 millions. It is doubtful if much of this increase was due to Exchange Equalisation Account operations, and it looks as if the Departments have been putting themselves in a more liquid position, which incidentally will help them to support either the gilt-edged market generally or any new Government issue which may be made. All this is surmise, and these "floating assets" have declined to £470 millions during the past fortnight. Yet this deduction points in the same direction as all the other indications.

For all these reasons it is safe to assume that a major setback in the gilt-edged market will not be allowed to occur. There are, moreover, other considerations to support purely financial arguments. In the present state of public opinion, for example, a fall in gilt-edged prices would have a serious psychological effect. It would at once suggest that the downward trend of interest rates was about to be reversed, and this impression would reflect on the price of "equities," the new capital market, the capital goods industries, and on trade and employment generally. From the political angle it would be regarded as a confession that the Government, in its policy of cheap and plentiful credit, had shot its bolt; and from the economic angle it would be inferred that trade revival had reached its zenith.

All this means that the upward trend of gilt-edged prices and the downward trend of long-term interest rates will be further stimulated in the hope of attaining Mr Keynes' next immediate goal of 2½ per cent. How far will the movement help recovery? Here more circumspection is needed. Equity shares have already reflected to the full the decline in interest rates, for most sound equities are now quoted at prices well in advance of a price calculated on relative yields to-day. The new capital market has also adjusted itself, as is shown by the terms on which municipal

and other high-grade issues are being successfully placed. Yet there has been no raising of capital on a substantial scale for new enterprise, and while the average investor is restive at the low return he now receives on sound securities, he has not yet been goaded to the point where he is prepared to take a risk. In short, the reduction in interest rates is spreading successfully from the money market to the gilt-edged market and to sound, well-established enterprise. It has not yet spread into the general field of industrial borrowing, and so long as the trade outlook remains so uncertain it is difficult to see how it can do so.

There are, in fact, two fields in which the fall in interest rates is lagging behind. One is the relatively narrow field of bank advances. To-day this particular lag is less important than many people think, for the trade depression has left most big concerns well supplied with liquid funds, and so they can provide their short-term finance out of their own resources. Again, it is reasonable to assume that ways will be found of overcoming this particular lag. Insurance companies, foreign banks represented in London, and other financial institutions have for some time been competing with the joint-stock banks, while a further and most welcome development would be the return of the sound, well-backed inland bill.

The banks cannot lower their general advance rate to 3½ per cent. or even to 4 per cent. without losing more revenue than they can afford. So long as the country requires a highly-organised banking system, which renders numerous free and unremunerative services to its customers, it must be prepared to pay for it. Nor is an advance rate of 4½ per cent. as great a burden upon trade as many people think. The proper test of the burden is the relation of the average firm's bank loans, and their cost, to their year's turnover, and in most cases bank interest (and still more the saving arising out of a ½ per cent. cut in the rate) would look very small in relation to other items of profit and loss. Where a firm has been deeply committed to its bank for some time, bank interest may be a more serious matter. The answer here is that the firm is really obtaining from its bankers finance which should take the form of debentures, and the true comparison is between the cost of the bank loan and the cost which a debenture issue would entail to a firm in such a position. The trouble is that many who grumble at the cost of bank loans and their alleged effect on the trade of the country, confuse bank loans with bank participations in industry. British bankers have always set their faces against the latter, and provided that bank loans are confined to their proper function of supplying short-term finance, their cost should not be injurious to the majority of industries.

The sluggishness of the new capital market is a more serious matter. To-day, new issues have shrunk to a fraction of their volume during the boom year of 1928, and clearly there is still a paucity of real new enterprise. The disappearance of international trade must partly be blamed for this, and only this week Messrs. Robert Benson and Company have justifiably used the lack of demand for capital as yet another argument in favour of the removal of the embargo upon foreign loans. Unemployment and the lack of purchasing power at home must also bear their share of the responsibilities of the lack of new enterprise, and to that extent the prevailing unemployment and absence of enterprise constitute a vicious circle.

How is this circle to be broken? The answer plainly is that the efforts to revive trade by cheapening the cost of capital have not yet proved effective, and must be continued and intensified. The most reliable test of the cost of capital as one of the factors of production is the elasticity of demand for capital. So long as demand fails to expand as rates fall, the presumption is that the cost still remains too high. This means that to-day we must still watch for a

further decline in long-term interest rates. If such a decline comes about, and if we can discern that a fresh demand for capital goods is developing, or that fresh capital expenditure, e.g. on housing schemes, is being undertaken, then we can assume that we are moving along the right road. In spite of the past year's housing boom and revival in the capital industries, we can hardly yet feel that degree of assurance.

On all grounds, therefore, we must not assume that the Government's cheap money policy has reached its culminating point, or that from now onwards it will be allowed to lapse. The Government has definitely committed itself to this particular task and must see it through to the end. So far, its efforts have met with a moderate degree of success. It would be madness to relax those efforts at the very moment when such leverage is beginning to overcome the inertia of trade depression.

FINANCIAL NOTES

The Money Market.—Money remains easy, with outside lenders offering funds generally at $\frac{1}{2}$ per cent. and at $\frac{1}{4}$ per cent. for overnight money. A certain amount has already been borrowed over the end of the year, and it is probable that the clearing banks will charge $\frac{1}{2}$ per cent. for loans into the New Year against eligible bills, and $\frac{1}{4}$ per cent. for other loans. Discount rates have become distinctly firmer. On November 23rd, £40 millions of Treasury bills were issued against maturities of £30 millions, and applications amounted to only £48.6 millions. The average tender rate was 6s. 3.97d. per cent., against 4s. 9.46d. per cent. the week before, but the total volume of Treasury bills has been increased from £423.7 to £433.7 millions, while last week's application and the subsequent course of business show that the market is not anxious to load itself up with bills immediately before the end of the year.

	Nov. 8, 1934	Nov. 15, 1934	Nov. 22, 1934	Nov. 29, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks.....	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills.....	$\frac{7}{16}$ - $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{3}{8}$ - $\frac{7}{8}$
Three months' bank bills	$\frac{1}{16}$ - $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{3}{8}$ - $\frac{1}{2}$

Current discount rates reflect this tendency, for this week next year's Treasury bills have been offered at $\frac{3}{8}$ per cent. without attracting buyers, and $\frac{1}{2}$ per cent. is probably a more representative rate. On Thursday afternoon it was confidently expected that the next day's tender rate would average $\frac{1}{2}$ per cent. Three months' bank bills are quoted at $\frac{3}{8}$ per cent.

The Bank Return.—This week there has been an increase of £3.1 millions in the note circulation. This probably represents currency requirements by the public over the end of the month, but the Christmas demand for currency is likely to begin on a small scale next week.

BANK OF ENGLAND					
	Nov. 29, 1933	Dec. 27, 1933	Nov. 14, 1934	Nov. 21, 1934	Nov. 28, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.

Discounts and advances	8.6	16.8	9.6	8.6	9.2

Proportion 51.9% 37.3% 47.4% 47.6% 47.1%
There has been a further increase of £2.2 millions in public deposits, due to this week's expansion of £10 millions in Treasury bill tender issues. On Saturday, December 1st,

the half-year's War Loan dividend, amounting to £35 millions, is due to be paid, and this will reduce public deposits to a more normal size.

The Foreign Exchanges.—The London exchange market has been very dull, but sterling has on balance reacted slightly after its previous improvement. Spot dollars have improved from \$4.99 $\frac{1}{2}$ to \$4.98 $\frac{1}{2}$, and three months dollars are steady at $\frac{1}{16}$ per cent. discount. Spot francs have strengthened fractionally from Frs. 75 $\frac{1}{2}$ to Frs. 75 $\frac{3}{4}$, and three months' francs have improved from 13 $\frac{1}{2}$ to 9 $\frac{1}{2}$ centimes discount. Some of the gold *bloc* currencies which have been causing anxiety have also strengthened during the week. Spot belgas have moved from Belgas 21.42 to Belgas 21.35, and the three months' rate has improved from 0.36 to 0.27 belgas discount. At the week-end the Bank of Italy raised its discount rate from 3 to 4 per cent. The Bank of Italy's reserve ratio has for some time stood at only 42 per cent., against a statutory minimum of 40 per cent., and it is thought in London that the Italian authorities are following the orthodox policy of raising the discount rate in order to attract foreign funds. It is equally thought that such a remedy must be ineffective in face of the prevailing over-valuation of the lira, but the exchange improved during the week from 58 $\frac{1}{2}$ lire to 58 $\frac{3}{4}$ lire, and no immediate suspension of the gold standard is expected. As regards German exchange rates, free reichsmarks have strengthened from Rm. 12.42 to Rm. 12.40, and registered marks have appreciated from 48 per cent. to 43 per cent. discount.

New York Money and Banking.—Money remains easy and New York rates are unchanged. During the week ended November 23rd, brokers' loans made by New York member banks on their own account rose from \$568 to \$572 millions, but loans made on account of others decreased from \$810 to \$805 millions. There was thus a net decrease in the total amount from \$1,378 to \$1,377 millions. Bank clearings of the leading 47 cities for the week ended November 21st were \$4,585 millions, against \$4,728 millions for the corresponding week in 1933, or a decline on the year of 3.1 per cent. The State of Illinois has placed \$30 millions of 3 $\frac{1}{4}$ per cent. relief bonds with a nation-wide banking syndicate at a price of \$101.58 per cent. Further gold arrivals were reported during the week from France, Belgium and Holland, but the franc has now risen to within the export gold point, and shipments from Paris have now ceased. Gold exports for October were \$2.2 millions and imports \$13.0 millions. This raises gold exports for the first ten months of the year to \$52.3 millions and imports to \$973.2 millions. Merchandise exports for October were \$206 millions, against \$191 millions in September and \$193 millions in October, 1933. Imports for October were \$129 millions, against \$131 millions in September and \$150 millions in October, 1933. Comparing the first ten months of 1933 and 1934, exports have risen from \$1,298 to \$1,767 millions and imports from \$1,187 to \$1,371 millions.

Banque Belge Pour L'Etranger.—The latest report of this international bank, covering the year ended June 30th last, contains some interesting pieces of information. Following the general tendency towards transforming foreign branches into affiliated companies registered under the laws of the country in which they are domiciled, the Banque Belge pour l'Etranger has turned its London and Paris offices into subsidiary companies, called respectively the Banque Belge pour l'Etranger (Overseas), Limited, and the Banque Belge pour l'Etranger, Paris. This transformation possesses certain administrative and legal conveniences, and does not involve any loosening of control. The report refers to the recent Austrian banking reconstruction measures and to exchange and other difficulties in Central and Eastern Europe. Perhaps the most illuminating commentary is the decision of the board to allot once more Frs. 4,000,000 from the year's net profits of Frs. 22 millions to contingencies, and also to transfer the sum of Frs. 30 millions from the reserve fund to contingencies. This last amount, which is in excess of the year's profits, reduces

the reserve fund from Frs. 130 to Frs. 100 millions. It would be wrong to assume, however, that the bank's position has become unduly weak. Its cash ratio is equivalent to 48 per cent., the bulk of its remaining assets consist of bills receivable and sums due from bankers and other debtors, while its investments and participations are more than covered by issued capital and reserves. The position is therefore thoroughly liquid.

Commercial Bank of Scotland.—The accounts of this bank show little change from a year ago, but there has been a slight increase in its deposits. The expansion in acceptances, etc., is due to a change in procedure, for this year forward exchange contracts are included under this heading for the first time. Among earning assets, advances are practically unchanged and investments and call money a little higher. Discounts, which consist solely of commercial bills, have again fallen, so that apparently the use of the bill is not yet making headway. The salient features in the accounts are summarised below:—

	1932	1933	1934
	£'000	£'000	£'000
Liabilities:			
Capital.....	2,250	2,250	2,250
Reserve fund.....	2,850	2,850	2,850
Notes in circulation.....	3,270	3,244	3,223
Deposits.....	37,503	37,725	38,932
Acceptances, etc.....	162	221	1,731
Assets:			
Cash.....	3,842	4,072	4,119
Cheques in course of collection and balances with other banks.....	1,924	2,174	2,318
Call money.....	2,877	2,695	2,786
Investments.....	18,648	20,725	21,963
Discounts.....	1,333	1,159	874
Advances.....	16,616	14,627	14,529
Net profit.....	377	387	379
Contingencies.....	50	50	50
Other allocations.....	80	80	80
Dividend—"A" shares.....	16%	16%	16%
"B" shares.....	10%	10%	10%

Net profits are slightly lower than in 1933. The decline in interest and discount rates is undoubtedly responsible for this, and in the circumstances the results are fairly good. The Commercial Bank has reduced its short loan rates in line with the clearing banks, and this reduction will affect next year's results. Against this, Scottish deposit rates are usually only 1 per cent., and efforts to reduce rates on savings bank accounts below the Post Office level are meeting with some success. Commercial conditions in Scotland are rather better, and no doubt less provision was needed this year for bad and doubtful debts.

Royal Bank of Scotland.—The only significant changes in this bank's accounts are slight contractions in deposits and investments. Both movements are so small as probably to be accidental, but the shrinkage in investments is opposite to the general banking trend. Advances, too, are a shade higher, and in view of the liquid condition in which many industrial undertakings find themselves to-day, this small increase is as much as can be expected. The salient feature in the bank's accounts are summarised below:—

	1932	1933	1934
	£'000	£'000	£'000
Liabilities:			
Deposits.....	55,899	59,257	58,944
Notes.....	2,781	2,859	2,793
Acceptances.....	1,075	1,599	3,895
Assets:			
Cash.....	5,479	5,988	6,206
Call money, etc.....	7,180	7,412	8,133
British Government securities.....	20,940	25,151	24,394
Other securities.....	1,878	2,386	1,992
Williams Deacon's Bank shares.....	3,094	3,094	3,094
Treasury bills.....	2,795	2,230	1,890
Other bills.....	2,106	2,132	1,984
Advances.....	21,468	20,249	20,921
Loans on stocks and securities.....	1,244	989	860
Net profits.....	605	612	621
To inner reserves.....	73	75	68
Other allocations.....	50	55	55
Dividend.....	17%	17%	17%

Net profits are a little higher, but this may arise from last April's reduction in income tax. Against this, more cash

'phone
STOCKHOLM 0101
for all kinds of
foreign exchange
transactions
SKANDINAVISKA KREDITAKTIEBOLAGET

is required to pay the year's dividend, as less tax is now deducted at source. The chairman alluded at the annual meeting to the slight but welcome increase in advances. He summed up the 1934 balance sheet by saying that it showed that the bank was in an excellent position, when trade and industry required it, to give increased facilities to its customers.

Bank of London and South America.—The balance sheet of this institution has been affected by the year's appreciation of sterling against the currencies of most of the countries in which the bank operates. Of the fall of £11.4 millions in deposits since a year ago half is due to this cause alone, and cash, bills receivable and advances have also been affected. Bills payable and bills for collection, being largely drawn in sterling, have escaped. The fall in deposits and cash is also due to the liberation under the Roca and Rothschild agreements of foreign funds previously blocked in Argentina and Brazil. In 1932 and 1933 these funds were accumulated in this and other banks, awaiting remittance, and as the bank did not know when these funds would be freed it felt it wisest to hold cash against them. The liberation of these funds has helped to reduce both deposits and cash to their normal level and ratio to each other, which last existed in 1931. Had it not been for these two factors, deposits would have increased during the past year:—

	1932	1933	1934
	£'000	£'000	£'000
Liabilities:			
Capital.....	3,540	3,540	3,540
Reserve.....	1,500	1,500	1,500
Deposits.....	41,368	42,739	31,363
Bills payable.....	630	474	625
Acceptances.....	1,153	1,354	1,611
Bills for collection.....	7,823	7,546	7,624
Assets:			
Cash.....	17,069	17,541	9,633
Investments.....	*	*	1,128
Bills receivable.....	10,355	9,227	6,662
Advances, etc.....	18,305	20,187	18,234
Gross profit.....	1,396	1,324	1,133
Expenses.....	1,084	987	857
Net profit.....	312	337	276
To contingencies.....	200	230	200
Dividend.....	3%	3%	3%

* Included under advances, etc., in 1932 and 1933.

Gross profits and expenses have been reduced as a result of the appreciation of sterling, but gross profits have been struck this year after instead of before providing for bad and doubtful debts, while expenses have carried the loss on exchange. This last arises from the fact that whereas the accounts are computed at official exchange rates, profits are remitted at "free" rates, which are invariably lower. Hence there is some fall in net profits. The exchange depreciation on the proportion of the bank's capital employed abroad has risen during the year from £581,000 to £913,000, but this is fully covered by contingencies reserve, and so does not represent any real loss of capital.

THE STOCK EXCHANGE

WHITHER INVESTMENT TRUSTS?

ABOUT five years ago a popular financial writer hazarded the view that the trust company, as an investment medium, was destined eventually to supersede all individual investment in Great Britain. To-day, investment trust stocks are the fourth lowest group in the Actuaries' Index. Clearly, between 1929 and 1934, in public estimation, there is a gulf fixed. In 1929, managed co-operative investment appeared to secure every advantage that human wit could devise—risk-spreading, large-scale buying, conservative finance, and continuous expert management which succeeded, at one and the same time, in being both enterprising and "canny." Five years ago it would have been almost *lèse majesté* to suggest that a generation of "fixed trusts" would arise, flaunting their lack of "management" as something both new and profitable.

What has happened in the meantime? Why have investment trust ordinary share earnings fallen more, instead of less, than those of the average British industrial company? Are the advantages of managed investment delusive, or has its purpose been misunderstood? Is the movement on the threshold of recovery? If so, which companies have the best prospects? For an answer to these and many other questions we venture to recommend to our readers a close perusal of the facts set out in the "Investment Trust Supplement" which accompanies this issue of the *Economist*. This analysis of the movement's profits, capitalisation, investment distribution, "cover," etc., deals with the decade from 1924 to 1933, with special reference to the eventful "crisis" years, from 1929 onwards. It may claim to be the most detailed scientific analysis yet made outside the movement itself.

It is impracticable to follow, within the limits of a short article, all the lines of thought suggested by the detailed tables given in our survey. The broad conclusions which emerge from our analysis are, however, both striking and significant. The severest trial since the 'nineties of last century has not shaken the twin foundations of investment trust theory—co-operative investment and risk-spreading. Throughout the depression, the movement as a whole has continued to earn profits. All but a few companies have earned and paid dividends on their "fixed" capital, and many companies have continued to pay dividends, though at reduced rates, on their ordinary capital. Even under the depressed conditions of 1933, the greater part of the movement's issued capital, and practically the whole of its debenture and preference capital, was "covered" by assets at prevailing market values.

At this point, an important caveat must be entered. Ten years ago differences between individual investment trusts were mainly fortuitous and personal. To-day, there is a distinct cleavage in the movement along chronological and geographical lines. Trust companies formed since the war, accounting for more than half the total numbers, are to-day in a distinctly less favourable position, both as regards earnings and capital "cover," than the companies formed before the war. Both in prosperity and in depression, the fortunes of the Scottish companies have tended to fluctuate more widely than those of their English counterparts. Beyond peradventure, our analysis proves that, in British investment trust finance, maturity makes for stability. Both the pre-war and post-war trusts are, frequently, under identical management auspices, and their resources are invested in much the same broad geographical areas, industries and types of securities. The newer trusts, however, have lacked the opportunities of the older companies resolutely to write down the book value of their assets, year by year, out of "reserved" revenue and capital profits. The peculiar form of "portfolio diversification," adopted by the majority of companies, on the other hand, has tended to accentuate rather than to arrest the decline in earning power. In a depression which has fallen with especial severity on overseas countries, the location of more than half the movement's total resources

outside Great Britain has been a distinct source of embarrassment.

The wider fluctuation of Scottish than of English earning power calls attention to another aspect of trust company finance whose importance has hitherto been seriously underrated. The movement has an exceptionally "high-g geared" capitalisation. In round figures, it has £250 of prior capital, carrying fixed rates of interest, or dividend, for every £100 of variable dividend or "equity" capital. In other words, the brunt of changes in prosperity must normally be borne by the holders of little more than one-fourth of the total capital. The Scottish companies have a higher "gearing" than the English—on the average, they have £317 of "fixed" per £100 of "equity" capital, against an English average of £218 per £100. Hence their wider fluctuations.

"Leverage" was a powerful argument for the purchase of trust company ordinary stocks, so long as profits were advancing. Its results, however, were unfortunate for equity stockholders when earnings began to fall sharply during the depression. Between 1929 and 1933 the total earnings of 92 pre-war trusts declined by 33 per cent., but the earnings available for equity stockholders fell by 58 per cent. The total earnings of 83 post-war trusts were reduced in the same period by 28 per cent., but earnings available for ordinary stockholders declined by no less than 81 per cent!

The reasons for the relatively low valuation of "marginal" investment trust stocks to-day can thus be summed up in a sentence. The movement, in the second of its historic crises (the first being the Baring crisis of the 'nineties), has endured the inevitable consequences of a capital structure which, for equity stockholders, has magnified the effects of fluctuations in earnings, and of a management policy which has stressed foreign rather than domestic investment.

Both these traits have contributed to the rigidity of investment trust portfolios during the last four years of depression. The popular theory that, in time of emergency, the companies can rapidly "switch" from less to more advantageous groups of securities, is certainly not confirmed by our analysis. The geographical, industrial and "denominational" distribution of representative trust company portfolios is shown to have been much the same in 1933 as in 1929. The extent both of the decline in earnings and the depreciation of capital values might well have been more limited had the companies enjoyed the same facilities for trimming their sails as were available to the private investor. In fact, the trust companies' holdings became a species of Nessus' Shirt, of which they could not divest themselves. For this result, the magnitude of the portfolios was doubtless in itself partly responsible, since any endeavour to "unload" on a falling market might have involved the companies in unconscionably heavy capital losses. Some of their securities, indeed (particularly their foreign investments), may never have enjoyed a very free market.

Perhaps the most important factor making for rigidity, however, has been the "high gearing" of trust company capitalisation, to which reference has already been made. Even in pre-depression years, the relatively high rates of interest which the companies had contracted to pay on their debenture and preference capital compelled them to go well afield in their search for high-yielding investments. To-day, when a fall in general interest rates has substantially reduced the yield obtainable on a contemporary purchase of any income-bearing investment, from a gilt-edged stock to an industrial ordinary share, the trusts are saddled with practically the same burden of fixed annual debenture and preference charges as in 1929. Apart from short-term debentures, which account for about 9½ per cent. of the total capitalisation of the Scottish companies, the average date of earliest redemption of the movement's

debenture stocks is thirty years ahead, while its preference stocks are redeemable only in liquidation. Our figures suggest that, at the prevailing level of interest rates, the majority of trusts cannot replace their present holdings with fresh domestic securities, at current market prices, to yield them an income sufficient to cover payments on their own fixed-interest securities and leave an attractive margin for dividends on their ordinary stocks.

What is the bearing of these conclusions on the movement's future prospects? Our survey has thrown into sharp relief certain consequences of past policy whose nature and possible implications may not have been fully realised. Investment trust managers can scarcely be charged with lack of foresight because they failed to budget for a virtual breakdown in international trade and finance. It is an open question, however, whether their choice of a capital structure, intrinsically adapted to a period of continuous expansion in world prosperity, involved too implicit a reliance in the latter's indefinite continuance. Their policy combined extensive foreign investment with a "high-g geared" capital structure, and involved the subsequent accumulation of substantial reserves out of the fruits of prosperous years. This policy appears, in fact, to reproduce the mental attitude of a man who fails to insure his house against fire on the ground that the latter is a highly improbable contingency, but sets aside a certain proportion of his income against eventualities of every kind. Since 1929 there has been a widespread conflagration. A substantial part of the premises has—temporarily at least—been demolished. The loss exceeds the accumulated reserves in practically all cases, but the margin is greatest among those companies whose savings have been accumulating for the shortest time.

For the last twelve months our analyses of British industrial profits have been sharply rising. Investment trust earnings may be at or near the turn, and the companies' marginal stocks will have an indubitable "recovery" appeal in coming months. For reasons already suggested, the companies must largely stand or fall by their present security holdings. Their "capital gearing" should ensure a more rapid proportionate rise in ordinary earnings than in total earnings. Under the present regime of international trade and currency restrictions and of reduced interest rates, however, investors cannot postulate an early return to the earning power of 1929. Buyers of investment trust stocks "for recovery" may therefore be well advised to follow a policy of keen discrimination. Other things being equal, recovery may be most striking, in the next few months, first, in the marginal stocks of companies which have the highest "gearing"; and, secondly, in those of companies having, in their portfolios, the largest proportion of domestic (and sterling area) securities as distinct from foreign securities, of equity as distinct from fixed-interest stocks, and of industrial holdings as distinct from Government and railway issues.

INVESTMENT NOTES

Course of Share Values.—To those who care to apply the imagery of war to investment matters the "November break-through" by British industrial ordinary shares may have peculiar significance. As will be seen from the chart published on this page, the index rose well beyond the point to which it had hitherto tended to return, with unflinching regularity, after every intermediate fluctuation since last March. There is a dual explanation for this phenomenon at a moment when the upward movement in industrial activity appears indubitably to be losing its impetus. In part, the share market has been celebrating a species of "harvest home." Last month's company reports produced numerous increases of profits and dividends, and suggested that in some cases—notably the brewing industry—the market had been inclined somewhat to under-estimate the effects of the past year's recovery. In the main, however, the November share rise was a measure of readjustment, in view of the fresh downward trend in interest rates. Wall Street, after the elections, has had a firmer tone, reflecting the view that the all-powerful President will continue to incline towards a "safe" policy rather than towards

further unorthodox experimentation. For the present, however, the market for equity stocks shows few signs of returning to the high level of a few months ago. It is generally felt that a "mild" recovery in industry, however healthy, may need to go far before handsome dividends on many equity stocks are again imminent, in view of the extent to which the wages and hours policy of the New Deal has put

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS.

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

back the "earnings line." Meanwhile, in Great Britain, the latest downward movement in interest rates, though temporarily halted, has placed long-term British Government stocks on a yield basis of just over 3 per cent., and reduced the average yield on the 144 ordinary shares in the Actuaries' Index to 3.60 per cent., as compared with 3.68 per cent. a month ago. The average market value of the 144 securities is now 74.3, as compared with 72.0 a month ago and 68.6 a year ago (December 31, 1928 = 100).

ACTUARIES' INVESTMENT INDEX

Group (and No. of Securities)	Prices (Dec. 31 1928=100)			Yields (%)		
	Year Ago (Nov. 28, 1933)	Month Ago (Oct. 30, 1934)	This Week (Nov. 27, 1934)	Year Ago (Nov. 28, 1933)	Month Ago (Oct. 30, 1934)	This Week (Nov. 27, 1934)
Fixed Interest Stocks						
British Government (2)	123.9	133.5	135.1	3.48	3.23	3.19
Misc. Industrial Deb. (11)	119.6	122.7	124.0	4.46	4.08	4.03
Misc. Industrial Pref. (42)	112.1	116.6	120.0	4.49	4.37	4.24
Ordinary Stocks						
Insurance Co.'s (24)	98.4	112.1	117.9	4.31	3.74	3.54
Building Materials (4)	68.5	80.6	87.0	3.69	4.43	4.10
Elec. Light and Power (14)	127.4	131.9	136.7	3.93	3.78	3.65
Gas (7)	133.3	139.9	144.2	4.47	4.35	4.19
Elec. Supplies (8)	95.0	98.5	103.8	4.64	4.34	4.15
Home Rails (4)	79.1	72.8	75.1	1.34	1.51	1.53
Breweries and Distill. (16)	98.0	115.2	125.5	4.20	3.81	3.75

If equity shareholders are correct in assuming that a further increase in industrial profits in 1934-35, equal to that of 1933-34, is becoming increasingly unlikely, it would appear that the course of general interest rates may be the dominant factor in determining ordinary share values in the immediate future.

* * *

Tilling Arbitration Award.—The Arbitration Tribunal set up under the London Passenger Transport Act issued an interim decision on Wednesday, awarding Thomas Tilling, Ltd., some £143,871 of 4½ per cent. "A" stock, £143,870 of "B" stock, and £1,462,259 of "C" stock in the London Transport Board, in compensation for the transfer to the Board of the company's London omnibus undertakings. Minor claims in respect of severance, apportionments and costs were reserved for a later decision. An arbitration which has lasted intermittently since the spring has thus ended, like most British arbitrations, in a *via media*.

Tilling's original main claim was for £3,595,543 in equal amounts of "A," "B" and "C" stock, while the Board offered £1,032,231. Taking all stocks at par, the award represents 49 per cent. of the Tilling claim, but as the market quotations for London Transport 4½ per cent. "A" and "B" stocks are respectively at premiums of 24½ and 29½ per cent., while the "C" stock is at a discount of 9 per cent., the present value of the award is only 41 per cent. of the company's claim taken on a "market value" basis. Tilling ordinary shares, which have been as low as 79s. 6d. this year, touched 105s. 7½d. shortly before the announcement, but dropped sharply to under 100s. on market disappointment, with a subsequent recovery to 101s. 3d. As the remaining claims do not involve at most more than £173,501 cash, plus costs, it is now possible to estimate fairly closely the effect of the award on the company's future. The following tables set out the revenue which the company will receive, presuming varying rates of dividend on Transport "C" stock, and show Tilling earnings for the last three years:—

INCOME RECEIVABLE ON LONDON TRANSPORT STOCK AWARDED TO THOMAS TILLING

Interest on 4½% "A" Stock (£143,871)	Interest on "B" Stock (£143,870)	Dividend on "C" Stock (£1,462,259)				
		At 3%	At 4%	At 5%	At 5½%	At 6%
6,474	7,193	43,868	58,490	73,113	80,424	87,736

TOTAL INCOME AS PERCENTAGE OF TILLING ORDINARY CAPITAL (£1,318,375)

Presuming dividend on "C" stock of	3%	4%	5%	5½%	6%
Percentage of total income to Tilling ord. cap.	4.4%	5.5%	6.6%	7.1%	7.7%

TILLING RESULTS FOR LAST THREE YEARS

Years to Dec. 31	Total Profits	Amount Earned for Ordinary	Rate Earned for Ordinary	Rate Paid on Ordinary
1931.....	368,591	308,365	45.6	20
1932.....	355,590	312,325	26.6†	15†
1933.....	364,127	324,125	27.8	15

* Including profits from London Omnibus Section for nine months to September 30th only.
† On increased capital.

The publicity attending the hearings before the tribunal has concentrated a disproportionate amount of attention on a single aspect of Thomas Tilling's operations. For some years past the company's major interests have been in provincial omnibus undertakings. In the *Economist* of February 17, 1934, we published a detailed analysis of its holdings, owned both directly and through Tilling and British Automobile Traction, in which (as we showed in a subsequent Note of April 21st, page 886) Thomas Tilling has, directly and indirectly, a 45 per cent. interest. At present, as we suggested in our last week's issue (page 990), London Transport earnings appear to be running at a rate equivalent to slightly under 4 per cent. on the "C" stock. On this basis, earnings on the London Transport stocks awarded to Thomas Tilling would be equal to some 19.8 per cent. of the company's total profit for 1933, when the earnings of the London omnibus section were included for nine months only. The nominal amount of the London Transport stocks awarded to the company is equivalent to 26s. 6d. per Tilling ordinary share. It will be for the company to decide whether the Transport stocks are to be retained as an investment or distributed, wholly or partly, to shareholders.

Union-Castle Voting.—Last Tuesday, at an extraordinary general meeting of the Union-Castle Mail Steamship Company, a resolution restricting ownership and control to British subjects was passed, *nem con.* A further resolution conferring the right to vote and attend meetings, in all circumstances, on the preference shareholders was carried by 1,779,657 votes to 360,379. For the present, however, this resolution is ineffective, in view of an injunction granted by Mr Justice Clauson on November 23rd

restraining the company from acting in this regard without the consent of the ordinary shareholders, pending the trial of an action to test its validity. The Union-Castle chairman, Mr Robertson F. Gibb, at the meeting, dwelt on the unfortunate historical results of the company's control by the Royal Mail group and the directors' fear that, in a Royal Mail break-up, control might pass to "persons whose interests did not coincide with the interests of the company." He made it quite clear that if the judgment of the Court of first instance went against the directors they would carry the matter to appeal. Shareholders of all classes will hope that an amicable arrangement may be made to avoid this prospect of prolonged and expensive litigation. Many critics who, having no interest, either way, in the company, are able to take a dispassionate view, express considerable sympathy for the natural disinclination of the present board, whose valuable reconstructive work is widely recognised, to run the hazard of further experiments in group control. Two wrongs, however, do not make a right, and the issues raised by any suggestion to perpetuate powers which, *ex hypothesi*, were intended to be merely temporary, go far beyond the interests of any single company. On general principles, there is much to be argued against control by a minority, but when that minority represents a *rentier* interest, the case appears overwhelming. The ordinary stock has one vote per £10, while the 6 per cent. "A" preference has one vote per £1 share. Presuming that the whole of the ordinary voting power, i.e. 270,000 votes, was cast against Tuesday's resolution, that the whole of the remaining 90,379 votes "against" were cast by holders of the 6 per cent. preference shares, and neglecting the 24,000 votes of the 4½ per cent. cumulative preference shareholders, an analysis of Tuesday's voting suggests that holders of £1,779,657 of preference capital favour the scheme while holders of £2,790,379 of ordinary and preference capital are against it.

The Oil Outlook.—The American Government still appears to maintain control of the oil situation in East Texas through the Federal Tender Commission, to whose operations we referred in an Investment Note of November 10th (page 884). The Commission is refusing shipment licences for inter-State commerce to illegally produced crude oil and refined products, but suits have been brought by the "hot oil" interests first to obtain an injunction restraining the Federal Tender Commission from functioning altogether and secondly to declare illegal the action of the railroads in refusing to handle "illegally" produced oil. These suits have been postponed until November 24th. It would be unwise to assume that Mr Ickes, the Oil Administrator, has eliminated "hot oil" until these suits have been decided. But to show his determination we may cite the case of the Wilshire Oil Company. The Oil Administrator's representative in Los Angeles has notified all members of the Pacific Coast cartel to suspend deliveries to dealers handling gasoline supplied by the Wilshire Oil Company on the grounds that this company has been illegally over-producing crude oil. The company, in retaliation, threatens to bring a suit against the cartel members on the grounds that the N.R.A. has no control over its business, which is strictly intra-State. Unfortunately the Mid-Continent and Texas oil districts are not "cartelised" as in California, and the attempt to restart the gasoline buying pool in East Texas has finally been abandoned. The Oil Administrator rightly decided that these buying pools only encourage the production of "hot oil" and weaken the gasoline market in the long run. In the meantime a new gasoline marketing agreement has been drawn up between the representatives of the major oil companies and the Planning and Co-ordination Committee of the Oil Code for the elimination of the undesirable practice of discounts. This agreement covers twenty-three States. Gasoline prices have actually been advanced in the Eastern States and the Gulf export price of "U.S. Motor" gasoline has improved to 4.06 cents as compared with 3.75 cents at the beginning of last month. At the recent meeting of the American Petroleum Institute, the delegates passed a resolution recommending the principal oil producing States to form inter-State

compacts covering crude oil production, and with the co-operation of the Federal Government to set up an authority to determine the domestic demand and to allocate quotas between the States. Government control of the oil industry in America seems now to be complete. The London market for oil shares remains irregular, with only a moderate professional interest. The decision of the Anglo-Persian Company, announced this week, to pay no interim dividend repeats the policy of last year, and was generally expected.

COMPANY NOTES

Road Material Companies.—The most prosperous period in the recent annals of the road-material business has been the earlier 'twenties, when areas of road construction were being made good. Though the depression of the 'thirties has not left the country with comparable arrears, new construction, improvement and maintenance of roads have undoubtedly been allowed to lag since 1931. The effect on the profits of road material concerns may be seen in the accompanying table. Not only has the total available work shrunk as a result of the economy campaign among public authorities, but the necessity of keeping necessary expenditure as low as possible has given the contractors a strong incentive to cut prices. In October, 1933, the bitumen emulsion trade reached an agreement to regulate prices and

work. The agreement, however, did not cover all branches of the road-making business, and recent chairman's speeches have still complained of "intense competition." Recovery, indeed, has so far touched the business only lightly. The public works and contracting industry still heads the unemployment list with a percentage of over 40. There are signs, however, that official policy is becoming slightly more favourable to public works activity. It will be observed that the years of the Labour Government were years of considerable prosperity for some of the road material companies. Possibly the recent successes of the Labour Party in the municipal elections may not be without effect in the coming year. The prices of shares in the leading asphalt companies already discount a certain degree of recovery.

Commercial Motor Results.—In a recent review of the commercial motor industry (see the *Economist*, October 20th, page 740) we suggested that business had shown more satisfactory expansion during recent months. This improvement is reflected in the accounts of three well-known

makers which have been issued this week. The Associated Equipment Company had the advantage of tutelage under the L.G.O.C. and became a public company following the formation of the London Passenger Transport Board. Since it now holds a ten-year contract with the Board, covering chassis and supplies for a large proportion of its fleet, its privileged position is still retained. Now that legislative attention to the industry has abated, leading firms have concentrated on further technical development, particularly of the heavy-oil engine. A.E.C., which was one of the pioneers of this new type, may thus be expected to share in the expansion of oil-engined vehicles in the middle- to heavy-weight classes. The earnings for ordinary, shown in the table at £102,007 compare with £54,808 for the nine months

(c) Year to September 30th. *After crediting unclaimed amount of income tax recovered. † Calculated equivalent for full year. ‡ Calculated gross equivalents of 8.5 per cent. and 7.5 per cent., tax free, for earnings and dividend. (d) 1s. shares, fully paid.

to September, 1933. The expansion of Dennis Brothers' profits has been more rapid, and total profits have risen from £89,979 to £121,541. The earnings on the very small ordinary capitalisation have accordingly advanced from 98.9 to 139.8 per cent., and the total dividend from 100 to 133½ per cent. The balance sheets of both companies show a sharp expansion in stock and work in progress, and their liquid assets position is satisfactory. The third company, John I. Thornycroft, carries on a mixed business of commercial motor manufacturing, marine engineering and ship-building. The expansion of sales in each department reverses a distinctly unfavourable trend in recent years, overhead costs have been reduced, and the motor vehicle section

MONTREAL

reorganised. These changes are likely to carry some benefit into the current year, but the prospect of future profits is still clouded. The two latest years' figures themselves are shown after income tax adjustments. The internal position has been maintained with difficulty by drawing upon general reserve to the extent of £296,000 in the last three years, and the balance at reserve now amounts to only £12,783, after crediting £33,783 from writing the debenture redemption policy at surrender value. Any benefits of recovery, accordingly, seem likely to be devoted to strengthening the financial position. Taken as a whole, these accounts reinforce our earlier conclusion that the prospects of leading manufacturers seem reasonably satisfactory.

* * *

P. and O. Accounts.—The report of the Peninsular and Oriental Steam Navigation Company for the year to September 30th last, which is presented in admirable detail, confirms the forecast made in these columns a month ago. Although the company is paying its preferred ordinary dividend, earnings from shipping and allied operations have again failed to cover requirements for debenture stocks and fleet depreciation on a 5 per cent. basis. Receipts from voyages, etc., show only a very slight rise. Passenger traffic tended to increase, but conditions in the Straits and the China trade remained uncertain. Manufactured shipments from Japan increased and cargoes from Australia were well maintained, but outward cargoes were again disappointing. Receipts for the last three years are summarised below:—

RECEIPTS OF P. AND O. COMPANY	Years to September 30		
	1932	1933	1934
Receipts from voyages	881,770	1,182,909	1,202,079
Dividends from subsidiary co.'s....	356,619	248,229	269,567
Coaling, wharfage and engineering undertakings.....	133,347	157,917	137,501
From other investments	569,789	259,513	192,403
Profit on sale of investments	98,009	13,272	*418,300
Miscellaneous income, rentals, etc.	113,049	93,105	89,059
[Income tax]	103,965	33,792	16,538
Total	2,256,548	1,988,738	2,325,447

* Profit on sale of Wm. Cory shares.

Among the company's subsidiaries, the Orient Steam Navigation showed operating profits of £315,958, against £321,503, and repeated a 5 per cent. tax-free dividend. The British India Company disclosed profits of £97,076, against £57,498 (excluding surplus on sale of steamers in both cases), but again passed its ordinary dividend. The profits of the subsidiary companies as a whole, however, were again insufficient to cover depreciation of their fleets on a 5 per cent. basis. Thus the dividends received by the parent company must once more be regarded as of the nature of payments from accumulated resources. The appropriation of P. and O. receipts is set out below:—

APPROPRIATION OF RECEIPTS	Years to September 30		
	1932	1933	1934
total from profit and loss (as above)	2,256,548	1,988,738	2,325,447
Depreciation of steamers	350,000	1,364,426†	1,387,918†

Administration, salaries, wages, etc.	444,576	450,002	453,023
Other expenses*	60,964	46,574	16,243
Debenture service	529,080	384,564	319,365
Earned for dividends	165,537	Dr.479,627	Dr.398,731
Preferred dividend.....	152,000	152,000	152,000
Deferred dividend	Nil	Nil	Nil
Taken from reserve†	Nil	Dr.656,970	Dr.550,000
Total carried forward	129,275	154,617	153,886

* Loss on sale of steamers, depreciation of tugs, lighters, launches, etc., and directors' fees. † From reserve for redemption of debenture stocks, 1930-40, now freed. ‡ On the basis of 5 per cent. of cost.

The accounts may disappoint some stockholders who had expected a substantial recovery in earnings. So long as the group is not earning its fixed charges and minimum depreciation requirements, it must needs be living, to a greater or a lesser extent, on the past. It is fortunate that its accumulated resources are of handsome proportions. During the year the P. and O. Company has sold 1,500,000 shares of William Cory at 73s. 6d. per share. Only a part of the profit on this transaction appears to have been brought into revenue account, and £385,085 has been appropriated to write down two ships, which may shortly be surplus to requirements, to break-up values. The reserve for redemption of the 1930-40 debenture issue, which is no longer required, has been further drawn upon, to the extent of £550,000, to bring fleet depreciation up to the 5 per cent. figure. The Cory sale is reflected in an increase in floating assets from £15,417,205 to £21,829,531, in the consolidated balance sheet for the group. The majority of Press reviews of this year's accounts have dwelt favourably on the group's impressive liquidity. Financial strength, however, is not a permanent substitute for earning power. It may be assumed that, though the company is sufficiently well provided to ride out a prolonged hurricane, the directors would welcome the prospect of fairer weather than has yet appeared on the horizon. There is no suggestion that the deferred stock units, now quoted at 16s., are within hailing distance of a dividend.

* * *

Tate and Lyle.—The preliminary results of this company for the year to September (briefly noticed in the *Economist* of November 11th) prepared shareholders for a particularly pleasing report. Trading profit, in fact, is nearly 25 per cent. higher at £1,189,720, while total income has increased from £1,032,334 to £1,304,687. These results afford impressive testimony to the company's technical and economic paramountcy in the sugar refining industry. The consumption of imported and home-grown sugar during the latest financial year increased by 6½ per cent. to 2,204,000 tons (raw value). The sharp increase in supplies which occurred from the end of 1933, however, involved a further fall in raw sugar prices during the present year, and the wholesale price of refined, particularly towards the end of the period, was lower than in 1932-33. It may be assumed, therefore, that the progress of profits revealed in the following table has an intimate connection with cost reductions, assisted by the Liverpool refinery reorganisation:—

	Years to September 30		
	1932	1933	1934
Trading profit after tax provision	1,010,366	954,253	1,189,720
Other receipts	72,386	78,081	114,967
Total profit	1,082,752	1,032,334	1,304,687
Directors' fees	7,722	7,722	7,570
Depreciation reserve	100,000	250,000†	75,000‡
Taxation equalisation reserve	...	...	150,000
Debenture interest	91,250	91,250	91,250
Preference dividend.....	71,500	71,500	71,500
Ordinary shares { Earned	812,280	611,861	909,367
Paid	544,000	578,000	765,000
Earned %	26.5	18.3	28.0
Paid %	16	17	22½
General reserve	265,000§	50,000	150,000
Carried forward	65,112	48,973	43,341

† Depreciation of plant and machinery. ‡ Plant, etc., £50,000; leasehold property, £4,000; cottage property, £21,000. § Includes £55,000 investment reserve and £10,000 dividend reserve. The balance sheet fully exposes the advantages of "ploughing-back" earnings. During the last decade as much as £1,462,000 has been allocated out of profits for reserves of a "free" nature. In the last four years £525,000 has been reserved for depreciation, the present credit balance being £600,000, against book value of fixed assets totalling £5,750,965. The current position is equally impressive. No less than £1,360,000 lies at bankers, on deposit, and the expansion of all turnover items leaves net current assets at £2,723,000, against £2,472,000 for the previous year. Irrespective of the effect of possible legislative changes in the organisation of the industry, the £1 ordinary shares, quoted at £5 xd to yield £4 ros. per cent., may be regarded as a sound industrial investment.

Daily Mail Trust.—By the sale of interests in Evening Standard and London Express Newspapers the holdings of this company were restricted during 1933 almost completely to the Rothermere companies, but the present accounts herald a considerable extension of activities. The dividend income for the year to September 30th has risen by some £19,000, but total income has increased by a smaller amount, owing to the inclusion of over £15,000 underwriting commission in 1933. Payment of a full year's preference dividend reduces the amount earned for ordinary shares to £194,238, against £201,429. The dividend, which was short earned in the previous year, has been increased to 11¼ per cent. in extension of the principle adopted last year of drawing on carry-forward. The following table reveals that the draft amounts to £60,836, against £25,304:—

	Years to September 30,		
	1932	1933	1934
Dividends and underwriting income	238,467	322,761	328,668
Income tax	58,845	63,898	63,483
Directors' fees	2,500	2,500	2,500
Expenses	3,839	6,645	8,447
Preference dividends	...	48,289	60,000
Ordinary shares (tax free)—			
Earned	173,283	201,429	194,238
Paid	176,269	226,733	255,074
Earned %	8.6	8.9	8.6
Paid	8½	10	11¼
Carried forward.....	243,322	218,018	157,182

The realisation of investments has yielded a profit of £636,189 during the year. These are described in the directors' report as "temporary holdings," and the proceeds have been invested on a wider basis. This change of policy is to be marked by an alteration of name to "Mail and General Trust." The presentation of the investments items has been changed during the year. Whereas "Shares in Subsidiary Companies" formed 88.5 per cent. of the portfolio total of £3,780,419 in 1933, no dissection is shown of the present holdings of £4,046,588, and a new subsidiary company, with £100 capital, which does not trade, appears for the first time among the assets. In view of the expanding scope of the trust's operations, to which only general reference is made in the report, shareholders may reasonably expect some elucidation of the investment operations during the past year and the direction of future policy. The £1 ordinary shares, quoted at 56s., yield £4 os. 5d., tax free, on the latest dividend and £3 1s. 6d., tax free, on earnings.

* * *

U.S. Steel Corporation's Prospects.—A correspondent writes to suggest that current quotations of 38½ for the common and 83½ for the preferred stock of the United States Steel Corporation do not appear adequately to reflect certain unfavourable features in the company's contemporary position. Production both of pig iron and steel in the United States, the writer points out, is running very considerably below the level of 1929, and has lately shown a discouraging lack of resilience. Pig-iron output was 79½ per cent. below 1929 in 1932 and 69 per cent. below the pre-depression figure even in 1933, after the stimulus given by the Rooseveltian recovery measures. In recent months it has tended to run below the 1933 level. The production of finished steel products fell to 15.8 per cent. of capacity in the quarter ended March, 1933, recovered intermittently to 48 per cent. in the June quarter of 1934, and receded to 23.5 per cent. in the September quarter. Large quantities of scrap metal are available for steel manufacture to-day, the price per ton having fallen from \$12.58 in April to \$9.58 in October. After meeting depreciation, interest, etc., the U.S. Steel Corporation reported a deficit, for the first quarter of this year, of \$6,989,965, when working at 29 per cent. of capacity. In the second quarter, working at 48 per cent. of capacity, it earned a net income of \$5,350,241, while in the third quarter, operating at 23.5 per cent. of capacity, it sustained a deficit of \$9,826,767. For the fourth quarter, a ratio of approximately 30 per cent. may be a generous estimate. In the last quarter of 1933, on roughly the same operating basis, there was a deficit of \$7,945,445. In view

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

of subsequent rise of costs it is scarcely likely that the deficit in 1934 will be smaller. Thus, for the whole of the current year, a deficit of about \$20 millions may have to be faced. To this must be added the cost of the dividend of 2 per cent. paid—but not earned—on the 7 per cent. cumulative preferred stock, which amounts to \$7,205,620. This points to a total reduction of at least \$27 millions in the undivided surplus, which has already been reduced from \$422 millions to \$287 millions in the space of two years. Assuming that the dividend on the preferred stock for the final quarter of 1934 is maintained at the rate of 2 per cent. per annum, there will be arrears at December 31st of 11¼ per cent., or approximately \$40 millions. The question whether the balance-sheet valuation of "stocks" will eventually require to be written down should also be considered. Has the enforced idleness of a considerable part of the plant resulted in any deterioration in its condition? In short, our correspondent contends that, apart from "depreciation" questions, earnings must be increased by fully \$45 millions per annum before anything is being earned on the common stock. Even if arrears of \$40 millions of preferred dividends are wiped out by a draft on the undivided surplus, earnings must increase by more than \$80 millions over the current year's level before they will represent 5 per cent. on the common stock. Such an increase, it is contended, would presuppose a thoroughgoing revival in American steel demand, of which there is little contemporary evidence.

* * *

Consolidated Gold Fields.—Events have confirmed the market view that last year's "Gold Fields" earnings would be larger than was suggested by the increased dividend rate. The net profit of the operating company, New Consolidated Gold Fields, rose by as much as £451,960 to £1,327,080. No less than £621,450 was set aside for reserves, etc., this figure being an increase of £258,270 on that for the previous year. Dividends to the holding company were £192,540 higher, at £657,410, and the carry-forward was raised by £48,220 to £162,970. A marked expansion in investments largely explains a decrease in cash advances. Loans at short call, however, show a most substantial growth. We give below a table of salient figures for the past three years:—

	Year ended June,		
	1932	1933	1934
Investments.....	3,254,660	3,538,572	4,882,150
Shares in subsidiaries	1,475,590	1,147,590	1,157,590

Carried forward*.....	61,860	17,380	19,540

* Gold Fields Company. Other figures relate to the New Consolidated Gold Fields.

The directors furnish brief particulars of the new Transvaal undertakings in which an interest has been acquired, including the Vogelstruisbult, Venterspost and Vlakfontein. Progress is reported as regards the Bulolo and other American mining enterprises. Some striking aggregate figures are presented in a contrast of results of the Witwatersrand producers operated by the New Consolidated Gold Fields last year and in 1932. Perhaps the most notable is an expansion of over 56 per cent. in the ore reserves, though this is accompanied by a decrease of 17½ per cent. in value. An advance of 66 per cent. in the dividends

declared has coincided with a rise of 56½ per cent. in the average price of gold. On the basis of last year's dividends the yield on Gold Fields ordinary is approximately 6 per cent.

* * *

Pahang Consolidated.—During the past financial year this company, like other tin producers, benefited from the high prices established under the restriction scheme, but the directors remain unreconciled to its application to the company. An increased quantity of ore, of higher average grade than before, was treated to give an operating profit of £79,400, against approximately £20,000 in each of the two preceding years. Costs, however, were heavier, partly owing to the increase in royalty and partly to additional outlay on pumping. The average price realised for black tin, at £151 per ton, was £34 higher than in 1932-33. The final dividend of 10 per cent. on the ordinary shares makes 15 per cent. for the year, against nil for each of the three preceding years. The preference shares, in accordance with their participating rights, receive an extra 5 per cent., making 12 per cent., against 7 per cent. Though only a comparatively small amount of development work was performed, a further slight increase occurred in the ore reserves. The Uta lode disclosed ore values above the average grade of the mine. On the company's rubber subsidiary, the Kuala Reman, the working loss amounted to only £820, against £9,040 in 1932-33. Given the maintenance of current prices for rubber, the company's large holding in this enterprise may be valuable. The current price for Pahang 5s. ordinary shares is about 8s. 6d.

* * *

Trepca.—Although this base metal company suffered a reduction in earnings last year, the decline is much less than might have been inferred from the reduction in the final dividend. At £682,550 the income actually shows a small increase, but higher expenses, total and average, have reduced the operating profit by £70,800, to £224,070. Depreciation was also somewhat heavier, but taxation was substantially lower. No allocation is made to general reserve, which was initiated twelve months ago with an appropriation of £40,000. After the payment of a final dividend of 6 per cent., making 12 per cent. for the year (against 20 per cent.), a balance of £36,600 remains to be carried forward. Development is stated to have given very satisfactory results. The ore body has now been proved to a depth of 300 metres below the 610 metre level. The ore reserve figure remains at 2,500,000 tons, the lead average of 8.7 per cent. being slightly lower than before and the zinc average of 8.5 per cent. unchanged. The estimate takes no account of any tonnage below the 610 metre level. The current price of the 5s. shares is about 8s.

* * *

Other Company Results.—In addition to companies discussed in preceding notes, our summary table on page 1070 sets out the results of 37 other concerns whose reports have been received this week. The profits trend is still very satisfactory in the majority of cases. Further brewery results continue the story of impressive expansion of earnings. The largest concern, Wolverhampton and Dudley, shows net profits of £204,305, compared with £182,930, and is paying 25, against 20, per cent. W. Butler and Company have achieved even greater proportionate expansion in profits (£130,714, against £95,029), and higher earnings and dividends are also published by Cheltenham Original and Showells Brewery. The finance group contains an interesting miscellany of companies. Among concerns with specific industrial holdings, Tube Investments profits are considerably higher (£363,815, against £201,854), but Tobacco Securities net income has declined from £802,134 to £758,410. In the hotel group, Slaters and Bodega net profits have increased from £31,246 to £42,269, while Strand Hotel, which strikes a balance "after contingencies," shows the same trading profit as in the previous two years. The improvement in rubber company results is well sustained; this week's reports include Ledang Bahru (£11,875, against £1,279), Asahan (£7,383, against £1,288) and Sungei Puntar (£5,512, against £68). Miscellaneous industrial companies which have shown satisfactory expansion of earning power include Wrights' Ropes (£18,029, against £14,328),

and R. and J. Dick (£19,145, against £8,977). W. V. Bowater and Sons' net profits of £46,208 compare with £35,463 for the previous period of nine months. Avon India Rubber, which reports a loss of £13,775 compared with the previous year's profit of £36,804, and Cooper and Company's Stores (£31,788, against £47,950) are the principal exceptions to the continued improvement in profits. Allied Ironfounders has declared an interim dividend of 7½ per cent. No interim was paid a year ago. The preliminary statement of Turner and Newall profits set the market at rest on Thursday evening. Net trading profits amount to £714,228, against £406,656, and the total dividend is 10 per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, English, Scottish and Australian Bank, Union Castle Mail Steamship, Brazilian Warrant Agency and Finance, London, Australian and General Exploration, Australian, Mercantile, Land and Finance, Charterhouse Investment Trust, Malaya General, Tebing Rubber Estates (1931), Jantar Nigeria, Wall Paper Manufacturers, and New Modderfontein Gold Mining. The Duke of Buccleuch gave stockholders of the Royal Bank of Scotland a full review of the year's business. He referred to the feeling in Scottish industrial districts that the recent lag in new orders would prove only temporary, but emphasised the manifold handicaps which still beset international trade, among which currency instability was a major factor. Mr Andrew Williamson gave an informed review of Australian conditions at the English, Scottish and Australian bank meeting. He devoted considerable time to the refutation of the advocates of nationalised banking, which was the major issue in the recent Federal election. The proceedings at the Union Castle meeting are discussed in a Note on page 1042. The chairman of Brazilian Warrant Agency gave full details of the capital reduction scheme, which was approved by a large majority of ordinary shareholders. Mr C. A. Moreing reviewed the policy and progress of London, Australian and General Exploration and disclosed that an interest in Klerksdorp Consolidated Goldfields had been acquired since the close of the year. Members of Charterhouse Investment Trust were given interesting details of the scope of the new Industrial Development Company, which will engage its own capital in the finance of industrial undertakings. Mr Alan V. Sugden, after reviewing the accounting changes necessitated by the recent acquisitions of Wall Paper Manufacturers, declared that improvement was evident at home and in the Dominions. The competition of five or six independent manufacturers was engaging the consideration of the board. The chairman of The New Modderfontein fully outlined the technical results of the past year, and pointed to the improved prospects under present conditions. Mr John Sanderson discussed the effects of Japanese and German wool purchases on the position of the Australian, Mercantile, Land and Finance Company. Mr Percy Tarbutt pointed out that the prospects of the Jantar Nigeria Company were satisfactory, although a definite forecast was difficult to make. At the Malaya General meeting, Mr G. M. Weekley emphasised that the restriction scheme was not intended to force up prices unduly, but must be equitable to both producers and consumers to be beneficial. The chairman of Tebing Rubber Estates estimated that the crop for the current year would amount to 540,000 lbs., and for 1935-36 an export allowance of about 500,000 lbs. was anticipated.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
December 4

ACCOUNT
December 6

The "House," which is nothing if not loyal, welcomed the Royal marriage none the less heartily despite the slight disturbance which its accompanying social festivities occasioned in the normal run of business. The undertone of most markets remained steady, but the volume of dealings

showed a perceptible falling off. For the time being the gilt-edged market ceased to be a power-house, setting innumerable wheels in motion in every other market. Prices suffered little recession, but the large institutional buyers, whose intervention was so decisive a week or two earlier, were active only intermittently and on a decidedly more modest scale. The coincidence of this phenomenon with a hardening tendency of short money rates suggested an obvious explanation of the check to the November movement in interest rates.

The gilt-edged market opened weak, but the reaction brought in moderate support. In mid-week, quotations were relatively firm on a limited amount of business. Old Consols fell temporarily below 90. India loans were steady, second and third thoughts on the Joint Committee Report remaining favourable. The initial attempt to float a corporation loan yielding under 3 per cent. came somewhat inopportunely, and 73½ per cent. of Birmingham's issue was left with underwriters.

In the foreign bond market Brazilians suffered from scattered selling, but Argentine loans were firm on inspired reports of a new conversion offer, affecting the Port of the Capital bonds. The continued quest for income produced an intermittent demand for Japanese bonds, and, to some extent, for Chinese. German loans were harder, Potash improving on sinking fund operations.

Although home rail prior charges were slightly easier in sympathy with gilt-edged stocks generally, the "marginal" issues were steady to firm on a small business. London, Midland and Scottish ordinary rose on Wednesday, after the publication of a favourable week's traffic figures. London Transport "C" rallied slightly on Wednesday after the disclosure of the Tilling award, whose implications are discussed on page 1041. The market did not like the look of the week's Argentine traffic figures, and quotations were marked down fractionally.

In the industrial market there were few brewery reports to encourage a superiority complex, and trading generally was on a more limited scale. The brewery group itself was easier, bulls of the recent rise showing a disposition to close with the approaching end of the account. International counters opened firm in sympathy with Wall Street, but became irregular as the week wore on. Iron and steel shares were easier, apart from United Steel and Allied Ironfounders. The interim dividend of 7½ per cent. on the latter shares took the market somewhat by surprise. Coal shares were slightly lower in the absence of official confirmation of South Wales amalgamation rumours. Motor shares were easier, despite the increased profits disclosed by Associated Equipment and Dennis, which are set out in a Note on page 1043. Aviation shares had an uncertain tendency at the outset, but were harder after Wednesday's arms debate in the House of Commons. A fractional decline in electric supply share quotations brought in a little investment support. Electrical equipment shares remained steady, Crompton Parkinson being firm on the repetition of a capital bonus. Textile shares opened quietly, but rayon issues were stronger on Thursday on the new high record made by the October production figures. Among miscellaneous companies, Turner and Newall lost ground and Dunlop were easier. Thomas Tilling reflected initial disappointment with the arbitration award, but subsequently had a firmer appearance. Bank shares receded somewhat and insurance shares were dull, in sympathy with the gilt-edged market.

Leading oil shares were in fair request at the outset, but all other issues were neglected. The Anglo-Persian decision to pay no interim dividend was generally expected, but exaggerated and premature reports regarding the Amatlan lawsuit of the Mexican Eagle Company disposed buyers to increased caution in the middle of the week. Rubber shares were strongly supported at first, the commodity showing a strong recovery on the reported decision of the Dutch authorities to institute a system of individual native assessments. On Wednesday, however, the tendency was reversed, both of the commodity and the share markets. Tea shares similarly failed to maintain their initial firmness. It was generally believed that the probable "cut" in the 1935 export percentage had been over-discounted.

The mining markets suffered from a dearth of new business. Kaffir shares were dull, and received little support

either from Paris or Johannesburg. Dealers tended to mark down prices on a further intimation that no modification of grading policy would be considered. The excellent Gold Fields figures (set out on page 1045) had been fairly well discounted. West Africans were quiet and easier. Among West Australian issues, Wiluna suffered a setback, but the market generally was steady on the announcement of the participation of various groups in Yellowdine. Tin shares remained uncertain, with scattered selling. Rhodesian copper shares showed no favourable reaction to the announcement of the formation of the promised shareholders' association.

FOREIGN STOCK EXCHANGES

NEW YORK

THE marked improvement in sentiment which took many stocks to new high levels towards the end of last week has continued this week. Speculators were ready to take quick profits and accordingly the general rise was checked on Tuesday, and again in late dealings on Wednesday. The net improvement in quotations, however, scarcely does justice to the more roseate view which many operators have taken since the elections. Even utility stocks, which had registered the fears of impending administrative attention, shared in the rise, and on Monday, in fact, led it. With turnover running at over the million mark, the market has presented an animated appearance. In the stock market, utilities and steels were prominent on Monday, but Tuesday's temporary reaction transferred attention to rails. By mid-week, utility stocks had staged a satisfactory recovery, and steel, aircraft and motor issues were active. Speculative corporation bonds were strong in sympathy with stocks. Federal issues, however, tended to lose ground on the Treasury announcement that December operations would be limited to meeting maturing Debt Certificates. Foreign bonds were firm, Scandinavian issues (under the influence of the Finland refinancing operation) and Argentines being in good demand. Business news continues favourable, although the seasonal expansion is slow. The "Iron Age" figure of steel mill activity is 29 per cent., against 28.5 per cent. last week. The dependence of further progress of heavy industry on the automobile industry is emphasised, for greater expectations are placed on demand from that quarter—and possibly the tinplate industry—

than from elsewhere. Scrap prices are hardening, and other pointers such as power output and retail sales are fairly favourable. The stock market is apparently willing to discount some measure of industrial recovery, and, for the moment, takes the view that the "right incline" of Presidential policy is likely to continue. Nevertheless, there are, as it admits, serious matters such as currency policy, social insurance, veterans' bonus, public expenditure and taxation, concerning which a vociferous Congress may try to get the last word.

* Two-hour Session

PARIS

The Bourse opened in more assured fashion this week in anticipation of M. Flandin's speech on Tuesday. Rentes, which received the special solicitude of the authorities after last week's bear attack, were well supported on Monday and Tuesday. Thereafter, discussion of the Premier's programme induced a more hesitant feeling. Although impressed by its scope, the market was ready to doubt whether achievement would be up to intention. Rentes, however, were maintained, but bank shares declined. International

favourites were irregular. Rubber shares waned after early firmness, and little interest was evinced for mining issues.

	Nov. 21, 1934	Nov. 28, 1934	Nov. 28, 1934	Nov. 21, 1934	Nov. 28, 1934	Nov. 28, 1934

BERLIN

Share quotations declined all last week and closed at about the week's lowest, apart from Reichsbank, which advanced five points to 148. Salzdetfurth Potash, and a few other specialities. The first days of the new week witnessed further declines, which in the case of foreign currency securities were very considerable. Aku, Compania Hispaniole, and Arbed (bonds) fell heavily. This drop, and the partial weakness of German shares, was due to selling on reports—which were later denied—that the Government was contemplating the seizure of all foreign securities held by German nationals, in order to provide funds for the purchase of the Saar mines. Some foreign selling, on the recovery in blocked marks, was also evident. Home bonds changed little last week, but were weaker on Tuesday this week. Dollar bond prices also sagged.

	Nov. 21, 1934	Nov. 28, 1934	Nov. 28, 1934	Nov. 21, 1934	Nov. 28, 1934	Nov. 28, 1934

AMSTERDAM

Rubber shares provided this week's feature on the Bourse. A good demand was forthcoming on the repeated assurances from the East that the Government's obligations as to native production will be fulfilled. These buoyant conditions, however, were not sustained, and the market was distinctly dull on Wednesday. Sugar shares were active, but irregular. Industrials generally moved to lower levels, although leading issues displayed some irregularity.

CAPITAL ISSUES

SENIOR borrowers have monopolised this week's business in the capital market. The failure of the gilt-edged market to regain its stride created somewhat inauspicious conditions for the large City of Birmingham issue on Tuesday. In the circumstances a 21-23-year 2½ per cent. stock at 96½, yielding a few pence under £3 per cent. to redemption, had every appearance of a hard bargain, and the underwriters found themselves left with 73½ per cent. of the total. The fate of the York Corporation 3 per cent. issue at par, with maximum life of 31 years, was not known as we went to press, but the more favourable turn of gilt-edged suggested that its reception would be warmer. The prospectus of Bletchley Flettons reveals that the profits estimates are based on present brick prices, which have been influenced by a shortage of bricks during the building boom of the past twelve months, and presumably would fall if the housing and slum schemes in prospect were not realised. The vendors' profit, subject to development carried out since June last, is £47,625, and of the total consideration of £197,625, £139,500 is payable in cash and £58,125 in shares. Control remains with the vendor company. The shares of Sale Lido are of local and speculative interest. Tender issues of preference stocks have been announced by South Suburban Gas and Barnet District Gas and Water, yielding £3 16s. 2d. and £3 18s. 11d. per cent., respectively, at minimum prices. The two "introductions" this week are Anglo-Scottish Investment Trust 3½ per cent. debenture stock at £95 per cent. and I. Beer and Sons.

PUBLIC OFFERS

City of Birmingham.—Issue of £5,000,000 2½ per cent. redeemable stock, 1955-57 at £96 10s. per cent. Charged on general rate and whole revenues of Corporation, and ranks *pari passu* with existing issues. Financial statistics: Rateable value, £6,719,270; net debt, £52,766,000 (of which £39,857,000 is in respect of productive undertakings); population, 1,028,000; 1d. rate produces £24,661; total rate for current year, 14s. in the £. Proceeds required for repayment of mortgage loans, and extension of electricity service. Stock redeemable on July 1, 1957, at par, or from July 1, 1955, on three months' notice.

City and County of York.—Issue of £500,000 3 per cent. redeemable stock, 1955-65, at par. Proceeds required for repayment of mortgages. Stock redeemable on May 31, 1965, or from May 31, 1955, on three months' notice. Financial statistics: Population, 91,000; rateable value, £553,016; present net rate, 12s. 6d. in the £; surplus assets at March, 1934, exceeded £2,000,000; net debt, £2,586,000 (of which £2,200,000 is in respect of trading and housing undertakings). Holders of mortgages are offered right to conversion at par.

Bletchley Flettons, Ltd.—Issue of 185,000 6 per cent. cumulative £1 preference shares and 185,000 5s. ordinary shares at par. Incorporated November, 1934, to acquire clay deposits and works, expected in full production of 50 million Fletton bricks by midsummer next. Clay deposits are estimated sufficient for 100 years at production of 100 million bricks per annum. Company's works will be managed by Flettons, Ltd. Purchase consideration, £197,625, payable as to £139,500 in cash and as to £58,125 by issue of 232,500 ordinary shares to vendor (Brick Investments, Ltd.), which purchased property for £150,000 cash. Estimated profits, on basis of current prices for Fletton bricks, at least £30,000 per annum. Vendor has guaranteed first year's preference dividend.

Sale Lido, Ltd.—Issue of 10,000 6 per cent. cumulative £1 preference shares and 53,000 ordinary shares of 5s. each at par. Formed to construct swimming pool, solarium, café, etc., at Sale, near Manchester. Site valued £3,827, to be acquired for £3,750 by issue of ordinary shares. Estimated net profits £6,000.

BY TENDER

South Suburban Gas Company.—Offer by tender of £200,000 4 per cent. preference stock, at minimum price of £105 per cent. Company is associated with South Metropolitan Gas Company. Total consumers, 173,688. Proceeds required to

repay bank loans for capital and general purposes. Stock ranks *pari passu* with existing preference stocks. Reserve fund amounts to £94,668.

Barnet District Gas and Water Company.—Offer of £25,000 4½ per cent. preference stock, at minimum price of £114 per cent. Net revenue of both undertakings in 1933 was £63,638, of which £51,069 was available for preference stocks. Accumulated funds at December 31 last were £73,066. Statutory area for water is 72 square miles, and for gas 40 square miles. Proceeds required for further extension of services.

BY STOCK EXCHANGE INTRODUCTION

Anglo Scottish Investment Trust, Ltd.—Particulars of issue of £150,000 3½ per cent. debenture stock, 1949-52, at £95 per cent., secured by floating charge on the undertaking and assets. Stock will be repaid on June 1, 1952, at par, or from June 1, 1949, on three months' notice. Stock ranks *pari passu* with existing terminable debentures and 4 per cent. debenture stock, 1943-48. Messrs. Pater and Company have purchased the stock at £94½ per cent.

Beer (I.) and Sons.—Issued share capital £200,000, divided into 5½ per cent. cumulative preference £1 shares and ordinary 5s. shares. It operates a business of provision merchants, meat, poultry, and general farm produce dealers, &c., at Smithfield. Net assets are stated at £217,955, which includes £36,576 for goodwill. Profits for the last four financial years average about £29,000 per annum, the figure for 1933-34 being £24,588.

ISSUES TO SHAREHOLDERS ONLY

Rezende Mines, Ltd.—A meeting will be held at Lonrho Buildings, Salisbury, Southern Rhodesia, on February 28, 1935, to consider proposals (1) to sub-divide each 5s. share into five shares of 1s.; and (2) to increase the capital by the creation of 350,000 new shares of 1s. It is proposed that of the 350,000 new shares of 1s. each, 250,000 will be offered to shareholders at 8s. per share, on the basis of one new share for every three shares of 1s. and to carry option to purchase, on or before March 31, 1937, 50,000 new shares of 1s. at the price of 20s. each—in the proportion of one option share for every five of the 250,000 new shares.

Bangawan Estates.—An issue at par of 2,364,613 6 per cent. convertible preference shares 1s. is now being made. Ordinary shareholders will be allotted one ordinary share in the new company, credited as fully paid, in respect of each share held in the old company.

TO SHAREHOLDERS OF ANGLO-ORIENTAL MINING CORPORATION LIMITED

300,000 shares of Tano Gold Dredging, Ltd., have been sold to Anglo-African Selected Investments, Ltd. The Anglo-Oriental Mining Corporation is offered in the proportion of three shares of Anglo-African Selected Investments, Ltd., for every forty shares held in this corporation, at the price of 6s. per share, payable in full on application.

ISSUED TO SHAREHOLDERS OF D. SMITH & SONS

Machinery (Smith's Patents).—Offer of 100,000 6 per cent. cumulative preference shares of 5s. and 500,000 1s. ordinary shares in Machinery (Smith's Patents), Ltd. Lists close December 3rd.

PRIVATE PLACINGS

United Steel Companies.—The final block of 130,000 shares of the 2,077,223 shares of United Steel Companies, which have been in the course of being placed for some time, were marketed November 28.

ISSUE OF SHARES TO JOHN LEWIS PARTNERSHIP

John Lewis and Company, Ltd.—Authorised shares to be increased to £900,000. Upon increase being sanctioned, 200,000 ordinary shares will immediately be issued for cash to John Lewis Partnership.

CONVERSIONS AND REPAYMENTS

Staffordshire 3 per cent. Stock.—£137,062 3 per cent. stock will be repaid at par on and after February 12, 1935.

Oxford Canal.—The directors propose to convert the shares into stock and to change the name of the company.

East Indian Railway 4½ per cent. Debenture Stock, 1935-55.—The Secretary of State for India in Council gives notice that it is his intention to redeem the debenture stock outstanding, at par, on June 1, 1935.

South Africa Conversion Loan.—The Government gives notice of conversion of £6,995,900 5 per cent. loan, 1935 (issued in South Africa), into Union 3½ per cent. local registered stock, 1955-65. The exchange will be made at par. Holdings will be redeemed on January 15, 1935, unless applications for conversion are received before December 31, 1934.

(Continued on page 1052)

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics. In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 1049)

Glasgow 5½ per cent. Loan.—The Glasgow Corporation Finance Committee recommends that the £2,500,000 Glasgow Corporation 5½ per cent. stock be redeemed in July, 1935. It is proposed to provide the funds for the redemption by an issue of stock bearing interest at 3 per cent. or less. Holders will have the right to convert into the new issue.

Buenos Ayres Western Railway, Ltd.—The directors offer holders of £1,000,000 5 per cent. notes which mature on January 1, 1935, the right to apply for an extension of 60 per cent. of the nominal value of each note held by them for a further period of three years subject to the following conditions: (a) During the period of extension the notes will bear interest at 4 per cent. per annum on the reduced nominal amount for which they are extended; (b) Noteholders accepting this offer will receive a cash payment of 6s. for each £100 nominal of notes deposited for extension; (c) 40 per cent. of the nominal value of each note to be extended will be repaid in cash on January 1, 1935; (d) The directors reserve the right to create and issue at 99½ per cent. new 4 per cent. three-year notes maturing on January 1, 1938.

Bristol 3½ per cent. Stock.—The Finance Committee are considering the redemption of the outstanding portion of Bristol Corporation 3½ per cent. stock, 1925-1965. The total outstanding is £3,028,321. It is proposed to issue a lower interest-bearing stock.

Argentine Conversion Loan.—Details are expected shortly of an Argentine conversion operation. This will deal with the £3,510,000 Port of the Capital (Buenos Aires) 5 per cent. bonds, the holders of which will be given the opportunity of exchanging into a sterling issue bearing a lower rate of interest.

FIXED TRUSTS

First Provincial Unit "B" Certificates.—These certificates are now in issue. The underlying securities consist of 32 issues, including British funds, insurance, gas and electricity, mining and general industrial shares. Component securities are fixed, subject to exceptional provisions reserved in trust deed, and trust has fixed life of 20 years. Charges amount to ¼ per cent. per annum over full life of trust.

OFFERS ABROAD

Finland Loan in New York.—Cable advice from New York states that a banking group, headed by Brown, Harriman and Company, Inc., and including Edward B. Smith and Company, the Lee Higginson Corporation and the First Boston Corporation, have issued \$10,000,000 Republic of Finland 4 per cent. serial loan. Only \$8,000,000 is being offered in America, \$2,000,000 maturing on January 1, 1940, having been purchased by the Bank of Finland. The financing is exclusively a refunding operation and will not involve lending new capital to Finland.

FORTHCOMING ISSUES

Eagle Star and British Dominions Insurance.—An extraordinary general meeting will be held at 32, Moorgate Street, on December 14th, at 11.30 a.m., to consider resolutions that the capital be increased by £1,167,868, to £5,067,868, by the creation of 1,000,000 shares of £1 each in the form of 4 per cent. second cumulative preference shares and 55,956 shares of £3 each in the form of 10 per cent. cumulative preferred ordinary shares. The directors intend to make a public issue of the 4 per cent. second preference shares, and to give preferential consideration to applications made by all classes of shareholders of the company.

Sunlight Laundries.—Meetings will be held on December 17th, at Piccadilly Hotel, at 12.15 p.m., to pass resolutions increasing the authorised capital by the creation of £75,000 additional 7½ per cent. cumulative preference shares and £50,000 additional ordinary shares ranking respectively in all respects equally with the existing preference and ordinary shares.

Vlakfontein Gold.—It is understood that particulars will be published this week-end of the Vlakfontein Gold Mining Company, Ltd.

John Lewis Partnership.—It is understood that John Lewis Partnership, Ltd., will make an offer of 300,000 new 5 per cent. preferred ordinary £1 shares next week to its existing shareholders.

Cumberland Silica Bricks.—The list will open on December 3rd of 150,000 6 per cent. participating preferred ordinary 10s. shares and a like number of 1s. deferred shares in Cumberland Silica Bricks, Ltd.

Regional Properties.—Arrangements are in hand for an issue by Regional Properties, Ltd. This is a new company with a capital of £200,000 in £1 shares. The coming issue is expected to take the form of shares and debenture stock.

RESULTS OF ISSUES

Broadways (Retailers).—The list for issue at par of ordinary shares of 5s. each was closed at 1 p.m. November 23.

Australian Internal Loan.—The Australian internal 3 per cent. loan of £15,000,000 has been oversubscribed in three days.

Neuchatel Asphalt.—The issue of 4½ per cent. debenture stock, 1944-46, has been oversubscribed.

Italian Bond Issue.—It is officially announced that 555,078 subscribers applied for 3,895,994,000 lire (£67,000,000) of the 2,000,000,000 lire (£34,000,000) issue of nine-year 4 per cent. Italian Treasury bonds.

Spanish 4½ per cent. Loan.—The Spanish Treasury 300 million peseta five-year loan at 4½ per cent. was subscribed three times over.

Bletchley Flettons, Ltd.—The subscription lists for the issue at par of 6 per cent. cumulative preference shares of £1 each and ordinary shares of 5s. each were closed at 9.45 a.m., November 27th. The issue was oversubscribed.

Birmingham 2½ per cent. Loan.—Lists in connection with the issue of £5,000,000 2½ per cent. stock of 1955-57 closed November 27, after remaining open all day. Underwriters left with 73½ per cent.

CALLS DUE DECEMBER 3 TO DECEMBER 8, 1934

The grand total of calls falling due in December, 1934, is £7,934,567 which compares with £53,366,016 which fell due in November, 1933. The following calls fall due from December 3, 1934, to December 8, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid
2s.	Anglo-Oriental Mining. (Offer of 300,000 shares of 2s. each, fully-paid of Anglo-African Selected Investments, at 6s.)	6/- p.s.	Dec. 3	All

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND

ANNUAL GENERAL COURT OF PROPRIETORS

CONTINUED PROGRESS OF THE BANK

IMPROVED INDUSTRIAL CONDITIONS

DUKE OF BUCCLEUCH'S REVIEW

The annual general court of proprietors of The Royal Bank of Scotland was held, on the 28th ultimo, at Edinburgh, His Grace the Duke of Buccleuch, K.T., Governor of the Bank, presiding.

In moving the adoption of the report, His Grace said:—

I presume it will be your pleasure that the annual report and balance sheet, with the auditors' report, which have now been in your hands for some days, shall be taken as read. Although, perhaps, unattended with the exceptional difficulties of the preceding two years, our year which has just ended has had its difficulties, and the directors are pleased to submit to you a statement of so satisfactory a character.

Deposits have been well maintained throughout our year, and at £58,900,000 are only about £300,000 short of last year's record total of £59,200,000.

Notes in circulation show a moderate reduction of £66,000 as compared with last year, but no special significance is attached to that, as the fall was of only one or two weeks' duration when the circulation returned to its normal figure of over £2,800,000.

Acceptances and other obligations show a marked increase of £2,297,000 in the year. This increase is largely due to forward operations in foreign currencies on account of our clients to cover the risks of fluctuation in the exchanges. In all cases these operations were covered with first-class banks and institutions.

LIQUID RESOURCES AND INVESTMENTS

Turning to the assets side of the balance-sheet, you will observe an increase in our liquid resources. Cash on hand and with the Bank of England and other London banks, and money at call and short notice, is fully £940,000 up on last year's figures, providing evidence of the strong liquid position of the bank.

A welcome increase of about £700,000 in advances on cash credit and current accounts largely accounts for the lower figures appearing against British Government securities, which at £24,394,000 compare with £25,151,000 last year. Other investments also show a small reduction of £394,000.

As usual, all our investments are valued in the balance sheet at or under the market prices ruling on the date of our balance. Our Government securities are well distributed and show a good proportion in the short-dated and medium-dated loans.

I, perhaps, need not add that the valuation of our securities shows a very large surplus over book values.

I have already referred to the increase in our advances, which, though small, we regard as satisfactory, in view of the continued shrinkage in the demands of trade and a certain amount of liquidation of frozen loans.

Our bill portfolio shows a moderate fall. Treasury bills at the present low tender rates hold out little attraction as an investment counter and, with keen competition for commercial bills, we are glad to show such a substantial figure as £3,874,000 under this heading.

From the figures I have dealt with you will see that we are in an excellent position, when trade and industry require it, to give increased facilities to our customers. That is one of our functions, and we are at all times glad to give favourable consideration to proposals based on sound banking principles.

PROFITS

I now come to the profit and loss account, where we show an increase of £9,000 in the profit upon the figures of the previous year. The directors regard this result as very satisfactory taking into consideration the lower earning rates on our gilt-edged investments and our Treasury bills compared with previous years.

I may also mention that while our stockholders receive the benefit of the reduction in income tax on their midsummer and Christmas dividends, we, as a bank, have only experienced the

benefits of the tax reduction on our investment dividends received after April of this year. So that, taking the year as a whole, we have had to bear a higher rate of tax than that deducted from the dividends paid to our stockholders.

Following our usual practice, full provision has been made for all bad and doubtful debts.

APPROPRIATIONS

The directors are pleased to be in the position to recommend that a dividend for the half-year, payable at Christmas, at the same rate as formerly—17 per cent. per annum—be declared, and to make the usual appropriation to pension reserve fund and to maintain the increased appropriation of last year to bank buildings and heritable property.

After these appropriations there remains a surplus of £68,386, which, following the practice of the past three years, it is proposed to carry to inner reserves against contingencies. Our inner reserves are very strong, but, under present conditions, we consider it advisable to continue our conservative policy of adding to them.

There is no call for me to say anything about our capital and rest, which remain at the same figures.

BUSINESS OF THE BANK

The general business of the bank throughout Scotland and at our London offices continues to progress.

Our English associate, Williams Deacon's Bank, who close their books at December 31st, had a satisfactory half-year to June 30th, and report improved conditions in certain of the areas where they are represented.

To meet the convenience of our clients in Smithfield Market, London, where we have important connections, we have arranged to open a branch. Suitable premises have been acquired adjoining the market, and it is expected we shall be able to start operations early in the New Year.

The increasing business at our Burlington Gardens, London, Branch has necessitated important alterations in the Banking Office and in the rest of our property there. These have now been completed, and I am glad to say that our surplus premises there have been fully let.

TRADE IN SCOTLAND

From reports we have received from different centres it is gratifying to again record an improvement in a number of the industries in Scotland.

Unfortunately, here and there, and particularly in the heavy industries, a lack of new orders during the past two months or so is being experienced. Despite that, a feeling of optimism prevails that the present quiet period will soon pass.

In shipbuilding the notable event of the year was the launching of the *Queen Mary*, and the publicity it received should have a beneficial effect on future work on the Clyde. The outlook here may be regarded as fairly satisfactory, as some new building orders are confidently expected in the near future.

The striking progress which is being made in industrial efficiency augurs well for the part which this country will take when the world returns to economic sanity.

The Scottish Agricultural Securities Corporation, Limited, for which we, along with three of the other Scottish banks, provided the capital, has now been operating for over a year. During that time loans to farmers, which provide for repayment on a long-term basis, to the extent of about £400,000, have been arranged. From the applications which the Corporation continues to receive from farmers all over the country, it is evident that the credit facilities extended by the Corporation are of advantage to the

farming community, who, I am glad to note, are now receiving better prices at the stock sales.

WORLD TRADE

While the improvement in our trading position compares favourably with the rest of the world, I am afraid it still falls short of our hopes and expectations. We are still in the position of waiting for that real advance which will do much to reduce the heavy figures of our unemployed.

The difficulties imposed on international trading in recent years have, in many cases, been further accentuated by clearing arrangements, blocked accounts and fears of currency depreciation and devaluation. The enforced limitation of imports in our own and other countries, in order to protect or strengthen the balance of payments, also greatly affects world consumption.

Last year, when I addressed you from this chair, I referred to the growth of economic nationalism and the politically imposed barriers to international commerce which foster self-sufficiency but hinder world trade, and I feel that it is useless to expect any substantial measure of all-round improvement until steps are taken by the leading nations to establish a satisfactory and stable monetary standard, which would have the effect of abolishing or modifying the obstacles hindering the free movement of commodities.

NATIONALISATION OF BANKS

From certain quarters nationalisation of banks continues to be advocated, but I cannot learn that the demand for nationalisation is the general wish of the people of this country, nor can I think that it is other than their wish that we shall continue our functions of being responsible trustees of the money placed in our keeping, and of employing that money in sound and legitimate ways to the benefit of our depositors and the industry of the country. The sound banking system of this country has stood with remarkable success the test of the worst depression which the world has experienced. It is the envy of every other nation, and I am convinced that our people have no desire to see their savings transferred to the keeping of—what in effect would be—a Government Department controlled by the Government, representative of whatever Party might be in power.

DIRECTORATE

During the year, the Earl of Iveagh was elected an extraordinary director to fill a vacancy on our extraordinary board. Lord Iveagh has had a long connection with one of our London offices, and we are glad to welcome him to our extraordinary board.

THANKS TO OFFICIALS AND STAFF

I think I may claim that the directors give very close attention to the affairs of the bank, but we are the first to recognise how much of the success of the bank is due to the skill and the loyal and devoted service of our general manager, Mr Whyte, as well as to the officials and staff at head office, London City office, our offices in the West End of London and in Glasgow, Dundee, and our branches generally. To all of them we desire to express our appreciation of their services and support.

I referred last year at some length to Mr Whyte's long and able service in the bank and our high expectations of his work as general manager, and I need only add now that those expectations have been realised to the full.

APPROVAL OF ACCOUNTS—DIVIDEND

I now beg to propose that the Report now submitted, containing a statement of the accounts and balance-sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The Report was approved, and the governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected, and auditors were reappointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

BRAZILIAN WARRANT AGENCY AND FINANCE COMPANY, LIMITED

CAPITAL REDUCTION APPROVED

DETAILS OF THE SCHEME

Class meetings of the holders of ordinary and preference shares in the Brazilian Warrant Agency and Finance Company, Limited, and also an extraordinary general meeting of the company, were held, on the 23rd ultimo, at Winchester House, Old Broad Street, London, E.C., to consider resolutions reducing the capital of the company by £900,000 from £2,000,000.

Addressing the preference shareholders' meeting, Mr Arthur Whitworth (the chairman) explained that they were not affected in any way by the scheme, and the resolution approving it was carried unanimously.

At the meeting of ordinary shareholders which followed, the chairman said that it was not proposed to proceed with the resolution in the notice providing for the conversion of the ordinary shares into stock, in view of the difficulty of dealing with small units on the Stock Exchange.

The directors were asking the ordinary shareholders to consent to a very large amount being written off the ordinary capital. That matter had been before the company for a very considerable time, but until quite recently it would have been impossible to tackle the problem because the exchanges had been closed, and, at any rate, a partially open exchange was a necessary factor for a sterling company to register the value of its assets in Brazil. During the last few months the exchanges had been more or less open.

The present directors had their eyes firmly fixed on the future, and, in asking the ordinary shareholders to consent to the scheme, they were asking them to agree to put the capital of the company into a position so that, if and when profits were earned, they could be distributed to both classes of shareholders. With one exception the profits earned during the past eight years had been slightly more than sufficient to pay the preference dividend, and the preference capital could not be written down unless the whole of the ordinary capital had been lost, which was not the case by a very considerable margin.

DETAILS OF THE SCHEME

They were proposing to write off £916,538 from the assets, of which £900,000 was to be written off the ordinary share capital by reducing the value of the shares from 10s. to 2s. It was then proposed to take £15,000 out of the general reserve, which stood at £215,000, and the small balance of £1,538 would be taken off the amount standing to the credit of the carry-forward, which at December 31st last was £55,852. As to how the amount of the write-off had been arrived at, it was proposed to write £208,904 off the value of the Santos premises, land and buildings, the Transport company, and the two warehouse companies in Santos and Rio de Janeiro. Then they owned the whole of the ordinary share capital of the Cambuhy Coffee and Cotton Estates, Limited, and they also owned the Tibirica Coffee Estate. From those two assets they were writing off the large sum of £624,403.

Those two sums represented approximately 90 per cent. of the total write-off. They then had to convert the balance of their floating assets over liabilities, including the unremitted profits, at some estimated rate of exchange. Whereas in the last balance sheet they had been taken in at the official rate of 4.7/256d., the rate of exchange now taken was the free rate at the time the decision had to be made, with a margin of 10 per cent. for eventualities. That gave a rate of exchange of 73, at which they proposed to write off £83,231 under that heading, the rate of exchange to-day being 72.

With regard to the proposal to re-create capital to the equivalent of the amount written off, that was being done with the object of avoiding the loss of stamp duty already paid, and preference shares so created might be needed if negotiations were reopened with the Cambuhy preference shareholders. There was no intention of making any issue at present and no issue could be made without the consent of the shareholders.

After some discussion a poll was taken, with the result that the resolution approving the scheme was carried by 1,181,649 votes to 13,130.

At the extraordinary general meeting which followed a poll was taken on the resolution for reduction of capital, with the result that it was carried by 1,511,600 votes to 12,730.

The resolution sanctioning the subsequent increase of capital was carried on a show of hands.

UNION-CASTLE MAIL STEAMSHIP COMPANY, LIMITED

THE MAINTENANCE OF BRITISH CONTROL

VOTING RIGHTS OF PREFERENCE SHAREHOLDERS

PROPOSED PERMANENT STATUS

MR ROBERTSON F. GIBB'S ADDRESS

An extraordinary general meeting of the Union-Castle Mail Steamship Company, Limited, was held, on the 27th ultimo, at Southern House, Cannon Street, London, E.C., to consider special resolutions altering the articles of association. The special resolutions were designed to restrict the holding of the company's stock or shares to British subjects or corporations and to confine the directorate to British subjects, and to confer on the holders of the 4½ per cent. cumulative preference shares and on the holders of the 6 per cent. "A" cumulative preference shares the right to attend and vote at all meetings of the company whenever held and whatever the business to be considered.

Mr Robertson F. Gibb (the chairman of the company) said:—Ladies and gentlemen,—As you are aware, this meeting has been called for the purpose of considering and, if thought fit, of passing two special resolutions. The objects of these resolutions and the reasons for your directors' decision to submit them to the company's stock and share holders are clearly set out in the circular which was sent you on November 1st, while the notice convening this meeting which accompanied the circular gives the wording of the resolutions in full. Nevertheless, I feel it may be desirable for me briefly to comment on these two resolutions before submitting them to you for your approval.

I propose to divide my speech into two parts, first of all dealing with Resolution No. 1, and, at the conclusion of those observations, putting that resolution to the meeting. I shall then refer somewhat more fully to the second resolution, which I shall put to the meeting after dealing with any questions or comments which members may wish to ask or make.

BRITISH STOCK AND SHARE HOLDERS

The first resolution, to which I presume there will be no serious objection, is designed to restrict the holding of the company's stock and shares to British subjects or corporations and to confine the directorate to British subjects, thus obviating the possibility of this great company passing into foreign control. I think you will agree that such an eventuality would be highly undesirable, in view of the very important links between component parts of the British Commonwealth of Nations which are provided by the vessels of the Union-Castle Line. The mail and other services which are run under our house-flag are of national importance, and for this reason alone I do not doubt you will desire to support the resolution to be placed before you. By embodying this resolution in its articles of association, the company would put itself in the same position as that adopted by several other large British shipping companies, which have felt the desirability of ensuring that they should remain under British control.

In this connection I may mention that we have received inquiries from a few of our shareholders as to the effect of Resolution No. 1 upon existing holdings by persons who are not natural born British subjects.

The reply to this question is that the board is advised that the proposed new article does not lay them under any positive obligation to take action as regards existing shareholders, and that it will be a matter for the board's discretion as to whether or not they sign the certified memorandum, which is a condition precedent to any removal of an existing shareholder from membership of the company.

While, of course, I cannot bind the board, and still less the successors in the future of the present directors, I may say that, as at present advised, it is not anticipated that any action will be thought necessary with regard to any foreign shareholder at present on the register.

The Chairman then moved the resolution approving the new article, and Sir F. Vernon Thomson, K.B.E. (deputy chairman), seconded it.

Mr A. Jaffé criticised the wording of the resolution, pointing out that the inclusion of the words "natural-born" before the words "British subject" wherever they appeared in the resolution would mean that naturalised British subjects would be unable to hold

shares. He considered that a grave injustice, and he did not think that it was in accordance with the intentions of the directors. He accordingly moved an amendment to the effect that the words "natural-born" should be omitted wherever they occurred in the resolution.

Mr Uirling Clark seconded the amendment.

The Chairman said that the board accepted it. He proceeded to put it to the meeting, and it was carried unanimously, as was also the substantive resolution as amended.

The Chairman: The second resolution, if passed, will confer on the holders of the 4½ per cent. and 6 per cent. "A" preference shares the right to attend and vote at all meetings of the company whenever held and whatever the business to be considered.

RECENT LEGAL PROCEEDINGS

You are, of course, aware that this resolution has been, and still is, the subject of certain proceedings in the Courts, and it is right that I should explain to you as shortly as possible the nature of those proceedings and the present position of them. The proceedings have been taken by persons who may be described as representing the holders of the ordinary stock against the company and the directors, and the claim made in the action is that no such resolution as this for the alteration of the company's articles can, if passed, be effective to bind the ordinary stockholders and effective to alter the voting rights of the preference shareholders, because the resolution has not been approved at any separate class meeting of the ordinary stockholders.

That action was only begun about a fortnight ago, the writ being issued on November 12th, and it has not yet been tried. But the plaintiffs in the action, as soon as they had issued their writ, gave notice of their intention to apply to the Court by motion for an injunction to restrain the directors from submitting the resolution to this meeting, and, alternatively, for an injunction to prevent the directors from acting upon the resolution, if passed, until the action had been disposed of. This motion for an injunction came before Mr Justice Clauson in the Chancery Court on Friday last, the 23rd ultimo, and I want to make it quite clear to you at the outset that the decision of the Court, which no doubt many of you read in your papers on Saturday, was the decision on this interlocutory application and not the Court's judgment in the action itself.

THE JUDGE'S DECISION

By his decision the Judge declined to grant the plaintiffs the first of their requests—namely, an injunction to prevent us from submitting the resolution to you—but the Judge did express the view that the passing of this resolution would not be effective to extend the present rights of the preference shareholders without the consent of the ordinary stockholders given at a class meeting, and, accordingly, he granted an injunction restraining the company from acting upon the resolution, if passed, unless or until that consent is obtained, that injunction to remain in force only until the action has been tried or some further order made.

Now, in view of the fact—which the directors, since hearing the views of most of the ordinary stockholders, fully recognise—that there is no chance whatever of the present holders of the company's ordinary stock giving their consent at a separate meeting of their class to this proposal, it is clear that if the view expressed by the Judge as to the necessity of their consent in order to render the resolution effective is right in law we are wasting our time to-day in considering the resolution, because if and when passed it will simply be so much waste paper. But it is right that I should tell you, with the greatest respect to the learned Judge, that the view expressed by him on this point is directly contrary to the advice which the directors had received, before the decision to put forward this resolution was arrived at, from very eminent counsel, and it is therefore the intention of the directors, if the point is ultimately decided against the company on the trial of the action, to appeal from the decision.

PROSPECTIVE LEGAL ACTION

The proper time for an appeal will be after the action has finally been decided by the Court of first instance.

The action will not be heard for some little time, and, of course, the action will never come to trial if the resolution is not passed at this meeting. I understand that on the hearing of the action the plaintiffs will raise the point that the resolution is not *bona fide* in the interests of the company as a whole and is therefore invalid in law.

I wish to emphasise two points. First, so far as the directors themselves are concerned I can assure you that they do take the view that the proposal is in the interests of the company—the Union-Castle Mail Steamship Company—as a whole and of all its members who have invested their money in the company's business. Second, the issue before you at this meeting is precisely the same to-day as it would have been had the proceedings in Court last week never taken place, and there is no reason whatever why any member of the company voting here to-day should allow the present result of those proceedings so far as they have gone to influence his vote in any way whatever.

I am going to put before you in the frankest manner possible the facts in relation to this matter and the considerations which led your board to make the proposal now submitted to you. It has been suggested that it is considered to be somewhat abnormal and possibly without precedent. I propose to show you that the conditions with which the board is faced are wholly abnormal and possibly also without precedent. (Hear, hear.)

You are aware that the control of this company was acquired in 1912 by the Royal Mail and Elder Dempster companies through the purchase of the whole of the ordinary stock. Prior to the date when the Royal Mail group assumed control of the company, the company had been managed by Messrs Donald Currie and Company, and had accumulated considerable liquid assets in the form of Government and other gilt-edged stocks. Within a few days of taking over control the new board resolved that the company's investments be sold, and that a bonus be paid on the ordinary shares of £16 per share, free of income tax.

DISSIPATION OF LIQUID RESOURCES

This transaction, which involved a total payment of £2,269,456, was shortly afterwards carried out, with the result that virtually the whole of the then accumulated liquid resources of the company were immediately dissipated. You are also aware that during the period of that control this company's resources were utilised in such a way that, instead of being retained in the business, apart from the payment of normal dividends, large sums were invested in, or lent to, other companies of the Royal Mail group. These investments and loans have involved the company in extremely heavy losses, and I think it important that shareholders should have some information with regard to them. They include:—

£1,069,750 ordinary stock in the Royal Mail Steam Packet Company, which cost £1,191,506, and is now believed to be worthless.

33,000 6 per cent. preference shares and 200,000 6½ per cent. preference shares in Elder Dempster and Company, Limited. These cost £33,000 and £200,000 respectively, and are, in each case, now believed to be worthless.

998,900 ordinary shares in White Star Line, Limited, which cost £998,900, and are now believed to be worthless.

375 £1,000 ordinary shares and 275,000 6 per cent. "A" preference shares in Harland and Wolff, Limited, which cost £662,500 and £256,313 respectively, and are now believed to be worthless, and also 19,000 6 per cent. first preference shares in that company, costing £17,576, and now quoted at about 4s. per share.

In addition, the company lent £130,000 to the Glen Line, Limited, and £68,375 to Elder Dempster and Company, Limited, in respect of which we have received deferred creditors' certificates of unknown and little, if any, value.

CALAMITOUS POSITION OF THE ROYAL MAIL GROUP

I need not describe to you the calamitous position in which the Royal Mail group found itself in 1930. The loss to the Union-Castle Company upon these investments was over £3,000,000. The payment of the preference dividend was suspended in 1931, as the result of which the preference shareholders, under the constitution of the company, came into power. Following upon the promises I had made to the preference shareholders, two new directors were appointed—namely, Sir F. Vernon Thomson and Mr R. A. Murray, the former with long association with ship management, and the latter with finance. Both have proved themselves invaluable to the company.

Stock and share holders have been kept constantly informed of the successive steps which the board took in ridding the company of its onerous liabilities. Heavy payments to White Star Line, Limited, were completely liquidated; the loan from the British Treasury and the Bank loan were entirely paid off; ships that had been mortgaged were released, and to-day there is only one loan outstanding, which is being reduced under arrangement by regular instalments, with only one ship mortgaged. Furthermore, the company's £2,000,000 of debenture stock, which was due for repayment in 1934, was successfully converted into a new stock on a favourable basis, resulting in an annual saving to the company of interest of £20,000.

REHABILITATION OF THE UNION-CASTLE FINANCES

The company's position to-day is better than it has been for many years past, and its credit stands exceedingly high. As the result of the rehabilitation of our finances it has been possible to make a substantial beginning towards clearing off the arrears of preference dividend. If results justify our doing so, we hope to continue this policy.

At this point I would like to remind shareholders that in our last three balance sheets the auditors have qualified their certificate by stating "the book value of the investments as a whole, after deducting the reserve for depreciation of investments, is considerably in excess of their present value under existing conditions," while their certificate for the preceding six years also bore a qualification in regard to the value of our investments in other companies. It is therefore absolutely necessary that part of any profits made by the company must be allocated to writing off the losses on investments until their book value is brought more in harmony with their actual value. This is the policy which, as prudent business men, the directors have thus far preferred to pursue rather than to adopt the alternative of drastically reducing the ordinary capital.

In this connection also it has to be borne in mind that for some years the replacement of the company's fleet was retarded. The directors are of opinion that the company's cash resources must be conserved not only to meet existing liabilities, but also to replace tonnage now becoming obsolescent, and thus maintain the company's premier position as the Mail Company in the South African trade, which it has occupied for about three-quarters of a century. As shareholders know, four new vessels are now under construction, and only last week an order was placed for two more vessels specially designed for use in our "round Africa" service.

AN IMPORTANT FACTOR

Now there is one factor which the board has had to face, and to which it has given anxious consideration for a long time past. If and when the company is able to pay off all arrears of preference dividend, the control of the company would, if the articles remain unaltered, revert to the ordinary stockholders, and the preference shareholders would cease to have any voice in the company's affairs. It was the directors' duty to consider what would be the effect upon this company as a whole if this were to happen. In this connection you have to remember that the two companies who are the beneficial owners of this company's ordinary stock are, as all the world knows, in a deplorable financial position and faced with staggering liabilities. It was announced the other day that the Royal Mail deficiency account now amounted to over £11,000,000, which might well be further increased. The Elder Dempster Company also has a huge deficiency account of something like £8,000,000.

The directors are apprehensive that if after satisfaction of the arrears of the preference dividend the control of the company should revert to the ordinary stockholders, the company may come under the control of persons whose interests do not coincide with the interests of the company. (Hear, hear.) The present position of the Royal Mail Steam Packet Company and Elder Dempster Company is, as you know, that a moratorium is in force as regards both companies. That moratorium expires on December 31, 1934. The directors have no means of knowing what will happen after that date, but since, so far as they know, no arrangements have yet been reached for an extension of the moratorium it appears not unlikely that the Royal Mail Steam Packet Company and Elder Dempster may be put into liquidation and that the assets of these companies, including the ordinary stock in the Union-Castle Company, will be sold.

THE DANGER OF OUTSIDE CONTROL

If they should be sold it seems probable that a purchaser might ultimately be found in some other group of shipping companies holding the company's ordinary stock as one block. The 4½ per cent. preference shareholders of the company number some 450 and

the 6 per cent. "A" preference shareholders number some 4,500. Having regard to the past experience of the company, the directors are of the opinion that the interests of the company will be better served if steps are taken to secure that the ultimate control of the company shall not be vested in one set of hands or concentrated in a few people. (Hear, hear.)

I have seen it stated by those who have publicly criticised this proposal that if it goes through the preference shareholders may exercise the control they will then have in order to increase the company's reserves and rebuild its fleet. That is precisely what this company most urgently and imperatively requires to do. As I have already stated, our reserves were lost and our fleet was rapidly becoming out of date because of our entanglement with the Royal Mail group and the consequent dispersal of our liquid resources.

We are fully conscious of our responsibility in putting this resolution about voting before you. It consists in making permanent the 6 per cent. "A" preference shareholders' present but temporary right to attend and vote at meetings and in conferring a similar right on the 4½ per cent. preference shareholders. I have heard it asked whether it is quite fair that the preference shareholders should take this course. I would like to point out this. According to the advice we have received and on which we have acted and intend to continue to act, the power which the preference shareholders have the right to exercise to-day is inherent in the constitution of the company under its articles and by the terms of issue of the preference shares. The 6 per cent. "A" preference shareholders had no right to any voice in the company's affairs until their dividend was in arrear. When that happened they had the right to step in, which they did, and take control, and we maintain that the right given the preference shareholders under the articles of association entitles them to take such steps as will safeguard the interests of the company for the future. (Hear, hear.)

ADVISABLE PUBLICITY

I would emphasise the desirability of publicity for the company's affairs, as contrasted with the secrecy with which they were conducted from 1912 to 1930. During the whole of that period of nearly 20 years, while the Royal Mail group controlled the company, no accounts or reports were published to the preference shareholders, and at the annual meetings only the respective secretaries of the two holding companies were present, the proceedings occupying a few minutes only. During that period (unless by searching the records at Somerset House) the preference shareholders had no means of knowing anything whatever of the position of the company. Since the preference shareholders have had control they have been kept advised regularly by circular and reports and balancesheets of the progress of the company, and at the annual meetings have been free to ask questions on any matter about which they might require information.

What is required above all things is that the company should carry on as an independent concern—(hear, hear)—free from entanglements of any kind with other companies and undisturbed by the prospect of its governance being hawked about from hand to hand and at the mercy of the highest bidder. (Hear, hear.)

In putting the resolution I would ask you to vote for what this board believes to be for the best interests of the company as a whole, so as to remove it once and for all out of the quicksands and entanglements of interlocking finance and give it a chance as a great independent concern to maintain that premier position in the trade with the great Dominion of South Africa and East Africa which it has enjoyed so long. (Applause.)

The Chairman concluded by moving resolution No. 2 dealing with the voting rights.

Mr E. F. Abbott seconded the resolution.

STOCKHOLDERS' VIEWS

Mr Urling Clark opposed the resolution on the ground that it was unjust to the ordinary stockholders and in any case ineffective, as there was nothing to prevent any group from obtaining a controlling interest in the preference shares. He was of opinion that the passing of the resolution would involve the company in an unlimited amount of strife and legal expense.

Mr Dingwall supported the resolution. He said that, in view of the manner in which the ordinary stockholders had conducted the affairs of the company, there was no promise of any good results in the event of their again obtaining control when the preference arrears had been paid off.

Mr Mackenzie Lees supported the remarks of Mr Clark on the ground that the resolution was aggressive and deprived the ordinary stockholders of valuable rights of control. He urged the chairman to postpone the resolution.

Mr Seear inquired whether there was any chance of effecting a compromise on the matter.

The Chairman said that the board would not consider postponing the meeting for a moment; they wished a definite decision arrived at that day. They were convinced that what they were endeavouring to do was in the best interests of the company as a whole, including those of the ordinary stockholders, the value of whose holdings had been enhanced since the present board took control of the company's affairs as an independent concern. (Applause.) There was no suggestion of a compromise at the moment. If the resolution was passed and any proposals were put forward, they would naturally be considered.

The resolution was carried by a large majority on a show of hands, but a poll was demanded.

The Chairman subsequently announced that the result was that the special resolution was carried by the necessary majority and that the figures would be announced later.

It was subsequently announced that the voting was 1,779,657 for the resolution and 360,379 against.

MALAYA GENERAL COMPANY, LIMITED

DIVIDEND OF 16 PER CENT.

The twenty-sixth ordinary general meeting of Malaya General Company, Limited, was held, on the 28th ultimo, at 7, Great Winchester Street, London, Mr G. M. Weekley (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—With a steadily rising market through the twelve months our average selling price was fully 2d. per pound better than in 1933, and, whilst costs have been steadily mounting also, the larger crop enabled us to finish at a fractionally smaller cost per pound of rubber, taking the year as a whole. I would point out, however, that all expenditure is on the up-grade, and this is likely to continue until conditions, especially as regards labour, become more settled.

The net profit of nearly £32,000 is, under all the circumstances, a very satisfactory figure, and if you approve of the proposed dividend of 11 per cent., making 16 per cent. for the year, it will result in a "carry-forward" of £11,534, as against £10,767 brought in, or an increase of £767.

Referring to the Regulation Scheme, he said: Much has been said in the Press about establishing a price level, and the market recently has been adversely affected owing to disappointment, that the scale of release in the early part of 1935 is to be greater than in November and December of this year. It was, however, never the intention of the scheme to fix definite price levels, which, after all, must be purely relative.

The fact that your estate, selling at an average price of less than 5½d. per lb., can produce a dividend of 16 per cent., is, in itself, evidence that the equitable relation between supply and demand is much more important than a standard price level.

The great thing to be borne in mind is that this scheme is not designed to enrich speculators or create profiteers, and not to force prices up unduly, but to act in such a way as to be equitable, i.e. to be equally satisfactory and acceptable to both producers and consumers.

We feel that all parties connected with the rubber trade should use their utmost goodwill and influence to secure the smooth working of this scheme, and if this is done it will be the most beneficial thing which has ever happened to the industry.

The report and accounts were unanimously agreed to.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd."

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK LIMITED

AUSTRALIA'S REMARKABLE FINANCIAL RECOVERY NATIONALISATION CAMPAIGN PROPAGANDA ANSWERED MR ANDREW WILLIAMSON'S REVIEW

The forty-second ordinary general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 28th ultimo, at 5 Gracechurch Street, London, E.C., Mr Andrew Williamson (the chairman) presiding.

Mr A. A. Shipston (London manager and secretary) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said that during the past year there had been three outstanding events: (1) The Second Chamber in New South Wales had been reconstituted on an elective basis; (2) the Federal election had taken place; and (3) the centenary of the State of Victoria had been celebrated, honoured by a special visit from his Royal Highness the Duke of Gloucester, representing his Majesty the King.

Since the present Government of New South Wales came into power in June, 1932, much good work had been accomplished in reducing the deficits of the previous Government and putting the finances of the State into a better condition, but he questioned if anything that they had done would have so far-reaching an effect in promoting sound government in the future as the reconstitution of the Second Chamber.

It had now been established on a firm constitutional elective basis which could only be amended by direct referendum to the people; and thus it formed a very real safeguard against the domination of any extreme section, or the forcing on to the Statute Book of hasty or ill-considered legislation, from whatever party such might emanate.

With regard to the Federal Election, this had resulted in the return of the United Australia Party, under the leadership of Mr Lyons, which with the Country Party formed a large majority. These two parties had formed a Coalition Ministry, with Mr Lyons again Prime Minister, and Dr. Earle Page, the leader of the Country Party, holding the second place in the Cabinet.

AUSTRALIA'S RECOVERY

In his Budget speech, delivered towards the end of July, some six weeks before the Federal Election, Mr Lyons was able to lay before the country a very satisfactory account of the stewardship of his Government. They assumed office at a time when the whole country was in a state of profound depression, and when the estimated aggregate deficits, Commonwealth and State, were approximately £40,000,000 for the year. They so effectively dealt with the problems with which they were then confronted that the record of their term had been one of continuously diminishing aggregate deficits of the States, while in the case of the Federal Government a surplus was secured in each year. These surpluses were secured after making remissions of taxation during the three years to June 30th last amounting to £9,590,000, while in the present Budget further remissions were provided for to the extent of £620,000. The Government came into office in the closing days of 1931, and the world price level for the next eighteen months was actually lower than in 1931. The recovery that Australia had made was therefore all the more remarkable.

Overseas trade had produced annual balances in favour of Australia of more than sufficient to meet in full public interest charges overseas in each of the three years.

A rapid glance at the chief heads of the work accomplished by the late Government would be sufficient to enable them to appreciate what had been done.

Unemployment, which was at 28 per cent. when the Government came into office, rose to 30 per cent. in the first six months during their fight against repudiation in New South Wales. From the date of the dismissal of the Lang Government unemployment percentages had steadily declined, the latest percentage for the September quarter being 20.2. These percentages were of total unemployment, but the unemployment due entirely to the depression had been reduced by practically 50 per cent.

Factory employment over all Australia rose from 336,658 workers in 1931-32 to 405,000 in 1933-34. Looking at production, on the basis of recorded production which did not include every form, it was estimated that the national income has risen during the three years from £438,000,000 in 1931-32 to £458,000,000 in 1932-33, and to approximately £497,000,000 in 1933-34.

Turning now to the building trade, which was a well-recognised indicator of rising or falling confidence, this had shown a healthy and encouraging movement. Comparing 1931 with the 12 months ended in March, 1934, permits issued for new buildings and dwellings increased from 3,838 to 6,715, and in value from £3,068,000 to £7,442,000, and the total value of all buildings and alterations and additions for which permits were issued rose from £4,197,000 to over £10,000,000.

Bank clearings (excluding Treasury bill transactions) in the six capital cities were about £25,000,000 weekly in the first quarter of 1932, and increased to over £34,000,000 weekly in the September quarter of 1934, and Savings Bank deposits, which were also a reliable financial barometer, rose from £194.5 millions at the end of 1931 to £212.5 millions at September 30, 1934.

REDUCTION OF INTEREST RATES

The Government, alike in the interests of the primary producers and of their own borrowing and conversion schemes, had done their best to bring down the rate of interest. The rates on Treasury bills had fallen from 4 per cent. on January 1, 1932, to 2 per cent. to-day; the Commonwealth Bank interest on deposits for twelve months had been reduced from 3½ per cent. to 2½ per cent., and for 24 months from 4 per cent. to 2½ per cent., while their advance rates had fallen from 5½ per cent. to 4½ per cent. Similar, though not identical, reductions had been made by the trading banks, while trustee companies and insurance companies had likewise reduced interest on mortgage loans.

There had also been a remarkable improvement in the Government's internal credit. On September 22, 1931, the Consolidated 4 per cent. stock, 1938, stood at £80; the same stock to-day was quoted at £107 5s. During their three years the Federal Government issued four new loans for the purpose of State public works and for the funding of Treasury bills, and since the election the new Government had just issued £15,000,000 3 per cent. stock at 99½ for similar purposes. There had been a steady improvement in the price at which the Government had been able to borrow, their latest loan being on a practically 3 per cent. basis.

SUCCESSFUL CONVERSION OPERATIONS

The Government had dealt during the past three years not less satisfactorily with their overseas debt. Since the elections the Coalition Government had just completed the conversion of a further £14,601,806, by which nine loans of three different States had been converted into one new Commonwealth Government Loan of the same amount, repayable 1964-74, bearing interest at 3½ per cent. and issued at 99, and this loan was largely over-subscribed. This brought the total of the conversions effected since 1932 to £124,450,892, and the total savings in interest and exchange to approximately £2,410,000.

He had given this brief review of the outstanding movements of the past three years to enable shareholders the better to appreciate what had been achieved in the face of well-nigh overwhelming difficulties, and to understand the sound foundations on which rested the high credit the Government of Australia now enjoyed both in Australia and in London. Both Government and people had done their respective parts admirably, and had achieved a wonderful measure of recovery, where either without the other would have failed.

THE ACCOUNTS

Dealing with the accounts, the chairman said that cash in hand, Australian Government notes, bullion, etc., was greater than last year by £1,519,789. Investments at £1,867,389, consisting of British and Dominion Government securities, had increased by £103,590, and they all stood in the books at under present market value. The ratio of cash to each pound of current account deposits was 15s. 6½d., and the cash and investments together were equivalent to 18s. 7½d. of their demand liabilities. This was an exceptionally strong position, but it was not altogether a profitable one, and indicated that the outlet for pound advances was still regrettably limited. Advances and other assets, £26,217,746 (after deducting provision for bad and doubtful debts and contingencies reserves) showed an increase of £1,233,978. The net

profit for the year amounted to £221,565, out of which there had been carried to reserve fund £15,000, and after allocating £5,000 to the Officers' Provident Fund and £50,000 to contingencies reserves, the directors recommended a further dividend of 2½ per cent., free of United Kingdom income tax (making 5 per cent. for the year), leaving £275,747 to carry forward.

The past year had been a difficult one for the banks, for while there had been a distinct improvement in confidence and greater activity in internal trade, with a more buoyant tone and a more hopeful outlook, the low level of prices of all export commodities was discouraging to enterprise, and notwithstanding the reduced rates of interest, lenders found unusual difficulty in obtaining satisfactory outlets for the money available. In these circumstances it had been impossible to show increased gross earnings for the past year. At the same time it was very satisfactory that their business connections had not only been well maintained but extended, and he trusted that the current year would prove quite as satisfactory as its predecessor. Until the world situation clarified and the prices of export commodities moved up to a more satisfactory level, they could not look for any rapid return to the more prosperous days of the past. It was only when the community as a whole was prosperous that the banks prospered and made satisfactory earnings. However, everything possible was being done to strengthen their position and to be ready to take advantage of the upward move whenever it arrived.

INDUSTRY'S LOAD OF TAXATION

One of the potent factors impeding the full financial and industrial recovery of Australia was the load of taxation which industry was carrying. Excluding the States the total taxation collected by the Commonwealth Government in the six years down to June 30 last had been about £330,000,000. The present Government had from the first been fully alive to the burden that was thus being carried and had already made important remissions, but it seemed that in this connection some amendments were urgently called for. He was glad to learn that the recent Taxation Conference held in Canberra agreed that all business losses should be carried forward and spread over a period of four years, and that this should apply to the Commonwealth and the whole of the States. He also understood that another conference was proposed to be held with a view to the drafting of a uniform Act which it was desired to bring into operation in all the States. There were, however, in force some other forms of taxation which could not be described as equitable—the income tax on absentee debenture holders of Anglo-Australian companies, and probate and succession duties on absentee shareholders in these companies.

MISLEADING PROPAGANDA IN NATIONALISATION CAMPAIGN

The recent Federal Election was fought between the Government and the Opposition mainly on one outstanding issue, the nationalisation of banking in Australia, which was made the issue by the Opposition themselves. The various sections of the Labour Party for the moment united to press forward this revolutionary issue. They proposed to transform the Commonwealth Bank of Australia from being a Central Bank, free of political control, into being practically the one bank of Australia, but under ultimate political dominance, and extinguishing all the trading banks. How they proposed to repay about £70,000,000 of shareholders' funds in the trading banks and the goodwill of the business which had been built up almost concurrently with the history of Australia itself they did not attempt to disclose, but for a long time before the election actually took place they carried on a widespread and most misleading propaganda throughout Australia.

These advocates of nationalising banking accused the trading banks, first, of deliberate restriction of credit—by which they meant that the banks for their own ends were not making advances as freely as they ought to—and, second, of giving an unfair preference to the big man as compared with the small man.

MISSTATEMENTS REFUTED

In reply to the first accusation, he would point out that it was obviously absurd to anyone who reflected for a moment. The making of sound advances was the most profitable side of a banker's business, and for him to put any restriction on lending other than that dictated by prudence would be directly contrary to his own interests. When a banker, though having ample funds, ceased to lend freely the sole and simple reason was that, from the point of view of safety, the business of lending money had become less attractive. A falling off in the total loans and disbursements of the country was not generally due either to the inability or unwillingness of the banks to lend on good security, but merely to the falling off in the value of the securities offered to them. It would be readily understood, therefore, that, so far from the trading banks deliberately restricting credit, any such restriction

or curtailment was forced automatically upon them by a fall in values. How could it be otherwise unless bankers were to cease worrying about their liabilities being covered to their full extent by liquid and realisable assets?

Another, and in Australia to-day the most important, factor in restriction of credit, as it was called, was the world depression in trade and industry inducing the customers of the banks to be unusually cautious regarding expansion of business through new enterprises. Notwithstanding the unprecedentedly low rates of interest the banks were charging for advances, customers were not applicants for loans as in better times, because they did not see their way profitably to employ the money the banks were willing, nay desirous, to lend. Those who talked so glibly about the nationalising of credit seemed to have little idea of the difference between the business of banking and that of a mortgage company, between a concern whose funds were mainly derived from deposits repayable on demand or at short notice, and a concern whose funds were mainly derived from the issue of shares or long-term debentures; though even in that case credit given to a borrower who was not credit worthy would also end in collapse.

EQUAL CONSIDERATION TO LARGE AND SMALL

Turning to the second accusation, namely that the big man got an unfair preference as compared with the small man, he had no hesitation in saying that this was equally untrue. It was obvious that, from the point of view of security—which must, in the interests of all concerned, ever be the touchstone of a banker's business—a man with abundant resources of his own offered greater security as a borrower than a man who had little or nothing behind him. Naturally the big man in these circumstances could command larger advances than the small man. But to say this was by no means to admit that the small man, to the extent of the security that he could offer, did not receive equal consideration with the big man. They were both treated with the same liberality in advances to the full extent that the margin of their respective resources justified. This accusation was entirely without foundation.

The bait which the advocates of nationalising banking held out was that if banking were nationalised credit would be more easily obtained. Doubtless this was exactly what would happen, but in practice what would it mean? It would mean quite evidently that credit would be granted without such particular regard to the security offered as was given at present; advances would be larger, more widely extended, but less well secured than at present. Could anyone doubt, after reading history, what would be the result of such a policy carried out consistently for a few years? At first there would doubtless be a general expansion, but this would almost inevitably be followed by an unhealthy boom and end in a violent crash.

A MISCONCEPTION

A misconception which distorted the judgment of the advocates of nationalising the banks was the notion that the State had a bottomless purse and that it could lend more liberally than anyone else. In the sense that the Government could inflate the currency this was true; in the sense that the Government had a large stock of real wealth which it could distribute, it was totally untrue.

Credit soundly given for the purpose of creating wealth which would within a given time repay the credit was like the circulation of the blood, renovating and recreating the human body and returning to the heart, to be again sent out on its life-giving flow. But credit unsoundly given, without regard to its purpose or to the period of its operation, or to the character of the borrower, resulted finally in inevitable disaster.

It was most distasteful to them as bankers to have anything to do with politics in a party sense. Their customers were to be found in all parties. When, however, as in the present case, one political party, split and torn by fierce internal divisions, yet agreed on one particular item of policy, made a massed attack on the banking system of the Commonwealth, it was the obvious duty of those who knew, or who ought to know, most regarding the actual facts, to speak, and that without any hesitation. This was admirably done by letters to the Melbourne Age from the chairman of the Associated Banks (Victoria), Mr Ernest O'Sullivan, their own senior joint general manager in Australia, in reply to letters appearing in that paper from those advocating a change, which disclosed an amazing misconception of the true position.

Last year, when referring to this campaign in favour of nationalising the banks, he said he had too much faith in the strong common-sense of the electorate of Australia to have any apprehensions as to their being misled by either ignorant or mendacious propaganda. The result of the Federal election had shown that that faith was justified.

The report and accounts were unanimously adopted.

LONDON, AUSTRALIAN AND GENERAL EXPLORATION COMPANY, LIMITED

CHAIRMAN'S OPTIMISTIC REVIEW

The annual meeting of the London, Australian and General Exploration Company, Limited, was held, on the 27th ultimo, at 20 Copthall Avenue, London.

Mr C. A. Moreing (the chairman), in the course of his speech, said: It has been obvious for many years that whilst our company possessed assets of very great value, its activities were most seriously curtailed, unless it could be provided with liquid funds upon a scale commensurate with its possibilities. I would like, therefore, to run over the history of the last twelve months, from which you will see that what has been done forms part of a well-conceived, coherent policy.

To give effect to our aspiration, it was first necessary to place the shares which remained unissued, and we were fortunate to do this upon terms most favourable to the company. As soon as possible after this had been done, the board decided to increase the capital of the company to its present figure of £250,000 by the creation of 857,345 shares, and this proposal was sanctioned by the shareholders on February 23rd. This step enabled the directors to carry out the next item in their programme, and give the shareholders a chance of participating in the improving fortunes of the company. An offer to the shareholders of the right to subscribe for one share at par for every four shares held was made on February 28th, and 238,353 shares out of 285,184 shares, the number under offer, were subscribed, a fact which showed both appreciation of the board's action and confidence in the company. The balance of the offer was taken by the interests, who guaranteed the issue.

The position of the company is now as follows: the authorised capital is £250,000, divided into 2,000,000 shares of 2s. 6d. each, of which 1,425,923 have been issued. Of the remainder 142,592 are under option at par until February 28, 1935. When these shares have been called there will remain unissued 429,569 shares, and it is the policy of the board to afford the shareholders the opportunity of subscribing for any further issue of shares which the company may make.

The value of our investments has risen by £50,436 to £196,379, and the unquoted securities have been taken at the directors' valuation, upon which the auditor does not express any opinion. In the directors' opinion, the unquoted securities are valued on a sound basis, and, so far as the quoted securities are concerned, on July 31st they possessed a market value in excess of their book value. The result of last year's operations has therefore been to place the company in the possession of liquid funds, and to permit of its balance sheet being reorganised in such a way as to give the company much greater freedom of action.

Unfortunately, the revival in trade which has taken place in the last twelve months has not been reflected in any improvement in base metal prices other than tin, and, in consequence, the return from our holdings in base metal shares is still limited.

I am glad to welcome the return of East Pool to the dividend list, and the latest information indicates that recent developments in that famous old mine are most encouraging. The new mill at Raibl, to which I referred last year, has been completed, and is fulfilling in every way the expectations of its designers. At Ringslade, in Devon, we have carried out most successful boring operations, which have proved an extensive body of dark clay over which we have secured a lease on favourable terms. Cardox has continued to make steady progress, and I am confident that in this device we have an asset of very great value.

Our main interest in gold mining at the end of the financial year with which we are dealing was in the Tanami Gold Mining Syndicate, Limited. In addition to this holding, we had a small interest in the Kenya Gold Mining Syndicate and the Luiri Gold Areas, Limited. Since the end of the financial year we have acquired an interest in the Klerksdorp Consolidated Goldfields, Limited. Captain Moreing is now in Johannesburg, and it is his intention to return from there to England by aeroplane, visiting your interests in Kenya on his way. The company has a portfolio of valuable interests in base metals, gold and industrials, and sufficient cash resources to take care of them.

I have always been an optimist, and, now, in my eightieth year, and after 60 years of active professional life, and after having been a director of this company for nearly 40 years, with all the experience I have accumulated, I am more optimistic than ever before.

I have faith in the future of the British Commonwealth of Nations, and all it stands for; I have faith in the future of India under the leadership of the British people; and I have faith in the future of the pound sterling, which is based on British credit, which is better than gold.

The report and accounts were adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

HIGHER WORKING PROFITS

The thirty-seventh ordinary general meeting of shareholders was held in Johannesburg on November 2, 1934.

The Chairman (Mr. John Martin) said:—The directors' report, balance sheet and accounts for the year ended June 30, 1934, which have been in your hands for some time, furnish full particulars of operations during the period under review and of their financial results. A further increase of 40,000 tons over last year brought the tonnage crushed to the new record figure of 2,122,000 tons. The yield was lower by 1.25 dwt. and averaged 5.463 dwt. per ton milled, but, owing to the higher price obtained for gold, the average working revenue showed an increase of 2s. per ton milled. Working costs showed a decrease of 1d. per ton milled, to 14s. 8d.—the lowest yearly average yet attained by the mine. The working profit increased by £255,396 to £2,304,865.

The net profit for the year was £2,284,754, which, with an unappropriated balance of £205,850 brought forward from last year, and an amount of £1,263 in respect of forfeited dividends, gave a total of £2,491,867 to be dealt with. This was disposed of as follows: Two dividends of 50 and 55 per cent. respectively accounted for £1,470,000; Government and Provincial taxes absorbed £768,388, of which £337,330 represented Excess Profits Duty; and a sum of £28,791 was provided towards miners' phthisis outstanding liability. This left a balance unappropriated of £224,688—an increase of £18,838 over the previous year.

The yield per ton milled showed a gradual decrease during the year from 5.702 dwt. in July, 1933, to 5.201 dwt. in June, 1934, the average value over the whole year being 5.463 dwt., compared with an average for the previous year of 6.713 dwt. The decline in yield was due partly to the lower value of the ore reserve and partly to the steadily decreasing proportion of the tonnage mined from the Main Reef Leader.

DEVELOPMENT AND RESERVES

The development footage accomplished amounted to 85,538 ft., which was 5,853 ft. less than for the previous year. The footage sampled on all reefs amounted to 55,030 ft., of which a total of 19,150 ft., or 34.8 per cent., was payable, with an average value of 295 inch-dwt.

The payable ore developed on all reefs, based on the standard price of gold, was 516,800 tons of an average value of 4.4 dwt. Compared with the previous year, this total showed a decrease of 71,100 tons in quantity and a fall in value of 0.6 dwt. Under present conditions, an additional 845,100 tons developed during the past year, of an average value of 3.0 dwt., may be classed as payable.

On the basis of the working costs and price of gold prevailing in 1932, the ore reserve as re-estimated at June 30, 1934, was 5,931,300 tons of an average value of 6.9 dwt. per ton over a stoping width of 49.4 inches. Compared with the previous year's estimate, the total reserve shows a decrease of 569,100 tons over the same stoping width, but with a lower average value of 0.2 dwt.

Under present conditions as to the price of gold and the level of working costs, a further 3,105,500 tons of an average value of 3.0 dwt. over an estimated stoping width of 43.9 inches could be included in the reserve. This gives a total tonnage of payable ore, excluding shaft pillars, of 7,760,100 tons of an average value of 5.5 dwt. per ton.

CURRENT YEAR'S RESULTS

During the first quarter of the current financial year the tonnage milled was fully maintained and totalled 541,000 tons. The grade of ore milled was lower, the average value being 5.039 dwt., while working costs showed a further reduction to 14s. 3d. per ton milled, a figure which was reduced to 14s. in October. These working cost results reflect the greatest credit upon the manager, Mr Meyer, and the staff and employees of the mine. The declared working profit for the three months totalled £557,668, but to that figure an amount of £5,721 has to be added on account of extra revenue from gold realisations compared with the monthly valuations. The development footage accomplished during the quarter totalled 17,347 ft.; the results were normal and present no new feature calling for comment.

As will have been noted from the quarterly report, the provision made for Government taxation, including Excess Profits Duty,

amounted to £165,279 in respect of the working profit for the three months of £563,389. This compares with the sum of £768,388 provided for taxation for the past financial year in respect of a total working profit of £2,304,865. It is therefore apparent that, while taxation continues to absorb a huge proportion of working profits, the ratio of Excess Profits Duty as affecting New Modderfontein is less unfavourable than that which resulted from the application of the original special taxation measure imposed by Parliament, which, as shareholders are aware, was subsequently revised.

FOUNDATIONS FOR SATISFACTION

Any survey of the position of New Modderfontein discloses solid grounds for satisfaction. For several years past, the mine has been faced by the certainty of a steady decline in the tonnage and value of the ore reserves. A policy has therefore been followed of conserving the ore reserve in order to ensure full exploitation of the property and the prolongation of profitable operations. The increased price of gold has counterbalanced the lower grade; and, notwithstanding unprecedented taxation, has so far resulted in the earning of higher working profits, the maintenance of dividends, and a very considerable extension of profitable life. New Modderfontein has distributed to shareholders over the period of its dividend-paying existence more than an average of £1,000,000 per annum. The total dividends declared to date amount in the aggregate to practically £28 millions. Future prospects are, of course, subject to well defined limitations, but nevertheless the whole position and outlook have much improved compared with what they appeared to be even two years ago.

The report and accounts were unanimously adopted.

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY LIMITED.

DIVIDEND POLICY

The seventieth annual ordinary general meeting of the Australian, Mercantile, Land and Finance Company, Limited, was held, on the 29th ultimo, at the company's offices, 20-22 Coleman Street, London, E.C.

Mr John Sanderson (the chairman), who presided, feelingly referred to the deep loss which the company had sustained by the death of Mr R. H. Caird.

On the question of the dividend, the Chairman said that, while it was apparent that the results of the year ending June 30th last had been better than those of the previous year, largely explained by the higher price of wool up to mid-January last, it would be appreciated that it had not been easy for the directors to decide what dividend recommendation to make in the present instance.

At the opening of the new wool season in Brisbane on August 20th last prices had shown a decline of approximately 40-45 per cent. from those ruling in January, 1934. There had been movements up and down since August, but up to October 31st 459,746 bales had been sold out of a total estimated clip of 3,146,000 bales, to which had to be added a carry-forward from the previous year of 213,352 bales. Of this carry-forward about 70,000 bales still remained to be sold on October 31st. Notwithstanding the increased volume of the 1934 clip, the total monetary return could not equal that received for the 1933 clip unless there were a substantial rise in values. This particularly applied to the company's station properties, the earnings from which formed an important item in their profit and loss figures.

They might consider themselves fortunate that the greatly increased consumption of wool by Japan during the past few years still continued and had materially helped to maintain prices even at the existing level, but they had yet to learn the extent to which the greatly lessened purchases by Germany and other Continental countries would continue. Obviously this was a factor which would influence the ultimate realisation of the Australian wool clip, the value of which was such a vital important matter for all their wool-growing clients, as well as for the company as owners of sheep stations and commissioned salesmen of wool, stock and produce of various kind. Having all these points in mind the directors had come to the conclusion that, however much they would like to recommend an increase in the dividend, shareholders would support them in taking the prudent course of postponing any alteration in the rate until they were better able to judge what influence the factors he had mentioned would have upon the results of the current year.

The report was unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED

HIGH QUALITY AND RELIABILITY

A GREAT RANGE OF PRODUCTS

The ordinary general meeting of The Wall Paper Manufacturers, Limited, was held, on the 29th ultimo, at the Holborn Restaurant, High Holborn, London, W.C., Mr Alan V. Sugden, J.P. (the chairman of the company) presiding.

The Chairman, in reviewing the accounts in detail, said: The figures do not portray a full year's results from the newly acquired businesses but only those of four to five months. It is difficult to make any forecast of the effect these results will present on a full year, and to try to work out any percentage increase would be fallacious.

BRITISH GOVERNMENT SECURITIES

Owing to the change in the value of money resulting progressively from the Government action in redeeming War Loan, there is now a considerable appreciation in the market value of our investments. The £360,912 appreciation on the old value appearing in our books has been applied to the reduction of goodwill.

GOODWILL

I would like to make a special reference to this, which again appears in our balance sheet due to the recent acquisitions. It may be said that there is inconsistency in this in view of our action for many years past in progressively eliminating the item from our books. I can only say it is impossible to acquire large go-ahead businesses making excellent profits without involving the purchase of goodwill. The Board proposes in the future, as and when it is opportune, to write down and ultimately extinguish the goodwill item. We propose no further writing down this year, partly because we are in a transition stage and need time to weigh up an entirely new situation, and partly because by an allocation to reserve we are still free to take such a course as shall later appear prudent by using reserves for this purpose in the same manner as we did a year ago.

GENERAL CONDITIONS

Whilst the amalgamation overshadows the other happenings of the year, there has been improvement in some sections of the company's business, limited principally to the home market, and to the Dominions. There is still competition to face in this country from the five or six manufacturers not included in the recent acquisitions, and this is engaging the very careful consideration of the Board. Abroad, we are faced with the difficulties so widely known to those who have experience of foreign markets.

WALPAMUR

This company has had a successful year, and has considerably increased its turnover and profits. In the growing number of its customers and in their recognition of the high quality and reliability of its great range of products, the Walpamur Company is reaping the reward of far-sighted policies of chemical research and of scientific investigation into improved manufacturing methods. We again invite stockholders, for whatever purpose they require paint products, to specify the appropriate article manufactured by the Walpamur Company. If any information is required, an inquiry to "The Walpamur Company, Limited, Darwen," will bring the necessary advice.

CANADA

Canadian Wallpaper Manufacturers, Limited, have had a better year and have resumed payment of dividend on their common stock.

EMPLOYEE DIRECTORS' PENSIONS

The practice in the past has been to recruit members of our Board from the ranks of management when vacancies arise, it being of the utmost importance that the direction of the business should in a large measure lie in the hands of those who have the closest practical knowledge of its problems. Apart from this, we have found it of the greatest value within the ranks to encourage the idea of promotion to its executive body. (I myself have enjoyed this promotion.) In 1929 a pension fund was inaugurated for the staff, and in future men who are promoted from the staff to the Board will be members of that Pension Fund; but on becoming directors they have to relinquish their membership of the Staff Fund. It appears neither sound nor equitable that we should treat whole-time employees, because directors, worse in this respect than every other person in our employ. Speaking

generally, vendors of businesses acquired by the company who become directors of our company are excluded from the benefits of the scheme. The scheme secures to the employee director in future, however, not a grant based on the goodwill of his old colleagues, but a definite calculable figure which is his as a right and to which he has contributed, and has no element of charity.

ACKNOWLEDGMENTS

I again make the fullest acknowledgment of the loyal and efficient service rendered during the past year by all members of our staff, in whatever capacity. No small part in the success of our company is due to these efforts, and I am sure the stockholders will support me in this acknowledgment.

The report and accounts were unanimously adopted.

THE JANTAR NIGERIA COMPANY, LIMITED

DIVIDEND OF 7½ PER CENT.

The twenty-second ordinary general meeting of the Jantar Nigeria Company, Limited, was held, on the 28th ultimo, at Winchester House, London.

Mr Percy Tarbutt, who presided, said that the net profit for the year under review amounted to £11,417, and including £15,867 brought forward from the previous year there was a balance at credit of profit and loss account of £27,284. The directors recommended that this sum should be appropriated by writing off the sum of £6,362 from the property account and the payment of a dividend of 7½ per cent., free of income tax, leaving a balance of £10,797 to be carried forward to the current year. The directors had again followed their usual practice of incorporating the manager's report in the report and accounts, and as his report was barely two months old there was very little to add, but he thought they could congratulate themselves on the results for the year and the increased dividend they were able to recommend.

With regard to ore reserves, of the total output of 171 tons which they were allowed under the scheme, less than 50 per cent. of it was taken from their reserves, while they had been able, by a small amount of prospecting, to add 207 tons to their reserves, which to-day stood at 2,362 tons, as compared with 2,235 tons at this time last year. They had still a considerable area to prove on their properties, which they would undertake when the time was more propitious—that was, when they were able to work their properties at something like normal output. They were, however, contemplating a certain amount of prospecting work on their Karu 3 property during the current year.

With regard to the future, their industry was one in which it was very difficult to give any forecast. Their output was restricted under the restriction scheme, and they did not know yet what tonnage they might be allowed to win and ship during the whole of the current year, although the quota for the first quarter of 1935 was unchanged at 40 per cent. of the standard tonnage. Provided, however, that the tonnage they would be allowed was somewhere in the neighbourhood of that allowed to them during the past year, and the price of the metal was maintained at somewhere around the present price, the outlook for the future was quite satisfactory.

The report and accounts were unanimously adopted.

TEBING RUBBER ESTATES (1931), LIMITED

SOUND FINANCIAL POSITION

The third ordinary general meeting of Tebing Rubber Estates (1931), Limited, was held, on the 27th ultimo, at 411/419, Salisbury House, London.

Mr E. B. Ridsdel (the chairman), who presided, said that it would be observed from the report that during the year the company harvested a crop of 563,892 lbs. of rubber, which, on the area tapped, was equivalent to a yield of 458 lbs. per acre; that represented an increase of approximately 30,000 lbs. in output and an increase in yield of 27 lbs. per acre. It would be seen from the accounts that after allowing for all expenditure, including the sum of £263 16s. spent on replanting old areas, the profit amounted to £2,096, compared with a loss last year of £1,998. Having regard to the fact that the net sale price obtained only averaged a little over 3½d. per lb., the profit earned must be regarded as very satisfactory.

The property account stood in the balance-sheet at £64,277, and showed an increase compared with last year of £847. That increase was due to factory alterations and the installation of new plant. Advances to Seroway showed an increase of £611, but, as stated in the report, Seroway was now fully self-supporting.

The financial position of the company was sound. Cash invested and in hand, rubber stocks and sundry debtors totalled £7,078, and deducting the amount due to creditors, £1,345, the net liquid assets of the company as at March 31st last amounted to £5,733. Their cash position to-day, however, was much better than that—not only on account of the profits earned since the close of the accounts, but on account of additional funds obtained from the final call of 2d. per share which was made in June last and which brought in £7,489.

During the current year they hoped to harvest a crop of 540,000 lbs. As regarded 1935, no announcement had yet been made in regard to the assessment to be granted, but on the basis of the assessments received for the six months ended December next, and on the assumption that the restriction cut was maintained at not more than 25 per cent. for the whole year, they estimated that their exportable allowance for the financial year 1935-36 would be in the vicinity of 500,000 lbs. of rubber.

With the restriction scheme now in force, together with the low working costs of the estate, he thought they could look forward with confidence to a successful future.

The report and accounts were unanimously adopted.

CHARTERHOUSE INVESTMENT TRUST, LIMITED

POSITION STRENGTHENED

The ninth annual general meeting of the Charterhouse Investment Trust, Limited, was held, on the 29th ultimo, at Southern House, London.

Sir Arthur H. Marshall, K.B.E. (the chairman), said that the directors were pleased to be able to report a satisfactory year's working, and to be able to declare an increased dividend and a bonus, as well as to allocate substantial sums to the reserves. Throughout the year they had witnessed a growth of public confidence resulting in greater Stock Exchange activity. This gave them the opportunity to dispose of the bulk of their holding of ordinary shares of Associated British Maltsters to greater advantage than seemed possible a year ago. The resulting profit of £67,570 arose only because the value of this holding had previously been written down in the company's books. A sum of £36,014 of their income-tax reserve had been set free, and these two sums, which were non-recurring items, had been transferred to an internal reserve further to reinforce the position against the necessarily fluctuating value of their assets. The liquid position of the trust had been fully maintained.

He could fairly claim that during the past year the Charterhouse Investment Trust had become more firmly established and enjoyed an increasing goodwill and wider connections throughout the country. The evidence of this fact was the satisfactory trading results they had been able to show.

Captain H. Nutcombe Hume, M.C. (managing director), said that the registration of the Charterhouse Industrial Development Company represented the consummation of plans which they had discussed for several years. Whereas the main function of the trust was to be the agents through which finance was obtained from public sources, the Development Company engaged its own capital in the finance of industrial undertakings, but from every other point of view the Development Company could be said to be a miniature Charterhouse Investment Trust. It was their

policy to confine themselves to the provision of capital for concerns which held out the possibility of development into larger undertakings and which, when this development had become an accomplished fact, would be able to pass out of the ownership of the Development Company to the public via the machinery of the trust.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 24, 1934, amounted to £8,438,000, against ordinary expenditure of £7,228,000. After allowing for an increase in Exchequer Balances of £110,531, the operations for the week, as shown below, decreased the National Debt by £1,099,000 to approximately £8,107 millions.*

Treasury Bills	+ 5,173	Public Department Advances ..	- 6,400
National Savings Certificates ..	+ 150	N. Atlantic Shipping Issues ..	- 22
	+ 5,323		- 6,422

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at September 30, 1934, appeared in *The Economist* for October 6, 1934.

COMPARISONS WITH CORRESPONDING PERIODS, 1933 and 1934 (000's omitted)

	Great Western	L.M.S.	L.N.E.R.	Southern
First half-year 1934, compared with first half-year 1933:				
Gross increase or decrease	+ 399	+ 1,422	+ 1,479	+ 232
Net increase or decrease*	+ 370	+ 1,000	+ 688	+ 90
Second half-year 1934, compared with second half-year 1933:				
Gross increase or decrease	+ 189	+ 719	+ 543	+ 167
Net increase or decrease*	+ 85	+ 341	+ 257	+ 83
21 weeks to November 25, 1934				
Gross increase or decrease	+ 85	+ 341	+ 257	+ 83
Net increase or decrease*	+ 3	+ 27	+ 12	...

* Including receipts from ancillary businesses.

LONDON TRANSPORT

Week ending November 24, 1934	Takings	Compared with 1933
Aggregate 21 weeks ending November 24, 1934	£11,121,600	+ 139,000

* For an explanation of the manner in which the figures are made up see the *Economist*, March 17, 1934, page 610.
Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted, on the basis of the best information available.

REPORTS AND NOTICES

FORESTAL LAND AGREEMENT.—The directors of La Forestal Argentina, S.A., have consented to give their adherence to an agreement which has been reached unanimously by all Argentine and Paraguayan producers of quebracho extract relating to the economic distribution of their products in their foreign markets. This agreement has been conceived in accordance with the general principles actuating the economic policy of the Argentine Government. It is anticipated that beneficial results to be anticipated from this agreement should begin to make themselves felt during the course of next year. The directors of the Forestal Land, Timber and Railways Company state that the results for 1934 show an improvement over those for 1933.

BANKS

BANK OF MONTREAL.—The figures covering the fiscal year ended October 31, 1934, show total assets of \$759,000,000, included among which are quickly available resources amounting to \$491,000,000, equal to 71.97 per cent. of all liabilities to the public. Deposits have been well maintained at \$630,000,000, compared with \$641,000,000 a year ago. Notes in circulation have risen to \$35,200,000 from \$33,800,000. Profits for the year total \$4,105,024, which after deduction of Dominion and Provincial Government taxes totalling \$900,654, leaves net profits of \$3,204,369. Dividends absorbed \$2,880,000, bank premises reservation \$100,000, leaving \$224,369, making the profit and loss carried forward \$1,809,820.

MISCELLANEOUS

THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LTD., AND THE BRITISH PORTLAND CEMENT MANUFACTURERS, LTD.—These companies have embarked upon an extensive programme of works enlargement at various points. The extensions will materially increase the capacity for production, notably in the Thames district from which London and the home counties draw their supplies and which also serves the coastwise and export markets, while the large works at Hope in Derbyshire, which supply Lancashire, Yorkshire and adjoining districts, are being more than doubled. Extensions are also in progress at their factories in the South of England, South Wales and Northern Ireland. It is anticipated that the whole of this increased production will be available in the early months of next year.

BRAZILIAN WARRANT AGENCY AND FINANCE COMPANY.—At an extraordinary meeting of shareholders held November 23rd the result of a poll taken on a resolution for the reduction of capital was a majority in favour of 1,511,600 votes to 12,730.

COPPER SHAREHOLDERS ASSOCIATION.—The Copper Shareholders' Association has been duly constituted as a non-profit-making body, organised for the promotion of the mutual interests of members and the industry. The names of the temporary committee are: The Hon. Sir Henry Barwell, K.C.M.G., Major John Hawkins, Henry Rule, Esq., C.A.

LENA GOLDFIELDS, LTD.—A meeting of the holders of the convertible 8 per cent. ten-year bearer notes of Lena Goldfields, Ltd., was held November 26th, to consider a resolution approving the board's proposals in connection with the provisional agreement with the Soviet Government. Mr Herbert Guedalla presided. A quorum was not present, so no business could be transacted. The total amount of the actual creditors of the company was £1,905,000, which included the noteholders, £750,000. The total cost of arbitration was something like £58,700. The company also had to

provide for the expense in connection with their proposals for avoiding fractions in the case of the new scrip. It is intended to deposit the Soviet Bills with the Midland Bank, as trustee, against which deposit certificates would be issued. During the first ten years £3 2s. 8d. would be paid half-yearly on each £100 certificate, so that at the end of that time the holders would have received £62 14s. 2d. During the subsequent ten years the half-yearly payments would be at the rate of £1 17s. 3d., making, at the end of ten years £37 5s. 10d., making £100 in all, subject to a few pence for the expense for the administration of the trust. The meeting was adjourned until December 11th.

TEBING RUBBER ESTATES (1931), LTD.—The crop harvested during the year ended March 31, 1934, amounted to 563,892 lbs. of rubber, and the average net sale price obtained, including stocks realised since the end of the year, was 3.653d. per lb. The accounts for the year show a profit of £2,096 15s. 10½., from which has to be deducted the debit balance brought forward from last year, viz., £1,375 18s. 1d., leaving a credit balance of £720 17s. 9d. to be carried forward. Since the close of the financial year a call of 2d. per share has been made, thus making the shares fully called.

THE UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON, LTD. (IN VOLUNTARY LIQUIDATION).—The liquidator states that there are certain outstanding questions with the Inland Revenue authorities which they cannot dispose of before judgment is given by the House of Lords in a pending case between the Inland Revenue and another company in which similar issues are involved. It is therefore proposed to make a further cash distribution to the shareholders of 2d. per share, leaving a balance of approximately 1d. per share to be distributed when the exact amount can be ascertained. The necessary warrants, together with the payments to those shareholders who are entitled thereto of their proportions of the net proceeds of sale of fractions of shares in the Associated Equipment Company, Ltd., will be sent out on December 27th next.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The prolonged weakness of a number of commodity markets gave way to a firmer tendency during the week ended last Wednesday. In many cases the fall in prices seems to have been arrested, and quotations for certain raw materials and foodstuffs registered a rise. This improvement is a reflection of a better demand in a number of countries, especially in the United States.

Among textile raw materials, cotton registered an appreciable rise, and wool prices at the auctions in Australia showed a firmer tendency under the influence of the increase in consumption noticeable in France and in Great Britain and of prospects of larger takings by the wool textile industry in the United States. Quotations for jute also showed a firmer tendency, partly as a result of the attempt made by the Government of Bengal to reduce production. Flax was again marked up in price, and raw silk was also dearer.

Copper, lead, spelter and tin—the principal non-ferrous metals—all advanced to slightly higher levels in the week ended last Wednesday. World deliveries of copper, after falling somewhat below world production in August and September, appear to have exceeded output in October. It appears that, despite certain rumours, none of the members of the zinc cartel has officially announced his withdrawal from the cartel, and that the next meeting will take place in Brussels during December. As a result of an improvement in demand, most varieties of vegetable oils rose in price. In addition, the market in linseed was affected by adverse crop reports from Argentina. The market in rubber improved when it became known that the Dutch Government is taking energetic measures to prevent the collapse of restriction in the Dutch East Indies. Prospects of an increase in consumption in the United States also contributed to the rise in rubber prices.

As far as foodstuffs are concerned, wheat rose slightly in price, despite the failure of the Budapest Wheat Conference to tackle the real causes of the wheat problem. The downward movement of raw sugar quotations seems to have been arrested at last, for last week's rise in prices was followed by a further advance this week. Meat prices are slightly lower on the week. Quotations for bacon show little change, but butter was slightly cheaper.

The rise in most American prices continued last week. Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 149.5 on Wednesday

last, compared with 146.4 a week ago, 142.9 a month ago and 124.0 on the corresponding date last year.

COAL

SHEFFIELD.—Supplies for the export trade are barely sufficient and best hards are scarce. There is a fair inquiry for forward business. Prices of best steams are firm at 17s. to 17s. 6d. f.o.b. Business in the house coal market is brisker, although super qualities are somewhat neglected. Industrial demand for all classes of fuel is maintained at the former high level, and prices are firm.

NEWCASTLE-ON-TYNE.—A good arrival of tonnage has given the market a cheerful outlook for the next few days. Northumberland steams of all descriptions are firm, most collieries being fully stemmed for the remainder of the year. Forward enquiry is also good. Apart from prime gas qualities, the Durham market is better placed for the next few weeks. Steams are heavily sold, and there is more business in second-class gas and coking coals. Bunkers are in a more favourable position, several collieries being fully sold to the end of the year. The export trade for all classes of coke is brisk, whilst in the inland trade there is a steady flow of orders.

Current f.o.b. prices for export:—NORTHUMBERLAND.—D.C.B. screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. DURHAM.—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d. Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—The market remains steady. Recently new business in the export branch has fallen off a little, but the collieries are still fairly well placed for orders. They are in fact less dependent on exports for the time being, finding a ready outlet in the home market.

Shipment prices f.o.b. district ports:—LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s. 6d.; splint second, 15s.—15s. 3d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; steam, 12s. 9d.—13s.; trebles, 14s.—14s. 6d.; doubles, 13s. 6d.; singles, 12s. 6d.; pearls, 12s.; dross, 10s. FIRE.—Best unscreened navigation, 12s. 9d.; unscreened navigation, 12s. 3d.—12s. 6d.; first-class steam, 13s. 6d.—13s. 9d.; third-class steam, 12s. 9d.—13s.; trebles, 14s.—16s.; doubles, 13s.—14s.; singles, 12s. 6d.—12s. 9d.; pearls, 11s. 9d.—12s. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 6d.; unscreened navigation, 12s. 6d.; trebles, 13s. 6d.—14s. 6d.; doubles, 13s. 3d.—13s. 6d.; singles, 12s.—12s. 3d.; pearls, 11s. 9d.—12s. AYRSHIRE.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s. 6d.; trebles, 15s. 6d.—15s. 9d.; doubles, 13s. 6d.; singles, 13s.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—In spite of the low prices quoted by Poland, it is expected that the whole of the Egyptian State Railways contract for 150,000 tons, will be placed in South Wales. It is reported that an offer from a Cardiff firm to supply 40,000 tons at 23s. 2½d. c.i.f. or 18s. 1½d. f.o.b. has been accepted, but the actual decisions of the Egyptian authorities in regard to the balance are not yet known. The French State Railways are inviting tenders for the supply of between 125,000 and 145,000 tons of large coal and between 85,000 and 115,000 tons of small coal over next year.

General conditions on the market are unchanged. There is a great scarcity of sized grades, which in some cases are commanding about 2s. per ton above the minimum schedule, but the supply of large through coals is in excess of demand, and for these grades quotations are ruling at scheduled figures. South Wales colliery owners expect that an agreement between Great Britain and Poland for the regulation of their coal export trade relations will be reached in London next week. Coke and patent fuel are firm, but pitwood is weak, and quotations for Portuguese wood have dropped to 21s. According to French Customs import returns, there was an increase during October of 49,000 tons in the supplies obtained from the United Kingdom, and since the recent agreement increasing the price of French pitwood under the coal-pitwood agreement, licences are being granted more freely than at any period since the early summer months.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; Western Valleys, 17s. 9d. to 18s.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; French nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. French, 21s. Portuguese.

IRON AND STEEL

MIDDLESBROUGH.—The current output of foundry pig iron continues to go into consumption, and as makers have contracts on their books with home consumers based on the official minimum figures, they are not actively seeking overseas trade, for which they realise a lower price. At the same time, they are keeping contact with regular foreign customers who have always shown a preference for iron from this district. The hematite iron trade is steady. More orders have been received from home consumers and good deliveries against current contracts are being made to Sheffield and the Midlands. For this quality of iron a small amount of export trade is being done, although it is at a lower figure than that quoted for home users. A parcel of 1,540 tons of hematite pig iron has been shipped to Italy during the past week. The official minimum prices both for Cleveland foundry pig iron and East Coast hematite are unchanged.

Heavy steel scrap is not plentiful but, whilst merchants are quoting 52s. 6d. per ton delivered here, consumers are not too ready to pay this price. Steel manufacturers continue to be busy both on semis and finished steel. Further orders have been received during the past week for rails for export to South Africa, whilst the shipbuilding orders for three vessels to be built on the Tyne and one vessel to be built on the Tees will have an immediate effect on the plate mills. The demand for sheets is improving. Steel prices are maintained, and steel boiler plates are now controlled at £9 7s. 6d. per ton, subject to the usual rebate. Foreign ore continues quiet, whilst blast-furnace coke is obtainable at 20s. per ton delivered at the furnaces here.

SHEFFIELD.—Some of the works in the heavy steel section are speeding up production in view of the Christmas stoppage, which may be rather long because of the need for overhauling plants. Consumers of steel and steel parts usually lay in increased supplies to carry them over holiday periods in centres where the raw material is dealt with. The amount of work on hand in Sheffield continues to be substantial. Orders are still tapering off for high-grade special steels, but the makers are fully booked to the end of the year. In several important departments plants are working at high pressure; this is the case with engineers' small tools. Exports continue to expand a little. Large tonnages of wire rods, steel hoops and strips and tin plate bars, together with other finished materials, are being imported from the Continent. The United States and Germany are sending many tools to this country. Seasonal orders have come to the cutlery trade this week and the output of silver and plated ware is expanding, chromium-plated goods being greatly in evidence.

GLASGOW.—The outlook is brighter this week, largely owing to the further contracts placed with Clyde shipyards, which in due course will call for steel material to be supplied mainly by local makers. In practically every branch business continues to show some signs of improvement and there seems every prospect of a continuance of regular employment. In addition to the requirements for ship building, there is a good demand for material for engineering work. Structural work, while not nearly sufficient to keep shops busy, is just a shade more plentiful and the material employed is almost entirely being supplied by home manufacturers. The foundries in the West of Scotland are also very busy just now, although at the tube plants things are somewhat quieter. Sheet makers are still finding export trade unsatisfactory, although the slight improvement recently in evidence is maintained. In the home trade business in both black and galvanised sheets is exceedingly good.

CARDIFF.—The position in the South Wales tinplate trade is practically unchanged. Relatively, the home market is at the moment more active than the export trade, and substantial contracts have been placed for supplies to home-canning factories during 1935. Prices remain unchanged under the international agreement schedule. Tinplate bars are steady in price at £5 2s. 6d. per ton delivered; and galvanised sheets at from £11 5s. to £11 15s. per ton f.o.b. works port. Tinplate shipments at Swansea last week totalled 79,895 boxes, compared with 85,341 boxes the previous week, and as deliveries into warehouses were also heavier, stocks at the end of last week totalled 111,690 boxes, compared with 93,234 boxes the previous week and 156,021 boxes a year ago.

OTHER METALS

The metal markets are still influenced by the uncertainty regarding the future of the Zinc Cartel and of the restriction scheme for copper. The copper market has, however, shown some improvement during the past week as a result of statements by several authorities in favour of a restrictionist policy. The Copper Shareholders' Association is now in being and has the support of over 1,500 shareholders, although how much capital these represent is unknown. Nevertheless, the formation of the association has apparently not been without influence upon the Rhodesians, who need the financial support of the copper investors for their extensive mining developments. So far, however, it has not been possible to find a reasonable basis for agreement. The United States mining companies have decided to waive their sales quotas in favour of the customs smelters for a further two months. It is probably true that this is the best way of preventing price-cutting by the customs smelters, although the policy of maintaining the United States domestic price of 9 cents per lb., despite the opposition of consumers, is a highly questionable one.

At its November meeting the Tin Committee decided to maintain the present production quota of 40 per cent., but not to renew the special 4 per cent. quota. Since these decisions had been anticipated by the market, their effect has been small. Meanwhile, a fresh speech against the restriction scheme by the chairman of Tekka, Ltd., has caused considerable interest amongst operators. According to the statistics of the International Tin Research and Development Council, although world production of motor cars increased by 38 per cent. during the year ended September 30th, tin consumption by this industry increased by only 31 per cent. over the same period. Similarly, although the world's output of tinplate was 7 per cent. higher during this period, only 5 per cent. more tin was used. This decline in tin consumption per unit of output in the two most important tin-consuming industries was doubtless due to the high price of this metal.

Uncertainty regarding the future of the Zinc Cartel continues to depress the lead and spelter markets. It has been rumoured that the attitude of the Australians would end the life of the cartel, but hitherto no meeting has been held; and in view of past history it would be unwise to express an opinion concerning the future of the cartel.

TIN.—Sales on the London Metal Exchange: 385 tons on Monday, against 250 tons last week; 350 tons on Tuesday, against 150 last week; 575 tons on Wednesday, against 250 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 51.25 cents a week ago and 51.15 cents a month ago. Wednesday's official closing quotation in London for standard cash was £229 15s. to £229 17s. 6d., compared with £228 10s. to £228 12s. 6d. last week.

COPPER.—Sales on the London Metal Exchange: 1,900 tons on Monday, against 1,225 tons last week; 1,151 tons on Tuesday, against 1,300 tons last week; 1,750 tons on Wednesday, against 3,400 tons last week. Domestic spot was quoted at 6.72½ cents per lb. in New York on Wednesday, against 6.72½ cents a week ago and 6.72½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 10s. to £27 11s. 3d., compared with £26 11s. 3d. to £26 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 38,927 tons, show an increase of 920 tons and stocks of rough copper, at 10,967 tons, an increase of 871 tons.

LEAD.—Sales on the London Metal Exchange: 250 tons on Monday, against 150 tons last week; 400 tons on Tuesday, against 1,000 tons last week; 950 tons on Wednesday, against 150 tons last week. The New York quotation on Wednesday was 3.50 cents per lb., against 3.50 cents a week ago and 3.70 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 15s. for shipment during the current month, compared with £10 8s. 9d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 175 tons on Monday, against 150 tons last week; 400 tons on Tuesday, against 50 last week; 550 tons on Wednesday, against 300 tons last week. Wednesday's quotation in East St. Louis was 3.70 cents per lb., against 3.70 cents the week before, and 3.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 18s. 9d. for shipment during the current month, against £11 16s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., as against £11 12s. 6d. to £11 15s. per flask of 76 lbs. last week. Foreign antimony was again quoted at £60 per ton. Chinese wolfram was quoted at 39s. to 41s. per unit c.i.f., as against 40s. to 42s. per unit c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. — There has been a tendency for raw cotton prices to harden. This has not been due to any particular change in the statistical position, but chiefly to a rather better trade demand and the relatively tight position in the futures market as a result of the difficulties experienced in importing from the United States. Egyptian cotton rates have also been stiffer on further reports of the material being of poor quality. A good demand continues to be experienced for Egyptian, Brazilian and Peruvian staples.

There has been no shortage of cloth inquiry and active negotiations have taken place between buyers and sellers. Mixed reports

THE BRITISH OVERSEAS BANK, LIMITED

ESTABLISHED 1919.

Report by the Board of Directors to the FIFTEENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33 GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on Tuesday, the ELEVENTH day of DECEMBER, 1934, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1934, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1934, amounts to £ 62,332 16 11
Balance available from last account £ 64,306 0 7
Making a total of £ 126,638 17 6

which has been appropriated as follows:—
In payment of a dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the year ended 31st October, 1934, which together with Income Tax thereon amounts to £ 60,000 0 0
Leaving a Net Balance to be carried forward next year of £ 66,638 17 6

It is with the deepest regret that the Directors record the death of the Right Honourable Viscount Churchill, G.C.V.O., which occurred early in January last. Viscount Churchill was associated with the Bank from 1919, the year of its foundation, first as Governor of the Council, and from 1924 as Chairman of the Board of Directors, which office he continued to hold up to the time of his death.

Mr. Arthur C. D. Gairdner has been appointed to succeed Viscount Churchill as Chairman of the Board, and, whilst relinquishing his office as Managing Director, he continues as before to devote his whole time to the affairs of the Bank. Mr. Nigel L. Campbell has been appointed to succeed Mr. Gairdner as Deputy-Chairman.

The Directors retiring by rotation are Sir James Caird, Bart., and Mr. Nigel L. Campbell, who, being eligible, offer themselves for re-election.

The Auditors, Messrs. George A. Touche & Company and Messrs. McClelland, Ker & Company, also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board,
A. E. THORNE, Secretary.

London, E.C., 29th November, 1934.

AUDITORS' REPORT TO THE MEMBERS.

We have examined the above Balance Sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange, and have verified the Securities. We have obtained all the information and explanations we have required, and are of the opinion that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

have been received as to the business done for India; some makers of the finer sorts in light bleaching materials have done better, chiefly for Calcutta and Karachi. Industrial activity in the Blackburn district is improving. A varied business has been put through for several minor outlets East and West, principally in cloths for printing and dyeing, and necessary purchasing has been reported in home trade goods, chiefly in dress materials and poplins. Some exporters have stated that they are finding more resistance from manufacturers against low offers.

There has been rather more demand for American yarns for home consumption, especially in medium numbers, and some spinners have sold a little more freely. In Egyptian qualities a rather larger turnover has occurred in fine counts, and prices have tended to harden. Many difficulties are being encountered in trading with Germany.

COTTON PRICES

	1934				Corresponding Date	
	Nov. 7	Nov. 14	Nov. 21	Nov. 28	1932	1933

AMERICAN COTTON SITUATION.—According to cables and letters from the Southern States of America a crisis is approaching in the cotton situation. The Government policy of offering loans against cotton to farmers of 12 cents per lb. has created a position which is considered very unsatisfactory. The relatively high price of the American staple has resulted in a marked falling-off in exports, and it is significant that so far this season exports have been only 1,811,000 bales as compared with 3,159,000 bales in the same period of last season. The growers themselves are not dissatisfied, since they are getting a good price for their cotton, but the business of merchants and factors has been vitally affected, and strong representations are being made for a change in Government policy.

Some official announcement is expected to be made in Washington at the end of this week with regard to the acreage plans for next season. It is rumoured that the area under cultivation will be about 32,000,000 acres against 27,000,000 acres for the current season. Under normal conditions the new crop should be between 12,000,000 and 13,000,000 bales, against about 9,750,000 bales for this season. The Commission appointed by President Roosevelt to inquire into the Government's policy recommends that all measures tending to restrict exports, including the cotton loan plan, should be abandoned at the earliest possible date. It is suggested in some quarters that growers should be paid a subsidy on domestically consumed cotton, but that foreign business should be done at the world price-level. There is undoubtedly increasing anxiety in the United States owing to the larger consumption of what are known as outside growths, particular reference being drawn to the bigger supplies of South American cotton, especially Brazilian. It is being urged in many quarters that the loss of export trade is very serious, and it is not likely that the Washington officials will be able to resist the pressure for some alteration in policy.

JUTE.—Dundee. — Fairly satisfactory conditions are prevailing in the jute industry. Spinners and manufacturers are comfortably placed with orders for delivery within the next two months and are adhering firmly to their prices, especially as raw jute quotations have recently displayed an upward tendency. Sellers of the fibre in Calcutta are very reserved and jute is being held up in anticipation of the Government of Bengal scheme for restriction of sowings next season. Though the restriction scheme will be on a voluntary basis, many influential heads of districts and officers are being enrolled to emphasise to the growers the necessity for smaller crops if higher prices are to be obtained.

It is interesting to note that the consumption of hessian cloth in the United States is gradually increasing; that for October was 53,000,000 yards, which is well above the monthly average for the year of 43,000,000 yards.

Prices of raw jute are gradually rising, and Calcutta goods are following suit, as a result of improved demand. Daisee-2/3 are now quoted at £14 10s. and fours at £13 10s. for the full group, December-January, while Tossa-2/3 has gradually advanced to £15 10s. and fours to £14 10s., same shipment. Good First Marks are usually quoted at £19 7s. 6d. and Lightnings at from £17 12s. 6d. Green Circle Ram being at £17 17s. 6d. and Heart Ram-D/E at £16 7s. 6d., December-January. Yarns are firm, but buyers

continue to show reluctance to operate for forward delivery. The lowest for common 8 lb. cops is 1s. 10d. and for 8 lb. spools 1s. 10 1/2 d., while twist rules firm at 3 1/2 d. to 3 3/4 d. for 3 ply 8 lb., sacking yarns at 2 1/2 d. for 24 lb. weight and 3d. for 8 lb. chains, with rove at £17 for 48 lb. and £14 for 200 lb., and the finer yarns continue unchanged at 2s. 4d. for third quality and 2s. 1d. for fourth. Carpet yarns enjoy a steady demand at from 2 1/2 d. to 2 3/4 d. for 14 lb. warp.

A moderate business is being done in jute cloth, but for delivery as early as can be given, with buyers still unwilling to purchase for forward despatch. Prices rule firm at from 2 1/2 d. for 10 1/2 oz. 40 in. and 2 3/4 d. for 8 oz., with 1/8 d. less possible for February-March. Linoleum hessians are firm, but again quiet, and heavy goods remain steady, though business is slow. For 10 oz. 40 in. Calcutta hessians 19s. 10d. is named for November-December, 19s. 8d. for January-March and 19s. 7d. for April-June, with 8 oz. at 15s. 10d., 15s. 9d. and 15s. 8d. respectively. Liverpool twills are quoted at 51s. and "B" twills at 45s. 9d., December to June.

GRAIN MARKETS

WHEAT.—Prices have been irregular during the past week but, on balance, have tended to a slightly higher level. Quotations both in this country and the United States are now generally above those of a week ago. Reports of rather unfavourable weather in Argentina had a steadying effect here, but exports from France are likely to continue. We discuss the results of the International Wheat Conference in a Note of the Week.

According to Mr G. Broomhall, total shipments during the past week were 1,289,000 quarters, against 1,298,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 99 1/2 cents per bushel, against 98 1/2 cents the week before and 95 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 3d. to 32s. 9d. per 496 lbs., against 31s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 28s. 9d. to 29s. 6d., against 27s. 9d. to 28s. 9d. Australian, ex ship, 25s. 6d., against 25s. a week ago.

FLOUR.—Trade has again been very quiet and prices show little change on the week. North American shipments were 72,000 sacks in the past week, as compared with 123,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 23s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 22s. 6d. as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 24s. 3d. to 26s. 3d.; Australian, ex store, 19s. to 20s., against 19s. 9d. to 20s.

BARLEY.—Imported feeding barley has been a rather better market this week, but the demand for English malting varieties continues poor. "December" futures were quoted at 54 cents per bushel in Winnipeg on Wednesday, against 52 1/2 cents last week and 50 1/2 cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 30s. to 50s., against 30s. to 50s. a week before.

OATS.—Demand on the whole continues fair, with quotations showing little change compared with those of a week ago. On Wednesday, "December" futures were quoted at 53 1/2 cents per bushel in Chicago, against 53 cents a week ago and 49 1/2 cents last month. Quotations in London, Wednesday: "River Plate," landed, not quoted; "Chilean White," landed, 23s. 9d., against 23s. 9d. a week earlier.

MAIZE.—Following a decline in quotations early in the week, the market reacted sharply and rates are now higher than those of a week ago. Supplies are rather short, but demand continues good. "December" futures were quoted on Wednesday at 90 cents per bushel in Chicago, against 84 1/2 cents a week ago and 75 1/2 cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. 3d. per 480 lbs., compared with 21s. last week; "Plate," ex ship, 21s. 3d., as against 20s.; "Plate," "November," 21s. 9d., as against 20s. 3d. Yellow maize meal, ex wharf, was quoted £6 to £6 2s. 6d. per ton, against £5 15s. to £5 17s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to November 24	Cwts. 77,941	Cwts. 302,111	Cwts. 283,375	Cwts. 307,279
13 weeks to November 24	975,372	3,463,352	4,366,846	5,765,100
Average price of English wheat per cwt.	s. d. 6 9	s. d. 5 5	s. d. 4 7	s. d. 4 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 22, 1930	Cwts. 145,502	Cwts. 470,212	Cwts. 45,088	s. d. 6 7	s. d. 9 4	s. d. 5 10
Nov. 21, 1931	73,670	501,688	65,803	6 10	9 1	7 0
Nov. 26, 1932	302,111	427,915	47,352	5 5	7 2	5 10
Nov. 25, 1933	283,375	367,848	47,957	4 7	9 2	5 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Nov. 29, 1933	Jan. 3, 1934	Nov. 21, 1934	Nov. 28, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	60½	65½	77½	78½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	65½	46½	83½	84½	98½	99½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 125,137,000 bushels shows an increase of 1,394,000 bushels on the week. Supplies a year ago amounted to 117,077,000 bushels.

OTHER FOODS

SUGAR.—New York prices, both spot and forward, have further advanced on fairly heavy buying this week. London prices have been firm, though supplies on offer have been limited and trade rather quiet. The spot price in New York on Wednesday was 3.085 cents per lb., as compared with 3.00 cents per lb. last week and 2.82 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery," at 4s. 3½d., against 4s. 1½d. to 4s. 2½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
	Tons	Tons	Tons	Tons	Tons	Tons
London	776	141	1,424	1,322	17,615	17,499
Liverpool ...	15,020	33,674	14,542	13,365	127,117	108,401
Total tons	15,796	33,815	15,966	14,687	144,732	125,900

Last week 32,946 25,851 15,626 14,750 144,902 106,772

COFFEE.—The New York market has again ruled quietly steady and on Wednesday Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. Trade in London has also been quiet and quotations remain practically unchanged. Last week's movements of coffee in London were as follows: Brazilian, landed, 255 bags; delivered for home consumption, 49 bags; exported, 120 bags; stocks, 28,459 bags, against 26,409 bags a year ago. Central American, landed, nil; delivered, for home consumption, 1,629 packages; exported, 791 packages; stocks, 76,523 packages, against 64,979 packages last year. Other kinds: Landed, 1,541 packages; delivered, for home consumption, 2,145 packages; exported, 524 packages; stocks, 71,332 packages, against 99,163 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 20s. 3d. per 50 kilos, c.i.f. Continent, as against 19s. 9d. to 20s. 3d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 448 bags; delivered, for home consumption, 4,859 bags; exported, 782 bags; stocks, 141,397 bags, against 112,210 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,475 packages of Indian and 19,625 packages of Ceylon tea. Competition for the Indian grades was not quite so keen and prices were barely steady. Quotations for the Ceylon varieties were rather irregular, but export demand showed some improvement. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

	AVERAGE PRICE PER LB.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA LIMITED

NOTICE IS HEREBY GIVEN that the Ordinary General Meeting of THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA LIMITED will be held at RIVER PLATE HOUSE, FINSBURY CIRCUS, LONDON, E.C.2, on TUESDAY, the 4th day of DECEMBER, 1934, at 12 noon, for the purposes following, namely:—
To receive and consider the Annual Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors for the year ended 30th June, 1934; to confirm the dividends paid on the First and Second Preference Shares, and the Interim Dividend paid on the Ordinary Shares; to sanction the declaration of a final dividend on the Ordinary Shares; to elect Directors and other Officers and to transact the other ordinary business of the Company. Dated this 24th day of November, 1934.

BY ORDER OF THE BOARD,
J. BRADSHAW,
Secretary.
49, Moorgate,
London, E.C.2.

A BINDING CASE for The Economist Obtainable from The Publisher Price 5/-

most sorts remains steady, with dry Capes quoted at 6½d. and 5½d. for firsts and seconds and 5½d. and 4½d. for drysalts.

Turnover in the leather market generally has shown improvement. Sales of English and wetsaltd bends have been taken up with a fair amount of freedom and there has also been some good business put through on account of light weight dry hide bends, and pinned bellies. Medium weight bends have been asked for, but the inquiry for these has not been very active. In the upper leather section, demand is chiefly for box and willow calf and side leather, but there has been a fair amount of trade done in black and coloured kid. Suedes and reptiles have found buyers for limited quantities, but it cannot be said that the turnover of patent leather has registered any expansion.

REPORT BY THE COURT OF DIRECTORS OF

The ROYAL BANK of SCOTLAND

To the ANNUAL GENERAL COURT OF PROPRIETORS, on Wednesday, 28th November, 1934

The Directors now submit to the Proprietors the annexed Abstract Statement of the Affairs of the Bank at the Second Saturday of October, 1934, with relative Profit and Loss Account, certified by the Auditors.

The net profits of the year, after providing for all bad and doubtful debts, amounted to	£621,426 16 4
The Midsummer Dividend, at the rate of 17 per cent. per annum, required	£321,316 6 5
Less Income Tax	72,296 3 5
It is now proposed to pay a Dividend at Christmas at the rate of 17 per cent. per annum, which will require	£321,316 6 5
Less Income Tax	72,296 3 5
There has been written off expenditure on Bank Buildings and Heritable Property	249,020 3 0
Carried to Pension Reserve Fund	25,000 0 0
And to Inner Reserves against Contingencies the Balance of	30,000 0 0
	68,386 10 4
	£621,426 16 4

All the Bank's Investments are valued in the annexed State of Affairs at or under the prices ruling at the date of the Balance. In virtue of the powers conferred upon them by The Royal Bank of Scotland Act, 1873, the Directors elected The Right Hon. The Earl of Iveagh, C.B., C.M.G., D.L., as an Extraordinary Director.

The Governor, the Deputy-Governor, the Extraordinary Directors, and the Senior Ordinary Director (Sir Thomas Dunlop, Baronet) all retire at this time, and are eligible for re-election.

Auditors also fall to be appointed for the ensuing year, and Mr. J. Maxtone Graham, C.A., and Mr. George James Gregor, C.A., offer themselves for re-election.

By Order of the Court of Directors,
WILLIAM WHYTE,
Cashier and General Manager.

ABSTRACT STATE OF AFFAIRS, at 13th October, 1934.

LIABILITIES.	
1. Deposits with accrued Interest and other Credit Balances	£58,944,630 7 3

" Dividend to be paid at Christmas, less Income Tax	249,020 3 0		
" Inner Reserves against Contingencies	68,386 10 4		
" Balance, being free Rest or undivided Profits, carried forward	3,780,926 6 6		
	£4,402,353 2 10		£4,402,353 2 10

D. SPEED, Chief Accountant.

AUDITORS' REPORT

As Auditors appointed by the Proprietors of THE ROYAL BANK OF SCOTLAND, we have checked the Cash on hand at Head Office, Glasgow and London (City Office), the other Assets and of the Liabilities set forth in the foregoing Abstract State of Affairs; and we now certify that in our opinion said Abstract State is a full and fair Balance Sheet, properly drawn up, and exhibits a true and correct view of the state of the Bank's Affairs, as shown by the books, at 13th October, 1934.

EDINBURGH, 12th November, 1934.

J. MAXTONE GRAHAM, C.A., Auditor.
GEO. JAMES GREGOR, C.A., Auditor.

A RIFT IN THE CLOUDS

A WEEK or two ago it looked as if very little headway was being made in dissipating the tense and restless state of Europe. M. Barthou's project for an Eastern Locarno Pact had fallen into abeyance; the Saar plebiscite looming ahead was fraught with ominous possibilities, while speeches by Cabinet Ministers in this country seemed to suggest that His Majesty's Government, baffled by the difficulties of the international situation, might turn their back on the international obligations which this country had assumed and seek a precarious peace behind increased defences. The clouds were heavy overhead and the statesmen looking round for whatever shelter they could find.

This week we welcome definite signs of a change for the better. So far as Germany is concerned the appeal for a new effort at reconciliation implied in the speeches of Mr Baldwin and Sir John Simon in the House of Commons last week has apparently not fallen on deaf ears. The interplay of the various forces within the Nazi ranks is still obscure, but it is fairly clear that internal stresses have recently reached an acute phase and that the extremist elements of Nazism are no longer in favour with the authorities. The visit of Herr Hitler's special emissary, Herr Ribbentrop, to England and France, did not, it is true, lead to any definite result, except the not very practical proposition that the way to Franco-German reconciliation lies in a fraternisation between French and German ex-service men. But deeds speak louder than words, and the German Government's action in the last few days is definite evidence of an increasing spirit of accommodation.

France, in the person of her new Foreign Minister, M. Laval, has also made her contribution towards an easier state of things. Although M. Laval insists that Germany must return to the League as a condition of an agreement on armaments, he has shown a definite appreciation of the need for an understanding. On the question of the Saar, for example, he did something to ease the situation when he declared last Saturday, in answer to a Parliamentary question, that if the plebiscite results in a vote for the *status quo*, "the Saarlanders could always afterwards appeal to the League for the return of the territory to Germany," and that "France would not be opposed to this." This answer has the merit of encouraging the Saarlanders to express

their wishes freely, by assuring both them and their compatriots in the Reich that France does not intend to exploit German party strife to prolong the separation of the Saar for a moment longer than the inhabitants themselves desire.

These signs of a more understanding attitude on both sides have taken practical shape in two notable achievements this week. The first of these, for which the French and German Governments deserve much credit, was the signature on Monday of a Franco-German agreement—negotiated at Rome under the auspices of the Saar Plebiscite Committee of Three under Baron Aloisi—which regulates the principal political, financial and economic questions that will arise between France and Germany if the Saar reverts to Germany as a result of the plebiscite. In that event France is to receive 900 million French francs in settlement of her claims for the Saar mines, which will then be returnable to Germany, and for all other French State claims in this territory. This sum, which clearly could not be transferred by the hampered and almost non-existent procedure of the foreign exchange market, is to be paid for partly by the return of French bank notes circulating in the Saar—which will release to the French Government the gold or other security now held as backing to the issue—and partly by free deliveries of coal to France over five years. In addition there is a special arrangement about two pits which are entered from French territory, though the seams lie under the Saar territory.

On the political side, there are to be considerable extensions of the guarantees with regard to the treatment of the population of the territory, which the German Government gave in the agreement of last June. The guarantees already given to the voters are to be extended to the non-voting population: no measures are to be taken against any inhabitants of the territory, on account of their religion, race or language, for a specified though limited period; individuals will be perfectly free to leave the territory and all the rights acquired by the inhabitants in regard to social insurance and such like benefits are to be respected.

The second event which may well prove of very great significance in the whole field of international relations occurred on Wednesday at Geneva. It will be recalled

that last September M. Barthou stated that France considered herself under a special obligation to ensure order and to prevent undue pressure while the plebiscite is being taken, and that she would not shirk this responsibility, though she hoped that other countries would share it with her. A month ago Sir John Simon told the House of Commons that "there never has been any question of the use of British troops in the Saar, and nothing of the sort is contemplated." The conclusion generally drawn at the time was that the British Government, influenced by that current of opinion which loudly demands that we should keep clear of the troubles of Europe, was unwilling to accept any responsibility in this matter. But the movement of French troops towards the frontier roused responsible politicians at once to the dangerous possibilities of such action by a party interested in the result of the plebiscite. At the League Council, this week, M. Laval urged that if action was necessary responsibility for it should be assumed by the Council and not by France, and that if this were done France was willing to stand aside entirely and leave the task to "neutrals." To the surprise of public opinion throughout the world, Mr Eden, for the British Government, responded by saying that if the Council thought that an international military force was necessary as a standby to support the Saar police in case of emergency, Britain would be willing to respond by sending her appropriate quota of troops. This offer was subject to the very proper condition that other countries conveniently situated for the purpose should also be prepared to make a contribution, and that France and Germany assented to the arrangement. This assent has since officially been given.

The lead given by Mr. Eden was promptly followed by representatives of Italy, Russia and Czechoslovakia; and the Committee of Three, which had already effectively discussed the economic questions involved, has been asked to make definite proposals before the end of the Council session for the organisation of an international police force to be placed at Mr Knox's disposition.

The action of His Majesty's Government in response to M. Laval's gesture has created a change of the first importance in the international situation. Mr Knox, who is in the best position to express an opinion, told the Council that while the Governing Commission could not be sure of maintaining order in present circumstances, he was certain that if an international police force were provided order would be preserved and the plebiscite and the difficult period to follow would pass off peacefully. In other words, this action will carry us safely over a critical danger point. But the incident does not end here. If the steps now taken enable us successfully to pass this particular crisis—which Herr Hitler has described again and again as the outstanding issue between France and Germany—it will be the first specific proof for several years past of what may be achieved in solving difficult international problems if good will is present and if all nations who are parties to a collective system show themselves ready to accept their share of the obligation to ensure peace.

Thus the situation is promising; and as it is the first step that counts, we may begin to hope that the larger problem that Mr Baldwin was examining in the House a week ago—namely, the reopening of disarmament negotiations—may shortly be taken up afresh. If this hope is realised, it may yet prove that, in spite of threatening storms in Far-Eastern seas, the year 1934 has seen the worst of the political depression, as 1932 marked the bottom of the economic one.

But we have learned by bitter experience that a slight break in the clouds does not always portend fairer weather. Much yet remains to be done. M. Laval, on whom the mantle of M. Briand has fallen, has an especial responsibility and a great opportunity. We, too, in this country, must not desist from continuous efforts. But if after long travail the world is to emerge intact into the calm atmosphere of an assured peace, Germany's contribution is the most vital one of all. For Germany has not only to moderate her claim to guns and shells and personnel—as she has shown herself not unwilling to do—her rulers must also take steps to exorcise belief in the philosophy of might which is being instilled in the minds of her young people. If such doctrines grow unchecked, conventions and agreements will ultimately avail nothing. Germany's former enemies must offer her real equality in security. Her own response must be the offer of the will to peace.

THE TRAMP SHIPPING SUBSIDY

THE President of the Board of Trade announced last July that the Government would support a scheme to subsidise tramp shipping. Legislation was to await satisfactory proposals from the shipowners which would prevent dissipation of the subsidy by domestic competition between British ships and would ensure that British shipping should benefit at the expense of foreign subsidised shipping. The shipowners have now made their proposals, the Government has accepted them, and a Financial Resolution embodying the scheme was passed on Tuesday.

According to the White Paper issued in explanation of the scheme, the subsidy is to be for one year and is not to exceed £2,000,000 in amount. The sum to be distributed will be reduced below this maximum on a sliding scale according as average freight rates for the subsidy year rise above 92 per cent. of the 1929 average. The scheme is to apply only to ships other than tankers, passenger ships and ships with a substantial amount of refrigerated cargo space, and only when all cargo is carried on charter-party terms. Shipowners must register all eligible ships with the proposed Tramp Shipping Subsidy Committee, and must make a claim for subsidy with regard to eligible voyages by eligible ships within 21 days of the completion of the voyage. Subsidy will be paid in proportion to the number of "ton-days," calculated as the product of the gross register tons and the duration of the voyage. Quarterly interim payments of subsidy will be made, and the basis of distribution between owners will be the total ton-days credited to each owner during the quarter. If necessary, an adjustment will be made in the last quarter to ensure that total payments are in proportion to the total ton-days for the year.

So far the White Paper presents a rather complicated method of calculating and paying a subsidy which is designed, one might suppose from Mr Runciman's statement, to secure greater employment of British tramp shipping at the expense of foreign. But a later paragraph contains provisions which appear flatly to contradict this supposition, for it is laid down that if an "undue" number of ships which had been laid up are brought out for trading (and the natural result of the subsidy will be to bring them out), the sums payable may be adjusted so that owners shall not receive more than they would have done had they been trading only the proportion of their eligible tonnage recommended by the Committee. It will be observed that the result of the scheme entirely depends upon the way this paragraph is administered. The effect of the subsidy would normally be to increase the tonnage of British shipping able to make effective competition with foreign shipping, and this might in turn lead to lower freight rates and an automatic increase in the subsidy until it reaches its maximum with freights for the year at 92 per cent. of the 1929 average. In such circumstances will the "limitation" clause be so administered as to prevent the fall in freights and the increase of subsidy by restricting the number of ships at sea? If on the other hand freight rates are already at 92 per cent. or less of the 1929 average, nothing can be saved to the Government by a policy of limitation. It may be assumed, however, that it will still be enforced in the hope of averting a further fall of freights.

But whatever the motive for, or the degree of, limitation the method of application will depend upon the interpretation of the phrase "owners should not receive more . . . than they would have received." This can only mean that "no individual owner shall receive more . . . than he would have received," i.e. the paragraph appears to give the Committee the power, through its ability to withhold the subsidy, to maintain the proportions in which the total ton-days of business are at present divided among the shipowners. If all shipowners were to expand their ton-days at the same rate each would receive the same proportion of the total subsidy as before. But if one shipowner puts more ships to sea the Committee may decide that an undue increase in trading tonnage has occurred and refuse the increased subsidy which would otherwise fall to this shipowner. In other words, this paragraph gives the Subsidy Committee the power to fix quotas for individual shipowners, and is designed to prevent any effective increase in the employment of British shipping.

In return for the subsidy the industry was required to organise itself so that the subsidy should not be dissipated by domestic competition. Accordingly it proposes a Tramp Shipping Administrative Committee whose duties are to develop a "united front against any possible combined operations of shippers to depress freights below an economic level," to promote co-operation between tramp and cargo liner owners, and to co-operate with international shipowners' organisations. The Administrative Committee is to recommend such conditions of charter as in their discretion they may think fit, and the offer of more favourable terms would presumably be punished by the partial withholding of subsidy in the manner described above.

It is clear that if none of the subsidy is dissipated—that is, passed on to the shipper by means of lower freight rates—there will be no increase in the employment of tramp shipping. The shipowners cannot both keep the subsidy and increase employment of their ships, and as the scheme is propounded in the White Paper the shipowners seem to be concerned mainly with keeping the subsidy. Apparently employment of British shipping will only be increased if a satisfactory agreement can be reached at the proposed International Shipping Conference at Berlin next year.

The subsidy proposals for tramp shipping have been opposed by the cargo liner owners; but the scheme proposes to bring them into consultation, and they are likely to withdraw their opposition if they have effective representation on the Committee which is to decide charter conditions. Apparently a further subsidy of £500,000 for cargo liner owners was considered, on the ground that this would restore the *status quo* between liners and tramps, but the scheme was abandoned.

The Financial Resolution retains the "Scrap and Rebuild" proposals of the President of the Board of Trade, but the original scheme has been modified so that only two tons have to be scrapped for every ton of new shipping built, and only one ton for every ton of existing shipping modernised. A main objection of the shipowners to the original scheme was that the reduction of recent years in world tonnage was largely at the expense of British ships, and that the "scrap and rebuild" method would still further reduce the proportion of British shipping. In order to prevent this development, owners are now allowed to purchase and scrap foreign ships in order to qualify for rebuilding loans. This scheme is to be brought into operation at a date to be fixed by the Board of Trade after the necessary legislation has been passed, but no loan is to be made after two years from the date on which the legislation is passed. Loans are not to exceed £10 millions.

The subsidy to British tramp shipping will have been justified if it is instrumental in getting rid of the whole regime of shipping subsidies. It may have that effect, but "a hair of the dog that bit him" is of as doubtful efficacy for economic madness as for rabies. In the meantime the British subsidy is not merely a defensive measure against foreign subsidies but an offensive measure against foreign unsubsidised shipping. The unsubsidising nations, particularly the Scandinavians, are keenly alive to the position, but there is little sign as yet of a changed attitude among the subsidising countries. The voice of economic sanity in international affairs has been heard more frequently of late in the United States, but its influence in official quarters has yet to be proved. Whether the effect of the British subsidy in inducing the subsidising nations to recant will be swifter and surer than its effects in forcing those who are not at present subsidising to follow suit remains to be seen. But there are obvious grounds for doubting whether this is the best way to assist shipowners.

British shipping can only regain prosperity through a revival of international trade. It is an interesting point that the development of tariffs and economic nationalism has in some cases increased the distance over which certain commodities have to be carried by ships, and to this extent shipping has been less depressed than might have been expected. But this influence is very small, and shipping as an industry very properly prays for a return of economic internationalism. Perhaps even the prophets of self-sufficiency can see the absurdity of granting a subsidy to, say, beet sugar, and then having to grant a further subsidy to the industries damaged by the first! If we proceed much farther in this fashion we shall soon have everyone subsidised against everyone else.

The Hall-mark of INSURANCE SECURITY

7 Chancery Lane, London

THE AUSTRIAN CONVERSION

AFTER the war, no country's claim for international assistance to achieve economic stability was more urgent than that of Austria. Her people were reduced to conditions of starvation and misery far worse than those in Germany; her territory, sources and markets were lopped away, and her entire economic and social structure was turned topsy-turvy.

In 1923, after a thoroughgoing examination by the League's financial experts, the League of Nations Loan for Austria was issued, with the guarantee of eight States. The loan was issued in ten markets at 6, 6½ and 7 per cent. nominal interest, but at prices which gave a yield of 8 per cent. and more. In those unsettled times, Olympian interest rates were the order of the day. Even then, however, economic advisers foresaw the possibility that interest rates would descend towards Avernus; and the Austrian Government in 1923 reserved the right, which the eight guarantor States could call upon them to exercise, to redeem the loan by giving due notice on any dividend date after ten years. But no one envisaged a period of virtually unutilised cheap money in all important centres within ten years, coupled with currency chaos, political instability as great as, if not greater than, in 1923, and the stabilisation of world trade at levels lower than the immediate post-war maximum. These conditions of general economic depression forced upon Austria the need for a new equilibrium at which her economic activity could maintain the value of her depreciated currency. Since May, 1931, when the Austrian Credit Anstalt crash ushered the financial crisis into Europe, this new equilibrium has been broadly attained; and in 1933 Austria was able to fund her short-term indebtedness, necessitated mainly by the 1931 crash, in the International Guaranteed Loan of that year. Since then, her public expenditure has been reduced more than her revenues; savings deposits have increased; and her foreign trade has more nearly approached equilibrium than for many years.

In these circumstances, the Austrian Government might well turn its attention to the lowering of the services on its external public debt. Moreover, in September this year the Finance Committee of the League of Nations recorded that they were impressed by the power of recovery shown by Austria in the crisis, and they put up a trial balloon for the conversion of the 1923 League Loan. "A conversion of the loan," they said, "would be consistent with the original expectations when the 1923 loan was issued and the general trend of current conditions where debtors have maintained their solvency . . ." The Austrian Government therefore approached the eight States-guarantors of the 1923 loan, who signified their willingness to take the necessary legislative and administrative measures to renew their guarantees. It was found possible to arrange an international loan in eight markets to the total of some £20 millions, and on terms which represented a substantial reduction from those paid in 1923. On December 1st, therefore, the Austrian Government gave the necessary notice

of redemption of the 1923 loan, and on Wednesday of this week the terms of the conversion operation were made known.

An issue of £10,163,900 in £4 10s. per cent. guaranteed sterling bonds, dated 1934-59, was offered at a price of 98½ in London on Thursday. This sterling issue includes provision to take over half the outstanding amount of the American *tranche* of the 1923 loan. Other issues are being made in other centres, as noted below. The net proceeds of the whole loan will be used to redeem, on June 1st next, the outstanding bonds of the 1923 League Loan, in their entirety. Thus no new money will be at the disposal of the Austrian Government. The annual service of the new issue will amount to £1,500,000 when the sinking fund allocations begin in three years' time, as against the annual service of £3,000,000 on the 1923-43 loan. This saving is facilitated by the fact that only nine years remain of the old loan's currency, whereas the new loan has a possible twenty-two years in which to accumulate a sinking fund, though the Austrian Government can repay the loan any time in the last ten years. Holders of the old loan who convert will receive preferential treatment, and can notify their acceptance of the conversion terms up to December 19th. Subscribers need only pay 5 per cent. in cash on application, 18½ per cent. on January 3, 1935, and 75 per cent. as far ahead as April 25th next. The services of the new loan are not only adequately covered by gross revenues and receipts of the Austrian Customs and the tobacco monopoly, but are guaranteed as to 24½ per cent. each by Britain, France and Czechoslovakia, as to 20½ per cent. by Italy, as to 2 per cent. each by Belgium and Sweden, and as to 1 per cent. each by Denmark and Holland—all original guarantors. These proportionate guarantees are less onerous than those on the old 1923 loan, by reason of the reduction effected by the new Conversion Loan in the annual service of Austria's external public debt. Moreover, the services of the 1933 International Guaranteed Loan, and of all other Austrian loans ranking after these two, are thereby given a greater measure of security.

The new loan is issued at a rate of 4½ per cent. at 98½ in London; in Sweden and Italy it is 4½ per cent. at 95; in Holland 4½ per cent. at 89; in Switzerland and Belgium 5 per cent. at 94½; and in Austria, Czechoslovakia and France 5 per cent. at 87. These differences of rates for the same guaranteed security naturally reflect local market conditions, but they are significant, none the less. Some surprise has been expressed that the British share should have been increased by half the *tranche* of the 1923 loan issued in the United States, but recent legislation in America and the state of investment opinion there ruled out the possibility of American participation from the start. Actually, Austria herself is taking over the other half of the 1923 American *tranche*; and both this, and Austria's share in the new loan, will be denominated in schillings instead of in American dollars, as in 1923. The total amount of the 1923 American *tranche* outstanding on December 1st this year was only \$14,534,500.

Austria's gain from the new loan, however, is greatest by reason of the credit-standing of her guarantors. And if we "weight" the Government credit of each guarantor State by its percentage guarantee of the new Austrian loan, the £4 11s. 4d. per cent. flat yield and £4 12s. 1d. per cent. yield to redemption, which Austria is now paying, compare very favourably with the weighted average flat yield of £5 2s. per cent. obtainable from the guarantor Governments' securities. Austria has deserved well of her creditors; and if the present loan is a success, she will have done very well indeed.

In conclusion, there are three broader implications of this conversion operation which should be borne in mind. First, it is true that the Government of Austria is buttressed by supporters whose political principles would not command the respect or sympathy of most Englishmen, and also that it is so buttressed by methods repugnant to a true democracy; but to refuse to accord Austria financial assistance in recognition of her improved economic status on these political prepossessions would be to choose the worse of two evils. For Austria must be given at least the opportunity for further economic improvement, or she will be driven, by internal violence or despair, into the arms of Nazi Germany; and then her capacity, either to

pay or to co-operate internationally, would in all probability be severely circumscribed if not altogether destroyed. Secondly, our own increased participation in the new loan increases our influence with Austria and our interest in giving her counsel. In the past, Austrian Governments have been very sensitive both to British public opinion and to considerations urged upon them from this country. It may well be that this is the best way to help the cause of democracy in Central Europe, after all. Lastly, the present conversion operation is a considerable step toward a general lowering of interest rates, from which, almost alone at the moment, the world has much to hope. On all these grounds the new Austrian issue should be welcomed.

HOUSING AND BUILDING

If there is any economic problem for which the conception of "planning" in the broadest sense is appropriate, it is housing. For we are all agreed, in this case, about our ultimate object—the proper housing of the whole population at the lowest possible cost to the Exchequer. The new Report, "Housing England," issued by the group known as Political and Economic Planning, is consequently most opportune and valuable.* The Report contains a full statistical analysis of every phase of the housing problem, as well as detailed recommendations for action. It deserves high praise and wide study.

The Report starts from the indisputable premise that unrelated slum-clearance, private enterprise and assisted municipal building are not enough. It may be that, by paying a sufficiently high subsidy to enable local authorities to remedy overcrowding, enough workers' houses might be built some day—at a cost. By proper organisation and rationalisation, however, of the entire processes of housing and building—which, as the Report points out, are separate—the cost and the time could be enormously reduced. In reality, the Report argues, there are three housing problems. The first is a housing problem proper, a problem of bricks and mortar: how many houses are needed in order to house the workers at a satisfactory standard of accommodation? The second is a rent problem: how can we secure that workers' housing is, so far as possible, economically self-supporting? The third is that of "rent-paying capacity," which is not strictly a housing problem at all, but a general problem of poverty.

In answering the purely statistical question—how many houses are needed?—the Report surveys the principal estimates hitherto made, including our own published on March 31st last; and reaches the conclusion that a total of between 1,150,000 and 1,255,000 houses represents the minimum requirement for the years 1934 to 1941, if proper allowance is to be made for overcrowding, replacement, and the probable increase in families. The rate of about 170,000 houses a year implied in this total compares with our own lower limit of 165,000. In our opinion the estimate in the Report does not make nearly enough provision for necessary obsolescence and replacement. The allowance is 50,000 houses per annum, *inclusive of slum clearance*. But, according to Sir Raymond Unwin, the annual rate of replacement in the past decade—admittedly far less than adequate—has been 25,000 per annum. But the Report's estimate is a minimum, and its authors would probably agree with us that much more than the minimum must be built if anything approaching a proper standard of housing is to be attained.

It is evident (the Report points out) that nothing less than the erection of 1,000,000 houses during the next seven years would meet the situation, and then only if they were all built to let at rents averaging not more than 10s. to 11s. per week. There should be no danger of exceeding either the needs or the potential demand if the rate of building amounted to 200,000 annually, provided that at least half were built to let at rents averaging 10s. per week, and not less than 50,000 dwellings were destroyed annually.

What reduction of building costs is possible, and how is it to be achieved? Perhaps the most striking, and the least generally recognised, point which the Report brings

* "Housing England." Report by P. E. P., 16, Queen Anne's Gate, S.W. 1. 152 pages. 5s. net.

out is the extent to which local rates are a cost, or rather a tax, on working-class housing. Every working man, employed or unemployed, pays rates, generally compounded in his rent. And a rate of 10s. in the pound on a house of a rateable value of £13 means an addition of 2s. 6d. a week to the rent. The amount which the lower-paid worker can afford to pay in rent is consequently reduced from, say, 11s. to 8s. 6d.—a crucial difference. On this subject the Report is justifiably outspoken:—

Two to three shillings per week is probably the most frequent figure [for rates paid by workers] and this means a tax of from 3 to 7½ per cent. of income for a family living on, say, 40s. to 60s. a week. In extreme cases the percentage may be well over 10 per cent. . . . The general effect of rates may be compared with that of the notorious window tax. The case for this imposition is all the weaker because rates go largely to the support of social services, which are predominantly for the benefit of lower-paid workers. . . . A complete overhaul of rates is no doubt desirable, but obviously nothing so large is likely to be undertaken for many years. . . . The fact that piecemeal action is perfectly feasible is shown by the derating of agriculture (wholly) and of industry and freight transport (partly) achieved through the Local Government Act, 1929, and other measures. If special relief can be arranged for "deserving" industries (including brewing) surely special relief can be arranged for "deserving" people.

The Report consequently suggests a 75 per cent. derating of working-class houses on the ground that "this would probably make the proportion of income paid in rates by the lowest-paid classes more or less comparable to the proportion paid by the richer classes." Clearly, the question is a wide one, wider even than housing. But the Report makes out a case for *ad hoc* action, which should receive very careful consideration.

No less important as a charge on the rent-payer is the rate of interest. The weekly charge on a capital sum of £300, without amortisation, is 3s. 6d. at 3 per cent. and 5s. 9d. at 5 per cent.—a very substantial portion of the rent of a working-class house. Speculative building naturally requires a large speculator's profit. But even the building societies, the Report maintains, cannot give much further assistance towards cheap finance.

The present lowered rates of advance under the 1933 Act amount to 4½ per cent. for London and the South, and 4 per cent. elsewhere, but the limitation of the life of the mortgage to 30 years brings total loan charges up to about 6½ and 6 per cent. . . . No definite lowering of the cost of houses, as judged by inclusive rentals, provided through building society finance, can be looked for in the immediate future.

The Report considers the proposal for a big Government guaranteed housing loan at 3 per cent. It is inclined to decide against this proposal for no very discernible reason, and suggests instead that a private organisation might, with the Government's "goodwill," raise capital at least at 3½ per cent.

Actual building costs, present and possible, are exhaustively analysed by the Report. In the first place, it is pointed out that the whole building industry is riddled with anachronisms, anomalies and confusions. A vast number of obsolete State and municipal regulations remain in force. These, the Report urges, should be made scientific and up-to-date; and minimum standards and designs for houses and a licensed period of life should be made universal. All this requires a central, or at least large-scale, building organisation. Such an organisation would also be able to attack the problem of the high cost of raw materials. At present the cost of bricks is kept artificially high by the large number of small firms existing in the industry and the wide fluctuations of output now prevailing. Some amalgamation and a steady output would, in the Report's estimation, substantially reduce costs. The cement industry, on the other hand, is fairly thoroughly rationalised, but it has developed a monopolistic price-fixing tendency which is equally injurious to the public. An agreement among all producers in the industry was concluded in June, 1934; and the first effect of the new agreement has been the raising of prices in all districts, in certain cases by as much as 20 per cent. "Compared with industrial companies in general," the Report observes, "it cannot be said that the cement industry has been unremunerative throughout the

depression." Thirdly, timber prices have been artificially raised by the Government's action in limiting Russian timber imports in the supposed interests of Canadian producers. Under Canadian pressure imports from Russia, which was up to 1933 our principal source of supply, have been cut down by political action, as a result of which we now get about 20 per cent. less timber from the Russians and pay about 17 per cent. more for it.

The Report's final estimate of "the minimum cost for a minimum house in present conditions" shows that an inclusive weekly rent (including rates) of 11s. 8d. is the lowest that can now be hoped for. "Taking account of immediately possible savings," including rates and interest at 3½ per cent., it is calculated that a rent of 10s. 1½d. could be achieved. If the Report's estimates and calculations are accepted, it is clear that the accomplishment of the suggested economies, together with a 75 per cent. de-rating of workers' houses, would solve the housing problem entirely.

In recommending the practical machinery necessary to secure the desired economies, the Report seems to falter somewhat in following out the logical conclusions of its own arguments. It recognises the need for centralisation on technical, economic and social grounds, but it rejects the proposal for a public housing authority with monopoly powers, just as it rejects the idea of a Government-guaranteed loan, for no very apparent reason. Instead, it suggests the foundation of two ordinary limited liability companies—a building company and a housing company—the first to build houses and the second to plan, own and manage them. These companies would compete with ordinary private enterprise and operate on a profit-earning basis. It may be that the authors of the Report are right in wishing to start with this comparatively unambitious plan. Whatever the final verdict on the plan, however, there is no question that the Report itself is a singularly thorough, competent and valuable document.

MR BENNETT'S CHANCES

(BY OUR OTTAWA CORRESPONDENT)

POLITICAL events in Canada have now reached a very interesting stage. The coming session, which will open in January, is the last of the present Federal Parliament, and, if the Bennett Ministry can struggle through it, will be followed sometime in the summer of 1935 by a general election. During the past year the fortunes of the Conservative Party, which has been in power since July, 1930, have gone from bad to worse. The Conservatives have lost one Federal by-election after another, some of them in what were counted impregnable strongholds of Conservatism. They have also forfeited control of a series

of Provincial Administrations, until only those of the two smallest of the nine Provinces are left in their hands.

It is now plain that the Party is being rent by a serious dispute over the recent resignation of Mr Stevens, the Minister of Trade and Commerce. Outside Montreal and Toronto, where the Conservative papers argued that Mr Bennett was well rid of a troublesome radical colleague, most of the Conservative Press backed Mr Stevens; and some papers, e.g. the *Winnipeg Tribune*, actually asserted that he had been driven out of the Cabinet by reactionary colleagues, acting under the orders of big business interests which his activities had exasperated. Again, several Conservative members and local party leaders have proclaimed their sympathy with Mr Stevens, and by implication condemned the structure of the Cabinet. Moreover, he has become a political hero in the eyes of the independent retail merchants of the country, who regard him as their valiant champion against the oppressive competition of the departmental and chain store organisations, and their various associations have ranged themselves behind him. Even the Retail Merchants' Association of Calgary, Mr Bennett's home town, has passed a resolution describing Mr Stevens' resignation as a "national calamity." He has been deluged with invitations to speak, for public opinion has been stirred by the disclosures about low wages and industrial conditions, and in some addresses after his resignation he has repeated in even stronger terms his indictment of "big business" and its ways. As a private member of the Royal Commission on "price spreads," etc., he is still indefatigably turning the searchlight of publicity upon existing business methods.

Clearly Mr Stevens, though deprived of Ministerial authority, has a substantial following in the country and is in a position to make trouble for his late colleagues. Not a few Conservative members feel that the circumstances surrounding Mr Stevens' resignation have fatally handicapped their Party for the general election, because its opponents will charge it with subservience to "big business," and if an opportunity of escaping this odium by a Parliamentary revolt presented itself these members would welcome it. Mr Bennett is fully aware of this mutinous discontent with his leadership among a section of his followers, and newspapers friendly to him have been hinting that, as soon as Parliament meets, he will summon a full-dress Party meeting and seek a vote of confidence in his leadership, with the intimation that, if it is not forthcoming, his resignation from both the Party leadership and the Premiership will be tendered immediately. There is little doubt that he will easily secure endorsement of his leadership and policies, for his resignation would precipitate a general election, and most Conservative members want to postpone this until they have rebuilt their weak and inefficient Party organisation. Moreover, they know how damaging to the Party morale a change of leaders would be on the eve of an election and in the atmosphere of a bitter domestic feud; and since Mr Stevens would be unacceptable as a leader to Mr Bennett's friends and to the powerful business elements in the Party, it would be hard to find a satisfactory successor to Mr Bennett. The present prospects are that the Prime Minister will carry on for another session and try to cope with the aggressive tactics of the Liberal Opposition, which is now sublimely confident that the gates of office are ajar. Its leaders have declared their intention to persist in their demand for a general election on the ground that the Government has outlived its mandate. They have even threatened to resort to tactics of obstruction.

Thus, the Bennett Ministry will from the first day of the session be engaged in a difficult rearguard action and cannot have much hope of securing a favourable battleground for the election. Under present constitutional provisions, which confer jurisdiction about wages and industrial conditions upon the Provinces, the Bennett Ministry can hardly sponsor any programme for the elimination of the abuses disclosed.

In its search for an election programme, however, the Ministry has now accepted the invitation of President Roosevelt to reopen negotiations about the St. Lawrence

Waterway. Mr William Phillips, the American Under-Secretary of State, recently visited Ottawa to confer with the Prime Minister. It is understood that he sought certain modifications of the original treaty in order to placate the objections of American opponents of the project, and that his two main requests were for a recognition of American sovereignty over the waters of Lake Michigan, and a larger share for American labour of the construction work. Since Mr Phillips' visit, Mr Herridge, the Canadian Minister at Washington, has spent a fortnight in Ottawa in constant consultation with officials of the Department of External Affairs and technical experts. The Quebec contingent of the Bennett Ministry is still dubious about the project, but the rest are sympathetic, and electioneering strategists discern in the public expenditure necessitated by the extensive works very useful ground-bait for the general election. It is unlikely that the Canadian Government will boggle much at the American requirements, but in view of the state of Canadian opinion it will move very warily; and before it seeks the approval of Parliament for a revised treaty it will require proof of the assurances now being given at Washington that the Roosevelt Administration can, if the modifications are agreed by Canada, muster the necessary two-thirds Senate majority for the ratification of the treaty.

Meanwhile, the Canadian opponents of the Waterway have been encouraged by the declaration of Mr Hepburn, the new Liberal Premier of Ontario, that he is opposed to it on the grounds that the project is uneconomic; that Ontario, whose late Conservative Administration had agreed to take over and develop Canada's share of the hydro-electric power to be made available on the international section, has already more power than can be profitably disposed of; and that the provision of another avenue of transportation would tend to aggravate the difficulties of the railways. The hostility of the Liberal Government of Quebec to the scheme is also unabated, and apparently Mr Bennett can expect no co-operation from the Administrations of the two Provinces through which the Waterway flows. But, failing co-operation, he could still proceed to modify the treaty and undertake with the United States the navigation works of the Waterway, leaving the Americans to develop their share of the power on the international section.

With the renewal of these negotiations, there are hints of a possible trade agreement between the two Governments. It would seem difficult for a Government so deeply committed to the principle of high protection, and so tied by the Ottawa Agreements, as the Bennett Ministry to negotiate an adequate trade treaty with the U.S.A.; and the Liberal Press is exhorting the Roosevelt Administration to wait until a Liberal Government, which genuinely believes in lower tariffs and trade reciprocity, is in power at Ottawa. Mr Bennett and his colleagues, however, decline to accept this thesis and feel that, without impairing the fiscal structure of the Ottawa Agreements or invading the preserves of Canadian manufacturers, there is scope for a treaty which would stimulate trade between the two countries and benefit particular Canadian interests, e.g. the cattlemen of the West, the fishermen of the Atlantic Coast, and the mining industry. The Conservatives cannot hope to extract from the United States the tariff concessions they would like for these interests without giving something in return; but co-operation in the construction of the St. Lawrence Waterway, upon which President Roosevelt has apparently set his heart, would be a partial *quid pro quo*. The Canadian negotiators will also argue that Canada needs a freer flow of exports to the United States, in order to meet the heavy financial obligations which she has incurred to the Republic; and that stimulation of Canada's natural industries must redound to the benefit of the huge investments of American capital now placed in Canada. The possibilities of a new trade treaty are to be thoroughly explored; but it is said that the word "reciprocity," which the Canadian Conservative Party declared to be anathema in 1911, is still to be banned from the vocabulary of the negotiations. On all these counts Mr Bennett's Government is in for a thoroughly testing time.

NOTES OF THE WEEK

The Diehards' Defeat.—The progress of the Government's Indian constitutional reform now seems assured. On Tuesday Mr Baldwin met the Central Council of the National Union of Conservative and Unionist Associations at the Queen's Hall, to "take counsel" with them, as he had promised, "before the Bill with regard to India was introduced into Parliament." The Central Council numbers nearly 2,000 members, of whom about 1,700 attended. The opposition of the Diehards, both to the White Paper and, more recently, to the Joint Select Committee's Report, had for long constituted a threat to the continuation of the National Government itself, despite the protestations of Diehards to the contrary; and it had been increasingly criticised as such. It was not surprising, therefore, that Mr Baldwin, in a moderate but firm speech, recommended the acceptance of the Committee's report as the basis for legislation, in his capacity as leader of the Conservative Party. It was made quite plain that rejection by the meeting of the resolution approving the general principles of the Report would provoke a Cabinet crisis, resignation and a General Election. Before such an alternative the most robust sympathiser with Lord Salisbury, who described the proposed safeguards as "a strait waistcoat made of paper," or with Mr Churchill, who said we were being "chattered out of India," might well quail. History has shown again and again that it is quite possible for skilful politicians to lead the Conservative Party into all kinds of unlikely paths, but that the Party resists all attempts to split it; doubtless many who in their hearts may have sympathised with the Diehard thesis that the rejection of the reforms would "save" India for the Empire, were still more impressed by the fear that an adverse vote would lose Britain for the Conservative Party. It would, however, be unfair to the Select Committee to attribute the victory of Mr Baldwin by 1,102 votes to 390 entirely to internal party considerations. For it has become increasingly evident as the days have passed that the weighty considerations which have converted such representative Tories as Lord Derby and Sir Austen Chamberlain have made a great impression on those who have cared to study the matter thoroughly. In reality the slow march of events has already left no possibility of turning back without disaster, and Wednesday's vote has merely demonstrated that even the Conservative Party now accepts that fact.

Depressed Areas Bill.—The House of Commons this week passed the second reading of the Depressed Areas (Development and Improvement) Bill and the financial resolution attached to it. The Minister of Labour's speech confirmed the general impression that the Government had no intention of dealing with the depressed areas on any comprehensive lines. Indeed, Mr Stanley definitely stated that the Government had decided against any policy of relief works. It is a little difficult to see, therefore, quite what the Commissioners expect to do with their £2,000,000 between now and the next Budget. According to the Minister of Labour, they may make grants towards land settlement schemes, and also towards certain local amenities which local authorities are entitled to provide without a grant-in-aid. "Here a little and there a little" still seems to be the motto of the Government's policy—and from the drafting of the Bill it looks only too likely that the Commissioners, instead of being, as they should be, empowered to plan a concerted effort to rehabilitate the economic life of these areas, will be merely a fifth wheel to the coach. Mr Martin, the Conservative member for Blaydon, correctly expressed the sentiments of a large number of his own Party—to say nothing of the Opposition—when he said that the Bill was a terrible disappointment to the younger men who were supporting the Government. Incidentally, the House was considerably troubled by the fact that the financial resolution had been so drafted that any discussion about the areas to which the provisions of the Bill should apply was ruled out. Moreover, though formally the resources of the development fund are not

limited to the £2,000,000 mentioned in the resolution, the attitude of the Government appears to lend some degree of plausibility to Mr Maxton's suspicion that its real intention is to limit the fund to that sum. Indeed, it is not easy to see how along these very limited lines the Commissioners, whose powers expire in 1937, could profitably spend much more.

The American Arms Inquiry.—The Committee of the United States Senate which is investigating the trade in arms resumed its sessions on Tuesday. The course of the inquiry has been directed to the influence which the American munitions industry has apparently been able to exert on the attitude of the Government towards projects of international control. Before the Conference called at Geneva in 1925 to consider the drafting of a convention, the munitions firms knew the names of, and were in touch with, the American representatives three weeks before their appointment was announced. Mr Hoover, then Secretary of Commerce, summoned a meeting of munitions manufacturers to inform the American delegation of their views, and it was revealed in evidence that at least one firm believed that Mr Hoover's intervention had prevented the adoption of a convention displeasing to the armaments interests. The Committee has again been at considerable pains to establish the existence of an international agreement among armament firms, and there has been much talk of "co-operative action" on the part of the firms and of "co-operative inaction" on the part of Governments in failing to stop such breaches of international treaties as the re-armament of Germany. That the munitions industries of the different countries work in close collaboration is already sufficiently established. Whether they have been able to carry their co-operation far enough to frustrate all attempts at control of the traffic in arms, as the Committee believes, is as yet not proven. But with every allegation, true or false, that emerges in Washington, the case becomes stronger for an inquiry in this country of equal range and with equally searching powers. It is to be hoped that the British Government will bear this in mind when deciding on the personnel, the terms of reference and the powers relating to evidence of the promised inquiry. A committee of limited range and insufficient powers would do nothing to allay the suspicions of the public and would cast doubts upon the sincerity of its sponsors.

The Naval Conversations.—As we prophesied last week, the French and Italian Governments have both declined to join with Japan in denouncing the Washington Treaty. But the Japanese Government is proceeding with its own plans, and we may expect the formal act of denunciation to follow at Tokyo within the next few weeks. On Tuesday the British and American delegations met to discuss what should be done when the Japanese denunciation was a *fait accompli*, and there is reported to have been some difference of opinion—the British desiring more than ever to continue the conversations, while the Americans were inclined to feel that the action of the Japanese raised such large political issues that a further discussion of technical naval questions would be of little use, at any rate for the time being. This first effect of Japan's intransigence, slight though it may be, will give the Japanese encouragement; for the one thing that they are counting upon in pursuing their audacious policy is the possibility of driving in a wedge between the two English-speaking Powers. The truth seems to be that Japan's policy of progressive aggression, now that it has reached the stage of demanding naval parity, can no longer leave Anglo-American relations as they are. These must now either become definitely more intimate or else perilously cooler. His Majesty's Government are manifestly wincing at this alternative, and it looks as if the American people, if not the American Government, are only just beginning to face it. Probably His Majesty's Government would like, if

they could, to play a broker's part which would make Japan distinctly grateful without offending America too much. But such a policy could only succeed if Japan's aims were limited—if the Japanese question were not, in the last resort, as it is, a capital question for the United States, and if the Dominions could be left out of account. On the other side, America would like to see England come down definitely on her side of the fence, without being herself committed to taking any action if Japan chose to treat such British action as an unfriendly act. In so far as they feel like this, both Governments are wishing for the moon. If America wishes to ensure that England shall not make a private arrangement with Japan in self-defence, she must screw up her courage and enter the collective system. In return, England must screw up her courage and play her part in making the collective system effective—even in the Pacific, and even against Japan in the last resort—if she means to avoid alienating not merely the United States but also Canada, and ultimately all the other self-governing Dominions into the bargain. Tokyo is enforcing momentous decisions upon London and Washington; but London and Washington must decide aright.

Stresses and Strains in Germany.—Germany is now divided against herself on two internal fronts—a political front on which the Reichswehr stand over against the Nazi organisation (now represented by the S.S. since the S.A. were so severely knocked on the head in June last); and a cultural front, on which the Christian Churches stand over against the Rosenbergian pagan revival. On both fronts at this moment there are signs of renewed activity. The S.S. are apparently pressing, once again, to make their way into the Reichswehr by whole units with their existing officers and *esprit-de-corps*, while the Reichswehr are holding out as firmly as ever for their right to select their own recruits on the candidates' individual merits, and to take in S.S. men singly if they take them at all. This is the old quarrel which was perhaps one of the causes of the "clean-up" of the S.A. last June. But the S.S. are more formidable than the S.A. for the Reichswehr to handle; for they have gained by the S.A.'s losses six months ago; and, while they cannot compare with the old S.A. in numbers, they are numerically equal to the Reichswehr and not altogether out of the running with them in equipment and discipline. All the same, it seems probable that if the conflict does come to a head the Reichswehr will be the victors for the second time, and that the Führer will once again be found on the winning side. Already we see symptoms like those which immediately preceded the killings on June 30th. A Herr Brückner, who was once a comrade of the late Herr Heines and who has remained the Governor of, and Regional Party Leader for, Silesia, was dismissed on Tuesday from both his posts "for conduct injurious to the Party." On Wednesday, the name of Gottfried Feder, who drew up the Nazis' economic programme in 1927, was placed on the retired list. It is also reported that the *Statthalter* of the *Länder* have lately been given emergency powers. Meanwhile, on the cultural front, there are indications that a fresh offensive against both the Protestant and the Catholic Churches will be launched as soon as the Saar Plebiscite is over. Dr. Müller has refrained from resigning his post as Reichsbishop, and the negotiations for the interpretation of the Concordat are reported to have been virtually suspended—on the part of Berlin and not of the Vatican. It seems uncertain whether the Government and the Party will maintain their present attitude of official disinterestedness, or whether they will come into the arena again; and also uncertain whether the German Christian Movement will be used as the first wave of attack against the Christianity of the Free Churches, or whether the Rosenbergian pagans will fly their own colours. But, whatever the strategy, it seems likely that battle will soon be joined.

The Chaco War.—The Bolivian defeat in the Bolivian-Paraguayan war has been followed by the deposition and arrest of the President of the Republic and the formation of a new Government. The President is accused of having abused his constitutional position as commander-in-chief by giving orders over the head of the commanding

officer in the field, and attempting to oust him from his post in favour of a rival general who was the President's friend. These personal manoeuvres may have played their part in bringing about the Bolivian defeat; but, to an outsider, the chief crime that President Salamanca has committed against his country would appear to be his obstinate rejection of repeated opportunities for making peace; and, on this charge, both the new Government of Bolivia and the old Government of Paraguay stand in the dock, side by side with the present Bolivian scapegoat, before the judgment seat of world opinion. In the meantime, the war goes on; and the whole of the Chaco, right up to the south-eastern foot of the Andean plateau, may soon be overrun by the Paraguayan forces. But even if the victor were to extort, on Brest Litovsk terms, a peace settlement which the united goodwill of the world has failed to bring about on the basis of a reasonable compromise, such a peace would settle nothing and would be no vindication at all of the efficacy of military force. Supposing that Paraguay does succeed in nominally doubling her area by these means, she will simply be condemning herself to self-exhaustion in the effort to hold a wilderness against the inevitable *revanche* of an embittered enemy who is greatly her superior in latent resources. This Chaco War is an epitome of the irony and tragedy that is inherent in war always and everywhere, and this is one reason why the failure of the world's prolonged efforts to bring this war to an end is so deeply disquieting. In the depths of South America, the world drama is being played on a miniature scale; and it needs some strength of mind to resist the temptation to take the present act of the Chaco tragedy as an omen for the world at large.

Mr Baldwin's Two Voices.—What *did* Mr Baldwin say at Glasgow on November 23, 1934? It was reported in the *Manchester Guardian* of November 24th that he had said:—

A collective peace system, in my view, is perfectly impracticable in view of the fact to-day that the United States is not yet, to our unbounded regret, a Member of the League of Nations, and that in the last two or three years two Great Powers, Germany and Japan, have both retired from it. . . . A collective peace system would never be undertaken without those countries.

This surprising, and apparently conclusive, statement set the doves of peace a-fluttering. Is there no possibility at all of a collective peace system without those Powers? Must we revert to the armaments-and-alliances type of security? Or abnegate League principles, as well as regional security agreements like Locarno? While everyone was wondering if these words held significance of a sinister profundity, which would ill become Mr Baldwin, Mr Baldwin made another speech. This was at Bonar Law College, Ashridge, last Saturday. Talking of the totalitarian State idea, he said:—

If it becomes universal, you may see this within a short time: that from the Rhine to the Pacific there will be a people running into millions, who have been trained to be either Bolshevik robots or Nazi robots. . . . We are a tremendous obstacle to that kind of slave State spreading farther West, but it may well be, if the world proceeds as it is proceeding now, that the day may come when those who have still preserved their freedom will have to stand together lest freedom perish from the earth.

Incompatible voices? Hardly. But Mr Baldwin seems loth to draw a logical inference—that collective security is a question of policy, not of last-minute chancy manoeuvres. In the House of Lords on Wednesday Lord Cecil moved for papers, in an endeavour to discover what Mr Baldwin really did say; or failing that, what he meant by what he said. Lord Stanhope, the Under-Secretary for Foreign Affairs, dexterously sidetracked the issue; so while the news of the Government's decision to participate in policing the Saar appears to confute their former protestations, we are left wondering about Mr Baldwin's words, and the Government's intentions.

Red Star and White.—A decidedly piquant situation has arisen over the disposal, by the International Mercantile Marine of New Jersey, of the Red Star Line. This

American-owned line had five ships, sailing under the British flag, which had been used in the North Atlantic trade. It was proposed that an English concern should buy them at very low prices, scrap two, run the rest, and even build new ships—in order to introduce a new and cheaper transatlantic service. The English concern

approached the Treasury in an informal manner, and desired to know their attitude. In an equally informal manner they have been informed that it was not, in the opinion of the Treasury, in the national interest that this proposal should be carried through.

Thus Mr Neville Chamberlain, in the House on Tuesday, when Sir John Sandeman Allen raised the whole question on the motion for the adjournment. The Government could not

facilitate the setting up of a new competition which could only have the effect of injuring this (Cunard-White Star) merger which was so recently started under the auspices of the Government, and which indeed might jeopardise the building of the second ship.

In brief, the Government, having decided last February to loan £4½ millions at preferential rates to complete both the Cunard-White Star merger and the "Queen Mary," with the possibility of financing another super-ship, is now concerned to deter competitors from the field, even by the threat of refusing to allow the transfer of funds for the purchase. But would the proposed purchase necessarily involve competition with the British luxury liner or liners? Their competitors are the "Bremen" and the "Europa," the "Rex" and "Conte di Savoia," the future "Normandie." The British North Atlantic interests should seek to rationalise by international agreement the luxury, rapid traffic—not to annihilate a British attempt to tap entirely new levels of the demand curve of transatlantic travel. If the Government is concerned to facilitate the building of another luxury liner, it should not base its hopes on the fallacy that "£10 to New York and find your own food" is a threat to luxury, express traffic. Together with the politically heterogeneous company which demanded a "reason why" from Mr Chamberlain on Tuesday—Sir John Sandeman Allen, Mr Morgan Jones, Mr Walter Rea, Mr Craven Ellis, Col. Ropner, Major Nathan and Mr Aneurin Bevan—we are surprised that a dash of Government participation in industry should so rapidly have made the Government monopoly-minded. The fault lies not in the stars—Red or White. It lies in the Government, which is trying to control both of them.

"Empire Free Trade."—The entry of the free trade Country Party into the Australian Government may not have visibly intensified that Government's inclination to increase British imports to Australia. But it has at least strengthened its opposition to the restriction of Australian imports into Great Britain. Dr. Earle Page, leader of the Country Party, and now Deputy Prime Minister, made a vigorous attack on Monday at Canberra on the restrictions threatened by Mr Elliot. The policy of Australia, Dr. Page declared, must be to "resist export restriction with all its strength."

Australia's future (he continued) depended on the progressive development of her resources. Without expansion it was impossible to restore prosperity, solve unemployment and meet external obligations. . . . If Australia was forced by world policy to abandon natural, economic industries, she would be obliged willy-nilly to set about developing unnatural, uneconomic industries. He need not dwell upon the effect on her capacity to meet external obligations, should the second policy be forced upon her. . . . Australia must strive by every means to overcome the danger that she might be forced to take an unnatural, uneconomic course. She must demand continuously and persistently that no restrictions be placed on Australian goods in British markets.

Dr. Page is perfectly entitled to utter these warnings. If we in this country are to cease buying Australian exports, she cannot buy our exports or pay us the interest on her debts. But will Dr. Page's colleagues look at the other side of the shield and remove the duties on Lancashire cotton goods that were recently imposed? In the present state of Imperial economic relations—thanks largely to Mr Elliot—threat justifies threat, instead of concession justifying con-

cession. Nevertheless, Dr. Page's menaces may very likely have some salutary effect on the British Cabinet as a whole. For the Conservative Party has always had a much more tender regard for the Dominion producer overseas than for the British consumer at home. Indeed, the consuming masses of this country may well thank Providence for the lucky historical chance that so large a proportion of our food imports happen to come from the Empire.

The Supply of Class "C" Houses.—A White Paper on Housing issued by the Ministry of Health (H.M. Stationery Office, 3d.) contains the following details regarding the number of houses provided in England and Wales by local authorities and by private enterprise since 1930:—

NUMBER OF HOUSES PROVIDED IN ENGLAND AND WALES

Half-year ending	Local Authorities		Private Enterprise		Total Number of Houses
	With State Assistance	Without State Assistance	With State Assistance	Without State Assistance	
1930, March	24,502	1,605	590	51,788	78,485
September	24,550	1,360	1,682	55,622	83,214
1931, March	27,984	2,000	883	69,746	100,593
September	32,205	1,119	983	60,044	94,351
1932, March	35,371	1,366	1,350	68,374	106,461
September	31,063	690	1,306	62,456	95,515
1933, March	23,503	735	1,187	79,556	104,981
September	24,474	501	1,269	87,088	113,332
1934, March	29,399	1,466	1,644	120,781	153,290
September	19,376	1,856	578	134,153	156,463

The total number of houses with a rateable value not exceeding £13 (£20 in Greater London) provided by private enterprise without State assistance during the year ended September 30th was 92,865. But only 64,773 of these were built to let. During the same period local authorities built 49,275 houses with, and 3,322 without, State assistance. Presumably the majority of these houses are of the Class "C" type and were built to let. The total number of Class "C" houses built to let during the year ended September last was consequently at the most only about 117,000. Although the construction of the cheaper working-class houses has apparently increased, the rate of building will have to be speeded up further if the problem of overcrowding is to be solved within a reasonable period of time.

The Pig Muddle.—The Pigs and Bacon Boards are having difficulty in concluding their arrangements for 1935. The Pigs Board represents the pig breeders, the Bacon Board the curing factories; and the terms of sale are arranged by negotiation between the two Boards. For the period which is just coming to a close the price has been based on a sliding scale which takes into account the price both of feeding stuffs and of bacon. Since the Bacon Board insisted on this arrangement for 1935 its continuance was not in doubt. All that remained, in effect, for negotiation, therefore, was the other conditions of the contract. Nevertheless, the parleys lasted for more than four months. The main difficulties were twofold. During the present year deliveries of pigs to the curers have shown a very marked seasonal fluctuation. This has been inconvenient to the factories and embarrassing to the Government in fixing the

import quotas. The Bacon Board insisted on some improvement in this direction. Secondly, bacon prices were weak in the early autumn months and the curers needed reassurance on this point. The contract terms were not announced until the last week in October, less than three weeks from the closing date, November 14th. These terms include some slight concessions to producers, but there is also a stipulation that not less than 25 per cent. of the pigs contracted for must be delivered in the four months January to April, and not more than 45 per cent. in the four months September to December. The curers are to provide funds for paying bonuses to those producers who deliver more than 25 per cent. in the four spring months. These level delivery conditions and the short period left for sending in contracts made the breeders very reluctant to commit themselves. The closing date was postponed until November 20th, but the total number of pigs contracted for was only 1,670,000, a figure which the Bacon Board refused to accept. A further appeal has therefore gone out for another 450,000 pigs without any level delivery condition, the offer to remain open until December 22nd. The domestic difficulties of the pig-bacon scheme are thus showing no sign of diminution. The industry is inclined to ascribe all its troubles to low prices, and the low prices to excessive imports. The reasoning can easily be disproved by the fact that bacon imports are now considerably lower than for some years past. But the disproof is hardly necessary in this case, as the difficulties have clearly nothing to do with price, but are due to the instability, both seasonal and annual, of the pig industry. Our farmers evidently have a long way to go before they will be able efficiently to fill the gap left by the foreign supplies of bacon which are now being restricted by quota. It is becoming more and more clear that a drastic rationalisation of the domestic industry should have been made a condition precedent to any restriction of foreign supplies instead of being left as a pious hope for the future.

A Year of the Milk Board.—It has been pointed out to us that the Milk Marketing Board did not begin operations on October 1st but on October 7th. In a Note with the above title in last week's *Economist*, in which the operations of the Board for the month of October in 1933 and 1934 were compared, we failed to make it clear that the figures of gallonage are for this reason not strictly comparable, or that the increase in the total volume of milk passing under the Board's control was not as large as mere comparison of the unadjusted figures would indicate. The conclusions we drew last week are not, however, affected, for while the month of October was, for the purpose of the Board's statistics, 24 per cent. larger in 1934 than in 1933, the total volume of milk increased by 52 per cent., the amount going into liquid consumption by 34 per cent., and the "surplus" by 152 per cent. Moreover, the correction does not affect our comments on prices or the fact that the "surplus" has increased from 17 per cent. of the total in October, 1933, to nearly 28 per cent. in October, 1934. It is clear that the Board's price policy is stimulating the growth of a surplus which has to be disposed of at a loss, even after the taxpayer has been called upon to make his contribution by way of subsidy.

The Electricity Bill.—The new Electricity Supply Bill, now in Committee of the whole House, has two objects. The first is to authorise the Central Electricity Board to enter into working agreements with privately owned generating stations not engaged in public supply. Such working agreements as already exist are voluntary. A number of such private stations periodically have surplus power for disposal, and if they can be connected to the Grid the Board can tap a source of power at marginal rates. It will benefit further because the private plants may take their peak requirements from the Grid. The Bill's second object is to authorise direct supplies from the Central Electricity Board to railway companies. The Southern Railway in its recent electrification schemes found it very difficult to negotiate with a large number of supply authorities, and it is clear that if there is to be extensive electrification of our railways the companies must

be free to deal with one authority only—clearly, the Central Electricity Board. The Bill received considerable opposition at its second reading, mainly on the grounds that it allowed a public Board to undertake business which is the legal monopoly of private enterprise. But, as the Minister of Transport maintained, this is not the effect of the Bill. The Central Electricity Board was formed in 1926 in order that electricity consumers might have the benefit of cheap power. In fact, the Board is severely handicapped by unnecessarily high capital charges (as we pointed out in the *Economist* of April 22, 1933) and by lack of control over both the cost of generation and the prices at which supplies are made to the public. The Board cannot require an authorised supply company to stop generating its own energy and take its requirements from the Grid, unless the Grid price, including capital charges, is less than the supply company's running costs, ignoring capital charges. Supply companies have criticised the finances of the Central Electricity Board, and apparently some companies would like to curtail the Board's activities. They maintain that the costs of the Grid put a heavy burden on the supply companies. But, in fact, this burden is carried by the consumers, and no one contends that the consumers could get an adequate service without the Grid. It should therefore be the concern of the supply companies to expand consumption to the utmost, not to oppose a Bill which enables the Central Electricity Board to fulfil one of its main functions.

A Record Railway Run.—On Friday, November 30th, a short steam train made an experimental run at record speed from London to Leeds and back. This comes as a timely *riposte* to those who have advanced the rival claims over steam of the Diesel-driven Flying Hamburger, which is scheduled to run between Berlin and Hamburg daily at an average speed of 77 miles an hour. The London and North Eastern Railway set out to equal this schedule with one of their standard Pacific locomotives and a train of four coaches. Over a stretch of line which includes gradients, important junctions and other obstacles, they beat an equivalent time schedule of 2½ hours by 14 minutes. For the return journey, two extra coaches were coupled up, and in spite of this additional load and one slow-down, where the track was being relaid, the train arrived eight minutes before its scheduled time. These results show that a steam-driven train, drawn by a relatively old express engine, can rival the German Diesel train over an ordinary give-and-take road, and at the same time provide accommodation for a greater number of passengers. There is always, of course, a long gap between a single successful experiment and the establishment of a routine service. By all accounts, the German and Dutch Diesel trains are hardly yet past the experimental stage, for the need of running repairs still arises far too frequently. The English railways have still many problems to solve before time-tables based on an average speed of over 70 miles an hour can be introduced. The average main line has to carry express trains, semi-fast trains, local trains, "empties," and goods and mineral trains of every category. Most of the main lines out of London are now "four-tracked" for a considerable distance, and in the suburban area six and eight tracks are not uncommon. Yet even the four-track system is subject to narrowings to two tracks in certain places, as witness the Potters Bar Tunnel and the Digswell Viaduct on the L.N.E.R. main line to Leeds. Again large junctions such as Peterborough, Grantham and Doncaster on the L.N.E.R., Rugby and Crewe on the L.M.S., and Reading on the G.W.R., may call for service checks. Moreover, every train has to be fitted in to its proper place in the mosaic of the working time-table, so that it has time to clear at every junction and other fouling points. Except at flying junctions, up and down trains are liable to foul each other, which increases the complexity of the time-table. Nor does every passenger who joins a train at King's Cross wish to go to York, Newcastle or Edinburgh. Trains must be stopped at intermediate junctions. Like Governments, railways always have to think of "the greatest good of the greatest number," and this alone precludes the running of more than a few fast long-distance trains, which have to be fitted into the general time-table. Still, granted further and more

continuous track-widening, the construction of a few avoiding lines, and perhaps the improvement of certain terminus approaches, the express services could undoubtedly be accelerated. Whether there would ensue a big enough demand to meet the additional capital and running costs is another question.

The Level Crossing Problem.—One minor detail in the way of rapid express running has been thrown into tragic relief only a week or two ago. An express train on the old Great Eastern line to Cambridge collided with a lorry at a private level crossing, and was derailed. The driver and fireman were killed, but the passengers and the driver of the lorry had a miraculous escape. The accident is subject to an official inquiry, and so is *sub judice*, but a few general comments are permissible. Public road crossings are as a rule fully protected by signals inter-locked with the gates. Thus, the risk of accidents is limited to gate-crashing by road vehicles—which is not entirely unknown. Delays may also occur when reckless road users try to beat the signalman who is seeking to close the gates. The vast majority of level crossings, however, are "occupation" crossings provided for private roads giving access to farms and factories. Hitherto, the railways have relied upon George Stephenson's famous dictum regarding "the coo"; but the growth of modern road transport has reached the point where the "awkwardness" may be shared by the train. While there is a strong case for the abolition of public road crossings, the expense of building bridges at every private crossing would be prohibitive. Automatic signal lamps, however, indicating the approach of a train could be provided at comparatively small cost, especially where the line was already under track-circuit protection. Their cost, both capital and maintenance, should equitably fall upon the private user, and recent accidents suggest that it is high time for legislation to be passed enforcing these duties upon railway company and private user alike.

Building Costs.—"Cheap money" at the bottom of a depression generally finds its way into housing and construction, thus starting "recovery." Owing to the influence of building costs on the volume of construction, we show below the changes in our index of costs since December, 1929. The index has been compiled for the purpose of calculating one of the component series of our Index of Business Activity; the method of construction of the index as well as its significance were explained in the *Economist* of November 11, 1933:—

Economist INDEX OF BUILDING COSTS (1924 = 100)				
	Index of Wages	Index of Materials	Combined Index	
1929—December	99.7	88.1	93.9	
1930— "	97.1	83.5	90.3	
1931— "	95.6	82.7	89.1	
1932— "	92.6	78.5	85.6	
1933— "	89.7	76.4	83.0	
1934—March	89.7	76.2	82.9	
May	89.7	75.6	82.6	
July	89.7	75.6	82.6	
September ...	89.7	75.5	82.6	
November ...	89.7	75.8	82.7	

It will be seen that the index has remained at the low level to which it had fallen a year ago, despite a considerable increase in building activity. There has been very little change in the cost of the materials included in the index since last year, but bricks are almost as dear as they were in 1929. Wages, too, have remained almost unchanged since 1933. But the building operatives are understood to have put forward a demand for an increase amounting to approximately one penny per hour. The proposal will be discussed between representatives of employers and operatives next January, but there are as yet no indications of the probable outcome of the negotiations.

Sterling and International Prices.—The last fortnight has witnessed a definite recovery in sterling prices. The *Economist's* complete British index number has risen by 1.3 per cent., while the British index number of primary products has risen by 2.3 per cent. American wholesale

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK

LIMITED

Head Office: 41 LOTHBURY, LONDON, E.C.2

prices have continued to rise. The *Economist's* index number of primary products is 3.6 per cent. higher than a fortnight ago, while the complete Irving Fisher index number has risen by 0.2 per cent. American primary products are now at their highest point for the year. French prices are still slowly falling, but Italian prices are rising.

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Nov. 7, 1934	Nov. 21, 1934	Dec. 5, 1934
Cereals and meat	64.5	67.5	68.3	69.1
Other foods	62.2	59.4	59.1	59.7
Textiles	43.7	52.0	51.7	53.3
Minerals	67.4	75.3	75.8	75.5
Miscellaneous	65.8	68.2	68.7	68.9
Complete index	60.4	64.4	64.7	65.4
1913 = 100	83.1	88.7	89.0	89.9
1924 = 100	52.2	55.7	55.9	56.5

In the cereals and meat group, wheat and maize are both higher, and meat prices, with the exception of New Zealand mutton, have advanced. Bacon is unchanged. Among other foods coffee is cheaper, but there were increases in raw sugar and coconut oil. In the textiles group American cotton has risen by 19 points during the fortnight, and yarn is also dearer. Wool tops are slightly cheaper, but there were advances in silk, flax and jute. In the minerals group copper and lead have both risen in price. Among miscellaneous materials, hides, rubber, linseed oil and creosote have all advanced.

UNITED STATES

THE INRUSH OF GOLD

THE persistent strength of the dollar has already attracted about \$120 millions of gold; and as yet the gold currencies have shown little tendency to rally. The firmness in silver suggests that the Treasury has been buying that metal; but one-third of the "loan on gold abroad" by the Reserve Banks was liquidated apparently by a gold import. The removal of the nominal exchange control, if intended to facilitate an export of capital, has actually worked the other way; and it is understood that there has been a substantial repatriation of American funds resulting from renewed confidence in the dollar. To a lesser (and minor) degree, this has been accompanied by some movement of foreign funds into our market. At the same time, there has been some inducement to transfer idle balances from New York to London to take advantage of the higher short-term rates obtaining there, but this movement appears to have been too small to affect exchange quotations perceptibly.

This import of gold is, of course, raising the cash reserves of the commercial banks, and its effect is now substantially cumulated by the silver programme. From the end of August to November 21st, Member Bank reserves rose from \$3,907 millions to \$4,196 millions, or \$189 millions. In this period the monetary gold stock rose \$113 millions; while there was an increase of \$36 millions of currency in circulation—a normal seasonal phenomenon. But \$79 millions of silver certificates were issued in the two months September and October, following an apparent monthly average of about \$40 millions since the silver plan was put into effect in August. This movement has not been attended by any expansion of aggregate bank credit, as collateral loans have fallen about as rapidly as commercial loans have risen. There has been a continuation of the remarkable expansion of net demand deposits (nearly \$600 millions from August 29th to November 14th), but of this \$400 millions represented a transfer from Government deposits. Government deposits now stand at the relatively low figure of \$800 millions in the Reporting Member Banks, suggesting that the Treasury will ask for a considerable sum of money on December 15th, in addition to the large refinancing on that date. In spite of the increase of almost 30 per cent. in net demand deposits in the past twelve months, debits to individual accounts for October, 1934, were barely higher than for October, 1933, and only about 5 per cent. above October, 1932. The indices of production correspond fairly well with the debit figure, ignoring the rise in commodity prices. The moderate increase in payrolls and employment since October, 1932, has been apparently met by an increase in the small-denomination currency in circulation.

BUSINESS SENTIMENT GOOD

If it is difficult to reconcile monetary and industrial data, it is equally difficult to relate "business sentiment" with business data. The recovery in the physical volume of production from any except a few of the lowest months of the depression is extremely small, the numbers of persons so destitute as to require relief are apparently still rising. Yet the typical business man in the street describes his business as pretty good, commonly calls it better than a year ago, and is hopeful for the coming year. This paradox can be explained by asserting that the statistical data does not reflect current facts, or by supposing that business sentiment is somewhat independent of current facts.

As was to be expected, the approach of Congress is already foreshadowed. Not a day passes but an important official in Washington forecasts some new development in N.R.A., or in the agricultural programme, the spending programme, the trade policy, or the relief schemes. For

the most part, upon analysis, these forecasts prove to be quite intangible, and are put out, perhaps, as species of trial balloons. Meanwhile, although the monetary programme is in abeyance, except for minor manoeuvres in silver, there can now be no doubt that, as usual, the currency will be a major topic of Congressional controversy. Proponents of higher prices for silver and gold are once again finding an audience in the Press, and a comparatively new agitation is coming forward in various forms. One proposal is to retire a major part of the public debt by an issue of currency; another, to finance parts of the spending programme by currency. It is impossible to measure the force of the sentiment favouring new monetary experiments; but it would be a mistake to underrate it.

NEW YORK, November 23.

FRANCE

THE BUDGET AND DEVALUATION

THE Chamber has voted the 1935 Budget without incident. The Budget is now before the Senate, and it will probably become law before Christmas. This rapidity is due to the provision preventing Deputies from proposing new expenditure.

The debate on "ways and means," however, was marked by a new speech from M. Paul Reynaud in favour of the devaluation of the franc. M. Flandin again rejected the proposal:—

French common sense (he said), will never understand why some should be enriched while others are impoverished. . . . The adjustment of French internal prices to world prices at a lower cost of living is my solution. I have said and I believe that we will attain this goal by confidence alone.

M. Germain-Martin, Minister of Finance, emphasised the improvement in the Budget situation which has been achieved. Expenditure has been cut from 53,000 million francs to 45,000 million francs. The admitted deficit on the 1935 Budget will probably reach 600 million francs, so that the "economy" decree-laws could not be abolished unless new revenue were tapped. M. Germain-Martin expressed the opinion that "if monetary stabilisation could be obtained from Great Britain and the United States, a great service would be rendered to humanity; but it would be a mistake to propose negotiations now on stabilisation."

A new commercial agreement has just been concluded with Germany. The agreement reached in July, which was to have expired on December 31st, will be prolonged for three months. This is to provide for the new problems which may arise from the Saar plebiscite. The agreement maintains the former stipulations about the guarantees attached to the Dawes and Young Loans interest payments, and to the commercial long-term and short-term debts. The outstanding debts which resulted from the first clearing agreement (dated from August 1st) receive the guarantee of the Reich. The agreements provide for other modifications which should tend to secure exchange equilibrium. For the first ten months of 1934 Franco-German trade was as follows:—

	(000 francs)		
	1933	1934	
Imports into France ...	1,870,077	2,446,205	+ 576,128
Exports from France...	1,617,963	1,385,050	- 232,913

French exports were lower by 16 per cent. in comparison with 1933 and imports were 31 per cent. higher. In September and October there was a French export surplus, whereas the clearing is based on the existence of an import surplus. The new agreement provides for the creation of a permanent mixed commission, which will supervise Franco-German trade. At the same time the French import quotas have been extended in favour of Germany in order to

recreate the import surplus and facilitate the payment of the outstanding debts.

Having signed this agreement, M. Marchandeu, Minister of Commerce, has left for Moscow, where he will enter into negotiations with the Soviet Administration for an expansion of Franco-Russian trade, which was for the first nine months of the year as follows:—

	(000 francs)		
	1933	1934	Difference
Imports into France ...	522,577	385,167	- 137,608
Exports to U.S.S.R. ...	36,662	94,723	+ 58,011
Total	559,439	479,892	- 79,547

The table shows that the provisional agreement of January 1st was successful from the point of view of the balance, but that this advantage was gained at the expense of the volume of trade.

The Colonial Conference, which has just opened in Paris, is also connected with these efforts since its object, like Ottawa, is to develop France's overseas possessions and to improve their financial and commercial relations with the Mother country.

FIXED WHEAT PRICE TO BE ABOLISHED

The Government recently announced its intention to re-establish freedom of markets, and it has begun with the most important, the wheat market. A minimum price was guaranteed to wheat producers by a law of July, 1933, and as a consequence the French price has remained enormously above the world price. The Government has now laid before the Chamber a Bill which provides for the freeing of wheat sales in three months' time. And the minimum price will be immediately reduced. These measures, however, do not affect wheat which is involved in carry-over and stock contracts; for this wheat the former minimum price will be maintained until July 13th next at the latest.

In order to free the market effectively these stocks have to be liquidated, and this the Government intends to achieve in three ways: by the constitution of a reserve stock, by export and by denaturation. The financial backing necessary for these operations amounts to 1,500 million francs. This will be obtained by a loan which will be launched by the Caisse de Crédit Agricole, and the interest will be guaranteed by an increase in the production tax from three to seven francs per quintal. Thus the Budget will not support a new charge. By these means it is hoped that the price of bread will be lowered immediately by 0.20 or 0.25 cents per kilogram. To prevent any future over-production the Government intends to prohibit further extension of sowing as well as the increase of types of grain which, though prolific, are of a small baking value.

At the same time, the Government intend to tackle the problem of the wine surplus, now depressing prices. Some 15 million hectolitres of the last crop will be distilled, and the Government will prohibit any new plantation. It also intends to compel wine-growers who are proprietors of vineyards larger than 10 hectares to dig out a portion of their plants. Thus, in the case of wine, as of wheat, the freeing of prices is to be conditioned by a severe control of production.

PARIS, December 6.

GERMANY

NAZI BANKING POLICY ABANDONED

THE Committee of Inquiry into Banking, which first met in September, 1933, with the President of the Reichsbank as chairman, has now issued its report. This report is to be the basis of a law not yet published. The Committee makes suggestions for reform which in most cases do not much diverge from principles of bank legislation already recognised in Germany and abroad. Nazi plans and promises have been rejected or ignored by the Committee. There is, however, a marked tendency towards closer State control and towards an increase in the powers of the Reichsbank. The Committee rejects the nationalisation of credit, and

holds, on the contrary, that, without prejudice to the position of the savings banks (which are already under public law), the most suitable organisation of credit institutions lies with private initiative, with its own responsibility.

The Committee's positive recommendations are:—

Centralised and more comprehensive State supervision; State concessioning for new banks and bank branches, with State power to eliminate persons already engaged in banking; the ensuring of adequate liquidity; the prevention of abuses in the mechanism of payments; better publicity; and a clearer definition between the money and capital markets in so far as this is a banking question.

The rejection of nationalisation is based on the Committee's opinion that recent German banking troubles did not arise from organic defects in the credit structure. The Committee recommends the encouragement of regional banking and the encouragement of the "private banks." These private banks, mostly small firms or family concerns, were years ago considered moribund, and many of them, though formally independent, were dependent upon larger banks; but they came out of the crisis of 1931 better than the great joint-stock banks. The Committee's proposal for State bank supervision is merely an extension of the Bank Commissary and Bank Curatorium organisation created by Dr. Brüning. The main difference is that the new "Bank Supervision Office" should be competent for all banks, including the savings banks. The Supervision Office should be a Reich institution, presided over by the Reichsbank President, who is already President of the Curatorium, and include as members Secretaries of State from the interested Ministries.

The great banks, which already issue monthly balance sheets, are to be required to submit these to the Reichsbank, the smaller banks to submit balance sheets twice a year. To prevent abuses in non-cash payments, it is recommended that this system be brought into the sphere of influence of the Reichsbank. Higher liquidity should be attained by ensuring that short-term deposits should in general be lent out only on short-term. At present the Committee merely proposes the imposition of unstated maximum quotas for the less liquid assets and of minimum quotas for the more liquid, but leaves precise regulation to the Supervision Office. The Committee finds that insufficient capital was a cause of recent bank troubles, and recommends a better ratio between capital and deposits. It also recommends the distribution of credits over different branches of business and the avoidance of too large single risks. The Committee's report has been well received in financial circles, and a moderate advance in bank shares has occurred.

The Loan Stock Law of March, which compelled share companies to invest sums equal to certain excess dividends or dividend increases in public loans, has been amended. The new law prescribes that share companies shall not pay dividends exceeding 6 per cent. on paid-up capital, or, where the last dividend exceeded 6 per cent., shall not pay more than 8 per cent. Any profits available for higher dividends shall be transferred to the Gold Discount Bank, which shall invest them in Reich loans or municipal conversion bonds, administer them as trustee for the shareholders, and pay them out to the shareholders on the expiry of the fourth following company accounting year.

STATE CONTROL OF PROSPECTING

A law placing the business of prospecting of minerals, including oil, under State control has been promulgated. The Minister of Economy is himself entrusted with the task and is empowered to unite into a Reich Institute the geological institutes of the States and of Prussia. Reich officials will have the right to enter on and prospect on private land. Intending private prospectors must report in advance, and must report results; and proposed borings for minerals must

BRITANNIC ASSURANCE COMPANY LIMITED

Funds : : : : : £23,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

also be reported and are subject to State inspection. Another new law reduces the number of security bourses from 21 to 9 by abolishing certain provincial bourses and fusing others. Only the Berlin, Breslau, Hanover and Stuttgart Bourses remain without any change. The Bremen, Hamburg and Lübeck Bourses will be fused into a Hanse Bourse, with headquarters at Hamburg. The produce exchanges, which are in general branches of the Bourse, are not affected by the law. A further new law empowers the courts, on application of a debtor, to forbid or restrict the execution of such judgments for debt as are "contrary to a healthy national sentiment."

Under the "Law for Preparation of the Organic Construction of German Business" there has appeared a first ordinance, the effect of which is to articulate economic undertakings of all kinds according to branch and locality. Economic Chambers (*Wirtschaftskammern*) and a Reich Economic Chamber are to be created. An Economic Chamber is a joint institution representing the district organisation of industry, the local Chamber of Commerce and Industry, and the local Chamber of Handwork; and it will be under a Director (*Leiter*, not *Führer*), with two deputies. The Director and one deputy are to be appointed by the Minister of Economy. The Economic Chamber will have a Council (*Beirat*). This Council will consist of the directors (*Leiter*) of the district groups; the presidents of the Chambers of Industry and Commerce and Chambers of Handwork; and the local directors of the "Reich" and "main" groups of business. The Reich Economic Chamber is to be a joint institution embracing the branch and local organisations of business, of the Chambers of Commerce and Industry and Chambers of Handwork. The function of the Reich Economic Chamber is to handle the common affairs of the Reich groups, the Economic Chambers, the Chambers of Industry and Commerce, and the Chambers of Handwork, and also matters submitted to it by the Minister of Economy.

BERLIN, December 5.

NORWAY

INDUSTRIAL AND TRADE RECOVERY MAINTAINED

THERE was a non-political change in the composition of the Government recently when the Minister for Finances, M. Per Lund, voluntarily retired to take up the position of Director of Taxation. M. Lund has been replaced by M. Gunnar Jahn, who has been Director of the Statistical Bureau since 1920. The new Minister has not previously taken any public part in political life, but on account of his special qualifications for the position which he is taking up, his entry into the Government is regarded with general satisfaction. His first task will be that of preparing the Budget for 1935-36. His predecessor is able to "bequeath" him a surplus of 500,000 kroner for the first quarter of the current Budget, which compares with a deficit of 2,480,000 kroner for the same period of the preceding Budget year.

The Government have decided to convert their 5 per cent. loan of 1927, amounting to 49 million kroner, into a 4 per cent. loan, the whole of which will be taken over by banks and insurance companies and will not be offered for public subscription. The returns of the Norges Bank during the month indicate only insignificant fluctuations, except for the item "balances abroad," which rose by 12.4 million kroner on November 15. There was a corresponding contraction, however, in the item "Securities in Foreign Exchange."

The foreign trade figures for the first ten months of the year are now available:—

	(Million kroner)	
	1933	1934
Imports	553.4	607.9
Exports	455.5	472.9
Import surplus ..	97.9	135.0

The October figures show increased imports, especially of raw materials, machinery and metals; the total of

imports rose by about 6.6 million kroner compared with September. Exports rose by 4.5 million kroner, the increase being mainly due to increased shipments of moist mechanical pulp, packing paper and canned goods. In September, as usual, Great Britain ranks first among Norway's customers, while Denmark, which usually occupies the sixth place, has usurped the position of Germany as our second best customer.

The generally increased activity of industry is shown by the larger imports of raw materials, etc., as well as by the industrial production index, which rose in September by 6 points to 122—the highest figure since the compilation of the index. There was a seasonal increase in the unemployment figures on November 15th, the number being 39,600, as against 35,500 on October 15th. The cost-of-living index has fallen slightly.

The bond market has been unusually firm during recent weeks, especially the market for gilt-edged sterling loans. Share prices have declined somewhat during the month.

TRONDHEIM, December 4.

DENMARK

INCREASING IMPORTS FROM GREAT BRITAIN

THE latest foreign trade figures reveal a considerable import surplus for the first ten months of the present year. The figures also show that Great Britain is still tending to buy less from and sell more to Denmark:—

	Imports	Exports	Re-exports
	(in million kroner)		
Denmark's trade with all countries:—			
Total for the period January—			
October, 1934	1,103	949.1	47.8
Total for October, 1934	131.8	98.9	5.6
Denmark's trade with Great Britain:—			
October, 1934	39.5	57.6	
October, 1933	34	65.3	

The present import surplus (as also interest and sinking fund payments on foreign loans) is believed to be covered by the increased freight earnings of Danish shipping.

During the last few weeks there has been a considerable increase in the number of unemployed. The figure for November 16th was 97,643, a little above the figure for the same period last year. The employment of Danish shipping, however, continues to be quite satisfactory. With laid-up tonnage reduced to only 35,060 tons, it may be said that nearly the whole of the Danish mercantile fleet has now found occupation.

THE CONVERSION OF AGRICULTURAL DEBTS

The new Bill (now the fourth) for the conversion and adjustment of agricultural debts was introduced into the Rigsdag on November 6th. It has been received without much enthusiasm. The real difficulty is that, as the money market is not quite ripe for large-scale conversion operations, it will be difficult to carry out any conversion of the magnitude contemplated without special provisions, such as, e.g., the introduction of a share coupon tax to check a flow of money from fixed-interest bonds into shares. Moreover, the money market has to absorb new bonds aggregating several hundreds of million kroner each year, in order to finance loans against security in new houses. Actually, owing to the rise in agricultural prices, the interest burden is not weighing so heavily on the farmers as it was last year.

The present Government has always wished to abolish the Landsting (Upper House); and this question, which involves a change of the Constitution, was again brought into the limelight on October 31st, when the Prime Minister introduced a Bill to give effect to the change. There is a long constitutional path to tread, however, before the change can be finally achieved.

A committee is expected to be appointed before long to co-operate with similar bodies in Norway and Sweden to further common Scandinavian economic interests; and at the instigation of the Finnish Minister in Copenhagen special efforts are being made to promote trade between

Finland and Denmark. A few figures of inter-Scandinavian trade may be of interest:—

	Total Imports		Total exports		Re-exports	
	1932	1933	1932	1933	1932	1933
Denmark's trade with:—			(Million kroner)			
Finland	11.5	15.6	6.4	8.3	2.4	3.0
Iceland	2.1	2.5	3.9	6.2	2.5	3.6
Norway	24.1	28.5	22.9	22.6	9.6	8.3
Sweden	63.1	88.7	43.1	36.4	23.0	21.6
Total	100.8	135.3	76.3	73.5	37.5	36.5

As the Exchange Control Act is expiring on December 31st the question whether this Act is to be renewed or discontinued is another important matter on the agenda of the Rigsdag. The Government Parties have no wish to take the responsibilities for a relaxation of the present import control, fearing as they do that a sudden release of imports might be dangerous to the stability of the Danish krone and seriously impair the employment situation of Danish industry. A prolongation of the Act is consequently possible, but the opposition to it is growing.

COPENHAGEN, December 4.

JAPAN

HUGE DEFICIT AND NEW TAXATION

THE rice crop failure in North-Eastern Japan has proved serious. In many parts the crop has been a total failure, and the peasantry has been reduced to a state verging on starvation and necessitating immediate relief. A special session of the Diet will meet at the end of this month to deliberate on remedial measures for the distressed farmers in those districts as well as rehabilitation schemes for the typhoon-stricken areas in Western Japan. The official measures for relief and rehabilitation involve the expenditure of some 140 million yen, which will be submitted to the session as supplementary estimates. National revenue so far has shown a substantial increase, which, however, will be absorbed by these climatic disasters.

The Treasury, in publishing the Budget estimates for the fiscal year 1935-36, fixed the total national expenditure at 2,042.8 million yen. This is a slight decrease of 68.7 million yen on the original estimates for the current year. The estimated revenue for the next fiscal year is placed at 1,410 million yen, revealing again a huge deficit of 641.8 million yen against the estimated expenditure. The greater part of the deficit is to be met, as in previous years, by a new loan, but the Finance Minister proposes also a small addition to taxation of some 30 million yen. His scheme is to impose a special "emergency" duty on the excess profits of individuals and companies which have benefited by the industrial recovery since the abandonment of the gold standard. This is a noteworthy departure from the preceding Government's policy of financing the Budget deficiency wholly by borrowing, although the fund to be raised by fresh taxation is disproportionately small.

The proposal for new taxation has been a great shock in financial circles. Actually taxpayers have not been so surprised to learn of a tax addition of 30 million yen or so, but they fear that a severer ordeal may be in store for them, since the Finance Minister's decision, it is suspected, was made under the influence of what may be called militant national-socialism. Stock prices fell sharply on the news of the taxation proposal, particularly in industrial sections which will be chiefly affected by the projected tax. The aggregate value of all shares listed on the Tokyo Stock Exchange on November 1st was down by 439 million yen, or 7½ per cent., on the month. After a series of temporary and technical recoveries all shares still continue to weaken.

INDUSTRIAL AND TRADE EXPANSION CONTINUED

Other economic indices, however, show that the general trend remained unaltered. The Bank of Japan's index number of wholesale prices registered a further advance of 1½ per cent. on the month, the total rising to 181.8, the highest of the year. The output of cotton yarn during October at 123,193,000 lbs. increased by 8,166,000 lbs., as against that of September, and that of rayon yarn at

Supposing you were overtaken by

ILLNESS or ACCIDENT

could you rely on a continuance of your income—the whole—or even part of it?

Personal effort may be the mainstay of your income. If so, it is but prudent to examine a means whereby you may provide for yourself a fixed sum per week to offset your loss. Household bills, rent, rates and taxes do not wait obligingly while health is regained; expenses tend to increase when the doctor's aid is called . . . and convalescence is a costly business.

Sickness and Accident Insurance

can provide an income during sickness or if you are the victim of an accident.

● Post the enquiry form below for details of this Legal & General plan—relieve your mind of financial worry if you are ill.

Age next birthday.....
EC

12,264,000 lbs. rose by 448,000 lbs. The note circulation for November 9th was 1,133.6 million yen, against 1,140.4 million yen a month ago. Call money remains at a fraction above 2½ per cent., and prime commercial paper is quoted at 4½ per cent.

The trade returns for October show that the recovery in foreign trade, which had been deflected a little in August and September owing to the typhoon disaster, gathered its former momentum in the succeeding month. Imports are returned at 177,431,000 yen, an increase of 38,431,000 yen, or 27.6 per cent. over October, 1933. Exports also have risen from 171,177,000 yen in October, 1933, to 201,356,000 yen this year, an advance of 30,179,000 yen, or 17.6 per cent. Notable increases in imports are recorded in raw cotton, iron and steel, machinery and petroleum, while raw wool alone among the staples showed a marked decline. To the expansion in exports cotton piece-goods, silk and rayon fabrics, tinned and bottled provisions, and wheat flour all made substantial contributions, whereas raw silk again made a poor showing. As imports continued to gain heavily relative to exports, the active balance of trade was again smaller last month, being 23,925,000 yen, against 32,177,000 yen a year ago.

TOKYO, November 9.

PALESTINE

STEADILY INCREASING PROSPERITY

THE biennial Levant Fair is now over, and the report of its Exhibition Committee permits a survey of the latest developments in Palestine. Over 600,000 people visited the 1934 Fair, at which 2,861 concerns from more than 33 States were represented. Five years ago only 330 firms, of which more than two-thirds came from Palestine and only 45 from Great Britain, were sufficiently interested to show their goods in Tel-Aviv. By 1932 the number had

rised to 1,226, and Palestinian concerns still accounted for one-third of the total. This year there were 505 British exhibitors, and the foreign proportion had risen to three-quarters, which is striking testimony to the growing interest of the world in a country whose prosperity has been rapidly on the increase in recent years.

Statistics for the first six months suggest that 1934 will be another record year. The number of immigrants was slightly above the figure for the first half of 1933, and the total is expected to be at least equal to, if not greater than, last year's figure, when 40,000 immigrants were recorded. It is already certain that the capital brought with them will exceed the total of any previous year. Between December, 1933 and March, 1934, banking deposits alone increased by £2,500,000, or 25 per cent. of the total of £10,000,000 outstanding at the end of December, 1933, following a total rise of £5,000,000 since December, 1932. In 1933 investment reached a total of more than £10,000,000, of which £2,700,000 was in new buildings, £1,950,000 in agriculture, £800,000 in trade and industry, and £650,000 in the purchases of real estate. Building statistics for the first seven months of this year show that last year's output has been fully maintained. Citrus and orange plantations have been further extended. The number of new factories and firms registered during the first eight months of 1934 was 143, against 586 during the whole of 1933; but it is calculated that the new capital involved will be equal to, if not greater than, last year's figure. In 1933, the new companies were mostly on a small scale and only gave employment to 3,200 additional persons, whereas this year many large factories have been set up, and companies formed a year or two ago have extended their plant and scale of operations. The production of potash has already exceeded the minimum of 10,000 tons per annum prescribed in the company's concession, and the works under construction on the Dead Sea are nearing completion. A number of factories for the manufacture of textiles and light castings have begun production, and it is reported that Palestinian cement has even been exported to England.

HUGE INCREASE IN IMPORTS

The expansion in the country's capital equipment is shown by the rise in imports of capital goods. Comparison of the first quarter's figures for 1933 and 1934 shows that imports of the various kinds of machinery have risen by anything from 70 per cent. to 100 per cent. Imports of building materials have been maintained despite the rise in the domestic production of these materials. Motor-cars, textiles and foodstuffs, particularly sugar, also show appreciable increases. The latest figures only relate to May, and in that month the value of imported motor-cars was 100 per cent. above the corresponding figure in 1933. Compared with 1933, total imports during the first quarter rose from £2,437,340 to £3,322,197, and as exports only increased from £1,916,089 to £2,095,706, the passive trade balance rose from £521,251 to £1,226,491.

The rise in imports exceeds all modern records, but so far it has been paid for by the new capital brought into the country by immigrants. There is, therefore, no danger that this increase in the passive trade balance may lead to a currency crisis—in fact there still appear to be fairly large reserves outside the country. Two factors, however, are beginning to arouse some anxiety. They are, first, the fact that four-fifths of the exports are represented by oranges, of which nearly 70 per cent. go to Great Britain; and, secondly, the shortage of labour and the consequent high wages, which have raised the wage level in Palestine far above that in the surrounding countries. The position in the orange-growing industry is the more delicate, since the Arab population, which has so far been averse to engaging in any enterprise requiring permanent residence on the land, has been stimulated by the high profits of Jewish plantations to begin orange growing. It is believed that the prices for the 1934-35 crop, which will probably amount to 6,000,000 cases, will be maintained. The danger, however, lies in the next few years, when, on the basis of the current rate of investment in the industry,

there will be crops of 12 million to 14 million cases. Though modest, the standard of life of the Jewish immigrants is luxurious compared with that of the Arabs, whose participation in the Jewish-controlled selling syndicates seems very doubtful. Of more immediate importance, however, is the labour problem. The rates for unskilled and agricultural labourers have risen to five and six times the rates in Syria and Transjordan. This has compelled many employers and their families themselves to work, in order to give employment to their capital, and it has led to rapid mechanisation of agricultural methods where a few years ago only hand labour was employed.

TEL-AVIV, November 30.

CANADA

THE NEW BANK OF CANADA

THE Canadian Bankers' Association held its annual meeting on November 8. Mr Jackson Dodds, General Manager of the Bank of Montreal, who was re-elected President for a second term, urged that the present time-limit of ten years for the charters of Canadian banks should be abolished and that they should be given permanent charters instead, subject to revision by Parliament every ten years. He described the creation of the Bank of Canada as "a sharp break in the evolution of the Canadian banking system," but, while expressing some scepticism about its value to the country, pledged the cordial co-operation of the chartered banks to make it a success. Mr Dodds was critical of the Government's policy of mild currency inflation.

The total yields of the principal grain crops of Canada are estimated provisionally by the Bureau of Statistics in bushels as follows:—

	1933 (bushels)	1934 (bushels)
Wheat	269,729,000	275,252,000
Oats	307,478,000	324,745,000
Barley	63,359,000	63,748,000
Rye	4,327,000	5,437,000
Mixed grains	33,009,000	37,481,000

The average yield per acre in bushels of wheat was 11.5, compared with 10.4 in 1933; and of oats 23.7, compared with 22.7.

Winter has, as usual, given a stimulus to business through increased purchases of winter clothing and footwear and equipment for winter sports. Both wholesalers and retailers report an increase in business and are reasonably well satisfied with the outlook for the winter. The Bureau's "physical volume of business" index, however, showed a sharp decline for the week ending November 3rd:—

WEEKLY ECONOMIC INDEX, WITH SIX OF ITS COMPONENT FACTORS							
Week ended	Car-loadings	Whole-sale Prices	Bond Clearings	Bank Stocks	Com-mon Stocks	Trad-ing	Total
Nov. 4, 1933	61.8	...	107.2	70.3	79.0	116.5	82.1
Oct. 27, 1934	73.2	71.2	128.4	84.8	92.6	78.3	95.3
Nov. 3, 1934	69.2	71.1	128.0	67.5	90.2	95.1	91.9

Building construction was somewhat better in October, and the value of permits issued was \$2,721,919, an increase of 21.1 over the September figure and 53.3 per cent. over the figure for October, 1933. There is evidence that the depression in the primary industries has at last been checked.

THE RECOVERY IN OVERSEAS TRADE

Foreign trade returns for October show a substantial improvement:—

	1933	October	1934
Exports (domestic origin)	60,488,720		67,747,809
Imports	41,070,259		47,219,415

Exports for the first seven months of the present fiscal year ending October 31st are placed at \$384,780,352, a gain of \$58,882,794 over 1933; and imports at \$310,966,108, a gain of \$69,749,194. Wheat exports are still unsatisfactory

in volume, and the export figure for October was only 21,807,784 bushels, compared with 23,611,510 bushels in October, 1933.

In recent months the Federal revenues have not maintained the buoyancy visible in the earlier part of the fiscal year, but they are still higher each month than in the same month of 1933, and the return from customs and excise for October, at \$21,781,128, show a gain of \$1,358,531 over October, 1933. The yields of the main items of revenue for the first seven months of the present fiscal year are as follows:—

	Seven months ending Oct. 31	
	1933	1934
Income-tax	48,475,303	49,546,835
Customs duties	36,039,146	45,116,096
Excise taxes	55,927,517	63,863,377
Excise duties	21,744,802	26,573,812
	162,186,768	185,100,120

Commodity prices showed a downward tendency in October, and the wholesale index of the Bureau of Statistics for the month was 71.4, as against 72 in September. The Bureau's retail index for October was 79.3, as compared with 79 in September, 78.7 in August and 77.6 in October, 1933.

A return by the Department of Finance shows that on October 31st the amount of Dominion currency in circulation was \$210,790,848, and that the gold holdings of the Treasury against Dominion notes and savings deposits amounted to \$72,790,848. Of the latter \$2,236,665 was held against savings bank deposits and \$56,786,160 against Dominion notes, leaving \$13,786,160 in excess of the lowered Statutory requirements authorised at the last session of Parliament. The policy of currency expansion which the Government has been pursuing is reflected in the fact that the amount of currency issued under the Dominion Notes Act was \$146,786,160 on October 31st, compared with \$106,351,972 on October 31, 1933.

OTTAWA, November 26.

LETTERS TO THE EDITOR

COPPER RESTRICTION AND THE SHAREHOLDER

TO THE EDITOR OF THE ECONOMIST

SIR,—As an intending member of the Copper Shareholders' Association, I find it difficult to reconcile your comments on the position of the copper industry with the interests of shareholders.

You state in your November 24th issue that low-cost producers, especially in Rhodesia, are mining at a profit at present price levels, and infer from this, if I read you correctly, that restriction might, therefore, be a bad thing.

I am inclined seriously to doubt your first premises. As an example, the Roan Antelope, one of Rhodesia's lowest-cost mines, can produce blister copper at £19 17s. 10d. a ton, but with the addition of debenture interest and depreciation, this figure is raised to £23 4s.; and after that must be added the cost of refining before a comparison between net costs and the market price of the metal can be made.

Profits, if I may suggest it, cannot be gauged on a bare covering of costs, from the investor's point of view. What matters to the shareholder is whether it is possible to declare a dividend—surely the only fair test of strength of a company—and the low cost producers of copper have failed in this test, which indicates that all is not well.

It may be that some of the lowest-cost producers could make a small distribution if it were not necessary to husband resources owing to the present condition of the industry. But is this any comfort to the shareholders, who know that the existing uncertainties could be removed by an international agreement, a fact proved by the experiences of the tin industry? And again, is the shareholder supposed to congratulate his directors on the wisdom of their inaction, when he knows that a continuation of unfettered over-production will cause the price of copper to fall so low that every mine in the world will operate at a severe loss? Such a crisis is perilously near, with copper selling around £27.

The copper shareholder cannot afford to view things in an abstract way. He does not wish to pay for a war that may knock out rival companies; all he asks—and in my humble opinion, justifiably—is a fair return on his investment. This he is not getting, and, until he does, no amount of sophistry will convince him that a right policy is being followed.—

Yours faithfully,

41, Carlyle Square,
Chelsea, S.W.3.
November 27, 1934.

JOHN FERGUSON.

[Mr Ferguson finds it difficult to reconcile our comments on the copper situation (see *Economist* of November 24th) with the interests of shareholders. But where do the latter's true interests lie? An adjustment of supply to demand at a level of prices to yield a "fair" return to shareholders in all copper mining concerns (at whatever price these shares may have been acquired) would result in a vicious circle and ultimately lead to dislocation in the industry, to the detriment of both shareholders and consumers. Moreover, a price-raising scheme would involve the allocation of fixed quotas (as between individual concerns) and would prevent low-cost producers from increasing their share of the market at a critical moment in their development. There is no evidence of a heavy accumulation of stocks of copper outside the United States, and there are prospects of an improvement in the earning power of low-cost concerns as soon as demand begins once more to expand. To throttle this expansion at the trough of a depression for the sake of immediate dividends would seem dubious tactics.—Ed. *Econ.*]

RUBBER PLANTERS' FLIGHT

TO THE EDITOR OF THE ECONOMIST

SIR,—Among the readers of your paper there are, we are sure, a number of shareholders in rubber companies, since the aggregate amount of British money invested in rubber planting in Malaya is between £100,000,000 and £200,000,000 sterling.

Such readers have probably seen references in the papers to a publication issued on behalf of the Incorporated Society of Planters (Malaya), which embraces nearly all the Europeans working on the estates managed by the companies in which they hold shares. This publication reviews the present serious financial plight of the planters, and is an appeal to shareholders to study the facts. Many of these would, doubtless, like to read it, and, therefore, perhaps we may be allowed to say that a copy of the pamphlet will be sent, free of charge, to any shareholder who will write to the London agent, Mr Charles Watney, Courtfield House, Courtfield Road, London, S.W.7.—Yours very faithfully,

W. J. O'DONOVAN, M.D. (M.P.),
H. GRAHAM WHITE (M.P.),
JOHN WILMOT (M.P.).

MONEY AND BANKING

WHAT OF THE LIRA?

AN increase in the rate of discount of a Central Bank has become an exception, in fact almost an anomaly, in prevailing world conditions. It is natural, therefore, that the decision to raise the Italian Bank rate from 3 per cent. to 4 per cent., which was announced on November 24th, should have drawn attention once more to the course of development in Italy. More particularly is this so as such a step cannot be ascribed to any unforeseen or untoward events of recent occurrence outside Italy—as, for example, the devaluation of the United States dollar, which, by precipitating a heavy outflow of gold, caused a rise in Bank rate in France and Holland at different dates.

The circumstances in which this action was taken by the Banca d'Italia at the instance of the Ministry of Finance were, moreover, rather unusual. Earlier in the same week the Italian Government had issued an internal loan of 2,000 million lire in the form of 4 per cent. nine-year Treasury bonds at par. On the Friday the subscription lists were unexpectedly closed in advance of the time originally announced, the loan having, according to report, been heavily oversubscribed. The next day—a Saturday—a 4 per cent. Bank rate was decreed.

The lira exchange has been under pressure for a considerable time. This has been evident alike from the sight quotation in Paris, where lire have for many months been at 3 per cent. discount in relation to their gold parity; and from the forward rates in the London market which have shown a discount this year fluctuating between a maximum of 17 per cent. and a minimum of 4 per cent. per annum; the present figure is 6½ per cent. per annum. Again, since January, the Banca d'Italia has lost gold week by week. From 7,091 million lire on January 1st its reserve has fallen to 5,951 million lire on November 20th, a decline of over 14 per cent. But this movement, conspicuous though it is, would not in itself have caused an excessive deterioration in the technical position of the Central Bank if it had been possible to counteract it, as in previous years, by a more or less proportionate contraction in the note circulation and sight liabilities. Contrary to previous experience, this year's note circulation has risen by some 400 million lire, and as a result the Bank's ratio of gold to sight liabilities has fallen to 42 per cent., which brings it for the first time since re-adoption of the gold standard by Italy, in December, 1927, into close proximity with the statutory limit of 40 per cent. If, therefore, the slow but persistent drain on the Bank's gold reserve were to continue, without a proportionate reduction taking place in the sight liabilities of the central institution, the Italian Government would obviously have to choose between the alternatives of formally denying any connection with the gold standard or reducing the statutory ratio of the gold reserve to notes and deposits.

In view of this position, it has been suggested in some authoritative Italian quarters that the proceeds of the recently issued loan may be applied, in part, to the reduction of the Government's liabilities to the Banca d'Italia. The need for such a reduction receives additional emphasis from Signor Mussolini's warning that there is a Budget deficit of 3,000 million lire. Such a reduction would at the same time strengthen the technical position of the Bank and result in an immediate contraction of the credit structure.

But it may be questioned whether the fundamental difficulties of the situation can be removed by these or similar measures. Deflation in its severest form has been practised almost without intermission in Italy for nearly ten years. Once the lira had been stabilised, in December, 1927, at a level 30 per cent. higher than that of the French franc and at least 25 per cent. higher than the actual lira exchange of the three preceding years, deflation became a self-imposed necessity. And as world prices have not risen but fallen in the meantime, the necessity has remained. Italian economy, still struggling with an over-valued currency, was,

in marked contrast to France, badly hit by the collapse in world prices even before 1931, and the abandonment of their gold parities by sterling, the dollar and the yen has since added enormously to the strain. To meet it, the Italian Government has had recourse to a series of surgical operations rather than to osteopathic treatment. Wages and salaries have been reduced, through successive cuts, by amounts ranging from 20 to 40 per cent., even though the cost of living is kept up by one of the highest tariffs in the world. House and factory rents have undergone three reductions of 10 per cent. each. Debit and credit rates of interest have been lowered by decree, and other similar measures adopted.

While the Italian Government appears to have given us a practical example of theoretically almost perfect deflation, the result, unhappily, has only confirmed, instead of contradicting, the gloomy forecasts of most economists. The growing distress and large-scale unemployment which attended the Italian Government's efforts at readjustment during the earlier part of the present depression evidently rendered it both socially and economically expedient for the Government itself to undertake vast public works, involving large expenditure. This has had, as a natural consequence, the desirable effect of stimulating production in many important branches of industry (referred to in the Turin letter in last week's *Economist*). Unfortunately, being in manifest contradiction to the earlier and uncompleted process of adjustment to world conditions, it has served to increase the strain upon Italy's international position.

During the current year the adverse balance in foreign trade, reduced to 1,500 million lire in 1932 and 1933, has risen sharply. For the first ten months it amounted to 2,009 million lire, as against 1,150 million lire for the corresponding period in 1933. Month by month exports have failed to maintain the level of last year, while imports, under the stimulus of the domestic re-employment programme, have in most months exceeded those of the previous year. Movements of the price index figures, both wholesale and retail, are more or less consistent with the trend shown by the trade figures. For though they show, in each case, a downward tendency, the net decline during the past two years has not kept pace with sterling and dollar prices in terms of exchange. The downward movement in wholesale prices has moreover lagged behind conspicuously in comparison with that of other gold countries such as France and Belgium.

Even at the present level the adverse balance of Italy's foreign trade would be anything but disastrous to her welfare and the stability of her currency if the invisible items, normally showing a substantial balance in Italy's favour, were to recover. Unfortunately, while Italy's foreign indebtedness, both long-term and short-term, is now negligible, there has been a serious decline in tourist travel, emigrants' remittances and the earnings of Italian shipping. These between them account for the deficit, which has had to be met by a steady outflow of gold. The first-named item has been seriously prejudiced during this past year, not only by the low exchange levels of the dollar and of sterling, but also by the severe competition of the German registermark, together with the disabilities imposed on Germans themselves, who have always flocked to Italy in very large numbers. Emigrants' remittances, again, can hardly be expected to recover without a noticeable upswing in the economic prosperity of the United States and France, while as regards shipping, Italy herself can hardly be exonerated from having contributed very substantially to the plight in which that great industry now finds itself the world over.

Apart, therefore, from the prospects of a general rise in world prices measured in gold, the outlook for the lira remains dubious. The choice before the Italian Govern-

ment seems to lie between renewed drastic deflation, with all its attendant social and economic evils, and the further pursuit of a policy of "reflation" accompanied, however, by an adjustment of the exchange to whatever level may be required to square the balance of accounts with other countries. It would be wholly mistaken to expect the increase in Bank rate to contribute in any marked degree towards this end. Rigid exchange control has been exercised for a long time in Italy, and a higher Bank rate will add nothing to its efficacy in preventing the export of capital. On the other hand, the higher rate cannot be expected to attract any funds to Italy from abroad and thereby to support the exchange position. Thus, unless there is a sharp reversal of the trend in Italian economic affairs, due to factors which so far have remained undisclosed, some positive action in relation to the currency in the not too distant future may come more as a necessity than as the result of long deliberation.

FINANCIAL NOTES

The Money Market.—The distribution of the War Loan dividend has made money very easy, but little day-to-day money has been wanted this week, and the rate is nominal at ½ per cent. A fair amount of money has been borrowed into the New Year at ½ per cent. against eligible bills. Discount rates have been definitely firmer, partly because of the increase of £10 millions in the volume of tender issues of Treasury bills, but mainly because of a general unwillingness to buy bills which will have to be carried over the New Year. For this reason January Treasury bills have been offered at ½ per cent., with few buyers, and Februaries at ⅞ per cent. The rate for March Treasuries is lower at ⅝ per cent., as buyers argue that the longer a bill has to run in the New Year the better becomes the chance of securing a capital profit on the drop in the discount rate which is generally expected to occur soon after the turn of the year. Last week's Treasury bill tender rate was 9s. 3.94d. per cent., against 6s. 3.97d. per cent. the week before, and on Thursday afternoon tender rates of ⅝ per cent. and even ⅞ per cent. were anticipated for the following day. Three months' bank bills were quoted at ⅝ per cent., and one bank was refusing to buy at less than ¾ per cent.

	Nov. 15, 1934	Nov. 22, 1934	Nov. 29, 1934	Dec. 6, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short Loan rate:—				
Clearing banks	½-1	½-1	½-1	½-1
Others	½	½	½	½
Discount rates:—				
Treasury bills.....	½	½	¾-7	¾-1
Three months' bank bills	¾	¾	¾-1	¾

The payment of the War Loan dividend is responsible for wide changes in the floating debt. Tender issues of Treasury bills have increased from £423.7 to £433.7 millions, and tap issues from £431.9 to £436.1 millions. Advances from Public Departments have risen from £38.2 to £46.6 millions, so that the "floating assets" of the Departments have risen from £470.1 to £482.7 millions, against only £388.1 millions on March 31st last. Including £2.2 millions borrowed on Ways and Means from the Bank of England, the week's increase in the floating debt was £24.8 millions.

The Foreign Exchanges.—This week sterling has reacted sharply from \$4.98½ to \$4.95½ against the dollar, and from Frs. 75½ to 75¼ against the franc. Early in the week the reaction was more pronounced, for the Paris rate dipped below Frs. 75, and the British control had to intervene. The discount on three months' dollars has narrowed from ⅞ cent to ⅝ cent, while that on three months' francs has narrowed from 9½ to 5 centimes. It is recalled that three months ago when sterling was relatively weak, heavy bear sales of forward gold currencies were made. This week these had to be covered, and the buying of spot francs and other gold currencies was accelerated by the votes of confidence

received by the new French and Belgian Governments in their respective Chambers, and by the news of the Dutch loan to Belgium. Three months' belgas, however, are still quoted at 0.31½ belgas discount. Meanwhile commercial buying of dollars had been delayed in anticipation of a further seasonal improvement of sterling, but when the pound began to weaken some of these impending dollar commitments were hurriedly covered. There was also a little buying of dollars for investment purposes. These influences both explain the sudden relapse of sterling and also suggest that it may prove transitory.

The Bank Return.—This week there was a further increase of £5.7 millions in the note circulation, due to currency withdrawals for Christmas shopping. The Reserve was reduced by the same amount.

BANK OF ENGLAND					
	Dec. 6, 1933	Dec. 27, 1933	Nov. 21, 1934	Nov. 28, 1934	Dec. 5, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.6	190.7	192.1	192.1	192.2
Note circulation.....	374.9	392.0	376.9	379.7	385.4
Banking Department:—					
Reserve	76.9	59.7	75.8	73.0	67.3
Public deposits.....	6.9	22.2	25.3	27.7	8.6
Bankers' deposits	115.9	101.2	95.9	89.1	108.9
Government securities ..	78.0	88.0	80.1	80.4	84.8
Discounts and advances	8.5	16.8	8.6	9.2	9.6
Proportion	48.3%	37.3%	47.6%	47.1%	43.7%

In order to pay the War Loan dividend, £19.1 millions was drawn off public deposits. This, with the week's increase of £24.8 millions in the floating debt, more than accounts for the sum of £35 millions required for the War Loan dividend. The increase of £4.4 millions in Government securities reflects Ways and Means borrowing from the Bank. Bankers' deposits have risen by £19.8 millions, this movement being due to the payment of War Loan dividend warrants into customers' accounts at the joint-stock banks. Had it not been for the Christmas currency withdrawals, the increase would have been still greater.

New York Money and Banking.—Money remains very easy, and New York rates are unchanged. Brokers' loans by New York member banks rose from \$572 to \$576 millions during the week ended November 28th, and other loans against securities rose from \$805 to \$814 millions. Total loans against securities have thus risen from \$1,377 to \$1,390 millions. Heavy financing operations have been carried through by the Administration this week. Holders of \$992 millions of Treasury certificates maturing on December 15th were offered either 1½ per cent. notes maturing on June 15, 1936, or 2½ per cent. notes maturing on June 15, 1939. A cash issue for the purpose of financing new expenditure was also made in the form of \$450 millions in 3½ per cent. 15-18 year bonds, and \$450 millions in 1½ per cent. notes maturing on June 15, 1936. Both these cash issues were heavily oversubscribed, but up to December 5th acceptances of the conversion offer only amounted to \$800 millions. Even so, there is a general expectation of an early rise of Government bonds at least to a 3 per cent. basis, and were the Budget balanced, it is thought that a 2 per cent. basis could be reached. The view that a further decline in interest rates is impending was endorsed last week by the President of the American Bankers' Association, who added that he was not afraid that lower rates would divert money from savings bank and other bank deposits into speculative channels. He also expected Congress to fix next session a limit to the deposit insurance liability of the banks. President Roosevelt's Committee on the co-ordination of Government lending has proposed the creation of a revolving fund of \$500 millions for granting loans to farmers against stored farm products. Gold arrivals in the middle of this week include \$11.2 millions from France and \$10.1 millions from Holland.

Holland's Loan to Belgium.—Early this week it became known that Belgium had successfully raised a loan of Fl. 100 millions in Amsterdam. The terms appear fairly onerous, for the loan is for one year at a nominal rate of 4 per cent., and it is understood that the price of issue is below par. It is also believed that the loan is subject to the "all-in" gold clause, which not only binds Belgium to repay in gold or gold exchange, but which also provides that in the event of the Dutch suspension of the gold standard within the year Belgium is still bound to repay in gold, so that any profit on the depreciation of the guilder accrues to the lender. One-quarter of the proceeds of the loan will be allocated to the Congo, and the remainder to financing Belgian schemes for providing work for the unemployed, and partly towards meeting the general Budget deficit. The loan was sponsored by a leading Amsterdam house, but arrangements are being made to place part of it in other centres. It is not being offered in London as it is not of a type that is permitted under the Treasury embargo. The terms of the loan are roughly parallel to those of the Dutch credit granted to France last March. From the general exchange point of view, this operation represents a purely internal transfer of funds inside the gold bloc, but nevertheless it was partly responsible for a hardening of the gold exchanges in the early part of this week. The London view, however, is that this hardening is also due to the covering of forward sales of gold currencies made during their period of strength against sterling three months ago. The effects of this covering are likely to be temporary, and so the present recovery of the gold currencies may not persist.

* * *

Swiss Banking Reform.—After a run on several important banks in Switzerland, the demand for banking reform became irresistible. The Banking Reform Act just published neither attempts complete control of credit by the State, nor cripples enterprise by too detailed regulations or by dealing too hardly with the banker of second grade. It applies to all institutions which are founded for, and expressly solicit, deposits and current accounts; but it does not apply to finance companies, investment trusts, brokers or trustees, who remain under the control of the National Bank, to which, again, the Act does not apply. Deposits may only be accepted by banks which publish balance sheets; half-yearly returns are required if the balance-sheet total reaches 20 million Swiss francs, quarterly returns for 100 million Swiss francs, and monthly if it exceeds that figure. Each depositor receives special creditor rights for 5,000 Swiss francs; but in the event of a run the Federal Council may grant a moratorium to the bank if a surplus of assets can be proved and interest payments can be maintained. In order to safeguard the interests of depositors and creditors, banks must retain a reserve fund of at least 20 per cent. of their share capital, and they must submit to an inspection of their books by independent accountants, who are specially charged to direct the attention of the board to dangerous or doubtful credits or investments. In order to restrict competition among the banks for new deposits, no bank whose balance-sheet total exceeds 20 million Swiss francs may increase its deposit rate or interest on bank certificates without the permission of the National Bank. The Act leaves the distribution of assets entirely to the banks, with the exception of agricultural savings banks; but all banks and finance companies must make a full return of foreign investments to the National Bank, which now receives a right of veto for the protection of the national interest. No banking reform can remove the threat to the Swiss economic system inherent in the unbalanced State and railway Budgets and the depression in the agricultural and export industries, but the new Act should contribute to strengthen the confidence of depositors in the Swiss banks.

* * *

Brazilian Exchange and Bonds.—A further example of the international tendency to complete purely bilateral trading arrangements between countries is afforded by the long-anticipated announcement of the preferential alloca-

tion of foreign exchange cover in Brazil as from December 10th. The Bank of Brazil has stated that as exchange for the "official" market is derived entirely from coffee exports, cover in that market will in future be distributed among foreign countries proportionately to their purchases of Brazilian coffee, the United States to receive 46 per cent.; France, 13 per cent.; nine other countries, excluding Great Britain, 26 per cent.; and the remainder, including Great Britain, 15 per cent. The United States is by far the best customer of Brazil, and certainly has a good bargaining weapon in its large adverse balance with Brazil, which amounted to some 377,656 contos of reis in the first half of 1934. The total value of coffee exports from Brazil—say 64 per cent. of all merchandise exports—in the period January-September, 1934, was 1,628,691 contos of reis (paper), and, on this basis, 46 per cent. of exchange cover would represent, say, 749,197 contos, which, if used to finance a great expansion of merchandise imports from the United States—leaving aside the other preferential official allocations of exchange—would appear to indicate a future deflection of official exchange cover which might prejudice Brazil's debt services. Brazil has to transfer some 178,000 contos to United States creditors and 272,000 contos mainly to British creditors—a total equivalent of some £7,200,000. These payments are to be spread over a period of six years in accordance with the arrangements made in June last year for the release of frozen milreis balances. The funding arrangement, however, under which partial payments on the external debt are provided for, was based upon anticipations that some £8,000,000 of exchange would become available annually. Brazil's favourable balance of trade for the period January-September, 1934, was £7,249,000 (gold), so that, at first sight, the new preferential allocations of the exchange in the "official" market, which is likely to divert part of Brazil's supplies of foreign exchange to the financing of new American imports, must arouse apprehension over the future prospects of the service on Brazilian bonds. It also appears that British export trade with Brazil may suffer, in that increased recourse to the "free" market may be necessitated, with a consequent increase in the cost in depreciated milreis of British imports into Brazil.

* * *

British Overseas Bank.—The main change in the position of this bank since a year ago is the increase of £365,000 in its deposits. This increase, however, cannot be entirely welcome, for it may consist partly at least of foreign panic money transferred to London in October last, immediately before the accounts of the bank were made up. This money is essentially volatile, and under present conditions it is difficult to keep it sufficiently liquid and at the same time find remunerative use for it. The accounts suggest that most of it has had to be lent on the money market:

	October 31st		
	1932	1933	1934
Liabilities—	£ thous.	£ thous.	£ thous.
Capital	2,000	2,000	2,000
Reserve fund	175	100	100
Investment depreciation reserve...	...	150	150
Deposits	2,532	2,599	2,964
Acceptances, etc.	3,449	2,989	3,121
Assets—			
Cash	252	217	229
Call money	596	686	946
Balances abroad.....	193	150	145
Discounts	647	663	498
Government securities	450	397	380
Other investments	563	571	596
Advances, etc.	1,594	1,840	2,025
Net profits	112	63	62
To contingencies	50	...	...
Dividend—			
"A" shares	6%	6%	6%
"B" shares	Nil	Nil	Nil

The decline of £17,000 in Government securities is explained by the contraction in holdings of Treasury bills, which are included under this heading. The fall in discounts illustrates the dearth of commercial bills. The increase in advances and other accounts may arise from changes in the bank's open forward exchange positions. Net profits remain low, but the "A" shares, in which alone the public are interested, continue to receive their dividend of 6 per cent.

THE STOCK EXCHANGE

"KAFFIR" PROSPECTS

THE approach of the December dividend declarations has failed to stimulate the market for South African gold-mining shares into the activity characteristic of earlier dividend periods. Since the June payments were announced the market has been subjected to a species of refinement by fire, whose ultimate effects may well be as salutary as their immediate consequences have been disconcerting.

In the first place, the exuberance of irresponsible speculation in South Africa has been checked. Hard-pressed operators have been compelled, in numerous instances, to liquidate their holdings of sound, dividend-paying shares in order to meet their engagements elsewhere. Secondly, the industry's authoritative spokesmen have announced, in the clearest possible terms, their inflexible decision to subordinate immediate dividend considerations to those of extended "life" in determining their mining and milling policy. In the face of these chastening factors share values have shown noteworthy resilience. The "Gold Mining" index of the *Investors' Chronicle* (December 31, 1923 = 100) declined from 221.4 in August to 217.7 in September and 204.8 in October, but had recovered to 217.7 at the end of last month. Broadly, however, there is little inclination to resume speculative dealings on an appreciable scale, and dividend prospects are being regarded conservatively.

On the whole, the market expects that the forthcoming distributions will confirm the higher levels established last June, with small improvements in a few instances. This opinion is based, less on calculations of what the mines are capable of paying, on their known earnings, than on their probable policy in the light of two factors which are strongly influencing the industry at the moment. One is the wage problem, and the other the factor of taxation. Both are intimately bound up with the much-debated policy of lower-grade ore milling pursued by the majority of mines. Apart from the general desirability of maximum "life," an over-impressive rise in profits and dividends might provide fuel for an agitation for an all-round increase in wages, which, in turn, would have repercussions on other undertakings throughout the Union.

The taxation factor continues to be a bone of contention between the Government and the industry, which has not ceased to feel that its burden is onerous, arbitrary and unequal. A powerful plea for its reduction was made this week by Mr J. A. Agnew, chairman of Consolidated Gold Fields, at the company's annual meeting. Mr Agnew gave the following instructive comparison between the profits of the Witwatersrand gold mines (including Heidelberg) and the direct revenue accruing to the Government therefrom, before and after South Africa's departure from the gold standard:—

	1932	1933	Increase	
			Amount	Per cent.
Total profit of the mines	15,300,000	31,500,000	16,200,000	106
Income tax	1,800,000	3,750,000		
Excess profits	1,800,000	6,000,000		
Government share of profits.....	2,500,000	4,880,000		
Total to Government	4,300,000	14,630,000	10,330,000	240
Balance to mines.....	11,000,000	16,870,000	5,870,000	53

During 1933 the Government received 64 per cent. of the increased profits, leaving only 36 per cent. for the mining companies. Before 1933 direct revenue from the gold mines formed about 15 per cent. of the total South African Budget. To-day, the proportion is over 40 per cent. There is force behind Mr Agnew's plea, not only for a removal of the anomalies of the Excess Profits Duty Act,

but also for a reduction in the normal tax to 3s. from the "emergency" level of 4s. to which it was raised in 1932.

No changes of taxation, however, can affect the 1934 dividend position. Prospects in this regard may be viewed in relation to current earnings. The following table gives total profits for each mine during the first eleven months of 1934, as compared with the corresponding months of 1933:—

	Profits to November 30		Increase (+) or Decrease (−) in 1934	
	1933	1934		
Current year ends Dec. 31, 1934—	£	£	£	%

Van Ryn Deep	267,437	255,590	− 11,847	− 4.4

* Figures for five months, July to November.

The average gold price on which the figures have been based during the eleven months of 1934 has been 136s. 6d., against 122s. 6d. for the same period of 1933. In addition, the majority of mines have considerably increased the tonnage of ore treated, and the general trend of costs has been lower. In the light of these facts, the above comparison of profits suggests that a drastic reduction has been made in the value of the ore treated. In several instances where substantially increased profits have been achieved, this result proves, on inspection, to be due to a very considerable increase in the tonnage milled. Daggafontein, for example, has increased the quantity of ore treated from 592,200 tons for the eleven months of 1933 to 867,900 tons for the current year.

The figures suggest that in most cases final distributions will show little change from the June interims. There are, however, several prominent exceptions. There is a general belief, for instance, that Crown will increase its payment by at least 6d. per share, as compared with the interim figure, while Daggafontein may pay as much as 1s. over its interim of 2s. 9d. In some quarters it is thought that Randfontein, which distributed an interim of 1s., may pay a final of 1s. 6d. despite the heavy shrinkage in its profits for the current year. The mine has passed through a poor patch in its development, and profits are down by one-third. Results, however, are now slightly on the up-grade again, but the expectation of a final dividend of 1s. 6d. may be optimistic. The profits of West Springs also show a heavy decrease, despite an increase in the tonnage treated. This company reduced its interim by 3d. to 1s., and a final of the same amount may be as much as can reasonably be expected. Among the companies which are not expected to make any change in their interim payments are Langlaagte, New Modder, Government Areas, Brakpan and New State Areas. The following table sums up prevailing estimates regarding final payments on

some of the most active shares, and affords comparison with 1933 and the last pre-devaluation year:—

	Total, 1932	Dividends per Share		Estimated Final, 1934	Estimated Total, 1934
		Total, 1933	Interim, June, 1934		
Crown	s. d. 7 9	s. d. 14 3	s. d. 8 0	s. d. 8 6	s. d. 16 6
Daggafontein		3 9	2 9	3 9	6 6
East Rand	0 6	2 3	1 3	1 9	3 0
East Geduld	2 9	7 0	4 0	4 6	8 6
Geduld	7 6	11 3	6 6	7 0	13 6
West Rand	0 7½	1 3	0 9	1 0	1 9

The technical position underlying the "Kaffir" market, at the moment, is indubitably stronger than it appeared to be a few weeks ago. The shares of the dividend-paying mines are closely held, and recent buying has been mainly for investment. The recent set-back, however, has damped down speculative activity. It may be questioned whether the December dividends will have any appreciable revivalist effect, for potential changes are limited to relatively few companies, and have already been largely discounted. On a longer view, the easier tendency of the pound in the last few days has resuscitated discussions of Britain's alleged debit balance on international payments in 1934, and of the possibility of a further decline in sterling in 1935. The experience of the last few months, however, has suggested that the benefits of a higher gold price are more likely to be taken up by a proportionate reduction in average grade, or by higher taxation payments, than passed on to shareholders in increased dividends. "Policy," in other words, may continue to be the major determining factor in the outlook. If the industry's plea for reduced taxation continues to fall on stony ground, it is not easy to see when, why or how the market can stage an early repetition of its past exuberance.

INVESTMENT NOTES

Trustee Law: A Suggestion.—Our recent discussion of certain anomalies in the Trustee Law (see the *Economist* of October 13, page 687) has produced an interesting suggestion from a reader, designed to avoid the limitations which are placed upon trustees working specifically under the provisions of the Act of 1925. Briefly, the suggestion is to devise an "investment clause" which could be embodied in a will or instrument creating a trust, which would allow trustees to operate outside the present provisions of the Act, without exposing the beneficiaries to undesirable investment risks. Our reader suggests that the clause should permit investment (a) in all stocks of trustee status; (b) in debentures of all public companies whose earnings in each of the preceding five years have been sufficient to cover interest requirements at least three times; (c) in all Central Electricity Board stocks; and (d) in ordinary shares of public companies which have paid a minimum of 5 per cent. in each of the last five years. Not more than 5 per cent. of the trust funds should be invested in the ordinary shares of any one company, and the total equity holdings of the trust should be limited to 20 per cent. of the whole. Although these conditions do not fall completely within the sanction of accepted investment canons, they have much to commend them. In the first place, they would be entirely optional upon the trustee, who could if he chose continue to restrict himself to the existing range of investments. Some cautious investors, however, might regard the debenture cover requirements as a minimum, and an extension of the period required, to include all phases of the trade cycle, would conceivably be of advantage. Greatest controversy, however, would undoubtedly attach to the ordinary share recommendation. This should certainly be based, not on dividend payments, but on earnings. Further, the suggested period of five years is undoubtedly too short. Nor does our reader—whose suggestion is admittedly only a first approximation—indicate any balance-sheet measure for the equity security. In cases where a considerable amount of

debenture and preference capital stands in front of the equity issue, wide fluctuations of earning power and potential weakening of the assets position would always be latent. Since investment is not an exact science, the formulation of working rules necessarily involves difficulty; but, in view of the unwillingness of the Chancellor of the Exchequer to appoint a committee to reconsider the machinery of trustee investment, as indicated in an answer in the House of Commons recently, it is not impossible that a private clause of this nature would be welcomed. If an acceptable common form could be devised, in order to protect trustees from imputations of breach of trust, beneficiaries might well be spared considerable hardship arising from periods both of low interest rates and rising prices.

* * *

Trust Companies' "Home" Investments.—In the Investment Trust Supplement, published with our last week's issue, we showed that approximately half the funds of the average trust company were invested abroad. Since 1931, economic recovery has travelled faster and further in Great Britain, the Empire, and the sterling area generally than in the rest of the world. It may therefore be presumed that, other things being equal, those companies have the best chance of an early revival in earnings which have more than the average share of their resources in the prosperity zone. The following is a list of companies to which this condition applies, their "Home and Empire" percentages being shown in descending order of magnitude:—

PERCENTAGE OF TOTAL PORTFOLIO INVESTED IN THE UNITED KINGDOM AND BRITISH EMPIRE—As shown in latest report.
(Percentages based on market values shown in italics; all other percentages based on book values).

Geographical distribution is, of course, only one of many factors which a potential buyer of investment trust stocks must consider. General standing, past results, "gearing," etc., need also to be taken into account, and investors should be clear whether they are buying for long-term stability or rapid recovery. Distribution by industries and types of security, again, is almost as important a factor as geographical distribution. In subsequent issues we propose to publish further lists of companies with "more than average" holdings in these respects. All such lists, however, suffer from one disadvantage, which is within the power of trust company managers to remedy. Even to-day, many trusts furnish no particulars whatever of the nature of their holdings. After the severe decline in earnings and dividends of the last few years, it is difficult to see how even a specious case can be made out for the continuance of a "blank cheque" policy.

* * *

Actuaries' Investment Index.—The easier tendency of share values this week is attested by a fall in the Actuaries' Index of 144 industrials (December 31, 1928 = 100), from 74.3 on November 27th to 73.7 on December 4th, the

figure a month ago being 72.5. The corresponding yield averages are 3.62, 3.60 and 3.67 per cent. respectively. One or two constituent groups in the Index show a slight upward tendency, but the trend of the majority of groups is downward.

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Nov. 6)	Week Ago (Nov. 27)	This Week (Dec. 4)	Month Ago (Nov. 6)	Week Ago (Nov. 27)	This Week (Dec. 4)
Higher this Week—						
Insurance Co.'s (24).....	112.3	117.9	118.0	3.71	3.54	3.53
Home Rails (4).....	74.3	75.1	75.7	1.52	1.53	1.51
Lower this Week—						
Building Materials (4).....	81.0	87.0	84.4	4.40	4.10	4.23
Elec. Light and Power (14)	131.1	136.7	134.7	3.79	3.65	3.70
Oil.....	58.0	58.3	55.7	5.00	5.17	5.22
Breweries and Distilleries (16).....	120.2	125.5	123.2	3.81	3.75	3.85
Shipping (3).....	15.9	15.4	14.3	NH	NH	NH

The setback to the November upward movement has so far been perceptible, but scarcely significant. Every rise for the last couple of years has been followed by a similar secondary phase.

COMPANY NOTES

Laundry Companies.—Both the possibilities and the problems of the laundry trade are indicated by the fact that some 80 per cent. of the nation's washing is still done at home. As labour is easily the most important element in laundering costs, the public laundry is a luxury to the poorer type of housewife. While the use of machinery and large-scale operation allow the laundry trade to handle its washing with much less effort per unit than the "domestic"

† Broken period equated to twelve months.

operator, there has lately been a great advance in the efficiency of the washing apparatus and cleansing preparations which are at the latter's disposal. Moreover, the public laundry has to face three quite substantial costs which do not enter into the "home-washing budget": those of collection and delivery, of accounting, and of sorting the garments out for their several owners. To set against these problems, the laundry companies have the important long-term advantage of an established trend to help them. Even in London, houses built sixty or seventy years ago were regularly equipped with a "copper" for home washing. Those "coppers" are very rarely used to-day in houses occupied by the middle or upper classes. Country houses, where drying and bleaching present fewer difficulties, continued home washing rather longer, but few domestic laundries survive. Home laundering has, in fact,

OFFER OF CONVERSION

to Holders of

Argentine Republic Port of the Capital (Buenos Aires) 5 per cent. Bonds

The proposal to issue in London Bonds of the Conversion Loan has been referred to His Majesty's Treasury, who, so far as they are concerned, raise no objection.

Application will be made to the Committee of the Stock Exchange, London, for permission to deal in and, in due course, for an official quotation for the Bonds.

Argentine Government Conversion Loan

ISSUE OF

4½ per cent. Sterling Bonds

(being the third issue of Bonds of the above Loan)

Sanctioned by Decree dated 3rd December, 1934, authorising an issue of £5,800,000 nominal of Bonds pursuant to Law No. 11821 of the 10th October, 1933, authorising the conversion of Argentine Government Loans.

Interest payable 1st January and 1st July
Six months' interest payable 1st July 1935

The Bonds are the direct obligation of the Argentine Government and will be repaid in sterling in London on or before the 1st July, 1986. An accumulative sinking fund of one half of one per cent. per annum is to be applied half-yearly in the purchase of Bonds at a price not exceeding par (exclusive of accrued interest but inclusive of expenses) or, to the extent to which Bonds are not so obtainable, in the redemption at par of Bonds to be selected by drawings. The first operation of the sinking fund will be in respect of the half-year ending 1st July, 1935.

The Argentine Government reserves the right on three months' previous notice to redeem at par on any interest payment date the whole or any part (to be determined by drawings) of the Bonds outstanding. The Argentine Government also reserves the right to accelerate redemption of the Bonds at any time by increase of the sinking fund.

Principal of and interest on the Bonds are exempt from all Argentine taxes or impositions present or future.

In the event of the Argentine Government creating any obligations secured by a charge on any of its revenues or assets the Bonds of the Conversion Loan shall (in common with any existing obligations of the Argentine Government entitled to the benefit of a similar provision) be secured equally and rateably with such obligations.

BARING BROTHERS & CO., LIMITED, and MORGAN GRENFELL & CO., LIMITED, are authorised by the Government of the Argentine Republic to offer to holders of

Argentine Republic Port of the Capital (Buenos Aires) 5 per cent. Bonds

(notice of redemption of which on the 1st July, 1935, has been given by the Government)

conversion into
4½ per cent. Sterling Bonds of the Conversion Loan on either of the following bases, namely:—

1. £100 nominal of such 4½ per cent. Bonds together with a capital payment of £5 and an adjusting interest payment of 5s. in exchange for £100 nominal of Bonds surrendered
2. £105 5s. nominal of such 4½ per cent. Bonds together with an adjusting interest payment of 5s. in exchange for £100 nominal of Bonds surrendered.

Bonds presented for conversion must be accompanied by all coupons maturing on and after 1st July, 1935. The coupon maturing on 1st January, 1935, should be detached by holders for encashment in the usual way.

On the above bases a holder who converts will receive interest at the rate of 4½ per cent. per annum on the new Bonds from the 1st January, 1935, together with the difference between that rate and 5 per cent. per annum to the 1st July, 1935, on the Bonds surrendered for conversion.

Holders whose Bonds have been drawn for redemption on the 1st January, 1935, have the right to accept the offer of conversion.

Holders accepting the offer of conversion must lodge their Bonds, together with the appropriate forms of acceptance, at the Counting House of Baring Brothers & Co., Limited, 8 Bishopsgate, London, E.C.2, or of Morgan Grenfell & Co., Limited, 23 Great Winchester Street, London, E.C.2, not later than 4 p.m. on Thursday, 20th December, 1934.

On acceptance Holders will receive fully paid Letters of Allotment exchangeable in due course for Provisional Scrip Certificates to Bearer, to which will be attached a coupon for six months' interest at the rate of 4½ per cent. per annum, payable 1st July, 1935.

Provisional Scrip Certificates will be exchangeable in due course for Definitive Bonds to Bearer which will be issued in denominations of £1,000, £200, £100 and £20.

Fractional Certificates will be issued for amounts of less than £20, and these Fractional Certificates may afterwards be consolidated and exchanged for Scrip Certificates in amounts of £20 and multiples thereof, a further Fractional Certificate being issued for any balance. Arrangements will be made for dealing in the Fractional Certificates.

Brokerage will be paid to Bankers and Stockbrokers at the rate of 5s. for every £100 nominal of Bonds converted pursuant to this offer and comprised in forms of acceptance bearing their stamp.

Forms of acceptance may be obtained from Baring Brothers & Co., Limited, 8 Bishopsgate, London, E.C.2, or Morgan Grenfell & Co., Limited, 23 Great Winchester Street, London, E.C.2.

LONDON, 5th December, 1934.

been superseded by the public laundry in almost every instance where labour was formerly engaged to do the home laundering. Low down in the scale of wealth, washing day is recognised as a toil to be avoided as soon as the family can afford. Laundries therefore stand to benefit directly from the rising standard of living, even over as short a period as a decade. There is also internal evidence that the laundry trade has reached an important stage of its evolution. The years 1927 and 1928 saw the flotation of at least four laundry companies (Sunlight, Advance, National United, and Richmond Park). Since then, chairmen's speeches have made a fairly constant theme of the necessity for giving better and better service and of the possibility of doing so by the installation of really up-to-date plant. Thus, between 1928 and 1933, the Sunlight Laundries spent £304,574 on new plant, and the majority of other public laundry companies show a rising trend in the "plant" figures in their balance sheet. This indicates at least a faith in the commercial possibilities of modern laundry equipment. As the accompanying table of profits suggests, laundry companies in general seem to have suffered relatively little from the depression. Profits have fallen in most cases, but remain at quite satisfactory levels none the less. It would seem, therefore, that laundry shares may have attractive possibilities over a period, though the expansion may be slow, and the capital of some of the existing companies is not large enough to offer the investor a very "free" market. That the general outlook is fairly promising, however, is suggested by the fact that so astute a concern as the British Electric Traction Company, searching for new fields to develop, has decided to explore the possibilities of the laundry trade.

The Brewery Recovery.—Shareholders in the leading brewing concerns have no reason for complaint either with the trend of profits or with their directors' liberality. We reviewed the factors which have contributed to this vigorous upswing in profits in a Note in the *Economist* of November 24th, page 989. We now set out below the total profits of nine further companies whose results have since appeared. The figures confirm the impression that "the trade" has particularly to thank higher industrial activity in the Midlands for releasing additional consuming power. Notwithstanding the additional cost of purchasing home-grown hops and barley, which are estimated to have cost Benskin's Watford Brewery 1s. 7d. per barrel more than in 1933, the increase in consumption and the economies induced by lower depression profits have more than balanced the account. To the detailed figures for the brewery companies, in the following table, we have added those of Manbré and Garton, whose brewing sugar business is linked closely to the general prosperity of the industry:—

Years to September 30th (except Wenlock Brewery, to October 31st).

	Total Profits (before Expenses and Depreciation)			Ordinary Shares			Quo- tation	Yield %
	1929	1933	1934	1929	1933	1934

Wolverhampton and Dudley	233,679	204,728	225,923	22½	20½	25a	150/-	3 6 9
Manbré & Garton	428,022	306,940	319,169	17½	12½	13½	55/7½	4 17 0

† Free of income tax. ‡ Period from November 29, 1928. * Net profit. † Of which 17½ per cent. paid less tax, and 2½ per cent. tax free. (a) And capital bonus of 100 per cent. (b) Includes £56,750 special bonuses from accumulated profits of subsidiary companies. (c) And capital bonus of 50 per cent.

These impressive results have been received in the market with proportionate enthusiasm. Whether the trend of future profits is likely to continue so favourable, however, is conjectural. Production economies have been soundly consolidated, but is there appreciable scope for further

extension? Is the improved state of the trade calculated to withstand the secular decline in consumption which has been a feature of the post-war period? What repercussions upon profits would result from a slackening in the tempo of industry, or a wet 1935? These are questions which deserve the attention of the long-term investor.

Thomas Tilling's London Assets.—With commendable promptitude the directors of Thomas Tilling, Ltd., have issued a report showing the effect of last week's interim arbitral award. Valuing the stocks awarded to the company on the basis of par for "A" and "B" and 9½ per cent. for "C" (i.e. the middle market price on the date of the award), the capital value of the stocks amounts to £1,618,397. The assets transferred by the company to the London Passenger Transport Board on September 30, 1933, appeared in the accounts at a written-down value of £225,330. There is, therefore, a surplus over book values of £1,393,067, which will be carried to the general reserve fund. The question of the costs and expenses incurred in the course of the arbitration will be dealt with when an award has been made in respect of two smaller claims regarding severance and apportionment. The report confirms the profit figures for 1933, which have been already announced, and shows that the ordinary dividend of 15 per cent. was covered by earnings of 27.8 per cent., including receipts from the company's London undertaking for the nine months to September 30, 1933, only. Dividends on the "A," "B" and "C" stock, now awarded to the company, to the end of 1933, would represent a further 1 per cent. on Tilling ordinary, and increase the company's 1933 earnings to 28.8 per cent. The balance-sheet figures endorse the view which we expressed last week (page 1041) that the company's London assets are only a minor part of its total interests. After their transfer to the Transport Board, the company will still hold properties, vehicles, plant, etc., valued last December at £390,414, and shares in and loans to subsidiary and allied companies valued at £2,506,060. On a 4 per cent. "C" stock dividend, the company's London Transport holdings will return 5.5 per cent. on Thomas Tilling's ordinary capital. With a maximum "C" dividend of 6 per cent. the return will be 7.7 per cent. on Tilling ordinary. The "surplus" on the taking in of the stocks under the award will raise the company's general reserve fund to £2,217,128, equivalent to 33s. 7d. per £1 ordinary share. A future scrip bonus to shareholders may be a possibility. No announcement, however, is likely to be made on this point pending the final award of the Arbitration Tribunal.

Dorman Long Accounts.—The accounts of Dorman Long for the year to September 30, 1934, appear in the uncomfortable interregnum between authorisation of the company's capital scheme by shareholders and its submission to the Court. The clarity with which the figures are set out renders doubly regrettable the omission to show their relation to the new conditions which will arise if the scheme is sanctioned. The trading profit, in fact, at £481,725, shows an increase of as much as 130 per cent. on the £209,335 of 1933, and is much the largest total for any year since 1924. Dividends on investments, etc., bring in an additional £28,674, while sundry outgoings include £60,406 for the maintenance of idle mines and works, £92,548 for interest and £20,814 under other headings. The net profit is £336,631, but no depreciation is charged on the fixed plant. How far would earnings have covered the company's obligations under the potential new regime? If the scheme's provisions had applied in 1934, about £100,000 would, apparently, have been available after all prior charges (including bank interest, depreciation at £130,000, and interest on the new 5 per cent. debenture stock). This sum, divided equally between bankers' amortisation and the new 6½ per cent. first preference shares, would have covered earnings of rather less than 2 per cent. on the latter. Clearly, therefore, profits must

register a further substantial advance before any of the proposed new shares which are junior to the 6½ per cent. first preference can have more than a token value. The prospect, naturally, would be improved by an expansion in the company's overseas trade, or an amalgamation with the South Durham group. The market quotation for the existing 5½ per cent. debenture stock is about 89. Under the scheme, every £100 will be converted into £60 of 5 per cent. redeemable debenture stock, and £50 of first preference shares. It may be reasonable to assume a market price of about 110 for the new 5 per cent. debenture. On this basis, the quotation for the existing debenture is equivalent to a price of 9s. 2d. for the new first preference shares. This appears fairly high for a marginal stock whose continued ability to pay 2 per cent. is dependent on a further increase in earnings sufficient to provide for the service of prior lien stock, to a possible total of £1,250,000, which the directors will have power to issue.

Carreras.—The results of this company, covering substantially the first year of "ex coupon" trading, have been awaited with lively interest. In view of the company's earlier successful exploitation of coupon schemes, conjecture regarding the profits aspects of the pact has enjoyed free play. The preliminary profits statement, issued on Tuesday, broadly confirms our earlier interpretations of its effects (see the *Economist*, October 20th, page 736). Net profits, which, after charging depreciation, amount to £804,942, compared with £827,143 for the previous year, are only 2½ per cent. lower. No details are given of the various sources of income, but the slight fall in profits suggests that some shelter may have been derived from the pact. The earnings for the three equity issues are lower, owing partly to payment of a full year's dividend upon the 4½ per cent. "C" preference shares. A table based on the preliminary figures is given in the next column.

	Years to October 31	1932	1933	1934

* Figures not yet published. † And £250,000 transferred from development fund. ‡ £79,035 credited direct from sale of investments. § New issue expenses written off.

The abolition of coupon trading after the second month of the company's financial year has involved costs of as much as £297,905, of which £250,000 is transferred from development fund and £47,905 from profits. The presumption is that this expense will be non-recurring, and that the coupon scheme has been liquidated with reasonably satisfactory results. The comments of the late chairman at last year's meeting have, in fact, been largely realised. The agreement has evidently necessitated some adjustment in production, and its costs have been substantially met out of development reserve. Its eventual outcome is not certain, and shareholders must needs await the full report and Lord Reading's speech for more detailed information. In the meantime the results suggest that the £1 "A" and 2s. 6d. "B" ordinary, now standing at 150s. and 19s., to yield £4 15s. 9d. and £4 14s. 8d. per cent. respectively, have satisfactory investment merit.

Turner and Newall.—Since the depression of 1931 this great asbestos combine has gone to meet recovery more than halfway with a far-reaching programme of financial and technical reorganisation, consolidation and extension. The results have been eminently satisfactory, for profits and dividends have steadily advanced during the last two years. The preliminary figures for the year to September 30th last show net profits which have been exceeded only in the two "prosperity years" 1929 and 1930. Earnings on the ordinary capital, in fact, have practically doubled in the last twelve months. The dividend is raised from 5 to 10 per cent., and £94,349 is appropriated against subsidiary assets transferred to the company—a procedure which, as the preliminary statement somewhat naively explains, "is instead of allocating £100,000 to general reserve."

Years to September 30	1932	1933	1934
Profits (including transfer fees)	423,820	575,284	*

Net earnings	300,671	396,656	704,228
Preference dividend	101,098	101,098	101,098
Ordinary			
Earned	199,573	295,558	603,130
Paid	181,647	242,197	484,394
Earned (%)	4.2	6.5	12.8
Paid (%)	3½	5	10
Special appropriation	52,766	106,126	194,349
Total carried forward	52,766	106,126	194,349

* Figures not yet published. † Special appropriation against book value of subsidiary companies' assets conveyed to Turner and Newall. "This is instead of allocating £100,000 to general reserve."

The full report will be published on December 17th. It will, doubtless, show to what extent the figures have been affected by the company's purchase of a controlling interest in two large American asbestos companies last January. The cost of this operation was financed entirely from Turner and Newall's liquid resources. The dividend announcement was up to the market's best expectations, and the £1 units of ordinary stock have subsequently risen from 48s. 9d. to 52s. On this figure, allowing for the final dividend of 7½ per cent., the yield is £3 17s. 6d. per cent. on the dividend and £4 19s. 9d. per cent. on the latest earnings.

* * *

Aerated Bread Company's Progress.—Fortunate is the company which can replace internal decay by vigorous reorganisation and expansion. The remarkable improvement in the Aerated Bread Company's profits since 1928 is the best testimony to the prompt measures taken in earlier years under the direction of the present chairman. Trading profits have further advanced, in the latest year, from £208,133 to £213,338. After higher allocations for depreciation and taxation, the earnings rate on the increased ordinary capital is all but maintained at 8.7 per cent. A three-year profits analysis follows:—

Years to end September	1932	1933	1934
Trading profit and interest received	209,661	213,884	222,082
Directors' fees	3,333	3,333	2,715
Depreciation	54,540	57,514	60,853
Tax provision	44,000	46,000	47,000

Earned (%)	8.9	8.8	8.7
Paid (%)	5	5	5

Issue expenses written off..... 5,001
General reserve 30,000
Carried forward 40,394

† £29,837 appropriated from general reserve to adjust difference between cost of W. Hill assets, and values at which they have been written into A.B.C. books.

A major development in the company's recent history is the acquisition of other catering concerns. During the latest

year, the W. Hill undertaking has been absorbed. Since the close of the year the outside preference interests in Pritchards Restaurants have been acquired by exchange of shares. It may be presumed that profits have not yet fully benefited from these interests. The increase of £198,000 in 6½ per cent. preference capital, which was part of the consideration for the W. Hill business, has not ranked for dividend in the latest year, but an increase in profits of some £13,000 to meet this payment should be well within the company's power. Meanwhile, the liquid position of the concern has considerably improved, notwithstanding continued expenditure on reconstruction of the head depot. Fixed assets have increased by some £514,000 during the past two years. The report is accompanied by a helpful statement of the combined subsidiaries' position, which shows surplus assets of £369,933 attributable to A.B.C. (including £100,527 reserved for a company now in process of amalgamation) against a book value of £194,183 for cost of shares in subsidiary companies. The £1 ordinary shares, quoted at 26s. 6d., ex dividend, to yield £3 15s. 5d. per cent., carry reasonable equity prospects.

* * *

Raleigh Cycle Holdings.—The effects of the "cycling boom," the offspring of the cult of "hiking," to which we referred in a Company Note on November 3rd, page 837, find gratifying expression in the initial report of Raleigh Cycle Holdings. This company was registered last February, its chief asset being the entire issued share capital of the Raleigh Cycle Company. The existence of two separate companies—an operating and a holding concern—would appear to serve, at the moment, no concrete purpose. The necessary publication of two profit and loss accounts and balance sheets for a single business merely adds to the difficulty of shareholders in making calculations of real earning power, etc. A comparison of the twin documents shows that the operating company earned £382,895 trading profits for the year ended August 11, 1934, against which £32,246 was charged for depreciation (at a rate giving the plant an eight-year life), and £16,663 for salaries and fees. The balance of net profit, £333,986 (which is a record in the company's history), is equivalent to 21 per cent. on the ordinary capital of the holding company, after allowing for a year's dividend (including participation), on the cumulative preference shares. Thus the dividend of 11 per cent. on the ordinary is conservative and well covered. The operating company has made provision of £75,467 for income tax, and transferred £75,000 to reserve, raising the latter's total to £325,000. The directors' report is of cheerful tenor. Export trade is steadily increasing in spite of many difficulties. The company's new twin cylinder three-wheeled vehicles, recently introduced, have had an encouraging reception. Economies in production and organisation, introduced towards the end of last season, will have their full effect in the New Year. At their current price of 37s. 6d., including 8 per cent. final dividend, the £1 ordinary shares of the holding company yield £6 2s. 6d. per cent. on last year's dividend and £11 13s. 3d. per cent. on equivalent earnings. A somewhat high yield, however, is not inappropriate, in view of the wide fluctuations in earning power to which even the best-managed companies in the cycle trade have been subject in the past.

Timothy Whites' Offer.—Notices have been sent out this week to preferred ordinary and deferred ordinary shareholders in Taylors (Cash Chemists), London, and Taylors (Cash Chemists) Trust. The shareholders concerned are offered, briefly, one 5s. ordinary share in Timothy Whites (a multiple chemist's business under the auspices of the same financial group) for every two preferred ordinary and approximately every 27 deferred ordinary shares in the two Taylors companies, or alternatively, cash purchase at 10s. and 9d. per share of each class. Timothy Whites also offers to purchase, at par, the outstanding funding certificates of Taylors (Cash Chemists), London. This scheme, which

600,000 Ordinary Shares of 5/- each	...	...	...	£150,000

The Subscription List will open and close on Tuesday, the 11th December, 1934, for an:—

ISSUE OF

125,000 6% CUMULATIVE PREFERENCE SHARES AT 21/- PER SHARE AND
500,000 ORDINARY SHARES AT 5s. 6d. PER SHARE

THE PROSPECTUS SHOWS:

1. Company acquires old-established business with net assets of £343,057, with continuity of management.
2. Profits for year ended 30th June, 1934 ... £31,814
Average profits over seven years ... £25,524
3. Preference dividend covered over three times, and balance, £22,814 represents 15½% on Ordinary shares.
4. Preference Shares and Ordinary Shares can be applied for separately.

Copies of the Prospectus are obtainable from:

LLOYDS BANK, LIMITED, 72 Lombard Street, E.C.3 } and all
MIDLAND BANK LIMITED, Poultry, E.C.2 } Branches

From the Brokers:—

ZORN & LEIGH-HUNT, 3/4 Gt. Winchester Street, E.C.2. MOY, DAVIES, SMITH, VANDERVELL & CO., 20 Copthall Avenue, E.C.2.

And from the ISSUING HOUSE:—

STANDARD INDUSTRIAL TRUST LIMITED,

2 Broad Street Place, London, E.C.2

bears the impress of the vigorous personality of Mr Philip E. Hill, is expected to yield economies of centralisation valued as high as £40,000 per annum, and to raise the amount available for Timothy Whites ordinary shareholders to some £162,000 per annum. The circular thus estimates that a distribution of 25 per cent. on the Timothy Whites ordinary shares may be regarded as reasonable. In this connection the reports of the companies concerned for the year to September 29th may be usefully summarised:—

	Timothy Whites	Taylor's (Cash Chemists) Trust	Taylor's (Cash Chemists) London
Net profit	203,579	69,025	48,929
Income tax	35,742	16,619	10,903
Depreciation, etc.	17,268	...	6,164
Earned for dividends	150,569	52,406	31,862
Do. do. 1933	136,937	30,800	28,193
Do. do. 1932	118,754	38,039	17,362
Preferred dividend	96,370	31,735†	19,998†
Deferred dividend	43,915	...	...
Reserve	...	10,000	10,000
Brought forward	19,127	2,122	4,242
Carried forward	29,411	12,793	6,106

† On 6 per cent. cumulative preference shares. ‡ £17,156 dividend on 6 per cent. cumulative preference shares, and £2,842 interest on funding certificates.

Profits of the Taylors companies are now showing some recovery, the Trust, which holds the ordinary capital of Taylors Drug, having disclosed a satisfactory improvement. Shareholders in Timothy Whites will be asked to make the necessary conversion of deferred ordinary into ordinary shares, and to agree to the creation of new ordinary and "A" preference shares, with £1,000,000 4 per cent. debenture stock. The scheme appears equitable to all parties. The fact that the directors have a majority interest in the deferred shares of Timothy Whites may recommend the pro-

posals to shareholders who may be inclined, for the time being, to reserve their opinion on the scope of the proposed economies.

* * *

Other Company Results.—In addition to companies whose results are set out on previous pages, our weekly summary of profit and loss accounts on page 1126 includes reports from 40 other companies. The National Bank of Scotland reports net profits of £271,597 against £257,661, and maintains the dividend at 16 per cent. In the finance group, New Zealand Loan and Mercantile Agency shows considerable recovery from a loss of £41,326 to a profit of £89,038. Among other iron and coal companies, Blaenavon has been further affected by depression in South Wales, and reports a loss of £33,238 against a small profit of £783. The South African subsidiary of Stewarts and Lloyds, however, has evidently derived great advantage from increased mining and construction work in the Union, net profits having advanced from £53,082 to £85,319. Further rubber reports continue favourable, although this week's companies have been less willing to resume dividend payments than their predecessors. Outstanding results include Djasanga (£28,406 against Dr. 7.476) and Sembilan (£12,086 against £182). The Elder Dempster accounts show a deficiency of £24,864, against £69,306 for the previous year. The results of Harrods (B.A.) and S. American Stores (Gath and Chaves) substantially reflect the adverse effects of the peso exchange, and losses are reported against profits in each case. Further trust results continue to suggest an upward flicker in revenue. Some interesting miscellaneous results have been published this week. Bowater's Paper Mills net earnings are lower (£91,709 against £136,938). Crompton Parkinson, the electrical accessory manufacturers, report an improvement from £102,188 to £131,810, while the net profits of Foster Clark are slightly higher at £80,678.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Peninsular and Oriental Steam Navigation, Consolidated Gold Fields of South Africa, Pahang Consolidated, Steaua Romana (British), New Gold-Town Investments, Steaua Romana (British), Trepca Mines, fields of Venezuela, Bushtick Mines (1934), Bekoh Consolidated Rubber Estates, and Strand Hotel. Bekoh Consolidated Rubber Estates, and Strand Hotel. Sir William Currie, presiding at the P. & O. meeting in the illness of the chairman, the Hon. Alexander Shaw, adopted a restrained attitude towards the immediate prospects for the shipping industry. Although cruises, he declared, had been a useful source of employment, and both Indian and Australian conditions had improved, there was still an undoubted surplus of tonnage for the requirements of a diminished volume of international trade. The plea of Mr. John A. Agnew, at the Consolidated Gold Fields meeting, is endorsed in our leading article on Kaffir prospects on page 1099. At the Pahang meeting, Mr. H. Frisby declared that the Utrata lode—the richest ever discovered in the Willinks Mine—could not be developed owing to the severity of the tin restriction regulations. At the Town Investments meeting, the chairman expressed the directors' view that the company had reached a point at which large allocations to reserve had become less important. The chairman of Steaua Romana (British) declared that external payments had been made difficult by exchange restrictions. The company, however, had still further reduced its costs of drilling, producing and refining. The chairman of New Goldfields of Venezuela showed that development had given gratifying results, but the Venezuelan Government exchange policy had resulted in a serious shortage of remittance facilities. The Hon. H. U. Moffat informed the shareholders in Bushtick Mines (1934) that the ore developed and the results obtained suggested that the mine had possibilities of production on a larger scale than could have been anticipated. At the Trepca Mines meeting it was stated that the tonnage of ore treated was the largest since operations began, and that the treatment plant had proved its capacity to handle substantial tonnage. The chairman of Bekoh Consolidated Rubber stated that only a small proportion of the year's crop had obtained the benefit of rubber at 7d. The company's standard production under the restriction scheme was declared to be 1,084,735 lbs. At the Strand Hotel meeting, Major M. Gluckstein stated that the hundred additional bedrooms at the Regent Palace Hotel had been fully let. A continuous programme of re-equipment and re-designing was in progress at the company's hotels.

MINING NOTES

Van Ryn Gold.—Our mining correspondent writes: Although the value of the 639,000 tons put through the mill last year was only 3.40 dwts., while in recent months recovery has been well below 3 dwts., this veteran Rand producer is still making satisfactory profits. Last year's figure was £161,500, against £157,700 in 1932-33, the net total being £127,300, against £103,300. After payment of dividends totalling 20 per cent., tax free, against 15 per cent., the increase balance of £102,200 is carried forward. The ore reserves on June 30, 1934, were computed at 1,262,600 tons, averaging 2.9 dwts., as compared with 1,114,900 tons, value 3 dwts., a year earlier. Last year's record of tonnage milled, however, will probably be surpassed during this year, since additional plant improvements are being carried out. From a tabulation given in the report of the managing director, it would appear that a 60 per cent. rise in the price of gold has resulted in a 300 per cent. increase in ore reserve tonnage, with a drop of no more than 25 per cent. in grade. The company's financial position is strong, cash assets being supplemented by £200,000 in gilt-edged stocks. On the basis of last year's dividends, the yield on the shares, before amortisation, is over 10 per cent. net. The life of the mine has been extended by recent developments, but remains comparatively short.

Luipaards Vlei.—A substantial increase in this company's net profit for 1933-34, resulted from an expansion in the tonnage of ore treated, an increase in average yield, and a reduction in note interest. Net profit, in fact, was returned at £176,030, against £135,100 in 1932-33. The dividend is raised from 8d. to 1s. per 2s. share, and a slightly reduced balance of £45,070 carried forward. The transfer of £20,000 to general reserve raises the total to £70,000, including £50,000 share premiums. The ore reserves show a moderate increase in both quantity and value, at 1,857,600 tons, value 4.9 dwts. During the year the balance of the 7 per cent. notes was converted into shares. To provide for recent and future capital expenditure, the board has decided to create an issue of £275,000 5½ per cent. five-year notes, convertible into shares at the rate of 120 per £100 of notes. The current price of the shares is about 15s. 6d.

* * *

Tin Dredging Results.—In the case of the Kamunting company, the benefits of the higher price of tin last year were supplemented by an appreciable saving in debenture service. As a result of repayment in January, interest required only £1,400, whereas interest and redemption absorbed £23,580 in 1932-33. Profits, therefore, cover a final dividend of 12 per cent., making 20 per cent. for the year, against 15 per cent., and the somewhat increased balance of £48,300 is carried forward. In view of the drastic restriction in output, no appropriations are made for depreciation out of profit and loss. An allowance of approximately £9,000, however, is added to the share premium account of £72,150 and the debenture redemption account now amounts to £36,000. A significant feature in the directors' report is the announcement that, of the dredging reserves available four years ago—some 100 million cubic yards—no more than 16 million cubic yards had been worked out at the date of the last balance sheet. Additional areas have been subsequently acquired, and the prospective period of operations may be regarded as lengthy. The assets of the Pangnga River Tin consist entirely of shares in the Kamunting. Last year's profit was £37,900, against £27,200, and dividends totalled 16 per cent., against 10 per cent. Kamunting 5s. shares are quoted at about 11s. 6d. and Pangnga at 8s. 6d. The Ayer Hitam Company, thanks to a certain expansion in output (due to the raising of the company's quota) as well as the higher price of tin, more than doubled its profit last year, the total figure being £35,050, against £15,060. The 2½ per cent. dividend paid in September raised the year's distribution to 12½ per cent., as against 7½ per cent. After writing off the substantially increased amount of £9,700, a balance of £10,230 is carried forward, against £7,380 brought in. The 5s. shares stand at about 13s. 6d. in the market. Satisfactory dividends have also been declared by the Malayan Dredging group, whose annual statements are due shortly.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE SETTLING DAYS

TICKET
December 18

ACCOUNT
December 20

The pre-Christmas account has opened in distinctly pedestrian fashion, a not uncommon seasonal phenomenon, although its incidence, at the beginning of new dealings, would appear to be somewhat early this year. For the moment, however, the buoyancy of the gilt-edged market has abated, and has clearly exposed the reason for the mid-November rise in industrials. Bereft of the influence of lower interest rates, shares with a solid backing of earning power have declined to lower levels, and it has been left to "Kaffirs" to stage a limited revival. Price movements have been restrained, although the dwindling

attention of speculators has caused an appreciable dullness of tone and slackening of business.

Although gilt-edged fluctuated, the trend was consistently towards lower prices. The trend of the exchanges easily outweighed the strengthening effect of December interest payments, and recently active stocks such as Old Consols and Local Loans had lost up to two points by mid-week. Conversion issues, however, showed more resistance to the recessionary tendency. India loans were quiet, and Dominion issues, in particular Australians, lacked support. Home Corporation issues followed the gilt-edged trend, after showing initial firmness.

The foreign bond market presented several interesting features. German issues responded satisfactorily to the agreement with France on problems concerning the Saar transfer. Austrian 7 per cents. were considerably stronger on the conversion arrangements for the 6 per cent. guaranteed loan (discussed on page 1081). Some enquiry was also made for European issues, which are within hailing distance of the conversion zone. Other Central European issues were irregular, but French rentes improved with the franc. Nervous selling of Brazilian issues caused appreciable falls in quotations, but Argentine loans were firm, though little changed. Sino-Japanese bonds received quiet support.

Home rail stocks opened in good form, but a satisfactory batch of traffics—as in some earlier weeks—was accompanied by withdrawal of support, and prices drooped. Transport "C" stock remained in favour and advanced against the trend. Main line prior charges were affected by a small stream of sales. Certain South American prior charges, including Cordoba debentures, enjoyed early support, but a weaker tendency soon supervened.

Operators in the industrial market found it difficult to evoke public interest, and markets had a very irregular tendency. The last ounce was squeezed out of the improved brewery results on Monday, and interest in other sections was apt to be limited to companies in the news. Cable and Wireless preference stocks were in request, on dividend prospects. "Heavy" industrial shares declined, after a fair opening. In the motor group, dealers were exercised with the full Tilling report for 1933 (reviewed on page 1102), but the weakness of Ford and A.E.C. was the principal feature of a rather irregular group. Aviation issues were depressed, on the realisation that increased activity and spectacular technical progress had no necessary correlation with dividend prospects. Electricity supply shares were somewhat slack, but equipment issues were generally maintained. The Carreras figures (set out on page 1103) were voted satisfactory, but apart from Gallaher and Godfrey Phillips, the market showed little movement. Textile shares were dull, and rayon issues irregular. Miscellaneous leaders became rather neglected, after early support for Turner and Newall, Imperial Chemical and Murex had spent its force. Milling and building issues became distinctly easier. The oil market remained thoroughly uninteresting, with nothing to attract either professional or public attention. Rubber shares opened satisfactorily, and with only a limited floating supply of shares, prices responded to moderate supporting orders. On later days, however, the stream of new business virtually dried up, leaving quotations exposed to a small volume of selling. Tea shares continued their firm tone on Monday, on further consideration of the quota "cut," but the scale of profit-taking on Tuesday suggested that the market's earlier view was based on conjecture rather than on assurance. The passing of the Jorehaut interim dividend was a signal for substantial selling, in which Indian issues were principally affected.

The mining markets presented a favourable comparison with the lame tendency elsewhere. The improvement of sentiment in Paris brought a welcome renewal of orders, while Mr. Agnew's speech at the Consolidated Gold Fields' meeting, suggesting the desirability of reduced South African taxation, stimulated public interest. The December dividend prospects, which are discussed in a Leading Article on page 1099, were also regarded as attractive, and business in 'seasoned' issues was better than for some time past. On Wednesday, however, turnover was appreciably slack, although prices were little affected. Business in West African issues improved sympathetically, under the lead of Ashanti and Gold Coast Selection, but little activity

was evident in the Australian section. Rhodesian copper issues remained dull, and movements in tin shares were unimportant.

FOREIGN STOCK EXCHANGES

NEW YORK

THE recovery which halted for a space last week-end gained new momentum in the middle of this week. The bond market was firm throughout, the success of the Government's large cash issue of bonds and notes causing surprise in the market and jubilation at the Treasury. Railroad prior charges were also prominent. Although a preliminary survey indicates that only 14 out of 44 major railroads will earn their fixed charges this year, the market has been full of rumours of new Government assistance. The Reconstruction Finance Corporation, for example, has been reported, with complete unauthenticity, as being willing to exchange its debentures for low-grade rail bonds. Stock market prices have followed daily and hourly fluctuations in national sentiment and, particularly, in commodity prices. Wednesday's strong revival in wheat and cotton coincided opportunely with better business news and the declaration of numerous extra dividends, and prices gained up to 2 points. Operators are evincing a certain partiality for amusement shares. Loew last week-end broke through their previous "high" for the year, and Radio Preferred were strong on the recrudescence of the familiar rumour of a plan for dealing with dividend arrears. The Treasury's success was also indubitably popular in the stock market. The cash offer was six times oversubscribed. Of the \$992 millions of maturing certificates, some \$800 millions were offered for conversion. Generally, the markets' behaviour in the last three weeks is regarded as reassuring. The recovery has not approached the spectacular, but has been persistent, and each step appears to have been consolidated. Though the Administration, once so voluble, has maintained an almost unbroken silence regarding its future intentions, this is not necessarily interpreted as a discouraging sign. Nothing, certainly, has occurred so far to suggest that the President is wavering in his rightward course. Trade news is on the whole improving, and pre-Christmas buying appears to be opening out satisfactorily. The "Iron Age" puts this week's steel mill activity at 29.5 per cent., against 29.0 per cent. of capacity, and the price of steel scrap—a significant pointer—is advancing.

PARIS

The market has had a more favourable tone, after an irregular opening. The Government is credited with both inclination and ability to make the necessary 1935 Budget arrangements with maximum expedition. The market is also disposed to regard the Government's allegiance to the gold franc as above suspicion. Rentes gained ground on the opening day, but tended to fall away slightly in mid-week. Bank shares fluctuated extensively, though little credence was given to the rumour that one of the large institutions would pass its interim dividend. Fair investment buying of industrial shares was in evidence on every moderate reaction. The recovery in diamond shares made further headway in the early part of the week, but profit-taking subsequently occurred. Gold shares were fairly steady, without attracting a large volume of business.

BERLIN

After a decline early last week, the market showed substantial recovery, which spread from coal, lignite and engineering shares to steel and electrical issues. Foreign currency shares regained part of their recent losses. Bank shares rose after the publication of the report of the Enquiry Committee. The advance made further headway at the beginning of this week, but quotations for other shares showed a weaker tendency on Tuesday. Domestic bond values moved within narrow limits, though advances predominated. On Wednesday, however, the Bourse as a whole was depressed by the new law limiting dividends. Selling affected a long list of shares, including electrical, engineering, rayon, mining and shipping issues.

AMSTERDAM

The market was dull and almost featureless at the beginning of the week. Young Loan, exceptionally, was active, rising 2 1/2 points on Tuesday and a further 1 1/2 points on Wednesday, on unexpectedly good news regarding the Saar position. Tobacco shares, however, were weak, and sugar shares lost ground. Rubber counters failed to respond to the news of fresh control measures regarding accumulated stocks. In the middle of the week, however, the undertone became firmer. Tea, rubber and sugar shares recovered part of their losses, but oil shares remained somewhat reactionary.

CAPITAL ISSUES

ALTHOUGH the *Stockton-on-Tees Corporation* has made a highly successful issue of 3 per Cent. Redeemable stock, 1960, at a premium of 10s.—a full trustee issue—the past few days have been mainly a "foreign borrowers' week." The *Austrian Government* has floated an issue of £10,163,900 of 4 1/2 per Cent. bonds at 98 1/2, finally redeemable not earlier than 1949 or later than 1959. The offer is made in connection with the conversion of the outstanding bonds of the London *tranche* of the 6 per Cent. Guaranteed Sterling bonds of 1923, and half the American *tranche*, the other half of which has been taken over by Austria. This important operation is discussed in a Leader on page 1081. Although the issue terms have been well adjusted to conditions in the London market, and the offer is expected to have a satisfactory reception, the price appears, intrinsically, somewhat high, for reasons discussed in our leading article. The *Argentine Government Conversion Loan* also takes the form of 4 1/2 per Cent. Sterling bonds. It is the third issue of the same character (previous issues were dealt with in the *Economist* of June 2nd, page 1203, and September 15th, page 496), and is offered in conversion of the Port of the Capital 5 per Cent. bonds. The offer affords investors a further opportunity of attesting their appreciation of Argentina's unequalled record in fulfilling her obligations. Other issues of the week include a couple of brick company flotations, which appear to take full cognisance of the contemporary activity of the trade. Certain statements in the prospectus of *Cumberland Silica Bricks* have been challenged by the official organ of the Refractories Industry. These relate to technical questions, and to the extent of competing imports. A reconciliation between the opposing views would appear a necessary prelude to any endeavour to ascertain the investment prospects of the shares. *National Star Brick and Tile Holdings* is taking over two established and successful companies. Preliminary expenses are somewhat heavy—for reasons which may in some instances be outside the control of those concerned. *S. G. B. (Dudley)*, which will make an issue next Tuesday, will take over an old-established brick and fireclay business with continuity of management. *Vactric*, on the same day, will issue £1 preference and 5s. ordinary shares. Sales and profit figures, given in the prospectus, have shown a "geometric" increase in recent years. The "advertisements for public information" of the week include *Vlakfontein Gold Mining*, an important "Gold Fields" flotation, *Swan Estates, J. and J. Makin* (paper and metal foil manufacturers), *The Star Brewery and Tanami Gold Mining Syndicate*, which was originally an Australian and is now a Kenya gold prospecting enterprise.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

divided when the stock is sold, dividends, account being taken of any enhancement or reduction of price.

acquired, £247,633; purchase consideration, £226,238, £95,768 being in cash and balance in 521,880 5s. ordinary shares. Combined average profits (6 years National and 4 years Star Brick) after depreciation and fees £16,855.

CONVERSION OFFERS

Argentine Conversion Loan.—Holders of Port of the Capital (Buenos Aires) 5 per cent. bonds (called for redemption on July 1, 1935) are offered conversion into 4½ per cent. sterling bonds of above loan at par, plus £5 5s. for capital and interest adjustment, or £105 5s. new bonds, plus 5s. interest adjustment, for £100 old bonds surrendered. Issue is direct obligation, and redeemable, by half-year sinking fund operations, at or below par, between July, 1935, and July, 1936, on three months' notice. Exempt from Argentine taxes. Bonds and acceptance forms must be lodged with agents by 4 p.m. December 20th.

Austrian Guaranteed Conversion Loan.—Issue of £10,163,900 4½ per cent. guaranteed sterling bonds at £98 10s. per cent. Net proceeds will be applied in redemption of outstanding sterling and one-half of outstanding American issue of guaranteed loan, 1923-43. Bonds are redeemable at option of Austrian Government after December 1, 1949, on 90 days' notice and at latest by December 1, 1959, by annual sinking fund drawings or purchases at or below par. All tranches of the 1923-43 loan will be redeemed, Spain being subject to conclusion of negotiations, and America, as to 50 per cent., by schilling issue in Vienna. Bonds are secured on gross revenues of Customs and tobacco monopoly, which amounted (in mn. schillings): 1931, 570.85; 1932, 519.29; 1933, 447.80; 1934 (6 months), 219.30. Interest and sinking fund estimated at Sch. 50 millions per annum. Holders of sterling bonds, 1923-43, may convert at par, plus £2 cash payment and special interest payment of 15s. per cent.
