But, although the 1912 Convention envisaged manufacture of opium and its derivatives only under licence, together with control of imports and exports and limitation of opium production in China, by 1913 only thirteen countries had ratified it, and the war supervened before it entered into force. The Peace Treaties contained a clause automatically setting it in work for all signatories; and to-day it is applicable in 58 States—the most widely ratified Convention administered by the League of Nations. Every year the Assembly has to review the progress made. Nevertheless, the continued activity of illicit narcotics producers both inside and outside the 58 ratifying States, and their ingenuity as "shy traffickers," brought forth other drugs for illicit purposes. This led to the 1925 Geneva Convention, which, despite the withdrawal of China and the United States owing to the absence of control of Chinese production, was much more comprehensive, and 50 States ratified it. Greater powers were given to the League's Health Committee to schedule new substances; a permanent, independent Central Board was set up, to which compulsory returns of production of drugs had to be made; and the use of import certificates was made compulsory. Application of this 1925 Convention steadily widened; and it was felt that strong support would be given for direct limitation of manufacture of narcotics. The British Government in 1930 therefore requested the League to call another Conference. This met in 1931, and a Convention resulted, ratified by 44 States, which dovetailed with the 1925 Convention, and provided that imports of scheduled drugs should be regulated by reference to official estimates of needs for legitimate purposes. Control of the movement of the raw material into, and of drugs out of, the factories was tightened up; a check was provided by perfecting an accountancy system; and the limitation of production in accordance with legitimate needs was facilitated by combining the provisions of both the 1925 and the 1931 Conventions. Turkey and Persia, to which the "shy

traffickers" had recourse before 1931, acceded to the 1931 Convention; and between 1931 and the present day the efforts of the world to deal with the illicit drug traffic were rewarded with greater success. The League Council in 1933, however, drew attention to the dangers of the illicit traffic, and in view of their warning it is of interest to describe the position with which the League, and the vast majority of countries who are trying to stamp out so grave a social evil, are faced to-day.

The object of the 1931 Convention was to limit total world production of narcotics to the quantity needed for medical and scientific purposes. The 44 States ratifying the Convention undertook to keep the production within these bounds by the limitation of national manufacture. The following example will show how necessary it was to limit the world production of narcotics as a means of combating the abuse of these drugs. A few years ago the Opium Commission, in co-operation with the League Health Committee, compared the amount of narcotics produced and the actual consumption throughout the world for medical and scientific purposes; it was discovered that even the most generous estimate of world figures indicated an amount which was less than one-tenth of the actual quantity produced. But now the statistics of production and legitimate trade as reported by States Members (see League publication, Document O.C. 1530), show that in recent years (1928-32) there has been a remarkable decrease towards the level of legitimate needs. In general the decrease during this period amounts to 50 per cent. or even more.

The production of raw material for the manufacture of narcotics, however, must also be considered. The statistics of the Opium Commission show a general decrease; exports also tend to diminish. As, however, the decrease of production is considerably less than that of demand, there has been a great increase in stocks. The total world stock of raw opium (not counting China) has increased from 2.3 tons in 1929 to nearly 3 tons at the close of 1932. This means that the world stock of raw opium would be sufficient to satisfy the legitimate demand for narcotics for the space of a whole year. Such an increase of stocks is a constant menace, since it involves a serious temptation to transfer quantities to the illicit market.

Until quite recently, therefore, one might justifiably have been satisfied with the results achieved by the League of Nations in its campaign. But the abuse of drugs in China has led to the opening up of new sources of supply. Moreover, a menace has arisen in the shape of important secret manufacture in Bulgaria, which was revealed about a year ago by Russell Pasha, the representative of Egypt on the Consultative Opium Commission. The reports submitted at the last session of the Commission (May to June, 1934) by Russell Pasha, by Colonel Sharman, the Canadian delegate, and by Mr Fuller, the delegate for the United States, disclosed the following details on the state of affairs in Bulgaria.

This country has ten secret factories and laboratories which are busy producing heroin for the illicit market. (The factories were mentioned by name at the session, as were their proprietors, and the amounts produced were also indicated.) The proprietors and organisers include two individuals who are well known as international smugglers. Two circumstances have drawn attention to this Bulgarian production, namely, various seizures by the Customs authorities, and the importation of large quantities of acid acetic anhydride. This substance is needed for the manufacture of aspirin, dyestuffs and artificial silk; but since Bulgaria does not manufacture these substances we are bound to conclude that it has been used for the manufacture of heroin. The following quantities of acid acetic anhydride were imported into Bulgaria in recent years: 1930, 70 kilos.; 1931, 70 kilos.; 1932, 3,500 kilos.; 1933, 6,000 kilos. This means that the amount imported in 1933 would suffice for the production of 3,000 to 6,000 kilos. of heroin. The legitimate world needs of heroin are only 1,500 kilos.; it follows that in 1933 Bulgaria was in a position to produce four times the amount needed for world consumption. Besides the manufacture of narcotics, the production of opium has been greatly increased in Bulgaria in recent years. Reliable information which reached the Canadian Government indicates the amount of opium produced as follows: 1931, 4,000 kilos.; 1932, 45,000 kilos.; and 1933, 65,000 kilos.

It is not in Bulgaria alone, however, that developments in recent years have become menacing. The state of affairs in the Far East also gives rise to anxiety. At the meeting of the Consultative Commission in November, 1933, the American representative reported on the enormous increase of opium production in Jehol and in Manchuria. According to the estimate of a high Chinese official, the annual illicit production of opium in China now amounts to 12,000 tons—that is to say, seven times the amount produced in the rest of the world. Far more dangerous still, apparently, is the illicit manufacture of narcotics, which has made great progress in China recently. Here, too, the large quantity of acid acetic anhydride imported has drawn attention to increased manufacture. China, too, has no factories for aspirin, dyestuffs or artificial silk. The only possible conclusion is that these imports were used for the manufacture of heroin. The quantities of acid acetic anhydride imported would allow the production of twice the quantity of heroin normally required for world needs.

To sum up, the campaign against opium and other

noxious drugs undertaken by the League of Nations chiefly in Central and Western Europe, that is to say in the countries which transform the raw materials, has been successful. To-day, however, the transformation of opium is being largely carried out in the producing countries themselves, namely, in Bulgaria, China, Japan and Manchuria. Means will have to be found to combat this menace. These countries, with the significant exceptions of Manchuria and Japan, are all parties to the 1931 Convention. It can be assumed that energetic action on the part of the Government would prevent the manufacture of narcotics in Bulgaria for illicit purposes. In China the question is more difficult; owing to disturbed political conditions in that country, special means will be necessary to put an end to illegal production and manufacture there; but there is no reason to doubt that, as the authority of the Central Government extends and becomes consolidated, adequate measures will be taken.

Not until the "shy traffickers" become shy even of the less administratively competent countries will this menace to civilisation be effectively controlled.

NOTES OF THE WEEK

The Week in Austria.—In circumstances of extraordinary difficulty, Herr Schuschnigg's Government has started well. As between Austria and Germany, the outstanding question during the last few days has been whether the Austrian Government would give its *agrément* to Herr Hitler's designation of Herr von Papen as German Minister in Vienna. In his haste to get rid of Herr von Papen and to make a display of "good neighbourliness" towards Austria (after a tragedy for which, in the eyes of the world, Herr Hitler himself had been so gravely to blame), the *Führer* exposed himself to an Austrian rebuff by committing one technical error and one indiscretion. The technical error was to appoint Herr von Papen as his own personal representative—to report directly to him instead of to the Reich Minister for Foreign Affairs in the ordinary way. The indiscretion was to announce this somewhat irregular proceeding publicly without having first sounded the Austrian Government on the subject. Herr Hitler has since retreated to the extent of declaring that Herr von Papen's status, *vis-à-vis* his own Government, would be that of any ordinary diplomatic representative. And the Austrian Government, on their side, have decided to accept Herr von Papen on these terms—more or less on probation. Herr Hitler seems to have reckoned that Herr von Papen's religion would commend him to a Catholic Government. But this was evidently a miscalculation. In Catholic circles Herr von Papen seems now to be regarded as a Catholic who has betrayed his own Church in allowing himself to be used as a stalking-horse by a political movement which is pagan in policy and in spirit. From the Catholic standpoint his record has been unsatisfactory in the matters of the dissolution of the Zentrum, of the Catholic interest in the Saar (for which he has been Herr Hitler's Reichskommissar), and of the negotiations for the Concordat between the Reich and the Vatican. However, Herr von Papen's tenure of his new post will presumably depend on how the Reich behaves towards Austria during this next chapter in their relations. During the past week the German wireless propaganda has been attacking the "Dollfuss" governmental system again, and giving highly coloured and "patriotic" accounts of the way in which Dr. Dollfuss's Nazi murderers met the death penalty. Outside observers, now that Herr Hitler has undisputed sway—and undisputed responsibility—in Germany, will scrutinise more closely than ever the Nazi attitude to Austria for at least a few practical signs of that "good neighbourliness" which Herr Hitler appears to desire.

Anglo-German Exchange Agreement.—The negotiations for exchange clearing between England and Germany, which were initiated by the transfer agreements of July 4th, have now been completed. It is understood that an arrangement has been reached whereby the Reichsbank will provide sterling up to 5 per cent. of the value of British goods imported into Germany. Payment of the remaining 95 per cent. will be made in reichsmarks to the credit of a special account to be opened by the Bank of England at the Reichsbank. The Bank of England will pay the British exporter the sterling equivalent of this 95 per cent., and will reimburse itself by selling its reichsmarks to British importers of German goods. As the balance of trade is substantially in favour of Germany, the scheme should be practicable. There are several points left outstanding and complete details must be awaited. There is no suggestion that it will be compulsory for British importers of German goods to use the scheme; and if they pay direct in sterling, the Bank of England may have difficulty in disposing of its reichsmarks. It may be assumed that the maintenance of this scheme is conditional upon there being no substantial increase in British exports to Germany, as otherwise its whole basis would be destroyed. Nor will its introduction necessarily modify the stringent control now exercised by the German Government over certain raw material imports, and British exporters of controlled commodities would be well advised to make certain that they can secure payment in sterling. No mention is made of re-exports from Great Britain, nor does the scheme apparently embrace Colonial goods. Finally, it apparently only relates to future transactions, leaving the problem of sums now due for British exports made during recent months still unsettled. This will be of particular concern to British cotton spinning and coal interests who already have large amounts due to them, and it will be recalled that the British cotton spinners have threatened to suspend further shipments, while the opinion is expressed in Germany that it is no longer necessary to rely so much upon Lancashire for supplies of fine cotton yarn. A new problem, which though of minor importance is a serious matter to those directly concerned, is raised by the decision of the Reichsbank to suspend from October 1st the issue of registered marks to foreign diplomats and journalists permanently resident in Germany. This decision will involve them in a loss on exchange equivalent to about 35 per cent. of their income from foreign sources. It is questionable if the amount at issue is sufficient to warrant

so oppressive a change in procedure, and this shows that the position of the Reichsbank is still very acute. Until the full details of the agreement have been published it is not possible to judge whether it will facilitate a rise of Anglo-German trade from its present attenuated level.

* * *

Naval Ratios.—What is the Japanese Government's policy for the now fast approaching naval conference of 1935? The question is of capital importance; for, if it ever came within Japan's power to attain naval parity with the British Empire and the United States, she would be supreme over the British and American navies jointly in Far Eastern waters. An unchallengeable Japanese naval supremacy in those waters would render possible a Japanese domination over the whole of China and the Far East under the specious title of a Far Eastern Monroe Doctrine. In a statement made at Tokyo, on July 31st, to the foreign Press, the Japanese Prime Minister, Admiral Okada, announced that his Government did not expect to achieve parity between Japan and the two other principal naval Powers at the 1935 Conference; but any relief we may derive from this declaration must be tempered by the Admiral's accompanying declaration that Japan did not intend to accept, any longer, the principle of naval limitation by ratios. This Japanese statement promptly drew, on August 1st, an answering statement from the United States Secretary of the Navy, Mr Swanson, who declared emphatically that he was personally opposed to any alteration of the present agreed ratios between the three Powers, which stand for capital ships exactly, and for other ships approximately, in the relation of 5-5-3. Mr Swanson stated at the same time that he was in favour of a 20 per cent. reduction in all categories, upon the present treaty figures. On this, the Japanese naval authorities are reported to have commented informally to the effect that Japan will insist on repudiating the present ratios, whatever opposition she may encounter; that the proposal for a proportional reduction all round is unreasonable; and that the American naval construction programme under the Vinson Bill and the N.I.R.A., though it is, of course, perfectly legitimate under the existing treaties, is calculated *de facto* to give the United States an important advantage. Since then, it has been reported that the United States naval authorities are to build new naval bases in the Aleutian Islands and elsewhere in the Pacific. What are the Japanese after? They seek to justify their proposed repudiation of the ratio both on grounds of national security and on grounds of national prestige; but the plain fact is that naval parity with the British Empire and the United States would give Japan the dominion over China. Another certain fact is that the United States will never acquiesce in Japanese naval parity with herself *de facto*, and that, if Japan denounces the present treaty ratio, she will be giving the signal for a naval building race in which the United States would assuredly have the will, as well as the means, to outbuild her to any extent. Is Japan bluffing? And is Italy doing the same in publishing, on August 2nd, a decree definitely authorising the construction of two 35,000-ton battleships? For the Powers with slender resources, this appears to be dubious policy.

* * *

"Our Daily Bread."—The operations of our restrictionist saviours of British agriculture are bearing rich fruit—for their protégés, at least. We described, in the first of our three articles on British agricultural policy, the last of which appears in this week's issue, the process by which the wheat-grower in this country receives an indirect subsidy from all consumers of bread, in the shape of a wheat levy imposed on all flour milled or imported. This additional levy, which recently equalled the cost of wheat on the free world market, is naturally passed on by the millers to the consuming public in the price of flour and bread. Thus, prior to the rapid rise of the last few days, the free price of wheat was about 5s. per cwt., whereas under the 1932 Wheat Act a standard price of 10s. per cwt. was guaranteed to registered British wheat-growers, up to the limit of the "anticipated (home) supply" for each year. The "anticipated supply" is generally exceeded—which is only natural when the State guarantees a minimum price for any product—and the

receipts of registered growers per cwt. of their wheat production are therefore generally slightly less than the exact difference between the free price and the standard price. But this is small comfort to the consumer. In the last five weeks the London millers have raised the price of standard grade flour from 24s. 6d. per 280-lb. sack to 28s. Adding to this the wheat levy—which was progressively raised, as world wheat prices fell, from the Wheat Act's original 2s. 3d. per sack to 3s. 6d., and then to the present 4s. 6d.—the present price of the sack comes to 32s. 6d. As, however, the Food Council's limit for the 7½d. quarter loaf is 31s. per sack of flour, certain conclusions are evident. Clearly, the present levy, which is mainly a burden on the mass of poorer consumers, may soon involve a rise in the price of bread. Equally clearly, it should automatically fall as prices rise. As the free price of wheat is rising, the levy, if we must suffer it, should be scaled down nearer to its original figure of 2s. 3d. per sack of flour. But that, say our restrictionists, would frustrate the expectations of a flourishing new industry—the costly cultivation of British wheat in a wheat-choked world out of levies paid by consumers! It will be extremely interesting, and crucial for many housewives, to observe what will happen next. Will the levy fall, or will the price of bread rise to maintain the levy intact? A joint meeting of the London Master Bakers' and Confectioners' Protection Society and the Principal and Wholesale Retail Bakers' Society is to be held next week to decide on the price of bread. Events will show for whose welfare our restrictionists have been chiefly concerned.

* * *

Transport Wages.—Last week the National Joint Conciliation Board for the road transport (goods) industry adopted an important report on wages and conditions of work, the purpose of which is to give effect to the "fair wages" clause of the Road and Rail Transport Act, 1933. Minimum scales of wages for drivers and mates or attendants are laid down for different kinds of services and vehicles, varying for drivers from 70s. a week down to 45s. a week, and from 56s. to 48s. for attendants. The report also recommends a 48-hour guaranteed week, special rates for overtime and Sunday duty, minimum scales for casual employment, and payments for rest periods and holidays—including a week in the summer, Christmas Day, Good Friday and the four Bank Holidays. The setting up of a joint conciliation board consisting of representatives of employers and workmen in each of the Traffic Commissioners' areas is also suggested. These provisions, which are obviously based on the analogy of the conditions on the railways, will certainly go a long way to remove one of the great anomalies in our national transport system—namely, the disparity of conditions of employment on the railways and the roads. The real difficulty will be to enforce them on the small employer—a task which will need the closest co-operation between the industry and the licensing authorities. Meanwhile, the attitude of the Unions in the negotiations with the railway companies over the restoration of the "cuts" is definitely hardening. The railwaymen have instructed their leaders not to take a negative answer—an ominous phrase which seems likely to foreshadow a deadlock. As we pointed out last week, the economic argument for a restoration of the "cuts" at the present moment is not strong. Railways are still far from earning anything like their "standard revenue," and the interests of the railway shareholder who has borne the brunt of the depression are certainly entitled to some prior consideration. And from the narrow standpoint of the workers themselves it would certainly be a short-sighted policy to force the companies into a permanent condition of financial embarrassment by attempting to maintain an uneconomic wage level, since in the long run the final adjustment would express itself in unemployment.

* * *

Germany's Economic Dictator.—Dr. Schacht, the President of the Reichsbank, has added to his present duties the responsibility for the management of the Ministry of Economy. The titular Minister, Dr. Schmitt, is ill,

and, according to our Berlin correspondent, it has apparently been decided after and in consequence of the June 30th massacre that he will not return when his theoretical six months' leave is ended. Since the disappearance of the Reparations control-mechanism, the Reichsbank has never been independent of the Government, as was originally intended. It was as a politician that Dr. Schacht replaced Dr. Luther. The new change need not involve any modification of current policy. It is indeed taken in some quarters to mean that Dr. Schacht, for the moment, has put through, against other Nazi Ministers, his policy of maintaining the gold-parity of the reichsmark, or rather of some of the reichsmarks. This is not certain. The general expectation that the mark will be devalued has expressed itself in sharp advances of foreign-currency securities on the Bourse. Dr. Schacht's declarations that no devaluation is intended do not necessarily indicate that he is really pledged to maintain the mark. For entirely legitimate reasons a Government cannot admit devaluation intentions; it can only announce devaluation. Dr. Schacht's appointment to the Ministry of Economy has been favourably received in manufacturing circles. The Schmitt Administration was a failure. This Minister had absorbed the cruder Nazi doctrines; and his repeated interventions against new private undertakings, designed to provide employment, were ill received, and aroused the suspicion that existing manufacturers were successfully intriguing for State-created monopolies for themselves. As a banker of big experience, Dr. Schacht is familiar with many important sides of business; he is reasonable and accessible, and as an old "Manchester-Liberal," also formerly in close connection with "Marxist" administrators, he can have no excessive respect for Nazi economics. It is now hoped that a slackening of the harmful official intervention in enterprise will take place.

* * *

Alarums and Excursions at Foochow.—The alarm which was sounded at the end of last week at the important Chinese treaty port of Foochow, in the Province of Fukien, appears to have been a false alarm. A "Communist" army from the "Red" domain in the interior of the province was reported to be descending upon the city in search of supplies; but the raiders are now believed to have retired, after having come within some fifteen miles of their supposed objective. This abortive raid, which superficially appears to advertise the Nanking Government's weakness, is really, perhaps, an indirect testimony to their growing strength; since the systematic blockading tactics which the Government forces are now adopting against this "Red" area from the landward side are probably the cause of this attempt, on the part of the beleaguered insurgents, to break out in the opposite direction. We may perhaps infer that the blockade is proving itself effective in wearing the insurgents down; and the Nanking Government's prospects of gradually restoring its authority throughout the "Red" regions of Central and South-Eastern China are decidedly improved by the fact that their policy is now no longer just negatively repressive. The military blockade is accompanied by a serious attempt to ameliorate the lot of the peasantry on the Government's side of the front; and nothing is so likely to sap the strength of Chinese agrarian "Communism" as a reasonable expectation of a not intolerable existence for the cultivator under the aegis of the Kuomintang. So much for the alarum of Foochow; but the excursions of British, American and Japanese warships, which it has elicited, raise other and wider questions. Not that it was superfluous to send the ships; for Foochow contains a considerable foreign mercantile and missionary community; and the foreign residents in China, as well as the Chinese peasantry, have had their unpleasant experiences of Chinese civil war—for example, at Nanking itself in 1926. When the report of the "Communist" foray arrived, the despatch of foreign warships could hardly have been avoided; and so long as the ships of three different naval Powers pay a simultaneous visit, their presence is not likely to be prolonged nor to constitute a danger of any further encroachment upon China's territorial integrity. If, however, the Japanese Far Eastern Monroe Doctrine had

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK

LIMITED

Head Office: 41 LOTHBURY, LONDON, E.C.2

been applied and backed up by a Japanese navy outnumbering the British and American, would Chinese integrity have been so secure?

* * *

A Minorities Problem for the League.—When great crises in high politics dominate the stage, public attention usually has little energy to spare for less urgent problems. It is therefore not surprising that the pressing preoccupations of recent events in Central Europe should have diverted Western opinion from the affairs of national minorities. This fact doubtless accounts for the comparative disregard of recent developments in the long drawn-out controversy between the administration of Prince Henry of Pless in Upper Silesia and the Polish revenue authorities, which has already formed the subject of numerous petitions to the League. The question at issue nominally concerns the amount of taxes payable by the Pless undertaking in respect of the financial years 1925 to 1930, and involves such disputable matters as allowance for amortisation and the method of calculating profits during periods of currency depreciation. The sum in dispute is large and amounts to some £250,000. These are problems which should be soluble by normal methods of discussion and adjustment, particularly as the Pless administration has made repeated and substantial offers with a view to achieving a settlement. The Polish authorities, however, have so far apparently been unwilling to reach a settlement; they have cut short the discussions, and they finally resorted, on May 18th, to the violent measure of dispatching bailiffs to the various Pless businesses, seizing such moneys as were available, sequestrating banking accounts, and generally making it wellnigh impossible for the Pless concern to pay wages or carry on day-to-day administration. These proceedings are bound to raise grave anxieties abroad. If the Polish authorities desire the fiscal weal of Poland, their policy in ham-stringing one of the most important and reliable revenue-producing enterprises in Upper Silesia can hardly justify itself as wise administration. If, on the other hand, the financial issue, as is widely rumoured, is a mere pretext for unfair discrimination against a member of the German minority, then the problem is more serious. It is due for deliberation by the League in September. In the meantime it is essential that no action should be taken in Poland which might further aggravate an already grave situation.

* * *

A Bull Point for Raw Cotton.—The official American estimate of the forthcoming cotton crop was published on Wednesday. The estimate, which is based on the position in the cotton fields on August 1st, is for a crop of only 9,195,000 bales (1 bale = 500 lbs.). This compares with an estimate on August 1, 1933, of 12,314,000 bales and an actual crop last year of 13,043,110 bales. With the excep-

tion of the abnormally bad cotton crop of 1921, the present estimate is the lowest since 1896. Even so, it did not surprise the market; for the general opinion expected a cotton crop of about 9,000,000 bales. Nevertheless, prices bounded up in New York on Wednesday by 43.47 points, and in Liverpool by over 30 points, per lb. The New York price reached the highest figure since 1931; and the Liverpool price the highest since July, 1930. The rise in prices was obviously due to traders' expectations that the low crop would permit inroads to be made on stocks, and so improve the prospects of the cotton industry as a whole. A few days ago the New York Cotton Exchange estimated that world consumption of American cotton during the season now ending was 13,564,000 bales; and for the coming year it estimates that the same quantity will be required. As the carry-over of United States cotton this year is estimated at 10,836,000 bales, against 11,754,000 bales a year ago, the carry-over a year hence should be only about 6,500,000 bales—assuming, of course, that world consumption of United States cotton in 1934-35 and the actual crop remain at the above figures. This would mean a reversion, a year from now, to almost normal conditions in the United States cotton situation, after years of severe crisis. It is hardly surprising that traders have marked up cotton prices.

The World's Sugar.—The International Sugar Conference which opened in Brussels last week has been adjourned until September without achieving any positive results. Meanwhile, a sub-committee is to try to work out a basis of discussion for the adjourned Conference; and, in particular, it will have to enter into negotiations with the countries which are at present outside the Chadbourne Plan, in order to get them into a wider international sugar convention. The Chadbourne Plan of 1931, which comprised the most important sugar-exporting areas of the world (Cuba, Java, Peru, Germany, Czechoslovakia, Hungary, Poland, Belgium), expires on September 1, 1935. Its prolongation is not, therefore, a matter of urgency. But the present world sugar situation has so stultified the hopes based on the Plan, that a new and more comprehensive Plan is necessary. While sugar production of the Plan countries during the last five years has fallen from 12.5 million tons to 6.9 millions, production by countries outside the Plan, largely by reason of State assistance and tariffs on imports of cheap sugar, in the last six years has risen from 14.7 million tons to 19.3 millions. Import requirements of the world market, as a result of increased production by the countries outside the Plan, have therefore fallen in the last six years from 5.9 million metric tons to 3.1 millions (F. O. Licht's figures). Thus, the Chadbourne Plan, which was drawn up by and embraced only the chief exporting areas, has been made relatively of no avail. In view of these trends, the second sub-committee of the 1933 World Economic Conference requested the Bureau of the Conference to work for a general unification of the world's sugar industry; and in March of this year the Chadbourne Plan members attempted to widen the scope of their agreement. In the meantime, the United States has accorded Cuba, the largest sugar producer, more favourable quotas for imports into the United States. But Java, whose cane production is most cheap and efficient, has seen her export markets continually curtailed; and if only Java could benefit by an increase in world demand for raw sugar, it might not be impossible to secure the agreement of the countries outside the Plan, who are still extending their own artificially assisted sugar production, to a more comprehensive plan. Without such a new world sugar convention, the present difficulties of the Plan countries, caused mainly by costly and uneconomic national sugar production in formerly sugar-importing States, can hardly be solved at the adjourned Conference in September.

Employment in July.—The Ministry of Labour estimates that there were approximately 10,136,000 insured persons aged 16-64 in employment in Great Britain on July 23rd, a decrease of 27,000 since June 25th, following the previous fall of 24,000 during the month of June.

Compared with July, 1933, an increase of 394,000 is reported. The number of unemployed persons on the registers of employment exchanges was 2,126,260 on July 23rd, 1934, of whom 1,553,747 were wholly unemployed, 492,872 temporarily stopped and 79,641 registered as "normally in casual employment," a decrease altogether of 315,915 compared with a year ago, and of 301,500 in the first category alone. There has, however, been an increase of 26,700 in the number of women temporarily stopped, and of 1,700 in the number of girls under 18 who are out of work, owing to the deterioration in the textile situation, and particularly in the woollen and worsted section. Compared with a month ago, there has been a net increase of only 33,674 in the numbers of unemployed on the registers, despite a rise of 45,500 in the number of those temporarily stopped. This is partly due to local holidays in Lancashire, Yorkshire and Scotland, during which about 20,000 workers were so registered. The sharp rise in unemployment in Scotland and the North-Western districts, and the apparent set-back in all textile industries shown in the following table, are all partly, but unfortunately by no means entirely, attributable to these same causes:—

	Increase (+) or Decrease (—) compared with			
	June 25, 1934	July 24, 1933	June 25, 1934	July 24, 1933
	Number	%	Number	%
Coal mining	26,378	7.4	64,078	16.2

Public works contracting	3,321	2.8	2,505	2.0
Motor vehicles, cycles and aircraft	2,844	10.8	15,327	34.8
Distributive trades	154	...	20,547	9.2
Tailoring	8,971	38.2	1,973	6.1
Boot & shoe manufacture	5,459	20.0	7,248	28.7
Cotton	11,966	11.1	11,555	8.8
Woollen and worsted	6,733	13.7	25,522	85.0
Jute	11,711	104.0	4,117	21.7
All industries	33,674	1.6	315,915	13.2

There has been a very large drop in the numbers of coal miners unemployed, which partly counteracts the unusual increase in June of 65,000; and there has been further improvement in all the metal industries. There are now only 3,000 more iron and steel workers unemployed than in July, 1929. On the other hand, building activity has slowed down to a serious extent; and there are now still 273,500 insured persons out of work in building and public works contracting, as compared with 102,800 in 1929. There has also been a very marked decline in all consumption goods industries—textiles, boot and shoe, tailoring and motor vehicles—even when due allowance is made for North Country holidays. This is no doubt partly seasonal, but it is also some indication that the limits to recovery by expansion of the home market are soon reached. The following table gives changes between June and July in the numbers unemployed in the various administrative divisions of the country:—

London	+ 992	North-East	5,656
South-East	+ 1,226	North-West	+ 11,408
South-West	+ 2,977	Scotland	+ 20,321
Midlands	+ 8,803	Wales	6,397

Improvement in coal mining and metal industries is reflected in the decreased unemployment in Wales and the North-Eastern division.

Juvenile Unemployment.—One of the most serious aspects of the present unemployment problem in this country is the growing extent of juvenile unemployment. The number of juveniles (aged 14-18) wholly unemployed increased by 12,200 during July, to 77,839. This is due, as the Ministry of Labour points out, to the fact that schools in many northern areas had already broken up by the date of the returns, and such end-of-term unemployment is a normal temporary phenomenon. But over twelve months there has been a reduction of only 2.5 per cent. in the numbers of juvenile unemployed on the registers as com-

pared with an average reduction of 13 per cent. in the total of unemployment. It must be remembered that the effects of the very high post-war birth rate are just beginning to be felt on the juvenile labour market. During this year, approximately 570,000 boys and girls over 14 will enter insured industries in search of work, as compared with 466,000 last year, 590,000 in 1935 and 500,000 in 1936; while vacancies were filled during the first six months of this year at the rate of only 436,000 per annum through juvenile and ordinary labour exchanges—and that in a period of fairly rapidly expanding employment. There will clearly be a large surplus, and no palliatives in the way of providing instruction centres for young persons who are out of work can take the place of the regular discipline and hours of work which they would get from an extension of the school-leaving age. Instead of such an extension, the only measure taken in view of this problem is the section of the new Unemployment Bill providing for the insurance of juveniles between the ages of 14 and 16 which will come into force on September 3rd. From that date all children who are in employment other than agriculture or domestic service, except apprentices receiving no wages, will be insured. Employers are to pay a weekly contribution of 4d., of which 2d. may be deducted from wages, but benefit will not be paid until the child has attained the age of 16. Parents entitled to their own unemployment benefit, however, will be able to secure dependants' benefit as at present if the young person is still receiving full-time instruction, or if he or she is unemployed through no fault of his or her own. The Bill also makes provision for juveniles under 16, who voluntarily continue in whole-time education beyond the school-leaving age, whereby they may receive free credit for as many as 20 contributions. This provision, however, does not come into force until September, 1935. There will not necessarily be any large addition to the figures of juvenile unemployment by this extension of insurance as over one-third of the total of juveniles already on the unemployment registers are under 16.

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 1.8 per cent. during July, following a rise of 0.4 per cent. during June. The current figure of 85.3 compares with 84.4 in July last year and 80.1 in July, 1932. Details of the index number are as follow:—

	(1898-1913 = 100)				
	Average, 1913	July, 1933	May, 1934	June, 1934	July, 1934
European waters	110.0	85.8	85.2	86.7	89.5
North America	113.1	74.7	78.7	76.5	75.7
South America	123.4	80.8	78.2	80.5	83.7
India	106.3	90.5	89.8	88.0	88.3
Far East and Pacific	117.4	87.3	83.2	86.3	87.3
Australia	127.9	87.2	85.4	84.6	87.2
Total	116.3	84.4	83.4	83.8	85.3

Most British ports state that the freight market is improving. There is a steady demand for outward coal tonnage, especially for South America and the Mediterranean, and Scotland also reports a good demand for boats to load coal for Denmark and Finland. The North American trade is disappointing and the coastwise market is inactive. Apart from these sections, the general tone is better. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home Trade	78.8	- 0.7	South America—		
Bay—outwards	102.7	+ 5.5	Outwards	70.0	+ 4.1
Bay—homewards	96.8	+ 4.9	Homewards	97.4	+ 2.2
Mediterranean—			India—outwards	75.1	- 0.7
Outwards	96.0	+ 9.4	India—homewards	101.5	+ 1.3
Homewards	83.5	- 1.9	Far East, etc.	87.5	+ 1.0
North America	75.7	- 0.8	Australia	87.2	+ 2.6

Expressed as a percentage of the average for 1913, the total figure of our index number for July is 73.3, compared with 72.0 for June, and 72.5 a year ago.

FRANCE

FRENCH REVENUE AND TRADE

M. GERMAIN-MARTIN, Minister of Finance, has just decided that from now on the fiscal returns will be published every three months, instead of every month as in the past. He produced at the same time the figures for the quarter ended June 30th. For this period, receipts which concern the ordinary Budget reached Frs. 8,894,429,450, of which Frs. 8,760,540,100 were normal receipts, as follows:—

Direct taxes	1,815,837,000
Indirect Taxes and monopolies	6,914,477,000
Estate duties	30,226,100

Compared with published estimates, tax revenue shows a deficit of Frs. 874,016,900, of which Frs. 871,028,000 is a shortfall on indirect taxes and monopolies and Frs. 2,988,900 on estate duties. (For direct taxes, no comparison between estimates and receipts is available.) For the preceding quarter, the deficit reached only Frs. 687 millions. The deterioration is obvious. A *communiqué* of the Ministry of Finance declares that these results are not surprising, as they initiated the recent policy of decrees-laws for economies and fiscal reform. The Government ascribed the shortfall in receipts to three causes:—

(1) *Diminution in Customs Receipts.*—Total receipts of the Customs during the second quarter show a shortfall of Frs. 390 millions, that is, 44 per cent. of the aggregate deficit. Import duties show a diminution of only Frs. 316 millions, which is a consequence of depression, increased quotas, total prohibition of wheat imports, and, lastly, abolition of the exchange supertax on imports from countries with devalued currencies.

(2) *Exaggerated Estimates.*—The method by which estimates are drawn up in the Finance Department often leads to miscalculations. This method takes the past as a basis for forecasting the future. The consequence is that in times of prosperity the estimates are minimised; while in a crisis they are inevitably exaggerated. When in the summer of 1933 the estimates were calculated for the 1934 Budget, the Administration took the experience of 1932 as a basis for receipts estimated in comparison with the previous year, and the receipts of the twelve months (July 1st-June 30th) for the receipts which were to be directly estimated. This method consequently ignored the increasing incidence of the crisis.

(3) *Persistence of the Crisis.*—This is notably demonstrated by increasing unemployment figures and bankruptcies. The Finance Department believes that out of the total revenue deficit in the second quarter of this year, Frs. 250 millions may be imputed to the intensified crisis. It is particularly noticeable that the turnover tax, for instance, produced during the second quarter Frs. 1,606,029,000, a sum which is Frs. 137,109,000 lower than the Budget estimates, and Frs. 80,422,000 lower than receipts for the second quarter of 1933.

As a whole, these figures correspond with the image of the crisis which the French public has drawn for itself. Business as a whole is quieter than a year ago, and taxation reform does not appear to be a great stimulus to renewed business activity. But during the present period of recess revenue figures are not very often discussed. Public opinion is now particularly attentive to the latest events in foreign politics, above all, to the evolution of the Hitler Government in Germany, and to the rumours from America which forecast further depreciation of the dollar, sooner or later. This latter rumour, if it becomes a fact, may entail disturbances to the Continental currencies.

COAL MINES

According to the statistics published by the Comité Central des Houillères de France, the production of French coal mines during June, 1934, totalled 3,960,366 tons in 26 working days, against 3,959,355 tons in May in 24 working days, and 3,896,035 tons in June, 1933, in 25 working days. The average daily production was therefore 152,322 tons in June, 1934, against 164,973 tons in May and 155,841 tons in June, 1933. The number of men employed was 235,838 at the end of June, 1934, against 238,200 at the end of May and 248,735 at the end of June, 1933. The production of coke in the coke plants of the coal mines was 332,131 tons in June, against 334,913 tons in May and 301,927 tons in June, 1933. For the half-year 1934, coal production reached 24,667,010 tons, against 23,945,222 tons for the first six months of 1933. The production of coke in the coke plants of the coal mines, was, for the same period, 2,034,485 tons, against 1,851,068 tons; and the production of briquettes was 3,103,501 tons, against 2,756,159 tons.

PARIS, August 8.

GERMANY

EFFECT OF HINDENBURG'S DEATH

THE disappearance of Hindenburg from the political scene brought no real increase of power to the National-Socialist Party, which since it attained office has always done as it liked. But the President's death was an event of vast emotional importance, and with the ensuing ceremonies and demonstrations, has helped to obliterate the impression of Herr Hitler's extermination of opponents on June 30th and of the Nazi fiasco in Austria. This influence seems not to have been confined to the home public. The Nazi stage-managers foresaw this, for them fortunate, effect; and the ceremonies and demonstrations were consequently pushed to extravagant lengths, and were indeed in certain details and in their general spirit contrary to the President's wishes and temper. While Hindenburg still lay unburied, Herr Hitler's Government proclaimed that the way to honour him was to honour Herr Hitler. Before Herr Hitler became Chancellor he was regarded by President Hindenburg with aversion and distrust; and he himself had demonstratively expressed his contempt for the President. To discerning Germans the events following President Hindenburg's death have therefore merely emphasised the already obvious glaring contrast between the spirit and bearing of the Prussian military aristocracy and of Hitlerism. Increasing opposition between these political elements is visible, which makes the Nazi dictatorship look not altogether secure. In particular, Nazi blunders in foreign policy, the fiasco in Austria, and the alienation of Italy, upon which Herr Hitler had counted as an ally in his promised war against France, have displeased a class which formerly claimed a monopoly

in foreign policy; and the latest exaggerated protestations of peaceful intentions, which so surprisingly belie the antecedents of Hitlerism, seem to critics of this class amateurish and clumsy, and likely to increase foreign distrust.

RAW MATERIALS CRISIS

The question of regulating industry has ceased to be a mere matter of ideas. Recent interferences with private business have not been inspired by Nazi doctrines of the State competence to plan, but by the foreign exchange and raw materials crisis. If the Reichsbank is not responsible for this crisis, as many believe, it has at least shown lack of foresight. It justified the partial default on the bonds of service of July, 1933, not so much by the insufficiency of the reserves for the service as by the alleged need for replenishing them. Its utterances at that time indicate that it expected that default would result in replenishment. Increase to a figure of Rm. 1,500 millions was mentioned as Dr. Schacht's ambition. The failure to realise this ambition—the reserves under Dr. Schacht's administration have fallen 90 per cent.—illustrates once more a manner of German reasoning which is never justified by fact and is, presumably, theoretically false. If Rm. 1,000,000 is saved by defaulting on a debt, so the reasoning runs, the reserves will be exactly Rm. 1,000,000 higher. This reasoning is a counterpart to the false theory, to which reference has been already made in this correspondence, that, if one saves Rm. 1,000,000 by reducing the import of a commodity to that extent, the reserves will be automatically Rm. 1,000,000 higher. These false notions have aggravated the bad effect on Germany's balance of foreign payments already caused by her narrow foreign-trade policy. No improvement in the reserves situation can be counted on with certainty from mere restriction of imports.

The position of industries that consume foreign raw materials is getting worse. There are reports that whole branches and many individual concerns have discharged workmen owing to this cause. The 36-hour week in textiles, though in part it merely suspended production for stock, reduced the quantity of effective employment. The Chemnitz textiles industry is embarrassed in some of its branches, in particular in fabric gloves, by the difficulty of obtaining English fine yarns. The official handling of this problem is irresponsible. The Press, which says only what the Government tells it to say, harps on vicious foreign tariff policies and on a universal world-desire to ruin Germany; and reports exaggerate with *Schadenfreude* the punishment that has fallen upon evil-minded foreigners in the shape of reduced activity in their raw material industries.

CREDIT AND FINANCE

Money became easier after the turn of the month. Day loans for first-class borrowers were around 4 per cent. The banks are cautious in expectation of a considerable demand for cash this month for harvesting and business purposes. The market for Reich short-term paper has been lifeless. The Finance Ministry's budgetary return for the first quarter of the financial year shows:—*Ordinary*: Revenue, Rm. 1,725 millions; expenditure, Rm. 1,569 millions; surplus, Rm. 156 millions. *Extra-ordinary*: Revenue, nil; expenditure, Rm. 2½ millions. The deficit carried over from the financial year 1933 is Rm. 1,797 millions.

The Reich debt, which at the end of the financial year 1933 was Rm. 10,227 millions, had fallen by March 31st to Rm. 9,938 millions, whereof Rm. 1,795 millions were in foreign currencies. Outstanding Dawes Loan is returned at Rm. 408 millions and Young Loan at Rm. 1,072 millions; all figures are on the basis of exchange rates on March 31st. Reports are published of increasing consumption of beer and of other exciseable commodities.

INDUSTRY

The wholesale price index for August 1st was 99.7, against 99.3 on July 25th. The agricultural products index rose 0.7 per cent. Manufactured consumption goods show a new tendency to rise. Bankruptcies in July numbered 191, the lowest figure so far, against 223 in June. The Ministry of Economy has forbidden the creation of new undertakings for production of rolled or pressed lead articles and the expansion of existing undertakings, the usual

reason, misinvestment of capital, being given. Department store sales in June were 8½ per cent. higher than in June, 1933. This shows a considerable improvement; in the first half-year of 1934 sales were 6 per cent. below those of the same half of 1933. All retail sales in June were 14 per cent. higher than in June, 1933, and in the first half-year were 10 per cent. higher. A small part of the increase is due to a rise in prices. Goods unloaded in Hamburg in the first half-year were 6,800,000 tons, which is 5 per cent. more than in the same half of last year; goods loaded were 3,200,000 tons, which is 2 per cent. less. The home steel market remains active; and the last returns show a moderate increase in export. The West German engineering and ironware industries are better occupied. Exports of textiles machinery have sharply increased, also of motor cars. The Solingen cutlery industry has had a propaganda week, "One Thousand Years of Solingen Wares," during which measures for furthering exports were discussed. Export of cutlery last year recovered to 4,360 tons, as against 3,950 tons in 1932 and 5,950 tons in 1913. The share taken by Europe since 1913 has much increased; that of America has fallen to one-half.

BERLIN, August 8.

AUSTRIA

POLITICAL DISTURBANCES AND TRADE

THE recent political tragedy has exercised little influence upon economic affairs. In contrast to the February disturbances, there has been no strike, and no interruption of production worthy of mention has taken place. Orders received from abroad have maintained their normal level. In foreign tourist traffic, which is now at the height of the season, there was a decline in some parts immediately after the attempted *Putsch* owing to sudden departures, but this did not last long, and the stream of foreigners to Austria is now steady again. Again, in contrast to February, withdrawals of savings deposits have been very slight. In the whole of July the reduction amounted to only 8 million schillings. Moreover, a reduction of savings is to be expected at this season, as people take money out of the banks for holiday purposes and also to pay the quarter's rent due in Austria on August 1st. Indeed, in July, 1933, withdrawals of savings deposits amounted to 17 million schillings. In view of the earlier increase in savings deposits and of the reserve practised in according credits, the banks and savings banks had an abundance of cash at their disposal and were able to satisfy all demands with the greatest ease. This may be seen from the very slight tension at the National Bank at the end of July. The bill portfolio rose by only 3.2 million schillings to 247.8 million schillings, while the increase registered at the end of July, 1933, was 4.2 millions, which then brought the total up to 239.3 millions. It is therefore clear that there was no special call upon the Austrian National Bank in connection with the political events.

It is true, however, that big changes have taken place in the National Bank figures. A reduction in discount commitments has been counterbalanced by an increase of the fiduciary circulation by 119.7 million schillings—a change-over within the total circulation which had not occurred to such an extent in recent years, if ever. On the other hand, the difference in the total circulation, namely, an increase of five million schillings, must be regarded as very moderate, especially as actual cover has really increased by reason of a marked increase in forward exchange holdings. The economic aspect of recent political events can therefore be regarded as reassuring.

HALF-YEAR'S BUDGETARY SITUATION

No definite idea can yet be formed of the effects of political events on the Budget. The cost of the increased public security service will undoubtedly mean expenditure in excess of estimates, as was also the consequence of the February revolt. But this extra expense has already been taken into account. As appears from the recently-published report of the League of Nations representative in Austria,

in the first half-year of 1934 the expenditure for national defence, police, and defence corps was greater by 23 million schillings than for the same period of 1933, while the special tax to cover this excess (the security tax) had already brought in 6.5 million schillings. This tax had only been collected since the second quarter, so that a considerable portion of the excess expenditure for security service must have been covered. It is, of course, difficult to say how far it will go towards covering the unforeseen requirements, or what new sources of revenue will have to be tapped. The State Budget for the first half-year, 1934, appears as follows:—

	ORDINARY BUDGET	
	1933 (In millions of schillings)	1934
Staff salaries	351.91	351.64
Materials	608.76	657.45
Total expenditure	960.67	1,009.09
Total revenue	881.41	933.44
Deficit	79.26	75.65

The deficit on the ordinary Budget is therefore 3.61 million schillings lower than last year. It is surprising that the increased expenditure appears almost wholly under materials, whereas, in view of extra expenditure on security services, one would expect the burden to fall on staff salaries. The supplementary Budget, which is to cover public works, called for 40.74 million schillings in the first half-year, against an estimate for the whole of 1934 of 103.06 million schillings. This was met chiefly by the proceeds of the Lottery Loan of 1933.

This year the finances of the Federal States are rather better. It should be noted that the expenditures of these bodies are a very considerable addition to that of the State. They are estimated for 1934 at 597 million schillings. Compared with their high level of 1931, namely 854 million schillings, a big saving has already been effected. Apart from the Budget of the City of Vienna, which closed with a deficit of 45 million schillings as a result of the February troubles and their effects, it will be seen that the Federal State Budgets, which previously gave rise to much anxiety, have already been put into fairly good order. This is the more striking as these bodies have lately contracted no new loans, as opposed to their former practice. By converting their dollar loans into schilling loans they are effecting a slight saving. Styria has already made such a conversion, and it has now been decided by Lower Austria to offer conversion of the 7½ per cent. Dollar loan of 1925 into 6½ per cent. schilling bonds, whereby, however, for 100 dollars an exchange of 600 schillings is offered, whereas the current rate is actually about 535 schillings. The City of Salzburg has succeeded in converting its 7½ per cent. Swiss Franc loan into 5 per cent. bonds, also in Swiss francs, and has also gained easier amortisation conditions. This is a straightforward conversion, while in most of the other cases the main purpose was to get the debt changed from dollars to schillings.

The financial position of many corporations is still dreary. Several towns have lately reported financial embarrassment not confined merely to meeting debt services, but extending to inability to pay for goods, etc. Several municipalities have been obliged to declare themselves bankrupt. It is hoped, however, that the new financial constitution, which came into force on August 1st and gives the State departments extensive powers to intervene and to control the Budgets of States and municipalities, will introduce order in these matters in the near future.

VIENNA, August 6.

SWITZERLAND

AMENDING THE CONSTITUTION

THERE has recently been much discussion in the Swiss Press and political circles regarding the opportunity of modifying the Federal Constitution—which dates from 1874—and of adapting it to modern conditions. It seems that the Government as well as public opinion have agreed on the necessity of such revision.

Switzerland is a Confederation of 22 Cantons or virtually sovereign States. The supreme legislative power is vested in a Parliament of two Chambers, while the executive power rests with the Federal Council formed of seven members elected by the two Chambers of Parliament. The Federal Council is supreme in matters of peace, war and treaties, it regulates the army, railways, post, telegraph and Customs systems, money, the issue and repayment of banknotes, and weights and measures. But, in past years, there has been a general tendency to centralise all important services and to leave all questions of general interest in the hands of the Federal Council, which was even granted full powers in the economic domain. The Cantons thereby lost the greater part of their rights and privileges, and it is now felt that it would be wise and profitable for the country to abandon excessive centralisation and to return to Federalism. It is too early to say what the future Constitution is likely to be, but it is probable that it will restrict the powers of Parliament, which has acquired too much authority, particularly in financial matters, and that it will empower the Federal Government to take certain action against revolutionary movements. It will furthermore enable the Cantons to recover part of their sovereignty, and lay down a new organisation for the Federal Railways, which are to be freed of political influences.

TRADE AND EMPLOYMENT

There has been no great change in the economic situation of Switzerland during the past months. During the first half-year imports totalled Frs. 712.7 millions, compared with Frs. 770 millions in the first half of 1933, the drop being due to import quotas and restrictions. On the other hand, exports aggregated Frs. 405 millions, as against Frs. 416 millions in the first half of 1933, a decrease of nine millions, which can partly be ascribed to the continued fall in prices, for an increase of 7 per cent. was recorded in the volume of goods exported. The import surplus, which was about 46 per cent. in 1933, was 43 per cent. in 1934.

Total exports of the four chief industries were satisfactory, as an increase was recorded in watchmaking (+ Frs. 4,000,000), cotton goods (+ Frs. 2,000,000), machinery (+ Frs. 3,000,000), but silk exports fell by Frs. 5,000,000 compared with the figures for the first half of 1933.

Trade with Great Britain showed an improvement over last year, as imports from Britain reached Frs. 45.4 millions, as against Frs. 42.1 millions in the first half of 1933, and exports to Britain totalled Frs. 43.7 millions, compared with Frs. 42 millions the previous year. Trade with the five principal countries was as follows, compared with 1933:—

SWISS FOREIGN TRADE: FIRST HALF-YEARS

(In millions of Swiss francs)

Country	Imports from		Exports to	
	1933	1934	1933	1934
Germany	264	196	72	79
France	127	110	66	63
Italy	62	59	41	32
Great Britain	41	45	41	43
U.S.A.	40	40	29	26

Up to the end of June the labour market showed an improvement, mainly owing to seasonal increases in employment in agriculture and the building and hotel industries. At the end of June persons in search of employment totalled 46,900, as against 99,147 in January and 44,087 in May, and against 53,860 in June, 1933. The rise in unemployment recorded since the end of May—continued in July—is probably due to reduced industrial activity in consequence of unsettled political conditions in Europe.

NEW BANKING LAW

The winding up of the Geneva "Banque d'Escompte Suisse"—which was compelled to close down last April—is likely to begin within a few weeks, as the Committee of Administration appointed by the Court has terminated its preliminary work. It is said that creditors will be repaid at least 80 per cent. of their claims, and more if suffi-

cient time is allowed for a gradual winding-up of the bank. The Federal Government has decided to help small-savings depositors, who will get 80 per cent. when their deposits exceed 300 francs, and who will be repaid in full if their deposits are less. Meanwhile the Parliamentary Committee elected for that purpose has examined and approved the new law on banking proposed by the Federal Government, which will be discussed by Parliament in September. The law is to apply to all financial concerns which receive funds from the public and operate with them. The accounts and balance sheets are to be drawn up according to certain definite rules. When the balance sheet exceeds 100 million francs the bank will be compelled every month to submit a summary balance sheet to the National Bank, and a detailed one every year. When the balance sheet does not exceed 20 millions the bank will have to publish provisional balance sheets during the year. A bank, before investing important sums abroad or before issuing a loan abroad or for another country or a foreign industry, will have to "advise" the National Bank. The limit for all foreign investments and loans is likely to be fixed at 100 million francs.

The law also contains drastic provisions as to the relation between funds held by the banks and their total commitments, as well as to the relation between liquid assets and short-term engagements. The law further provides for the protection of savings, and it makes the creation of any new bank conditional upon the approval of the Federal Government.

In the past twenty years Swiss banks have invested and lent enormous sums abroad, with the result that they suffered heavy losses—which caused the failure of some banks—when foreign currencies depreciated. The new law is therefore intended, on the one hand, to prevent excessive export of capital, and on the other hand to protect investors by a continuous and drastic State control of the banks.

GENEVA, August 5.

JAPAN

A NEW MINISTRY

THE Saito Ministry resigned *en bloc* early in July through a scandal in connection with high Treasury officials, and on July 8th Admiral Keisuke Okada formed the second "National Government," appointing some of his Ministers from the leading members of the two major political parties, though one of the parties refused to give official support. Headed again by an admiral, the Ministers for Army, Navy and Foreign Affairs remaining in their respective posts, the Minister for Agriculture transferred to the Home Office, and the Under-Secretary of the Treasury promoted to Finance Minister, the general character and policy of the new Ministry are not expected to be much different from those of the preceding Ministry. Especially with regard to financial policy, it is believed that its predecessor's policy will be faithfully followed, the new Finance Minister being the nominee of Mr Takahashi. Without the immense personal prestige of Mr Takahashi, however, it remains to be seen whether the young Minister can be as adamant to the increasing claims of the fighting services as was the veteran financier. This is what is generally feared in financial circles.

FOREIGN TRADE

The preliminary figures of our foreign trade in June show an increase in both imports and exports, as compared with June, 1933. Though the percentage increase in imports is considerably higher than that in exports, this is mainly due to a heavy belated arrival of raw cotton. For the first six months of the year the percentage increase in imports, in comparison with the corresponding period of last year, is substantially lower than that in exports. The tables following give a comparison of the

value figures for June and of the first six months of this year and last:—

	(000's omitted)		Increase (+) or	
	Month of June		Decrease (–) in 1934	
	1933	1934	Yen	%
Imports	137,010	201,507	+ 64,497	+ 47.1
Exports	162,689	183,804	+ 21,115	+ 13.0
Total	299,699	385,311	+ 85,612	+ 28.6
Import surplus	— 25,679	17,703	...	...

	First Six Months		Increase (+) or	
			Decrease (–) in 1934	
	1933	1934	Yen	%
Imports	1,016,341	1,158,511	+ 142,170	+ 14.0
Exports	829,873	1,003,588	+ 173,715	+ 20.7
Total	1,846,214	2,162,099	+ 315,885	+ 17.1
Import surplus	186,468	154,923	— 31,545	— 16.9

Exports of cotton piece-goods during the first half of this year set a record for all time. According to the statistics of the Cotton Traders' Association, exports of cotton cloth during the first six months of this year amounted to 1,262,974,000 sq. yds. at 232,350,000 yen, as against 1,034,424,000 sq. yds. at 183,639,000 yen in the January-June period of 1933.

BUSINESS MAINTAINED

Bank deposits are on the increase, and the weight of idle money forced the "B" class, or lesser banks, among the Tokyo clearing banks to reduce their deposit rate from 4.2 per cent. to 4 per cent. as from June 25th. Clearing banks in many provincial towns followed suit. The Bank of Japan's index number of wholesale prices for June registered a further drop of 1 per cent. on the month. The aggregate value of all shares listed on the Tokyo Stock Exchange on July 2nd recorded a fall of 28.1 million yen, as against a month ago. Industrial production, on the other hand, maintains in general an upward tendency. The output of cotton yarn during June set another record at 286,000 bales.

The Department of Agriculture and Forestry's forecasts of the wheat and allied grain crops for the country, excluding Hokkaido, on June 10th placed the year's wheat crop at 8,682,000 koku, or an increase of 11.3 per cent. upon the actual yield of last year, and the barley and rye crops, at 6,640,000 koku and 5,744,000 koku, increased by 3.6 per cent. and 10.6 per cent. respectively. According to the report of the same Department, the output of spring cocoons for the country, excluding Hokkaido and North-Eastern provinces, is estimated at 40,959,000 kamme, or a decrease of 3,418,000 kamme (7.7 per cent.) upon last year.

POPULATION INCREASE SLOWING DOWN

The yearly natural increase in the Japanese population, which reached the million mark in 1932, was apparently arrested during last year. According to the report of the Bureau of Statistics recently published, the natural increase in 1933 was 927,209, or 13.79 per 1,000 of the population, the number of births and deaths being respectively 2,121,125, or 31.55 per 1,000 and 1,193,916, or 17.76 per 1,000. In 1932 the natural increase was 1,007,868, or 15.20 per 1,000, the birth-rate and death-rate being 32.92 and 17.72. The smaller natural increase in 1933 was thus accounted for by a lower birth-rate rather than a higher death-rate; and this factor is of special significance.

TOKYO, July 9.

ARGENTINA

BUSINESS AND FOREIGN TRADE IMPROVING

THE general improvement in the Argentine's prospects that became noticeable three months ago may be said to have been advanced by the drought and the short grain crops in the United States. Prices of cereals have risen considerably, wheat being quoted at \$6.55 per 100 kilograms for spot shipment, while maize is at \$5.90. Linseed has not responded to the same extent, but of this there is compara-

Why be content with 4%?

Do what many others are now doing—sell your stocks and shares and buy a Sun Life of Canada Annuity. If your age is 57 (male), you get an income equivalent to 8% on your capital and it is guaranteed for life. If older the income would be still greater.

Write in confidence, stating age and capital at disposal, and exact figures will be supplied to you.

(Incorporated in Canada in 1885 as a Limited Company.)

tively little in hand, while there are at least 2 million tons of wheat and 3½ million tons of maize at the present moment ready for sale if not for shipment. Chartering during the next three months shows 1,800,000 tons taken for cereals alone, so that the trade figures by the end of the year should show a substantial advance in the favourable trade balance, which has been steadily growing month by month. As regards Argentine trade with Great Britain the improvement, on balance, as compared with last year, is reasonably certain, judging by the figures for the first six months, which are as follows:—

	Estimated Real Values		Estimated Real Values	
	First Six Months (in \$ paper)		First Six Months (in \$ paper)	
	Imports	Exports	Imports	Exports
	1933	1934	1933	1934
Dutiable	324,857,584	375,117,635	1,632,011	206,666
Duty-free	105,608,036	130,002,863	579,071,245	716,973,592
	430,465,620	505,120,498	580,703,256	717,180,258
Balance	+ 149,937,636 + 212,059,780			

	Tariff Values		Estimated Real Values	
	First Six Months (in \$ paper)		First Six Months (in \$ paper)	
	Imports from		Exports to	
	1933	1934	1933	1934
United Kingdom	98,656,718	104,392,730	207,847,712	224,131,050
U.S.A.	51,395,325	67,679,448	28,207,566	41,382,418
Germany	48,556,986	51,605,561	43,503,366	55,475,736
Italy	46,218,702	36,351,975	26,967,182	27,666,505
France	25,900,189	24,324,418	41,909,543	46,794,645
For orders*	...	...	...	116,258,614

* The item "for orders" has been allocated to the various final destinations of the produce in the 1933 figures. For first six months 1934 it represents 16.3 per cent. of total shipments. At least 6 per cent. will consist of shipments to U.K.

It must nevertheless be remembered that, as regards imports, the statistics based upon market values are swollen to the extent of the depreciation of the peso. Comparing market with tariff values the difference is close upon 10 per cent., market values being the greater.

What is important, both to the national Treasury, which has its debt services to meet, and to the would-be remitters of funds held here in Argentine pesos, is the probable effect of this steady improvement upon exchange quotations. At the present time it seems obvious that the peso is being deliberately kept at about the level of twenty to the pound sterling. This is presumably due to some form of Government intervention, but inasmuch as no information of an exact nature is published concerning the operations of the Exchange Control Bureau this is only surmise. It is hinted in some quarters that a foreign reserve fund is being built up on Government account, but if this be so the proceedings have been most carefully concealed. Nor is anything known as to how much the Government has made out of exchange, or where the money lies. On the most conservative calculation, the gains obtained are at least \$150 millions. These gains were

to be used to subsidise the prices of cereals if they fell below certain specified levels. But no such payments have been necessary, nor are any in prospect as prices are now well above the minima fixed. The Government should have plenty of ready money to-day, yet its position will not be easy to gauge unless and until the Minister of Finance makes a clear and categorical statement; always assuming that he considers it advisable to do so.

TRANSFER PROBLEM

There has been no further information vouchsafed concerning outstanding exchange for funds awaiting remittance prior to November 28, 1933. There has been no statement as to the amount of five-year bonds in foreign currencies actually taken up, and the local impression is that the proposal fell flat, even with respect to Italian funds. The official belief seems to be that, little by little, everyone wishing to remit will have to go to the open market when in a hurry. Certain it is that permits are now being granted with a sparing hand. It is also possible that the official world holds the opinion that foreign funds, held here in pesos and earning next to no interest, will be available for local investment, widening the market for Government requirements, which tend to increase. As yet the proposed expenditure of important sums on public works, foreshadowed in the Presidential address to Congress in May, has not taken shape; but both in the Municipality of Buenos Aires and in certain provinces important financial operations are foreshadowed. The former is issuing 6 per cent. bonds to an amount of \$40 millions, and, pending their placing, an arrangement has been made whereby some \$20 millions cash may be obtained from local banks, against \$25 millions in bonds as collateral guarantee; the bonds being held and marketed gradually by the Banco de la Nación to meet the loan. Viewed as one of the world's greatest capitals, the city of Buenos Aires is far from having over-borrowed, while receipts from rates and taxes rise year by year.

Provincial operations are quite another matter, inasmuch as the national Government is in no way responsible for the debts of the provinces. Local investors, roughly speaking, rate provincial bonds at 1 to 2 per cent. worse than national bonds, judging by current quotations; and, where certain provinces, such as Santa Fé, are concerned, the fact that modification of prior contracts and temporary suspension of services has taken place naturally lowers quotations. It is, however, unlikely that provincial issues will be offered in the foreign market for some time to come, and local lenders are usually well able to form their own judgment as to the advisability of increasing or diminishing their commitments in this line.

Buenos Aires, July 28.

URUGUAY

THE URUGUAYAN EXCHANGE SITUATION

In Uruguay, although the general situation is undoubtedly improving, the exchange problem is becoming daily more and more complicated. There is a considerable amount of deferred exchange awaiting settlement, and throughout the first fortnight of July the Finance Minister, the Minister for Foreign Affairs and the directors of the Bank of the Republic have held almost daily meetings, having as their object an equitable distribution of such foreign exchange as is at present available. Governmental requirements take first place, and during the month of June all necessary funds were remitted abroad for the purpose of meeting debt services due on July 1st, while further sums, amounting to approximately £120,000, have since been transferred in anticipation of payments falling due in August and November. Amortisable bonds in circulation at the end of May represented the following amounts:—

Currency	At 5 %	At 6 %
French francs	25,591,600	31,664,700
U.S. dollars	2,184,120	4,435,785
Sterling	515,700	1,085,329

Down to May 31st some 5,000 applications for bonds had been liquidated, for a sum equivalent to 35,750,000 Uruguayan pesos. To cover the quarterly interest and the

second amortisation of 15 per cent. which fell due on these bonds on June 30th, remittances have been made to London, Paris and New York for the following amounts: £293,175, 12,465,000 French francs and 1,198,000 United States dollars. Figures were also published showing that between January and May, 1934, exchange equivalent to French Frs. 230,453,000 had been distributed. Of this amount, Frs. 172,868,000 had been handled at the official rate, Frs. 57,585,000 being "compensated" exchange. This compensated exchange, when it is a matter of selling export paper, may be disposed of at 40 per cent. above the official rates, but it is also provided that the resultant exchange must be used to purchase goods from the country whither the Uruguayan produce exported is shipped. In the majority of cases this means the United Kingdom. The provisions which established a compensated market came to an end on June 30th, but they have been extended to September 30th, when the matter will be discussed anew.

Sluggish movement in the export market, and above all the fall in the price of wool, coupled with Germany's prohibition regarding imports of that staple, have undoubtedly caused some anxiety in the Uruguayan market; in June to all intents and purposes the meat packing houses have been the only suppliers of export paper. This means that the Banco de la Republica has been forced to meet market requirements by drawing against its foreign reserves, nor is there much likelihood of any real improvement in Uruguayan exchange until the middle of October next, when the wool season may be said to begin. Even then much will depend on the price of wool in the international market; therefore it would be folly for persons abroad, having interests in Uruguay which in the ordinary course of events call for the regular remittance of funds, to assume that an increase in receipts from this quarter may soon be expected. Quite the contrary is the case. For, judging by the speech of the Minister of Finance to the Senate last month, economy on external debt services has unfortunately been more than offset by the increased charges called for by the internal debt, plus the diminution in actual revenues, which, for 1933, amounted in round figures to 4,000,000 Uruguayan pesos. As regards the first half of 1934, there is already a deficit of some 2,000,000 Uruguayan pesos; that is, taking both the completed and estimated figures from January to June. There is a heavy floating debt, round about 30 million Uruguayan pesos, and though the figures of imports and exports for 1933 show a balance favourable to Uruguay, the inclusion of invisible imports results in a debit balance of payments well over 10 million Uruguayan pesos.

Such figures may seem to contradict the former opinion regarding an improvement in the general position of affairs in Uruguay. It must, however, be remembered that the position, as represented by these figures, is akin to that of the firm which has substantially written down its bad and doubtful debts. Private commerce in Uruguay is on all hands admitted to be more brisk, with a slightly better turnover and a decidedly more optimistic feeling in the air than that prevailing twelve months ago. Provided that a strict policy of economy is adhered to by the Government, and that present taxation is faithfully collected, any improvement in international prices for Uruguayan exports will be at once reflected in a stronger cash position, also in an upward movement in exchange. It ought to be clearly understood by all who hold credits in Uruguayan pesos that stabilisation, if and when it does come, is unlikely to be at any point above 60 per cent. of the present nominal value of the peso.

Montevideo, July 21.

SOUTH AFRICA

THE UNION AND PORTUGUESE EAST AFRICA

On July 11th the negotiations for a revision of the Treaty between the Union of South Africa and the territory of Portuguese East Africa (the "Mozambique Convention") opened at Lourenço Marques. The new Convention, when agreed, will replace that of 1928 which has been denounced by the Union Government. In one form or another a

convention between the two Territories, governing importation of native labour, Customs duties at the borders, and railway traffic to Lourenço Marques and the use of the harbour there, has been in force for more than 30 years. Some such working arrangement is so natural as to be inevitable. In normal times native labour from the Union and the neighbouring British Protectorates is insufficient for the requirements of the mines as well as for farming and South African industries, whereas there is a surplus of labour in Portuguese territory and the local Exchequer is in need of the emigrants' pass fees; Lourenço Marques is the natural port of the Transvaal, whatever Durban may say to the contrary—and Natal's only arguments on the point are based on patriotism; as regards Customs duties, the boundary between Union and Portuguese territory is purely political and national and in no sense natural—the Union has industrial advantages and Mozambique has low production costs in agriculture. It is to be feared, however, that many of the ideas prevalent on the matter are based on local and individual prejudice rather than on reason or knowledge.

At the present time the number of Portuguese natives in the Transvaal is considerably below the figure permitted by the expiring convention, since for the time being there is an exceptionally large supply of natives available from local sources. This position is already changing owing to improvements in general business all over the Union. The Portuguese natives have some traditional claim on employment in the gold mining industry, as their employment therein long ante-dated the employment of Union natives in large numbers. At present the 244,000 natives in Transvaal gold mines include only some 50,000 Portuguese natives. The clauses in the convention which deal with railway goods traffic may be said to represent an attempt at a compromise between the large proportion of the "competitive area" traffic which would naturally go through Lourenço Marques, and the insignificant fraction which the Union Government, the Railway and Harbour Administration, and the Union coastal population are prepared to recognise as inevitable.

The ultimate outcome of the "fusion" negotiations has been the formation of a large centre party headed by General Hertzog and General Smuts, and much smaller parties on opposite wings led on the one hand by Dr. Malan, who objects to the maintenance of connection with the British Commonwealth, and on the other hand by Colonel Stallard, who rejects the right conceded to individual members of the centre party to work for a Republic if they so desire. The impartial looker-on can only wonder that men, otherwise intelligent, should think it worth while to quarrel with old friends over a question so patently theoretical, in the case of the Union of South Africa, as "full sovereign independence" in the sense which the Nationalists profess to desire.

WILD-CAT KAFFIR COMPANIES

The Stock Exchange "boom" in Kaffirs continues. At the recent dinner of the Chemical Metallurgical and Mining Society of South Africa Mr. John Martin, President of the Chamber of Mines, and two prominent Cabinet Ministers delivered warnings on the undue optimism of speculators at the present time. There is no doubt that the ample supply of idle money and the shortage of outlet for investors, has led to the flotation of a number of ill-conceived companies, and that some whose shares stand (at the moment) at substantial premiums will never be the subjects of any serious attempts at production. The Stock Exchange wits are exchanging a story of a chairman of one of the wild-cat companies who warned his technical colleagues against undue enthusiasm by saying "Many a good mine has been entirely ruined by shaft sinking!"

Examination of the June dividend declarations of the producing members of the Chamber of Mines shows that established companies with ample ore reserves yield only about six per cent. at to-day's prices—although that figure can be regarded as fairly secure under present conditions. It does not seem to be widely appreciated that the increase in prices in the case of such companies is the result of two factors—the fall in interest rates and the increase in profit-making capacity of gold mining companies at the present time. Dividends declared by companies whose figures appear in the Chamber of Mines' Monthly Analysis of

Gold Production have reached the following totals in the last three half-years:—

January-June, 1933.....	6,454,000
July-December, 1933.....	7,146,000
January-June, 1934.....	7,310,000

The total for the year 1932 was almost exactly £9,000,000.

The trade returns for May reveal a continued improvement in imports, although the active balance is still largely in excess of the amount necessary to provide for the foreign commitments of the Union. For the five months to the end of May imports were £24,700,000, and exports £29,500,000, with gold at standard value and £39,700,000 at estimated realised value. Needless to say, there is still an excessive supply of money, but the South African Reserve Bank has altered its buying rate for sterling to par from 2s. 6d. discount, the "spread" thus becoming 17s. 6d. per cent. in place of £1 as formerly. This is a move in a desirable direction, although the 17s. 6d. "spread" still seems rather wide.

The tendency towards a very slight rise in prices shows no sign of acceleration, and at times and in certain areas seems to be arrested. The Union experience has therefore falsified the prediction of the gold standard protagonists. The improvement in business activity continues.

Johannesburg, July 18.

NEW ZEALAND

BUSINESS IMPROVEMENT

The effects of higher prices for wool and meat are now being felt throughout the Dominion, and a definite improvement in business can be recorded. For the last six-month period, total debits of all bank accounts are 20 per cent. higher than a year ago and 19 per cent. below the corresponding period of 1928-29. The rise has become steeper more recently. Increases are also recorded in building permits, land transfers, mortgages registered, and railway and coastal shipping tonnage. Money is abundant and cheap; the share price index has risen by 35 per cent. in the last two years; while gilt-edged securities have improved from 94 two years ago to 108 in May last, despite conversions last year from 4½ to 4 per cent. Imports have been increasing slowly but steadily for the past nine months, and there has recently been a marked expansion in imports of motor vehicles, about three-fourths of which now come from Britain.

For the year ended March last, total exports amounted to £N.Z. 46.4 millions, as compared with £N.Z. 34.5 millions in 1931-32, and £N.Z. 38.8 millions in 1932-33. Expressed in sterling the year's exports were £37.2 millions, and imports £21.3 millions. The active balance is thus nearly £16 millions sterling, from which must be taken at least £8 millions sterling to pay interest overseas on State, local and private debt, etc. But it is officially stated that the accumulation of surplus exchange funds in London since the exchange rate was raised on January 20, 1933, which are taken over by the Government under the Banks Indemnity Act, exceed £20 millions sterling. It appears that, owing largely to the uncertainty about the future of the exchange rate, every effort has been made to transfer as much money as possible to New Zealand, and to transfer as little as possible from New Zealand. Under the exchange standard operating, the result is a heavy excess accumulation of funds in London, and a similar large excess of bank deposits over advances in New Zealand. In April, bank deposits reached the highest level ever recorded, over £N.Z. 64 millions, while advances, which in the recent past have often exceeded deposits, were below £N.Z. 40 millions. This abundance of money is depressing interest rates. The Government has issued Treasury bills on the open market at 2½ per cent., compared with over 5½ per cent. paid to the banks about a year ago; a local body has recently floated a small loan at below 4 per cent.; and private mortgages have been recorded as low as 4 per cent., compared with the usual rates of 5½ to 6½ per cent. in 1925-30.

THE EXCHANGE RATE

Some efforts have been made to remove the widespread uncertainty about the exchange rate, and the Government

has made repeated statements that the present rate is likely to remain for some time to come. But the public generally thought that the accumulation of exchange funds in London, financed by Treasury Bills in New Zealand, would force a reduction of the rate. Now it has been explained that the surplus funds will be sold to the Reserve Bank when it opens on August 1st. The Government will receive funds in New Zealand in exchange, and will use these to pay off the Treasury bills by which money was raised in New Zealand to buy surplus exchange in London. This will relieve the Budget of the burden of interest on Treasury bills, now exceeding £N.Z. 20 millions, and give the Reserve Bank substantial assets to start business with. It will also make a large addition to the commercial bank's unemployed resources in the Dominion; and it is expected that interest rates will fall further in consequence.

Parliament meets towards the end of June and will have to deal with the reports of several investigating bodies. A Tariff Commission sat last year and its report is to be presented and, presumably, acted upon. A Commission is now inquiring into the administration of native affairs, with which the Government auditor was dissatisfied; another into the methods by which companies finance development schemes; and a third into the dairy situation. Dairy production has increased greatly since 1928 and now constitutes 20 per cent. of total production and 40 per cent. of total exports. Prices have been very low for the past two seasons and it is feared that quantitative restrictions will be imposed in the British market when the Ottawa agreement runs out in 1935. A conference of the industry, called by the Government, rejected restriction, whereupon the Government took charge of negotiations with Britain and set up a Royal Commission to inquire into the whole question of production and marketing.

THE BUDGET POSITION

The audited figures for revenue and expenditure during the financial year ending March 31st last have now been published and disclose a welcome improvement. Revenue exceeded estimates by £N.Z. 1.2 millions, while expenditure fell short of the estimate by £N.Z. 0.2 million. As a result, the deficit (after bringing £N.Z. 2 millions of reserves into revenue) has been reduced from the estimated £N.Z. 2.1 millions to £N.Z. 0.7 million actual. Since the estimates were presented in October last the improvement is substantial. Should it continue, as it promises to do, a balanced Budget may be expected for 1934-35; and it may be possible to give some relief to taxpayers and others before the general election, which is anticipated towards the end of 1935.

CHRISTCHURCH, June 14.

LETTER TO THE EDITOR

THE IRISH BALANCE OF PAYMENTS

TO THE EDITOR OF THE ECONOMIST

SIR,—Under the above heading, your Irish Correspondent in your issue of July 21st says that "the external trade situation is beginning to cause anxiety among thoughtful observers"; and, suggesting that the total balance of payments has already become unfavourable, concludes that "even if trouble is averted to-day, it will not be averted for long, unless, of course, a settlement is reached with Great Britain and the export trade revived." On the other hand, and with great fairness, he admits that the Minister for Industry and Commerce is optimistic, and, even more significant, that "the best-informed bankers in Dublin are of opinion that no drain is taking place, and refuse to regard the situation with any anxiety." Will you permit me to range myself on the side of the latter and to indicate some of the major grounds for my opinion?

I agree, of course, that economic peace is much better for all concerned than economic war and that Ireland has suffered grievous, though rapidly lessening, losses. But she has shown by unmistakable evidence that she is prepared to "stick it," and to take full advantage of the almost ideally stimulating conditions for proceeding with an intensive industrial development which she has long desired. Her buoyancy, in obviously most embarrassing conditions, has

caused great bewilderment, not merely to political Jeremiahs but to many experienced and dispassionate observers—so much so, indeed, that they begin, like your Dublin correspondent, to doubt the evidence of their senses.

I, too, like him, was for a long time depressed by the Irish balance of payments, until I was driven, some years ago, to conclude on grounds which I cannot enter into here that it did not, and does not, tell the whole story. It is difficult enough to attain anything approaching precision about the British balance of payments: in the Irish case it is much more difficult. But I venture to suggest to him that he has given insufficient attention to the movements of capital—movements which explain much. Thus, he draws gloomy inferences from a decrease of £10 millions in the "net sterling reserves of the banks" between the first quarters of 1933 and 1934. Is not this the same thing as the corresponding decrease in "deposits" which, as the best of the Irish bankers volunteered to me at balance-sheet time in February last, was due to the withdrawal of American money which came here when the dollar was at a premium over sterling and which left here when, on the devaluation of the dollar, it could return home at a further profit?

Again, there has been an unquestionable repatriation of an unknown quantity of Irish-owned capital for investment in Irish industrial development—and a parallel influx into the Irish Free State of an unknown quantity of British and foreign capital for the same purpose. The latter has been so real that it has been thought necessary to introduce legislation preventing the non-Irish ownership of more than 49 per cent. of the capital in new industrial enterprises. Much of this capital comes to Ireland as capital goods in the guise of imports of constructional materials, machinery and other equipment, electrical appliances, etc. A further element to be borne in mind is that it may well be that this repatriation of Irish capital has left undiminished the total of Irish-owned capital in Britain, inasmuch as the amount repatriated quite possibly does not exceed the amount by which British recovery has enhanced the realisable values of the gilt-edged and good-class British investments held by Irish owners.

How much capital these unknown quantities represent I am not prepared to estimate, but they must be very substantial having regard to the progress made with electrical development, flour milling and sugar production and the creation of factories, large and small, for the manufacture of boots and clothing, confectionery, hosiery, cement and slates, and with tanneries, food canning enterprises, etc. They are probably sufficient, and more than sufficient, to account for the increased margin of imports over exports.

If your Dublin Correspondent will take these capital elements into account, I suggest that he will find little cause to disagree with "the best-informed bankers in Dublin" who are aware that last Christmas was the best season which the metropolitan and provincial shopkeepers have had for several years and that the railway earnings for the January-June period, 1934, show a marked improvement. Their practical experience of what is happening does not appear to conflict with the inferences to be drawn from a comprehensive survey of all the ascertainable financial and economic factors. No "drain," in fact, can be shown to be taking place, and no depletion of capital resources.

And does not the steadiness of the local government electorate (with a property qualification) at the elections last month point to the same conclusion?

I am, Sir, Yours faithfully,

HENRY HARRISON.

Dublin, August 3, 1934.

[Our Dublin correspondent writes in reply to the above letter:—

"I do not find anything in Mr Harrison's letter with which to disagree. The whole point of my remarks on the Irish balance of payments was that the published statistics apparently do not explain the facts as otherwise observed. My reason for neglecting capital movements was the impossibility of obtaining even approximately accurate estimates of their amount, but I agree that the Free State has gained a good deal on capital account in the last two years, owing to the rise in Stock Exchange values, and that the gap shown by the published figures may still continue to be bridged by favourable capital movements. I must repeat, however, that the trend shown in the balance of payments is such as to cause anxiety regarding the future, and that there are underlying weaknesses in the position of the Free State that render the continuance of its present strong creditor status somewhat precarious. Any substantial reduction of the country's invisible income from abroad would produce the most serious consequences to the balance of payments and the revenue, and would considerably deflate that buoyancy to which Mr Harrison quite correctly draws attention. Such a disaster might, it is suggested, be precipitated by any political or financial measure that would weaken the confidence of Irish capitalists."—ED., *Econ.*]

MONEY AND BANKING

SOUTH AMERICAN EXCHANGES

THE severe exchange restrictions introduced into the South American markets during the past few critical years were primarily due to the endeavours to maintain economic equilibrium as far as possible in face of dwindling world markets and low prices for primary products. In like manner, the tendency recently observable to relax these restrictions in varying measure can also be traced to the fact that, even allowing for depreciated currency values, the export trade of the principal Republics—as also the vital export surplus—shows a degree of betterment this year. Nevertheless, recent developments have not entirely followed normal lines, mainly by reason of the spread of economic nationalism and the policy of unilateral trade agreements, as well as internal factors of a politico-fiscal nature, such as protection for national industries which had been fostered by the crisis.

While the above considerations apply generally, there have been individual orientations of policy dependent upon local circumstances. The case of the Argentine is particularly interesting from the British point of view, having regard to the important and reciprocal nature of the trade between the two countries, the recognition of which forms the basic principle of the Roca Agreement—one of the first, and certainly the most important, of the exchange agreements. By a combination of skilful management of fiscal affairs and fortuitous circumstances—principally the drought in other grain-producing countries—an exchange system adopted to combat adverse circumstances has brought an unforeseen accretion of funds to the Argentine Government. The adverse trade balance of September-November, 1933, combined with low world grain prices on the eve of the grain exporting season, induced the Argentine Government to adopt at the end of last November a comprehensive system, based on their past experience of exchange control. This was designed to assist the grain exporter by depreciating the peso, and, at the same time to control the inflow of imports. Approximately 99 per cent. of export exchange must be sold to the Exchange Commission, and such exchange—after providing for Government requirements—is re-sold by tender to importers and others. The original intention was to transfer such funds as accumulated from the margin between buying and selling rates to the Grain Regulating Board as compensation for any losses suffered through buying grain from the farmers at certain fixed minimum prices. The recent heavy advance in grain prices, however, suggests that the fund may not be required for its professed purpose.

While the Minister of Finance has refused to disclose the size of the fund, an approximate idea may be gained from the trade returns. For the six months December, 1933, to May, 1934, exports totalled 727 million paper pesos, the export exchange for which would be delivered to the Exchange Control. After deducting about 75 million pesos for six months' service on the foreign debt, there would remain 652 millions for disposal at an average tender rate of, say, 17 pesos per £. As the exchange had been bought by the control at a rate of 15 pesos, there would result a profit of some 87 million pesos. This would be even higher if, as seems almost certain, some of the exchange were sold at the "free" rate of, say, 20 pesos per £. Indeed, any normal factors governing Argentine exchange are mainly superseded by the policy of the Government, which has admitted operations in the "free" market. The position may be viewed with mixed feelings by importers and others, especially by those who are forced to resort to the "free" market to remit or who have large accumulated funds unremitted. Still there should at least be satisfaction on the part of holders of Argentine Government Bonds in view of the further apparent reserve, beyond the expanding export surplus (212 million paper pesos for January-June, 1934) and the large gold holding (246 mil-

lion gold pesos) of the Conversion Office. The ultimate goal of the Government is a free exchange market, but although the margin between the free and official rates has recently narrowed, the Government will probably proceed very cautiously in the direction of a free exchange market.

Following the example of the Argentine, Brazil officially recognised at end-May last the "free" or quondam "black" exchange market, and by a further Decree of June 20th certain minor export products may be freely exported and the proceeds negotiated in the "free" exchange market. While, therefore, exchange in the official market—controlled by the Bank of Brazil—is still pegged to sterling at about 60 milreis per £, there are also in existence the "free" and the "grey" exchange markets. The "free" market deals in exchange other than export bills, which remain (with the exception of bills covering certain minor exports, and representing about 1 per cent. of the total) a monopoly of the Bank of Brazil, the rate in that market being about 80 milreis per £ sterling. In the "grey" market, the Bank of Brazil sells to such parties as are indicated by exporters and hold the necessary permits, a proportion varying from 50 to 70 per cent. of export bills, except those covering coffee. Such operations are effected at the official rates, but a premium of 20 to 25 per cent. on the official rate is collected by the exporters from the buyer. The premium in the "grey" market is thus approximately 12 milreis per £ over the official rate. So far as concerns the distribution of available exchange, the procedure is to classify imports in three categories: (1) Raw materials; (2) approved imports; and (3) non-essential imports. These receive, respectively, 50 per cent., 30 per cent., and 20 per cent. of the funds available for remittance, but exchange will not be provided for drafts received after June 15th, until all previous bills for collection have been liquidated.

In the absence of gold reserves, the key to the Brazilian exchange position must continue to be the export surplus. The export surplus up to May 31, 1934, was £4,291,000 (gold), against £3,459,000 last year, and the export surplus for the whole of 1934 is hardly likely to be very much more than that of 1933, namely, some £8,000,000 (gold). Under the Debt Service Decree of November 5, 1933, the Brazilian Federal Government took over the payment of the service on all the foreign loans of the Federal Government, the States and Municipalities—at reduced rates in many cases—and payment in 1934 of the service under this scheme was estimated to cost the Federal Government about £6,700,000, while payment under the Frozen Credits Agreement would absorb another £1,300,000. Whilst the export surplus shows some slight expansion, it is doubtful whether there will be any revision of the debt funding scheme before its expiration, even allowing for the depreciation in sterling and dollars against gold.

There has been a steady, if slow, improvement in the position in Chile, and a certain degree of guarded optimism is justifiable compared with the position a year or so ago. Owing to an expansion in exports, the surplus over imports for the first five months of this year is 141.8 million pesos of 6d. (gold), compared with 68.3 millions in the corresponding period of 1933. This expansion is largely due to the "Compensation" Agreements concluded with many European Continental nations. While these assist in the marketing of Chilean products—principally nitrate—they also operate to set off a percentage of the proceeds—averaging something like 30 per cent.—towards liquidating the blocked foreign debts in Chile. Further, in pursuit of the universal policy of bilateral trade, the import of goods from Chile is compensated by exports to that country, and when it is remembered that even in normal times the greater part of the proceeds of Chile's principal exports do not return thereto, it is doubtful if Chile's real balance of pay-

ments is such as to enable serious proposals to be advanced for the funding of the foreign debt. Nevertheless, the path has at least been cleared for future discussions as a result of the recent adjustment of the nitrate position, as well as of the short-term foreign debt; and, with the real improvement in the basic position, there are hopes of stabilisation of the peso with at least some relaxation in the strict exchange control. Official supervision of the import and export trade, however, is likely to continue.

The signature of the Peace Pact between Colombia and Peru should remove the drain upon exchange for armaments. Peru has avoided exchange control, while in Colombia 85 per cent. of export exchange may now be negotiated in the open market. In Ecuador, 75 per cent. of exchange may also be freely dealt in, whilst both Guatemala and Venezuela have avoided control. In general there are welcome signs of an improvement in the South American exchange position.

FINANCIAL NOTES

The Money Market.—Money was fairly easy on Tuesday and Wednesday, but it is believed that the market secured most of last week's Treasury bills, and payment for these, together with holiday currency withdrawals, made money less plentiful on Thursday. Calling by one of the clearing banks was also in evidence on that day. As a result outside money was a firm $\frac{1}{2}$ per cent., and some clearing bank money was borrowed at one per cent.

	July 19, 1934	July 26, 1934	Aug. 2, 1934	Aug. 9, 1934
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate :—				
Clearing banks	1	1	1	1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills :—				
(a) Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

The discount market has been inactive. The clearing banks continue to quote $\frac{1}{2}$ per cent. for August and September Treasuries and $\frac{1}{2}$ per cent. for October and November. No clearing bank buying of bills was reported, but there was some outside dealing in hot Treasury bills at around $\frac{3}{4}$ per cent. Last week's tender rate was 14s. 4.76d. per cent., against 13s. 9.92d. per cent. the week before. Only £37.0 millions of bills were allotted, so that the supply of bills issued by tender was reduced from £457.3 to £454.3 millions. It is now just below the level of March 31st, which seasonally is the lowest point of the year.

The Bank Return.—Holiday currency withdrawals have raised the note circulation to £392.8 millions. This figure is a high record since the amalgamation of the note issues. The Reserve has fallen to £59.4 millions.

	BANK OF ENGLAND				
	Aug. 9, 1933	Dec. 27, 1933	July 25, 1934	Aug. 1, 1934	Aug. 8, 1934

Bankers' deposits	92.8	101.2	104.8	96.5	82.0
Government securities ...	88.3	88.0	83.5	£1.2	83.3
Discounts and advances	11.0	16.8	7.5	8.9	7.0

Proportion 41.0% 37.3% 44.9% 43.2% 41.9%
The only other change of importance since a week ago is the temporary transfer of £12 millions from bankers' deposits to public deposits. This is probably fortuitous, being due partly to summer income tax payments but mainly to the incidence of Treasury bill payments and maturities.

The Foreign Exchanges.—Owing to the weakness of the dollar, which is discussed in the following Note, the London foreign exchange market has been rather more

active this week. There were heavy sales of both spot and forward dollars, and the spot rate weakened to \$5.07 and the three months' rate to $\frac{1}{2}$ cent discount. A more interesting movement was that foreign sellers of forward dollars were simultaneously buying their own currencies forward against sterling, with the result that both forward Holland and Switzerland rose to a fractional premium for the first time for many months. Both the British and French authorities were sellers of spot francs at Frs. 76 $\frac{1}{2}$, and the Banque de France continues to support the lire. The discount on three months' lire has now narrowed to 1-1 $\frac{1}{2}$ lire, but this is still equivalent to over 8 per cent. per annum. Most South American currencies have been firmer on United States drought reports and the consequent increase in the demand for South American produce. The Monte Video rate has weakened slightly, owing to the relaxation of exchange restrictions.

New York Money and Banking.—Money rates remain unchanged, with the official call rate at 1 per cent. and 90-day bankers' acceptances at $\frac{1}{2}$ per cent. The week ended August 1st witnessed another decline in brokers' loans from \$1,008 to \$885 millions. Heavy foreign sales of both spot and forward dollars were made during the early part of the week, and on Tuesday French francs appreciated to 6.63 $\frac{1}{2}$ cents, against 6.59 cents the previous Wednesday. There were several reasons behind this sudden foreign attack on the dollar. The first month of the new financial year recorded a Federal deficit of \$248 millions, against \$107 millions a year ago. Again, the silver interests, led by Senator Thomas, have complained that the Treasury is treating the Silver Purchase Act as a dead-letter. The Treasury reply is that silver certificates and bills are being put into circulation as fast as they can be printed. Meanwhile the Treasury is an active buyer of silver, and during the past week the free New York price has stiffened from 46 $\frac{3}{4}$ to 48 cents an ounce and on Thursday afternoon it was announced that the Treasury would buy compulsorily at 50.01 cents an ounce all silver held in the United States. Finally the sharp rise in the prices of many primary products as a result of the drought has inspired apprehensions of a further devaluation of the dollar under the powers which the Administration possesses to devalue down to a limit of 50 per cent. of its former gold parity.

The Bank of New Zealand.—The accounts of this bank for March 31, 1934, resemble those of the other New Zealand trading banks in that the main movement during the preceding year was the increase in the bank's holdings of New Zealand Government securities. This was partly due to the acquisition by the Government of the bank's London balances in exchange for Treasury bills, and it will be noted that the Bank of New Zealand's London assets have been reduced since 1933 by £2,100,000. The bank's accounts are summarised below:—

	1932	1933	1934
Liabilities :—	£'000	£'000	£'000
Capital.....	6,858	6,858	6,858
Reserve fund	3,575	3,575	3,575
Note circulation	4,063	4,339	4,259
Deposits	31,566	32,573	34,328
Bills payable and other liabilities, (including contingencies)	3,643	3,530	3,356
Assets :—			
Cash.....	7,697	8,305	7,599
Call money and securities held in London	4,314	6,266	4,163
Bills receivable	1,515	1,632	2,484
New Zealand Govt. securities	4,683	3,454	8,715
Australian Govt. securities	3,647	3,975	4,945
Other securities	682	520	459
Bills discounted	792	594	594
Advances, etc.	24,861	24,485	21,962
Gross profits	1,771	1,746	1,570
Expenses.....	1,162	1,131	976
Net profits	609	615	594
Ordinary dividend	14 $\frac{1}{2}$ %	11 $\frac{1}{2}$ %	10%

Gross profits are reduced by £176,000, but against this must be set a contraction of £155,000 in expenses. General expenses are a little higher, but rates and taxes are lower by £163,000. The ordinary dividend is reduced from 11 $\frac{1}{2}$ to 10 per cent.

THE STOCK EXCHANGE

IRON AND STEEL FINANCE

THE rise in the Actuaries' Index of iron and steel shares, over the last twelve months, from 43.2 to 51.3 (December 31, 1928 = 100), epitomises the industry's investment history in its "recovery" phase. Recent monthly output figures have been the best of all publicity agents, but average share values are only half what they were five and a half years ago, because, in far too many cases, the tide of recovery has still a long way to flow before reaching the equity shareholder. No other British industry to-day offers such wide contrasts in the quality of its investment wares, from the water-logged debenture to the sound ordinary share. It may be relevant, therefore, to supplement our last week's analysis of the structure of ten leading groups of companies (see the *Economist*, August 4th, page 227) by an examination of recent financial results.

The rapidity of the industry's revival in productivity since 1929 may be gathered from the following table, which traces the course of a number of significant indices:—

	Pig-Iron Production	Steel Ingot Production	Econ- omist's Steel Con- sumption Index	Price of Cleve- land G.M.B. No. 3 (per ton)	Foreign Trade in Iron and Steel and Manufactures	Steel Unem- ploy- ment
	Tons = 100	Tons = 100	1929 = 100	£ s. d.	Exports (Tons)	Imports (Tons)
Monthly average :—						%
1929	632	803	100	3 10 6	365	235
1930	516	610	76	3 6 11	263	243
1931	314	434	54	2 18 7	165	237
1932	298	438	55	2 18 6	157	132
1933	344	584	73	3 2 6	160	81
Jan.-May, 1934	477	750	83	3 6 6	167	122
June, 1934	516	758	84	3 7 6	204	98

Recovery (which began to gather momentum about half-way through 1933) produced only a moderate upward movement in indices based on last year's average results. Investors should, therefore, bear in mind that any conclusions suggested by iron and steel company reports made out to December 31st last are subject to the proviso that they reflect only the first phase of recovery, whose effects may have been partly neutralised by earlier months of depression. Reports drawn up on March 31st last, however, should include at least nine months of increased activity. Reports to the end of last June, which will be published in the next few weeks, should cover twelve "recovery" months, but may not necessarily afford an adequate measure of current earning power. With this caveat, we may consider the tabular summary, at the head of the next column, of profits of twenty-seven iron and steel companies for the last five years, arranged on the "group" lines suggested in our last article.

Hair-splitting comparisons cannot be made between the results of individual companies. Although the figures are shown in every case before debenture interest, if any, they are not always given after provision for depreciation, for some companies, in the depths of depression, have made none. It is clear, nevertheless, that there has been a broadly similar trend in the earning power of the majority of companies, which has corresponded fairly closely with the movements of the leading production indices. For example, if the aggregate profits of the companies are compared with the steel ingot production index, for every year since 1929, the following results emerge:—

	1929	1930	1931	1932	1933
Steel Ingot Production Index	100	76	54	55	73
Profits Index—					
27 Companies.....	100	91	59	53	83
25 Companies.....	100	94	70	60	94

* Omitting Harland and Wolff, and Cammell Laird, with heavy shipbuilding interests.

The "recovery appeal" of iron and steel shares is based entirely on the last column of this table. The revival in earnings, so far, has been more than proportionate to increased production, partly because the latter has been largely localised in the profitable home market, and partly

(f) After £50,000 depreciation. (g) Years to September 30th. (h) To March 31st of following year. For six months to March 31, 1932, profits were £105,300. (i) Earned for dividends in each year.

owing to the efforts of individual companies and groups to improve their internal finances and technique during the period of depression. The purchase of any iron and steel shares at present Stock Exchange values is a gesture of confidence in the ability of the industry, with a quasi-permanent tariff, to maintain, and even improve upon, its current level of production and prices.

The financial position of the separate companies, however, varies so widely that no judgment on the merits of any share can be formed without an initial segregation of those companies, whose securities have a wide public holding, into separate categories, according to the extent to which their capital requirements are covered by their latest available earnings. Such a grouping is indicated in the table on the following page.

It will be seen that many of the companies whose ordinary shares are of immediate interest to the investor are numbered among the smaller or more specialised concerns. Examples are Whitehead, who are re-rolling specialists; Staveley, who have recently developed the pipe-manufacturing side of their business; and Allied Ironfounders, who have benefited from the boom in the building trades. Among the "heavier" companies, the greatest measure of recovery appears to have been secured by those who have gone out to meet it half-way—United Steel Companies, for example, by effective internal reorganisation, and Stewarts and Lloyds by a carefully-worked-out "production strategy," based on the new Corby works. Vickers, with its heavy interests in engineering, etc., has been slower to feel the effects of revival.

Among the larger companies whose equity shares were still outside the earnings zone at the date of their last report, Guest, Keen and Nettlefolds have shown an appreciable recovery in earning power. The position of this company's junior securities, however, could be more readily assessed

(a) No debentures or preference shares. (b) Prospectus estimates profits for year to June 30, 1934, at not less than £850,000, sufficient for ordinary dividend of 5% per cent. (c) On 5% per cent. dividend basis. (d) £2,550,000 4 per cent. debenture stock issued since date of last report. (e) No debentures. (f) No preference shares. (g) First preference covered. Second preference £31,772 short of annual requirement of £235,732. Two years' dividends in arrears. (h) Year to March 31, 1934. (i) After allowing for preference dividend arrears. (j) Seven years' preference arrears outstanding. (k) No preference dividend paid. Three years' arrears outstanding. (l) Three years' arrears on 6 per cent. first preference paid July 2, 1934. (m) Interest paid to date. (n) Interest unpaid since 1928. Payable only out of profits to June, 1935. (o) Moratorium to September, 1934, on 5% per cent. first mortgage redeemable debenture stock. (p) Scheme of arrangement. (q) Debenture interest to 1935, payable only if without detriment to the business.

if the company's accounts, as regards its subsidiary concerns, were more detailed. It is clear that a not unimportant part of the recent increase of earnings, both in the case of this company and of Baldwins, has resulted from the improved position of the "heavy" South Wales subsidiary, British (Guest Keen Baldwin). In the case of Richard Thomas, whose tentative reorganisation proposals for the satisfaction of preference arrears were discussed in the *Economist* of July 28, 1934, page 173, much depends on the ability of the largest British tinplate manufacturing concern, whose "raw material" is subject to the British tariff and whose world-market is shared among leading producing countries by an international agreement, to secure a relatively high international price level for its products.

The contemporary appeal of the securities of the remaining companies in the table, even under a recovery regime, is limited to a narrower circle of investors. The debentures of companies in the penultimate group, whose interest is being earned, may not be unreasonably priced, in view of the current trend of profits in the industry as a whole. Even the senior stocks of companies in the last group must be regarded as speculative, in varying degree, pending the re-establishment of earning power at a level sufficient to permit the replacement of temporary schemes of arrangement by definite plans for capital reconstruction.

For the whole industry, indeed, the future turns on ability to consolidate the ground recently gained. In this respect, investors may regard the possibility of far-reaching plans for regrouping and concentration of productive effort, on which the Government and its advisers have hitherto laid more stress than certain representatives of the industry itself, as of greater potential significance than any endeavour to maintain high prices, in a protected home market, on the upward curve of a production cycle.

INVESTMENT NOTES

"Kaffir" Share Activity.—The market for South African gold-mining shares, which last month showed mildly reactionary symptoms, has developed noteworthy activity this week. Substantial inquiry in London has been supplemented by buying from Johannesburg and Paris, and prices have quickly responded, with few exceptions. Numerous inter-connected factors have combined to produce unusual interest in what is normally a quiet week. Despite the rise in grain and cotton prices, accumulating evidence suggests that the effects of the drought may be little short of disastrous for the American farmer. The American dollar has been weak, and the London price of gold on Wednesday showed a premium of as much as 10d. over the American shipping parity. Despite Mr. Roosevelt's latest silver move, market publicists may be premature in suggesting that the Administration will be forced, by way of "relief" measures, into new semi-inflationary commitments in the autumn, involving a further reduction of the dollar's gold content and/or the replacement of the Federal Reserve system by a Government-controlled institution. Commentators who discount alarmist and extreme views, however, admit that the outlook for the dollar may be less easy to estimate than a few weeks ago. The possibility that a decline in its exchange value may involve a certain sympathetic movement in sterling is at least a sufficiently plausible "risk" to appeal to some "Kaffir" operators. Meanwhile, the market's technical position makes for firmness. Nervous selling by outside holders having ceased, dealers' books are being depleted of the stock which was willingly acquired during the last reaction, and institutions controlling substantial quantities of stock, whose policy so often determines the immediate course of the market, are indisposed to increase its floating supplies. The absence of opportunities for profitable placing in other markets has lent attraction to "Kaffirs" as a haven for funds for which the Gilt-edged market offers too little speculative scope. As interests with important new gold-mining issues in prospect, in the near future, may be presumed to desire as favourable an environment as possible, the continuance of firm conditions is not improbable.

New Issues in July.—The capital market last month showed modest signs of expansion, suggestive of a re-awakening of new investment activity which is invariably associated with the upward swing of the recovery phase. We set out the usual analysis below:—

(000's omitted)				
Monthly Average	United Kingdom	British Possessions	Foreign Countries	Total
1930	14,220	5,121	2,975	22,316
1931	4,542	3,209	761	8,512
1932	13,589	2,129	24	15,742
1933	17,520	2,429	449	20,398

Monthly Total	Govt.		Other	Total
	May, 1933	June, 1933		
May, 1933	19,001	8,037	5,547	32,585
May, 1934	Dr. 450	10,518	9,546	19,688
June, 1933	3,150	11,355	783	15,288
June, 1934	Dr. 150	3,857	3,683	90
July, 1933	Dr. 200	3,369	212	3,881
July, 1934	Dr. 300	13,624	3,753	17,077

The total under non-government United Kingdom issues largely reflects an increase in new capital requirements for British heavy industry. The William Cory "sale" provided the P. & O. with funds for its shipbuilding programme. Other prominent borrowers include Welsh Associated Collieries and Stanton Ironworks. Elsewhere, at home, new offers have been made for conversion of existing business, of which the most spectacular was the preference issue of Griffiths Hughes Proprietaries. The total under "British Possessions" consists almost entirely of new gold mine financing, opportunely undertaken with gold at 137s. per ounce. The month's figures suggest the long-awaited inception of a revival in new long-term industrial investment. As current events in America are showing, a satisfactory volume of voluntary investment can do more to stimulate the industrial monetary circulation than the most

free-handed policy of Government subventions. If these present indications are maintained when the capital market resumes normal activity after the holiday weeks, they should strengthen hopes of a resumption of economic progress during future months.

Coal Company Earnings.—Although recent reports from the iron and steel companies reveal considerable recovery in earning power, coal companies as a whole have been unable to achieve such satisfactory improvement. Output during 1933 continued the declining trend from 1929, being 207.0 million tons, compared with 209.2 million tons for 1932. Exports and bunker coal were again slightly lower during 1933, and although some improvement in industrial demand for small coking coal was evident during later months, it was insufficient to compensate for reduced domestic consumption caused by abnormally mild weather. Individual collieries experienced considerable handicaps arising from the quota provisions of the 1930 Act, which led to serious price-cutting between districts owing to the sluggishness of the export market. Complaints were expressed by some chairmen at recent meetings that trade connections had been maintained only by purchase of quotas from other pits. The favourable features in an extremely difficult year are limited to a further increase in output per man-shift from 22 to 22.5 cwt., indicative of further mechanisation, and a slight increase in working profit per ton, largely contributed by the fourth quarter of the year. We show in the following table the aggregate and distributable profits of 18 mining and 3 factoring concerns whose reports have appeared recently:—

Company and Date of Accounts	Total Profits (in £ thous.)			Available for Dividends (in £ thous.)

† Six months' figures.

* Fifteen months.

The increase in total profits of 18 mining companies is of the order of 12.6 per cent., while the available profits of the companies have increased by 37 per cent. This apparently gratifying increase reflects the low level from which profits must rise before any considerably improved return can be expected on colliery shares. As the total preference and ordinary share capital of the 18 companies is approximately £50.1 millions, the overall return is only 2.4 per cent. Moreover, many companies have arrears of depreciation to overtake, and considerable cutting out of dead wood among the assets will be necessary before the fruits of renewed dividends are justifiable. The unenviable experience of the Ebbw Vale Company, whose iron and steel plants have been closed since 1931, has shown a slight improvement during the year to March last, but, for Welsh collieries as a whole, revival in the European market can only follow a considerable reduction of the restrictions on the entry of coal. Moreover, as Canadian demand for anthracite is showing some decline, the immediate outlook for Amalgamated Anthracite is less encouraging than a few months ago. In other districts the

outlook is somewhat brighter. Exports to Scandinavia from the North-Eastern coalfields show considerable improvement for the first six months of this year, resulting from trade agreements, while total output and average prices for the first half of the year were somewhat higher than for the corresponding period of 1933. The voluntary marketing scheme submitted by the owners, which provides for co-ordinated district prices and separation of export trade from domestic quotas, has received authoritative approval. This scheme should prevent any further reduction of the already exiguous profit margins in the home market, which suffered last year as a result of inter-district competition, and if industrial demand maintains its present increase coal earnings should benefit appreciably. Technical efficiency is showing further improvement, being 23 cwt. per shift during the first quarter of the year, while numbers employed also increased, especially in the Northern and Midlands fields. Investors who recall the vigorous statement of the Coal Mines Reorganisation Commission that higher efficiency can be obtained only by concentration of production and full-time working in already efficient pits may regard the prospects of the industry as at present organised, even granted the present degree of industrial recovery, as less certain than many would desire.

Insurance Share Index.—During the second quarter of this year the market quotations for insurance shares showed in most cases a continued improvement. This satisfactory tendency is well illustrated by the following table, which portrays the course of an investment in 1913 of £1,000 in the ordinary shares of each of the 24 leading insurance companies.

SHARE INDEX
(1913=1,000 in each case)

	1920	1929	1932	1933	Mar. 29, 1934	June 29, 1934
Alliance	1,018	1,675	1,638	1,979	2,121	2,142
Atlas	2,059	3,532	3,000	3,182	3,397	3,333

Guardian	1,731	2,596	2,538	3,158	3,282	3,102
Legal & General	1,443	6,536	5,678	7,580	8,743	10,273
Life Assn. of Scotland	1,009	1,989	2,080	2,669	2,948	3,043
London & Lancashire	1,801	4,548	3,808	4,409	4,462	4,616
London Assurance	1,832	2,126	1,783	2,280	2,474	2,765
N. British & Mercantile	1,338	4,514	3,990	4,666	4,650	4,936
Northern	2,067	2,011	1,904	2,078	2,090	2,149
Phoenix	1,429	1,945	1,666	1,945	1,894	1,894
Prudential	730	2,163	2,146	2,740	2,974	3,117
Royal Exchange	2,325	3,227	2,896	3,664	3,573	4,128
Royal	1,379	2,882	2,464	2,656	2,688	2,731
Scottish Life	1,129	2,680	2,583	3,174	3,371	3,371
Scot. Union & Nationa	2,764	5,213	3,803	4,335	4,363	4,584
Sun Fire	1,159	2,853	2,364	2,889	2,933	3,156
Sun Life	645	2,237	2,040	2,349	2,519	2,620
Yorkshire	2,293	3,041	2,731	3,212	3,298	3,401
Average	1,766	3,406	2,911	3,535	3,744	3,943

The figures are based on the mean of the highest and lowest prices in each year, except in the case of the quarterly quotations for 1934, which relate to the middle market prices on the respective dates. In all cases where an issue of bonus shares has been offered, due allowance has been made by assuming that the rights have been sold and the proceeds utilised to purchase an additional holding in the original shares. It will be seen that seventeen quotations show a net rise in the June quarter of this year, that of the Legal and General being particularly noteworthy.

Actuaries' Investment Index.—The improved tone in the security markets, from the middle of last week onwards, has been well maintained since the holiday. Almost all groups in the Actuaries' Index show a slight advance, though values have still only partially made up the leeway of the preceding three weeks. The combined index of 144 ordinary shares (December 31, 1928 = 100) stood at 69.9

on August 7th, compared with 69.3 a week earlier and 70.9 a month earlier. The corresponding yield figures were 3.74, 3.76 and 3.72 per cent. Movements in various sub-groups are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	July 10, 1934	July 31, 1934	Aug. 7, 1934	July 10, 1934	July 31, 1934	Aug. 7, 1934
Insurance Co.'s (24).....	108.9	109.6	110.0	3.85	3.82	3.81
Coal (6).....	93.0	88.6	89.5	3.86	4.01	3.97
Cotton (6).....	46.0	44.4	45.1	2.27	2.27	2.26
Iron and Steel (6).....	51.6	50.9	51.3	1.25	1.22	1.22
Oil (5).....	63.9	59.6	61.4	4.60	4.93	4.78
Home Rails (4).....	83.4	69.7	74.5	1.43	1.57	1.51
Miscellaneous (30).....	61.9	60.2	61.0	3.96	4.04	4.00

The recovery, whose causes have been largely "technical," has been well spread. Home rails, incidentally, have continued to deserve their reputation of being the most volatile group in the domestic equity market.

COMPANY NOTES

Boot and Shoe Companies.—Boots and shoes are articles of durable consumption, whose replacement, postponed over a considerable period when purchasing power is low, may produce a strong accumulated demand on any improvement of conditions. Last year showed the first signs of such a demand. Retail sales of footwear improved by 1.6 per cent; the Board of Trade's index of production for the industry rose from 96.4 to 106.2; employment improved; and the long fall in leather prices appeared to have been checked. The manufacturers' accounts, published during the early part of 1934, showed better earnings—with the important

* All free of tax.

exception of the J. Sears-Freeman, Hardy and Willis group, which is the largest unit in the industry. A five-years' earnings survey, for numerous representative concerns, is given in the attached table. The improvement, however, was less decided than might have been expected. In the autumn of 1933 an attempt was made to raise selling prices to cover higher raw material costs. The effort, however, was not successful, and there has subsequently been no strong

buying movement to overtake arrears of replacements. The index of production was higher for the first quarter, and the retail sales returns have been somewhat better, but employment has not improved, and demand for leather has been limited. It is generally assumed that the drought is having the effect, invariably associated with dry weather, of checking the demand for shoe replacements. If so, a wet spell might be calculated to produce an excellent autumn-winter sales season. Meanwhile, with turnover roughly maintained and leather prices down, the older manufacturers should presumably be able to make at least as good profits as last year. One difficulty, however, faces them. Rapid improvement in bootmaking machinery has enabled manufacturers in country centres to produce fully saleable competitive footwear, by the employment of non-union labour at almost an "agricultural" wage. Not unnaturally, the old-established members of the Federation have objected, and for some time past attempts have been made to reach a trade agreement to exclude such differential wage rates. At the moment both masters and men are negotiating on the point. The omens may be, possibly, unfavourable to an early solution to this problem. Investors, on the other hand, are aware that the industry has an excellent record of industrial peace and reasonable compromise. The strike risk, therefore, is small, and with a return to normal conditions of demand the appeal of cheapness in itself may well diminish. It may be suggested, therefore, that the industry still offers "recovery" possibilities, combined with fair security, particularly in the case of those concerns dealing direct with the public through their own chain of retail shops.

Tootal Broadhurst Lee.—The accounts of this old-established spinning and cotton manufacturing company suggest that its branded products continue high in public esteem. Trading profit for the year to June 30th last is £11,103 lower at £116,647, but the amount earned for the ordinary and employees' shares shows little change at £66,830 owing to reduced provision for income tax and the disappearance of debenture interest charges following the redemption in March, 1933. The dividend of 10 per cent. is again earned with a small margin:—

	Years to June 30,		
	1932	1933	1934
Trading profit, after depreciation	95,089	127,750†	116,647†

	7½	10	10
Carried forward	16,057	17,786	18,773

† After employees' bonus of £20,000, based on dividend payments.

The steady recovery from 1930-31, with its precipitate fall in earnings to 1.4 per cent., has thus been consolidated. The balance sheet reveals that stocks are higher by £104,000 at £834,741, but cash holdings have, nevertheless, advanced from £177,072 to £227,455. Provision for depreciation is of usual adequacy, and a hidden reserve of considerable value is suggested by the auditors' statement that "no value is included for patents, trade marks or goodwill." The report is silent on the trading conditions experienced during the year, regarding which the chairman's speech will be eagerly awaited. A quotation of 48s. 9d. for the £1 ordinary shares, yielding £4 5s. 6d. per cent., appears reasonable in view of the profit potentialities of the anti-crease processes now being exploited and, on the reverse of the medal, the possibility of further reduction in the value of individual orders, to which the chairman referred last year.

Financial Newspaper Proprietors.—The directors of Financial Newspaper Proprietors, Limited, announce an agreement under which the company's organisation has, in effect, been pivoted on The Financial News, Limited. The latter has taken over all the assets of the parent company

in return for the allotment to the latter of additional shares, the assumption of all liabilities, the discharge of a debt of approximately £127,000 due from the parent, and the making over to the latter of an assignable option to subscribe for cash, at par, up to 650,000 additional ordinary 2s. shares of The Financial News, Limited. As a result of this transaction, Financial Newspaper Proprietors holds 525,000 (out of 525,500) of the 2s. ordinary shares of The Financial News, Limited, now in issue, and thus retains the whole of its original equity in the combined assets. The agreement, however, requires the cession of certain rights vested in the holders of management shares in Financial Newspaper Proprietors, whose representatives have expressed their willingness to concur. The arrangement makes possible certain administrative and clerical economies, for the parent concern will henceforth have no separate staff, no expenses and no directors' fees. The circular states that net earnings and prospects have been so far improved, partly as a result of a recent increase in financial advertising, that a preliminary survey shows earnings and dividends receipts of more than 12½ per cent. on the ordinary share capital of The Financial News, Limited, for the year to June 30th last (after allowing for preference dividends but excluding certain non-recurring receipts and payments). The Financial News, Limited, has an issued capital comprising £150,000 in 5 per cent. cumulative £1 preference shares, £50,639 in 6 per cent. cumulative second preference £1 shares, and £52,550 in 2s. ordinary shares. The capital of Financial Newspaper Proprietors comprises £525,000 in £1 ordinary shares and £25,000 in £1 management shares, the latter ranking for a 6 per cent. dividend after 6 per cent. has been paid on the ordinary.

Midland Housing Corporation Affairs.—The affairs of the Midland Housing Corporation Ltd. (which, three months ago, issued 200,000 6½ per cent. 10s. cumulative preference shares and £150,000 4½ per cent. redeemable first mortgage debenture stock, both at par), were discussed at length last Tuesday at the statutory meeting. The company's legal adviser informed shareholders that, after allotment on May 8th, the customary examination of titles had been supplemented by a visit to the places where the various properties were situated. These comprised 495 houses and five shops in the Birmingham district. The prospectus had stated, *inter alia*, that the properties were let at what might be regarded as minimum rentals, payable in advance, and that the company, therefore, commenced with immediate revenue which should be well maintained. A report by a firm of valuers on the Birmingham properties declared that, with three exceptions, all the properties were let on monthly tenancies, and that the possibility of loss from voids might be considered negligible. The inspection *in situ*, however, revealed that 178 out of 500 properties were apparently unoccupied. Examination of the rent books, it was declared, had substantially confirmed this result. Inquiries of the vendor's solicitors thereupon elicited the explanation that the matter was covered by an agreement under which the vendor had leased the unoccupied properties to his son for a period of three months. This agreement (which had not previously been seen by the company's solicitors) was dated May 4, 1934, two days after the issue of the prospectus and two days after the accountants' and surveyors' reports, but four days before the opening of the subscription list. After taking counsel's opinion, the company's solicitors wrote to the vendor's solicitors repudiating the contract. The latter responded with a writ against the company for specific performance. In the course of discussion at Tuesday's meeting, a shareholder, described as the vendor's legal adviser, drew a distinction between "unoccupied" and "unlet" houses, and declared that the document, of whose existence the company was apparently ignorant when the prospectus was prepared, had, in fact, been in the possession of the company's secretaries. The vendor, also addressing the shareholders, declared that a hundred of the unoccupied houses had subsequently been let, and applications had been received for practically the whole of the balance. The company's spokesman, however, was not in a position to confirm this. It was announced that certain gentlemen, who had no con-

nection with the formation of the company, had been appointed directors, representing large debenture and preference shareholders. It was also suggested that any person who felt he had a right to rescission, and gave notice to that effect, without taking steps to embarrass the company, would be preserving his position.

Other Company Results.—Our usual summary table of profit and loss accounts on page 286 is of holiday dimensions, for only ten reports have been received from companies not discussed above. Two brewery results to June 30th indicate that the improved conditions in the industry have been well maintained during the first six months of the year. Friary, Holroyd and Healy's profits have shown a vigorous advance from £74,284 to £123,134, the ordinary dividend being increased from 7½ to 10 per cent., and £40,000 transferred to general reserve. Clarkson's Old Brewery, Barnsley, reports net earnings of £13,967, compared with £10,039, the ordinary dividend being maintained at 10 per cent. Among hotels, Grosvenor House has shown satisfactory recovery during the year to June. Profits of £45,129 (against £14,115) have been earned, but the dividend of 5 per cent. involves a draft on carry-forward after provision for debenture issue expenses. In the miscellaneous group, Wilson Bros. Bobbin Company profits have fallen from £22,820 to £18,830, but the dividend has been increased from 4 to 5 per cent. Salter and Salter, the Pudsey bootmakers, report a further loss, the debit balance forward now amounting to £38,509.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS	
TICKET August 14	ACCOUNT August 16

BULL and bear being both on holiday, the natural resilience of the markets again revealed itself in August Week. The tone of the "House," from the Consol market to the Dome, was brighter. Though price movements were measurable only in a limited number of cases, changes were practically all in the right direction. The causes of the improvement were mainly "technical," for the preceding recession showed that a fair number of orders had been placed just "below the market." The July unemployment figures suggested that British industrial recovery was still losing some of its early impetus. Some speculative demand, again, was traceable to causes which would not bear close inspection—the rise of South American stocks on higher grain prices and the activity in Kaffirs on hopes of a higher gold price, for example, being both ultimately traceable to the disastrous American drought.

Gilt-edged stocks were very firm, their advance being led by Old Consols and Local Loans at the outset and by 2½ per cent. Conversion stock later. Irredeemable India stocks followed a similar course and Dominion issues were good, though business was not active.

The feature of the foreign bond market was the demand for South American issues, particularly those of Argentina and Brazil. Investors, resigned though not reconciled to the Brazilian debt scheme, argued that any sustained rise in world grain prices would, *pro tanto*, improve the exchange balances of almost every South American republic. German bonds were quiet and uneventful. Among Far Eastern stocks, Chinese showed improvement, except in the case of the Boxer Loan, which, as always, followed the trend of the dollar.

Home rails were hesitant at first, but the pre-Bank Holiday traffic figures were unexpectedly favourable, particularly on the L.M.S., and a firm tone was reinstated. The market, however, had an undercurrent of caution, partly owing to reports of "light" Bank Holiday traffic and partly to the impression that the week's momentous conferences on the wages question might result in a partial concession by the companies to the men's point of view.

London Transport "C" stock recovered its setback on the publication of the provisional earnings and dividend statements. Argentine rails were buoyant on the improving prices of wheat and maize, the higher peso, and the smaller decline in "sterling equivalent" traffic figures.

Though relatively little business was passing in the industrial market, the tone was indubitably cheerful. The provinces were buyers, on balance, particularly of tobacco shares, on the resuscitation of rumours regarding an arrangement between Imperial Tobacco and Gallaher. "Commodity shares" were in request on the trend of the produce markets, the net being cast sufficiently wide to bring in shares like Sudan Plantations, Hudsons Bay and Rio Flour Mills. Coal and steel shares were irregular, apart from a little buying of William Cory and Richard Thomas Preference. Electric supply shares again attracted little interest, and electrical equipment issues were a shade easier. Among motor shares, however, Ford continued their advance. The brewery share market, having digested the reports of Watney and Guinness, was inclined to take a more favourable view of earnings prospects. Taylor Walker responded to the increased interim dividend. Conditions were quiet in the textile group, but Whitworth and Mitchell, exceptionally, were in demand, on rumours that the company's trading had improved appreciably after its setback last year. Courtaulds hardened slightly, but American Celanese remained dull. Tootal Broadhurst were easier on the slight fall in trading profits shown in the report, which is discussed on page 280. British Oxygen rose on buying from the north of England. Bank shares remained quiet but firm, and fair investment support was in evidence for leading insurance shares.

London and the Continent tended to take a favourable view of developments in the oil trade, but the upward movement in the shares was checked by the lack of support from New York. Rubber shares, however, responded to the upward trend of the commodity in the first half of the week. The tea share market also had a better appearance, though the promise of Tuesday's opening was not fully borne out.

The Kaffir market was one of the most active in the "House," for reasons set out in a Note on page 278. Paris and Johannesburg gave steady support, and floating supplies of stock were found anything but ample. Attention was directed particularly to the newer shares, like Van Dyk and South African Lands. Activity in West African shares was more restricted, the market being somewhat upset by the report of possible litigation, on a question of title in connection with a recent issue. West African gold shares again obtained considerable attention. Dealings in Gold Exploration and Finance shares were done at an increasing premium on the issue price. Rhodesian shares showed evidence of awakening activity. Dealings in tin shares, however, remained limited, the future course of the metal being still regarded as difficult to forecast.

FOREIGN STOCK EXCHANGES

NEW YORK

THE President has returned to find severe difficulties confronting the Administration in its task of promoting economic recovery. The rainless West, where temperatures over 100 degrees have been suffered daily for the past month, is reported to be in privation, the grain crop being disastrously affected and cattle, starved of grass and water, being slaughtered in desperation. The hectic scenes in the Chicago wheat pit were not allowed to obscure the effects of greatly reduced agricultural purchasing power on rails, agricultural machinery and mail order shares. Wall Street, which was dull and irregular early in the week, took a firmer tone on Wednesday, but the market was more inclined to surmise the possible directions of Presidential policy for the relief of the situation than to undertake speculative business. Reports have been bruited of further large Government expenditure, fresh credit inflation, and devaluation of the dollar to a 50 cents basis. Senator Thomas has given the foreign exchange market ample evidence of his enthusiasm, and the state of farming and business, labour relations and the approaching elections make some such move highly probable, for the inflationary materials already at the President's hand have not yet proved inflammable. The market has proved erratic in response to these reports, although mining and metal shares have shown some life. Rails, after touching new "lows," have subsequently recovered, while tobacco and food shares have shown some slight improvement. Dealings in the bond market have become more active as the week has progressed, but interest remains confined chiefly to high-grade issues, foreign bonds being mainly unchanged, and rails and second-grade issues weak in tone. The market has found the tactics of this week's "silver move" easier to understand than its strategy.

* Two-hour Session.

PARIS

The Bourse opened in quiet and hesitant fashion, on a scaling-down of professional commitments as a result of Wall Street uncertainties. Although business remained small, a better tone developed in later sessions, but some mid-week selling of Rentes led to irregularity. International issues, such as Suez Canal and Royal Dutch, showed slight improvements, but 5 1/2 per cent. German Loan receded further. On the Coulisse, rubber shares were well supported, and a sustained inquiry for leading gold mining shares put most quotations higher. Oil shares remained dull.

	Aug. 1, 1934	Aug. 8, 1934	Aug. 9, 1934	Aug. 1, 1934	Aug. 8, 1934	Aug. 9, 1934

BERLIN

In consequence of the President's death the Bourse was closed from August 2nd to August 7th inclusive. On the three preceding days of trading shares declined sharply, chief losses falling to active stocks and popular favourites. Reichsbank, Deutsche-Disconto, Siemens and Halske, and Continental Gummi were some of the heaviest losers among leading issues. Minor shares were neglected and many were not quoted at all. Home bonds reacted moderately, the main declines occurring on Tuesday and Wednesday. Dollar bonds were irregular and predominantly weaker, but towards the end certificates were steady. At the re-opening on Wednesday this week substantial buying led to a general advance in quotations, leading industrial issues and Reichsbank being particularly strong.

AMSTERDAM

Dealers were unable to take a definite view of American developments, and the trend of the week's market was somewhat erratic. Commodity shares were generally better, rubber issues being in active demand, although quotations showed little tendency to advance after Tuesday. Sugar and tobacco shares also became stronger after a weak opening. Leading industrial issues fluctuated during the first half of the week without showing any appreciable net change.

BY STOCK EXCHANGE INTRODUCTION

Bright (John) and Brothers, Ltd.—£300,000 5 per cent. debenture stock secured by trust deed in favour of the Prudential Assurance Company as trustees. The stock will be redeemed on or before December 1, 1971, by means of a cumulative sinking fund of 1 per cent. per annum, commencing in the year ending December 1, 1935.

Kimingini Gold Mining Company, Ltd.—Particulars of issued capital, 1,200,000 shares of 10s. each. Company, promoted by Kentan Gold Areas, will acquire reef and alluvial mining claims, timber and mining interests over 10 square miles in Kakamega district of Kenya. Purchase consideration, £340,000 in cash. Kimingini reef now warrants production programme, samples averaging 15 dwts. over 3 feet, payable length of strike 1,200 feet. 12,200 feet underground work and considerable diamond and Banka drilling has been done. Mill erection will be commenced on delivery, and development to 500 foot level is in progress.

TO SHAREHOLDERS OF NEW WITWATERSRAND AREAS

New Machavie Gold Mining Company, Ltd.—Issue of 1,320,000 shares of 5s. each at par, as of right in proportion of 145 shares to 100 shares held on June 30, 1934. Company acquires properties of Old Machavie Company, and 2,305 adjoining claims for £370,000, satisfied by allotment of 1,480,000 shares. New company will liquidate old companies' debts to vendors of £48,000. 75 per cent. of all sections sampled have been found payable of average value 7.9 dwts. over 52 inches. Four compartment shaft commenced, estimated depth 550 feet.

THE COMING AMERICAN BOOM

By L. L. B. Angus

The long-promised inflation has at last begun. Millions will be made on the New York Stock Exchange. It is not impossible, the Author says, for Shares to regain their 1929 levels.

BURMA CORPORATION, LTD.—The board of directors have declared a final dividend of 2½ annas per share for the year ended June 30, 1934, payable on October 10th to shareholders registered on September 11, 1934, free of Indian and British income taxes. Shareholders on the London register will be paid at an exchange rate of 1s. 6d. per rupee (equal to 2½d. per share).

LONDON TRANSPORT "C" STOCK.—In order to prepare the warrants for interest payable September 10, 1934, a balance of the stock will be struck on the night of Friday, August 10, 1934. On and after Saturday, August 11th, the stock will be transferable ex-dividend.

NATIONAL FIXED INVESTMENT TRUST, LTD.—Midland Bank Executor and Trustee Company, Ltd., announce that the second half-yearly income distribution upon National Fixed Trust certificates of Unit "B" will be paid to registered certificate holders at the rate of 7-64/10d. net per sub-unit on the due date, August 15, 1934.

WILLIAMS DEACON'S BANK, LTD., give notice that in order to prepare the interest warrants, due September 1, 1934, on Wolverhampton Corporation 3% Stock, 1924-54, the books will be closed from August 18th to August 31st, inclusive.

COMPANY MEETINGS, &c.

GROSVENOR HOUSE (PARK LANE), LIMITED

STEADY IMPROVEMENT IN RESULTS

The 6th ordinary general meeting of Grosvenor House (Park Lane), Limited, was held, on the 9th instant, at Grosvenor House, Park Lane, London.

Mr Arthur O. Edwards (chairman and managing director) said that the total profit for the year amounted to £102,533, and the net profit was £52,393. Their trading throughout the year under review had been very steady and the indications were that the forthcoming year would be at least as good as the one which had just ended. Having regard to those facts the directors proposed the distribution of a dividend of 5 per cent. on the ordinary shares. That left to carry forward to next year the substantial balance of £53,679.

The results for the past financial year had not been due to any special cause, but their income had steadily improved throughout the year and showed increases month by month on the corresponding months of the previous year. The consensus of opinion among the leading economists was that Great Britain had fared better than most countries in the depression through which they had passed and that they were emerging from the depression better than most. In his view the emergence was of the slow and sure type, and that comparatively satisfactory position of Great Britain was a sound background for the company's business.

They could not, of course, estimate the effect of the turmoil and economic eruption which had taken place, and still was taking place, abroad, but there was no doubt whatsoever in his mind that the general position was much better to-day than it had been a year ago. The number of visitors showed a general increase, and it was gratifying to note that the increase was derived from foreign countries—including the United States—and Dominions and Colonies, as well as from Great Britain. They were constantly improving their rooms and service, and the proportion of returning guests was indicative of the satisfaction that they succeeded in giving.

The demand on their accommodation for banquets and receptions had been good, and they had decided to convert their ice rink into a magnificent ballroom. That ballroom would be

the only first-class ballroom in London which could accommodate from 1,000 to 2,000 guests.

The report and accounts were unanimously adopted, and the proposed dividend of 5 per cent. on the ordinary shares was approved.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 4, 1934, amounted to £13,838,000, against ordinary expenditure of £17,008,000. After allowing for an increase in Exchequer Balances of £253,015 the operations for the week, as shown below, increased the National Debt by £3,423,000 to approximately £8,079 millions.*

(000's omitted)

Public Department Advances	+ 6,200	Treasury Bills	— 2,813
National Savings Certificates	+ 50	N. Atlantic Shipping Issues	— 25

GOLD

Messrs. Samuel Montagu and Company write on August 8, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,621,164 on the 1st inst., as compared with £191,580,150 on the previous Wednesday.

During the week the Bank announced the purchase of £55,796 in bar gold.

The open market has been fairly active and about £2,200,000 of bar gold was disposed of during the week. Quotations ruled at about dollar parity until the 4th inst., when following weakness of the dollar in terms of sterling, there was a good demand for gold from the Continent, as a result of which prices have since been fixed above the parity.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling
August 2	138s. 2d.	12s. 3.57d.
" 3	138s. 1½d.	12s. 3.61d.
" 4	138s. 0½d.	12s. 3.70d.
" 7	137s. 10d.	12s. 3.93d.
" 8	138s. 0½d.	12s. 3.70d.
Average of above five days...	138s. 0½d.	12s. 3.70d.

Gold shipments from Bombay last week amounted to about £729,000. The s.s. "Chitral" carries £722,000, of which £529,000 is consigned to London and £193,000 to New York; the s.s. "Elysia" has £7,000 destined for London.

Since 1931 the export of gold from Newfoundland had been prohibited, but an Act was signed yesterday by which the free export of gold from that country is now permitted.

SILVER

The firmer tone apparent at the end of last week has been maintained and prices have shown a steady advance. Although China has sold and there has been some selling on Continental account, America and the Indian Bazaars gave good support so that offering were readily absorbed. Speculators have made re-sales, but these have been only moderate.

The market appears steady at the present level and the undertone good.

Quotations during the week:—

IN LONDON			IN NEW YORK		
	Bar Silver per oz. std.	Cents per Ounce		Bar Silver per oz. std.	Cents per Ounce
	Cash	Two Months'		Cash	Two Months'
August 2	20½d.	20½d.	August 1	46½	47½
" 3	20½d.	20½d.	" 2	47½	47½
" 4	20½d.	20½d.	" 3	47½	47½
" 7	20½d.	20½d.	" 4	47½	47½
" 8	20½d.	20½d.	" 6	47½	47½
Average of above	20.700d.	20.800d.	" 7	48	48

The highest rate of exchange on New York recorded during the period from the 2nd inst. to the 8th inst. was \$5.07½ and the lowest \$5.02½.

TOCUYO OILFIELDS OF VENEZUELA LIMITED.—Oil produced during July, 514 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during June 39,950 tons; oil purchased during June from other companies, 58,700 tons. Oil produced during July, 41,750 tons. Oil purchased during July from other companies, 60,792 tons.

PHENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix group of companies for July was 79,292 tons.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE event of the week has been a fresh advance in wheat prices, following further reports of drought damage in the producing areas of North America. The U.S. crop is expected to be the smallest for some forty years, and a smaller output from other areas will help to reduce the carry-over from previous seasons. Flour is also dearer this week, while the prices of other cereals have moved upwards in sympathy with the advance in wheat. Sugar and cocoa have risen in value, but the London tea market has been closed this week. Butter prices show a further advance, but other foodstuffs are mainly unchanged on the week.

Official statistics published on Wednesday indicate that the American cotton crop is likely to be one of the smallest for many years. Publication of this estimate caused a jump in world cotton prices and it is reported from Lancashire that the demand for piece-goods shows a slight expansion. Raw jute also tends to appreciate in value, but the market for yarns and cloth in Dundee is quiet. According to Messrs. Dalgety and Company, the total Australasian production of raw wool in the season just ended showed a decrease of 167,800 bales (or 72,467,000 lbs.) compared with the previous season, while the carry-over is 71,760 bales in excess of last year's total. Prices have shown a tendency to weaken in the past few days.

Quiet conditions have prevailed in the markets for iron and steel and coal, following the holidays; while, with the exception of nickel, the markets for non-ferrous metals have been dull. The rubber market opened firm after the holiday break, and prices have been marked up this week in response to the news that shipments from the chief producing countries have been unexpectedly small during the past month or so. Linseed and linseed oil have advanced in price, while cotton seed and cotton-seed oil are meeting with steadier trade than of late.

Moody's daily index of the prices of staple commodities in the United States (December 31, 1931 = 100) recorded a sharp advance from 144.1 on August 1st to 149.5 on August 8th, the rise in cereals and cotton being mainly responsible for the upward movement. On the corresponding date of last year the index stood at 133.6.

COAL

SHEFFIELD.—Supplies of steam and small coals are short, and prices firm. More coal has been released for export, but little new business is coming forward. Quotations for best steams vary from 16s. 9d. to 17s. 3d. f.o.b. The August output quota is the same as in July—55 per cent. of standard tonnage. Demand on forward account for blast furnace coke is experienced owing to the strong tone in the iron and steel industry, and higher prices are foreshadowed. The position of industrial fuel continues strong. Washed singles are not so difficult to obtain, but prices are firm. House coal is in poor demand with prices weak.

NEWCASTLE-ON-TYNE.—Shipments from the North-East ports are maintained and compare favourably with last year, and there is a little more foreign inquiry circulating for shipment ahead. The prompt position, apart from screened steam, is quiet, and most grades are being offered freely at schedule minimums. All classes of coke are firm, and makers have little difficulty in disposing of supplies.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B., screened, 13s. 6d.; smalls, 10s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 10s.; Tyne Prime, large, 12s. 9d.; smalls, 10s. 6d.; Hartley Main, large, 13s.; smalls, 10s. 6d. **DURHAM.**—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d. Wear Special, unscreened gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District Gas coke, 20s. 3d.

GLASGOW.—The Scottish coal market is making a slow return to normal after the holidays, and most varieties of fuel are obtainable with little difficulty. First steams in Fife, however, are well booked for some weeks ahead, and Lothian prime steam and Lanarkshire prime splint command a fairly ready market. Among washed

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended July 21, 1934, was: Bolivar District, 653,927 barrels; Maracaibo District, 37,857 barrels; total, 691,784 barrels. Production for the week ended July 28, 1934, was Bolivar District, 665,963 barrels; Maracaibo District, 36,005 barrels; total, 701,968 barrels. Well L.S. 251 at Lagunillas has been brought in, producing 690 barrels per day through a $\frac{1}{2}$ -inch flowplug. Production for the week ended August 4, 1934, was: Bolivar district, 675,310 barrels; Maracaibo district, 37,343 barrels.

smalls, singles remain firm, and pearls fully steady, but the larger sizes are still easy in trend, doubles especially being affected by the reduction in business with Germany.

Shipment prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 6d.—14s. 9d.; navigation, unscreened, 12s. 9d.—13s. 3d.; Hartley, 14s. 6d.; steam, 12s.—12s. 6d.; trebles, 13s. 6d.; doubles, 12s. 3d.; singles, 13s.; pearls, 11s. 6d.—12s.; dross, 9s. 9d. **FIFE.**—Best unscreened navigation, 12s. 9d.—13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 13s.—15s. 6d.; doubles, 12s.—12s. 3d.; singles, 13s.; pearls, 10s. 9d. **LOTHIANS.**—Prime steam, 12s.—13s.; secondary steam, 11s. 6d.—11s. 9d.; unscreened navigation, 12s. 6d.; trebles, 14s.; doubles, 12s.; singles, 13s.; pearls, 10s. 9d.—11s. **AYRSHIRE.**—Best unscreened navigation, 13s. 9d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.—14s.; doubles, 13s.; singles, 12s. 9d.; pearls, 11s. 6d.—12s.; dross, 10s.

IRON AND STEEL

MIDDLESBROUGH.—Actual business in the local iron market is very small and an increase is unlikely until the end of the present month, after the foundries have had their annual holidays. Meantime local ironmasters are shipping fair quantities of foundry pig iron to Scotland and have orders on their books which will continue to absorb production. Stocks in makers' hands are not increasing to any extent. The price of Cleveland No. 3 foundry iron is maintained at 67s. 6d. per ton delivered at local foundries, whilst the price of East Coast hematite iron is based on No. 1 at 68s. per ton delivered locally.

Small cargoes of foreign ore continue to change hands on the basis of 17s. per ton c.i.f. Tees for best Bilbao rubio, whilst good Durham blast furnace coke is maintained at 20s. per ton delivered at the furnaces here. In the semi-finished steel departments it is understood that a few more orders have been received, whilst in the heavy steel departments manufacturers are chiefly busy on constructional steel and railway material. The scrap market is quiet, and heavy steel melting scrap is obtainable at 50s. per ton delivered at the works.

SHEFFIELD.—The holidays are responsible for curtailed activity in the raw and semi-material markets. Nevertheless most of the steel works are well supplied with orders. Prospects for the autumn appear to be favourable, although some authorities predict a reduction of turnover. The output capacity of the steel and tool works has been increased considerably during the last eighteen months. The future of overseas business is uncertain and development is still hampered by the inability of exporters to obtain prompt payment of their accounts. In view of currency restrictions abroad, it is surprising that exports of steel goods are so large. Engineers' and mechanics' small tools are meeting with a substantial demand, but trade in cutlery and plate is depressed.

GLASGOW.—There is little change in the situation in the West of Scotland this week. While plants are being employed to much the same extent as during recent months, in some branches orders have not been quite so plentiful—largely on account of the holidays. Steel makers are running plants to very near capacity. Sheet-makers are working steadily on home orders and there is no further decline in the export demand. Tube makers are in the main very well employed. In the manufacturing trades work in the West of Scotland is fairly plentiful and nearly all shops are able to give regular employment to workers and to keep plant steadily employed.

OTHER METALS

Copper rallied a little early this week on rumours of a new world copper conference, but the prospects of such a conference being held are remote and United States producers are shipping heavy supplies to Europe in an effort to regain some of the market lost during the past two years to African and Canadian sellers. Further price cutting may therefore be in prospect and Tuesday's slight gain was not held.

Tin prices have been maintained at the level reached immediately after the publication of the July statistics, while lead and spelter show little change on the week. During the first half of July there was a further increase in stocks held by the spelter cartel, but it is suggested that this may have disappeared during the second half of the month. It is worth noting that the difference between the prices of lead and spelter, which was recently almost £4 per ton in favour of spelter, is narrowing; this may well give rise to an increased use of spelter at the expense of lead.

The International Nickel Company of Canada, which enjoys a world monopoly, increased its dividend for the second quarter of this year to 15 per cent. This reflects the recent improvement in the market situation—an improvement which seems likely to continue in the near future.

TIN.—Sales on the London Metal Exchange: 85 tons on Tuesday, against 340 tons last week; 225 tons on Wednesday, against 285

tons last week. The New York quotation on Wednesday was 51.75 cents per lb., against 51.70 cents a week ago and 51.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £227 5s. to £227 10s., compared with £229 to £229 5s. last week. Stocks in London and Liverpool at the end of last week were 3,704 tons, an increase of 259 tons on the week.

COPPER.—Sales on the London Metal Exchange: 750 tons on Tuesday, against 1,025 tons last week; 800 tons on Wednesday, against 1,350 tons last week. Domestic spot was quoted at 7.02½ cents per lb. in New York on Wednesday, against 7.02½ cents a week ago and 7.20 cents a month ago. Wednesday's official closing price for standard cash in London was £28 12s. 6d. to £28 13s. 9d., compared with £28 13s. 9d. to £28 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week at 29,430 tons, show an increase of 678 tons, and stocks of rough copper, at 7,142 tons, show a decrease of 19 tons.

LEAD.—Sales on the London Metal Exchange: 250 tons on Tuesday, against 700 tons last week; 550 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.75 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 15s. for shipment during the current month, compared with £10 17s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 200 tons on Tuesday, against 300 tons last week; 250 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.30 cents the week before, and 4.35 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 11s. 3d., for shipment during the current month, against £13 7s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver, at £11 10s. to £11 12s. 6d. per flask of 76 lbs., remains unchanged. Foreign antimony at £36 to £36 10s. per ton also remains unchanged. Chinese wolfram was quoted at 37s. to 38s. per unit, c.i.f., as against 37s. 6d. to 38s. 6d. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—**Manchester.**—The event of importance with regard to the raw cotton situation has been the publication of the United States Government statistics relating to the new crop. The estimate was less than expected and prices in New York and Liverpool have advanced. On the other hand, world consumption of American cotton tends to fall off compared with a year ago and it remains to be seen whether the advance in prices will be maintained.

The general inquiry in piece-goods has shown some expansion. Rather more business has been offering for India and fair sales have been arranged in light whites for Karachi and Madras and dyed goods for Amritsar and Delhi, but offers for Calcutta have been rather poor. No improvement can be recorded in the turnover for China. Bleaching cloths have attracted attention for Egypt and useful lines have been secured in finishing styles for South America and West Africa, but home trade buyers have restricted their purchases. The position of spinners remains very unsatisfactory. It is reported that the Master Spinners' Federation is about to consider the question of organised short time in the American section. Users of Egyptian cotton continue to be harassed by the situation in Germany, and there is a tendency for more spindles to stand idle in Bolton and district.

AMERICAN COTTON CROP.—On Wednesday last the United States Department of Agriculture issued important statistics relating to the cotton crop for the season 1934-35. The estimate of the output was 9,195,000 bales, against a growth for last season of 13,047,000 bales. The condition was given as 60.4 per cent., as compared with 74.2 per cent. at the same time last year, whilst the yield per acre was stated to be 160.9 lb. against 208.5 lb. for last year's crop. These figures were below expectations and prices in New York and Liverpool advanced about ½d. per lb. From the point of view of supply, the American cotton situation is undoubtedly bullish. The carry-over from last season was about 10,500,000 bales, so there should be available during the next twelve months about 19,700,000 bales. It is estimated that world consumption during the past season was about 13,500,000 bales, but the tendency at the moment is for less American cotton to be used by spinners, the demand from buyers for cottons from other countries having been a market factor for some time.

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

American cotton is relatively dear compared with "outside growths," such as Brazilian, Egyptian and East Indian. It is reported that, early this week, quite a number of Manchester traders took a view of the market and bought yarn and cloth before the crop statistics were published. It is feared, however, that if the upward movement is maintained it will be difficult to sell manufactured goods freely, unless there is an early improvement in the purchasing power of Lancashire's chief customers.

JUTE.—**Dundee.**—On account of small imports into up-country markets in India and the deterioration of the new crop as the result of recent flooding and immature cutting, sellers of raw jute are reserved and are holding for higher prices. An improved business in manufactured goods in Calcutta has also helped the firmer tendency in raw jute prices and the position has assumed rather brighter prospects during the past few days. Buyers of yarns and cloth, however, have shown little disposition to purchase on broader lines and business remains quiet, notwithstanding the fact that prices of Dundee goods are again cheaper than those of Calcutta. Spinners and manufacturers are fairly well engaged, but there is a dearth of fresh orders. The Gunny Trade Association in Calcutta has requested the Indian Jute Mills Association to reconsider their decision to unseal the 2½ per cent. of the hessian looms at present sealed up, which should take effect as from November 1st; but so far there is no indication as to how this request has been treated. Trade has not warranted the increase in output intended, but prices all round have been remarkably well maintained.

Old crop Shiva Daisee-2/3 has been sold at £14 7s. 6d. per ton and the full group of new crop is now quoted at £14 10s., with fours at £13 12s. 6d. and £14 respectively. Tossa-2/3 is quoted at £14 17s. 6d. per ton for old crop and £15 5s. for new, with fours at £14 2s. 6d. and £14 7s. 6d. respectively. Good First Marks are named at £17 and Lightnings at from £15 17s. 6d. for Circle SSL to £16 7s. 6d. for Green Circle Ram, while Hearts are quoted at £14 17s. 6d. for SCC to £15 2s. 6d. for Ram-D/E, August-September. Only trifling lots of jute yarns are being bought at 1s. 8½d. for common 8 lb. cops and at 1s. 9d. for 8 lb. spools, but spinners are now asking 1s. 9½d. again for the latter. Twist is steady in price at 3½d. to 3¾d. for 3 ply 8 lb., and sacking yarns are unchanged at 2½d. for 24 lb. weft and 3d. for 8 lb. chains. Rio yarns are still more or less neglected and rove meets a quiet trade at unchanged prices. Carpet yarns are steady at from 2½d. for 14 lb. warp. Business in jute cloth remains quiet on the whole, but prices are very steady at from 2½d. for 10½ oz. 40 in. and 1½d. for 8 oz.

Calcutta goods have advanced in price as the result of good business from consuming centres, principally the River Plate. The price of 10 oz. 40 in. was increased to 19s. 8d. and 8 oz. to 15s. 7d., August-September, and 19s. 7d. and 15s. 6d., October to March. Liverpool twills are now quoted at 50s. and "B" twills at 44s. 7d., August-September, and 49s. 9d. and 44s. 6d. for October-March.

GRAIN MARKETS

WHEAT.—Trading in wheat has been very active during the past few days, and prices showed a further rise. This appreciation may be traced to a variety of causes, including the strong upward movement in Argentina, the extremely small crop of Spring wheat in the United States, the deterioration of the Canadian crop and reports of poor crops in Russia, with rumours of impending famine in that country. Following considerable fluctuations, prices in Chicago show a significant gain on the week, while heavy buying at Liverpool has led to a marked advance there.

According to Mr G. Broomhall, total shipments during the past week were 1,305,000 quarters, against 1,146,000 quarters in the preceding week. On Wednesday, "September" futures were quoted in Chicago at 109 cents per bushel, against 103½ cents the week before and 92½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 37s. per 496 lbs., against 34s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 36s., against 33s.; No. 3 Northern Manitoba, Vancouver, ex ship, 31s. 9d., against 31s. 9d.; Australian, ex ship, 32s., against 28s. 6d. to 29s. a week ago.

FLOUR.—North American shipments were 112,000 sacks in the past week, as compared with 99,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 28s. per 280 lbs., against 27s. last week; delivered London, 27s., as compared with 26s. a week ago. Manitoba patents, ex store, 27s. to 28s., against 26s. to 27s. 6d.; Australian, ex store, 19s. to 20s., against 19s. to 20s.

BARLEY.—The market for feeding barley has again ruled firm, and quotations have been advanced this week. "October" futures were 57½ cents per bushel in Winnipeg on Wednesday, against 50½ cents last week and 45½ cents a month ago. Quotations in London on Wednesday were: "English malting," f.o.r., per 448 lbs., 28s. to 31s., against 27s. to 30s. a week before.

OATS.—Quotations for oats have been advanced together with other grains, but forward trading in imported produce has been very

quiet. On Wednesday, "September" futures were quoted at 51½ cents per bushel in Chicago, against 46½ cents a week ago, and 45½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. 6d. per 320 lbs., against 20s. 6d. a week ago; "Chilean White," landed, 24s., against 21s. 6d. to 22s. a week earlier.

MAIZE.—Plate maize has enjoyed another week of active trading, with steadily advancing prices. "September" futures were quoted on Wednesday at 76½ cents per bushel in Chicago, against 71½ cents a week ago and 60½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 26s. 3d. per 480 lbs., compared with 22s. 6d. last week; "Plate," ex ship, 25s. 3d. as against 21s. 6d. "Plate," August, 25s. 3d., as against 21s. 9d. Yellow maize meal, ex wharf, was quoted £6 to £6 2s. 6d. per ton, against £6 to £6 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales, of home-grown wheat—				
1 week to August 4	Cwts. 21,284	Cwts. 26,830	Cwts. 24,053	Cwts. 102,879
49 weeks to August 4	4,902,609	3,763,302	3,522,853	6,431,768
Average price of English wheat per cwt.	s. d. 6 6	s. d. 6 7	s. d. 6 8	s. d. 5 0

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 28, 1934	Cwts. 131,384	Cwts. 7,108	Cwts. 18,823	s. d. 5 1	s. d. 7 10	s. d. 6 5
Aug. 4, 1934	102,879	4,314	16,563	5 0	8 5	6 4
Aug. 2, 1930	68,712	5,238	10,800	8 3	6 6	6 0
Aug. 1, 1931	25,067	1,499	7,136	6 5	6 4	6 8
Aug. 6, 1932	26,830	1,786	4,088	6 7	6 8	7 10
Aug. 5, 1933	24,053	6,061	17,447	6 8	7 1	5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Aug. 9, 1933	Jan. 3, 1934	Aug. 1, 1934	Aug. 8, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	87	65½	88½	94½
Chicago (No. 2 Winter)	55½	46½	100½	84½	103½	109
Cents per 60 lb.						

The visible supply of wheat in Canada, at 103,302,000 bushels, shows an increase of 2,552,000 bushels. Supplies a year ago stood at 102,223,000 bushels.

OTHER FOODS

SUGAR.—The spot market in New York has been firm, while home refined has met with fair request in London, with prices showing some advance on the week. The spot price of raw sugar in New York on Wednesday was 3-32 cents per lb., as compared with 3-23 cents per lb. last week and 3-18 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9d., against 4s. 8d. to 4s. 8½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London	927	135	1,459	1,778	32,198	28,056

COFFEE.—After a dull opening early in the week, the coffee market closed firm in New York on Wednesday with Rio No. 7 (cash) quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. Trade in London has been quietly steady, and public auctions will be resumed next Tuesday. Last week's movements of coffee in London were as follows: Brazilian, landed, 1 bag; delivered, for home consumption, 642 bags; exported, 120 bags; stocks, 28,437 bags, against 28,109 bags a year ago. Central American, landed, 1,376 packages; delivered, for home consumption, 2,223 packages; exported, 726 packages; stocks, 109,299 packages, against 97,818 packages last year. Other kinds: landed, 507 packages; delivered, for home

consumption, 2,445 packages; exported, 779 packages; stocks, 101,823 packages, against 90,906 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Acgra, "August-September," was 20s. 6d. per 50 kilos, c.i.f. Continent, as against 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 6,465 bags; delivered, for home consumption, 7,355 bags; exported, 743 bags; stocks, 251,617 bags, against 165,715 bags a year ago.

TEA.—The Tea Market is closed for the August holiday, but public auctions will be resumed on Monday next. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.		Ceylon	Java	Sumatra	Nyasa-land	Total
	Northern India	Southern India					
Aug. 3, 1933	d. 11-11	d. 10-92	d. 14-78	d. 9-18	d. 8-91	d. 12-08	
July 5, 1934	12-01	12-85	13-28	11-13	11-06	12-47	12-89
July 12, "	13-02	12-74	12-93	10-79	10-61	12-36	12-57

Aug. 1, "	13-29	12-49	12-99	(a)	(a)	12-00	12-94

(a) No sales.

RICE.—The "spot" price was 8s. 3d. per cwt. on Wednesday as compared with 8s. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., shows a rise of 3½d. on the week. Movements in London during the past week were as follows: Landed, 739 tons; delivered, 94 tons; stocks, 1,983 tons, against 6,241 tons a year ago.

POTATOES.—The fair supplies meet with a steady demand, but quotations have shown a tendency to decline. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. 6d. to 7s. 6d. per cwt., as compared with 7s. 8d. to 8s. 6d. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 17 tons; delivered, 1 ton; stocks, 219 tons, against 312 tons a year ago. White, landed, 52 tons; delivered, 40 tons; stocks, 6,321 tons, against 932 tons a year ago.

MEAT.—There has been a fair demand for beef, veal, mutton and lamb, but trade for pork tends to be quiet. Wednesday's quotation for Argentine beef, chilled hindquarters, was 4s. to 4s. 4d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. 2d. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 7,991 tons, against 8,133 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.0 per cent. of the beef supplies, against 87.0 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 80.4 per cent. of the total supply of mutton and lamb, against 77.4 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Resumption of business after the holiday brought a sharp advance in the price of linseed in sympathy with Argentine options and the firmness of wheat. Prices on Tuesday, however, closed below the highest, but little actual business with consumers was reported. Linseed is affected to some extent by crop conditions in the United States, and varying estimates of the balance of the old Plate crop left for shipment. The outlook for the new crop in Argentina, however, continues satisfactory. It is considered probable that the United States, already a substantial buyer, may have to resume importation from India in the near future. The quantity at present afloat for Europe is 111,600 tons (including 23,000 tons from India), rather more than last week; and for the United States and Canada 24,900 tons, against 45,000 tons a year ago. Current quotations for Plate for shipment are around £11 12s. 6d., and for Calcutta to London £12 15s. per ton. Cottonseed is steadier, with a fair trade demand. Old crop Egyptian is quoted £5 2s. 6d., and new £5 7s. 6d.

Linseed oil is firmer and dearer, following the rise in seed prices. Raw oil, ex Hull, August and September-December delivery, is quoted £21 15s. per ton naked. Cotton oil is steadier, Egyptian crude, ex Hull, being held for the advanced figure of £13, and common edible £15. Oilcakes are in improving demand, and some advance in quotations is noted.

HIDES AND LEATHER.—Business in the hide and leather markets has been quiet, owing to the intervention of the August holiday. Prior to the break, a moderate amount of business was forthcoming for the completion of orders for footwear in hand but, generally speaking, demand was concerned mainly with the cheaper lines of both sole and upper leather. Few fresh sales are expected this week, but indications point to a renewal of interest as soon as normal working conditions are resumed; inquiries are already going around for autumn supplies, and are usually for a rather better type of leather than has been in request during the past month or so.

The hide market is quiet and, if anything, inclined to be slightly weaker. No sales of domestic hides and skins will be held this week, supplies for a fortnight having been disposed of at the last auctions. The foreign hide market exhibits practically no change in values, with only a very small amount of business passing for tanners in this country.

RUBBER.—The market in both New York and London opened firm after the holidays, and values have appreciated this week. Unexpectedly small shipments in June and July from Malaya, Ceylon and the Dutch East Indies have exerted a bullish influence. Tapping in Malaya may have been temporarily interrupted by the exceptionally heavy rains, but it seems likely that some increase in stocks may have taken place. This cannot continue, however, for the Regulation Scheme makes provision against the accumulation of stocks either by producers or dealers in the controlled areas. It is now believed that the Dutch East Indies will have no difficulty

in enforcing the restriction scheme, since the native producers are convinced that it is in their own interests. In New York, Wednesday's spot price for rubber, at 15½ cents per lb., compared with 14½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 106,327 tons, show an increase of 937 tons as compared with the preceding week.

A BID FOR PEACE

THERE seems to be no doubt that the Soviet Government intends to apply for admission to membership of the League of Nations when the League Assembly meets next month. If this decision has been taken and been made public, we may infer that the Russians have ascertained that the risk of their application being rejected is so slight as to be negligible. Russia's admission ought, indeed, to be assured, since both Germany and Japan—the two neighbouring Great Powers against whose possibly aggressive designs Russia is seeking the safeguard of League membership—have both debarred themselves from obstructing Russia's admission to the League by having given notice of their own intention to secede from it.

The fact that the Soviet Union should wish to join the League, and that this wish should have good prospects of being fulfilled, is an important entry on the credit side of the balance sheet of international affairs; and it should give encouragement to all the forces of peace and reconstruction throughout the world. In any circumstances, it would be a great event that, in the fifteenth year of the League's existence, one of the two empty chairs at the Council table should be occupied at last by its intended incumbent; for the absence, from the beginning, of Russia and the United States has always lamed the League by advertising its initial failure to achieve that comprehensive world-wide membership which is an indispensable condition of its ultimate success. One half of that original gap will now be filled by Russia's accession this autumn; and this auspicious event is doubly welcome now, as an offset to the abandonment of the League by Japan, who was an original member, and by Germany; who was admitted to membership, with such high hopes, as a consequence of the Pact of Locarno.

Thus, Russia's prospective entry into the League this year would be extremely good news in itself, even if there were nothing more to follow. But, as a matter of fact, this Russian application for membership is bound up, like Germany's application in 1926, with a concrete plan for international appeasement and security in Europe. If Ger-

many's application and admission were corollaries of the conclusion of the original "Western" Locarno Pact, the Russian application is intended to be a first step towards the achievement of that "Eastern Locarno" which is the present goal of Russian and French statesmanship in Europe. If Russia duly enters the League next month, definite and active negotiations for the conclusion of this "Eastern Locarno" pact may be expected to follow during the winter. If these succeed in bringing about, between Germany and her neighbours in Eastern Europe, an arrangement which is genuinely analogous to its prototype of 1926, then we may perhaps look forward to a notable increase, throughout Europe, of a sense of security, and to a fresh and more successful effort to attain an agreed limitation and reduction of European armaments.

What, then, is the outlook for this new attempt to save Europe, in which Russia's application at Geneva next month is to be the opening move? Manifestly, Franco-Russian statesmanship holds a number of very strong cards. France and Russia themselves, who are the originators and the sponsors of the project, account for two out of the five Great Powers that are immediately concerned. Two others—the United Kingdom and Italy—have signified their benevolent acquiescence in the plan, while praying to be excused from promoting it actively by taking any fresh commitments upon their own shoulders. Among the smaller countries, Franco-Russian diplomacy is now assured of the active participation of all three Baltic States, as well as of the three Little Entente States. There remain two countries that have expressed a distaste for the scheme—that is to say, Germany and Poland. That is the crux; for the opposition of either of these two countries alone would be a serious obstacle; and the seriousness is immensely increased by the apparent inclination of the German and Polish Governments to make common cause. Germany's distaste for the Eastern Locarno, in her present mood, is understandable. What needs some explanation is the fact that Poland should have the same feelings, and should actually feel so

Kölnische Zeitung*is the most important newspaper of Western Germany.*

and in all parts of the world wherever German papers are read it is known and its authority recognised. - The Kölnische Zeitung has its greatest distribution in the Rhine and Ruhr district, the great industrial part of Germany which has a population of 11 millions. For over 100 years the Kölnische Zeitung has been the favoured advertising medium of commerce, particularly for financial announcements. — The newspaper of good tradition, of reliable news service, the successful advertising medium.

strongly as to play with the notion of parting company with France and of throwing herself into Germany's arms.

As for Germany's attitude, it is human—though, we think, shortsighted—for the rulers of Germany, with their preoccupations, to take the line that the element of reciprocity and equality in the proposed Eastern Locarno is a pious fraud, or, at any rate, an empty form, and that the project is really a plan for effecting the "encirclement" of Germany in so respectable and gentlemanly a fashion that Germany herself may be inveigled into setting her own signature to the warrant for immuring her alive. If we are to be "encircled" in any case, the Germans may argue, let us at any rate strip the hypocritical mask off the face of this Franco-Russian policy, and expose the hostile face beneath in all its ugly nakedness. To British minds, this attitude is shortsighted, because, in our belief, "the Eastern Locarno," if it once comes to pass, will become very much what the contracting parties choose to make of it. If Germany enters into it with a good grace, and loyally acts up to its spirit and boldly challenges the other parties to do the same, we firmly believe that it will be morally impossible for France and Russia and their friends to turn the arrangement into the veiled "encirclement" which Germany fears. More than that, we believe that, if they become aware of a sincere goodwill on Germany's side, they will never feel any temptation to misuse the arrangement by turning it into an instrument for holding Germany down. For these reasons we sincerely hope—in Germany's interests as well as in our own—that Germany will take the long and statesmanlike view and will throw all her weight into making "the Eastern Locarno" project a success.

It is Poland's attitude which is, at first sight, puzzling. On a rational objective view of Polish interests, Poland might be expected to jump at the Franco-Russian project as spontaneously as Germany, on her side, might be expected to shy away from it. Here, for the first time since the restoration of her political unity and independence after the war, Poland is offered an opportunity of escaping from the nightmare of being at enmity with both Germany and Russia simultaneously. So long as she has to fear that both her mighty neighbours, at whose expense she has been reconstituted, are nursing a grievance against her and are waiting for the first opportunity to carry out a fifth partition, she naturally cannot feel secure. Why, then, is she not enthusiastic for a project which, at the best, will secure her against both a German and a Russian *revanche*, and at the worst will assure her of Russian support in the event of German aggression? Why does she hesitate to come to terms with Russia, who manifestly now harbours no designs upon Poland's Ukrainian and White-Russian provinces, but is simply concerned to preserve the territorial integrity of the Soviet Union within its present frontiers? Why is Poland ready to coquet with Germany, who, in spite of the ten-years' German-Polish Pact, has certainly not renounced her ambition of eventually recovering the Corridor? Considerations of prestige, no doubt, play a part, for Poland has certainly not renounced her desire for recognition among the Great Powers by securing a permanent seat on the League Council. This means far more to a country with long history and proud traditions, but whose independence has only recently been recovered, than we perhaps can readily understand. Yet it is not to be believed that a plan which is of really vital importance should be sacrificed for the mere sake of "saving face." Whatever may be the inducements—expressed or implied—of her "understanding" with Germany, it cannot possibly be to Poland's interest to substitute a series of rival groupings among the countries of Europe for the alternative of a genuine collective agreement.

The decision, however, really rests with Germany, for if her adhesion is secured, all that is hoped from the proposal will be within reach. If Germany refuses, we shall go back to the system of alliances—however the fact may be camouflaged or explained away. If Germany is to fulfil the hopes of her late President and to take her place as an equal among the Powers, now is her opportunity. Let us hope that she will not throw away the chance through a feeling of soreness and of soured mistrust.

PROVIDENCE TAKES A HAND

ONLY a short while ago the farmers of the world were floundering in a sea of super-abundance. On all sides we were assured that the science of economics, laboriously built up on "the economics of scarcity," must now give way to the "economics of glut." Large stocks of coffee, sugar and wheat were destroyed, or perverted to extraordinary uses; cattle and pigs were slaughtered; acreage-restriction schemes were evolved; standing cotton was ploughed back into the soil; and price-manipulation practised under benevolent State legislation became a fine art. The only thing that was *not* done was to make efforts to increase consumption and lay plans for absorbing surpluses at lower prices. Shakespeare's porter must surely have been looking forward to 1934—"Here's a farmer that hanged himself in the expectation of plenty."

But in a moment the scene is changed. It had seemed that the huge stocks overhanging the world's raw commodity markets would, like the poor, be "always with us." Providence, however, has stolen a march on the restrictionists, and by a judicious combination of drought and floods has shown—at the cost of widespread suffering and distress—what may happen at any moment to the best laid schemes of mice and men. Whether the markets were justified in swinging so suddenly from one extreme to the other is altogether another matter.

Let us turn to the facts. Except in Poland, where the recent torrential floods have wrought such havoc, the 1934 summer seems to have been one long drought. This has reached catastrophic proportions in the United States, where the President is reported to be considering the special convocation of Congress to decide on relief measures. The spring wheat crop in the U.S.A. was estimated by experts on August 2nd at only 78 million bushels, as against an average spring crop of 210 millions. The winter crop estimate is also down to 402 million bushels, giving a total of 480 million bushels, against the low figure of 527 million bushels actually harvested in 1933-34, and an average harvest of about 800 millions. The drought has taken heavy toll in Canada, and in parts of Australia, though estimates of their crops are not yet available.

The Russian harvest, according to reliable forecasts,* may be so low as to cause a recurrence of the 1932 famine; and there is only a faint expectation that Russia will be an exporter of wheat on any scale this year. The July monthly Crop Report and Agricultural Statistics of the Institute of Agriculture, Rome, shows that for eight European wheat-producing countries† the total harvest estimates in July work out at 577 million bushels, against 669 millions in July, 1933, and an average total production from 1928 to 1932 of 628 millions. But the four Danubian wheat-exporting countries in this group (Hungary, Roumania, Yugoslavia, Bulgaria) expect a total crop of scarcely 240 million bushels, as against last year's July estimate of 327 millions and a realised total of 371 millions. Consequently no exports from this usual area of supply are expected. Finally, owing to a combination of Nature and bad transport, China expects poor crops of rice and wheat, and will probably need imports of the latter.

On the brighter side—or the gloomier, if one be a restrictionist—the Argentine crop will probably be of average dimensions and yield, though even here drought has occurred. France has a harvest this year which is barely enough for her own consumption, but the carry-over will be 110 million bushels; while her North African territories, Morocco and Algeria, expect harvests this year well above their average, despite decreased sowings, so that they will have a surplus, which France does not need, of between 25 and 32 million bushels. And in the East, India, Japan, Palestine, Syria and Turkey show estimates which are larger than last year's figures.

Thus the crop reports, on the whole, indicate a smaller world harvest than last year, and an appreciable increase this cereal year in the world's import needs of wheat. But the legacy of former Plenty, in the shape of stocks carried

* Broomhall; † International Institute of Agriculture, Rome.

† Germany, Finland, Spain, Netherlands, Bulgaria, Hungary, Roumania, and Yugoslavia.

over, must be considered. On June 1st, the world's exportable wheat surplus was 645 million bushels, and the balance to be exported under the London Wheat Agreement by July 31st, the end of the cereal year, was 109 millions. But, although the U.S.A., Australia and the Danubian exporters will not have been able to fulfil their export quotas, and although Argentina, Russia and other exporters have already exceeded theirs, the world's import needs in the year which ended on July 31st last will probably prove to have been less than was forecast in London. A total carry-over, of between 525 and 575 million bushels on August 1st, therefore, would not seem wide of the mark. This is borne out by the official Canadian figures for July 31st, which show visible stocks of 193 million bushels, plus 10 millions stored in or afloat to the U.S.A., against 212 and 7.7 millions, respectively, the preceding year. And Australia's estimated visible supplies on August 1st were 58 million bushels, against only 30 millions the preceding year. Moreover, certain normally importing countries had stocks on hand on August 1st—e.g. France herself carried over about 110 million bushels—though these cannot be properly included as exportable surpluses.

We can therefore pass to the world's estimated supplies and requirements in the cereal year which has just begun:

I: WHEAT AND FLOUR: IMPORTERS' REQUIREMENTS

Countries	(Thousand bushels)		
	1932-33 Actual	1933-34 Approximate	1934-35 Estimate
Great Britain and Ireland	237,600	236,000	232,000
France, Italy, Germany	52,000	20,000	56,000
Belgium, Holland	66,400	66,400	64,000
Scandinavia, Denmark	24,000	23,200	24,000
Greece	20,000	10,400	16,000
Other European countries	55,200	38,400	56,000
Total Europe	455,200	394,400	448,000
Ex-Europe	166,400	124,000	128,000
Grand total	621,600	518,400	576,000

II: WORLD WHEAT EXPORTS: INCLUDING FLOUR

Countries	(Thousand bushels)		
	1932-33 Actual	1933-34 Approximate	1934-35 Estimate
Canada	257,600	180,000	288,000
United States	37,600	40,000	8,000
Argentina	126,400	140,800	160,000
Australia	154,400	89,600	96,000
Russia	17,600	26,400	?
Danube and France	27,200	37,600	24,000
Grand total	620,800	514,400	576,000

Source: Broomhall's *Corn Trade News*, August 7, 1934.

The exportable surpluses of the 1934 crop were estimated in July by the International Institute of Agriculture at 360 million bushels. If the world's import needs are about 576 millions, 216 millions will have to be supplied from the stocks carried over. As this carry-over is probably about 550 millions, the exportable surpluses at the end of the year 1934-35 will probably be reduced to about 325 million bushels, against about 550 millions on August 1, 1934, 683 millions at the corresponding date in 1933, 588 millions in 1932, 564 millions in 1931, 502 millions in 1930, 512 millions in 1929, 319 millions in 1928, and 249 millions in 1927.

But the estimates above are early and very tentative; and the nervousness at present shrouding the world's wheat markets is due to three major uncertainties. First, the estimates of available supplies in the new cereal year depend on the final harvest figures in Canada, Argentina and Australia. The Canadian harvest should soon be known; but those of the other two of the four chief wheat-exporting countries (the fourth, the United States, will most probably make virtually no exports at all this year) cannot be known before November-December. Secondly, the harvests actually realised in importing countries will affect import requirements. These cannot yet be established, though it is reasonably certain that Germany, Italy, Greece and the minor European importing countries will this year need increased imports owing to their own bad harvests (see Table I above). Thirdly, the declared intention of the United States authorities to proceed with wheat acreage restriction this year, and the efforts of the Wheat Advisory Committee may clearly be of less importance than the intervention of Providence.

The figures quoted by the secretary of the Wheat Advisory Committee at the meeting which began in London on Wednesday are on a somewhat different basis from those given above; they confirm, however, the general conclusion that a big inroad will be made on stocks this year, but if things go normally with the Southern Hemisphere harvests in the spring of 1935, the stocks a year hence will still be a little above normal—if we take as "normal" the average of the years 1922-28.

Two comments suggest themselves in connection with these figures. The first is that the recent violent fluctuations in the price of wheat on the various produce markets are largely unjustified in view of the large stocks that still exist. The second is that if Nature continues in unfriendly mood and behaves as harshly to the growing crops of 1935 as she has behaved this year, the world's consumers might well be threatened then, if not now, by a much sharper rise in the price of bread than has hitherto been imagined, even by the restrictionists.

But whatever fate may be in store in this connection, the story of the world's wheat supply in recent years points some very important morals in these days of attempted regulation of the processes of production. Even if the plan for limiting the sown area is put into force, we are still very far from stabilising production of a commodity where Nature plays so large a part. Secondly, a very small variation in the supply of a commodity like wheat may cause a great disturbance of the market unless it is, at least in part, corrected by an adjustment in consumption resulting from a change of prices. Restrictions which prevent this from happening quickly magnify the difficulties and lead to a crisis. Finally, if price movements such as we have recently witnessed can occur in a world market where there are so many sources that can compensate one another, it is obvious that countries which attempt to shut themselves in behind a tariff wall must be prepared to face far greater fluctuations in the price of the staple food of the people whenever the even tenor of production is disturbed by the act of God. The Advisory Wheat Committee has endeavoured to legislate for an emergency. It will have to probe much deeper if it is to help in restoring a really balanced method of meeting the world's essential food requirements.

BRITISH OVERSEAS TRADE

THE overseas trade figures for the month of July, which were published on Wednesday, show that the rising tendency of imports of raw materials still continues, but that it is now being offset by increasing exports. We give first of all the figures of our foreign trade in the first seven months of the current year, compared with the corresponding figures for the same months in the last two years:

I.—BRITISH OVERSEAS TRADE—FIRST SEVEN MONTHS

	Jan.- July, 1934	Increase (+) or Decrease (–) as compared with			
		January–July, 1933		January–July, 1932	
Imports.....	£'000	£'000	%	£'000	%
British exports	419,867	+46,067	+12.4	+7,177	+1.7
Re-exports	223,049	+17,821	+8.7	+6,722	+3.1
Total exports	33,136	+3,625	+12.3	+501	+1.5
Total imports	256,185	+21,446	+9.1	+7,223	+2.9
Excess of imports over total exports	163,682	+24,621	+17.7	–46	...
Transshipments under bond	13,639	+397	+3.0	+1,703	+14.3

While there is an increase in the visible import surplus of 17.7 per cent. over the corresponding figures in 1933, this import surplus is only back to the 1932 figure. On the other hand, exports of British manufactures show a 3.1 per cent. increase over the 1932 figures, and re-exports of imported goods an increase of 1.5 per cent. over the 1932 figures; while total exports are 2.9 per cent. above the 1932 figure, against an increase of only 1.7 per cent. in imports. Compared with last year's figures for the first seven months, imports are up by £46.1 millions, or 12.4 per cent.; exports have risen £17.8 millions, or

8.7 per cent.; and re-exports have increased by a welcome £3.6 millions, or 12.3 per cent., so that total exports show an expansion of £21.4 millions, or 9.1 per cent. This revival of activity in re-exports is paralleled by a further 3 per cent. increase over the 1933 figures in transshipments under bond, and of 14.3 per cent. over those of 1932. To a country so concerned in maintaining its entrepôt trade and the "invisible exports" to which that trade gives rise, such a revival in re-exports and transshipments under bond is an encouraging feature. The *caveat*, which we have entered before in interpreting the growing figures of imports and of the import surplus, must be repeated. It takes as long as six months, and more in some cases, for increased imports of raw materials, necessitated by an expanding order-book, to be reflected in the obverse—expanding exports and contracting imports. Moreover, the welcome increase in total foreign trade, imports and total exports together, must bring in its train an increase in our invisible exports on shipping, banking, insurance and merchanting account. When we turn to the figures for July alone, the tendency for increasing exports to overhaul the increase in imports is more evident:—

II.—BRITISH OVERSEAS TRADE—MONTH OF JULY

	1934		Increase (+) or Decrease (—) compared with	
	July, 1933		July, 1932	
Imports	£800	£800	%	%
British exports	33,230	+ 4,311	+ 8.0	+ 6,126
Re-exports	4,129	+ 195	+ 4.5	+ 824
Total exports	37,358	+ 3,087	+ 9.0	+ 4,760
Excess of imports over total exports ...	20,668	+ 1,224	+ 6.3	+ 1,366
Transshipments under bond	1,745	— 100	— 5.5	+ 134

The latest figures are much above the figures for July, 1932, in all groups—re-exports are as much as 25 per cent. up, and British exports are £3.9 millions up, or 13.4 per cent., against a rise of only £6 millions, or 11.8 per cent., in imports. Comparison with July of last year shows that British exports in July this year have risen by a further £3.3 millions, or 11 per cent., though re-exports have fallen slightly. Imports, however, are only £43 millions, or 8.0 per cent., up. Thus the import surplus in July was only £1.2 millions, or 6.3 per cent., greater than in July, 1933, and roughly the same amount above July, 1932; so that the greatly increased import surplus in the first seven months, shown in Table I, is not being maintained. Our analysis of the July figures for various important commodities follows:—

III.—UNITED KINGDOM TRADE IN IMPORTANT COMMODITIES—MONTH OF JULY

Category and Measure	1932	1933	1934
Imports:			
Iron ore and scrap	thous. tons	140	236
Raw cotton	thous. cents	683	1,331
Sheep's and lambs' wool	mill. lbs.	41	51
Rubber, raw	thous. cents	165	124
Exports:			
Coal	thous. tons	3,334	3,271
Iron and steel manufactures	thous. tons	158	156
Machinery	thous. tons	27	24
Cotton yarn	thous. lbs.	9,528	10,412
Cotton piece goods	mill. sq. yds.	198	155
Wool tops	thous. lbs.	2,380	4,282
Woolen yarns	thous. lbs.	635	704
Worsted yarns	thous. lbs.	3,080	3,527
Woolen tissues	thous. sq. yds.	5,133	5,593
Worsted tissues	thous. sq. yds.	2,485	3,319
Linen piece goods	thous. sq. yds.	4,212	5,722
Locomotives	tons	115	514
Motor vehicles and chassis	number	2,414	3,541
Re-exports:			
Raw cotton	thous. cents	46	71
Sheep's and lambs' wool	mill. lbs.	18	26
Rubber	thous. cents	74	35

From this table it is clear that greatly increased imports of rubber and of iron ore and scrap are important elements in the adverse balance in July. Cotton and wool imports are down, following the set-back in the textile industries; but exports of woollen tissues, woollen yarn, and cotton piece goods are more than in July last year. The heavy imports in recent months of iron ore and scrap are already reflected in the largest July export figure for iron and steel manufactures, machinery and motor vehicles and

chassis that has been achieved for three years. The rise in iron and steel and motors is quite remarkable. Coal exports, though at the highest July figure for three years, were still far below normal. Under re-exports, as might be expected from Germany's import restrictions and non-payment for previous shipments, cotton and wool show sharp declines in July from the figures a year ago. On the other hand, 25 per cent. of our rubber imports in July, which were treble our imports in July of last year, was re-exported.

Thus, on the whole, the July overseas trade figures may be said to present a moderately encouraging picture. The increased employment figures up to the end of June, are reflected, save for the badly hit textile trades, in increased exports; and there is clearly greater activity so far this year in the raw materials of industry, both in imports and re-exports. It should not be forgotten, however, that the crisis has lasted for almost five years; that our present fiscal policy was inaugurated before the first date in any of the above tables; and that, in consequence, comparison of any of these 1934 figures with their opposite numbers in, say, 1928 or 1929, would severely shake that complacency with which many of our politicians seem to view the economic prospects of this country.

LIFE AND DEATH ON THE ROADS

(BY A CORRESPONDENT)

Is it really possible to diminish the total of persons killed on the roads? The nation has taken to the roads in increased numbers for its summer holiday again this year; and at the same time the rising total of fatal accidents has suddenly gained first-class news value. A greater number of accidents is naturally to be expected when the total of cars on the road is rising; and it would appear that the unwonted prominence given to the figure of 150 or so deaths a week is due to the desire of the authorities to shock public opinion and so restrain the motorist. Possibly our new Minister of Transport's recent remark about "mass murder" on the road, and his subsequent well-reported adventures, with traffic lanes, red lights and bicycles, were inspired by the same motive.

Whether or not the figure of 150 deaths a week can be termed a national scandal, most discussions of the question strike the average motorist as seriously divorced from reality—like debates on the speed limit. It is clear, first of all, that on the great majority of roads on the great majority of days there are no accidents whatever. It is clear, again, that there are a great many accidents which should never take place at all. Given these two self-evident facts, the real practical problem is to discover what are the principal causes of these accidents and how far they are preventable. It is a mistake to suppose that this question must be answered entirely by a *post mortem* statistical analysis of actual accidents. The average motorist's experience of incidents which might have led to accidents is equally important.

Such experience establishes beyond doubt that there are a few definitely murderous drivers on the road. The only question with these is whether, when once detected, they should ever be allowed to drive again. In general, however, experience seems to suggest that there are three main causes of preventable accidents:—(1) Pedestrians (often children) stepping out from behind stationary vehicles; (2) wrongly judged attempts at overtaking; (3) collisions at cross roads. The blame for the first class of accident might on first thoughts be laid wholly on the pedestrian, and the attempt made to abolish it by adjuring the pedestrian to curb his rash incursions onto the road. In fact, however, motorists can do a great deal to prevent this kind of accident. It is perfectly feasible for every driver to form the habit of *assuming* that a pedestrian will step out from behind every stationary vehicle he passes. If he assumes this, and also fixes his eye on the crucial spot, gives it a wide berth, and sounds his horn, he can make sure of avoiding all but the most suicidal of pedestrians.

If the truth were known, the vast majority of accidents not involving pedestrians would probably turn out to be due to faulty overtaking. There is a two-mile flat, straight, junctionless stretch of the London-Basingstoke main road

near Camberley which is said by local doctors to account for more accidents than any other stretch of road in the district. This is sometimes regarded locally as evidence that accidents are due to excessive speed. Actually it shows nothing of the kind; for people do not collide head-on on a wide arterial road. It is plain evidence that a great many accidents are due to faulty overtaking—the only possible general cause of accidents on such a stretch of road. To some extent, of course, the whole dispute whether accidents are due to speed or bad driving is artificial; for bad driving principally consists in going at the wrong speed in the wrong place. Unfortunately there can be no other remedy for faulty overtaking than to instil into every motorist the following maxim: Do not overtake unless you can see as far down the road as it will take you to do so. The observance of this maxim naturally requires some judgment, presence of mind and skill; and if a driver does not possess these qualities, as some human beings clearly do not, the question certainly arises whether he (or, possibly, she) should be allowed to drive at all. At any rate, the rule "never overtake on blind corners" should be constantly forced on every motorist's attention.

The inadequate treatment of cross-roads by the authorities must have disappointed many drivers who are sincerely anxious to make the roads both convenient and safe. At present practically all cross-roads are marked with a cross (underneath the usual red triangle). This is perfectly satisfactory on the few great main roads, like the Great North Road or the Bath Road, where the main road traffic obviously has precedence over the side road. But there are innumerable cross-roads and junctions throughout the country where it is difficult or impossible to say which is the major road. In these cases ideal prudence would require a walking pace from every driver. Actually, however, there is probably little traffic on the road; and the average cautious driver consequently slows down to, say, 25 m.p.h., sounds his horn, and hopes for the best. If two drivers do this at once, there is probably an even chance of a collision. A very large number of accidents must certainly be due to this cause. Any experienced motorist could point to a dozen "indeterminate" cross-roads on a single inch-to-a-mile ordnance survey map.

Surely a very simple reform would almost wholly abolish these accidents. Let the Ministry of Transport devise two simple signs—say, a cross and a circle—meaning (1) you are approaching a major from a minor road; and (2) you are approaching a minor from a major road. At all "indeterminate" cross-roads the Ministry (or local authority) would make an arbitrary decision which was the major road. This system has been adopted in a very few places already. If it were adopted universally, none but suicidal drivers would dart out on to main roads, while the traffic on the "main" road could proceed safely, securely and at a reasonable speed.

Doubtless not all preventable accidents are due to these three causes. Some are due to rare and unpredictable concatenations of circumstances, and some, without doubt, to bicyclists. Most motorists would probably agree, however, that bicyclists, though they unquestionably move in an eccentric fashion, and often sideways, nevertheless do not habitually travel more than two abreast. Admittedly, in

some towns, such as Cambridge, bicyclists proceed in tadpole-like shoals which turn the most level-headed motorist's life into a bad dream. The question of women drivers is an even more controversial one. Some motorists declare that they are the cause of all the trouble; others as stoutly maintain that they are the safest drivers on the road. At any rate there seems no doubt that women drivers have a distinct character of their own. On the whole this would seem to be a certain thoughtless timidity rather than criminal negligence; and its consequence would seem to be exasperation rather than physical injury among normal drivers.

Fortunately, however, there is more life than death on the roads. A tour of England and Wales during the height of the holiday season leaves the gratifying impression that enormous progress has been made by the State and private enterprise together in bringing the benefits of travel, fresh air and the countryside into the lives of an ever-increasing number of people. Some will be disconcerted at first to find wide, straight arterial roads where ten years ago there were only winding lanes. But the volume of traffic on these outlying roads conclusively justifies the ambitious building policy pursued by the Ministry of Transport since the war.

Some parts of England seem almost to have been laid out to please the pleasure-seeking motorist. There are wide areas in such beautiful counties as Cumberland, Hereford and Gloucester where the roads are admirable and practically no excesses of advertisement or "ribbon" building offend the traveller's eye.

Undeniably the blot on all this is the scandalous failure of the State to tax enhanced land-values and control ribbon development on these new arterial roads, particularly in the London area. If only we could amend this failure while there is yet time, and if, above all, we could so frame our fiscal and general economic policy as to bring the road within the reach of the workers as well as the upper and middle classes, we should have very solid grounds for gratification at the revolution in life on the roads.

NOTES OF THE WEEK

Mr Roosevelt Back in Washington.—President Roosevelt has lost no time in clearing up the uncertainty that prevailed as to the mood in which he would return from his month's holiday. Even before reaching Washington he had served notice on the public that the New Deal is to be intensified rather than amended. In a speech in Wisconsin he derided the cry for more confidence and less Governmental interference, and pledged himself that there would be no return to what he chose to call "the old law of tooth and claw." The proclamation ordering the so-called "nationalisation of silver," on which we comment in an article on page 313, was issued on the same day, and the two pronouncements taken together started a brief

but violent inflationary scare. From Washington the Treasury did its best to counteract this impression and succeeded in rallying market opinion, though its action in licensing gold for export probably had more effect than its soothing words. The indications still seem to be against any immediate further reduction in the gold content of the dollar, but the sickly condition of business is an argument of increasing potency for inflation, and the propagandists who have had so much success in the past in influencing the President's policy are working up a new agitation. For the present, however, the emphasis is still laid on Government expenditure, and the combined needs of drought relief, public works and the new housing project

seem likely to maintain the deficit at substantial proportions, despite the news that the Reconstruction Finance Corporation continues to receive more in repayments than it pays out in loans. The fact that Congress is not in session lessens the efficacy of inflationary propaganda, and if Mr Roosevelt can hold out until the November elections his personal prestige may be so enhanced by them that he will be able to impose his own policy. But this assumes that his personal inclination will be to avoid a further devaluation of the dollar, and it would be hazardous to suppose that he has not changed, and will not change, his mind on the subject in the future as he has in the past. The November elections, at which the House of Representatives and a third of the Senate are to be elected, will be interesting from the political standpoint as well as for their influence on economic policy. Mr Roosevelt has given the clearest indication that he rates loyalty to the New Deal above loyalty to his party, and in the States of Wisconsin and California he has gone out of his way to support the candidatures of Senators La Follette and Johnson, even though these gentlemen have hitherto been classed as Republicans and are opposed by "regular" Democratic nominees. This is one more indication of the fact that Mr Roosevelt has the ambition of recasting American politics on the lines of a conflict of policies rather than maintaining the present largely geographical distinctions of parties.

Hindenburg's Political Testament.—On Wednesday night the late President Hindenburg's long-awaited political testament "To the German People and its Chancellor" was broadcast from all principal transmitters in Germany. This document which was known to be in existence for some time is dated May 11th of this year and contains a eulogy of Herr Hitler and of the Nazi movement which will come as a surprise to some and as not so much of a surprise to others. The late President recalls at the outset, by citation of the last chapter in his "From My Life," published in 1920, his belief in "that Reich to which the hopes of our fathers once clung, and on which half a century ago the future of the Fatherland was confidently founded: *das deutsche Kaisertum*." The reiteration of that phrase is a strong hint that Herr Hitler should not forget that Germany is one day again to be a monarchy—but perhaps the monarchical dynasty will differ from that envisaged by the late President. His last public utterance goes on in a remarkably revealing passage:—

I was aware that the fundamental State laws and the form of Government which the nation had chosen in the hour of greatest need and inner weakness did not meet the real requirements and characteristics of our people. The hour had to come when this knowledge would be common property. Therefore, it seemed to me a duty to lead the country, without imperilling its existence, through the valley of external oppression and humiliation, of internal want and self-laceration, until this hour dawned.

The symbol of and firm support for this structure had to be the guardian of the State, the Reichswehr. In it had to repose the old Prussian virtues of unquestioning devotion to duty, simplicity and comradeship as the solid foundation of the State. The German Reichswehr, after the collapse, carried on in an exemplary way the lofty tradition of the old army. Always and at all times must the Wehrmacht (Services) remain the instrument of the supreme State-leadership, able to do justice to its task of defending the country irrespective of all inner political developments.

So Hindenburg affirmed his continuous fundamental disbelief in the fitness of the Weimar democratic system for the "real requirements and characteristics of" the German people. He then refers to "a decisive step of first importance" which "my Chancellor, Adolf Hitler and his movement" contributed "in the great aim of leading the German people together, above all differences of caste and class, to inward unity." But, as if recognising that the movement to which he gave power on January 30, 1933, could only take one step and not travel the whole road to Germany's "inward unity," Hindenburg continues:—

I know how much remains to be done, and I wish from my heart that behind the act of the national uprising and

of the national unification the act of reconciliation may stand, which will comprise the whole German Fatherland.

To one who happened to hear this passage broadcast from Berlin, the juxtaposition of "unification" and "reconciliation" seemed most apt upon its hour, just before the vote next Sunday, and at a time when amnesties were being proclaimed in Germany. The late President's testament is certainly political capital for the new President-and-Chancellor; but it should also provide him with searching questions as to the future of the German *Kaisertum*, and as to the Nazi ways and means of securing that future.

* * *

Cold Comfort for Consumers.—Last week we drew attention to the rise in the price of the 280-lb. sack of flour, apart from the wheat levy, from 24s. 6d. six weeks ago to 28s. On Friday of last week it was further raised to 28s. 6d., plus the wheat levy of 4s. 6d., making the final price of the sack 33s., or 2s. above the Food Council's limit for the 7½d. quarter loaf. We then asked if the levy on flour to aid British wheat growers would be reduced, in view of the recent sharp rise in wheat prices on the free market which had caused the equally sharp rise in the price of flour; or if the price of bread would rise to maintain the levy intact. The first query was answered by the Minister of Agriculture last Monday, when it was announced that the levy per sack of flour milled or imported would be reduced by 6d. to 4s. per sack of 280 lbs. from Sunday, August 12th. This is comfort for the consumer; but it has quickly proved to be very cold comfort. For our second query was answered on Thursday by the announcement that the quarter loaf will cost 8d. from next Monday, instead of 7½d. Moreover, the Minister for Agriculture has issued an Order under the powers conferred on him by the 1932 Wheat Act which gives rise to misgivings. In this order he fixes the "anticipated supply" of home-grown wheat eligible for deficiency payments from the Wheat Fund at 29 million cwt.—an increase of 2 million cwt. over last year, and of 10.8 million cwt. over 1932-33. This means that more of our wheat requirements will be met under the costly system of indirect subsidy from necessitous consumers, and implies that more deficiency payments must be made from the Fund. It is true that if wheat prices continue to rise the gap to be filled by the levies will fall—but that will be still colder comfort, for it means that the consumer will have to find the wherewithal to pay more for the whole wheat supply. The Minister apparently does not fear this general rise, for in a second order he estimates that the "free" price obtainable by registered growers in 1934-35 will continue to be 5s. per cwt. We hope he may be right; but by legislating for a steadily increasing proportion of home-grown wheat he is seeking to bring it about that the "average" cost of all wheat milled in this country will slowly approximate to 10s. per cwt.

* * *

Railway Wage Agreement.—At the end of last week the danger of a wage dispute on the railways, which seemed to be threatening, was fortunately arrested. The union leaders accepted the companies' offer and a new wage agreement was signed under which part of the "cuts" made by the award of the Railway Wages Board at the beginning of 1931 will be restored. The cost to the railway companies of the concessions now agreed on is estimated at about £1,100,000—which is equivalent to about one quarter of the "savings" effected three and a-half years ago. As the new agreement will not come into full operation until next January the effect on the companies' finances during the current year will be comparatively small. The main feature of the new agreement is the abolition of the additional 2½ per cent. cut on all earnings over 40s. a week made 3½ years ago; the basic reduction of 2½ per cent. is also remitted in the case of the lowest grade workers. It was clear from the beginning that the companies were reluctant to face the prospect of a permanent loss of traffic to the roads which would have been entailed by a strike, and, in the circumstances, the union leaders showed considerable forbearance in refraining from pressing more exorbitant demands. Nevertheless, it is far from certain

that the addition of an extra million a year to the companies' wages bill will ultimately benefit the recipients. In spite of the marked improvement in earnings which took place during the latter half of last year, the railways are still far from being even moderately prosperous. Net revenue in 1933 amounted to only £28.8 millions—which is equivalent to about 2.6 per cent. on the total capital of the four companies, of which more than £300 millions had to go without any dividend at all. During the first half of the present year net receipts were up by about £2,000,000, and in spite of the improvement which has continued throughout the summer, it is by no means certain that the second half of the year will show that this rate of advance has been maintained. (See Investment Note on page 318.) Though the new proposals for wage scales and conditions of service laid down by the National Conciliation Board of the road transport industry may do something to mitigate the pressure of road competition, which is still acute, there does not seem to be any immediate prospect of the restoration of railway earnings to anything like the 1929 level. It may be doubted therefore whether the action of the unions in forcing up wages even to the tune of only a million a year will, in the long run, prove of permanent benefit to the workers. It is at least as probable that the ultimate effect of action of this kind will result in a reduction of the volume of employment in this branch of transport by delaying any reduction of charges that may be needed to enable the railways to ward off the competition of the roads.

* * *

The F.B.I. Mission to Manchukuo.—On August 10th it was announced that the Federation of British Industries had decided to send an industrial mission to Manchukuo to study conditions in that country and to ascertain whether British industry can co-operate with local interests in its development. It is added that the mission will also pay a short visit of courtesy and good will to Japan to establish friendly contact with the representative organisations of Japanese industry and commerce. In this announcement two objectives are put forward which are admirable in themselves, and would therefore be beyond controversy—if they were free from complications. Every sensible person in this country is anxious to take any legitimate and effective action for the opening of new markets for British trade, and equally to seek ways and means of ending the virtual economic war which is at present being waged between British and Japanese industry. Since the two Governments have shown themselves hitherto more peacefully inclined in handling the thorny problems of economic competition than British and Japanese private economic interests, it is highly desirable that these interests should take steps to settle their own quarrels. But if a private "good will tour" to Japan has now been taken up by the F.B.I. as one of the tasks which it is its duty to carry out, there seems no reason why this immensely important business should be tacked on to a trade mission to Manchukuo; for the total trade of Manchuria is a drop in the bucket compared with the volume of the trade for which British and Japanese exporters are competing in more important parts of the world market. On the other hand, if the opening of a new British market in Manchuria is to be taken as the major object of the mission, the local prospects seem poor, in view of the Manchukuo Government's project (reported in *The Times* of last Saturday) for establishing State monopolies of staple imports. It is notorious that one of the functions of the so-called Manchukuo Government is to monopolise the trade of Manchuria for the benefit of Japan; hence the economic advantage which Great Britain may expect to derive from this F.B.I. mission to Manchukuo is less easy to discern than the political advantage which will accrue to Japan. For the Japanese, the F.B.I. mission offers an opportunity of obtaining what may be called "a semi-official British recognition" for the *de facto* regime which Japan has illegally set up in Manchuria. The F.B.I. (like the Third International in a similar situation) may protest that they are not the Government, and that (in the words of a leading article in *The Times* of August 10th) "the Federation could not allow itself to be deterred from investigating [the field of Manchuria] by irrelevant and extraneous considerations." But are they irrelevant? For example, are we to believe that the F.B.I. would have made a public announcement

of this projected mission without first having obtained the British Government's blessing? As it is, the mission cannot be free from unfortunate political implications.

* * *

Prince Starhemberg at Ostia.—Prince Starhemberg's flying visit to Ostia last Saturday, where he conferred with Signor Mussolini and Suvich, is slightly disturbing. It may be interpreted as meaning that Dr. Schuschnigg's Government is doubtful about its ability to hold its own without more direct Italian support. Alternatively it may mean that the Italian Government is anxious to increase its control over Austria in order to forestall some further Nazi offensive. Any tightening of Italy's grip upon Austria is bound to put an additional strain upon the peace of Europe; and this will be so *a fortiori* if Italian policy takes the course of promoting some kind of reconstruction of the pre-war Austro-Hungarian Dual Monarchy under a restored Habsburg Dynasty. For, while it is true that post-war Austria and Hungary, united, would no longer constitute a Great Power within their present frontiers, their union would immensely enlarge the power of their patroness Italy; and any such development, under Italian auspices, would be dreaded intensely, and resisted violently, by the three States of the Little Entente. They would all agree in regarding it as a first—and a formidable—step in the direction of territorial treaty revision in South-Eastern Europe. The truth is that, if the Little Entente had to choose between a Habsburg restoration in a reunited Austria-Hungary under an Italian protectorate, or a frustration of this supposed Italian plan by an *Anschluss* of Austria to Germany, they would opt for the latter as the lesser evil. This applies not only to Yugoslavia, who has much to fear from Italy and nothing to fear from Germany, but equally to Czechoslovakia, who so dreads a Habsburg restoration at Vienna and Budapest that she would prefer the fate of being three-quarters encircled by a Greater Germany, which included Lower Austria as well as Upper Silesia. As for France, her choice of evils, if she had only herself to consider, would be the opposite. But, of course, France has the goodwill of her allies to consider. In the circumstances, it is unfortunate that the rumour of a Habsburg restoration should have revived. Perhaps, after all, this is simply an unwarranted inference from the fact that Chancellor Schuschnigg, with his known personal sympathies for the Habsburg Dynasty, happened to be visiting Budapest at the moment when his Vice-Chancellor flew to Ostia. It is greatly to be hoped that Dr. Schuschnigg's Government may prove strong enough to stand its ground as an independent Power. Its internal position will be strengthened by the release from prison, on August 9th, of Herr Seitz, the former Social-Democratic Burgomaster of Vienna. The release of other imprisoned Social-Democratic leaders is foreshadowed. Meanwhile, on the Bavarian side of the frontier, Herr Hitler has at last taken the step of disbanding the legion of renegade Austrian Nazis, whose numbers are now estimated at something between 30,000 and 50,000. The maintenance of these, misled and disillusioned exiles will remain a charge upon the finances of the Reich; but that is Germany's funeral.

* * *

The Russo-Japanese Railway Dispute.—The long-drawn-out Russian negotiations for the sale of the half-Russian-owned Chinese Eastern Railway to the Government of "Manchukuo" have ended in a deadlock. Nominally

Russia has been dealing with "Manchukuo" through the Japanese Government as intermediary. Actually, of course, the negotiations are with Japan, whose creation and puppet the "Manchukuo" Government is; and the Japanese military occupation of Manchuria, including the C.E.R. railway zone, since the autumn of 1931 is the cause of the negotiations. Being neither able nor willing to fight the Japanese in order to prevent Northern Manchuria from falling into their hands, and having lost, already, the strategic and political value of the C.E.R. as the short cut between Vladivostok and the main body of the Soviet Union, the Russian Government has wisely set itself to sell out its own half-share in the commercial ownership of the railway to the new military masters of the country through which the railway runs. The stumbling block in the negotiations has been the vast discrepancy between the lowest price which the Russians have been willing to take and the highest which the Japanese have been willing to instruct "Manchukuo" to offer. A final Japanese offer, on July 25th and a final Russian counter-proposal on the 31st have left this gulf unbridged; and the Japanese Government have now announced their intention of retiring from their rôle of mediator and leaving the Russians to deal with "Manchukuo" direct. No doubt "Manchukuo," with its Japanese bayonets, can be trusted by Tokyo to sustain the dragon-like rôle of Jorkins; and it is already announced that, if the "direct" negotiations break down, the Manchukuo authorities will treat the C.E.R. in future as an ordinary commercial concern, subject to the common law of the land, and no longer as an international entity with a semi-political status. What this is likely to mean in practice may be gathered from the allegations of malicious and systematic sabotaging of the C.E.R., on the part of the Japanese military authorities in Manchuria, which have just been published (from a safe retreat in Russian territory) by the Russian manager of the railway, Mr Rudy. The intention of the Japanese, if they fail to obtain legal possession at their own derisory price, is evidently to make the Russian interest in the railway as unprofitable commercially as it has already become politically and strategically.

The German Protestants Dissent.—The breach between the German Protestant Reichsbishop Müller, "appointed" by Herr Hitler, and the broad mass of German Evangelical pastors has been widened this week. On August 9th a "snap" convocation of the so-called National Synod of the Evangelical Church, which the Reichsbishop had set up, took place. No fewer than 21 legally appointed representatives were absent, and the Reichsbishop nominated 21 other persons to preserve his two-thirds majority. The Synod then proceeded to pass a law ratifying, retrospectively, all the measures taken by the Nazi Church administration since the Reichsbishop's appointment, thus confirming his suspension of pastors and even giving him powers to change the Church constitution. The Synod even prescribed a new oath, which, although not published at the time in Germany, was quoted in *The Times* of August 10th, and its main provisions are as follows:—

I . . . swear before God as a preacher of the Gospel in my present and in every other spiritual office to observe loyalty and obedience to the Führer of the German nation and State, Adolf Hitler, as befits a servant of the Evangelical Church, and to devote myself to the German nation with every sacrifice and effort befitting a German Evangelist.

Hard on the heels of such proceedings came a striking protest from their pulpits last Sunday by most of the 7,000 pastors of the dissenting Pastors' Emergency League. This declaration, which succeeds the unequivocal declarations of opposition to the Reichsbishop's procedure made by the Opposition Free Reich Synod at Barmen in May, was confirmed at Barmen on Sunday, when 1,800 representatives of 400 parishes in Westphalia and the Rhineland declared all the actions of last week's so-called National Synod at Berlin to be wholly illegal. Thus the opposition in the entire Protestant Churches of Germany to the authority of an appointed Reichsbishop has reached formidable dimensions. Happily, there are signs that the Nazi authorities recognise the dangers of a Protestant *Kulturkampf*. The head of the dissenting Confessional

Synod is understood to have discussed the breach in the Church with certain Nazi Cabinet Ministers. Herr Frick, the Minister of the Interior, in a speech at Cologne on Monday, actually declared that it was the business neither of the State nor of the Nazi Party to attack the Christian Churches or to promote a new faith movement. Next Sunday's vote seems to have forced the State authorities in Germany to take more account of quite another "communion of the spirit" than Nazism. Julian the Apostate tried to impose State paganism throughout his Empire, which was even greater than the Third Reich. But we are reminded that his last words were "*Vicisti Galilee!*"

Russia and Bulgaria.—Diplomatic relations between the Soviet Union and Bulgaria have been restored in a protocol signed at Constantinople at the end of last month. The instrument provides, in those comprehensive terms which have become common form in recent Russian agreements with foreign countries, for a reciprocal abstention from intervention or propaganda, direct or indirect—including the recruitment or incitement, or aiding or abetting, of private armies or militant or terrorist organisations in the territory of the other contracting party, and the active participation or passive acquiescence in the conveyance of supplies to organisations of the kind. Such provisions, in instruments signed by the Soviet Government, are interesting and important in a general way. They are evidence of that Government's earnest desire to prove itself a "good neighbour" in a world whose good will, now that Russia is conscious of certain rather bad neighbours hanging threateningly upon her own far-flung frontiers, she can no longer afford to spurn. A particular interest also attaches to this Russo-Bulgarian protocol if it may be regarded as one further stone laid in place in the large and ambitious structure which Russian and French diplomacy is now busily erecting in Eastern Europe. The protocol is significant in relation to the Balkan Pact and the Little Entente. On the one hand, Yugoslavia has long been anxiously concerned to secure a reconciliation with Bulgaria, with an eye to covering her rear in the event of serious trouble in the Adriatic. This was the more urgent, in that Italo-Yugoslav relations have long been bad, and Bulgaria, until the recent *coup d'état*, was closely linked to Italy. On the other hand, Russia is on intimate terms with one of Yugoslavia's Balkan partners, Turkey, and she has also recently obtained recognition from Czechoslovakia, who is Yugoslavia's partner in the Little Entente, and from Roumania, who is doubly bound to Yugoslavia by Pact and Entente alike. The Russo-Bulgarian protocol may become a bridge both for a reconciliation between Bulgaria and Yugoslavia and for a resumption of diplomatic relations between the latter country and the Soviet Union itself; and this would go a long way towards consolidating the political situation in South-Eastern Europe. Twenty-two years ago, on the eve of the First Balkan War, the diplomacy of a previous Russian regime succeeded momentarily in bringing Bulgaria and Serbia into partnership to Russia's advantage. It would be a curious illustration of the continuity of history if the Soviet Government were to consolidate this achievement on a more permanent basis.

Sterling and International Prices.—The sharp rise in the prices of primary products such as wheat and cotton, due to more unfavourable drought reports from the United States, is reflected in our index numbers for August 15th. Sterling prices of primary products have risen during the past fortnight by 3.6 per cent. and dollar prices by 4.0 per cent. These are both very big increases for a single fortnight, and both figures have now established new high records since their compilation was begun in September, 1931. The British complete index, which includes a certain number of semi-finished products, has been affected by this movement, for it has risen by 1.6 per cent. The Irving Fisher index number for the United States, which includes a larger range of finished products, has remained immune. The net result is that those American farmers who have any produce left to market have substantially improved their position, and the same applies to farmers in more fortunate parts of the world. Even French and

Italian prices have been apparently affected by the drought, for a fractional increase is recorded by both these index numbers. The general impression left by the latest figures is that the world is now experiencing a rise in prices due to growing scarcity, or rather to a disappearance of its excessive stocks of commodities. There is no evidence of any increase in consumption, and indeed the German restrictions on raw material imports point in the opposite direction. The present rise in prices is not therefore as favourable a sign as it appears to be on the surface.

Miscellaneous	65.8	69.4	69.9	69.9
Complete index	60.4	66.2	66.0	67.1
1913 = 100	83.1	91.0	90.8	92.3
1924 = 100	52.2	57.2	57.0	58.0

The past fortnight witnessed a general increase in cereals and meat prices. Among other foodstuffs there was a sharp advance in butter. In the cereals group, cotton, silk, flax and jute were all higher, and the fall in wool prices has for the moment been checked. Non-ferrous metals were slightly higher. In the miscellaneous group, declines in hides and sulphate of ammonia were neutralised by advances in rubber, linseed oil and tallow.

Tin Quota Reduction.—The International Tin Committee at its meeting on Monday reduced production quotas by 10 per cent., to 40 per cent. of the standard tonnage; the reduction is to come into force from October 1st. This decision is, unfortunately, not surprising. It would probably have been put into force earlier had not the 10 per cent. increase in the quota arranged in May been expressly fixed until September 30th. There has been an unusually large drop in tin purchases since June, considerably larger than can be accounted for as a seasonal decrease. From this it is to be concluded that the International Tin Committee's price policy is tending more and more to restrict consumption. The use of substitutes for tin, which right up to recent months was of no great importance owing to the greater economy of using tinplate, is now becoming more serious. For some time past, to quote one example only, large placards have appeared all over England pointing out the advantages of the "new hygienic aluminium food containers." Even in the preserving industry, which has hitherto been undeniably the largest user of tin, competition with tinplate has begun to stir. This should really give food for thought to the International Tin Committee. The new reduction in the quotas which is to rule from October 1st, despite the expected autumn lull at this

period, would seem to indicate that the Committee are bent on doing everything in their power to maintain the present dangerously high price of about £225 per ton.

Cotton Weavers' Wages.—Although some little time ago the Government passed the Cotton Manufacturing Industry (Temporary Provisions) Bill for the purpose of legalising wage lists in the weaving section of the cotton industry, there seems, according to our Manchester correspondent, little prospect at the moment of employers and operatives coming to any agreement on a new list. Joint conferences took place rather more than a month ago which ended in a deadlock. The employers put forward certain proposals which meant a reduction in the earnings of the workpeople and these were definitely rejected. At the end of last week it was announced, at the close of a meeting of the General Council of the Weavers' Amalgamation, that steps would be taken for the resumption of negotiations with the employers. It is understood, however, that the representatives of the workpeople will have their hands tied and that any agreement reached with the employers will have to be ratified by a delegate meeting of the operatives. It is admitted that there are many anomalies in wage rates at the present time; but the employers in their suggested revision are undoubtedly endeavouring to obtain a reduction in wages, and this attitude is being strongly resisted by the workpeople in the several Lancashire weaving towns. It is probable that discussions between the two sides will be reopened next week. Owing, however, to the radical cleavage of opinion which exists, an early settlement is improbable.

Iron and Steel Production in July.—Iron and steel production continues to be well maintained. Although, owing to the "Fair" holidays in Scotland, the country's total production of steel fell from 757,500 tons to 718,200 tons, production of pig iron rose from 514,000 tons in June to 527,200 tons in July, thus returning to the level of May, which was the previous 31-day month.

	BRITISH IRON AND STEEL			
	(Thousand tons)			
	Production	Imports	Exports	
	Steel	Pig Iron	Iron & Steel	Iron & Steel
July, 1933	567.5	487.5	63.4	156.1
June, 1934	757.5	514.9	98.0	204.1
July, 1934	718.2	527.2	126.4	197.1

The principal rise in imports occurred in pig iron, billets, blooms and slabs, and steel bars, rods and shapes. Pig iron imported amounted to 10,980 tons, of which 8,784 tons came from India: 2,052 tons was special pig iron "wholly smelted with charcoal," probably from Sweden. Of the 66,950 tons of pig iron imported this year India has contributed 57,748 tons. Imports of raw materials for the industry have naturally risen considerably with the increase in production. Imports of scrap iron and steel, which amounted to 47,152 tons in the first seven months of last year, have in the corresponding period this year amounted to 235,035 tons: the corresponding figures for iron ore being 1,501,972 tons and 2,457,346 tons, and for manganese ore 59,462 tons and 121,750 tons. (See the Leading Article on July Overseas Trade.) The chief items of exports were tinplates and sheets (34,800 tons), tubes (32,200 tons), galvanised sheets (21,600 tons), steel bars, rods and shapes (14,600 tons), and plates and sheets (14,100 tons). Of the 14,115 tons of plates exported, 10,247 tons went to "other foreign countries," probably Russia. The employment figures issued last week showed that the numbers unemployed in the iron and steel industry at the end of July were 23,492 less than at the end of July, 1933.

UNITED STATES

AGRICULTURE AND BUSINESS "UNDER THE WEATHER"

MIDSUMMER is rarely a period of optimism; but this year sentiment is extremely depressed. The sharp severity of the slump in productive activity since June is now generally recognised. It is realised that, despite higher prices for agricultural products, the drought and its crop failure can only be rated as national misfortune and local disaster. In the security markets, there is growing consciousness of the fact that the volume of rail traffic has not increased rapidly enough to support higher prices of materials and increased labour charges, especially new pension costs; while public utility companies are squeezed between rising taxes and costs and falling rates imposed by the regulating commissions. Few industries are doing as well as a year ago, and the Federation of Labour still rates unemployment at 10 millions. In this setting, the remarks of Mr William Green, President of the American Federation of Labour, provided small cheer for the business community: "Will it be necessary for society to take over the means of production? Will the Government be forced . . . to invite the eager and willing workers to march into the idle shops . . . ? These are questions which industry must ponder now before it is too late. The crisis is on us." No partisan opponent of the Administration has voiced such discouragement; yet his sentiment is echoed, in other terms, of course, by the financial and business community.

In part this gloom reflects the realisation of the severity of the drought. The curtailment of crops, by Nature and by the A.A.A., has had a strong influence on agricultural prices.

PRICES OF AGRICULTURAL COMMODITIES*

(Cents per unit)

	April 16, 1934	August 1, 1934
Wool	79.18	71.82
Cotton	11.80	13.20
Flaxseed	172.00	188.00
Eggs	18.00	18.50
Maize	43.00	71.00
Oats	27.88	47.75
Wheat	80.50	106.13
Cattle	6.30	6.65
Butter	23.50	25.50
Rye	52.75	77.50
Hogs	3.90	4.30

* Excluding processing taxes.

It will be noted that wool and flaxseed, which are largely imported, have changed little, and that cotton has risen only slightly, although the western part of the Cotton Belt is drought-stricken. Eggs, butter, hogs and cattle have shown only negligible price advances; but cereal grains have spectacularly advanced. From these figures, it is quite clear that the drought has been only partially compensated by higher prices. For example, most maize is marketed in the form of hogs; and it is no benefit to the typical Corn Belt farmers if maize goes from 43 cents to 71 cents a bushel, if at the same time hogs advance only from \$3.90 to \$4.30. When considering farm income, it is, of course, necessary to consider the bounties derived from the processing taxes. Furthermore, it must be remembered that the drought has been irregular in its incidence, and that in the driest areas literally nothing has been produced. In such regions, the farmers are this year totally or almost totally dependent upon Federal bounties. Farm income is likely to be less this year than last; although more liberal Government bounties may make up the difference. The Department of Agriculture actually forecasts a farm income *higher* this year than last. Moody's daily index of primary commodities now stands at 147, showing an advance of about 20 per cent. since December. The present figure is approximately back at the highest point touched in mid-July, 1933. The Bureau of Labour index at 75 (against 60 in the early part of 1933) has maintained its advance intact.

"SETBACK IN PRODUCTION"

The Federal Reserve figures for June show that in that month, although there was some recession, there was still little evidence of the slump which was to come in July.

FEDERAL RESERVE BOARD BUSINESS INDICES

(1923-5 = 100. Seasonally Adjusted)

	June, 1933	April, 1934	May, 1934	June, 1934
Industrial production	91	86	86	84
Manufactures	93	85	86	83
Minerals	84	90	89	88
Construction contracts (total)	18	32	26	29
Residential	13	12	11	12
Urban	23	49	39	43
Factory employment	67	82	82	81
Factory payrolls	47	67	67	65
Freight car loadings	62	62	63	64
Department store sales	68	77	77	73

The sudden decline in steel operations from about 60 per cent. of capacity in June to below 30 per cent. of capacity in July is hardly typical of industry in general. The advance in cartelised prices in April and the threat of strikes had offered a special incentive to fill steel requirements before the end of the quarter. Nevertheless, the July setback seems fairly widespread. With the present low level of money rates there is strong inducement for a concern to convert working capital from its cash equivalent into raw material; and, as far as can be ascertained, raw material stocks are generally fairly heavy.

With the disappointments of the summer there has come from the usual quarters a demand for "inflation." The Committee for the Nation has energetically revived its campaign for a 50-cent dollar; the silver interests urge greater activity; while others advocate a revival of the C.W.A. or an amplification of the P.W.A. As the business community has largely lost faith in any and all of these devices, this renewed agitation has contributed to general discouragement. In the last few days the rumour that the dollar would be further devalued has revived, and these rumours have received sufficient credence to have had visible effects in certain markets, and notably on the foreign exchange value of the dollar. The somewhat anomalous coincidence of a sharp rise in commodities and an equally sharp fall in securities is not, however, to be explained on such terms. The commodities that have risen have done so primarily because of reduced supplies occasioned by drought. The decline in securities is to be attributed to the deterioration of the business situation and to waning hopes of an autumn recovery.

NEW YORK, August 8.

FRANCE

FOREIGN AFFAIRS

PUBLIC opinion continues anxious about political developments in Central Europe. The latest Nazi manoeuvre brought relief; but no one here dares to take the *Führer's* declaration of pacifism at its face value. It is conceded, however, that economic difficulties may create a more conciliatory attitude in German foreign policy for the next few months at least. As to the recent "silver utterances" in America, not much importance is attached to the latest prophecy of Senator Thomas, that nationalisation of silver means the end of the gold *bloc*. This measure, however, even if it does not entail immediate depreciation of the dollar, is not considered as a factor making for confidence in the stability of that currency.

GOVERNMENT AND THE NATIONAL FINANCES

The Doumergue Government is proceeding with its measures for bringing order into the national finances. At the last Cabinet Council, M. Germain-Martin declared that preparation of the 1935 Budget was being pushed forward

CHEMICAL BANK

&

TRUST COMPANY

NEW YORK

For over a century in times of crisis attention has been called to the stability of the Chemical Bank.

Office of the London Representative:

6 BISHOPSGATE, E.C.2

under favourable conditions and that the task will be ended by September 15th. He confirmed that the next Budget will not exceed 47,000 million francs, against 50,000 millions for the current Budget. This reduction will be effected by economies, and a large slice has already been secured as the result of earlier measures. On the same lines, a recent Decree considerably reduces the percentage grants-in-aid accorded by the State to Departments and Communes for public works. Excessive grants in the past have stimulated the smaller local authorities to lavish money on schools and municipal works, as a result of which their local budgets and rates increased enormously.

This policy of economies is causing "increasing returns" of confidence. The subscription lists for the last issue of 4 per cent. Treasury bonds were closed last Saturday and it was officially announced that the total amount taken up was approximately 5,000 million francs, despite various internal and external disturbances unfavourable to public confidence. Out of these 5,000 millions, 3,000 millions were, as was expected, subscribed in new money, which renders the Treasury situation easy until at least the end of October. The other 2,000 millions were paid in "Clémentel" bonds, which are due for redemption in October. As the amount of these bonds outstanding at that date is about 6,000 millions, the conversion issue which must then be offered will thus be reduced to about 4,000 millions. Confidence in the Government restoration programme appears elsewhere, notably in the steady increase in the Bank of France's gold reserve, which reached 80,486,581,000 francs in the last return, against a note circulation of 81,717,825,000 francs, i.e. a cover of nearly 100 per cent. The cover against sight liabilities reached 79.91 per cent., a ratio which was only once exceeded in the past, at 79.95 per cent. last November.

SAVINGS BANKS AND CONFIDENCE

The Savings Bank of Paris has just published its annual report, which contains valuable information on French saving during 1933. Deposits in the Savings Bank of Paris reached 483,960,000 francs, which is 68 millions less than in 1932. Withdrawals were 440,714,733 francs. The French ordinary savings banks also registered a slackening in the increase of new accounts and new deposits. Deposits were 7,862,413,000 francs, a sum nearly 2,000 millions less than in 1932. Withdrawals, on the contrary, reached 7,834 million francs, or 534,600,000 francs more than in 1932. The balance is still in favour of deposits, but only by 28 million francs, instead of 2,500 millions in 1932. At the end of the year total deposits reached 34,535 million francs, i.e. an increase of 876 million francs (interest included), against an increase of 3,000 millions at the end of 1932. In the Postal Savings Bank the same tendency is evidenced; on December 31st total deposits reached 24,133 million francs, i.e. an increase in deposits of 515 millions instead of 3,000 millions in 1932. The reasons for this trend are numerous: the crisis, which curtails the reserves of the public, the continuous recourse by the State to the money market, the political crisis and events in Germany,

etc. This review of saving activity during 1933 invites a guess at what it has been in the first few months of the current year. From January 1st till May 15th the returns of the savings banks have shown heavy withdrawals, which amounted to 250 million francs in two weeks (February 16th-February 28th). Although since then these returns again show regular deposit surpluses, the latter have never been above 74 millions (second two weeks of July), so that the net results for the first seven months of the year still leave a surplus of withdrawals of 508 million francs.

INDUSTRIAL PRODUCTION IN JUNE

The Statistique Générale has just published its monthly figures showing industrial production in France. These statistics compare the June figures with those of the two preceding months and with June, 1933:—

1913 = 100

	June, 1933	April, 1934	May, 1934	June, 1934
General index	111	103	101	99
Engineering	113	100	99	98
Iron and steel	91	79	80	80
Textiles	75	69	66	61
Mines	100	103	103	102
Building (adjusted figures)	92	87	84	81
Leather (" ")	111	101	99	98
Paper (" ")	142	154	158	159
Rubber (" ")	995	974	940	892
Motors (" ")	476	460	456	454

In the motor industry, 15,902 automobiles and 1,937 lorries have been put on the road, compared with 15,026 and 2,046 in May, 1934, and with 14,903 and 2,475 in June, 1933. The figures for the cotton industry are as follows:—

	March	April	May	June
Spinning (average per spindle in kilograms):				
Production	1,841	1,552	1,593	1,453
Deliveries	1,847	1,520	1,608	1,411
Stocks	2,615	2,626	2,634	2,423
Unfulfilled orders	5,618	5,373	5,126	4,568
Weaving (average per loom in pieces of about 100 metres):				
Production	5.65	5.18	5.00	4.95
Deliveries	5.03	4.43	4.43	4.85
Stocks	8.24	8.88	9.62	9.09
Unfulfilled orders	15.44	14.51	12.75	12.63

The figures of bankruptcies register a slight decline compared with the preceding month. Bankruptcies were 860 in July, against 1,036 in June, and bankruptcies and judicial liquidations were 1,212 against 1,414 in June.

PARIS, August 14.

GERMANY

NEXT SUNDAY'S PLEBISCITE

ACCORDING to official statements the result of the voting on August 19th "is already established." Although by this, as appears from other official utterances, is meant that "all" Germans will vote for the fusion of the Presidency with the Chancellorship as already enacted by a law which came into force on August 2nd, it also means that the Government will be in a position to announce just the result that it considers advisable. The circumstance that in the last appeal to the nation Herr Hitler received over ninety per cent. of votes might conceivably raise difficulties, for it would be difficult for a Nazi government to admit that its popularity had abated, and even a slight increase of its election popularity must bring it within sight of a 100 per cent. vote, so that a few more elections would raise a dilemma. The appeal is officially described as a "free election." It is not an election, there being no choice, and it is not free, for no person without risking his life would publicly express opposition. The formal purpose of the election (though the Minister for Propaganda affirms that an election is necessary only in order to impress foreigners) is not clear. It is not admitted that a disapproving vote, which is at least theoretically possible, would cause the revocation of the fusion law. The legal position is, indeed, in other respects unsatisfactory. The "enabling Act" of May 24, 1933, which in general conferred authority to

deviate from the Constitution, specially excepted presidential rights. The assumption of presidential powers by the Chancellor is a breach of this provision. In general, the appeal to the nation seems intended for extensive official propaganda and agitation, which is to "prove," what observers know is contrary to fact, that Herr Hitler and his Government have not lost supporters by the massacre of June 30th, and by the fiasco in Austria, with their harmful effects on Germany's international position.

CONTROL OF RESERVES AND RAW MATERIALS

The exchange agreement with Great Britain has not caused unqualified satisfaction. It had been expected that the agreement, by covering old debts, would have made possible the resumption of import of English yarns, or at least that a simultaneous private agreement settling the old debts question would have been reached. Further, an agreement which is dependent on the non-endangering of the Reichsbank's precarious reserves hardly promises permanence. The Reichsbank's reserves depend partly upon measures which may be taken by other Governments than the British. This fact is brought out by Holland's decision to put into force against Germany, on August 15th, her compulsory-clearing law, in consequence of the failure of negotiations for regulating payments. Any creditor country that resorts to compulsory clearing can always, if its trade balance with Germany is sufficiently passive, exact payments in excess of those agreed on between Germany and other creditor countries; and if Holland chose to retain the full trade surplus the German reserves situation would be aggravated. It is, however, likely that the Dutch compulsory clearing measure will prove as effective as were the mere threats of clearing by other countries, and that an agreement will ultimately be reached.

The delivery of gold for industrial purposes has been restricted. Non-ferrous metals will henceforth be supplied to industrial undertakings only upon proof of individual need. The control board for these metals has fixed prices. On the basis of the law of March 22nd, authorising control of industrial raw materials, a board has been established for iron ore, manganese, scrap iron, pig iron, ingot steel, semi-products, and the usually listed rolling-mill products. The Ministry of Economy announces that priority in the supply of raw materials will be conceded for execution of export orders. The Ministry states that export now constitutes 10 per cent. of total industrial production, which is less than during the last good trade period. The ordinance of May 16th against the raising of prices of necessary articles of daily consumption without official permission has been extended to all goods.

AGRICULTURAL SUPPLIES

It is officially stated that the food supply of the population in the new crop year is assured, and that resort to rationing or substitutes or synthetic foods will not be necessary. The crop estimates for August 1st show for wheat, rye, barley and oats slight increases in the yield per hectare as compared with July. The estimated bread-cereals production is 11,540,000 tons, as against the 11,380,000 tons of the July estimate. The average of 1924-33 was 11,400,000 tons, in the earlier years of which decade, however, production was very low. The estimated oats production is 21 per cent. below the decade average; early potatoes only 1,870,000 tons, against 2,910,000 tons; hay, first cutting, only 11,690,000 tons, against 23,370,000 tons. The estimates therefore point rather to a fodder than a food shortage, except for potatoes. An ordinance regulating the sale of potatoes has been issued. The Finance Minister has been empowered to give further guarantees of Rm. 46 millions for regulating the cattle market and Rm. 1,000,000 for fostering home production of fodder.

MONEY AND CREDIT

The demand for money this week increased in consequence of quarterly tax liabilities, and bank acceptances were offered. The Reichsbank's return for August 7th shows that only 35½ per cent. of the July month-end credits had been repaid, as against 63 per cent in the same period of 1933. Discounts and Reichsmark note circulation are only slightly higher than a month ago; total circulation

Rm. 5,564 millions, against Rm. 5,388 millions a year ago. The question of the valorised mortgages has come up for discussion. The last regulation, under which 25 per cent. of the original gold value of mortgage claims, which had depreciated during the inflation, was restored, was that repayment of capital could be claimed on April 1, 1935. The total mortgage sum is Rm. 13 milliards. As the interest borne by the valorised mortgages is lower than the current market rate there would be little prospect of their prolongation in 1935. The creditors are insurance companies, banks, savings banks, and private capitalists. A new legislative regulation, which could only take the form of a new postponement of repayment, is expected.

EMPLOYMENT, INDUSTRY AND FOREIGN TRADE

The number of unemployed in July fell by only 54,000; in the two months June and July by 100,000. In July, 1933, the unemployment decreased by 240,000. The occupational census of June 16, 1933, shows, with a practically unchanged total since 1925 (32,296,000, as against 32,009,000), a decline in the number engaged in industry from 13,487,000 to 13,051,000, whereas the number engaged in trade and communications rose from 5,255,000 to 5,931,000. In 1907, out of 25,156,000 total employed only 9,848,000 were engaged in industry; it seems therefore that, independently of the depression, the pace of industrialisation slackened in the second census period. The number of persons engaged in agriculture, which rose between 1907 and 1925 from 8,556,000 to 9,762,000, had fallen by 1933 to 9,343,000. The number of persons with independent occupations shows, contrary to general belief, a sharp rise.

The industrial position has changed little. The share of the total coal turnover sold in the "contested area" (subject to British competition) has increased. Coal dumps have slightly declined. The home steel market is active. Export of heavy iron and steel in the first half-year was 1,233,200 tons, import 924,000 tons, as against 978,900 and 660,800 tons respectively in the same half-year of 1933; the export surplus of iron and steel has therefore been maintained, and in rolling-mill products substantially increased. The first balance-sheet total of the reconstructed Steel Trust (Vereinigte Stahlwerke A.G.) is Rm. 1,740,355,000, whereof Rm. 969,757,000 represents land, buildings and plant; Rm. 371,716,000 participations in other concerns; and Rm. 221,859,000 claims on other concerns. On the liabilities side are capital Rm. 549,469,000 (formerly Rm. 775,000,000) which is to be raised to Rm. 560,000,000; long-term debts in foreign currencies Rm. 142,569,000, in marks Rm. 170,859,000; bank debts in foreign currencies Rm. 71,881,000, in marks Rm. 69,329,000. From the profit and loss account it appears that gains of Rm. 71 millions resulted from the conversion of German-held dollar bonds into mark bonds and from amortisation of foreign-currency debts over the exchanges.

The foreign-trade return for the first half-year shows with Europe an active balance of Rm. 425 millions, as against Rm. 768 millions in the same half of 1933, and in Europe without Russia Rm. 469 millions, against Rm. 679 millions; with America a passive balance of Rm. 353 millions, against Rm. 244 millions. Only with Asia has the passive balance declined. Increased imports of raw materials made for greater passivity with overseas countries. The chief declines in exports were to France, Switzerland, Holland, Belgium, Austria, and Poland; whereas exports to Italy, Denmark, Greece, and Great Britain increased.

BERLIN, August 15.

SWEDEN

BUSINESS EXPANDING

ECONOMIC developments in Sweden during the last few months have been characterised on the one hand by a marked increase in the tempo of production in the large export concerns of the mechanical industry, which had previously, unlike other export industries, shown comparatively unsatisfactory export figures; and, on the other hand, by the increased employment which is now also visible in

most industries. Practically all statistics show a progressive improvement in the situation. Nevertheless the tendency of the volume of credit to increase which was noticeable during April and May has ceased, and the demand for credit has actually declined. It is as yet too early to see whether this development is or is not a seasonal phenomenon.

In Industriförbundet's seasonally corrected index of industrial production this increased employment finds expression in the rise of the index number from 107 in March this year to 110 in April and 111 in May. Indeed, the last figure represents the average level for the good year 1929. In June, 1933, the figure was 85, and the highest position was reached in the beginning of 1930 with the figure of 118. Just as in the earlier part of the year, it is the industries working for the home market which have caused the rise, and among them principally the consumption industries.

DECLINING UNEMPLOYMENT

As has already been remarked, this increased production is also reflected in a considerable decline in the number of unemployed. Whereas previously the increase in the quantity of production was only faintly reflected in the number of workers employed, the saving of labour effected by rationalisation no longer offsets the increased demand for labour. The number of applications for work per 100 vacancies has fallen from 560 in January and 401 in April to 317 in May and 298 in June, while the May and June figures a year ago were respectively 458 and 451. The number of unemployed in the trade unions amounted at the end of May to 15 per cent. of their registered members, as against 19.5 per cent. a month earlier and 21.1 per cent. at the same time last year. These figures are absolutely the best since the late autumn of 1931, but relatively they are somewhat less favourable than those for the corresponding months of 1931. The number of unemployed reported to the State Unemployment Commission amounted at the beginning of June to 116,300, as against 145,600 a month earlier. On June 1st last year the figure was 156,200. The improvement during the last months in the metal and iron industry is reflected in the scarcity of skilled and specialised workers. This favourable development in the labour market is all the more striking since it has taken place in spite of the unemployment policy of the Social-Democratic Government, which in a high degree tends to restrain the unemployed from seeking work in the open market, where wage conditions are frequently less advantageous.

FOREIGN TRADE IMPROVING

Whereas increased employment in domestic industry during the first five months of this year has brought down considerably the total of unemployed, the favourable development of export industries (especially in the mechanical industries) will almost certainly have contributed in a high degree during June to a more than seasonal reduction of the number of unemployed. The volume of foreign trade during June was larger than in any preceding year since 1930, and exports were especially large. This development has resulted in an export surplus equal to that of the same month of 1929, and for the first half of this year the import surplus amounted to only 31 million kronor, or the lowest amount to be found in any first half-year since the end of the war. The quantity of timber shipped during June was the highest monthly figure reached since 1929, both as regards sawn and planed woods. Exports of pulp for the second quarter reached a particularly high level, and there is as yet no tendency to decline. The same is true of exports of paper. The increase in the export value of the products of the mechanical industries is especially striking in the case of electrical machinery and separators. The marked improvement in the sales of the iron and steel industry is still continued. Exports of iron ore are still roughly three times as great as during the same period last year. Exports for the first half-year exceeded those of the whole of last year. Imports of raw materials and semi-manufactures for the heavy industries maintained a high level. The June figures are the highest monthly figures for the year. Imports of cotton are still considerable, but on the other hand import requirements of wool were covered to a very large extent in the first four months of the year. The June figure is lower than any monthly figure in this or last year. The imports of this commodity for the half-year are 50 per cent. larger than for the corresponding period last year.

DEMAND FOR CREDIT WANING

The increased tempo of production in the various branches of industry would lead one to expect an increased demand for credit from the banks. This has not occurred, however. Payments for foreign shipments usually result, in the month of June, in a reduction in the volume of credit of the banks, while the banks instead acquire the foreign exchange from exporters. The shrinkage in the volume of credit is, however, considerably greater this year than in previous years. Compared with the increase during the two immediately preceding months this changed tendency appears very clearly. It would appear that it has its cause in the unusually abundant flow of foreign exchange during recent months and does not reflect any decreased capital requirements of industry. The exchange holdings of the commercial banks increased during June by 41 million kronor and during the whole of the second quarter by a total of 94 million kronor. The exchange holdings of the Riksbank and the commercial banks exceeded 550 million kronor at the turn of the month, and if we add to this the gold reserves we reach a total holding of about one milliard kronor of short-dated resources. About 80 per cent. of this amount is calculated at gold value. The export abroad of securities by the banks and stockbrokers amounted in June to 8,830,000 kronor and imports at the same time to 6,800,000 kronor. The balance of payments was thus improved by 2,030,000 kronor.

Naturally the Stock Exchange could not fail to be strongly influenced by the drastic alteration in Germany's commercial policy which preceded the last political crisis in that country, and which has since been intensified. The vexed problem of transfer is naturally reflected in the general tone of the Stock Exchange, and the uncertainty of the position in Germany and of the future of trading relations with that country has affected Stock Exchange activity as well as certain Swedish exporting industries unfavourably. As compared with the position at the beginning of the year, how-

ever, there was at the end of the half-year still a rise of 1.4 per cent. in industrial production. The last two months have especially affected the Grängesberg company, despite its increased shipments of iron ore in recent months. Germany is, of course, its largest market, and the outcome of the transfer negotiations must be of decisive importance for its activities. The relatively sharp fall in bank shares is due to the same cause, since the yield on the comparatively large holdings of German bonds by certain banks must considerably affect their profit-earning capacity.

STOCKHOLM, July 24.

CANADA

OTTAWA has now relapsed into the usual post-session torpor. The work of organising the new central bank and of setting up the machinery necessary for the operation of the Central Marketing Board is going ahead, while the Finance Minister has been conferring with leading bankers about plans for a new conversion loan in the autumn. A Victory Loan of about \$233 millions matures on November 1st, and as some other obligations have to be provided for it is expected that there will be a domestic offer of \$250 or \$300 millions at a rate below 4 per cent.

Their political fortunes are also occupying the attention of Ministers, and a miniature general election to fill four vacant seats in the Federal Parliament, all in Ontario, is due to take place on September 24th. At least two of the three seats held by the Conservatives are shaky, and if they are lost, as is not improbable, the Liberals will renew their demand for a general election. But it will be impossible to have the new registration system, created last session, in operation before the end of the year, and so the common forecast in Ottawa is that the Government will summon Parliament in November instead of January and let it sit through the winter. According to this prediction it will introduce industrial reform legislation based on the recommendations of the Stevens Committee, which has been investigating price spreads, wage conditions and correlated problems; and after passing another Budget will go to the country in April or the first half of May. By this course it will be possible for Canada to send representatives armed with a proper mandate to the gathering of the statesmen of the Commonwealth which is due to take place at the time of the silver jubilee celebrations in London next June, and an unpleasant squabble on this subject which has been looming up will be avoided.

POOR OUTLOOK FOR WHEAT

There is little good to report about the all-important Western wheat crop, and the surveys, official and unofficial, continue their pessimistic tone. The Bureau of Statistics' latest bulletin, published on July 24th, says that another week of high temperature and limited rainfall has caused further damage to the Western crop, and describes the drought as more severe in the areas previously affected, extending into districts where the crops appeared good. There has also been much heavier loss from hailstorms than usual, but the grasshoppers, although thick in many areas, are not causing much damage. In a large part of the West the crop is ripening prematurely and the harvest promises to be early. Alberta is faring better than the other provinces, and one authoritative expert forecasts that its wheat yield will be about 135 million bushels, but that the total yield of the prairies will only be 288 million bushels. The Western pastures have been badly burned, and there is serious concern about the prospects for autumn and winter feed for livestock. The price of wheat has risen; but the volume of export demand remains disappointing, and on July 13th visible stocks of Canadian wheat were still 187 million bushels, as compared with 200 million bushels at the same date last year. Milling interests protest that their export business is being seriously impaired by the marketing policy of the Government's grain agent in Winnipeg, in maintaining a substantial spread between the domestic price for wheat and the world price.

BUSINESS STILL IMPROVING

The foreign trade returns for June were again satisfactory, and are, with the comparative data for June, 1933, as follows:—

	June, 1933	June, 1934
Exports	\$ 45,967,773	\$ 58,045,528
Imports	\$ 33,618,905	\$ 46,185,892

Exports to the United Kingdom rose in value from \$18 to \$26½ millions, a gain of 47.4 per cent.; and imports from the United Kingdom from \$8 to \$9½ millions, a gain of 19.1 per cent. Imports from the United States (\$26½ millions) rose by 45.1 per cent., and exports to the United States (\$16 millions) rose by 7.4 per cent.

Business conditions maintain an upward trend, and the general economic index of the Bureau of Statistics for the week ending July 14th was 96.2 as against 95.3 for the previous week—a new “high” for the present year. The total car-loading figure for the first two weeks of July, 85,336 cars, showed a gain of 5,024 cars over the corresponding figure for 1933.

Wholesale trade has been active and seasonal merchandise has moved in satisfactory volume, while retailers report substantially better business than a year ago, together with a greater influx of summer visitors. In industry, cotton, woollen and hosiery mills are mostly working full time; but the clothing industry in Quebec is dislocated by a strike for higher wages. The boot and shoe plants are also well supplied with orders; and the rubber, electrical appliance and meat-packing plants are also busy. In the heavier industries there has been evidence of the usual midsummer recession; but output in the majority is at a higher level than a year ago. The June production of pig iron was 37,306 tons as compared with 38,189 in May; and of steel 64,013 tons compared with 71,437 in May. In the primary products industries there has been a decline in the export demand for lumber, and prices have fallen slightly. The newsprint industry, without being able to make reasonable profits, is keeping up its output; and exports for June, although below the May figure, were valued at \$6,816,158—more than \$1 million above the figure for May, 1933. There is steadily increasing activity in all mining camps, and several new gold mines have recently come into operation; the more important new discoveries being in British Columbia and Manitoba. The early run of salmon in British Columbia has been heavy, and the fishing industry on both coasts has better prospects than for some time. But new construction still lags everywhere; and the June figure, valued at \$12 millions, was very low, being little more than one-third of the figure for the average of pre-depression years.

The latest bank statement, to the end of June, shows that current loans in Canada are \$874½ millions, \$12 millions less than at end-June, 1933. Call loans at \$103 millions are up by \$5 millions; and savings deposits are down by \$22 millions. There was an increase of \$14 millions in the note circulation during the month of June.

MONEY AND BANKING

AMERICAN SILVER POLICY

PRESIDENT ROOSEVELT'S proclamation of August 9th, calling on all holders of silver bullion in the United States to sell their stocks to the Treasury, has fluttered the monetary doves to an extent far greater than its intrinsic importance would indicate. The proclamation contains no new statement of policy, it adds nothing to the President's message to Congress of last May, and is issued merely in execution of the Act passed as a result of that message. Moreover, the amount of money involved is very small in comparison with the huge totals in which American public finances are now expressed. Nevertheless, the proclamation was sufficient to induce a depreciation of several points in the exchange quotation of the dollar, driving it below the gold export point and abruptly reversing the westward tendency of gold movements that has prevailed for some months past. More than that, the New York market in United States Government bonds suffered a sharp relapse, in spite of supporting purchases undertaken by the Stabilisation Fund of the Treasury, and an issue of Treasury-guaranteed securities of the Home Owners' Loan Corporation met with such an unfavourable reception that the Treasury had to accept bids below par for part of the issue and itself to take up another part.

This flurry was not, of course, entirely caused by the decision to purchase the existing stocks of silver. But the implication was read into the decision that the President had returned from his holiday more favourably inclined to further monetary experimentation than he has previously been this year. The Treasury, with an eye to its refinancing programme, has tried hard to combat this view, and the apprehensions of the market have been lessened but not entirely laid to rest, particularly since the voice of Senator Thomas has been heard from the Middle West advocating an immediate further reduction of the gold content of the dollar.

It is idle to attempt to foretell anything so inherently unpredictable as Mr Roosevelt's intentions. But it will be useful to review the silver legislation itself, apart from its connection with the resurgent inflationary agitation. The root of the silver agitation lies, of course, in the heavy fall in the price of silver which had been apparent ever since 1920, but was very greatly accentuated during the early years of the depression. The falling price was naturally little to the liking of silver producers, whether in the United States or elsewhere, who provide the bulk of the support for a policy of remonetising silver or raising its price in other ways. But because of the past history of silver as a money metal in the West and its present use as currency in China, the bare appeal for assistance for the silver producers has been overlaid with two economic arguments. The first, which is almost peculiar to the United States, goes back to the controversy of the '90s. Advocacy of bimetallism has always been the vehicle through which the Agricultural States of the American West have expressed the age-old demand of the agrarian debtor for an increase in the currency. Memories of William Jennings Bryan and the “cross of gold” have succeeded in perpetuating the attachment to silver of the Western section of the Democratic Party, while in the eyes of the East silver legislation and unsound inflation are still almost synonymous terms.

The second argument has a wider following. Since silver is the currency of China, an increase in the price of silver raises the value of Chinese currency, and this, according to the silver advocates, increases the power of China to purchase Western goods. This argument, which is demonstrably false, has been propagated with a cynical inconsistency by precisely those people who have most vigorously insisted on lowering the value of their own currency. That what is sauce for the American or British goose is sauce for the Chinese gander has been shown by the course of events since 1931. Since September, 1931,

the price of silver has been rising, and the quotation of the Chinese dollar has risen from 10d. to 1s. 4½d. in London and from 21 cents to 33 cents in New York. The result for China, as demonstrated in Sir Arthur Salter's report on “China and the Depression,” which was published as a Supplement to the *Economist* of May 19th, has been falling prices, dwindling trade and depression. The forcibly expressed views of the Chinese Government have consistently been that the price of silver should be neither raised nor lowered, but stabilised. A third element in the problem is the position of the Indian Government, which, having demonetised silver after the war, has large stocks of silver to sell.

An attempt was made at the World Economic Conference last year to reconcile these conflicting forces, the Americans and the producers aiming for a rise in the price of silver, the Chinese Government wanting stabilisation and the Indian Government anxious to dispose of its holding. The Agreement concluded at the Conference provided that the Indian Government was to restrict its sales to 35 million ounces a year, while four other Governments, of which the American was the chief, agreed to purchase an equal amount, the American share being 24 million ounces. This Agreement could fairly be interpreted as a stabilisation measure. Indian Government sales were to be offset by other Governmental purchases, leaving the implication that the market was to be relieved on balance of all Governmental intervention. China, in ratifying the Agreement in March, made the specific reservation that her ratification would be cancelled if the spirit of the Agreement were departed from. India had ratified the Agreement in November, and although no reservations were made, emphasis was laid in the Finance Member's speech on the stabilising effect which it would have on the market.

President Roosevelt ratified the Agreement on December 21, 1933, at the same time announcing that the American Government would purchase all domestically-mined silver at the price of 64½ cents an ounce. As American domestic production was about 22 million ounces in 1933 this could be interpreted as an implementation of the Agreement, although the high price offered is likely to stimulate a greater production.

The American silver interests, however, were far from being satisfied with ratification of the London Agreement. Their pressure on the President continued, and in May he consented to the introduction of a Silver Purchase Bill. This measure declares it to be the intention of the United States Government to purchase silver until its monetary reserves consist as to three-quarters of gold and as to one-quarter of silver. As it was made clear that there was no intention of exchanging any of the gold reserve for silver, this involved the purchase of about \$2,600 millions of silver. Assuming that silver would be valued at the old mint price of \$1.29½ an ounce, this meant buying 1,600 million ounces in addition to the 400 million ounces already in the Treasury. The free stocks of silver bullion in America do not exceed 250 million ounces, the total stocks in Shanghai and India are only about 700 million ounces, and the world production of silver—out of which the demands of the East and of industry have to be met—has never exceeded 270 million ounces and has recently been about 160 million ounces a year. The programme is thus a very long-range one. As a preliminary step, the President was consequently authorised compulsorily to purchase all silver in the United States.

This is the step he has now taken. The silver is being purchased at 50.01 cents an ounce, but it will be coined into silver dollars at the rate of \$1.29½ an ounce. The Secretary of the Treasury has, however, announced that only sufficient of these silver dollars—or, more precisely, silver certificates based on them—will be issued to cover the purchase price of the silver. Taking the official estimate

of 200 million ounces likely to be bought, the addition to the currency will consequently be only some \$100 millions. These notes will presumably be deposited in banks and will form no net addition to the circulation. In any case, the amount is trifling in comparison with the \$5,300 millions of currency in circulation or with the \$1,900 of excess reserves of the member banks of the Federal Reserve system. Any inflationary effect in the United States, other than a purely psychological reaction, will clearly be very small.

The effect of the policy on the price of silver is of greater interest. If purchases are restricted to silver already in America, the effect will be small. But they will not be, and are not, so restricted. The American Treasury has been buying silver in London for some time past, and its purchases are undoubtedly responsible for the strength of the market. The price of silver has risen this year from 19½d. and 45 cents on January 2nd to 20½d. and 48 cents on August 7th. The quotation of the Chinese dollar is now nearly 10 per cent. higher than at the time of the London Agreement, and there is talk in Shanghai of an embargo on exports of silver. The American Government should realise that its policy of bribing the silver miners of the West is the direct cause of quite unnecessary economic dislocation in a country which not only has no margin of endurance for further disasters but is also the largest untapped market remaining in the world for those products of Western industrialism in which America herself excels.

FINANCIAL NOTES

The Money Market.—At the end of last week the market secured the bulk of the new Treasury bills, and as a result there was a fair demand for funds. Outside money was very firm at ½ per cent., and the clearing banks lent a little fresh money at one per cent. A fair amount was called by one of the clearing banks on Thursday.

	July 26, 1934	Aug. 2, 1934	Aug. 9, 1934	Aug. 16, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short Loan rate:—				
Clearing banks	1	1	1	1
Others	½	½	½	½
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	7	7	7	7
(b) Others.....	½	½	½	½
Three months' bank bills	6	6	6	6

The discount market remains very idle. Only £31 millions of Treasury bills were allotted on August 10th, the average tender rate being 16s. 11.06d. per cent., against 16s. 4.76d. per cent. the week before. The clearing banks have not been ready buyers of bills, and their purchases have been mainly limited to bills maturing at the end of September. This is a convenient date, as it puts holders of bills in funds with which to pay for new bills maturing at the end of the year. As a result of this demand, market supplies of bills maturing towards the end of September are becoming limited, and some houses are now quoting to outside buyers rates as low as ½ per cent. The clearing banks' buying rates are unchanged at ½ per cent. for October and November Treasury bills and ¾ per cent. for earlier dates, but brokers were not willing to sell hot Treasury bills at more than ½ per cent., and at this rate there were few buyers. The total of outstanding Treasury bills issued by tender has now fallen to £450.3 millions, while during the week ended August 11th the total of bills issued through the tap rose from £371.0 to £377.8 millions. Against this must be set a fall of £7.4 millions in Ways and Means advances from Public Departments, so that what has really occurred is a change in the character of the Departments' floating assets.

The Bank Return.—The return of notes from circulation after the holidays has now begun, and as a result the circulation has fallen by £8.7 millions and the Reserve has risen by the same amount. In the absence of any appreciable changes in the composition of the Bank Return, the

banks have obtained most of the benefit of this return of currency, and bankers' deposits have risen by £7.5 millions. A further return of currency may be anticipated next week.

BANK OF ENGLAND					
	Aug. 16, 1933	Dec. 27, 1933	Aug. 1, 1934	Aug. 8, 1934	Aug. 15, 1934
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold.....	190.2	190.7	191.6	191.7	191.7

Banking Department:—					
Reserve	72.1	59.7	62.8	59.4	68.1
Public deposits.....	17.3	22.2	11.9	23.9	23.5
Bankers' deposits	98.2	101.2	96.5	82.0	89.5
Government securities ...	82.3	88.0	81.2	83.3	84.1
Discounts and advances	10.1	16.8	8.9	7.0	5.5

Proportion 45.7% 37.3% 43.2% 41.9% 45.4%
Public deposits remain at the relatively high figure of £23.5 millions. No immediate decrease is to be expected, as next week the monthly Excise payments are due. The Government has heavy disbursements to make on September 1st, including the 3 per cent. Conversion Loan dividend and the half-yearly Victory Bond redemption. The present size of public deposits may therefore be due to preparations for these payments, and in any case money is so plentiful that there is no harm in this amount being withdrawn temporarily from use.

The Foreign Exchanges.—Operations in dollars made the foreign exchange market rather more active this week, but the general trend of the Continental exchanges was slightly against sterling. The New York spot rate stood on Thursday at \$5.07½ after having touched \$5.11½ earlier in the week. Three-months' dollars simultaneously strengthened from ¾ to ⅞ cents discount. The recovery was due to gold shipments from the United States, but it is believed in London that Continental bears of dollars had previously made substantial profits. The Paris rate at one time fell to Frs. 76½, but it has since recovered fractionally to Frs. 76¼ on intervention by the British control. Purchases of forward francs against sales of dollars sent the three-months' Paris rate temporarily to a slight premium, but it has since reacted to par. Many operators are very chary about committing themselves very far ahead in Continental currencies. The depreciation in the dollar has naturally put an end to American gold purchases in London, but heavy purchases of gold have continued, and the London price has been at a premium over both the franc and dollar parity. It is thought that the general uncertainty is leading to a renewal of purchases for hoarding. This week there has been a heavy tourist demand for registered marks, but this has been countered by American selling, and the rate has weakened from 34 to 40 per cent. discount. The Rio exchange has weakened slightly from 3½d. to 3¼d. on the further relaxation of the Brazilian exchange restrictions, including the abolition of the "grey" market. The movement, however, is small enough to show that this greater freedom was justified.

New York Money and Banking.—The Administration's decision to purchase all American stocks of silver at once gave rise to rumours of impending inflation, and these received a further stimulus from the unfavourable position of the national finances. These untoward developments came at a time when many operators had come to think that the immediate outlook for the dollar was favourable, and they had therefore been going short of dollars. The result was a sharp appreciation of foreign currencies, and by Monday sterling had risen to \$5.11½ and the French franc to 6.69½ cents. These movements apparently alarmed the authorities, for the Secretary to the Treasury at once announced that silver certificates would only be issued up to the price paid for the Treasury's new silver acquisitions, while on Wednesday licences to export gold to France—which had become a profitable operation—were at once forthcoming. Only one small shipment of \$1,000,000 has actually been made, though several arrivals

of gold from Europe were at once shipped back again, for the fact that gold shipments were permitted at once had a favourable psychological reaction on the foreign exchange market. By Wednesday sterling had relapsed to \$5.07½ and the franc to 6.65½ cents, or to within the export gold point, and the market had become convinced that, notwithstanding the uncertain financial outlook, the Administration intended to operate the gold standard for the present, upon the basis of \$35 per ounce of gold. Meanwhile credit remains very plentiful and money rates are unchanged. During the week ended August 8th brokers' loans were reduced from \$885 to \$827 millions, while member banks' excess reserves have risen to a new high record of \$1,950 millions. It is announced that Mr Eugene Black has resigned the Governorship of the Federal Reserve Board, and is returning to his former post as Governor of the Atlanta Federal Reserve Bank. His successor has not yet been appointed.

July Clearing Bank Averages.—The July returns of the nine English clearing banks bear further evidence of the present redundancy of credit. There is a very slight increase in advances, which is encouraging in that it suggests that the general demand for bank accommodation is well maintained in the face of the pre-holiday recession in trade. The further reduction in tender issues of Treasury bills is reflected in a decline of £3.1 millions in discounts, and the banks are still disinclined to add much more to their investments. Call and short loans are reduced by £3.1 millions, while the fall in the omnibus item including cheques in the course of collection suggests that with the approach of the holidays cheques as distinguished from currency are circulating less freely.

	(£ millions)				
	July, 1933	April, 1934	May, 1934	June, 1934	July, 1934
Capital and reserves.....	123.3	123.4	123.4	123.4	123.4
Acceptances, etc.	107.9	112.2	109.9	109.0	106.7
Deposits (including undivided profits, etc.).....	1,934.8	1,814.5	1,820.1	1,832.2	1,832.9
Total liabilities	2,166.0	2,050.1	2,053.4	2,064.6	2,063.0
Cash	201.6	218.9	214.8	196.0	207.1
Cheques, balances and items in transit	46.5	52.0	48.4	54.1	47.2
Money at call	91.9	128.7	127.1	137.0	133.9
Discounts	360.2	209.8	220.7	225.8	222.7
Investments	535.5	516.3	524.1	531.7	533.0
Loans and advances	753.3	743.5	739.6	742.1	743.4
Investments in affiliated banks.....	24.8	24.6	24.6	24.6	24.6
Cover for acceptances, premises, etc.	152.2	156.3	154.1	153.3	151.1
Total assets	2,166.0	2,050.1	2,053.4	2,064.6	2,063.0

The result of these changes is that the banks have had to allow their cash to expand by £11.1 millions, and the ratio of cash to deposits has risen from 10.7 to 11.3 per cent. A year ago the cash ratio was 10.4 per cent., and deposits and discounts were over £100 millions higher. Thus the intervening redemption of Treasury bills has both reduced deposits and has also left the banks with greater potential—as distinguished from actual—reserves of credit in hand.

Anglo-German Exchange Agreement.—A White Paper and an official explanatory circular were published at the week-end giving further details of the agreement. The scope is confined to German firms who hold a general exchange permit, and it excludes goods subject to import licences, controlled raw materials, and goods falling under the German agricultural monopolies. A special account is to be opened at the Reichsbank by the Bank of England, and in so far as allocation of foreign exchange proves insufficient, importers of British goods may make payments in Reichsmarks into this account. The Bank of England will sell the Reichsmarks in this account at its discretion, subject to the provision in the agreement that the Bank of England may dispose of its Reichsmarks for the purpose of paying for German exports to Great Britain, or for covering other payments in Germany approved by the Reichsbank. Payment to British creditors will only be

made as and when Reichsmarks are sold, and creditors will be dealt with in chronological order. British exporters are officially advised to arrange that any exchange losses or loss of interest due to delay shall fall on the German importer, and the agreement provides that where debtor and creditor both accept such an arrangement these losses may be made good by subsequent payments into the special account. The Bank of England will notify British exporters when payment is made by the German importer into the special account and again when the Reichsmarks have been sold. The agreement provides that it is only the sale of the Reichsmarks which constitutes the discharge of the German importer's debt. Two provisions are made to prevent the special account from growing to an unwieldy size. In general, if the agreement leads to a substantial alteration in the existing proportion between British and German exports, it shall at once be reconsidered. It is more specifically provided that if the special account comes to exceed Rm. 5,000,000, further payments into the account may be suspended by the Reichsbank until the account sinks below this limit. The fact that the scheme does not cover British imports of German goods will add to the difficulties of the Bank of England in disposing of its reichsmarks. According to City opinion it may have to quote a competitive rate, which will add to the exchange loss arising from the scheme.

German Imports from the Colonies.—A special article in the Anglo-German exchange agreement deals with goods not of British origin and also with goods shipped direct to Germany from any British colony, overseas territory, protectorate or mandated territory. It does not cover Dominion goods, which are excluded from the agreement. Where non-British goods are bought through a British firm the German importer must prove that he bought these goods in appreciable quantities and regularly prior to January 1, 1933. Similar proof must be afforded in the case of goods bought from a firm established in the British overseas territories as defined above. In both these cases the importer may make payment into the special account of the Bank of England up to a limit of 10 per cent. of the basic exchange allocation originally granted to the importer in 1931, and apparently this 10 per cent. allocation may be added to such allocations of exchange as he receives under the general exchange regulations to-day. In the event of any increase in the percentage limit up to which the imported basic exchange allocation may be used, the 10 per cent. allocation may be increased by twice the amount of the increase in the general percentage limit. It will be seen that under present conditions this concession is only of limited value, but it is at least a gesture which recognises the importance of our entrepôt and colonial trade.

THE STOCK EXCHANGE

GOLD IN WESTERN AUSTRALIA

THE devaluation of the pound has profoundly modified the outlook for gold producers in the sterling area, and encouraged a large-scale movement of new capital into the industry, helped by the Treasury's willingness to waive the "embargo" on "Imperial" issues. We have already discussed the scope and prospects of the movement in the Union and in West Africa (see the *Economist* of July 7 and 28, 1934, pages 21 and 171). We now propose to examine its implications in Western Australia, whose potential importance as a gold producer was attested by the flotation, last month, of a new finance company, backed by some of the most powerful names in the mining world.

The recognition of Australia's potentialities as a gold producer is not a matter of yesterday. Portuguese explorers, early in the sixteenth century, may have been aware of the metal's existence in the new continent, but they made few efforts to exploit it, and for three more centuries Australia's gold lay undisturbed. In 1833 a discovery of the metal was reported in New South Wales, but that State was soon eclipsed as a gold producer by Victoria. Both Queensland and South Australia were subsequently added to the list of producers, but as late as the eighteen-sixties the President of the Royal Geographical Society categorically denied the existence of gold in Western Australia. The discoveries of 1885, however, at Hall's Creek, in the Kimberley district, confuted the authorities, and heralded a series of finds destined to eclipse all previously made in Australia. The Kimberley district was abandoned, after some £1,000,000 of gold had been extracted, but more spectacular discoveries followed. Australia resounded with reports of fortunate prospectors at Coolgardie and Kalbarri, who picked up in a few days hundreds of ounces of gold, including such famous nuggets as "Big Ben," worth £3,500, and "Golden Eagle," valued at £6,500.

As in all "pioneer" gold fields, many fortunes were made—and lost. "Prospects," for which large sums were paid on the strength of surface indications, frequently petered out at depth. By the beginning of the present century, however, Western Australia had settled down to serious mining. Between 1890 and 1900 the population of the State was quadrupled. Altogether Western Australia, from 1890 to the end of 1933, has produced gold to the value of £177,677,722—a record excelled so far only by Victoria. To-day Western Australia accounts for some 75 per cent. of the annual gold output of the Commonwealth, though the peak of its production was achieved as far back as the first decade of this century. It has been left to recent prospecting and development, fostered by

changed world conditions, to provide the industry with a new lease of life, and to transform its immediate outlook.

The gold mining industry of Australia has benefited from world conditions, in the last few years, to a far greater extent than that, for instance, of South Africa. The Union, having long depended on gold as her chief export and major source of wealth, felt depression far less acutely than other primary producing countries or most manufacturing nations. While the value of all other commodities was falling, the price of gold remained stable, and South Africa was able to postpone the devaluation of her currency for fifteen months after Great Britain had been compelled to take that step. Australia's economy, however, was primarily dependent upon wool and wheat, whose heavy fall in price threatened to make her debt burden intolerable and overset her whole economic structure. An adverse balance of payments encouraged her to devalue the Australian pound relatively early in the depression, and producers of gold received an immediate benefit. Moreover, while the South African Government has always appeared to view the increased profits of gold mining, after currency devaluation, with a somewhat jealous eye, the Commonwealth, anxious to stimulate the production of the one commodity with an apparently unlimited external market at a fixed price, followed devaluation with a subsidy. Though the latter, in its original form, has now been abandoned, the Commonwealth is still prepared to guarantee a price of £5 10s. per ounce, in Australian currency, for all gold produced in excess of 451,432 ounces per annum, with a limit of £1 per ounce on the amount of the bounty. Australia, further, has studiously avoided the heavy discriminatory taxation imposed in South Africa. At present, with a London price around 138s. per ounce, the Australian producer is receiving 172s. 6d. in his local currency. The prospects of an early return of the Australian pound to par, which would eliminate his exchange differential advantage, are not seriously regarded. Unless the prices of such commodities as wheat and wool rise to a spectacular degree, Australia's external debt obligations must continue to weigh somewhat heavily upon her currency, despite her recent conversion operations. Meanwhile gold mining costs have not, so far, appreciably reflected the fall in the gold value of the Commonwealth's currency. Australian labour, which in the past has enjoyed a reputation for a certain intransigence, not wholly unearned, is reputed as likely to maintain its present more conciliatory attitude, as indeed it has every inducement to do, for the present outlook promises very substantial benefits to owners and miners alike.

"THE GOLDEN MILE"

The increased readiness of British speculative investors to subscribe capital for new enterprises in the Western Australian field needs no further explanation. The famous "Golden Mile" at Kalbarri has of itself provided a sufficiently powerful advertisement of the effect of the higher gold price on the dividends of companies already operating, as the following summary suggests:—

DIVIDENDS PAID	
Boulder Perseverance, Ltd.—1926, 10 per cent.; 1928, 10 per cent.; 1931, 20 per cent.; 1932, 30 per cent.; 1933, 30 per cent.	
Great Boulder Proprietary Gold Mines, Ltd.—1924 to 1928, nil; 1929, 12½ per cent.; 1930, 12½ per cent.; 1931, 25 per cent.; 1932, 25 per cent.; 1933, 37½ per cent.	
Lake View and Star, Ltd.—1921–22 to 1931–32, nil; 1932–33, 50 per cent.	
North Kalbarri (1912), Ltd.—50 per cent. for 1933.	
South Kalbarri Consolidated, Ltd.—1920–21 to 1930–31, 2s. 6d. per share per annum; 1931–32, 2s. 6d. per share and 2s. 6d. per share return of capital; 1932–33, 2s. 6d. per share and 2s. 6d. per share return of capital; 1933–34, 5s. per share.	

The annexed maps (reproduced by permission of the *Financial News*) show the position of Western Australia's auriferous areas and the distribution of claims on the

GOLDFIELDS OF WESTERN AUSTRALIA

Mining and Union Corporation groups to join with the "pioneer" group, already mentioned, and the Imperial Smelting and Zinc Corporations in a pooling of interests through the medium of a new concern, Gold Exploration and Finance Company of Australia, Ltd. Some 1,800,000 of the latter's 10s. shares, offered at par at the end of last month, were readily taken, and are now quoted at a premium of 4s. 6d. In Western Australia the new company operates chiefly through the Western Mining Corporation, which holds mining reservations over areas scattered among practically all the promising districts of the State. Intensive prospecting is now being carried on by a field staff and by aerial survey. In addition, the associated Champagne Syndicate has acquired leases over some 670 acres in the Kalbarri district.

Another important group, at present engaged in Western Australian prospecting, was responsible for the flotation of Anglo-Australian Gold Development, Ltd., in 1933 and Commonwealth Mining and Finance, Ltd., this year. Among the companies already "floated off" by this group are North Kalbarri United Gold Development, Ltd. (formed to take up leases adjoining the North Kalbarri mine), Southern Cross Gold Development, Ltd. (whose properties are about one hundred miles to the west), and Murchison Gold Development, Ltd. (operating at approximately the same distance to the north of Kalbarri).

The following table shows the issued capital, present share quotations and recent results (where available) of the companies mentioned in this article:—

Company	Issued Capital	Denomination of Shares	Present Quotation	Latest Report

From the viewpoint of the speculative investor, whose co-operation will remain indispensable in the opening up of Western Australia's gold resources, a certain importance attaches to the fact that many of the prospective new mines are surface propositions, and may consequently reach the production stage in a shorter period than the new deep-level properties on the Rand. It is generally admitted, however, that the gold-bearing formation is less regular than that of the famous South African field, and some proportion of disappointments may be inevitable. The investor who is willing to adventure his money in this field may be advised chiefly to follow the big groups, which enjoy the benefit of the best available technical advice and possess the financial resources necessary to overcome initial difficulties. The history of Wiluna is the best commentary on the soundness of this advice.

INVESTMENT NOTES

Foreign Lending—New Style.—This week's "placing," in London, by Hambros Bank of approximately £1,150,000 of 5½ per cent. first mortgage debentures of the Aktieselskapet Union (Union Company) of Oslo, at 98, is not the first "foreign" issue made since the Treasury laid its embargo on the London market. In April, 1933, permission was given for a loan of £1,000,000 to the Danish Government, in 4½ per cent. bonds, issued at 96½, in connection with the building of the Seeland-Falster Bridge with British steel. This week's offer, nevertheless, is of historic interest as the first under the enabling provisions

"Golden Mile." Further "publicity" for Western Australia, in the London market, has been provided by the discovery and opening up of Wiluna, a company formed, under the auspices of the Consolidated Gold Fields and Associated Mining and Finance Corporation groups, as long ago as 1927. As a result of initial difficulties with the treatment process, and of doubts as to continuance of the formation, the price of the company's shares fell to a low level towards the end of 1931. During the following year, however, the company surmounted its difficulties, and the added advantage of the increased gold price produced a rapid rise in the shares. It became apparent that Wiluna, situated some three hundred miles north of Kalbarri, was less an isolated mine than a fresh goldfield. The company has now entered the dividend list. The group responsible for its exploitation holds options on the ground to the north of its area through a company known as Gold Fields Australian Development, Ltd., formed in 1932.

Other mining finance houses have followed the example of Consolidated Gold Fields. A most important development in this direction was the decision of the Central

announced by the Chancellor on July 19th last. It produces no "direct benefit to British industry," but permits a country within the sterling bloc to increase its sterling assets. The proceeds will be used to refund Kr.21,500,000 of the company's 6½ per cent. first mortgage debenture stock held by the Bank of Norway, and will be credited to the latter's account in London. The company reduces its interest charge, Norway ratifies her membership of the sterling club, by putting herself under at least an indirect "obligation" to London, and British investors obtain a reasonably sound stock, giving a higher yield than that obtainable on most domestic debentures. The implications of the offer, presumably, have been carefully considered. Norway's credit is excellent—the Norwegian Government's 4 per cent. Sterling Loan of 1911 stands at 111 in London—and the Union Company is the largest producer of newsprint and mechanical pulp in the country. From an earnings standpoint, the "cover" for the debentures is not over-generous, for interest alone will take £60,000 a year at the outset, while available profits have been as low as £110,627 in a recent year. The security for the debentures, however, is not earnings, but exports, for the company will instruct its foreign buyers to pay their entire proceeds direct to the debenture holders' agents in London, who will keep in sterling each month one-twelfth of the amount required for the service of the debentures. In the last ten years the company's output—which is practically all exported—has been as high as £1,519,185 in a single year, but depression reduced the total for 1933 to £618,933. For the first seven months of 1934 output has been running at the rate of approximately £730,000 for a full year. This form of security is clearly designed to obviate the disadvantages which have been proved to attach to other methods of safeguarding bondholders' interests in depression. It is by no means novel, for the twenty-five-year Sinking Fund gold bonds of the Potash Syndicate of Germany are similarly secured, *inter alia*, on the proceeds of the sale of potash to countries outside Germany. The "exchange transfer risk" is not eliminated, for the Union Company is apparently under no obligation to invoice all its foreign sales in sterling—though, in fact, its exports are largely made to countries inside the British Empire. Meanwhile, subscribers to the loan are secured in the near future, by the Anglo-Norwegian Trade Agreement, against discriminatory treatment as regards imports of the company's chief products into their most important market. One may speculate over the Treasury's attitude had the company's products, in addition to being "competitive" with those of Empire countries, been subject to the British tariff. Should one traffic with the Devil, even to increase his sterling assets?

Australian Prospects.—The Australian wool sales which start on Monday of next week have traditional importance in setting the pace of Australian economic activity during the ensuing season. Last year's sales were highly favourable, but advance indications this year are less promising. Demand from the gold bloc has deteriorated, and the control of raw material imports into Germany has led to definite weakness in prices. Offerings to be made at Brisbane have consequently been reduced from 1,600,000 bales to 1,350,000 bales. It is possible, however, that the commercial concordat with Japan may encourage Japanese demand, and the effects of a possible fall in wool may be mitigated by the improvement in wheat prices. Meanwhile holders of Australian bonds have a September "election risk" to consider. Although the tenor of Mr Lyon's opening speech in the campaign is of good omen for Commonwealth bonds, some Australian political observers question the return of his party to power and are canvassing the possibility of a composite Government of the United Australia Party and the Left-Centre. In either case, adequate surveillance of the rights of bondholders seems assured. The latter now have more to fear, in the long run, from the trend of Australian tariff policy, evidenced by this month's increased duties on certain classes of piece-goods and yarns which have excited protest in Lancashire. Current quotations on the Mel-

bourne Stock Exchange show the redemption yield on ten 4 per cent. issues at no more than £3 6s. 3d. per cent., but it may be significant that the average net quotations have fallen from £109 2s. 10d. to £107 6s. 9d. from August 7th to August 14th. We set out in the following table the course of London quotations of Commonwealth stocks during this year, with current prices and yields:—

Stock	Redemption	Quotations				Yield to redemption (%)
		Jan. 31	Mar. 28	June 28	Aug. 14	
5 per cent.	1935-45	102½	103½	102	102½	£ 4 18 6†
4½ per cent.	1940-60	105	107	104	105	3 18 0
5 per cent.	1945-75	108½	111	108	108	4 2 7
3½ per cent.	1936-57	102	103	102	102	2 16 6
4 per cent.	1935-70	105	108	106	106	3 12 3
4 per cent.	1943-48	102	103	102	102	3 17 6
3½ per cent.	1948-53	100	103	100	100	3 15 0
3½ per cent.	1937-38	101	102	101	101	3 3 9
3½ per cent.	1946-49	(a)	103	100	101	3 15 3
3½ per cent.	1951-59	(a)	(a)	98	98	3 13 3

(a) Not issued.

† Flat yield.

The stocks were carried upward by the falling trend of interest rates during the first quarter of the year, but the March 28th level has not been maintained. The Commonwealth made a prompt start with debt conversion, and apart from the 5 per cent. 1935-45 loan, of which £22,384,000 is outstanding, the scope for further operations is restricted for six years. The restoration of Australian credit to a 3½ per cent. basis is a tribute to measures of financial rehabilitation, but the yields inevitably take into account the dependence of the Commonwealth upon primary products.

Stockholders and Railway Wages.—The railway wage settlement, whose terms are discussed in a Note on page 304, involves the relinquishment by the companies of about one-fourth of the total savings in their annual wages bill, effected under all heads as a result of reductions and adjustments under the National Wages Board award of March, 1931. Its cost in a full year is stated to be in the neighbourhood of £1,100,000. The distribution of this amount between the four railways cannot be exactly ascertained. On the occasion of the original award, however, we estimated that the then saving would be distributed between the four companies (in order of magnitude) in the approximate proportions of 7, 5, 3 and 2, respectively. Assuming that these ratios are still broadly operative, the following table gives a rough picture of the incidence of the new agreement, in 1934, and in a full year:—

	(000's omitted)			
	London Midland and Scottish	London and North Eastern	Great Western	Southern
Approximate cost of new agreement, Oct.-Dec., 1934.....	£ 55	£ 40	£ 25	£ 16
Approximate cost in full year...	450	325	195	130
Increase of net revenue in first half 1934, compared 1933.....	1,000	686	370	90

The increased amounts falling on the current year, it will be seen, are moderate. The cost of the concessions, from the stockholders' point of view, however, can perhaps best be expressed by the statement that, on the basis of the above estimates for a full year, the L.M.S. has passed on to its workers about 45 per cent. of the recovery in net earnings secured in the first half of this year—whose repetition, in the second half, is highly unlikely. The corresponding figures for the other railways are:—L.N.E. 47 per cent., G.W. 52 per cent., and Southern 145 per cent. A full year's concessions are equivalent to 1.1 per cent. on L.M.S. 1923 Preference stock; 0.6 per cent. and 0.75 per cent., respectively, on L.N.E. 4 per cent. First Preference and 5 per cent. Redeemable Preference; 0.45 per cent. on Great Western Ordinary; and 0.47 per cent. on Southern Preferred Ordinary.

Tin Quota Cut.—With strangely light heart, the market seized on Monday's *communiqué* from the International Tin Committee as justification for putting tin shares to higher levels. The Committee agreed to recommend to the signatory Governments that, during the period from October 1 to December 31, 1934, the quota should be fixed at 40 per cent. of the standard tonnages, against 50 per cent. for the six months expiring on September 30th. The tin market had shown a falling trend during this month, towards the figure of £225 per ton which, it is rumoured, the sponsors of restriction "have in mind." It is stated by some dealers that the maintenance of prices in recent weeks was due solely to the purchase of nearly 10,000 tons by a group during June and July. The sharp fall in American and European purchases, indeed, had no visible effect on quotations, although business, with the exception of home demand for plates, was reduced to extremely low levels. This fall, although occasioned in part by seasonal influences in America, and exchange difficulties in Europe, is also related to the quest for substitutes which has been encouraged by the sharp rise in the price of the metal under restriction. The increase in the quota to 50 per cent. from April was interpreted as a sign that the interests favouring restriction would, in the future, consider the claims of the consumer more adequately. This week's proposed change is less reassuring for the tinplate industry, and it is difficult to see how producers are likely to benefit. With its eye on the improvement in the metal on Monday, the share market evidently overlooked the effect on mining revenues of a 20 per cent. reduction in the rate of output, and the inevitable increase in operating costs per ton. Meanwhile, the accumulation of the special 5 per cent. "buffer" quota proceeds. The equilibrium of supply and demand at reasonable price levels, as we have previously suggested, would constitute a more valid bull point for the shares of low-cost producers than the present artificial regimentation of supply. In Malayan quarters, it is feared that the accumulation of the "buffer" pool implies the attempted perpetuation of control, despite authoritative statements that the pool stocks will only be used to eliminate short-period market fluctuations. The pressure to reduce supplies to "amenable" proportions continues, but the resultant price has not only involved the accumulation of a vast potential output, if and when restriction is abandoned, but also threatens to involve a dangerous spiral of reduced output—higher prices—reduced demand. To the independent observer, it still appears that a freer market would be of common advantage to producers, consumers and shareholders.

Actuaries' Investment Index.—The tone of the industrial share market has remained firm this week, though the volume of business has tended to fall off since the beginning of the new account. The computations of the Actuaries show that average values have now fully recovered the ground lost in the second half of July. The index for 144 industrials of all classes (December 31, 1928 = 100) stands at 70.5, against 69.9 a week ago and 70.4 a month ago. The corresponding yield figures are 3.72, 3.74 and 3.71 per cent. The rise over the past week has been well distributed among the component groups, as the following figures suggest:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	July 17, 1934	Aug. 7, 1934	Aug. 14, 1934	July 17, 1934	Aug. 7, 1934	Aug. 14, 1934
Higher this Week:						
Home Rails (4)	80.1	74.5	80.5	1.48	1.51	1.46
Breweries and Distilleries (16)	109.3	110.4	111.4	3.91	3.92	3.95
Oil (5)	62.6	61.4	62.5	4.69	4.78	4.70
Building Materials (4)	81.7	80.4	81.9	4.13	4.19	4.25
Electric Supplies (8)	94.2	93.1	93.7	4.50	4.55	4.52
Lower this Week:						
Iron and Steel (6)	51.5	51.3	51.0	1.24	1.22	1.21
Investment Trusts (15)	50.8	50.1	49.6	3.76	3.81	3.84

Considerable bear closing in home rails followed the announcement of the wages agreement, though second and third thoughts were less favourable, and prices reacted. Brewery shares have remained active, on the moderately cheerful tone of chairmen at recent annual meetings. The

A HINT to every husband that to bequeath capital to his dependants means a legacy of worry . . . the worry and difficulty of investing funds. This is one of the reasons for the world-wide popularity of the "Safeguard" Plan which assures a guaranteed INCOME as well as capital. It relieves the widow of financial responsibility and gives a guaranteed return more favourable than any ordinary investment.

popularity of building material shares is undiminished. The further mild recession in investment trust stocks reflects the continuance of a downward trend in published earnings figures. Coal, iron and steel shares have been slightly affected by fears that the South Wales wages situation may involve the danger of a general "sympathetic" stoppage in the autumn.

Industrial Profits in July.—We received 197 company reports last month, showing an aggregate rise in profits of 27.1 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits*	Reports Published in	No. of Companies	Rise or Fall in Profits*
1933—		%	1934—		%
May	209	+ 2.26	January	122	+ 3.27
June	214	+ 1.46	February	209	+ 5.02
July	160	+ 3.20	March	216	+ 6.34
August	45	+ 11.62	April	188	+ 12.96
September	102	+ 4.06	May	251	+ 23.43
October	121	+ 17.06	June	201	+ 20.44
November	185	+ 79.64	July	197	+ 27.1
December	138	+ 13.04			

* After payment of debenture interest.

The reports of the month disclose net profits of £9,747,289, as compared with £7,670,499 in the preceding year. The feature of the month's reports is the vigorous upswing in rubber and tea company earnings. Forty-four rubber companies disclosed net profits of £160,100, representing a net improvement of £383,445 by comparison with the previous year, while 26 tea companies showed net earnings of £510,283, against total losses of £36,122 for 1932-33 working. These two groups contribute 45 per cent. of the total improvement of £2,076,790, while 11 brewery concerns are responsible for 43 per cent. The miscellaneous group of 43 companies shows an improvement from £793,098 to £1,122,356, but other sections show small and irregular

changes. We set out in the following table the results of nine important companies:—

	Net Profits for Financial Years ending in		Change %
	1933	1934	
Anglo-Argentine Tramways	Dr. 263,307	Dr. 584,003	...
Armstrong-Whitworth Secs.	Dr. 246,856	Dr. 531,214	...
Distillers	1,724,128	2,140,621	+ 24.2
Furness Withy	379,675	378,165	- 0.4
Guinness'	1,468,903	1,745,174	+ 18.8
International Tea	614,729	645,860	+ 5.1
Patons and Baldwins	409,273	330,300	- 19.3
Richard Thomas	111,440	263,063	+ 136.0
Watney, Combe, Reid	825,376	999,867	+ 12.1
Total, nine companies ...	5,023,361	5,387,833	+ 7.3

Although these companies account for over 55 per cent. of the total profits, the heavy losses of Anglo-Argentine Tramways and Armstrong-Whitworth Securities have materially reduced their share in the month's improvement.

COMPANY NOTES

Wireless Companies.—The fallacy that rapidly expanding profits are a necessary consequence of rapidly expanding output has nowhere been better exposed than in the wireless manufacturing industry. Between 1924 and 1927 the number of licences outstanding doubled, only to double again by the end of 1931, when the total of receiving licences in force was 4,329,400. The depression, far from checking the expansion of the wireless habit, has seen the absolute rate of increase hastened. By the end of 1932 the licences in force were 5,973,800. They

* Broken periods equated to 12 months basis by simple proportion.
Note.—As Electric and Musical Industries, Ltd., is the largest concern in the industry its name is included above. But no trading figures are yet available on which sound conclusions can be based.

are now over 6,400,000. Despite this bounding expansion of their market, however, the manufacturers of wireless sets and components have in many cases had to face substantial trading losses, as the accompanying table shows. Even successful and relatively stable concerns, such as Pye Radio, have not been able to maintain their earnings at the levels of a few years ago. The business, like other trades exploiting modern inventions, has attracted new participants whose technical qualifications have been sounder than their business experience. Further, as a small local business may support itself largely by the assembling of sets from standard components bought at trade discounts, the industry has suffered from the disadvantages of a multiplicity of small units. In consequence, production has run ahead even of the soaring demand, and price cutting has been rampant, particularly since November, 1932. At the beginning of this year the leading manufacturing company reduced the price of its

standard set from £15 15s. to £12 12s.—a substantial cut—only to see the new price immediately undercut by smaller concerns. Such chaotic conditions are hardly likely to be permanent in any industry, but may be of fairly long life. Even if its major disadvantages were overcome, other elements of instability would persist. As the present exhibition at Olympia so clearly demonstrates, the wireless industry is still making rapid technical advances. The example of the motor and aeroplane industries shows that technical progress, however advantageous for the industry as a whole, produces violent fluctuations in the earnings of industrial concerns. Now one, and now another, takes the lead or falls behind. Intense competition necessitates heavy selling expenses; while the goodwill established by advertisement depends precariously on the fortunes of the latest model. Finally, the rush to secure a share in the rapidly expanding market has allowed a somewhat faulty distribution system to be built up in the radio industry. This has absorbed liquid assets, otherwise available for research and development, into the somewhat stagnant pool of hire-purchase finance. It may be that the dominating size and resources of Electric and Musical Industries, Ltd., will allow it gradually to assume control of the industry in somewhat the same way as Courtaulds, Ltd., has assumed control of rayon production. Owing to the prevalent opening for the very small unit, however, the task of consolidation will be difficult and slow. Meanwhile the shares of individual wireless manufacturers may provide handsome profits for specialists with inside knowledge as to which companies are selling their products. At present, however, their appeal to the general investor is somewhat narrowly limited.

Guinness (of London).—The £1 units of Arthur Guinness ordinary stock have enjoyed a net rise from 112s. to 118s. 6d. since the chairman, the Earl of Iveagh, disclosed at the annual meeting, on August 10th, that the company had decided to establish an English branch at Park Royal, on the north-western side of London. The business has been established in Ireland for 175 years, but the distance from its principal market has threatened recently, through conditions outside its control, to become considerably wider than the Irish Sea. The company, in fact, may be giving notice to the Fianna Fail Government of its preparedness against the fiscal possibilities of Irish "independence"—with a hint, possibly, that good conduct may earn some remission of the sentence, in the statement that the company intends to "open slowly" in England and may have profitable Irish "sidelines" to replace some of the work transferred to Great Britain. The plan was first mooted in 1913, when a site was purchased near Manchester, but was postponed on account of the war and the subsequent increase in building costs. In the meantime, the proportion of the company's trade done in England, especially in Southern England, has steadily increased. Exhaustive tests have confirmed the view that the quality of the Guinness product will be unaffected by a change of location. The "Liffey water" legend will doubtless die hard, but it has been suggested—not, perhaps, in entire seriousness—that as the company has, in fact, drawn its Dublin water, not from the river, but from the neighbouring Grand Canal, the (English) Grand Union Canal Company (which has recently passed its interim dividend owing to the drought) may be induced to provide similar facilities at Park Royal. There should be no necessity for an early increase in the company's issued capital, for it already holds Government and other securities valued, below market prices, in the last balance sheet at £4,644,000. Whether stockholders may look for increased dividends, in the near future, is more doubtful. The new arrangements may be calculated ultimately to check, or to reverse, the downward trend of earnings of recent years (trading profits were £1,701,131 last year, against £3,099,548 in the year ended June 30, 1925), but the directors may well elect to follow a conservative distribution policy during the period of transition. That the position of the brewing industry generally, however, has improved over the past year is admitted by practically all its spokesmen. At the Watney, Combe meeting, Colonel Serocold, the chairman, confirmed this view, and discussed the working of the "control" scheme for hops.

Initial Services.—This Company distributes toilet requisites and teas to business houses, and also manufactures and supplies tricycles and motor vans on maintenance contracts. Its trading results continue satisfactory. After being stabilised at approximately £210,000 for the previous three years, trading profits have advanced to £222,566. Three years' comparative results are set out below:—

	Years to June 30,

Carried forward	17,688	20,035	20,154

† Includes £40,000 written off goodwill.

A first allocation has been made to reducing goodwill, which in earlier years was the largest asset in the balance sheet, and which now stands at £160,000. Apart from an increase of £90,000 in investments in subsidiary companies which is not explained in the directors' report, the balance sheet shows little change. At 66s. the 5s. ordinary shares yield £3 17s. 9d., but the very satisfactory profits record, in a field which is little explored, may conceivably attract competition from new entrants.

"Chartered" Prospects.—A half-yearly interim statement of dividend policy is due to be made by the British South Africa Company ("Chartered") in September. It may be opportune therefore to bring up to date our survey of the company's position, made in the *Economist* of January 20th last, page 128, and our further reference to copper interests later (in our issue of May 12, 1934, page 1033). The company's income can be put under four headings: (a) fixed interest investments; (b) shareholdings; (c) royalties; (d) financial operations. From division (a) revenue should increase this year to an equivalent of royalties received from Southern Rhodesia last year which were exchanged for Government stock. From division (b) not much improvement in returns for the past half-year is to be anticipated, since the two chief holdings are copper and Rhodesia Railways Trust shares. Although the Rhokana company, in which "Chartered," as shareholders, are mostly interested, showed a modest profit in its last balance sheet, the trend of price for copper has been disappointing, and the current profits of the Rhodesian copper producers cannot be handsome. On the other hand, the progress of the Rhodesian railways has been marked. Traffics for eight months to May last have improved by 40 per cent. over the corresponding period a year ago, the respective figures being:—1932-33, £1,418,479; 1933-34, £1,966,293. This result has enabled the companies to pay already part of arrears of interest on their various debentures. All outstanding balances will be repaid as soon as certain formalities are adjusted. The immediate benefit to the "Chartered" company will be two-fold. Railway earnings have been sufficient to repay its advances in respect of interest on debentures which it had guaranteed. Any further liabilities under this guarantee now become contingent. The distribution of fresh dividends by the railways on their ordinary shares, however, is likely to be deferred for some time to come, since proposals have been agreed upon by the three Colonial administrations concerned and the railways to provide for the replenishment and maintenance on a new basis of a Statutory Reserve Fund. The required accumulation approximates to a sum of about one million pounds. Probably, therefore, no early increase of revenue from the important investment in Rhodesia Railways Trust will be forthcoming. Prospects, however, have indubitably improved. As regards division (c) of "Chartered's" profits—income from royalties—the output of minerals for January-June, 1934, compared with the preceding six months, shows little change in the minor products. Copper production has risen by some 7,000 tons to 64,709 tons, and the only remarkable alteration has been a rise in the out-turn of cobalt from 251,468 lbs. in July-December, 1933, to 678,386 lbs. in January-June, 1934. On the whole, revenue from royalties may have moderately increased. Profits from (d)

—financial operations—must necessarily be a matter of surmise. The "Chartered" company is not directly interested in the gold-mining market, which has been so active. No transactions of great importance have taken place in the copper section. On the whole, the omens suggest an interim distribution on "Chartered" corresponding to that of last September.

Other Company Results.—Owing to the holiday "close season," only eight reports have been received from other companies. The usual summary table appears on page 335. Henry Briggs, the Yorkshire colliery company, shows a slight improvement in profits from £48,713 to £51,131. Kelsall and Kemp have published accounts covering six months to June owing to a change in the accounting date from December 31st to June 30th. Profits amount to £33,657, and the dividend of 3½ per cent. actual is half the previous year's full rate. In the Trust group, Continental and Industrial reports a further fall in net revenue from £93,913 to £75,333, and the dividend is reduced from 6½ to 4 per cent. For the Third Scottish American, the fall is slight (£37,160, against £38,857), and the dividend is reduced by 2 per cent. to 17 per cent. The usual quarterly dividends of 6 and 2½ per cent. have been announced by Boots Pure Drug and J. and P. Coats.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

TICKET	SETTLING DAYS	ACCOUNT
August 28		August 30

THE tone of the markets remained firm, but the volume of business tended to decline. Those who were bears, three weeks before, closed their positions last week-end, and few operators had sufficient optimism to open substantial commitments on the other tack. Generally, those who had a profit—as in home rails—cashed in on the first signs of a check. Prices advanced, nevertheless, for the market, having been cleared of its floating supplies of stock, marked up quotations on every appearance of a buyer. Generally, emphasis shifted from both the gilt-edged and the mining markets towards industrial shares.

Quiet conditions obtained in gilt-edged, and prices eased slightly as the week progressed, both irredeemable and short-term stocks being affected. India loans moved in sympathy. Among Dominion issues, Australians were somewhat easier on the conditions described in a Note on page 318.

Despite the reaction in American wheat prices, South American bonds—particularly Brazilian—remained firm. European bonds again attracted little or no interest. Chinese issues were steady, but Japanese declined on the heavy military appropriations forecast in the Budget figures.

Home railway junior stocks had a sharp rise on the announcement of the wages agreement, reflecting oblivion of all its implications except its avoidance of a possible strike. The weekly figures, however, were a damper on enthusiasm,

since they suggested that Bank Holiday traffic had been relatively light. The two "northern" lines continue, however, to reflect improvement in the industrial areas, while the other two companies are merely maintaining their position at this time last year. The interruption of the rise in wheat prices produced speedy profit-taking in Argentine rails. Canadian Pacific were similarly marked down.

The course of prices somewhat flattered the amount of business in industrial shares, for stock in many cases was in rather short supply. Breweries again attracted considerable attention. Guinness were bought for the reasons described in a Note on page 320. Expectations of an increased dividend induced provincial inquiries for Bass. Tobacco shares were fairly active, particularly Imperial and Carreras. Among motor shares, Austin were strong on the chairman's favourable statement which accompanied the disclosure of the company's programme of new models. Woolworth were bought on dividend hopes. Electric supply shares remained steady, and electrical equipment shares were quietly firm. Coal and steel shares, however, were affected by talk of a possible future stoppage, arising out of the wages disagreement in South Wales. Business in textile shares was quiet, a moderate rise in Courtaulds being quickly followed by profit-taking. Unilever were stronger than for some time past. Dunlop continued to advance, on nebulous rumours of a resumption of interim dividends. Imperial Chemical also showed a steadily rising tendency. Bank shares were irregular, particularly those of institutions operating in the East. Insurance shares were quiet, but fully held their ground.

The oil share market made a disappointing start, but became brighter as the week progressed. Business was largely professional, but moderate demand for any share usually revealed the absence of any considerable supplies. Rubber shares opened firm, investment demand being stimulated by hopes of a fresh rise in the price of the commodity. Quieter mid-week conditions in Mining Lane, however, were quickly reflected in the share market. Tea shares were dull, owing to disappointment with the prices realised at the auctions for new season's Indian teas.

The carry-over disclosed only a small bull account in Kaffirs. New business started under cheerful auspices, but Washington's disclaimer of any intention further to devalue the dollar brought an easier tendency in mid-week. This was not altogether unwelcome, for the market was anxious to increase its floating supplies. West Africans remained quiet but firm. Western Australian shares were in good demand at the outset, but became quieter later, in sympathy with other markets. Business in Rhodesians was on a very small scale, Paris showing little interest in "Chartered," whose prospects are discussed on page 321. A number of tin shares were marked up on the announcement of a forthcoming reduction in the quota (criticised on page 319), and remained steady despite Wednesday's fall in the price of the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

Indications that the Administration intends no further devaluation of the dollar during the autumn were welcomed in the bond market this week, although the evidence was unofficially obtained in a circuitous fashion, quite unbecoming to its importance. For the moment, therefore, the financial community has been relieved of its growing distrust of the implications of the silver policy, although it would be ill-advised to rule out the possibility of further devaluation to the 50-cent limit until the Treasury has spoken after its Conversion operations have been completed. Government bonds, which had been heavily sold at the end of last week, rallied sharply on Monday, and remained firm on later days. The slump in grain prices led to somewhat irregular movements in stocks, but trading was quiet and principally concentrated on shares likely to benefit from higher commodity prices. Leading industrial issues on Tuesday were slightly weaker, but some investment buying of preferred stocks was in evidence. The possibility of a building revival was canvassed in some quarters of the market, but the shares made little response. Motor shares, on the other hand, were firm, and expectations of a favourable crop encouraged the demand for leading tobacco issues. The tone of the week's trading has reflected its steady investment character. Although speculative interest shows little sign of returning to the market, quotations have maintained their week-end recovery during this week's quiet sessions. Business news shows no indication of a change in recent trends. Current steel mill activity, according to the Iron and Steel Institute, is at 22.3 per cent. of capacity, compared with 25.8 per cent. last week. Retail trade activity, however, remains favourable. The new Stock Exchange rules, which were published this week, were deemed rigorous but not oppressive, and were welcomed as an indication of the Commission's intention to encourage a free market.

* Two-hour Session.

PARIS

The set-back in commodity prices in America over the week-end caused general hesitancy on the Bourse on Monday, which was in turn assisted by the dull tendency of Government issues. Gold mining shares were well maintained, but internationals, such as Royal Dutch, Rio Tinto and Canadian Pacific, were noticeably weaker. A better tone developed on Tuesday, when Renten hardened in view of the settlement, and most industrials and international favourites improved. The gold mining group registered further gains, and Crown Mines continued in favour. The market was closed on Wednesday for the Feast of the Assumption.

BERLIN

On the reopening of the Bourse on August 8th, after a six days' suspension, the share market was strong, gains of four to five points being common; but thereafter the market became quiet, with a slight reaction of prices. Steel, potash, engineering and rayon shares showed largest gains last week, while this week lignite and electric cable shares and certain special favourites, including Mannesmann Tubes, were bought. The home bond market last week had a substantial rise, but this week the market was dull, and certificated and converted dollar bonds weakened.

AMSTERDAM

Trading this week relapsed to small dimensions, rubber shares in particular showing marked dullness under the lead of Amsterdam Rubber. Industrials, on the whole, were maintained, Philips' Lamps showing some recovery in early sessions, while Unilever N.V. were strong, against the trend of the market, on Wednesday. Sugar shares were slightly lower on balance, and Royal Dutch, despite some purchasing on Tuesday, failed to hold the rise. German 5 1/2 and 7 per cent. loans fell steadily during the first three days.

	Aug. 8, 1934	Aug. 13, 1934	Aug. 15, 1934	Aug. 8, 1934	Aug. 13, 1934	Aug. 15, 1934

The Strength of a Rope

depends upon the number and quality of its strands. The strength of the

British Fixed Trusts

is that their Units comprise a wide variety of industries and areas, thus avoiding dependence on a particular or local industry or group of companies operating in this industry which might be overtaken by misfortune. An investor in British Fixed Trusts Sub-Unit Certificates spreads his capital over 12-30 different industries, covering 24-86 distinct leading British companies, including:—

£19 buys 10 "First British" Fixed Trust Sub-Units covering 24 Companies ... (2 divs. p.a.)
£32 " 10 each 1st & "Second British" Sub-Units covering 50 Companies ... (4 divs. p.a.)
£43 " 10 each 1st, 2nd & "Third British" Sub-Units covering 78 Companies ... (6 divs. p.a.)
£54 " 10 each 1st, 2nd, 3rd & "Fourth British" Sub-Units covering 86 Cos. ... (8 divs. p.a.)

Any sum from a few pounds upwards can be invested. YIELD—over 4 per cent. per annum, increased periodically by sales of "Rights" free share bonus distributions, etc., with reasonable prospects of capital appreciation. For explanatory booklet apply to your Stockbroker, local Bank Manager, to the Head Office or Branches of the Trusts:

LLOYDS BANK LIMITED

or to the Managers of the Trusts:

MUNICIPAL & GENERAL SECURITIES CO. LTD.

(Telephone: CITY 5201.)

CAPITAL ISSUES

THE Salford Corporation has had the freedom of the market this week for its issue of £1,000,000 3 1/2 per cent. stock at par. The strength of the gilt-edged market before the issue ensured a favourable reception for the loan, which offered no concession in price. Any increase in the floating supply of suitable investment media, however, is welcomed in the market. The only "introduction" of the week is Abbey Lodge (Regent's Park) 4 1/2 per cent. debenture stock, which is reasonably covered as to capital and income. The first foreign loan, under the relaxed Treasury requirements, is discussed in an Investment Note on page 317.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

PUBLIC OFFER

Salford Corporation.—Issue of £1,000,000 3½ per cent. stock, 1954-64, at par. Assets of Corporation at March 31, 1934, £11,793,600, surplus assets being £5,997,200. Gross income from revenue-earning property for last financial year exceeded £1,450,000. Rateable value, £1,113,757, and present rates are 16s. 6d. in the £. Net debt at March 31, 1934, £4,944,205, £2,049,319 in respect of reproductive undertakings and £1,131,311 in respect of house property. Stock will be redeemed at par on September 1, 1964, or after September 1, 1954, on three months' notice. Proceeds will be used to repay short-term mortgage loans and for expenditure on municipal undertakings. Holders of mortgage bonds maturing before March 31, 1935, desiring to convert will receive preferential allotment.

BY STOCK EXCHANGE INTRODUCTION

Abbey Lodge (Regent's Park), Ltd.—Particulars of £180,000 4½ per cent. first mortgage debenture stock. Secured by specific first charge on leasehold property and floating charge on undertaking and repayable on various terms by August 6, 1974, or at company's option after August 6, 1949, at par on three months' notice. Company holds 73 years' unexpired Crown lease of property comprising 56 flats, valued at April 30, 1934, at £385,752. Profits for years to April 30: 1933, £17,077; 1934, £18,566. £100,000 indebtedness to creditors has since been cancelled, and written off property account and present issue will be applied to repayment of advances.

ISSUE TO SHAREHOLDERS ONLY

London Brick Company and Forders.—Offer of 200,000 unissued ordinary £1 shares at par to ordinary stockholders registered August 1st in the proportion of one new ordinary share for every £7 of ordinary stock, fractions to be sold. New shares will rank for dividends hereafter declared on the ordinary capital and as soon as practicable will be converted into ordinary stock ranking *pari passu* in all respects with the present ordinary stock.

PRIVATE PLACING

Aktieselskapet Union.—£1,150,000 5½ per cent. first mortgage debentures at £98 per cent. It is understood that Hambros Bank has undertaken to place the above issue, which will be secured by first charge on proceeds of the company's exports, which have not been less than £600,000 per annum during last ten years. Debentures will be redeemed at par by September 1, 1957, and net proceeds of issue will be utilised to repay 6½ per cent. kroner debentures outstanding in Norway.

BY TENDER

Lyme Regis District Water Company.—Offer by tender of £4,000 10 per cent. ordinary stock at minimum price of par, made on August 9, 1934. Proceeds required for repayment of redeemable debentures and capital extension. Company supplies Lyme Regis in bulk under 99 years' agreement at minimum charge of £860 per annum. Average price of twenty-eight tenders accepted, 22s. 0½d. per £1 stock.

CONVERSIONS AND REPAYMENTS

Stuttford and Company, Ltd.—Notice has been given to the debenture holders of Stuttford and Company, Ltd., that the £100,000 outstanding in 5 per cent. debenture bonds of £100 each will be paid off on February 1, 1935, at a premium of 10 per cent.

Ferreira Estate Company, Ltd. (incorporated in the Union of South Africa).—The directors have decided to recommend to shareholders that a further reduction of capital be made by refunding 7s. per share out of the proceeds of realisation of assets. In consequence of lengthy legal and other formalities, the refund cannot be paid to shareholders until approximately February, 1935.

Village Deep, Ltd. (incorporated in the Union of South Africa).—The directors have decided to recommend to shareholders that a further reduction of capital be made by refunding

1s. per share out of the proceeds of realisation of assets. In consequence of lengthy legal and other formalities the refund cannot be paid to shareholders until approximately February, 1935.

Henrietta Rubber Estate.—Holders of 7 per cent. first mortgage debenture stock, of which £49,950 is outstanding, are informed that the bonds will be repaid on October 15th next at 105 per cent., plus accrued interest as from July 1st.

Isaac Holden and Sons.—The directors have decided to redeem £150,000 of outstanding 4 per cent. first mortgage debenture stock at par.

Cawnpore Electric Supply Corporation, Ltd.—The company proposes to apply part of its surplus funds in the redemption before maturity of some of its outstanding 5 per cent. debentures at £107. Holders desiring redemption may obtain application forms from the company's office. Applicants will be notified in due course of the number of the debentures which the company intends to redeem, and payment will be made on November 19th, plus interest accrued to November 15.

FORTHCOMING ISSUE

South African Land and Exploration Company, Ltd.—An issue of 550,000 shares of 3s. 6d. will shortly be made to shareholders at 45s. per share in the ratio of 4 shares for every 10 shares registered on September 6.

RESULT OF ISSUE

Salford 3½ per cent. Stock.—Lists closed at 9.5 a.m. on Wednesday, owing to over-subscription.

CALLS DUE AUGUST 20 TO AUGUST 25, 1934

The grand total of calls falling due in August, 1934, is £6,367,141, which compares with £7,270,599 which fell due in August, 1933. The following calls fall due from August 20, 1934, to August 25, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid
Debs.	Bermuda Development (£450,000 4% Debs. at £98%)	£94	Aug. 20	All
£1	London Brick & Forders (200,000 Ord. Shares at par)	£20/-	Aug. 24	All
10/-	New Robinson Gold (600,000 Shares at 11/3)	5/-+1/3pm	Aug. 24	All
£1	Powell Duffryn Steam Coal (1,000,000 5% Prefd. Ord. at 20/9)	6/-	Aug. 22	10/-
Stock	W. Gloucestershire Power (£550,000 4% Deb. Stock at par)	£40	Aug. 20	All

† On acceptance of allotment.

COMPANY MEETINGS, &c.

WATNEY COMBE REID AND COMPANY, LIMITED

IMPROVED RESULTS

The annual general meeting of Watney Combe Reid and Company, Limited, was held, on the 18th instant, at the Windsor Castle Restaurant, London.

Colonel O. P. Serocold, C.M.G. (chairman of the company), presided, and, in the course of his speech, said:—We are steadily pursuing the policy outlined to you on former occasions of bringing our houses up to date. I am glad to be able to tell you that the magistrates are showing themselves more favourable to such improvements, evidently realising that it is for the benefit of the public at large that beer should be sold under good conditions and that facilities for catering should also be provided. We now have an increasing number of houses where the sale of food at reasonable prices is an important factor, and we are glad to know that the public appreciate the excellent value offered.

The brewing industry has during the past year been much exercised over its raw materials. You are aware that Parliament passed two Marketing Acts in 1931 and 1933. These Acts conferred powers by which particular branches of agriculture were enabled to set up Marketing Boards to deal with the particular products. As a result hops are now controlled.

HOPS

We did not feel particularly encouraged by the act of the new Board, which established what we consider to have been an exorbitant price for last year's hop crop. Incidentally, we estimate that the excessive price above normal cost our company between £30,000 and £40,000. Following that, further proposals were made that a quota, or controlled production, should be established.

Before the quota was approved by Parliament the Minister of Agriculture set up a joint committee to advise on the working details. I was myself a member of that committee, and am glad to be able to tell you, although brewers are even now not reconciled to the main principles of the quota, which involve the disappearance of the free market which had previously existed through the centuries, that nevertheless the committee, by friendly co-operation, succeeded in elaborating a report by which methods are recommended to render possible its working with a minimum of friction. I understand that the Minister of Agriculture has accepted that report. As a first result the price of hops will be fixed for five years at something like 33 per cent. below the exorbitant price of last year, but nevertheless at a very remunerative rate of profit to the growers. How the control of quantity to be produced will work still remains to be seen.

BARLEY

There have also been questions over the barley from which we make our primary raw material, malt. In deference to the farmers' representations, brewers were requested by the Chancellor of the Exchequer to increase their use of home-grown barley to the utmost, and a gentlemen's agreement was given to that effect. At the same time, the increasing output of beer encouraged greater freedom in purchases. As a result, the 1933 crop of English barley fit for malting was cleared in record time and at a price remunerative to farmers.

I can say without hesitation that we shall do the same this year as we did last, and I do not doubt but that other firms will do the same, and I trust the Board of Agriculture will appreciate what the brewers have done for British barley, and recognise that compulsory methods are as unnecessary as they are undesirable.

So far as the balance sheet is concerned, we have a profit balance of £970,191 to deal with this year, against £832,383, which, I think you will agree, is satisfactory, remembering that we brought in a smaller "carry-forward" than in the preceding year. We have drawn down by £75,000 our carry-forward in the three years 1931, 1932 and 1933, but this year we propose to put back £24,000, leaving it at £301,000.

The trading profit at £1,901,071 compares with £1,680,403 a year ago. Rents receivable amount to £432,223 against £447,721 a year ago and £502,475 in 1930. This big drop of £70,000 is an indication of the assistance we have found it necessary to give to our licensees who have been passing through difficult times.

Now a word in regard to the dividend: last year I finished my speech by saying that things were improving and that your board hoped for better results in the year ahead. Well, here we are paying you 13 per cent. on the deferred stock instead of 10 per cent.; so my forecast has proved to have been justified.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 11, 1934, amounted to £10,866,000, against ordinary expenditure of £6,912,000. After allowing for an increase in Exchequer Balances of £111,255 the operations for the week, as shown below, decreased the National Debt by £3,697,000 to approximately £8,075 millions.*

(000's omitted)			
Treasury Bills	+ 3,828	Public Department Advances	- 7,400
National Savings Certificates	+ 150	P.O. & Teleg. Capital Issues	- 250
		N. Atlantic Shipping Issues	- 25
	+ 3,978		- 7,675

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

The aggregate revenue and expenditure to August 11, 1934, is shown below:—

FINANCIAL YEAR, 1934-35, APRIL 1, 1934, TO AUGUST 11, 1934 (000's omitted)			
Expenditure	255,819	Revenue	205,097
Increase in balances	359	Gross increase in borrowing £52,697	
		Less—	
		New Sinking Fund	1,615*
		Net borrowing	51,081
	256,178		256,178

* Authority will be sought in the Finance Bill to meet the amount of the Statutory Sinking Funds in 1934 by borrowing.

POSITION OF THE FLOATING DEBT

Ways and Means Advances Outstanding—	Aug. 12, '33	Mar. 31, '34	Aug. 11, '34	Movement, week ended Aug. 11, '34
Advances by Public Department	32,000,000	44,900,000	32,200,000	- 7,400,000
Treasury Bills outstanding	985,295,000	799,810,000	832,140,000*	+ 3,825,000
Total Floating Debt	1,017,295,000	844,710,000	864,340,000	- 3,575,000

* Includes £2,000, the proceeds of which were not carried to the Exchequer within the period of the account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £35,000,000 in Treasury bills were opened on August 10, 1934, and the total amount applied for was £58,340,000. Tenders were accepted for Treasury bills at three months, dated Monday to Friday, at £99 16s 2d., and above in full; Saturday, at £99 16s 2d., about 18 per cent., and above in full. The average rate per cent. was 14s. 11.06d. The amount allotted was £31,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1932				
January 1	40,000,000	50,320,000	38,000,000	5 s. d.

GOLD

Messrs Samuel Montagu and Company write on August 15, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,676,960 on the 8th instant, as compared with £191,621,164 on the previous Wednesday. Considerable amounts of gold have been offered in the open market during the past week. Following upon the American nationalisation of silver and the weakening of the dollar, the price of gold has been fixed at a large premium over the dollar parity, and the demand for the metal has sprung up again from Continental sources. As a consequence of the further depreciation of the dollar in terms of francs, the gold export point was reached at the end of the week and a shipment of \$1,000,000 bar gold has been made from America to Paris. The demand for gold from Continental sources remains strong and the price shows a premium over the exchange parities.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
August 9	138s. 1d.	12s. 3-66d.
" 10	138s. 1d.	12s. 3-66d.
" 11	138s. 1½d.	12s. 3-61d.
" 13	138s. 3d.	12s. 3-48d.
" 14	138s. 2½d.	12s. 3-52d.
" 15	138s. 4d.	12s. 3-39d.
Average	138s. 2-17d.	12s. 3-55d.

Only a small shipment of gold was made from Bombay last week; the s.s. "Ranchi" carries £11,000, consigned to London.

The Transvaal gold output for July, 1934, amounted to 876,094 fine ounces, as compared with 868,129 fine ounces for June, 1934, and 923,671 fine ounces for July, 1933.

SILVER

The week under review has seen a great deal of activity in the market and opened on the 9th instant with a rise of ½d. in the cash and ¾d. in the two months' quotations, 21 ½d. being fixed for both deliveries, a level which has since been well maintained.

The firmness was due to heavy buying by America and the demand being largely for prompt delivery, cash silver on the 10th instant was quoted at a premium of ½d. over the price for two months (this is particularly noteworthy, as hitherto the last occasion on which cash silver had commanded a premium was on November 18, 1931). The difference widened to ¾d. on August 11th, but narrowed to ½d. on the 13th, the next working day.

There has been a further development in the United States plan for the acquirement of silver in the shape of an executive order signed by President Roosevelt on August 9th nationalising all silver in that country; under the order all supplies must be delivered to the Treasury through the mints within 90 days. The price paid for this silver will be 50-01 cents per fine ounce. There are certain exemptions from the order, such as foreign and domestic silver coins, silver ore, silver in fabricated articles and silver owned by foreign Governments and foreign central banks.

It was reported that on receipt of the news, dealings in silver futures on the New York commodity exchange were suspended.

The announcement caused some speculative demand in the London market, but this and the American buying was offset to a good extent by China sales, which have been of considerable importance. The higher prices attracted profit-taking sales and the Indian Bazaars also made re-sales, but buying by the latter quarter has been less in evidence.

The market has a firm appearance but is dependent on a continuation of American support, failing which the present level might be difficult to maintain in the face of further China sales.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.		Cent per Ounce	
Cash	Two Months'	-999 fine	
delivery	delivery		
August 9	21 ½d.	August 8 ...	49
" 10	21 ½d.	" 9 ...	49 ½
" 11	21 ½d.	" 10 ...	50 (nominal)
" 13	21 ½d.	" 11 ...	50
" 14	21 ½d.	" 13 ...	50
" 15	21 ½d.	" 14 ...	50
Average	21-562d.	21-500d.	

The highest rate of exchange on New York recorded during the period from the 9th instant to the 15th instant was \$5-11½ and the lowest \$5-04½.

† Tax free. § Plus bonus 2½ per cent. tax free.
(a) For half-year to June 30, 1934. (b) 5 per cent. at each date.

WM. FRANCE FENWICK AND COMPANY, LTD.—The directors of this company have decided that the preference dividend for the six months ending June 30, 1934, shall be paid on September 1, 1934. The transfer books for the preference shares will be closed from August 16 to 29, 1934, both days inclusive, for preparation of dividend warrants payable to shareholders appearing on the register on August 15, 1934.

GRAND UNION CANAL.—The directors have informed stockholders that they consider it expedient in view of the unprecedented drought to defer the question of payment of an interim dividend on the capital stock until the final accounts are available at the end of the year. This decision has been arrived at in view of the additional expenditure involved by continuous pumping and other measures occasioned by the present drought.

BRITISH EMPIRE FIXED TRUST CERTIFICATES.—The first half-yearly income distribution on British Empire Fixed Trust Certificates, Series "B," due on September 1, 1934, will be paid to all certificate holders registered before the close of business on August 10, 1934. The share register of series "B" will be closed from August 13, 1934, to September 1, 1934, both days inclusive.

EASTMAN KODAK COMPANY.—The following dividends have been declared, payable on October 1, 1934, to stockholders of record on September 5, 1934: Regular dividend of one dollar per share on common stock; regular dividend of 1 dollar 50 cents per share on preferred stock.

RYLANDS AND SONS, LTD.—The directors have declared an interim dividend at the rate of 6 per cent. per annum, less income tax, on the cumulative preference shares for the half year ended June 30, 1934, payable on the 25th instant. It has been decided to defer consideration of dividend on the ordinary shares until the result of the year's trading has been ascertained.

SECOND BRITISH FIXED TRUST.—Municipal and General Securities Company announces a fourth distribution of the Second British Fixed Trust of 7d. per sub-unit, free of tax (compared with 3½d. for the previous half-year and 6d. for the corresponding period last year) payable against Coupon No. 4 on September 15th in respect of the half-yearly period ended August 11th. An earned balance of 0.099d. per sub-unit is carried forward to Coupon No. 5.

THOMAS WALLIS AND COMPANY.—The directors announce that no interim dividend is being paid on the ordinary shares for the six months ended July 31st last. The interim distribution on the 6 per cent. and 7 per cent. second preference shares will be paid as usual on September 1st.

REPORTS AND NOTICES

MISCELLANEOUS

COLTNESS IRON COMPANY, LTD.—At an extraordinary general meeting held at Glasgow on August 10th, it was resolved to reduce the capital of the company by cancelling the uncalled liability of 5s. per share on each of the existing £1 ordinary shares, making these shares 15s. each, fully paid. As the sanction of the Court, however, must now be obtained, it will be some considerable time before this reduction of capital can take effect. A further intimation will be made in due course. It was further resolved to increase the capital of the company to the present authorised amount of £1,287,500 by the creation of 262,500 ordinary shares of 15s. each to be issued on such terms and conditions as the company may subsequently determine. It was explained that the directors are merely taking advantage of these special meetings to create the shares in order that there may be some unissued capital in reserve, and that it is not the intention of the board to propose in the immediate future any issue of the shares so created.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of July, 1934, as compared with the corresponding month of 1933, show an increase of 17 per cent. of units sold.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to June 30, 1934, compared with those for the same period of 1933:—

	* Monopolies, Tobacco, Stamps, and Stamped Paper (Applicable to Plus Values)	Piraeus Customs Drachmae
Gross receipts, June, 1934...	19,086,966.60	83,997,820.50
Gross receipts, June, 1933...	16,031,930.80	60,138,566.00
Estimated receipts for six months (Law of Control)	14,450,000.00	5,350,000.00
Actual receipts for six months, 1934	114,705,594.50	425,734,278.20
Actual receipts for six months, 1933	103,503,404.60	407,601,994.80
Difference between estimated and actual receipts for six months:—		
1934	+100,255,594.50	+420,384,278.20
1933	+89,053,404.60	+402,251,994.80

NOTE.—Of the surplus over the estimated receipts from the monopolies, tobacco, stamps and stamped paper, 49½ per cent. is applicable towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893.

* Exclusive of increases in duties and selling prices not subject to the system of plus-values.

KARRIER MOTORS.—Roote's Securities, Ltd., who control Humber, Ltd., Hillman Motor Car Company, Ltd., of Coventry, and Commer Cars, Ltd., of Luton, announce that they have acquired the assets and goodwill of the business of Karrier Motors, commercial vehicle manufacturers, of Huddersfield.

MEXICO TRAMWAYS COMPANY (incorporated under the laws of Canada with limited liability).—At the adjourned meeting of the holders of the general consolidated first mortgage 50-year 5 per cent. gold bonds of the Mexico Tramways Company held on August 10th to consider and pass the extraordinary resolutions adopting the arrangement and compromise recommended by the committee representing the bondholders, on a poll being taken by the direction of the chairman, the holders of \$4,874,100 par value of the bonds voted in favour of the resolutions and only one holder of \$20,000 par value voted against. The chairman accordingly declared the resolutions carried.

REPUBLIC OF NICARAGUA 5 PER CENT. STERLING LOAN, 1909.—The Council of Foreign Bondholders have received advice that the sum of £1,984 17s. 9d., the equivalent of 10,000 gold cordobas, has been received in respect of the August instalment of the service of the above loan.

THE SOUTH AFRICAN LAND AND EXPLORATION COMPANY, LTD.—A cablegram has been received from the head office in Johannesburg notifying that the company has been advised that their application for the lease of the undermining rights of the remaining extent of its portion of the Farm Witpoortje No. 2 has been accepted by the Government.

UNION COLD STORAGE COMPANY.—The company does not intend to appeal against the judgment given last month in favour of preference stockholders, who claimed a declaration that the resolutions and agreements reducing the rate of preference dividend were invalid. Official intimation has been received to that effect by the solicitors for the plaintiffs.

WILLIAM HULLINS AND COMPANY, LTD.—It is announced by William Hullins and Company, Ltd., that Sir Frederic Alfred Aykroyd, Bart., has been appointed chairman and director of the company.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

A SHARP break in world wheat prices occurred last week-end as a result of more favourable crop reports in Canada and the United States. The decline continued on Monday, and, although the markets have since developed a steadier tone, the fall on the week is considerable; wheat is now cheaper than at the beginning of the month. With the exception of barley, other grains have also shown a tendency to weaken in price, although quotations for flour have been advanced during the past few days. Last week's rise in raw cotton prices has not been maintained, for attention is now being concentrated on the unsatisfactory state of demand, and increased output from areas other than the United States is a possibility. The cloth market in Lancashire is reported as being adversely affected. Quotations for raw wool show little change, but the trade is anxiously awaiting the opening of the Australian sales next Monday. A report from Bradford states that the outlook at the present time does not appear unfavourable.

Non-ferrous metals have been dull this week. The decision of the Tin Committee to reduce production quotas from October 1st next led to a temporary spurt in tin prices, but this advance has not been fully held. The markets for copper, lead and spelter have all been quiet, and price fluctuations have been small. Stocks of zinc underwent a further reduction during July, but there are indications of an increased output of aluminium in the near future. The British iron and steel industry is in a fairly favourable position, considering the time of year, and exports are well up on last year's figures; in certain areas the coal trade is also showing signs of improvement.

In spite of the decline in cereals and cotton, Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) advanced from 149.5 on August 8th to 150.5 on August 15th, as compared with 129.6 at the same date of last year.

COAL

SHEFFIELD.—Conditions in South Yorkshire continue as depressed as ever. Large steams for export are still scarce owing to the reduced output, and the recent increase of price appears to have checked forward business, which is extremely quiet. Prices vary from 16s. 9d. to 17s. 3d. f.o.b. Industrial requirements are becoming normal again after the holidays and are likely to continue on a large scale. The scarcity of small fuel (also due to the low production of the pits) is proving a handicap to the blast furnace coke trade. The output of the ovens barely meets the present consumption of the iron works. Prices of coke, however, remain comparatively low. Depression is acute in the house coal trade and prices are being cut.

NEWCASTLE-ON-TYNE.—Shipments from Blyth continue to show an increase compared with last year, whilst at other ports on the North East figures remain at about the same level. During the past week there has been a more active trend in foreign inquiry

for screened, and the prospects after the end of this month are good for all classes of Northumberland screened steam coal. Durham fuel, particularly unscreened gas and coking, is being offered freely, and collieries producing these grades are considered fortunate to secure a full week's work. Unscreenered bunkers are slightly better placed, the prime brands being in good demand. Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 13s. 6d.; smalls, 10s. 6d.; Howards, Bentinck, Newbiggin screened, 13s.; smalls, 10s.; Tyne Prime large, 12s. 9d.; smalls, 10s. 6d.; Hartley Main large, 13s.; smalls, 10s. 6d. DURHAM—Lambton-South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special unscreenered gas, 15s.; Holmside, Ryhope, Boldon unscreenered gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreenered or smalls, 13s. 2d.; prime unscreenered bunkers, 13s. 6d.; second-class unscreenered bunkers, 13s. 3d.; prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—Improved conditions prevail on the Scottish coal market, a reflection of which is the fact that last week shipments aggregated 283,000 tons, fully 40,000 tons higher on the week. First Five steams remain a strong feature among large coals, and as regards washed material doubles are firming up, following a resumption of shipments to Germany, and pearls are in good demand on London account.

Shipment prices (f.o.b. district ports): LANARKSHIRE—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 6d.—14s. 9d.; navigation, unscreenered, 12s. 9d.—13s. 3d.; Hartley, 14s. 6d.; steam, 12s.—12s. 6d.; trebles, 14s.; doubles, 12s. 3d.; singles, 13s.; pearls, 11s. 6d.—12s.; dross, 9s. 9d. FIRE—Best unscreenered navigation, 12s. 9d.—13s.; unscreenered navigation, 12s. 6d.; first-class steam, 13s. 6d.—13s. 9d.; third-class steam, 12s.; trebles, 13s. 6d.—15s. 6d.; doubles, 12s. 3d.—12s. 6d.; singles, 12s. 6d.—13s.; pearls, 11s.—11s. 6d. LOTHIAN—Prime steam, 12s.—13s.; secondary steam, 11s. 6d.—11s. 9d.; unscreenered navigation, 12s. 6d.; trebles, 14s.—14s. 6d.; doubles, 12s.; singles, 12s. 6d.—13s.; pearls, 11s.—11s. 6d. Ayrshire—Best unscreenered navigation, 13s. 9d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.—14s.; doubles, 13s.; singles, 12s. 9d.; pearls, 11s. 6d.—12s.; dross, 10s.

CARDIFF.—Although there has been little activity in the steam coal market during the past week there have been one or two bright features and buyers requiring particular brands have not been able to cover their requirements very easily. Sized coals are particularly firm, notably those of the drier qualities, and peas and beans are able to command approximately about 1s. per ton above the minimum scheduled prices. Large coals, however, continue in excessive supply, but patent fuel and coke are steady. As a result of the recent economies of the G.W.R. the number of berths available for use has been reduced to 78, and of these 59 were occupied on Wednesday. The decision of the Executive Council of the Miners' Federation to convene a delegate conference towards the end of the month to consider a recommendation for the termination of the 1931 wages agreement at the end of September is more a matter of procedure than a threat of a stoppage, and hopes are confidently entertained that the parties will be able to adjust their differences over the terms of a new agreement.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; seconds, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 22s. 7½d. (French), 23s. (Portuguese).

IRON AND STEEL

MIDDLESBROUGH.—Although only small parcels of pig iron are changing hands, the market continues steady. The output continues to go into consumption and good shipments are being made to Scotland, while it is noticeable that more small parcels are being shipped to foreign destinations. Next week, most of the foundries will close down for the local holidays. This may cause a slight increase in stocks of pig iron in makers' hands, but is not sufficient to affect the market position, and prices for home use are based on 67s. 6d. per ton delivered locally for No. 3 Cleveland foundry pig iron, and 68s. for East Coast Hematite No. 1 delivered to firms in the Middlesbrough zone, with the usual extras for delivery further away.

Shipments of all classes of pig iron from the Tees to August 14th amounted to 5,826 tons, against 4,312 tons to July 14th. Odd cargoes of foreign ore continue to change hands on the basis of 17s. per ton c.i.f. Tees for best Bilbao rubio, and good Durham blast-furnace coke remains at 20s. per ton delivered at the furnaces. In the semi-manufactured steel departments a good output is being maintained, whilst in the finished steel departments shipbuilding and sheets remain quiet. Other sections are fairly busy on orders already on the books. Heavy steel melting scrap is plentiful and can be obtained at 50s. per ton delivered at the works. There will be no market on Tuesday next.

SHEFFIELD.—The majority of the steel workers who were suspended for the holiday have now resumed work, and the position is much the same as before the stoppage. As regards billets and other part-manufactured material, orders for some time past have been on a reduced scale compared with the first quarter of the year, but suffice to maintain the working of plants at almost full capacity. Complaints are heard of delays in delivering orders for certain kinds of special steels and steel goods, and to some extent this is due to scarcity of suitable skilled labour. Buying of ferro-alloys used in special steels has been meagre for several months, and prices of tungsten have been reduced this week by 3d. per pound. The recent substantial advances of this material brought sales almost to a standstill. Demand for stainless steel is as brisk as ever, and valuable orders are on hand for large hollow forgings intended for chemical works. Files and various tools are selling freely. Export trade is still handicapped by difficulties of finance, and business with Germany has been suspended because buyers have defaulted for the time being. Cutlery and plate meet an extremely quiet trade.

GLASGOW.—The situation in the iron and steel trades is regarded very hopefully, and opinion seems to be general that the improvement which has been noticeable for some time will be maintained and probably bettered during the autumn and winter months. Buyers have not been quite so numerous just of late, on account of holiday influences, but business placed shows an increase upon that of recent years at this season. At the steel works tonnage on order books is considerable and plants are well employed. Makers of semis, although not so well placed, have also a fair amount of work on hand at the moment. The export demand for sheets shows some improvement, and home demand continues on a very satisfactory scale. In nearly all branches export business seems to be on the up-grade, and the number of enquiries on the market is encouraging. It is announced this week that Messrs Fleming and Ferguson of Paisley have received an order for a dredger for service in British Guiana.

CARDIFF.—Pending the completion of detailed arrangements regarding the International quota and price agreement, South Wales tinplate manufacturers are not booking orders beyond September, with the result that a big volume of inquiry is stated to have developed from overseas buyers. Meanwhile, prices are very firm at from 18s. to 18s. 3d. per basis box, and Welsh steel bars have been advanced from £5 to £5 7s. 6d. per ton. Galvanised sheets are also in slightly better demand, but quotations are unaltered at from £11 5s. to £11 15s. per ton. Shipments of tinplates at Swansea last week totalled 78,357 boxes compared with 58,855 boxes the previous week, and stocks have consequently been reduced by about 20,000 to 130,677 boxes.

OTHER METALS

The chief event of the week was the meeting of the International Tin Committee on Monday, when it was decided to reduce production quotas by 10 per cent. to 40 per cent. of standard tonnage as from October 1st next. This announcement was followed by a jump in tin prices, but the advance has not been fully held; and since the market is completely controlled, little practical result is to be expected. The aim of the Committee appears to be the stabilisation of prices at present levels, but any expansion of consumption at these rates appears doubtful.

The copper market has exhibited no new features this week and prices have fluctuated only within narrow limits. Rumours regarding a world copper conference have again been current, but there is no prospect of this materialising at present—especially in view of the fact that Rhodesian producers know nothing about the proposal, save what is contained in the daily press.

Trade in lead and spelter has also been quiet and prices show little change. The statistical position of both metals, however, continues to improve and in July stocks held by the Zinc Cartel (for countries outside the United States) were reduced by 4,702 metric tons to 106,319 tons—as against a holding of 139,892 metric tons at the end of last January. According to the American Bureau of Metal Statistics, the world production of refined lead amounted to 733,146 short tons during the first six months of this year, an increase of 119,278 short tons compared with the corresponding period a year ago. The improvement, however, was largely in

the earlier months of the year and by June production had fallen below last year's level. By the end of the year, therefore, the excess over 1933 may be reduced to small proportions.

We have alluded several times to the efforts of certain countries to establish their own aluminium industry, and in this connection it is interesting to note that, during the first half of 1934, Germany imported no less than 108,360 tons of bauxite, as compared with only 75,880 tons in the same period last year. During the same period, Italy produced 6,290 metric tons of aluminium, against 4,770 tons a year ago, although exports from Italy declined from 3,690 to 890 metric tons. It would appear that this development must lead to grave difficulties for the world's aluminium industry.

TIN.—Sales on the London Metal Exchange: 800 tons on Monday; 260 tons on Tuesday, against 85 tons last week; 75 tons on Wednesday, against 225 tons last week. The New York quotation on Wednesday was 52.35 cents per lb., against 51.75 cents a week ago and 51.90 cents a month ago. Wednesday's official closing quotation in London for standard cash was £229 15s. to £229 17s. 6d., compared with £227 5s. to £227 10s. last week. Stocks in London and Liverpool at the end of last week were 3,853 tons, an increase of 149 tons on the week.

COPPER.—Sales on the London Metal Exchange: 200 tons on Monday; 925 tons on Tuesday, against 750 tons last week; 1,000 tons on Wednesday, against 800 tons last week. Domestic spot was quoted at 7.07½ cents per lb. in New York on Wednesday, against 7.02½ cents a week ago and 7.20 cents a month ago. Wednesday's official closing price for standard cash in London was £28 7s. 6d. to £28 10s., compared with £28 12s. 6d. to £28 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,490 tons, show an increase of 3,060 tons, and stocks of rough copper, at 7,142 tons, remain unchanged.

LEAD.—Sales on the London Metal Exchange: 250 tons on Monday; 300 tons on Tuesday, against 250 tons last week; 150 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.75 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 17s. 6d. for shipment during the current month, compared with £10 15s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 150 tons on Monday; 350 tons on Tuesday, against 200 tons last week; 150 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.30 cents the week before, and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 13s. 9d., for shipment during the current month, against £13 11s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 7s. 6d. to £11 12s. 6d. per flask of 76 lbs., as against £11 10s. to £11 12s. 6d. last week. Foreign antimony was quoted at £36 15s. to £37 10s. per ton, as against £36 to £36 10s. per ton last week. Chinese wolfram was quoted at 39s. to 41s. per unit, c.i.f., as against 37s. to 38s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—Raw cotton prices, after advancing about ½d. per lb. following the bullish American crop estimate, have given way on liquidation of contracts and the rise has been lost. Although it is recognised that only limited supplies will be available this season, increased attention is being centred on the unsatisfactory outlook for consumption and the possibility of a larger output from other sources. The cloth market has been somewhat adversely affected by the fall in raw material rates and buyers have been cautious in making offers. The general inquiry, however, for India continues rather more encouraging and moderate orders have been secured in dhooties for Calcutta, mulls for Karachi and dyed goods for Amritsar and Delhi. Operations for China and the Straits Settlements have been confined to sorting up lots in specialities. Shippers to Egypt and the Near East have given some attention to bleaching and dyeing cloths without much being done. Irregular buying has taken place in finishing styles for South America and West Africa. Only occasional sales have been mentioned for the Dominions and home-trade reports have given very little satisfaction. Quotations in the yarn market have been easier and more irregular. Home users have purchased sparingly and export demand remains dull.

COTTON TRADE REORGANISATION.—About two months ago the Master Cotton Spinners' Federation put forward another scheme for the reorganisation of the spinning section of the industry, but it was realised that there was little probability of any reorganisation until something was done to deal with the question of redundant machinery. A special committee was therefore appointed, with Lord Colwyn as independent chairman, to go into this matter; it is now stated that the report is completed. This is about to be considered by the State of Trade Committee and the General Committee of the Federation. No details of the proposals have yet been published, but a more serious attempt is undoubtedly about to be made to deal with this problem. Compared with a year or two ago, there are many more people in Lancashire who realise that united action is necessary to relieve the depression and to place the industry on a sounder footing, but whatever scheme is put forward, a good deal of criticism must be expected. The opposition, however, is likely to be less than on former occasions when such proposals have been made.

WOOL.—Bradford.—The entire industry on this side of the equator is anxiously awaiting the opening of a new selling season at Brisbane next Monday. Commercial conditions throughout Europe during the past three months have been such as completely to disorganise the wool markets of the world, and the exercise of patience in opening a new selling season has been the right policy. The cessation of sales in Australia and South Africa has meant a much larger

GRAIN MARKETS

WHEAT.—A sharp break in wheat prices occurred last week-end, when it was found that official reports of crops in North America were better than many people had anticipated. The decline continued on Monday, when there were heavy realisations on the Liverpool futures market, but trade subsequently became much steadier. The decline on the week is, however, substantial, and prices are now lower than at the beginning of August. According to Mr G. Broomhall, total shipments during the past week were 1,465,000 quarters, against 1,305,000 quarters in the preceding week. On Wednesday, "September" futures were quoted in Chicago at 101½ cents per bushel, against 109 cents the week before and 98½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 35s. 9d. per 496 lbs., against 37s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 34s. 6d., against 36s.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted; Australian, ex ship, 31s. 6d., against 32s. a week ago.

FLOUR.—North American shipments were 119,000 sacks in the past week, as compared with 112,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 28s. 6d. per 280 lbs., against 28s. last week; delivered London, 27s. 6d., as compared with 27s. a week ago. Manitoba patents, ex store, 26s. to 27s., against 27s. to 28s.; Australian, ex store, 20s. to 21s., against 19s. to 20s.

BARLEY.—Although trading has been rather less active during the past week, the undertone of the market for imported feeding barley continues very firm. Little trading has been reported in English barley and quotations are largely nominal. "October" futures were 55½ cents per bushel in Winnipeg on Wednesday, against 57½ cents last week and 46½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 35s. to 50s., against 28s. to 31s. a week before.

OATS.—Stocks in the United Kingdom are being reduced owing to smaller imports and quotations showed a slight advance in London this week. American prices have, however, declined. On Wednesday, "September" futures were quoted at 49½ cents per bushel in Chicago, against 51½ cents a week ago, and 44½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. 6d. per 320 lbs., against 22s. 6d. a week ago; "Chilean White," landed, 24s., against 24s. a week earlier.

MAIZE.—Quotations for this cereal generally show little change on the week. "September" futures were quoted on Wednesday at 75½ cents per bushel in Chicago, against 76½ cents a week ago and 61½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 26s. 3d. per 480 lbs., compared with 26s. 3d. last week; "Plate," ex ship, 25s. 3d., as against 25s. 3d. "Plate," August, 25s. 3d., as against 25s. 3d. Yellow maize meal, ex wharf, was quoted £7 to £7 5s. per ton, against £6 to £6 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to August 11	Cwts. 25,824	Cwts. 28,217	Cwts. 51,628	Cwts. 85,463
50 weeks to August 11	4,928,433	3,811,519	3,574,486	6,517,231
Average price of English wheat per cwt.	s. d. 6 6	s. d. 6 7	s. d. 6 0	s. d. 5 0

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 4, 1934	Cwts. 102,879	Cwts. 4,314	Cwts. 16,563	s. d. 5 0	s. d. 5 5	s. d. 6 4
Aug. 11, 1934	85,463	3,305	16,502	5 0	5 2	6 7
Aug. 9, 1930	75,560	3,906	11,495	8 4	6 4	5 11
Aug. 8, 1931	21,284	1,156	4,314	6 6	6 9	6 9
Aug. 13, 1932	28,217	1,752	4,466	6 7	6 9	7 7
Aug. 12, 1933	51,628	7,407	18,782	6 0	9 7	5 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Aug. 16, 1933	Jan. 3, 1934	Aug. 8, 1934	Aug. 15, 1934
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	62½	46½	70½	65½	94½	87½
Chicago (No. 2 Winter) Cents per 60 lb.	55½	46½	67½	84½	109	101½

The visible supply of wheat in Canada, at 101,673,000 bushels, shows a decrease of 1,629,000 bushels. Supplies a year ago stood at 100,326,000 bushels.

OTHER FOODS

SUGAR.—The market for raw sugar in New York has been easier, and prices have fallen. In London, home refined has been in fair demand at rather lower rates. The spot price of raw sugar in New York on Wednesday was 3.27 cents per lb., as compared with 3.32

cents per lb. last week and 3.17 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9d., against 4s. 9d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
	Tons	Tons	Tons	Tons	Tons	Tons
London	1,292	65	1,080	961	32,410	27,160
Liverpool ...	11,638	10,253	8,575	6,613	159,078	145,155
Total tons....	12,930	10,318	9,655	7,574	191,488	172,315
Last week ...	7,617	7,381	12,156	14,441	188,213	169,571

COFFEE.—The market has been quietly steady this week, with prices showing little change. In New York on Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9 cents per lb. a month ago. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 4 bags; exported, 20 bags; stocks, 28,413 bags, against 28,130 bags a year ago. Central American, landed, 68 packages; delivered, for home consumption, 1,721 packages; exported, 292 packages; stocks, 107,354 packages, against 95,898 packages last year. Other kinds: landed, 1,025 packages; delivered, for home consumption, 1,455 packages; exported, 667 packages; stocks, 100,726 packages, against 87,887 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "August-September," was 20s. per 50 kilos, c.i.f. Continent, as against 20s. 6d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 3,168 bags; delivered, for home consumption, 1,515 bags; exported, 3,753 bags; stocks, 249,517 bags, against 169,416 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 39,527 packages of Indian and 26,670 packages of Ceylon tea. Demand was not too active and quotations were regarded as being rather disappointingly low. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.								
Week ending	North India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total	
Aug. 3, 1933	d. 11-11	d. 10-92	d. 14-78	d. 9-18	d. 8-91	d. Nil	d. 12-08	
July 12, 1934	d. 12-01	d. 12-85	d. 13-28	d. 11-13	d. 11-06	d. 12-47	d. 12-89

Aug. 1, "	d. 13-29	d. 12-49	d. 12-99	(a)	(a)	d. 12-00	d. 12-94	

(a) No sales.

RICE.—The "spot" price was 8s. 3d. per cwt. on Wednesday as compared with 8s. 3d. a week ago, while the forward quotation, at 7s. 10½d. per cwt., shows a rise of 1½d. on the week. Movements in London during the past week were as follows: Landed, 237 tons; delivered, 120 tons; stocks, 2,068 tons, against 6,061 tons a year ago.

POTATOES.—A steady demand has been experienced for the ample supplies coming forward and prices have remained steady at generally unchanged rates. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. 6d. to 8s. per cwt., as compared with 6s. 6d. to 7s. 6d. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 13 tons; delivered, 13 tons; stocks, 213 tons, against 303 tons a year ago. White, landed, 40 tons; delivered, 35 tons; stocks, 6,326 tons, against 902 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hind quarters, was 4s. 6d. to 5s. per 8 lbs., as compared with 4s. to 4s. 4d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 7,170 tons, against 6,487 tons in the corresponding week last year. Imported beef, principally Argentine, formed 88.0 per cent. of the beef supplies, against 88.3 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 80.6 per cent. of the total supply of mutton and lamb, against 76.0 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets have a decidedly quieter tone and business is small in volume. Linseed is slow and demand is chiefly from the Continent. With the probability of ample supplies between now and the readiness of the new Plate crop, crushers are only buying to cover their immediate requirements to meet the cake demand. The needs of the United States are still problematical. In the past few days old crop Argentine linseed has lost 10s. to 12s. 6d. per ton and is now offered at £11 2s. 6d. for all positions to October, with new crop for January-February shipment quoted around £10 15s. Indian seed is not so firm and Calcutta to London is lower at £12 10s. Shipments from the River Plate are on a firm scale. The quantity now afloat for Europe has increased to 117,100 tons (including 28,200 tons from India) and for the United States 19,400 tons. The crop situation is unchanged. Cottonseed is easier and black Egyptian old crop is available at £5 5s. and new crop (October) £5 7s. 6d.

Demand for vegetable oils is only moderate. Linseed oil has still to meet Dutch offers. The current quotation ex Hull for August delivery is £21 and for September-December the same. Cotton oil is dearer in sympathy with United States and seed, Egyptian crude being on offer at £14 and common edible at £16 per ton ex Hull. The demand for oilcakes is steadily improving and quotations firmly held.

RUBBER.—Following the announcement of President Roosevelt's silver nationalisation policy, world rubber prices temporarily advanced. Subsequently, however, operators appear to have become doubtful and the upward movement was not maintained. Quotations show little change on the week, although rubber is now a little

dearer than at the beginning of the present month. This appreciation is taken to be a further indication of the soundness of the market position, and there appears to be no dangerous speculation at the present time. In New York, Wednesday's spot price for rubber, at 15½ cents per lb., compared with 15½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 107,236 tons, show an increase of 909 tons as compared with the preceding week.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE WILL OF THE PEOPLE

If the plain man were a philosopher and tried to express in words what he requires of the society in which he lives, his first demand would probably be that he should be permitted to live in peace and quiet with his neighbours. For the plain man wants tranquillity, so that he may get on with that business which most appeals to him—the business of living. Sustenance, shelter, the opportunity to bring up a family, and, if possible, leisure for amusement and the spice of mild adventure—these are his primary needs. The idea of the Social Contract is that he owes duties to the State in return for the liberty and security it can guarantee him for the pursuit of these needs. And, fundamentally, the economic needs of the plain man form the basis of the social order.

But the world has evolved and grown more complex since the days of Rousseau; and other considerations than the plain man's needs have emerged. Security involves not merely internal order in the State and the assurance of some measure of personal rights, but also protection against external aggression. With the growth of the sense of social solidarity in the State there have come into being all those influences which have made of the idea of nationality one of the strongest political forces—if not the strongest—of modern times. So that when "the nation" is threatened or the sense of national pride rebuffed, the peoples of the world are capable of heroism and sacrifice to the point of self-destruction.

There is, however, yet another motive which is capable, in given circumstances, of overriding all others—namely, the urge for freedom and the determination to retain some measure of liberty to choose for one's self. Politically, this fundamental urge may declare itself in a fight for democracy or in revolution against an oppressive or mechanical economic system which reduces the plain man to a cog in the machine.

These three ingredients—the desire for economic security, the appeal to the pride of nationality, and the urge for freedom—seem to be mixed in most varying proportions in the popular sentiment of the peoples of the world to-day; and if the nations have difficulty in understanding one

another it is largely because differing circumstances have resulted in such great variations in the motives which go to fashion the will of the people. Not only so, but this will of the people can only be declared through some form of political machinery allowing for its expression; and the forms of this machinery to-day vary widely from country to country, ranging from the absolute denial of free expression to so great a degree of political liberty as we possess in this country.

That is, perhaps, why we find it hard to understand the overwhelming figures of the German plebiscite last Sunday. Of the total qualified electorate of 45,473,635 persons, 43,529,710 voted—a striking testimony to the personal interest of the German voter in recording his vote, in comparison with the apathy of the electorate in many of the remaining democracies. Of the votes cast in Germany last Sunday 38,362,760 were in favour of Herr Hitler's designation as Chancellor and President; 4,294,654 were against it; and 872,296 ballot papers were spoiled. Thus, in comparison with the referendum of last November, the percentage of valid votes in favour of the Nazi regime has fallen from 95.1 to a little under 90; and that of the unfavourable votes has risen from 4.9 to a little over 10; while the high percentage of non-valid votes, after so much official instruction in the art of voting, must in the main be taken as increasing the proportion of unfavourable votes.

No doubt, in Hitlerite Germany it is not very profitable to be known as a voter against the regime. This, coming on top of an unparalleled Governmental campaign of propaganda in which adverse voters were stigmatised as traitors before the event, heightens the significance of the increase in votes adverse to Herr Hitler. But when due allowance is made for all this, the figures show a vast acquiescence in Herr Hitler's regime, comparable only to the overwhelmingly favourable plebiscites held by Napoleon III prior to, and during, the Second Empire in France. By comparison with last Sunday's figures in Germany, the poll for the National Government in this country in 1931, which was 67 per cent. of the votes cast, but less than half the total electorate, amounts to a miserable vote of no confidence!

Nevertheless, the doubling of the minority adverse to the Nazi regime in nine months is at least as significant as the still overwhelming size of the majority. But of what is it significant, and to what causes can it be ascribed? First in importance among the factors making for this growth in the adverse vote was, without a doubt, the reactions of many Germans to the profoundly disturbing events of June 30th. The feeling in Germany was undeniably one of relief when Herr Hitler took action to remove those of his followers who had abused their great influence at the expense of the community. But the measures taken to "remove" them were, in the nature of an extremist movement, extremist. The German citizen could hardly view the ruthless extermination of the Leader's followers by the Leader himself with anything but the gravest misgivings for the future of Germany. Secondly, economic difficulties have been exerting a steadily increasing pressure upon the industrial workers, for the reasons given in our Berlin correspondence this week; and the proportion of votes against the regime was significantly greater in the industrial districts than elsewhere. Thirdly, after June 30th, and since the death of Hindenburg, there has been a pronounced swing to the Right in Nazi policy, evidenced not only in the Leader's speeches, but also in the press. There is evidence, indeed, that the regime, after June 30th, has been more inclined to drop the "Socialist" and concentrate on the "National" elements in its composition. One need only recall the continuous references to the paramount rôle of the Reichswehr, that *cadre* of army officers and Junker landlords; the damping down of demands by Left-wing Nazis for the State control of industry; the disbandment and reduction of the S.A. Brownshirts; the extraordinarily ill-advised Nazi policy aiming at the subjection of both Catholics and Protestants, at one and the same time, to the dictates of the State; and, last but not least, the blow to Nazi policy and prestige in the abortive Nazi revolt in Austria, in the dastardly murder of Herr Dollfuss, in the consequent "loss" of Austria, and in the very real loss of Italian friendship, which now leaves Germany virtually isolated in a charmed circle of her own making. Finally, the high hopes in the first flush of a "unified" Nazi Germany have given way to disillusionment—disillusionment over an economic Utopia for the plain man, disillusionment over the vast plans for a Third Reich incorporating Austria, disillusionment even over the incidence of Nazi Government on the ordinary citizen.

Here is matter enough for heart-searchings by Germans themselves. Against it all, the Nazis appealed to the plain man's pride of nationality. All Germany's difficulties and discontents were laid at the doors of foreign countries. "We have evil foes in the world," said Herr Hitler, in his election address at Hamburg, which was broadcast all over Germany. These foes willed the destruction of Germany, as they had willed it at Versailles. That was all. But Germany would be great again, and then all would be well.

It would be rash to draw any definite conclusion as to the will of the German people from last Sunday's plebiscite. The plebiscite is only one among many devices for expressing the will of a people; but like all such devices, it can only be a true test under freedom and with adequate knowledge on the part of the voters of the issues at stake. Under pressure of propaganda, it can be little more than farcical. "You can fool all the people some of the time, and some of the people all the time." The result of Herr Hitler's latest referendum is a warning that "you can't fool all the people all the time." Herr Hitler based his appeal to the German electorate last Sunday upon the need to demonstrate to foreign countries the unity of Germany behind the Nazi Government. Truly, disunity in Germany would be deplorable. Is it too much to hope that the unity of Germany may yet be achieved on better foundations than propaganda and intimidation? The desire for "Peace at home and peace abroad" is without doubt the highest common factor in the will of other peoples than the German. The prestige of Herr Hitler, of his Government, of Germany herself, would be immeasurably greater if such votes as that of last Sunday expressed the will of a free and well-informed people. And the first need of the plain man, at least in Europe, would be immeasurably nearer realisation.

HEALTH AND HOUSING

THE fifteenth annual Report of the Ministry of Health which was published recently is, like its predecessors, an interesting and informative document. This year, besides the usual statistical returns and reports on the multifarious activities of the department, it contains an instructive special survey of the public health services, with special reference to the progress—such as it is—which has been made in the co-ordination of the former Poor Law medical services under the Local Government Act of 1929 with the other branches of public health administration. In the historical introduction to this special section there is quoted the following passage from the Report on the Sanitary Conditions of the Labouring Population of Great Britain which was published in 1842. The first finding of the Report states "That the various forms of epidemic, endemic and other disease caused or aggravated or propagated chiefly amongst the labouring classes by atmospheric impurities produced by decomposing animal and vegetable substance, by damp and filth, and close and overcrowded dwellings, prevail amongst the population in every part of the kingdom, whether dwelling in separate houses in rural villages, in small towns, in the larger towns—as they have been found to prevail in the lowest districts of the Metropolis."

The close connection between health and housing pointed out in this Report may well stimulate us to some reflections. During the century which has almost elapsed since that date sanitary conditions, speaking generally, have improved beyond recognition, and the epidemics of diseases such as cholera which visited this country as late as the 'sixties of last century have fortunately been banished. Increasing knowledge of sanitary conditions and the steady growth of other public health services has enormously increased the life of the individual citizens. Indeed, the progress that has been made in the last generation is startling. Since 1871-80 the average expectation of life—in spite of efforts to the contrary by the internal-combustion engine—has increased by no less than fifteen years. Few, however, would venture to say that the progress made in the matter of housing has been anything like as significant. "Damp, filth and close overcrowded dwellings" still characterise urban and rural areas alike. We are still more than 800,000 houses short of anything like a decent standard of accommodation, and Sir Ernest Simon has estimated that at least four million houses are for various reasons more or less unfit for human habitation. When the lamentable condition of so much of our housing is taken into account, the improvement that has taken place in public health generally during the last decade is sufficiently remarkable. In spite of the widespread conditions of want and poverty which have prevailed during the past four or five years in some of our industrial areas, the health of the public shows no statistically visible sign of deterioration. A slight increase during 1933 in the number of deaths from pulmonary tuberculosis is explained by influenza, but there is also a definite though small rise in the maternal mortality rate which needs explanation.

We have no space in this article to comment in detail upon the various administrative problems raised by the transfer of medical services and accommodation from the Poor Law to the public health services. Reading between the lines of the report, it is clear that, while considerable progress has been made by the county boroughs, the councils of the administrative counties have met with considerable difficulties, some of them, it would appear, of their own making. One of the chief objects of the Act of 1929 was to improve the general standard of municipal hospital accommodation through the absorption of Poor Law hospitals and the more efficient co-ordination of existing resources. In the county boroughs the position as regards hospital accommodation is, on the whole, regarded as satisfactory by the Ministry, but the situation in many of the counties calls for improvement: "in at any rate a number of counties some material expenditure will be necessary as an urgent public health requirement in order to achieve a reasonable standard of efficiency in this service." More particularly there seems to be a shortage of tuberculosis accommodation on the North-East Coast—a problem which

can only be solved by co-operation among the different municipalities. Unfortunately, so far, attempts to arrive at an agreed scheme have broken down. As the report clearly shows, more co-operation is wanted not only among the separate local authorities themselves—and not least perhaps among the separate committees of the same authority—but also between the local authorities and the voluntary hospitals, if public health services are to develop along the most efficient and economic lines.

The sage tone of reasoned criticism and judicious advice which characterises the section on public health is notably absent in the portion of the report which deals with housing. Here the tone is, to say the least of it, rather unjustifiably optimistic. The report mentions, for instance, the belief that the statistics since the abolition of the Wheatley subsidy "give reason to believe that the Government's reliance upon private enterprise as the main source of the future supply of working-class houses was not misplaced." But the evidence given to support this conclusion is hardly convincing. It is true that the number of houses built without subsidy during the twelve months ended March 31st of this year was no less than 207,869—a record figure. But how many of these houses were really of the type most urgently required? Since last autumn the statistics do give us some light on the kind of houses built. Of the 120,781 houses constructed in the half-year ended March 31, 1934, only 44,754 came into the Class "C" category, and of these only 13,014 were to let. Unfortunately, the category "C," which is no doubt adequate for the purposes for which it was originally designed, namely, rent restriction, is not very relevant to the statistical evaluation of the real housing problem, since Class "C" includes houses to let at an all-in-rent of as much as 11s. 6d. in the provinces and 16s. in the Metropolis—a rent quite considerably above the means of the poorest-paid workers (to say nothing of the intermittently or permanently unemployed), whose need forms the real measure of the housing problem. Until the Ministry of Health produces some figures to show how many houses are being built to let at 10s. and under it will be impossible to gain any accurate idea as to how far the Government policy is really succeeding in doing what it professes to set out to do.

Meanwhile, notwithstanding the fall which has taken place in the cost of building since the incidence of the world depression, it still remains true that local authorities, except in specially favoured areas, are unable to build without subsidy houses to let at 10s. and under, in spite of the advantage which they enjoy over private enterprise and the building societies, owing to the longer period over which the repayment of loans can be spread. It may readily be admitted that in the past enormous sums have been wasted through the various housing subsidies—we are still spending from the Exchequer alone some £13½ millions under the various housing Acts since the war—but that is no argument for abolishing the Wheatley subsidy altogether. What is needed is a more modest form of subvention, which will not be misapplied, but will be appropriated exclusively for the benefit of those who really need it; perhaps in connection with some scheme of differential renting on the lines attempted by the municipality of Leeds.

It may perhaps legitimately be inferred that the Government has recognised its initial mistake, since in framing its slum clearance plans it has decided to reintroduce the subsidy by the back door, by the assistance which has been promised for tenement building in the over-crowded urban centres. The exact nature of the Government's proposals in this connection will not be revealed till the autumn, but Lord Irwin's speech in the House of Lords just before the summer recess seemed to encourage the belief that the necessity for vigorous action has to some extent, at any rate, been recognised. Here the danger appears to lie in the fact that unless the new tenement building is planned on a sufficiently large scale it will be ruinously expensive. The Dudley Committee came to the conclusion that, given a sufficiently radical reorganisation of present methods of building and a proper degree of standardisation, financial assistance on the scale of the present rehousing subsidy should be amply sufficient to supply the type of accommodation required at reasonably low rents. But it is clear

enough from their report that, in order to attain the economies which they advocate, something very like a revolution in building technique will be required. It is for reasons such as these that we believe a National Housing Commission, as recommended by the Amulree Committee, to be essential. The Dudley Committee (which was largely a body of technical experts) did, it is true, reject this proposal, but on grounds which were anything but convincing. Administrative considerations point unmistakably to the conclusion that the degree of planning and co-ordination required to solve the housing and slum clearance problem on a national scale and on really economic lines can only be obtained through the creation of some such supervisory body endowed with adequate powers. The proper demarcation in each area of the appropriate spheres for the private builder, the building society, the public utility societies and the local authorities can only be effected by nation-wide planning—to say nothing of the effective mobilisation of the credit as well as the material resources of the community. We believe that such a commission, if it were set to work on sound lines and on a really long-range programme, could achieve very important results by way of reducing costs of construction, through the reorganisation of the building trade—including a revision of present trade-union practices, as well as a control of price-rings—in addition to the modernisation of constructional technique. The Government, it is true, has promised an inquiry into the costs and methods of tenement building, but that is not enough. What we envisage is a much more thorough-going planning of building activities over the next ten, twenty or even thirty years—for, in spite of the many misapplications of that now fashionable term, house building remains one of the industries to which planning on a large scale is appropriate. Only by some such method will it be possible to attain the real goal towards which the efforts of the nation should be directed—namely a condition in which the normal housing needs of the community can be supplied without any special form of State assistance.

THE DIRECTION OF OVERSEAS TRADE

THE Board of Trade's quarterly analysis of the direction of our foreign trade is gradually affording the necessary information for estimating the effect of various influences—our own and other people's commercial policy, monetary policy, restrictive legislation, trade agreements, etc.—on the distribution and amount of our imports and exports. The total turnover for the second quarter of 1934, at £273½ millions, is some £27 millions more than in the corresponding quarter of 1933. This improvement over 1933 is almost exactly the same as was shown by the spring figures in comparison with a year ago. It is true that the gross figure is a few millions less than in the first quarter of the year, but it is not unusual to find a slight seasonal fall in the total turnover. The broad fact is that there has been a rather more than 10 per cent. recovery from the trough of the depression and that the improvement is being maintained. The total, however, still makes a very poor showing compared with 1929, when the corresponding turnover amounted to £476 millions.

The improvement is spread in slightly differing proportions over all the three chief groupings of trade. The following table, for example, shows quarter by quarter our imports from Europe, from foreign countries outside Europe and from the Empire respectively:—

	TOTAL IMPORTS (£000,000)								
	From Europe (including Dependencies)			From Other Foreign Countries			From the Empire		
	1929	1933	1934	1929	1933	1934	1929	1933	1934
1st quarter	99.9	51.9	58.8	107.9	45.5	53.0	98.2	61.8	72.1
2nd quarter	115.0	55.7	62.6	91.9	43.0	47.2	91.9	62.4	68.6
3rd quarter	124.4	64.9	...	87.2	45.1	...	79.8	57.5	...
4th quarter	127.1	68.9	...	108.5	51.2	...	89.5	67.7	...

The figures indicate that imports from Europe rose more than from any other source and that they exceeded those

for the first quarter of the year. But this follows a quarter when the Empire scored most heavily—the net result for six months being that the increase from the Empire has been at about the same rate as the rise in foreign imports. Similar figures for exports tell a slightly different tale:—

BRITISH EXPORTS (£000,000)									
Exports to	Europe (including Dependencies)			Other Foreign Countries			Empire		
	1929	1933	1934	1929	1933	1934	1929	1933	1934
1st quarter	56.6	32.7	35.0	42.9	17.5	17.9	81.7	39.5	41.9
2nd quarter	59.2	30.7	33.9	41.1	17.0	17.5	77.2	37.8	43.5
3rd quarter	59.7	32.4	...	43.1	19.9	...	82.0	40.9	...
4th quarter	60.0	35.2	...	42.3	18.5	...	83.6	45.3	...

In this case the Empire market has shown the largest increase in the past three months—the least satisfactory figure in the table being our sales to foreign countries outside Europe.

Export statistics, however, always reflect a very definite time lag, and in any case the figures for three months are liable to be affected by transient or seasonal influences. In the detailed analyses which follow we have taken the entire first half-year. The first of the tables relates to the countries of Europe:—

TRADE WITH EUROPEAN COUNTRIES—FIRST HALF-YEAR
(000's omitted)

From or to	Imports				British Exports			
	1913	1929	1933	1934	1913	1929	1933	1934

Other European countries	86	1,058	1,359	1,752	181	1,180	1,010	1,373
Total	152,283	214,896	107,639	121,351	96,308	115,821	63,419	68,931

* Including dependencies.

We have reduced our purchases only from Italy, Roumania, Greece, Turkey and Denmark. In the last case the reduction has not prevented a continued expansion of our exports to above the 1929 level. On the other hand, we have increased our imports from Russia by 50 per cent. (including an increase of £1.5 millions of wood and timber), while she has reduced her purchases considerably. The only other countries which are actually buying less from us than in 1933 are France and her dependencies and Turkey; the trade war with France this year partly accounts for this; but the Belgian and Dutch markets are also showing very small signs of expansion. Thus, while our trade with the Baltic States and our exports to Scandinavian countries have almost risen to the level of 1929, trade with the countries of the gold bloc is less than half what it was before the depression. An interesting feature of the above table is the fact that our trade with Germany in both directions has increased as compared with the first half of 1933 in spite of exchange difficulties and debt negotiations.

Turning to foreign countries outside Europe, we find that while our purchases have grown, their buying of British goods has not shown the same elasticity as that of countries nearer home. This is brought out in the following table.

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE—
FIRST HALF-YEAR
(000's omitted)

From or to	Imports				British Exports			
	1913	1929	1933	1934	1913	1929	1933	1934
Turkey-in-Asia	1,507	551	194	258	2,479	327	169	234
Egypt	11,547	13,302	5,798	6,822	4,721	6,464	3,131	3,138
Iraq	...	697	121	137	...	1,284	1,028	772
Persia	238	4,301	3,900	3,528	350	1,093	421	656
China	2,149	5,458	2,036	2,323	7,102	7,474	3,206	2,981
Japan	2,139	4,307	3,394	4,491	6,183	6,423	2,537	1,970
United States*	70,579	100,897	34,778	40,441	14,529	22,639	7,770	9,524
Cuba	1,828	3,240	1,440	1,570	1,123	1,170	341	453
Mexico	1,230	1,409	1,461	1,494	1,263	1,214	698	798
Colombia	493	1,293	558	720	872	1,915	1,177	839

Argentina	23,554	40,983	21,922	22,958	11,267	14,014	6,352	6,560
Other non-European foreign countries	3,983	9,427	5,247	5,367	3,374	6,138	3,092	2,709
Total	131,617	199,816	88,499	100,190	65,504	84,023	34,529	35,282

* Including dependencies.

Our imports from the above countries have increased by a slightly higher proportion than those from the rest of the world (13.2 per cent., as against 13 per cent.), and this increase has been fairly evenly spread as between individual countries, but exports have hardly risen at all. The influence of currency depreciation in Japan is seen in the increase in our purchases by one-third, accompanied by a fall of over 25 per cent. in our sales to her. Of the Latin-American countries, Brazil and Mexico are already selling us as much as in 1929, but imports from the Argentine are still very low owing to our restrictions on imports of meat and wheat; they still form, however, a considerably higher proportion of our total imports from foreign countries than before the war. Trade with the United States has recovered somewhat from its very low level of a year ago, the increase of our imports being largely due to the improved competitive power of American goods owing to the depreciation of the dollar. On the other hand, increased American buying is a welcome sign of recovery from the depths of the depression. Except in the case of America, however, there has been no very marked increase in the purchase of British goods. Japan and Brazil, in particular, have reduced their imports from us by 25 and 20 per cent. to less than one-third of the pre-depression level.

Lastly we come to Imperial trade, which is analysed in the following table:—

TRADE WITH BRITISH COUNTRIES—FIRST HALF-YEAR
(000's omitted)

From or to	Imports				British Exports			
	1913	1929	1933	1934	1913	1929	1933	1934
Irish Free State	...	19,480	8,140	8,005	...	17,212	9,119	9,790
West Africa ...	2,478	6,983	9,747	9,574	2,908	3,932	3,134	2,942
South Africa ...	6,836	12,959	7,839	6,585	10,754	16,244	10,587	13,846
India & Ceylon	24,604	36,155	18,876	25,986	36,167	43,250	17,476	18,227
Straits Settlements	8,539	6,171	1,769	3,390	2,914	6,499	2,118	2,568
Australia	19,913	32,853	25,974	27,552	17,137	25,241	9,991	11,729
New Zealand ...	14,475	32,709	22,212	26,119	5,451	9,551	4,351	5,048
Canada	10,938	21,666	20,414	22,115	12,007	17,903	7,204	9,268
West Indies	1,293	2,582	2,743	3,229	937	2,251	2,222	2,210
Other Possessions	5,784	18,244	12,518	14,101	6,955	14,815	11,159	10,462
Total	94,860	190,062	124,231	140,666	95,248	158,898	77,341	85,390
Excl. Free State	...	170,582	116,091	132,661	...	141,686	68,222	75,600

The effect of our preferential system still tends to be one-sided, for an increase of £16 millions in our imports is balanced by an increase of only £8 millions in our exports. This increase, while it compares favourably with the growth of our trade with other parts of the world, reflects the considerable measure of recovery—even prosperity in the case of South Africa—that is being enjoyed by the Dominions rather than any marked preference given to our producers. While our increased demand for wool from Australia and New Zealand and for non-ferrous metals and timber from Canada are also a direct result of reviving industrial activity, a large part of our increased importation of meat and dairy produce from the Dominions has been at the expense of foreign countries, Denmark and the Argentine.

The large rise in the value of our imports from India and Ceylon is partly accounted for by the rise in the price of tea owing to export restrictions and partly to increased imports of cotton and shellac. The Irish Free State figures tell a sorry story when it is recalled that in 1931 the export figures were bigger than for any other single British country. The figures for the Empire other than Ireland bring out the interesting fact that our trade balance with the Empire has changed from a tiny positive one in 1913 to a heavy negative one in 1934.

The next table records changes in the direction of our re-export trade over the past few years:—

RE-EXPORTS TO ALL COUNTRIES—FIRST HALF-YEAR
(000's omitted)

	1913	1927	1929	1931	1933	1934
Soviet Union	5,142	5,511	1,064	971	475	1,220
Germany	11,396	5,656	14,258	8,014	5,112	6,203
Netherlands*	2,786	2,416	2,424	1,677	1,065	1,094
Belgium*	3,687	4,788	5,462	2,814	2,547	2,707
France*	6,417	9,831	11,207	5,835	4,611	4,304
United States*	16,535	10,623	9,111	4,344	3,515	3,444
Other foreign countries	6,071	6,516	5,950	3,713	3,161	4,586
Irish Free State	...	4,762	4,941	4,462	2,190	2,472
Other British Possessions	7,037	6,117	6,145	3,878	2,527	2,986
Total	59,051	66,220	60,562	35,708	25,203	29,016

* Including dependencies.

The movement of our re-exports has, with two exceptions, followed the same direction as exports of British goods. A substantial increase, almost entirely of rubber (£400,000) and tin (£60,000) has occurred in our sales to the Soviet Union, which, however resolute in cutting down imports of manufactured goods, cannot do without certain essential raw materials. There has been a general falling off in re-exports to the United States, in spite of a rise of £470,000 in beverages since the end of last year. *Entrepôt* trade with the gold bloc has expanded only slightly, but, as has already been seen above, Germany has shown a remarkable capacity to absorb an increasing quantity of imports, particularly, in this case, of raw wool, and is now the only country which takes considerably more re-export goods from us than in 1927, though still far less than in 1929, when credits were more plentiful and industry expanding without restraint.

The preceding comparisons have illustrated on the one hand the development of trade as compared with a year ago, and on the other the long distance which practically every branch of our foreign commerce has fallen from the peak of the prosperous year 1929. If 1932 is brought into the story the figures reveal the extent of the effect produced by the preferences granted by the Import Duties Act of March, 1932, and the Ottawa Agreements reached in the autumn. We have no space for a full analysis; but the gross figures for British and foreign countries respectively give an indication of the general trend of trade:—

TRADE WITH ALL COUNTRIES (£000,000)

	Imports from			British Exports to		
	Foreign Countries	Irish Free State	Other British Countries	Foreign Countries	Irish Free State	Other British Countries
1st half of—						
1932	230.4	14.5	115.5	103.2	15.5	68.4
1933	196.1	8.1	116.1	97.9	9.1	69.2
1934	221.5	8.0	132.0	104.2	9.8	75.5

It is clear from these figures what has happened. In 1933—the first year after the preferences came into effect—Empire trade (other than that with the Free State) just contrived to hold its own, whereas foreign trade continued to sag. The further fall in this latter category was most marked in the case of imports—a result that would be expected in view of the depreciation of the £, which must have hit our imports while giving some assistance to our hard-pressed exports. The net result was to strengthen the relative position of our Imperial trade in relation to our trade as a whole. The proportionate change, however, has not been a very great one, and in 1934, though there is a slightly greater increase in Empire trade than in foreign trade, there has been a recovery in both directions. Irish trade is, of course, suffering from the trade war; but even here there is some recovery of our exports—though the figures are lamentably low as compared with the position in 1932.

THE GERMAN STEEL TRUST—I

In recent years the iron and steel industries of almost all countries have been more and more co-ordinated and brought into closer relationship with the State. In two articles, of which the following is the first, Herr Richard Kühlmann, a former Secretary of State at the German Ministry of Foreign Affairs, describes the development of the German Steel Trust.

In the spring of 1932 the world was startled by the news that the German Finance Minister, Herr Dietrich, had purchased control of the German Steel Trust from Herr Flick, a leading industrialist. In Germany more branches of industrial life are Government-owned and Government-operated than in any other country, apart from Soviet Russia. The State owns and operates practically all the railways. It controls much of German shipping and a large proportion of Germany's coal and potash; operates all the telegraphs, cables and telephones; considerably influences production and distribution of electricity; and was forced in the latest crisis to acquire a controlling interest in most of the big banks. The acquisition of control in the German Steel Trust which added to all the above the control of most of Germany's coal, iron and steel production, appeared the last link in a chain leading ultimately to State Socialism. Such an interpretation of this last deal may seem plausible; but it is not borne out by the facts.

To understand the situation we must examine what led to the founding of the Steel Trust and trace the origins of the combines forming that Trust. The four sections of the first Steel Trust (Vereinigte Stahlwerke or Stahlverein) have their home in Westphalia. The Westphalian industry is infinitely more important than the steel business both in the Saar Valley and in Silesia, and the tendency to create big mergers has, broadly speaking, been confined to Westphalia.

Let us look first at the Gelsenkirchener Bergwerks A.G., one of the four great companies composing the original Steel Trust, and called upon to play a more prominent rôle in the recently reconstructed Steel Trust. Gelsenkirchen was founded in 1873. For a long time it was only a coal-mining company, and it was only reluctantly that its owner, Emil Kirdorf, allowed Gelsenkirchen to take up iron and steel manufacture. In 1893 Kirdorf was one of the chief promoters of the Rhenish Westphalian Coal Syndicate, which from that time became most efficient in maintaining order and prosperity in the German coal trade. Emil's brother, Adolf Kirdorf, founded the Steel Syndicate (Stahlwerksverband), which played an equally beneficent rôle in iron and steel.

One of the prominent leaders in the industrial field was August Thyssen. In 1871 he established Thyssen and Company in Hamborn, a big plant comprising blast furnaces, Thomas steel works, and open-hearth steel works. Germany was at all times fairly rich in coal, but very badly off for iron ore. It is only in former Western Germany, Alsace-Lorraine and Luxemburg, that iron ore,

called "minette," is plentiful. Before the war there was in Germany a tendency to build modern blast furnaces on the "minette" to supply pig iron and high-grade half-finished products to those factories on the Ruhr and Rhine which transformed them into finished products. Thyssen established before the war a huge modern plant in Alsace-Lorraine at Hagendingen, hoping to secure for the rest of his mills large quantities of cheap pig iron. Like all German companies which had plants in Alsace-Lorraine he lost them when the Treaty of Versailles was signed. Thyssen's works, enormously prosperous before and during the war, suffered severely, and in 1919 Thyssen remodelled his concern. The iron-producing plants were amalgamated under the name of August Thyssen Hütte, and the machine factory became Thyssen and Company. The mines were combined into the Gewerkschaft Friedrich Thyssen. When in 1926 the Steel Trust was founded, Thyssen transferred the whole of his property to the new trust, in which his share was 26 per cent.

Hugo Stinnes belongs to a younger generation than these "big men." The limited company, Hugo Stinnes G.m.b.H., was founded in 1893. Stinnes was particularly interested in securing control of the Deutsch-Luxemburgische Bergwerks- und Hütten A.G., Bochum. He became president of this company in 1907, and succeeded in persuading Emil Kirdorf to make a combine between the Gelsenkirchener Bergwerks A.G. and the Deutsch-Luxemburgische Bergwerks- und Hütten A.G. Both companies established a central holding company, called Rheinelbe Union. This was the first great combine of powerful, independent works in the Westphalian area, and it paved the way for the Steel Trust. Stinnes bought for the Rheinelbe Union the control of the old-established Bochumer Verein für Bergbau und Guss-stahlfabrikation; and he persuaded the leader of the Siemens electrical establishments to join the Rheinelbe Union, which was extended by the important electrical undertaking of Schückert and Company in Bavaria. But co-operation between the two electrical companies and the Rheinelbe Union never really materialised. After the death of Hugo Stinnes in 1925, and the collapse of the sky-scraper he had tried to erect, Siemens and Schückert retired from the combination, while remaining on friendly terms with the Rheinelbe Union. No attempt has since been made to renew a partnership between electrical and heavy industries in Germany.

Stinnes was one of the few who realised the great opportunities offered by the German inflation. He was able to buy control for a song, at values calculated in gold; and he operated on such a scale that, when the mark was stabilised, he found himself at the head of a host of ill-assorted companies and undertakings—e.g. big shipping lines, newspaper factories, and great newspapers (manufacturing, as one of his critics said, public opinion wholesale as a by-product of the pulp industry!), banks, cinema combines, automobile factories, hotels, etc. Consequently, very soon after his death, the top-heavy structure came down with a crash.

After this sketch of the great personalities responsible in the main for the almost fabulous increase of Germany's strength in coal, iron and steel, let us examine Germany's position in the field of heavy industry before the beginning of the World War.

PRODUCTION OF COAL, IRON AND STEEL IN 1913
(Million tons)

Country	Coal	Pig Iron	Steel
Germany*	277.3	16.8	17.1
United States	517.0	31.5	31.8
United Kingdom	292.0	10.4	9.0

* Pre-war: including Alsace-Lorraine, Saar and Upper Silesia.

Since about the year 1906 Germany had beaten England both in production of pig iron and steel. For the reasons already given, a large percentage of her iron ore had to come from overseas. Sweden contributed a lot, Spain added her quota, Tunis became dependent on German demands, even South-American deposits were found useful for supplying the Westphalian market. But the great minette deposits in Luxemburg and Lorraine were the most valuable, being within the boundaries of the Reich. With the exception of the two great family establishments, Krupp in Essen and

Haniels (Gute Hoffnungshütte), all other big interests bought mines and built blast-furnaces on the minette deposits of Alsace-Lorraine and Luxemburg. Consequently, after 1919 German industries lost both their iron-ore reserves and their most modern plants. The leading Saar firms, Stumm and Roehling, were badly hit; Thyssen received a heavy blow; Deutsch-Luxemburg had to sell out all their Luxemburg establishments. It was inevitable, therefore, that many of the big steelmakers should combine to secure what, individually, they could no longer obtain.

In 1926, therefore, the Vereinigte Stahlwerke A.G. was founded in Düsseldorf. The four groups who sold out to Vereinigte Stahlwerke were, first the Gelsenkirchener Bergwerks A.G., the Deutsch-Luxemburgische Bergwerks- und Hütten A.G., and the Bochumer Verein für Bergbau und Guss-stahlfabrikation. This group secured 39.5 per cent. of the total share holdings. Next, the Thyssen concern joined with 26 per cent., as noted above. Then the Phoenix A.G. für Bergbau und Hüttenbetrieb, Düsseldorf, and the Vereinigte Stahlwerke van der Zypen und Wissener Eisenhütten A.G., Köln-Deutz, together obtained another 26 per cent. Finally, the Rheinische Stahlwerke A.G., Duisburg-Meiderich, obtained 8.5 per cent. According to the statutes, purchase, building and exploitation of mines, iron-producing plants, steel works and rolling mills, and trade in all their products, were the aims of the new company. The new Trust was particularly rich in coal, having a capacity of 37 million tons. The capacity for coke was 9 million tons, for pig iron 9 million tons and for steel 7.8 million tons. The Vereinigte Stahlwerke held majority and minority interests in numerous other undertakings. They held, for instance, 56 per cent. of the Austrian Alpine Montangesellschaft, Vienna, which was originally acquired by Stinnes. The capital stock in 1930 was Rm. 800 millions; and the total bonded debt amounted to about Rm. 500 millions. Most of this debt was payable in American dollars, and a large number of the mortgage bonds had, mostly through the banking house of Dillon Read and Company, New York, been marketed in the United States. The prospectus of the Stahlverein's mortgage bond issue dated June 1, 1926, arranged with the American banks, stated, under the heading "The Company":—

"United Steel Works Corporation, which has contracted to acquire the principal fixed assets (except certain coal properties), the good-will and business of four leading coal, iron and steel concerns in Germany, viz., Rheinelbe Union, Thyssen, Phoenix and Rheinstahl, will be the largest industrial unit in Europe and one of the largest manufacturers of iron and steel in the world, ranking in productive capacity second only to United States Steel Corporation. Its coal properties will be among the largest in the world with respect to reserves and present productive capacity. United Steel Works Corporation has operated these properties since May 7, 1926, and is at present producing approximately 40 per cent. of the entire German steel production and employs about 164,000 persons."

The organisation of the 1926 Steel Trust and the changes effected, mostly in 1933, will be described in the concluding article.

AGRICULTURAL PROGRESS

THE rising volume of agricultural disputation is necessarily conducted in a sort of statistical twilight. Partly for natural reasons, partly because of the diversified and individualistic nature of the industry, accurate information on the production of foodstuffs in this country is very difficult to collect. Even when it is possible to make an estimate of the production of the past, prediction of the future or even assessment of the present is out of the question. The Marketing Boards have had this difficulty to contend with; the unpredictable variations in the supply of bacon pigs, for example, is much the most formidable obstacle to the successful working of the pigs scheme.

The Ministry of Agriculture, however, makes a creditable effort to supply the deficiency of statistics, and two interesting returns have been issued in the last few days. On June 4th each year a census is taken of the acreage

under different crops and of the numbers of livestock, and these figures are published within a couple of months. After the farming year is concluded estimates are made, firstly of the crop raised on the acreage ascertained by the census and of the livestock and livestock products resulting from the number of animals shown, and secondly of the value of this output. These estimates for 1933 have also been issued recently.

So far as 1934 is concerned, then, we can only speak of acres and numbers. The results of the census are summarised in the following table:—

ACREAGE UNDER CROPS AND GRASS AND NUMBER OF LIVESTOCK ON HOLDINGS ABOVE ONE ACRE IN EXTENT IN ENGLAND AND WALES ON JUNE 4, 1932-34

(000's omitted)					
	1932	1933	Change	1934	Change
	Acres	Acres	%	Acres	%
Arable land	9,367	9,250	- 1.2	9,248	...
Permanent grass	15,839	15,870	+ 0.2	15,777	- 0.6
Total acreage	25,206	25,120	- 0.3	25,025	- 0.4
Wheat	1,288	1,660	+28.8	1,759	+ 6.0
Other grains	2,680	2,370	-11.6	2,377	+ 0.3
Peas and beans	280	290	+ 3.6	294	+ 1.4
Potatoes	504	519	+ 3.0	488	- 6.1
Sugar beet	255	364	+42.7	397	+ 8.9
Other rootcrops	810	793	- 2.1	766	- 3.4
Vegetables	115	121	+ 5.2	126	+ 4.1
Hops	17	17	...	18	+ 5.3
Fruit	310	310	...	316	+ 1.9
Fodder and miscellaneous crops	214	222	+ 3.7	241	+ 7.9
Clover and rotation grasses	2,410	2,074	-13.9	2,072	- 0.1
Bare fallow	434	458	+ 5.5	340	-25.8

	No.	No.	%	No.	%
Cattle	6,358	6,620	+ 4.1	6,659	+ 0.6
Sheep	18,495	18,090	- 2.2	16,518	- 8.7
Pigs	3,185	3,069	- 3.6	3,319	+ 8.1
Horses	917	903	- 1.6	886	- 1.9

The returns also show the number of agricultural workers employed, which rose from 697,481 in 1932 to 715,546 in 1933 and fell again to 687,700 in 1934.

The most interesting changes shown by these returns are the increases in the acreage devoted to the two "subsidised" crops, wheat and sugar beet, though in each case the increase is less than in the preceding year. The increase in the total under grain crops other than wheat is entirely due to barley, which shows an increase of 14.6 per cent., while the others all show considerable decreases. Oats and rye also declined between 1932 and 1933; the increase in barley is a reversal of the tendency of 1932-33, when barley acreage declined by nearly 22 per cent. The increase in the number of pigs is connected with the marketing scheme; it is noticeable that the number of breeding sows shows an increase of 10.9 per cent., while the number of pigs under two months old is 18.0 per cent.

higher. This seems to indicate that the seasonal variation in pig deliveries is likely to be accentuated this year rather than diminished.

These figures can be supplemented by the final estimates based upon the 1933 returns. The interesting comparison here is that of the value of the net output of the agricultural industry. This is shown in the following table; the figures include only the value of crops and livestock sold off the farms, and consequently exclude the value of fodder crops:—

ESTIMATED VALUE OF THE AGRICULTURAL OUTPUT OF ENGLAND AND WALES

	1930-31 £'000	1931-32 £'000	1932-33 £'000
Livestock, etc.—			
Livestock	64,960	58,210	56,450
Milk and Dairy Produce	54,970	49,440	52,280
Poultry and eggs	21,010	20,000	20,760
Wool	1,310	1,230	1,820
Total Livestock, etc.	142,250	128,880	131,310
Farm crops—			
Corn	9,850	9,770	8,910
Potatoes	11,680	15,900	9,060
Sugar beet	6,760	3,100	4,220
Hops	950	890	1,610
Hay, straw, etc.	3,980	3,300	2,560
Total Farm Crops	33,220	32,960	26,360
Fruit and vegetables—			
Fruit	7,800	5,600	7,100
Vegetables	12,270	15,150	12,940
Total Fruit and Vegetables	20,070	20,750	20,040
Grand total	195,540	182,590	177,710

The figure for corn in 1932-33 does not include deficiency payments made by the Wheat Commission, which amounted to £4,510,000 in that year. The net income of the agricultural community, consequently, appears to have amounted to £182,220,000 in 1932-33, compared with £195,540,000 in 1930-31, a drop of 6.8 per cent. In the same period our index of business activity showed a decline of 4.2 per cent., while an average of our index of wholesale prices and of the Ministry of Labour index of the cost of living fell by about 10½ per cent. Correcting the fall in the physical volume of business by the fall in the price level, the decline in the whole national income for the period 1930-31 to 1932-33 can be estimated at from 12½ to 15 per cent. Against the above fall of 6.8 per cent. in the net income of agriculture, this fall of 12½ to 15 per cent. in the whole national income would seem to support the conclusion we reached in our issue of June 23rd, in commenting on the figures of the more comprehensive agricultural census carried out in 1931, that "agriculture has been for some time one of our more prosperous industries."

NOTES OF THE WEEK

Ministerial Prophecies.—Mr Walter Runciman defended the economic policy of the National Government in a speech in Scotland on Saturday. Few would quarrel with what he said, for he recited the admittedly impressive evidences of trade revival in this country. But objections can be taken to what he did not say. Mr Runciman mentioned his thirteen trade agreements, for example. He was probably inhibited by the presence on the same platform of Mr Walter Elliot from adding that the Government is doing more to destroy trade with its left, or Elliot, hand than it is doing to restore it with its right, or Runciman-Colville, hand. But he might have explained why there should be any reason for complacency over the trifling achievements of bilateral negotiation when the Government has so far deliberately neglected its opportunity of organising a large-scale revival of international commerce between all those countries which are prepared to return to elementary principles of sanity in treating each other's trade. Mr Runciman mentioned the 19,000 who had returned to work in Glasgow and the 73,000 in Greater London. But he said nothing of the 63,000 who have been thrown out of work in the Public Works Contracting industry during the period of office of the National Government. The portion of the speech which has attracted the greatest attention was that in which he forecast a further reduction in income-tax "if only to make up for the conversion of War Loan into cheaper national security." Since our trade relations are now settled in the Ministry of Agriculture, there can be little objection to a President of the Board of Trade predicting the Budget, even though it is far too early for any prophecy to be more than a guess. And since the open season for Budget prophecies has thus been officially inaugurated two remarks may perhaps be made. In the first place, it is unwise to encourage War Loan holders to believe that the conversion of their holdings from 5 per cent. to 3½ per cent. gives them any moral claim to a reduction of income-tax, for even 3½ per cent. interest now represents a far higher real return, if measured in terms of the cost of living, than 5 per cent. represented at the time the Loan was raised. And in the second place, if there is to be any reduction of income-tax in the next Budget it is imperative, on grounds both of economics and of equity, that it shall be given in the shape of a restoration of the exemptions and allowances to the pre-1931 level. Mr Chamberlain took the alternative course of "6d. off" on the ground that it "would confer most direct benefit upon the country, would have the greatest psychological effect, and would impart the most immediate and vigorous stimulus to the expansion of trade and employment." Since Budget Day, the previous promising trade recovery has been halted, while the trend of Stock Exchange values has been definitely downward. The "psychological effect" argument can therefore be regarded as exploded, and there is no continuing reason why the smaller income taxpayer should continue to bear four-fifths of his "crisis" burden, while the larger income taxpayer has had two-thirds of the increase remitted.

Quite Another "Test Match."—Mr Runciman has decided to take up with the Australian Government the question of the increased duties placed upon certain British cotton goods, which amount in some cases to 100 per cent. *ad valorem* and over. Though the Australian Government can claim to have acted on the advice of the Tariff Board, there is every reason to suspect that the increase in duties has been timed with a view to the Federal elections, as a bid for support from the Queensland cotton manufacturing interests. The Lancashire cotton industry, not without good reason, regards these increased duties as a contravention of Articles 9 and 10 of the Ottawa Agreement, and sent a deputation to London last week to protest against them, which was received on Wednesday by Mr. Bruce, the Australian High Commissioner, and also by Lieut.-Colonel Colville, at the Board of Trade. Although the actual quantity of trade

affected by the increased duties is comparatively trifling—only about £200,000 a year—a principle of the highest importance is involved, namely, the interpretation of Articles 9 and 10 of the Ottawa Agreement. For if Australia is to be entitled to place duties of 100 per cent. on British products, then it is plain that the Agreement, so far as this country is concerned, is a mere farce. If, on the other hand, the words of the Agreement are to bear their plain meaning, it is difficult to defend the action of the Australian Government, which to all fair-minded observers must appear as a plain breach of faith. For how can a 100 per cent. tariff "give United Kingdom producers full opportunity of reasonable competition on the basis of the relative cost of economical and efficient production"? However much we may deplore the unfortunate outburst of resentment in Lancashire, which has taken the form of a boycott of Australian produce, the motive which has inspired it is intelligible enough. The Australian Government would do well to realise that it cannot have it both ways; and that if Ottawa is to remain a reality, it must be understood to imply obligations as well as privileges. Such are the difficulties besetting the paths of a policy of Imperial preference which attempts to reconcile on a protectionist basis interests which are fundamentally incompatible.

American Agriculture.—Agricultural matters still appear to fill the centre of the stage at Washington. An official estimate of the cash income of the farming population, which was issued last week, throws a more favourable light on the plight of agriculture than might be expected. The cash income from crops and livestock during 1934 will amount, according to this estimate, to about \$5,450 millions, compared with about \$5,000 millions in 1933. In addition the Administration is expected to pay out about \$500 millions in benefits of various sorts, most of them in return for restriction of production. The \$525 millions which are to be spent on drought relief will be a further addition to income. The purchasing power of the farmer has been adversely affected by the rise in the prices of the goods he buys, but on the other hand nearly \$1,700 millions of farm mortgages have been refinanced with a considerable saving to the farmer in interest payments. Regarded in the aggregate there is little doubt that the American farmer is recovering, but the drought has produced the greatest variations in the condition of different regions, and the Administration will be busy for some time in relieving the distress. Rising prices and local shortages have not made the policy of restriction any more popular, and though the Government still professes to believe in it, the pressure of farming opinion shows signs of forcing a retreat, especially in view of the importance of the farming vote at the November election. Political considerations probably also lie behind the preferential treatment that is again being accorded to cotton. Mr Roosevelt has announced the Government's readiness to make advances of 12 cents a pound to the cotton growers on this year's crop, in spite of the fact that a similar offer last year resulted in heavy stocks being left on their hands. This year's crop is short, so that the prospect of avoiding loss is possibly greater.

Revising N.R.A.—Agricultural politics also have some bearing on the movement for reform of the N.R.A. A rising income is of little use to the farmer if the prices of the articles he buys rise even more rapidly, and N.R.A. codes have obviously had the effect of increasing the "spread" between the cost of raw materials and the price of the finished product. Attention is being increasingly concentrated upon the rise in the prices of manufactures since N.R.A. came into effect. A large part of the continued paralysis in the construction industry is probably due to the rise in the cost of building, which is now equal to or above the inflated 1929 level. But the "buyers' strike" is not restricted to building; the low level of retail sales has

been one of the most disappointing factors in the whole eighteen months of recovery. Public opinion is being encouraged to throw the blame on the price-fixing provisions of many codes, but this resuscitation of the trust bogey is not the full explanation, as the enforced increase in labour costs is probably a far more potent cause of higher prices than monopoly. How far this fact is from being generally realised is illustrated by the demand of the American Federation of Labour for higher wages to meet the increased cost of living. The "economics of glut" can thus still maintain the delusion that all can consume more while producing less. Meanwhile business continues to decline. It is officially estimated that during June and July the numbers of the employed declined by 359,000 and the total of weekly wages paid by \$10,460,000. Even after allowing for the fact that the population of the United States is three times as great as that of Great Britain, this is still a considerable fall and the Secretary of Labour must have been expressing official optimism in saying that there was no reason to conclude from these figures that business was getting generally worse. The wave of labour disputes continues, nearly all of them being concerned with the famous and much-misinterpreted section 7 (a) of the National Industrial Recovery Act. At the moment, the most critical dispute is in the cotton textile industry, which threatens to involve over a million workers if it leads to a stoppage on September 1st. But this is only the largest of a very great number of disputes, many of them attended with violence, which cover the whole country.

After the Referendum in Germany.—We comment in a leading article on the results of last Sunday's referendum in Germany, and on the reasons for those results. The effects of the increased adverse vote upon Nazi policy and methods are much more difficult to estimate. Will the Nazi Party now intensify its hold over the lives of German citizens and over the State machine, or will it relax that hold? Exactly how serious is the opposition recorded in the adverse votes of over four millions? Although a casualty list of 10 per cent. of the troops in the firing line would be regarded as almost negligible by any really up-to-date modern general in a real battle, such a percentage is far more serious in the sham battle of a plebiscite, especially when the general is an absolute dictator, the weapon propaganda, and the combatants apprehensive voters. It is one of the—perhaps salutary—paradoxes of all the post-war dictatorships that, the more nakedly the dictator resorts to brute force, the more acutely sensitive he becomes, not exactly to public opinion, nor even to public sentiment, but to popular superstition or hypnotism. So long as the dictator's star is felt to be in the ascendant, he can dictate for the most part by strong personal appeals. But if once the populace begins to lose its blind faith in him, he may be driven to depend on force alone, and then the dose of repression which he will have to administer will be so terrific that the most docile nation in the world may prove incapable of standing it. Herr Hitler has long since committed himself to a periodical measurement of the altitude of his personal star in terms of election statistics, and it is therefore very serious for him to see his stellar kite droop and sag, even though it may still be very far from trailing on the ground. The proportion of those who had the courage to vote "No" has slightly more than doubled; and this is really a portent, for the Nazi rolling-and-pressing machine surpassed itself this time in its efforts not only to drive voters to the polling booths, but also to impress upon them the disagreeable consequences that might follow for them if they voted wrongly. The adverse votes have been particularly heavy in the industrial districts, and heaviest of all in the port of Hamburg, which has been well-nigh ruined by dwindling trade. In spite of the Führer's strenuous personal campaign in Hamburg, the percentage of "Noes" there was 20.5; and in Berlin it was 18.5. In his Monday morning manifesto to the German nation, the Chancellor-President announced that his next task will be "to win the last remnants of our people for the National-Socialist idea and doctrine in a campaign as skilful as it will be resolute and inflexible. The plan of this campaign has already been decided during last night; it will be carried out with Nazi

celerity and thoroughness." Will this mean a renewal of terrorism? The world can only judge the quality of the support for Herr Hitler in Germany by the measures taken by the Nazis in the coming months.

Dr. Schuschnigg in Florence.—At Florence, last Tuesday, the Austrian Chancellor, Dr. Schuschnigg, had that meeting with Signor Mussolini which Dr. Dollfuss was to have had if he had lived. In the official *communiqué* the conversations are stated to have ranged over the political, economic and cultural spheres and to have resulted in effective decisions. The cultural side of the arrangements seem to have provided for an increase in the number of Italian tourists in Austria. Italian tourists, however, can hardly fill the void in Austria's national economy deliberately caused by the prohibitively costly German visa, which, despite Herr von Papen's professions of economic goodwill towards Austria, is still in force to prevent German tourists from visiting Austria. In the economic field proper an attempt seems to have been made to increase the effectiveness of the Protocols of Rome, signed in March, which provide for tripartite economic collaboration between Italy, Austria and Hungary. But, here again, the basis is not wide enough, and the grouping of countries too artificial, to afford a genuine solution of Austria's economic problems. Signor Mussolini seems, therefore, to be faced with the alternatives of renouncing his Italian plan for stopping the *Anschluss*, or else of giving some kind of political dole on a scale which would assuredly place an unbearable strain upon Italy's financial resources. Incidentally it would also make a mockery of that "independence and integrity and complete internal autonomy" of Austria which Signor Mussolini and Dr. Schuschnigg have just reaffirmed their intention of maintaining. What is to be the next stage in Austria's unhappy post-war history? Dr. Schuschnigg started on his return journey to Vienna from Florence at one o'clock on Wednesday morning, travelling through the night by car on a circuitous route through Genoa and thence by sea to Nice. It has inevitably been suggested—and just as inevitably denied—that this convinced Austrian monarchist was going to pay a call on the ex-Empress Zita at Viareggio. It has also been suggested that, at Nice, he may be called on himself by some representative of the French Government. Whatever grains of truth may be hid in such rumours, Austria's present position in Europe is not a permanently possible state of affairs, and sooner or later there is bound to be some rather far-reaching rearrangement in Central Europe in one direction or another. A reunion of post-war Austria with post-war Hungary under a Habsburg crown and an Italian aegis seems hardly possible in face of the united opposition of Germany, France and the Little Entente. On the other hand, if the scope of the March Protocols is not enlarged by the adherence, in some form, of the Little Entente States, so as to allow Austria—and, indeed, each of the five Danubian States—to become part of a wider economic area of freer trade, Italy's efforts for Austria are likely to be stultified by desperate remedies in Central Europe.

Preparing for the Saar Plebiscite.—The Chairman of the Saar Governing Commission, Mr Knox, is showing determination and enterprise in carrying out a difficult and thankless task. In virtue of a resolution which was passed by the League Council on June 4th, he has now announced a decision, on the Governing Commission's part, to recruit 2,000 additional police to serve in the Saar during the plebiscite period, and to recruit them outside the frontiers of the Saargebiet and the Reich in some neutral German-speaking country which is a State member of the League. In practice, this can only mean Switzerland; since Switzerland is the only country with a German-speaking population that has so ancient and so decided a national feeling of its own that it could be trusted to be truly "above the battle" in any question of Pan-German politics. The task is not one which can be agreeable to the Swiss; but we may assume that the public announcement would not have been made unless it were known that the

Swiss Government intended to place no obstacle in the way of the Saar Governing Commission's plan. The decision has been supported by an effective documentation, which brings out the political unreliability of the present locally-recruited Saarland police force, as well as the obstacles which the Nazi *Deutsche Front* in the Saargebiet has placed in the way of the Governing Commission's attempt to strengthen that force by drawing upon more reliable elements in the territory itself. In the circumstances no impartial observer can doubt that the Governing Commission's decision is unavoidable if the plebiscite is to be a free and genuine expression of opinion. And it is now more important than ever that the freedom of the vote should be ensured, because the result of the voting is no longer the foregone conclusion that it was before January 30, 1933, and even down to June 30, 1934. The reason for this remarkable change in the local situation is the indignation of the Saarland Catholics—who amount to more than 70 per cent. of the whole population of the territory—over the killing of Dr. Klausener, and other eminent and blameless leaders of the Catholic community in the Reich, at the time of the "clean up." These positive acts of unpardonable and unexplained atrocity have brought to a head a previously germinating disapproval of the Nazi regime, and this feeling among the Saarlander Catholics has evidently been intensified by the strange conduct of the Bishop of Trier, who came to the Saar on July 29th to speak at a meeting of protest against the murders of June 30th, and then blessed Nazidom instead of denouncing it. This week, the Governing Commission in the Saar has asked the Landsrat to approve the dissolution of the local Nazi labour organisation, the "Volunteer Labour Corps," on the grounds that it sent "volunteers" into Germany for "training" in German camps. The firm hand which the Commission is showing seems likely to ensure for the Saargebiet the benefits of free thought and speech. Many in the Saar may be constrained next January to vote for their retention.

* * *

The World's Wheat.—The Wheat Advisory Committee, which has been deliberating in London on the working of the International Wheat Agreement in the 1934-35 cereal year, is making rather heavy weather. The cereal year, which ended on July 31st last, was the first in which the International Wheat Agreement was operated. The Wheat Advisory Committee had fixed export quotas for each exporting country sufficient to cover their estimate of the world's import needs. But these needs in the year 1933-34 have not come up to estimate; and while some export quotas have not been fulfilled—notably those of the United States, Australia, and the Danubian exporters—Argentina and Russia have exceeded theirs. Even so, the world's carry-over of wheat has not been much below that of 1932-33; stocks are considerable; and the incidence of the drought this year will not probably do more than necessitate a moderate cut into stocks this year if consumption cannot be levered up. To obviate the difficulties besetting the fixed allocation of annual export quotas for 1934-35, the drafting sub-committee of the Advisory Committee have proposed variable quarterly export quotas. If these should have to be reduced by reason of deficient harvests, it is proposed that compensation should be paid to those countries whose export quotas are reduced, by those whose quotas are increased. This compensation could be in cash or in kind—i.e. in the shape of a quota increment for the succeeding quarter or season. Another proposal is that a portion of the world's estimated demand for wheat should remain unallocated, and should be doled out later when harvests and import needs are more definitely established. There is great support in the Committee for the continuation of the export quota system. The representative of France is reported to have stated that, failing such a system, his country could not guarantee to absorb its own wheat surplus. In fact, this is an example of the difficulties brought about by agrarian protectionism in the normally wheat-importing States of Europe. While stocks in the exporting countries most fitted to raise wheat have mounted, owing to the rise in European import duties, and while acreage has been cut

down in those countries, acreage, production and yields have vastly increased in Europe. So far, there is no indication that the Advisory Committee is tackling the world's wheat problem at the root, viz., the progressive curtailment of uneconomic, tariff-protected wheat production in the normally wheat-importing countries, and the expansion of world trade by the increase of cheaper wheat exports from lands most naturally adapted to its cultivation. If the Committee do not try to stop the margin of wheat cultivation from being fixed by reference to the costs of the highest protected national producers, its schemes for allotting shares in a strangled world wheat market are not likely to benefit either the world's exporters or the world's consumers.

* * *

The Herring Industry: Diagnosis.—The Sea-Fish Commission, which was appointed last December, has presented a most interesting and competent interim report on the herring industry. That the herring fisheries are in a state of extreme depression has been well known for some time past, but the causes of the distress are now set out in the most succinct and impressive way. The source of the trouble is the shrinkage of the market. Compared with 1913 the average catch landed in the years 1925 to 1930 was nearly 30 per cent. lower; in 1931 to 1933 it was less than half, and in 1933 only 43½ per cent., of the 1913 figure. Exports have declined by about 55 per cent. and domestic sales by about 45 per cent. The factor of price may be partly responsible for this decline, as the average level of prices in 1925-30 was 35 per cent., and in 1931-33 21 per cent. above the 1913 level, but there can be little doubt that the major factor was a falling off in demand. The export markets were affected by protection in Germany, by much smaller purchases by Russia (average sales in 1921-28 were only 6 per cent. of the 1911-13 average), and by competition from the Icelandic and Norwegian fleets; but the almost equal decline in home consumption shows that the explanation cannot be entirely found in a shrinkage of export markets. The Commission had the enterprise to conduct a survey among home consumers, and found that more than a third of the families approached had formerly served herrings in some form, but had ceased to do so. The shrinkage in the market has not been accompanied by any corresponding reduction in the number of drifters. The result has been the appearance of the familiar phenomena of surplus capacity: weak selling, universal losses, disorganisation and financial exhaustion. The position has been particularly distressing, since most of the fishermen are paid on a share basis and are not eligible for unemployment insurance benefit. In recent years their net earnings have almost disappeared. The condition of the drifters has steadily declined and the seaworthiness of many of them is doubtful. Nets have not been replaced and many are now worn out. The salesmen at the ports have to a certain extent carried the industry financially, but their resources are now exhausted, while the drifters are very heavily in debt. The Commission finds that no section of the industry has been guilty of taking an excessive share of the income of the whole industry, except possibly the merchants who supply coal to the drifters. Most sections, however, are organised on a basis of excessively expensive individualism. The present condition of the industry is desperate, in a far more literal sense of the word than applies to the better-known depressed industries.

* * *

—and Prescription.—The remedy proposed is that of "an overriding authority and a basic structure." The overriding authority is to be provided by a Herring Board, located at Edinburgh. The Board, which is to consist of eight members—three of them, including the Chairman, appointed from outside the industry, and the remainder representative of, but not elected by, the different sections of the industry—is to operate in the main through a system of licensing which is to apply to every section of the industry and be coupled with insistence upon higher and more uniform standards of quality. So far as the actual fishing is concerned, the number of boats licensed

is to be reduced, seaworthiness being the elimination test in the first instance, boats are to be allocated to areas, close seasons are to be fixed, and the size of nets and methods of fishing regulated. The present condition of the industry makes it impossible to make a levy for the laying-up of boats, and it is suggested that the Treasury should make a grant of £50,000 for the purpose. The Board is also to provide credit facilities for the replacement of old vessels by a smaller number of new ones. The Board is to act as agent for the industry in the export trade, where at present small and weak sellers face powerful foreign trusts. Finally, the Board is to engage in advertising and research. Eventually it will raise its funds by a levy on sales, but it is recommended that the Treasury should grant £125,000 for the expenses of the first two years. In addition, the Treasury should guarantee the borrowings of the Board up to £800,000; this sum will be mainly used for extending credit to the industry. These proposals seem to meet the circumstances of the case. Apart from a hint of future protection against imports from Norway there is little of the "restrictionism" which is ruining the agricultural schemes; indeed, the Commission goes out of its way to emphasise the necessity of higher quality and lower prices. The efficiency of the Herring Board will depend entirely upon the character of the independent members, but given the necessary combination of tact and firmness there is no reason why it should not do very useful work. The principle of subsidies to private interests out of the public Treasury is never attractive, but the amounts involved are very small compared with the large sums lavished on the farmer, they have a good prospect of being temporary, and they can be regarded as in some measure a tardy compensation for exclusion from the unemployment insurance scheme to a body of men who, in peace and in war, have always deserved very well of the community.

* * *

Socialising Iron and Steel.—The T.U.C. General Council's report this year contains a scheme for the socialisation of the iron and steel industry which goes considerably further than the statement of the Executive Council of the Iron and Steel Trades Confederation issued in May, 1931. There is no longer talk of running the industry as a public utility corporation with local and central managerial boards; the private owner is to be expropriated altogether—not, however, without compensation in the form of redeemable stock, terminable annuities or Government bonds bearing fixed interest. The basis of compensation is to be the "net maintainable revenue" of the undertakings concerned, minus the financial benefits conferred by the Government by way of protection. The control of the industry is to be vested in a (State-owned) iron and steel corporation, the management of which is to be exercised by a central board of ten persons appointed by the President of the Board of Trade after consultation with the trade unions. Under the central board, the industry is to be articulated into sections, each of which will be controlled by a sectional board, also appointed by the Minister, which will be responsible, among other matters, for marketing arrangements covering all sections' products. The central board is to act as the co-ordinating body with the ultimate responsibility of price-fixing in conjunction with a body representing the interests of consumers of iron and steel products. It is plain that the compilers of this scheme have abandoned the regional principle of organisation advocated by the unions in 1931 in favour of a sectional organisation on the lines of the original scheme proposed by the National Committee, while the emphasis laid on marketing bears traces of the influence of the P.E.P. report on the industry. Taken as a whole, the organisation for the industry laid down in the scheme (apart from the question of ownership) resembles fairly closely that advocated by the more far-sighted and progressive leaders of the industry itself, except for the method of appointment and the emphasis laid on consultation with the trade unions. But it goes a good deal further along the lines of centralised monopoly than even the most ardent "rationalisers" would be prepared to advocate. And though it may be doubtful whether so complicated a congeries of industries is really a suitable subject for public

NATIONAL BANK OF GREECE

Capital paid up and Reserves Drs. 1,205,000,000

monopoly of this character, the lamentable history of the attempt to reorganise the iron and steel industry on its present basis, in return for protection, seems to indicate that very wide measures of public control will be necessary if the badly-needed work of rationalisation is ever to make any real progress.

* * *

British Industrial Production.—The latest Board of Trade index number of industrial production in the second quarter of 1934 shows an increase of 0.7 per cent. as compared with the first quarter, and of 14.1 per cent. compared with the second quarter of 1933. If mining and quarrying are excluded, the percentage increases are 3.2 and 14.7 respectively. The following table shows comparative figures in various industrial groups, covering in all about two-thirds of the total mining and manufacturing of Great Britain:—

INDEX OF PRODUCTION (1924=100)

Group	Year 1932	Year 1933	June Quarter, 1933	March Quarter, 1934	June Quarter, 1934
1. Mines and quarries	77.5	76.9	71.5	89.0	78.8
2. Iron and steel and manufactures thereof	66.2	82.2	78.5	104.7	104.3
3. Non-ferrous metals	96.3	101.9	104.5	117.1	142.1
4. Engineering and shipbuilding	88.6	96.0	97.0	108.1	114.4
5. Textiles	85.1	89.8	86.9	96.3	91.1
6. Chemical and allied trades	98.1	101.0	101.3	107.9	109.8
7. Leather and boots and shoes	96.4	106.2	114.2	110.7	108.1
8. Food, drink and tobacco	97.6	99.2	102.3	99.7	107.6
9. Gas and electricity	147.0	156.2	(a)	(a)	(a)
Total of manufacturing industries (2-9)*	97.2	103.9	103.2	114.7	118.4
Total of all groups (1-9)*	93.3	98.6	96.7	109.5	110.3

* Includes also various industries not specified above.
(a) Complete information regarding gas production in 1933 and 1934 is not yet available; a provisional estimate of the quantity made has been used for the calculation of the group index for the year 1933, but no information is available as to the quantities made in each quarter. The available data for electricity have been included in the general index.

The present physical volume of output of the United Kingdom is 0.8 per cent. greater than in the last quarter of 1929, the highest previous figure reached; and if the figures for the building trade were included the increase would probably be considerably larger. But it must be remembered that no allowance is here made for the increase in productivity which should normally accompany a growing population and developments in industrial technique and organisation. Compared with the corresponding quarter of 1933, all the groups shown above, except leather and boots and shoes, show considerably increased activity, amounting in the case of iron and steel, and engineering and shipbuilding, to as much as 32.9 and 17.9 per cent., respectively. The heavy and constructional industries, which in the main provide industry with its capital equipment, are, in fact, still maintaining their relative advantage in the "recovery," which is a normal feature of the first upward phase of the business cycle. If the figures of the first and second quarters of this year are compared, however, the only substantial increase recorded is in non-ferrous

RUBBER.—The market in rubber has been a little more active; and prices recorded an appreciable rise on the week. In New York Tuesday's spot price for rubber, at 14½ cents per lb., compares with 13½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., against 6½d. per lb. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7¾d. for October–December, 1934, as against 6½d. to 7d. a week ago. Stocks in London and Liverpool at the end of last week, at 99,872 tons, show an increase of 1,487 tons as compared with the preceding week.

The prices in the following list are revised with the assistance of an eminent firm in each department

(New York quotations, unless otherwise stated.)

NEW YORK, August 14.

INCREASED GOLD HOLDINGS

M. Germain-Martin, Minister of Finance,* recently decided that the fiscal returns are to be published henceforth every three months, instead of every month as in the past. Consequently the next three-monthly return will only be published in October. Nevertheless, official figures have been produced for July. They show a better revenue than in the former month. Compared with the estimates, the receipts show, in fact, a deficit below the average monthly deficit in the second quarter, which was 291 millions. The revenue from direct taxes is nearly the same as in July, 1933. There has been a marked increase in the revenue from the income tax on securities. The revenue from stamp and registration duties together is about level. Revenue from the turnover tax shows, as compared with July, 1933, a diminution of only 2 per cent., against one of 5 per cent. for all three months of April, May and June. On the other hand, Customs revenue shows a fresh contraction, as a consequence of import restrictions. The imports restriction policy raises many objections from French economists, who reject the devaluation which M. Reynaud recently advocated in his speech in the Chamber as the only way out of the depression. These critics maintain that the French monetary position is the only sound and right one, but that this policy cannot be pursued solely by random and conflicting measures, which make price adjustment so much more difficult. They ask for an active policy to reduce the cost of living, and a policy of capital export.

DEFLATION IN PRACTICE

Supporters of a deflationary policy draw attention to the fact that the decline in prices, from which they hope for a renewal of business activity, is pursuing itself regularly, as the following table shows:—

(1913 = 100)

	July, 1933	December, 1933	July, 1934
Wholesale Prices	397	389	361
General index	431	436	400
Home products.....	335	304	291
Imported products	418	415	386
Foodstuffs	396	360	358
Vegetable food	418	448	380
Animal food	469	465	466
Sugar, coffee, cacao	379	367	340
Industrial products	378	362	347
Ores and metals	281	263	252
Textiles	440	433	389
Sundries			
Retail prices (Paris index)	467	514	478
Cost of living (Paris index)	507	520	489

The evidence of the figures is striking, particularly since the beginning of the year; but the state of trade in general offers very little sign of any "renewal of business activity."

PARIS, August 22.

GERMANY

ELECTION RESULTS

THE election result of August 19th is not likely to have much influence on home politics. In present conditions, the Government can achieve any electoral result it considers desirable, and that it has admitted a somewhat less overwhelming success than that of November, 1933, probably means that it realises how much more public opinion has in the meantime moved against it than the figures show. The pre-election agitation was notable mainly for the exploitation of President Hindenburg's prestige, which was carried on in all conceivable ways, and for an extreme anti-foreign propaganda, which took the form of asserting that many foreigners and even foreign countries desired failure and anarchy in Germany, a view expressed in Herr Hitler's Hamburg speech, in an appeal by Herr Rosenberg, head of the Nazi Party "Foreign Office," by many agitators, and by the official Press. The election success was correspondingly presented to the public mainly as a triumph over foreign jealousy and enmity. Although designed merely for electioneering purposes, these misrepresentations have the same effect as incitements against the non-German world.

THE EXCHANGE SITUATION

The Cabinet is holding no ordinary meetings, and legislation is suspended. Since Dr. Schacht took over the Ministry of Economy, prohibitions against new industrial enterprises, on the ground of excessive production-capacity, which created monopolies for existing concerns, have ceased. In its return of August 15th, the Reichsbank's reserves show practically no change. Decrees further regulating foreign exchange and the consumption of imported raw materials continue to appear. The prohibition in the first decree, against expansion of production in textile industries by longer working hours, has been extended to all textile branches with the exception of embroidery and manufacture of garments. For control of cotton yarns a special board has been established at Berlin. The use of copper and tin and their alloys, and also of quicksilver, has been prohibited in many manufacturing branches. The Board for Foreign Exchange Control has issued a decree regulating the repayment of foreign raw material credits out of foreign exchange yielded by export; this is allowed in cases where the export of goods containing such materials is sufficient, after providing exchange for repayment of the credit, to yield to the Reichsbank 20 per cent. of the total exchange proceeds. The general quota of foreign exchange for import for September is again fixed at 5 per cent., and acceptance credits may again be utilised only up to 10 per cent.

The Reich has denounced from August 31st the clearing agreement concluded with Finland in June. Finland's balance at the Reichsbank was to rise at most to Rm. 1 million, but it has reached nearly double that sum owing, apparently, to the failure of Finnish importers to buy sufficient German goods. According to the Amsterdam press, the application of the Dutch clearing law to Germany was caused by the increase in the last weeks of the Bank of the Netherlands' deposits in the Reichsbank to Rm. 22 millions, which sum could not be liquidated by the methods provided. The Reichsbank had withdrawn the authorisation to sell the "bank marks" in the free market, and as there was insufficient demand for them in payment for German goods, they could only have been realised at a depreciation of 7 per cent. The effect of the Dutch clearing is to stop direct payments for Dutch imports from Germany, and the Bank of the Netherlands thus obtains gulden with which its "bank marks" may be liquidated. The large increase in the Reichsbank's deposits, which stand about 50 per cent. higher than in August, 1933, seems to represent to a great extent deposits on account of foreign central banks under the clearing agreements.

Money was in demand last week for property tax and industrial assessment payments, but this week the market was easy, with day loans about 4 per cent. The fall in stocks of industrial raw materials and the consequent

tendency to reduce production for stock tend to reduce the loans and deposits of commercial banks.

RISE OF PRICES

The cost-of-living index for July was 122.9, as against 121.5 in June and 118.7 in July, 1933. While rents in the past twelve months have been stable, the food item has risen from 110.5 to 117.8, and clothing from 110.9 to 115.7. The index for January, 1933, when the Nazi Party attained power, was 117.4 (food being 107.3 and clothing 112.1), but fell at first, in April, to 116.6. Wages have not risen, being according to the last (out-of-date) statistics about 1 per cent. lower than at the beginning of 1933; the rise in the cost of living is therefore severely felt by the industrial working class. On August 8th, the wholesale price index regained, at 100.1, the pre-war (1913) level, and it advanced further to 100.2 on August 15th. The wholesale price index reached its recent peak figure of 141.6 in July, 1928, and had fallen by April, 1933, to 90.7. The movements of the various groups since the high point have been:—

WHOLESALE PRICE INDEX: GERMANY
(1913 = 100)

	July, 1928	Aug. 15, 1934
Agricultural products	136.6	100.0
of which—		
Vegetable products	149.6	116.7
Livestock	114.6	74.1
Animal products	135.2	103.8
Industrial, raw and semi-finished goods	135.1	92.5
Manufactured goods	159.6	115.3
of which—		
Instruments of production	137.6	113.9
Consumption goods	176.1	116.7

Officially, this is a gold price index; in reality, since 1931 it has been an internal paper mark index. Even in its bearing on Germany's competitive power in foreign trade it cannot be considered a gold index, inasmuch as a great part of export is subsidised with blocked marks for the specific purpose of counteracting the depreciation of foreign currencies.

FOREIGN TRADE

The foreign trade returns for July show:—

	June, 1934	July, 1934	Jan.—July, 1934
		(Rm. millions)	
Imports:—			
Livestock	2.5	2.4	21.0
Foodstuffs	84.1	98.9	593.2
Raw and semi-finished materials	224.3	199.2	1,623.7
Manufactured goods	64.3	62.3	425.5
Total	375.2	362.8	2,663.4
Exports:—			
Livestock	0.3	0.2	2.7
Foodstuffs	11.8	8.8	79.9
Raw and semi-finished materials	59.6	61.9	469.3
Manufactured goods	267.1	250.4	1,855.6
Total	338.8	321.3	2,407.5

Imports declined from the June totals by 3 per cent., both in volume and value. The decline in raw materials imports, which conflicts with the usual seasonal tendency of July, was due to restriction. The heaviest decline, by Rm. 13 millions, was in wool. Exports declined 5 per cent. This decline also is contrary to the usual seasonal tendency, and may be explained by the fact that in June, contrary to rule, exports were maintained. Exports to Great Britain and to France increased; but to the Netherlands, the United States, Japan, British India, and Denmark they declined substantially. The passive balance in July was Rm. 42 millions, and that for the whole seven months is Rm. 256 millions.

INDUSTRY

The Reich Bureau of Statistics estimates that the "volume of work" equivalent of German industry in the middle of 1934 was only 20 per cent. below the highest post-war level reached in 1928-29. Konjunkturinstitut estimates the national income from wages and salaries in the second quarter of 1934 at Rm. 7,500 millions, as against Rm. 6,900 millions in the first quarter. It estimates that, seasonal fluctuations being eliminated, income from these two sources in the fourth quarter of 1933 was 6 per cent. higher than in the first, and in the second quarter of 1934 17 per cent. higher. In the third quarter of 1929 this

income reached nearly Rm. 12,000 millions, having risen from Rm. 8,000 millions since the first quarter of 1926, just before the 1926-29 industrial boom. The movement of the national income from wages and salaries is practically identical with that of the whole national income.

The railway corporation's gross receipts in the January-June period were Rm. 203 millions higher than in the same months of 1933, and Rm. 1,015 millions lower than in the same half of 1929. Generation of electricity is 15 per cent. above that of a year ago. Pig-iron production in July was 767,200 tons, against 440,100 tons in July, 1933, and production in the first seven months respectively 4,663,200 and 2,821,200 tons. Corresponding figures for ingot-steel production are: for the months of July, 1,036,000 and 1,003,800; and for the first seven months, 6,580,100 and 4,075,500 tons. The engineering industry in July was occupied to 58 per cent. of capacity, as against less than 30 per cent. at the bottom of the depression, but of late the improvement has been slow.

BERLIN, August 21.

ITALY

HOME AND FOREIGN POLITICS

PUBLIC opinion in Italy is centred wholly on the international situation. In consequence of the murder of the Austrian Chancellor Dollfuss, the outlook and attitude of the Italian Press became sharply critical of German policy. To the unanimous opposition voiced against the *Anschluss*, there is now added a less marked but significant criticism of Hitlerism in its bearing on the Saar question, the German labour problem and the handling of Germany's economic crisis. A recent decree authorising expenditure for the fiscal years commencing in 1934-35 of the sum of 1,200 million lire for renovation of the air fleet and replenishment of stores, had been already announced in Signor Mussolini's speech of May 26th, but it was published on August 7th, when the international situation had become more tense.

A sensation has been caused by the expulsion from the Fascist Party of Signor Arpinati, former Under-Secretary of State for Home Affairs under Signor Mussolini, and also of a score of his Bolognese friends. Later Signor Arpinati was condemned to five years of deportation to the Islands (*confino*).

NEW INDEX OF PRODUCTION

For the first time the Corporations Department is able to publish a comprehensive index number of production, which can be compared with those published by the *Economist* for Great Britain, and with other indices in foreign countries. A special committee presided over by Professor Amoroso has recently approved the report written by Professor Cianci, in which are laid down criteria for compiling five special indices for textile, metallurgical and engineering, paper, building, and light and heat industries. On the basis of 1928, the general index works out as follows:—

1928	100.00	1934—January	72.20
1929	109.15	February	77.31
1930	100.31	March	84.45
1931	84.72	April	86.92
1932	72.93	May	88.88
1933	80.49		

The bottom seems to have been touched in 1932. A 10 per cent. increase from that date for the year 1934 may be deemed certain.

A comparison between unemployment totals in different industries in May, 1933, and May, 1934, gives the following results:—

	Decreases May, 1933 May, 1934		Increases May, 1933 May, 1934
Agriculture	297,039 157,949	Iron & steel, engineering	105,079 108,602
Mining	34,360 30,756	Gas and electricity	9,398 10,390
Food	27,442 19,632	Building and roads	274,839 309,607
Textiles and clothing	128,880 92,590	Furniture and woodwork	48,160 52,959
Chemical and glass	28,440 22,119	Paper and printing	11,705 12,014
Hotels and other public establishments	34,679 24,978	Entertainments	11,136 18,423
Transport (private)	27,504 25,899	Commerce	51,467 55,339

The greatest reduction in unemployment has taken place in agriculture, food, textiles, hotels. Constructional indus-

tries, producing mainly goods for capital equipment, have not fared so well.

CONTROL OF NEW INDUSTRIES

That recovery is in progress may also be deduced from the number of applications considered at the last session of the Ministerial Committee which is called to grant licences to start new industrial plants or to enlarge old ones. Out of a total of 102 applications, the Committee gave its assent to 68, negated 25, and called for further information for 9. The official *communiqué* only gives the numbers in broad categories of industry. Since one of the postulates of planned economy aiming at the prevention of crises is Government control of new industries, it would be more helpful if fuller data on the interesting Italian experiment were forthcoming. Ex-Minister De Stefani has repeatedly hinted in the *Corriere della Sera* at unforeseen consequences of this "licence" system: for instance, the rise of a sort of market for concessions granted by the Committee. It appears that some people have asked for authorisations to start new plants, without any real intention of starting them, hoping instead that *entrepreneurs* already on the job would be willing to purchase those rights for the sake of avoiding competition. Signor De Stefani, with good reason, asks for publicity in the preliminary stages. Third parties should have the right to intervene. How, it may be asked, can consumers be protected against monopoly? According to Signor De Stefani the decision should be made by a truly judicial body. It is difficult, however, to imagine how a Court, juridically minded, can reach decisions on such things as inventions, better organisation, ability of untried men, etc. How are we to discover a Ford among hundreds of young applicants? Senator Agnelli, at present the big man in the motor-car industry, was, when quite a young man, a lieutenant in the army. What chance would he have had of being selected by a Court among the many would-be motor makers in the adventurous days when the automobile was deemed a crazy invention? Perhaps these and other doubts may be dispelled by the publication of the full reports laid down before the Committee on each application, and of the full technical and economic reasons for the decisions of the Committee.

FALL IN THE GOLD RESERVE, AND CREDIT POLICY

The continued fall of the gold reserve of the Bank of Italy has given rise to some misgiving. Between December 31st and July 31st the figures have changed as follows:—

	Dec. 31, 1932	July 31, 1933	+ or -	Dec. 31, 1933	July 31, 1934	+ or -
Gold and gold devisen res....	7,144	7,337	+ 193	7,397	6,399	- 998
Notes issued ...	13,672	13,329	- 343	13,243	13,330	+ 87
Advances and discounts ...	6,539	5,001	- 1,538	4,693	4,389	- 304
Official rate of discount (%)	5	4	- 1	3½	3	- ½

The dates selected are arbitrary, as all selections are; but being the same in the two years the arbitrary factor is perhaps reduced to a minimum. Certainly the decrease by 998 million lire of the gold reserve in the first seven months of 1934, as against an increase of 193 millions in the corresponding period of last year, is remarkable; and the general public will compare it with the inverse movement in the notes issued: 87 millions more in 1934, instead of a 343 millions decrease in 1933. Perhaps, however, the most important variation relates to advances and discounts, on which the attention of the public is not focussed. There is usually a big decrease in demand for advances and discounts between December 31st and July 31st. The decrease was 2,267 millions in 1930, 1,220 millions in 1931 and 1,538 millions in 1933. In the current year it was only 304 millions, a figure comparable with the even smaller decrease of 28 millions in 1932. Presumably the notes brought to the Bank of Italy, to obtain exchange for foreign payments, were re-issued to meet internal trade demand. Presumably also the internal demand was favoured by the low official rate of discount. The hardening of foreign exchanges and the export of gold, instead of provoking a stringency in the internal credit market, left it untouched.

If the above analysis be correct, the Bank of Italy will

possibly be driven in self-defence to put up the official rate of discount and to make a more drastic selection of commercial paper offered for discount. This is apparently the only way of making effective the strict control now exercised on the foreign exchanges.

TURIN, August 17.

AUSTRIA

LEAGUE LOAN CONVERSION

IN September the League of Nations will probably deal thoroughly with Austrian questions. On the financial side, a prominent point will be the proposal to convert the League of Nations loan. In official circles in Vienna it is stated that English influence is working for alleviation of the debt service of this loan. In consequence of the loan treaties, and especially of the various guarantee provisions, conversion cannot easily be effected. But the French Government has been empowered by Parliament to take such a step, and the negotiations with England, Italy and Czechoslovakia are progressing favourably; the four States mentioned above participate to an extent of 94 per cent. in the guarantee for the amount issued. Preparations are already being made to utilise the option of notice on December 1, 1934. It has lately been stated that it is not merely a question of prolonging the redemption term, which lapses in 1943, by about ten years, but also of a reduction in the 6, 6½ and 7 per cent. rates of interest. Quotations of the loan on the various markets are very steady, but opinions whether the time is ripe for the conversion differ. For the Austrian Budget relief of this kind is highly desirable. There is also talk of direct loan negotiations by the City of Vienna in Paris, but no definite report has yet been published.

Whether or not the Austrian section of the League of Nations loan will be converted is not yet known. Attention is still concentrated on conversion of dollar loans, of which that of the Province of Lower Austria is now in progress, while that of the 8 per cent. dollar bonds of the City of Graz is being prepared. Bonds bearing 8 per cent. have probably become rareties in Europe. The effective rate of interest, at Vienna quotations, is possibly still higher. On the basis of prices on August 14th, the American section of the 7 per cent. International Federal Loan of 1930 (whose service is guaranteed by the revenue from customs and tobacco monopoly) was paying 11.12 per cent., the already converted 6½ per cent. Styrian Loan (in schillings) 10.57 per cent., and the 7½ per cent. Tiwag dollar bonds 13.05 per cent. But the Tyrol Communal bonds, which are in Swiss francs, and the interest rate of which was compulsorily converted by last year's gold clause regulation from 6½ to 4½ per cent., yield 10.85 per cent. The lowest effective rate yielded by the stocks on the Vienna Stock Exchange is that of the English section of the League of Nations loan, namely, 5.92 per cent., which means that it is above par. The stock market has lately been weaker, owing to fears in relation to the stability of the dollar. Still, there is a lively turnover in fixed-interest scrip, while share business is stagnant. In spite of the political events, the index of Austrian shares only fell from 513 to 511 in July.

TOTAL VALUE OF SHARES LISTED: VIENNA

	(Millions of Schillings)			
	1929	1933	1934	July
Total	1,070.0	497.0	486.0	486.0
Building and building materials	43.1	22.4	21.2	21.2
Breweries	87.8	42.1	40.9	40.9
Electricity and gas	173.3	57.1	56.6	56.6
Coal and mining	60.9	25.5	29.8	29.8
Metals and metal industries	288.3	105.6	92.9	92.9
Paper, printing, publishing	57.1	15.6	15.4	15.4
Textiles	56.7	19.3	20.3	20.3
Sugar	15.6	19.8	20.3	20.3

The 1929 quotations were already only a fraction of those previously ruling and a further depreciation of about 55 per cent. has taken place. But from last year onwards the steadiness has been notable, especially if one considers

the wiping out of various bank shares due to the banking consolidation measures.

INDUSTRY STEADY

No particular change has taken place in the state of industry. Labour statistics at the end of the month were as follows:—

	July, 1933	June, 1934	July, 1934
In receipt of the dole (Austria)	300,762	263,883	257,213
In receipt of the dole (Vienna)	126,282	123,032	121,472
In search of work (Vienna)	177,560	187,597	183,413

The development in Vienna is therefore less favourable than in the rest of Austria. For this, there are two main reasons. Public works have been almost exclusively in the provinces, and the City of Vienna is only now beginning them on any scale. By the end of the year, the Vienna programme should give employment to 15,000 persons, as against 7,000 at present. The Federal programme, which gives work to about 50,000 persons, hardly touches Vienna.

Again, the rise in exports, which is the most important factor in the real improvement in Austrian economy, benefits the Vienna labour market very little, because finished-product industries need not immediately engage more workers in order to cope with increased output, and because in these industries the wage bill is a much less significant item than in timber, magnesite, paper, etc. Exports are well maintained, which is apparent not only from the reports of most branches of industry but also from the continued supply of foreign exchange. This latter fact is the more remarkable in view of the July events. Export propaganda is now working intensively for more distant and overseas markets. Unfortunately, foreign trade is not bringing about a corresponding improvement in domestic business, although foreign tourist traffic at the end of July was not unsatisfactory after the temporary disturbances in that month.

VIENNA, August 20.

HOLLAND

COAL PROBLEMS IN HOLLAND

THE difficulties involved in marketing the output of the Netherlands collieries and the threatening wage disputes have induced the Government to intervene. With the object of safeguarding the home market for the mines, it has now imposed quota restrictions on foreign coal. From July 15th to December 31st the import of coal, coke and patent fuel from all countries is limited to 60 per cent. of the average quantity imported for 5½ months in 1933. Of the imports of coal and coke into the Netherlands in 1933, totalling about 7,000,000 tons, England supplied about 1,307,045 tons; while in pre-war times England's share was fully 2,000,000 tons. Holland's imports of coal have been declining steadily since 1929, in which year they were over 10 million tons. On the basis of England's share of 1,307,045 tons in 1933, England will only be able to export during the stated period about 360,000 tons, i.e. 60 per cent. of eleven-twenty-fourths of 1,307,045 tons. The new regulations do not apply to exports of coal from countries with which Holland has a trade agreement, as is the case with Germany. As the treaty with Germany does not expire till the end of the year, German coal will not be liable to restrictions until then.

UNSATISFACTORY TREND OF EXPORTS

Despite—or perhaps because of—quota restrictions and relief measures for Dutch industries and agriculture, the desired fall in prices and an all-round readjustment to the world price level have failed to materialise. In order to ensure the maintenance of the gold standard, the Netherlands need to pursue a deflationary policy to cope with foreign competition. But, instead of a decline in prices, an actual rise is recorded, as will be seen from the following indices of wholesale prices, compiled by the Central Statistical Bureau.

	General Index 48 articles 1913 = 100	Index of Foodstuffs 28 articles 1913 = 100
1913	100	100
1919	304	296
1920	292	252
1921	182	187
1922	160	160
1923	151	143
1924	156	156
1925	155	155
1926	145	144
1927	148	153
1928	149	157
1929	142	149
1930	117	119
1931	97	101
1932	79	84
1933	74	76
1933 July	73	73
1934 June	76	81
1934 July	77	82

The competitive strength of Dutch industries in foreign markets has naturally been seriously impaired by this advance of prices, and exports from Holland continue downwards. The balance of trade of the Netherlands for July is set out in the following table issued by the Central Statistical Bureau (gold and silver bullion omitted):—

	July		Jan.-July		June
	1933	1934	1933	1934	1934
Imports	104	86	667	624	89
Exports	56	58	412	397	59
Percentage of imports covered by exports	54.1	67.7	61.7	63.6	66.7

The imports of gold and silver were in July, 1934, 16,757,229 guilders and exports 2,435,061.

It is hardly surprising that complaints as to lack of orders are generally expressed, not only from the collieries, but also from the woollen textile and shoe industries.

ECONOMIC IMPROVEMENT IN THE DUTCH INDIES

An encouraging feature is that the economic situation in the Netherlands East Indies is improving. In view of the close financial and economic relationship between the Motherland and the colonies, it is significant that various signs of recovery, and of some degree of stability, are perceptible in the Indies. The rising prices of colonial products, e.g. tea, rubber, tin, etc., contribute to this improvement. The Indies have, in fact, managed to maintain a favourable trade balance which for the years of crisis may be termed considerable; and their export surplus shows a pronounced rise for the first quarter of 1934.

TRADE NEGOTIATIONS WITH JAPAN

For the economic situation in the Indies great importance is attached to the commercial negotiations now being conducted in Batavia with Japan, with the object of concluding a trade treaty with that country. Former suppliers of the requirements of the Netherlands Indies are being supplanted by Japan to an increasing extent, and this course of events calls for preventive action for three reasons.

First, however much the interests of the Indies are served by importing at the lowest price, there is no denying the axiom that imports can only be paid for by exports. Under the trade policies which are now well-nigh universal, the maintenance of the colonies' economic structure, which is based upon export, makes it imperative to marshal the colonies' buying powers as a means to increasing their exports. Secondly, the colonies' few, and comparatively recently established, branches of industry are being seriously menaced by the inordinately low prices at which Japanese products are quoted in the Indies. After a voluntary agreement with Japanese manufacturers had failed to yield satisfactory results, the Government of the Indies enforced in June, 1933, a quota system for cement, which ensured a reasonable market for the only cement works in the Indies. In December, 1933, the two breweries newly established in the Indies were afforded similar protection; and, finally, in February, 1934, the native weaving industry was safeguarded by a quota on imports of coloured textiles. This last measure has stimulated activity in the weaving industry of the Indies. Thirdly, not only Japan's ambition to supply the merchandise required by the Indies, but also her efforts to effect her own shipping and distribution, entirely ignored

the old-established and naturally well-adapted shipping, import and *entrepôt* concerns in the Indies.

It will thus be seen how complex and important the present negotiations at Batavia are, and how difficult it will be to arrive at a solution satisfactory to both parties.

AMSTERDAM, August 10.

BELGIUM

BANKING SYSTEM AND CREDIT EXPANSION

THE Government has a series of Bills in hand which will be enforced by Royal Decree. They concern Belgium's banking structure and credit system, and are cast in a bold way.

As a result of the Cabinet crisis, Count de Broqueville introduced into the Government two Ministers without portfolios who are specialists on financial questions: M. van Zeeland, Vice-Governor of the National Bank, and Senator Ingenbleek. M. Francqui, Governor of the Société Générale de Belgique, who had been officially invited to enter the Cabinet, declined. This change was evidence that the Government was going to tackle Belgian financial difficulties. Indeed, it asked for emergency powers, which belong normally to Parliament. After much discussion, the Chambers granted the powers at the end of July. The Socialists, who hold 40 per cent. of the seats, voted against the Bill, but their opposition was not as keen as usual. The powers granted to the Government for six months enable it to change the fiscal system, to cut wages, salaries and pensions, to take measures necessary to protect savings. Moreover the Government has power to compel dissident producers to enter a cartel if a majority of industrialists in that branch are already members.

A first block of economy measures, in one Bill, is ready at present and will be published this week in the *Moniteur*. It has special reference to credit and the banking system, as measures are overdue in those fields. The big Belgian banks have stood up to the crisis very well; they have no assets frozen in Germany or elsewhere. They have suffered losses through clients' insolvencies, and the market value of their industrial participations has fallen considerably. But they have been able to write down out of their reserves. Small provincial banks have on the contrary been more seriously affected. The most important failure was that of the Belgian Labour Bank; its paid-up capital amounted to 100 million francs and its deposits to about 300 millions (about £3 millions).

The Government's intervention has arisen from the difficulties of secondary banks and from the fact that other banks, forced to strengthen their cash reserves, have compelled industry to repay a portion of current account advances, and have avoided granting new advances. The total volume of credit has been continuously contracted in Belgium; this contraction is, of course, a hindrance to commercial and industrial recovery. Part of the current account advances are more or less frozen.

BANKING REFORM

The Government's plan sets out, in the first place, to reform the banking system with a view to protecting savings and deposits. Since the beginning of the industrial epoch Belgium has had big banks of the German "mixed" type (*Beteiligungs- und Finanzierungsgesellschaften*); they accept deposits and are interested both in commercial and other short-term operations, and in industrial participations. The Société Générale de Belgique was the first, and is the most important institution of this kind. It has deposits amounting to 4,155 million francs and controls a third of the coal output, more than a half of the Congo industry, etc. The Société Générale is now to abandon this mixed form, which she adopted nearly a century ago. A royal decree with force of law will enforce the division of the bank into two juridically independent companies; one will be a holding company, the other a joint-stock bank of the British type; this division of the mixed banks is to be completed by December 31, 1935. It is understood that the Société Générale will be divided immediately. The activity of the deposit banks will be strictly regulated; discounts or

advances and Government securities and similar bonds and debentures will be the only authorised objects of day-to-day operations. Industrial participation will be forbidden. There are also provisions as to bank accounting, and monthly balance-sheets are to be published. Foreign banks operating in Belgium will have to conform to the new system.

The second financial Bill admits of credit expansion through the National Industrial Credit Society, a private bank patronised by the State, which has a paid-up capital and reserves amounting to 200 million francs. The banks' advances to industry will be transferred to it, and it will pay for them with 3 per cent. debentures guaranteed by the State. The banks can secure loans against these debentures at the National Bank up to 80 per cent. of their face value.

The intervention of the Central Bank in this field must not be regarded as a first step towards inflation: the only aim is the enlarging of a too narrow credit mechanism for industrial purposes. The special powers granted to the Government formally exclude monetary devaluation. The members of the Cabinet all favour the classical school in economics, and refuse to indulge in "adventures." The banks will probably only have recourse on a narrow scale to the National Bank; it is often sufficient to know that the banks will be able to get liquid funds to have no, or little, need for such funds. The credit granted in Belgium by the discounts of the Central Bank shows an appreciable reduction in comparison with the pre-war period. Business men dislike drawing or accepting bills. This explains why recourse is more frequently had to advances on current account. The mobilisation of these advances, therefore, is based on normal activity by the Central Bank in the control of credit.

Theorists assert that, in consequence of unforeseen circumstances, the balance of payments became unfavourable; the gold bullion reserve of the National Bank would have to play its normal function. The National Bank of Belgium has a gold reserve amounting to 13,000 million francs, and therefore a cover of about 70 per cent. of all its sight liabilities. If a gold export of 1,000 millions takes place from now on, it would be a very small price paid by Belgium for unfreezing and enlarging the credit mechanism.

The Government's intervention aims not only at credit expansion but also at the reduction of its cost. The rate of interest is high in Belgium, though capital is in abundant supply. Commercial credit is granted through discounts at a rate of 4 or 5 per cent., but discounts and bills are not abundant enough. For advances on current account, however, 6 to 8 per cent. is charged. The reform aims at reducing the rate to 4½ per cent. for current account advances; the National Society for Industrial Credit (S.N.C.I.) will operate on this basis.

The Government hopes to enlarge the mortgage credit market, and to stimulate a general conversion movement by allowing anticipatory repayments, even when a longer maturity has been provided for in the agreement. Fiscal and registration taxes will not be exacted on such transactions.

Thus, the Government's financial policy is wide in scope and daring in conception. It has been approved by press and public opinion.

LOUVAIN, August 20.

CZECHOSLOVAKIA

POLITICS AND AGRICULTURE

AMONG the political events of importance we have to mention the re-election of M. Masaryk as the President of Czechoslovakia for the fourth time.

The special law which has given the Government full powers to take speedy measures in economic matters has lately been supplemented. Owing to the secession of the National Democratic Party from the Government the Agrarian and Socialist parties have become now the deciding factors. This feature is clearly reflected in the economic measures of the Government for the safeguarding of

agrarian interests and in its social policy. With regard to the latter a decree has been issued prohibiting the cessation of work in industrial undertakings or dismissal of employees without the consent of the Government. The validity of existing collective Labour agreements has been prolonged, social insurance revised and a law improving the status of clerical employees has been passed. The Government tried to introduce a 40-hours' week for Labour, but this question has been left open for negotiation between workers' and employers' organisations, according to conditions in the various trades. The tendency towards compulsory association in industry and agriculture has so far met with strong disapproval.

The obvious preponderance of the Agrarian Party enabled them to carry through important measures for the benefit of agriculture. In Czechoslovakia, as in other countries, autarky has been greatly sponsored in recent years. Imports of cereals, cattle and animal products have been hindered by Custom prohibitions and quotas, and the regulation of imports and exports was entrusted to Corn and Animal Products Syndicates. These measures stimulated extensive corn and animal production and resulted in such a situation that it was not possible to hold up home prices merely by import restrictions. Last year, relief was sought by purchases on account of the Government. There are still some 45,000 trucks of wheat and rye left from last year's harvest. Before the current harvest, agriculturists again demanded that agricultural profitability should be assured, as purchases by the official syndicates were not deemed sufficient. Thus a corn monopoly has been established by a Government decree of July 13th. Administration has been entrusted to a Corn Syndicate composed of representatives of the farmers', consumers', millers' and traders' organisations. This chartered company is to buy up, sell, import and export cereals, fodder, and to import flour. This adjustment has been carried out despite the strong opposition of certain political parties and non-agricultural circles, who see in it a much too far-reaching hold of the State on private enterprise, and who fear its effects on commercial policy and prices. The Corn Syndicate, however, has already begun to operate by purchasing newly-harvested corn.

With regard to animal products, agrarian policy proceeded on the same lines. Imports—especially those of pork—were radically limited and farming extended, with the result that prices fell heavily. The tendency was further strengthened by the insufficiency of fodder due to the great drought. Under these circumstances the Government tried to relieve the situation by restricting pig-farming in proportion to the fodder at hand. The output of artificial fats has also been limited by certain quotas, shared among manufacturers. The milk trade has been regulated, and a Timber Syndicate formed. Moreover, agriculture has been granted certain reliefs in respect of social insurance; a moratorium for farmers' debts in districts stricken by bad harvest; and a special relief fund for these districts has been voted. Finally, the Government has under consideration a scheme to relieve farmers of some of their burden of indebtedness.

PRODUCTION

The number of unemployed persons at the end of June was 586,730, which is less by 38,080 than a month ago, and by 89,203 than a year ago. In industry a slight revival has been noticeable and some improvement in certain sections has set in. Those industries, however, that cater for export are still suffering from export difficulties. The output of coal has not risen proportionately. In the first half of the year it was 5,061,000 tons, and the output of lignite was 7,246,000 tons. Production of iron and steel was better and amounted, for the same period, to 291,000 tons of iron and to 478,000 tons of steel. In comparison with the previous year the output of iron almost doubled and that of steel rose by about 40 per cent. Building activity has been weak on the whole, chiefly owing to the impossibility of obtaining long-term credits.

Prices are showing a rising tendency; partly in sympathy with the world movement; partly owing to the devaluation of the Czechoslovak crown, which made the import of raw materials and of semi-manufactured goods dearer; partly owing to the drought and bad harvest. The complete

wholesale price index in July stood at 701, that of agricultural products rose from 639 in June to 721 in July, while the index of manufactured goods declined from 684 to 679, so that for the first time the agricultural was higher than the industrial price index and the spread between these two components of the general index disappeared.

MONEY MARKET

The long-term credit situation has not improved, and it is still difficult to obtain such credit. Also savings deposits have been weak. The Rediscount Institute, which was established to support the market in gilt-edged securities, has started operations. Business on the Stock Exchange has been limited. State revenues have improved on the whole. The Government is preparing the Budget Bill for the autumn session. Further economies in public administration are expected, as this problem is being discussed by the Parliamentary Economy Commission.

FOREIGN TRADE

Imports for the first half-year amounted to 3,053 million Cz.K., against 2,683 million Cz.K. a year ago; exports amounted to 3,151 million Cz.K., against 2,699 million Cz.K., so that there is an active balance of 98 million Cz.K. for the half-year.

In comparison with last year, export trade has improved with Great Britain, Italy, Germany, Netherlands, Switzerland, Scandinavia, Greece, and with the Overseas category. The rise in the nominal export values is due to devaluation, and if we reduce the nominal value of exports to the previous value of the Cz.K. the increase in comparison with last year is substantially less. It would be premature to estimate the effects of the devaluation. It seems, however, that it has not brought any marked results, as it could only promote exports in free markets, whereas in the majority of countries imports are still hampered by restrictions on trade and by difficulties of securing payment. On the other hand, despite great efforts by the Government to prevent a rise of prices, the increase of prices in the home market for raw materials and semi-manufactured goods imported from abroad is obvious, and this offsets the premium upon exports secured by devaluation.

New supplementary trade agreements have recently been concluded with Finland, France, Yugoslavia, Belgium and Hungary. Negotiations were also begun with Roumania to revise the quota agreement. With regard to the economic relations of the Little Entente States, the proposal for economic preferences is being considered. Negotiations were also begun with Austria, but the effects of the Italo-Austro-Hungarian preferences on trade relations between Czechoslovakia, Austria and Hungary have not yet been elucidated. Relations with Russia being now on a regularised diplomatic basis, a commercial treaty is being prepared to replace the present interim measures.

PRAGUE, August 8.

ROUMANIA

FOREIGN DEBT AGREEMENT

THE representatives of the Roumanian Government and of the holders of Roumanian bonds, who have been negotiating since February last, have reached an agreement which is to be ratified by both parties before August 15th. The bondholders of the following countries, namely, France, Belgium, Holland, Switzerland, England, America and Italy, are included in the arrangement, which is concluded for a period of three years and comprises the 4 per cent. and 5 per cent. unified loans, the 4½ per cent. loan of 1913, the 4 per cent. consolidated loan of 1922, the 6 per cent. loan of 1925, as well as the two issues of the Monopolies Institutes, i.e., the 7 per cent. stabilisation loan of 1929 and the 7½ per cent. development loan of 1931. The redemption of the five Government loans remains suspended until March 31, 1937, and their coupons maturing during the three years from April 1, 1934, are payable as to 25 per cent. in the first year, 35 per cent. in the second and 42 per cent. in the third year. The balance is can-

celled. The 75 per cent. still unpaid on coupons due during the second half of the financial year 1933-34 will be paid in bonds of a new consolidation loan bearing interest at 4½ per cent. as from November 1, 1934, and redeemable by drawings or by purchase in 15 years from November 1, 1938. The redemption of the stabilisation and development loans is also suspended for the period of the agreement, and the coupons are payable as to 50 per cent., 53 per cent. and 55 per cent. in the first, second and third year respectively. The balance due on these coupons will be deposited at the National Bank in the shape of Treasury bonds, which, however, will be cancelled if the terms of the agreement are carried out. Of the coupons on the loans of the Monopolies Institute payable during the second half of the financial year 1933-34 there remains an unpaid portion of 50 per cent. which will be settled by allocation of new consolidation loan bonds.

The normal funded debt service, external and internal, amounted to 5,840 million lei in 1932. By the agreements made with the foreign bondholders in 1933 the yearly charge was reduced to 4,553 million lei. The economy realised by the Roumanian Exchequer as a consequence of the new arrangement amounts to 5,300 million lei spread over three years; but it will not be easy to meet even these reduced commitments, in view of the decrease in Treasury receipts and the difficulty of transfer arising from unsatisfactory foreign trade.

PROPOSED INTERNAL LOAN

The Ministry of Finance is now occupied with preparations for the new internal loan, by which it is intended to liquidate the floating debt and to create funds to meet expenses for national defence, agriculture, road construction and other public works. According to the details furnished by the Minister of Finance on the occasion of his last Budget, the floating debt is made up as follows:—

	Million lei
Remainder of payments due for supplies	12,358
Receipts from provisional deposits	2,742
Treasury bonds	1,076
Debt to the National Deposit Banks	1,524
Temporary advance from National Bank	2,000
Advance on metallic currency	1,001
Swiss advance	1,769
Sundries	652
Total	23,122

It is probable that the unfortunate firms who supplied the State with equipment in past years and have waited in vain for payment will accept bonds of the new loan in settlement. This will mean a loss for them, considering the low prices at which other Government issues stand. The 12,300 million lei due on this account, therefore, as well as the 3,818 million lei due for provisional deposit receipts and Treasury bonds representing similar debts, are likely to be taken as subscriptions to the new loan. To pay the remaining 6,000 million lei, however, cash must be made available by public subscription to the new loan, and it is doubtful if the terms can be made sufficiently attractive for the general public to come forward, despite indications that there are large amounts of idle money. The chances of obtaining a surplus for fresh expenditure are very problematical; and it seems that part of the floating debt will remain in existence, as the Government will be unwilling to abandon its plans for further national defence.

HARVEST PROSPECTS

The harvest figures are being examined with particular anxiety this year in view of the precarious foreign trade balance of the first six months. The grain harvest will probably be well below average. The production of wheat varies considerably from one district to another, the figures reported ranging from 600 kgr. to 1,300 kgr. per hectare. Total production is estimated at 200,000 wagons, which, with the stock in hand, will be sufficient for internal consumption. Export of wheat is prohibited. The commission which is entrusted by the Government with the valorisation of cereals, and has received 300 million lei for this purpose, has fixed the price of standard wheat at 435 lei per 100 kgr., which is considered too low by producers. The exportable quantity of barley is expected to be 400,000 tons, and that of rye, oats and vegetables 300,000 tons. The prospects of the maize harvest appear better than a month ago. The

probable yield per acre is given as 1,000 kgr., and the harvest is expected to reach 400,000 wagons, of which 100,000 wagons should be available for export. All figures given are estimates and are subject to revision. As regards maize, the result depends on the weather during the current month.

FOREIGN TRADE REGULATIONS

The new quota system for imports, fixed for the three months beginning July 1st, is based on imports during the year from July 1, 1933. This reduces the proportionate amounts allowed for the three months by 20 per cent., with the exception of equipment required by the petroleum industry. On account of the exceptional increase in the amount of goods imported from England during the year, imports from Britain are to be reduced by 40 per cent. At the same time, all permits given for exports in compensation for imports or in payment for old debts are cancelled as from August 1st. This unexpected decision will play havoc with a number of industries dependent on imports of raw material or semi-manufactured articles. It will also break the "compensation agreements" for the export of large quantities of cereals and timber; and in the absence of any plan to replace these, no new business can yet be concluded by exporters. The sudden decision, communicated to the firms concerned by the authorities only in the second half of July, caused great consternation. Exports and imports on the basis of "compensated trade" have developed to a very high pitch during the last twelve months; and the commission paid by the importer—varying between 12 and 25 per cent. according to the goods exported, the country of destination and the season—enabled the exporter to carry on his business with a fair amount of profit; although cereal prices in this country are considerably higher than those ruling in world markets. In this connection, information from reliable sources states that 80 per cent. of the exports of cereals during the last season was only possible under the compensation system. The authorities are credited with the intention of re-introducing an export premium. In view of the experience in 1931, when a large amount of export premiums granted by the Government remained unpaid, this plan is dubiously regarded by exporters. On the other hand, importers lose prompt and practical means of payment for their goods; and they will have to go to the National Bank for their foreign exchange, suffering all the delays and vexations caused by the notorious shortage of foreign currency.

BUCHAREST, August 3.

CHILE

GOVERNMENT POLICY

DURING the twenty months that the present Government has been in office, apart from small local disturbances, the country has been free from political turmoil. In April, however, there was a minor political crisis. Colonel Marmaduke Grove was elected Senator for Santiago on a Socialist ticket, with the support of a section of the Radical Party organisation—and this in spite of the fact that its own party was represented in the Cabinet. The four Radical ministers, finding their position untenable, had no alternative to resignation. This move to the Left on the part of the Radicals undoubtedly represented the feeling in the country and was inspired in part by fear of a small but growing Fascist movement. The President dealt adroitly with the situation by forming a new Cabinet including two Democrats (a party of the Left, between the Radicals and Socialists) where before there was one, while retaining the support of the Right and Centre parties. The new Government was thus of a slightly more Left-wing complexion than its predecessor.

Present indications suggest that political peace and economic recovery will continue, though a return to the conditions of pre-depression years is scarcely possible without a real revival in international trade. The Government programme of concluding reciprocal trade treaties with European countries as well as with other republics of the American Continent has already produced beneficial results and should in the future go far to restore the prosperity of export trade. The Chilean Government has made clear its

desire to honour its foreign obligations as soon and as far as conditions permit. In this connection the fact that the favourable visible trade balance rose to 94 million gold pesos (of 6d.) in the first quarter of the present year, compared with 42 millions in the same period of 1933, and only 27 millions in 1932, is of good augury. It must, however, be remembered that, as the Chilean exporting industries are mostly foreign-owned, in many cases only the costs of production and not the full invoice values are actually spent in Chile.

A GRADUAL RECOVERY

Although Chile is still a very long way from the prosperity of the pre-depression years, all the economic indices confirm that the worst of the depression has been passed. The activity of Chilean home industry has again increased after the short set-back which followed the cessation of uncontrolled inflation in the summer of 1933. At the end of March last sales were slightly higher and production only just below the figures of a year earlier. Gold production which, prior to the depression, was relatively insignificant, has now become a factor of first-class importance in Chilean economic life. There has been an enormous increase alike in the quantity of gold obtained from mines and alluvial washings as well as that found in other minerals. In the first quarter of 1934 Chilean gold production from all sources amounted to 1,771 kilograms against 820 kilograms in the same period of 1933 and only 645 kilograms in the whole twelve months of 1930. The improvement in export trade only became apparent in the second half of 1933. This is chiefly the result of the Compensation Treaties concluded between Chile and various European countries, by which the frozen assets of those countries in Chile are released in return for larger purchases of Chilean products, especially nitrate.

With the general increase of economic activity there has been, apart from seasonal fluctuations, a pronounced decline in unemployment. At the end of March last the workless numbered 38,953, of whom 27,588 were classified as labourers and the remainder employees and domestic servants, the corresponding figures a year earlier being 74,770 and 52,559. These statistics are especially significant in view of the fact that, more remunerative work being available, there are to-day some ten thousand men fewer engaged in gold washing than a year ago. The reduction of unemployment has been one of the main considerations which influenced the Government in the framing of its general policy, and even in dealing with the monetary question.

CREDIT AND THE EXCHANGES

From the middle of 1933, when uncontrolled inflation, after lasting for approximately two years, suddenly came to an end, until October, there was a short period of deflation, the volume of currency in circulation declining from 886.7 million pesos to 850.5 millions. Thereafter there was a slow but steady increase to 902.9 millions in March. This new inflation caused a moderate decline in the external value of the peso and a rise in wholesale prices. It has so far been scarcely sufficient, however, to affect materially the cost of living. But as a fresh departure from the principles of orthodox monetary policy it naturally met with strong disapproval from the authorities of the Central Bank. The explanation was supplied by President Alessandri in his message to the Congress on May 21st last. A slight rise of the Chilean peso above its existing level in terms of gold would, he said, be sufficient to render unremunerative the working of the lower grade gold mines and those of the washings which yielded but small returns. And this would result in increased unemployment. He added that with any appreciable rise in the external value of the peso the export of agricultural produce would cease to be a paying proposition. He definitely attributed the general resurrection of the country to the premium on gold and foreign currencies. It would thus appear that the Government has resolved upon a policy of a mildly inflationary tendency. Public opinion in Chile is predominantly influenced by the fact that the country began to emerge from its troubles at a time when inflation was still in progress and that the short deflation of July-October, 1933, led to a set-back in trade and even a slight renewed rise in unemployment.

SANTIAGO DE CHILE, July 10.

MONEY AND BANKING

THE GERMAN EXCHANGE AGREEMENT

THE publication of the terms of the Anglo-German Exchange Agreement has given rise to a certain amount of confusion, and also speculation how the agreement will work in practice. Admittedly the whole scheme is experimental, and it is difficult to tell at present how it will operate; but there are certain broad inferences which can already be safely drawn, and certain misconceptions which can be corrected.

To begin with, it is necessary clearly to distinguish an exchange agreement from exchange clearing. Clearing is compulsory in the sense that all traders of both countries are bound to settle their debts through the clearing. It also works in both directions, including in its scope the imports and exports of both countries. An exchange agreement is permissive. No trader is bound to make use of it if he thinks he can obtain or make payment more conveniently through whatever channels remain open. Again, it only works in one direction, for whereas the exports from the country in the stronger exchange position to the country in the weaker position may be paid for under the scheme, the converse does not apply.

The Anglo-German Agreement probably originates from the gradual shrinkage of the foreign exchange allocations to German importers to virtually zero. The idea is not new, and agreements between Germany and other European countries have been operating—in many cases quite successfully—for a considerable time. So long as even a small amount of foreign exchange was forthcoming for the financing of British exports to Germany, we were under no incentive to resort to artificial measures, which might or might not be successful. Latterly, however, it became apparent that unless some new machinery could be devised, British exports to Germany would not be paid for at all. This made the experiment of an exchange agreement justifiable, for at the worst we could lose nothing more, and at the best we might save something from the wreck. Moreover, we were able to draw upon the experience gained from other exchange agreements, while the discussions over the Dawes and Young Loan interest payments provided a convenient opportunity for initiating discussions on this question as well. It is a fair assumption that the Reichsbank is willing to collaborate with the Bank of England in the operation of the Agreement, for representatives of the Reichsbank must have taken part in the negotiations, and without some assurance of Reichsbank co-operation the Agreement could not have been signed.

The *modus operandi* of the Agreement seems to be much as follows: the German authorities have agreed that payments for imports from Great Britain may—except for the infinitesimal amounts of foreign exchange released to importers—be earmarked primarily to cover payments due from Great Britain. In return they have asked that this traffic shall be centralised under official British control—that is, under the Bank of England, acting as the British Government's agent. This has been agreed, and the Bank of England has opened a special account at the Reichsbank into which German importers may make reichsmark payments for their British goods. These marks are to be known as sondermarks. Here the first point of distinction emerges, for under the German exchange regulations a foreign exporter who accepts payment in reichsmarks finds that those marks are blocked inside Germany, and that they may not as a general rule be used as payment for German exports. In return for the surrender of this principle, the German authorities have obtained the canalisation of these payments under the ægis of the Bank of England. Incidentally, as the Bank of England acts as the British Government's agent, it may be inferred that the Bank is relieved of any risk of ultimate loss under the scheme.

The next step is for the Bank of England to sell its sondermarks, and to reimburse British exporters out of the sterling proceeds of its sales. Here it remains to be seen

how the scheme works out in practice, but Continental experience affords some guide. It may be assumed that the Bank of England will on the whole offer its sondermarks as it receives them, and notwithstanding recent suggestions to the contrary, will not try to adjust its sales from day to day so as to obtain the best possible rate. On the other hand, it must have assured the Reichsbank that it will not force sondermarks on to the market to a point at which the value of the reichsmark would be seriously affected. The sondermark is not a "free mark" in the strict sense of the term. The Agreement provides that sondermarks may only be used in payment for German exports to Great Britain, or for other purposes approved by the Reichsbank; and so the Bank of England will only sell to other banks domiciled in Great Britain, and will presumably require evidence that the reason for the purchase of the sondermarks conforms to the terms of the Agreement. The British banks, in fact, have agreed that where a customer applies for sondermarks which are not to be used in payment for German goods he shall give information as to the nature of the payment, and shall also quote the number and date of his Reichsbank permit. This throws the whole onus upon the general public, but it is conceivable that the Reichsbank will give a wide interpretation to the use which may be made of sondermarks.

The vital points are the discount at which sondermarks will be sold, and the extent of the demand for them. At first sight, it would appear that they would have to compete with the various kinds of blocked marks released to cover German "additional exports." On the other hand, there is also a natural desire on the part of both German exporters and the Reichsbank to receive payment in sterling. The Reichsbank, however, will have to countenance payments in sondermarks if the scheme is to work, and there are indications that it is ready to do so. Also, notwithstanding a recent German estimate that 40 per cent. of Germany's export trade consists of additional exports, there is reason to believe that applications for leave to use additional export facilities are rigorously scrutinised, and that a large part of the normal exports to Great Britain can be financed by sondermarks.

Foreign experience supports this view. In many cases similar Agreements have worked smoothly. There has been a regular demand for marks, and foreign central banks have been able to dispose of their marks at discounts of the order of 1 per cent., and with a delay of only five days after their receipt. When the Agreement has broken down, some special cause can usually be found. Thus the Dutch allowed their Agreement to embrace a new and abnormal transit trade, and foreign exporters to Germany naturally seized the opportunity to slip through Holland. Hence the Dutch authorities found themselves overwhelmed with marks which they could not possibly realise. A similar *contretemps* cannot occur under the British Agreement, for its terms provide that it only includes re-export trade within narrow limits, that payments of sondermarks into the Bank of England's account are automatically suspended whenever the size of the account exceeds Rm. 5 millions, and that the whole Agreement can be ended if it is found seriously to have affected the Anglo-German balance of trade. Here we have profited by past experience.

It therefore looks as if the Agreement may operate smoothly with a minimum of loss or delay to traders who make use of it; and the initial inquiry for sondermarks which has sprung up in London is a distinctly hopeful sign. There are, of course, one or two gaps. Outstanding debts due to British exporters have had to be excluded, or the scheme would have been over-weighted from the start and would never have had a chance. A more serious obstacle is the exclusion of controlled raw material imports into Germany. It was found impossible to include them without a fundamental recasting of the whole German exchange

control system. Still, the position of these two important groups of traders has been made no worse by the introduction of the scheme, and the exporter of goods outside the German control is now free to resume trading with a better hope of receiving payment for future shipments. The whole scheme, of course, is an experiment, and in one sense is to be regretted in that it involves a further constriction of international trade and the creation of a new species of blocked mark. On the other hand, we stand to lose nothing more by our signature of the Agreement, and we may gain a little.

FINANCIAL NOTES

The Money Market.—Monday and Tuesday of this week fell exactly three months after Whitsun, and so there were no Treasury bill maturities on those days. As a result there has been a fair demand for funds, which was accentuated by some fresh Stock Exchange borrowing, and the clearing banks had to lend a little new money at 1 per cent. The rate charged by other lenders was a firm $\frac{1}{4}$ per cent.

	Aug. 2, 1934	Aug. 9, 1934	Aug. 16, 1934	Aug. 23, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{7}{16}$	$\frac{7}{16}$	$\frac{7}{16}$	$\frac{7}{16}$
(b) Others.....	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$
Three months' bank bills	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$	$\frac{11}{16}$

The discount market has been very idle. Only £30 millions of Treasury bills were allotted last Saturday, which reduces the total tender issue from £450.3 to £445.3 millions, but even so, the average rate improved from 14s. 11.06d. to 15s. 5.6d. per cent. The clearing banks' buying rates are unchanged at $\frac{1}{2}$ per cent. for September Treasury bills and $\frac{3}{4}$ per cent. for later dates, but their purchases have been confined to a few late September bills. There is no demand for October bills, which are not a useful maturity. The outside rate for Treasury bills of all dates is now $\frac{3}{16}$ per cent.

The Bank Return.—More of the holiday notes have returned, and as a result the note circulation is now lower than it has been since June 20th. It may be assumed that the return of the holiday currency is complete.

BANK OF ENGLAND					
	Aug. 23, 1933	Dec. 27, 1933	Aug. 8, 1934	Aug. 15, 1934	Aug. 22, 1934
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.2	190.7	191.7	191.7	191.7
Note circulation.....	374.6	392.0	392.8	384.1	379.4
Banking Department:—					
Reserve.....	76.9	59.7	59.4	68.1	72.8
Public deposits.....	32.2	22.2	23.9	23.5	37.4
Bankers' deposits.....	90.5	101.2	82.0	89.5	82.1
Government securities ...	84.9	88.0	83.3	84.1	84.5
Discounts and advances	10.1	16.8	7.0	5.5	5.8
Proportion	46.5%	37.3%	41.9%	45.4%	46.9%

There has been a big increase in public deposits to an unusually high figure. To a large extent this is due to the absence of Treasury bill repayments on the first two days of the week, but the mid-month Excise payments provide a further explanation. In consequence, bankers' deposits are lower.

The Foreign Exchanges.—The London market has again been active. There has been a persistent demand for francs, and as the British control has been less active, the spot rate has fallen to Frs. 76 $\frac{3}{4}$. Three months' francs are also quoted at a slight premium. The dollar has also depreciated to the export gold point against the franc, and on Thursday afternoon it was stated in London that gold shipments from New York were being arranged. Seasonal commercial buying of dollars has now begun, however, and

this may help to steady the rate. Still there is a persistent opinion that further devaluation may take place once the September financing is complete. The strength of the franc against sterling is not easy to understand, as the repatriation of French balances from London must be practically complete. One theory is that the pressure on the pound comes not from London but from elsewhere in the sterling area. The official reichsmark rate has appreciated sharply to Rm. 12.85 $\frac{1}{2}$. No sondermarks are yet available, and many people who had been holding back for sondermarks have had to buy free marks instead. Registered marks remain weak at 40 per cent. discount. The London price of gold remains at an appreciable premium. The South African Reserve Bank has held back over £1,000,000 of gold in South Africa, and less gold has lately arrived from India. The result is that only small amounts of gold have been on offer in the London market.

New York Money and Banking.—Money remains very easy, and New York rates are unchanged. Brokers' loans for August 15th were returned at \$821 millions, against \$827 millions the week before. Notwithstanding last week's fall in the dollar to the export gold point, gold arrivals for the week ended August 15th were returned at \$22.2 millions, of which \$8.8 millions came from England and \$7.6 millions from India. This gold was, of course, already on its way when the weakness in the dollar developed. Exports were returned at \$1,279,000, while ear-markings on foreign account increased by \$2,147,000. This week's gold arrivals have, of course, been insignificant, but the rally in the dollar caused foreign ear-markings to be reduced at the week-end by \$525,000. During the last few days, however, the dollar has again depreciated against the French franc towards the export gold point, and there have been rumours of fresh impending gold shipments. The Budget outlook remains unsatisfactory. A Federal deficit of \$4,000 millions is envisaged for the current financial year, which will raise the accumulated deficit to \$10,000 millions. In view of the cost of the new relief expenditure, which will have to be covered by fresh borrowing, some increase in taxation is thought to be inevitable.

China and Silver.—The news that late last week the largest single silver shipment on record, amounting to \$6,350,000, reached New York from London shows that the United States Administration's decision to purchase American-owned silver at 50.01 cents an ounce is already exercising a powerful attraction on the world's silver supplies. Meanwhile, the Chinese authorities are already showing their perturbation at recent developments. Since the passage of the American Silver Purchase Act, about 60 million Chinese dollars of silver have been exported, and a further 30 millions is in Shanghai awaiting shipment. Regulations have now been issued forbidding the melting down of silver coins, and a conference took place this week between General Chiang Kai-Shek, the Finance Minister, the Governor of the Central Bank, and a foreign adviser. Shanghai bankers are urging the imposition of an embargo on the export of silver, but Government opinion is divided, and probably no decision will be taken before a further conference to be held at the end of this week. Since the end of May, the Chinese dollar has appreciated from 15 $\frac{1}{2}$ d. to 16 $\frac{3}{4}$ d., or by about 7 per cent., and this has intensified the over-valuation of the Chinese currency with serious results to internal and external trade. A year ago the dollar stood at only 15d., so that it has since appreciated by about 11 per cent. It is now entirely at the mercy of the price fixed by the United States Administration for the purchase of silver, but were a further rise in silver to occur, the Chinese authorities might be forced to consider either the devaluation of the Chinese dollar in terms of silver, or else the abandonment of the silver standard. In the latter event, silver would be free to appreciate in terms of Chinese currency, and the effect of silver shipments would become similar to that of the recent gold exports from India. Admittedly, it would be difficult, and in many ways undesirable, for China to sever the link with silver, but she cannot remain indefinitely at the mercy of American policy.

THE STOCK EXCHANGE

CHINA AND THE BRITISH INVESTOR

WHETHER or no interest rates have reached their lowest point, investors are evincing a disposition to explore the highways and byways of the security markets in search of increased yields, since the demand for liquidity during and after the crisis is no longer urgent. To many the average yield on representative industrial shares already appears to discount domestic recovery, and signs have lately been evident of a tentative reawakening of interest in foreign bonds. That China, harried by banditry in the South, subject to the conflicting terrors of flood and drought, and suffering from the loss of Manchuria, should earn even momentary consideration at this juncture testifies to her efforts, during the depression, to maintain her financial integrity so far as her limited powers have permitted. Sheltered by the fall in silver from 1929 to 1931, her internal price level gave her considerable advantage in world markets still determined by the gold currencies. But the subsequent devaluation of sterling and the rupee exchange, with the depreciation of the yen and the American dollar, have since involved her in the deflationary spiral of falling prices and trade, whose effect is well exemplified by the following table of foreign trade values (which exclude Manchurian trade throughout):

FOREIGN TRADE (AFTER ADJUSTMENT FOR MANCHURIAN TRADE):
1929-1932

(Millions of standard dollars)				
	Net Imports	Exports	Total Value	Import Surplus
1929	1,620	1,070	2,690	550
1930	1,723	944	2,667	779
1931	2,002	915	2,917	1,087
1932	1,524	569	2,093	955
1933	1,345	612	1,957	733
Five months, Jan.-May				
1933	661	246	907	415
1934	484	219	703	265

China's exports, by value, were 33 per cent. lower last year than in 1931, and the fall in net imports was of the same proportions. The Shanghai index of wholesale prices declined in that period from 126.7 to 103.8 (1926 = 100). There has clearly been a substantial fall in the volume of China's international trade. Nevertheless, the adverse "visible balance of trade" is tending to diminish, the figure for the first five months of this year being no more than \$265 millions, compared with \$415 millions for the corresponding period of 1933.

The elasticity of the Customs revenues appears surprising at first sight. The following figures include Manchurian receipts to June, 1932, and exclude them subsequently:—

	\$ millions
1929	338
1930	281
1931	383
1932	*312.5
1933	339.5

* Excluding \$19.5 millions of Manchurian Customs, this figure would be \$293 millions.

The maintenance of the revenue, however, despite the loss of the Manchurian Customs, has resulted from increased duties and surtaxes since 1931, while the calculation of duties on the basis of Customs gold units has protected the revenue from exchange losses. China has made use of her tariff autonomy to reform and simplify the taxation system under an established Civil Service, but the drive for increased revenue and an element of "infant industry" protectionism culminated in the new tariff introduced in May last year, which provided for increases of 50 to 100 per cent. on many classes of textiles. In some cases, such as sugar, this policy has been largely defeated by increased smuggling, and in others by reduced consumption. The duties on certain classes of imported foodstuffs and clothing have again

been increased in July this year. Moreover, the interior is occasionally called on to pay the impositions of independent war lords.

The appreciation in the external value of silver has been reflected in the internal currency situation. Coupled with military expenditure and general political insecurity, especially in the provinces of Szechwan, Kiangsi and Fukien, the rise in price has encouraged a large drain of silver from the provinces to Shanghai. The reformation of the silver currency by the creation, in March, 1933, of the standard dollar, both as the unit of account and the circulating medium, which should have promoted enterprise and confidence, has thus unfortunately coincided with a deflationary movement. That this has assumed serious dimensions is shown by the fact that the Hongkong "Treasure Tables" now reveal a net export of silver:—

(Thousands of standard dollars)

	Gold			Silver		
	Imports	Exports	Net Export	Imports	Exports	Net Import
1929	1,566	4,637	3,071	189,188	24,311	164,877
1930	4,012	29,773	25,761	159,788	55,393	104,395
1931	16	50,043	50,027	118,233	47,430	70,803
1932	251	109,582	109,331	96,539	106,934	10,395
1933	268	69,635	69,367	80,432	94,855	14,423

Exports of gold are still subject to embargo, and the table refers to officially sanctioned transactions from the free Hongkong market. Silver exports are subject to an export tax of 2 $\frac{1}{2}$ per cent. In fact, the smuggling of both metals has proceeded on a considerable scale, to the serious detriment of the monetary stocks. Those high quarters who have stated, in connection with the American silver policy, that "it is obvious . . . that a rise in silver increases the potential purchasing power of the Far East" have completely ignored the fact that this fresh accentuation of the internal and external drain is calculated still further to hamper all transactions in China, to drive down internal prices afresh, and to enhance the pressure for local issues of inconvertible notes. Chinese currency stability, in fact, depends on an adequate silver import, and not on the petty advantage of an exchange premium. It would, indeed, be difficult to devise any expedient more harmful to China's economic interests than the raising of the price of silver. Although her share of world trade in 1929 was only 2 per cent. and her exports and imports \$U.S.1.34 and \$U.S.1.67 per head respectively, her external trade is of greater proportionate significance in her economy than is America's. Unless, therefore, the international price level for China's exports rises proportionately to the rise in the price of silver, the vicarious altruism of the American silver interests may prove costly to China.

This factor may be of prime importance in the near future. As Sir Arthur Salter pointed out in his report to the Chinese Government last February (of which a full summary was published as a supplement to the *Economist* of May 19, 1934), China is one of the few major regions ripe for capital development. At present the country is suffering from the severe depletion of its capital resources. The position has not been improved by the declaration, in April, of Japan's "Monroe Doctrine," which warned foreign powers that concerted operations undertaken by foreign powers, even in the name of technical and financial assistance, were bound to acquire political significance, and that Japan must object to such undertakings, and others . . . "detrimental to the peace in East Asia," as a matter of principle. As China, in the past, has almost invariably raised her foreign loans by simultaneous issues in a number of centres, this declaration presents the British investor with the possibility that further investment, however urgently necessary it may appear for development

a Partly secured on Salt Gabelle and likin. Terms of issue provide for security on Customs revenue on the abolition of likin, but provisions have not been implemented. b Redeemable by equal annual drawings from 1923 to 1952, but no drawings have been made. c Coupons in default from July, 1925. d Half interest being met. Latest payment June, 1934, in respect of June, 1929 coupon. e Particulars given are for English issue only. f Payable out of surplus salt revenues only. g Interest outstanding at present.

purposes, or for the restoration of assets such as railways and rolling stocks, may be obstructed by considerations of *haute politique*.

For the moment, therefore, the railway bondholder in particular can see little prospect either of opening up new avenues of Chinese investment or of obtaining an increased return for his present holdings, the large majority of which have been in complete default for several years. In 1932 the Ministry of Railways assessed the total liability of the Government lines at \$1,033 millions. It is evident that even the interest charge is not being earned to-day, though steps towards unification of control are being taken which may increase efficiency and restore some semblance of credit-worthiness. As the British investor, at the beginning of 1933, had £15½ millions at stake, of which £8½ millions of principal and interest were in default, obvious importance attaches to the question of liquidating outstanding debt, and securing adequate compensation to the Railways Department for military freights, damage, and diversion of funds for military expenditure. Between 1929 and 1932 construction was largely at a standstill, and only 346 kilometres of new lines were completed. The important Canton-Hankow line still has a gap of over 200 miles, which is to be completed out of the British share of the Boxer Indemnity at a cost of £4,700,000. The recent policy of the managements has aimed at the reduction of European and other engineers, and the working condition of tracks and rolling stock has deteriorated considerably. The recruitment of competent *personnel*, the compounding of past debts, and raising of fresh funds—not merely for extension, but also for restoring lines, which are adequately profitable in themselves, to a reasonable state of efficiency—are all urgently necessary.

The bearing of adequate communications upon administration and economic life in China cannot be overstressed. The efficiency of transport, for example, closely affects the authority of the Government, which at present tends to be apoplectic at the centre and anæmic in the interior provinces. An improvement in economic conditions, making possible the avoidance of unbalanced budgets and expensive temporary borrowing, is necessary to pave the

way towards the internal provision of new capital on a reasonable basis. Successful exploitation of China's natural resources, indeed, would show how small are her present heavy obligations in relation to her economic potentialities. It is unlikely, however, that China, unassisted by the technique and capital of other countries, can herself secure adequate development of her resources, or that her future industrialisation will follow the ambitious lines of the 1931 ten-year plan of the Ministry of Industries. But the establishment of small industries, serving the agricultural population with simple equipment for intensive cultivation, mainly rural in scope, together with an expansion of coal mining and an increase in power supplies for pumping and irrigation, may be calculated to increase China's exports, to restrict her dependence upon imported foodstuffs, and to furnish a margin of agrarian purchasing power to provide for further gradual industrialisation.

Within the limits imposed by internal and external conditions, China appears to have endeavoured to maintain at least the nucleus of her credit in being against the advent of better times. As the annexed table shows, the loans secured on the Customs have been faithfully served, while the Salt Gabelle loans are in partial default only in respect of repayment. Most of the railway bonds, however, continue to be drawn, but not repaid, and the fact that London dealings in undrawn bonds are at the same quotations as for drawn bonds augurs complete uncertainty as to prospects of repayment.

For the moment the outlook for Chinese economic recovery is not auspicious. The export of silver continues, and a record shipment from Shanghai this week brings the total export to \$90 millions for this year. The Government has declared against an embargo on silver, presumably for the reason that clandestine trade would outstrip even the present heavy drain. There have been alternative rumours that a devaluation of the new silver currency is in prospect. These, if widely spread, would add to the difficulties of maintaining the integrity of the currency. China has a larger proportionate stake in a rising international price level than any other country, and, in the absence of contrary factors, the present upward trend of primary commodities would be calculated sensibly to assist her position. On a longer view, however, a country which is painfully learning the arts of decentralised government, is attempting to mitigate its exposed position on international account, and recognises the dangers of an over-rapid industrial development, may eventually—high politics permitting—be expected to provide a not unprofitable field for investors who are prepared to accept a fair degree of risk for a proportionately high return.

INVESTMENT NOTES

Industrial Share Outlook.—The latest figures of our Index of Business Activity, published in this week's *Economist* Trade Supplement, are of special significance to holders of British industrial equities, on the threshold of another autumn and winter. They suggest that the trend of the "recovery" curve has shown indubitable signs of flattening out in the last month or two, and that the summer seasonal recession is at least "normal" this year, whereas twelve months ago it was much less than normal. Not all investors, however, may have realised that British industrial share values have been discounting precisely this factor for the last eight months. Throughout the "recovery" period, indeed, changes in average market values have ante-dated changes in business activity by an appreciable interval. The *Financial News* daily index for 30 ordinary shares (1928=100) touched its lowest point of 51.3 on May 31, 1932. By the end of last year, it stood at 84.0. Its present level is 88.0. In other words, the index, which rose by nearly 33 points between the middle of 1932 and the end of 1933, has risen only a further four points in the last eight months. The "three months' moving average" curve, on the Business Activity Chart given on the first page of our Monthly Supplement, definitely began its upward movement in the second quarter of 1933, and its

ascent was interrupted only a month or two ago. Though it may be premature, as yet, to postulate a purely stationary trend for the Activity Index in coming months, industrial shareholders may certainly be well advised to make provision for the possibility that the market will obtain much less assistance from industrial events this autumn than last. There are, however, other important factors which may tend to support market values. The first is the absence, as yet, of any sign of a break in the cheap money regime. So long as the return on gilt-edged stocks and sound industrial prior charges is low, no ordinary share offering a reasonable security will be allowed to fall to a level at which it offers a return out of line with the rest of the market. The shares of companies in industries whose "recovery" prospects are still regarded as being above the average, such as the steel and building trades, will be specially sought after. The "yield factor" is of particular importance in view of the fact that an upward movement in profits and dividends may be looked for in coming months, even if the activity curve shows no marked rise, since the *current* level of industrial operations is higher than the *average* for the last twelve months. Investment demand, however, under these conditions, may well be selective rather than general, and market attention may veer from one group of shares to another, on short-term and "specialised" grounds. Recent examples of this tendency have been the activity of motor shares, on the advertising of new models by leading manufacturers, this month, and the buying of certain tobacco shares on the resuscitation of nebulous rumours regarding amalgamations. Similarly, the market may show increased sensitivity to unfavourable news. America's influence, at the moment, is not healthy. The danger of at least a temporary increase of competition for British industry, if one or more of the remaining Continental outposts of the gold standard is compelled to surrender during the coming winter, is also occupying the minds of some investors. In general, industrial shareholders would welcome more tangible prospects of a revival in international trade.

Wall Street and "Control."—Since Mr Kennedy, chairman of the Securities Exchange Commission in America, broadcast his mollifying speech (during the President's absence abroad) the Control has pursued a cautious path which, on account of its very tentativeness, has done little to reassure Wall Street that its intentions are to interfere only in cases of definitely undesirable practice. The rules for registration of securities, concerning which the market had indulged its most morbid fears, turned out, on their publication last week, to be disciplinary, although they avoided any appearance of harshness. The principal feature requires the filing of individual holdings amounting to over 10 per cent. of any class of registered security, which is to commence from November. It is not clear how nominee holdings are to be affected under this rule, which seems likely to encourage some division of existing holdings to avoid the necessity for registration of changes in interests. So far, no requirements for the conduct of business have been published, but Mr Kennedy's statement that safeguards for investors will come later, when the Commission has examined the data received, may be read in the light of the Commission's demand for statistics of trading. Reform without disturbance would appear to be the main objective, but the ability of the Commission to prevent manipulation seems likely to be seriously limited by its powerlessness to interfere with foreign orders. It is reported that steps are being taken to avoid the diversion of business from American markets to foreign centres, but in the meantime Wall Street itself is languishing in anticipation of new margin regulations, the announcement of which is declared to be imminent. Meanwhile, the President has this week studied the plans for the reform and co-ordination of all sections of the recovery programme. In some quarters it is thought that some relaxation of Administrative control over business will be effected, but in view of the President's statements on his return from holiday, it would be unwise to anticipate the announcement which is expected this week-end. Such a

An Income of 5% plus a return of Capital

The Society has devised a scheme whereby an income of 5 per cent. on the Capital invested is secured for life, and on death a return of a portion of the Capital is guaranteed. The investor; moreover, is entitled to participate in the profits of the Society in respect of this portion, and will thus obtain the benefit of any future favourable trend in the investment situation.

development, however, would not be surprising in view of the President's readiness to change his tactics in emergency, for the present recession in economic activity is causing serious concern, and might well be countered by some extension of *entrepreneurs'* freedom, especially in the financial sphere.

* * *

B.I.D. Policy.—It has been disclosed this week that the British (Guest Keen Baldwins) Iron and Steel Company has placed £2,032,000 of 4 per cent. debenture stock with the Bankers' Industrial Development Company. The latter will provide financial facilities, as and when required, for the construction of the British (G.K.B.) new steel works at Cardiff. The debenture is charged on various South Wales properties and other assets of the company, present and future, and takes precedence of all other charges which may be created. The announcement suggests that the Bankers' Industrial Development Company is in process of solving, by trial and error, the problem of its proper function in the London capital market. The B.I.D. was formed four years ago, under the ægis of the Bank of England, the banks and important issuing houses, to provide finance for developments in "key" industries, for which existing capital market facilities were inappropriate. At the outset it was confronted with the difficulty that whereas "rationalisation" loans could normally be "placed" through the ordinary machinery of the market when the borrowers' position was satisfactory, they threatened to be largely "unplaceable," however august the issuing authorities, when the borrowers' credit was uncertain. In the first offer made under its ægis (that of the National Shipbuilders' Security) the B.I.D. overcame this difficulty by securing the loan, in effect, on the gross turnover of the industry. The problem of transforming "doubtful" into "good" risks became more apparent, however, with the B.I.D.'s next issue. Its offer of Lancashire Cotton Corporation debenture stock was made on a prospectus showing net losses. Neither a redemption yield of 7 per cent. nor a five-year guarantee of interest by an insurance company sufficed to secure a favourable reception for the stock, which fell to a heavy discount. More recent operations, however, have suggested that the B.I.D. has studiously avoided "unacceptable" risks, and is tending increasingly to concentrate on the "carrying" of large capital projects, involving a lengthy constructional period, pending their eventual placing on their own investment merits. Thus the Corby extension of Stewarts and Lloyds, for the manufacture of basic Bessemer steel, was based on an arrangement with the B.I.D., under which £2,550,000 of 4 per cent. debenture stock has been successfully placed this year, out of a total authorised issue of £3,300,000. The British (G.K.B.) scheme appears to have been conceived on similar lines. The full amount will not be advanced immediately, but will be paid as the work at Cardiff progresses. Presumably, the permanent "placing" of the stock, given a continuance of favourable market conditions, will not be

undertaken until the work is sufficiently far advanced to permit of the debentures "paying their way" out of earnings. Incidentally, a testimony to the improving position of the Guest, Keen group is afforded by the report of another important subsidiary, John Lysaght, which shows a net profit for 1933 of £199,892, against £76,878, covering a total dividend of 8 per cent., tax free (against nil) on the £2,000,000 of ordinary capital, which is held as to more than 99 per cent. by Guest, Keen and Nettlefolds.

South American Railways.—The recent upward trend in the prices of primary commodities, especially grains, has stimulated interest in the stocks of railways operating in South American countries which, having no deficiency in their own crops, are thought likely to secure a clear gain. The "currency" receipts of practically every South American railway, indeed, are at present running ahead of last year. In some cases, however, the market does not appear clearly to have grasped the significance of exchange movements in the meantime. The Brazilian and Chilean railways are not greatly troubled by this factor, for their exchange (once they have obtained it) shows only moderate variation as compared with last year. The Argentine railways, however, are in a very different position, for the Argentine Government has, in the last few months, adopted various measures to stimulate the national export trade, which have involved a significant depreciation in the rate at which the railways can obtain sterling for homeward remittances. The effect on their sterling receipts for the twelve months to June last has yet to be disclosed. Since the beginning of July, however, the railways have adopted the policy of giving, in their weekly traffic returns, both peso receipts and their sterling equivalents, at "official" rates. Although this method gives a misleading impression of shareholders' ultimate exchange losses, it forcibly reveals the seriousness of the exchange problem from the investor's viewpoint. The peso figures for the first seven weeks of this year are eloquent of improving traffic conditions. The gross "currency" receipts of the four chief Argentine railways, in fact, already show an increase of 3,606,000 pesos, or 8.9 per cent., over last year. The sterling equivalents, however, are down by £536,000, or 17.2 per cent. The following table summarises the latest information regarding the position of seven important South American railways:—

Railway	Financial Year ends	Gross Receipts—Last complete Year compared previous Year	No. of Weeks so far	Current Year			
				Gross Receipts compared same Weeks previous Year		Change compared previous Year	
				Currency	Sterling equivalent	Currency	Sterling
B.A. Gr. Southern ...	June 30	£'000 - 42*	7	+ 391	- 263	+ 2.7	- 23.2
B.A. Western ...	June 30	+ 9*	7	+ 444	- 72	+ 8.9	- 18.4
Central Arg. ...	June 30	- 376*	7	+ 2,691	- 102	+ 20.1	- 10.0
B.A. Pacific ...	June 30	+ 109*	7	+ 862	- 100	+ 11.2	- 16.7
Leopoldina ...	Dec. 31	- 301	33	+ 8,055	+ 17	+ 20.5	+ 2.2
San Paulo ...	Dec. 31	+ 70	33	+ 1,902	+ 17	+ 3.3	+ 1.8
Antofagasta ...	Dec. 31	+ 71†	33	+ 113	...	...	+ 33.4

* At par of exchange. † Railway receipts only.

Whether or not Argentine railway labour is successful in its pressure for increased wages, it is doubtful how far the fruits of an admittedly improving economic situation will reach stockholders on this side. Meanwhile, the 1933-34 reports, due at the end of September, may exert a chastening influence on the market. The two Brazilian railways, Leopoldina and San Paulo, are facing improved conditions, particularly as regards coffee, but have little ground for satisfaction with the policy of the Brazilian authorities, evidenced by the abolition of the system of sliding scale tariffs (varying with the rate of exchange), by the law enacting compulsory holidays at full pay for workers, and by the levying of a heavy tax on coal imported by the railways, coupled with a 10 per cent. "quota" for native coal,

which is quite unfit for locomotive purposes. The outlook for the Antofagasta (Chile) and Bolivia railway is, possibly, more encouraging. Part of last year's increased passenger receipts reflected the transportation of troops in Bolivia, but this year's further rise is, in the main, an economic movement. The greatest contemporary problem is the inadequacy of exchange facilities.

The "Kruschen" Placing.—In the *Economist* of July 28th last (page 173), we discussed certain questions in connection with the "placing" of 500,000 £1 ordinary shares of Griffiths Hughes Proprietaries, Limited. The latter acquired the issued capital of a business whose proprietary products included, *inter alia*, the famous "Kruschen Salts." A firm of London stockbrokers, Messrs Cazenove, Ackroyds and Greenwood, exercised an option to take up these shares at par, in return for underwriting an issue of preference shares. The eventual market price established itself around 39s. (the present quotation being 40s.), and the London Stock Exchange Committee ordered the expunging from the "Supplementary List" of all dealings below 37s. 6d., on the ground that these were in respect of placings effected before the granting of facilities. A Parliamentary sequel was a question, put down in the House of Commons, by Captain A. H. M. Ramsay, Member for the Peebles and Southern Division of Midlothian, asking for a report of the details of the issue, to permit the preparation of "a clause for inclusion in any amendment of the Companies' Act, 1929, designed to prevent issuing houses and others from exploiting the public by the use of introduction methods in lieu of a prospectus." The question was withdrawn in order to give time to the Board of Trade to consider the facts. The *Financial News* has now published a letter, dated August 9th, from Dr. Leslie Burgin, Parliamentary Secretary to the Board of Trade, to Captain Ramsay, declaring that there was nothing unusual in the method of introduction of the ordinary shares, and that the Committee of the Stock Exchange were satisfied that neither the vendors nor the brokers to the issue were in any way concerned or connected with the rapid rise in price. The latter "was due solely to the supply of shares being insufficient to meet the demand of the public." The Board of Trade, very properly, disclaims any official concern with the procedure of the Stock Exchange, but makes it clear that the Stock Exchange Committee are fully alive to their responsibilities. It would appear, therefore, that certain parties may have been guilty of an error of judgment—for it is one of the functions of a broker to estimate the probable "state of the market"—but that the incident admits of no other construction.

Actuaries' Investment Index.—Although the volume of business has shown a further tendency to fall off this week, industrial share values remain firm. The 144 ordinary shares comprised in the Actuaries' Investment Index (December 31, 1928 = 100) stood at 71.0 on August 21st, against 70.5 a week earlier and 70.1 a month earlier. On July 31st, the index was as low as 69.3. The corresponding yield figures are 3.69, 3.72 and 3.73 per cent., with a "high" of 3.76 per cent. on July 31st. The increase in the latest week's figures, though unspectacular, is well distributed, as the following table suggests:—

Group, and No. of Securities	Prices (Dec. 31, 1928=100)			Yields (%)		
	July 24, 1934	Aug. 14, 1934	Aug. 21, 1934	July 24, 1934	Aug. 14, 1934	Aug. 21, 1934
	1934	1934	1934	1934	1934	1934
Higher this week:						
Building materials (4).....	82.7	81.9	82.7	4.08	4.25	4.21
Cotton (6).....	45.0	45.6	46.8	2.26	2.27	2.27
Electric supplies (8).....	94.1	93.7	94.4	4.50	4.52	4.49
Stores and catering (15) ...	79.6	79.8	80.4	4.15	4.15	4.11
Breweries & distilleries (16)	110.3	111.4	112.8	3.91	3.95	3.90
Lower this week:						
Coal (6).....	90.1	89.1	88.4	3.92	3.99	4.03
Home rails (4).....	78.7	80.5	77.0	1.49	1.46	1.52

The largest gain over the past month has been secured by the brewing and tobacco groups, the latter of which is not separately shown in the Index. Home rails, despite considerable weekly vicissitudes, are now a little lower than they were a month ago.

COMPANY NOTES

Furniture Companies.—Though there are a few public companies which manufacture furniture, the investor's main interest in the furniture trade is through the distributive side of the business. Actual manufacture is carried on, in the main, by small private concerns working independently. This, in the past, has tended to introduce an element of instability into the industry. In periods of difficulty some manufacturers have been accused of serious price-cutting to obtain distributors' orders, of lowering labour conditions to reduce costs, and of resorting to unseasoned and inferior materials and workmanship, with skilful varnishing to conceal defects. However this may be, as furniture is a form of "capital goods" for which demand may contract sharply in times of depression, ability to cut prices, with a corresponding variation in quality, is capable of producing particularly difficult trading conditions, the more so since purchases of furniture are not made by habit at a given shop but, usually, after comparison of prices at several shops. A concern holding large stocks of the higher quality products at the beginning of a depression may be faced with a considerable falling-off in custom. To intensify these elements of instability there is the now highly important factor of hire-purchase trading. Inevitably, this increases the temptation to purchase when the public is in a buying mood. In this country,

however, it has not so far produced the volume of bad debts during depression which many of its critics professed to fear. During the last four years, however, almost every one of the large public furniture retailing companies has been compelled to write off sufficiently large sums to have a "serious effect on profits. In most balance sheets "hire-purchase debtors" is much the largest asset, and is equivalent to, perhaps, twenty times (or over) the net profits. A relatively small default can therefore be a serious burden on earnings. Instability, however, is accompanied by the possibility of very substantial profits in favourable conditions. In the first place, the special accounting necessary to hire-purchase trading gives a cumulative effect to profits in a series of good years. In the second place, the new uses of plywoods and veneers have permitted a substantial reduction of costs in a business where demand is decidedly elastic, with a consequent increase in the trade's turnover. Thirdly, new furnishing must accompany the present wave of new building. As volatile "recovery" securities the

PATENT PAPER PACKING (Foreign) LIMITED

Share Capital £150,000 Divided into 600,000 Shares of 5/- each

The Subscription List for an Issue of 360,000 Ordinary Shares of 5/- each at par will open on Tuesday next, the 28th day of August, 1934.

DIRECTORS

ERNEST EDWARDS (Chairman, J. Lemoine Ltd., Champagne, Rheims France), Chairman.
The VISCOUNT MASSERENE and FERRARD, D.S.O. (Director, Northern Counties Committee, London, Midland & Scottish Railway).
ANDRE LOUIS SIMON (President of the Wine and Food Society).
CAPT. REGINALD CORFIELD (Director, Corfields Ltd.).

BROKERS

HENRY J. GARRATT & CO., 5 Great Winchester Street, London, E.C.2, and Stock Exchange.

The Prospectus will show (inter alia) that:—

- (1) The Company acquires and exploits under licence in thirty-one Foreign Countries the Rights of the invention known as Patent Paper Packing for protecting bottles, eggs, electric bulbs and other fragile articles.
- (2) The Packing has already been successfully utilised in France and Germany, and its manufacture has recently been started in England at an up-to-date factory.
- (3) Firm offers for the purchase of the Rights for four countries alone amount to £52,000, and the Directors have no doubt that the remaining Rights can be disposed of for a sum considerably exceeding the Company's capital.
- (4) In addition, a large and increasing revenue should accrue from Royalties on the output of the Companies operating abroad under licence, and it is anticipated that the income from American Royalties alone will be sufficient to pay dividends ranging from 25 to 40 per cent. on the issued capital, apart from those received from other countries.
- (5) The surplus cash working capital of £19,000 provided by this issue is considered ample, as the Company will be primarily concerned with the disposal of Patent Rights under licence and will not be engaged in manufacture.
- (6) The Directors are men of proved business capacity and international experience.

shares of furniture distributors may be of interest to the skilled investor. They are, however, less suitable for the more conservative, long-period investor, to whom stability of earning power is a prime consideration. This view is borne out by a study of the figures of the five important companies whose recent results appear in the annexed table.

Calico Printers' Profits.—Investors have become accustomed to the expectation that little good can come out of Lancashire, in view of the cotton textile industry's difficulties. The preliminary figures of the Calico Printers' Association show that this view may be both short-sighted and unjust, for the Association reports an increase in working profits, in the year to June 30th last, of 7.2 per cent., which has restored earnings to their highest level since 1929-30. Though the net profit is insufficient to permit a payment on the Association's £2,010,736 of ordinary capital, the preference dividend is fully covered, whereas a year ago it was short-earned by £26,879:—

Years to June 30		1932	1933	1934
Working profit		£656,228	£629,516	£674,935
Depreciation, renewals, etc.		359,970	366,790	371,263
Directors' fees		10,800	10,800	10,800
Debt interest		128,000	128,000	128,000
Preference dividend		150,805	150,805	150,805
Ordinary {				
Earned		6,653	Dr. 26,879	14,067
Paid		Nil	Nil	Nil
Earned (%)		0.4	Nil	0.9
Paid (%)		Nil	Nil	Nil
Reserve		...	Dr. 50,000	...
Total carried forward		10,476	33,596	47,663

The allowance for depreciation, renewals, etc., is higher than in either of the preceding years, though still well short of the £501,607 allowed in 1929-30. Comment on the

balance sheet position must await the full report. The Association has made every effort to secure maximum efficiency without sacrificing the quality of its fabrics. The chairman at the meeting may have something to say regarding the results of the company's dyed silk and rayon department, which was established two years ago, and also on the all-important topic of Japanese competition. The 5 per cent. cumulative preference stock is quoted at 15s. 7½d., to yield 6½ per cent. The ordinary stock is dealt in at 10s. 7½d.

* * *

Midland Counties Electric.—The Midland Counties Electric Supply Company deserves congratulation on its enterprise in publishing an attractive and informative brochure on its history and activities. The company is a "Balfour-Beatty" concern, incorporated in December, 1912, whose share and loan capital has subsequently grown from £572,659 to £6,000,000. Post-war development has been particularly rapid, as the following table shows:—

Year	Consumers	Units Sold	Connected Load K.W.
1919	2,567	9,783,000	12,490
1922	4,172	23,806,863	30,984
1925	8,657	60,409,436	54,239
1928	20,577	133,596,226	105,303
1931	41,860	175,432,547	163,840
1933	62,885	236,531,870	202,121

The progress revealed by this table is the more encouraging since the company's area (excluding three boroughs in which supply is given), has the relatively low density of population of approximately 440 per square mile, while the large cities which are within its area, but are excluded from supply, have a density varying between 10,000 and 17,000 per square mile. Broadly, its area covers the four counties of Warwick, Leicester, Derby and Nottingham, but excludes such important places as Birmingham, Coventry, Leicester, Derby, Nottingham, Newark and Chesterfield. In the last ten years the earnings for the ordinary shares have increased from £45,862 to £157,500, but in the meantime the issued ordinary capital has been trebled, so that the rate of earnings has risen only from 7.9 to 8.5 per cent. The dividend has been stabilised for the last five years at 7 per cent. At the present price of 37s. 6d. the shares yield 13½ per cent.

* * *

Vickers' Grouping.—In connection with the tables and diagram published in the *Economist* of August 4th last, page 228, showing the organisation of British iron and steel groups, it may be helpful, for those studying the organisation of the industry, to point out that the grouping employed in our chart includes the connections of the main companies in each "constellation," even where this amounts to an investment interest only. It follows that the use of a dotted link between any two companies, in the chart, does not imply any interest of either with the subsidiaries and sub-subsidiaries of the other. Thus, the relationship between Vickers and Associated Electrical Industries, as indicated in our diagram, is limited to an investment interest. The subsidiary companies of the latter concern are shown for the sake of logical completeness, without any implication that they are minor satellites in a planetary system of which Vickers, Ltd., is the sun. Where "interest" shades into "control" is a matter for judgment in individual cases, for a large shareholding, assisted by representation on the board, may in certain conditions constitute effective economic control, even if legal sanctions are lacking. We are assured, however, that Vickers, Ltd., exercises no control over the policy of Associated Electrical Industries. Similarly, although Armstrong Whitworth Securities holds one-third of the ordinary shares in Vickers-Armstrongs, the latter company has no interest in the Lancashire Steel Corporation or in other companies controlled by Armstrong Whitworth Securities. We take this opportunity of adjusting and amplifying our analysis as regards Group A in the light of the latest available information. Vickers (Crayford) (No. 3) has been taken over by Vickers-Armstrongs, and wound up. Supermarine Aviation (No. 12) is a subsidiary of Vickers (Aviation) (No. 2). British Separators (No. 11) is a subsidiary of Cooke, Troughton and Simms (No. 7). We also understand that no company now exists named Vickers Commer-

cial Steel (No. 15). Electric Holdings (No. 5) controls Manufacturers' Estates and Assets (No. 8), the latter, in turn, controlling Isle of Walney Estates (No. 13). Airship Guarantee (No. 6) is now moribund, and Walney Housing (No. 14) has been liquidated. A further subsidiary of Electric Holdings, viz. Steel Investments, may be added to complete the record, but it is small and inoperative. Vickers and Cammell Laird have a joint controlling interest in Metropolitan Cammell Carriage and Wagon, and of the subsidiaries, Blake Boiler and Leeds Forge (Nos. 36 and 38) are no longer active, while Newlay Wheel (No. 41) has been wound up, leaving Patent Shaft and Midland Railway Carriage (Nos. 39 and 40) as the principal operating subsidiaries. In the Vickers-Armstrongs group, Internal Combustion Locomotives (No. 55) is in course of being wound up. Finally, Darlington Forge (No. 58) is entirely controlled by English Steel and, according to our latest information, is not associated with John Brown in Carnforth Hematite (No. 59). These small amendments may throw additional light on the present economic (as opposed to the "legal") organisation of the Vickers' interests. These are set out in an informative booklet issued by the company, which also describes the principal products of the active units in the group.

* * *

Oil Companies' Liquidity.—A slip circulated by a leading firm of jobbers in the oil share market sets out, in striking fashion, the extraordinarily liquid position of 15 large oil companies. The total liquid assets of the group are shown at £68,794,798, which, after deduction of current liabilities amounting to £21,738,024, gives a surplus of liquid assets of as much as £47,056,774. Among the leading companies Anglo-Persian shows a surplus of £5,459,061, Burmah Oil £9,266,236, Royal Dutch £10,690,605 and Shell £10,701,285. These large figures are a striking testimony to the industry's resources, and in view of the international ramifications of the leading companies, they will clearly afford ample protection from the worst effects of impediments to international commerce and exchange difficulties. This insurance, naturally, involves the payment of a premium. The majority of oil directors and shareholders would obviously welcome an improvement in conditions which would employ the large surplus funds at present invested outside the business. The "Shell" Transport investment holding of £10,198,966, for instance, which is mainly in gilt-edged stocks, may be regarded as a capital reserve against the far-distant day when the wells dry up, but in the meantime it must inevitably reduce the average return on the capital considerably. In matters of internal finance, however, oil company directors wield a benevolent despotism behind whose authoritarian barriers the inquisitive are rarely allowed to penetrate. To judge from these figures, the powers-that-be have adequately achieved their *fiat* for liquidity.

* * *

Other Company Results.—Our weekly summary of profit and loss accounts, which will be found on page 381, contains results of seven other companies which have been published during the week. The Tyne-Tees Steam Shipping results show a slight improvement at £20,394, compared with £19,841 for the year to June, 1933, and the dividend of 5 per cent. has been earned except for a slight short-fall. Compass Investment Trust net revenue is lower (£20,136, against £25,233), but the dividend of 2 per cent. is maintained, although it requires a draft of £3,320 upon carry-forward. In the miscellaneous group, Carter and Company, the tile and pottery manufacturers, report a satisfactory improvement in profits, from £16,793 to £22,809 for the year to May 31st last. Meccano net earnings for the year to February 28th are £17,817, comparing with £16,258 for the previous year. Toogood and Sons' net profits have improved from £5,670 to £9,821, and the dividend of 4 per cent. is at twice the previous year's rate. The Empress Brewery shows a considerable increase in profits (£34,258, against £20,610 for the year to June 30, 1933), and the surplus after preference dividend (£28,258) is distributed to ordinary shareholders, following the practice of the previous year.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
August 28	August 30

So far as actual business was concerned the week honoured the August tradition more than either of its predecessors. There were, however, even fewer sellers than buyers, and prices consequently had a firm tone everywhere. Speculation, possibly, concerned itself with foreign bonds rather than gilt-edged securities, and with industrials rather than gold-mining shares. So far, the holiday month's business has suggested that there is rather more optimism than opportunity for its exercise. There would be more buying if there were more bargains in the basement.

Gilt-edged stocks opened quiet and a little dull, but showed firm symptoms in the middle of the week, when Victory Bonds were in demand after going ex dividend. The prowess of the Commonwealth's representatives in another place did not prevent a slight weakness in Australian issues on Wednesday, on election rumours and the prospect of official disagreement over the textile duties. In the foreign bond market, Japanese stocks were harder, the market refusing to take an alarmist view of the political implications of the Chinese Eastern railway dispute. A slightly harder tendency occurred in Chinese bonds, whose prospects are discussed in a leading article on page 363. South American bonds continued in demand on the improving exchange situation, but Brazilians were subject to sporadic profit-taking as the week progressed. The market for German bonds continued in a state of complete stagnation.

Home rails opened dull, but became demonstrably active with the mid-week publication of traffic figures well above market anticipation, despite the fact that the figures afforded comparison with a relatively good week's takings in 1933. London Transport "C" stock remained steady, despite the decreasing tendency of current receipts. South American rails were supported on the improvement in the peso and milreis exchanges. The importance of the "exchange" factor is stressed in a Note on page 366.

Trading was of comparatively small dimensions in the industrial share markets, but cheerful conditions were maintained. Buyers moved by faith rather than sight, and the explanations furnished for some of the week's prominent rises were frequently nebulous and unconvincing. Further buying of tobacco shares in the "Imperial" group, for example, was put down to vague rumours regarding the continued benefits of the abolition of coupon trading. When Woolworth encountered profit-taking, after a rise which appeared to discount much more than a prospective increase of dividend, attention was turned to Great Universal Stores, on the company's decision to open a chain of stores, which, inevitably, must involve competition at some points with Woolworth. Motor shares were firm, but interest was transferred from the private car companies to the heavy commercial vehicle manufacturers. Business in coal and steel shares remained on a small scale, and prices showed a tendency to decline, to which Guest Keen were an exception, on the improved results of the John Lysaght subsidiary. A little profit-taking in breweries was quickly absorbed. Textile shares were steady under the lead of Calico Printers, whose increased earnings are set out on page 367. Rayon shares, however, were neglected. Shipping shares remained dull. Bank shares were irregular and, on the whole, easier. Only a small business was done in insurance shares, mainly at unchanged prices.

The oil share market failed to maintain its initial firmness. Although selling from the Continent had spent itself by the middle of the week, operators showed marked reluctance to open new commitments, in view of the uncertain American position. The rise in the price of rubber to 7½d. was associated with a semi-revival of interest in the shares, accompanied by prognostications of a possible rise to 9d. in the autumn. The tea share market, however, remained depressed, the course of

prices for the new season's Indian teas being disappointing.

The mining markets had much more of a "holiday" appearance than in any earlier week. The unexpected movement of gold currencies against the £, however, promised greater activity when the market was "in the mood." For the greater part of the week neither London, Johannesburg nor Paris showed any disposition to increase "Kaffir" commitments, though the rise in the sterling price of gold induced a little more activity in the later sessions. West African shares were dull at the outset, but became more active later, and signs of increasing interest were evident in Western Australian mines. Rhodesian copper issues were steady, after a dull start. Despite reports of a potential shortage of tin supplies in America, tin shares continued to reflect the downward trend of the London price of the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

AFTER running at record low levels since 1922 on Monday, the market has subsequently been roused to activity this week. An expansion in turnover from 270,000 shares on Monday to 1,300,000 shares on Wednesday cannot be wholly attributed to Major Angas's influence, although his pamphlet is reported to be enjoying a wide circulation in market circles and has assisted sentiment, despite some authoritative criticisms. Public interest, which was entirely lacking on Monday, has returned to the market with considerable effect, for gains of 1 to 3 points were registered in most stocks on the two following days. Business has been mainly concentrated, possibly in accordance with the precepts of the chronicler of the coming boom, in motor, amusement and farm equipment issues, but rail stocks have been generally firmer in anticipation of an improvement in traffic receipts. Second-grade speculative bonds have received considerable investment attention, but a reaction has occurred in Government bond quotations on indications that future Treasury issues will be more widely offered to the public, since the banks fear the consequences of any rise in interest rates on their present large holdings. Some foreign bonds have been active, Argentine issues in particular reaching new high levels. The market has suffered no immediate disadvantage from the indications of possible labour trouble in the textile industries, but the industrial situation is not regarded with great confidence, although fears of a postponement of the autumn upswing until next spring are not widely entertained. Current steel mill activity is at 21 per cent. of capacity, against 22 per cent. last week, but power output is somewhat higher. The market is awaiting with interest the outcome of this week's discussions on the reform of the "New Deal" on the assumption that it will secure greater co-operation between the various sections, and will reinforce the application of the Anti-Trust laws.

* Two-hour Session.

PARIS

The Bourse presented a fairly quiet appearance this week, but, on the whole, quotations improved slightly as the week progressed. Uncertainty on Wall Street gave no encouragement in early sessions, when Rentes were easier on the Parquet. International counters improved on Wednesday, including Rio Tinto, which had been very heavy on Monday owing to the fall in copper prices. On the Coudisse, diamond shares continued weak, and gold-mining issues failed to maintain a half-hearted improvement on Tuesday. Rubber and oil shares attracted little attention.

	Aug. 14, 1934	Aug. 20, 1934	Aug. 22, 1934		Aug. 14, 1934	Aug. 20, 1934	Aug. 22, 1934

BERLIN

After a decline in quotations early last week, shares were firm, but material advances were confined to certain favourites, in particular paper and pulp shares. Among steel issues Mannesmann was bought, but Hoesch sharply reacted. Reichsbank advanced four points. On a rumour that the system by which foreign currency securities may be exchanged against dollar bonds would be changed, Continental Linoleum, Compania Hispaniola, I.G. Chemie, and other issues in this group declined considerably. This week's share market opened steady, but on Tuesday became weaker but irregular, with a reaction in some pulp shares and a sharp advance in Westdeutscher Kauffhof (Tietz department stores). Domestic bonds were dull, dollar bonds being unchanged or slightly weaker.

AMSTERDAM

Business continued very quiet in all departments of the Bourse this week, although a firmer undertone which developed in mid-week was a welcome corrective to some wilting in prices arising from earlier lack of supporting business. Rubber shares were somewhat firmer on Wednesday, and leaders in the industrial market, including Philip's Lamps and Unilever, checked a reactionary tendency as the week progressed. Royal Dutch were merely steady on Wednesday, while the rest of the oil market continued its

gradual decline. Sugar shares opened dull, but recovered part of their fall, but home and Dutch East Indies bonds were slightly lower on Tuesday owing to the D.E.I. conversion report. German loans, after a weak opening, were slightly stronger in mid-week trading.

	Aug. 15, 1934	Aug. 22, 1934	Aug. 15, 1934	Aug. 22, 1934	Aug. 15, 1934	Aug. 22, 1934

CAPITAL ISSUES

THE new issue market has again been quiescent, though there are signs of activity on the horizon. An issue of £500,000 3 1/2 per cent. stock will shortly be made at par on behalf of *Stretford Corporation*. This is the first venture of the Corporation to the London market, and the terms are identical with those of recent successful operations by corporation borrowers. The lists will open next week for an issue of 600,000 5s. shares of *Patent Paper Packing (Foreign)* at par. This company acquires foreign rights in a patent process which is being exploited in this country by Compressed Paper Packing, whose position vis-à-vis the London Stock Exchange Committee was dealt with in our issue of August 5, 1933, page 285. The parentheses in the title inevitably recall certain features of the 1928 new issue boom. The prospectus states that application for permission to deal will be made "as soon as the directors deem it expedient to do so."

BY STOCK EXCHANGE INTRODUCTION

Neil Gwynne (B.M.L.) Mines (no Liability).—Particulars of issued capital, 300,000 shares of A. 10s. each. A. 1s. paid; 55,000 shares of A. 10s. each allotted to vendors. Company acquires from Bendigo Mines mining rights over 250 acres for consideration as above. Development programme is now in preparation. Issue underwritten by vendors, who guarantee calls up to 2s. 6d. per share, in consideration of option up to August, 1938, over 60,000 shares at 2s. 6d. premium. Calls are limited to 6d. per month, and will be made as necessary.

CONVERSIONS AND REPAYMENTS

Aberthaw and Bristol Channel Cement.—The directors have decided to repay £212,844 6 per cent. first mortgage debenture stock at 105 and to create £300,000 4 1/2 per cent. debenture stock in its place, of which it is proposed to issue £230,000 forthwith. Holders of 6 per cent. stock may exchange their

security at par and receive the premium of £5 per cent. in cash, or exchange their holdings, including the premium, at the rate of £105 of new stock for each £100 of existing stock.

Anglo-Dutch Plantations of Java, Ltd.—The company and its subsidiary, the Anglo-Dutch Utilities Company, Ltd., have decided to bring up to date the sinking funds of the debenture stocks, which have been in suspense since January 1, 1933, and July 1, 1933, respectively. The amounts necessary for the redemption of the stocks for the years 1933 and 1934 will be paid to the trustees on September 1st.

Clan Line Steamers.—The directors have considered redemption of the 7 per cent. debenture stock at an early date, of which £925,000 was outstanding at the end of 1933. To provide part of the funds it is proposed to issue 500,000 5 1/2 per cent. redeemable first "B" preference shares of £1 each, ranking for dividend *pari passu* with the existing first preference shares, together with £225,000 additional ordinary shares. A capital redemption reserve fund will be established, to which 1 1/2 per cent. of the nominal amount of the redeemable shares in issue will be carried out of the profits available for ordinary dividends. Redemption of the "B" shares will be permissible on various terms to December 31, 1935.

Tai Tak Plantations.—It is proposed to reduce the capital to £145,474, by cancelling 1s. of capital paid up on each of the 2s. shares numbered 239,483 to 1,330,000, and to consolidate the shares into 545,259 ordinary shares of 2s. each. All special rights attaching to the preference shares (including all arrears of dividend) are to be cancelled, and the shares converted into ordinary shares.

FORTHCOMING ISSUES

Bowmaker, Ltd.—It is proposed to increase the capital of the company to £400,000 by the addition of 50,000 6 per cent. preference shares of £1 each and 200,000 ordinary shares of 5s. each. It is proposed immediately to issue 12,500 preference shares of £1 each at 21s. per share, and 50,000 ordinary shares of 5s. each at par. The proceeds of this issue will be used for the purpose of financing a subsidiary company, which has recently been acquired, to be known as Bowmaker Industrial Trust, Ltd. The directors ask that the placing of the new capital be left entirely in their hands under the Articles.

Patent Paper Packing (Foreign), Ltd.—Issue of 360,000 ordinary shares of 5s. each at par. Company acquires rights of invention of similar name in thirty-one States, including France and Germany and British Empire, but including United States. Applications for acquisition of rights have been received from would-be purchasers in twenty-five countries. The anticipated return in cash and shares from disposal of rights is in excess of £150,000, and potential royalty income from American rights is estimated at equivalent to 25 to 40 per cent. on the issued capital. Purchase consideration £120,000, cash £60,000, and 240,000 ordinary shares. Vendors underwrite 240,000 shares free of commission. Issue will be made Tuesday, August 28th.

Stretford Corporation.—Underwriting has been completed for £500,000 of Stretford Corporation (Lancs.) 3 1/2 per cent. stock 1935-65, at par.

NOTE—Shares with a New York quotation or with definite American market are quoted at par. Where stocks are not quoted at par, the market price is given. In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is given. The return on ordinary stocks and shares is calculated by reference to the latest dividend payment, when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividend payment, when the stock stands at a discount and the earliest date when the quotation is above par. Allowance is made for accrued dividends in calculating the yield on "cum div." shares. Dividends, account being taken of any enhancement or reduction of interim dividends.

REPORTS AND NOTICES

MISCELLANEOUS

WM. BEARDMORE AND COMPANY, LTD.—It is officially announced that by arrangement with National Shipbuilders Security, Ltd., Messrs. Wm. Beardmore and Company, Ltd., will cease to build main propelling machinery for ships when their present contracts

at Dalmuir have been completed, towards the end of next year. This arrangement does not in any way affect the other industries which are still to be carried on in the company's establishment at Dalmuir.

BRANDEIS, GOLDSCHMIDT AND COMPANY.—For family reasons it has been decided to convert this business, which has been carried on since 1875 under the style of Brandeis, Goldschmidt and Company into a private limited company retaining the name of Brandeis, Goldschmidt and Company, Ltd. The capital will be £600,000 and the management and conduct of the company will remain the same.

BRAKPAN MINES, LTD. (Incorporated in the Union of South Africa.)—A cablegram has been received from the Head Office in Johannesburg, stating that subject to the approval of the Government, the Board has accepted an offer by The South African Land and Exploration Company, Limited, to purchase 715 claims on the Company's Witpoort Section, for a consideration of 250,000 shares in South African Land and Exploration Company, Limited. The claims are situated to the south-east of a line starting from the north beacon of the South African Land Company's area and drawn at right angles to its north-eastern boundary.

RHODESIAN ANGLO AMERICAN, LIMITED.—It is announced that 83·8 per cent. in value of the outside shareholders in its subsidiary, the Bwana M'Kubwa Copper Mining Company, Ltd., have accepted the offer to purchase their shares for shares in Rhodesian Anglo American, Ltd. The directors are aware of further acceptances in transit from abroad and these will be considered upon arrival.

GROUP UNITS INVESTMENT TRUST, LTD.—The company announces income and rights distribution for half-year ended June 30, 1934, on the following fixed trust certificates: "Deposit Receipts" (First Series), 9·03d.; "Deposit Receipts" (Second Series), 6·97d.; "Rand Certificates", dividend, 5·72d.; and Rights, 1·5d.

BRITISH EMPIRE FIXED TRUST "B" CERTIFICATES.—The first half-yearly distribution will be paid to holders on September 1st at the rate of 2·4283d. per sub-unit, free of tax, in respect of dividends received by the Trust for the half-yearly period ended August 10th.

WILLIAM HOLLIS AND COMPANY, LTD.—Pending the receipt of the recommendations of the Shareholders' Consultative Committee, it is not considered desirable to pay the interim quarterly dividend on the 5 per cent. cumulative preference shares up to June 30, 1934, until the results of the current year have been ascertained.

COMPANY MEETINGS, &c.

INITIAL SERVICES, LIMITED

INCREASED TRADING PROFIT

The sixth ordinary general meeting of the Initial Services, Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, E.C.2., Mr. A. P. Bigelow (chairman and managing director) presiding.

The Chairman, in the course of his speech, said:—The trading profit is approximately £11,000 greater than that of the previous year, being £222,566 os. 9d., against £211,483 ios. 8d. Owing to the lower rates of interest receivable on cash balances and gilt-edged investments, the interest figure shows a reduction of nearly £2,500, so that the profit carried to the balance sheet is £219,792 6s. 3d., as against £210,937 6s. 2d. for the previous year, an increase of nearly £9,000. The only substantial alterations in the balance sheet on the assets side are the increase in "Investments in subsidiary companies" by £90,000, to £255,000, and the reduction of "Amounts due by subsidiary companies" from £30,521 19s. 9d., to £1,630 2s. 5d. The directors decided to increase the capital of your main subsidiary company, Initial Laundry, Limited. This additional capital has enabled us to acquire laundries in centres where we considered it advisable to handle our own work, and where previously it had been contracted out.

We are satisfied that the further funds invested will prove remunerative, and will increase the efficiency of the organisation.

We now come to the profits available for distribution. The balance brought forward from last year was £20,034 12s. 7d., to which must be added the net profit for the year of £219,792 6s. 3d., giving a total of £239,826 18s. 10d. The directors propose to transfer £10,000 to general reserve, increasing that account to £200,000, and to utilise a further sum of £40,000 to write down the item of goodwill from £200,000 to £160,000. The directors recommend that a final dividend be paid on the ordinary shares of 1s. 8d. per share, less tax, payable on October 1st, and we shall have £20,154 3s. 1d. to carry forward, as compared with £20,034 12s. 7d. brought in.

At recent meetings, when dealing with our profits, which for the previous two or three years had remained almost stationary, I explained that our business is one which does not show violent fluctuations in its results, and which responds slowly to either depressed or buoyant conditions of trade.

I hope that if conditions continue to be favourable during the coming year, we shall be able to show even more satisfactory results.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 18, 1934, amounted to £12,908,000, against ordinary expenditure of £8,728,000. After allowing for a decrease in Exchequer Balances of £344,879 the operations for the week, as shown below, decreased the National Debt by £4,525,000 to approximately £8,070 millions.*

SILVER

Although prices have shown very little change during the week, the market has again been very active. Buying for America has been on a large scale, but demand has been offset by China sales. The Indian Bazaars and speculators have supported the market, but both have made some re-sales.

In view of the very large shipments of silver being made from China, there were rumours of the likelihood of an embargo being placed on exports, but it was announced by the Chinese Finance Minister on August 20th that no such action was contemplated.

The market has a steady appearance, as the demand for America is likely to continue, and this, with China selling, form the chief features for the time being.

Large shipments of silver purchased on American account continue to be made to New York.

Quotations during the week :-

COAL

SHEFFIELD.—Rather more interest is being shown in best steams for export, but is confined so far to inquiries. Shipments are limited. There is a scarcity of medium-sized coal. Prices continue firm at 16s. 9d. to 17s. 3d. f.o.b. Owing to approach of the period of higher prices, merchants are giving attention to house coal and many contracts are expected to be placed shortly. Since the quota was lowered, stocks of house coal at the pits have nearly disappeared. Prices of best qualities are round about 20s. per ton at pits. The output of small coal barely meets the consumption of the coke ovens, and when the winter demand for coke for heating purposes sets in the supply may fall short. The iron works are taking a large tonnage. Prices at 18s. to 20s. f.o.b. are regarded as inadequate and efforts to get them up to a higher level are proceeding.

NEWCASTLE-ON-TYNE.—Whilst this is one of the duller periods of the year in the North-East coal trade, it is satisfactory to note that from the Tyne 305,500 tons were shipped last week, an increase of 56,550 tons compared with last year. Screened steam coals are a very strong feature, Northumberland collieries being well sold until the Spring of next year. The Durham market remains quiet, with all the many classes of unscreened gas and coking offering freely at schedule minimum prices.—Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 13s. 9d.; smalls, 11s. 3d.; Howards, Bentinck, Newbiggin screened, 13s. 3d.; smalls, 11s.; Tyne prime large, 13s.; smalls, 11s.; Hartley Main large, 13s.; smalls, 11s. DURHAM—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear special unscreened gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 20s.; Newcastle and district gas coke, 20s. 3d.

GLASGOW.—The varieties of coal recently in demand maintain their strength, and the market in general is fairly satisfactory, the seasonal expansion in business being near at hand. First Fife steams are well booked, and prime splint in Lanarkshire and navigation fuel are none too plentiful. The smaller sizes of nuts command a ready market, but the position of trebles and doubles is irregular, these being freely obtainable in some areas.

Shipment prices (f.o.b. district ports): LANARKSHIRE—Ell best, 13s. 6d.; splint best, 15s.; splint second, 13s. 3d.; navigation, screened, 14s. 6d.–14s. 9d.; navigation, unscreened, 12s. 9d.–13s. 3d.; Hartley, 14s. 6d.; steam, 12s.–12s. 6d.; trebles, 14s.; doubles, 12s. 3d.; singles, 13s.; pearls, 11s. 6d.–12s.; dross, 9s. 9d. FIRE—Best unscreened navigation, 12s. 9d.–13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 6d.–13s. 9d.; third-class steam, 12s.; trebles, 13s. 6d.–15s. 6d.; doubles, 12s. 3d.–12s. 6d.; singles, 12s. 6d.–13s.; pearls, 11s.–11s. 6d. LOTHIAN—Prime steam, 12s.–13s.; secondary steam, 11s. 6d.–11s. 9d.; unscreened navigation, 12s. 6d.; trebles, 14s.–14s. 6d.; doubles, 12s.; singles, 12s. 6d.–13s.; pearls, 11s.–11s. 6d. Ayrshire—Best unscreened navigation, 13s. 9d.; jewel, 14s. 6d.; steam, 11s. 6d.; trebles, 13s. 6d.–14s.; doubles, 13s.; singles, 12s. 9d.; pearls, 11s. 6d.–12s.; dross, 10s.

CARDIFF.—Indications of Autumn improvement are still absent in the Welsh steam coal trade. Since the holidays new business has been developing slowly and in view of the severe price cutting by Poland and Germany in the leading export markets, particularly in Italy, Welsh exporters are finding it difficult to make progress. Hopes are expressed in South Wales, however, that an agreement will shortly be reached between Great Britain and Italy under which an improved outlet will be secured for the coals of this district. Meanwhile all grades of large are excessive and smalls are irregular, but there has been some revival of business in sized coals, the smaller grades of which are scarce. Coke is quieter and briquettes active, while a further fall has taken place in pitwood prices.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. to 18s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; seconds, 12s. 6d. to 13s.; coking smalls, 13s. 6d. 14s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 10s. 6d. to 11s.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 22s. 7½d. (French), 23s. (Portuguese).

IRON AND STEEL

MIDDLESBROUGH.—Owing to local holidays business is practically suspended, there being no iron market this week. There is no reduction, however, in the local production of pig iron, and prices are well maintained. Shipments so far during August show a considerable improvement over last month, the quantity of all kinds of pig iron shipped from the Tees to August 21st being 10,091 tons against 5,819 tons to July 21st. Merchants who have

contracts for pig iron with German buyers are, however, unable to effect shipment owing to the difficulties in arranging payment, but it is noticeable that parcels of pig iron have been sent recently to Italy, Australia, and smaller parcels to other European countries. Most of the steelworks are closed down this week, when opportunity is taken to effect necessary repairs. The coke position remains strong, and for good Durham blast-furnace coke 20s. per ton is obtainable for delivery locally. Foreign ore continues to be based on 17s. per ton for best Bilbao rubio, and it is understood that further business has been done in iron ore for delivery over next year.

SHEFFIELD.—The overseas trade returns for July revealed a very substantial increase in shipments of tools, cutlery, and several other of Sheffield's steel goods. As regards iron and steel and their manufactures, the tonnage exported was less than in June, but well up on July last year. Special alloy steels also make a good showing. Local steel firms report that orders coming in are for reduced quantities compared with the first quarter of the year, when consumers were eager to replenish their depleted stocks, but it is anticipated that work for some time to come will suffice to keep plants running regularly. In certain departments plants are working at full capacity. Firms building railway stock have been almost at a standstill as regards export account for several years, but one or two valuable contracts have lately been booked and better conditions for the trade in the future are assured. A good home demand exists for the better kinds of engineers' small tools.

GLASGOW.—There is more activity in the iron and steel markets this week, the number of enquiries showing a considerable advance and orders placed covering a greater tonnage. At the shipyards there is a good deal of repair work on hand, and while only one small order is reported as having been placed this week, there are a large number of tenders out at present. At the steel plants there is still a large amount of work on hand. Makers of semis also have sufficient work to keep plants fairly well employed and are securing a good share of the requirements of local users. In the sheet trade there is a slightly better export demand, particularly for galvanised sheets, while home trade remains satisfactory. In the tube trade the situation is unchanged. Wagon and carriage builders, machinery makers and many branches of the engineering trade are all busy in this district.

CARDIFF.—Firm conditions continue in the Welsh steel and tin-plate trades. Tinplates are ruling at 18s. to 18s. 3d. per basic box, and new business has been booked with Australia, South America and Russia. In the Far East business is difficult and Japanese competition has extended. Uncertainty prevails over the instructions of the international agreement committee in regard to prices. Sales are permitted for three months, but beyond this the permission of the international committee has to be secured. Welsh bars are quoted at £5 7s. 6d. delivered, while trade in galvanised sheets remains slack.

OTHER METALS

The metal markets have been quiet this week, only tin and silver exhibiting interesting developments. Despite the reduction in the quota, tin prices have declined considerably, for industrial demand is at present small and speculators are inactive. It is difficult to say whether this decline will be more than temporary, since the restrictionists are in a position to maintain prices at their previous levels. A further reduction would therefore indicate a change in official policy, but no news of such a change has so far been reported. That such a revision of prices is necessary, however, is clearly indicated by the remarks made in the discussion before the Foreign Committee of the United States House of Representatives last Tuesday; it was then stated that in the United States—by far the most important tin-consuming country—every effort would be made to find substitutes for tin.

Copper prices further declined to a lower level this week, while dull conditions prevailed in the markets for spelter and lead. The silver market, however, was naturally much affected by the new wave of American purchases and an increase in prices was almost compensated by increased Chinese offerings. There have been rumours of a Chinese silver embargo, but these do not seem to be well founded. The Chinese Government has considered the question but no decision has yet been reached. These heavy offerings would, however, seem likely to lead to sharp deflation in that country, and it is very doubtful whether China could steer clear of an embargo in such an event. Until a prohibition of exports takes place, however, it is unlikely that the price of silver will rise much higher than at present.

TIN.—Sales on the London Metal Exchange: 100 tons on Monday, against 800 tons last week; 175 tons on Tuesday, against 260 tons last week; 225 tons on Wednesday, against 75 tons last week. The New York quotation on Wednesday was 52-00 cents per lb., against 52-35 cents a week ago and 52-40 cents a month ago. Wednesday's official closing quotation in London for standard cash was £226 5s. to £226 10s., compared with £229 15s. to £229 17s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,802 tons, a decrease of 51 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,400 tons on Monday, against 200 tons last week; 1,450 tons on Tuesday, against 925 tons last week; 1,300 tons on Wednesday, against 1,000 tons last week. Domestic spot was quoted at 6-87½ cents per lb. in New York on Wednesday, against 7-07½ cents a week ago and 7-02½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 18s. 9d. to £28, compared with £28 7s. 6d. to £28 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,610 tons,

show an increase of 120 tons, and stocks of rough copper, at 7,142 tons, remain unchanged.

LEAD.—Sales on the London Metal Exchange: 350 tons on Monday, against 250 tons last week; 500 tons on Tuesday, against 300 tons last week; 600 tons on Wednesday, against 150 tons last week. The New York quotation on Wednesday was 3-75 cents per lb., against 3-75 cents a week ago and 3-85 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 15s. for shipment during the current month, compared with £10 17s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 400 tons on Monday, against 150 tons last week; 200 tons on Tuesday, against 350 tons last week; 150 tons on Wednesday, against 150 tons last week. Wednesday's quotation in East St. Louis was 4-25 cents per lb., against 4-30 cents the week before, and 4-30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 15s. for shipment during the current month, against £13 13s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 7s. 6d. to £11 12s. 6d. per flask of 76 lbs. Foreign antimony was quoted at £36 to £36 10s. per ton, as against £36 15s. to £37 10s. per ton last week. Chinese wolfram was quoted at 40s. to 41s. per unit, c.i.f., as against 39s. to 41s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—MANCHESTER.—There have been no important developments in the Lancashire cotton industry. The fluctuations in raw cotton prices have been disconcerting, while cloth buyers have not been prepared to place orders of weight. India has provided a fair demand but the turnover has been disappointing. There has been rather more business, however, for South America and certain smaller outlets. Scattered sales have been reported in home trade fabrics, but spinners have had another unsatisfactory week. Stocks are increasing in first hands and order lists are becoming lighter. A restricted turnover has been done in Egyptian yarns and at the time of writing no agreement has been reached with regard to outstanding German debts, although there is a possibility of an early settlement.

COTTON PRICES

JUTE.—Dundee.—Prices of all commodities in the jute trade are being well maintained. There is a tendency in the up-country markets in India to withhold supplies pending the outcome of plans for the restriction of the cultivation of raw jute, while there is also reported to be a big "bear" account to cover the new crop in Calcutta. The quality of the fibre this season, and especially of white jute, is said to be poor and jute of good colour will be difficult to obtain. Demand on the whole is very quiet and users of the raw material are in no haste to purchase, having large stocks carried forward from previous seasons. The value of Daisce-2/3 is still round about £14 10s. per ton for both old and new crop, and fours are offered at £13 10s. for old and £14 for new, while Tossa-2/3 is quoted at £14 17s. 6d. for old and £15 5s. for new, and fours at £14 2s. 6d. and £14 7s. 6d. respectively. First Marks are more or less nominal at £17 and good Lightnings are mentioned at from £15 17s. 6d. to £16 2s. 6d., with Hearts at £14 12s. 6d. for Balchand to £15 2s. 6d. for Ram and SCC, August–September.

Jute yarns are very quiet and only trifling lots are being bought. Spinners, however, are fairly comfortably situated and nothing less than 1s. 8½d. would be accepted for common 8 lb. cops and 1s. 9½d. for 8 lb. spools, though buyers are attempting to purchase at ½d. less. The rates demanded by spinners are insufficient to meet the cost of production. Twist is steady at from 3½d. to 3½d. for 3 ply 8 lb., and sacking yarns are occasionally in request at from 2½d. for 24 lb. weft and 3d. for 8 lb. chains. Rove remains unchanged and quiet at £17 for 48 lb. and £14 for 200 lb., while carpet yarns meet a slow trade.

Manufacturers have recently transacted very good business in the narrow widths of jute cloth and are adhering firmly to their prices of 2½d. for 10½ oz. 40 in. and 1½d. to 2d. for 8 oz., though the market is again quieter at the moment. The wide widths have not been in much demand and orders for these would be welcomed at 2½d. for 10½ oz. The narrow widths were largely purchased by the home trade in view of the fact that prices of Calcutta goods have been higher than those of Dundee goods. Heavy goods and linoleum hessians are in little demand. Calcutta has ruled fairly strong for both hessians and heavy goods and a good business has been done at that centre, raising prices to 20s. 1d. for 10 oz. 40 in. and 15s. 9d. for 8 oz., August–September, and

19s. 9d. and 15s. 8d. for October–December, with Liverpool twills and "B" twills ruling at 50s. 9d. and 45s. respectively, August–December.

GRAIN MARKETS

WHEAT.—Lower prices have been quoted on the main export markets this week, due in some measure to the somewhat better estimates of crops in the United States and Canada, and to rains in Argentina and Australia. European buyers have reduced their demands, while holders of futures have sought to realise and to secure what profits they could, thus accentuating the downward movement. In Chicago, however, September futures ruled rather higher than a week ago. According to Mr G. Broomhall, total shipments during the past week were 1,333,000 quarters, against 1,463,000 quarters in the preceding week. On Wednesday, "September" futures were quoted in Chicago at 104½ cents per bushel, against 101½ cents the week before and 98 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 35s. per 496 lbs., against 35s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s. 6d., against 34s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 30s. 3d. to 31s. 3d., against 31s. 6d. a week ago.

FLOUR.—North American shipments were 109,000 sacks in the past week, as compared with 119,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 27s. 6d. per 280 lbs., against 28s. 6d. last week; delivered London, 26s. 6d., as compared with 27s. 6d. a week ago. Manitoba patents, ex store, 25s. 9d. to 27s. 9d., against 26s. to 27s.; Australian, ex store, 20s. to 21s., against 20s. to 21s.

BARLEY.—The demand for imported feeding barley is expanding and the market has been firm, with higher prices quoted. Trading in English barley, however, still continues slow. "October" futures were 60½ cents per bushel in Winnipeg on Wednesday, against 55½ cents last week and 47½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 48 lb. lbs., 35s. to 50s., against 35s. to 50s. a week before.

OATS.—Chicago quotations for futures are higher on the week although prices in London have weakened somewhat. On Wednesday, "September" futures were quoted at 50½ cents per bushel in Chicago, against 49½ cents a week ago, and 44½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. per 320 lbs., against 22s. 6d. a week ago; "Chilean White," landed, 23s., against 24s. a week earlier.

MAIZE.—Trading in Plate maize has shown some reduction this week and Danubian supplies have increased. London quotations show slight reductions compared with a week ago. "September" futures were quoted on Wednesday at 76½ cents per bushel in Chicago, against 75½ cents a week ago and 64½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 26s. per 480 lbs., compared with 26s. 3d. last week; "Plate," ex ship, 25s., as against 25s. 3d. "Plate," August, 25s., as against 25s. 3d. Yellow maize meal, ex wharf, was quoted £6 17s. 6d. to £7 per ton, against £7 to £7 5s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930–31 to 1933–34:—

	1930–1931	1931–1932	1932–1933	1933–1934
Estimated sales of home-grown wheat—				
1 week to August 21	Cwts. 24,780	Cwts. 28,233	Cwts. 283,433	Cwts. 71,825
51 weeks to August 21	4,953,219	3,837,752	3,837,919	6,589,056
Average price of English wheat per cwt.	s. d. 6 4	s. d. 6 7	s. d. 5 4	s. d. 5 1

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 11, 1934	Cwts. 85,463	Cwts. 3,305	Cwts. 16,502	s. d. 5 0	s. d. 8 2	s. d. 6 7
Aug. 21, 1934	71,825	21,556	23,715	5 1	10 6	6 7
Aug. 16, 1930	62,816	4,818	11,133	8 5	6 8	6 5
Aug. 15, 1931	25,624	1,866	6,427	6 6	7 6	6 5
Aug. 20, 1932	26,233	3,518	7,667	6 7	6 6	7 6
Aug. 19, 1933	263,433	21,384	33,138	5 4	10 4	5 4

THE ENDOWMENT BONUS POLICY

Combines the advantages of

WHOLE LIFE and ENDOWMENT ASSURANCE

Issued by the

NATIONAL PROVIDENT INSTITUTION

48 GRACECHURCH STREET, LONDON, E.C.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Aug. 23, 1933	Jan. 3, 1934	Aug. 15, 1934	Aug. 22, 1934
Winnipeg (No. 1 Manitoba)	82½	46½	70½	65½	87½	84½
Chicago (No. 2 Winter)	55½	46½	88½	84½	101½	104½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 99,501,000 bushels, shows a decrease of 2,172,000 bushels. Supplies a year ago stood at 100,031,000 bushels.

OTHER FOODS

SUGAR.—Spot quotations have been easier this week, and futures have declined under liquidation by trade and producing interests and on selling in the new crop months, owing to more liberal offerings on the spot market. The spot price of raw sugar in New York on Wednesday was 3.24 cents per lb., as compared with 3.27 cents per lb. last week and 3.20 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 5s. 4½d., against 4s. 8d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London	2,073	3,750	1,577	1,320	32,906	174,745
Liverpool	10,794	...	15,086	13,075	154,786	132,080
Total tons	12,867	3,750	16,663	14,395	187,692	306,825
Last week	12,930	10,318	9,655	7,574	191,488	172,315

COFFEE.—Spot quotations in America have been fairly steady this week, but have declined a little. In New York on Wednesday, Rio No. 7 (cash) was quoted at 9 cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. Trade in London has been quiet at slightly reduced rates. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 15 bags; exported, 40 bags; stocks, 28,358 bags, against 28,130 bags a year ago. Central American, landed, 1,325 packages; delivered, for home consumption, 1,720 packages; exported, 613 packages; stocks, 102,194 packages, against 94,399 packages last year. Other kinds: landed, 390 packages; delivered, for home consumption, 2,011 packages; exported, 1,393 packages; stocks, 97,712 packages, against 85,393 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "August-September," was 20s. 3d. per 50 kilos, c.i.f. Continent, as against 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 1,202 bags; delivered, for home consumption, 3,534 bags; exported, 1,187 bags; stocks, 245,998 bags, against 168,791 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 43,840 packages of Indian and 28,501 packages of Ceylon tea. A fairly active general demand has been experienced and the better qualities have been firm in price; quotations for inferior grades have, however, shown some reduction this week. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Aug. 17, 1933	11-30	11-50	14-89	9-36	8-33	10-40	12-25
July 12, 1934	13-02	12-74	12-93	10-79	10-61	12-36	12-57
July 19, " "	12-80	12-31	12-76	10-67	10-41	11-84	12-38
July 26, " "	12-71	12-20	12-82	10-75	10-29	12-06	12-31
Aug. 1, " "	13-29	12-49	12-99	(a)	(a)	12-00	12-94
Aug. 16, " "	13-59	12-23	12-90	10-28	9-89	11-58	12-78

(a) No sales.

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 3d. per cwt. a week ago, while the forward quotation, at 8s. 4½d. per cwt., shows a rise of 5d. on the week. Movements in London during the past week were as follows: landed, 104 tons; delivered, 111 tons; stocks, 2,061 tons, against 6,046 tons a year ago.

POTATOES.—A steady demand has been experienced for the liberal supplies on offer, but prices have shown little change on the week. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. 6d. to 7s. 6d. per cwt., as compared with 6s. 6d. to 8s. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5½d. per lb. on Wednesday, against 5d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 11 tons; stocks, 202 tons, against 312 tons a year ago. White, landed, 93 tons; delivered, 24 tons; stocks, 6,395 tons, against 920 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hind quarters, was 4s. 2d. to 4s. 6d. per 8 lbs., as compared with 4s. 6d. to 5s. last week. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 6d. to 4s. a week ago. According to the Smithfield official market report, supplies during last week amounted to 8,137 tons, against 8,328 tons in the corresponding week last year. Imported beef, principally Argentine, formed 55.2 per cent. of the beef supplies, against 86.5 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 78.5 per cent. of the total supply of mutton and lamb, against 74.5 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Quieter conditions again rule, and in certain directions there has been some reaction in prices from recent high levels. Trade in linseed is very slow, and so far as this country is concerned is almost negligible. Plate is hardly in demand at all, and for Indian there are very few buyers. Shipments from Argentina are not so heavy, and the quantity of linseed afloat for Europe is rather less at 104,800 tons (including 24,600 tons from India) and for the United States and Canada 26,000 tons. Although the anticipated yield in North America is disappointing, good news of the crop in Argentina continues. South America has still around 383,000 tons for export and 143,000 tons is expected from India, the total being only 35,000 tons less than that actually shipped in the remainder of last year. This is considered ample to supply world needs until the new Plate seed is ready. Current quotations for old Plate are £11 2s. 6d. per ton, and new for January-February shipment £10 12s. 6d., and Calcutta £12 7s. 6d. Cottonseed is easier and old Egyptian has dropped back to £5 2s. 6d., while £5 5s. is required for the new seed, October loading.

Demand for vegetable oils is only poor. Linseed oil is steady but inactive, and raw oil for August and September-December delivery quoted around £21 per ton naked ex Hull mill. Cotton oil is neglected. Egyptian crude ex Hull is offered at £14, and refined at £16, without attracting buyers. Oilcakes are in improved demand dearer.

RUBBER.—The market has shown no new features this week, and price fluctuations have been confined within narrow limits. Buying has been on a restricted scale, but offerings from the East have been light, so that prices are a trifle higher than a week ago. According to the statistics of the Malayan Information Agency, total stocks of rubber in the Straits Settlements at the end of July amounted to 76,417 tons, a reduction of almost 6,000 tons on the month. In New York, Wednesday's spot price for rubber, at 15½ cents per lb., compared with 15½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 107,397 tons, show an increase of 161 tons as compared with the preceding week.

TIMBER.—For this holiday month, spot trading in European and Canadian deals, battens and boards has been comparatively good, but imports of softwoods during July were 28.5 per cent. above those of July, 1933, and as much as 47.6 per cent. in advance of those for the corresponding month of 1932. Nevertheless, stocks here are not too heavy, and there are signs this month of a decline in the volume of importations. It must also be remembered that, whilst the Russian shipments for the U.K. this full year are to be about the same as those in 1933, to the end of last month 556,600 loads (of 50 cubic feet) had already come to hand, whereas for January-July last year only 73,970 loads were received from Russia. Canada's exports to the U.K. this year have risen to 602,977 loads, against only 213,043 loads in the corresponding period last year, and it is questionable whether that rate of increase can be maintained. It would appear, therefore, that whereas the weight of imports in 1933 fell in the last five months of the year, this year it is falling on the first seven months.

Spot prices have been firm for the higher-class goods and steady for the inferior grades. Shippers' prices for the latter have shown occasional weaknesses, but might recover should imports decline and the better spot consumption be maintained. Industries are consuming more timber this year, although the building industry had an unemployment roll of 17.2 per cent. in July. Imports of hardwoods are larger this year, but they are going steadily into consumption. Teak and mahogany from Empire countries are in better demand, while more Canadian and American hardwoods are coming forward. The plywood trade is also receiving larger imports this year and business is active.

HIDES AND LEATHER.—It is not yet possible to say that there has been any definite improvement in the markets for hides, leather and leather goods since the holidays, although the more frequent enquiry in some directions tends to show that consumers of leather, particularly boot and shoe manufacturers, are taking stock of their autumn requirements. But buyers of footwear are loth to enter into commitments for bulk quantities, so that the majority of purchases are confined to sample parcels for the making of further specimens wherewith to tempt purchasers. The inactive demand for leather is reflected in the market for raw hides and skins. In view of the conditions mentioned above, tanners are not inclined to enter into negotiations for large quantities; consequently, the market is dull with prices for both home and foreign goods tending lower.

At the auctions for domestic hides held this week, ox and heifers were unchanged to from ½d. to ½d. per lb. lower in price for both clear and warbled descriptions, while cows and bulls were ½d. per lb.

cheaper all round. The calfskin market was fairly steady at Manchester, but at the Leeds auctions reductions of from ½d. to ½d. per lb. were registered. Although there has been little change in quotations for imported hides, no large amount of business has been negotiated, and the position of the market is weak. B.A. frigorific ox, at 3½d. per lb., are ½d. per lb. cheaper, and a slightly easier tendency is noticeable also in the case of dry hides from the same origin. African hides are all unchanged in price except for unbathed Adis Abebas, which at 4½d. per lb. are ½d. per lb. lower. The market for Australians also is weaker, wetsalted Queensland meats at from 3½d. to 4½d. registering a decline of ½d. per lb., while

dry salted show a slightly larger reduction. The limited number of sales made in connection with sole leather have been confined chiefly to medium and heavy weight English and wetsalted bends and light weight dry hide types. Other descriptions of bends have ruled quiet, as has also the market for offal with the exception of pinned bellies, for which there was a fair call. Producers and distributors of upper stock have made only small sales, mainly in connection with calf and glacé kid, and to a lesser degree patent and reptile leathers. The demand for cheap types of suede and split leather has fallen to very small dimensions, and there is no great activity amongst producers of carried upper stock.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

1884 — 1934

*The First Financial Daily Newspaper***THE FINANCIAL NEWS**

is not only the oldest, but the best, daily financial newspaper in the world. Its treatment of Stock Exchange and Investment matters, the Money Market and the Exchanges, is distinguished for its independence and objectivity. In "Lex" and "Midas" it has two of the shrewdest and most knowledgeable Stock Exchange writers of the day. Its daily column "Lombard Street" is followed by bankers and foreign exchange experts with greater attention than any other feature in daily journalism dealing with money and exchanges.

THE FINANCIAL NEWS

is obtainable from all good newsagents throughout the Country—Twopence Daily

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription **8s. 2d.**

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

FEARS IN THE WAY

ALARMS and excursions in Austria and Yugoslavia; "ancestral voices prophesying war" in Italy; an exasperated Note from Russia to Japan, inviting Japan to "make the necessary inferences"; the French Government's decision to build its last line of fortresses on the Eastern frontier with all speed; a big jump in the new American naval estimates—here is pretty week-end reading for the peaceful citizens of the world. While most of them are holiday-making, the Ministries of War and of Foreign Affairs take no respite; and the world wags on, but hardly towards peace.

Nor can the publication in Geneva this week of the League of Nations' tenth *Armaments Year-Book* reassure those who are concerned to seek peace and ensue it. The exigencies of national defence in a world which is hag-ridden by fears of war have led the seven Great Powers—France, Germany, Italy, Japan, Russia, the United States and this country—considerably to increase their appropriations for armaments. For the majority, this tendency was already evident in their 1933-34 budgets; and it is markedly so in the 1934-35 estimates of all seven of them. Moreover, the dictates of fear and distrust have become so cogent that Budgets have been mortgaged for years ahead. In France, Italy, Japan, and in this country, the defence estimates for the current year are being increased by expenditure on supplementary defence programmes starting this year and extending from three to five years.

Thus, over and above the ordinary Budget appropriations for defence, and despite a still uncovered budgetary deficit, France has her "Frontier Defence Organisation," started in 1931, out of which about 2,000 million francs still remain to be spent; and she makes further expenditure of a military character under the special Treasury Account, called *Outillage National*, of December, 1931. In Italy, Signor Mussolini announced at the end of May that an additional 2,000 million lire (£33 millions) would be shared equally by the Navy and Air Force between 1934 and 1940 inclusive; and this despite a deficit in 1933-34 of 4,000 million lire and a prospective deficit this year of about 3,000 million lire. In Japan, the 1933-34 Budget deficit had to be covered by an internal loan; but the new naval, military and air programmes for

1935 will raise the defence estimates, for the fifth year in succession, to an unprecedented level; and here, too, the increase in the "extraordinary" defence Budgets and in "special accounts" is most marked. In Germany, the 1934 estimates for the Reichswehr were increased by a third, those for the Air Ministry (covering all air transport as well as "the organisation of protection against air attacks") were increased by one-half, while the total defence appropriations show an increase over 1933-34 of more than one-third, and constitute one-sixth of the total Budget. The Russian defence estimates for 1934 show a 15 per cent. increase to the record Soviet level of 1,800 million roubles. In this country, the 1934-35 defence estimates were £4,765,000 more than last year's; those for all three services were increased; and over and above this there is, for this and the next four years, the new Air Force programme, at an estimated total cost of £20 millions, which was announced by Mr Baldwin on July 19th.

What is doubly disquieting is the steady relative increase in the real cost of national armaments. This emerges from a comparison of the actual defence expenditure of nearly all countries in the last three or four years with the downward trend of wholesale prices in those countries. When wholesale prices became comparatively stable in the "off-gold" countries after 1931, increased expenditure on armaments carried the process on; while increased expenditure in the countries still on gold represents a much greater relative burden on their tax-paying citizens. Thus, the citizens of the world are bearing upon their backs a steadily increasing burden of armaments. The economic activity of the nations is being increasingly diverted to that most uneconomic and unproductive of all activity—the piling up of capital, in the form of armaments, against the eventual and complete destruction not only of that capital itself, but also of the human labour which, in a saner world, would have been its counterpart in increasing the world's material well-being.

We are, in fact, back in the international anarchy of "the Great Illusion"—every nation the armed guardian of its receding security. This is, without doubt, the world's reaction to the deadlock in the combined endeavours of all the nations to achieve a comprehensive

system of collective security which could admit of a real measure of disarmament. Must we, then, resign ourselves to the writing-off of all hopes of "disarmament with security"? Within a fortnight the League Council will be meeting at Geneva in an international atmosphere of insipid gloom. What has been done since the Disarmament Conference split up into four special Committees in June? What are the prospects that something may be salvaged from the wreckage of great international hopes, to allay the equally great fears and obsessions of the nations to-day?

The four special Committees charged in June with the resolution of the deadlock were on (I) regional security agreements, (II) supervision and guarantees of execution of a Disarmament Convention, (III) air armaments, and (IV) manufacture of, and trade in, arms. Of these, the first reported on June 25th, having adopted the Model Treaty of Mutual Assistance of 1928 as the basis for security agreements, and having provided for definition of the aggressor. But its report waits upon the outcome of the protracted negotiations for the "Eastern Locarno" pact. The Committee on guarantees of execution has only forwarded a statement of possible solutions to the President of the Conference. The Committee on manufacture of, and trade in, arms has approved a draft text on inspection and supervision, providing that States should enact measures to ensure, "in the strictest manner," inspection, supervision and control of the manufacture of, and trade in, arms.

But the Air Committee, whose work would have been of cardinal importance as holding out hope of an international air armaments convention, has done nothing. Truly, the times were hardly opportune. But Germany's demands of April 16th for immediate re-armament in the air were moderate. The reported readiness of the British Government to waive their reservation on air-bombing if a comprehensive air convention could be secured, which ruled out bombing and provided for combined action against any State which practised it, was surely a basis for action. And France had made far-reaching proposals, extending even to the internationalisation of civil and military air forces. It is hard, therefore, to see why nothing has been done on a crucial matter which is likely to affect more closely than anything else the lives of the world's peaceable citizens.

Thus, the immediate prospects of an international agreement on the limitation of armaments—to say nothing of disarmament itself—are not encouraging. Mutually distrustful nations are striving to outdo each other in an armaments race in which the richest forge ahead, but stand to lose most. Any initiative from Geneva is frustrated by two great perplexities: the last-minute uncertainty of Russia's entry into the League, and the absence of Germany from the deliberations of the nations upon the peace of the world. If nothing is done, and done soon, to remove these two lowering uncertainties from the international horizon, the peoples of the world can hardly escape the storm.

ALIGNMENT IN AMERICA

THE lines of political battle are being drawn up in the United States in preparation for the November elections. The date of the election is laid down in the Constitution, and the formal machinery of nomination has already been set in motion. The whole House of Representatives and one-third of the Senate are to be chosen, as well as 300,000 legislators, officials, judges and minor office-holders in the forty-eight States. The President himself is not affected, but the European observer may be forgiven for supposing that his policies will be the only issue of the election.

The European observer would, nevertheless, be mistaken. National politics are rarely the deciding factor in American elections, and except when there is a President to elect, the electors give far more attention to local matters. The New Deal is, of course, an important issue, and this year's election will perhaps approximate more closely to the European conception of a verdict on national policies than most "mid-term" Congressional elections.

But even so the resemblance will not be close. If the conflict were a straight fight between Democrats and Republicans it would still be difficult to interpret the result. American parties are not held together by their adherence to one set of policies or by their opposition to another. The Republican Party is at present in Opposition; but that does not necessarily mean that it is opposed to the President's policies or to anything about the present Administration except that it is Democratic. The Republican Governor of Pennsylvania is one of Mr Roosevelt's firmest supporters, while the Democratic Governor of Nebraska is one of his most vociferous critics. It is generally expected that the Democrats will lose between thirty and forty seats in the House of Representatives, but this does not imply that Congressional support of the New Deal will be any weaker in the next Congress than in the last.

Mr Roosevelt has himself contributed to the confusion. Some of his most loyal supporters in Congress have been nominal Republicans. In Europe these men would be expected to change their party and become Democrats, but such changes are almost unknown in the United States. Indeed, some of the President's best supporters are being opposed by candidates of the President's own party. The most interesting case is in Wisconsin, where Senator La Follette is up for re-election, while his brother is a candidate for the State Governorship, both being opposed by "regular" Democrats. Mr Roosevelt, speaking in Wisconsin on his way back from the Pacific, blessed both sides impartially, cursing only the third, or "regular" Republican, angle of the triangle. In California there is an even more remarkable situation, for Senator Hiram Johnson, hitherto a Republican, has secured nomination as candidate of the Republican, Democratic, Progressive and Commonwealth Parties, with the President's support on all four counts.

Cross-currents such as these are unusual, but they do not wholly explain the difficulty of extracting a clear issue from the confused campaign. In many States one party is normally dominant, and nomination by the dominant party is virtually equivalent to election. This, and the fact that since there is no agreement within each party on policy there is equally little agreement on who should represent the party in office, mean that the fiercest fights are waged within the parties. The primary elections, in which the parties select their candidates, are regulated by law and conducted by public officials. These primary elections are now taking place throughout the country, and the results should be a better guide than the ultimate election in November to the popularity of the President's policies, for here, if anywhere, the fight is between New Dealers and Old Dealers. Unfortunately, even in the "primaries," local squabbles cannot always be separated from national issues. In the Nebraska Democratic Senatorial "primary," for example, Mr Charles Bryan, the present Governor of the State, brother of William Jennings Bryan and an opponent of the New Deal, was badly defeated by a New Dealer. But the New Dealer happened to be the candidate of the Democratic "boss" of the State, and his victory may demonstrate little more than the strength of the "machine" in the city of Omaha. In Ohio, the candidate supported by Mr Roosevelt was beaten, but the winner owed his success to his activities as a road-builder during a previous term as Governor of the State, and not to any opposition to the New Deal.

For these reasons it will be impossible in November to judge the President's popularity by the Democratic majority in Congress. It has been obvious for some time that he is trying to broaden the basis of his political support, and he probably has many millions of followers who will vote Republican in November. At the outset of his Administration he made a bid for the adherence of the Republican Progressives—the remnant of President Theodore Roosevelt's "Bull Moose" Party—by appointing two of his Cabinet, Secretaries Ickes and Wallace, from their ranks; and his present support of Senators La Follette and Johnson is another step in the same direction. He has also consistently courted organised Labour, hitherto inclined to be Republican, and there are signs that this particular alliance is being further cemented. Whether the President will go so far as to organise a new Party is doubtful, at least so long as he can keep control

of the Democratic machine. But it has become clear in the last few weeks that in gaining the Progressives and the unions he is losing some Democrats. A group of conservative Democrats, together with some Republicans, have founded a body to which they have given the name of the Liberty League. Though its declared objects are platitudinous and above reproach, being confined to support of the Constitution and of freedom of enterprise, it is generally recognised as intended to lead the opposition to the New Deal. Among its sponsors are, on the Democratic side, ex-Governors Alfred E. Smith and John W. Davis, Democratic candidates for the Presidency in 1928 and 1932 respectively, and, on the Republican side, ex-Governor Miller of New York and Mr J. W. Wadsworth. Mr Wadsworth is a former Senator and now a member of the House of Representatives whose name is frequently mentioned as a candidate for the Governorship of New York this year and for the Presidency in 1936. It is doubtful whether the Liberty League will carry very much weight; its leaders are known to be personally antagonistic to the President; they are too closely allied to "Wall Street"; and they have failed to secure the support of such conservative Democrats as Senators Glass and Tydings. But its formation is undoubtedly a portent of more opposition to come.

In this confusion of party politics the President stands out as the dominating figure in the national life. There is not, either in Congress or elsewhere, any other public figure who attracts nearly as much popular interest or popular acclaim. His personal popularity is still immense. Even in the drought regions he was received as a public hero, and a population which was superstitious enough to believe that the drought was Divine retribution for the restriction of crops has not failed to draw its own conclusions from the fact that wherever he went he brought rain. There is also little doubt that a majority of the nation accepts his policies. An interesting test of opinion has recently been made by the *Literary Digest*, whose "straw votes" have predicted the results of past elections with remarkable accuracy. In the present poll 1½ million persons were asked to say whether they approved "on the whole the acts and policies of Roosevelt's first year." The affirmative vote amounted to just over 60 per cent. of the total. Each voter was also asked to state for whom he voted in 1932, and the changes in voting provide even more interesting material than the final percentage. The President has gained in the West and in the North-East. In the South he appears to have lost heavily, but this is of little importance, as Democratic strength in that region is overwhelming. In the Middle West he is losing ground. Seven of these States—Ohio, Indiana, Illinois, Iowa, South Dakota, Nebraska and Kansas—voted for him by narrow margins in 1932, and in five out of the seven he appears to have lost supporters in the ensuing two years.

In fact, the Middle West is likely once more to become the battleground of political ideals. It is a region which cannot be swayed by political bribes, for its interests are varied and conflicting. Farmer and industrialist, capital and labour, Democrat and Republican, are all fairly evenly balanced. This is the region which more than any other broke President Wilson's "New Freedom," and it is here that President Roosevelt's New Deal will win or lose its fight for survival—but not until 1936.

FURS COME TO LONDON

THE first British "National Fur Week" begins on September 24th of this year. During that week "the importance of England as the centre of the world's fur industry" will be advertised to the public in a multitude of ways. England, which means in this instance London, has always played an important part in the industry, but it was not until quite recently that it obtained world pre-eminence.

Apart from New York, which has always been of importance in the fur trade, firstly as a market for American products (mainly raccoon, opossum, silver foxes, skunks, mink, musquash, otter and beaver), and secondly as the focal point of the important internal American demand, the

three large international trading centres which have grown up during the past century are London, Leipzig and Paris. London owes its position mainly to the importance of British territories, Canada and Australia, as producers of the raw materials of the industry. (Canada delivers chiefly silver foxes, red foxes, mink, musquash, beaver, raccoon, skunks, otter and lynx; while Australia specialises in rabbit, opossum, ringtail foxes, and wallaby.)

"The Company of Adventurers of England trading into Hudson's Bay"—its dignified title—which was founded in 1670, held its first public sale of beaver skins in London in 1672. The sales of this company have gained steadily in importance, so that to-day they constitute one of the most significant events for the international fur trade. London's position as an auction centre was further developed during the first half of last century, when the Hudsons Bay Company was joined by C. M. Lampson and Company in 1830 and by Frederick Huth and Company in 1911; and it has naturally been strengthened by the importance of London as a financing centre. Paris and Leipzig developed for different reasons. The large fur business in Paris is due to her position as the leading fashion centre of the world; while Leipzig's position as the meeting place of the great mediæval highways across Europe gave her a peculiarly favourable situation as a place of exchange. The reason Leipzig was able to maintain her position as leading fur trading centre even after the shifting of the trade routes by the invention of steamers and railways, and indeed right down to a year or so ago, was that a very efficient finishing industry (dressing and dyeing) had developed there during the nineteenth century. The peculiar characteristics of the various centres are largely determined by these historical facts. London is mainly a market for raw furs; Leipzig takes the skins and in most cases treats them before selling; while Paris buys finished skins and makes them up.

The following tables show the development of British and German trade in dressed and undressed furs:—

FOREIGN TRADE IN UNDRESSED FURS				
(Germany in million marks; United Kingdom in million £)				
	Imports		Exports	
	Germany	U.K.	Germany	U.K.
1913	124.6	4.6	54.4	3.6
1925	122.4	9.2	32.0	9.1
1929	252.4	10.6	114.5	9.0
1930	173.2	7.2	68.7	7.0
1931	134.9	5.4	55.2	6.7
1932	86.1	6.5	26.9	5.6
1933	69.1	7.5	28.2	5.9

FOREIGN TRADE IN DRESSED FURS				
(Germany in million marks; United Kingdom in million £)				
	Imports		Exports	
	Germany	U.K.	Germany	U.K.
1913	66.0	1.6	183.2	1.0
1925	35.3	3.4	126.0	2.0
1929	78.4	5.9	253.4	2.1
1930	64.1	4.3	204.3	1.5
1931	52.1	5.8	148.6	1.2
1932	34.2	2.0	79.5	0.9
1933	26.5	1.4	62.3	1.1

Until the war Leipzig's position as the international fur centre was unchallenged. No fur-dressing concerns of note existed outside the Leipzig district. Almost every skin had therefore to pass through Leipzig at least once. But during the war Germany was a closed market, and several countries set up their own finishing industries. In the United States and Italy, in particular, a large number of concerns grew up behind high tariff walls. During the post-war period this movement was extended, and now almost all countries with any considerable market for furs have set up fur-dressing factories. Although this industry requires experience, so that no country has yet attained Leipzig's standard of quality, tariffs are so high in some of the most important consuming countries (notably Poland) that no dressed furs can enter. On the other hand, a few of the newly-developed dressing concerns already enjoy some export trade. Exports of dressed furs from the U.S.S.R. (which is only surpassed by Canada and the United States as a fur-producing region) have expanded enormously, although they only started in 1929. This is not altogether surprising, since Russia sometimes sells the dressed furs cheaper than the raw furs, and her products are continually improving in quality.

In the long run, the development of dressing industries in all important consuming countries would have put Leipzig in the shade. And this was only postponed during the first post-war decade by a complete change in methods of fur production. Until quite recently furs were secured by hunting and trapping. In some parts hunting had reached such dimensions that whole species (e.g. the chinchilla and the Russian sable) had been exterminated. It became, therefore, imperative to restrict hunting in certain regions, with the result that the supply of furs was reduced. It was this reduction which stimulated the breeding of animals on farms and the rearing of domestic animals (lambs, foals, cats and calves, etc.) for skins and furs. Fur farms were already being run on an economic basis in the 'nineties, but the rearing of domestic animals, except Persian lambs, for their skins only began during the present century and has only attained large proportions since the war. This development has, in fact, only been made possible by the great advance in the art of dyeing and dressing, particularly in Germany, and has in return to some extent counteracted the damage done to Leipzig by the erection in so many countries of competing industries.

In 1930 it seemed that the position of New York and Paris would not alter very much in the long run. On the other hand, it was fairly certain that London would play a more and more important part, while Leipzig was expected gradually to retire into the background. Political and economic events in Germany during the past few years have precipitated this decline. The German credit crisis and the introduction of exchange restrictions hit the fur trade particularly hard. Already by 1931 a steady emigration of the leading fur dealers from Leipzig had set in. This increased enormously with the coming of the Nazis, partly because the greater part of the fur business is carried on by Jews or other non-Germans. These emigrants mostly went to London, Paris, Warsaw and Cracow, and while Leipzig's position as a fur centre thus deteriorated, London's position correspondingly improved, with the result that London is now the chief fur trading centre. In the last two years alone rather more than 30 fur firms have moved their headquarters from Leipzig to London, thus raising the number of establishments here by 15 per cent. And the actual transfer of business has been even greater, for since the beginning of the Nazi regime firms which had representatives in London have been gradually transacting an increasing proportion of their business through these representatives. Moreover, it is almost certain that Leipzig will not recover the large volume of direct Russian trade which was formerly transacted there. After the war a large part of the Russian trade came to London, but with the Arcos dispute it returned to Leipzig; and from 1927 the great Russian auctions were held in that town. But the tide is already turning again, and it is certain that in the near future London will once more become the main centre even for Russian fur trade.

Another factor has been at work recently to increase London's influence as an international fur centre. The earliest fur farms were started in Canada in 1874; and

the culture of furs has been most highly developed in that Dominion. But it was not until after the war that the supply of furs from farms showed any substantial increase, as shown in the following table:—

NUMBER OF PELTS SOLD FROM CANADIAN FUR FARMS		
	Total	Of which Silver Foxes
1921	4,997	3,922
1925	12,468	8,988
1929	38,311	26,867
1930	77,657	60,326
1931	133,248	95,851
1932	135,718	98,677

Source: Dominion Bureau of Statistics. Reports on Fur Farms of Canada. Ottawa, 1934.

Production is expanding rapidly, for the breeding of animals for furs is a paying proposition, giving an average profit of about 100 per cent. At the same time, the quality of the silver fox pelts is very high, and with increasing production the price has been driven down, so that new levels of demand are now tapped. A silver fox, which before the war would have cost about £300 and a few years ago could still not be bought for much less than £100 to £150, can now be had for £15 to £35. By far the greater proportion of the Canadian farm production and also large quantities of silver fox from the other chief fur-farming countries (U.S.A., which produces nearly as much silver fox as Canada, and Norway, whose output is about one-third of that of Canada) go through London. Russia may be expected in the near future to put considerable quantities of silver fox on to the market, and, judging by the present tendency of her exports, she is likely to choose London as her market. This indicates a further extension of London's activities as a trading centre for farm produced furs, for which she is already predominant, as shown by the following figures of auctions:—

OFFERINGS AT LONDON SILVER FOX AUCTIONS			
	Hudson's Bay	Lampson	Huth
1928	9,852	9,175	23,540
1929	11,207	13,780	35,186
1930	15,749	21,000	55,175
1931	24,092	38,585	42,040
1932	47,481	63,445	51,802
1933	63,367	35,940	34,238
1934 (to date).....	39,364	36,000	54,035

While London's position is likely to be improved by the extension of production on farms, that of Leipzig will probably be adversely affected, because these farm products, and in particular silver foxes, do not need dyeing. So that no great loss of quality is risked by having the furs dressed elsewhere than in Leipzig. It would seem that the position of London as the greatest fur trading centre is now so well established that even a radical change in political or economic tendencies in Germany could hardly challenge it.

THE GERMAN STEEL TRUST—II

AFTER 1926, companies like Phoenix and Gelsenkirchen owned no longer any iron-making or steel-producing plant. In fact, the four companies forming the Stahlverein were nothing more than four giant safes containing in the main so many millions of Vereinigte Stahlwerke shares. They continued under their own management, paying individual dividends. This was by no means satisfactory; it was nothing but an interim stage, during which final amalgamation of all these plants could be worked out. Clearly there were too many producing plants in the Trust, too many plants turning out the same products under different conditions. The efforts of those directing the Stahlverein, therefore, were concentrated on developing only those plants which could produce at the lowest costs and have the most ready access to foreign sources and markets. As to the other plants, most of them were scrapped, which meant heavy writing-down of assets. When the merger was made, each participating party claimed compensation in shares of the Trust up to the full value of what it brought into the Trust; so that the process of elimination was bound permanently to destroy a good deal of those values which, though "real" in the individual plants, became redundant and fictitious in the Trust.

By developing the most efficient plants in the new merger, the pre-existing plants were greatly reduced. For instance, when the Steel Trust was formed, it had 48 coal pits in operation. By 1934 these were reduced to 25. As to the iron and steel plants, they were reduced from 145 to 66. The number of blast-furnace systems by drastic rationalisation decreased from 23 to 9; of open-hearth steel works from 20 to 8; of rolling mills from 17 to 10; of tube factories from 8 to 3, and of wire-making plants from 9 to 4.

When the German State in 1932 purchased the majority holding in the Trust, complete reconstruction was inevitable, and the task was handed over to Herr von Flotow, formerly a departmental chief in the Prussian Ministry of Commerce and now managing director of a private banking firm. Herr von Flotow, in collaboration with the Ministries of Finance and Commerce and the leading managers of the Steel Trust, evolved a reconstruction scheme. The Hitler Government, early in 1933, confirmed Herr von Flotow's authority; and the plan was adopted and made definite by the overwhelming majority of the shareholders in Vereinigte Stahlwerke and carried out down to its minutest details. The plan seems complicated at first glance, for certain familiar names have been taken from the entities which they have designated for generations, and applied to new ones.

The main object of the reconstruction scheme was to do away with almost all the former holding companies composing the old Stahlverein, by merging them into one single company. Briefly, one of the big safes filled with Vereinigte Stahlwerke shares was made to contain all the other safes filled with those shares. The holding company controlling the largest number of Vereinigte Stahlwerke shares was the Gelsenkirchener Bergwerks A.G. Its capital was increased from Rm. 263 millions to Rm. 644 millions; Gelsenkirchener shares were exchanged for Phoenix, and so on. Rm. 48 millions of these shares were created to secure the old Gelsenkirchener notes. Later on, after redemption of these notes, this number of shares will be cancelled. The proportions of these share-exchanges varied from company to company and were based on a very accurate and complicated estimate of what the gold value of the shares was, taking each constituent company's holdings of Stahlverein shares as a basis.

Thus almost all the holding companies have disappeared. There is only one central holding company—Gelsenkirchen. Moreover, the share capital of the companies forming the Stahlverein, which had been nominally Rm. 1,232 millions, was by the new process reduced to Rm. 536.5 millions—that is a reduction of Rm. 700 millions, a sum considerably larger than the present share capital of the holding company. As a rule, nominal capital is increased in a merger. In this particular case it has been decreased by an enormous sum. The water has been squeezed out to a degree scarcely attained in a going concern in normal times. If a Gelsenkirchener share be taken as 100 an old Stahlverein share would work out at 60, a Phoenix share at 80.5, and a Van der Zypen share at 126. The capital of the Stahlverein, which was first reduced in 1931 from Rm. 800 millions to Rm. 774 millions, has been further reduced to Rm. 560 millions.

As to organisation, it was decided to divide the property of the new Stahlverein into groups of individual companies. Each individual company could then concentrate on what it was naturally adapted to produce. All the coal mines actually needed for the iron and steel works have been concentrated in one section, "mining," which has its seat in Essen. The capital of this mining company will in the future be Rm. 450 millions—Rm. 255 millions in shares, Rm. 195 millions in bonded debt. A limited company, called the Rohstoffbetriebe der Vereinigten Stahlwerke G.m.b.H., comprises all the iron-ore properties and other raw materials. Then there is August Thyssen-Hütte A.G., in Hamborn, which is to be the centre of a group comprising all iron and steel plants in the region of the Rhine. Around Thyssen's plant will be the same group, Hütte Ruhrort Meiderich, Niederrheinische Hütte, Hütte Vulkan, and the blast-furnaces of the Hüttenbetriebe Meiderich. This group will be able to produce four million tons of steel a year. (In the years 1927 and 1928 this production was actually achieved.) The share capital will be Rm. 200 millions, that is to say, capacity to produce one ton of steel

will take about 50 marks in capital. This is an extremely low capitalisation, for even in the last years of an acute crisis this group of works, running at no more than one-third of capacity, was able to earn its fixed charges and the sums needed for depreciation.

The next group is Dortmund-Hörder Hüttenverein A.G., a limited company with a capacity of two million tons of steel, and the Bochumer Verein, specialising in high quality steel with a capacity of 1.2 million tons. After that comes the Deutsche Röhren-Werke A.G., Düsseldorf, comprising a number of tube-producing plants; the Hüttenwerke Siegerland A.G., in Siegen, and the Westphälische Union A.G. für Eisen-und Drahtindustrie, in Hann., comprising all the wire-making factories. All these three groups are the principal customers of the steel-producing plants mentioned above. A further group is Deutsche Eisenwerke A.G., in Mülheim. The whole, rather unwieldy mass of Steel Trust Works has been organised into independent companies, controlling coal, iron ore, the big steel-making plants, and the plants for producing tubes, wires, and sheet-iron. Each of these groups will be an independent shareholding company, owning its own plants and having to carry a proportion of the mortgage debt originally incurred by the Steel Trust property. The aggregate share capital of all these individual companies is to be about Rm. 584 millions, while Rm. 418 millions will be the approximate bonded debt. It should be noted that in giving the bonded debt as Rm. 418 millions the dollar is taken as Rm. 4.20. If the dollar were taken at its quotation to-day, Rm. 2.55, the bonded debt would be considerably reduced.

The Vereinigte Stahlwerke, soon after its foundation, incurred a bonded debt of Rm. 523.6 millions—the state of its indebtedness on September 30, 1927. For this bonded debt special mortgages were secured on fixed assets valued (in the opinion of the directorate) at \$538 millions. Negotiations have since been started to rearrange this mortgage debt so that it could be split up, and each of the new shareholding companies allotted a proportionate share of the general debt of the old Stahlverein. These negotiations have so far been unsuccessful, and, therefore, the official and legal establishment of the new companies, according to the Government plan outlined, has not been carried out, but there is hope that, within reasonable time, this difficulty will be overcome, and that, while fully securing the rights of bondholders, the division of the former Stahlverein's mortgage debt into tranches among the new participating companies can be accomplished.

To make the picture complete we have to consider one aspect of the matter which has proved confusing to casual observers. We have seen that the original Gelsenkirchen company, by increasing its capital from Rm. 263 millions to Rm. 644 millions, acquired the shares of the other holding companies, so that, in reality, Gelsenkirchen is the only big holding company left. But now the plan takes away from the *new* Gelsenkirchen the name of "Gelsenkirchen," and calls Gelsenkirchen "Vereinigte Stahlwerke A.G. in Düsseldorf." Moreover, the time-honoured name of

"Gelsenkirchener Bergwerks A.G." under the present scheme is given to a new coal-mining group established in Fssen to control the coal mines which remain under the new trust. An equally new combine, comprising all that has to do with bridge-building, is called the "Dortmunder Union Brückenbau A.G." to secure the prestige of the name of "Dortmunder Union."

In conclusion, we have to deal with a most important aspect of this reconstruction, which is raised by the general tendencies of the National-Socialist Government of Germany. A German Government, possessing a clear majority of the shareholding capital, and, therefore, absolute control of the Steel Trust, ordered the reconstruction of the Trust. But when the official scheme sees the light of day it is discovered that, owing to the squeezing out of a vast amount of water, the shareholding of the Government has dwindled from 52 per cent. to less than 25 per cent. Now, under the German law of limited companies the holder of a minority of 25 per cent. or less has no privilege at all. He is treated exactly like any ordinary shareholder, while anybody holding more than 25 per cent. enjoys certain privileges. A minority of more than one-quarter of the total of the shares is called a *Sperr-Minorität*, as it can successfully oppose measures proposed by the majority. It seemed eminently desirable for the Reich that it should at least retain a protected minority. The reconstruction of the Stahlverein and the transfer of all these valuable properties to new companies would have cost a lot of money in taxes. An arrangement was therefore made between the Steel Trust and the German Government whereby, instead of paying for these taxes in cash, the Steel Trust handed over to the Government an amount in shares sufficient to cover all the taxes, allowing the Government at the same time to increase its shareholding to a little more than 25 per cent., so that it could become a privileged minority. If any proof be needed that Herr Hitler's Government does not dream of completely controlling German national industries, the reconstruction of the second largest joint-stock company in Germany (the largest is the Chemical Dye Trust, I.G. Farben Industrie A.G.) should be conclusive proof of the wisdom shown by the present Government in transforming its strong majority holding into a minority of one-quarter.

RETAIL DICTATORS

(BY A CORRESPONDENT)

IF Lord Nuffield were to announce to-morrow that, as a result of economies and improvements effected in his organisation, he was able to reduce the price of his Morris cars by 20 per cent., the statement would be received with general acclamation. "Great triumph of British engineering!" "Boon to the motoring public!" would be the inevitable headlines. But if Mr Selfridge at the same time announced that as a result of economies and improvements effected in his great retail organisation he was able to reduce all prices, especially those of proprietary articles, by 20 per cent., a first-class row would ensue. Why, it may be asked, should it be praiseworthy for Lord Nuffield to pass on a reduction in costs to the public in the form of lower prices and blameworthy for Mr Selfridge to do the same thing? Does anyone (except, perhaps, a Government perpetrating an arbitrary and illogical De-rating scheme) see any fundamental difference between the economic services rendered by a manufacturer and those by a retailer? Would Lord Nuffield allow the suppliers of his raw materials to insist that his selling price should represent a definite percentage on the value of the incorporated materials? Is not a motor car emerging from a factory the raw material on which a distributor works?

These reflections are provoked by a study of the manifesto just issued by the Society of Motor Manufacturers and Traders which contains the usual denunciation of price-cutting and outlines the measures which the industry intends to take in order to check the supposed evil. The industry, we are informed, has long been troubled by the activities of those on the fringe of the trade who have been indulging in a practice of price-cutting and unfair trading

which is obviously detrimental to the interests of the buying public and of the manufacturer.

In what way is it detrimental to the interests of the public to obtain something at a lower price? In what way is it detrimental to the manufacturer? The history of the motor industry is a stock example of the increase in consumption which follows a reduction in price—a text-book illustration of elasticity of demand. Why should the manufacturers worry if they obtain larger orders at their factory price? The Society does not explain this, but doubtless it genuinely believes that the whole industry would be thrown into confusion if manufacturers confined themselves to the results of their own operations and left individual distributors to do the same. If the final price were not strictly regulated from the manufacturers' end a savage war of price-cutting would ensue and develop to the stage when it was worth no one's while to sell cars; production would cease and the public would have to go back to horse cabs. So we are told on every occasion of this kind. It is really time that this hoary argument was buried. It is amazing that it should persist in face of the obvious fact that innumerable commodities continue to be supplied to the public without any regulation of final price by the producers at the early stages. No one has attempted to regulate the final price at which a cup of tea is sold. There is no list of authorised dealers in cups of tea. Anyone can open a shop or stall and dispense tea at any price he chooses. He can give cups of tea away if he likes. These cups of tea are sold up and down the country at any price from ½d. at a stall to a shilling in a luxurious hotel. Has the tea industry collapsed as a result of this "chaos"? Is it on the point of collapsing? Has there been a progressive deterioration in the quality of cups of tea supplied to the public? On the contrary, more tea is consumed per head than ever before, and the British public takes good care that its quality is up to the desired mark. The consuming public does not allow the tea growers to decide in what circumstances and environment it shall purchase its cup of tea. It is able to enforce satisfaction of its tastes and suppliers are sensible enough to conform.

But the Society of Motor Manufacturers and Traders is concerned because some of the public is willing to purchase cars from traders who have neither premises with suitable accommodation for cars, nor repair and service facilities, but whose function in the trade is often confined to the supplying of petrol and oils. Such traders, therefore, evade the "overhead expenses of properly qualified dealers." What, one may ask with exasperation, has this to do with the manufacturers? What are the overhead expenses of one trader to do with another trader? As well complain that all suppliers of cups of tea do not provide Louis XV surroundings, an orchestra and a mannequin parade.

What the Society is attempting to apply is the vicious principle of compulsory joint supply. If you buy a car you must buy as well extraneous products such as elaborate showrooms, suave attendance, after-service and facilities. But if a member of the public purchases a car in less pretentious surroundings and without guarantees of after-service he presumably is satisfied to dispense with these trimmings in return for a saving in the purchase price, just as he is free to choose between the amenities of the luxury store and the more austere service of the chain shop; or whether he will see the same play from the gallery or the stalls. To the argument that the more humble establishments will perpetrate abuses on the public which will discredit the industry there is the simple reply that the public does not need the dry-nursing of the manufacturers nor of other traders. It can, or will learn to, look after itself just as it does in most of its shopping when the onus is thrown upon it. Those members of it who want guarantees will pay for them voluntarily.

Moreover, the capacity to undercut may come not from the humbler establishments but from the skilful ones which are able to attract custom and justifiably prefer the greater aggregate profits which come from a larger turnover at a reduced margin of profit. A single member of the public buying a dozen cars at once would expect a discount from the trader; so should the public in general if it swells the turnover of a particular dealer.

Nor is it the concern of anyone but the trader himself how much profit he makes on a transaction or what value he sets upon his services. Again, if Lord Nuffield announced that in future he would only draw from the business remuneration at the rate of £4 per week this would be hailed as a noble act of self-abnegation and opponents of private enterprise in particular would hold him up as an example to other *entrepreneurs*. There would be no talk of unfair competition with other motor magnates with greater overhead expenses for country houses and yachts, and no suggestion that a firm of chartered accountants should

assess the real value of Lord Nuffield's service to be incorporated in the price of every Morris car.

It is to be feared that not only do such devices as discriminating discounts, blacklisting, officially assessed second-hand values prove futile, but *contrary* to the belief of the proponents they are detrimental both to the manufacturers and the buying public. Retail price maintenance is but one more example of those rigidities which are largely responsible for the present level of unemployment in so many Western countries.

NOTES OF THE WEEK

Silence in London.—Mr Hore-Belisha, our brave new Minister of Transport, is to be heartily congratulated on his order prohibiting the use of motor-horns in Central London at night. A marked mitigation of noise has been noticeable in the first week of the experiment. It is only extraordinary that no attempt to diminish London's nocturnal uproar has been made before. Compared with Paris, no doubt, London can hardly be called noisy; and, compared with Rome, it is almost as silent as the grave. But that is not to deny for a moment that in many districts within five miles of Charing Cross sleep is rapidly becoming a luxury to the healthy as well as to the sick. The injury done by noise in the last few years to the health and efficiency of the population of Central London must certainly have been enormous. Mr Hore-Belisha's selection of the motor-horn as the first point of attack is probably wise on the whole, since hooting is admittedly one of the worst of London's noises, and the experience of Paris has shown that prohibition need not lead to any increase in accidents. Experience in London, however, will have to establish the same thing before the new prohibition is finally justified. Obviously a sudden transition from a system in which it may be a legal offence *not* to sound one's horn to one in which it is an offence to sound it must give rise to some anxiety—and there may even be moments of emergency when motorists will be compelled to break the law in order to save life. It must also be remembered that motor-horns are by no means the one outstanding form of nocturnal noise in London as they are in Paris and Rome, where horns with an appallingly high note unknown in England are still in general use. In London there are plenty of other forms of gratuitous noise which Mr Hore-Belisha might investigate. There are clocks, for instance, which still chime and strike all night and interrupt the would-be sleeper's rest with an intermittent, irrelevant and peculiarly exasperating insistence on the flight of time. And motor-bicycles, notoriously and unquestionably, make a din far more hideous than all other noises put together—sharp, sudden, raucous and deafening. The survival of this species of noise is particularly indefensible, since no technical or legislative obstacle exists to the effective silencing of motor-bicycles. If Mr Hore-Belisha could really silence motor-bicycles too he would assuredly deserve well of the community.

A Turning Point in India.—The Central Legislature of India met on Wednesday to hear the Viceroy's review of the political and economic situation in India. After summarising the Indo-Japanese and Indo-Lancashire trade negotiations, Lord Willingdon stated that the Government of India "attached the highest importance to the creation of closer ties between the industrialists of India and the United Kingdom." He then passed to the improvement in factory conditions, in the social services and in agriculture, and foreshadowed the time when broadcasting services all over India would give the provinces the opportunity to express "their own culture in their own literary languages, with the added element of English programme matter." By far the most auspicious part of his address was that concerned with the suspension by the Congress Party of civil disobedience, and with that Party's entry into the constitutional fold. Since the Working Committee of the Congress Party agreed with Mr

Gandhi that he alone should exercise and be responsible for any civil disobedience, the Congress Party as a whole, though not without some internal dissensions, is committed to the attainment of Swaraj by constitutional paths through the Legislatures. The Viceroy stated that, owing to connections which still subsisted between terrorists and revolutionary organisations, as well as to "cowardly attacks on persons wholly unconnected with the Government, with the object of obtaining funds to keep the [Bengal terrorist] movement alive," the Government was retaining the special powers given to it by the Legislatures to combat outrages. But Lord Willingdon was certainly justified in saying: "The curtain has fallen, I hope finally, on the civil disobedience movement. That happy result I do not attribute so much to Government action as to the sturdy good sense of the mass of India's people." And a tribute to that sturdy good sense followed in the timely Government recognition that "legislation and police action could not by themselves eradicate this hideous evil" of terrorism. The Viceroy's general impression from his visit to England that "my countrymen are full of goodwill and sympathy for the natural aspirations of Indians in regard to political advance" had its counterpart in a tribute to the work of the Parliamentary Committee and in his promise that he would not permit any time to be lost in fulfilling the intentions of the new Government of India Act. This is a welcome, if indirect, assurance that the British Government's attitude on India has not been swayed by the Diehard campaign. The address, and the enthusiastic reception accorded to it, are evidences of a real turning-point in the Indian situation. If the Governments of this country and of India can convince Indians of their goodwill, in practical terms, it should be easy for all three parties, in Lord Willingdon's phrase, to "believe in each other's sincerity of purpose to continue working towards the fulfilment of our cherished hopes for the welfare and advancement of this country."

* * *

Signor Mussolini on War.—On August 24th, after the close of the Italian army manoeuvres, Signor Mussolini made a speech at Bologna to a gathering of Italian generals and foreign military attachés. This speech was not confined to military technicalities. It contained the following passages:—

Nobody in present-day Europe deliberately seeks war; . . . none the less, war is a possibility and may break out unexpectedly from one minute to the next. In Europe, at the end of July, there arose, unforeseen and dramatically, a situation recalling in a particular manner 1914. It may be added that, if we had not as a precautionary step promptly sent divisions to our eastern and northern frontiers, there would have been a danger of those complications arising which, at a given moment, are not to be solved except by armed intervention. . . . It is therefore necessary to be prepared for war not to-morrow, but to-day. We are becoming—and shall become so increasingly because this is our desire—a military nation. A militaristic nation, I will add. . . . To complete the picture, warlike. . . . War has been described as the court of appeal between nations. . . . Nothing has yet been discovered which can take the place of that which is the clearest, most tangible and most decisive expression of the strength of an entire people—that is to say, the size, the prestige, the power of its arms on land, on the sea, and in the air.

This is perhaps the most bellicose of all the bellicose declarations Signor Mussolini has made, and it compels comment. In the first place, Signor Mussolini claims that he has just averted a war by a show of force which may be taken to indicate that he does not himself intend to play the part of an aggressor. In the second place, the warning was addressed to the German or the Yugoslav, and not the French, military attaché in his audience—as is shown by the Duce's remark, in another part of the speech, that the *terrain* on which the foregoing manoeuvres had been held was remarkable for its resemblance to the *terrain* on Italy's eastern frontier. In the third place, all the passages above quoted were originally "released" only for publication abroad, and were not at first allowed to appear in the Italian Press. In consequence of the sensation abroad which the foreign edition of the speech has produced, the full text has now been published at Rome. But the original differentiation between the home and foreign versions represents the Italian Government's intentions, and the difference is illuminating. In itself, of course, the differential editing of the home and foreign versions of the same speech is an old Mussolinian device; but it is noteworthy that hitherto the home version has always been bellicose while the foreign version has been pacific. This time, the usual practice has been reversed. Does this mean that Signor Mussolini intended to give a serious warning to Germany and Yugoslavia without generating a corresponding wave of chauvinism in Italy? If so, we may perhaps conclude that, while Signor Mussolini regards the European situation as grave, he is still working—and hoping—for peace. *Si vis pacem, para bellum*, in fact. It is a pertinent comment on the prospects of collective action to maintain peace that the Duce should have been driven to such a dubious policy.

* * *

—And Herr Hitler on the Saar.—Last Sunday's giant demonstration at Ehrenbreitstein in token of National-Socialist Germany's "loyalty to the Saar" was a mass display of the familiar Nazi type. It remains to be seen what impression the 150,000 Saarlanders who participated took back with them. Will they have caught the infection of Nazi mass-enthusiasm-to-order, as the *Führer* so amiably takes for granted? Or will they have been more impressed by the disagreeableness of regimentation, the fatigue of parading through the livelong day, and the significant "absence" of Herr von Papen, whose mouth was officially reported to have been closed by an injury to his foot, though he was sighted, apparently alive and well, by a number of spectators? There were symptoms of embarrassment in Herr Hitler's speech, which, incidentally, lasted for no longer than thirty minutes, instead of the customary ninety. The most remarkable feature of the speech was an omission. The speaker did not give the Saarlander Catholics, who form the vast majority in the Saar, any assurance that, if they voted themselves back under the Government of the Reich, they would find conditions in Nazi Germany any more tolerable after January next than they are to-day for Catholics. Herr Hitler contented himself with a declaration that the Nazis had "made a clean cut between politics and religion" and that the National-Socialist State protected religion "if religion is not exploited for political purposes." As for the Saarlanders who belong to the non-Nazi German political parties, which now survive in the Saargebiet alone, they were simply told that, if they voted themselves into the Nazis' power, they could count upon "reconciliation without regard to former [*sic*] party membership": i.e. the non-Nazi parties will be abolished in the Saar as they have already been abolished in the Reich, but Saarlanders will not be penalised for having remained true to their previous party loyalties. Herr Hitler also showed an anxiety to soothe the Saarlanders' fears that reunion with the Reich may hit them hard economically by depriving them, without compensation, of their present French market. But Herr Hitler's greatest embarrassment was the difficulty, in the same breath, of telling the French that he meant to be a good neighbour and telling his own followers that

they must continue to struggle heroically against a world of enemies. To the French Herr Hitler repeated that, if the Saar returns to Germany in January, the last possible source of conflict between Germany and France will have been removed. In saying this, he is, we believe, sincere. But how can he harmonise this policy of friendliness towards France with the necessity of telling Germany that her fast approaching economic crisis is due to the machinations of a world of foreign enemies? Dilemma seems to be the nemesis of dictatorship.

* * *

The Fanö Conference.—Fundamental questions concerning the relations between religion and politics are being raised, at a timely moment and in a salutary way, in a joint conference of three international Christian organisations which is being held in Denmark, on the Island of Fanö. The three bodies are the Universal Christian Council for Life and Work, the Management Committee of the World Alliance for Promoting International Friendship through the Churches, and the Youth Conference; and the delegates are reported to include, among them, the nationals of seventeen countries. The issue before the Conference is the ultimate duty of a Christian who finds himself the citizen of a "totalitarian" state; and this is, of course, already a burning question in Germany. The situation in Germany to-day may be reproduced in other countries to-morrow; and it is therefore not unnatural that, at Fanö, the Third Reich should be in the centre of interest. To begin with, the Christians of Germany are represented at Fanö exclusively by "the German Christians"—which is not at all the same thing. Reichsbishop Müller has his representative there in the person of Dr. Heckel; but there are no representatives of the German Evangelical Pastors' Emergency Committee, nor of the dissenters' Confessional Synod. It is reported that the German Ministry of Foreign Affairs would have liked to see the Pastors represented at Fanö, as being an independent-minded and at the same time law-abiding element in German public opinion which is particularly well qualified for maintaining intellectual and moral contact between the Third Reich and world opinion. The Wilhelmstrasse, however, has been weakened by the death of President Hindenburg; and it was only able to authorise the Pastors to send a delegation subject to Bishop Müller's approval—which was, of course, withheld. So Dr. Heckel has the field to himself, but is not, apparently, finding it easy to plough. The public discussions at the Conference have revealed a general sense that, in the present struggle in Germany over the status of the Evangelical Church, the existence of Christianity is at stake; and the German situation has been taken explicitly as the touchstone of the world situation. The Youth Conference has put on record the opinion that, while it is a Christian's duty to be a good citizen, the Christian can only be true to his faith by putting first his duty to his Church if the State denies him freedom of religious expression; and that in such a situation he ought to receive the support of all Christians throughout the world. Is this one of those ripples that signify the turn of the tide of authoritarianism?

* * *

Japan, Russia and the World.—While Russian concessions have whittled down to a moderate figure the once formidable gulf between the Russian and Japanese valuations of the Russian interest in the Chinese Eastern Railway, the tension arising from the controversy has been increasing instead of diminishing. The Soviet Government has addressed to Japan a strongly worded note of protest against the arrest, on August 13th and 14th, in Manchurian territory, of nineteen Soviet citizens who are employees of the C.E.R. The note roundly denies the Japanese allegation that these Russian employees have been committing or inspiring acts of sabotage or fomenting banditry; and calls for satisfactory measures by Japan. If these are not forthcoming, Russia expects Japan to "draw the necessary inferences." The Japanese Foreign Office maintains its accusations, and—to show that the charge has not simply been trumped up as an excuse for applying pressure to Russia since the breakdown, last month, of the railway

transfer negotiations—it declares that the misdemeanours began as early as May. At Moscow, there seems to be a fresh wave of uneasiness in regard to Japanese intentions. Indeed, the fear of an imminent Japanese attack upon the territories of the Soviet Union is perhaps livelier, at this moment, than at any time since the strengthening of Russia's international position through her *rapprochements* with the United States and France. And the strange solidarity of Germany and Poland in opposition to the Franco-Russian proposals for an "Eastern Locarno" has increased Russia's fears of being beset, in some not too distant future, on both her European and Asiatic frontiers at one and the same moment. At the same time, it seems unlikely that the Japanese, who are particularly susceptible to Arctic rigours, are proposing to choose autumn as their season for making war upon their Russian neighbours. Nor, surely, would they wish to have so grave an embarrassment on their hands at a moment when they are on the point of entering into delicate preliminary conversations in preparation for next year's Naval Conference. It is reported this week that, if she cannot achieve parity with U.S.A. and this country, Japan will propose a naval disarmament programme which will ensure, very soon, her *de facto* parity. This will involve extremely delicate negotiations with both the United States and the British Commonwealth. Even the Generals and Admirals of Japan will surely shrink from quarrelling with the whole world at once; and we therefore hope that the Russians' fears are exaggerated. At the same time, we can neither feel surprise that they are entertained, nor doubt that they are entertained sincerely.

* * *

Results of N.R.A.—An official estimate of the first year's working of the National Recovery Administration has been issued at Washington over the signature of Mr Donald R. Richberg, who is both General Counsel of the N.R.A. and also Director of the National Emergency Council. Mr Richberg's report details the record of America's recovery. Employment has risen from 36,060,000 in March, 1933, and 37,860,000 in June, 1933 (immediately before the advent of N.R.A.) to 40,180,000 in June, 1934. The total of weekly wages rose by 34.5 per cent. between June, 1933, and June, 1934, while the average weekly income of the workers in work increased by 8.5 per cent. The cost of living, meanwhile, rose by 9.6 per cent., so that the standard of living of the workers in work was slightly reduced. In the same period both profits and production increased, so that an increase in Labour's share of the national income from 58.3 per cent. to 62.5 per cent. did not necessitate any absolute reduction in the incomes of other sections of the community. Mr. Richberg is, of course, unable to establish that these impressive facts are due to N.R.A., but he declares that the "coincidence of business improvement with N.R.A. codification and the obvious direct effects of N.R.A. in preventing destructive price cutting, in stabilising business operations, in improving total purchasing power by providing increased employment without reduction of compensation, and in increase of prices from loss levels to profit levels, demonstrate the dominant influence of N.R.A. in this industrial advance." But the demonstration is really not very convincing. It is true that N.R.A. "has succeeded in greatly spreading work without the individual worker suffering any material loss in real wages." But another way of saying the same thing would be that N.R.A. has made sure that recovery shall be used in increasing the total of men employed, so as to lift the burden from the relief funds—i.e. ultimately the taxpayer—at the cost of keeping down the average real wage to its 1933 level, which was 30 per cent. below the 1929 level. Furthermore, to establish that an increase in employment has followed N.R.A. is not to prove cause and effect. Many other causes were working in the same direction—threats of inflation, the depreciation of the dollar, heavy public expenditures and the return of banking confidence. The increase in employment has not been strikingly greater in the United States than in Great Britain; from the worst month to June, 1934, the increase was 11.4 per cent. in

Labour Troubles in the U.S.A.—In spite of the official apology, the N.R.A. is, for the moment, nobody's friend. A dispute has arisen within the ranks of the Administration over General Johnson's leadership. The opposition, led by Mr Richberg and Miss Perkins, the Secretary of Labour, wished to subordinate General Johnson to a Board of Directors in order to make N.R.A. less complaisant to cartel-forming Capital and more encouraging to union-forming Labour. General Johnson appears to have won the struggle to keep his position, but possibly only at the cost of conceding the point of principle. It is not unlikely that N.R.A. will now once more become what it was in the beginning, the ally of the Labour Unions. Disputes over the famous Section 7 (a) of the National Recovery Act still continue with increasing bitterness, and a strike involving the whole cotton textile industry will break out over the week-end unless a last minute intervention by the President is successful. Section 7 (a) reads as follows:—

Every code of fair competition . . . shall contain the following conditions: (1) That employees shall have the right to organise and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labour, or their agents, in the designation of such representatives or in self-organisation or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection; (2) that no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organising, or assisting a labour organisation of his own choosing; and (3) that employers shall comply with the maximum hours of labour, minimum rates of pay, and other conditions of employment, approved or prescribed by the President.

It will be noticed that this does not ban the company union; it merely prevents employers from forcing their workers into company unions. The American Federation of Labour has hitherto been very weak in American industry. In the cotton textile industry, for example, it had in 1929, on its own showing, only about 6 per cent. of the workers. Nevertheless it is now claiming not only to be accepted as a representative of the workers, but as the exclusive representative, a claim which the employers resist. Anyone familiar with European conditions can hardly avoid taking the view that the labour union will eventually oust the company union, but there is no justification for the view that the National Industrial Recovery Act gave such a substitution the force of law. The N.R.A. cannot do more than adopt an attitude of neutrality benevolent to labour—but the neutrality angers the unions as much as the benevolence infuriates the employers.

* * *

A Strike Threat in South Wales.—Once again we are reminded of the low wages and precarious economic conditions obtaining in the coal industry. A serious dispute over

wages has broken out in South Wales. A delegate conference of the South Wales Miners' Federation has decided to tender on September 1st one month's notice to terminate the existing wage agreement with the coal-owners. According to the official report of the Miners' Federation, the accuracy of which has not apparently been questioned by the owners, the history of the dispute is as follows. Wages in the South Wales and Monmouth coalfields were reduced in March, 1931, by an award of Mr Schiller, chairman of the Conciliation Board. This award was to remain in force until January, 1934, after which either side might give one month's notice to terminate it. There was a meeting in January this year between owners and men, but no settlement was reached. The men then suggested the reference of the dispute to the Coal Mines National Industrial Board; the owners refused. The men next proposed the appointment by the Ministry of Labour of an arbitration board consisting of persons experienced in industrial disputes. This offer was also declined by the owners. The workers' representatives then referred the dispute to the Industrial Board, but the owners refused to submit their view to the Board to assist it in making its report. The Board subsequently reported in favour of a restoration of the wage cuts made in March 1931. On the issue of the report the men asked for a joint meeting with the owners, but the latter refused to consider the question before September 18th. The Miners' Federation thereupon decided to tender notices on September 1st to terminate the existing agreement. It is no doubt true that as long as surplus capacity and uneconomic working prevail in the coal industry, and as long as international trade is depressed, there is little room for increases in wages. But the owners hardly seem to have acted in this case in a way likely to range public opinion on their side. A full month still remains in which to avert the disastrous folly of a strike. The Minister of Mines should certainly see to it that three weeks of that month are not wasted in obstinate inaction.

* * *

Dearer Milk.—The Milk Marketing Board and the distributors have managed to come to an agreement on milk prices for the twelve months beginning on October 1st next without recourse to the "appointed persons" whose award aroused such indignation among farmers in the spring. The prices fixed vary from 1s. 5d. a gallon in winter to 1s. in summer. The chief change is that the low-price summer season is to be two months shorter, and the consumer will thus have to pay the winter price for eight months of the year. The distributors have further induced the Board to guarantee their margins by fixing minimum retail prices. Thus the milk industry is still perpetrating its paradox of raising prices in the face of an increasing supply. It is true that the rise is a very small one, and that it will probably not reduce the demand for liquid milk, but the only way to encourage that increase in milk-drinking which alone will put the dairy industry on a sound footing is to make milk cheaper to the consumer. To raise the price to the farmer, who is already over-producing, and to guarantee distributors' existing generous margins is hardly the right way to go about it. There is something wrong about a system which enables two vested interests to fix their prices, and to clothe their decisions with legal force, without there being, at any stage of the price-fixing process, any consideration of the public interest. The Grigg Commission, it will be remembered, recommended that the three "appointed persons" should have a veto on any price-fixing agreements which they considered contrary to the public interest. The dairy industry may yet regret that it rejected this part of the report.

* * *

British Wheat Finances.—The British Wheat Fund figures for the cereal year ended July 31st last were published too late to permit of comment in last week's *Economist*. In the cereal year just ended, the Minister of Agriculture has laid down 4s. 7.63d. per cwt. as the "ascertained average ['free'] price" at the farm of home-grown millable wheat obtained by registered growers

in 1933-34, as against 5s. 4.46d. in 1932-33. The difference between 4s. 7.63d. and the standard price of 10s. per cwt. is 5s. 4.37d.; and, other things being equal, this amount would have been paid from the Fund—less a charge of 0.52d. per cwt. in 1933-34 for administrative expenses, against 0.68d. in 1932-33—as "deficiency payment." Since the Wheat Act entered into operation in May, 1932, however, acreage and production of British wheat have expanded by about 33½ and 50 per cent., respectively. The Act fixed the maximum home production eligible for "deficiency payments" at 27 million cwt. until 1935; but the quantity certified as sold in 1933-34 is 29.57 million cwt., against only 20.4 millions in 1932-33. Registered growers will, therefore, only receive 91.308 per cent. of 5s. 3.85d. per cwt.—namely 4s. 10.3d. per cwt. of their certified sales, against 4s. 6.86d. in 1932-33. It is noteworthy that the Commission estimated the total net supply of all flour for the country in 1933-34 at 83.6 million cwt., whereas the actual figure is about 84.9 millions. The levy on this total quantity has been raised so as to provide £7,180,000 (at an average levy of 4s. 2½d. per 280-lb. sack), against £4,774,208 for the 14 months of 1932-33, when home production was so much smaller. The increase in the Fund by more than 50 per cent. in a year has been necessitated by the almost parallel increase in British wheat production; and the levy on each sack of flour milled or imported was therefore raised to increase the Fund sufficiently to enable it to meet claims for "deficiency payments" on a vastly greater home production of wheat. The Minister of Agriculture may feel satisfied at so speedy a jump in home wheat production for a guaranteed price, exceeding even the "guarantee" limit within a year. But the high levy on flour, rendered necessary by the rapid increase in British wheat producers' claims on the Fund, took over £7,000,000 from British consumers in 1933-34, and handed it to the British wheat farmers. This increased levy was reflected in the increased price of bread in October, 1933, which, despite the further rise and fall of ½d. this month, still obtains. On this showing, the beet-sugar subsidy will soon have to bear a brother near the throne of economic inanity. What would happen to our real incomes if all industries lodged claims for comparable munificence at the public's expense?

* * *

Still More Import Duties.—The new batch of import duties, issued on August 28th by the Treasury on the recommendation of the Import Duties Advisory Committee, indicates that the holiday season has not lessened the activity of the bricklayers of our tariff wall. The Additional Import Duties (No. 29) Order, 1934, which came into force on August 30th, provides for an increase in the Customs duties on articles manufactured wholly or partly of certain non-ferrous metals, circular saws and segments, certain bolts, nuts and screws, wire nails and staples, and certain cork disks. An increase from 5 per cent. to 15 per cent. in the duty on articles manufactured wholly of aluminium, or of alloys containing more than 50 per cent. by weight of aluminium, is justified by the Committee on the ground that imports of these articles have increased at prices with which British manufacturers are finding it difficult to compete, and because the productive capacity in this country has been strengthened considerably in recent years. This duty does not, however, affect aluminium cans containing fish or other preserves, for it is the practice of the Customs authorities to charge duty on the contents of containers. The duty on articles manufactured wholly of copper, or of alloys containing more than 50 per cent. by weight of copper, was similarly increased, for the Committee was satisfied that the progress of the British industry was prejudiced by an increase in foreign imports of plates, sheets and strip "at very low prices." The same argument is put forward for increased duties on segmental saws and segments of metal, certain bolts, nuts and screws, wire nails and staples and certain cork disks. The grounds on which the Committee feels justified in raising import duties demonstrates that it is distributing favours more and more lavishly. The case of aluminium in particular shows that extension of activity behind our new tariff, however uneconomic, is sufficient

to warrant further increases in the tariff itself—*usque ad coelum*? On this showing, what will happen to the iron and steel duties if activity continues to expand and if prices rise? In fact, tariffs create the "uneconomic competition" which, in its term, brings more tariffs.

* * *

Sterling and International Prices.—British wholesale prices have remained practically unchanged during the past fortnight, but the advance in American prices continues. Primary products have risen in the United States by a further 3.9 per cent., and their total increase since the end of April is 20.2 per cent. The Irving Fisher complete wholesale price index number has also risen by a whole point, after having remained stationary since the middle of June. The past fortnight's advance in American prices has been very irregular. Wheat has moved by very little, and cotton is slightly cheaper. The rise is mainly confined to maize and its derivatives, the latter including bacon and lard. On the Continent, there has been another fractional advance in French prices, and the decline there seems to have been definitely checked. Italian prices are a shade lower, while the slow rise in German prices has for the moment been arrested.

* These figures refer to August 22nd.

Details of the group indices comprising the complete *Economist* index number are given below:—

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Aug. 1, 1934	Aug. 15, 1934	Aug. 29, 1934
Cereals and meat	64.5	73.3	76.8	76.8
Other foods	62.2	58.3	59.8	59.3
Textiles	43.7	52.6	53.2	53.5
Minerals	67.4	75.0	75.2	76.1
Miscellaneous	65.8	69.9	69.9	69.4
Complete index	60.4	66.0	67.1	67.1
1913 = 100	83.1	90.8	92.3	92.3
1924 = 100	52.2	57.0	58.0	58.0

In the cereals and meat group there were slight declines in wheat, flour and maize, and heavier falls in oats, potatoes and beef. All these declines, however, were offset by sharp advances in barley, rice and bacon. Among other foods, there were moderate reductions in tea and coffee. In the textiles group, raw cotton was slightly cheaper, but there was a further recovery in wool tops and jute was also dearer. In the metals group, small declines in copper, tin and lead were balanced by a larger advance in spelter. Among miscellaneous materials rubber was again dearer, but hides, linseed oil and sulphate of ammonia were all cheaper.

* * *

Sweets in the Shop Window.—What a sweet-eating nation we are! The sum of £50 millions is spent in Great Britain every year on sweets, and 73,590 insured persons

are directly employed in the manufacture of chocolate, cocoa and sugar confectioneries. This is almost half as many as are engaged in making bread and allied products, the staple foods of the masses of the people, and this figure takes no account of the large numbers indirectly involved in distributing and machine making. The confectionery industry, which is holding an exhibition at Olympia, has reason to congratulate itself both on the quality of its products, which, judging from reports from the public analysts, are probably the purest in the world, and on its relative prosperity. It now employs more people than at any time since 1929. At the opening of the exhibition at Olympia, Mr Morrison, president of the Manufacturing Confectioners' Alliance, drew attention to the very unfortunate reactions of the proposed sugar marketing scheme on the sweet trade, which uses more than one-quarter of the sugar annually consumed in the country. He said that the probable increase of ½d. per lb. in the price of sugar would cost the industry over £1,000,000, and would have to be passed on to the consumer in higher prices. This would almost certainly lead to reduced consumption and employment. So our agricultural "planners" penalise an efficient industry for the sake of a group of monopolists and of a notoriously uneconomic beet sugar industry, and the net result for the consumer is less "sugar and spice and all things nice."

* * *

Retail Sales in July.—The recovery in retail distribution in this country, which began in the autumn of 1933, was maintained during July. According to an article in this week's *Board of Trade Journal*, the value of retail sales in July was 3.1 per cent. higher than in the corresponding month a year ago, and the number of persons employed in the concerns reporting increased by 2.6 per cent. The following index numbers of changes in the value of sales make no allowance for the normal spurt in demand before Christmas and for other seasonal influences:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1933—January	95	99	97
February	98	78	88
March	99	89	94
April	103	105	104
May	96	104	100
June	102	100	101
July	94	105	99
August	95	75	86
September	97	88	93
October	99	105	102
November	102	105	104
December	118	146	131
1934—January	98	104	101
February	101	80	91
March	104	95	99
April	102	100	101
May	103	113	108
June	103	103	103
July	98	107	102

The inverse movement of the indices for food and for other merchandise between June and July may be ascribed to seasonal influences. As compared with July, 1933, the value of retail sales of food and perishable articles in the past month showed an increase of 4.3 per cent., and sales of other merchandise rose by 1.9 per cent. The improvement was again well spread both geographically and as between different categories of merchandise. Suburban London continued to lead with an increase of 6.1 per cent. in total sales. The percentage increases of

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income : £5,600,000
Funds : £23,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

total sales in other districts as compared with July, 1933, were:—South of England, 3.2 per cent.; Scotland, 3.0 per cent.; Wales and North of England, 2.3 per cent.; and London (Central and West End), 2.1 per cent. With the exception of piece-goods and fancy articles, the value of sales of all classes of merchandise was higher than a year ago. Sales of men's and boys' wear increased by 6.3 per cent., and the figure for the furnishing departments is 4.9 per cent. higher than a year ago. The value (at cost)

of stocks of foodstuffs and perishables at the end of July was 4.3 per cent. higher than a year ago, but stocks of other merchandise rose by only 0.8 per cent. Total sales in the first half of the current trading year (February-July) were 3.0 per cent. higher than those in the corresponding period of 1933, which in turn were 1.9 per cent. below the figure for 1932. Although business in general has been "marking time" since the beginning of July, there are no indications of an early setback in retail trade.

FRANCE

M. REYNAUD'S DEVALUATION CAMPAIGN

THE suggestion of M. Paul Reynaud, the ex-Finance Minister, that France should approach the United States with a view to a general stabilisation of the exchanges has met with disapproval. The proposal would entail a devaluation of the franc, and this has aroused the same objections as M. Reynaud's similar proposal a month ago. M. Reynaud argues that either prices must be deflated or else the currency must be devalued, and he emphasises the difficulties of deflation. It is contended in reply that devaluation of the franc would be a bad prologue to a general stabilisation of currencies, since it would mean a disturbance of contracts, a rise of prices, the ruin of creditors and rentiers, and a wave of speculation. Doubts are also expressed whether President Roosevelt would or could stabilise the dollar on gold in the near future. The fresh decline in sterling and the persistent rumours of a new devaluation of the dollar are creating the feeling here that opinion favouring depreciation is still strong in Great Britain and America.

M. Reynaud's campaign, however, has not been entirely without effect, since it has compelled his critics to face the problem of the resistance of prices to deflation. Leaders of the export industries have been studying the price factor in detail. They are quoting as an example the price of coffee, the cost of production of which represents only 11 per cent., the charges and transport in Brazil 13 per cent., and the taxes and duties 73 per cent. The conclusion is that the factors which are keeping up prices are transport and taxes, and that the solution of the French crisis lies in Customs and Budget reform.

FOREIGN TRADE STILL DIMINISHING

The foreign trade figures for the first seven months of the year show a new diminution in the value of both imports and exports. Imports reached 14,328,754,000 francs and 27,124,230 tons, a diminution of 2,991,506,000 francs and 1,526,685 tons compared with the preceding year. Exports were 10,150,846,000 francs and 14,354,293 tons, a diminution of 280,865,000 francs and an increase of 1,659,363 tons.

The following table shows foreign trade in July, compared with June, 1934, and with July, 1933:—

	(000 francs)		
	July, 1934	June, 1934	July, 1933
Imports:			
Foodstuffs.....	544,345	— 87,012	— 196,170
Raw materials.....	840,530	— 128,289	— 240,710
Manufactured goods.....	329,420	— 33,944	— 60,990
Total	1,714,295	— 249,345	— 497,870
Exports:			
Foodstuffs.....	171,535	— 10,820	— 2,708
Raw materials.....	380,141	— 35,283	— 42,522
Manufactured goods.....	799,377	— 54,243	— 69,817
Total	1,351,053	— 100,346	— 115,047

The two worst symptoms which this table shows are the contraction of raw materials imports—which indicates a slackening of French industrial activity—and the reduction of the exports of manufactured goods. Actually total im-

ports have diminished more than total exports, with the result that the passive balance has been reduced to 363 millions, the lowest since the beginning of the crisis. At this level the passive balance for the whole year 1934 will not attain the 6,000 million francs which the Minister of Commerce recently claimed as an improvement on the 10,000 million francs of last year. Nevertheless, the total turnover of French foreign trade in July was 259 millions lower than in May, which was itself the worst month since the stabilisation of the franc. French critics are pointing out that, if these tendencies continue, imports and exports may one day balance at zero.

EFFECTS OF PROTECTING THE WHEAT GROWER

The *Journal Officiel* has just published the approximate results of the wheat crop for 1934. This year's crop will attain nearly 83,594,240 quintals, against 98,611,200 quintals in 1933. The whole area sown was 5,305,010 hectares, against 5,464,390 in 1933. The yield per hectare (2.471 acres) is estimated at 15.75 quintals, against 18.04 in 1933; but the average weight per hectolitre should be higher, nearly 77.88 kilogs. against 77.24 in 1933. The figures for earlier years were as follows:—

	1930	1931	1932
Area (hectares).....	5,374,070	5,196,090	5,434,410
Yield per hectare (quintals) ..	11.55	13.83	16.57
Weight per hectolitre (kgs.) ..	71.66	73.46	75.33
Production (quintals)	62,080,660	71,881,710	90,771,340

It appears from this table that the final crop is bigger than the latest forecast. M. Queuille, Minister for Agriculture, declares, nevertheless, that the market situation has improved, as the following official table suggests:—

	Situation in	
	July, 1933	July, 1934
Carry over.....	15	21
Crop in France.....	98	83
Crop in Africa	3	3
Total	116	107
Consumption	88	88
Surplus	28	9

These estimates appear to many critics as too optimistic. Some declare that the figure of 88 million quintals for consumption is exaggerated; others that the carry-over, which is estimated by the Minister at 21 millions, reaches in fact 30 millions. The conclusion is that the present disorganisation of the wheat market will not be quickly remedied. The fixed price of 108 francs per quintal is undoubtedly still above the black market quotation, which is between 80 and 86 francs. Since the official price of bread cannot be based on these black market quotations, the real fall in the price of wheat has no effect on the price of bread and does not assist the general price deflation policy. Nor does it stimulate consumption.

In order to placate the agitation which still continues among producers and millers, the Government has just issued new regulations designed to stimulate the export of wheat, which is the only way of getting rid of the surplus as long as the price is kept at an artificial price in order to subsidise the farmer.

PARIS, August 29.

GERMANY

DR. SCHACHT ON THE OUTSIDE WORLD

At the opening of the Leipzig Autumn Fair the Reichsbank President, Dr. Schacht, now also in charge of the Ministry of Economy, delivered a speech on currency, foreign trade and foreign policy, in the course of which he foreshadowed reforms in the import payments system and announced that the campaign for self-sufficiency in raw materials would be continued. As justification for these measures he painted a picture of the history of foreign debts and international credits which differs very much from reality and from his own earlier utterances. He also reproved the non-German world, depicting its shortcomings in the "lurid hues of the romantic novelist." "Systematically depriving the third greatest foreign trade country of its possibility of existence"; "egotism of the Governments and the desire to keep Germany down"; "foreign Powers always overwhelming Germany with threats"; "forcing a philosophy of life (*Weltanschauung*) on us," were phrases heard with surprise by visiting foreign business men, who were used on such occasions to hearing inoffensive platitudes about the community of interest of the business world.

Dr. Schacht reported the breakdown of his system of controlling foreign exchange and imports, and attributed it to international dishonesty and malice. Under the clearing agreements, he complained, the unusable central bank deposits in the Reichsbank had unreasonably increased, rising from Rm. 68 to Rm. 130 millions between March and July. He complained of the abuse of the clearing agreements, circuitous imports of goods from countries which were not parties to it, and also of their abuse for the imports of half-manufactured and manufactured goods instead of raw materials.

Dr. Schacht also referred to the bureaucratisation of the control. In fact, tens of thousands of persons, official and private, are kept busy administering, or trying to master the intricacies of, the system which compels the commercial banks to keep many otherwise superfluous employees. The main changes promised by Dr. Schacht are the abolition of the rigid exchange rationing system which he introduced in July and a new rule that no importer will get foreign exchange unless he has in advance obtained an official "exchange certificate," which will be given only on proof of the desirability of the transaction contemplated. In future, therefore, the foreign seller will know in advance whether his account will be promptly settled. A German who is refused an exchange certificate may nevertheless (subject to the general import restrictions) buy foreign goods; but in such cases the foreign seller will have had warning that he cannot expect prompt payment; and such transactions could be financed, if at all, only by foreign long-term credits, which Dr. Schacht does not oppose.

THE IMPOSSIBILITY OF AUTARKY

Dr. Schacht declared that Germany would be compelled to aim at greater self-sufficiency in commodities at present imported; and duly emphasised the punishment that this would inflict on the offending foreigner. His implication that autarky has been forced on Germany by the outside world in connection with the currency troubles which arose in 1931 is, however, not correct history. Long before 1931, and independently of currency troubles, autarky was preached and practised as desirable in itself by Reich Ministers (e.g. the Food Minister, Dr. Schiele). The Nazis merely popularised the word "autarky," proclaiming "national economy" also to be desirable in itself.

The autarky agitation now under way has very little substance in it, and is mainly propaganda. According to the Nazi programme, self-sufficiency is to be attained by increasing the production by natural means of natural raw materials, by increasing the production of other natural products by new scientific or technical processes, or by the production of substitutes proper. Instances of the first class are flax and oilseeds, of the second benzene, of the third numerous substitute textile materials. The technical and economic possibilities of such production in no wise equal the inflated official propaganda. By bounties, it is true,

the Government this year nearly doubled the area under flax and nearly quintupled the area under rape and other oilseeds; and at a recent congress of chemists it was affirmed that Germany might grow soya beans, which she imports annually to the value of Rm. 100 millions. But plans for any material increase of production in this class are impracticable. Land is not available. A newly-issued report shows that the total area under cultivation (within the present frontiers) has fallen very considerably since 1913, and also that the wheat area has increased only at the expense of other crops. Last year, when wheat production threatened to exceed the demand, an official plan for curtailing it in order to provide room for flax and other plants was mooted; but this year's record wheat crop shows that even with the present increased area self-sufficiency cannot be infallibly counted on. Any considerable increase of production of wool, of which 90 per cent. of the consumption is imported, is for the same reason out of the question. In the second class the production of light oils is the only promising item, but there are natural limits to this.

The replacement of imported raw materials by synthetic substitutes, the subject of the loudest propaganda, promises nothing. The new textile materials are technically inferior and very dear. Most are products of the rayon industry, which has to import wood, and which cannot nearly supply the home demand for rayon itself, with the consequence that the import surplus this year has greatly increased. Expansion of this industry would require a vast investment of capital, which would not be justified by the production of an inferior raw material, for which also there would be no export market. In general, the production of substitutes would require technical adaptations which would absorb new capital and destroy old. The high prices of these artificially produced materials would tend to raise the general price level, to impede general export, and to reduce the German standard of living. As Germany's export of manufactured goods is based primarily on imported materials, iron ore, non-ferrous metals, wool, cotton and rubber, she could not attain autarky in the present limited official sense of interdependency of import without sacrificing nearly her whole export trade.

Further, the autarky movement is based, like most Nazi economics, on erroneous assumptions of rigidity in demand. Only a year ago the coming German independence of foreign light oils was officially proclaimed; but though the home output of benzene has meanwhile considerably increased the import has also increased (by about one quarter), and the demand for foreign exchange with which to import this commodity is greater than ever. The autarky movement, in fact, derives from certain primitive fallacies, chief of which is the belief that if import is forcibly reduced export remains unchanged. The *reductio ad absurdum* of this belief is the wheat situation. Self-sufficiency in wheat was preached on the ground that it would save Rm. 700 millions a year in foreign payments. By the time the Rm. 700 millions had been saved by increasing home wheat production at great cost the foreign payments position was worse than ever.

INDUSTRIAL ACTIVITY SLACKENING

The wholesale price index for August 22nd was 100.1, against 100.2 for August 15th. The raw materials group is unchanged, while manufactured goods prices continue to advance. The Sickness Insurance Board returns 15,532,000 insured employed at the end of July as against 15,529,683 at the end of June. From the Leipzig Fair are reported declines in activity in the textiles and toys branches, continued good business in leatherwares, furs and paper. For iron and steel wares the demand exceeds that of last year's autumn fair. A move towards the introduction of compulsory labour has been taken by issuing "labour service passports" to persons born before January 1, 1915, who have performed voluntary work services for half a year, and to younger persons who have served a whole year. Industrial activity seems to be slackening. Coal production in the first seven months was 70,086,500 tons, against 61,494,900 tons in the same months of 1933. The pig iron market is active, and export has increased. Export of heavy iron and steel in July was 130,150 tons, against 83,980 tons in July, 1933. Export of semi-products, joists, bars and thick sheets shows large increases, sometimes exceeding 100 per cent.

Money became normally stiffer towards the approach of the month-end, day loans rates advancing on Tuesday to 4½ per cent. As bank preparations for the demand had begun somewhat earlier than usual, cash realisations by sale of bank acceptances were hardly noticed this week. Again, this month the Reichsbank's credits of the last week of the preceding month were not fully repaid by the end of the third week. The Reichsbank's deposits continue to rise rapidly in connection with the non-transfers for debt service and the exchange agreements with foreign countries. The five chief commercial banks' balance sheets for the end of July show a decline of deposits of Rm. 107 millions, of which, according to unofficial estimates, about two-thirds is accounted for by register-mark payments and reduction of foreign acceptance credits. Loans also declined. Reich revenue from taxation in July totalled Rm. 685 millions, against Rm. 579 millions in July, 1933; in the first four months of the financial year revenue totalled Rm. 2,570 millions, against Rm. 2,197 millions. Rm. 85 millions of the increase are due to taxation changes (mainly slaughtering and fats taxes). Expenditure by municipalities on poor law and unemployment relief in 1933-34 fell by Rm. 230 millions to Rm. 1,886 millions.

BERLIN, August 28.

HUNGARY

REDUCED BUDGETARY DEFICIT

THE budgetary situation has considerably improved in the fiscal year 1933-34. The cash deficit of the Administration for the financial year, ended June 30th last, amounted to 38.1 million pengő, as against 87.8 million pengő for 1932-33. These figures include the advances to State undertakings (railways, etc.). Provisional results for 1933-34, compared with 1932-33, are as follows:—

EXPENDITURE	Million pengő	
	1932-33	1933-34
Actual budgetary.....	733.0	717.0
Actual extra budgetary	70.7	86.3
Total	803.7	803.3
RECEIPTS		
Actual budgetary.....	708.9	758.6
Actual extra budgetary	7.0	6.6
Total	715.9	765.2
Deficit	-87.8	-38.1

For neither of these two years, however, does expenditure include the non-transferred foreign debt service, except for the 1924 Reconstruction Loan in 1933-34. Actual budgetary expenditure was less than the estimate by 47.9 million pengő. Full details as to the composition of this amount are not yet available, but it certainly includes 20.4 million pengő of Treasury bills deposited in the

foreign creditors' fund in lieu of the pengő equivalent of the non-transferred debt service; 9.6 million pengő in respect of a payment due to the British Clearing Office (for the settlement of pre-war debts) which has been deferred by agreement; certain other non-transferred debt items; and the exchange difference resulting from dollar and sterling depreciation.

The most striking change from 1932-33 to 1933-34 is an increase of 49.7 million pengő in actual budgetary receipts. This does not mean, however, that taxation in the fiscal year just ended produced 49.7 million pengő more than it did in 1932-33, for the 1933-34 receipts include 26.1 million pengő which do not come from taxation, but from profits on coinage, to the extent of 5.1 million pengő and from repayment of debts and increased dues from the State railways, amounting to 21 million pengő. Thus, in order to obtain a budgetary receipts figure for 1933-34 which is comparable with the 708.9 million pengő in 1932-33, 26.1 million pengő must be deducted from 758.6 million pengő, leaving 732.5 million pengő. The increase from last year is therefore only 23.6 million pengő. Moreover, a number of taxes were increased, and new ones were imposed during the second half of 1932-33. These new taxes were only productive during four or five months of 1932-33. Thus the increase attributable to improved economic conditions is relatively very small. Finally, it should be noted that in 1933-34 the Boletta Fund (wheat and rye bounty), which is outside the Budget, incurred a loss of 11.9 million pengő, while the year before it made a small profit.

LEAGUE REPORT ON THE ECONOMIC SITUATION

The recent quarterly report of Mr Tyler, the representative of the Financial Committee of the League of Nations, points out that the improvement in the 1933-34 Budget does not warrant the assumption that fundamental economic conditions are correspondingly better. The trade agreements recently concluded with Italy and Austria secure the marketing of a large part of Hungary's normal wheat surplus, but Hungary's other agricultural exports, such as cattle and pigs, the importance of which in foreign trade has in recent years been greater than that of wheat, are encountering continual marketing difficulties, with the result that production is falling off. Hungarian industry cannot make good the fall in agricultural exports. Where it succeeds in exporting, it is in many cases only able to do so by keeping internal prices of its products at too high a level for the purchasing power of Hungarian consumers, which seriously impairs, in its turn, the competitive capacity of Hungarian agriculture. In general, the economic position is stagnant.

Exports continue to increase in value, however, and the export surplus for the first half of 1934 was slightly larger than for the first half of 1933. However, that proportion of exports from which the National Bank derives no foreign exchange is steadily increasing, so that the freely convertible currency available for imports of necessary raw materials and for payment of the foreign debts service does not increase. Comparative trade figures are as follows:—

	January-June	
	1933	1934
In million pengő		
Exports	159.0	186.0
Imports	144.2	168.4
Export surplus.....	15.2	17.6

The volume of transactions under the compensation scheme, initiated in December, 1932, continues to increase. Under it, exporters receive a premium in pengő over and above the equivalent, at "official" rates, of foreign exchange surrendered by them to the National Bank, this premium being provided from surcharges paid by importers for foreign exchange allotted to them. The average premium on exports amounted to 16.6 per cent., and the surcharge paid by importers to 20.7 per cent., over the "official" rates.

It is significant that the balance of trade with Austria, which the commercial treaty is designed to maintain at 1.5 to 1 in Hungary's favour, has in the last six weeks changed to Hungary's disadvantage, having become 1.3

to 1. It has not yet proved possible to negotiate a commercial treaty between Hungary and Czechoslovakia. On July 4th a new compensation scheme was arranged between the two countries for two and a half months, during which time Hungary may export to Czechoslovakia articles to a total value of 52 million Czech kronen, and Czechoslovakia may export to Hungary to a total of 36 million Czech kronen, the balance of 16 million Czech kronen being applied to the reduction of outstanding merchandise debts. This agreement will not greatly change the volume of Hungarian-Czechoslovak trade. The Hungarian articles which benefit by it are fruit, vegetables, pigs, lard and semi-manufactured textiles.

The yield of recent years' crops compares with the last estimate of the Ministry of Agriculture as follows:—

	Average, 1926-1930	1932	1933	Estimate, July 22, 1934
In million quintals				
Wheat	22.3	17.5	26.2	16.6
Rye	7.4	7.7	9.6	5.0
Barley	6.0	7.2	8.4	4.4
Oats	3.5	3.1	3.5	2.2
Maize	16.3	24.3	18.1	Prospects so far good.
Potatoes	18.7	15.6	18.6	

This year's grain harvest is poor, and consequently prices are considerably higher.

BUDAPEST, August 20.

ARGENTINA

RAPIDLY IMPROVING TRADE PROSPECTS

WITH Argentine prospects showing such rapid improvement as in the first half of August, it is difficult to avoid being carried away on the wave of optimism that daily gathers strength. Cereal prices, coupled with the knowledge that Argentina actually has grain and linseed on hand and, furthermore, has sown both under favourable conditions, are powerful arguments against pessimism. Below are shown current grain prices contrasted with those of nine months ago, and the figures need no comment. They also explain the recent appreciation of the Argentine peso, and invite the query why its rise is not more accentuated.

CEREAL PRICES IN PAPER PESOS PER 100 KILOS.
(Spot in Buenos Aires)

	November 28, 1933	August 10, 1934
Wheat	5.00	8.10
Maize	3.78	7.25
Linseed	10.40	15.15
Oats	4.00	6.50

For the moment the two negative factors in the export position are tacitly ignored. Poor hide prices and considerable doubt as to what wool will fetch when the October sales begin, are at present considered unimportant. It is true that the sum total of the value of wool and hides exported barely equals the increase in value of the exportable surplus of grain and seed in hand at the end of July, taking the 1933 figures as the basis of comparison; and it is always possible that, despite the threatened reduction of purchases of wool by Germany and Great Britain and the cessation of hide shipments to the United States, Argentina's trade balance at the year-end will still be far beyond expectation. There is unquestionably much greater commercial movement all round; heavier traffics on the railways, better business in the Buenos Aires shops, and immeasurably better returns in the collection of debts throughout the provinces, with the single exception of Mendoza. All this means a healthier and decidedly more cheerful movement.

There is, however, no reflection of it in the public finance returns. Argentina's total indebtedness on June 30, 1934, shows an increase which is well over 190 million pesos, while practically nothing has yet been accomplished in the way of budgetary economy, notwithstanding the imposition of new taxation and the likelihood that this will be yet further increased. Moreover, the increased indebtedness relates entirely to external obligations created through the unfreezing of blocked exchange and, although improvement

in the peso rate will help towards meeting the services thereon, such improvement cannot well be rapid. It is restricted by the expedient of handing out permits very sparingly, notwithstanding that exporters are offering their paper freely to banks, who hesitate to take it lest they be overbought in foreign currencies on a falling market.

ARGENTINE PUBLIC DEBT (CONSOLIDATED AND FLOATING)
(In thousands of paper pesos)

	June 30, 1933	June 30, 1934
National	3,797,815	4,021,610
Provincial	1,219,101	1,195,183
Municipal	480,188	471,987
	5,497,104	5,688,780

(Foreign currencies converted to paper pesos at par; compiled by Argentine Bondholders' Corporation.)

Included in the figures for June 30, 1934, are the following:—

INTERNAL CONSOLIDATED DEBT

	Pesos Paper
Converted loans (national).....	1,601,132,350
Not yet converted	214,571,145
Grand total	1,815,703,495

(These last figures are issued by the Ministry of Finance.)

THE TRANSFER PROBLEM

The present transfer situation is one that cannot be regarded as permanent; something will have to be done to protect at one and the same time both import and export interests. It seems that the Government is loth to forgo the handsome profit it at present receives from exchange. This is between 15 and 21 per cent., according to the class of export paper bought and sold; and no information is vouchsafed as to what is being done with the funds thus, daily received in current cash. It is common talk that before the present month is out some official declaration will be made, presumably on the return of the Minister of Finance after his two months leave of absence. Then it may be possible to find out whether there is anything in the rumour that substantial funds have been placed abroad to meet debt services due at the end of the year, so that, when the 1935 Budget estimates are published, it will be possible to show a decided saving as far as the figures of the Ministry of Finance are concerned. At the same time excessive optimism is to be deprecated. Humanly speaking there is nothing to check the successful sale, not only of the cereals which Argentina has in hand, but also of whatever she may be able to grow between this winter and the next harvest, i.e. November-December for linseed, January-February for wheat and oats, and March to May for maize. Given sound economic measures, such a condition of affairs should suffice to wipe out a large proportion of the losses occasioned by unfavourable conditions from 1930 to 1933.

If through the improvement in exchange the Government can find some way whereby legitimately earned profits accruing to foreign capital can be remitted abroad at successive intervals, not too far apart, it will go far towards removing the last vestiges of complaint which are still audible. In their zeal, Argentine nationalists sometimes write as if they held the view that foreign capital, once it arrives on these shores, must either be prepared to re-invest its earnings, giving all the usufruct to Argentina, or be sternly forbidden to make any profit at all. That is emphatically not the view of the Government, and improve-

Now Ready—

A CONCISE DICTIONARY
OF FINANCE By W. Collin Brooks

Author of "The Theory and Practice of Finance," etc.

An encyclopedia of financial information arranged in alphabetical order to ensure immediate reference. It is a desk-book of everyday use and value for all concerned with financial activities. The information in the book is absolutely authoritative and meets in detail the requirements of bankers, financiers, investors and all financial executives. Its value in examination, as well as professional work makes the book of particular importance to students. 414 pages. 12/6 net.

Order from a bookseller or direct from
PITMAN - Parker Street - Kingsway - London, W.C.2

ment in exchange conditions will enable them to testify to their views by assisting in the remittance of funds that have every right as well as every reason to be transferred abroad.

Just what form official intervention will take one cannot say. It is probable that when the free market rate more closely approximates to the rates that are bid by importers day by day—and the difference has been narrowed to \$1.15 on the quotations for sterling—exchange control will be completely reorganised. Rumour has it that the rate of purchase for export paper will be dropped to \$13.50 to the £, and that an official rate, applicable to all remittances whatsoever, will be fixed somewhere in the neighbourhood of \$15.50; all exchange being brought within the scope of State control. There is much to recommend this course, but it involves several questions which would arouse criticism, and is here recorded merely as a current rumour of possible, but not necessarily certain, intentions attributed to the Government.

BUENOS AIRES, August 11.

SOUTH AFRICA

POLITICS ON HOLIDAY

IN July, which is one of South Africa's main holiday seasons (in a country where there are several), political activities are not usually of any importance. Colonel Stallard and Dr. Malan have held meetings for their respective diehards and have met with some support. It has been pointed out that the two extremist leaders ought to appreciate each other, as in each case the attitude of the one is the main justification for that of the other. The position of the "fusion" policy and its supporters has been consolidated by General Hertzog's great success at the Free State Nationalist Party Congress at Bloemfontein. His motion in support of fusion was carried by 107 votes to 27, while the Malanite speakers were greeted with laughter and interruption. It cannot be said, however, that citizens as a whole care for politics in July. Those of them who are able to leave their various businesses are on the Natal Coast, in the Game Reserve, or touring the country. Moreover, a fair amount of winter rain has provided the farmers with occupation.

TRADE, EMPLOYMENT AND PRICES

There has been a change of some importance in the figures shown in the weekly statement of the South African Reserve Bank. Until June, 1934, the item "Bankers' deposits"—which stood at £4 millions at the beginning of 1933—had stood at about £29 millions for many months, the actual peak being £32½ millions on February 23rd. During July this figure has fallen by £5½ millions (from £28.9 millions on June 29th to £23.5 millions on July 27th). In the same month "Foreign Bills discounted" fell from £21 millions to £13.5 millions. On July 4th, the buying rate for sterling was raised from £99½ to par, and again on July 30th to £100½ South African to £100 sterling. The selling rate has remained at £100½, so that the spread is now 15s. per cent. instead of £1. In "normal" times the spread was usually 10s. The change in rate is an indication of a move towards normal conditions, of which further evidence is obtainable from the increase in imports.

	Six months ended June 30	
	1933	1934
	£m.	£m.
Grand total of imports	21.7	29.8
Grand total of exports (with gold at par)	36.2	35.3
Premium	9.7	12.8
	45.9	48.1

Imports during the month of June were £5.1 millions, compared with £3.9 millions last year.

The Monthly Bulletin of Union Statistics has just published a "General Index of Industrial Employment," from which the undernoted figures are taken. The base is 1,000 in July, 1925.

INDUSTRIAL EMPLOYMENT INDEX NUMBERS, BASE JULY 1925 = 1,000

Average	European	Other	1934	European	Other
1927	1,092	1,070	January...	1,097	1,077
1928	1,126	1,093	February ..	1,119	1,102
1929	1,159	1,108	March	1,131	1,113
1930	1,129	1,090	April.....	1,136	1,118
1931	1,084	1,041	May	1,147	1,129
1932	1,015	985			
1933	1,047	1,014			

In spite of the continued and increasing prosperity, there has so far been no serious rise in retail prices, the figure for food, fuel, light, rent and sundries for the Union being 16.4 per cent. increase on 1914 in June last and 14.6 per cent. in December, 1932, the last month South Africa was on the gold standard. There has been some slight increase in working costs on the gold mines, but this is probably due in great measure to the undertaking of work ordinarily reserved for periods of prosperity and not immediately remunerative.

There has been much agitation based on, but not confined to, the affairs of one company, on the part of groups of ordinary shareholders in gold-mining companies who consider that they should have a larger share of ground-floor participation when their properties are reorganised on a producing basis. It is difficult to say, in the absence of figures, which in several important cases are not available, whether the agitation has a reasonable foundation, but some of the methods associated therewith appear unwise. It is not often that such large sums of money are available as there are at present in the hands of the general public, and a controlling house which supports a moribund venture through bad times naturally expects, when times improve, its remuneration for so doing.

The Stock Exchange boom in gold-mining shares continues unabated. The twofold cause is the improved intrinsic prospects of the companies and the difficulty of investing money. The July issue of the Monthly Bulletin of Union Statistics contains a table, based on calculations by Professor C. S. Richards (vide "The Boom in Kaffirs," *S.A. Journal of Economics*, September, 1933) showing index numbers for the Stock Exchange prices of thirty producing gold-mining companies from January, 1923, to June, 1934.

The following figures, extracted from this table, tell their own story:—

January, 1923	Index Number	Date	Index Number
1923	1,145	June, 1931.....	1,134
1924	1,191	January, 1932	998
1925	1,257	June, 1932.....	929
1926	1,292	Week ending—	
1927	1,363	December 31, 1932 ...	1,290
1928	1,387	January 28, 1933	1,616
1929	1,209	February 25, 1933.....	1,900
1930	1,031	March 25, 1933	1,891
1931	1,000	April 29, 1933.....	2,050
		June 24, 1933	1,866

Date (monthly average) Index Number.

July, 1933	2,057
August, 1933	2,267
September, 1933	2,331
October, 1933	2,234
November, 1933	2,250
December, 1933	2,217
January, 1934	2,258
February, 1934	2,355
March, 1934	2,415
April, 1934	2,529
May, 1934	2,607
June, 1934	2,777

During the past eighteen months 201 new mining companies have been registered with authorised capital of nearly £17 millions.

JOHANNESBURG, August 17.

MONEY AND BANKING

THE OUTLOOK FOR STERLING

A CERTAIN amount of interest and excitement was roused at the end of last week by a sharp relapse of sterling against both the franc and the dollar. On August 1st the pound was quoted at Frs. 76½ and \$5.03½, and both forward francs and dollars were at a discount. Then came the American decision to purchase all silver stocks held in the United States, and the dollar ran up to \$5.11½. A slight rally followed, as a result of gold shipments from the United States, but the dollar-franc rate continued to hang near the export gold point, and meanwhile sterling developed weakness against the franc. By Thursday the pound had fallen to the new low point of Frs. 75½, while arbitrage operations caused the dollar to appreciate to \$5.03½. Forward francs also went to a slight premium.

This depreciation, which was accompanied, if not occasioned, by some relaxation of the British Control's support of sterling, gave rise to all sorts of rumours. Some of these may be dismissed at once. There is no foundation for the suggestion that the Exchange Equalisation Account has exhausted all its reserves of gold and foreign exchange, and if it had, it still has as a final reserve the gold which it sold to the Bank of England early last year. Some indication of the limited magnitude of the Exchange Account's summer operations can be deduced from the floating debt returns. Between March 31st and August 25th the floating debt increased by £12.5 millions. Tender issues of Treasury bills were reduced by £11.3 millions, so that the floating assets of Public Departments rose by £23.8 millions. This last figure gives a very approximate indication of the amount of fresh Treasury bills taken up by the Exchange Equalisation Account since March 31st, and therefore of the extent of its sales of gold and foreign exchange. This figure appears very small in comparison with the total size of the Account, which is £375 millions. It is therefore inconceivable that it has even approached the exhaustion of its gold and foreign exchange reserves. Moreover this very rough calculation makes no allowance for the sales of Funding Loan and acquisitions of Treasury bills by other Public Departments during the last three months.

There are two possible explanations of last week's depreciation of the pound. The first is commercial purchases of dollars to finance autumn produce shipments. We shall return to this point later, but reports from the London exchange market state that these purchases have already begun, though they have not yet assumed any great volume. Some of these purchases of dollars may well have been made through Paris as a straightforward arbitrage operation, induced by the pronounced weakness of the dollar against the franc. The other explanation arises from a general view on the Continent that once the September financing is complete a further devaluation of the dollar will take place. Continental opinion holds that Great Britain will not be able to remain indifferent to such a move with its consequent intensification of American competition, and that therefore the pound will be allowed to depreciate as well. Hence speculative sales of sterling against Continental currencies are already beginning, and this accounts for the premium on forward francs as well as the appreciation of spot francs against the pound.

Another possibility is that recent sales of pounds really emanate not from Great Britain but from somewhere else in the sterling area. The British trade balance is rather more adverse than it was a year ago, and this is a factor which ought not to be overlooked. Still, it is difficult to decide what is the balance of payments of the sterling area with the rest of the world, and in the absence of any information on this point, it is unwise to dogmatise too closely regarding current commercial, as distinguished from speculative, offerings of sterling.

For a "long run" view of sterling, there are again several factors to be considered. Firstly, there is the American drought and its effect upon sterling. This year

the United States will be a negligible exporter of wheat. Cotton exports show no sign of reaching last year's figures, but Canada, which is linked to the dollar and not to sterling, can dispose of much of her surplus wheat. Moreover, wheat, cotton and other American produce as well will have to be paid for at higher prices than were ruling a year ago. Another pertinent point was made by Sir Herbert Robson in a letter to *The Times* on Monday last. So long as there was a glut of wheat, he explained, European dealers let their stocks run down practically to zero, but now that there are prospects of a shortage and of higher prices, they are likely to reconstitute their stocks. This will add to European wheat purchases from Canada and elsewhere and so will increase the autumnal commercial pressure upon the pound. It would, therefore, be unwise to ignore the seasonal factor when considering the outlook for sterling.

As regards the value of the pound against the dollar and franc, it is again impossible to be precise. When the dollar was revalued last winter, its new parity with the franc constituted a serious undervaluation of the dollar and rendered it impossible for the pound to find a single point of equilibrium, in terms of purchasing power, against both currencies at once. Since then this unstable position has to some extent been redressed, for French wholesale prices have fallen, American wholesale prices have risen, and the British price-level shows little net change. Even so the pound is still poised in a highly unstable position between the two alternative equilibrium points of dollar prices and franc prices. At first sight, it is more likely to gravitate towards the dollar, which is of greater commercial importance than the franc, and this might suggest an impending depreciation of the pound. Such a train of inference, however, is nebulous in the extreme.

The fact is that almost everything depends on future American monetary policy. Does President Roosevelt intend to maintain the present gold parity of \$35 an ounce against all economic and political pressure, or is he only awaiting the completion of his autumn financing before he gives the dollar another downward thrust? That is a question which he alone can answer, and even he probably does not know the answer yet. Even if he does further devalue the dollar, it must not be lightly assumed that this will automatically necessitate a further depreciation of sterling against the gold currencies. In our own interests, we cannot be indifferent to the likely effect of such depreciation upon the gold currencies, both blocked and free. But all that we can say at present is that if the dollar should undergo a further depreciation, we shall have been given yet another pretty problem to solve.

Meanwhile it may be assumed that France will remain on gold at least until there is a political upset. The present Government is irrevocably committed to the gold standard, and French gold reserves are so strong that France cannot be driven off the gold standard except as the result of a deliberate act of policy. Even if the elections replace M. Doumergue with another Government, it is more than likely that the new Government will equally adhere to gold. M. Reynaud is still a voice crying in the wilderness; and again, this week, his advocacy of devaluation has been flatly countered by M. Germain-Martin, the French Finance Minister. The average Frenchman still regards a stable gold currency as his sheet-anchor. Moreover, the exchange position of many of the other gold bloc countries has become stronger. There is less anxiety about the Dutch exchange, and Switzerland has lately been recovering her previous gold losses. Belgium is removing the weakness in her banking system, and this week has felt justified in lowering her bank rate. Only in Italy does the currency need official support.

We may, therefore, dismiss any likelihood of an early break-up of the gold bloc, and it seems safe to assume that

the *status quo* will be preserved in the United States until the end of September. Further than that it is impossible to foresee. President Roosevelt may let loose some further change in monetary policy upon the world, while the pendulum of French confidence is always liable to sudden and wide swings, reflected in the movement into and out of London of French floating balances. Still in the short run there seems no justification for the recent weakness of sterling, and to judge from the foreign purchases of British gilt-edged stocks during the last two or three days, foreign opinion is now coming round to that view. Fundamentally, the pound is still a strong and stable currency, while the British Control still has ample resources at its disposal. If foreign operators choose to make "bear raids" on the pound, they must not be surprised if they have to rush, incontinent, to cover.

FINANCIAL NOTES

The Money Market.—Money remains comfortable at $\frac{1}{2}$ per cent. but some calling on Wednesday and Thursday's Stock Exchange settlement slightly affected supplies, and a certain amount of 1 per cent. money has been borrowed from the clearing banks late on most afternoons of the week.

	Aug. 9, 1934	Aug. 16, 1934	Aug. 23, 1934	Aug. 30, 1934
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Bill rates are really unchanged, but now that a new month is beginning the clearing banks have reduced their rate for October Treasuries from $\frac{1}{2}$ to $\frac{1}{4}$ per cent. The banks have been buying October bills, and outside discount rates hardened slightly on Wednesday and Thursday with the firmer tendency of money. Business has been done in hot Treasury bills at $\frac{1}{2}$ per cent., and the rate for three months' bank bills is now $\frac{1}{2}$ to $\frac{1}{4}$ per cent.

The Bank Return.—The usual end-of-the-month increase in the note circulation has this month been prevented by the further return of holiday currency.

	BANK OF ENGLAND				
	Aug. 30, 1933	Dec. 27, 1933	Aug. 15, 1934	Aug. 22, 1934	Aug. 29, 1934
Issue Department:—					
Gold.....	190.3	190.7	191.7	191.7	191.8
Note circulation.....	374.0	392.0	384.1	379.4	379.3

Discounts and advances	10.0	16.8	5.5	5.8	5.6

Proportion 47.2% 37.3% 45.4% 46.9% 47.7%
Public deposits remain at a high level. The Treasury has to find about £10 millions on September 1st for dividend payments and the half-yearly redemption of Victory bonds. It is also possible that this week Treasury bill maturities were concentrated towards the end of the week. If so, this would explain the accumulation of funds in public deposits in the middle of the week.

The Foreign Exchanges.—After a slight recovery earlier in the week sterling fell to a new low record level of Frs. 75 $\frac{1}{2}$. Forward francs have gone to a premium of 8.5

centimes, while the London price of gold has touched a new high record of 140s. 3d. an ounce. Dollars have also strengthened to \$5.03 $\frac{1}{2}$, but the forward rate remains at a slight discount. The reason for these movements are discussed in the leading article on the previous page. Free marks have strengthened to Rm. 12.63, while registered marks are also slightly better at 36 $\frac{1}{2}$ per cent. discount. Dealings in sondermarks opened last week at 3 pf. over the spot rate, but now that the initial demand has been met, the margin has widened to 13 pf. Even so, this only represents a discount of one per cent.

New York Money and Banking.—Money rates remain at their recent low levels. During the week ended August 22nd brokers' loans were reduced from \$821 millions to \$810 millions. The dollar has displayed renewed weakness against the gold bloc currencies, and at the end of last week an additional \$6,000,000 of gold was shipped to Paris, and \$1,460,000 to Brussels. An important announcement on the use of the Administration's profit on the revaluation of the dollar was made on August 28th by the Secretary to the Treasury. For the moment the profit, estimated at \$2,800 millions, is to remain in the Stabilisation Fund, but ultimately it will be applied to the reduction of the National Debt. Mr Morgenthau also pointed to the increase since March, 1933, of \$1,600 millions in the Treasury's cash balances, and to the increase of \$1,090 millions in the net assets of agencies owned and financed by the Government, and from this he deduced that the actual net increase in the National Debt due to the "New Deal" was only \$500 millions. These calculations have evoked considerable scepticism on Wall Street, where it is argued that the profit due to the revaluation of the dollar is equivalent to a concealed tax upon the nation. It was also pointed out that the statement that this profit would "ultimately" be applied to the reduction of the National Debt was vague in the extreme. It is, however, pertinent to point out that only this week heavy sales of Government bonds have been met by official support of the market, presumably out of the resources of the Stabilisation Fund. Thus the gold profit is already being used to reduce the National Debt in a very practical manner.

A Flood of Finance Bills?—The money market has received with some surprise the suggestion put forward in one quarter recently that the moderate increase in the volume of inland acceptances during the last few months has been accompanied, owing to lack of discrimination on the part of some acceptance houses, by a decline in the quality of these bills so severe as to cause "the authorities" some uneasiness. It might well be that a bill market which has subsisted for years on Treasuries (and the virtual promissory notes euphemistically called standstill "bills") should have lost all sense of the proper basis for a bill of exchange, and be prepared to take credit for financing anything remotely connected with current trade. Yet, according to a correspondent who writes to us on the subject this week, an examination reveals little which might shock the financial purist. Certain types of bills calculated to arouse misgivings—shipbuilding paper and hire-purchase drawings, for example—can seldom have been scarcer. It is therefore assumed that the criticism relates to cases where the granting of acceptance credits has enabled firms to reduce their bank overdrafts. This may or may not be bad finance. Overdrafts are certainly granted for purposes, such as the advance of wages, for which bills of exchange cannot appropriately be employed; but the bulk of the new inland bills must have replaced overdrafts used to finance the movement of goods, and must thus be drawn against documents or other good commercial security. In any case, it is not thought that the acceptance houses are so anxious to increase their business that they would consent to the creation of "typical finance bills" in large quantities. Meanwhile any increase in the number of legitimate inland bills would be welcome in more ways than one, and it is to be hoped that criticism will not proceed to the point where it may check such a growth.

THE STOCK EXCHANGE

BUILDING TRADE SHARES

THE shares of companies concerned with the building trades have run an excellent race in the Recovery Stakes during the fifteen months since their prospects were last reviewed in these columns (see the *Economist*, May 20, 1933, page 1080). Over that period "the field"—as measured by the Actuaries' Index of 144 industrial ordinary shares—has advanced by 16 per cent., from 61.2 to 71.2 (December 31, 1928 = 100), but the shares of "building materials" companies have risen by 30 per cent., from 65.0 to 84.5. But whereas "the field" has found the pace a little hot, and has recently shown signs of flagging—the total Actuaries' Index figure is no higher to-day than it was early last January—building material shares have exhibited substantial staying power, for practically the whole of their net rise has been concentrated on the last eight months. Their contemporary popularity with speculative and "solid" investors alike is based largely on this showing. While revival in industry generally has lately tended to slow down, and may, in the next few months, become increasingly contingent on an improved international situation, the market believes that domestic factors in themselves will be sufficient to ensure a continuance of increased production, profits and dividends in the building trades.

The grounds for this belief demand careful scrutiny. The activity of the building industry, as measured by the number of new buildings erected in Great Britain, advanced rapidly from 1925 to 1928, the total rising in three years from 143,764 to 261,588 (years to March 31st). Thereafter, however, the movement showed a definite sign of hesitation, the total new buildings erected in the year to March 31, 1929, falling to 187,858, with a partial recovery to 220,192 in the following year. General economic depression reduced the total once more to 196,804 in the following year, with a fresh but limited recovery to 214,466 in 1931-32 and 216,570 in 1932-33. From this point, however, revival began to make rapid headway. The total for the twelve months to March 31st last was 265,522. Other evidence of increased activity is given in the following table, which is based on data collated by Moody's-Economist Services:—

	Value of Building Plans approved in 146 Towns	Index of Activity (1924 = 100)		Percentage of Registered Workers Unemployed

* July figures, 8,842, 199.6, 150.8, and 17.2 respectively.

For the first six months of this year the value of building plans approved in 146 towns of Great Britain has been 20 per cent. higher than in the corresponding period of 1933, and 53 per cent. above the comparable figure for the same period of 1932. The "index of activity" for the first half of this year, compared with the same periods, has shown increases of 20 per cent. and 59 per cent. respectively as regards dwelling-house construction, and increases of 18 $\frac{1}{2}$ per cent.

* Including profit on sale of investments. (a) Free of tax. (b) Before tax. (c) Including capital reserve of £440,000. (d) Deferred stock. (e) After using £850,000 of reserve to write down goodwill, etc.

Note.—"Total Profits" are shown before debenture interest, if any, and before depreciation, where shown separately. "Profits retained in the business" include amounts carried forward. These are also included in "Total free reserves," but the latter exclude reserves for taxation, and other advance provision for future liabilities. "Total net current assets" are the surplus of current assets (including stock-in-trade) over current liabilities.

and 38 per cent. respectively as regards other forms of building, alterations, etc. Although the number of insured workers in the industry has appreciably increased over the last two years, the average proportion unemployed was only 19.7 per cent. in the first half of this year, against 28.2 per cent. in the first six months of last year and 29.0 per cent. in the first half of 1932.

Among the contributory causes of this gratifying revival may be mentioned cheap money, sustained building society activity, lower "all-in" prices to house purchasers, increased general employment and purchasing power, and, more recently, a tendency, among private individuals, industrial companies and local authorities alike, to catch up arrears of construction, equipment and reconditioning, accumulated during the depression. Obviously, building activity has still a very considerable way to go, on the dwelling-house side alone, before the nation's housing facilities are adequate to the needs of its citizens under modern standards of well-being.

What are the investment implications of these conditions? The erection of dwelling houses and many commercial properties is mainly in the hands of small localised

individuals and firms, or of private companies whose securities are not dealt in on any Stock Exchange. The British investor is interested chiefly in the shares of public companies supplying building materials and products for exterior or interior furnishing and decoration. The table at the head of the preceding column summarises the last three years' figures of ten such companies.

The profits and dividend figures, unfortunately, have a limited utility, since they refer, for the most part, to conditions, not in recent months of rapid revival, but in the period immediately preceding them. They suggest that the chief building trade companies in which the investor is interested succeeded in maintaining a very satisfactory average level of earnings and dividends during the depression, and, in most instances, were already exhibiting signs of improved earning power before the latest revival in building activity began to gather momentum. Such pointers to the trend of recent profits as are available are encouraging. A rise in earnings which has doubled the amount available for the ordinary shares of Eastwoods, for the year to March 31st last, is attributed by the directors to "expansion of trading in all departments." An increase in Pinchin Johnson's interim dividend, for the current year, from 6 per cent. to 7½ per cent., has been coupled with the announcement of a "record" tonnage output.

If the share market, therefore, has reason to discount higher profits for 1934, special interest attaches to the figures in the above table, which bear on the question how far the leading companies will be able to finance higher activity out of their own resources. The conclusions suggested are, on the whole, reassuring. The past financial policy of the majority of companies has been conservative, if allowance be made for the fact that holding companies, like Associated Portland Cement and London Brick, may tend to leave a certain proportion of "group" earnings in the accounts of their subsidiaries. During the last three years "free reserves" have shown a gradual but perceptible tendency to expand, and improving profits, in the latest period, have not been accompanied by a corresponding reduction in net current assets. The value of stock-in-trade has tended, for the most part, to fall rather than to rise. It may be concluded that the position of most companies is sufficiently liquid to permit of further expansion in trading without recourse to considerable external accommodation.

Although the equity shares of these companies are standing at prices, to-day, which are anything from twice to four times as high as those touched in the nadir of depression, they are slightly below the highest points reached during the last seven years:—

ORDINARY SHARES

Company	Share and Denomination	Highest Price, 1928-34	Lowest, 1928-34	Price, Aug. 29, 1934	Yield at Present Price (%)

(a) (1928) Right to one new share in four at £2. (1929) Bonus, one new for three held and £1 shares subdivided into 10s. shares. (1930) Bonus one new for ten.
(s) Based on dividend of 15 per cent. Interim dividend of 7½ per cent. just declared against an interim dividend of 6 per cent. a year ago.

Public interest is concentrated mainly on the probable level of forthcoming dividends. In view of the encouraging results so far announced, the admittedly strong showing of the indices of production, and the relatively satisfactory "earnings yield" still obtainable on many shares, it may be arguable that equity quotations for the best companies are not unreasonable, at a time when sound dividend-paying shares in other industries are on little more than a four per cent. basis. Values may even rise further between now and the publication of forthcoming reports, if the market for industrial shares as a whole remains firm in the meantime.

Without disparagement, however, of the very satisfactory progress of the building trades during recent months, the prudent investor may find it advisable to enter more than one caveat against unbridled optimism. In the first place, the building industry has been helped by abnormally dry weather during the last two summers and the intervening winter. In the second place, the strong organisation of certain industries producing materials for building and decoration is scarcely paralleled by the building trade itself. The buying of materials by many local builders is notoriously unscientific, and eagerness to replenish depleted stocks (which produced in certain areas, for example, something like a brick famine, earlier this year), may have tended to give an exaggerated impression of the permanent dimensions of future demand. Thirdly, conspicuous prosperity invariably encourages new competitive producers who may ultimately, under a regime of "over-production," become weak sellers. The chairman of London Brick took occasion, a few months ago, to warn shareholders that the plethora of new brick company flotations might have as its sequel a period of unsettled conditions. The cement industry, whose history since the beginning of this century has been a record of successive attempts to overcome endemic competition by integration of production, has lately achieved a measure of price control, which has certainly improved its profit-earning outlook in the near future. Whether it has permanently solved the industry's perennial problem, however, may be questioned. Finally, it remains to be seen if the due adjustment of the volume of building to the national needs, particularly of small dwellings to be let at a low economic rent, can be achieved without an ultimate reduction in the prices of essential materials.

INVESTMENT NOTES

Course of Share Values.—Externally and superficially the course of share values in London and New York was broadly similar during the past month. Though the volume of dealings was strictly limited in both countries the downward tendency in quotations was definitely arrested. By the end of the month, average quotations had more than regained the ground lost during the July

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS.

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

recession in London, and had recovered the greater part of their July losses in New York, as the annexed chart reveals. The underlying conditions in the two centres, however, were by no means identical. As we suggested in our review of British industrial share prospects a week ago (see the *Economist*, August 25th, page 364), the market has been influenced by the view that revival in industrial activity during the last couple of years has lately been

checked, but not completely arrested. Meanwhile, the pressure of low interest rates, and the realisation that the fruits of increased activity have yet to be reaped in higher dividends, have sufficed to restore share values, after a technical reaction, to what, since the beginning of this year, has appeared to be the point of "dead-centre." In America, by contrast, the trend both of industry and equity share values has recently been unmistakably downward, and the August recovery, such as it has been, appears to reflect hope rather than conviction of an autumn trade revival. The President's silver policy has encouraged the expectation in some market quarters of fresh currency experiments, which, as Major Angas has insisted *ad nauseam*, would be calculated to drive "currency-quakers" into equity shares. Whatever may be ultimately decided on, however, present indications suggest that the Administration will be on good behaviour until its heavy autumn refinancing arrangements have been carried through. Meanwhile, there is little prospect that American industry will be relieved of its heavier cost burden under N.R.A., or will be in a position to make any spectacular dividend showing. In Great Britain there is no sign of any break in the cheap money regime. Yields on fixed-interest securities tend, if anything, still to fall, while demand for particular equity shares or groups of shares is mainly determined by "specialised" considerations, as the following table suggests:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Year Ago (Aug. 29, 1933)	Month Ago (July 31, 1934)	Present (Aug. 28, 1934)	Year Ago (Aug. 29, 1933)	Month Ago (Aug. 29, 1934)	Present (Aug. 28, 1934)
Fixed Interest:						
British Government (2)	121.6	129.9	130.2	3.54	3.32	3.31
Miscell. Indus. Debenture (12)	116.9	121.0	122.1	4.58	4.15	4.12
Ditto, Preference (42)	107.4	113.6	115.1	4.66	4.48	4.42
Ordinary:						
Building Materials (4)	70.7	80.1	84.5	3.76	4.21	4.12
Cotton (6)	57.5	44.4	46.6	2.18	2.27	2.27
Iron and Steel (6)	49.2	50.9	51.2	1.89	1.22	1.22
Oil (5)	67.6	59.6	62.6	3.46	4.93	4.69

Breweries and Distilleries (16)	85.8	110.2	113.4	4.81	3.93	3.89

The index for the whole 144 ordinary shares in the Actuaries' sample stands at 71.2, against 69.3 a month ago, and 69.0 a year ago. The corresponding yield figures are 3.68, 3.76 and 3.62 per cent., respectively.

British Firms and American Taxes.—Despite press headlines, the demand of the United States Treasury from British financial houses and institutions for a return of income obtained in the United States, between 1929 and 1933, is unlikely to provoke even a mild storm in the City teacup. Under the American tax law, income derived from security market operations is liable to tax, whether the recipient is domiciled in America or not—though in the latter case, naturally, collection at the source may be impossible. Since the "crash" of 1929 the Washington Treasury's rights in this respect have been allowed to fall into desuetude, for obvious reasons. During the last few weeks, however, the officials, apparently out of departmental zeal, have been transmitting requests for returns to overseas banks, trust companies, insurance companies, stockbrokers, etc., with the object of catching up arrears. The legal right of the Treasury is indubitable, but whether the results of this stirring of the waters will be at all commensurate with the trouble involved for both parties may be questioned. The labour of analysing the nature and results of every transaction undertaken by an arbitrage house, a stockbroking business, or a "bank" (in the widest sense of the term), during the last five years, on behalf of itself and every one of its clients, will be immense. Whatever "jobbing profits" may have been made in the interim, the fact that American share values, which, according to the Standard Statistics Index, touched 228 in 1929 (1926 = 100), are now standing at only 69, suggests that the "set off" by way of capital losses may well deprive the American Treasury of any commensurate

return. In any case, the institutions concerned, and their British clients, are outside the penal sanctions of the American tax system. They cannot, like Al Capone, be compelled to meditate on their misdeeds in a penitentiary, and any widespread endeavour to collect the money from their New York connections and agents would produce a good deal of friction and very little cash. It might also tend to drive future dealings, to an appreciable extent, from New York to London. Meetings of interested members of the London Stock Exchange have been held, with the object of arriving at a common policy, and it remains to be seen whether friendly discussions with the American authorities will produce agreement on a line of policy satisfactory to both parties. In some quarters, indeed, the action of the American Treasury is regarded largely as a gesture to maintain an unquestioned legal right for possible future action, without undue insistence on what is past and gone.

Drawings of I.F.S. Land Bonds.—Some little concern has been caused in the gilt-edged market by the announcement, a few weeks ago, by the Irish Free State Ministry of Finance, of an unexpectedly large drawing (to take place on October 15th) of Irish Free State 4½ per cent. Land Bonds, which are guaranteed as to principal and interest by the British Government and are therefore a trustee investment. These bonds were issued to the amount of £25,297,463 (of which £24,875,732 were outstanding on January 4, 1934) in 1926 and subsequently, under the Land Act of 1923, the Land Bond Act of 1925 and the Land Acts of 1927, 1929 and 1931, in consideration of the purchase of tenanted holdings in the Free State. Under the terms of issue, as stated on the certificates, the bonds are redeemable by means of a Sinking Fund (understood to amount to ¼ per cent.) sufficient to provide for the redemption of the whole issue not later than December 18, 2004. The Sinking Fund was to be applied by drawings at par about October 15th in each year from 1926 for repayment in the following January, but the Ministry of Finance has the option of redemption at any time after the expiration of thirty years from the date of issue. No drawings have yet taken place, the reason, it is understood, being that sufficient bonds have hitherto been surrendered in satisfaction of death duties or in redemption of land purchase annuities. Now, however, has come the announcement of a drawing, on October 15th next, of no less than £300,000 to £350,000 of bonds. It has further been intimated by the National City Bank (Dublin), the paying agents, that the drawing will be applied, not to the whole £24,875,000 bonds outstanding, but only to about £14,000,000 bonds in the hands of the public. These two pieces of information suggest several perplexing queries, to which the London market is unable to give satisfactory answers. How is it, in the first place, that the Sinking Fund available is so large? The National City Bank, in a

letter to a firm of stockbrokers, say that the sum available "is made up out of the Sinking Fund accrued in 1933 and 1934, together with moneys received from purchasers on sales of Land Bonds and for redemption of annuities." They add that, in the coming four or five years, the drawings should average £110,000 to £120,000. According to the Stock Exchange Official Year Book, however, bonds surrendered in satisfaction of death duties or in redemption of land purchase annuities must be redeemed before any drawn bonds. How, then, are there proceeds of such surrenders available to meet the forthcoming drawing? And why is the drawing to be applied to only £14,000,000 of the £24,875,000 bonds outstanding? A full explanation of these points by the Free State Ministry of Finance would be welcome, since the holders of drawn bonds suffer a capital loss and are naturally desirous of knowing, both as regards this and future years, the exact procedure to be followed. The bonds, which have been as high as 112 this year, have fallen to 107. The latter figure is some 6 points lower than the current price of the similar Northern Ireland 4½ per cent. bonds, which are immune from drawings but are only guaranteed as to interest (not as to principal) by the British Government. As even this year's exceptional drawing represents no more than 2 to 2½ per cent. of the bonds subject to it (involving a risk of loss worth only a few shillings per cent.), the fall is certainly overdone, but that is a common result of uncertainty. The issue, incidentally, is one whose service the Free State Government has not questioned. It is one of the queer ironies which are not infrequent in the world of investment, that holders appear to be coming off worse than if default had occurred and the British Government been called upon to implement its guarantee.

* * *

Rubber Share Activity.—The maintenance of the London price of rubber around 7½d. per lb. has been associated with sustained demand for rubber shares, which has been concentrated mainly on the issues of the larger and better-known companies. The market is not particularly well supplied with shares, and for the present all stock which is likely to become available will probably be readily taken up. At the current level of values, many shares offer a meagre income return even on the basis of 7½d. rubber, and the market would appear to be looking for a considerably higher price during the winter of 1934-35. The International Committee has fixed export quotas at 90 per cent. for August and September, 80 per cent. for October and November, and 70 per cent. for December. Whether the price will lengthen as restriction strengthens, however, has yet to be seen. The present quotation is standing at approximately the level described as reasonable by Mr J. G. Hay immediately after the announcement of the scheme. If it has risen, say, to 9d. by the end of this year, the policy of the International Committee as regards quotas for 1935 will be particularly significant. Will the Committee be content with a price of 7d. to 8d., which is approximately two to three times the cost of production on efficient estates, or will they follow the example of the International Tin Committee and seek to maintain a level which has no relation to economic costs? All calculations for the immediate future, however, must necessarily be tentative. The absorption of rubber by America, who is still the world's largest consumer, is in the main a function of the national prosperity, and America's trade position has shown indubitable signs of deterioration in recent weeks. Though it is early as yet to rule out the possibility of an autumnal recovery in the United States, the International Rubber Committee may well decide to proceed with caution, if they continue to regard the encouragement of maximum rubber consumption, at a fair price to the grower, as the main object of the scheme.

* * *

Building Society Policy.—The "bad money" problem, which threatened the majority of building societies with unwanted and volatile funds when interest rates fell abruptly during 1932, has become less formidable

during the current year. The building boom (which is discussed in a leading article on page 405) has been staged largely on decreasing costs of dwelling houses, and the attractive prices now prevailing have apparently tapped a new stratum of demand. It would appear that the societies are transacting an increased proportion of mortgage business in the £400-£600 classes, which make considerable appeal to the artisan. Something resembling at least a temporary equilibrium has thus been achieved between the influx of new funds and the level of advance business, and the majority of societies have taken steps to relax the more stringent provisions which were forced upon them by the rapid increase in investment receipts two years ago. The present position for thirteen leading societies is set out in the following table:—

Society	Interest Rates			Restrictions on New Business	
	Paid to Depositors	Paid to Shareholders	Charged to Mortgagees	Deposits	Shares
Halifax—Abbey Road—London Group	(%)	(%)	(%)		
Halifax	3	3½ (a)	5 (b)	Maximum £4,500	Maximum £100 (in £10 shares)
Abbey Road	3	4 (c)	5 (c)	Maximum £5,000	Maximum £50 new, £250 old shareholders (f)
Co-operative	3	3½	5 (e)	Maximum £5,000	Up to £5,000.
National	...	3½ (h)	5 (b)	No deposit business	Maximum £500 new, £1,000 old members.
Westbourne Park	3	4	5	£4,975 limit	Issue suspended.
Woolwich	3 (j)	3½ (i)	5	£3,000 limit Savings Bank Dept. Deposit Bonds now closed	£1,000 new shares (Class D2). Old shares (Class D) now closed.
Other Societies:					
Bradford Third	3	3 (r)	5	£500 per annum	£100 per annum.
Huddersfield	3	3½	5	Up to £5,000 only	Temporarily closed (u).
Leicester Permanent	3 (s)	3½	5	Up to £4,750	Issue suspended.
Burnley	3	4 (o)	5	Up to £500	New accounts £250. Old accounts closed.
Bradford Second	3	3½ (p)	5	Up to £100	£100 only.
Leeds Permanent	3	3½ (q)	5	Up to £2,500 in any one month, with maximum £4,850	(g)
Northampton	3	3½	4½ (t)	Maximum £4,750	New and existing shareholders limited to £20 per month.

(a) On regular savings—subscriptions for £120 shares, at 10s. every four weeks—3½ per cent. is paid, plus any bonuses declared at general meeting. (b) To occupier-purchasers of private dwelling-houses only. (c) On payments received before March 31, 1934. (d) On payments received after March 31, 1934. (e) From June 1, 1933, for owner-occupiers of private dwelling-houses only. Others pay 5½ per cent. (f) Members with accounts opened before July 11, 1932, may invest not more than £200. (g) On new mortgages to owner-occupiers. (h) On receipts after June 1, 1933. (i) On receipts after June 1, 1933. (j) On Savings Bank balances. (k) On Deposit Bonds, now closed. (l) On new D2 shares. (m) On old D shares. (n) Subscription shares at 3½ per cent. and yearly bonus restricted to 5 shares only. (o) On old shares. (p) On new shares, plus bonus if declared. (q) £1,000 may be invested in any one month at 3½ per cent. (r) Maximum rate allowed to limited companies is 2½ per cent. (s) Where security is within County of Northampton or 25 miles of head office. (t) Where security is outside this area. (u) Where security is outside this area.

The table shows that the London societies have increased the amount which they are prepared to accept on deposit towards the limit of £5,000, although in the case of Woolwich Equitable investments received in the savings bank department are restricted to £3,000. Among the provincial societies there is some irregularity of practice, and the Burnley society has recently reduced its limit on deposits from £1,000 to £500. At the present level of interest rates, a return of 3 per cent. free of income tax is undoubtedly attractive to investors, but in view of the continued restrictions on share receipts, which carry a higher rate, the interest differential of 2 per cent. on current business should be adequately remunerative.

* * *

Tea Share Outlook.—The impending sales of the new Ceylon tea crop in London are awaited with unusual interest in the market. Advices received from Colombo indicate that this season's crop will be sold at considerably better prices than those which prevailed last year. As we suggested in a Note in the *Economist* of May 26, 1934 (page 1152), the "concertina" feature is becoming increasingly evident. Common teas, which met a brisk demand last season, have made no further headway, the average for all Northern India sorts to date being 1s. 1.49d., compared with 1s. 3.56d. for the corresponding period last season. The averages for high-grade Ceylon growers are still running below last season's level, but the new sales

should help to restore the price differential between the common and good grades. Weather conditions this year have been very favourable, whereas heavy rains considerably affected the quality of last season's leaf. Although common to medium producers seem likely to maintain their revenues, blending teas should also begin to enjoy the fruits of restriction. There are signs that the public palate is increasingly rejecting coarse teas in favour of blends retailed from 2s. 4d. per lb. upwards, and this insistence upon quality should sensibly improve the demand for high-quality blending kinds. If, as seems probable, the export "allowables" are maintained at 87½ per cent. when the restriction provisions come up for consideration in November, earnings of producers in this class should show definite expansion in the future. On a long-term prospect the investment attractions of sound tea companies appear not unfavourable. Demand is steadily expanding from lower depression levels, and there are indications that consumption may improve in overseas markets. It is understood that important interests in the industry are once again concerning themselves with the potentialities of the Russian market, which in pre-war years consumed large quantities of high-grade teas. The achievement of satisfactory financial arrangements would be a bull point for tea shares, which have been a disappointing market for some weeks past.

* * *

Gold Shares and Sterling.—The weakness of sterling against the franc, and the consequent rise in the sterling gold price to over 140s. an ounce, have provided fresh opportunities for speculators in the Kaffir market. The reasons for this week's break in sterling and the future trend of the exchanges are discussed in a leading article on page 403. Until the exchanges achieve some semblance of stability, gold shares are bound to be a volatile market. To the extent that present activity "under the Dome" is dependent upon a falling pound, the possibility of a sudden reversal of the trend must be a bugbear to the hardest of short-term operators. For the long-period investor, the ultimate sterling price of gold is a matter of

crucial importance. That sterling has been subjected to speculative bear operations is indicated by the premium established on three months' francs, and a sharp reaction might follow a well-timed "bear squeeze" by the "Control." Moreover, short supplies of the metal from South Africa (as from India) in the bullion market have accentuated the weaker tendency of sterling, since the sterling proceeds of sales have usually been retained in London. This week's movements suggest that investors should pay even closer attention to the dollar than to the franc. Much of the speculative selling of sterling has been carried out on the assumption of an eventual devaluation of the dollar to the 50 cent limit, in which case, it is presumed, sterling would be allowed to follow the dollar and to depreciate in terms of the franc. The benefits of such a contingency for gold shareholders would be, partially at least, offset if a deterioration of the French political and economic situation during the winter were to induce a movement of funds from Paris to London. Altogether, while the market for gold-mining shares may be an intriguing field for the speculator, investors may prefer to avoid heavy new commitments until the fog has cleared in the foreign exchange market.

COMPANY NOTES

Domestic Appliance Companies.—The domestic appliance business covers a heterogeneous group of products varying from electrical and gas apparatus to baby carriages, and including a variety of patent devices for saving domestic labour. It is possible, nevertheless, to distinguish certain principles which should govern investment in the group. Potentially, every manufacturer of domestic appliances enjoys the advantage of the widest of markets—that of the housewife. Provided that the appliance is a genuine saver of labour, the pressure of the domestic servant problem provides adequate inducement to buy. In practice, however, a number of conditions

This notice is not an invitation to the Public to subscribe, and is issued for the purpose of giving information to the Public with regard to the Company. The Directors collectively and individually accept full responsibility for the accuracy of the information given. Permission to deal in the shares of this Company has been granted by the Johannesburg Stock Exchange and application for leave to deal on the London Stock Exchange is being made to-day.

VAN DYK CONSOLIDATED MINES LIMITED

(Incorporated in the Union of South Africa.)

Authorised capital: £2,500,000 in 5,000,000 shares of 10/- each nominal value.
Issued capital: £1,275,000 in 2,550,000 shares of 10/- each nominal value.

DIRECTORS.

PETER MALTITZ ANDERSON (Chairman), Manager of Union Corporation, Limited, Johannesburg.
VERNON JOSEPH RONKETTI, Assistant Manager of Union Corporation, Limited, Johannesburg.
JAMES SCOTT SINTON, Secretary of Union Corporation, Limited, Johannesburg.
BANKERS.—BARCLAYS BANK (Dominion, Colonial and Overseas), Johannesburg.
SOLICITORS.—MESSRS. WEBBER, WENTZEL, SOLOMON & FRIEL, Johannesburg.
AUDITORS.—MESSRS. WHITELEY BROTHERS, Johannesburg.
BROKERS.—MESSRS. KEITH BAYLEY & RIGG, London Stock Exchange.
SECRETARIES AND REGISTERED OFFICE.—UNION CORPORATION LIMITED, Johannesburg.
LONDON SECRETARIES AND TRANSFER OFFICE.—UNION CORPORATION LIMITED, Princes House, 95, Gresham Street, London, E.C.2.

AREA.—The total number of claims which will be held by the Company will be as follows:—

On lease from the Government	3,666 claims
Purchased for cash	1,664 "
Total consolidated area	5,330 claims

LEASE TERMS.—The Company is to carry on preliminary operations for five years or until £300,000 is exhausted if earlier, but such operations may be abandoned at any time, and the Company also has the right to abandon any part of the leased area. The share of the profits payable to the Government in respect of the leased area is to be calculated according to the following formula:—

$$Y = 19.06 \frac{381.30}{X} \text{ (minimum 5\%)}$$

where X is the ratio of profits (less amortisation of capital expenditure) to recovery expressed as a percentage and Y is the percentage payable to the Government. The working of the formula for the consolidated area is illustrated in the following examples:—

Ratio of profit (X)	Percentage of net profit payable to Government (Y)
Up to 25%	5.0%
25% to 30%	6.3%
30% to 40%	9.5%
40% to 50%	11.4%
50% to 60%	12.7%

The share of profits payable to the Government is reducible by any amount which may become payable as a result of any increase in the existing scale of taxation. The operations of the Company will be divided into two stages, the first or preliminary stage comprising the equipment and completion of some of the existing Vertical Shafts, the sinking of Incline Shafts and the carrying out of prospecting operations by means of ordinary development. If these preliminary operations justify the erection of a reduction plant, the second stage would comprise the carrying out of further development and the full equipment of the property, including the erection of a reduction plant of suitable capacity, which at present is estimated at about 800,000 tons per annum.

WORKING CAPITAL.—The financial arrangements will provide the Company with a working capital of approximately £711,900, which sum is considered to be sufficient to carry out preliminary operations.

MANAGEMENT.—The Union Corporation have been appointed Head Office Secretaries, London Secretaries, and Technical Advisers, with power to carry on the technical management of the Company.

must obtain before these advantages can be enjoyed to any large extent. Not only the appliance itself, but also its uses, must be known and appreciated before the market can be said to exist. "Selling the idea" to the "housewife market" is an expensive process. Secondly, since the simplest means of increasing sales appeal is, normally, to reduce the cost to the consumer, there is frequently strong pressure to cut prices, even when competitors are not numerous. Thirdly, since a large number of domestic appliance manufacturers do not specialise on one product,

but are constantly seeking to increase turnover by marketing new lines, the success of a new idea rapidly attracts competition. A domestic appliance share can be attractive to the conservative investor only when it is issued by a company working in a reasonably well organised trade, whose product and "idea" are well established. This narrows the choice so greatly that little is left outside the gas and electrical industries. In the case of the latter, the larger apparatus is usually a side-line of one of the great electrical manufacturers, while the smaller apparatus may include many profitable products, but is usually subject to considerable price cutting. Possibly, when a new product with obvious appeal is marketed by an affiliate of a powerful group (as in the case, say, of the Aga cooker) success and stability may be achieved early in the company's history. Such a conjuncture, however, is exceptional. On the whole, the domestic appliance trades are a *terrain* in which the investor would do well to tread with caution. Well-established companies like Radiation, Ltd., and United Gas Industries have shown successful dividend-paying ability, but the returns of most other companies, summarised in the annexed table, are eloquent of the liability of profits to wide annual variation.

* * *

Debenhams' Report.—The reconstruction scheme for the Debenhams group appears to have been both well planned and well timed. Broadly, it re-pivoted the whole organisation on a single concern, cut out much dead wood and cross-holdings, and reduced the total fixed-interest payments. As the scheme was sanctioned by the Court only on January 30th last, the apparent improvement in earning power disclosed by the report for the twelve months to July 31, 1934, must be attributed almost entirely to better trading conditions. The directors confirm this view by their reference to an increased volume of sales and profits. The scheme, however, has placed the company in a decidedly more comfortable position as regards its appropriation policy. The balance of profit and loss account for the year (after income tax) is £585,229, and the net amount available for shareholders, after adding transfer fees and deducting debenture service, is £439,740. The 6½ per cent. cumu-

lative first and second preference stocks take £270,000 between them, and are thus well covered. Of the balance, the 7 per cent. cumulative third preference shares would normally require £119,000 gross, but as these shares rank for dividend only from August 1, 1934, the company has carried forward £119,740, which is virtually the equivalent of one year's dividend on them, and placed £50,000 to reserve. On the basis of a normal year's dividend on all the preference stocks, the £500,000 of ordinary capital (in rs. shares) has earned the equivalent of 15½ per cent., gross. The present market price of 3s. 6d. for the rs. shares, therefore, appears to discount a further recovery in profits. The capital structure is still very highly geared, for £8,610,646 of debenture and cumulative preference capital ranks in front of £500,000 of ordinary shares. Every additional £10,000 in profits, before tax, is, in fact, equivalent to a further 2 per cent. on the ordinary shares. The company is adequately supplied with liquid resources, for investments and cash total £1,005,593, while debtors and creditors are approximately in balance. The company recently placed 600,000 £1 5 per cent. cumulative preference shares of its subsidiary Harvey, Nichols and Company, privately at 21s. 6d. per share. As shares in and current accounts with subsidiary companies account for £4,915,350 of a balance-sheet total of £11,479,751, the provision of a consolidated balance sheet would be appreciated.

* * *

Eastwoods' Results.—Increases of approximately 100 per cent. and 50 per cent. in the trading profits of Eastwoods Cement and Eastwoods Flettons (which were discussed in the *Economist* of July 21st last, page 125) prepared the market for a satisfactory report by the parent company, Eastwoods Limited, for the twelve months to March 31st last. Results bear out anticipation, for trading profit, at £91,871, shows a rise of 47 per cent. as compared with the previous year, while earnings available for the £300,000 of ordinary share capital have more than doubled. The increased total dividend of 12½ per cent. (against 7½ per cent.) is covered by earnings of nearly 23½ per cent.

The directors' report contains the satisfactory intimation that the recovery in profits is due to expansion of trading in all departments of the company's activities. In other words, it reflects the increased *tempo* of the building trades as a whole, whose implications for "supply" companies are discussed in a leading article on page 405. The price agreement in the cement trade came too late to affect the results for last year. The expansion in the parent company's activities has not involved any reduction in liquidity, but rather the reverse. Holdings of cash and gilt-edged securities have increased from £122,000 to £150,000, but "current" items show a rise commensurate with the higher volume of activity, debtors having increased from £98,000 to £143,000, while creditors (including taxation and sundry reserves) stand at £120,000, against £87,000. The balance sheet position grows stronger each year as a result of the steady ploughing back of profits. Following the example of other progressive concerns, the directors have supplemented their report with an informative booklet describing the company's history and activities. The shares have risen from 49s. 6d. to 51s. 3d. on the publication of the report. At the latter price, allowing for a final dividend of 10 per cent., they yield £5 rs. 6d. per cent. on the last dividend, and as much as £9 10s. per cent. on earnings.

Other Company Results.—Excluding Eastwoods and Debenhams, whose results are discussed in preceding notes, only five profit and loss accounts are summarised in our usual table on page 423. Of these, Wardle and Davenport, in the textile section, have shown a satisfactory recovery in profits during the year to June 30th. Net earnings are shown at £22,786, compared with £13,855 for the previous year, and the dividend has been increased from 3½ to 4 per cent. tax free. J. and F. Stone Lighting and Radio, Limited, which was formed in February this year, has reported net profits of £8,004 for the half-year to June. The prospectus showed profits for the previous six months of £15,383, but this figure was subject to bank interest, proprietors' remuneration, depreciation and leasehold amortisation. The first dividend of 2d. per share is equivalent to 10 per cent. per annum. This week's dividend announcements testify to the rising trend of industrial profits. Pinchin, Johnson have announced an interim of 7½ per cent., less tax, comparing with 6 per cent. a year ago, and it is stated that sales for the first six months of this year show a substantial increase, while tonnage output constitutes a record, and net profits reveal a satisfactory increase. The directors of Staveley Coal and Iron recommend a final dividend of 4 per cent., making 6½ per cent., tax free, for the year to June 30th, the highest dividend since 1926-27, when 7½ per cent. was paid. Wiggins, Teape and Company (1919), who adopt the commendable practice of issuing quarterly results, have announced estimated profits, after depreciation, of £174,385 for the half-year to June, which compares with £162,589 for the first half of 1933. The net balance, which is struck after debenture interest and preference dividends and provision of £17,776 for subsidiary companies' losses, amounts to £74,029, compared with £80,009 last year. This week's Stores interim dividends, like earlier declarations, are unchanged; Peter Robinson are to pay 1 per cent., and Maple 2½ per cent. "Ye Mecca" profits for fifteen months to March 31, 1934, at £61,716 compare with £62,516 for 1932. Leigh Mills profit for year to July 31, 1934, was £30,382, compared with £22,829, and the dividend is raised from 7½ per cent. to 10 per cent., tax free.

the Southern, but showed the expected falling away on the two "heavy" lines. Little interest was taken in London Transport stock, despite a good week's traffic takings. Foreign rails were quiet, but Argentines held their ground. The latest traffic figures were interpreted more encouragingly, the Central Argentine achieving a "plus" in its "sterling equivalent" receipts for the first time. Brazilian rails were steady, with a strong demand for Leopoldina 4 per cent. debentures.

The industrial share market experienced no appreciable increase of business, but the appetite for increased dividends, present and to come, produced a little semi-professional activity in individual shares. Companies concerned with the building trades (whose prospects are considered in a leading article on page 405) were a prominent example of this tendency. Pinchin, Johnson were firm on the increased interim dividend, which was up to best market expectations, and other paint shares were in request. The Eastwoods results (summarised on page 410) stimulated interest in brick and cement propositions. The increased Staveley dividend performed the same service for iron and steel shares. Allied Ironfounders, being concerned both with the iron and building trades, were in demand in mid-week. Electrical equipment shares gained a little ground on favourable trade reports, while electric supply shares were quiet but steady. Motor shares showed some irregularity. Store shares were moderately favoured, though Woolworth, exceptionally, were depressed by profit-taking after their recent sharp rise. Textile shares were a quiet market, with a firm undertone. J. and P. Coats advanced, and buyers of Patons and Baldwins were in evidence on the firmer tendency of wool prices. Rayon shares became easier after a firm opening, though Wardle and Davenport improved on the moderate increase in dividend. Brewery shares had an easier appearance, and tobacco shares attracted less interest than in previous weeks. Bank shares showed few changes, but were firm generally. Insurance shares continued to receive quiet investment support.

The oil share market opened quietly, but showed increased strength in mid-week, despite the fact that Paris was a seller of many leading issues. Royal Dutch succeeded

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET September 11	ACCOUNT September 13
------------------------	-------------------------

To the August mixture of holidays, American uncertainties and European politics was added another market ingredient this week, viz. sterling weakness. Gilt-edged, abandoning traditions of the days when the pound was on gold, were firm. Industrial shares pursued their even tenor, with a few "features" but no general advance or decline, and no increase in the volume of business. The market for gold-mining shares, however, after looking its latest gift horse in the mouth for the best part of a week, could not resist a sterling price, on Thursday, of 140s. 3d. for gold, and displayed sizeable activity.

Though the turnover in the gilt-edged market was comparatively small, prices had a strong appearance during the greater part of the week. Four per cent. Funding Loan, which is free of British income tax to foreign holders, reached a new high record, and War Loan was well supported. Canada 3½ per cents. made a sharp advance, and Australians improved after a shaky start on nebulous fears regarding the elections.

Brazilians again opened firm and strong, but later became subject to profit-taking. German bonds were weak, and Central European issues generally were affected by the occurrence of political "scare" news. Japanese bonds were neglected and Chinese also tended to lose ground.

Home railway stocks were easier, partly owing to fears of the implications of a deadlock in South Wales. The week's traffic returns maintained the satisfactory showing of the previous week's figures on the Great Western and

You Can Be
Sure of
Shell

in holding a fairly sharp rise, but Shell tended to ease after initial strength. Rubber shares opened cheerfully, weakened slightly on Tuesday, and subsequently resumed their upward movement. Buying was concentrated mainly on the so-called "investment" shares, and was limited by the conspicuous absence of floating supplies in the market. Tea shares remained dull in sympathy with disappointing conditions at the Mincing Lane auctions. Though liquidation was not heavy, prices proved sensitive, particularly in the Indian group.

Although Kaffir shares were firm from the outset, dealings were not extensive during the first two days of the week, when the sterling price for gold actually declined by a few pence. Wednesday's weakness of the pound against the franc, however, resulted in a gold price, next day, above the £7 touched last February, and Kaffir prices quickly responded to professional demand. Most shares of producing companies made a satisfactory showing, but the newer undertakings claimed the lion's share of speculative interest. In the West African market Ashanti continued to advance, and Wiluna were higher in the Western Australian section. Rhodesian shares were steady on a few buying orders. Although the decline in the price of tin was arrested, business in tin shares was on a meagre scale, and no important price changes were recorded.

FOREIGN STOCK EXCHANGES

NEW YORK

THE market has made little progress this week, under the influence of N.R.A. rumours and counter-rumours, and the serious situation in the textile industry. The reported victorious emergence of General Johnson from last week's discussions on the future of the Recovery Administration has caused little stir in Wall Street, although it apparently implies the re-grouping of the administration in order to secure more efficient supervision of the Codes. Market sentiment has, accordingly, continued bearish. Stocks fell two points on Monday, rallied somewhat on Tuesday, but reacted later. Rail stocks have fallen slightly owing to anticipation that the petition for advances of rates will receive a hostile public reception. Government bonds have been slightly reactionary on balance, despite Mr Morgenthau's announcement that devaluation profits were ultimately to be used for debt reduction, and the President's emphatic denial that inflation was in immediate prospect.

The course of the bond market is being eagerly studied in view of the large refunding operations on September 15th and October 10th. Among foreign bonds, German issues have again fallen on Dr. Schacht's speeches, but South American issues have enjoyed some speculative support. Steel activity has declined from 21.3 to 19.1 per cent. of capacity and the market is not disposed to commit itself, one way or the other, on the prospects for the autumn revival, although it is showing increasing concern regarding the labour situation. It was officially announced on Tuesday that the merger of Republic Steel Corporation and Corrigan, McKinney Steel Company had been approved. The total assets will amount to \$323 millions, and the steel ingot capacity will total 6,000,000 tons annually.

* Two-hour Session.

PARIS

Business expanded as the week progressed, and Wednesday's lists showed satisfactory improvements in most sections. Renten and bank shares were well supported, and favourite international counters, such as Royal Dutch and Suez Canal met with steady inquiry. In the industrial section, considerable selling of Chargeurs Réunis occurred. On the Parquet, diamond shares made small signs of recovery, but the market evinced little interest in gold shares.

BERLIN

Sharp advances in industrial shares took place late last week and early in the present week. Potash, engineering, paper and steel shares in the Vereinigte Stahlwerke group were most favoured. Feldmühle Paper reached 120. Heavy buying was recorded in Westdeutscher Kaufhof (formerly Tietz), which recovered to 27 (lowest level 10), on report of better department-store business. Stoehr Wool and some other textiles gained substantially, and Mannesmann was also bought. Tuesday's share market brought further gains, with some reactions towards the close. Home bonds improved somewhat, while certificated and converted dollar bonds were steady.

AMSTERDAM

A steady opening developed into cheerful trading on Tuesday, but thereafter the Bourse became irregular and uninspired. Among industrials, Philips' Lamps and Unilever N.V. were in good demand, although the former reacted in later dealings on Wednesday. Tobacco shares were active on favourable crop indications, and rubber shares, under the lead of Amsterdam Rubber, maintained a consistently firm tone. A keen demand for Royal Dutch was reported on the somewhat opportunist reason that good profits would be realised on the group's silver holdings. Sugar shares were firm, but Billiton Tin fell steadily.

BY STOCK EXCHANGE INTRODUCTION

Gabriel Wade and English, Ltd.—Particulars of issued capital, 250,000 6½ per cent. cumulative preference shares of £1 and £331,000 ordinary stock. Formed April, 1919, to acquire timber merchants' businesses in London and provinces. Net profits for years to May 31st have been: 1932, £37,347; 1933, £35,359; 1934, £75,831. Total assets at May 31, 1934, £830,417, include goodwill £50,000, properties and plant £237,596, subsidiary companies investments and loans £57,518, stocks £235,742, debtors £197,146.

Rand Leases (Vogelstruisfontein) Gold Mining Company, Ltd.—Issued capital, 2,900,000 ordinary shares of 10s. each and 100,000 management shares of 10s. each, fully paid. Company formed September, 1933, in South Africa, to acquire compact mining area of 1,933 claims, 1,422 being leased from Government. Contracts being placed for plant and shaft equipment for output of 100,000 tons per month. The estimated life is twenty years, and on minimum recovery of 5 dwts. per ton, with gold at 136s., return would be 34s. per ton. Costs estimated at maximum of 20s. per ton, and gross profits at £840,000 per annum. Properties acquired for £140,000 and undertaking to retransfer approximately 57 claims to a vendor without payment if abandoned.

Van Dyk Consolidated Mines, Ltd.—Issued capital, 2,550,000 shares of 10s. each, fully paid. Incorporated in South Africa on June 30, 1934, and acquires benefit of agreements to acquire (1) 973 claims from Van Dyk Proprietary Mines for £251,500 cash, subject to vendors subscribing for 500,000 shares at par, and to right to offer 500,000 shares to its shareholders; (2) Government mining lease, over 1,808 claims; (3) Cancellation of debt of Van Dyk Proprietary to Union Corporation of approximately £250,000, and of share option against payment of £125,000 to Union Corporation; (4) 691 claims and Government mining lease over 1,858 claims from East Vogelfontein Exploration (Proprietary) for £150,000 in cash, subject to subscription of 300,000 shares and right to subscribe for further 300,000 shares; (5) Union Corporation guarantees subscription of shares as above, and subscribes for 950,000 shares at par. Preliminary vertical and incline shaft sinking is being carried out, and reduction plant of 800,000 tons p.a. capacity will be erected if preliminary work is satisfactory.

ISSUES TO SHAREHOLDERS ONLY

Hevea (Johore) Rubber Plantations, Ltd.—Hevea (Johore) Plantations, Ltd., is about to offer to its shareholders 422,040 ordinary shares of 2s. each for subscription by way of "rights" at the price of 2s. 6d. per share. The list of subscriptions will close on September 5, 1934, after which date the right to subscribe lapses and no application for shares can be accepted.

Oceana Development.—The directors have decided to offer, in the proportion of one share for every five shares held on August 8th, 87,880 shares of 5s. each at 20s. per share. The full amount may be paid up on application. Fractions of shares will not be dealt with.

Rhodesian Corporation, Ltd.—Rhodesian Corporation, Ltd., is offering for subscription 1,466,666 shares of 5s. at 7s. 6d. per share, payable in full on application to shareholders registered August 3rd, in the proportion of one share for every three held. Application forms must reach Barclays Bank (Dominion, Colonial and Overseas), Circus Place, Finsbury Circus, E.C., not later than September 8th.

Gold and General Investment Trust.—The directors have authorised an issue to shareholders registered on August 31st of 55,000 £1 shares at 22s. 6d. per share, in the proportion of one new share for every share held on that date. Letters of right will be posted to shareholders on August 31st, and the list of applications will close on September 29th.

OFFERS ABROAD

Province of Ontario.—A loan is being offered in Canada by a syndicate for \$37,500,000 in the form of 2½ per cent. internal bonds maturing one year to five years inclusive, yielding from 2.60 per cent. to 2.95 per cent. respectively, according to term.

CONVERSIONS AND REPAYMENTS

New Crocodile River (Selangor) Rubber.—This company proposes to redeem the £50,000 outstanding 7 per cent. debenture stock on November 30, 1934.

Pullman Car Company.—This company is to redeem the whole of the outstanding 6 per cent. notes on November 23rd at 102 per cent.

Santa Marta Railway.—Outstanding 6 per cent. debentures will be redeemed at par on December 1st.

Odham's Properties.—It is proposed to replace the existing £679,015 of 7 per cent. first mortgage debenture stock by an issue of £736,000 5 per cent. debenture stock at par, redeemable at 102½ per cent. on or after January 1, 1933, the company having the option to redeem at 102½ per cent. after January 1, 1942. The old stock is redeemable on or after January 1, 1937, at 102½ per cent., and, if the proposal is accepted, the stock will be redeemed on or after January 1st next at 106½, the extra 4 per cent. being compensation to holders.

Proprietors of Fletcher's (Meat Importers).—Holders of the first mortgage debenture stock, of which £68,195 is outstanding, have been notified that the company intends to redeem all the stock on March 1, 1935. The company is prepared forthwith to purchase any holding of debenture stock at par. The offer is open for acceptance up to September 30, 1934.

FORTHCOMING ISSUES

Northern Industrial Dwellings.—It is expected that a new issue of capital will be made during the next few days.

John Ismay and Sons.—An extraordinary meeting is to be held on September 5th to consider a resolution to increase the capital to £300,000. This is to be effected by the creation of 100,000 6½ per cent. cumulative preference shares of £1 and 1,000,000 ordinary of 1s. It is not proposed to issue the whole of the new shares in the near future.

RESULTS OF ISSUES

Patent Paper Packing (Foreign) Ltd.—The list was closed on August 29th, and allotment letters have been despatched. 226,000 shares have been applied for.

Stretford Corporation 3½ per cent. Loan at par.—List closed 10 a.m. on August 27th.

CALLS DUE SEPTEMBER 3 TO SEPTEMBER 8, 1934

The grand total of calls falling due in September, 1934, is £4,766,761, which compares with £25,747,684 which fell due in September, 1933. The following calls fall due from September 3, 1934, to September 8, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 25, 1934, amounted to £10,411,000, against ordinary expenditure of £6,546,000. After allowing for an increase in Exchequer Balances of £193,092 the operations for the week, as shown below, decreased the National Debt by £3,527,000 to approximately £8,067 millions.*

(000's omitted)	
Public Department Advances.....	+ 10,700
Treasury Bills.....	- 13,402
National Savings Certificates ...	- 100
P.O. and Telegraph capital expenditure	- 200
N. Atlantic shipping issue.....	- 525
	- 14,227
+ 10,700	

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

In spite of the threat of a stoppage, the view is held that a settlement will be reached before the end of the month. Meantime, however, it is feared the uncertainty may prejudice forward trade. Prompt business for steam coals is fair, but apart from the low volatile grades all classes are plentiful. The anthracite trade mainly volatile grades all classes are plentiful. The anthracite trade mainly volatile grades all classes are plentiful. The anthracite trade mainly volatile grades all classes are plentiful.

IRON AND STEEL

MIDDLESBROUGH.—Work has been resumed at the foundries and steel works this week, and the demand for pig iron shows signs of improving. A large portion of the pig iron produced locally is for consumption in producers' own steel works, whilst for foundry pig iron there is a better demand both locally and by Scottish consumers. Prices are maintained to home users on the basis of 67s. 6d. per ton delivered locally for Cleveland No. 3. East Coast hematite is being sold to home users on the basis of 68s. delivered Middlesbrough for No. 1 quality.

In spite of the exchange difficulties, further parcels of iron have been sold for export, shipments having been made this week to Sweden and Denmark. Makers have free hands to quote for export business, but are not inclined to reduce prices to too low a level.

Shipments of all classes of pig iron from the Tees between August 1st and August 28th amounted to 13,217 tons against 7,385 tons to the same date in July.

Blastfurnace coke is firm at 20s. per ton delivered at the furnaces here, whilst foreign ore remains based on best Bilbao rubio ore at 17s. per ton c.i.f. Middlesbrough for prompt delivery, and there are more enquiries for forward delivery, for which sellers are asking higher prices.

The steel departments have accumulated a fair number of orders during the holiday last week, and are fairly well employed, but more orders would be welcomed in the shipbuilding department.

Heavy steel scrap remains at 50s. per ton delivered works here.

SHEFFIELD.—The position in most departments of the steel trade is less favourable. A considerable number of operatives who were suspended at the August Bank Holiday are still unemployed. Firms report some shrinkage in the volume of orders, and plants are not working nearly so actively as before the stoppage. The unemployment

position is not so good as a year ago. The trade as a whole, however, is confident of an ultimate revival, the lull being attributed to the fact that more time is being devoted by responsible works officials to holidays than was the case last year and the previous year.

Several sections of the trade are maintaining full capacity. There is a better outlook for rolling stock for overseas markets. Requirements of the home railways have fallen off. Good business is being done in steel and tools with builders of commercial motors. This is the quiet season in the construction of touring motors, but sales at home and abroad keep at a high level. Business with shipbuilders remains as stagnant as ever. Expansion is still the rule in special corrosion-resisting steels, and valuable orders are on hand for hollow forgings of large capacity. The tool factories are fully employed on files, engineers' small tools and mechanics' tools of all kinds, exports tending to expand. The cutlery and plate trades are moderately employed. Exports of Sheffield goods to India, Scandinavia and Holland are growing, but shipments to most other foreign countries are down.

GLASGOW.—While there is no marked improvement in conditions in the West of Scotland iron and steel trades, the tendency is towards betterment. During the present week buyers are more numerous and more disposed to place orders for forward delivery. Nearly all the steelmaking plants are fully employed and have work on hand to keep them so for some weeks. Makers of semis, though not so well placed, are continuing operations at recent levels, and there is a steady demand. Sheet makers are still unable to find sufficient work to keep all mills running, but home demand continues to be highly satisfactory and export business shows signs of revival. Tube makers are also busy in most sections. Business is still scarce in the steel bar re-rolling industry and operations are continued on a very restricted scale.

CARDIFF.—The Welsh tinplate market remained firm, with prices ruling at 18s. per basis box, but makers are not pressing sales pending the receipt of revised conditions for trading under the international agreement. Order books are satisfactory over the next three months, and indications point to production remaining at 70 per cent. of capacity. Galvanised sheets are a shade better at £11 5s. to £11 15s. per ton, while Welsh bars are steady at £5 7s. 6d. per ton. Shipments last week amounted to 66,503 boxes as against 89,931 boxes in the previous week and 100,375 boxes a year ago.

OTHER METALS

The metal markets showed no important change during the week. Tin prices remained weak, but a further appreciable decline in quotations appears unlikely. Despite the increasing substitution of tin which is reported from various parts of the world, the International Tin Committee has the market still in its hands, and the policy of the restrictionists suggests that they are not anxious to see prices fall to a lower level. The United States as well as the Continent did not buy much this week, but new purchases will have to be made before long. In consequence of the small purchases during August, prospects for the new tin statistics, which are not available at the time of writing, are not good, but September should bring some improvement, as the stocks of consumers are now almost absorbed. On October 1st the reduction in the quota by 10 per cent. to 40 per cent. of the standard tonnages will come into force. It seems therefore that towards the end of the year there may be a shortage of tin on the market, the more so as the buffer-pool will become active during the next months.

The copper market was very quiet and prices moved within narrow limits. They are now a little over their lowest level, but as the price-depressing factors are not yet removed, the outlook remains rather obscure.

The market in lead and spelter did not change during the week, but there are some new features of long-term importance. According to the Metallgesellschaft (Frankfurt) the spelter output of the United States during July amounted to 22,628 metric tons, compared with 22,809 tons in June and 28,115 tons in May. The monthly average of 1933 was 24,547 metric tons. The refined lead production of the United States, which declined already during the last few months, showed in July (according to American reports) again a reduction from 33,200 to 31,900 short tons. Lead and spelter ores are the chief silver-bearing ores. It was therefore generally thought, towards the beginning of this year, that the silver policy of the United States would increase appreciably the lead and spelter output (at least in the United States). Developments indicate, however, that these fears were not well founded. The recent silver nationalisation order of the United States brings no new advantage to the silver mines. It is therefore not very probable that the silver policy will increase the lead and spelter production in future more than in the past. Of less favourable influence on the lead and spelter market are the German endeavours to increase her spelter and lead production. The increased subsidies have already led to an increase of the German spelter output during the first seven months of the present year. Production in this period amounted to 36,900 metric tons compared with only 27,900 metric tons during the corresponding period a year ago. During the next few weeks the new German zinc refinery of Giesche in Magdeburg will start production. The first ores are already on the way from Upper Silesia to the refinery. Moreover, from September 1st, Germany will pay a bonus (the height of the bonus is not yet fixed) to her producer for the increase if the home spelter and lead output. It is not yet possible to give a final judgment about the probable results of this new stimulus, as the result will depend on the height of the bonus. Theoretically, however, there must be an increase, despite the fact that the German spelter and lead capacity which is not used now is rather limited. From the point of view of the International Cartel

(Germany is a member of the International Zinc Cartel), this policy may lead to difficulties.

TIN.—Sales on the London Metal Exchange: 225 tons on Monday, against 100 tons last week; 185 tons on Tuesday, against 175 tons last week; 255 tons on Wednesday, against 225 tons last week. The New York quotation on Wednesday was 51.45 cents per lb., against 52.00 cents a week ago and 51.70 cents a month ago. Wednesday's official closing quotation in London for standard cash was £226 15s. to £227, compared with £226 5s. to £226 10s. last week. Stocks in London and Liverpool at the end of last week were 3,741 tons, a decrease of 61 tons on the week.

COPPER.—Sales on the London Metal Exchange: 525 tons on Monday, against 1,400 tons last week; 650 tons on Tuesday, against 1,450 tons last week; 475 tons on Wednesday, against 1,300 tons last week. Domestic spot was quoted at 6.87½ cents per lb. in New York on Wednesday, against 6.87½ cents a week ago and 7.02½ cents a month ago. Wednesday's official closing price for standard cash in London was £28 1s. 3d. to £28 2s. 6d., compared with £27 18s. 9d. to £28 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,683 tons, show an increase of 73 tons, and stocks of rough copper, at 7,042 tons, a decrease of 100 tons.

LEAD.—Sales on the London Metal Exchange: 250 tons on Monday, against 350 tons last week; 450 tons on Tuesday, against 500 tons last week; 1,100 tons on Wednesday, against 600 tons last week. The New York quotation on Wednesday was 3.70 cents per lb., against 3.75 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 13s. 9d. for shipment during the current month, compared with £10 15s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 200 tons on Monday, against 400 tons last week; 300 tons on Tuesday, against 200 tons last week; 50 tons on Wednesday, against 150 tons last week. Wednesday's quotation in East St. Louis was 4.25 cents per lb., against 4.25 cents the week before, and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 13s. 9d., for shipment during the current month, against £13 15s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 5s. to £11 10s. per flask of 76 lbs., as against £11 7s. 6d. to £11 12s. 6d. per flask of 76 lbs. last week. Foreign antimony was again quoted at £36 to £36 10s. per ton. Chinese wolfram, at 40s. to 41s. per unit, c.i.f., remains unchanged. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—There has been very little change in raw cotton prices during the past week. Demand from spinners has continued limited and the small sales have to some extent been accounted for by the Oldham holidays. Rather varied advices have been received with regard to the progress of the new crop in the United States. In certain districts the situation seems to have improved slightly, but the weather on the whole has not been favourable to the plants. It is anticipated that the United States Government estimate of the yield due on September 8th will be rather smaller than a month ago.

Although inquiry in piece-goods has been of fair extent, actual business has not broadened. According to mail advices from India, selling prices in the bazaars are below Manchester rates and replacement buying is therefore very difficult. Very little has been done for Calcutta, but some useful lines have been mentioned in light whites for Karachi and dyed goods for Amritsar. Operations for China have been confined to trifling lots of fancies. A miscellaneous business has been reported in bleachers for Egypt, finishing styles for South America and dress materials for South Africa. The Australian tariff question continues to excite considerable interest. Buying for the home trade has been restricted. Employers in Lancashire with narrow looms are badly in need of fresh orders.

In the yarn market the event of importance has been the agreement amongst spinners of coarse American counts. Rather more demand has been experienced in coarse wefts. Medium numbers in Egyptian yarns have been sold in moderate lots for home consumption. The outlook for a settlement of the German debts question is by no means bright, but it is hoped that the Lancashire delegation to Germany at the end of this week will achieve some success.

COTTON YARNS PRICE AGREEMENT.—There was some surprise in Lancashire cotton trade circles at the end of last week when it was announced that spinners of coarse American yarns had signed an agreement which places the previous arrangement on a legal basis and provides for severe penalties if the minimum prices decided upon by the committee are broken. The owners of 31 mills, controlling about 3,000,000 spindles, are included and the agreement will remain in operation for 18 months. It covers all yarn productions of counts of 26's and below. The meeting also decided to increase the basic price of 2½d. to 2½d. per lb. above current month cotton futures. The agreement consists of a preamble and three schedules. It provides that any resolution shall be binding on all the members if supported by two-thirds of the members present and voting. An independent accountant is to be appointed by the general committee and all members undertake to provide full facilities and assistance in order that he may investigate sales made by the members. Investigations will be made regularly and not only after complaints. Complaints of breaches are to be made direct to the accountant and after investigation he will report to the general committee, whether the complaint is justified or not. If a breach has been committed, the executive committee will assess the amount of damage which the other members have suffered from the breach, and the secretary will be instructed to proceed by legal methods for the recovery of the damages assessed. This may be considered a revolutionary development in the spinning trade of Lancashire. The Royton spinners who are affected have a reputation for the traditional individualism of Lancashire, and it is certainly a striking change in attitude on trade affairs for these spinning employers to arrive at the conclusion that united action is preferable to internal competition.

WOOL.—Bradford.—Wool users continue to show keen interest in the course of values at the Brisbane sales in Australia, which opened last week. Reports from that centre indicate that raw wool is in good demand at slightly hardening prices. Bradford and Japanese buyers are still giving most support. During the first week Japan took 60 per cent. of the offerings, and Bradford also bought considerable quantities; very little support was forthcoming from France, and there was practically no German buying. How long the present strength of buying from England and Japan is likely to continue is difficult to say, but it is significant that prices in the "futures" markets fell when it was learnt that there was very little Continental buying in Australia.

It is evident, however, that the trend of prices will depend largely on developments on the Continent. In this connection it may be noted that the uncertainty over future German policy is as acute as ever. Reports from that country say that certain firms are experiencing difficulty over the question of raw wool supplies, and it is therefore hoped that the time is not far distant to the reopening of German activity in world markets. Figures relating to stocks and imports of raw wool in Germany, however, do not support these reports of shortage. Stocks are down, it is true, but wool imports have increased on last year, despite the five months' ban. This, in conjunction with the recent threats of Dr. Schacht, seem to suggest that the reopening of German wool buying on anything approaching normal proportions may be delayed longer than many people hope. Certain it is that if there were to be a modification in restrictions on German imports the wool trade in this and other wool-consuming countries would be placed on a much sounder basis.

Meanwhile, trade in Bradford is closely following the Australian sales. No secret is made of the fact that the establishment of a price basis of 28d. to 29d. for good warp tops bought out of Brisbane came as an agreeable surprise to most firms in the industry. Prices as a whole in this market have been revised to higher levels, and although no great weight of business has been brought out, it is believed that if the present level of prices in Australia is maintained during the next few weeks, a great deal of the business at present being withheld on account of lack of confidence will be booked. Spinners report a little more demand for yarns, and by-products have improved in sympathy with the tops market.

GRAIN MARKETS

WHEAT.—The past week witnessed a reaction to the speculative rise in wheat prices, partly because increasing supplies of new wheat are now becoming available. As regards Canada, the harvesting of the crop is now almost completed in Manitoba and a substantial proportion of the grain crops of the southern and central districts of Saskatchewan has been cut. Some damage has, however, been suffered by drought in all the three provinces. France's crop appears to be nearly sufficient for home requirements, but some of the other European importing countries will have to purchase larger quantities of foreign wheat. According to the *Corn Trade News*, the world's visible supply of wheat on August 1st was 477,190,000 bushels, as compared with 459,660,000 bushels a year ago.

According to Mr G. Broomhall, total shipments during the past week were 1,532,000 quarters, against 1,333,000 quarters in the preceding week. On Wednesday, "September" futures were quoted in Chicago at 102½ cents per bushel, against 104½ cents the week before and 103½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 34s. per 496 lbs., against 35s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s. 6d., against 33s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 30s. to 31s., against 30s. 3d. to 31s. 3d. a week ago.

FLOUR.—North American shipments were 144,000 sacks in the past week, as compared with 109,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered, country, 27s. 6d. per 280 lbs., against 27s. 6d. last week; delivered London, 26s. 6d., as compared with 26s. 6d. a week ago. Manitoba patents, ex store, 25s. 3d. to 27s. 3d., against 25s. 9d. to 27s. 9d.; Australian, ex store, 20s. to 21s., against 20s. to 21s.

BARLEY.—"October" futures were 58 cents per bushel in Winnipeg on Wednesday, against 60½ cents last week and 50½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 35s. to 55s., against 35s. to 50s. a week before.

OATS.—On Wednesday, "September" futures were quoted at 51½ cents per bushel in Chicago, against 50½ cents a week ago, and 46½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. per 320 lbs., against 22s. a week ago; "Chilean White," landed, 23s., against 23s. a week earlier.

MAIZE.—The market in maize was active and quotations rose further owing to smaller crops of this grain and other feeding stuffs in Europe and North America. "September" futures were quoted on Wednesday at 79 cents per bushel in Chicago, against 76½ cents a week ago and 71½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 26s. per 480 lbs., compared with 26s. last week; "Plate," ex ship, 25s., as against 25s. "Plate," "September," 25s. 6d., as against 25s. 3d. Yellow maize meal, ex wharf, was quoted £7 to £7 2s. 6d. per ton, against £6 17s. 6d. to £7 per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1930-31 to 1933-34:—

	1930-1931	1931-1932	1932-1933	1933-1934
Estimated sales of home-grown wheat—				
1 week to August 28	Cwts. 71,825	Cwts. 21,558	Cwts. 23,715	Cwts. 21,500
52 weeks to August 28	5,129,773	4,178,569	3,878,606	4,974,713
Average price of English wheat per cwt.	s. d. 5 3	s. d. 5 0	s. d. 6 2	s. d. 6 3

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 21, 1934	Cwts. 71,825	Cwts. 21,558	Cwts. 23,715	s. d. 5 1	s. d. 10 6	s. d. 6 7
Aug. 28, 1934	176,562	29,743	30,706	5 3	10 5	6 4
Aug. 23, 1930	76,956	9,001	17,126	8 5	6 9	6 3
Aug. 22, 1931	24,780	935	7,250	6 4	8 5	6 2
Aug. 27, 1932	40,854	9,003	16,148	6 2	7 5	6 11
Aug. 26, 1933	340,650	63,649	46,420	5 0	11 0	5 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Aug. 30, 1933	Jan. 3, 1934	Aug. 22, 1934	Aug. 29, 1934
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	62½	46½	71½	65½	84½	81½
Chicago (No. 2 Winter) —Cents per 60 lb.	55½	46½	86½	84½	104½	102½

The visible supply of wheat in Canada, at 98,257,000 bushels, shows a decrease of 1,244,000 bushels. Supplies a year ago stood at 100,902,000 bushels.

OTHER FOODS

SUGAR.—Following the recent decline in quotations, the market in raw sugar was firmer in the past week. The spot price of raw sugar in New York on Wednesday was 3-28 cents per lb., as compared with 3-24 cents per lb. last week and 3-23 cents per lb. a

month ago. Wednesday's sales of raw sugar in London included "August delivery" at 5s. 2½d., against 5s. 4½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
London	437	4,139	2,264	2,370	31,079	176,514
Liverpool	9,063	8,261	15,473	13,396	148,376	126,945

Total tons	9,500	12,400	17,737	15,766	179,455	303,459
------------------	-------	--------	--------	--------	---------	---------

Last week	12,867	3,750	16,663	14,395	187,692	306,825
-----------------	--------	-------	--------	--------	---------	---------

COFFEE.—The New York coffee market has been dull, and prices tended to decline. In New York on Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. No auctions were held in London on Tuesday, and the spot market remained quiet during the past week. Last week's movements of coffee in London were as follows: Brazilian, landed, nil; delivered, for home consumption, 15 bags; exported, 12 bags; stocks, 28,331 bags, against 28,130 bags a year ago. Central American, landed, 2,254 packages; delivered, for home consumption, 1,220 packages; exported, 590 packages; stocks, 102,638 packages, against 92,948 packages last year. Other kinds: landed, 378 packages; delivered, for home consumption, 2,218 packages; exported, 285 packages; stocks, 95,587 packages, against 83,011 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "August-September," was 19s. 9d. per 50 kilos, c.i.f. Continent, against 20s. 3d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 3,134 bags; delivered, for home consumption, 3,465 bags; exported, 2,165 bags; stocks, 243,502 bags, against 163,827 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 49,513 packages of Indian and 27,751 packages of Ceylon tea. Quotations for common and low medium grades declined further during the past week, but prices for best qualities remained firm. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

AVERAGE PRICE PER LB.							
Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Aug. 24, 1933	d. 14-96	d. 10-90	d. 15-41	d. 9-27	d. 9-61	d. 14-24	
July 19, 1934	12-80	12-31	12-76	10-67	10-41	11-84	12-38
July 26, "	12-71	12-20	12-82	10-75	10-29	12-06	12-31
Aug. 1, "	13-29	12-49	12-99	(a)	(a)	12-00	12-94
Aug. 16, "	13-59	12-23	12-90	10-28	9-89	11-58	12-78
Aug. 23, "	13-16	11-85	12-63	9-98	9-56	11-47	12-38

(a) No sales.

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 8s. 6d. per cwt., shows a rise of 1½d. on the week. Movements in London during the past week were as follows: landed, 307 tons; delivered, 99 tons; stocks, 2,269 tons, against 5,939 tons a year ago.

POTATOES.—As supplies were somewhat excessive in relation to demand, prices tended to decline. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. to 7s. per cwt., as compared with 6s. 6d. to 7s. 6d. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5½d. per lb. on Wednesday, against 5½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 8 tons; stocks, 194 tons, against 327 tons a year ago. White, landed, 91 tons; delivered 42 tons; stocks, 6,444 tons, against 893 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hind quarters, was 4s. 4d. to 4s. 10d. per 8 lbs., as compared with 4s. 2d. to 4s. 6d. last week. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 6d. to 4s. a week ago. According to the Smithfield official market report, supplies during last week amounted to 7,762 tons, against 8,069 tons in the corresponding week last year. Imported beef, principally Argentine, formed 86.5 per cent. of the beef supplies, against 85.4 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 80.9 per cent. of the total supply of mutton and lamb, against 71 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OIL AND OILSEEDS.—Trade is not very active and prices generally have an easier tendency or are maintained with difficulty. Linseed is in poor demand owing to crushers' small needs, and Plate has again declined. Indian remains steady at a somewhat lower level of values. Crushers faced with difficulty in disposing of the oil product at a remunerative price are only concerned to buy seed to cover their trade in oilcake. Plate to Hull dropped to £10 15s. per ton for old crop, shipment to October, and new to £10 7s. 6d. November-January, Calcutta to London, is offered at £12 10s. or less. Shipments are comparatively heavy and the quantity afloat for Europe has increased to 112,100 tons (including 19,800 tons from India), or 7,300 tons more than last week; while that for North America is 28,500 tons, against 34,000 tons a year ago. Argentina has still 358,000 tons (estimated) of the old crop available for export, or 20,000 tons more than was

actually shipped in the remainder of last season, and 133,000 tons is expected from India, or 60,000 tons less. Cottonseed is in rather better demand and new crop Egyptian, September-October, has been sold at £5 6s. 3d.

Linseed oil is in fair demand from consumers and is easier in sympathy with seed. Raw oil ex Hull mill for delivery to the end of the year is quoted around £20 10s. per ton naked. Cotton oil is slow and unchanged. Egyptian crude ex Hull is offered at £14 and refined at £16 prompt. Oilcakes are in better demand and firm.

Bank of New Zealand

Incorporated with Limited Liability in New Zealand by Act of the General Assembly, 29th July, 1861.

BANKERS TO THE GOVERNMENT OF NEW ZEALAND.

REPORT OF THE DIRECTORS

Presented at the Ordinary General Meeting of the Proprietors, held at the Head Office of the Bank, Lambton Quay, Wellington, on 15th June, 1934.

The Directors submit herewith the Balance-sheet and Profit and Loss Statement of the Bank for the year ended 31st March last. The profits, after providing for expenses of management, and for all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the Provident Fund, are £594,231 19 0. From this has to be deducted:—

Interest on Guaranteed Stock.....	21,199 9 1
Leaving Balance of Profit for the year.....	573,032 9 11
To which has to be added:—	
Balance brought forward from last year.....	344,795 1 5
	917,827 11 4

From which has been paid:—	
Dividend on Preference A Shares.....	£50,000 0 0
Interim Dividend on C Long-Term Mortgage Shares.....	7,031 5 0
Interim Dividend on D Long-Term Mortgage Shares.....	17,578 2 6
Interim Dividend on Preference B Shares.....	31,250 0 0
Interim Dividend on Ordinary Shares.....	187,500 0 0
	293,359 7 6

Leaving available for distribution.....	£624,468 3 10
---	---------------

This the Directors propose should be disposed of as follows:—

Dividend on C Long-Term Mortgage Shares at 6 per cent. per annum.....	£7,031 5 0
Dividend on D Long-Term Mortgage Shares at 7½ per cent. per annum.....	17,578 2 6
Dividend on Preference B Shares (making £100,000 for the year).....	68,750 0 0
Dividend at rate of 5 per cent. on Ordinary Shares (making £375,000 for the year, equal to 10 per cent.).....	187,500 0 0
Leaving Balance to be carried forward...	343,608 16 4
	£624,468 3 10

Such dividends to be paid in New Zealand Currency.

During the year Agencies at Clevedon, Drury, New Lynn, and Okato have been closed. Apiti Agency has been re-opened.

H. BHAUCHAMP, Chairman.

BALANCE SHEET AT 31ST MARCH, 1934.

THE GREAT DEPRESSION

In the course of his presidential campaign nearly two years ago Mr. Roosevelt boldly declared himself an experimentalist. In the grievous economic plight of the United States, he asked for a mandate to act, and, if he found his measures ineffective, to try and try again. This frank attitude awakened a sympathetic response far outside the boundaries of his own country, for everywhere there was a despairing feeling that the policy of "letting well alone" was allowing the world to sink deeper into poverty. So we have all been experimenting, each according to our inclinations or prejudices and within the limits of our various national circumstances. Surely it is not true that matters can no longer be controlled even if they are handled resolutely and with decision? If this question is to be intelligently answered, it is imperative to recover a sense of direction and to form a conception of the kind of world which statecraft must set itself to recreate.

In formulating such a conception it is clearly a first essential to understand what are the forces which have produced the present setback to the forward march of civilisation. In the compass of a couple of hundred pages* Professor Robbins has outlined his views of the origin and course of the crisis and of the necessary conditions if we are to emerge from it. Though the reader may not share his emphasis and may differ from his conclusions, there is no one who will not find this compact and brilliant sketch unusually stimulating and provocative.

Professor Robbins attributes the immediate cause of the crisis—namely, the American crash in the autumn of 1929—to the character of the inflation boom which preceded it; but in describing this episode he tilts vigorously at certain common assumptions about the monetary history of the preceding decade. In particular, he is a severe critic of the policy of this country—not for the reason so often urged that our policy was deflationary and constituted a heavy handicap to recovery—but because our policy was not deflationary enough. America and France, which together received so much of the world's gold, did not "sterilise" it, but created currency or allowed the volume

of bank money to expand. It was in this country, which—for apparently good reasons—had returned to gold at a parity which proved too high, that wages, costs and prices were out of equilibrium with those in the world at large; and it was for us to correct this situation and restore our prices to a competitive level, and thus, if the gold standard functioned properly, to draw back an adequate gold reserve.

Naturally, Professor Robbins does not attribute the whole blame to the monetary policy of this country only. He bluntly criticises the American banking authorities for their failure to prevent the development of inflation in the United States in the years preceding the crash. He recognises also that the crash developed into the greatest depression in history because of the many causes, political and economic, which during and after the war have created a chaotic lack of order and balance in the world's economic structure. Opinions will certainly differ about the weight to be attached to the influence of the war, to faulty statesmanship in drawing up the Peace, to economic nationalism and to underlying changes in world population, industrial knowledge, etc. But it is interesting to find Professor Robbins criticising the policies adopted after as well as before the crash. He thinks, for example, that the attempt of the creditors of Germany to secure repayment, and the invention of a "standstill" arrangement which failed to distinguish between good and bad debts, was a mistake and delayed recovery; and again that this country was seriously at fault in not seizing the opportunity to return to gold at the beginning of 1933, when feelers were being put out from the United States and when we were regarded as the chief obstacle to stabilisation at new levels. At that time, the pound sterling was at a favourable parity, and an agreement would have prevented the American experiments in currency depreciation. In Professor Robbins's view, we awoke to the possibilities too late.

But surely this American "kite" was not a genuine opportunity; for so far-reaching an issue, together with the debt and other problems associated with it, could not have been settled in a "lame duck" session of Congress; and events thereafter raced along too rapidly for conference or reflection. Regrets are natural to one who sees in the

* "The Great Depression." By Lionel Robbins. Macmillan and Co. 200 pages. 8s. 6d. net.

collapse of the gold standard the great tragedy of recent times—since it marked the breakdown of the post-war attempt to reconstruct an international world system and revived in their most active form all the devices of economic nationalism. These, in turn, rendered far more difficult the processes of recovery, accentuated impoverishment, and so pushed us deeper into political troubles which have threatened to destroy the whole system of democracy. So impressed, indeed, is Professor Robbins with the danger of war and the instability of the modern world that in looking to the future he reaches the gloomy conclusion that "the probability of peace and progress in the next half-century is not very great."

The course of statesmanship, then, according to our author, is to put in the forefront the restoration of a stable basis for international trade. He is realist enough to see that we cannot jump back forthwith to a full gold standard, but he would like to see some provisional plan of stabilisation, to be followed as quickly as possible by a full restoration of the gold standard, with all its implications in the matter of adjustability of costs by any nation that may find itself out of balance with the world. If the people are told the truth, and if they realise the unpleasant alternative of a decline in the standard of civilisation, democracy should be as capable as dictatorship of accepting even that which may seem at first unpleasant, but is for the ultimate good of each nation.

For Professor Robbins nothing but the full gold standard will suffice. That an easier way may be found in the device of a system of variable parities changed from time to time as conditions vary, he does not admit. Such a system, he would allow, might circumvent the serious difficulty of bringing about equilibrium by a general disturbance of wages and prices within the country. But the rules in accordance with which changes could be made would be hard to define, and in the absence of rules the exchange would be at the incalculable discretion of the controlling authority. The exchange rate would become a political issue and inflation might ensue; its uncertainty would create trouble with foreign countries and make impossible long-term trading agreements; long-term international loans would be almost, if not quite impossible, and the chance of speculative profit would even encourage those large-scale transfers of short-term capital which has been so disturbing a factor in recent years.

We have no space to follow Professor Robbins into many other matters of diagnosis or of policy, but the points we have mentioned are sufficient to show that he lacks neither courage nor force in challenging many accepted doctrines of the day. With many of his judgments we agree, and we are most certainly at one with him in his insistence on the need of finding the way to restore a world economic and financial system.

But on two major points we find ourselves in disagreement on matters which affect policy. In the first place, both in his critique of British monetary policy before 1929 and in his comment on the possibility of modifying exchange parities instead of trying to adjust the internal equilibrium of a country, Professor Robbins seems to underrate the economic, social and political difficulties of bringing about general and equitable changes in wages and prices. The difficulties in the way of a movable parity system are formidable, but they should be soluble with time and experience. Certainly, the technical and diplomatic problems which such a plan propounds would be child's play compared to the task of bringing about an adjustment of wages sufficient to counteract such great economic changes as those which have upset the world's economic equilibrium in the past decade.

This leads us to our second and more general reflection. Professor Robbins attaches enormous importance to an international monetary system. We agree. But the breakdown of the post-war standard was not primarily due to the way that standard was handled by the world's banking authorities. True, inexperience in many countries, the novelty of a system where gold is the standard but not in active circulation, differences of banking tradition in a world with several centres instead of a single dominating monetary centre, and some important errors of judgment undoubtedly played their part. The root cause of the collapse—as the *Economist* has repeatedly argued—was the fact that, for

reasons which had nothing to do with the monetary system, the economy of the world, already rent and turned upside down by the war, was pieced together again under conditions which did not permit of a quick return to a new and stable equilibrium in international economic relations. An international standard was set up on the assumption that it would facilitate the necessary adjustments as it did the much smaller changes of pre-war days. But the facts were too obdurate, the political background too unstable, the changes too rapid, the new features—such as reparations and war debts—on too great a scale, and the barriers to the free movement of goods too numerous and obstructive to permit a new harmony to be brought about merely by setting up afresh an international monetary system. In short, the gold standard was called upon to right all the wrongs and remove all the debris of faulty statecraft, national ignorance and jealousy, and conflicting social ambitions. It failed. It cannot be expected to succeed until the conditions have been recreated under which an international system can work.

Professor Robbins recognises that political and economic disorder were responsible for the fact that the American crisis developed from a more or less normal fluctuation of pre-war type into "the great depression." But it is equally true that, until all the major world disorders are corrected, any attempt to restore an automatic international standard will almost certainly fail. If we are to avoid a second failure, we must attack the problem on the broadest possible front. In the meantime we have no option but to pursue on a provisional basis a monetary policy which will as far as possible eliminate exchange fluctuations, and endeavour step by step to rebuild international trade over the widest possible area and up to the limits which circumstances permit.

A NOTABLE ASSEMBLY

CHAUVINISTS, as well as those who seek to capitalise "the old Adam" in humanity, have drawn strength from the deadlock over disarmament. They foretell the imminent demise of the League of Nations. But the League has not lost much, if any, vitality. Nor has it needed much officious striving to keep it alive, for, with the tide of the world's security at its lowest post-war ebb, the League's Fifteenth Assembly which opens on Monday promises to be a notable gathering of national delegates. And the Council, which began its deliberations on Friday, has an agenda which still shows evidence of the world's recourse to its greatest international forum.

The blows which the League has already received, and the factors which are still working against it, are, of course, not only manifest but conspicuous. There is the world-wide movement towards re-armament, on which we commented last week. There are the special local danger-points, like Austria in Europe and Manchuria in the Far East, where sparks are flying—and any one of these sparks might explode the world's powder-magazine. There is the tension between Russia and Japan and between Italy and Germany. There is the equivocal position of countries like Yugoslavia and Poland, which are officially in a French camp, but are persistently reported to be coquetting with "the Third Reich." And, finally, there is the secession of both Germany and Japan, who have both served notice of their intention to resign from the League, and have both actually ceased to take part in League activities, though judicially their notice does not take effect until next year.

If these were all the items to be entered on our balance sheet, the upshot would not be at all obscure. The heavy losses which we have indicated would have taxed the League's strength to the uttermost and have brought it within sight of bankruptcy. Happily, however, there are other items, of not less importance, to be brought into the reckoning on the credit side.

If Germany and Japan are receding from the League, Russia and America are moving towards it. It was the very crisis in the League's fate, over the Sino-Japanese dispute, that started America on this auspicious course. It is a vital interest of the United States that the Sino-Japanese dispute should receive a just and peaceful solution; and although the efforts of the League to bring about such a solution have so far failed, they have nevertheless

brought home to American public opinion, more forcibly than anything else that has happened since the war, the value of an international institution for the maintenance of some kind of world order under a collective system. This increase of American cordiality towards the League, which first became apparent over the Sino-Japanese affair, has been manifested again in the cordiality with which the United States has welcomed the intervention of the League in the Peruvian-Colombian and Bolivian-Paraguayan conflicts, without any tendency to resist this intervention as a European infringement of the Monroe Doctrine. The American Government has also come into line with other Powers in taking authority to control or prohibit the sale of armaments to the two belligerents in the Chaco war and, indeed, to control the private manufacture of, and trade in, arms. Taken together, these developments in American policy are significant and encouraging.

While the United States has been making this cautious advance, the U.S.S.R. has been moving much faster and farther. From an attitude of dogmatic and militant hostility towards the League, the Soviet Government has now come to the point of applying for membership.

It now seems virtually certain that, at the present sessions of the Council and Assembly, the Soviet Union will forthwith apply for admission to membership in the League, and for that permanent seat on the Council which was deliberately reserved for Russia, as well as for Germany and the United States, when the constitution of the League was originally drafted. If the Russian Government does make this application, we may assume that it has good reason to believe that it will not meet with a rebuff. Thus, if no last-minute objections are raised, the entry of Russia into the League will not only be the outstanding event of this session; it will be one of the great landmarks in the League's history.

An application for admission is, of course, a delicate and uncertain business; for, while the general sense of the existing members is normally in favour of strengthening the League by an accession—especially when the applicant is a Great Power—there will always be individual States members which think they stand to lose by a general gain. This obstacle presented itself, rather disconcertingly, in 1926, when the Power seeking admission was Germany. On that occasion Poland was the key country; and, now that the applicant is Russia, Poland will be the key country again, as far as the Council is concerned. While mere admission to the League requires no more than a two-thirds majority in the Assembly, the grant of a permanent seat on the Council requires unanimity among existing Council members, and a bare majority in the Assembly as well. In 1934, as in 1926, Poland is a Council member; and it is therefore in her power to blackball Russia now, as she could have blackballed Germany then.

In 1926, Poland's affirmative vote had to be purchased by granting her a "semi-permanent" seat on the Council for herself—that is, a seat which is temporary in theory but permanent in practice. Poland, apparently, will content herself with proposing that the obligations of the minorities treaties shall henceforward be assumed by all States members of the League; and this proposal is incontrovertible in abstract justice. But, as the Polish Government knows, it has only the slenderest chance of being accepted in practice, and it is to be feared that, in putting this proposal forward, Poland is not so much hoping for success as seeking a plausible pretext for a subsequent repudiation of her own existing obligations. If so, it is unfortunate; for, though Poland's contractual obligations, in this matter of minorities, may be an anomaly, this anomaly is certainly a salutary one. The protection of minorities is a good thing as far as it goes, even though it may not be universal; and the concrete interests of some ten million Ukrainians, White Russians, Jews and Germans in Poland ought not to be sacrificed on the altar of the abstract principle of "the equality of States."

Another question with which the Council and Assembly will have to deal is the Chaco war, which has hitherto defied the peace-making endeavours of the League, the Pan-American Union, the United States and the *états limitrophes*. Nowadays, the world simply cannot afford to allow any war to burn itself out—even in a relatively remote and isolated region—when there is so much inflammable material lying about everywhere. It is

supremely important that the fighting between the Bolivians and Paraguayans should be brought to a stop by international action; and, since both countries are land-locked, and neither of them is capable of manufacturing its own munitions, this is a clear case for applying an international armaments embargo. Already, great progress in this direction has been made by the individual action of the armaments-producing countries (including, as we have mentioned, the United States). Public opinion, all over the world, is interested and favourable; and the League now has an opportunity of systematising and confirming an embargo which may not only put an end to a local war in South America, but may also establish an invaluable precedent for ending, or even preventing, other wars hereafter.

Finally, the Council will have to consider the work of the Committee of Three on the situation in the Saar. The revelations made public this week (which will be found in a Note on a later page) are such as to disturb those who had hoped for a fair and free plebiscite next January. The Council, Baron Aloisi's Committee of Three, and the Saar Governing Commission are faced with a problem upon the solution of which depend the personal liberties, property and, perhaps, persons of all those many Saarlanders who, till now, have not succumbed to the threats, blandishments and propaganda of the Nazis.

From this necessarily cursory survey it will be seen that the League's work this autumn is as important as ever, and that, given bold leadership and a unity of purpose, it has a good chance of raising its stock very high. No doubt, we must be careful not to build too great hopes on the favourable items in the balance sheet before the account is cast up. Yet, "if hopes are dupes, fears may be liars." The moral, surely, is that, at this crisis in our post-war history, every people and every Government ought to throw itself into the struggle in order to make sure that the forces of peace, order and reconstruction "possess the field."

RUBBER UNDER CONTROL

THE extraordinary rise in the price of crude rubber during recent months demonstrates the dangers of replacing competition by monopoly, especially in the case of essential raw materials. It is therefore opportune to examine the development of this latest attempt at "planning." So far it is not altogether reassuring.

In the spring of last year the price of crude rubber began slowly to rise, following an improvement in consumption. Towards the end of 1933 the rise in prices gained momentum, not as a result of a further improvement in the rubber situation, but because of the expectation of a restriction scheme. Consequently, output again jumped ahead of consumption, and a disastrous setback in prices and in the position of commercial estates was only prevented by the inauguration, on June 1st last, of the second rubber control plan, which was analysed in the *Economist*

of May 5th. Since then prices have continued in an upward direction, and the current quotation of "smoked sheet" in London, at 7.50d. per lb., compares with an average price of 6.47d. per lb. in May and of 2.12d. per lb. in March, 1933. In New York the quotation rose from 2.90 cents per lb. in March, 1933, to 13.15 cents per lb. in May, 1934, and 15.50 cents per lb. at the beginning of September.

The development of exports, consumption, stocks and prices is summarised in the following table, compiled from the statistics of the Rubber Growers' Association:—

EXPORTS, CONSUMPTION, STOCKS AND PRICES OF RUBBER

Period	Exports of Crude Rubber			World consumption of crude rubber	Stocks of crude rubber in Malaya, U.K. and U.S.A. end of year	Re-claimed production in U.S.A.	Average price in London (smoked sheet)
	World	Malaya	Dutch East Indies				
	(Thous. tons)	(Thous. tons)	(Thous. tons)	(Thous. tons)	(Thous. tons)	(Thous. tons)	Per lb. d.

* January–March, 1933. † Provisional.
sheet, August, 1934, 7.44 pence per lb.

The International Rubber Regulation Committee, which is administering the scheme, started off with a moderate turn of the restriction screw. The proportion of the allotted quotas which the various countries might export was fixed at 100 per cent. for June and July, at 90 per cent. for August and September, at 80 per cent. for October and November, and at 70 per cent. for December. No decision has apparently yet been made regarding next year's export quotas. The difficulty of controlling native production in the Dutch East Indies has been temporarily overcome by the imposition of an export tax. Although detailed statistics for July are not yet available, exports from Malaya and from the Dutch East Indies in June and July were well below the allotted quotas. The deficiency was at first attributed to the unwillingness of growers to engage additional labour in view of the reduction in export quotas from August onwards. But with the publication of the stocks held in Malaya at the end of July it became abundantly clear that supplies had been held up in the expectation of higher prices.

This inference was confirmed by a report, according to which the Controller of Rubber at Singapore had warned producers regarding the carry-forward condition of the Restriction Agreement. The Controller pointed out that the maximum carry-forward of export rights from one year to another is limited to 12 per cent. of the quota and that, unless the estates used their provisional credits on a more generous scale and dealers ceased to hold up rubber, it would become necessary to curtail the extent to which export rights can be carried forward, and to limit the stocks held by individual dealers. The Controller is to be commended for his prompt intervention in order to stop growers in Malaya from running a little restriction scheme on their own.

Since stocks in consuming countries remain heavy, this incident caused little damage, but in the absence of large supplies a sharp and unjustified rise in prices could hardly have been prevented. Consumption was well maintained in May and June, but declined sharply in July to a figure well below that of the corresponding month a year ago.

This decline in demand, coupled with heavy shipments in the month before restriction came into force, was responsible for an increase in stocks in the principal centres from 544,500 tons at the end of May to the record level of 574,500 tons at the end of July. This increase was largely due to heavy shipments in the month before the restriction came into force.

The aim of the rubber plan, like that of similar schemes, is "to regulate the production and export of rubber in and from producing countries, with the object of reducing existing world stocks to a normal figure and adjusting in an orderly manner supply to demand, and maintaining a fair and equitable price-level which will be reasonably remunerative to efficient producers." As only three months have passed since the inception of the scheme, it is as yet too early to pass judgment on its results. As the sharp increase in prices has not yet led to a reduction in stocks, there is a danger that extremists may press for a short cut to a lower level of stocks by more drastic restriction. Such a policy would undoubtedly drive up prices to an unreasonable level. A rise in the prices of raw materials is usually justified by claiming that their cost represents only a small proportion of the cost of the manufactured product. This argument was, in fact, used by the former chairman of the Rubber Growers' Association in his address to the annual meeting of the Association on June 7th. Mr W. J. Gallagher pointed out that the cost of crude rubber represented only 6 per cent. of the selling value of all articles, other than tyres, in the United States in 1933, and that the average cost of crude rubber in a tyre was about 12 per cent. of the selling price. Moreover, Mr Gallagher assured the members of the Association, "on good authority," that the belief "among some producers and perhaps other people" that "manufacturers desire to get rubber at as low a price as possible" was "entirely ungrounded."

Now it is true that manufacturers prefer stable prices of raw materials at a level slightly above the average of fluctuating quotations. But the increase in the price of rubber since March, 1933, from 2.12d. per lb. to 7.50d. per lb. is scarcely a moderate rise, especially as many estates can make a reasonable profit at 4d. per lb. A statement by the Secretary of State for the Colonies, in the House of Commons on July 12th, did not help to dispel fears of a rapid and undue rise in prices. "We are satisfied," said Sir Philip Cunliffe-Lister, "that we have a scheme administratively possible to work, and elastic in its readiness to respond to increased demand." The question of prices was not mentioned at all. Messrs Charles Hope and Son, the London rubber merchants, stated, in a circular issued on July 6th, that in their view a fair and equitable price was "one that will enable rubber companies to reinstate, at pre-slump salaries, all those employed in the production and marketing of their rubber, maintain their estates in good order, allow for amortisation, not only of buildings and machinery, but also of trees and finally make not less than 6 per cent. on the money invested in the estates." Messrs Charles Hope and Son reach the conclusion that for the time being a fair and equitable price is not less than 9d. per lb. This is an ominous conclusion, not only for consumers but also for the fortunes of the industry as a whole.

We imagine that many will be found who hope that the International Rubber Regulation Committee will take a more reasonable view of what is fair and equitable, for the success or failure of the scheme ultimately depends on its price policy. If that policy is directed solely to secure higher prices, consumption will suffer, and the production of reclaimed rubber and of substitutes will advance. Such a policy, indeed, is not at all calculated to employ all the plantations and operatives in the industry. It is perhaps opportune to point out that "the equating of production with consumption" can be more profitably achieved, for the industry as a whole, by a price policy aiming at increasing consumption to the potential level of production. It is the demerit of most restriction schemes that, in the interests of a few high-cost producers, high prices are allowed to outweigh the possibilities of increased consumption. It may be that, in the case of rubber, the new Manufacturing Consumers' Panel will make its claims heard. Till now, however, theirs has been a very "still, small voice."

CO-OPERATORS IN CONFERENCE

(BY OUR CO-OPERATIVE CORRESPONDENT)

THIS week the delegates of 141 co-operative organisations in 39 countries have met in London at the fourteenth International Co-operative Congress. They represented 95,000 societies with an aggregate membership of over 100,000,000, and with a trade turnover of £4,260 millions. Owing to the enforced amalgamation of the four German consumers' co-operative organisations into a federation under State-appointed "administrators," the co-operatives' vital principle of free democratic control has been ruptured; and German co-operators have consequently had to withdraw from the International Co-operative Alliance. But the representative nature of this week's meeting is striking enough. The increased scope of international co-operation by co-operators themselves since the last International Co-operative Conference in Vienna in 1930 is impressive in a world which seems to have set its face against sanity in international affairs.

The Conference has had as president Mr Vaino Tanner, former Premier of Finland. This is fitting recognition of the solidarity of co-operators, both consumers and producers, in Scandinavia. Of the 100,000,000 and more co-operators represented, 73,000,000 are Russian; and Russian co-operatives are steadily expanding their trade with other co-operatives through Centrosoyus—the Central Bureau of Russian Co-operatives. Recent accessions to the International Co-operative Alliance include national co-operative federations in Roumania, India, Bulgaria and Korea, as well as societies in Mongolia, South Africa and the French West Indies.

M. Albin Johansson, a director of the Swedish Co-operative Union, outlined the rôle of international co-operation in present-day economic development. Recalling the confidence with which the Geneva Conference of 1927 was welcomed as promising a reduction of the world's tariffs, he quoted a statement in the *Economist* of June 18, 1927, that "whatever arguments may be brought forward for artificial methods for stimulating our home market, protectionists and free traders alike would be agreed that much the quickest and most direct route to the recovery of our depressed industrial districts, as well as the expansion of our commerce and shipping, would be by an enlargement of foreign trade." But foreign trade became restricted by increased tariffs. Of fifteen of the larger European countries only six during 1925–29 made such tariff reductions that the general level of protective tariffs had been lowered—by between 5 per cent. and 43 per cent.; while nine countries had instead raised their tariffs—by between 4 per cent. and 112 per cent. All attempts to lower tariffs, M. Johansson pointed out, have been abandoned; and ingenious methods of quotas, licences, the rationing of currency and other ways of constricting the

circulation of goods have resulted in a world commercial war.

Contrasted with this is the development of international co-operation implying free intercourse between the peoples of the world with the view to the establishment of "real international co-operative economy." That has been the main discussion of the Congress.

Since the war imitations of co-operative societies have become so insistent in various countries, including our own, that the 1930 Congress at Vienna decided to institute an inquiry with a view to a definition of the principles of Rochdale Co-operation. This has been entrusted to a committee representative of the leading nationalities which asked the London Congress to approve the view that the "standard" essential features of voluntary co-operation are:—(1) Open membership; (2) democratic control; (3) dividend on purchases; (4) limited interest on capital. Further, it is suggested that co-operation should recognise political and religious neutrality, maintain cash trading, and promote education. These are recommendations which reveal that in Britain, the home of co-operation, the modern generation has strayed from political neutrality by its association with the Labour Party, and from the security of cash trading by popularising credit clubs among its members. Hence the International Congress may prove of value to the British movement by giving it the opportunity of returning to the old ideals which made it such a stimulating force to the newer forms of co-operation in Europe and elsewhere. The reaction of the British co-operators to these proposals will be interesting to observe.

On the international side of co-operative trading the Congress learned that the International C.W.S., formed twelve years ago, has made a beginning with joint purchases of American dried fruit through the New York branch of the C.W.S. These purchases have been made for the past three seasons, and an increasing volume of business resulted each year. The turnover of the national wholesale societies for 1932 in sixteen countries (not including Estonia, Germany, Poland and Russia, which, in 1929, had an aggregate trade of £152,900,000) was £150,266,293, to which England contributed £82,247,740 and Scotland £16,147,828. Sweden followed with over £8,000,000, Denmark and Finland with £7,000,000 each, France and Switzerland with £6,000,000 each, Czechoslovakia with £5,000,000 and Austria with nearly £2,500,000. The imports of the national wholesale societies of fifteen countries were £41,180,034 in 1932, a drop of £12,000,000 compared with 1930, attributable to currency restrictions and tariff and quota barriers. Among the classes of goods imported, one-fourth were cereals, grain products and sugar; another quarter were tropical and Colonial products, fruit and fish (fresh, tinned or canned). Animal fats and meats, dairy produce, vegetable and mineral oils accounted for nearly £19,000,000; while textiles and manufactured goods to the value of only £1,573,471 were imported by the co-operative organisations of the fifteen countries—excluding Russia.

In order to foster inter-co-operative trading relations between the producers and consumers in the various countries, a joint committee has been set up, following conferences between the International Co-operative Alliance and the International Commission of Agriculture to consider the technical problems involved. Mr Henry J. May of the Alliance, M. A. Borel of the Commission, and Mr Harold Butler of the International Labour Office constitute the executive bureau, which has begun its work by inquiring into the participation of agricultural and consumers' co-operative organisations in the trade in eggs and in butter. This is the beginning of research work intended to provide guidance for the development of the import and export trade of the various national co-operative bodies. So far they have come to the conclusion that the most useful example of a joint undertaking is the New Zealand Produce Association, which is a joint concern of the English C.W.S. and the New Zealand farmers.

Along with this progress of international trading relations is the endeavour eventually to establish an International Co-operative Bank. This has been delayed by the economic crisis, but its realisation is recognised as essential to the practical realisation of the full "planned international economy" policy which the Congress has declared to be essential for the recovery of world prosperity. Thus the various national co-operative movements are bringing the weight of their national trading importance to bear upon the problem of resuscitating international trade. There is certainly great scope for their endeavours.

RUSSIA'S PLANNED ECONOMY—I THE PROFIT AND THE LOSS

(BY A CORRESPONDENT)

FOR the world at large nothing that the Soviet regime has yet achieved can exceed in significance its attempt to plan and direct the national economy of a country which extends over a sixth of the land surface of the globe, with a population of over 160 millions. Russia is certainly a large enough laboratory to afford a thorough testing of the proposition, which Communists hold as a dogma, that planned economy in the hands of an authoritarian State, involving the wiping out of the last vestiges of private capitalist ownership, is a panacea for the world's economic ailments and the road to greater material prosperity.

Most national economic systems, to be sure, are to-day subjected to a degree of State control inadmissible in pre-war times. The trend of the numerous Fascist Governments in Europe is towards greater regimentation, in economic as well as in political and intellectual life. President Roosevelt's New Deal is an interesting, if inchoate, effort to achieve economic security without eradicating private ownership of the means of production, and without discarding democratic forms. Even in countries which have best weathered the world crisis and where the impulse to change is therefore weakest, e.g. England and France, the State is forced to intervene very far in economic life by its efforts to regulate foreign trade, to manipulate the internal price level, and to foster home industries and agriculture. In short, the question now before the world, which every country seems disposed to answer in its own way, is not *whether* there shall be State planning of economic life, but *who* is to do the planning and how is it to be done?

The Soviet regime inaugurated with the Five Year Plan a fascinating problem for students of economics, simply because that Plan is the most complete available exhibit of Planned Economy. The directors of the Soviet economic concern have no profit-seeking business men, no recalcitrant labour unions, no farmer proprietors who obstinately insist on planting more or less than planners think they should, no independent voters to turn them out of office if the shoe of economic hardship pinches too tightly. The Soviet Government is the oldest, and in some respects the most smooth running, of the three major party dictatorships in Europe—the other two being Italian Fascism and German National Socialism. During the first years of the Revolution it destroyed such typical representatives of the system of private property as the big landowner and the industrial

magnate, the banker and the wealthy merchant. During more recent years it has "liquidated," to use a familiar Russian word, those classes which could still be regarded as small capitalists; the small shopkeepers who were able to carry on, in a limited way, after the introduction of the New Economic Policy in 1921; and, still more important, the great mass of small peasant holders. The majority of the latter are now enrolled in collective farms, where they must work according to plans prescribed by the State. The more well-to-do and the more incorrigibly individualistic have been driven from their homes and sent to forced labour in timber camps and on new construction enterprises. The minority of peasants who still retain individual holdings are subjected to much economic discrimination, and seem destined to be swallowed up in the collective farms within the next few years.

So the directors of the Soviet system of planned economy, who are, in actual practice, the high officials of the Communist Party and of the Soviet Government, need only fear such a state of universal misery that the population will be moved to armed rebellion. But the Soviet technique of government (subsequently imitated with conspicuous success by Mussolini and Hitler), in which propaganda and terrorism are skilfully combined, makes it possible to strain public endurance beyond what might seem breaking point in most other countries.

The first Five Year Plan was officially declared at an end after four and a quarter years, at the close of 1932, although actually many of its aims were very far from realised at that time. The year 1933 was one of respite from the terrific pace of new building which had been kept up in 1931 and 1932—a year of tentative redressing of the more glaring failures and discrepancies in the first Plan. It was only in 1934 that a second Five Year Plan, scheduled to run until 1937, was issued. So, while it is too early to pass final judgment on a new and unprecedented economic system, some tentative conclusions on the basis of Russia's experience can be ventured.

On the positive side of planned economy one has to place a substantial increase of output in many branches of industry, especially in metallurgy, machine building, chemicals and other potential war industries; the avoidance of unemployment; and a very considerable spread of education, so that universal elementary education is now compulsory in the Soviet Union, and the number of students in the higher and middle schools has greatly increased.

On the negative side one has to recognise a sharp decline in a standard of living which was already low in 1927 and 1928; the officially admitted loss of about half the country's livestock, as a result of ruthless measures to force collectivisation upon the peasants; a very considerable extension of terrorism against real or supposed "class enemies" and a great increase in the number of persons employed as forced labour in timber camps and mines, and in the construction of canals and factories. In the summer of 1933, 71,000 persons were officially reported to have received amnesty or reduction of sentence on *one* Soviet forced-labour enterprise: the canal linking up the Baltic and the White Seas.

The first Five Year Plan laid down in minute details the movement of prices, costs, nominal and real wages. In this respect, however, its predictions went astray as sadly as the frequent promises of returning prosperity of ex-President Hoover. Prices, instead of falling according to plan, soared higher; costs of production rose instead of declining; and, while nominal wages increased faster than the Plan had specified, real wages sharply declined as the cost of living rose more steeply. The stability of the Soviet rouble was a conspicuous, if unacknowledged, sacrifice on the altar of industrialisation.

There was an enormous discrepancy between the figures of the Plan and the actual results in agricultural production. The grain harvest of 1932, even according to probably exaggerated official figures, was 30 per cent. below the Plan estimate. In livestock the Plan called for a substantial increase; actually there was a decrease of about 50 per cent. The food supply of the population, which was supposed to improve, deteriorated to the point of serious malnutrition in the towns and famine in some country districts. To the town dwellers of the Soviet Union the first years of planned economy brought more sustained and widespread deprivation than one would find in other countries during the crisis. The workers' standard of living as regards food, housing

and clothing was closer to that of the unemployed of Western Europe and America than to that of the employed. This is attributable to a variety of causes. Food supply was curtailed to some extent by the policy of forcing exports of food in order to get foreign currency to pay for imports of machinery and equipment, and much more by the temporary breakdown of agricultural production. This was a natural, if unforeseen, result of destroying the most competent individual farmers, the so-called kulaks, and forcing collective farming upon the other peasants. Manufactured goods ran short because almost all imports were restricted to things which could neither be eaten nor worn, such as excavators, blast-furnace equipment, metals, etc., while the domestic industries which produced for the immediate consumer were neglected in favour of the so-called heavy industries (iron and steel, oil and coal, metallurgy and electrical equipment) which were considered more important for strategic purposes and for making the country more self-

sufficient. Tremendous overcrowding persisted in most Soviet towns because the influx of new inhabitants, fleeing from starving small towns and country districts, swamped the available new buildings.

At the same time it must be recognised that the severe deprivations were not aggravated by ostentatious contrasts of wealth and poverty, that almost everyone had work, so that the psychological hopelessness which comes from unemployment was spared; and that part of the population, especially the Soviet-minded youth, found compensation for short commons in an exhilarating sense of being part of a country in process of creation, a sense of possessing wider opportunities for education and promotion. But so far as country districts are concerned, nothing that European peasants and American farmers suffered as a result of price maladjustments can reasonably be compared with the famine of 1932-33 which marked the climax of Russia's agrarian crisis.

NOTES OF THE WEEK

The American Textile Strike.—The long-threatened strike in the American cotton textile industry began last Saturday. The intervention of the week-end and of Labour Day on Monday has made it difficult to estimate to what extent the strike is succeeding in closing the mills. In the Southern States a majority of the mills have been closed, but the strike appears to have been less successful in New England, and the sympathetic strikes in the silk and woollen industries appear to be making little headway. Unfortunately, the violence and bloodshed which seem to be inseparable from labour troubles in the United States have already broken out, and in some places the dispute is already degenerating into the usual bitter and bloody struggle between the employers attempting to protect their employees who remain at work and the unions attempting to intimidate them into joining the strike. Much will depend upon the attitude of the Federal Emergency Relief Administration. The earlier policy of "seeing that nobody starves" has been modified, and relief payments are being withheld until the Department of Labour or the National Labour Relations Board declares the strike "justifiable." Without this help the strike will probably collapse, but with it a long struggle is possible. The National Labour Relations Board, considering itself to be a semi-judicial body concerned with interpreting the famous and ambiguous Section 7 (a) of the National Industrial Recovery Act (which we quoted last week), has refused to intervene, but the President has appointed a Board of Mediation of three members. The cause of the strike, which is being rather lost from sight in the confusion of political manoeuvres to which it has given rise, was the rejection by the employers of the following demands:—(1) Reduction of hours from 40 to 34 without reduction of weekly wages; (2) reinstatement of all workers discharged for union membership in contravention of N.I.R.A.; (3) recognition of the United Textile Workers' Union; (4) appointment of an arbitration tribunal; and (5) abandonment of the "more looms to a weaver" movement. "Recognition" is the centre of the dispute, but the exact connotation of the word is obscure. In the mouths of the Unions it means acceptance of themselves as sole collective bargaining representatives of the workers, and this interpretation has been supported by a ruling of the National Labour Relations Board that any union that can enrol 51 per cent. of the workers in any industry is to be recognised as the representative of all the men. But because the United Textile Workers' Union can close half the mills, it does not follow that it can enrol half the workers, since picketing, peaceful and unpeaceful, always plays a large part in American strikes. The whole confused position can only be cleared up by an unambiguous statement by the President of his attitude to the claims of the unions. He is naturally reluctant to come off the fence, but it looks as if the present dispute will force him to do so.

Empire Free Trade.—There still seems to be a slight chance that Australia may honour the Ottawa Agreements and remove the 100 per cent. duties recently imposed on certain Lancashire cotton goods. The Federal Cabinet met a week ago and decided that no decision could be taken until after the election on September 15th. At the same time, a trivial and temporary concession was granted by the admission duty-free into Australia of all goods actually on order on August 2nd. Here, as far as Australia was concerned, the matter seemed likely to rest. But it was announced on Tuesday that certain Lancashire firms are willing to consider a contract to buy for a period of years either a fixed quantity of Australian-grown cotton or the surplus crop over local requirements, provided that quality is satisfactory and that the goods made in Lancashire from such cotton are admitted on favourable terms into Australia. This quasi-barter scheme—such is the plight even of inter-Imperial trade to-day—seems to offer the best hope of a cut in the Australian duties. For the principal object of the duties was to please, not the cotton manufacturers of Sydney and Melbourne, but the primary producers of Queensland. The Ottawa Agreements and the British market were being jeopardised for the sake of a small and uneconomic industry! There seems no doubt that Mr Lyons's Government is determined to fight the election on the issue of high protection. Dr. Page, the leader of the free trade Country Party, has already attacked the duties fiercely and effectively. He describes them as a "body-line attack" on Ottawa. The Government, however, apparently calculates that it will gain more seats in Queensland by the duties than it will lose to Dr. Page in other country districts. Nothing, it appears, but a bargaining concession from Lancashire can preserve any semblance of Empire Free Trade in cotton. For one can hardly believe Mr Lyons's Government will adopt quite so cynical an attitude towards the Queensland growers as to promise them a tariff before the election and remove it afterwards—unless it has something to offer in return. It will accordingly be due to the initiative of Lancashire if the Ottawa Agreements are not to turn out in the case of Australia, as well as Canada, to be a piece of empty verbiage.

The Policy of the T.U.C.—The tide in the Labour movement is now running very strongly against dictatorship and the advocacy of violence. Indeed, it would appear that recent Hitlerite excesses in Europe have been almost as embarrassing to the Socialist League as they have been to Sir Oswald Mosley. The Trades Union Congress, meeting this week at Weymouth, in appropriate proximity to Tolpuddle, gave decisive expression to the present democratic temper of the Labour movement. Mr Conley, in his presidential address, compared the Tolpuddle "martyrs" to

the "men and women who fought for freedom in the streets of Vienna" in February, and denounced dictatorships in the following terms:—

The rise of political dictatorship is a direct answer to organised labour's growth in power and its steady progress towards a new social and economic order. Democracy is under attack not because it has failed but because of its success in the sphere of government and the development of social and economic policy.

Mr Conley also attacked the whole "restrictionist" policy of the National Government, "the policy," as he called it, "of restriction, regulation and control," which "has led to a sabotage of productive capacity and the wilful destruction of actually available wealth." The wanton subsidising of agriculture at the expense of the rest of the community and the creation of "State-protected and State-subsidised monopolies" were also condemned. We would like to take all this as a welcome sign that the T.U.C. is looking to an increase and not a decrease of general production as the best way out of depression. But our confidence on this point is not enhanced by the practical policy which Mr Conley advocated in the second part of his speech. The whole trade union movement, he urged, should organise a concerted pressure on employers for shorter hours and higher wages. How far is this policy to be carried? It is necessary, of course, for all trade unions to keep up a periodic pressure of this kind to ensure that the wage-earner receives a fair reward; and the upswing of the trade cycle is the appropriate time for such pressure. But if the capitalist is squeezed beyond a certain point, there will be little hope of that general increase in production by which alone, as the T.U.C. seems to realise, the standard of living of the whole working class can be substantially raised. Mr Citrine, in a later address, explicitly rejected the Socialist League's plan for the immediate abolition of capitalism:—

Let us see that our programme is of such a character that, instead of waiting for the social millennium, we shall progressively raise the standard of life.

We think that Mr Citrine is wise, and we would suggest to him that such a programme is likely to be found in the reform, rather than in the abolition, or even the squeezing, of capitalism.

* * *

Labour and Fascism.—The Trades Union Congress's resolution on Fascism has special importance in view of Sir Oswald Mosley's intention to hold a Fascist demonstration in Hyde Park this Sunday. A joint report prepared by the National Council of the T.U.C., the Labour Party and the Co-operative Union was endorsed by a heavy majority at the Congress. This report describes Fascism and Nazism as "in essence a monstrous and savage dictatorship" and calls for a united opposition to Fascism from every section of the Labour movement. Mr Citrine, in a speech introducing the resolution on Tuesday, made it clear that the T.U.C. advocates the immediate "demilitarisation" of the Mosley Fascists, but opposes any attempt to resist Fascism by the adoption of Fascist methods. The Labour Party, by its refusal to participate in a counter-demonstration in Hyde Park this week, has shown itself resolved to pursue the same prudent and sensible policy. Unfortunately, the British Fascist movement is organised on military lines and drilled to "keep order" at its meetings by the brutal methods whose employment at Olympia last June so profoundly shocked public opinion. The methods and organisation of this body have, unhappily, provoked a small but active number of Communists to organise a counter-demonstration against the Fascists at the same place and time. Here we have the spectacle, painfully familiar from the experience of Germany, of a clash between extreme Left and extreme Right. The vociferousness and ill-advised actions of an insignificant Communist minority—which, as is noted above, are roundly condemned by the Labour Party—should not blind us to the undeniable provocativeness of the Fascists. In such circumstances the drafting of almost the whole of London's regular police force into Hyde Park is a necessary precaution against an outbreak of violence. But, whatever may happen in Hyde

Park this week-end, is it not high time the Government awoke to the dangers, so apparent in other countries, of tolerating drilled and uniformed political bands in a free democracy? Such bodies are more likely to jeopardise our liberties, law and order than the rantings of a few Communists. In compelling the Fascists to adopt the normal procedure and methods of political parties in this country the Government would remove, at the same time, the existing provocation to the Communists. And it would have on its side, we are confident, not only the already evident support of Labour opinion, but of Conservative and Liberal as well.

* * *

The Armaments Industry.—The inquiry into the American armaments industry instituted by a Committee of the United States Senate is revealing some very disturbing facts. The only witnesses so far have been officials of the Electric Boat Company, owners of many of the patents governing submarine construction. It has been shown that this company worked in close concert with Messrs Vickers, Ltd., from whom it received royalties. The world's markets appear to have been divided between the two companies, and evidence was given of one occasion on which the American company passed an order from Chile to the British company, with the advice not to be "too modest about the price." This story is not rendered any more savoury by the allegations that at the time of the transaction the American company was executing an order for Peru, that Peru and Chile were on the verge of hostilities, and that there are strong hints of corruption in securing the orders from both countries. Moreover, the Committee elicited the interesting fact that orders to the Electric Boat Company from Peru greatly increased after the visit of an American Naval Mission, one member of which advised the company on its method of securing orders. At the same time, Chile was favoured with a British Naval Mission, and the Committee appeared to believe that this had some connection with the placing of orders for naval armaments by Chile in Great Britain. Senatorial investigations are frequently mere "muck-raking"; but the present inquiry has fully justified itself in the first two days. The state of affairs revealed by the evidence is so alarming, and the threads leading to this side of the Atlantic so numerous, that there is a very strong case for a parallel inquiry, with similar powers of compelling evidence, in Great Britain.

* * *

The Salvos of Dr. Schacht.—In two speeches within a week—the first at the opening of the Leipzig fair a fortnight ago, and the second at Bad Eilsen, at the end of last week—Dr. Schacht has fired off two salvos of highly explosive argument. In the first, he reverted to the contention that Germany's large imports of capital had been solely on reparations account, and that Germany had lost by the process. As we have previously pointed out, this is only true in a very limited sense. Foreigners by 1930 had participated in German firms up to Rm. 4,000 millions, and held real estate in Germany up to Rm. 2,000 millions. From 1924 to 1931 inclusive the net investment in German industry increased each year, despite the cessation of foreign long-term lending after 1929. From 1926 to 1930 inclusive, Germany was making considerable investments abroad. Moreover, if all Germany's foreign borrowing were only for reparations—in the case of the Young Loan this was clearly not so, for one-third went to the German railways—it is hard to square the figures above with the mounting gold reserves of the Reichsbank during these years. Finally, Dr. Schacht's contentions reflect his divergence from the views of official German economists themselves in 1930, when the official *Wirtschaft und Statistik* (1930, page 895) wrote:—"Germany's long-term foreign loans have been raised to enable Germany's industries to reorganise their productive processes on her re-entry into the world's economic system, and in part also to commercialise German reparations." Dr. Schacht's Leipzig salvo, however, sounds feeble compared with the broadside delivered at Bad Eilsen on Thursday of last week. In that speech, Dr.

Schacht ventured a long way on to the political terrain. Germany's present grave position was due to the Versailles "Treaty"—his own quotation marks—to the relentless treatment of Germany by encircling, highly-armed neighbours, and to their still persisting intent to deprive Germany of her means of existence. This seems like persecution mania. Dr. Schacht did not even offer the world the alternatives he had previously brought forward—the scaling-down of Germany's debts, or the increased buying of German goods. Instead, he issued an ultimatum.

Nothing remained but to grant her a full moratorium of many years for recuperation. Simultaneously, the burden of her foreign indebtedness would have to be reduced to such dimensions that it could be borne after the lapse of the moratorium. . . . Germany would then automatically obtain those trading credits which would enable her to exercise her normal purchasing power in the world's market.

Automatically, indeed! Dr. Schacht appears ingenuous. His proclamation amounts to the contention that Germany will not deflate, will not devalue, but also will not abate her internal public expenditure and inflationary programme which has been, and still is, raising her costs beyond the effective level at which the maintenance of the gold mark would be commercially possible. In fact, the official gold mark is only held where it is by the paraphernalia of special marks, at bewilderingly various discounts, most of which have been used to further "additional exports" or to increase investments in Germany. Dr. Schacht appears to claim that Germany should make her own terms so that she can have it every way at once. With a semi-moratorium now in force, and with her industries incomparably well-equipped on imported capital, a complete moratorium is now demanded for a term of years absolute, after which, we are assured, Germany would be in a sound enough economic position, there being no more reparations and there having been no interest on all this capital equipment in the interim, *automatically to obtain trading credits again*. This time, we think, Dr. Schacht doth protest too much.

* * *

The Saar Revelations.—The documents which have just been forwarded to the Secretary-General of the League of Nations by the chairman of the Saar Governing Commission, Mr Knox, are as discreditable to the moral character of "the Third Reich" as they are destructive of any reputation for intelligence which may still be left to the National-Socialist regime. The Nazis have boasted to the world that the whole population of the Saar is longing to come to the bosom of "the Third Reich." Now the party that has made this boast is revealed to be arranging for measures of severe coercion in order to produce a result which, they profess to believe, will produce itself spontaneously. The Nazis may or may not win their majority in the Saar four months from now; but they have already ensured that, even if they do win, the world shall be left incredulous of the genuineness of their victory. The documents now published show that between 10,000 and 16,000 young men from the Saar have been drafted into "voluntary labour camps" in the Reich. The sites for these camps have been chosen outside those territorial limits within which the carrying out of military training is prohibited by the Treaty of Versailles. The young men are being detained, beyond the normal period of "voluntary labour camp" service, in order that they may be thrown into the Saar, as a highly organised force, at the moment when the plebiscite is being held. Individuals who demur to being kept on for this purpose are being, and are to be, bullied and maltreated. In publishing the documentary information of which this is the gist, the Saar Governing Commission announces that it has prepared—as a preliminary preventive measure—a draft ordinance banning the voluntary labour organisation in the Saar and requiring the young men who were enrolled in it to report to the police, with liability to be placed under surveillance. The same measures are to be applied to Saarlanders who have been members of the S.A. and the S.S. Mr Knox and his colleagues are valiantly doing the duty which the League of Nations has laid upon them, despite the obloquy to which they are subjected in the official Nazi Press of

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK
LIMITED

Germany. It is now the duty of the Council and Assembly of the League to see that their agents and representatives in the administration of the Saar receive—and this promptly—both the moral and the material support which they urgently require if they are to be enabled to carry out their duties effectively to the end. The neutral police and gendarmerie must be enrolled in adequate numbers and given adequate powers; and the neutral Plebiscite Commission must take all the steps that it can against the deliberate attempts, of which it is now forewarned, to make the plebiscite a farce. Organised Nazi agitation and intimidation beyond Germany's frontiers, after its tragic climax in Austria, seems to have shifted to the Saar. It is fortunate that the League has the authority and the power to withstand such measures aimed at the population under its care.

* * *

Consolidation in the Baltic.—On August 30th the three Baltic States—Estonia, Latvia and Lithuania—took the wise and constructive step of forming a Baltic entente, which is to have immediate effect. The "Treaty of Entente and Collaboration," in which this agreement is embodied, follows the lines of the Statute of the Little Entente which was enacted at the beginning of last year. There is to be a common foreign policy, to be decided at periodic meetings of the three Foreign Ministers, and this solidarity in the conduct of foreign affairs is to go the length of a pooling of the three countries' diplomatic and consular representation. This last arrangement, which goes beyond anything that has yet been done in the Danubian entente, is a common-sense measure which is powerfully recommended by the small size and scanty resources of each of the Baltic States in isolation. On the other hand, the Baltic entente has not yet gone so far as the Danubian entente in collectivising the military defence of its members. It is reported, however, that a military convention is to follow. This Baltic *rapprochement* has been contemplated for a long time past, but hitherto it has been checked by the obstacle of the Lithuanian-Polish dispute over Vilna. Latvia and Estonia—being happy in having no quarrel with Poland themselves, and being anxious that their relations with Poland should remain friendly—have hesitated to tie themselves up with a neighbour who was inclined to make her feud with Poland into the *grande passion* of her international life. This obstacle has at last been surmounted by a clause in the new three-Power agreement which excludes "specific problems" from its scope. A representative of the Lithuanian Government has interpreted this clause by stating that only one "specific problem," in the sense intended, was in evidence, and that, for the settlement of this problem, freedom of action was reserved by the State concerned. Ostensibly this means that Lithuania's attitude towards

Poland is still officially intransigent. Recently, however, there have been indications that Lithuanian intransigence is becoming platonic; and it seems probable that Lithuania's two neighbours would not have concluded the present agreement with her—notwithstanding the saving clause—unless they had good reason to believe that the Lithuanian-Polish feud would not, in fact, break out again dangerously in the future. In any case, the formation of the Baltic entente is one more indication of regional security groupings provoked by fears of Nazi Germany's intentions in Eastern Europe. But it is, none the less, an important step towards political stabilisation in North-Eastern Europe, and is therefore auspicious for the Eastern Locarno and the European peace.

The Law and the Church in Germany.—The German Evangelical Reichsbishop, Dr. Müller, goes on getting himself into trouble. Not content with having forbidden the dissenting Evangelical Pastors to participate in the international religious conference at Fanö, he has published a polemical reply to the very moderate and gentle references which were made to religious conditions in Germany in the Conference's report. He has also chosen this precise moment for enacting a church law re-applying to the pastors of the German Evangelical Church the "Aryan Paragraph" which excludes any German subject with a Jewish wife or grandparent from eligibility for the public service of "the third Reich." The original application of this "Aryan Paragraph" to the Church was the enormity which gave the opposition in the Evangelical Church its dynamic force. Last November Dr. Müller revoked these original "Aryan" church laws in the hope of thereby securing the opposition pastors' submission. His re-introduction of this odious and arbitrary ecclesiastical decree, and his new law on Wednesday, applying his decrees to the dissident Evangelical Churches of Bavaria and Württemberg, may land him in further trouble. It remains to be seen whether, in the ecclesiastical as opposed to the political field, either of these decrees is really valid; for this week Dr. Müller's whole legal position has been called in question by a courageous, and exceedingly important, judgment delivered by the Berlin High Court in the case of Dr. Buchholz, pastor of the Tempelhof parish. Last March Dr. Buchholz was retired by the Consistory of the Brandenburg Church Province in virtue of a decree issued on February 3rd by Dr. Müller in his capacity, not as Reichsbishop, but as State Bishop of Prussia. And this decree was based in turn upon an earlier decree of January 20th, in which the Reichsbishop had vested in himself, as Prussian State Bishop, all the powers of the Prussian Church Synod, and had annulled all provisions of the Prussian Church Constitution with which these measures were inconsistent. The Court has now ordered the Tempelhof Parish Council to pay Dr. Buchholz's arrears of salary, to go on paying his full salary, to leave him in possession of his dwelling-house and to pay the costs of litigation, on the ground that his retirement is inoperative. This judgment rests on the finding that Dr. Müller's decree of January 26th was invalid. The Court points out that the constitution of the German Evangelical Church (which has, of course, been enacted since Herr Hitler came into power, and may be presumed to have his approval) clearly states the limits of the Primate's powers, and that it does not give him the right to alter the constitution of the State Churches. If the Primate's action is meant to be an application of the "principle of leadership" in the ecclesiastical sphere, that, the Court declares, does not suffice to give it legal validity. The Court expresses the opinion that, in a *Rechtsstaat* (a State based on the rule of Law) there can hardly ever have been a decree which was so gross an infraction of the law as this. The Court insists that an emphatic protest against Dr. Müller's action is necessary in order to preserve the respect for law in the German people's minds. Here speaks, with no uncertain sound, the voice of Civilisation. It will be heard beyond the bounds of the Evangelical Church, and not in Germany alone, with relief.

The Rising Cost of Subsidies.—The main article in the current issue of the *Monthly Review* of the Midland Bank is an interesting and informative discussion of the sub-

sidies which are now being so lavishly granted—mainly at the instance of the present Government—to private interests. The origin and cost of each of these subsidies is described in turn. Most of them are connected with agriculture, but the subsidies for shipping and for petrol produced from domestic coal are not forgotten. Housing subsidies are excluded as being in a rather different category. At the end of the article the writer appends a few, regrettably brief, comments on the cost of these payments. The startling result emerges that the subsidies announced since the Budget—that is, in four months—will cost over £8,000,000, the bulk of which is to fall on the current Budget. In some cases there is provision for ultimate repayment, but the Midland Bank, together with most other observers, doubts whether these repayments will ever materialise. Even if they do, it will only be because an artificial scarcity will have raised prices. It will be the consumer, not the private interests to whom the subsidies have been granted, who will repay the taxpayer. This £8,000,000 is additional to the £3,250,000 of beet sugar subsidy, which is already provided for. It is also additional to the wheat subsidy, which never comes into the Budget, but is estimated to cost the public the sum of £6,750,000 in the year 1934-35. The annual cost of these doles is therefore already in the neighbourhood of £18 millions, and is steadily rising. Meanwhile, the monopolies set up by the Agricultural Marketing Boards are beginning to subsidise themselves at the consumers' expense by raising the prices of their products, and the host of protective duties will inevitably have the same effect. Nobody will disagree with the Midland Bank when it concludes that "the relative disposition of effective taxation as between direct and indirect is disturbed, the relationships are no longer clearly indicated in the nation's Budget, and discussion of the best apportionment, in the interests of the nation as a whole, is rendered more difficult." "Sooner or later," the article concludes, "the whole subject will need to be investigated thoroughly and comprehensively." We would suggest that "sooner or later" is altogether too weak a phrase; the need for an inquiry is urgent.

Wages and Losses in South Wales.—The publication of the results of the July quarter's working in the South Wales coalfield does not, on the face of it, brighten the prospect of a settlement of the current wage dispute. The joint audit, published on Saturday, shows an aggregate loss of £31,609, or .93d. a ton, compared with a profit of £34,190, or .94d. a ton, in the previous quarter. Proceeds at the pit-head amounted to £5,473,508; the surplus being £3,541,613, after deducting costs of production other than wages, which totalled £3,573,222. It must be remembered, however, that owing to the close financial relationship now existing between the collieries and the much more prosperous distributing companies, these figures do not prove quite as much as might appear. Furthermore, the loss on the July quarter is seasonal, and is normally counterbalanced by the results of the other quarters; and the quarterly ascertainment have, up to the present return, shown a marked improvement. On other grounds the case for an increase in wages is very strong. South Wales, alone of all the coalfields, suffered a cut in wages in 1931; and, even if the cut were now restored, real wages of the lowest-paid men would be lower to-day than in 1914. Without a revival of international trade there can be no return of substantial prosperity to South Wales. Even in existing circumstances, however, the miners' claim for a restoration of the 1931 cut merits more serious attention than the owners yet appear to have given it.

Production and Trade.—The following chart shows the comparative development of industrial production and foreign trade in this country, and in the world as a whole, since 1929. The index of world industrial production is that of the Institut für Konjunkturforschung, Berlin, and the chart showing British production is based on the index calculated by the Board of Trade. The index of the volume of world trade is calculated quarterly by the Economic Intelligence Service of the League of Nations and its con-

struction was explained in the July number of the *Monthly Bulletin of Statistics*. The index of the volume of British foreign trade is based on the quarterly indices published in the *Board of Trade Journal*.—

BRITISH AND WORLD PRODUCTION AND FOREIGN TRADE
(1929 = 100)

Between 1929 and the second quarter of 1931 the downward movement in British industrial production and foreign trade corresponded closely to the course of world economic activity as a whole. The third quarter of 1931 marked a turning point. As a result of an expansion in business activity in this country, the index of industrial production rose well above that of world production. In 1933 the divergence between the two lines of production became narrower, owing to the marked, but only temporary, improvement in the United States and France. Similarly, in the third quarter of 1931, the line representing the volume of British foreign trade rose above that of world trade, and the divergence of the two lines has since become wider; but the almost parallel movement of our overseas trade curve with that of the world's foreign trade shows the identity of our commercial fortunes with those of the world as a whole. Finally, the chart shows that the increased industrial production in 1933, especially in this country, was accompanied by only a moderate improvement in the volume of foreign trade. The final recession in the curves of foreign trade may prove to be only of a seasonal nature.

Employment in August.—The Ministry of Labour estimates that there were approximately 10,170,000 insured persons aged 16-64 in employment in Great Britain on August 20th, an increase of 34,000 compared with July, as against a decrease of 27,000 between June and July. Compared with a year ago 376,000 more persons were in employment. The number of unemployed persons on the registers of employment exchanges was 2,136,578 on August 20th, of whom 1,598,338 were wholly unemployed, 456,841 temporarily stopped, and 81,399 registered as "normally in casual employment." The increase in total unemployment during the month was 10,318, and the decrease since a year ago was 274,559. This monthly increase in unemployment was more than wholly accounted for by the abnormally high total of boys and girls now leaving school. There was actually an increase of 31,088 in the number of unemployed boys and girls in the month. There was a decrease of 20,770 in the number of men and women on the registers. The following are the decreases

Boot and shoe	+ 3,145	+ 10.0	+ 8,690	+ 32.6
Tailoring	+ 2,654	+ 8.4	+ 817	+ 2.4
Motor vehicles, cycles and aircraft	+ 2,327	+ 8.2	— 13,109	— 29.9
Hosiery	+ 1,928	+ 13.4	+ 5,706	+ 54.1
Pottery	+ 1,658	+ 9.7	+ 4,007	+ 17.6
Cotton	+ 1,548	+ 1.3	+ 5,675	+ 4.5
Coal mining	— 24,309	— 7.3	— 81,212	— 20.9
Jute	— 13,308	— 57.7	— 658	— 6.6
Building	— 4,235	— 2.9	— 19,788	— 12.2
Shipbuilding and ship-repairing	— 1,852	— 2.6	— 22,726	— 24.5
Woollen and worsted	— 1,600	— 2.9	+ 25,176	+ 87.9
Shipping service	— 1,240	— 3.0	— 6,842	— 14.7
All industries	+ 10,318	+ 0.5	— 274,559	— 11.4

In comparison with a month ago the jute industry shows the remarkable decrease of nearly 60 per cent. in employment, due chiefly to an increase in raw jute prices. There has also been a slight fall in unemployment in the building and coal industries, the latter fall counterbalancing the exceptional rise earlier in the summer; and an appreciable rise in the boot and shoe, hosiery and pottery trades. Compared with a year ago there has been a heavy increase in the woollen and worsted, boot and shoe and hosiery trades, and a substantial fall in the iron and steel, shipbuilding, and the motor industry. The following table shows the changes between August 20, 1934, and July 23, 1934, in the total numbers unemployed in the various administrative divisions:—

London	+ 447	North Eastern	+ 5,618
South Eastern	+ 2,936	North Western	+ 17,365
South Western	+ 1,464	Scotland	— 16,572
Midlands	+ 7,121	Wales	— 8,061

The improvement in the coal-mining situation is reflected in the falling-off in unemployment in Scotland and Wales.

A Tale of Maize.—A decidedly piquant situation has arisen over the price of maize in South Africa. According to our South African correspondent, it bids fair to have widespread repercussions. The Central Agency for Co-operative Societies is a limited liability company whose main function is to dispose of maize produced by members of the various rural co-operative societies. The company has been in existence for 25 years, and last season handled some five or six million bags of 200 lbs. each. The South African Government's policy has, for many years past, been the encouragement of co-operation, and the Agency is widely regarded as having some unofficial backing from, if not official association with, the Government. Unfortunately, a large number of farmers looked to the Agency to market their maize only in bad times, but not in good, when they could secure better prices privately. This

monetary matters, as well as on the broader aspects of economic policy, were imbued with a practical common-sense, derived from almost forty years' association with the great banking concern over which he presided. Mr Goodenough's speeches at the annual general meetings of Barclays Bank furnished abundant evidence of a mind which always fastened upon the broad, long-run principles of finance and trade, especially the basic requirements of a world monetary and economic system. In banking policy he has been classed as a conservative; but it would be more appropriate to say that he favoured the gradual progress of banking technique rather than financial or monetary experimentalism. This attitude was reflected in his consistent advocacy of an "improved" gold standard rather than of currency or exchange manipulation. The loss of his personality will be long evident—not only in the City, but also in the broader social and educational fields where his advice and generosity had achieved so much.

Supplementary despatches from Washington, while less detailed than those describing the change in N.R.A. organisation, indicate that the price-fixing policy is to be modified. It is intimated that certain industries based on natural resources will be assimilated to public utilities, and that in these some sort of price control will be continued; but that in other industries price-fixing will be abandoned, except in emergency cases.

The whole co-operative policy to which the Government has pinned its faith is therefore in danger of breaking down.

The figures for July show only modest increases in output as compared with the corresponding month a year ago. The improvement was most marked in Germany, where output rose by 16 per cent. during this period. The percentage increases in the other countries were as follows:—Belgium, 11 per cent.; Saar District, 11 per cent.; Poland, 10 per cent.; United Kingdom, 9 per cent.; United States, 5 per cent. and France, 2 per cent. Output showed a seasonal decline between May and June in the United Kingdom and

FAR-REACHING EFFECTS OF THE DROUGHT

Opinions of the effects of the drought continue to conflict. The official data indicate that except in cereals and in cotton, crops will generally not be materially lower than those of last year. These data confirm the official assurances that there is no prospect of a food shortage, and hence no cause for public concern; but it is hard to reconcile these views with the strong and even violent advances in the prices of primary foods within the last few weeks, particularly in livestock and dairy products. Indeed, so strong have been these recent price rises as to necessitate a revision of opinion about farm income. Assuming that crops are as large as the official estimates, and assuming that current prices hold, it seems likely that total farm income will be higher this year than last.

To illustrate these changes, a table is given showing the price changes between August 1st and August 15th. Current prices are above those of the latter date:—

PRICES OF AGRICULTURAL COMMODITIES

	Cents per unit			
	Sept. 1, 1933	Apr. 16, 1934	Aug. 1, 1934	Aug. 15, 1934
Wool	72.27	79.18	71.82	66.96
Cotton	9.45	11.80	13.20	13.60
Flaxseed.....	178.00	172.00	188.00	196.75
Eggs.....	15.75	18.00	18.50	21.00
Maize	49.75	43.00	71.00	76.50
Oats	37.00	27.88	47.75	51.13
Wheat	85.75	80.50	106.13	106.25
Cattle	5.90	6.30	6.65	6.65
Butter	23.00	23.50	25.50	28.00
Rye	71.13	52.75	77.50	87.38
Hogs	3.85	3.90	4.30	5.60
Lard	5.45	5.33	7.35	8.28
Cottonseed oil	4.80	5.25	6.05	6.60

The condition of the cattlemen has been extremely serious. Their prices have remained low, their pastures have dried up, and the cost of feeding has become almost prohibitive. The Government has purchased about 3,500,000 head of distressed cattle; removing some to other areas for feeding, and slaughtering some for food for persons on relief.

Comparing prices not only with the pre-drought period, but with a year ago, the changes are enormous, and with few exceptions (the most striking being cotton and cattle) would seem in the aggregate to compensate, or more, for the reduction in crops. As for cotton, the States east of the Mississippi are compensated for their smaller crop; but west of the river, this is not true. For the cattle raisers, the drought has been a calamity and as yet the prices of eggs and dairy products hardly cover the increased costs of feeding. The conclusion is that the price advances since August 1st have made it almost certain that, at present, the indicated farm income in the aggregate appears higher than it was a year ago; but that in the drought area, the income, even with relief and bounties, will be substantially lower.

While the rise in farm prices is gratifying to the Administration, whether attributed to monetary policy, the drought or to the A.A.A., the reverse of the shield—the rise of retail food prices—is clearly disturbing. Bulletins of the Department of Agriculture are endeavouring to reassure the public. But, although the vicinity of New York may not be typical, retail food prices about New York have risen sufficiently to be a matter of real concern to family budgets.

The net result is a paradox. If the official data on supply are correct, price rises based upon the public's expectation of scarcity are mistaken. On the other hand, it is difficult to reconcile the official figures of supply with the stream of warnings from Washington intimating the establishment of various forms of control over food distribution. The second strongest impression is that of the productive capacity of American agriculture. The drought is apparently the most widespread and severe in American history; and yet, on official estimates, it (combined with the A.A.A.) has merely reduced American farm output a trifle below the computed needs of domestic consumption.

Rumours of an early devaluation of the dollar persist, but are generally doubted in view of the heavy programme of Government financing between now and the middle of

October. The market for Government securities, in spite of or because of intermittent Treasury intervention, is nervous and rather heavy. It is understood that the Treasury is actively purchasing silver in foreign markets, but the magnitude of the amount required under the law is so large that it is questionable if enough can be secured on the present monetary valuation of \$1.29 an ounce. It is also pointed out that the price of \$1.29 maintained the ratio of 16 to 1 only with gold at \$20.67, and that the current monetary value should be \$2.18 an ounce.

NEW YORK, August 29.

FRANCE

"CONFIDENCE" AND THE DOUMERGUE CABINET

FRANCE must face two "maturities" in October: the one is financial, and consists in the reimbursement of the "bons Clementel," while the other is political—the maintenance or otherwise of the political truce by the Radical-Socialist Congress at Nantes. At the annual meeting of the Radical-Socialist Congress of the Department of Allier, M. Lamoureux, Minister of Commerce in the Doumergue Cabinet, contended that these two October maturities were inseparable. The reimbursement of the bonds, he said, would necessitate the placing of a loan, and this meant the preservation of the confidence of rentiers, which was impossible without the continuance of the "Union Nationale." In the present Chamber two majorities only were possible: the "Cartel" (Socialists and Socialist-Radicals), or the "Union Nationale," and the Cartel was unrealistic since the Radical-Socialists have adopted a hostile attitude towards the "Front Commun," the alliance of Socialists and Communists. The dissolution of the Chamber, M. Lamoureux said, would be dangerous for the Party, for Parliamentary institutions and for the country. After listening to M. Lamoureux's speech, the Congress unanimously passed a resolution urging the national Congress of Nantes to maintain its confidence in the present Cabinet so that M. Doumergue could act with "increased energy."

Recent events consequently seem favourable to the Doumergue Cabinet. Nevertheless, the confidence of rentiers may be affected by the persistent campaign for a devaluation of the franc. The Government has therefore issued two *communiqués* as answers to M. Paul Reynaud's devaluation proposals. First, M. Germain-Martin, the Finance Minister, has declared his intention of continuing the policy of "economies." Expenditure in the 1935 Budget, M. Germain-Martin said, which would be laid before the Chamber before September 20th, would not exceed 47,000 millions, against 50,162 millions in 1934, and the Budget would be balanced without new taxation by further cuts in State expenditure, particularly military expenditure, on which the Cabinet had already agreed. M. Germain-Martin argued that the present disparity between internal and external prices was principally due to excessive interest rates, which were the result of too numerous calls from the State on the money market. The balancing of the Budget should remedy this situation.

DEFLATION OR DEVALUATION

To M. Paul Reynaud's contention that either prices must be deflated or else the currency devalued, the Government has replied in another *communiqué*, in which it claims to have already obtained results in its efforts to reduce the cost of living. It quotes many examples, such as meat, milk, butter, heating and lighting. M. Germain-Martin has given up the idea of a special tax on electrical consumption, holding that such a tax would raise the costs of industrial production. The *communiqué* concluded by saying that the Government hopes to see in the near future a general reduction in prices.

The *communiqué* issued after the last Cabinet meeting also referred to the limitation of the stipulated interest rate. It announced that the Minister of Justice had informed the Cabinet of his intention to re-establish the former limitation of interest and that the Ministers of Justice and Finance had been entrusted with the task of

studying the measures to be taken on this subject. The "stipulated" interest rate was limited to a maximum of 5 per cent. by the law of September, 1807, which was suspended by a law of April, 1918. There is at present no limitation in France of the rate of interest, and the interest rate is always legal whatever the "stipulated" rate may be. It is now suggested that this liberty may be unfortunate, since it favours an excessive interest rate—often as high in France as 8 and 9 per cent. But it is also pointed out that compulsory regulation of the interest rate would not have much significance, since the interest rate is determined by the situation of the money market and the confidence of the public.

Production at French coalmines in July totalled 3,836,594 tons in 25 working days, against 3,960,366 in June (26 working days), and 3,815,058 in July, 1933 (25 working days). The average daily production, which was 152,322 tons in June, was 153,464 in July, against 152,602 in July, 1933. The number of men employed has fallen from 235,838 in June to 234,599 in July, against 248,069 in July, 1933. These figures show an improvement in mining methods, since the average daily production has increased by 862 tons, while the number of men employed has diminished by 13,470. If the figures of July, 1934, are compared with those of January, 1932—a very active winter month—the average production is the same, while the number of men employed is lower by 40,000.

PARIS, September 5.

GERMANY

COMPULSORY DISMISSAL OF YOUNG WORKERS

UNDER an authorisation decree promulgated on August 10th the Reich Board for Labour Exchanges and Unemployment Insurance has issued an ordinance for the drastic redistribution of employed and unemployed labour which in principle prescribes that persons of both sexes aged under 25 years in public and private occupations are to be dismissed and replaced by older persons at present unemployed. The ordinance does not apply to agriculture, domestic service, or shipping, or to married persons and persons with obligations to support others, former members of the defence forces, persons belonging to the various "private armies," and old adherents of the Nazi Party. Exempted also from dismissal are persons who have already done voluntary service in the work camps or as helpers to farmers. The ordinance contains other minor exceptions and exemptions and certain qualifications. Its chief aim is social, but it also involves the now habitual discrimination in favour of Nazi stalwarts.

Such discrimination extends even to direct monetary imposts. Membership of the Labour Front, for instance, is in general compulsory and involves contributions from employees which rise to nearly 7 per cent. of income, but it costs nothing except a small fee to members of the Nazi Party who have "red" cards or to members of Nazi military and similar associations. In most measures of this kind "old" attachment to Nazism is the qualification for the privilege. The effect is therefore to create not only a Nazi class permanently privileged in official esteem and material opportunities, but also to create varying grades of permanent privilege within the Nazi Party itself. This system conflicts with Herr Hitler's claim to have united the nation and to have furthered its social equalisation. The system, however, is a necessary outcome of the dissatisfaction of the Nazi rank and file with the conferment of high official and well-paid private posts on Party magnates, most of whom have done very well for themselves materially, while great numbers of humbler supporters have been so far ignored.

The present ordinance compels every employer to render a return of the ages of employees in his concern, etc. The Labour Exchanges will make the substitute appointments. The dismissed persons are to be given a certain priority in finding new work, in particular in agriculture and forestry; and a Reich subsidy will be paid for necessary new housing. The Reich Board will further pay subsidies of

Why be content with 4%?

Do what many others are now doing—sell your stocks and shares and buy a Sun Life of Canada Annuity. If your age is 57 (male), you get an income equivalent to 8% on your capital and it is guaranteed for life. If older the income would be still greater.

Write in confidence, stating age and capital at disposal, and exact figures will be supplied to you.

H. O. LEACH (General Manager), Sun Life Assurance Company of Canada. 141 Sun of Canada House, Cockspur Street, London, S.W.1.

(Incorporated in Canada in 1865 as a Limited Company.)

Rm. 50 per month in cases of persons over forty years old who have been long unemployed, to make good their inferior efficiency, this being, however, confined to private employment.

The organisation of business under the "Law for Preparation of the Organic Reconstruction of the German Economy" of February 27th has made further progress. Group No. I, "Steel and Iron," which will in future be the only competent representation of this branch, has been subdivided into groups for steel overhead constructions, steam machinery and plant of all kinds, railway cars, field railway materials, shipping, and central heating and ventilation. Organisation of a similar kind in the electrical, chemicals, and paper and pulp branches has been undertaken. All persons, firms and companies engaged in these industries are compulsorily members of the Group, and must report themselves. The ordinances, which are issued by the Leaders of the Groups concerned, contain prohibitions against "measures for market regulation."

On September 1st there came into force a law for "assistance to petty rentiers," under which pensions will be granted to old persons and persons unable to work and in need who can prove that they had capital property of at least Rm. 12,000 or an income from capital of at least Rm. 500, and that their capital or income was lost through the currency depreciation. The pensions will somewhat exceed existing charitable municipal allowances.

RECOVERY IN STEEL EXPORTS

The business situation is little changed. The wholesale price index for August 29th was 100.1, unchanged. The Railway Corporation's July report shows a decline of 2.7 per cent. in car-loadings as compared with June. This decline was seasonal; loadings were 9.7 per cent. higher than in July, 1933, but 11.4 per cent. lower than in July, 1930. The Corporation's gross takings in the first seven months were Rm. 241 millions higher than in the same months of 1933 and Rm. 1,216 millions lower than in the same months of 1929. Consumption of certain goods affected by the depression is recovering; and the total retail sales turnover, which fell from Rm. 36.3 milliards in 1928 to Rm. 21.7 milliards in 1933, is increasing. The recovery, however, is irregular. This year both the quantity and the value of textiles sold show sharp rises, but whereas the value of the foodstuffs turnover has risen, the quantity has slightly fallen, and is 13 per cent. lower than in 1929.

The home steel industry continues active, and the export of pig iron is increasing. Tinplate production in the first seven months was 136,500 tons, as against 112,700 tons in the same months of 1933; exports were 84,400 tons, against 69,400 tons. Imports from Great Britain fell from 4,100 to 2,040 tons. Japan, Holland, Belgium and Switzerland are heavy buyers. In consequence of good home and foreign orders the tinplate mills are fully occupied; and a financial improvement is stated to have followed the conclusion of the International Cartel in July. The trade Press expresses doubt of Great Britain's coming accession to the

International Steel Cartel, and denies the report that this question will be formally handled by the Direction Committee of the Cartel when it meets in Paris at the end of September. Doubt is expressed whether British producers would agree to grant a fixed import quota to the Cartel, which would be a necessary condition if British exports were to be spared the organised competition of the Cartel.

TRANSFER, MONEY AND CREDIT

The Gold Discount Bank has withdrawn its undertaking to purchase bond scrip at a fixed price, which since the negotiations of February was at 67 per cent. of the nominal price, and was formerly (except for the privileged countries Switzerland and Holland) 50 per cent. The Bank will henceforth buy only in accordance with changes in the foreign exchange situation. Outstanding scrip of the Conversion Office totalled a month ago Rm. 23 millions; but a great part of the scrip for the first half of this year has not yet been issued, in particular for the United States, in consequence of obstacles and delays. This measure does not concern the alternative offers of the Reichsbank for partial transfer after July 1st this year. Provisional arrangements for payment have been made with Holland and Finland. It is denied here that the new agreement with Sweden gives the same treatment to interest on the Kreuger Loan as to that on the Dawes and Young Loans, but details of the new treatment of the Kreuger Loan are lacking. The Norwegian Press reports conclusion of a new clearing agreement, under which the existing special account of the Norwegian National Bank with the Reichsbank is to be dissolved and replaced by a reichsmark account into which German importers will pay. The Reichsbank is to open a crown account in the National Bank in Oslo for payments by Norwegian importers, reichsmarks being booked against crowns at latest official quotation.

The month-end money demand was rather below normal. Day-loan rates began to weaken on September 1st after not fully reaching the level of the end of July. Average August day-loan rates were a little lower than in July, but offers of bank acceptances exceeded the demand; and the Konjunkturinstitut once again describes the money market as being somewhat strained. Bankruptcies in August slightly increased. Loans by the commercial banks show a declining tendency, which is apparently due to the consolidation of municipal short-term debts. The Reichsbank's credits and investments in the last week of August increased by Rm. 420 millions, as against Rm. 355 millions in the last July week. Deposits have again increased, and now reach Rm. 717 millions, the highest figure since the end of 1931, as against Rm. 415 millions a year ago. The total circulation rose sharply, and is Rm. 5,769 millions. The Reichsbank again received Russian gold, but as payments abroad reduced its gold holdings in foreign central banks, the gold reserve (as also the foreign exchange reserve) is practically unchanged.

BERLIN, September 5.

POLAND

DIFFERENCES WITH FRANCE

THERE is a great deal of concern in Poland over the differences with France which have attracted so much attention of late. Public opinion here is not in conflict with the efforts of the Government to foster good relations with Germany, nor with the Government's determination minutely to examine the Franco-Soviet proposals for an Eastern European pact of mutual assistance before giving a definite answer. But the public mind is at a loss to understand why the attitude of the French Press towards Poland has undergone such a complete change during the past six months, and why Poland, who was never consulted about the Western Locarno or the Four-Power Pact, should be expected to swallow the proposed Eastern Locarno, without even knowing precisely what it means, merely because it is sponsored by France and Soviet Russia and blessed by Great Britain. France clearly has failed to comprehend the great feeling of relief from 15 years of incessant tension with Germany which the signing of the non-aggression pact brought about on January 26th last.

There has, unfortunately, been a tendency to connect divergences of views in the political field with misunderstandings over trade and finance, and for this the Polish Press is no less to blame than the French. The sequestration by the Polish authorities last March of the Zyrardow textile mills, which were controlled by French capitalists, and the recent arrest of two directors who are French citizens—with a murder, a suicide and a duel, all involving prominent people, to enliven the proceedings—have magnified to the point of national honour an incident that is trivial in the affairs of nations. But the Poles see in it, as in the failure to improve commercial relations between the two countries, an inclination on the part of France to treat Poland rather as a colony than as an equal; and it is this state of mind, even more than the matters actually in dispute, that needs to be corrected.

The floods in Western Galicia in the latter part of July, besides leaving at least 50,000 families destitute, did a great amount of damage to the railway lines and bridges, the roads, buildings, waterways and even to the soil in many places. The property damage—including the loss of grain, fruit trees, cattle, poultry and farming equipment—was probably not less than £10 millions. The response so far, both in Poland and abroad, to the appeal for relief contributions has been very generous, but most of the destitute families will have to be provided for until next year's harvest, and it cannot be expected that private charity will be able to carry the entire load. No estimate has yet been published of the extra burden which will be placed on the Budget in consequence of the floods, but it will be considerable. The area mainly affected is not an important grain-producing region, and in a normal year the amount of grain lost would not have been of much consequence to the nation as a whole. This year, however, the crops were adversely affected by the spring drought, so that the flood loss becomes a serious matter, and may even mean that very little grain from the present crop will be available for export. This situation has already been reflected in the price of rye, the principal crop, which has risen from 14.00 to 17.50 zlotys per quintal since the floods. The crops other than cereals appear to be quite satisfactory, but they are not an important element in foreign trade. More than 400,000 tons of cereals were exported in the first seven months of 1934, as compared with 255,000 tons in the same period of 1933, which indicates that the carry-over is not large.

TRADE RECOVERY NOT MAINTAINED

The spring improvement in trade has not been maintained, and the production index is again falling. The textile industry, which led the improvement, is now leading the set-back. Cotton and wool imports in the first seven months of 1934 were 39,255 and 13,470 tons respectively, as compared with 31,327 and 12,324 tons in 1933, but stocks of finished goods on hand are now uncomfortably large. The coal industry is also in trouble both at home and abroad.

Despite growing economic tension within the country, which is accentuated by the continuous conflict between the Government and organised industry over price reductions, and the increasing difficulties in foreign markets, the surplus of exports over imports has been maintained during recent months at a level sufficient to check further drain on the exchange reserves of the Bank of Poland. During the first seven months of 1934 exports amounted to a value of 554.5 million zlotys and imports to 461.9 millions, leaving a visible active balance of 92.6 millions. In the same period of 1933 exports were 517.1 millions, imports 449.9 millions and the active balance 67.2 million zlotys. Trade with the principal countries on a percentage basis was as follows:—

	January-June			
	Exports to		Imports from	
	1933	1934	1933	1934
Great Britain	20.1	20.0	9.3	10.0
Germany	16.9	17.4	19.1	12.1
France	6.2	4.5	6.4	6.1
Soviet Russia	5.4	4.8	1.7	1.8
United States	1.0	2.4	13.5	15.4

The export figures afford a partial explanation of the shift in political sentiment away from France and in the direction of Germany. Poland is heavily indebted to France on capital account, but the French so far have shown no disposition to take this fact into account in granting import quotas or tariff preferences. The Franco-German commercial

JAPAN

FARMERS AND LOW COCOON PRICES

THE abnormally low price of cocoons is distressing the agricultural community. The summer cocoons, which are now arriving at the markets, are quoted at 1.90 yen on an average, as against a mean of 4.87 yen a year before. This is far less than half the cost of cocoon-raising as estimated by the Imperial Agricultural Association. The farmer's sad plight, after he sold his spring crop at a substantial loss, may be easily imagined. As an emergency relief measure the Government has again resorted to a stock-carrying policy, and has decided to allow three million yen to co-operative warehouses for carrying stocks. But the depression in the cocoon market is largely attributable to the huge amount of surplus spring crop being held by co-operative warehouses under the Government measure of support. It is obvious that such a continuation of the stocks-carrying policy would not only fail to bring about recovery in cocoon prices but would only make matters worse. Dissatisfied with a mere sop, the National Federation of Cocoon-raisers' Guilds and other similar bodies demand more thoroughgoing and "permanent" relief measures, and their clamour becomes increasingly vehement.

The trade returns for July created a somewhat unfavourable impression, since both imports and exports were smaller than in June. Compared with July, 1933, however, imports, at 169,430,000 yen, increased by 28.3 million yen, or 20.1 per cent.; and exports, at 179,306,000 yen, rose by 20.5 million yen, or 12.9 per cent. Raw cotton imports were down by 26 million yen as against the previous month, but 5.3 million yen larger than a year ago. Certain other imports, such as raw wool, petroleum and machinery, were also on a larger scale than in July last year. On the export side, cotton piece-goods, silk fabrics and rayon manufactures have done better, whereas raw silk recorded the heavy decline of 22.7 million yen.

SIGNS OF A CHECK TO THE INDUSTRIAL BOOM

There are signs of a setback in other economic indices, although they are mostly seasonal. The output of cotton yarn during July, at 112,989,000 lbs., shows a decrease of 1,421,000 lbs. as against that of June. The production of rayon yarn, at 11,822,000 lbs., also discloses a decline of 223,000 lbs. The Bank of Japan's index number of wholesale prices for July recorded a further slight drop of 0.2 per cent. on the month, reducing the total to 138.4, the lowest since October, 1932. The aggregate value of all shares listed at the Tokyo Stock Exchange on August 1st registered a fall of 111.9 million yen, or 1.85 per cent., as compared with a month ago. The deposits and advances of the Tokyo clearing banks for last month declined by 6.1 million yen and 6.9 million yen respectively, as against the previous month, while investment holdings increased by 45 million yen.

The first half of this year witnessed a further rapid expansion in the rayon industry. The output of rayon yarn in the first six months of this year amounted to 64,367,000 lbs., as against 40,347,000 lbs. in the corresponding period of last year. Exports of rayon yarn and tissues in the January-June period of 1934 totalled 11,746,000 yen and 50,296,000 yen respectively, compared with 2,650,000 yen and 32,801,000 yen in the same period of 1933. The total productive capacity of eight companies belonging to the Rayon Manufacturing Association was 190 tons a day at the end of June, 1934, compared with 111 tons a year ago; and it will be increased to nearly 270 tons by the midsummer of 1935. Encouraged by such marked activity in the trade, sixteen new companies have so far been promoted with an aggregate productive capacity of 85 tons per day, and their shares have even been sold at a premium. It is feared, however, that such a mushroom growth of rayon concerns may prove a cause of disturbance to the trade in general.

Some big business interests are following the example set by the Mitsui family in the disposal of company shares exclusively owned by them with a view to evading the charge of monopoly. The Mitsubishi family has disposed of 400,000 shares out of 1,100,000 of the Mitsubishi Heavy Industries Company, a ship and aircraft building concern. The Asano family has also sold 50,000 shares out of 110,000 of the Asano Kokura Steelworks. The South Manchuria Railway is to dispose of large blocks of shares of the South

treaty negotiations, which have been carried on intermittently for several years, still appear to be at a deadlock. The negotiations with Great Britain for a tariff agreement to supplement the commercial and navigation treaty of 1923 began in London late in June and are now adjourned for further study. It is expected that the negotiations will be resumed in October, and that in the meantime representatives of the British coal industry will visit Warsaw to continue the discussions with the Polish industry on prices and marketing which began in London in April.

WARSAW, September 1.

TURKEY

PROGRESS OF INDUSTRIALISATION

THE Prime Minister, Ismet Pasha, broke his holiday recently, to open, or lay the foundation stones of, a number of new industrial works and factories connected with the five-year plan announced last year. His object was to mark the keenness of the Government about the plan and to show that it was being carried into execution according to schedule. All the works inaugurated were in the neighbourhood of Istanbul. A first paper mill was laid down at Ismidt, the Turkish naval base on the Sea of Marmara; a bottle and glass factory at Pasha-Bagtche, on the Asiatic side of the Bosphorus; a semi-coke factory at Zoungouldak, the Black Sea coal area; and a large linen-producing works was added to a factory near Istanbul, on the European side. These enterprises indicate the variety and practical character of the industrialisation which is being started, all of them utilising Turkish raw materials and meeting primary needs which till now were met by imports. The most ambitious undertaking is the semi-coke and coal-product factory, which, according to the Prime Minister, is to be the beginning of a metallurgical industry in Turkey.

A considerable exodus of foreigners is being brought about by the application of the law banning the employment of foreigners in small concerns. A year's delay had already been granted at the request of the Greek Government, which did not want to see her refugee problem intensified by a flood of exiles from Turkey. But although there is now no unemployment in Turkey and many of the trades which are banned to foreigners cannot be carried on as yet by Turks and workers are badly needed, the veto has been put into force this summer. Numbers of foreigners are quitting the country with their families; several thousands have been shipped to Greece.

ANTI-SEMITIC AGITATION SUPPRESSED

There has also been a dislocation of economic life in Thrace due to an alarm among the Jewish population there. An emigration movement started, and over 3,000 Jews took refuge in Istanbul. Apparently it had been suggested that they would be accused of spying in the areas of the Dardanelles and Chanak, where they had their homes. It had also been rumoured that they were going to be removed by the authorities. Their economic rivals took advantage of these rumours, and even attacked their shops and pillaged their homes at Kirkklar-Eli, in Thrace. The attackers seem really to have believed at first that the Government had some anti-Semitic policy in mind. They soon found that they were mistaken. The Government stepped in energetically, punished the anti-Semitic agitators and encouraged the frightened Jews to go back and resume their place in the economic life of Thrace.

Meanwhile, a very general round-up of the foreign concessionary companies is being carried out, and they are being forced into a corner and obliged to liquidate their rights in favour of the Government. The foreign-owned and managed railways have been reduced from over 2,000 to under 1,000 kilometres, and those that remain, such as the Smyrna-Aidin Railway—a British interest, the first railway to be constructed in Turkey—are being squeezed out. This new attack on foreign companies has been extended from the railways to the Smyrna Docks, the Istanbul Docks, the Istanbul Telephone Company, the Istanbul Tramway and Electricity Company.

ISTANBUL, August 23.

Manchuria Chemical Company and those of the Korea Railway Company: in the disposal of shares, the S.M.R. will retain a controlling power over the chemical concern, but will sever its connection with the Korean railways.

TOKYO, August 11.

CANADA

RUMOURED CABINET CRISIS

OTTAWA has been full this week of rumours of an acute Cabinet crisis and the impending dismissal or resignation of Mr H. H. Stevens, the Minister of Trade and Commerce. The trouble arose from publication in the Press of summaries of a pamphlet written by Mr Stevens, in which, after reviewing the evidence submitted to the Parliamentary Committee on price spreads, wage conditions and correlated problems, he proceeded to attack various business and financial interests, whom he named explicitly, for indefensible wage-cutting, stock-watering and other unethical business practices. He further declared that he would not rest until the abuses which had been revealed were remedied, and that the task would probably involve a departure from the traditional policies of the Conservative Party. A flood of protests descended upon Mr Stevens's Ministerial colleagues. Mr Stevens, in an interview in Winnipeg, explained that the pamphlet was an expansion of an address delivered privately to a group of Conservative members at the close of the session and had never been intended for public circulation. But the aggrieved business leaders have not been appeased and are insisting that Mr Stevens must not be allowed to function as Chairman of the Royal Commission into which the Parliamentary Committee has been transformed.

An Inter-Provincial Conference on the subject of unemployment and its relief was held in Ottawa on July 30th and 31st. The Provincial Premiers were confronted with the considered decision of the Bennett Ministry that, while it would continue to maintain the Federal labour camps now in operation and succour indigent farmers in the West, it would discontinue on August 15th the Federal Treasury's contribution of one-third of the cost of direct relief, which the Federal Government has for the past three years been sharing equally with the Provinces and Municipalities. Most of the Provincial Premiers protested strongly against this decision, and argued that, if the whole burden of the cost of direct relief was thrown upon the shoulders of the Provinces and Municipalities, they would not have funds to meet their debt obligations. Eventually, the Bennett Ministry agreed that it would continue to make some contribution to direct relief, but on a smaller scale and on the basis of proven needs, provided that the Provinces would tighten up the administration of relief and eliminate abuses revealed in a report of the Auditor-General.

1,133,000 STILL UNEMPLOYED

In the first half of the year expansion of industry absorbed a certain number of the unemployed, but according to official figures there were still 1,133,000 people, or more than one-tenth of the population, in receipt of State assistance of some kind on June 30th, and the number was only about 100,000 less than the figure for the corresponding date in 1933. Moreover, the drought has not only devastated the grain crop over a wide area but has made it very difficult to feed livestock in many districts. The Government of Alberta is now asking the Federal Ministry to finance a scheme for slaughtering and processing 75,000 or more head of cattle in the Province. The Government of Saskatchewan declares that 50,000 head in that Province will have to be killed or shipped to areas where feed is available.

THE GOVERNMENT'S WHEAT PROFITS

The latest western crop report of the Bureau of Statistics, published on August 8th, is again pessimistic, and reports a further deterioration of all grain crops in the absence of adequate rains. Only in Northern Manitoba, East-Central and Northern Saskatchewan and Northern Alberta is the crop situation reasonably good. In the Southern area the meagre crops have ripened prematurely, and harvesting is now in full swing. In the last two weeks there have been heavy

rains in Manitoba and Alberta, but they will only help late-sown crops. Wheat prices have mounted above the dollar level, and it is unofficially stated that the Federal Government has now a profit of about 20 million dollars on its transactions in the wheat market.

The debt problem is still worrying all public authorities, and Mr Mitchell Hepburn, the new Liberal Premier of Ontario, recently expressed the view that legal powers already available would probably have to be invoked to force the creditors of a number of municipalities in Ontario which are in default, and at present have their finances administered by Government boards, to consent to a composition and accept lower rates of interest. The Finance Department at Ottawa is busy with plans for another conversion loan in the early autumn, and it recently succeeded in placing with the Chase National Bank of New York and associated houses a loan of \$60 millions on the security of Treasury notes for a year at 2 per cent., the lowest rate at which a Canadian public loan was ever placed.

Business conditions are somewhat stagnant, and gains in some directions have been balanced by setbacks in others. The tourist traffic is substantially larger than it was a year ago, but the crops are below the average in most sections, and, with rural purchasing power remaining at a low level, it may be difficult to maintain the business recovery of the first half of the year. The mining and forestry industries are still doing very well, but the lumbermen want still larger foreign markets, and the three Provinces of Quebec, New Brunswick and Nova Scotia have agreed to subsidise jointly a special agent to push their export trade in lumber in Europe. Railway earnings are reasonably satisfactory compared with a year ago, but Mr Beatty, the President of the C.P.R., is continuing his campaign for a merger of the two systems. Commodity prices have been rising slightly, and the last weekly index of wholesale prices (for August 3rd) was 72.4, compared with 72.2 for the previous week and 71.9 on July 13th.

OTTAWA, August 27.

LETTER TO THE EDITOR

OUR AGRICULTURAL INCOME

TO THE EDITOR OF THE ECONOMIST

SIR,—In the article on "Agricultural Progress" in your issue of August 25th it is assumed that the net income of the agricultural community is equal to the net value of agricultural output. By further comparison of the fall in the latter with the fall in the whole national income the conclusion is reached that "agriculture has been for some time one of our more prosperous industries"!

This sort of reasoning in the mouth of the Minister of Agriculture was condemned—and rightly so—by you, sir, in a recent issue. I did not expect to find it in the *Economist*.—

I am, sir, your obedient servant,

Isle of Muck, Isle of Eigg, LAURENCE MACEWEN.
Inverness-shire, August 31, 1934.

[We apologise for not making our meaning clearer. By "the agricultural community" we meant all those concerned, directly or indirectly, in this country in the production of agricultural commodities. The net value of agricultural output is neither the gross income of the agricultural community nor, strictly speaking, its net income. But, since we are dealing with England and Wales, for which there are no import and export figures, it is the closest approximation that can be made to the net income. In strict logic, purchases from abroad of fertilisers, feeding-stuffs, animals for breeding or fattening, etc., and purchases of machinery, etc., at home should be deducted. This, however, cannot be done, so that, in estimating the fluctuations in the net income of the agricultural community, we are forced to use the figures of net output. If the deduction could be made, it would probably strengthen rather than weaken our argument, for, taking the whole of the United Kingdom, imports of the more important agricultural "raw materials" declined by 36 per cent. between 1930-31 and 1932-33. It is therefore probable that the "net income of the agricultural community" declined by even less than the 6.8 per cent. we quoted. It is, of course, possible that the incomes of farmers were reduced by a larger proportion—but farmers are not "the agricultural community."—Ed. *Econ.*]

MONEY AND BANKING

THE FEDERAL RESERVE SYSTEM: 1914-1934

THE twentieth anniversary of the Federal Reserve system falls this autumn. It is being celebrated in the United States by talk of converting the present system of twelve regional banks, owned by their member banks but largely controlled by a Federal Reserve Board appointed by the President, into a single Central Bank under the undisputed ownership and control of the Federal Government. This plan, it is believed, has not yet secured the approval of the President, but it is obviously a possibility that legislation of this character will be introduced into the next session of Congress.

The present is consequently an appropriate time for reviewing the operations of the system in its first twenty years. Dr. S. E. Harris of Harvard University has lightened the task by his recently published monumental study on the subject.* For the industry and profundity which have gone to the preparation of this book it is impossible not to have the highest respect, and it will undoubtedly be regarded for many years to come as the *locus classicus* on the subject. But it is legitimate to add the regrettable fact that the book is written in a style which first confuses, and then maddens, the reader. In spite of analytical contents, tables and copious summaries it is frequently impossible to be sure what Dr. Harris is writing about. It is a very great pity that a work of such great scholarship on a subject of such paramount importance should have been enveloped in a linguistic fog.

Much of Dr. Harris' work is historical, and his second volume is entirely devoted to an extended discussion of the monetary crisis of 1927 to 1933, which will be of particular interest to all students of the monetary history of the past six years. But this is a controversial and well-ploughed field, and the more original part of the book deals not with the history but with the technique of Central Banking control. Those who look forward to the growth of Central Banking as the chief hope of controlling the Trade Cycle will find very much to interest them in Dr. Harris' conclusions.

Dr. Harris distinguishes four main methods by which the Federal Reserve system can control the credit structure: bank rate policy, open-market operations, moral suasion and qualitative discrimination. He takes each in turn and subjects it to examination, and we may conveniently follow his example.

Bank rate policy in the United States has from the start been emasculated by the impossibility of imposing a penalty rate. This is largely due to the fact that the member banks borrow directly from the Reserve Banks, without the intermediation of a money market. In England if Bank rate is sufficiently above the market rate of discount, bill brokers are forced to reduce their borrowings from the Bank on pain of bankruptcy. But in the United States, even if the rate of Reserve rediscount is above the yield on the actual collateral pledged, it may be—and probably is—below the average rate of earnings on the banks' total assets. Thus to force a reduction of borrowings, Bank rate would have to be very high indeed, and such high rates are prohibited by the force of public opinion, always clamorous for cheap money, and by the belief of the member banks that since they own the Reserve Banks they are entitled to accommodation at reasonable rates. In point of fact, however, the system has made very little attempt to test the power of its Bank rate. The rate of rediscount has consistently been kept below the yield on the collateral deposited, so that borrowing has imposed no penalty upon the borrowing member bank.

Throughout the history of the Federal Reserve, bank rate policy has been thrust into the background by open market operations, which, in their modern application, are

almost a Federal Reserve invention. Dr. Harris, however, believes that they "have proved to be a weapon of second-rate effectiveness." The main reason he ascribes for this is that the Reserve authorities have concentrated their attention upon the volume of Federal Reserve credit outstanding, and in particular upon the size of their portfolio of Government securities. The important figure to be watched is the size of the member banks' reserve balances. Purchases and sales of Government securities by the Reserve Banks affect the size of member banks' reserve balances only if other things are equal. But other things never have remained equal. When the Reserve Banks sell Government securities, member banks may maintain their balances by selling acceptances (bankers' bills) to the Reserve. Alternatively, they may increase their borrowings. But even if both acceptances and borrowings are included, the total of Federal Reserve credit outstanding does not determine the size of member banks' reserve balances, for the import and export of gold and the movement of currency into or out of circulation or hoarding will also have to be considered. Thus, member bank reserve balances increased rapidly between 1922 and 1927, although there was no substantial increase in Reserve Bank Credit. Conversely, a very large increase in Federal Reserve credit in 1932 failed to increase member banks' reserve balances. Dr. Harris might, indeed, have gone further and questioned whether control of the reserve balances, even if it were established, would be of much assistance. In 1928-29, for example, reserve balances were not increasing, but there was an obvious inflation of credit. And in 1933-34 reserve balances have been increased until there are \$2,000 millions of excess reserves without any notable tendency to expansion of credit.

Moral suasion has always been the favourite weapon of politicians, and it was the only policy upon which the Federal Reserve Board and the Federal Reserve Banks could agree in 1928-29. Its attraction arose out of the dilemma in which the authorities found themselves as the great inflation gathered way. To have pursued a vigorous policy of making money dear would have killed speculation on the Stock Exchange, but it would have inconvenienced general business. There is a curious unwillingness in America, even to-day, to admit that Wall Street was not the only speculator in 1928-29, and at the time it was regarded as axiomatic that money rates must not be raised throughout the country. Hence the policy of keeping money cheap but "morally persuading" member banks not to increase their speculative loans. The events of 1928-29 effectively demonstrated that credit cannot be departmentalised, and the surprising thing is not that the policy of moral suasion failed but that it was persisted in for so long and that it still retains its adherents in high places.

Qualitative discrimination in extending credit arises out of the same fallacy as moral suasion. At the beginning the Reserve Banks had an elaborate system of differential rates, but it had to be abandoned shortly after the war and each Reserve Bank established a single rediscount rate. Acceptances, however, have always been favourably treated, and the low buying rate for this variety of paper has frequently interfered with the operations of bank rate or open-market policy. In the early years of the system an attempt was also made to establish elaborate rules of eligibility of paper presented for rediscount, with the object of encouraging certain sorts of transactions. The net result was that member banks took care to have a certain amount of eligible paper on hand, but otherwise went their way undisturbed. Eligibility is now being gradually abandoned in favour of the rival principle of security—that is, judging a loan by its safety rather than by its purpose.

Dr. Harris' main conclusion is, then, that the Federal Reserve system never succeeded in establishing an effective control of credit. It sometimes contrived to expand credit,

* "Twenty Years of Federal Reserve Policy." By S. E. Harris, Ph.D. Harvard Economic Studies, No. XLI. (Cambridge, Mass.) Harvard University Press; (London) Humphrey Milford. Two Volumes. 865 pages. 37s.

but never to contract it. Its policy has consequently had a constant inflationary bias. This conclusion holds very little comfort for the future. The system is now dominated by an inflationary Government; its actual and potential gold reserves are enormously greater and the member banks' reserve balances are 75 per cent. higher than in August, 1929. To ward against these inflationary possibilities the Reserve system has, it is true, one new weapon to its hand, namely, the power to decree an increase in the minimum reserve percentages of member banks. But the usual fatal solicitude for the small country bank will probably prevent its being used, even if the Federal Reserve Board, with its predominantly political composition, can make up its mind early enough. All the indications point to the belief that the American banking system has learned nothing from the results of its inflationary bias in the years before the crisis.

FINANCIAL NOTES

The Money Market.—Market conditions were easy this week; money was in good supply at $\frac{1}{2}$ per cent. on Tuesday; Stock Exchange borrowing on Wednesday hardened rates, but the usual clearing bank was "calling" on Thursday, and there was some borrowing from other clearing banks.

	Aug. 16, 1934	Aug. 23, 1934	Aug. 30, 1934	Sept. 6, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{7}{16}$	$\frac{7}{16}$	$\frac{7}{16}$	$\frac{13}{16}$ — $\frac{7}{16}$
(b) Others.....	$\frac{1}{16}$	$\frac{3}{16}$	$\frac{1}{16}$	$\frac{1}{16}$ — $\frac{1}{16}$
Three months' bank bills	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$ — $\frac{1}{16}$	$\frac{1}{16}$

The discount market was very dull. Bill rates were lower, but hardened towards the end of the week. One or two of the banks were buying October and November Treasuries; but market activity was centred on the September-October Treasuries at $\frac{1}{2}$ per cent. The outside discount rates were weaker, hot Treasuries being about $\frac{1}{16}$ — $\frac{1}{8}$ per cent. Three months' bank bills have weakened to $\frac{1}{8}$ per cent.

* * *

The Bank Return.—This week's bank return does not show any changes of particular import:—

	Sept. 6, 1933	Dec. 27, 1933	Aug. 22, 1934	Aug. 29, 1934	Sept. 5, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.3	190.7	191.7	191.8	191.8
Note circulation.....	375.2	392.0	379.4	379.3	381.3
Banking Department:—					
Reserve.....	76.4	59.7	72.8	73.0	71.0
Public deposits.....	21.5	22.2	37.4	34.0	29.6
Bankers' deposits.....	97.4	101.2	82.1	83.7	88.9
Government securities ...	83.5	88.0	84.5	83.2	85.0
Discounts and advances	9.7	16.8	5.8	5.6	6.9

Proportion 46.6% 37.3% 46.9% 47.7% 45.6%

The note circulation has increased by £2.0 millions, but this has been more than offset by increases of £1.8 millions in Government Securities, of £1.3 millions in Discounts and Advances and of £1.5 millions in Other Securities. Public deposits are £4.4 millions lower than last week, which is a smaller reduction than was expected in view of the high level at which this item has been standing and the disbursement of approximately £10 millions on September 1st for dividends and the redemption of Victory bonds. As a result of these changes bankers' deposits have increased by £5.2 millions.

the intervention of the control, a slight recovery began. On Saturday, however, in spite of "bear" covering and further control operations, the franc rate did not rise above 74½. The record low level for sterling was reached on Monday, with a franc rate of 74½, a dollar rate of 4.98½, and a gold price of 141s. 7d. an ounce—a high record for all time. Forward francs were in demand at the end of the day, and the premium stood at 8½ cents. Until Wednesday the tendency of sterling was then upwards, both against the gold currencies and the dollar. On Wednesday and Thursday, however, there was a further relapse, the franc rate touching 74½ and the dollar rate 4.99½ on the latter day. The mark also weakened against sterling until the middle of the week, and then recovered. The rate for free marks on Wednesday was 12.55; register marks were then at a discount of 33.38 per cent. and Sondermarks were quoted at 12.75-12.80.

* * *

New York Money and Banking.—Money rates have remained about their recent low levels, with a faint tendency to go lower. Bank clearings of the leading 47 cities for the week ending August 29th totalled \$3,643.6 millions, against \$3,999.4 millions for the corresponding week a year ago. Bank loans of members of the New York Stock Exchange in August decreased by \$48 millions to \$874 millions. Monday was a public holiday in the United States; and conditions have been dull almost the whole week. The economic uncertainties overhanging American business are apparently making the market hesitant. During the next two months the Treasury will have to undertake new financing to a total of \$1,725 millions, including the raising of \$1,200 millions to redeem the Fourth Liberty Bonds, which have already been "called"; but despite Treasury support for the market, Government issues are pronouncedly weak. On Friday of last week gold to the value of \$2,800,000 was exported to Europe; on Tuesday \$4,988,000 of gold was withdrawn from the Federal Reserve Bank on French account; and on Wednesday \$3,497,000 of gold were shipped to France, and \$499,000 to Holland. On Friday of last week, 8,800,000 ozs. of silver, valued at \$4,175,000, were shipped from Southampton to New York. The new Montreal silver exchange has allotted eleven seats to members of the New York Stock and Commodity Exchanges. It is reported that a conference may shortly take place at which the officials will discuss the resumption of trading in silver futures in New York, which was suspended on August 9th, in consequence of the Government's decree nationalising silver stocks. On Wednesday, Mr Secretary Morgenthau confirmed the resignation of Mr W. R. Stark, chief economist at the Treasury, and one of the last "conservative" officials remaining in Mr Morgenthau's entourage. This comes hard on the heels of the resignation, at the week-end, without explanation, of Mr Lewis Douglas, Director of the Budget—the last of the "sound money men" in President Roosevelt's Administration. These resignations have perturbed financial circles.

THE STOCK EXCHANGE

AUSTRALASIAN BOND PROSPECTS

BONDHOLDERS, as a class, are shy of elections. To this trait, rather than to any widespread anxiety over the result of the Commonwealth voting on September 15th, is probably due the net fall in the average price of ten Australian internal loans in Melbourne from £109 2s. 10d. on August 7th to £106 15s. 9d. on August 28th, with a proportionate change in average yield from £3 3s. 4d. per cent. to £3 7s. 7d. The electoral pendulum normally swings fast in Australia, and the present Government may well lose some traditionally Labour seats gained at the last election under the stress of a national anxiety which Mr Lyons has himself removed by the subsequent fulfilment of his own mandate. A Labour Government is possible, but not probable, and the heaviest odds are being laid on a joint Government of the United Australia Party and the United Country Party—i.e. the Right and the Centre, including, possibly, part of the Labour Right Wing, which has previously co-operated in not altogether dissimilar circumstances. Such a development would hold few terrors for Australia's oversea bondholders. Even a Labour administration would probably meet its external debt service promptly, completely and without question, though it might well embark on a course of disturbing experimentation with the internal banking system.

The Lyons Government, to its credit, leaves the country in a position to meet its overseas obligations without hardship. In the eight years to June, 1930, when Australia was a heavy importer of capital, her "visible" balance of trade was passive to the extent of about £8½ millions per annum. In the twelve months to June last there was an active balance (including "commercial gold" movements) of £38 millions sterling. Present external interest requirements are £22 millions sterling. Since October, 1932, the authorities have effected loan conversions in London covering £110 millions of stock with a total saving in interest of £1,827,000 sterling, equivalent to £2,283,000 Australian. The Commonwealth Budget has been balanced, after the making of substantial remissions of taxation, and though there is still an aggregate deficit in the State Budgets, its net total is less than the aggregate Commonwealth and States sinking fund allocations.

Possibly the strongest claim of the Lyons Government to a vote of thanks from overseas bondholders is summed up in the statement that Commonwealth 5 per Cent. Bonds, 1945-75, which touched 58 in 1931, are now standing at 108, and New South Wales 5½ per Cent. Bonds, 1947-57, which were as low as 50, are quoted at 111. This result has owed something to the export stimulus conferred by an exchange rate of £125 Australian for £100 London in a period during which sterling has itself shown considerable depreciation in terms of gold. Australia has also been indebted to higher sterling wool prices, exemplified by a rise in the index of the Bradford "Weekly Wool Chart" from a low "depression" figure of 49 (July, 1914 = 100) to 102 in January last, with a subsequent reaction to 70. This rise has played a decisive part in the increase in the estimated Australian national income from £438 millions (Australian) in 1931-32 to £458 millions in 1932-33 and £497 millions in 1933-34 (years to June 30th in each case). Nevertheless, Australia's internal efforts to reduce her burden of interest rates and costs have been sufficiently vigorous, far-reaching and successful to have exercised a decisive influence on her immediate destiny. Interest on all internal loans, by the Commonwealth States and public bodies, and on company debentures, has been reduced by anything up to 22½ per cent. Mortgage interest rates and rents have been similarly reduced and drastic cuts have been made in salaries and pensions. The declining tendency in wage rates, in industries where cost of living scales are in operation, has been reinforced by a cut of 10 per cent. in real wages under the jurisdiction of the Federal Arbitration Court.

It is, in a sense, unfortunate that the moment chosen for ascertaining the verdict of the Australian people on these achievements has coincided with a less favourable phase in

world conditions outside Australia's control, and with the inception of a somewhat gratuitous fiscal controversy with British textile interests. The relationship of the latest scale of cotton textile duties to the Ottawa Pacts is a question which only indirectly concerns bondholders, but the outlook for the wool and wheat industries is of crucial significance. The wheat crop of 1933-34 was below average, and as farmers tended to hold back supplies, exports fell well below Australia's quota under the World Wheat Agreement. Sowings for the 1934-35 crop have been estimated at the lowest figure for thirty years, and the drought bogey has not even now been exorcised in all areas. Wheat exports in the coming season, however, will in all probability be helped by higher prices, whereas the extent of the forthcoming "wool cheque" has been threatened by a significant reaction in the world price level. Reduced demand from France, raw material import restrictions and prohibitions in Germany and exaggerated bargaining-threats from Italy were largely responsible for the original postponement of this season's sales. The auctions eventually held at Brisbane, and this week at Sydney, however, have been partially reassuring. Buying from Bradford, Japan and local mills has been brisk, and the nature of the bidding on behalf of European interests has suggested that the German regulations may leave important loopholes for those who are prepared to seek them. The current level of prices is about 20 to 25 per cent. below that of the opening sales last year, and it is uncertain to what extent marketing offerings, at this stage, are deliberately conservative. On present indications, however, the decline in wool prices, though significant, may fall a long way short of the calamitous dimensions recently prophesied.

Broadly, there is little danger that Australia's export balance will decline sufficiently in coming months to jeopardise her ability to remit her full interest service, though until electoral and economic uncertainties are resolved, there may be no widespread recovery in London quotations which, as the following table shows, are below the highest levels for this year:—

† Allowing for net accrued interest. (t) Based on redemption at par in two years, x Ex dividend.

There may be room for varying opinions on the question whether a difference of about $\frac{1}{2}$ to $\frac{3}{4}$ per cent. in the average yield on British and Australian Government stocks is a correct index of the permanent economic relationship of the two classes of securities. That future Australian Governments, however, have every incentive to maintain the national credit overseas is suggested by the table given in a Note on pages 451-2, which shows that Australia has optional or compulsory maturities in London during the next five years to a total of £137½ millions, of

which £70 millions are now costing under 4 per cent., while £67½ millions are costing 4 per cent. or more.

So much for Australia. We may complete our review of the prospects of Australasian bondholders by a brief summary of conditions in New Zealand. After a succession of hard years, New Zealand appears to be achieving something of her old prosperity. Holders of New Zealand loans in this country will be first to congratulate the Dominion, whose economic improvement is well summed up in Mr Coate's Budget proposals, which were announced on August 23rd. To replace a deficit of £709,000 for 1933-34—itsself £1,291,000 lower than the Budget estimate—the Finance Minister proposed estimates for 1934-35 which give an indicated surplus of £8,000. The Dominion is now experiencing the benefits of higher export prices for wool and meat, coupled with low interest rates. The burden of mortgage indebtedness, which had become severe as a result of the slump in agricultural prices, was eased by the Mortgage Relief Act in 1931, which was extended to 1933. The necessity for this moratorium relief has largely passed away, but the opportunity is being taken, now that ample mortgage credit is available at 4½ per cent. or lower, to establish a National Mortgage Corporation. This will bridge the gap between private investors, who, it is anticipated, will readily subscribe to mortgage bond issues at 4 per cent., and the mortgagors, who have paid from 6½ to 7 per cent. for accommodation. The rearrangement of mortgage finance is rightly regarded by the Finance Minister as one of the first tasks in the financial rehabilitation of the Dominion. The Reserve Bank, which has just commenced operations, should assist in the stabilisation of lower interest rates.

Although all the economic indices reflect the improvement in New Zealand's position, the figures for overseas trade are particularly impressive:—

OVERSEAS TRADE (Thousands of N.Z. £'s)

Years ended December 31 :	Exports	Imports	Export Surplus
1930	44,941	44,340	601
1931	34,951	26,498	8,453
1932	35,610	24,646	10,964
1933	41,006	25,581	15,425
Seven months ended July :			
1933	26,739	14,329	12,410
1934	34,349	16,623	17,726

An average rise of 20 per cent. in export prices since 1932, as the Finance Minister pointed out, has restored equilibrium between farming costs and prices, but this improvement must be attributed largely to the deliberate New Zealand exchange policy. The alteration in the pegged rate from £N.Z.110 to £N.Z.125 for £100 sterling has been hotly debated by those who have to meet obligations in London, on the ground that the rate is unwarranted by the active balance of trade, while some quarters have not hesitated to describe this policy as exchange dumping. Moreover, there is considerable uncertainty as to the maintenance of the rate, despite authoritative assurance that it will be maintained until the end of the produce season. The Reserve Bank is to acquire the surplus London funds which have accumulated under this policy, and will provide funds in New Zealand for the redemption of £N.Z.20 millions Treasury bills by which the London deposits were purchased.

The London market rates New Zealand's credit high, the average yield obtainable on her sterling loans being about 3½ per cent.:—

NEW ZEALAND LOANS

* Ex dividend. † Bearer bonds. Other issues are inscribed. ‡ Flat yield.

The table suggests that little opportunity will be found for conversion operations during the present phase of low interest rates. Active borrowing during the twenties on a twenty-year term has resulted in redemption dates which, unlike Australia's, can be turned to little purpose. Present quotations are close to this year's high levels, but the future trend will have an intimate connection, not merely with long-term interest rates, but also with the consequences of British agricultural policy. The sheep-farming and dairy industries are apprehensive of import regulations in the British market on the expiration of the Ottawa Agreements in 1935. Stockholders who recognise that New Zealand has presupposed a free British market for her produce, and has borrowed £161 millions in the London market out of a total debt of £280 millions, will trust that British policy will recognise the mutual dependence, and the mutual obligations, of debtor and creditor.

INVESTMENT NOTES

Boom Symptoms in the Capital Market?—Certain critics, with a lively memory of the 1928 "prospectus boom" and its aftermath, are asking whether the new capital market in 1934 is not exhibiting some of the symptoms of that distressing period. The number of company prospectuses, admittedly, is very much less to-day than six years ago. The flotations of 1934 are mostly new mining propositions, which were almost unrepresented in 1928, or established industrial enterprises with a satisfactory record under private auspices. Mining issues are in a class by themselves. Some of the methods adopted for financing the development of the West African goldfields, for example, may be open to serious criticism, but gold prospecting is a speculative business, and those who take a hand may be credited with knowledge of the rules of the game. In the refinancing of established industrial businesses, however, there is no room for expedients which aggrandise "the market" at the expense of the outside investor. The adoption of a capitalisation which places heavy preferential requirements before a relatively small amount of low-denominational ordinary capital impairs the value of priority rights and makes ordinary dividend and earnings rates over-sensitive to fluctuations in total profits. It also lends itself to market manipulation. In some recent instances a relatively small number of ordinary shares has been available for the public, the remainder being retained for judicious unloading, when limitation of supply has produced a high premium, by "the shop." What would be the position if conditions unexpectedly deteriorated, as in 1929? An even more objectionable feature is the coupling of subscriptions with the grant of free options on future capital, an instance of which occurred this week. "Option certificates" have been defended on the ground that they may facilitate the raising of further capital when necessary. But under conditions which make an option worth exercising a company, *ipso facto*, can obtain a better price by direct issue, while under opposite conditions it will obtain none, for options will not be exercised. Companies which issue option certificates, in fact, merely create a convenient gambling counter. The discovery, this week, of certain forged allotment letters in connection with a recent issue—Airspeed (1934), Limited—though happily of small moment owing to the alertness of the brokers who discovered the fraud, is an instance of the temptations which high premiums may offer to individuals whose self-regard exceeds their social sense. The market should need no reminding that widespread or prolonged departure from the principle that new issues should secure maximum resources for borrowers, with a minimum *douceur* for the market, will bring Nemesis, sooner or later.

German Bonds and Dr. Schacht.—We deal on page 436 with Dr. Schacht's latest demand on Germany's external creditors for a moratorium for several years, a scaling down of the principal of the loans, and new credit

to restore her exporting capacity. The effect upon the market value of the threatened bonds has, naturally, been unfavourable. The annexed table gives the prices ruling on Wednesday, together with those of May 30th (the day succeeding the break-up of the Berlin debt conference), June 15th (the day after the moratorium announcement), July 5th (the day after the signing of the Clearing Agreement under which Germany undertook to pay in full the "Dawes" and "Young" coupons falling due in the second half of 1934), on August 31st (the day following Dr. Schacht's Bad Eilsen speech), and the highest prices recorded this year:—

	1934	High	May 30	June 15	July 5	Aug. 31	Sept. 5
"Dawes" 7%	95½	75½	62½	67	47½	49	49
"Young" 5½%	69	54½	43½	49	36	36½	36½
Potash 7%.....	93½	80	73	74½	60½	59½	59½
Potash 6¼% ...	90	75½	71	68½	55	55	55
Berlin City 6%	52½	36½	39½	36	27	26½	26½

The table shows that Germany's "premier" security, the "Dawes" 7 per cent. loan—which has "absolute priority of transfer," besides being hedged about by all the "safeguards" of pledged assets and revenues that financial ingenuity could devise in 1924—has now attained the unenviable distinction of a 15 per cent. yield. Both "Dawes" and "Young," together with the municipal issues (of which Berlin City 6 per cent. is a sample), have in the past six months lost half the value which the first year of Nazi rule had left them. On the other hand, the two Potash loans, whose service is collected outside Germany from the gross proceeds of all German potash sold in foreign countries, have fallen less severely, and now stand above the Reich loans. There has been much discussion in the market as to whether this superiority of the Potash over the Reich loans is justified by their respective merits or demerits. The two main arguments on the point tend in opposite directions. On the one hand there is, in favour of the Potash issues, the fact that the German Government cannot by any purely financial procedure intercept the proceeds of the potash sales and withhold them from the trustees for the bondholders; though the Government might, conceivably, requisition the potash from the Syndicate and attempt to sell it abroad on its own account. On the other hand, there is, in favour of the Reich loans, the fact that in June the British Government was on the eve of establishing clearing machinery against Germany with the main object of compelling Germany to continue paying interest on the Dawes and Young Loans. If Germany, at the end of the current six months, attempts to put Dr. Schacht's threat into force against those two loans, the British Government will be bound to take all reasonable action to protect its bondholders. It is under no special obligation, however, to the holders of the Potash bonds. We do not claim to decide the relative values of the two arguments. It is impossible to be certain that any German Government which decided on unilateral action in the matter of the Potash loans could not find a way of destroying their special security. We should hesitate to say that at the present relative prices the Potash issues are necessarily a better gamble than the "Dawes."

Outlook for Primary Commodity Shares.—What is the outlook, in the coming months, for companies engaged in the production of the basic foodstuffs and raw materials—wheat, copper, tin, rubber, tea and the like? In the present phase of the trade cycle investors may naturally look for a further general advance in prices. There are, however, many complicating factors which render any confident expectation of a continuous rise distinctly hazardous. Is it reasonable, in the first place, to look for a fresh expansion of demand in the face of the ominous creakings, or worse, of the economic machine in two such enormously important consumption areas as the United States and Germany? On the supply side, while expansion in the output of many commodities has been checked, in some instances this result has been due to artificial and arbitrary measures, the product of "restriction schemes" of one kind or another. Among the leading commodities, only in one case, wheat (and other cereals), is natural restriction of supply a dominant factor. The estimate of the Inter-

national Institute of Agriculture for the current wheat crop of the Northern Hemisphere (excluding Russia and China) indicates that the total yield will be some 10 per cent. below the 1933 record, though still slightly above the 1928-32 average. With a poor crop promising in Australia, there is little prospect of the Southern Hemisphere's redressing the balance. The carry-over is ample, and nothing like actual scarcity is in sight, but the odds, nevertheless, are fairly heavily on a further rise in price, especially as wheat is subject also to such "artificial" control as the International Wheat Agreement may contrive to make effective. Much the same remark applies to cotton, which is subject to the combined influence of natural and artificial restriction. In the purely artificially restricted class are tin, rubber and tea. Of these tin is in what may be called the advanced stage of restriction. As restriction is really drastic and has recently been aggravated, there has been a big rise in price. There are now signs that price is having a deterrent effect on demand, and that, unchallengeable as the determination of the International Tin Committee may be, a further advance may not be easy of achievement. At the other end of the restriction class is rubber, which is only just entering upon its course of rigorous treatment. The decisive issue here is whether or not the International Committee will live up to its early professions of moderation. On economic considerations the present price, of 7½d., certainly appears sufficiently high, but many producers are agog for 9d. or more, and moderating influences on the Committee may have a hard task to control the more ambitious spirits. In the case of tea restriction has been administered with restraint, but is nevertheless meeting with difficulties. Consumption has not expanded as much as had been hoped, and in recent months prices have come back sharply. Plans are afoot for a "drink more tea" campaign which may help demand—but only if prices are not raised again. Finally, there is the select band of the unrestricted, of which oil (despite Mr Ickes) and copper are the leading members. Oil has been depressed by the great expansion of Russian output since the inception of the original "Five Year Plan," and by the development of "hot oil" production in America. Copper has been hampered by the German crisis and flagging American demand, by American sales and by expanding output from the low-cost African mines. International agreements to restrict are a bare possibility in both the oil and copper industries. Failing them, there is little reason confidently to look for a material rise in prices in the near future.

Roumania and Her Creditors.—In view of the announcement of M. Slavescu, the Roumanian Minister of Finance, that his Government intends to raise internal loans for consolidating public debt and meeting Budget needs, Roumanian bondholders will read with enhanced interest the report made by M. Roger Auboin to the Governor of the National Bank of Roumania, whose findings are discussed in a Note of the Week on page 440 of this issue. Roumania's external creditors have shown a praiseworthy forbearance which has redounded greatly to Roumania's advantage. They have consented to agreements which have reduced the annual external debt service from a "normal" total of 5,700 million lei, to 2,710 million lei for 1933-34 and an estimated 1,398 million lei for 1934-35. In return for this sacrifice of three-fourths of their service, the external creditors have a moral right to urge that Roumania will, at least, ensure that her internal finances are put into a sound condition. Instead, M. Auboin's report reveals that there is still a permanent deficit in the Budget, which, by necessitating the putting into circulation of an amount of purchasing power greater than that received as tax revenue, prevents the establishment of a natural equilibrium. Until this situation has been corrected, Roumanian bondholders can scarcely look for a sensible amelioration of their present unsatisfactory position.

Australia's Conversion Opportunities.—Although the Australian Government, during the current low interest regime, has succeeded in converting as much as £109,849,000 of bonds in London, at a total interest saving

of £1,827,000 sterling (equivalent to £2,283,000 Australian), she has still a large field of optional or compulsory refinancing before her. The following table sets out all her loans, issued in London, which have definite or optional redemption dates during the next five years:—

Date	Stock	Maturity	Rate of Interest	Amount Outstanding
1934—December 1 ...	South Australia.....	1934	3½	£ 789,400
1935—January 1	Tasmania	1935	4½	137,750
April 1	South Australia.....	1916-35	4	1,559,150
May 1	Western Australia.....	1915-35	3½	463,110
"	"	1920-35	3½	2,496,711
June 1	"	1915-35	3	2,235,007

				5,717,813
1930-1950	New South Wales.....	1930-50	3½	12,067,428
1935-1955	West Australia.....	1935-55	3½	3,345,804
Grand Total:				138,371,259

Of the total of £138,371,259, some £67,492,812, carrying interest of 4 per cent. or more, may be convertible to a lower level if cheap money endures, while £70,878,447, bearing interest under 4 per cent., will be convertible into long-term stock "at a profit" only if interest rates fall further in the meantime. Of the former total only £4,012,715 represents compulsory maturities, against £63,480,097 callable at the Australian Government's option. Of the "under 4 per cent." stocks, some £45,140,902 fall into the "compulsory" category before 1939. Only £789,400 of stock reaches its definite maturity date during the remainder of this year, but in 1935 some £19,311,841 will fall due for repayment (of which £17,614,941 is costing 3½ per cent. or less), while £62,480,097 of stock (all costing 4½ per cent. or 5 per cent.) will become "callable" at the Government's option. The figures bear out the conclusion, suggested in a leading article on page 449, that the Commonwealth Government which will take office after this month's election, whatever its political colour, will have every incentive to retain the good will of overseas bondholders.

Building Society Policy.—In a "Note" under this heading in last week's issue of the *Economist* we set out the interest rates paid and charged by a number of British building societies, and summarised their regulations limiting new business as regards deposits and shareholdings. The National Building Society, which was included in our list, has now made a certain relaxation in its restrictions affecting investment. New members—i.e. those who open accounts on and after September 1, 1934—may now invest amounts in the society's shares up to £600 in all. Shareholders who were on the society's books at August 31st may increase their holding by an amount not exceeding £600, subject to the condition that total balances must not exceed £4,980, accounts in the names of husbands and wives being treated as one account. The interest rates paid to shareholders remain as set out in our "Note" last week. The company, as we suggested, does not accept money on deposit account, all balances being held in the form of shares.

"Digest" Australian Year Book.—The sixth edition of this year book* will be welcomed by English finance houses and investors who are interested in the Australian and New Zealand markets. The change in the date of publication from the autumn to the spring has enabled the latest information to be included. The editor's intention has been to give particulars of all investment companies listed on Commonwealth and New Zealand Stock Exchanges. Apart from certain recalcitrant companies which refuse to publish any information—and who incur the editor's merited criticism—the record is detailed and comprehensive. The volume includes a Directory of Directors. A welcome innovation sets out the domicile of the share registers of each company. As a record of personnel, capital and dividends the volume deserves to rank as the "Burdett" of the Antipodes.

New Issues in August.—The capital market did homage to Augustan traditions last month, the total new issues being only £2,021,000, as compared with £19,614,000 in August, 1933. We set out our usual analysis below:—

(000's omitted)					
Monthly Average	United Kingdom	British Possessions	Foreign Countries	Total	
1930	14,220	5,121	2,975	22,316	
1931	4,542	3,209	761	8,512	
1932	13,589	2,129	24	15,742	
1933	17,520	2,429	449	20,398	
Monthly Total	Govt.	Other			
June, 1933	3,150	11,355	783	Nil	15,288
June, 1934	Dr.150	3,857	3,683	90	7,480
July, 1933	Dr.200	3,369	212	Nil	3,381
July, 1934	Dr.300	13,624	3,753	Nil	17,077
August, 1933	Dr.250	485	15,045	4,334	19,614
August, 1934	50	1,500	471	Nil	2,021

British Government borrowing was confined to £50,000 net sales of National Savings Certificates. The only issues for use in the United Kingdom were the Salford and Stretford Corporation Loans, both by way of 3½ per cent. loans at par. Other borrowings were frankly speculative, the New Machavie Gold Mining Company making an offer of shares totalling £330,000, and Patent Paper Packing (Foreign) an issue of £90,000.

Actuaries' Investment Index.—The return of investors from holiday has not brought any marked accession of business to the industrial share markets as yet. Prices, however, have been well sustained, the 144 shares in the Actuaries' Investment Index (December 31, 1928 = 100) having an average value of 71.4 on Tuesday of this week, against 71.2 a week earlier and 69.9 a month earlier. The corresponding yield figures are 3.67, 3.68 and 3.74 per cent. Net fluctuations over the last four weeks have been small even in the component group indices, as the following table suggests:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Aug. 7, 1934)	Week Ago (Aug. 28, 1934)	This Week (Sept. 4, 1934)	Month Ago (Aug. 7, 1934)	Week Ago (Aug. 28, 1934)	This Week (Sept. 4, 1934)
Building Materials (4)	80.4	84.5	84.6	4.19	4.12	4.12
Coal (6)	89.5	88.1	89.6	3.97	4.06	3.98
Cotton (6)	45.1	46.6	45.4	2.26	2.27	2.28
Oil (5)	61.4	62.6	62.7	4.78	4.69	4.68
Electric Supplies (8)	93.1	94.7	96.8	4.55	4.48	4.41
Home Rails (4)	74.5	77.6	77.7	1.51	1.54	1.54
Breweries and Distilleries (16)	110.4	113.4	113.3	3.92	3.89	3.90

A progressive tendency was shown last month by building material, electrical equipment and brewery shares, while home rails, after numerous ups and downs, finished slightly higher on balance. As we showed in our chart on page 406 of last week's *Economist*, the slight August rise in values merely compensated for the decline during July, the general trend since the beginning of this year having been stationary.

OBJECTS.—The Company was incorporated in England on the 3rd August, 1934, with the objects set out in its Memorandum of Association, and in particular to acquire as a going concern the undertaking, property and assets of Fillerys Toffees Limited, of Birmingham, now in voluntary liquidation, and hereinafter referred to as "the Vendor Company," subject to its liabilities.

HISTORY AND BUSINESS.—The business, which is that of manufacturers of Toffees, Caramels and Confectionery, was founded in 1923 by Mr. R. H. Mayhew and three others associated with him as a Private Limited Company (the Vendor Company) on the 20th August of that year. At the date of going into voluntary liquidation, namely, 30th July, 1934, the Vendor Company had an authorised capital of £15,000, of which £10,952 had been issued and paid up.

The business is done with large wholesalers, distributors and general stores on a cash and one month credit basis.

PROFITS.—The following is a copy of a Report which has been received from Messrs. Price, Waterhouse & Co., Chartered Accountants, of 3, Frederick's Place, Old Jewry, London, E.C.2:—

29th August, 1934.

The Directors, FILLERYS TOFFEES LIMITED, Wilders Drive, Greet, Birmingham.

Gentlemen,—In accordance with instructions we have examined the books and accounts for the three years and ten months ended 2nd June, 1934, of the business which you have acquired from Fillerys Toffees Limited (the Vendor Company).

We report that the profits of the business for the respective financial periods were as set out below:—

Financial year ended 25th July, 1931	...	£28,811
" " " 30th July, 1932	...	£23,535
" " " 29th July, 1933	...	£11,326
Ten months ended 2nd June, 1934	...	£15,520

These profits have been arrived at after charging all expenses of working and management, except Directors' fees, and after making such adjustments as are in our opinion appropriate, including:—

- Provision for depreciation on the basis of a valuation of the fixed assets by Messrs. Frank Wilde & Glover, dated 31st July, 1934, and
- Provision for the remuneration of the Managing Director on the basis of his proposed agreement with your company, but without charging income tax.

We are, Gentlemen, Yours faithfully,
(Signed) PRICE, WATERHOUSE & CO.

ASSETS.—The assets to be acquired, as shown in the case of the land, buildings, plant, machinery and furniture by a Valuation dated 31st July, 1934, by Messrs. Frank Wilde & Glover, and the remaining assets and liabilities on the basis of

the audited Balance Sheet of the Vendor Company as at the 2nd June, 1934, are as follows:—

Net Current Assets:—

Cash at Bank and in Hand £9,945
Sundry Debtors, Deposits, etc., less Reserves 14,860
Advances to Directors (since repaid) 5,837

Less: Sundry Creditors, Provisions for Accruing Expenses and Income Tax 30,642

10,724

19,198

Stocks of Raw Materials, Finished Goods, Tools, Utensils, etc., as valued by Managing Director 9,636

29,554

Freehold Land, Buildings, Plant, Machinery, Office Furniture and Transport 37,981

TOTAL NET ASSETS (EXCLUSIVE OF GOODWILL) £67,535

VALUATION.—The following Report and Valuation has been received from Messrs. Frank Wilde & Glover, Valuers:—

38, Waterloo Street, Birmingham 2

To the Directors of FILLERYS TOFFEES LIMITED, Greet, Birmingham.
Messrs. Fillerys Toffees Limited.

Dear Sirs,
In accordance with your instructions, we have attended at the premises known as National Works, Wilders Drive, Greet, Birmingham, and inspected the plant and machinery, utensils of trade, fixtures and fittings, furniture, etc., and now beg to report as follows:—

The property is well situated at two miles from the centre of the City and at close proximity to the Great Western Railway. The location is an excellent one for an industrial property and plentiful labour, both male and female, skilled and unskilled, can be obtained.

The layout of the building is in accordance with the requirements of your product and there is ample concrete space for extension of the premises.

We have inspected the whole of the plant and machinery and found it in excellent order.

We value the whole as a going concern at the sum of £37,981 (thirty-seven thousand nine hundred and eighty-one pounds) made up as under:—

Freehold Manufacturing Premises £11,000
Machinery, plant and office furniture, and transport, detailed in the accompanying inventory 26,981

Yours faithfully,
(Signed) FRANK WILDE & GLOVER.

PURCHASE CONSIDERATION.—The purchase price (apart from the assumption of liabilities) payable by the Company to the Vendor Company under Contract No. 4 was £97,500, to be satisfied by the issue to the Liquidator of the Vendor Company or his nominees, being shareholders of the Vendor Company, of 390,000 Ordinary Shares of 5s. each in the capital of this Company, credited as fully paid up, and such shares have accordingly been duly issued. The proportion of the purchase price attributable to goodwill is £29,965.

The preliminary expenses of the Company, including cost of formation, capital duties, legal and accountancy expenses, are estimated at £2,500 and up to that amount are payable by the Company.

The available working capital is £29,554, which in the opinion of the directors is sufficient.

None of the borrowing powers of the Company has been exercised, and there are no debentures. No mortgages or charges are subsisting on any part of the Company's assets.

No Share or Loan Capital of the Company is under option, or agreed to be put under option.

No sums have been paid or agreed to be paid to any Director or to any firm of which a Director is a member by any person to induce him to become or to qualify him as a Director or otherwise (except as mentioned below) for services rendered in connection with the promotion or formation of the Company.

No commission, discounts, brokerages or other special terms have been granted by the Company to any person in connection with the issue of any of its shares.

No cash, shares or securities have been paid or proposed to be paid to any promoter.

A copy of the Memorandum and Articles of Association of the Company and of the above mentioned Report Valuation Certificate and Contracts may be inspected at the Transfer Office of the Company, 52, Coleman Street, London, E.C.2, on any day during usual business hours up to and including the 11th September, 1934.

Dated 30th August, 1934.

COMPANY NOTES

Agricultural Machinery Companies.—The position of the agricultural implement manufacturer during the depression has been particularly difficult. Unlike the general engineer, he has been directly dependent on a primary industry for his custom; and the primary industry of agriculture has been in a state of greater or less depression since the brief post-war boom. The manufacturer of agricultural machinery and implements has thus found himself at the very intersection of the "agricultural shears," with agricultural prices constantly falling in relation to prices of manufactured goods. If the implement manufacturer worked on the American system he attempted (with some temporary success) to solve his difficulty by lavish credits, many of which have since deteriorated into bad debts. If he followed British principles, he had to work on an inadequate turnover even before the depression. No doubt as recovery spreads to include agriculture and the colonial plantation businesses, agricultural implement manufacturers will benefit, as other producers of capital goods benefit in recovery. The latest profits of Ruston and Hornsby and of Ransomes, Sims and Jefferies show distinct improvement, and their chairmen report better conditions. The agricultural engineer makes capital

* If one year's pref. div. not been paid, and neglecting arrears, earnings for the ordinary shares would have been £21,835 or 1.1 per cent. † Profit as shown in accounts, possibly not comparable with prospectus profit. ‡ Broken period equated to 12 months. § Applied to special depreciation.

goods for a market which is notoriously lacking in capital, and recovery can scarcely be as vigorous as in the case of engineers supplying equipment to large industrial concerns with ample capital resources. Moreover, the British agricultural engineer is faced with a home market in which the long-term tendency has been away from laboured land towards grass land (which requires much less machinery to the acre), while in the export market he is faced by barriers and price competition. Exports of agricultural machinery remain at a very low level. Possibly the wheat subsidy may bring some increase in the home demand for machinery; but that can hardly be a decisive factor for the agricultural engineering industry. In the face of its difficulties, the industry has carried out a considerable centralisation of control under the leadership of Ruston and Hornsby. The latter controls Ransomes, Sims and Jefferies, has bought up several of the businesses of the former Agricultural and General Engineers group, and has formed a close alliance with R. A. Lister and Company. Besides extending its ramifications in this way, this group

has prudently extended its market by developing engineering products, such as Diesel engines and power excavators, outside the strictly agricultural market. The group is now, in effect, a general engineering business with an agricultural department and tradition. Outside the group, as is indicated by the receiverships of Marshall, Sons and Company (controlling Clayton and Shuttleworth) and of Robey and Company, the field is being cleared of competitors. With patience, therefore, Ruston shareholders may in time find their earnings restored. For the present, however, the "equity" still lies with the dividendless preference shares. That the intensified effects of depression are not confined to the British group is shown by the figures for Canadian and foreign companies given in the accompanying table.

* * *

Recent Steel Reports.—Recent steel and coal company announcements afford satisfactory—in the case of the steel companies even more than satisfactory—confirmation of expectations based on the improved output figures. The United Steel Companies' showing, this week, was, indeed, so good as to take the market completely by surprise. At the time of the sale of the banks' 4,500,000 shares in this great combine, last May, the profit for the year to June 30th was officially estimated at not less than £850,000. The actual figure of £947,680 shows the prospectus estimate to have been more than commendably cautious. The promised 5½ per cent. dividend, now declared, will, of course, be shown by the full report to have been covered by a margin even more ample than the prospectus give subscribers any right to expect. The shares sold in May at 21s. 6d. now stand at 23s., so that the option held by the issuing group, to purchase at 23s. the remaining 2,077,000 shares of the Steel Companies' holding, begins to have an interesting appearance. We show in the following table the last three years' net profit figures for five companies whose results have recently become available:—

	1932	1933	1934
Henry Briggs (June 30)—			
Net Profits	48,082	48,713	51,131
Ordinary dividend %	5	5	5

Net profits	187,354	351,438	947,680
Ordinary dividend %	Nil	Nil	5½

* Free of tax.

The dividend of Staveley Coal and Iron is the largest since 1927. For details of this company's experience the full report must be awaited. John Lysaght's increase in profit is striking—the more so since it relates to the calendar year 1933, when steel activity was running well below the current level. The Lochgelly Iron and Coal Company, whose interests are largely in coal, has broken an unenviable record of losses by a net profit of £14,375 for 1933-34. This turn of the tide enables the directors to tackle the problem of the balance sheet and the preference dividend arrears. They propose to write down 827,750 £1 ordinary shares to 8s. each and to use the £496,650 thus obtained to write off the accumulated loss of £166,882, to write down assets by £291,384 and to provide £38,384 in ordinary shares in commutation of the preference arrears. The arrears amount to 6s. per share on the 191,920 shares and the proposal is, in effect, to reduce this figure to 4s. a share and, in satisfaction thereof, to allot one 8s. ordinary share for every two preference shares. In all the circumstances the cut is perhaps not more than is reasonable.

D. Gestetner.—This company, which manufactures duplicating machines and accessories, has shown gratifying recuperative power, its profits for the year ended August 31st last, published with customary promptitude, being the highest since 1930. The result is attributable partly to the company's success in catering for the office requirements of British business revival (its new electric and hand models, placed on the market in 1932, having obviously been a sound selling proposition), and partly to a partial but gratifying revival in export trade. The company, very wisely, decided to shut down its American branch three years ago, and thus eliminated a possible drain on its profits. Last January a return of capital was made to shareholders, one-fourth of the preference and half the issued capital being repaid. Each shareholder was then allowed to subscribe at par for one 5s. ordinary share for every five shares of either class. The net effect was to reduce the annual preferential requirements, in a full year, by £6,125. The 1933-34 ordinary dividend of 30 per cent. on the reduced capital, against 12½ per cent. on the old capital, requires £63,752, against £40,625, and a substantial allocation is made to general reserve:—

		Years to August 31,		
		1932	1933	1934
Issued Capital	7% Cum. Pref.	350,000	350,000	262,500*
	Ordinary	325,000	325,000	212,500*
Total profits		87,993	89,415	140,456(a)
Depreciation		9,567	10,110	11,378
Tax, fees and staff funds		19,536	11,523	12,713
Net profit		58,890	67,782	116,365
Preference dividend		24,500	24,500	20,473
Ordinary	Earned	34,390	43,282	95,892
	Paid (%)	32,500	40,625	63,752
	Earned (%)	10.8	13.6	45.5
	Paid (%)	10†	12½	30(b)
To general reserve		122‡	Nil	32,367
Total carried forward		16,703	19,360	19,134

* 5s. on each £1 preference, and 5s. on each 10s. ordinary repaid to shareholders on January 2, 1934, with option to subscribe one 5s. ordinary for every five preference or ordinary held. † And capital bonus of 5 per cent. from profit on sales of investments, etc. ‡ And £19,878 from profit on sales of investments, etc. (a) Including £2,244 profit on sale of British Government securities. (b) And capitalised bonus of one 5s. share for every five held.

The company is capitalising £42,500 of general reserve, i.e. about £10,000 more than this year's reserve allocation. In view of its capital policy in recent years, the company's ordinary shares have a certain interest for investors liable to supertax, apart from their excellent earnings record and prospects. Balance-sheet assets are conservatively valued, and the current financial position is strong and liquid. The 5s. ordinary shares are quoted at 36s. 6d. cum dividend and bonus. The Industrial Finance and Investment Corporation, which offered to purchase, at £1 per share, the rights of holders entitled to subscribe for new ordinary shares under the scheme of last January, has had no reason to repent of its bargain.

* * *

Other Company Results.—On pages 468 and 469 respectively we summarise the latest profit-and-loss figures and dividend announcements of other companies, disclosed this week. The experience of companies in different branches in the engineering industries has generally (though not invariably) been favourable. R. and W. Hawthorn, Leslie show net profits, to June 30th last, of £16,157, against a net loss in the previous year of £1,970, and pay an ordinary dividend of 4½ per cent., against 2½ per cent. Renold and Coventry Chain discloses a highly satisfactory increase in profits from £46,932 to £85,942, and raises its dividend rate from 3 per cent. to 6 per cent. In the textile industry, Leigh Mills has covered a 10 per cent. tax-free dividend (against 7½ per cent. tax free) by net earnings of £30,382, against £22,829. The experience of John G. Murdoch, musical instrument traders, has been less favourable. Generally, however, this week's smallish sample of results confirms the impression that earnings from British domestic industry are still on the upgrade. The week's divi-

dend announcements include those of a number of overseas mining companies. A "Kaffir" finance house, General Mining and Finance, has declared an unchanged interim dividend. The largest of the Indian gold-mining companies, Nundydroog Mines, has, however, somewhat disappointed its market followers by reducing its interim from 3s. 6d. to 2s. 9d. per share—payable at a reduced rate of tax. The dividend declarations of important tin-mining companies show the expected effect of higher metal prices, cum restriction. Thursday's unchanged interim dividend of Imperial Chemical Industries was below market expectation.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET | ACCOUNT
September 11 | September 13

THE firmer tendency of sterling influenced stock market movements as little as last week's weakness. Gilt-edged stocks continued their dogged rise, and once again the market began to think in terms of a possible 2½ per cent. yield level for British Government securities by Christmas. At the other end of the House there was no tendency to discount the probable establishment of the sterling price for gold at over 140s., for the revival of confidence in the franc, which had helped to depress sterling, suggested a reason for the sale of Kaffirs in Paris. Meanwhile, industrial shares continued to make an almost imperceptible advance, on a moderately small business. The market was satisfied, for the time being, with the prospect of the maintenance, rather than the further rapid advance, of general industrial activity, and was more concerned with the harvesting of this season's crop of dividend increases than with future conditions of growth.

Although gilt-edged stocks were quiet at first, prices were very firm. Three and a half per cent. War Loan rose above 105. India stocks made further headway, second thoughts on Lord Willingdon's speech being decidedly favourable. Among Dominion loans, Canada 3½ per cents. were in demand, and a recovering tendency was seen in Australian bonds, whose prospects are discussed in a leading article on page 449. In the foreign bond market Japanese issues showed strength, on growing evidence that a Soviet-Japanese clash was less imminent than had been imagined. South Manchurian issues rose in sympathy. Bear covering produced a rally in "Dawes" Loan on Monday, but scattered selling subsequently put the price down again. Potash bonds, whose position *vis-à-vis* the Reich Loans is discussed in a Note on page 450, had a slightly downward tendency. Among South American stocks, Argentine issues were higher on the satisfactory seven months' trade figures.

A particularly good week's traffic figures infused only a little activity into the Home Rail market. In the London Transport group, however, Metropolitan Assented obtained attention on the declaration of a 3½ per cent. dividend. Little business was done in the foreign rail market, though Argentine issues were steady in mid-week on the continuing improvement in peso receipts.

Business in industrial shares tended slightly to increase in volume as the week progressed, and prices were well maintained, though a semi-holiday atmosphere still prevailed. The unexpectedly large profit figures of United Steel served to check a rather irregular tendency in iron and steel shares. I.C.I. were easier on the unchanged interim. Demand for motor shares was intermittent, Leyland being in request at the beginning of the week, while Ford continued their recovery. Only slight attention was given to electrical supply shares, but a moderate inquiry for electrical equipment shares continued. Brewery shares were well maintained, but tobacco shares showed a further slight tendency to recede. The reduction in the ordinary dividend of Cohen Weenen caused selling of Godfrey Phillips. Textiles were steady, with relatively few dealings. Unilever showed further recovery. Special demand sprang up for British Oxygen on dividend

expectations. Bank shares were steady on a small volume of business, and few quotable changes were recorded in insurance shares.

Professional interest in oil shares was at a low ebb, the uncertainties of the American situation tending to check speculative enterprise. "Shell" received a little attention on nebulous rumours of the possibility of an interim dividend declaration in the autumn, which obtained little credence in the market. The week opened with a profit-taking tendency in rubber shares, and the movement was only partially checked by a slight mid-week recovery in the price of the commodity. The tea share market opened depressed, but became steadier on the drying up of the persistent stream of selling.

The gold share markets have so far derived little benefit from the fall in sterling. Trading was on a restricted scale at the beginning of the week, and though prices were steadier subsequently, demand failed to develop on the lines expected. Kaffirs lost ground, with few exceptions, of which Daggafontein were the most noteworthy. The West African market followed a similar course, and little interest was taken in Australians. Nundydroog were somewhat easier on the reduced interim dividend. The quietude of the Rhodesian market was unbroken. Tin shares were irregular, though the market was helped by the satisfactory dividends declared by well-known Malayan companies.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET has been quiet, with a slight upward "kick" on Wednesday, after Monday's Labour Day holiday had been preceded by the smallest Saturday morning turnover since 1918. The dominant feature in the outlook is the uncertainty which shrouds every important part of the national life. The textile strike may find a basis for settlement in the respect both parties profess for the personality and views of the President, but so long as the main question of the national status of trade unionism remains unsettled the attitude of Labour bodes ill for future harmony in industry. Activity in the capital goods industries is still sluggish. Steel mill activity is put at 18.4 per cent. of capacity, against 19.1 per cent. last week, and construction contract awards make a gloomy picture. Government policy is still an enigma. The improvement in commodity prices has been halted. The railroads, like many other industries,

are feeling the burden of higher costs, while some of the lines situated in the drought areas, which were not among the strongest in the country, may be unable to avoid the intervention of the courts. On the other hand, hopes of some autumnal upswing in business have not been abandoned. These were mainly responsible for the tentative professional attention given to metal, automobile, chemical and railroad shares in the middle of this week. One factor prolonging the summer dullness has been the disposition of merchants and traders to place minimum buying orders, to tide over the period of uncertainty, with the intention of replenishing their stocks later, when the outlook is clearer. The country generally appears to be waiting for a *deus ex Hyde Park*.

Address

.....

PARIS

Although business was limited, the tendency of bears to take cover produced a slightly better tone all round. Rentés were weak at the outset, but became appreciably firmer as the week progressed. Industrial shares were quiet, with a slightly improved undertone. The market was at first a seller of gold-mining shares, but became stronger on the favourable reception accorded to the August mining returns.

BERLIN

The share market closed firm last week, with a sharp advance in a number of favoured issues. The new week opened with a general rise. Kloeckner and Mannesmann were prominent in the steel group. Rhenish-Westphalian Electricity also advanced, and the majority of electrical and public utility shares were firm. Electrical cable shares reflected favourable accounts of progress in the industry. Banks were also firm. Tuesday's market was irregular, though most electrical shares gained further ground. The domestic bond market was dull and undecided. The new Reich Loan was quoted for the first time at 95. Dollar bonds showed little change in spite of their sharp decline on the foreign stock exchanges. On Wednesday the Bourse was irregular, though bank shares again improved.

AMSTERDAM

The Bourse opened dull, became firmer, and turned reactionary again. Tobacco shares were depressed by the temporary prohibition of imports into Germany. Among industrial shares *Aku* were sold from "special" quarters. Unilever, however, continued to gain ground, helped by the recovery in sterling. Rubber shares were quiet, in sympathy with the slight downward tendency in the commodity price at the early part of the week. Oil shares were neglected. Home Government bond prices were maintained, but an increasingly pessimistic view was taken of German bond prospects after a temporary rally at the beginning of the week.

CAPITAL ISSUES

THE only public issue of the week was made by *James and Shakspeare, Limited*, an old-established firm of metal brokers, which is taking over the metal and produce departments of another business, with an option to acquire a majority interest in a third. The capitalisation is high-gear, £300,000 of redeemable preference shares ranking ahead of £125,000 of ordinary shares, issued or to be issued. To obtain one ordinary 5s. share at 7s. 6d., applicants must subscribe for a £1 redeemable preference share at par, but will be granted an option, available to December, 1937, to take up an additional ordinary share at 7s. 6d. We comment upon this feature in a "Note" on page 450. Although pre-depression figures are not furnished, the two main businesses have shown a progressive tendency in profits from 1931 onwards. The vendors of the Bishirian business show noteworthy conservatism by agreeing to sell to the company, for a purchase price of £33,000 in ordinary

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

shares, a business which has produced average profits of £19,285 per annum over the last three years. The week's advertisements in connection with Stock Exchange placings include particulars of the debentures of the *Union Company of Oslo*, whose introduction, with Treasury permission, was discussed in the *Economist* of August 18th, page 317. Another advertisement relates to an issue of ordinary shares of *Fillerys Toffees, Limited*. This company has acquired a Birmingham confectionary business, founded in 1923, which appears to be recovering from the effects of technical reorganisation and re-equipment on contemporary profits.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

OFFERS ABROAD

Government of India.—Issue of 3 per cent. rupee bonds, at 99 per cent., unlimited in amount, repayable at par on September 15, 1941. Subscriptions will be received in 4½ per cent. bonds, 1934, or in cash. No subscriptions in London.

Swedish Government 3½ per Cent. Loan.—Offer of 70,000,000 kronor (£3,880,000) at 99 per cent. during September 6th to 15th. Amortisation will be by equal annual drawings between 1945 and 1974. The issue was oversubscribed in twenty minutes.

FORTHCOMING ISSUES

Bursledon Brick Company.—Offer of 25,000 ordinary shares to shareholders at 15s. per share. One for each four held.

Camp Bird, Ltd.—The Camp Bird issue of 6,000,000 shares of 1s. at par to shareholders and debenture holders is to be made on September 15th. Lists will be closed on September 29th. Underwriting has been completed. The new capital, after adjustments in connection with the reorganisation, will be available for financing business already investigated by the company.

Wall Paper Manufacturers.—Shareholders in Wall Paper Manufacturers may expect to receive shortly details of the company's proposed issue to finance acquisitions made earlier this year.

United Steel Companies.—It is understood that the United Steel Companies will in the autumn make a debenture issue for about £2,300,000 at a lower rate of interest than on existing debentures. Company has issued £1,300,000 of 6 per cent. 15-year debentures to bankers as security for loan, repayable at 105 before July 1, 1935, on six months' notice. There is about £2,600,000 of loan capital in the group of companies.

RESULTS OF ISSUES

North Wales Power 3 per Cent. Debenture Stock.—Holders of the company's 4½ per cent. stock were invited to convert into the new issue, but cash subscriptions were not sought. The underwriters have to take up about 67 per cent. of the issue.

Hevea (Johore) Rubber.—Issue fully taken up by share* holders. Allotment letters posted.

James and Shakspeare, Limited.—The list for the issue by James and Shakspeare closed at 10 a.m., September 6th.

CALLS DUE SEPTEMBER 10 TO SEPTEMBER 15, 1934

The grand total of calls falling due in September, 1934, is £4,766,761, which compares with £25,747,684 which fell due in September, 1933. The following calls fall due from September 10, 1934, to September 15, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid
Stock	Alicoombe Estates, Ltd. (£110,000 5% Deb. Stock, at par)	£50%	Sept. 15	All
Stock	Bournemouth and Poole Electricity (£400,000 3½% Deb. Stock, at 99%)	£35%	Sept. 10	£64%
Stock	Huddersfield 3% Red. Stock, 1960 (£1,500,000, at 95%)	£60%	Sept. 15	All
5/-	International Tea Company's Stores, Ltd. (549,752 Ordinary Shares, at 20/-)	5/- p.s.	Sept. 10	10/-
5/-	Oceana Development, Ltd. (87,880 Shares, at 20/-)	5/- p.s.	Sept. 10	5/- p.s.

RAND LEASES (VOGELSTRUISFONTEIN), GOLD MINING COMPANY, LIMITED

LARGE ORE RESERVES

STRONG FINANCIAL POSITION

At the first ordinary general meeting of shareholders of Rand Leases (Vogelstruisfontein) Gold Mining Company, Limited, held in Johannesburg, the deputy chairman, Mr W. Patrick Jones, stated, *inter alia*:—Ladies and gentlemen,—The property account reflects the transaction referred to at the statutory meeting, namely, the purchase from Mr Arthur Pratt of the freehold portion of the farm "Vogelstruisfontein" No. 62, together with other mining rights equivalent in all to 355 claims thereon, and further mining rights on the farm "Roodepoort" No. 43. The purchase price for these rights amounted to £125,000. The purchase was made after the Government's consent in terms of the usual mining lease had been obtained. As a consequence of these readjustments the profit accruing to the Government from the working of the joint area was reduced by 10 per cent.

In the case of gold mines which have not yet reached the producing stage, all expenditure on underground equipment—shaft sinking and development—is allowed to accumulate at 5 per cent. interest and can be set off against the profits assessable to excess profits taxation. I may point out that our lease with the Government provides that the company will pay only 50 per cent. of any excess profits taxation—an additional benefit in favour of the company.

CONSIDERABLE PROGRESS

The consulting engineer's report discloses considerable progress made during the short period under review in the dewatering and reconditioning of the several shafts which will serve a considerable portion of the company's mining area. A scheme for the conservation of water has been started and excavations for the foundations are almost complete. The scheme when finished will impound over 200 million gallons of water; it is hoped to have this completed before the next rainy season.

The site for the reduction works has been fixed and the flow-sheet decided upon. Considerable work has been done in the design of the works themselves. By the courtesy of the Johannesburg Consolidated Investment Company, Limited, the co-operation of their Metallurgical Department has been obtained for this work.

A recalculation of the ore reserves of the mine has been made from existing assay plans, and indicates that with gold at 85s. per ounce there are 1,163,000 tons of payable ore developed of an average value of 5.4 dwt. over 40 in. on the Main Reef Series. With gold at 135s. per ounce, an additional 685,000 tons valued at 3.3 dwt. over 43 in. become available.

ENERGETIC DEVELOPMENT PROGRAMME

The work done on the old shafts, which will serve the outcrop of the Main Reef Series, has revealed particularly satisfactory conditions. The development of the Bird Reef, which outcrops from the centre of the Lease Area, has shown very encouraging values. These two factors, coupled with the benefits to be derived from the purchase of the ground from Mr Arthur Pratt, have led your board, acting on the advice of its technical advisers, to proceed forthwith with a programme for the laying-out and equipping of the mine for an ultimate crushing capacity of 100,000 tons per month. This programme will involve the placing of large orders for the importation of plant and equipment so that the work may be expeditiously carried out. In view of these developments the board considered it necessary to take steps to increase the capital of the company to £1,500,000.

The result is that the company's liquid resources are over £1,000,000, a sum which, in the opinion of our technical advisers, will see us through to the production stage, which, so far as can be seen now, should be early in 1936.

The energetic development of the mine received a considerable impetus on the 26th of last month, when the first sod was turned in the sinking of the No. 11 Central Shaft, from which the whole of the Southern Section of the company's mining area will be developed and worked. This shaft will be a vertical 7-compartment shaft of an ultimate depth of 4,600 ft., and has been designed to give the maximum efficiency throughout the life of the mine.

In conclusion, I wish to express your board's warm appreciation of the valuable services of your consulting engineer, Mr J. D. MacKenzie; the mechanical engineer, Mr W. S. Carr, the technical adviser, Mr G. J. V. Clarence; and the secretaries and their respective staffs for the excellent service rendered by them all to the company during the arduous period under review.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 1, 1934, amounted to £8,588,865, against ordinary expenditure of £16,130,924. After allowing for a decrease in Exchequer Balances of £235,503 the operations for the week, as shown below, increased the National Debt by £7,557,444 to approximately £8,075 millions.*

(000's omitted)

Public Department Advances.....	+ 11,200	Treasury Bills.....	— 209
		National Savings Certificates	— 100
		Other Debt under War Loan	— 1,753
		Acts 1914 to 1919	— 1,556
		New Sinking Fund (1928)	— 25
		N. Atlantic shipping issue.....	— 3,643
	+ 11,200		

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

GOLD

Messrs. Samuel Montagu and Company write on September 5, 1934, as follows:—
The Bank of England gold reserve against notes amounted to £191,762,097 on the 29th ultimo as compared with £191,676,960 on the previous Wednesday.

The continued appreciation of the gold currencies in relation to sterling caused a succession of fresh record prices daily until Monday, when the high record of 141s. 7d. was established. Yesterday and to-day exchanges reacted and prices declined by 8½d. and 4d., respectively. Offerings have been slightly heavier, totalling some £2,600,000 during the week, and quotations have tended to move closer to the parity of the gold currencies.

Quotations during the week:—

		Per fine ounce	Equivalent value of £ sterling
August 30	140s. 3d.	12s. 1.38d.	
" 31	140s. 11½d.	12s. 0.65d.	
September 1	141s. 5d.	12s. 0.18d.	
" 3	141s. 7d.	12s. 0.01d.	
" 4	140s. 10½d.	12s. 0.73d.	
" 5	140s. 6½d.	12s. 1.07d.	
Average	140s. 11.25d.	12s. 0.67d.	

The Southern Rhodesian gold output for July, 1934, amounted to 57,403 fine ounces, which compares with 58,333 fine ounces for the preceding month and 54,561 fine ounces for July, 1933.

SILVER

At the outset of the week under review the fall in the value of the £ sterling was reflected in higher Eastern advices, and silver prices advanced in consequence. Both prices rose ½d. on the 30th ultimo, and on the following day quotations at 21½d. for cash and 21½d. for forward delivery showed a further rise of ½d. and 1d. for the respective positions.

Heavy China selling was countered by large speculative and some Indian buying.

Since then prices have on balance tended to sag a little, and a fall of ½d. to-day leaves quotations at 21½d. and 21½d. The market has been more active throughout the week, and is firm at to-day's level, at which large purchases have been made by America and by speculators, much of the former being for prompt shipment.

In spite of the continuation of heavy selling by China, we consider the undertone to be good, and unless some new factor emerges we would expect such changes as may occur to be in the upward rather than in the downward direction.

Quotations during the week:—

IN LONDON		IN NEW YORK	
	Bar silver per oz. std. delivery		Cents per ounce
August 30	21½d.	August 29	49½
" 31	21½d.	" 30	49½
September 1	21½d.	" 31	49½
" 3	21½d.	September 1	49½
" 4	21½d.	" 3	Holiday
" 5	21½d.	" 4	49½
Average	21.740d.	" 21.792d.	

The highest rate of exchange on New York recorded during the period from the 30th ultimo to the 5th instant was \$5.02½ and the lowest \$4.98½.

INDIAN CURRENCY RETURNS (in lacs of rupees)

(a) On 850,000 5/- shares. (b) On 650,000 10/- shares. (c) On new capital. (d) On old capital. (e) Paid in December. * Free of income tax.

CHOSEN CORPORATION, LTD.—The board have decided to pay on October 2nd an account of the new financial year commencing July 1, 1934, a first dividend for the quarter July-September of 10 1/2d. per share, which is equivalent to a rate of 17 1/2 per cent. Since the new board took over control of the Corporation in May, 1933, the quarterly dividends have been continuously increased by 1d. per share from 6d. up to 9d. per share—the rate paid for the final quarter April-June, 1934, of the last financial year. The above dividend is independent of any final dividend which may be declared in respect of the financial year ending June 30, 1934, when the final accounts are to hand. The annual meeting will probably be held during October.

COHEN, WEENEN AND COMPANY, LTD.—The directors announce that the net profit for the year ended June 30, 1934, after charging income tax, depreciation and directors' fees, amounts to £70,376. The directors have decided to add £5,000 to reserve, making this figure £22,500, and will recommend a dividend of 18 per cent. (eighteen per cent.) actual on the ordinary shares, and a final dividend of 4 per cent. (four per cent.) actual on the 7 per cent. cumulative participating preference shares, making 8 per cent. (eight per cent.) for the year. This will leave £41,789 to be carried forward.

SOUTHERN KINTA CONSOLIDATED, LTD.—With reference to the dividend announcement shown in above table, this dividend was only payable to the former shareholders of Kampong Malaya Tin Dredging, Ltd. (in liquidation), Southern Kampong Tin Dredging, Ltd. (in liquidation), and Kinta Tin Dredging Company, Ltd. (in liquidation), and is not an additional dividend to that of 5 per cent. declared on August 16th.

SWEATS AND WELLS (FURRIERS, ETC.)—Interim dividend on the ordinary shares of 2 1/2 per cent., payable on October 15th. The directors state that the results of the company's business for the half-year were most satisfactory. No interim distribution was made a year ago, but a payment of 5 per cent. was announced in the annual report. Last April the company absorbed S. and M. (1928), Ltd., the London Fur and General Trust, Henry Dodgson, Ltd., and Gooch's (1928), Ltd.

UNITED STEEL COMPANIES.—The directors of the United Steel Companies announce that profit for the year to June 30, 1934, after charging directors' fees, loan interest and income tax, but before providing for depreciation, amounts to £947,680, and that they will recommend a dividend of 5 1/2 per cent., less tax. The profit compares with £351,438 for 1932-33, £187,354 in 1931-32, and £41,321 in 1930-31. This is also the first payment to be made on the issued capital of £8,616,385 since formation in 1930. The meeting will be held on October 4th. Day.

CARDIFF.—Apart from a slight improvement in the demand for sized coals, conditions on the Cardiff coal market are unchanged. The tonnage supply has continued fairly satisfactory, and on Wednesday morning 67 tips were occupied and three vessels were waiting their loading turns at Swansea. Last week total shipments in the foreign and coastwise trades amounted to 424,000 tons, compared with 381,000 tons the previous week and 345,000 tons in the corresponding week last year. If items continue good, there are prospects that last week's improved shipments will be maintained. Large classes are in excess of demand and stocks are heavy, but washed grades are moving off easily and for some of these grades current quotations are above the minimum schedule. The pitwood position has been complicated by a decision of the Portuguese Government fixing a minimum price of 21s. 6d. c.i.f. for deliveries during September and October, and it is considered by importers that this decision may lead to a revision of the conditions of the Anglo-French coal-pitwood agreement under which 22s. 7½d. c.i.f. has been fixed for French pitwood.

The South Wales Miners' Federation has given notice to terminate the wages agreement of 1931, but the Conciliation Board will meet on September 18th, and it is believed in well-informed circles that the negotiations will lead to a settlement without any interruption of work.

French.

IRON AND STEEL

MIDDLESBROUGH.—Interest in the local market is broadening, as is usual after the August holiday period, and makers are doing further business in both foundry and hematite pig iron, at the fixed prices to home consumers. Production of pig iron and steel in this area for July was 150,300 tons and 167,200 tons, respectively. Shipments of all classes of pig iron, manufactured iron and steel from the Tees during August amounted to 52,254 tons.

Business in pig iron for export continues to expand despite exchange difficulties. During August quantities have been shipped to Belgium, Denmark, Sweden, Norway and Italy. A parcel of about 1,000 tons of ferro-manganese was shipped to Australia, and it is understood that a further parcel will follow shortly.

The recent orders for steel placed in this country for China are reflected in last month's figures. A quantity of over 8,000 tons was despatched to that country. A new outlet has been found in Canada, a quantity of about 1,100 tons of manufactured steel having been sent there. Russia also continues to take steel, a further shipment having been made in August, and this has been followed by another parcel in September.

Foreign ore is tending firmer, and although best Bilbao rubio is quoted at 17s. per ton c.i.f. Middlesbrough for prompt, sellers are asking higher prices for forward. Blast-furnace coke continues firm at 20s. per ton delivered at furnaces here, whilst good heavy steel melting scrap is 50s. per ton delivered.

At the end of August there were 27 blast furnaces in operation in the North-East area, of which four were producing Cleveland foundry pig-iron, ten hematite, and thirteen basic and other irons.

SHEFFIELD.—Business in finished steel is picking up again after the holiday lull, and most of the works are well employed and booking new orders freely. The outlook for the autumn has improved. In certain important special lines makers report steady expansion of demand, and cases are to be found of deliveries falling into arrear. Much new plant has been installed during the last two years which accelerates production of wire, wire goods, strip and tools, and the present capacity of these sections is much greater than formerly. In spite of this factor, unemployment of steel workers continues to shrink. Export trade, although patchy, is maintained at a substantial level, losses in Eastern markets being offset by increased sales to Scandinavia, Holland and Empire countries. Prices of iron and steel material continue steady. The hand tool branches are very busy, notably on saws, files and engineers' small tools. Cutlery and plate sales are recovering after the dull season, and more cutlery is going abroad.

GLASGOW.—There were no outstanding developments in market conditions in the West of Scotland this week. Business is proceeding at much the same levels as during the past few weeks. Steel makers are all well employed with specifications coming in at a fairly steady rate, and present outputs are likely to be maintained for some time. Sheet makers, while still finding export business quiet, are receiving a considerably increased number of enquiries for export, and these for several overseas markets. Tubemakers continue to be in the main fully employed and have a good quantity of work on books. In the Glasgow district engineering shops and makers of machinery are all busy. Structural engineers who have had a long dull period are finding business more plentiful, and the tonnage placed recently in the West of Scotland is quite important. The material for these structures is largely of British—indeed local—manufacture.

CARDIFF.—On the Swansea Metal Exchange on Tuesday tinplates were firm at 18s. 2d. per basis box f.o.b. for export and at 17s. 9d. f.o.r. for the home market. The position is more stable than it has been for some months past and the industry is now operating at approximately 65 per cent. of capacity. The arrangements connected with the new international agreement provide for the systematic adjustment of prices to exchange fluctuations, as well as for the delimitation of markets. It is reported that the smaller independent units in South Wales which are at present marketing their tinplates through merchant houses are considering the advisability of the adoption of methods of sales centralisation. Galvanised sheets are steadier but are nominally unchanged at from £11 5s. to £11 15s. per ton, while steel bars remain firm at £5 7s. 6d. per ton delivered.

OTHER METALS

The general tendency on the metal markets was practically unchanged this week, only tin prices showing wider fluctuations. It was generally anticipated that the latest statistics would reveal a slight increase in tin stocks but, according to A. Strauss and Co., these declined during August by 637 tons, to a new low level of 17,715 tons, as against 38,944 tons and 56,766 tons at the corresponding date in 1933 and 1932, respectively. This reduction was chiefly due to an increase of almost 500 tons in American deliveries; but it must be pointed out that deliveries to the U.S.A. during the twelve months just ended were much lower than in the previous year—47,685 tons, compared with 51,890 tons. This contraction is surprising in view of the fact that American tin-consuming industries were busier during the past year than they had been in the previous twelve months. The reduction in deliveries of tin is therefore regarded with disappointment. Upon receipt of the August statistics early this week, tin prices showed some improvement, but the market later reacted, and the gain was not held.

Copper has remained almost unchanged in price during the whole week. Some more buying orders were forthcoming, but supplies are large, and some producers (mainly in the U.S.A.) are anxious to sell. The situation in Germany has improved a little, for recent orders led to a better distribution of copper stocks in that country. But from the international point of view this is not encouraging, since it will probably prevent the early removal of the existing restrictions. The German ban is likely to affect the markets in the future more than in the past, for the large German forward contracts seem to be exhausted. Imports of metals into Germany first showed a sharp reduction in July, and when the August figures are available there is no doubt that a further decline will be recorded.

Lead and spelter have exhibited no new features this week, but the wolfram market showed a tendency to harden again. The autumn demand may result in a further price rise, especially since it is learned from Germany—one of the chief consuming countries—that substitutes for wolfram cannot be found.

TIN.—Sales on the London Metal Exchange: 245 tons on Monday, against 225 tons last week; 265 tons on Tuesday, against 185 tons last week; 200 tons on Wednesday, against 255 tons last week. The New York quotation on Wednesday was 51.45 cents per lb., against 51.45 cents a week ago and 51.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 15s. to £229, compared with £226 15s. to £227 last week. Stocks in London and Liverpool at the end of last week were 3,596 tons, a decrease of 145 tons on the week.

COPPER.—Sales on the London Metal Exchange: 575 tons on Monday, against 529 tons last week; 450 tons on Tuesday, against 650 tons last week; 900 tons on Wednesday, against 475 tons last week. Domestic spot was quoted at 6.82½ cents per lb. in New York on Wednesday, against 6.87½ cents a week ago and 7.02½ cents a month ago. Wednesday's official closing price for

standard cash in London was £27 18s. 9d. to £28, compared with £28 1s. 3d. to £28 2s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,169 tons, show a decrease of 514 tons, and stocks of rough copper, at 7,042 tons, remain unchanged.

LEAD.—Sales on the London Metal Exchange: 500 tons on Monday, against 250 tons last week; 1,050 tons on Tuesday, against 450 tons last week; 900 tons on Wednesday, against 1,100 tons last week. The New York quotation on Wednesday was 3.75 cents per lb., against 3.70 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 10s. for shipment during the current month, compared with £10 13s. 9d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 300 tons on Monday, against 200 tons last week; 800 tons on Tuesday, against 300 tons last week; 500 tons on Wednesday, against 50 tons last week. Wednesday's quotation in East St. Louis was 4.20 cents per lb., against 4.25 cents the week before, and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £13 3s. 9d., for shipment during the current month, against £13 13s. 9d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., as against £11 5s. to £11 10s. per flask of 76 lbs. last week. Foreign antimony was quoted at £36 10s. to £37 per ton, as against £36 to £36 10s. per ton last week. Chinese wolfram was quoted at 40s. to 43s. per unit, c.i.f., as against 40s. to 41s. per unit, c.i.f., last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—Although no striking change took place in the level of prices for raw cotton in the past week, the tendency, if anything, has been towards a lower level. It is a long time since trade demand for American cotton was so poor, and most of the business has been in outside growths, especially Brazilian. The mill strike in the United States is considered a bearish factor. Some uncertainty exists as to the effect of the Government crop report due at the end of this week.

The turnover in piece goods for abroad was again of limited dimensions. Buyers for all outlets have displayed very little enterprise. There have been loud complaints of the restricted demand for India, and particularly Calcutta. Miscellaneous orders have been booked for Karachi, Madras and up-country in light whites and dyed goods. Trifling lots of fancies have been put through for China. Scattered sales have occurred for Egypt and South America in bleaching and finishing qualities. A few more contracts have been arranged in dyed goods for the Dominions, chiefly Australia and South Africa. Necessary buying has taken place in home trade fabrics. More looms are stopping in certain weaving districts. The yarn market has been generally slow. Limited quantities of American and Egyptian descriptions have been booked for home use and export demand remains dull.

COTTON YARN PRICE AGREEMENTS.—Following the recent agreements in the Lancashire cotton industry amongst spinners of coarse American yarns with regard to minimum prices, an attempt is now being made to arrange a similar agreement on a legal basis for ring yarns. This section covers about 120 companies owning about 7,000,000 spindles. After a preliminary meeting by a Special Committee, all the firms affected have been asked to reply to a questionnaire not later than September 17th. Spinning employers are being asked whether they are agreeable to the fixing of minimum prices for ring yarns, to the appointment of an independent chartered accountant with free entry to the books of the mills, to the acceptance of provisions for substantial penalties for breach of regulations and for legal recovery of penalties, to the appointment of an arbitration board to settle matters of quality and to the payment of a levy per mill. The success of this movement will depend upon the replies received, but so far the support given has been encouraging. It is believed that this method is the only way by which price cutting, which has meant heavy financial losses, can be stopped.

COTTON CONSUMPTION AND STOCKS.—The International Federation of Master Cotton Spinners' and Manufacturers' Associations has published statistics relating to the cotton season ended July 31st last. It is stated that the consumption of American cotton during the twelve months was 13,539,000 bales, against 14,170,000 bales in the previous year, a decline of 631,000 bales. On the other hand,

OVER ONE HUNDRED YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY
ASSETS - EXCEED - £16,000,000
FIRE LIFE ACCIDENT MARINE
Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 4, St. James's Street, S.W.1

during the same period there was an increase in the amount of East Indian cotton used of 550,000 bales and an increase of 174,000 bales of Egyptian, whilst sundry cottons showed an increase of 649,000 bales. It is significant that last season compared with the previous year, the consumption of American cotton decreased by 4 per cent., whilst there was an increase of 13 per cent. in the use of cotton grown in other countries. Leading authorities are convinced that this movement has been largely due to the efforts in the United States to restrict supplies and force prices on to an uneconomic level, thus bringing about a bigger demand for competitive cotton.

World mill stocks of all kinds of cotton on July 31, 1934, were 5,331,000 bales, against 5,050,000 bales at the end of July, 1933. Spindles in all the countries of the world on July 31, 1934, were 156,882,000, as against 157,718,000 in January last and 157,755,000 twelve months ago. The Federation has also published valuable information relating to short-time working in the mills of the world. In the half-year ended July 31st last the curtailment in Great Britain amounted to 8.14 weeks, against 7.38 weeks in the previous six months. There were 63 firms with 3,776,343 spindles in the American section in Great Britain completely stopped during the period under review, whilst in the Egyptian section seven firms with 620,544 spindles were completely stopped during the six months. It is recorded that firms with 114,972 spindles have closed down indefinitely during the past half-year.

JUTE.—Dundee.—The first effects of the final Government forecast published yesterday were an easier tone in the raw jute and gunny markets. The figures were rather larger than had been anticipated by the industry. Last year the forecast figures were 7,933,200 bales, which have now been revised by the Director of Agriculture to 8,012,000 bales, but the actual outturn of the last crop was 8,946,000 bales. For the present season 7,963,800 bales have been forecast, but the conditions under which the crop was grown have not been so satisfactory this year and there is not the same likelihood of the estimate being exceeded to any great extent. Statistically, the position may be in favour of the maintenance of low prices for raw jute, but it must be borne in mind that the quantity forecast is insufficient to meet the requirements of the world, which last season were 8,865,000 bales and are estimated to be at least 9,000,000 bales for the present season. Fears of any scarcity of the fibre, however, are counteracted by the fact that users of raw jute have stocks in hand amounting to about 6½ million bales. The acreage figures this season have been revised to 2,517,000 acres, compared with 2,419,500 acres given in the first forecast in July.

There was a general decline in values of raw jute following the forecast, new crop Daisee-2/3 falling to £14 15s. per ton for full group and fours to £14, while Tossa-2/3 dropped to £15 5s. and fours to £14 10s., October-November. First Marks are quoted at £17 10s. to £18 and good Lightnings at from £16 to £16 5s., with Heart Ram-D/E at £15 5s., September-October. Business in the fibre has only been possible where low prices have been accepted.

Jute yarns have ruled quiet, but spinners are determined to adhere to their prices, as they are fairly comfortably situated with orders meantime. Common 8-lb. cops are named at 1s. 9d. and 8-lb. spools at 1s. 10d. lowest, while twist is generally held for 3½d. for 3-ply 8-lb. Sacking yarns are very steady at 2½d. for 24-lb. web and 3d. for 8-lb. chains, and the Rio yarns have been in demand, 2s. 2½d. being paid for third quality 8-lb. warp and 1s. 11½d. for fourth. Buyers of carpet yarns occasionally enter the market at 2½d. for 14-lb. warp.

Inquiries for jute cloth are freely made, but buyers are not very keen to go on operating in view of the uncertainty of raw jute prices. Prices are steady at from 2½d. for 10½-oz. 40-in. and 1½d. for 8-oz., the latter being at 2d. for 40-in. width for delivery within two to three months. Linoleum hessians are dull, but heavy goods have displayed more movement recently.

Stocks of hessians in Calcutta at the end of August were reduced by about three million yards to 111,700,000 yards, but stocks of heavies were increased by 2½ million yards to 109 million yards, compared with end of July. Prices were easier yesterday at 20s. for 10-oz. 40-in. and 15s. 8d. for 8-oz., September, 19s. 7½d. and 15s. 7½d. for October-December, and 19s. and 15s. 4½d. for January-March, with Liverpool twills at 51s. 6d. and "B" twills at 45s. 4½d., September, 51s. and 45s. 3d., October-December, and 50s. 9d. and 45s. January-March.

GRAIN MARKETS

WHEAT.—The past week was an uneventful one in the wheat market. Prices fluctuated within narrow limits. The market is still dominated by crop reports. The latest estimate of the United States crop indicates a yield of 484 million bushels, as compared with 527 million bushels harvested in 1933, and 851 million bushels in 1932. The situation in the United States and in Canada is aggravated by the small yield of other grain crops. Thus, the yield of the maize crop in the United States is estimated at 1,446 million bushels, as against 2,339 millions bushels harvested in 1933 and 2,580 million bushels in 1932. The yield of oats, barley and rye is also much lower than in the past two years. The latest reports of the condition of the wheat crop in Argentina are favourable, but Australia is still in need of rain.

COMMERCE AND TRADE

AS THE WORKER SEES IT

LAST week's meeting of the Trade Union Congress at Weymouth was remarkable chiefly for its cautious reaffirmation of the principle of "gradualism." While the usual lip service was paid to Socialism as an ideal, the principal speeches were carefully calculated to damp the excessive ardour of the adherents of the Socialist League—not to mention the National Executive of the Labour Party. The only concrete piece of "Socialism" finally adopted was a scheme for the nationalisation of the iron and steel industry, and more than one word of warning was given against visionary plans for a Socialist millennium.

Indeed, it is impossible not to suspect that the remarks both of the President, Mr Conley, and of Mr Citrine, the General Secretary, were deliberately intended to correct the impression made on the public by some of the more startling features of the Labour Party's programme of action, as expounded in the recent brochure entitled "For Socialism and Peace"—for example, in the following passage:—

Banking and credit, transport, electricity, water, iron and steel, coal, gas, agriculture, textiles, shipping, ship-building, engineering—in all of these the time has come for drastic reorganisation, and for the most part nothing short of immediate public ownership and control will be effective.

This marked difference of emphasis—to put it no higher than that—illustrates very characteristically the divergence in outlook between the trade union leaders and the "intelligentsia" of the Party, which distinguishes British "Socialism" from the Continental Marxian brand. Indeed, it may be doubted whether at heart the average trade unionist is a Socialist in any intelligible sense of the word which would distinguish it at all clearly from what used to be known as Radicalism. For, as Mr Conley's presidential address well showed, the trade union wing of the Labour Party is not really interested—as are the handful of intellectuals of the movement—in destroying the so-called capitalist system, but rather in the much more practical task of increasing the workers' share in the national dividend by pushing up wages and stimulating the more eleemosynary "social" services.

And herein lies at once its strength and its weakness. For the instinctive avoidance of revolutionary courses is counterbalanced by a certain lack of clear thinking in formulating a constructive programme. There are dangers, as

we suggested last week, in the policy of pressing for high wages, regardless of economic conditions. And Mr Conley did not give any precise indication of the form of co-ordination which he envisaged in his wage-raising campaign, but he made it plain enough that he was certainly not thinking in terms of a general strike. It is also significant that the proposal made by Mr Yates, of the Typographical Association, for a general levy on all unions of £100,000 a year, during the progress of any dispute sponsored by the T.U.C. was referred back, after some pointed comment by Mr James Jones.

Though the Congress by an overwhelming vote approved the report of the General Council condemning association with Communists on trades councils, Mr Conley welcomed the entry of Russia into the League, and, after blessing the project of an Eastern Locarno, advocated the extension of long-term credits to the Soviet Government, from which he expected the very exaggerated return of £100 million of orders annually. He was on much firmer ground when he condemned the Government's decision not to raise the school age, because it would cost the State another £8,000,000. It is certainly difficult to understand how an administration that is willing, out of the blue, to subsidise beef to the tune of £6,000,000 a year—to mention only one item on a growing list—can seek refuge in the plea of economy for its refusal to effect such an obviously desirable reform.

In addition to a number of resolutions dealing with matters of economic or social interest, two very significant resolutions of a political character were passed by the Congress, one on dictatorship and the other on war. The former, though aimed directly at Fascism and the dictatorship by the Right, was very wisely made to include dictatorship by the Left. The Congress has shown great wisdom in thus definitely repudiating unconstitutional action even when masquerading in the dress of Socialism, for by doing so it has rescued the bulk of the Labour movement from the somewhat sinister imputations cast upon it by the indelible cretins of Sir Stafford Cripps and the Socialist League.

Even more significant in some ways is the new attitude revealed in the resolution on peace and war. Here the sentimental pacifism implied in the resolutions of earlier Congresses is definitely abandoned in favour of a much more realistic and constructive attitude. Though recon-

to a general strike against war in certain circumstances is not ruled out, the Congress has committed itself wholeheartedly to the collective system of security with sanctions under the League of Nations which is the essence of the Liberal Party's foreign policy, and to the support of a "League" war. It is to be hoped that the lesson of this almost startling change of front will be appreciated not only in this country, but also by the rulers of Germany, whose ambiguous policy has been responsible for this very healthy reaction.

The scheme for the nationalisation of the iron and steel industry adopted by the Congress, which was briefly described in the *Economist* of August 25th, is a much less promising venture in trade union thinking. The scheme is evidently a rehash à la Russe of the original plan put forward by the National Committee, not very thoroughly thought out. It contemplates the creation of a Government-owned iron and steel monopoly organised on sectional lines with a central co-ordinating body to be appointed by the President of the Board of Trade, solely on grounds of professional competence. The sectional boards, on the other hand, are to be appointed after consultation with the trade unions. It needs no great stretch of the imagination to realise how thoroughly bureaucratic such an organisation would in practice become—even though it was not formally under the control of a Government department. Of all our many industries the iron and steel industry—which is not a single trade but a vast and delicate complex of highly specialised interrelated industries working largely for the foreign market—seems one of the least suitable for this type of treatment, which might, indeed, be perfectly appropriate, for example, to a transport service. It is quite true that the industry in its present condition needs drastic reorganisation—but not on the lines of this kind of bureaucratic monopoly. What the industry most requires is a new type of leadership armed where necessary with compulsory powers to prevent a recalcitrant and over-individualistic minority from impeding that natural process of concentration and integration which the more far-sighted employers recognise as indispensable.

A similar criticism applies to the proposed socialisation of the cotton trade under a Cotton Control Board—a scheme for which the Joint Council was directed to prepare. How in practice it is going to be possible to "control" an exceedingly specialised industry running into many hundreds of separate units, the Council will probably find it easier to imagine than to describe. The Council was also called upon to prepare a "plan" for the coal industry of which the object is to be "to secure the complete unification of the industry under public ownership and control." But it would probably be wise not to attach too much importance to these paper schemes, which have yet to see the light.

The antagonism aroused by the Government's Unemployment Bill seems to have aroused feelings of most surprising violence, and the Congress so far forgot itself as to pass a resolution describing it as a "Slave and Black-leg" Bill—a piece of absurd exaggeration for which it was deservedly rebuked by Mr Citrine, who brought the meeting back to a sense of reality by his reference to the German labour camps.

Apart from rather superficial aberrations of this kind, the general impression left by the Congress is certainly encouraging. It shows that the trade unions, which form after all the bulk of the Labour movement, are increasingly alive to their responsibilities, national and international, and there is every reason to hope and to believe that the Weymouth meeting will exercise a steadying influence on the councils of the Labour Party. The Conference was true to type and reflected beyond any doubt the sound common sense—decked out, according to tradition, with a few favourite dogmas and served up with a little high falutin'—of the British working class. Talk of workers' control, representation on Central Management Boards and the like was used without very much conviction, for the Conference delegates were well aware of the deep gulf that yawns between a resolution and a policy. At the same time it would be a mistake to brush aside altogether these "hardy annuals" as of no significance. They show in what direction the workers' aspirations lie, and if democracy is to win through, it is with these aspirations that the community must sooner or later come to terms.

ITALY AND FRANCE

At the end of last week it was reported that a Franco-Italian understanding had been reached on questions at issue between the two countries and the ground thus prepared for closer political co-operation. From both Paris and Rome it has been quite clearly indicated that this report of a *rapprochement* is, at least, premature, and it is obvious that there are many awkward adjustments to be made before the ground is clear; but even though the recent reports are no more than "intelligent anticipation" there is good reason for thinking that events are tending in this direction. If so ambitious a project is achieved it would be one of the most important events for good or evil—and we hope for good—of any that have happened since the war in the field of international politics. It is, therefore, worth considering what such an agreement would imply.

The prophets of evil will point out that such an arrangement would be ominously similar in type to the Anglo-French arrangement of 1904 and the Anglo-Russian arrangement of 1907. Two Great Powers, long alienated from one another by chronic friction over a number of apparently intractable points of dispute, deliberately make up their minds to compose their differences because they have each come to the conclusion, simultaneously, that they have more to fear from a certain third Power than they have to fear from one another.

In the present instance, it is suggested that an entente between France and Italy would be based on two fundamental points. On the one hand, there must be no equalisation of Germany's armaments with those of the heavily-armed Continental European Powers; and on the other there must be no impairment of Austria's independence of Germany—neither Anschluss nor Customs Union nor even a virtual Gleichschaltung of a Nazified Austria remaining nominally sovereign. In the present European situation these two points are of paramount importance for France and Italy alike; and, by comparison, these two Powers' own controversies with each other are luxuries which can and must be sacrificed. Of these controversies the two most important are the settlement of an agreed ratio of strength between the French and Italian navies, and the adjustment of claims in North-West Africa. On the naval question, we may conjecture that Italy might rest content with something less than formal parity, and France with less than the superiority of force which would assure her of being able to protect her lines of communication across the Western Mediterranean against an Italian attack. On the North-Western African question, it may well be that France might agree to cede to Italy a sufficient slice of Tunisia to constitute what Italian diplomacy calls a *parecchio*, and that some compromise might be reached on the vexed question of the ultimate citizenship of the Italian population in the French protectorate.

Such a Franco-Italian *rapprochement* would obviously derive greatly increased importance from the fact that each of the two parties has friends and satellites whom it will do its utmost to carry with it. France must try to bring in Poland and the Little Entente, Italy to bring in Hungary as well as Austria—and perhaps also Bulgaria, Albania, Greece and Turkey. When we take into account the new Franco-Russian friendship, and the policy of the lately formed "Little Entente Number Two" in the Balticum, we see that, if the Franco-Italian understanding could be made to bear its full theoretically possible fruits, the effect would be to marshal against Germany every country in Europe except the Continental States which were neutral in the last war and the two European members of the British Commonwealth of Nations!

For reasons which we discuss below, a new anti-German combination is unlikely to be quite as comprehensive as all that. But even if part only of this programme were carried out it would represent an astonishing change, in Germany's disfavour, from the division of camps which appeared to be taking shape in Europe before Herr Hitler's advent to power. Down to January, 1933, it looked as though France and her East European allies were in danger of seeing their post-war military predominance in Europe challenged by a combination of no less than three Great Powers: Germany, Italy and Russia. Two years ago, no one would have dreamed that, by the present date, Russia,

Italy and France would be in process of ranging themselves together again on the same side as they were during the late war. The only thing that has made so astonishing a transformation of the international landscape a possibility is the behaviour of Nazi Germany since the beginning of last year, and of militarist Japan since the autumn of 1931. It is the German and the Japanese war-dance that has driven Russia into the arms of the anti-revisionist bourgeois Powers. Nor is Russia the only lover of isolation who has been impelled in this anti-Japanese and anti-German direction. We have seen the United States co-operating with the League of Nations in the Far Eastern crisis and giving the Soviet Government diplomatic recognition. We have seen the Government of the United Kingdom actually lifting a finger to give its blessing to the project of an Eastern Locarno. In fact, we have seen the beginnings of a world-wide drift of all the Powers with great possessions into a defensive combination against the two Powers that have broken from the world system of co-operation.

How far is this movement likely to go? How long is it likely to last? What effect is it likely to have upon the prospects of war and peace?

On the Machiavellian principle that a common enemy provides the surest bond of international friendship, we might congratulate ourselves on seeing the peace of the world secured by the encirclement of Germany and Japan in an "iron ring." But this is one of those clever half-truths that are apt to betray those who put their trust in them. In real life, such "iron rings" are formed only to be broken; for either the encircled animal will prove to have strong enough teeth to gnaw through the encompassing metal, or else he will appear so pitifully impotent that his captors will sooner or later relax their grip and give him an opportunity to escape by returning to the congenial occupation of bickering with one another.

The ring now growing round Germany and Japan is certainly not equally strong in all its sectors. Yugoslavia, for instance, might repudiate a French alliance which would require her to be on good behaviour towards Italy; Poland a French alliance which would involve a similar bearing towards Russia; and Hungary an Italian alliance which implied a renunciation of Hungarian claims against the Little Entente. Again, neither Yugoslavia nor Roumania is afraid of Germany, while neither of them cares to have Russia for their official friend. Thus a new Pan-European combination against Germany might soon find itself deprived of Polish, Hungarian, Yugoslav and Roumanian support; and if all, or even any, of these countries did gravitate towards Germany, the "iron ring" round the Third Reich would be seriously weakened. So it is, likewise, with the ring round Japan. When the Japanese statesmen feel blue at seeing the Soviet Government recognised by the United States and admitted to membership in the League of Nations, the Japanese militarists and navalists may encourage their civilian colleagues by pointing out that there can be no effective encirclement of Japan without the participation of the British Empire; that the British Conservative Party still hates the Bolsheviks, while the British Admiralty is still jealous of the American Navy; and that the present Government in the United Kingdom may therefore be trusted to play Japan's game as accommodately as Germany's game is being played by a Polish Colonel Beck.

No doubt, such Japanese and German calculations may err in being too clever on their side. The British nation, for example, would certainly turn out of office a Government whose pro-Japanese policy went so far as to make mischief between this country and the United States. Nor could Poland afford to find herself left stranded as Germany's sole friend in face of a hostile Franco-Russo-Italian alliance. Yet it remains fundamentally true that any balance of mutually hostile forces is in its nature unstable and ephemeral, and that there is, therefore, no security in any mere combination of forces, however overwhelming the combination may be to begin with.

What is the moral? Certainly not that we should denounce or discourage any *rapprochement* between any group or pair of Powers. A *détente* between France and Italy, or, for that matter, between Poland and Germany, is pure good in itself; and even the "iron ring" of a defensive combination against Germany or Japan may be

not pure evil as a temporary makeshift; for undoubtedly the worst thing that can happen is that countries in the present mood of Japan and Germany should succeed in achieving their ambitions by force. The "iron ring" has its temporary and contingent value if it convinces the Powers who are momentarily in a truculent frame of mind that militancy defeats its own ends. Our first object must be to make them despair of gaining their ends by violent means; but this negative policy offers no permanent safeguard for the peace of the world unless we also hold out to Powers with a grievance a reasonable hope of obtaining justice as soon as they have renounced the use of force. Reconciliations such as those which seem to be taking shape between France and Italy can and should be crowned by a "peace of mutual understanding" between the two recalcitrant Powers and the rest of the world.

IS IT PROGRESS?

THE advancement of science seems to be one of the few human activities which remain unretarded by economic depression. It is natural, therefore, that this year's meeting of the British Association should have given expression, as usual, to the satisfaction and pride of our scientists in the continued advancement of learning. A certain note of doubt, however, was noticeable this year in the confidence with which the scientific world is accustomed to expect improvements in knowledge to solve or alleviate the world's practical difficulties. Is the influence of scientific thought on the economic world as entirely harmless as the influence of the economic world on scientific thought? May not the rapid advance of theoretical science even have contributed something to the present world-wide economic chaos? In many of the discussions, from Sir James Jeans's Presidential address onwards, these uneasy questions seem to have been implicit.

Sir James Jeans's address—brilliant, eloquent and erudite though it could not have failed to be—was the kind of speech which is apt to win the praise both of scientists and philosophers, because the scientists think it philosophical and the philosophers think it scientific. Once more Sir James told us the story of the supersession of the old "materialist" atomistic physics by the "wave picture," and of the "wave picture" in its turn by the purely mathematical conceptions of to-day. And leaping therewith to the conclusion that reality consists of "waves of knowledge" or "constructs of our minds," he proceeded to argue as follows:—

The photons are no longer distinct individuals each going its own way, but members of a single organisation or whole—a beam of light. . . . The biologists are beginning to tell us, although not very unanimously, that the same may be true of the cells of our bodies. And is it not conceivable that what is true of the objects perceived may be true also of the perceiving minds? . . . It is only a step from this to a solution of the problem, which would have commended itself to many philosophers, from Plato to Berkeley. . . .

Not a few uncritical readers of these words must have gained the impression that modern science, by some miraculous dispensation, had succeeded where both Abelard and Descartes failed, and "proved," by mathematics, the existence of an all-knowing Providence.

Is it really in the true interest of the advancement of learning that this impression should be allowed to get abroad? Modern physics and mathematics have surely not advanced the ultimate philosophical problem a step further than it was left by Berkeley. What modern science has done is to destroy the so-called "materialist" conception of reality, as consisting of nothing but physical bodies in space, which science had itself invented. It has also shown that the phenomena of the sensible world, which were once thought to be determined by the movements of physical atoms, are, in fact, partially at any rate, determined by mathematical principles intelligible to our minds. Philosophically, this surely leaves us with the very problem which puzzled Berkeley: how can it be that the objects of our knowledge appear, on analysis, to be wholly dependent for their existence on the minds that know them? Perhaps philosophy has made some little progress in answering this question since Berkeley's day. But in face of the problem as Berkeley saw it and as modern physics now presents it, may it not be that the scepticism of the 18th-century philosophers was more scientific than the ambitious speculations of Sir James Jeans? Nevertheless the success of natural science in thus systematising the whole range of physical phenomena in terms of consistent mathematical principles remains one of the greatest achievements of human thought.

Have the effects of scientific discovery on the practical world worked so certainly to the benefit, or even to the credit, of mankind? Sir James Jeans rightly refused to endorse the shallow pessimism of those who believe that the progress of mechanical technique is obviously bound to increase the total of the world's unemployment. In the short run, and particularly in times of depression, Sir James admitted, the invention of labour-saving devices may swell the number of the unemployed. Not only, however, do these inventions themselves tend to raise the general standard of living; there is another economic consequence of science which Sir James emphasised: "the more fundamental discoveries which originate as pure science, but may ultimately lead to new trades and new popular demands providing employment for vast armies of labour." How much "employment," we may ask with Sir James Jeans, has been provided by the "labour-saving devices" discovered by Edison and James Watt? It is the very existence of the labour and purchasing power released from the satisfaction of old demands which enables the new to be satisfied.

Nevertheless Sir James was right in reiterating the truism that a failure of human organisation rather than of scientific technique is cheating the world of prosperity today. It would be very superficial, however, to accept the common inference that it is the more intractable problem which we have solved and merely the easier which still confronts us. The supremely difficult technique of physical production, we are often told, has been mastered; and only the simple problem of distribution remains. Is it really a simple problem, however, so to organise and distribute all the land, labour, capital and raw materials of a nation or the whole world that the products of each and all together are available in exactly the right place, at the right time and in the right quantities to satisfy the infinite and ever-changing tastes and fancies of millions of persons who enjoy the inestimable benefit of free consumers' choice? The building of a locomotive may be a far easier problem than the organisation of a time-table which will enable every line and every train to be fully used and every demand to be met. And the organisation of the whole world's economic system is a myriad times more complicated than the organisation of a single time-table. Is there really any wonder that the price mechanism has not yet solved the problem to perfection? Is it not really more wonderful that it has ever come near to solving it at all?

The immediate practical difficulty, as it confronts us today, is the task of transferring labour and capital from the production of goods and services no longer in demand to the production of those goods and services for which the de-

mand is expanding. Ultimately the solution of this problem must largely depend on general monetary and commercial policy; but there are a great many supplementary expedients which may be of use, as Sir Josiah Stamp pointed out in his interesting paper on "The Need for a Technique of Economic Change." Sir Josiah went so far as to suggest that aid might be given to the declining industries at the expense of the more prosperous ones. He also emphasised, however, the danger of actually retarding transfer by such schemes; and he insisted that financial aid of this kind should be "on a tapering scale," while assistance to workers in old industries should be made conditional on their seeking employment in new ones.

It would be as foolish to underrate the difficulties of adjusting our economic system to changes in demand and scientific inventions as it would be to assume that such changes and inventions are bound to break that system in pieces. We must expect shocks and convulsions as the consequence of the impact on the economic system of new influences, some of an economic and some of a non-economic kind. These shocks, convulsions and adjustments are bound to involve some measure of human distress. The essential task before us is to reduce that distress to a minimum by an intelligent understanding and a skilful handling of the new forces that confront us. The economic problem, the problem of adjustment set by the ever-more-rapid advance of science, is of enormous difficulty and complexity. But it is not insuperable.

RUSSIA'S PLANNED ECONOMY—II

THE PROFIT AND THE LOSS

(BY A CORRESPONDENT)

RUSSIA'S experience would indicate that the main danger of a Socialist planned economy is precisely the reverse of that which Conservative critics predicted at a time when Socialism was purely a matter of academic discussion. The familiar argument of some theoretical economists was that a Socialist community would consume everything it produced immediately, without making due provision for obsolescence and future construction. Very different has been the actual course of events in Russia. There the population has been compelled to endure the greatest deprivations, to eat less food, wear shoddier clothes, go without countless little comforts, to say nothing of luxuries which are taken for granted in most other countries—all for the sake of creating national industries. There is a very real causal connection between such apparent paradoxes as the erection of an enormous hydro-electrical power plant on the Lower Dnieper and the existence of hunger, and in some cases famine, in the villages within a hundred miles radius around it. These peasants, along with the population in general, had simply been called on to pay the price for an enormous investment of capital in new enterprises, which can only begin to pay their way after a term of years.

How the Soviet Union has been "starving itself great" during the first years of its planned economy is evident if one compares two tables, both based on Soviet official figures, one showing the progress of industry during the first Five-Year Plan, the other the decline of livestock and of food consumption. The industrial production figures are as follows:—

INDUSTRIAL PRODUCTION IN U.S.S.R.

	(000's)	
	1927-1928	1932
Coal	35,400 tons	64,200 tons
Oil	11,600 "	21,400 "
Pig iron	3,300 "	6,160 "
Steel	3,900 "	5,890 "
Copper	28 "	47 "
Cotton thread	2,871,000 metres	2,540,000 metres
Superphosphates ...	151 tons	613 tons

Everywhere, except in cotton thread, there are substantial gains, although these gains in several cases fall far short of the more ambitious figures of the Plan.

One gets a very different picture in the field of livestock

and food supply. Here the corresponding table reads as follows:—

LIVESTOCK IN U.S.S.R.				
	(In million head)			
	1929	1930	1931	1932
Horses	34	30.2	26.2	19.6
Big horned cattle	68.1	52.5	47.9	40.7
Sheep and goats	147.2	108.8	77.7	52.1
Pigs	20.9	13.6	14.4	11.6
	1927-28		1932	
Consumption of meat	4,210,000 tons		2,871,000 tons	
Consumption of eggs	10,000,000,000 eggs		4,100,000,000 eggs	
Consumption of milk products	310,000 tons		185,000 tons	
Consumption of sugar per head	7.7 kilograms		5.3 kilograms	

The reason why the prophets went so far astray in suggesting that a Socialist regime would save too little is that originally Socialism was regarded as an extension of democracy, in which the voice of the masses would determine the course of economic policy. Actually Socialism was established in Russia as a result of civil war; all vestiges of political democracy were annihilated and a system of cast-iron dictatorship was set up, under which a small group of men in the Kremlin can decide what is good for the masses without worrying overmuch whether the masses really want it.

Nothing in Communist criticism of the private capitalist economy is more justified than their denunciation of such practices as dumping milk in rivers, throwing coffee into the ocean, burning grain and ploughing up cotton, all at a time when there are undernourished and underclothed people. If one imagines as a suitable monument to the follies and weaknesses of private capitalism, a vast mountain of wheat, coffee and cotton, ready for destruction, one can with equal ease erect a rival mountain out of the spoiled and wasted food products in the Soviet Union which have been destroyed not deliberately, but as a result of carelessness and inefficiency, which, in turn, are certainly not unconnected with the drastic elimination of the private profit motive and the wholesale bureaucratisation of economic life. How many potatoes, wrested from the reluctant peasants, have then been left to rot in damp and unsuitable cellars? How many tomatoes and other vegetables have spoiled from poor packing and dilatory shipment? How much meat has been wasted for lack of proper refrigerators? One can find plenty of testimony on these questions in such picturesque headlines as are apt to appear in Soviet newspapers in the summer months:—"Breach after Breach on The Vegetable Front—Cars with Decayed Vegetables Arrive Daily in Moscow—Carloads of Rotting Vegetables Advance on Leningrad." If private capitalism cannot escape the responsibility for the wanton destruction of foodstuffs, the Soviet system is equally responsible for the abnormally large losses in Moscow and in the Soviet provinces which are attributable to mismanagement, inefficiency and carelessness, to say nothing of the immense losses of machinery and capital equipment due to lack of skill and of technical knowledge. It must be remembered, however, that inefficiency was a traditional characteristic of the Russian people long before the Soviet Revolution.

The Soviet Union has furnished repeated evidence that mistakes and miscalculations in the operation of a closely centralised State-controlled economic system may be quite as disastrous as the failures and breakdowns of an individualist system. When the makers of Russia's first Five-Year Plan did not provide for the necessary expansion of the country's transportation facilities, they were preparing the way for a chronic crisis of the Soviet railroad system, which has resulted in frequent wrecks, immense losses of perishable freight and delays in important building projects. Still more serious were some of the mistakes in the application of planned economy to Soviet agriculture. Leaving aside the question whether collectivisation itself was a desirable policy, one can scarcely fail to recognise, in retrospect, two major blunders of execution which increased enormously the human and material costs of carrying out this gigantic agrarian transformation. The first of these was the attempt in 1929 and in the first months of 1930 to socialise the peasants' livestock without giving them any

compensation. By the time Stalin had recognised the harmfulness of this policy and had published his famous "Giddiness from Success" message the damage was done. A large part of Russia's cattle had been destroyed by the peasants, whose desperate slaughtering of their beasts suggested the tactics of the Russian generals who laid waste their country before Napoleon's invasion.

The other great mistake of agrarian policy—closely linked up, incidentally, with a definite miscalculation of planning (the far too rapid pace which was set for new industrial building)—was in making, year after year, irregular requisitioning forays on the peasants, forcing them to sell an undefined surplus of their crops at arbitrarily fixed prices in increasingly worthless paper roubles. This mistake seems all the more inexcusable because a similar requisitioning policy, made necessary to some extent at that time by the exigencies of civil war, led to a steady contraction of peasant production and to the ultimate crisis of food supply which brought about the adoption of the New Economic Policy in 1921. Now the more reasonable system of a fixed tax in kind has been introduced. But this occurred only after the former practice, under which the peasant came to feel that the more he raised the more would be taken away from him, had led to the widespread neglect of the fields in 1932 and to the subsequent famine.

The implications of one curious paradox of Soviet life during recent years do not seem to have been fully grasped in some quarters outside the Soviet Union. Mass unemployment has disappeared in the Soviet Union. The numbers of unemployed in Western Europe and in America have been reckoned in many millions. But what might have seemed a natural expectation, a vast migration of the unemployed of America and Great Britain and Germany to the Russian "workers' republic," has most conspicuously not taken place. A few thousand Americans, mostly of Russian origin, have come to Russia as permanent immigrants. There has also been an almost imperceptible trickle of working-class immigrants from other countries. But it is doubtful whether the number of immigrants to Russia during the "boom" years of the Five-Year Plan exceeds the number of those who have legally or illegally left the country. And even this comparison is misleading, because the unemployed American or Englishman who wants to try his fortune in Russia can leave his own country without difficulty, whereas the Soviet Government is most rigorous in keeping its citizens within their country, especially if it suspects that their sentiments are not enthusiastic. If it were as easy to leave Russia as it is to leave the United States and most European countries, there can be little doubt that the migration balance, even during the years when the capitalist world was in the grip of a severe crisis, would have been greatly against the Soviet Union.

In completing this survey of the practical results of Soviet planned economy one may say that an absolutist state, possessing a firm grip on all the natural resources and labour power of the country, has been able to achieve remarkable results in certain fields of industrial construction and development. It has not, however, been able to bring about an all-round rise in the standard of living, or to banish the elements of crisis and maladjustment from the national economic life, or to overcome such familiar economic laws as the inevitability of high prices, legal or illegal, when there is scarcity. So far it has not even reached the point where the problem of smooth distribution of a large surplus of foodstuffs and other consumers' goods arises. If, there-

fore, any country, in the thick of its present problems, is inclined to copy Russia, perhaps the outstanding lesson is that "planned economy" minus any opportunity for criticism or control from below—criticism not only of details of execution, but of the main propositions of the planned economy—has all the elements of first-rate tyranny. The State which is out for "efficiency" can be a more ruthless exploiter, because it is more powerful and more inescapable than a private concern.

BEEF

THE Intelligence Branch of the Imperial Economic Committee has recently published a "Cattle and Beef Survey" which maintains the high standard of information and interest which the previous publications of the Committee have set. The Survey deals with the cattle and beef industry in 21 separate countries, and although emphasis is naturally laid upon the trade of the British Empire countries, the chapters on foreign countries are also uniformly informative. The whole volume is a model of what such a piece of economic research should be.

The cattle population of the 21 countries most important for the meat trade amounted last year to some 297,700,000 head, of which 65.6 millions were in the United States, 48.6 millions in the British Empire, 47.5 millions in Brazil, 32.2 millions in Argentina and 38.6 millions in the U.S.S.R. The total is about 9 per cent. higher than in 1913, but it has been declining in recent years and is some 3½ per cent. lower than in 1925. The decline has been—with the exception of the Soviet Union—entirely concentrated in the overseas meat-exporting countries, and particularly in South Africa and the Argentine. In the meat-importing countries the cattle population has been increasing, frequently as the result of protection.

Cattle population, however, is not a sure guide to the available supply of beef. The quantity of beef produced per head of cattle varies considerably; moreover, in many countries, particularly Australia, New Zealand and Great Britain, the proportion of the total cattle population which is bred for the dairy industry has been increasing. The production of beef has consequently been declining at a faster rate than the figures of cattle population would indicate. The estimated production of beef and veal, together with consumption *per capita*, are shown in the following table:—

PRODUCTION AND CONSUMPTION OF BEEF AND VEAL

	Production					Consumption <i>per capita</i> , 1932
	1909-13 (average)	1925	1928	1931	1932	
Great Britain	000 tons 571	000 tons 544	000 tons 579	000 tons 524	000 tons 519	lbs. 63

Total (excluding U.S.S.R.)....	(a)	7,994	7,580	7,117	7,447	...

(a) Not available. (b) Year 1913. (c) Year 1912. (d) Year 1931. (e) Year 1930.

The decline in the total from 1925 to 1932 was 7 per cent., and, as most of it was accomplished by 1928, it cannot be ascribed to the depression. Indeed, the depression seems to have made remarkably little difference to the consumption of meat. The table illustrates the predominance of the United States in volume of production, although the *per capita* consumption of the United States is not unduly high. The United States is now almost entirely self-sufficient so far as her meat supply is concerned and is

* "Cattle and Beef Survey." Published by H.M. Stationery Office. 5s.

not an important factor in the international trade in cattle or beef.

International trade in cattle and in fresh beef is restricted to groups of adjacent countries. Far the largest element in the cattle trade is the export from the Irish Free State to Great Britain. There is also some trade from Canada and Mexico into the United States, from Argentina to the adjacent countries, from Denmark into Germany (before the recent imposition of restrictions) and Belgium, and from Hungary and Yugoslavia into Italy, Austria and Czechoslovakia. The trade in fresh beef is very small, the only considerable elements being the exports from Denmark to Holland, Belgium and Germany, and from China to Japan. Broadly speaking, international trade in beef relates to frozen and chilled beef. The trade of the main exporting and importing countries is set out in the next table:—

TRADE IN FROZEN AND CHILLED BEEF

(Thousand tons)

	1909-13 (average)		1928		1933	
	Frozen	Chilled	Frozen	Chilled	Frozen	Chilled
Exporting Countries:—						
Australia	58.0	—	84.6	—	70.7	0.1
New Zealand ..	17.9	—	37.9	—	46.5	0.1
South Africa ..	0.5	—	7.5	—	10.0	0.3
Canada	1.6	—	19.5	—	3.7	1.0
Argentina	117.7	174.8	122.7	376.9	30.9	344.4
Uruguay	13.8	—	39.7	33.1	28.8	28.9
Brazil	—	—	41.5	16.5	10.7	25.8
Importing Countries:—						
United Kingdom	407.8	—	665.7	—	607.7	—
Italy	2.4	—	51.3	—	38.3	—
Belgium	7.9	—	21.5	—	26.7	—
France	(a)	—	8.0	—	23.0	—

Germany	23.6	—	104.3	—	0.6	—

(a) Export surplus.

(b) Not available.

The picture presented by these figures is comparatively simple. The United Kingdom is far and away the largest importer of beef, and she gets her supplies of chilled beef exclusively from South America and her supplies of frozen beef very largely from the British Dominions in the Southern Hemisphere. Hitherto, the South American countries have had the chilled beef trade entirely to themselves, but recent experimental shipments from Australia and New Zealand have been successful, and it is believed that the Dominions will shortly be able to compete in this trade. This will very considerably affect the conditions of the market, for the demand for frozen beef is declining, while that for chilled beef is expanding. Of the other importing countries in the table, Italy gets fresh beef from Denmark and frozen beef from South Africa and Argentina; Belgium imports frozen beef from South America, and France from Uruguay and Madagascar. Great Britain is the only market for chilled beef. The table excludes the trade in tinned meat, which is now of importance only in Argentina, Uruguay and Brazil as exporters and Great Britain as an importer, although there was some trade from Australia to Great Britain before the war.

British imports of beef have recently been declining, the total falling from 700,000 tons in 1925 to 608,000 tons in 1933. This fall is not entirely due either to the depression or to the protection of the home market, although both have doubtless played a part. The influence of Ottawa is perceptible. Imports of chilled beef from South America have fallen by only 3,000 tons between 1925 and 1933, whereas imports of frozen beef have fallen by 60,000 tons. Within this category, however, there has been some shift from foreign to Empire supplies, since the former fell by 55,000 tons and the latter by 4,000 tons only. The net result has been that imports from British countries have risen from 15.4 per cent. of the total (by weight) in 1925 to 18.8 per cent. in 1933. Domestic production fell in approximately the same period from 537,000 tons in 1924-25 to 518,800 tons in 1932-33. The domestic share in the total supply has increased from 51 per cent. in 1923-28 to 50 per cent. in 1932-33.

There has been, in fact, a perceptible decline in the consumption of beef in this country. This has not, however,

meant a decline in the consumption of meat as a whole, as the following table shows:—

Per Capita MEAT CONSUMPTION IN GREAT BRITAIN

Year	Beef and Veal (a)	Mutton and Lamb (a)	Pigmeat (b)	Total	Proportion of Beef and Veal
	Lbs.	Lbs.	Lbs.	Lbs.	%
1910-14 (average)	65.8	30.7	33.1(c)	129.6	50.8
1924	69.4	23.8	43.9	137.1	50.6
1925	71.2	23.8	41.7	136.7	52.1
1926	72.4	25.6	37.8	135.8	53.3
1927	71.3	26.8	39.9	138.0	51.7
1928	70.6	28.0	43.1	141.7	49.8
1929	69.9	28.0	40.2	138.1	50.6
1930	69.8	28.6	41.4	139.8	49.9
1931	66.9	28.6	47.4	142.9	46.8
1932	64.4	30.9	49.2	144.5	44.6
1933	62.8	33.7	47.8	144.3	43.5

(a) Twelve months ended May 31st of the year stated.

(c) Average 1909-13.

(b) Calendar years.

The increase in mutton and lamb and in pigmeat is quite impressive, as is the fact that total consumption has increased throughout the depression and is now at a record level. The declining popularity of beef is usually ascribed to a change of taste, and the authors of the Survey apparently subscribe to this view. But it is possible from the statistics of prices included in the Survey to supply another and more probable reason. Between 1927 and 1933 the price of fresh beef fell by 14 per cent. and the price of imported beef by 16 per cent. In the same period the price of fresh mutton and lamb fell by 20 per cent. on the average, the price of imported mutton and lamb by 28 per cent. and the price of pork by 29 per cent. In view of the ease of substitution of one meat for another, such differences of price are probably decisive. The Survey shows that the price of beef, in spite of its fall, has risen sharply relatively to the average of all prices, and draws the commendable conclusion that the only way to secure an increase in beef consumption and beef prices is to raise the purchasing power of the population.

The Survey also contains a great deal of interesting information on the consumption of meat in other countries. The figures of beef consumption *per capita* have already been given in the first table. The consumption varies all the way from 204 lbs. in Argentina to 18 lbs. in Italy. The consumption of Great Britain is not very high in the list; it is less than half that of New Zealand and less than one-third that of Argentina. Consumption in a meat-producing country, however, is obviously not of quite the same significance as in countries where practically the whole is marketed. For six countries the Survey gives figures for the consumption of other varieties of meat, which are given in the following table:—

Per Capita MEAT CONSUMPTION IN VARIOUS COUNTRIES, 1928

Country	Beef and Veal	Mutton and Lamb	Pigmeat	Total
	Lbs.	Lbs.	Lbs.	Lbs.
Great Britain	70.6	28.0	43.1	141.7
United States ..	58.5	5.6	73.9	138.0
Germany	40.1	1.5	73.2	116.3(a)
France	48	6	17	73 (b)
Belgium	39.2	1.6	39.2	84.2(c)
U.S.S.R.	23.2	10.8	19.6	53.6

(a) Including 1.5 lbs. *per capita* of other meat.

(b) Including 2 lbs. *per capita* of horse-meat.

The total consumption is highest in Great Britain, but it is not our consumption of beef so much as of mutton and lamb that stands out. In pigmeat, in spite of the British breakfast, we are a long way behind the United States and Germany.

THE FATE OF THE SAAR

AMONG the many critical problems of Europe, the decision that will shortly be made regarding the fate of the Saar is one of the most complicated, and there is no achievement that would do more to re-establish confidence in European statesmanship than the finding of a solution that would at once satisfy the inhabitants, ensure tranquillity in the territory itself, and remove any sense of soreness or grievance. Is this too much to hope for?

France's views on the subject have now been laid on the table in a Memorandum to the League of Nations published last Tuesday. This document lays it down that the coming change in the Saar regime, after fifteen

years of international co-operation in that centre under League auspices, should be free from violence or injustice, and that the Saar population should be given an outline of the future regime and of their status under it to enable them to vote advisedly in the plebiscite of January 13th. The French Government are ready to guarantee equality before the law, liberty of person and property, and the same civil and political rights as French citizens enjoy, "without distinction of language, race or religion," to Saarlanders if the whole or part of the territory is united to France.

The Memorandum goes on to urge upon the League, whatever the future of the Saar may be, the necessity for ensuring "respect for rights acquired under its administration; in particular, the right of ownership, the guaranteeing of legal, administrative and fiscal decisions taken during the League's administration, the right of foreigners to keep their property in their respective currencies, and the respect for contracts made in foreign currency or gold." With these suggestions few would, we imagine, disagree.

With regard to the Saar coal mines, which are French property while the Saar is under League administration, the Memorandum states that, should the territory continue under the *agis* of the League, the French Government "would be prepared to surrender a large part of the deposits on equitable terms to the territory." Should, however, the territory unite with Germany, "the French Government wish to leave no doubt as to their determination to be paid the full value of the mines"; and they recall the provision that Germany must in that case repurchase the mines at a price payable in gold. As the provisions for action after the plebiscite include the fixing of a price by a committee of three experts, the fixing by the League Council of a time-limit for payment, and then, in the event of default, the giving of "instructions" by the Council; and as until payment in gold is effected the mines would remain the property of the French State under German sovereignty, the French Government suggests that the Council should take steps, in co-operation with France and Germany, for the conclusion of a Franco-German agreement before the plebiscite is held. Then Germany could propose methods of payment. The Memorandum also draws attention to the debts incurred, when the Saar seemed secure under the League, by Saarlanders and Saarland concerns to foreign lenders. If the Saar unites with Germany, the French Government says: "It would be inadmissible that the francs circulating in the Saar should be withdrawn and claimed by the Reichsbank without being employed for the settlement of foreign and private debts for which Germany would have to assume responsibility." In view of Germany's exchange restrictions this is a point of practical significance.

Such financial considerations, however, though of importance, are subordinate to the tragic dilemma presented to a great many inhabitants of the Saar who cannot bear to vote their homeland definitely out of Germany, whereas, as Catholics, Democrats, Jews, Socialists or Communists or merely as civilised human beings, they dread and loathe the prospect of coming under the Nazi regime. It has been said for some time that if only the Peace Treaty provided for repeating the plebiscite in another five or ten years, in case the League *status quo* were chosen, there would be no doubt of a majority for that solution. The most significant feature of the French Memorandum is that it is precisely this alternative which the French Government now suggests that the League should offer. It points out that under paragraph 35 (a) of the Saar Annex to the Versailles Treaty, the Council has the power, in case the inhabitants opt for remaining under the League, to adapt the present provisional regime "to the permanent welfare of the territory and the general interest." The French Government now suggests that this adaptation should include taking account "of the desires already expressed by the population, that possibilities of modifying this status

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
Annual Income : : : : £5,600,000
Funds : : : : £23,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

should be reserved." In plain language, this means that the Council should promise the inhabitants that if they choose to remain under the League, they will be given the chance at some future date to vote once more for returning to Germany.

Moreover, it is strongly hinted that the wishes of the population itself would be a primary factor in determining that date, for another "adaptation" proposed by the French Government is that "a large place should be given to the co-operation of the Saar population" in the government of the territory—that is to say, the regime should be made democratic. To such a regime the French Government would be prepared to surrender the mines on favourable terms.

According to the Peace Treaty, all matters connected with the Saar are to be settled in the Council by a majority. But, in any case, it is inconceivable that Germany or any other State on the Council would attempt after the plebiscite to oppose the granting of democratic rights to the population,

including the right of self-determination on some future date to be settled by the League at the instigation of the population itself. France's suggestion will arouse a very considerable response in the territory itself and will be difficult to combat.

Meanwhile, stories of personal pressure and even of outrage continue to be reported, and Mr Knox has informed the Council that he must avail himself of the right granted him last June to strengthen the Saar police force for the plebiscite period by recruitment outside the territory, and has backed this request by a number of extracts from the correspondence of the Nazi "Voluntary Labour Service" that show just how much reliance may be placed on Nazi promises. The President of the Council has circularised the Members of the League, urging them to give the fullest support to the Saar Governing Commission's recruiting campaign. Thus, willy nilly, the League is being compelled to set up an *ad hoc* international police force in order to enable it to carry out one of its most inescapable responsibilities.

NOTES OF THE WEEK

Russia on the Threshold.—The delicate business of shepherding Russia into the League has proceeded steadily at Geneva this week, but not quite as smoothly as had been hoped—nor, be it said, with much credit to the members generally, who are making almost as heavy weather of a matter of world-wide importance as they did on the occasion of the admission of Germany nearly a decade ago. Switzerland, the principal source of the opposition, is understood to have been troubled by religious scruples. Two other dissenting or at least reluctant Powers, Portugal and Argentina, are concerned about the extension of the system of permanent seats on the Council; while Poland is restless regarding her own obligations under the arbitration and minority clauses. Eventually, after much coming and going and pulling of strings, the French delegation, the chief sponsor of Russia's introduction, satisfied itself that the necessary two-thirds majority in the Assembly and a permanent seat on the Council were assured; and a letter of invitation was accordingly drafted. A little later, however, another snag appeared. The words of Article 1 of the Covenant, providing that a State should give guarantees of its intention to fulfil its international obligations, were omitted from the letter in order to obtain the greatest possible number of signatures. This twist in the negotiations did not commend itself to M. Litvinoff, who was observing the proceedings, it appears, from somewhere in Savoy. And a final embarrassment was provided by Mr De Valera, who protested, understandably but tactlessly, against the backstairs method of diplomacy used at Geneva this week. While the British and French delegations have been executing these manoeuvres at Geneva, a not very convincing attempt has been made in this country to work up opposition to Russia's entry on grounds of political and even quasi-religious prejudice. We are confident, and glad, that this attempt has no chance of success. Whatever may be thought of Communism and labour camps and the methods of the Comintern, the most practical way of furthering the cause of peace and civilisation to-day is to strengthen the League. And the most practical way of strengthening the League is to ensure the adherence of Russia.

The League Council.—The three temporary members leaving the League Council this year are Spain, Panama and China. Spain will get the requisite two-thirds majority for re-eligibility and be immediately re-elected without any question. Chile and Colombia are so far the candidates for the South American seat vacated by Panama. Chile has the better claims on her international merits, and would, with Argentine and Mexico, who are already members, make a strong Latin-American contingent on the Council. But Chile has previously been on the Council and Colombia has not. Nevertheless, Chile's chances would seem to be the

brighter. China vacates the only seat specifically reserved for Asiatic Powers. Persia has put in a claim, but was on the Council only three years ago. There are strong rumours that Turkey will become a candidate. It is pointed out, however, that the Turks have uniformly asserted that they are a European State, and have even claimed a semi-permanent seat on the ground of being both European and Asiatic. These claims would have to be abandoned if they competed for the sole Asiatic seat. They may postpone their candidature to the Council for a year or even two years, when they could take Portugal's place—unless in the meantime the reorganisation of the Council, which may be discussed after Russia has come in, results in some new opportunity for Turkey. China is standing for re-election, which would require a preliminary declaration of re-eligibility by a two-thirds majority. The arguments put forward by the Chinese and those who are backing their candidature are as follows:—(1) Since Japan left Geneva, China is the only Far-Eastern representative of the League; (2) China stands for the idea of co-operation between East and West through the League, and has done her best to uphold the principles of the Covenant; (3) China is being subjected to the strongest Japanese pressure to abandon the League and the whole idea of co-operation with the West and throw in her lot with Japan. If her candidature to the Council failed, the fact would be exploited with enormous effect by the Japanese and bypro-Japanese groups in China; (4) The war danger in the Far East is becoming greater and more urgent every day. China is a vital factor in the whole situation, and should therefore be on the Council (which already comprises Australia, Great Britain and the U.S.S.R., all of whom are likewise directly concerned). These arguments will undoubtedly carry very great weight.

U.S. Election Omens.—The election in the State of Maine on Monday is interesting on several grounds. Maine is the only State to hold its election in September, and there is an old proverb "As Maine goes in September, so the nation goes in November." This was certainly true in 1932, for the election of Democrats to the Governorship and to two out of three seats in the Federal House of Representatives was the first indication of the landslide two months later. Curiously enough, in November, 1932, Maine itself voted by a small majority for Mr Hoover. This time the Governor has secured re-election with a very much larger majority, and the Democrats have retained their two Congressional seats. Mr Hale, the retiring Republican Senator, has secured re-election only by the skin of his teeth. It is difficult to assess the importance of this election. It proves that the Democrats can repeat their successes of 1932 in a "rock-ribbed Republican" State. Moreover, local politics appear to have been subordinated to national issues, and several of the defeated Republican

candidates based their campaign on opposition to the New Deal, so that the result can be interpreted, much more clearly than in other States, as a verdict of the electorate on Mr Roosevelt's policies. On the other hand, Maine is a small and, in spite of the proverb, not a typical State. It is probable that the American electorate is still in a radical frame of mind. The Republicans have been trying to fasten the Socialist label on to the President by identifying him with the extreme views of Mr Upton Sinclair, the Democratic candidate for the Governorship of California. But it is quite possible that their efforts will only heighten his popularity with the general public. The cotton textile strike is, meanwhile, still raging; violence seems to have been growing more widespread, and a number of strikers have been shot by the police. The unions have shown their power to close more mills than was expected, but the latest reports show some drift back to work. The President has appointed a strong Board of Mediation, but the employers have refused to agree to arbitration.

More Armament Secrets.—The second week of the United States Senate inquiry into the munitions industry has brought to light a crop of disclosures no less disturbing than the first. There must be many people who, though they have never regarded armament firms as philanthropic institutions, have nevertheless been surprised to learn of episodes that are as strange as what they had previously regarded as fiction. At last Thursday's sitting the dealings of the American Electric Boat Company with various European countries were unearthed. It was revealed, among other things, that the company had an agent who founded the "Navy League of Holland," himself being the only honorary member, and subsequently offered a prize for the best essay on the submarine. This gentleman was also the agent of a firm which, as he himself admitted, was turning out sub-machine guns for the German Government in contravention of the Versailles Treaty. On Friday, Mr Louis L. Driggs, of the Driggs' Ordnance and Engineering Company of New York, admitted that his firm had, in the words of a member of the Committee, "used an officer of the United States Navy as sales agent in South America." It was later elicited that not merely an American officer, but a whole cruiser was used to advertise to the Turkish Government the merits of Mr Driggs's guns. Mr Driggs also described the relations between himself, a certain London company and the notorious Mr Shearer, of Geneva Naval Conference fame. At Monday's session letters from the managing director of a British armament firm to the American Armament Corporation were read at length. One of these letters contained the following words:—

In spite of all the dreams of the idealists who imagine that *homo sapiens* is filled with honour, justice, love and self-sacrifice, Japan is going to take a larger slice of China; and comparatively shortly; while the getting is good.

The very character of the language here used shows that careful sifting of the evidence elicited by the American inquiry will be necessary before the bare truth can be disentangled from a mesh of irresponsible assertion; and it is not surprising that much of the "testimony" which has been "put on the record"—though obviously poppycock—has given rise to diplomatic protests from countries which have been lightheartedly brought into the picture. Nevertheless, beneath all this smoke, there is certainly at least some fire. Indeed, the public conscience is now so keenly aroused on the whole subject that nothing but the abolition of private armament manufacture can prevent the occurrence of such scandals as have already been proved—and the suspicion of even worse ones.

Our Agricultural Policy.—Some admirably pertinent and informative comments on the present and future of British agriculture were made by Professor J. A. S. Watson and Sir Daniel Hall, Chief Scientific Adviser to the Ministry of Agriculture, at the British Association on Monday. Mr Watson protested most effectively against the protectionist devices which are encouraging agricultural

and particularly cereal production in the old European countries of the world and so ruining the far more efficient producers in the great prairies of the newer countries overseas. We are blinded even to-day, Mr Watson pointed out, by obsolete and pernicious ideas about the moral superiority of agriculture, and specially of wheat production, to all other economic pursuits. "It is somehow more honourable to plough a field than to let it lie in grass." Yet demand is not static, but changing, and technical progress goes on. Mr Watson also had the courage to state in plain language the unpopular but undeniable truth that an increase in the number of persons employed in British agriculture must not be looked for, since it could "be achieved only at a real and considerable cost to the consumer" and would "imply a displacement of cheap production overseas by relatively dear production at home." Nevertheless, Mr Watson added, there are signs of increased specialisation, greater productivity and consequently higher wages among British agricultural labourers owing to the enhanced importance of pig, dairy and poultry production. "There is a growing tendency to fit the land and capital to the man rather than the man and capital to the land." In only one respect, perhaps, can exception be taken to Mr Watson's address; and that is to his talk of "the determination of farming costs on which, under a planned economy, prices must be based. . . ." Does not Mr Watson here forget that costs are themselves partly determined by demand, and that demand is dependent upon price? The use of land, labour and capital must be controlled and directed by demand in agriculture, as in all other trades.

Meat, Milk, Wheat and Sugar.—Sir Daniel Hall began his address by reminding us that British agriculture can only hope for stability if it organises itself for the service, and not at the expense, of the other nine-tenths of the community. This means, he rightly pointed out, that our agriculture must concentrate on increasing the production of those commodities for which our soil and climate is best fitted. "We should specialise on meat, milk, and all the range of livestock products, fruit and vegetables, leaving the cheap sources of energy, like cereals and sugar, to be imported." This is sound advice, and it inevitably led Sir Daniel to a severe criticism of the policy of encouraging uneconomic wheat and sugar production in this country:—

Scientific research has so greatly increased the output of sugar cane that it is difficult to see how beet can ever compete on equal terms unless some entirely unpredictable break occurs in either the sugar beet itself or in the methods of manufacture, both of which have been the subject of intensive research, and seem to be near the limits of improvement.

Let Mr Elliot take note of that. The march of science is not always, as he seems fondly to imagine, in the direction of self-sufficiency. Nor is it likely that our restrictionists are going to get away much longer with the pretence that their policy has had no effect in raising the price of food. The Board of Trade index of wholesale food prices, just published, shows a rise from 82.0 in July to 87.3 in August. What this means in practice was graphically illustrated by the testimony of Mr John Gregory, president of the Northern Council of the Retail Grocers' Federation, at Leigh on Wednesday. One result of restricting bacon imports, Mr Gregory said, was that

Many grocers in working-class districts who had built up a bacon trade on mild-cured Continental bacon at a reasonable price have been deprived of their supplies, and their customers could not afford to buy bacon at the price now ruling.

The cost of agricultural protection was never made more plain.

BUSINESS MEN! Why not live out at lovely Laleham-on-Thames? It's just as cheap and how much better. Half-hourly service to Town. Laleham Hotel, near Staines.

The Nuremberg Rally.—This year's celebration of the annual Nazi Party Rally at Nuremberg illustrates the besetting difficulty of dictators—the problem, from which they are never free, of reconciling incompatibles. On this occasion, Herr Hitler has had to do his best, on the one hand, to keep up the affection and enthusiasm of his Brownshirts, and on the other hand to rub in the fact that the Nazi Revolution is definitely at an end, and that any Brownshirt who tries to carry it further will meet the fate of Captain Roehm. This is, of course, the kind of problem in which Herr Hitler is an adept, and he seems to have handled it at Nuremberg in a masterly way. The stage-management is reported to have been, if possible, even better than usual; the flags, lights, bands and swastikas were superb; and the show of enthusiasm was duly evoked. At the same time, the S.A. were not, this time, given the centre of the stage. The performance opened with a parade of the Labour Corps (a harbinger, it is rumoured, of universal compulsory labour-service), and it closed with a parade of the Reichswehr, in which Herr Hitler slipped out of the rôle of demagogue and into that of a kind of *Ersatz* King of Prussia. A touch of unintentional humour was given to the proceedings by a display of reproductions of the regalia of the Holy Roman Empire; for it has been pointed out that the figures in the Imperial Crown represent non-Aryan worthies. We may presume, however, that the princes whose patrimony Herr Hitler was intending to claim were not King Solomon or Judas Maccabeus, but rather those medieval Maximilians and Ottos who exercised a shadowy suzerainty over what is now Austria, as well as over what is now the Third German Reich. The Imperial insignia, however, were kept in the background. Perhaps Herr Hitler remembered that it was only a few weeks before Julius Cæsar's death that the crowd offered him a crown and sceptre and saluted him as "King." Dr. Goebbels, meanwhile, had been lecturing on Propaganda as a creative force, and Herr Rosenberg announcing that this force was to be used for the re-writing of German history in the Nazi spirit. A more serious question which was being canvassed at Nuremberg behind the scenes was "Who shall be Herr Hitler's deputy?" In his capacity as Führer of the Nazi Party, Herr Hitler already has a perfectly good, and long-established, deputy in the person of Herr Hess; and the popularity of this genuinely modest and loyal lieutenant was demonstrated by the ovations which the crowds at Nuremberg gave him. But apparently the Führer is one thing and the Chancellor-President another. Who is to be Herr Hitler's deputy in this second and more sumptuous capacity? There have been rumours that this other deputyship is to be put into commission between Herr Hess, General Göring and General Blomberg. Is this to be the bone of contention in the next internal struggle in the Nazi body politic? In spite of the impressiveness of the Nuremberg display, the present masters of Germany have poor prospects unless they manage to stand together against the ordeal of the coming winter.

Scandinavian Solidarity.—Last week, on the eve of the meeting of the League Assembly, a preliminary meeting of Scandinavian Foreign Ministers was held at Stockholm under the chairmanship of the Swedish Foreign Minister, Dr. Sandler (whom the Assembly has since elected as its President). Such regional preliminary meetings are now an established institution not only in Scandinavia, but in other parts of Europe, e.g. in the Balticum, and also in the Danubian area as between the members of the Little Entente. At the Scandinavian meeting this year the distinguishing feature was the addition of the question of economic co-operation to the political agenda. On a statistical showing, the prospects for Scandinavian economic solidarity are not promising; for at present the trade of each of the four Scandinavian countries with its three Scandinavian neighbours amounts to only a fraction of its total foreign trade. In fact, the economy of the Scandinavian countries, like that of the United Kingdom, is still based on the nineteenth-century regime of world-wide economic relations. This does not mean, however, that the Scandinavian countries may not achieve a considerable measure

of economic co-operation in the future. If freer trade is to be found by regional economic groupings, the Scandinavian countries are bound to form such a group, or at least part of such a group. For groupings of this kind will be largely determined by geographical, political and cultural affinities; and, in these non-economic fields, the *rapprochement* between the Scandinavian countries has been remarkable. To gauge its strength, we have simply to remind ourselves that, down to the eighteenth century, Sweden and Denmark were political enemies who invariably ranged themselves on opposite sides in every European war; that in the twentieth century Sweden and Norway all but went to war over the secession of Norway from the union of 1815; and that at the present day the Norwegians are still fighting a sort of *Kulturkampf* against the "Danification" of their language. Against this background the strength of the modern tendency towards Scandinavian solidarity is very striking; and it does not seem extravagant to suppose that this tendency may eventually extend itself to the economic field. In fact, there has already been an earnest of this in the common behaviour of the Scandinavian exchanges since the pound went off gold. On this showing the Scandinavian Governments, when they put economic co-operation on the agenda of their meeting at Stockholm last week, were making wise provision against an uncertain future.

Germany's Economic Dilemma.—Germany is in the paradoxical position of trying at one and the same time to stimulate economic recovery by credit inflation and to remain on the gold standard at an over-valued parity. The recently published report of the Reichs-Kredit-Gesellschaft, of Berlin, makes it clear that the revival of last year is entirely due to the Government's expenditure of Rm. 5,500 to 6,000 millions on public works, which have been wholly financed by the issue of comparatively short-term paper. This volume of new credit naturally stimulated the demand for consumption goods. Consequently there was a rapid rise in imports which, beginning in April, 1933, reached its peak twelve months later; and although there has since been a fall of nearly 10 per cent., the figure is still higher than it was a year ago. The expansion of credit also caused a rise in prices, which was enhanced by the Government's agricultural policy. Between April, 1933, and June, 1934, the wholesale price index rose from 90.7 per cent. (1913=100) to 97.5 per cent., the agricultural index from 81.8 per cent. to 94.6 per cent. and the index of manufactured goods from 111.3 per cent. to 115 per cent. In a world of falling gold prices this movement reduced the competitive power of Germany abroad and there was a constant fall in exports; a fall which has, no doubt, been aggravated by tariff wars and the anti-German boycott. As a result the active trade balance of 1933 became a passive one. Within Germany Government expenditure has brought about a rapid rise in production which was at first confined to consumption goods, but later spread to production goods. There was a consequent rise in the number of persons employed from 12,600,000 in April, 1933, to 15,500,000 in May, 1934. But despite this increase of nearly 25 per cent. in the number of people employed, the total income from wages and salaries only shows an estimated rise of 12 per cent. Compared with 1933 there was a fall in the consumption of sugar, beer and cigarettes. Only meat, which is being sold to the poor at special prices, showed any increase. The effect of this attempted credit expansion on the gold standard is also clearly revealed by the statistics of the banks. The gold and foreign exchange holding of the Reichsbank has fallen to Rm. 76 millions, and the note issue is now chiefly covered by bills, more than 50 per cent. of which have been drawn under the Government public works programme. Deposits of the savings banks, whose liquidity in 1931 was a source of concern, increased by nearly 25 per cent.; but debtors fell by 30 per cent., and investments, Treasury bills and other Government paper increased by over 40 per cent. It is apparent from the report that the Government has now assumed control over the whole economic life of Germany and that the policy of arbitrarily stimulating or curtailing various branches of production must seriously affect the value of the bank's assets. These measures also interfere

with the adequate supply of raw materials on which, according to the report, the present structure of industry entirely depends. It is obvious from the trend of the statistics and the information given in the report that, since a further rise in German internal prices seems inevitable and the continuation of interference must necessarily make production more costly, Germany will find it more difficult still to purchase these raw materials in the near future. Devaluation or famine may be Germany's dilemma before long.

Dr. Schacht's New Plan.—Dr. Schacht, however, is still bravely trying to direct the storm. Details were announced this week of the extension of the control of German imports which was foreshadowed in his recent speech at Leipzig. The new plan (which is described in detail on page 488) amounts to full State control of all imports by an extension of the present system of Control Boards, which will be increased from 11 to 25 covering both industrial and agricultural commodities. The Boards will issue foreign exchange certificates for all the classes of goods which come under their control and these certificates will have to be presented to the Customs authorities. That the new scheme represents a further step in the direction of autarky seems undeniable and it is obvious that it provides Dr. Schacht with a very powerful instrument for restricting international trade. But apart from this restrictive effect, it has at any rate one advantage, inasmuch as it is intended to remedy the anomalies of the present position under which German importers are not limited in the quantities of uncontrolled goods which they can order, but are limited in the means of payment by the foreign exchange control. Thus the accumulation of unpaid debts, like those of German importers of cotton yarns to Lancashire spinners, for example, should in the future be prevented, and that at any rate is all to the good. Proposals have also been made, with Dr. Schacht's sanction, for the repayment of these debts, amounting to £267,000, in twelve monthly instalments, on condition that deliveries of yarn are immediately resumed. Security for new commitments is to be arranged by the deposit of Reichsmarks, which will subsequently be transferred within six months under guarantee of the Reichsbank, and arrangements for this type of deferred transfer are included in Dr. Schacht's new plan for import control. At the time of writing Lancashire had not yet accepted this offer, which, in view of the extended credit demanded for new transactions, naturally gives some food for reflection; but the general view seems to be that in the circumstances these proposals represent the best terms that can be expected.

—But Trouble over Clearing.—Meanwhile the Anglo-German Exchange Agreement, which only came into force on August 20th, has not made a very auspicious start, for on Wednesday the Treasury had to announce that, in accordance with Article 2 of the Agreement, the Reichsbank had temporarily suspended payments into the special account opened by it in the name of the Bank of England. Article 2 provides that when the balance of this special account, which is fed by the payments in marks of the German importers reaches Rm. 5,000,000 the Reichsbank has the right to refuse to accept further credits until the demand for these "sondermarks" from British importers has again reduced the balance below this limit. Some such arrangement was almost essential, since the British exporters can only receive payment as and when the sondermarks have been actually sold by the Bank of England. The contingency which has now occurred was from the beginning regarded as probable, since the use of the clearing machinery is virtually obligatory on the German importer from Great Britain whilst it is optional to the British importer from Germany. The deficiency in the demand for "sondermarks" by the latter has been due partly to ignorance of the facilities offered and partly to the fact that the small discount below the official reichsmark rate at which the Bank of England was willing to sell sondermarks has not been deemed a sufficient inducement to disturb previous remittance practice. Still, the demand for sondermarks has shown a tendency to increase, and it is

understood that on the day preceding the suspension the Bank of England sold a larger quantity than on any previous day. There is therefore some chance of the clogged machinery clearing itself given a little time, though actually the Rm. 5,000,000 limit had been well exceeded before the Reichsbank stopped the account. Certainly, British importers, who do not take too short-sighted a view of their own interests, have an incentive to use the machinery, since to do so is to facilitate our export trade to Germany, whilst the consequence of a complete breakdown of the present voluntary arrangement is almost certain to be the establishment of a compulsory clearing with all its attendant delays and inconveniences.

Sterling and International Prices.—An examination of the movement of wholesale prices in this country during the past fortnight reveals an appreciable setback in the quotations for a number of primary products, despite a decline in the gold value of the pound. The decline was almost confined to imported materials. In view of the recession in activity in the United States, the stagnation of business in France, and the restrictions on raw material imports into Germany, this downward movement is scarcely surprising. The fall in our Complete Index was less marked, as it includes a number of semi-manufactured products which have remained unchanged in price. Our index of the prices of American primary products also shows a slight fall, despite a further advance in quotations for cereals. But the Irving Fisher index, which includes a substantial proportion of semi-manufactures and finished materials, continued to rise. The index for France showed a further advance, but this was due entirely to a rise in the prices of home-produced foodstuffs. The indices for industrial raw materials and for imported goods are appreciably lower than a fortnight ago.

Sept. 12th	110.0	127.7	150.3	165.3	116.3	82.7	92.4

* These figures refer to Sept. 5th.

Details of the group indices comprising the complete *Economist* index number are given below:—

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Aug 15, 1934	Aug. 29, 1934	Sept. 12, 1934
Cereals and meat	64.5	76.8	76.8	76.0
Other foods	62.2	59.8	59.3	58.7
Textiles	43.7	53.2	53.5	52.1
Minerals	67.4	75.2	76.1	75.6
Miscellaneous	65.8	69.9	69.4	69.5
Complete index	60.4	67.1	67.1	66.4
1913 = 100	83.1	92.3	92.3	91.4
1924 = 100	52.2	58.0	58.0	57.4

With the exception of the figure for miscellaneous materials, all the groups indices show a decline. Among cereals and meat, the prices of bacon and oats rose sharply, but the quotations for foreign wheat, flour, maize, rice, beef and English mutton were all marked down during the past fortnight. In the "Other Foods" group, declines in the

quotations for refined sugar and cheese were partially offset by a further substantial increase in the price of Danish butter. The fall in the index for textiles is due to the marking down of quotations for jute, silk and wool. Among minerals, copper, lead and spelter showed a decline, but tin, tinplates and house-coal were dearer.

* * *

U.S. Cotton Crop.—Quotations for American raw cotton declined sharply at the beginning of this week, following the publication, on September 8th, of the third official report on the condition of the crop. According to the United States Department of Agriculture, the cotton crop is expected to yield 9,252,000 bales of 500 lbs., as compared with a yield of 9,195,000 bales forecast on August 8th, and an actual yield of 13,047,000 bales in 1933, 13,002,000 bales in 1932, and 17,095,000 bales in 1931. The acreage remaining for harvest is estimated at 27,241,000 acres, against 29,978,000 acres picked in 1933, 35,939,000 acres in 1932, and 38,705,000 acres in 1931. The latest estimate indicates a yield per acre of 162.6 lbs., compared with 208.5 lbs. in 1933, 173.3 lbs. in 1932, and 211.5 lbs. in 1931. The forecast took the market by surprise, for it was generally believed that the crop had suffered further deterioration during August and that the September estimate would therefore be lower than that issued a month ago. While the strike in the United States undoubtedly contributed to the fall in quotations, it has long been evident that prices of American cotton had risen in relation to those of other cotton as a result of the price-raising policy adopted in the United States. This view was confirmed by the statistics recently issued by the International Federation of Master Cotton Spinners' and Manufacturers' Associations. As compared with the season ended July 31, 1933, consumption of United States raw cotton in the past season showed a decline of 4 per cent., as against an increase of 13 per cent. in the use of cotton grown in other countries. The American cotton market will, of course, remain under the influence of crop reports in the near future, but prices of United States varieties are not likely to rise very much in the absence of a substantial improvement in demand.

* * *

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 5.0 per cent. during August, following a rise of 1.8 per cent. during July. The current figure of 89.6 compares with 81.4 in August last year and 81.7 in August, 1932. Details of the index number are as follows:—

(1898-1913 = 100)					
	Average, 1913	August, 1933	June, 1934	July, 1934	August, 1934
European waters	110.0	83.7	86.7	89.5	91.1
North America	113.1	72.8	76.5	75.7	77.4
South America	123.4	73.2	80.5	83.7	85.4
India	106.3	90.9	88.0	88.3	96.1
Far East and Pacific	117.4	84.3	86.3	87.3	91.4
Australia	127.9	83.7	84.6	87.2	96.1
Total	116.3	81.4	87.8	85.3	89.6

Rates for outward tonnage have, on the whole, remained firm, and Newcastle reports that the recent improvement in the Mediterranean market has been maintained. At Liverpool the River Plate market is also steady; although shippers are inclined to hold back, owners are not pressing tonnage. The North Atlantic trade is dull, but there is a good tone in the Far Eastern and Australian markets. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	79.3	+ 0.5	South America—		
Bay—outwards	113.8	+ 11.1	Outwards	69.2	— 0.8
Bay—homewards	85.2	— 1.6	Homewards	101.6	+ 4.2
Mediterranean—			India—outwards	74.4	— 0.7
Outwards	94.7	— 1.3	India—homewards	117.7	+ 16.2
Homewards	84.2	+ 0.7	Far East, etc.	91.4	+ 4.1
North America	77.4	+ 1.7	Australia	96.1	+ 8.9

Expressed as a percentage of the average for 1913, the total figure of our index number for August is 77.0, compared with 73.3 for July and 70.0 for August last year.

* * *

Transvaal Output in August.—The output of gold by the mines of the Transvaal during August amounted to 881,861 ounces of fine gold at a value for purposes of declaration of £6 18s. per ounce, as compared with 876,094 ounces in July at £6 17s. and 934,714 ounces in August last year at £6 5s. In the following table we show the monthly output since the beginning of 1928:—

Month of	1928	1929	1930	1931	1932	1933	1934
January ...	Fine Ozs. 845,857	Fine Ozs. 876,432	Fine Ozs. 882,601	Fine Ozs. 914,576	Fine Ozs. 936,784	Fine Ozs. 967,457	Fine Ozs. 907,641

July ...	867,211	889,480	912,652	916,843	981,160	923,671	876,094
August ...	891,863	889,601	921,081	916,425	991,322	934,714	881,861
September ...	857,731	849,553	903,176	916,024	961,501	901,799	...
October ...	897,720	888,690	926,561	945,113	974,965	908,888	...
November ...	872,484	861,593	884,753	900,510	978,716	899,468	...
December ...	859,761	851,134	908,492	923,353	980,618	894,156	...
Total ...	10,358,596	10,414,066	10,719,760	10,874,145	11,553,564	11,017,485	6,998,440

The following table shows the number of natives employed at the mines during the past nine months:—

	Dec., 1933	Jan., 1934	Feb., 1934	Mar., 1934	April, 1934	May, 1934	June, 1934	July, 1934	Aug., 1934
Gold mines	235,739	239,871	242,594	242,577	243,059	243,579	244,857	245,918	248,436
Coal mines	11,686	11,661	12,120	12,434	12,452	12,481	12,800	12,845	12,745
Total...	247,425	251,532	254,714	255,011	255,511	256,060	257,657	258,763	261,181

The number of natives employed at the gold mines has shown a notable expansion since the beginning of the year.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE TEXTILE STRIKE ISSUE

CURRENT reports on the textile strike indicate that about one-third of the workers are out in New England and a larger proportion in the South. The points at issue are stated to be: the 30-hour week with no reduction in wages; graduated wages based upon skill required; uniform limitation of machine load; recognition of the United Textile Workers as the collective bargaining agency; and the institution of an arbitration board. The contention of the

employers is that the N.R.A. codes have already increased labour costs greatly, and that this, combined with the rise in raw materials, plus the processing taxes, has already lifted the prices of finished goods to a level beyond which the consumer cannot meet further advances. The earnings of textile companies are characteristically erratic, but at the present time there are certainly no profits capable of absorbing any increase in costs.

The market is well stocked with textiles, and has shown itself apathetic to the strike; the funds of the union are small in proportion to the demands to which they are liable. The probability would, therefore, seem to be a

short, violent and unsuccessful strike, except for the possibility of Federal intervention. This is quite uncertain; for example, Federal relief funds have been promised to strikers, but the Relief Administrator has specifically declared that the Treasury will not "underwrite the strike."

The resignation of Mr Lewis Douglas, Director of the Budget, came as something of a shock, although it had not been unexpected for months. The correspondence of the resignation was not made public. Following his resignation, however, news dispatches from Washington began to intimate that the idea of balancing the next Budget (for the fiscal year July, 1935-June, 1936), as announced in the President's message of last January, was being abandoned. The reasons are obvious—the business recovery has failed to materialise, and the burdens of relief, instead of diminishing, are growing heavier. In June, 1934, 3,716,755 families and 512,701 single persons were on Federal relief rolls. These figures do not include those who are employed under certain special administrations. The average relief is stated to be \$23 a month, having risen about 50 per cent. in the past year largely because of the increased cost of living. The distribution of these relief funds does not follow publicly defined principles: in some States the entire relief programme falls on the Federal Treasury; in others, as in New York, the heavier part of the burden is borne locally.

THE COST OF RELIEF

It seems to be impossible to obtain a comprehensive synoptic view of Federal relief expenditures, as grants are made under numerous Congressional appropriations, quite confusing to an outsider. The Federal Emergency Relief Administration was created in May, 1933; its appropriations have totalled \$1,231 millions and are virtually exhausted. But these figures do not include appropriations under Public Works Administration, nor the special agricultural appropriations. It is now believed that relief expenditures must rise, and an estimate of 5,000,000 families on relief is officially predicted for the winter. As a remedy, organised labour advocates the 30-hour week and a revival of Civil Works Administration; but the present policy seems to be to find work for the unemployed in Government-operated factories. A considerable endeavour has already been made in this direction by F.E.R.A.; and the idea is the basis of Mr Upton Sinclair's E.P.I.C. (End Poverty in California) campaign.

Appraisals of the drought are still uncertain, the recent weather having been more favourable to such crops as are still unharvested. One thing, however, seems to be clear. The failure is most severe in those crops which are principally consumed on the farm, such as hay, oats and maize. Higher prices for these commodities benefit the farmer only if the added costs are recovered from higher prices for livestock, dairy products, eggs, etc. Except for hogs, the prices of such products are rather laggard; there is further some danger that livestock will be sacrificed because of the high cost of feeding. The present indication, largely because of the recent advance in hogs, is that farm income exceeds last year's in the aggregate; but it is too early to speak with positive assurance.

An important ruling was made regarding N.R.A. during the week, when it was decided that in any industrial concern a labour organisation representing a majority of the workers was solely entitled to represent them in collective bargaining. This reverses certain other decisions, in which schemes of proportional representation were permitted; and it is regarded as a victory for the American Federation of Labour.

The condition of N.R.A. becomes increasingly obscure. Last week's letter reported the refusal of the cotton garment industry to accept the Executive order to raise wages and reduce hours by 10 per cent., although the President was presumably within the authority of the Recovery Act. No further action on this matter has been reported, but a strike is threatened. This week another episode has occurred which raises important questions of enforcement. The Retail Solid Fuel Code permits local price-fixing arrangements in emergencies, but the Code Authority has resigned in a body, claiming that it could not secure from N.R.A. sufficient help in enforcing com-

pliance. The N.R.A. answer is that it must establish the existence of an emergency. It is officially stated that this is not to be interpreted as a dissolution of the Retail Solid Fuel Code. Meanwhile the papers carry reports both of concerns which surrender their Blue Eagle voluntarily and of others which are deprived of them as penalties; and also of suits to enforce code compliance even from concerns which have refused to sign codes.

Business news continues uniformly discouraging. Steel operations are at 18 per cent. of capacity—almost as low as during the banking holiday of 1933. There are fitful reports of better retail trade in localities, but as yet nothing has appeared which can be taken as evidence of seasonal upturn.

NEW YORK, September 5.

FRANCE

M. HERRIOT AND M. TARDIEU

M. HERRIOT, Minister of State and leader of the Left-wing parties in the Doumergue Cabinet, delivered a speech on Sunday before the members of the Radical-Socialist Federation of the Rhône. M. Herriot contended that "the crisis was a liquidation of the errors, the excesses and frantic imprudences of the post-war period"; that with its 47,000 million francs the 1935 Budget would reach the limit of the capacity of the French tax-payer; and that prices were falling. He also emphasised the necessity of preserving the confidence of rentiers by the maintenance of the Doumergue Cabinet on the eve of the funding of the Clementel bonds which mature in October. The Federation passed a resolution asserting that "the public interest calls for unity in the effort towards financial restoration and the solvency of the Treasury" which are the condition of any public work scheme and of any relief to the victims of the crisis. On the same day M. Tardieu, who is also Minister of State but leader of the Right parties, made a speech attacking what he called selfish and material views of life, which, he said, have always brought on the ruin of nations. He extolled the merits of the political "truce" and the "Union Nationale."

The next political event will be a broadcast speech of M. Doumergue on September 21st, followed by two others. These speeches will have very great significance, because they will be given on the eve of the Departmental elections (the first ballot for the Senatorial elections), which have just been fixed for October 7th. It has been announced that in these speeches the Prime Minister will discuss the hotly debated problem of Parliamentary and administrative reform.

RECORD UNEMPLOYMENT TOTAL

These reforms have become urgent, because the difficulties created by the economic crisis and the resulting public discontent are rapidly increasing. These difficulties are principally connected with wheat and unemployment. M. Sarraut, Minister of the Interior, has asked M. Queuille, Minister of Agriculture, to assist the farmers to sell their 1933 wheat crop. At present they have received no money for this crop, while they are compelled to pay the costs of cultivation. Meanwhile M. Marquet, Minister of Labour, has sent to M. Doumergue a letter in which he states that the number of unemployed is the highest since the war. The following table, which is extracted from his letter, shows that in comparison with 1932 the figure of unemployment is lower in Paris but higher by 14 per cent. in the suburbs and by 44.9 per cent. in the departments.

UNEMPLOYED (official figures)

(Third week of August)

	1932	1934	Per cent.
Paris	90,123	88,372	— 1.9
Suburbs	59,876	68,269	+ 14
Departments	116,724	169,082	+ 44

In the light of these figures, M. Marquet urged the necessity of accelerating the application of his plan of Public Works, which was adopted by Parliament in July, but held up by alleged financial difficulties.

French financial markets are disturbed by the recent fall of sterling and the rumours of a new devaluation of the dollar, the possibility of which has been frequently deplored as dangerous for the franc. French supporters of franc devaluation, however, appear to be losing ground. In a recent reply to M. Reynaud, M. Duchemin, President of the General Federation of French Industries, contended that the exchange premium which benefits the industries of countries with erratic currencies is of an ephemeral nature. "As soon as world prices rise," M. Duchemin added, "retail prices will follow suit in every country, but with an accentuated tempo in the countries which have abandoned the gold standard, so that the difference which exists between industrial costs in different countries will be considerably narrowed in the future." This view, which is accepted by most French business men, does not prevent the instability of the dollar and the pound from disturbing the French situation; monetary uneasiness, while bringing new gold to Paris, engenders a lack of confidence on the Stock Exchange, notably in Government bonds, as the following figures show:—

	Feb. 6, 1934	July 6, 1934	Sept. 6, 1934
3% irredeemable bonds	65.70	77.55	73.05
4½% 1932, "FB" bonds.....	80.20	89.90	88.15

The instability of the Anglo-Saxon currencies explains why French public opinion is keenly interested in the recent evolution of French foreign policy which is designed to achieve freer commercial relations, notably with the countries of the gold bloc. But it is recognised that some time must elapse before these hopes are realised.

PARIS, September 12.

GERMANY

THE NEW IMPORT CONTROL SYSTEM

THE new "Plan" for foreign trade control recently announced by the Ministry of Economy, to be based on the Law for Trade in Industrial Raw and Half-Finished Materials of March 22nd (the first general import control statute), consists essentially in an extension of the control system to numerous industrial commodities hitherto excluded and to agricultural products. Import and internal distribution of all these will be regulated on the principle (to be applied to each individual transaction) that only such goods shall be imported as can be paid for in view of the current reserve position. To the already existing eleven import control boards for different classes of industrial materials are added ten new ones, plus four for agricultural products, so that henceforth there will be 25 boards. The older control system is also defined further and in altered detail. The new system is embodied in an "Ordinance for Trade in Commodities," which contains the general and wide empowering clause: "The Reich Minister of Economy is authorised to supervise and regulate trade in commodities, and in particular to issue regulations concerning their provision, distribution, storage, sale and consumption." For such purposes the Minister may require the reporting of transactions and the keeping of books. The Minister of Economy will appoint a Reich Commissioner to direct and represent each board.

The boards already existing are for tobacco, industrial fats, wool, cotton, cotton yarns, bast fibres (flax, etc.), hides and pelts, rubber, soot, non-ferrous base metals, and iron and steel. The newly-created boards are for wood, horticultural products, coal and salt, mineral oil, chemicals, silk with rayon and clothing, furs, paper, technical articles, and "various commodities." The four agricultural control boards are for grain (with fodder), live-stock and animal products, milk (with oils and fats), and eggs.

The effect of all these measures is to subject imported goods of every kind to public control both as regards their purchase from abroad and their distribution at home. There is no limit to the Ministry of Economy's power to take measures for ensuring the distribution it desires. From September 24th the control boards will replace the present exchange boards (Devisenstellen) in regulating payment (supply of foreign exchange) for import. The

general import exchange rationing will cease. The boards will issue "exchange certificates" for import payments, which must be produced to the Customs authorities; and only these certificates, together with a Customs certificate of the actual import, will authorise payment to the foreign seller. The import of goods for which exchange certificates are refused is not prohibited; but the purchaser will not be able to count on his ability to pay within a reasonable time; and in order to prevent evasion of the exchange law, imports of this last class must be reported to the competent board. The present free limit for import payments is reduced from 50 to 10 marks. While in general the "exchange certificates" will authorise immediate payment, certificates guaranteeing payment at a later time will also be granted. The Ministries of Economy and Food and the Reichsbank will from time to time jointly determine the amount of exchange certificates to be issued. Certificates will also be necessary for payment in reichsmarks. In considering applications for certificates, a sufficient supply of materials for the export industries will in all circumstances be ensured. The new regulations, it is officially added, will be used in order to further the conclusion of compensation agreements. A new agreement of this kind with Bulgaria is announced.

The control system is a step, in so far as mere import is concerned, towards a State foreign-trade monopoly of the Russian type. The main difference—that the goods imported into Germany will remain private property—hardly affects the matter in its international bearing. It seems likely that a similar control of export will follow. Already official measures are being taken to force particular kinds of export by refusing foreign exchange for the import of materials to firms which show too much zeal to sell at home at higher than foreign prices. The rule that exchange certificates will always be granted for import of raw materials necessary for the export industries provides a new leverage for export control. Under the new system the State, acting through the boards, may easily, on political or other grounds, direct trade to particular countries, as is done by Russia.

New decrees limiting the use of pure tin and encouraging by bounties the home production of zinc and lead, have been issued. For certain purposes alloys of 40 per cent. tin content are prescribed. It is estimated that by means of various State subventions a supplementary output of 20,000 tons of fine zinc, 7,500 tons of raw zinc and 1,100 tons of soft lead will be achieved before the end of the current financial year. Some mines and works now closed will be re-opened.

UNEMPLOYMENT STILL FALLING

The number of unemployed at the end of August was 2,398,000, which is 28,000 fewer than at the end of July. The small decline is officially considered satisfactory in view of the discharge of 23,000 emergency employees and of the termination of the harvest. The number of employed (Sickness Insurance registration) at the end of July was 15,533,000, i.e. the number was practically unchanged during the month. The monthly reports of the Chambers of Commerce for August are moderately favourable. Except locally and for particular branches, textile mills have not suffered from shortage of materials, and most have orders for months to come. Heavy iron and steel developed well, but the steel-goods industry has reacted unfavourably.

A law forbidding the foundation of new banks, banking branches or agencies, has been promulgated. Only the Reichsbank, Gold-Discount Bank, Reichspost and Building Savings Banks, with some similar undertakings, are exempted. This measure is provisional, pending a general State regulation of banking. It seems directed more against public than private bank expansion. Since 1913, the number of private banks has risen from 2,506, of which 551 were "big banks," to 3,125, of which 1,258 were "big banks." But State banks have increased from 31 to 116, "Landesbanken" from 2 to 288, and all public banks from 52 to 415. The State and "Landesbanken" compete directly with the private banks. The savings banks, which now number 10,500 as against 8,425 in 1913, have, since the war, embarked on short-term credit business in competition with the private banks.

Money is this week stiffer in consequence of the quarterly income-tax liability; day-loan rates are around 4-4½ per cent. The wholesale prices index number for September 5th was 100.5, as against 100.1 on August 29th. The agricultural products and manufactured goods groups have risen sharply. The September estimate of the year's crops shows improvement on August. The whole grain crop is now estimated at 20,520,000 tons, which is 900,000 tons higher than the August, and 1,300,000 tons higher than the July, estimate. Wheat is estimated at 4,510,000 tons, rye 7,560,000 tons, and all bread grain 12,070,000 tons, which is 500,000 tons above the August estimate. The oats crop is heavily behind the ten years' average. The flax crop was badly damaged by drought, but owing to increase in the area sown (by 79 per cent.) exceeds last year's by 66 per cent.

BERLIN, September 12.

SPAIN

POLITICAL PROSPECTS

THERE are signs that a regrouping of political forces has been taking place in anticipation of the reopening of Parliament, and that the Socialists, in view of their disastrous defeat at the last elections, are disposed to make concessions to the extreme Left in order to reinforce their numbers, but the general opinion is that Sr. Gil Robles, of the Acción Popular (Moderate Right), will not delay much longer taking over the Government. Several of the present Ministers have proved very efficient and are very popular, but there are problems ahead which involve responsibilities too heavy for a minority government to take. This is especially the case with respect to the separatist agitation in the Basque Provinces and the constant friction between autonomous Catalonia and the rest of Spain. Recently much feeling has been stirred up by a Catalan decree prohibiting the entrance of wheat from the rest of Spain into Catalonia, and Catalan politicians are being accused of actively favouring the bid for autonomy of the Basque Provinces in order to support their own pretensions.

Harvest reports are, in general, excellent, and it is hoped that no imports from the Argentine will be necessary for the carry-over next year. The olive crop will probably be up to average, and fruit has also been plentiful.

Trade, on the other hand, shows no signs of recovery, nor is there much optimism to be found in industrial circles. The number of protested drafts in the hands of the banks continues very high and a protest has lost some of its moral significance in consequence.

The Stock Exchange was naturally very calm during the past month on account of the summer holidays, and, apart from the small amount of business done, quotations were, in general, weak; even Government securities lost some ground. There have been no new issues during August, nor is it customary to go to the public for capital until the beginning of October, when holiday-makers are all back from the North. One exception to this rule is the Lozoya Water Supply Company (the Madrid Water Company) which has been authorised to make an issue of 5 per cent. bonds, free of tax, for a total of Pts. 101 millions. The proceeds of this issue will be used to provide a further supply of water, which is urgently needed, to the city and its suburbs. There are one or two important Government and municipal issues to be made in the autumn, but until the political situation is more stable, industry cannot hope for any help from the market and must continue its hand-to-mouth existence as at present.

The increase of 15 per cent. on all railway rates, recently authorised by the Government, has had its effect on receipts, which have risen in comparison with the same period of last year. The quotation of the companies' shares has improved in consequence. As a result of general depression, the big store "Madrid-Paris" has had to close down. Part of the ground floor having been taken by a fixed-price store of the Woolworth type (an innovation in Spain) the success of the new venture has been so remarkable as to cause considerable perturbation among Madrid shopkeepers. The service of "telefonemas," or 'phoned telegrams, has

been taken over from the Telephone Company by the State in virtue of the terms of the original charter, and the company's shares fell somewhat in consequence, as it was thought, until the last moment, that the Government would not avail itself of the right to take over this service.

MADRID, September 1.

FINLAND

EXCHANGE DISPUTE WITH GERMANY

At the end of July payment difficulties arose between Finland and Germany. According to a clearing agreement dating from January, 1933, the Reichsmarks received by Finnish exporters for goods delivered to Germany are accumulated on a special account in the Reichsbank and are utilised in making payments for Finnish imports from Germany, which are as a rule appreciably larger than the exports from Finland to Germany. As German exporters demanded payment in other currencies, the balances of Finnish exporters on this account began to rise and threatened to assume considerable proportions to the detriment of exporters, who had to wait for payment and to run the risk of a possible depreciation of the German currency.

In order to relieve these conditions negotiations were started by the Finnish Government with the German authorities, principally with a view to Finnish importers being entitled to make their payments in Reichsmarks. But the clearing agreement was denounced by the Germans on August 31st. To protect the interests of Finnish exporters the Finnish Government was forced on August 20th to issue an order that for goods of German origin or purchased in Germany payment should be made in German marks through the medium of a Finnish bank. By this means a liquidation of the large special account in the German Reichsbank will probably be achieved. The stipulations contained in the ordinance may be relaxed by order of the Finnish Ministry of Finance, as soon as equilibrium has been established. Renewed negotiations between both parties have been begun.

PRODUCTION AND FOREIGN TRADE INCREASING

Industrial production increased considerably during the second quarter of the year. The index of production (1926=100) was as follows during the second quarter:—

1930	102	1933.....	97
1931	80	1934.....	112
1932	83		

The improvement is partly due to higher prices, but the volume of production has also increased very much, especially in the exporting industries.

Foreign trade has been lively during the summer, as the following figures indicate:—

	Imports June-July Mill. mks.	Exports June-July Mill. mks.
1932	615.0	992.2
1933	703.1	1,279.6
1934	863.9	1,524.4

As usual during the summer months, in which shipments of sawn timber are principally concentrated, the surplus

Now Ready— A CONCISE DICTIONARY OF FINANCE By W. Collin Brooks

Author of "The Theory and Practice of Finance," etc.

An encyclopedia of financial information arranged in alphabetical order to ensure immediate reference. It is a desk-book of everyday use and value for all concerned with financial activities. The information in the book is absolutely authoritative and meets in detail the requirements of bankers, financiers, investors and all financial executives. Its value in examination as well as professional work makes the book of particular importance to students. 414 pages. 12/6 net.

Order from a bookseller or direct from
PITMAN - Parker Street - Kingsway - London, W.C.2

of exports has been large. For the seven completed months of this year the surplus of exports was 524.3 million marks. This result is favourable in itself, yet it falls short of the brilliant results for the corresponding months in 1933 and 1932, which were 636.8 and 754.1 million marks, respectively.

The money market is extremely easy, chiefly on account of the favourable state of foreign trade. This is clearly illustrated by the following figures regarding the position of the Bank of Finland:—

	Aug. 15, 1932	Aug. 15, 1933	Aug. 15, 1934
	Million marks		
Reserve of foreign currency ...	327.2	649.1	1,032.2
Note reserve	583.9	712.3	781.6
Total credits.....	1,008.6	906.1	840.8
Re-discounted bills	140.8	25.2	...

The unusually easy state of the market is also shown by the fact that the credits granted by the joint stock banks have fallen below their deposits, whereas the reverse is usually the case. In July the credits of the banks were reduced by 143.4 million marks and thus reached a lower figure than at any time since 1927. Deposits have grown, though slowly.

The plentiful supply of money would have been even larger if some foreign credits had not been redeemed in the course of this year. The Industrial Mortgage Bank of Finland, Limited, has called in and entirely redeemed its dollar loan, of which about 6 million dollars were outstanding. Moreover, purchases of Finnish bonds have been made abroad for sinking fund purposes. Altogether it is estimated that over 500 million Finnish marks have been employed for the redemption of Finnish bonds abroad. Some time earlier, during 1931-33, the net Finnish indebtedness to other countries had been reduced from about 8,000 to 5,100 million marks, calculating the foreign currencies at the par rate of exchange. This proved possible thanks to the unusually active balance of payments.

HELSINKI, September 6.

IRISH FREE STATE

THE PATH TO AUTARKY

THE official estimate of the balance of international payments in 1932 has been prepared. The following is a summary of its principal results:—

CREDITS		DEBITS	
	£2,000		
Exports	25,920	Imports.....	41,497
Income from investments abroad	10,100	Remittances on Irish investments held abroad	5,740
Emigrants' remittances	4,000	Miscellaneous	686
Pensions, sweepstakes, etc.	6,592		
Miscellaneous.....	931		
Total.....	47,543	Total	47,923

Assuming these figures to be reasonably accurate, it would appear that the Free State external balance was satisfactory in 1932. Since then, the passive visible balance has increased by about £2,000,000, but income from investments abroad has probably increased substantially as a result of improved company results and increased dividends. Although the material available for forming an opinion is inadequate, it may reasonably be estimated that no serious drain has yet appeared in spite of the economic war, and this is the opinion of the best-informed Dublin bankers.

What gives rise to anxiety among more thoughtful observers is the future rather than the present, or, perhaps we should say, the distant rather than the immediate future. The Free State is obviously a strong creditor country, and is in the position of a private individual who is able to weather a period of great depression in his earnings because of the possession of a large "unearned" income. So long as the Free State continues to enjoy these favourable conditions, political follies and measures of

economic unwisdom can be indulged in without any marked effect on the general standard of living. But if once the country's "private means" were to disappear, the gap between visible imports and exports could no longer be bridged, and a drastic reduction of imports would at once become a matter, not of proud choice, but of stern necessity.

Such a reduction of imports would unquestionably be reflected in a lowering of the general standard. The Free State is not endowed with a rich variety of resources, as are the United States, nor with a tradition of chemical and engineering ability, as is Germany, where synthetic products may replace imports to some extent; and the path to "Autarky" would be indeed a thorny one. Of course, different people hold different views regarding the importance of comforts and luxuries to human happiness, and there are some leaders of opinion in Ireland who would like nothing better than a dense population of peasants living in rather simple, not to say primitive, conditions. But to those of us who do not wish to deprive our fellow countrymen of the fruits of human progress, such a picture appears bleak and depressing.

DANGERS TO THE BALANCE OF PAYMENTS

The danger of such a collapse in Irish civilisation is slight so long as the country can retain its creditor status, and it therefore behoves every responsible politician in Ireland constantly to observe the external balance of payments, to do nothing to depress it, and to attempt to improve it. One fact that should be borne in mind is that many of the credit items will tend to diminish with the passage of time. Pensions are essentially terminable incomes, while emigrants' remittances and sweepstake receipts have probably seen their best days. One would think that wisdom would dictate the building up of new visible exports to replace these invisible ones as they gradually decline, but apparently export markets are considered unimportant, and recourse is being had, in the time-honoured manner, to reducing imports rather than increasing exports. It is only fair, however, to observe that Messrs Thomas and Elliot have made exports from the Free State very unprofitable.

The decline in the invisible income to which we have so far referred is inevitable, but it will be gradual, perhaps almost imperceptible. But there might come about a further decline, which, while by no means inevitable, would be sudden and catastrophic. A large percentage—how large we have no statistics to show—of the income from investments abroad is concentrated in the hands of a relatively small number of rich families, who are very mobile and reside in Ireland mainly for pleasure or for sentiment, but not for business, professional or official reasons. Any severe political or financial shock that had the result of causing these families to cease to reside in the Free State would substantially reduce the credit side while adding to the debit side (on account, for example, of rents remitted abroad) of the country's external balance sheet. Such a shock to the nation's creditor position (and incidentally, it may be added, to the public finances) would expedite the downward readjustment of the people's standard which appears to be regarded with such unconcern by some of our politicians.

DUBLIN, September 10.

CHINA

TRADE DEPRESSION IN HONGKONG

THE Governor of Hongkong has appointed a Commission "to inquire into the causes and effects of the present trade depression in Hongkong and make recommendations for the amelioration of the existing position and for the improvement of the trade of the Colony." The Commission is composed of twelve members, of whom two are Chinese, under the chairmanship of one of the senior Government officials. Banking, shipping and property interests are represented and H.M. Trade Commissioner is a member. In the opinion of some people a smaller commission might

prove more effective, and it certainly seems as if some of the members of the Commission would be more useful in the witness box than in the seat of judgment. However, the Commission begins its work this week and it is to be hoped that it will be presented with a wide range of views on the present depressed state of trade.

The consensus of opinion is still strongly in favour of maintaining free trade here. Hongkong has no primary products, and its prosperity in the past has been entirely derived from its services as a clearing house for the trade of South China. There is, therefore, a general reluctance to run the risk of hampering the trade of the port by the institution of a system of tariffs, and for that reason opinion here is definitely opposed to the quota system, which other Crown Colonies have been forced to adopt. The Imperial Government agreed to exempt Hongkong from the scheme, but recently the reply of the Secretary of State for the Colonies to a question in the House of Commons hinted that Hongkong might be asked to adopt a modified quota system, under which goods destined for South China would be given through clearance. Such a suggestion would be found to be impracticable because imports, especially piece-goods, may remain here many months before being re-exported to South China, and it is quite impossible to declare at entrance which goods will be retained here.

Inquiries amongst importers about the proportion of piece-goods retained for sale in the Colony resulted in varying estimates from 5 per cent. to 20 per cent. The statistics for the past 3½ years show that exports of cotton piece-goods in 1931 and 1932 were 70 per cent. of the imports, for 1933 they were 82 per cent., and for the first half of this year they were 90 per cent. This percentage is really no guide to the quantity of piece-goods retained, as the statistics do not take into account stocks carried over from one season to another, nor do they show the large quantities which are smuggled from here to South China. It appears therefore that the institution of a quota to check the imports of Japanese cottons would only result in hampering trade, and if the imports for 1931 are taken as a basis it will be found that Japanese trade in piece-goods has fallen off very considerably. This is partly due to the boycott of 1931-32 and partly to diminished purchasing power. There has probably been an appreciable increase in demand for cottons from the Shanghai mills on the part of South China consumers, but this is only partially shown in the Hongkong trade statistics as the bulk of such goods would be shipped direct to Canton from Shanghai. In this connection the following table may be of interest:—

IMPORTS OF COTTON PIECE-GOODS INTO HONGKONG

(000's omitted)

	Approximate Quantities		
	From United Kingdom	From N. China	From Japan
1931	45 million yds. ... 19,071	32 million yds. ... 6,912	76 million yds. ... 18,800
1932	59 " " ... 19,290	42 " " ... 8,594	28 " " ... 4,566
1933	23 " " ... 7,453	40 " " ... 8,024	33 " " ... 5,225
1934 (to 30 June)	18 " " ... 1,482	18 " " ... 2,673	20 " " ... 2,816

Artificial silk goods show a large falling off in imports from Japan, the value in 1931 being \$2,382,000, as compared with \$480,000 for the first half of this year.

CANTON AND NANKING

The political situation in Canton is far from stable. Marshal Chan Chai Tong has full control of the military party, but he leaves civil affairs in the hands of subordinates, most of whom are quarrelling with one another. The efforts of the Nanking Government to arrive at a closer working arrangement with Canton have so far proved fruitless, although two important missions have visited the South during the past few months. Each mission has, of course, paid its respects to the veteran Kuo-mintang leader, Hu Han Min, but, despite urgent requests to go to Nanking, the latter remains in Hongkong criticising and deploring, but never giving a hand to help in the work of reconstructing China.

Recent visitors to Mr Hu include Dr. Wellington Koo, who passed through *en route* from Europe to Nanking, and

Dr. Wang Chung Hui, of the Court of International Justice at The Hague. The latter is spending a few days in the South before going on to Nanking, and he has been in touch with the leading officials in Canton. The return of Dr. Koo, Dr. Wang, Dr. W. W. Yen and one or two other prominent Chinese in the diplomatic service is not without significance, and their wide experience of world politics may have some influence in the conferences which are to be held in the North very shortly. Closer co-operation between Canton and Nanking is badly needed, and it is to be hoped that the representatives from the South will attend the conferences in a more reasonable frame of mind than has been the case during the past year or two.

HONGKONG, August 1.

LETTERS TO THE EDITOR

CONTROLLING RETAILERS' MARGINS

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of September 1st you published an article criticising the Manifesto issued by the Society of Motor Manufacturers. The arguments of your correspondent are, however, not confined to motor-cars, and he suggests that the cutting of prices of all proprietary articles is an unmixed blessing to consumers and manufacturers. The scheme put forward by the Society of Motor Manufacturers may or may not be the best possible scheme for regulating the position in the motor industry, but the denunciation of all systems of regulating retailers' margins is open to criticism. * Your correspondent compares cups of tea with motor cars, Mr Selfridge with Lord Nuffield. The distribution of proprietary articles is far too complicated a matter for such simple comparisons. In the first place, a cup of tea is seldom a proprietary article, although the packet of tea from which it is made may be branded. The distributor sells far more than the tea in the cup—there is milk, sugar, boiling water, and a clean

cup and saucer. A Morris car is the same wherever it is sold. There are, however, many other factors which complicate the issue. Some articles are bought on impulse—cigarettes or chocolates—and a large number of selling points are essential if sales are to be maintained. Price-cutting tends to limit the number of selling points. It is true that there are redundant selling points for some commodities, but the price-cutter hardly affects these. He operates in the best streets and tends to eliminate the more important shops.

In any trade the distributing margins generally allowed for wholesaling and retailing are determined by the nature of the product and the circumstances governing its use. The cost of distribution varies according to the density of population in various areas, for example, it is cheaper to wholesale in London than in South Wales.

Manufacturers are alive to the importance of widening the market of the product they sell. In the main, therefore, their interests are linked up with the interests of the community and such regulations as to price maintenance as they are able to enforce are not unduly restrictive.

A price-cutter is successful if he can secure some of the business done by his competitors while he himself is free from the competition of more severely cut prices. It is a fundamental rule that you cannot succeed as a price-cutter if you charge more than the lowest price. This results in very fierce and uneconomic competition where there is no system of restriction, and in several trades there have been a series of bankruptcies which, quite apart from the money lost in the individual failures, have seriously disorganised the distribution of the commodities affected.

Your correspondent points out that the history of the motor industry is a stock example of lower prices greatly stimulating demand. All would agree with him on this point, and most that our rigid internal price level was largely responsible for the continuously heavy unemployment in this country in the years before the world depression. But surely he carries his argument much too far in suggesting that the maintenance of retailers' margins played a more than minor part in fixing the level of our internal costs and prices.

Everyone would agree that the distributor is entitled to some reward for the undoubted service he performs. That the margin is in some cases so high that consumption is restricted is also probably true. In these cases price-cutting inevitably springs up. Some methods of restriction may be unwise, but the problem is extremely complex, and varies very much from trade to trade. Trades or groups of manufacturers within the different trades have worked out methods of control to suit their own conditions. In some cases these have broken down; in other cases they have worked well for a number of years. In the words of the 1931 Report of the Departmental Committee on the Restraint of Trade, of which Mr Wilfrid Greene was Chairman:—

"We do not regard the price maintenance system as free from disadvantages from the public point of view, but we are not satisfied that if a change in the law were made there is any reason to think that the interests of the public would be better served. . . . Though the withholding from retailers of goods in which they wish to deal may cause grievances and in some cases no doubt hardships, we do not consider that any compelling reason for a change in the law has been established."—Yours truly,

PAUL S. CADBURY.
Bournville, Birmingham.

IRISH FREE STATE LAND BONDS

TO THE EDITOR OF THE ECONOMIST

SIR,—I have to inform you that my attention has been directed to the note which appeared in your issue of the 1st instant with regard to the drawings of Irish Free State Land Bonds. In order to clear up any misconceptions which may be prevalent with regard to the approaching drawing of Land Bonds, I should be glad if you would publish the following information. The total amount of Land Bonds created and issued under the Land Acts, 1923–31, is approximately £25,000,000. These bonds were issued not only for the purchase of tenanted land but also for the purchase of untenanted land. The total amount of registered bonds in the hands of the public is approximately £15,000,000, but this figure is likely to be increased to an appreciable extent before the date of the drawing. The remainder of the issue consists of inscribed bonds which have not as yet, pending proof of title, been allocated to individuals by the Judicial Commissioner, but stand in the name of the Irish Land Commission to the credit of the several estate accounts.

Under the Land Acts, 1923–31, all purchase moneys and all claims against the purchase moneys must be paid in Land Bonds. It would be impossible to comply with this legal

obligation if inscribed bonds were included in the drawings. Every effort is being made, however, to speed up the distribution of the purchase moneys and thus secure that shortly all 4½ per cent. Land Bonds will be registered and capable of participating in the annual drawings.

In the meantime, in order to meet all reasonable objections, the Minister for Finance is providing in the drawing regulations that the amount to be drawn at the first annual drawing will be the "sums set aside" in the Land Bond Fund as at May 1st last for the redemption of bonds. The normal course would have been to draw bonds for redemption to the full amount calculated at the date of the drawing to be available at the date of redemption (January 1, 1935). The effect of the Minister's decision is that only approximately £255,000 will be available for the first drawing instead of an amount between £300,000 and £350,000.

As the sinking fund portion of annuities in respect of inscribed bonds included in the amount available for redemption on May 1st last did not exceed £42,000, it is considered that the new arrangements should meet all reasonable requirements of holders of registered bonds.

The large amount available in the sinking fund for the first drawing is due to two factors. The first factor is that the normal sinking fund derived from the sinking fund portion of the purchase annuities was not used in 1933 or 1934 to redeem bonds drawn for immediate redemption; the second factor is due to the operation of the Land Act, 1931. That Act was passed in order to expedite the vesting of lands, and under its provisions the purchase moneys of estates were fixed at a provisional figure, subject to subsequent adjustments. This procedure necessarily led to an over-issue of bonds in some cases and an under-issue in others. In cases where it is found that there has been an over-issue of bonds there is paid into the Land Bond Fund a sum sufficient to redeem the excess bonds issued, and this sum is added to the sums set aside for the redemption of Land Bonds (see Sections 3, 19 and 20 of the Land Act, 1931). The over-issues have exceeded expectations and account for the major portion of the sums available for redemption of bonds as at May 1st last.

I am to point out that the sinking fund for the redemption of bonds consists of the ½ per cent. paid by purchasers in their annuities, any moneys received from purchasers on sales of land or for redemption of annuities and any moneys paid into the Land Bond Fund under the provisions of the Land Act, 1931, already referred to.

It is not possible to calculate the amounts that will be paid into the sinking fund in the next few years under the Land Act, 1931, but it is expected that for the next few years after the 1935 drawing the amount available for drawings will not exceed £120,000 in any one year.—I am, Sir, your obedient servant,

T. J. KIERNAN,
Secretary.

The High Commissioner for the Irish Free State,
33–37 Regent Street, London, S.W.1.
September 8, 1934.

MONEY AND BANKING

THE FALL IN BANK DEPOSITS

THE August returns of the London clearing banks give further interesting evidences of the present tendency in British joint-stock banking. For some months the movement of credit expansion, which began in the early months of 1932 and received a large impetus from the War Loan Conversion scheme in July of that year, has appeared to have halted and there are even some signs of contraction. It is therefore particularly opportune at the present moment to examine the causes of this apparent change of trend.

We give below our customary monthly table of the figures of nine London clearing banks, omitting the National Bank, the bulk of whose business is in Ireland.

NINE LONDON CLEARING BANKS
(£ millions)

	Aug., 1933	May, 1934	June, 1934	July, 1934	Aug., 1934
Capital and reserves.....	123.3	123.4	123.4	123.4	123.4
Acceptances, etc.	105.5	109.9	109.0	106.7	108.7
Deposits (including undi- vided profits, etc.).....	1,927.3	1,820.1	1,832.2	1,832.9	1,818.5
Total liabilities	2,156.1	2,053.4	2,064.6	2,063.0	2,050.6
Cash	205.1	214.8	196.0	207.1	193.4
Cheques, balances and items in transit	43.4	48.4	54.1	47.2	43.4
Money at call	86.7	127.1	137.0	133.9	135.2
Discounts	357.1	220.7	225.8	222.7	220.0
Investments	544.9	524.1	531.7	533.0	540.2
Loans and advances.....	744.3	739.6	742.1	743.4	740.7
Investments in affiliated banks.....	24.8	24.6	24.6	24.6	24.6
Cover for acceptances, pre- mises, etc.	149.8	154.1	153.3	151.1	153.1
Total assets	2,156.1	2,053.4	2,064.6	2,063.0	2,050.6

There has been a sharp fall in both cash and deposits, cash falling to the lowest figure since November, 1932, and deposits to a level only slightly above that of March and April of this year, which were the lowest since the autumn of 1932. Advances have also declined slightly, although there has been no perceptible tendency either to increase or decrease in the past twelve months. Investments are higher than in recent months, but slightly lower than in August, 1933. The balance sheet total is more than £100 millions less than a year ago.

These facts are evidence of some credit contraction. It may, however, be said at the outset that they are not also evidence of a deflationary monetary policy. The figures of deposit turnover and of bank clearings show no sign of restriction. London clearings, for example, are nearly 12 per cent. and provincial clearings about 3 per cent. higher this year than last. The increased use that is being made of the available supply of credit is apparently outweighing any contraction of the total volume of credit that may be going on. Nevertheless, a contraction of credit, if it were continued, might in time impose a check on the expansion of business enterprise and in the present delicate stage of economic convalescence it would be as well to avoid any suspicion of deflation.

The accompanying charts have been drawn in an attempt to shed a little light on the causes of the present decline in bank deposits. The first chart shows the movements of the clearing banks' deposits (both total and current accounts), cash and discounts since the beginning of 1932. Each of these items has been expressed, from month to month, as a percentage of its average figure for 1932, so that their relative movements can be easily seen. It will be noticed that from April, 1932, until the end of the same year cash and deposits increased in almost exactly the same proportion. From January to July, 1933, the increase was halted, but the parallel movement of the two lines continued, although there was the usual seasonal decline in deposits in the spring. For the past twelve months, however, the lines have been diverging. Deposits have tended to fall, while cash has been well maintained, except in the last three months. Current accounts have held up better than total deposits, though they appear to have been heavily drawn upon for tax payments in the spring. Dis-

counts have varied very widely, rising rapidly in 1932 and since then falling. The decline in discounts was most rapid in the period between October, 1933, and March, 1934, when the decline in deposits was most noticeable, and it has been suggested that this was no mere coincidence, but the clue to the whole movement.

(1) FLUCTUATIONS OF DEPOSITS, CASH AND DISCOUNTS
(Average of 1932 = 100)

The cash ratio is not the only proportion which bankers try to preserve, though it is normally much the most rigid. Advances, for example, should traditionally be neither much more nor much less than 50 per cent. of deposits. Depression, however, has forced the banks to be content in recent months with an advance ratio of 40 per cent., while investments have moved up from below 20 per cent. at the beginning of 1932 to 30 per cent. at present. It is sometimes argued, however, that particular importance attaches to the ratio of discounts to advances. Bankers, according to this argument, are unwilling to let their bill portfolios fall below a certain proportion, since they regard them as a second line of reserve. This school of thought would explain the recent decline in deposits by pointing to the restricted supply of bills, due to the low level of international trade, so far as bankers' bills are concerned, and the funding operations of the Treasury, so far as Treasury bills are concerned.

The second chart has been drawn to illustrate this argument. It shows the movements of the cash ratio and discount ratio since January, 1932.

(2) CASH AND DISCOUNT RATIOS
(Cash and Discounts as a percentage of total deposits.)

Thus, the discount ratio has shown considerable fluctuations. The cash ratio, on the other hand, was comparatively stable until the middle of the year 1933. Since that time—with the exception of the last three months—the

cash ratio has tended to rise. Since March of this year, the discount ratio has been, if anything, the more stable of the two. There is, therefore, some *prima facie*, but not conclusive, evidence for the theory that the available supply of bills is now playing as large a part as the available supply of cash in determining the volume of deposits.

Much can obviously be said on both sides of this subject, for which we have no space here. No attempt has been made in this article to reach any conclusions applicable to monetary policy, but only to present the statistical evidence. The reflection is, however, suggested that the very small dimensions to which the London discount market has been reduced are beginning to exercise a restrictive influence on the volume of the banks' deposits.

FINANCIAL NOTES

The Money Market.—Conditions have continued easy during the week; money has been freely offered at $\frac{1}{2}$ per cent.

	Aug. 23, 1934	Aug. 30, 1934	Sept. 6, 1934	Sept. 13, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$	$\frac{7}{8}$
(b) Others.....	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$
Three months' bank bills.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Discount rates have eased definitely following the result of the Treasury bill tender of a week ago. The rate for three months' Treasuries is barely better than $\frac{1}{8}$, and though the banks are still standing out for $\frac{1}{16}$ per cent., they are getting no bills at that figure. The enhanced plethora of money evidenced by the increase in bankers' deposits shown in the Bank return and referred to in the following Note has no doubt been a factor in the discount market, but the principal reason for the weakening of rates is the near approach of the time when the three months' bill becomes the coveted end-December maturity.

The Bank Return.—The expansion of the note issue over the turn of last month is shown by this week's returns to have been purely temporary, for the active circulation is now back to its previous level:—

	Sept. 13, 1933	Dec. 27, 1933	Aug. 29, 1934	Sept. 5, 1934	Sept. 12, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.4	190.7	191.8	191.8	191.8
Note circulation.....	372.5	392.0	379.3	381.3	379.0
Banking Department:—					
Reserve.....	79.2	59.7	73.0	71.0	73.4
Public deposits.....	12.3	22.2	34.0	29.6	16.5
Bankers' deposits.....	109.6	101.2	83.7	88.9	103.2
Government securities ...	83.7	88.0	83.2	85.0	84.9
Discounts and advances	9.2	16.8	5.6	6.9	6.3

Proportion 47.7% 37.3% 47.7% 45.6% 46.8%
The actual contraction in the note circulation is £2.3 millions and the reserve in the Banking Department is up by almost the same amount to £73.4 millions. Apart from that the only movement of any significance is a sharp fall in public deposits by over £13 millions reflected in a somewhat larger increase in bankers' deposits to the rather unusually high figure of £103.2 millions. These movements are no doubt accounted for by the incidence of the Treasury Bill repayments and renewals.

The Foreign Exchanges.—After its sudden and dramatic fall a fortnight ago, sterling has been comparatively steady this week. Though the tendency has been upward, however, both against the franc and the dollar, it looks as if sterling were settling down not much above its record low level of last week—and the Exchange Account again this

week has been operating in favour of sterling. Nevertheless (see page 485), sterling prices have fallen in the past fortnight, which suggests, either, that the fall in sterling is purely ephemeral or else that the franc will soon feel an even heavier deflationary pressure than it has yet. It must be remembered, of course, that money rates are appreciably higher in Paris than London at the moment. The franc rate moved up from 74 $\frac{1}{2}$ on Friday last week to 74 $\frac{1}{4}$ on Thursday, and the dollar rate rose simultaneously from 4.99 $\frac{1}{2}$ to 5.00 $\frac{1}{2}$, the sterling price of gold sinking meanwhile from its historic record of 141s. 7d. an ounce last Monday to 140s. 6 $\frac{1}{2}$ d. on Thursday. Meanwhile the premium on forward francs has faded away, and the New York-Paris cross-rate has fallen comfortably below gold export point. The "free" mark showed some tendency to appreciate against the pound last Friday. On Wednesday the rate for free marks was 12.39; register marks were at a discount of 38.43 per cent.; and sondermarks were quoted at 12.65.

New York Money and Banking.—There has again been no change in the low money rates in the New York market. The "official" call loan rate is 1 per cent., with "outside" money available at $\frac{1}{2}$ to $\frac{3}{4}$ per cent. Brokers' loans increased by \$31 millions in the week ended September 5th and now total \$824 millions. Prime paper is quoted at $\frac{3}{4}$ to 1 per cent. Treasury bills to the amount of \$75 millions were sold on Tuesday at an average price of \$99.886 per cent. The monthly currency return shows that currency in circulation at the end of August amounted to \$5,396 millions, which is \$80 millions more than at the end of July. Of this increase, \$38.8 millions was contributed by silver certificates issued against silver bought by the Treasury. Twelve National Banks with "frozen" deposits amounting to \$9 millions were reopened in August, reducing the number of National Banks still unlicensed to 50. The dollar has had a weak tendency against the gold currencies. In the week ended September 5th, \$12,684,000 of gold was exported to France and \$500,000 to Holland. It is understood that the Stabilisation Fund was supporting the dollar at the end of last week.

Chile's Debt Service.—The latest report of the Central Bank of Chile confirms the suggestion made in an article in the *Economist* on August 11th that it is doubtful if Chile's balance of payments would yet permit the funding of her foreign debt. The internal position, the report shows, is undoubtedly better; local manufacturing industries have increased their production at the expense of imports, while there has been a sharp fall in unemployment. Wholesale prices continue upward, but this, the Bank states, is no longer the consequence of monetary inflation, but the result of commercial recovery. In fact, the supply of money has been maintained during the past half-year at the relatively stable level of approximately 900,000,000 pesos. The present general recovery, however, is only relative, and the economic situation, while better than eighteen months ago, is still far worse than it was before the crisis. The only source of income which in the course of this year will yield a figure equal to that for the year 1929 will be direct taxation, which the people will have to pay to finance a Budget that is one-third less than that for 1929, and to ensure that there will be no further inflation. The volume of business still stands at a very low level, but the depreciation of the currency has come to an end. The fictitious recovery represented by the inflation of values has been replaced by a real recovery reflected in an increase in the purchasing power of domestic wages, an increase in the physical volume of business, and the appearance of profits in trade and industry. The Central Bank points out, however, that, even though this recovery should continue steadily, the question when the taxable capacity of the nation will develop sufficiently to enable a part of the newly created income to be used for the service of the foreign debt is and will be problematical. In any case the service of the external debt could only be resumed, even partially, out of the proceeds in foreign currency of exports of nitrate and copper, if disturbance of the foreign exchange market is to be avoided.

THE STOCK EXCHANGE

OUTLOOK FOR TEA SHARES

THE tea share market is a one-way road, whose wayfarers have usually but a single objective at any given moment. For the last few weeks the market has been registering frank disappointment over the discovery that the International Restriction Scheme has not, within a little over a year, solved every problem in the industry once and for all. A rise in the tea share index of *The Investors' Chronicle* (December, 1923 = 100) from 43.5 at the end of 1932 to 105.6 at the end of 1933 discounted the effects of a stable and enhanced price level for two or three years ahead. The subsequent ebb in share values has been partly a reaction from the market's previous desire to eat its cake too quickly, and partly a reflex of the disappointing course of the commodity market in the last three or four months. The International Tea Committee will decide, in November, on their policy for 1935. As the immediate course of the share market is largely a speculation on their decision, it may be well to examine the economic background with which they will be concerned.

Administratively the scheme has worked well, with much less internal friction and more mutual "give and take" than might have been imagined. As a price-raising agency, both in prospect and in being, it attained such a measure of success that at the end of last year teas sold in the London market were fetching an average price of 1s. 1 $\frac{1}{2}$ d. per pound, against under 8d. per pound a year earlier. This rising tendency was maintained, broadly, until the beginning of last May, but it was even then perceived that the scheme involved certain complicating factors outside its avowed aim of restoring a profitable average level. In particular, limitation by quantity and not by quality was tending to disturb a traditional balance between the higher and lower grades, and to bring all teas closer to a lowest common denominator. Since the beginning of May low-priced tea has fallen from 1s. 1 $\frac{1}{2}$ d. to 10 $\frac{1}{2}$ d. On the current statistical basis even the latter price may be high, but it is broadly true to say that low-priced tea is *en route* for its true economic relative level. During its downward course, however, it has adversely affected the value of the medium to good qualities ranking above it, and has involved insistence upon a particularly high standard of quality in the "fine" class. Tea is not, like rubber, a standard commodity. It has a wide geographical and qualitative distribution. Between different types of tea, even in one area, such as Northern India, there may be differences of as much as

6d. a pound in costs, according to the type of tea produced. At present the producer of low-quality tea can make a fair profit at around 10 $\frac{1}{2}$ d. per pound, while the grower of the good to fine qualities may be unable to cover his costs at 1s. 1d. or even more.

The price "concertina" has far-reaching effects, for the distributive side of the industry has for the last few years been basing its calculations on a much lower level of costs for low-quality teas than now prevails. Every encouragement deserves to be given to the efforts of the industry to extend tea consumption by propaganda, and still more by a suggested guarantee scheme for exports to a potentially important market like Russia. The International Committee, in November, however, will have much more immediate matters of concern. In addition to the discovery of means, if any, of inducing a wider "spread" of prices, it will be faced with the implications of the fact that whereas, up to a few months ago, the industry was steadily reducing its surplus stocks—the reduction, as compared with twelve months earlier, was 24 million pounds at the end of April and as much as 34 $\frac{1}{2}$ million pounds at the end of June last—this process has recently been reversed. By the end of July the "gain" over 1933 had fallen to 21 million pounds, and the August showing is not expected to be favourable. Consumption has fallen off somewhat—London deliveries for the first eight months of this year were 287 $\frac{1}{2}$ million pounds, against 303 million pounds in the same period of 1933—and increased supplies have reached London from China and through shrinkage in offtake by outside markets (including markets on the gold standard) whose domestic absorptive powers have been less than was anticipated. Finally, India and, to some extent, Ceylon are tending to send their tea to London more quickly this season than last.

The omens, indeed, suggest that the International Committee, in November, may be disposed to recommend a reduction in the exportable percentage under the Restriction Scheme. Such a decision would probably produce an instant response both in the commodity and the share markets, which have always been ready to discount major changes speedily. It is difficult to see, however, how practical means can be devised of helping the high-grade as distinct from the low-grade producer, for a mere reduction in the total exportable quantities may tend to bring the two ends of the "concertina" still closer. For the present,

* Northern India tea sales start in second half of each calendar year, others at beginning of calendar year. † After charging provision for replacement of buildings, &c.
‡ See our "Capital Issue" columns for details of new share offer.

therefore, investors may find it advisable to differentiate between the shares of common tea producers, who are making profits at current prices, and some of the higher grade companies, who may be threatened with difficulty in covering their costs. The average London tea prices for the calendar year 1934 to date are anything from 2d. to 4½d. above the corresponding average for 1933. The market, however, is more concerned with the fact that the current level for all teas from Northern India and Ceylon is about 4d. below that prevailing at this time last year.

That the basic position of the industry has greatly improved since 1932 is unquestioned. The extent of the 1933 revival in profit-earning power is strikingly revealed in the following table, which shows total earnings and dividends for the last three years of 178 companies, subdivided according to producing areas. The figures are reproduced from the latest edition of an invaluable handbook on "Tea and Coffee Producing Companies," published by a leading firm of stockbrokers:—

District (and No. of Companies)	Earnings (after depreciation and fixed charges) (£'000)			Per cent. earned on Ordinary			Per cent. paid on Ordinary

Note.—Throughout the above table, 1931 includes results of 1930-31, 1932 includes 1931-32, etc., where accounting dates overlap calendar years.

The table confirms the impression that the largest relative gains have been secured by companies in districts producing mainly low-priced teas, like Cachar and Sylhet, while earnings and dividends of 1933 were still below those of 1931 in a "fine" district like Darjeeling and among the Ceylon companies which produce tea alone. This impression is borne out by the table at the foot of the preceding page, in which the position of a number of representative individual companies is set out. Broadly, improvement in earnings so far has been in direct proportion to the importance of low-priced tea in the output of particular companies. The present trend of prices appears to be accentuating this tendency, for the current season's selling averages shown in the table (reproduced from the *Financial News*), so far as they go, suggest that the companies making chiefly the lower-priced teas have obtained, in some cases, higher average prices this season than last, while the producers of high-priced teas, without exception, have secured a lower average price. In a concluding table (which appears at the head of the next column) we set out various figures relating to crops, costs, selling prices, etc., on the basis of the last accounts. Investors should be cautious in applying the ordinary share percentage equivalents given in the last column to current sales averages, particularly in the case of the Northern Indian companies, for the latter's "averages" apply only to the first few weeks of the current season, while the companies make up their accounts for the calendar year.

While reference to the table on the preceding page shows that the highest prices reached by tea shares this year were well below those of the last "prosperity period" before the great depression, the substantial reaction which has since occurred still leaves income yields at no more than a moderate level. The inference is that a decision by the International Committee to reduce the exportable percentage figure would probably stimulate market interest, but that a prolonged recovery in share values would presuppose a new upward movement in Mincing Lane quotations and a widening of the range of prices between the lower and the finer grades of tea. It is much too early to rule out these possibilities, for there has so far been no

	1933 Accounts (Tea)		Total Tea Crop (000 lbs.)		Id. per lb. on Latest Tea Crops, equivalent to following percentages on Ordinary

* 1932-33.

fundamental disturbance of equilibrium between world supply and demand, despite the recent downward tendency of Mincing Lane prices. That the Committee, however, will be disposed to tighten rather than to loosen the restriction screw seems likely in view of their knowledge of recent estimates, which suggest that in March, 1938, when the present scheme comes to an end, the total potential supplies from producing countries will be about 250 million pounds above the present "standard production" figure, of which as much as 150 million pounds will be located in India. Whether world demand will have sufficiently expanded in the meantime to absorb this potential surplus, time must be left to show. As the figures, however, will indubitably be in the background of the minds of most members of the Committee next November, the Committee's decision is unlikely to err on the side of over-generous production.

INVESTMENT NOTES

America's Refinancing.—The United States Government is now facing the delicate task of refunding an appreciable proportion of its debt whilst running a huge current deficit and being credited, rightly or wrongly, with at least a flirtation with the idea of depreciating by 16 per cent. the currency in which its debt is expressed. This week terms have been announced for the conversion of \$1,200 millions of Fourth Liberty 4½ per cent. Bonds, which have been called for redemption on October 15th, and of \$525 millions United States Treasury certificates, due September 15th. Within the next three months there are even larger maturities to be dealt with in the shape of \$1,933,200,000 long-term 3½ to 4½ per cent. War Bonds. The holders of the Treasury Certificates immediately due are being offered conversion into 1½ per cent. two-year Treasury Notes, whilst the Liberty Bond holders are offered the alternatives of exchange either into 3½ per cent. 10 to 12-year bonds or 2½ per cent. 4-year notes. This option has given rise to some controversy in the New York financial district, some commentators having criticised the Treasury for weakness in offering a short-term alternative when what is really needed is conversion into a long-term issue. Other critics have condemned the terms of the longer bonds as extravagant and the sharp fall in Government bonds this week lends colour to the criticism. It seems clear, however, that the banks who hold the bulk of the maturing Liberty Bonds are showing no great enthusiasm for the longer issue, and that the bulk of the conversions will be into the 4-year notes. There is no cash offering of the new bonds, but as the Treasury has a large cash balance—some \$2,000 millions—at its disposal, while, if need be, the services of the Stabilisation Fund, which has so far operated on only a modest scale, can be called in aid, there is no immediate risk involved in this course.

Argentine Conversion.—Last April it was announced that outstanding amounts of the Buenos Aires 5 per cent. Water Supply Loan of 1892 and of the 5 per cent. debentures of the Port of Buenos Aires were to be called for redemption on October 1st. Further negotiations have subse-

quently been in progress, and have culminated, this week, in the disclosure of arrangements for calling in three other loans, viz., the 5 per cent. Internal Gold Loans of 1907, 1909 and 1910. To comply with the wishes of the British Treasury, the tranches of the Internal Loans of 1907 and 1909, originally issued in centres other than London, are to be repaid in cash. Holders of the British issues of all five loans, however, are offered conversion into new 4½ per cent. Sterling Bonds. They have the choice of taking £100 of the new bonds plus £6 10s. of capital repayment, or £107 of bonds per £100 of existing stock, with an interest adjustment in each case, as shown in the following table:—

	Amount Outstanding	Date when called for Redemption	Interest Adjustment per £100		Market Prices		
			(A)* offer	(B)† offer	Low-est, 1929-33	Low-est, 1934	Price Sept. 11, 1934
British Issues	£		£ s. d.	£ s. d.			
5%, 1907 ...	2,409,760	Dec. 15, 1934	0 4 2	0 5 9	55	81½	101
5%, 1909 ...	2,795,920	Mar. 1, 1935	1 15 0	1 16 7	56	83	100½
5%, 1910 ...	716,620	Jan. 1, 1935	..	0 1 7	55	84	100½
Port of Buenos Aires 5% Deb. B. A. Water Supply, 5%, 1892 ...	242,800	Oct. 1, 1934	1 2 6	1 4 1	45	100	99
	606,780	Oct. 11, 1934	2 8 2	2 9 9	68	100	101½

* £100 of 4½ per cent. Sterling Bonds plus £6 10s. capital repayment, per £100 of "called" bonds. † £107 of 4½ per cent. Sterling Bonds per £100 of called bonds.

Altogether a total of £6¼ millions of outstanding "London" stock is being converted, and approximately £3,400,000 of foreign tranches is being repaid. Although the maximum total of the new 4½ per cent. conversion stock which may be required is £7,250,000, the Argentine Government has arranged London underwriting only for £4,500,000, at 93½, while the repayment of the foreign portions of the two internal loans will be made out of funds in its own possession. Though the news is not unexpected, the steady rise in Argentine bond prices, which has made the operation possible, is, in the main, a tribute to Argentina's proud record as the only South American Government which has made no default on interest or sinking funds throughout the depression. Argentina's interest saving will be of less significance than her relief from sinking fund charges, for all the "called" securities carried a cumulative annual sinking fund of 1 per cent., while the new 4½ per cent. conversion stock has a cumulative sinking fund of only ½ per cent., to be applied half-yearly from 1935. The date of final redemption of the new stock is 1986. Bonds must be lodged for conversion by noon on September 29. London's prompt recognition of Argentina's excellent debt record is wise and salutary, since any measure which is calculated to encourage the "will to pay" among debtors as a whole is obviously to this country's advantage. It may be hoped that the cessation of the need for special financial provision, on the Argentine side, for this large-scale operation, as well as the reduction in the total overseas remittances which will follow its consummation, will permit of the granting of more generous exchange facilities to other authorities, operating in the Argentine, who are desirous of remitting funds to this country. In this connection the railways appear to have a strong moral claim to liberal treatment, for the depreciation of the peso since the beginning of this year, and the policy of exchange control generally, has greatly prejudiced their ability to pay sterling dividends.

Irish Free State Land Bonds.—Our note in the *Economist* of September 1st (page 407) on the question of the drawings of Irish Free State 4½ per cent. guaranteed Land Bonds has evoked an explanatory letter from the Secretary to the High Commissioner for the Free State, which we print on page 492. Our correspondent conveys the information that instead of £300,000 to £350,000, as originally announced, the Minister of Finance has now decided that only £255,000 bonds will be drawn—in other words, somewhere about 1½ per cent. of the total amount of the bonds (£15 millions or more) which will rank for the drawing instead of the 2 to 2½ per cent. which the original decision

A Sign of

Strength Service

Dependability

Chief Administration:

7 CHANCERY LANE, LONDON

involved. That much is satisfactory, as is also the fact that the Minister of Finance is anxious to meet the "reasonable requirements" of the holders of the bonds. What is still not clear, however, is how cash received in respect of bonds found to have been over-issued can fairly be applied to the redemption of bonds other than the actual bonds "over-issued." The market continues to protest against the discriminatory procedure of excluding a large portion of the bonds from the drawing and insists that the drawings should be suspended until all the "inscribed" bonds have been allotted. Meanwhile the market price of the Loan has recovered from 107 to 109½. It is still, however, 4½ points (or about 4 allowing for difference of interest date) below the similar Northern Ireland 4½ per cent. loan. This is not, as was suggested, entirely immune from drawings, but is subject to annual drawings of roughly ½ per cent. of the amount outstanding in August. No drawings have, however, yet taken place.

Austrian League Loan Conversion.—The news from Geneva that the representatives of Great Britain, France, Czechoslovakia, Italy and the other guaranteeing States have assured the Austrian Government of their warm support of its efforts to refund its 6 per cent. League Loan on a lower interest basis promises an interesting extension of the "cure by conversion," which has proved so satisfactory within our shores. The Austrian Government Guaranteed Loan, 1923-43, was the first and largest of the series of League of Nations issues in pursuance of the treatment of "cure by loan" which was so much in vogue ten years ago. Despite all that has happened since, who shall even now say that the prescription, in Austria's case, was unsuccessful? The loan was originally for a total of £32,831,000 (at par value of the £). It carried interest at 6 per cent., 6½ per cent. and 7 per cent., and was issued in ten different countries. The British tranche was £14 millions (now reduced to £8 millions) in 6 per cent. bonds, offered in June, 1923, at 80, and yielding 7½ per cent. apart from redemption. The bonds are now redeemable at any time on six months' notice, and no doubt the Austrian Government will hope to be able to complete the arrangements so as to give notice by December 1st and make the conversion effective at the date of the June interest payment. As regards the basis of the conversion, it is a difficult matter to assess the value of a bond whose principal security is the joint guarantee of several different countries, whose individual "credit rating" varies from 3 per cent. to 6 per cent. or over. On an arithmetical average of the credit of the guarantees the rate for the conversion bonds would hardly work out at under 5 per cent., but throwing in Austria's own credit and the prestige of the League of Nations, it may be possible to carry through the operation on a somewhat more favourable basis.

Industrial Profits in August.—We received 30 company reports last month, showing an aggregate rise in profits of 35.47 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits*	Reports Published in	No. of Companies	Rise or Fall in Profits*
1933—		%	1934—		%
January.....	214	- 1.46	January.....	122	+ 3.02
February.....	160	- 3.20	February.....	209	+ 5.02
March.....	45	-11.62	March.....	216	+ 6.34
April.....	102	- 4.06	April.....	188	+12.96
May.....	121	+17.06	May.....	251	+23.43
June.....	185	+79.64	June.....	201	+20.44
July.....	138	+13.04	July.....	197	+27.10
August.....			August.....	30	+35.47

* After payment of debenture interest.

The reports of the month disclose net profits of £1,610,918, as compared with £1,189,186 in the preceding year. The steady rise in earnings continues unchecked, particularly in brewing (where three companies show an increase in profits of 63.2 per cent.), and in iron, coal and steel, where three companies record a rise of as much as 166.3 per cent. Ten companies in the miscellaneous group, however, show a slight reduction in profits of 2.7 per cent. The trend of investment trust profits is still downward. We set out in the following table the profits of five important companies, whose figures have materially contributed to the total results:—

	Net Profits for Financial Years ending in		Change
	1933 £	1934 £	
Friary Holroyd and Healy's			
Breweries.....	74,284	123,134	+ 65.8
John Lysaght.....	76,878	279,892	+264.1
Debenhams, Ltd.....	298,063	439,740	+ 47.5
Eastwoods, Ltd.....	46,359	75,895	+ 63.7
Initial Services.....	210,937	219,792	+ 4.2
Total, five companies.....	706,521	1,138,453	+ 61.1

The results, in four of the five cases, are well above the average for the whole 30 companies in this month's sample.

* * *

Scottish Steel Groups.—In view of the recent steps to secure the concentration of the Scottish steel industry, it has been suggested that the details of Group "F" in our article on Iron and Steel Groups (see the *Economist* of August 4th, page 228) might be expanded to include the connections of the Lithgow group. Lithgows, Ltd., is a very large shareholder in James Dunlop and Company, Ltd., and may be said to link the Colville group to the Lithgow group of shipyards. Lithgows, Ltd., is associated with Wm. Hamilton and Company and Robert Duncan and Company, both of Port Glasgow, and David Rowan and Company, of Glasgow, and James Dunlop and Company. The latter company is associated with David Colville and Sons, Ltd., in the control of Colvilles, Ltd. Lithgows, Ltd., hold a controlling interest in Steel Company of Scotland, Ltd., which has works at Hallside (Newton) and Blochairn (Glasgow), and owns Govan Shafting and Engineering Company, Ltd. Sir James Lithgow is chairman of Steel Company of Scotland, and Mr Peter Baxter, of James Dunlop and Colvilles, Ltd., is also on the board. Colvilles, Ltd., took over the Mossend works of Wm. Beardmore last May. The importance of the relation between Colvilles and the Steel Company of Scotland was stressed in a Company Note on Scottish Steel Rationalisation in the *Economist* of June 30th, page 1443.

* * *

A Dictionary of Finance.—"Close over," "Blister copper," "Recission bond," "Statement in lieu," "Tap rate," "Call of more," "Devisen," "Great hundred," "Table A." How many people who earn their living in the City could honestly say that they knew the exact significance of all these terms? They are in everyday use, but many, at least, are terms on which, before the publication of a "Concise Dictionary of Finance" (Pitman,

406 pages, 12s. 6d. net), a man might spend in surreptitious research a good deal more time than he cared to. The author of this much-needed addition to the financial bookshelf is Mr Collin Brooks, whose reputation as a writer in finance and other fields is sufficient proof that he brings to his arduous task ample resources of knowledge, accuracy and literary craftsmanship. Mr Brooks is, fortunately, not one of those lexicographers who disdains to notice the slang or colloquial term. His dictionary contains, side by side with such forbiddingly technical terms as "Bill of sale," "Consolidation of mortgages," "Letter of indemnity," "Preliminary expenses," and the like, many of those vigorous, racy and even impudent phrases with which every live market enriches its vocabulary. Thus, next to "Fourths of the month" we have "Fourteen hundred," the cry raised when a stranger intrudes into the Stock Exchange. Next to "Heritable bonds" we have "Hidden hand" and next to "Official seal for use abroad" we have "Old Lady of Threadneedle Street," who, Mr Brooks thinks, owes her origin to a speech in which Sheridan, in the House of Commons in 1797, referred to the Bank of England as "an elderly lady in the City of great credit and long standing who had . . . unfortunately fallen into bad company." A dictionary inevitably challenges the reviewer to try to discover errors and omissions. As Mr Brooks specifically asks to be informed of them, we venture to point out one or two. The amount of the "Exchange Equalisation Account" (not "Fund") is £375 millions and not £350 millions as stated. The Dictionary has no entries for "Confirmed credit," "Exchange clearing" and "Equities." If currency units like zloty and leva deserve inclusion as separate items, other units, such as leu, pengo and schilling should equally be given.

* * *

Actuaries' Investment Index.—Ordinary shares have been firm this week, with signs of a possible broadening of the market, on hopes of an autumnal "re-recovery" in British trade. The Actuaries' Index of 144 industrials continues its slow but persistent upward trend, the index on Tuesday last standing at 71.6 (December 31, 1928 = 100), against 71.4 a week earlier and 70.5 a month earlier. The corresponding yield figures are 3.67, 3.67 and 3.72 per cent. The movement is well distributed among component groups, as the following table shows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Aug. 14, 1934)	Week Ago (Sept. 4, 1934)	This Week (Sept. 11, 1934)	Month Ago (Aug. 14, 1934)	Week Ago (Sept. 4, 1934)	This Week (Sept. 11, 1934)
Building Materials (4)	81.9	84.6	83.8	4.25	4.12	4.25
Coal (6).....	89.1	89.6	90.2	3.99	3.98	4.11
Gas (7).....	135.5	135.7	136.6	4.45	4.45	4.42
Iron and Steel (6).....	51.0	51.2	53.8	1.21	1.22	1.22
Electric Supplies (8).....	93.7	96.8	97.8	4.52	4.41	4.38
Stores & Catering (15).....	79.8	81.2	81.6	4.15	4.07	4.06
Miscellaneous (50).....	61.7	62.7	62.9	3.94	3.89	3.88

Apart from a slight fall in the value of building material shares, due mainly to profit-taking, group indices have been unchanged, or have shown a slight rise, over the past week. Gas shares—the highest group in the Index—have further appreciated, after remaining largely unchanged for some weeks past.

COMPANY NOTES

Fertiliser and Feeding Stuffs Companies.—Since fertilisers and feeding stuffs are among the most important of the farmer's material costs, it is almost inevitable that greater prosperity among farmers, whether natural or induced by special legislation, should result in better custom for the fertiliser and feeding stuff manufacturers. The chairmen of several companies have recently testified to the improved purchasing power of the farmer and have held out hope of higher profits as a result. The manufacturer of feeding stuffs, however, must expect considerable, and largely unpredictable, fluctuations in his profit from year to year. In the case of oilseed and molasses products, he is

OFFER OF CONVERSION

to Holders of Bonds of the following Argentine Government Loans:—

**Port of Buenos Aires 5% Debentures,
Buenos Aires Water Supply and Drainage Works 5% Loan, 1892,
5% Internal Loan of 1910,
5% Internal Loan of 1907 (British Issue),
5% Internal Loan of 1909 (British Issue).**

The proposal to issue in London Bonds of the Conversion Loan has been referred to His Majesty's Treasury who, so far as they are concerned, raise no objection.

Application will be made to the Committee of the Stock Exchange, London, for permission to deal in and, in due course, for an official quotation for the Bonds.

Argentine Government Conversion Loan

ISSUE OF

4½ per cent. Sterling Bonds

(being a second issue of Bonds of the above Loan)

Sanctioned by Decree dated 11th September, 1934, authorising an issue of up to £7,600,000 nominal of Bonds pursuant to Law No. 11821 of the 10th October, 1933, authorising the conversion of Argentine Government Loans.

*Interest payable 1st January and 1st July
Six months' interest payable 1st July 1935*

The Bonds are the direct obligation of the Argentine Government and will be repaid in sterling in London by the 1st July, 1936, by means of an accumulative sinking fund of ½ per cent. per annum to be applied half-yearly in the purchase of Bonds at a price not exceeding par (exclusive of accrued interest but inclusive of expenses) or, to the extent to which Bonds are not so obtainable, in the redemption at par of Bonds to be selected by drawings. The first operation of the sinking fund will be in respect of the half-year ending 1st July, 1935.

The Argentine Government reserves the right on three months' previous notice to redeem at par on any interest payment date the whole or any part (to be determined by drawings) of the Bonds outstanding. The Argentine Government also reserves the right to accelerate redemption of the Bonds at any time by increase of the sinking fund.

Principal of and interest on the Bonds are exempt from all Argentine taxes or impositions present or future.

In the event of the Argentine Government creating any obligations secured by a charge on any of its revenues or assets, the Bonds of the Conversion Loan shall (in common with any existing obligations of the Argentine Government entitled to the benefit of a similar provision) be secured equally and rateably with such obligations.

BARING BROTHERS & CO., LIMITED, and MORGAN GRENFELL & CO., LIMITED, are authorised by the Government of the Argentine Republic to offer to holders of Bonds of the following Argentine Government Loans:—

Port of Buenos Aires 5% Debentures (notice of redemption of which on the 1st October, 1934, has been published)

Buenos Aires Water Supply & Drainage Works 5% Loan 1892 (notice of redemption of which on the 11th October, 1934, has been published)

5% Internal Loan of 1910 (notice of redemption of which on the 1st January, 1935, has been published)

and also to holders of Bonds of the British Issues of the following Argentine Government Loans:—

5% Internal Loan of 1907 (notice of redemption of which on the 15th December, 1934, has been published)

5% Internal Loan of 1909 (notice of redemption of which on the 1st March, 1935, has been published)

conversion into

4½ per cent. Sterling Bonds of the Conversion Loan on either of the following bases, namely:—

1. £100 nominal of such 4½% Bonds together with a capital payment of £6 10s. 0d. and an adjusting interest payment in exchange for £100 nominal of Bonds surrendered

or

2. £107 nominal of such 4½% Bonds together with an adjusting interest payment in exchange for £100 nominal of Bonds surrendered.

HOLDERS OF BONDS WHO CONVERT WILL RECEIVE IN RESPECT OF EVERY £100 NOMINAL BONDS SURRENDERED:—

Port of Buenos Aires 5% Debentures (the coupon due 1st October, 1934, having been detached for encashment in the usual way) either

£100 nominal 4½% Bonds, a capital payment of £6 10s. 0d. and an adjusting interest payment of £1 2s. 6d.

or

£107 nominal 4½% Bonds and an adjusting interest payment of £1 4s. 1d.
Buenos Aires Water Supply & Drainage Works 5% Loan 1892 (with all unmatured coupons attached) either

£100 nominal 4½% Bonds, a capital payment of £6 10s. 0d. and an adjusting interest payment of £2 8s. 2d.

or

£107 nominal 4½% Bonds and an adjusting interest payment of £2 9s. 9d.

5% Internal Loan of 1907 (the coupon due 15th December, 1934, having been detached for encashment in the usual way) either
£100 nominal 4½% Bonds, a capital payment of £6 10s. 0d. and an adjusting interest payment of £0 4s. 2d.

or

£107 nominal 4½% Bonds and an adjusting interest payment of £0 5s. 9d.

5% Internal Loan of 1909 (with all unmatured coupons attached) either
£100 nominal 4½% Bonds, a capital payment of £6 10s. 0d. and an adjusting interest payment of £1 15s. 0d.

or

£107 nominal 4½% Bonds and an adjusting interest payment of £1 16s. 7d.
5% Internal Loan of 1910 (the coupon due 1st January, 1935, having been detached for encashment in the usual way) either

£100 nominal 4½% Bonds and a capital payment of £6 10s. 0d., no interest adjustment being necessary

or

£107 nominal 4½% Bonds and an adjusting interest payment of £0 1s. 7d.

On the above basis a holder who converts will receive interest at the rate of 4½ per annum on the new Bonds from the 1st October, 1934, together with the difference between that rate and 5 per annum to the respective dates of redemption on the Bonds surrendered for conversion. In the case of the 1892 and the 1909 Loans, where the current coupon has to be surrendered, interest at the full rate of 5 per annum to the 1st October, 1934, has been allowed for in the adjusting interest payment.

Holders of Bonds of the Argentine Government 5% Internal Loans of 1907 and 1909 should note that the offer of conversion applied to Bonds of the British Issues only of such Loans. The British Issues comprised, in the case of the 1907 Loan, Bonds quoted on the Stock Exchange, London, numbered:—

120501 to 167500 of £20
179201 to 183500 of £100
189701 to 192250 of £200
192251 to 192750 of £1000

and in the case of the 1909 Loan, Bonds quoted on the Stock Exchange, London, numbered:—

1 to 560 of £1000
11586 to 31585 of £100
42986 to 62985 of £20

Holders accepting the offer of conversion must lodge their Bonds, together with the appropriate forms of acceptance, at the Counting House of Baring Brothers & Co., Limited, 8, Bishopsgate, London, E.C.2 or of Morgan Grenfell & Co., Limited, 23, Great Winchester Street, London, E.C.2, not later than 12 noon on Saturday 29th September, 1934.

On acceptance, Holders will receive fully paid Letters of Allotment (to which will be attached a voucher in respect of the adjusting interest payment) exchangeable in due course for Provisional Scrip Certificates to Bearer with a coupon attached for six months' interest at the rate of 4½ per cent. per annum, payable 1st July, 1935.

Provisional Scrip Certificates will be exchangeable in due course for Definitive Bonds to Bearer, which will be issued in denominations of £1,000, £200, £100 and £20.

Fractional Certificates will be issued for amounts of less than £20 and these Fractional Certificates may afterwards be consolidated and exchanged for Scrip Certificates in amounts of £20 and multiples thereof, a further Fractional Certificate being issued for any balance. Arrangements will be made for dealing in the Fractional Certificates.

Brokerage at the rate of 5s. for every £100 nominal of Bonds converted will be paid to Bankers and Stockbrokers in respect of conversions comprised in forms of acceptance bearing their stamp.

Forms of acceptance may be obtained from Baring Brothers and Company, Limited, 8 Bishopsgate, London, E.C.2, or Morgan Grenfell and Company, Limited, 23 Great Winchester Street, London, E.C.2.
London, 14th September, 1934.

working on a raw material which is itself subject to violent movements in price. The farmer himself may also use a larger proportion of natural feeding stuffs if the price of grains falls. It is not surprising, therefore, that the leading oil cake company (British Oil and Cake Mills) has earned

Note.—Though Imperial Chemical Industries is much the largest British fertiliser manufacturer, it has not been included above since its many other interests prevent its profits being representative of the fertiliser business itself.

* Broken period equated to 12-month basis. N.A.—Not available.

its lowest and highest profits of the last decade in two consecutive years (£249,191 in 1930 and £854,082 in 1931). Though the fertiliser companies have a rather steadier record, they, too, are exposed to the risk of considerable price fluctuations so long as the Chilean and the synthetic nitrate producers continue to wage price war on each other. In the home market the risks of this "war" are largely reduced by the protection of home-produced nitrate which has been part of our post-war chemical high policy. Nevertheless, the depression has seen a steep fall in nitrate prices even within this country, with consequent ill effects on fertiliser profits. These features are exemplified by the figures for a number of representative companies, given in the annexed table. Both the feeding stuff and fertiliser trades, however, enjoy one stabilising influence. Each is headed by a large group (Unilever and Imperial Chemical Industries respectively). It is possible, therefore, that the smaller members of the trades, which are mainly concerned with the home market, may benefit from a well-organised home business fostered by governmental support of the farmer.

Union Cold Storage.—Stockholders in the Union Cold Storage Company, in whom the directors' scheme of last November (subsequently declared invalid by the Court) for a reduction of interest on the preference issues may have aroused natural fears for the financial results of the past year, happily find no warrant for their misgivings in the accounts for 1933 now issued. The high level of profits of the preceding few years has not been absolutely maintained, but as the reduction in the net is only from £826,857 in 1932 (and similar figures in 1930 and 1931) to £820,060 after providing the usual £125,000 for depreciation, the shrinkage is almost negligible, and the usual 10 per cent. dividend or £100,000 allocated to the privately held ordinary stock is once again forthcoming. It is evident, therefore, that the

directors' business acumen has not deserted them, and that they have been able to cope as successfully as ever with the notorious difficulties of the meat trade.

	Years to December 31,

Carried forward	197,007	203,538	203,597

In addition to the usual allocation of £125,000 from profits to depreciation reserve there is again an allocation representing surplus on sale of assets and an amount transferred from provision for contingencies. This special allocation is £388,751, making a total allocation of £513,751, against which £364,083 is applied in actual writing-down of assets. Thus the total of the reserve has risen from £1,540,934 to £1,690,602. In the two previous years the writings down, £574,688 in 1932 and £833,063 in 1931, exceeded the allocations to the fund, which at the end of 1930 stood at £2,000,000. It would seem from the smaller amount applied in specific writings down this year that the directors are now more satisfied with the book valuation of the various classes of assets. The auditors' certificate, however, again qualifies the valuation of the shareholdings in subsidiary companies at £6,627,929.

Second Alliance Trust.—Although recent investment trust returns suggest that the tide of lower earnings may be about to turn, the results of this Dundee company have been affected by the progressively unfavourable tendency of the rate of exchange for dollar remittances. Receipts have fallen by a further £14,825, and the 22 per cent. dividend, which the company has heretofore paid throughout the depression, is no longer covered. The dividend is reduced to 18 per cent., and £25,000 is placed to contingent reserve, largely by a draft on the carry-forward.

* Including transfer fees, £38, £47 and £44, in 1932, 1933 and 1934, respectively.

Despite the reduction in dividend, stockholders will agree that the Second Alliance has weathered the storm in gratifying fashion, and has a record of which its directors may well be proud. Although the board do not commit themselves, this year, to any prediction, the absence of last year's warning of a further reduction in revenue may be significant—subject to the future behaviour of the dollar. The company's bond and stock investments, which now represent 95½ per cent. of its invested funds, have shown further appreciation. Over the last two years, depreciation in market value has been reduced from 20½ per cent. to 8½ per cent. of book cost. But for the latest fall in dollar investment values, the company's portfolio might well have reached "par" this year.

Wall Paper Manufacturers.—The Wall Paper Manufacturers, Ltd., have called a shareholders' meeting for Tuesday, September 18th, to authorise an increase of capital to £5,800,000 by the creation of 400,000 new preference and 400,000 new ordinary shares. The directors have helpfully used the occasion to present an *apologia* for the company's policy since the amalgamation of 1915. Between 1915 and 1919 the company's success in securing "a very large proportion" of the wallpaper trade of Great Britain was due partly to a war-time absence of imports and partly to "a friendly understanding" with manufacturers outside its orbit. In 1920 the company was overtaken by the exceptional trade slump, which may have powerfully influenced the board's decision, from 1921 onwards, to follow a policy of consolidation. The company reorganised its business, re-equipped its factories, inaugurated pension schemes, developed overseas markets, and steadily strengthened its financial position. On the production side, however, this policy, as the directors admit, tended to make the business static. The company, in other words, concentrated on the maintenance of prices and quality, and, either *post hoc* (the directors seem to suggest the latter), did not participate in the increased consumption resulting from general building and housing activity. The history of trade amalgamations which have followed a price maintenance policy suggests numerous precedents for the decision of the Wall Paper Manufacturers, at the end of last year, to absorb various competitors whose number, quality and range had increased. After negotiations which the circular describes as "short but intensive," it was agreed to acquire the following companies, all of which had valuable sale connections, a large "rollage" turnover and a satisfactory earning capacity: Cunliffe and Ward, of Blackburn; Derby Paper Staining Company, Limited, of Derby; T. Fairbrother of Rochdale; and Lees Paper Staining Company, Limited, of Oldham. The company has also acquired two small factories at Leicester, manufacturing specialities, whose production will be transferred elsewhere. The total purchase price has not been disclosed. The greater part (though not the whole) of the additional capital for which shareholders' sanction is sought will be issued in part consideration, but unspecified amounts are also being paid in cash, deferred stock and debenture stock. The latest developments have been discounted in the share market, where the £1 units of the company's deferred stock declined from 65s. to 62s. 6d. on its publication, and are now quoted to yield £3 19s. 3d. per cent. on the 11½ per cent. dividend paid for 1932-33. The report for the year to August 31st last, which is expected to be favourable, is due in November.

Other Company Results.—The reports and dividend statements of other companies, summarised on pages 515 and 514, are, with few exceptions, favourable. Textile company reports show an unspectacular but tangible tendency to improve. Whitworth and Mitchell, for instance, returns net profits of £74,648 against £69,623, though the ordinary dividend is reduced from 12½ to 10 per cent. The balance sheet of the Calico Printers' Association (whose profit figures were summarised in the *Economist* of August 25th, page 367) suggests an appreciable enhancement of activity, for stock-in-trade has increased from £795,468 to £870,506, while cash has fallen from £430,168 to £304,022. In the "miscellaneous" group, Murex, which works in close connection with Imperial Chemical Industries, has raised its total dividend (on a larger capital) from 30 per cent. to 35 per cent., and is making (a) an issue to shareholders of one 10s. share in five, at £4, and (b) a bonus issue of 100 per cent. by capitalisation of reserves. The report of Triplex Glass shows a trading profit of £130,787 against £97,225 and an unchanged dividend of 25 per cent. Under the auspices of the present management, gross trading profits have increased since 1929 by over 800 per cent. The company has purchased the goodwill of Protectoglass, Ltd., for £37,500. This transaction has been financed entirely out of last year's revenue. The expenses of new plant for manufacturing "Toughened" glass have similarly been met out of liquid reserves. The

week's record of dividend declarations is noteworthy for the decision of Godfrey Phillips, tobacco manufacturers, to pay an interim of 2½ per cent.—despite the reduced net profit of its subsidiary, Cohen Weenen—for the first time since 1930. The Scottish Power Company has declared an interim, also of 2½ per cent., for the first time in its history. The report of the Ardath Tobacco Company, to June last, shows net profits of £460,206, against £454,532. The dividend is unchanged at 12 per cent., tax free.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
September 25

ACCOUNT
September 27

THOUGH the new Account coincided with the Jewish New Year holiday at the beginning of the week, markets were firm. Gilt-edged stocks did not maintain last week's strength, but industrial shares continued their slow but steady rise. The market, indeed, showed signs of broadening. Speculative investors, at the moment, are well disposed towards the views of popular economists, who assure them that the apparent halt in the upward movement of British industry is being succeeded by "re-recovery." On the whole, however, the week's chief honours go to the foreign bond market. The Argentine conversion (described on pages 496-7 had been foreseen, but its terms had a beneficial effect on many South American bonds—even those of countries like Brazil, whose debt-paying achievements have fallen far short of Argentina's. The opinion is gaining ground in the market that, in the recovery cycle, it is now the turn of primary producing countries overseas,

whose status is unclouded by "political" difficulties, to benefit. The strength of Japanese bonds has, similarly, a politico-economic basis, for their yield appears attractive to speculative buyers in proportion as the prospect of an early breach with the Soviet recedes.

Business in the gilt-edged market was on a smaller scale than last week, and prices eased slightly. India stocks were a quiet market. Among Dominion issues, Canadian 3½ per cents. remained firm. The Nigerian Loan was received with somewhat "dutiful" favour. All Argentine bonds were strong on the conversion announcement, the "Roca" Loan, in particular, advancing steadily. Buying of Brazilians was helped by a further slight relaxation of the milreis exchange regulations. Chilean bonds were also in demand. Chinese bonds were featureless, but Japanese showed rises of 1 to 2 points a day. Apart from scattered offerings of Dawes and Young on Germany's rejection of the "Eastern Locarno," very little business was done in European issues.

The home rail market loyally responded to Sir Josiah Stamp's favourable diagnosis at the beginning of the week, but a generally satisfactory batch of traffic figures did not satisfy the optimists who, in the face of history, expected the London and North Eastern to repeat the previous week's exceptionally large gain. Metropolitan Assented were firm after the deduction of the dividend. The market in Argentine rails chose to disregard a disappointing week's traffic returns, and to put up quotations, particularly of prior charges, in the hope that the railways would secure improved exchange facilities on the conclusion of the Government's conversion operations. Among Brazilian rails, San Paulo were particularly firm.

After a quiet start the industrial markets showed fresh evidence of improving "psychology." Unfavourable news from America was largely neglected, even in the market for "Internationals," which made a good recovery in mid-week after a doubtful start. Motor shares were again in keen demand, Austin 5s. shares being quoted at over £6. Rolls-Royce were bought and Ford continued to gain ground. Standard were another strong feature. Iron and steel shares became steady after opening irregular. Electrical equipment shares were somewhat out of the picture, though quotations generally were maintained. In the brewery group Bass made a new "record," by reaching £5, and tobacco shares were firm after the Godfrey Phillips interim dividend. Textile shares were in increased favour from the provinces, Patons and Baldwins rising on encouraging reports of the Australian wool sales. Imperial Chemical threw off the influence of last week's unchanged interim dividend, and favourite counters like Dunlop, Turner and Newall, and London Brick were in demand. J. Lyons followed in the train of Bass, with a new "high for all time." The market was inclined to write down Wall Paper deferred, on the contents of the circular summarised on page 501. Unilever were bought from Amsterdam, as a guilded devaluation "hedge." Bank shares were quiet and uninteresting.

The dullness of oil shares, under American influences, was relieved by a little speculative buying from the Continent in mid-week, Shell improving on demand from Paris and Royal Dutch on Amsterdam buying. The rubber share market relapsed into a quiet and reactionary state, the market looking in vain for a lead from Mincing Lane. Tea shares certainly were given a sign from that quarter, but its unfavourable nature produced some weak selling in a market where support was conspicuously absent. The outlook for tea shares is examined in a leading article on page 495.

Gold shares opened quiet, the Johannesburg Stock Exchange being closed on Monday for the Jewish New Year. Subsequently the tone became slightly harder, though dealings were mainly "professional." Among Kaffirs, Anglo-American were in strong demand on Johannesburg account, possibly because of the company's interest in South African Lands, which have been a persistently firm feature for some weeks past. East African shares developed conspicuous activity on progress reports from the Kentan and Kimingini properties. West Africans, however, were quiet and West Australians on the whole lost ground. Tin shares continued to show scattered declines, despite the rise in the price of the metal. Slightly enhanced

interest, however, was taken in copper shares, the commodity outlook being viewed rather more favourably.

FOREIGN STOCK EXCHANGES

NEW YORK

THE Treasury's refinancing proposals could scarcely have been launched at a less opportune moment. The bond market was weak on the eve of their announcement. The terms were criticised on the grounds suggested in a Note on page 496. After temporary firmness on Monday, there was a definite break in prices for Treasury obligations on Tuesday and Wednesday, despite evidence of official support. The stock market was highly irregular, mining—particularly silver—shares being widely offered on Monday. U.S. Smelting slumped by over 8 points on the same day. Although steel mill activity is reported at 19.5 per cent. of capacity this week, against 19.0 per cent. last week, the business community is exercised over the apparent lack, so far, of normal signs of a seasonal upturn in business. Wall Street itself can scarcely have been expected to view the result of the Maine election with favour. The deadlock, and growing bitterness, of the textile stoppage is another depression factor. Electric power output for the week ended September 8th was 3.8 per cent. below that of the previous week and 1 per cent. below that of the corresponding week of 1933.

* Two-hour Session.

PARIS

Business opened dull, but the tone became somewhat firmer as the week progressed. Rentes were generally steady, but other Government issues became irregular. Liquidation of industrial shares on Monday and Tuesday was absorbed with rather less difficulty than had been expected, and the market had a much better appearance on Wednesday. Little interest was taken in gold or diamond shares.

	Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934		Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934

BERLIN

Though the share market was moderately active last week, quotations tended to decline slightly. Public utilities, however, were in demand. Among steel shares Mannesmann and Kloeckner were bought. Potash issues were also firm. This week's market opened quietly, though a number of coal stocks were better. Tuesday's market was relatively firm. There was a fair demand for lignite and certain brewery shares. Most electrical shares, however, were easier. Reichsmark bonds gained slightly during the week. Dollar bonds showed little change. Downward movements predominated on Wednesday.

	Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934		Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934

AMSTERDAM

Amsterdam, like Paris, opened dull and irregular—partly on account of the Jewish holiday—but became firmer subsequently. Unilever were particularly strong. Tea shares, however, lost ground steadily. Although little interest was taken in rubbers, prices were generally maintained. Philips' Lamps were active on the improved export figures.

	Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934		Sept. 5, 1934	Sept. 10, 1934	Sept. 12, 1934

CAPITAL ISSUES

THE autumn season in the issue market has been given a notable send-off by two major conversion operations. The Nigerian offer of a 3 per cent. stock for a 3½ per cent. issue, with the same final redemption date, may appeal to Trustee investors anxious to secure below-par holdings. Nigeria will have no other conversion opportunities before 1936. As regards the Argentine offer, it says much for the strength of Argentina's position that, at a time when other South American States are insufficiently credit-worthy to be able to borrow in London on any terms, Argentina is able to dispense with underwriting for part of an issue, on a redemption yield basis of £4 17s. 6d. per cent. Of the week's "industrial" offers, *Monsanto Chemicals, Limited*, follows a "Kruschen" issue and precedes an "Eno" issue. The investing public is thus having ample opportunity to participate in the chemical manufacturing business. The present company, however, has an established position, a successful record and important American connections. Its board is "departmental"—an unusual feature in this country. *Odham's Properties, Limited*, has issued a 5 per cent. mortgage stock in conversion of 7 per cent. first mortgage debenture stock. The prospectus shows net assets of £1,196,454, but, of this total, £663,393 represents the valuation of the copyright-litence of a weekly newspaper, at cost. The revenue cover, however, appears ample for interest and sinking fund. A resumption of borrowing by British corporations is expected shortly. Arrangements are in progress for an issue of £1,500,000 of 3½ per cent. stock 1955-65 by the Stoke-on-Trent Corporation. An important "proprietary" issue is forecast by the announcement that the London and Yorkshire Trust has acquired the control of J. C. Eno, Limited, and its associated companies, from Mrs Harold F. Ritchie, of Toronto.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics. Where stocks are in calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Profits, before income tax: 1931, £31,449; 1932, £90,073; 1933, £104,573; six months to June 30, 1934, £61,994. Total net assets £685,09. Purchase price £10,000 cash and £299,000 ordinary shares.

Odham's Properties, Ltd.—Incorporated March 9, 1932. Issue of £736,000 5 per cent. first mortgage debenture stock at par to repay £679,015 7 per cent. first mortgage debenture stock at £106½ of new stock or £100 of new stock and £6 10s. in cash. New stock redeemable by January, 1933, by sinking fund commencing 1936, and callable after January, 1942, at 102½. Net assets, March 31, 1934, £1,196,454. Profits after charging all expenses are: Three months to March 31, 1932, £29,247; years to March 31, 1933, £115,849; 1934, £115,901. Underwritten by Investment Registry, Ltd.

BY STOCK EXCHANGE INTRODUCTION

Lampert and Holt Line, Ltd.—Incorporated 1865. Balance sheet dated June 30, 1934, shows deficit for half-year of £27,779, before depreciation. Statement of trading shows: 1931, loss £38,035; 1932, loss £33,355; 1933, loss £27,959; half-year to June 30, 1934, loss £38,029. Total valuation of fleet, end of 1933, £635,347, but independent valuation, July 26, 1934, states value at £413,750.

ISSUES TO SHAREHOLDERS ONLY

Fisher and Ludlow, Ltd.—Issue of a further 150,000 ordinary shares of 10s. each at 20s. per share to ordinary shareholders registered on August 30, 1934, in the proportion of three new ordinary shares for every ten ordinary shares then held. Underwritten for a commission of 6d. per share, the underwriters paying all expenses.

Kepong (Malay) Rubber Estates.—The directors announce that a further issue of shares will be made in the course of a few days to holders on the register on September 14, 1934. Shareholders will be entitled to apply for one new share of 2s. in respect of very five shares held. The price of issue of the new shares will be 3s. 6d. per share.

Lunuvu (Ceylon) Tea and Rubber Estates, Ltd.—This company is offering to shareholders 64,335 £1 shares at 42s. 6d. per share in the proportion of one new share for every ten held. This issue is being made in order to provide the purchase money for estates recently acquired and to strengthen the company's financial position.

BY TENDER

Bognor Gas and Electricity Company.—The directors are offering for sale by tender an amount of 4½ per cent. redeemable debenture stock (1954), which will not exceed, including premiums, £7,695. The stock will be redeemed at par on September 30, 1954. Minimum price of issue is £105 per £100, yielding £4 2s. 2d. per cent. per annum.

CONVERSIONS AND REPAYMENTS

Argentine Government.—For particulars of conversion offer to holders of five "called" loans, see pages 496-7.

Baldwins, Ltd.—The directors of Baldwins, Ltd., announce their intention to repay the 6½ per cent. non-convertible income debenture stock in terms of the trust deed.

OFFERS ABROAD

Compagnie Générale Transatlantique.—New bond issue in order to acquire funds for the building of liner "Normandie." Unconditionally guaranteed by French Government and offered at Frs. 905 per 1,000 franc bond carrying 5½ per cent. interest. Total amount Frs. 120,500,000. Free of present and future taxation. Redeemable within twenty years at par by annual drawings.

FORTHCOMING ISSUES

Amarilla Gold Mines.—The first report of Amarilla Gold Mines states that in order to complete the contract recently made with the Selection Trust, it is proposed to increase the capital from £150,000 to £250,000 by the creation of 400,000 5s. shares. The Selection Trust, in consideration of financial and technical assistance, will be entitled to subscribe for the whole of the new share capital, when created, at varying premiums.

Murex, Ltd.—It is proposed to offer rateably to the ordinary shareholders a further 90,000 ordinary shares of 10s. each at an issue price of £4 per share. As soon as the final instalment of this new issue has been paid, it is intended to make a bonus issue of fully paid ordinary shares of 10s. each to the ordinary shareholders on a share for share basis, sufficient of the company's reserves being capitalised for the purpose, and subsequently to consolidate the whole of the then existing 10s. ordinary shares into shares of £1 each fully paid.

Stoke-on-Trent Corporation 3½ per cent. Stock, 1955-65.—Arrangements are in progress for an issue of £1,500,000 of Stoke-on-Trent Corporation 3½ per cent. stock of 1955-65. The issue price has not been fixed.

Wall Paper Manufacturers, Ltd.—It is proposed to increase the capital for business expansion to £5,800,000 by the creation of 800,000 shares of £1, of which 400,000 are to rank as preference and 400,000 as ordinary shares. The objects of these proposals are set out in a Company Note on page 501. An extra-ordinary meeting will be held at the Holborn Restaurant, W.C., on September 18, 3 p.m., to consider the proposals.

Simmer and Jack Mines.—An extra-ordinary meeting will be held at Johannesburg on November 7th, at noon, for the purpose of authorising an increase of the capital from £625,000 to £750,000 by the creation of 1,000,000 shares of 2s. 6d. each. The new shares will rank pari passu with the 5,000,000 existing shares. The directors propose to offer the 1,000,000 new shares for subscription by shareholders at 7s. 6d. per share in the proportion of one new share for every five shares held. Fractions will be disregarded.

RESULTS OF ISSUES

Indian Rupee Loan.—The lists of the new 3 per cent. Rupee Loan, 1941, which were only open for two days, closed September 11th. Subscriptions, which could be made in the form of the 4½ per cent. Bonds, 1934, maturing on September 15th, or in cash at 99, totalled about Rs. 10.6 crores.

James and Shakespeare, Ltd.—Underwriters of the recent issue by James and Shakespeare have had to take up about 80 per cent. of each class of share.

Odham's Properties.—Investment Registry announces that the subscription list in connection with the issue of £736,000 5 per cent. first mortgage debenture stock at par was closed at 9.5 a.m. September 12th, owing to heavy over-subscription.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 8, 1934, amounted to £9,353,000, against ordinary expenditure of £10,521,000. After allowing for an increase in Exchequer Balances of £174,247 the operations for the week, as shown below, increased the National Debt by £1,487,000 to approximately £8,076 millions.*

(000's omitted)	
Treasury Bills	+ 4,738
Land Sett. repayments	+ 24
	+ 4,762
Public Department Advances	3,200
National Savings Certificates	50
N. Atlantic shipping issues	25
	3,275

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

GOLD

Messrs Samuel Montagu and Company write as follows on September 12, 1934:—

The Bank of England gold reserve against notes amounted to £191,762,212 on the 5th instant, as compared with £191,762,097 on the previous Wednesday. During the week the Bank announced the purchase of £59,295 in bar gold. In the open market business has been on a moderate scale, about £1,750,000 being dealt with during the week. There was a fair general demand for the amounts offered and prices were maintained at a slight premium over the gold exchange parties.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
September 6	140s. 8d.	12s. 0-95d.
" 7	140s. 9 1/2d.	12s. 0-82d.
" 8	140s. 9d.	12s. 0-86d.
" 10	140s. 11 1/2d.	12s. 0-65d.
" 11	140s. 3 1/2d.	12s. 1-33d.
" 12	140s. 5 1/2d.	12s. 1-16d.
Average	140s. 7-83d.	12s. 0-96d.

No gold shipments were reported from Bombay last week.

SILVER

There has been little change in prices during the past week, but the market has continued to be active. Further purchases have been made for America and additional support has been given by the Indian bazaars and speculators. Demand has again been met by sales on China account, whilst there has also been some re-selling by speculators. News was received that on the 9th instant the Chinese Government had issued an order imposing restrictions on dealings in foreign exchange, but whilst this has caused some uncertainty, no effect on the silver market has yet been apparent. The undertone of the market remains good.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.	Cash	Bar silver per oz. std.	Cash
September 6	21 1/2d.	September 5	49 1/2
" 7	21 1/2d.	" 6	49 1/2
" 8	21 1/2d.	" 7	49 1/2
" 10	21 1/2d.	" 8	49 1/2

(*) Paid on a doubled capital. (s) Distribution of assets. (t) Paid on larger capital. (u) Second interim, making 10 per cent. to date, against 9 per cent. The 200,000 ordinary shares issued in July, 1934, rank for this 5 per cent. dividend.
† Free of income tax.

ILLINGWORTH, MORRIS AND COMPANY (WORSTED SPINNERS AND MANUFACTURERS).—The directors announce that owing to the present position of the wool textile industry, due to the severe fall in wool values, the complicated state of foreign political affairs, and the consequent decline in foreign and home trade, they have decided not to pay any dividend on the preference shares on September 30th.

METROPOLITAN ASSSENTED STOCK.—Messrs. Glyn, Mills and Company, 67, Lombard Street, E.C.3, Trustees and Registrar, announce that the interest for the year ended June 30, 1934, on the Metropolitan Assented Stock constituted by Section 89 of the London Passenger Transport Act, 1933, will be paid at the full rate of 3½ per cent. for such year less income tax at 4s. 6d. in the £. to those persons who at the close of business on September 7, 1934, are the registered holders of such stock, and that the warrants for interest will be posted on or about September 21, 1934.

FOREIGN GOVERNMENT BOND TRUST (FIRST DISTRIBUTION ON BOND-UNITS £8 7s. 6d. PER CENT.).—Municipal and General Securities Company, Ltd., announces the initial income distribution by the Foreign Government Bond Trust of £d. per Bond-Unit, free of tax, payable October 1st on presentation of Coupon No. 1, at the City Office of the Trustee, Lloyds Bank Limited, 72, Lombard Street, E.C.3. The distribution covers a period of five months from the commencement of the trust to September 7, 1934, and is derived from the interest received on the Foreign Government Bonds selected from the list of 122 bonds which the Trust is permitted to hold. The distribution includes the proceeds of sales of scrip paid in lieu of interest, and the yield works out at the rate of £8 7s. 6d. per cent. per annum gross, and £8 per cent. net on the initial price of 20s. per Bond-Unit.

LONDON AND SOUTH AMERICAN TRUST.—The board have decided to pay on October 1st a dividend of 3 per cent. per annum on the £500,000 5 per cent. preference capital, thereby satisfying the arrears of dividend to March 31st last. The earnings, while showing an improvement to date upon results known at this time last year, are still affected considerably by the adverse conditions ruling in South America and other centres. In consequence, the board considers it prudent to defer consideration of a payment in respect of the dividend on the preference capital for the current year until the results for the full year are known.

TRANVAAL AUGUST, 1934, OUTPUTS, &c.

OIL OUTPUTS

ANGLO-EQUADORIAN OILFIELDS, LTD.—The production for August is cabled as 17,051 tons.

ANGLO-PERSIAN OIL COMPANY, LTD.—Production in Persia for the month of July amounted to 654,000 tons, making a total of 4,363,000 tons for the first seven months of 1934. Production in Persia for the month of August amounted to 698,000 tons, making a total of 5,061,000 tons for the first eight months of 1934.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of August are as follows: Production of oil, 46,280 tons; deliveries, 45,830 tons.

ATTOCK OIL COMPANY, LTD.—Production for August, 8,324 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended August 11th: Venezuela, 18,745 barrels; Trinidad, 29,411 barrels. Production for the week ended August 18th: Venezuela, 18,090 barrels; Trinidad, 32,042 barrels. Production for the week ended August 25th: Venezuela, 17,238 barrels; Trinidad, 31,666 barrels; total, 48,904 barrels. Production for the week ended September 1st: Venezuela, 16,368 barrels; Trinidad, 31,675 barrels; total, 48,043 barrels. Production for the week ended September 8th: Venezuela, 18,014 barrels; Trinidad, 31,163 barrels; total, 49,177 barrels. Production for August: Venezuela, 78,249 barrels; Trinidad, 137,986 barrels; total, 216,235 barrels. Deliveries for August: Venezuela, 93,581 barrels; Trinidad, 142,810 barrels; total, 236,391 barrels.

BRITISH BURMA PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma, reporting the production of crude oil for the month of August as 26,264 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production August: Dacia, 3,664 tons; Perimeter X, 6,690 tons; Starnapha, 445 tons.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of August amounted to 94,907 barrels, or approximately 13,558 tons.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian company for August is cabled as 24,251 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The London financial agents of the Mexican Eagle Oil Company, Ltd., are advised that

the production for the week ended August 4, 1934, was 344,000 barrels. The production for the week ended August 11, 1934, was 345,000 barrels. Production for the week ended August 18th was 347,000 barrels. Production for the week ended August 25th was 356,000 barrels. Production for the week ended September 1st, 1934, was 358,000 barrels.

STEAUA ROMANA (BRITISH), LTD., are advised that the production of the Steaua Romana Company, Bucharest, for the month of July was 108,166 metric tons. Production of the Steaua Romana Company, Bucharest, for the month of August was 108,448 metric tons.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during August was 14,305 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,073 barrels.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended August 11, 1934, was: Bolivar district, 692,508 barrels; Maracaibo district, 36,487 barrels. Production for the week ended August 18, 1934, was: Bolivar district, 698,594 barrels; Maracaibo district, 36,636 barrels. Production for the week ended August 25, 1934, was: Bolivar district, 704,772 barrels; Maracaibo district, 36,051 barrels; total, 740,836 barrels. Production for the week ended September 1, 1934, was: Bolivar district, 699,830 barrels; Maracaibo district, 36,915 barrels; total, 736,745 barrels. Production for the week ended September 8, 1934, was: Bolivar district, 711,383 barrels; Maracaibo district, 35,846 barrels; total, 747,229 barrels.

MAIZE.—In Europe, increasing supplies of home grown feeding stuffs are affecting the demand for maize and forward Plate maize has been in less active request this week; quotations show a declining tendency. "September" futures were quoted on Wednesday at 78½ cents per bushel in Chicago, against 79½ cents a week ago and 75½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 24s. 9d. per 480 lbs., compared with 25s. 3d. last week; "Plate," ex ship, 23s. 9d., as against 24s. 3d.; "Plate," "September," 24s. 6d., as against 25s. Yellow maize meal, ex wharf, was quoted £6 15s. to £6 17s. 6d. per ton, against £6 15s. to £7 per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to September 11	Cwts. 64,859	Cwts. 118,467	Cwts. 355,593	Cwts. 476,680
2 weeks to September 11	107,617	208,632	702,462	832,961
Average price of English wheat per cwt.	s. d. 4 9	s. d. 5 8	s. d. 4 9	s. d. 5 1

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Sept. 4, 1934	Cwts. 356,281	Cwts. 110,998	Cwts. 33,883	s. d. 5 2	s. d. 10 10	s. d. 6 5
Sept. 11, 1934	476,680	378,572	36,882	5 1	11 0	6 6
Sept. 6, 1930	129,208	33,625	31,959	7 8	8 4	6 0
Sept. 5, 1931	42,758	22,454	17,859	5 1	10 2	5 9
Sept. 10, 1932	118,467	56,087	45,968	5 8	8 6	6 7
Sept. 9, 1933	355,593	356,831	48,605	4 9	10 10	5 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Sept. 13, 1933	Jan. 3, 1934	Sept. 5, 1934	Sept. 12, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	70½	65½	82½	83½
Chicago (No. 2 Winter)	55½	46½	88	84½	104½	105½
Cenit per 60 lb.						

The visible supply of wheat in Canada, at 99,738,000 bushels, shows an increase of 1,574,000 bushels. Supplies a year ago stood at 103,068,000 bushels.

OTHER FOODS

SUGAR.—After exhibiting an easier tendency earlier in the week the New York spot market in raw sugar became firm and, at the close on Wednesday, showed a gain of one point on the previous week. Quotations in London are, however, slightly lower on the week. The spot price of raw sugar in New York on Wednesday was 2.87 cents per lb., as compared with 2.86 cents per lb. last week and 3.27 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 6d. to 4s. 6½d., against 4s. 7½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	...	...	1,016	1,520	30,204	173,706
Liverpool	5,754	...	14,932	13,402	131,346	108,312
Total tons ...	5,754	...	15,948	14,922	161,550	282,018
Last week	9,155	8,457	16,866	14,976	171,744	296,930

COFFEE.—The New York spot market has been quiet, with prices showing some decline on the week. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb., as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The spot market in London, although steady on Wednesday, has also been quiet this week. Last week's movements of coffee in London were as follows: Brazilian, landed, 432 bags; delivered, for home consumption, 174 bags; exported, 18 bags; stocks, 27,795 bags, against 27,638 bags a year ago. Central American, landed, 284 packages; delivered, for home consumption, 1,833 packages; exported, 418 packages; stocks, 98,757 packages, against 90,197 packages last year. Other kinds: Landed, 1,556 packages; delivered, for home consumption, 2,399 packages; exported, 498 packages; stocks, 92,719 packages, against 88,118 last year.

COCOA.—The spot market in New York has exhibited an easier tone and quotations have shown a slight decline. Futures advanced earlier in the week, but the gain was not held and Wednesday witnessed a decline of about 7 points from the previous day's level. The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "October-December," was 21s. 3d. per 50 kilos, c.i.f. Continent, as against 21s. per 50 kilos last week. Last week's

movements of cocoa in London were as follows: Landed, 780 bags; delivered, for home consumption, 4,674 bags; exported, 1,480 bags; stocks, 231,163 bags, against 161,354 bags a year ago.

TEA.—The quantities catalogued for this week's auction comprised 55,712 packages of Indian and 26,482 packages of Ceylon tea. Competition for the former was generally good, but prices are slightly below last week's level. Ceylon varieties met with a less active demand and the market was generally weaker for the lower grades. Superior qualities were, however, still in good request at fully firm prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land

(a) No sales.

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 8s. 3d. per cwt., shows a rise of 1½d. on the week. Movements in London during the past week were as follows: Landed, 6 tons; delivered, 119 tons; stocks, 2,407 tons, against 5,950 tons a year ago.

POTATOES.—Plentiful supplies on offer met with a fair trade at steady prices. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. to 7s. per cwt., as compared with 6s. to 7s. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5½d. per lb. on Wednesday, against 5½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 55 tons; delivered, 15 tons; stocks, 279 tons, against 351 tons a year ago. White, landed, 24 tons; delivered, 47 tons; stocks, 6,441 tons, against 922 tons a year ago.

MEAT.—Trade for most descriptions of meat has tended to be quiet this week. Small pigs were in active request on Monday, but heavy pigs have encountered a slow trade, prices showing a slight reduction. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 6d. to 4s. 2d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. last week. New Zealand frozen mutton was 3s. 6d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield official market report, supplies during last week amounted to 8,747 tons, against 8,228 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87.0 per cent. of the beef supplies, against 85.4 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 73.0 per cent. of the total supply of mutton and lamb, against 69.7 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Quiet conditions continued, and with demand for both oilseeds and their products slow, quotations generally showed an easier tendency. In regard to linseed, the favourable reports of the new Argentine crop and the prospect of a larger yield by 100,000 tons than previously expected, prices have eased. Old crop Plate is available at £10 10s. per ton shipment to November, while new is quoted £10 January-February. Indian linseed is also easier, with Calcutta to London offered at £11 17s. 6d. per ton, September-November. There is, however, very little trade passing. The quantity of linseed afloat for Europe has increased to 128,300 tons (including 23,500 tons from India), which is 5,400 tons more than last week; and for the United States and Canada 42,600 tons against 32,000 tons a year ago. The final official estimate of the Argentine yield next season is 1,440,000 tons, against 1,337,000 tons for this season. Argentina has an estimated unsold balance of the old crop of 293,000 tons—about the same as a year ago, and India is expected to send 125,000 tons, against 160,000 tons. Cottonseed is firmer on spot, but trade is slow. New crop Egyptian is quoted at about £5 5s. per ton for shipment.

Linseed oil has been in better request from consumers, and prices have been favourable. Raw oil ex Hull mill for delivery to the end of the year is now quoted £20 per ton naked. Cotton oil is quiet and lower in price. Egyptian crude is offered at £13 15s., and refined at £15 15s. ex Hull. Demand for oilcakes and meals is not so good, but prices are steady.

RUBBER.—The market in rubber was dull, and quotations showed an easier tendency. In New York, Wednesday's spot price for rubber, at 15½ cents per lb., compared with 15½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 108,034 tons, show an increase of 3,396 tons as compared with the preceding week.

HIDE AND LEATHER.—Trading conditions have become rather more promising than they have been for several past weeks. Hide prices are more steady, and although the amount of business passing in some descriptions leaves much to be desired, more interest is being taken in offers of supplies. Some types of leather have also met with a better demand and quotations are showing a firmer tendency. At the auctions of hides and skins from home-

slaughtered cattle, held this week, demand continued fair. Best clear ox and heifers were generally unchanged to ½d. per lb. dearer, but in regard to other classes of ox and heifers the market was a trifle stronger. There was no alteration in prices for cows, with the exceptions of a slight reduction for those for first clears, while bulls were steady to ½d. per lb. advance. Calveskins were a fairly satisfactory sale and on average made rather more money. The market for foreign hides is in a little better position; although business in some sorts is still on the quiet side, there has been no set-back in prices. In the South American market fractional advances have been recorded both for wetsalted and dry descriptions, B.A. Frigorific ox having sold at an advance of ½d. per lb., while B.A. Americanos have realised rather more. In the African market, Capes command most attention, with sales of drys made

at 5½d. and 4½d. for firsts and seconds and 5½d. and 4½d. for dry-salted. Rather more interest has been taken in Australians, but actual business has not been large.

Business in sole leather has shown a further improvement, the demand for English and wetsalted bends covering most weights. There has also been a better inquiry for medium weight dry hide manufacturing bends, while turnover in the lighter averages has been fair. Pinned offal has been sought after more frequently and there has also been some request for rough sorts. Demand in the upper leather section has again been confined mainly to box and willow calf and glacé kid, but at the same time increased attention has been paid to patent, and in some directions turnover has been larger. Reptile and suede leathers have been sold in limited quantities.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

THE CONVERSION OF RUSSIA

THE entry of Russia into the League of Nations this week is an event of historic importance. It is a significant coincidence that Russia should have joined the League on the third anniversary of the day on which Japan broke her positive obligations under the Covenant. The day is being celebrated in Japan as one of national self-congratulation. The Japanese would do better to reflect that one of the chief consequences of their lawless action up to date has been this strengthening of the international organisation which Japan has done her best to ruin. The League is not only strengthened materially by the inclusion of a Power which is potentially far stronger than Japan herself. It is strengthened morally—and this is a greater matter—by a profound reversal in the policy of a Government which originally made itself master of one of the great countries of the world with the avowed object of using Russia as an instrument for achieving a world revolution by physical violence.

The entry of the Soviet Government into the League means that the rulers of Russia are converted to the idea that, in the world as it is, no State can preserve its existence, no regime endure, and no political movement continue, except within a framework of international order such as that of which the foundations have been laid in the League Covenant. Some of the critics of the Soviet Government and opponents of Communism have made haste to denounce the implied conversion of Russia's present rulers to the creed of international solidarity as being hypocritical, or at any rate self-interested. But even if this be true, to what conclusion does it lead? Let us consider for a moment the motive that has led to this interested action.

Russia has changed her policy to-day because two powerful neighbours of hers changed their policy yesterday and the day before. The Soviet Union has become eager to enter the League because she believes—and this belief is certainly genuine—that League membership can afford her some measure of security against the danger of a Japanese "and/or" a German attack. She has discovered the snag in her own previous foreign policy of playing the bad neighbour, and discovered it in that practical way in which most people, in most walks of life, do generally sooner or later discover the unprofitableness of

bad behaviour. She has suddenly awakened to find that the policy of Ishmael, which she had been practising, without much success, during the first dozen years of the Soviet regime, was perhaps on the point of being put into practice, with much greater effect, by Japan and Germany against the Soviet Union herself.

If this motive is not of the highest moral order, enlightened self-interest—or, to be more specific, a recognition of the advantages of mutual friendliness—is a good foundation on which to build the tradition and practice of what President Roosevelt calls "the good neighbour." It therefore offers a more substantial guarantee than any paper promises can provide that Russia, once a member of the League, will abide by her undertakings loyally. If the Soviet Union has joined the League for fear of Japan and Germany, can it seriously be supposed that her rulers will be so mad as to go on twisting the tails of France and Great Britain and Italy—or, for that matter, the tinier tails of Switzerland, Portugal and Holland—in order to exasperate her new associates into abandoning her, in disgust, when dangers threaten?

It may still, of course, be argued that, even if Russia, from whatever motives, does genuinely intend to observe her League obligations loyally, this does not justify the existing members of the League in admitting to membership a candidate so "steeped in sin." But this is carrying the conception of the League into fields which are quite beyond its scope and adopting an attitude repudiated by all those countries which have had relations with the largest single territorial unit in the world. While the League, like almost every human association, has an element of religion in the bond that holds its members together, it is on the whole less like a church than like a civil community in which membership is not a privilege but an obligation. For example, the Covenant demands that a non-member shall submit to the obligations of the League in a dispute with a member, just as municipal law demands that an alien shall submit to the law of the land in which he resides. The League's "land," in this sense, is the world, since international relations to-day are *de facto* world-wide. Is Russia to be punished for her sins by being prevented from renouncing her claim to immunity from the obligations of international law? Let those who

are inclined to think of the Soviet Government as a "criminal" reflect upon the implications of their simile. For we do not deal with criminals by placing them outside the law, but by insisting that they shall be under it. If a criminal surrenders to justice, do we kick him out of court and compel him to go on the loose again, on the ground that his presence pollutes the sacred precincts of the Goddess of Justice?

We have dwelt on these pros and cons because they have been aired during the last few days, not only in the Press of the world, but also in the lobbies and hotels of Geneva, where the controversy was accountable, last week, for that hitch in the proceedings for Russia's admission which we recorded in our last issue. By the end of the week, however, the arguments in favour of admission decisively prevailed; and, since then, events have moved rapidly. Unlike Portugal, Switzerland and Holland, the Great Powers did not feel that, in admitting Russia, they were either stultifying the League or contaminating themselves; and, by last Saturday, September 15th, the hitch had been overcome.

On that day, a revised telegram of invitation was addressed to the Soviet Government by the representatives of 30 members of the Assembly; the four Scandinavian countries, who were not among the 30, announced at the same time that they supported the invitation and that they would have signed the telegram if it had come from the Assembly as such, and not from the States individually. Therewith, Russia was assured of securing her two-thirds majority in the Assembly, and accordingly, on the same day, a letter of acceptance was addressed by M. Litvinov to the President of the Assembly. In this letter, the Commissar for Foreign Affairs announced that the Soviet Government was willing "to become a member of the League, occupying therein the place due to itself" [i.e. a permanent seat on the Council], "and undertaking to observe all the international obligations and decisions binding upon members in conformity with Article 1 of the Covenant." The letter also contained a quite reasonable reservation to the effect that Russia's acceptance of the Covenant's procedures for arbitration and judicial settlement should not be retrospective.

After the ground had been thus prepared by the preliminary exchange of communications, the Council met the same night and passed a unanimous vote to give Russia a permanent seat. This unanimity was obtained by the abstention of Argentina, Portugal and Panama, but the Polish vote was cast, and cast in the affirmative. Thereupon the Assembly, on Monday, referred the question of Russia's admission to the Sixth Committee, and on the same afternoon the Committee reported favourably. The Committee—which is coextensive in membership with the Assembly itself—made this recommendation by 38 votes to three. These adverse votes were those of Switzerland, Holland and Portugal; and there were seven abstentions, as well as five absences. As these latter twelve votes do not count, the majority by which Russia was eventually admitted was very much larger than the necessary two-thirds; and its importance is enhanced by its composition; for the "yeas" included the votes of France, Great Britain and Italy, the three members of the Little Entente, the three members of the Baltic Entente, Greece and Turkey, and also Poland, Hungary and Bulgaria (three votes which are perhaps especially significant because the three countries in question are at this moment all particularly restive).

The procedure was completed when the Sixth Committee's recommendation was accepted on Tuesday by the Assembly itself, and when the Soviet delegation, on the same day, took its place in the Assembly.

The discordant note which was struck by M. Motta (Switzerland), and sustained by M. Jaspar (Belgium), in the debate in the Sixth Committee on Monday afternoon, was more than counteracted by the answers which it drew from M. Barthou and Mr Eden. The British representative was undoubtedly expressing the view of his countrymen in welcoming the entry of Russia into the League on the ground that "our objective must always be to make this common council of the world as truly representative as we can."

THE NATION'S HEALTH

THE annual report of the Chief Medical Officer of Health for the year 1933, which was published this week, is an informative, and in some ways an encouraging, document. In spite of industrial depression and prolonged unemployment, the health of the public, even in the depressed areas, appears to show few, if any, signs of deterioration. Infant mortality, "a sensitive index of the general health," continued to show a decrease, and the rate of 64 per 1,000 births is the lowest ever recorded. Though there was a rise in the respiratory diseases group, presumably owing to the increased incidence of influenza, there was a definite decline in the diseases which are usually held to be the most sensitive indicators of debilitated conditions, such as tuberculosis and anaemia. The position is summed up concisely in the following sentences:—

The country has, in fact, passed through a series of lean years of economic depression without any material or exceptional rise in its general or particular mortality rates. That is the first broad fact. The second is this, the death rates which are most sensitive and susceptible of social or physical degeneration of a people remain steady and low—the mortality of women and children and the mortality caused by the diseases due to under-nourishment. Thirdly, there is no general increase of mortality among the unemployed themselves or their dependants, or even in the depressed areas as a whole.

There has, it is true, been a slight rise in mortality in Carmarthen, Glamorgan, Barnsley, Hull, Liverpool, and especially St. Helens, but for the remainder of the depressed areas the death rate remains about the same, or slightly lower, than in 1932. There is no evidence of a falling-off in the standard of nutrition of school children, which in many large towns, e.g. London, shows some improvement. Nor is malnutrition among adults, which is chiefly reported from the Tyneside and other dockyard areas on the north-east seaboard, at all widespread. Indeed, its "almost total absence" is described as "a noteworthy and encouraging feature of the reports from South Wales." The inquiries into the general health of the depressed areas confirms the conclusions reached in last year's report:—

Taking the country as a whole, the evidence appears to point to the conclusion that, except in certain localised areas, and in some special and restricted groups, there has been no general excess of sickness, ill-health or physical incapacity attributable to unemployment.

Gratifying as these results certainly are, they afford no grounds for complacency. Overcrowding, insanitation, and the constant anxiety created by lack of work are all factors conducing to ill-health which should be capable of elimination, and the toll of sickness upon the community is still in all conscience sufficiently startling when expressed in economic terms. Thus, the figures of sickness and invalidity show that during the year in England and Wales among the insured population only, and excluding loss due to sickness for which sickness or disablement benefit is not payable, there was an aggregate loss of 29 million weeks' work, the equivalent of a year's work of more than half a million persons.

In addition to these general conclusions, the report contains several sections of general interest on particular aspects or problems connected with the public health of the nation. Among these the section on tuberculosis is one of the most striking. Since the first national tuberculosis scheme was published twenty-one years ago enormous progress has been made in combating this "white scourge." We have now in England and Wales nearly 400 tuberculosis officers and 26,773 sanatorium beds as compared with fewer than six thousand in 1911. These largely increased facilities, together with improved methods of diagnosis and treatment, and by the application of X-rays, have enabled the number of deaths from pulmonary tuberculosis to be reduced from 33,505 in 1921 to 27,854 in 1933, while the mortality from tuberculosis of bones and joints has actually been halved during the last twenty years. The section on venereal diseases also provides some encouraging evidence on the decline in the incidence of syphilis, especially in the rate of transmission to wives and offspring, largely owing to the work of the V.D. clinics, which have

appreciably lessened the delay between the first appearance of the disease and the first recourse to treatment. The deaths from general paralysis of the insane in 1933 registered the lowest figure ever recorded, and Sir George Newman was able to venture the encouraging conclusion that "altogether it seems reasonable to claim for the V.D. scheme that it is steadily winning the battle against syphilis in this country." Gonorrhoea, on the other hand, unfortunately shows no evidence of decline.

The Report also contains an informative chapter on the co-operation of the public health services with the voluntary hospitals. The figures quoted show the enormous development in our national system of municipal hospitals, which now provide an aggregate total of 143,000 beds, nearly twice as many as those provided by the voluntary hospitals. It is pointed out that, in the opinion of the Ministry of Health, local authorities should have due regard to the facilities provided by the voluntary hospitals and should not duplicate them unnecessarily, and that in most areas it would be advantageous for the local authority and the voluntary hospital to agree on an arrangement whereby all patients requiring a particular form of treatment should be admitted to a particular hospital, especially in cases involving expensive materials, particular apparatus or highly specialised skill. It is clear that neither the municipal nor the public hospitals can by themselves cover the whole field adequately, and in the interests of the nation it is essential that unnecessary overlapping, to say nothing of actual friction, still too common in certain instances, should be avoided. The problem of conducting the two systems is one which will ordinarily have to be solved locally in each area. It is suggested that an important step in this direction would be the creation among the voluntary hospitals in each district of some joint organisation for the purpose of collecting funds, selecting cases, and interchanging staff, equipment and beds, etc.

OUR FOREIGN INVESTMENTS

THE uncertain behaviour of the exchange rates recently has aroused fresh interest in the question of the national balance of payments. Plausible short-term reasons can usually be found for the rise or fall of sterling from day to day, but within these swifter wheels may there not be wheels grinding more slowly, strengthening or weakening the long-term position of the pound? For six years now Sir Robert Kindersley has done economists and financiers the great service of collecting and publishing statistical information on British overseas investments and the income therefrom. His contribution to the September issue of the *Economic Journal*, though terse, is no less interesting than ever. Since the statistics take some time to gather, the detailed figures now published refer to 1931 and 1932, but a number of provisional estimates for 1933 are included, and from the trend we may reach certain tentative conclusions about the present year.

At the end of 1932, according to Sir Robert Kindersley's calculations, this country's investments abroad included £1,109 millions in the bonds of Dominion and Colonial Governments and municipalities, £323 millions in the bonds of foreign Governments and municipalities, £1,204 millions in British companies operating wholly or mainly abroad, and £719 millions in foreign and colonial companies whose securities are dealt in on British stock exchanges. Investments outside these classes—such as mortgages and other "direct" investments—are put at £285 millions. The total of £3,640 millions is £60 millions less than the equivalent figure for December, 1931. This decline in the nominal value of our overseas investments is due to a number of causes: the writing down of capital among foreign and colonial companies, and the lower balance-sheet values of shares of no par value in the same group; the repatriation of certain foreign bonds; and the operation of sinking funds and other normal means of repayment during a period when fresh investment was almost at a standstill. While the total invested in Government and municipal bonds within the Empire rose by £5 millions in the course of 1932, the total in similar foreign bonds fell by £14 millions.

There has, indeed, been an almost continuous fall in our holdings of foreign bonds since 1928; in the course of four years they dropped by no less than £41 millions.

In spite, however, of defaults and of conversions to lower rates of interest, there has been no great decline in the aggregate receipts from overseas bond investments, as the following table shows. Sir Robert Kindersley explains that the depreciation of sterling against gold has increased the sterling income derived from bonds payable in gold currencies. In view of the great importance of this question for the future of international indebtedness, it would be interesting to hear from Sir Robert what proportion of British holdings of foreign bonds are so payable, and whether this does not affect the capital amounts in a like proportion to the interest.

Totals	230.9	209.0	168.7	156.4	154.9

* Provisional estimates for 1933.

The average rate of return on our overseas investments in 1932 was 4.30 per cent., and in 1933 it is estimated at 4.26 per cent. The universality and depth of the slump make this figure remarkably high; very nearly two-thirds of British capital invested abroad in negotiable securities consists of bonds and debentures, on which defaults, though serious and sometimes spectacular, are a tiny proportion of the amounts regularly paid in spite of all difficulties. From 1931 to 1933, inclusive, British investors in foreign Government and municipal loans were deprived through defaults of only £19.3 millions (£11.1 millions of interest and £8.2 millions of sinking fund). The withheld interest represented only 5½ per cent. of the amounts due on all Government bonds (including those of Dominion and Colonial Governments and municipalities). Whether, outside Germany, there will be further defaults in the near future is a matter for speculation, but none is obviously in the offing.

While repayments to the United Kingdom through sinking funds and maturities totalled £55 millions in 1933 (provisional figure), British subscriptions to new issues for overseas (including issues used for effecting any of the above repayments) totalled only £50 millions. To this credit balance must be added a certain repatriation of foreign and Dominion bonds. It will be recalled that, according to the estimates of the Board of Trade,† this country had a debit balance of £4 millions on all current external transactions last year. This figure should, apparently, be increased; for the Board of Trade raised the estimate of net income

† See *Economist*, February 24, 1934, p. 390.

from overseas investments by £10 millions compared with 1932, whereas Sir Robert Kindersley now calculates that the gross income fell by £1½ millions. As foreign investments in this country actually showed signs of increasing after 1931, the net figure must, presumably, also be reduced by at least £10 millions, and probably more. Thus, even on the most favourable reckoning, our credit balance in long-term capital movements did no more than fill the deficit on current transactions. Nothing but a net inflow of short-term money could therefore have been available to pay for the gold (amounting to at least £100 millions) that was imported in 1933, other than amounts merely held on safe deposit for foreign interests and therefore not affecting the exchanges.

What are the prospects for 1934? The better trading results experienced by overseas concerns, especially in plantation industries, should be reflected in higher average dividend payments on the third of our capital abroad that is in non-fixed interest-bearing securities. On the other hand, the area of default is as wide as ever, the nominal amount of capital outstanding is already less, and the process of conversion to lower rates of interest continues. In sum, our net income from overseas investments may be higher, but not by more than a few millions. Capital repayments, which were somewhat fortuitously high last year, may not prove enough this year to cover new subscriptions to overseas issues, now that the Treasury has been partly relaxed. Can we look for a smaller debit balance in merchandise trade? Sir Robert Kindersley remarks that "the improvement in domestic trade has necessitated larger imports of raw materials, with the result that the balance of payments has probably resumed its adverse tendency." The excess of imports over total exports of merchandise was indeed £28 millions higher in the first eight months of 1934 than in the corresponding period of last year, almost entirely for the reason mentioned by Sir Robert.† We are, obviously, as far as ever from material self-sufficiency, and if that hoard of gold piled up by the Bank of England is to be regarded as unavailable, then the continued weakness of sterling can be explained by long-term as well as short-term factors.

THE POTASH CARTEL

SOONER or later most cartels which attempt to exploit the consumer break down under the weight of an increase in uncontrolled production and substitutes. The Potash Cartel, which was formed at Lugano early in 1926 by the French and German producers, and subsequently joined by Poland in March, 1932, enjoyed a virtual monopoly of this fertiliser for a number of years, a position of which it did not altogether fail to take advantage. But although the cartel was never able to exploit consumers, for the latter represent a fairly powerful political force, its position has recently been weakened by the emergence of Spain as a large-scale and low-cost producer of potash with a limited home market. It is therefore of interest to re-examine the position of the potash industry. The development of production in the principal countries since 1929 is shown below:—

WORLD PRODUCTION OF POTASH

(000 metric tons : K₂O content)

	1929	1930	1931	1932	1933
Germany	1,787	1,608	1,077	871	940

Russia	...	...	...	...	20*
Total	2,459	2,291	1,595	1,381	1,566

* Estimated.

† See page 532.

The potash industry in Germany was organised in a compulsory syndicate by the Potash Law of 1910, and ever since the war has been to a considerable extent under Government control. The Reichskalirat, or Potash Council, was formed in 1919. It consisted of 30 members representative of producers, consumers, labour and salaried personnel and State authorities. One of the chief objects of the Potash Law, passed at the end of 1933, is to introduce the leader principle into the industry, and to replace the Potash Council by a Potash Examination Board. The control exercised by the Government is now almost complete, and Government decrees have replaced the more or less democratic decisions of the Council. On the other hand, little has been done to alter the internal structure of the industry, and the existing quotas are to stay unchanged for some time, the prohibition against the opening of new mines being also extended. In spite of intensification of competition in export markets and the resultant fall in prices, the outlook for the industry in Germany is now more favourable than for several years past, chiefly owing to the marked improvement in domestic consumption last year and the recovery in exports since the latter part of 1933, and because of the internal strengthening which would result from the proposed Burbach-Wintershall merger. As far as sales are concerned, these reached 940,000 metric tons (K₂O content) in 1933—an increase of 11 per cent. on the 1932 figure, and approximately up to the 1931 level. Of these, 720,000 tons (77 per cent.) were on the home market, against 640,000 tons in 1932, so that the gain in home sales, of 12.5 per cent., was greater than in exports. Although prices have fallen by about 30 per cent. since 1929, the decline was less pronounced than in the case of many other commodities. Moreover, behind the protection of the rigid quota arrangements a good deal of reorganisation, concentration of production, and reduction of costs has gone on, and there is no doubt that the latest reorganisation scheme, which will leave only three important groups in the field, will be a further contribution in the same direction.

In France, apart from the effects of the intensification of outside competition in the export markets of the cartel and of a contracting home market, in which sales fell by 26 per cent. between 1929 and 1932, the industry has had to face the prospect of increased production owing to the development work carried out by the Mines de Blodelsheim, and sales of Spanish potash on the French market. The French production is divided between the State Mines (Mines Domaniales de Potasse d'Alsace), which in 1933 produced 247,640 metric tons (K₂O content), or 76 per cent. of the total; and the Mines de Kali-Sainte-Thérèse, which produced 78,000 tons. These two concerns have a joint marketing organisation. The first move made to surmount these difficulties was the passage of a Bill in July, 1933, despite considerable opposition from the chemical industry. This Bill provided, among other things, for the nationalisation of all potash mines, and accorded monopoly rights for all future potash discoveries in France or the French colonies to the Mines Domaniales. At the same time, negotiations were entered into between the Monopoly and the Blodelsheim company with a view to the inclusion of the latter. More recently, a second move has been made to protect the French market from Spanish imports by the establishment of a quota from April 28, 1934.

Some interesting figures were recently given by the chief engineer of the Alsatian mines illustrating the increase in technical efficiency which has been achieved in recent years. The output per man underground was 2.27 tons per shift at the end of 1932, against 2.09 in 1929—an improvement of nearly 9 per cent.; while, owing to better separation and washing methods, the content of crude salts extracted rose from 17.09 per cent. to 18.21 per cent. of K₂O over the same period—an increase of 6.5 per cent.

The development of the Spanish potash industry has been very rapid. Production was started in 1925 by the Minas de Potasa de Suria, a company formed in 1920 in which the Belgian Solvay concern and the Kalisyndikat are interested. This company remained the only producer until 1930, when it was joined by the Union Española de Explosivos, in which Imperial Chemical Industries are interested. The third producer, Potasas Ibericas, which is controlled by the French "Péchiney" concern (Cie. d'Alais, Froges et Camargue), but in which the Mines de Kali-Sainte-

Thérèse also have an important interest, started in October, 1932. It is scarcely likely that these three companies will remain the only producers. Already there are two further concession companies, La Fodina and La Minera, in which German capital is interested, investigating areas north of Sallent, and both are expected to start operations in the current year.

The Spanish Government exercises fairly close control over the potash industry through the Oficina Reguladora de la Producción Fabricación y Venta de Sales Potásicas, and lays down each year a production and price programme, including maximum and minimum production, and maximum domestic and minimum export prices. The potash consumption in Spain is relatively small, and fell from 23,833 metric tons in 1932 to 17,559 tons in 1933 (of which Suria supplied the largest individual share), so that all the companies have to rely chiefly on exports. It is difficult to express any opinion as to the ultimate level of Spanish exports and, hence, production. The deposits are not far from the sea, and production costs are low, partly owing to the fact that the shaft depths are often less than half those in France and Germany, so that it is almost certain that the present rapid growth will continue in the near future. The figures for the first half of the current year are very striking. Total exports of crude salts (the potash content of which is not available) were 65,900 metric tons, valued at 10.1 million gold pesetas, in 1932; 198,600 tons, valued at 19.9 million gold pesetas, in 1933; and 161,400 tons, valued at 11.6 million gold pesetas, in the first half of 1934. An indication of the severity of competition in international markets is given by the figures for average export prices, namely, 154 pesetas per ton in 1932, 100 in 1933 and 72 in January-June, 1934. The United States, which took considerable quantities of Spanish potash in 1933, increased in importance as a market in the first half of 1934 and took 40 per cent. of the total exports, whereas the relative importance of the Dutch market declined.

During February and March prolonged discussions took place at Nice between the Cartel and the Spanish producers with a view to securing the adherence of the latter. The Cartel, when faced with a demand for a larger export quota than they were prepared to agree to, urged that the Spaniards should start a propaganda campaign directed towards expanding their home market and reducing their dependence on exports. The Spaniards, who sent representatives from each of the chief producers, pointed out that in any case no immediate entry into the Cartel would be possible, since they had no national organisation, but the discussions ended in a friendly atmosphere, and it was agreed to resume them after the lapse of a few months, during which the formation of such an organisation would be considered.

There have been two other disturbing factors for the Cartel in Russia and Palestine. Not long ago many experts held that, while it was very doubtful if the production stage would be reached at Solikamsk, export was quite out

of the question owing to transport difficulties. The first Russian export deliveries actually took place towards the end of 1933, and since then considerable progress has been made, not only in Western and Northern Europe, but also in Japan, Canada and the United States. Total exports in the first half of the current year are reported to have reached 50,000 tons of pure potash, equal to about half the Spanish production last year. There is no doubt now that Russian exports are going to play a big part in the world situation. As far as production is concerned, apart from the Solikamsk shaft, a new shaft has recently been completed at Syrjanka, near the Beresniki Chemical Combine. The Solikamsk mine at present has a nominal daily capacity of about 4,500 tons of crude salts, although the actual output probably does not exceed 2,200 tons, which is about equal to the present throughput of the working-up plant (which produces 85 per cent. potassium chloride). On this basis the annual output calculated as pure potash would be about 70,000 tons.

In Palestine the output is in the hands of Palestine Potash, Ltd., and although litigation is at present in progress with regard to the validity of the concession, this company appears to have a fairly assured future. The output of crude salts last year was about 130,000 tons, but it is expected that work carried out at the north end of the Dead Sea will enable the capacity to be doubled during the current year, while considerable survey work has also been done at the southern end of the sea, where an area of 62 sq. kms. has been applied for. It will be remembered that, according to the terms of its concession, the company is committed to increasing output fairly rapidly.

As for the future, much depends on the trend of agricultural commodity prices. During the last few years purchases of fertilisers in all countries have been reduced to a low level, and even the slight general improvement last year led to a marked increase in consumption. If this is continued, there may be less difficulty in absorbing the greatly increased world output of potash than is now the case.

AUSTRALIA SEES IT THROUGH

THE Federal elections in Australia, which were held last Saturday, have resulted in a substantial victory for Mr Lyons, the present Prime Minister, or, rather, to put it more accurately, in a decisive defeat for Labour. The complete returns are not yet available at the time of writing, as the position in several seats, notably in Tasmania, is still uncertain; but it is clear that the United Australia Party retains by far the biggest representation in the Lower House, their probable representation being 34 seats against 17 of Federal Labour, 14 of the Country Party, and 9 Lang Labour. This means that, in a house whose numbers

will be reduced by one member, the United Australia Party has lost 4 seats, the Country Party 2 seats, and Independents 2 seats, while Federal Labour has gained 3 and Lang 4 seats. The gains of the latter party were due mainly to its victory in New South Wales over Federal Labour, which will probably only retain one seat in that State.

The new House will thus have a decidedly anti-Socialist majority, though the United Australia Party has lost its majority over all other parties, and will therefore be more dependent for its security on alliance with the Country Party. As Mr Lyons has two vacancies in his Cabinet to fill, caused by the retirement of Mr Latham, the former Leader of the Nationalist Party, and Senator Lawson, it will be interesting to see whether the understanding reached between the two parties for purposes of the election will ripen into a Coalition. The recent denunciation by Dr. Page of the new cotton duties imposed by Mr Lyons with an eye to the election illustrates the one fundamental difference of principle keeping these two more conservative parties from uniting. But the Country Party will now definitely hold the balance of power in the new House, and Mr Lyons has already promised to review the question when the election is over. Unless, therefore, Dr. Page sets his price too high, the prospects of definite co-operation between the two parties looks much brighter than it has been hitherto.

While Mr Lyons is therefore no longer his own master to the extent that he was after the election of 1931, the position of Mr Scullin in the Labour movement appears to have been distinctly weakened; his party has been decisively defeated in New South Wales by that of Mr Lang, who has proportionately effected a greater improvement in his position in the new House. Moreover, his personal prestige has suffered somewhat from the large increase in the poll of his Communist opponent.

But these are minor details compared with the all-important fact that the Australian elector has once more voted for sound finance, for finance was the chief issue at the election. It might have been expected that after the rapid recovery made in the last three years, and the brighter prospects in store, the voter would have been called back to old party allegiances and seduced by the more glamorous financial policies put forward by the two Labour leaders. But, in spite, or rather, perhaps, because of the superficially attractive proposals for the nationalisation of banking and currency advocated by Mr Scullin—to say nothing of the blandishments exercised by a number of "Douglas credit" candidates who in more than one constituency polled a surprisingly large number of votes, though not a sufficient number to secure election—he has decided to "see it through" on more orthodox lines.

For though Federal finances are once more in order, and Mr Lyons last year was able to remit taxation to the extent of £10 millions and to embark on the restoration of "cuts," State finances have not yet all of them completely recovered from the disorders of the great depression, and there are still the remains of deficits to be extinguished. It is evident that the memories of threatened repudiation, which indeed became momentarily an actual fact under the misgovernment of Mr Lang so far as New South Wales was concerned, have not been forgotten. Moreover, Mr Lyons was able to demonstrate the actual rewards of virtue by pointing to the considerable savings which the Commonwealth has been able to effect through the recent conversion of its sterling loans. He was with justice, too, enabled to claim credit for his success in carrying through the Premiers' Plan and for the very rapid economic recovery which followed its execution, though it should not be forgotten that the stars, especially in Aries, as well as the economists, have been fighting on his side. The rise in the

price of wool, and more recently in that of wheat, has entirely changed the economic picture. His policy has not, perhaps, shown any decisive bearing on the solution of the great long-range questions of Australian politics, such as constitutional reform—an issue raised in a semi-acute form by the secessionist movement in Western Australia—the development of the Northern Territory, or the direction of trade policy. But it has been able to claim some success for its piecemeal achievements, such as the sliding scale for the wheat bounty and the reference to a Commission of the vexed question of State demands for federal subvention, which underlies the secessionist clamour in the Western State. His provision of a "recovery loan" for the relief of rural debtors, of continued fiscal security for the home market, and his undertaking to negotiate commercial treaties for the expansion of the export trade, as well as his approval of Dr. Page's request for an inquiry into the banking system "if Parliament so desired," were all cleverly calculated to secure support from different sections of the community.

It is not at all surprising in the circumstances that this rather humdrum makeshift policy should have been preferred by the electors to the wild irresponsibilities of Mr Lang, which nearly brought the State of New South Wales to disaster, or to the milder inflationism of Mr Scullin. The object-lesson of 1931 was evidently still fresh in their minds, and the success of the skilful (but also lucky) combination of deflation and inflation contained in the Premiers' Plan was too obvious to be ignored. A conspicuous failure might perhaps have reversed the overwhelming verdict of 1931, which reduced Mr Scullin's following from 76 to 14, and that only if the Opposition had been firmly united. But for the last three years Labour has spoken with a divided voice. In spite of the reconciliation patched up between the adherents of Mr Lang and Mr Scullin in South Australia, Victoria and Tasmania, the Labour movement, once the most cohesive force in Australian politics, has been torn by irreconcilable internal conflicts, and the emergence of a Douglasite faction has added to the confusion. The extremism of Mr Lang has been too violent and too unconstitutional to attract more than a comparatively small section of a democracy which in a characteristically Anglo-Saxon fashion is wedded to a *socialisme sans doctrines*; while Mr Scullin has once more found himself uncomfortably falling between two stools. While, therefore, it may be said that Mr Lyons owes his success in some part to the divided counsels of his opponents, he owes far more to the healthy reaction of his compatriots against the extravagances which only three years ago were threatening the economic stability of the Commonwealth.

What influence this comparatively insignificant redistribution of forces will exercise upon Australia's general economic policy must for the moment remain a matter for conjecture. A *prima facie* guess would seem to suggest that Mr Lyons's somewhat increased dependence on the support of the Country Party will tend, if anything, to reinforce the slight downward movement in the Australian tariff, which was noticeable until quite recently, for we may reasonably expect the interests of the primary producer to obtain a rather greater emphasis in the Government's programme. But no very marked change in policy need be anticipated. For since the time of Ottawa Mr Elliot has begun to threaten the Australian producer with restrictions on his exports to this country. It is consequently less likely than it was that Australia will be willing to jeopardise her home industries for the sake of the British market.

Some, no doubt, will be tempted to point the moral for this country of Mr Lyons's victory. Has not the parallel been remarkable between the political history of Great Britain and Australia in the last five years? Will the parallel hold and Mr Macdonald lead a National Government once again to power? This Antipodean analogy is seductive, but in two important respects it is false. In the first place, the British Labour Opposition has not been split in two by the crisis. And in the second place, Mr Lyons's first Government cannot be reproached for basing its legislative programme upon a policy which he had not put fairly before the country. It would consequently be rash to conclude that what Australia thinks to-day of Mr Lyons, England will think of Mr Macdonald to-morrow.

NOTES OF THE WEEK

Deadlock in South Wales.—The danger of a strike in South Wales has become real and urgent. On Monday, October 1st, the miners' notices to terminate the present wage agreement are due to expire. Representatives of the workers and owners met on Tuesday, but failed to reach a settlement. Statements were afterwards issued by each side; and the position is now as follows. The owners assert that the suggested restoration of the 1931 wage cut would mean a heavy loss and that this is shown by the quarterly ascertainties of trading results. The men reply, first, that recent quarterly ascertainties have been better than those which preceded the grant in 1928 of the higher wage level now claimed; and, secondly, that the quarterly ascertainties are now in any case meaningless owing to the close financial connection between the colliery and distributing companies. It is suggested that the companies are really single units and that the collieries sell to the distributing agencies at artificially low prices. The question of arbitration is also at a deadlock. The owners demand an "independent and impartial" body, and the men, not unmindful that it was a lawyer who recommended the 1931 cut, insist on the appointment of persons with industrial knowledge and experience. The strength of the men's case consists in the fact that, on the advice of the Government, they referred the dispute to the National Industrial Board set up by the Coal Mines Act of 1930; and that this Board, on the evidence of the quarterly ascertainties, recommended the restoration of the cut. A very heavy responsibility now rests on both sides, since a strike would admittedly be disastrous. Surely it is not beyond the wit of the miners and the owners, and the Ministry of Mines, to devise a board of arbitration which shall include both independent and experienced members?

Silence, Safety and the Roads.—The prohibition on nocturnal motor horns in built-up areas came into force throughout the country on Sunday night. Undoubtedly the fortnight's test in London has been a success on the whole, though one fatal accident due to the prohibition has been reported. As soon as it is generally known that the regulation allows the sounding of horns at moments of emergency, there should be no accentuation of danger to offset the blessing of increased quiet. Encouraged by his success in creating silence, Mr Hore-Belisha is now turning his attention to safety. The present pedestrians' crossings in London are to be replaced by a combination of reflecting "beacons" and steel studs on the road surface; and it is now stated quite clearly that pedestrians have absolute priority at "uncontrolled" crossings. This regulation should be made known as widely and unambiguously as possible among both pedestrians and motorists. If it is generally known, the number of fatal accidents ought to be reduced—at the inevitable cost of some slowing down of the traffic. If it is not known, the crossings may easily result in an actual increase of danger. Mr Hore-Belisha has not yet tackled the problem of accidents occurring outside built-up areas and not involving pedestrians. The erection of signs at all cross-roads to indicate which is the minor and which the major road would probably do far more to diminish these accidents than anything else, short of a change in human nature. There would be no need to enforce an absolute stop on those approaching the major road. The instinct of self-preservation would be sufficient; and both safety and speed would be increased as a result of the change. At the opening of the new road to the London Docks last week, Mr Hore-Belisha announced that in making grants from the Road Fund he would "give preference to works of utility which have in them the germ of imagination and foresight." It would be too much to hope that this announcement presages any departure from the Government's policy of damping down road development for the sake of "economy." But some more rational treatment of our cross-roads—which would cost practically nothing—may perhaps be expected from the enterprising Minister of Transport.

Wars and Weapons.—The war in the Chaco between Bolivia and Paraguay came up once more for discussion at Geneva on Wednesday. The two countries concerned are prepared to join in the League's deliberations, and they appear to have no great objection to an arms embargo, although Bolivia as a land-locked State considers that she would be somewhat at a disadvantage thereby. Indeed, the absence of modern weapons seems to be accepted as another welcome step on the road back to primitive barbarism which both countries are determined to tread. The one thing they will not do is to suspend hostilities. In the circumstances the only practicable procedure for the outside world is to enforce an absolute arms embargo, and it is an international scandal that this has not yet been brought about. Great Britain, the United States and most other countries have already stopped shipments, but other countries have accepted the embargo "in principle only"—which appears to mean not in fact. Italy, which is one of these acceptors "in principle," has laid it down that "no decision on an international scale about the prohibition of export of war material could be taken so long as no decision had been reached on the responsibilities of the two countries to the conflict"—an *obiter dictum* which appears to bear no precise meaning other than the indefinite continuance in fact of shipments of arms already disapproved of in principle. It almost passes belief that language of this sort can still be talked at Geneva in spite of the disclosures that continue to be made at the American Senate investigation into the arms traffic. On the very day of the Geneva discussion, the Senate Committee in Washington was examining the representatives of a company which has been supplying war material to both Bolivia and Paraguay because they "did not wish to discriminate." Letters were read in which the representative of the company expressed the opinion—unhappily false—that "unfortunately for us it looks as though the trouble they were having is going to be settled amicably." The same individual on another occasion frankly confessed that "the unsettled conditions in Latin-America have been a great thing for me." Testimony of this sort is nauseating, and it is becoming daily clearer that nothing short of the total abolition of this calculating wickedness will satisfy the conscience of the world. We are glad to note that the National Liberal Federation has adopted a resolution calling for a British inquiry "on the same fearless lines and as public as that being carried on in America." We trust that the Government will appreciate the paramount necessity of acceding to this demand.

Eastern Locarno or Austrian Guarantee?—The drift towards solidarity is at this moment the prevailing current in Europe. It has already carried Russia into the League and Italy a long way towards a *rapprochement* with France. It is true that there are counter-currents, the most important being the joint Polano-German opposition to the Franco-Russian scheme for an Eastern Locarno. It looks, however, as though these contrary tendencies would merely modify the shape in which the European situation will crystallise, without being able to bring the process of crystallisation itself to a stop. The Franco-Russian idea was to establish, between Germany of the one part and Poland, Czechoslovakia and Russia of the other, a pact on the same lines as the existing Pact of Locarno which regulates Germany's relations with France and Belgium; and the two pacts were to be linked together by a French guarantee of the Eastern Pact and a Russian guarantee of the Western one (in addition to the British and Italian guarantees that are already in force). This project was never welcomed by Germany, whose present rulers continue to declare their devotion to peace and invariably hold back from committing themselves to any positive arrangements for maintaining it. The German note, on the subject of the Eastern Locarno project, which was addressed last week to the four other European Great Powers, has not yet been published, but it is understood

BUSINESS MEN! Why not live out at lovely Laleham-on-Thames? It's just as cheap and how much better. Half-hourly service to Town. Laleham Hotel, near Staines.

Write or 'phone STAINES 789

to convey a virtual refusal, on Germany's part, to participate. Since a Polish refusal is also virtually certain, this particular project seems likely to fall through. But this Polish and German attitude will certainly strengthen the relations between France, Russia, the Baltic States and Czechoslovakia; and Czechoslovakia will do her utmost to carry with her the other two members of the Little Entente. Meanwhile, the *rapprochement* between France and Italy has opened up the possibility of taking, as the nucleus for crystallisation, not the frontier between Germany and Poland, but the frontier between Germany and Austria. Though the question of the admission of Russia to the League has so far pushed all other topics into the background this year at Geneva, there has already been some informal talk there of a guarantee of Austria's independence. This guarantee is now practical politics; for on the political side it could be effectively given by Italy and France acting in concert, while the necessary economic corollary of breaking down the post-war economic barriers in South-Eastern Europe could be achieved by the co-operation of a majority of France and Italy's present South-Eastern European satellites, even if Hungary were to break away. A re-solidification of South-Eastern Europe into an equivalent of the old Danubian Empire would leave the Polish region as the one outstanding area where a permanent equilibrium has yet to be attained. Germany and Poland may yet come to think differently of the utility of an Eastern pact.

* * *

Colonel Beck and the Polish Minorities Treaty.

The present policy of Poland is difficult to understand. Not content with flying in the face of both France and Russia in the matter of the Eastern Pact, Poland has brought general odium upon herself at Geneva by declaring her intention to repudiate a diplomatic instrument to which Poland is a party, though this instrument is an integral part of the Peace Settlement, and the sacrosanctity of the Peace Settlement is Poland's palladium. On the 13th of this month, in the League Assembly, the Polish Foreign Minister, Colonel Beck, took two steps. He reintroduced, for discussion, a previous Polish proposal that the obligations for the protection of minorities, which are at present binding upon certain States members of the League, should be extended to all other members; and simultaneously he announced that, pending the translation of the minorities protection clauses into a general convention, the Polish Government, for its own part, "finds itself compelled to refuse, as from to-day, all co-operation with the international organisations in the matter of the supervision over the application by Poland of the system of minority protection." This announcement is indefensible, for the facts are these. "International organisations" in this connection mean the League; the League's procedure for dealing with minorities questions has been worked out with the concurrence of the Polish Government; and the League has a *locus standi* because it is expressly entrusted with the task in a treaty signed in Paris, on June 28, 1919, by Poland of the one part and the principal Allied and Associated Powers of the other. In Article 12 of this instrument, the stipulations on behalf of minorities in Poland are defined as "obligations of international concern" and are "placed under the guarantee of the League of Nations"; and it is agreed that "they shall not be modified without the assent of a majority of the Council of the League." The conclusion of this Polish Minorities Treaty is provided for in Article 93 of the Versailles Peace Treaty—an instrument which is itself the charter of Poland's reappearance upon the political map of Europe. Poland has now declared her intention to denounce the treaty of June 28, 1919, by a unilateral act, without the consent of the other parties to the instrument, and this announcement has drawn a severe reproof from Sir John Simon, representing one of these parties, and by M. Barthou and Baron Aloisi, representing two others. Meanwhile, in Poland itself, there have been official celebrations of the country's "release from a national humiliation." There would be much to be said for the "universalisation" of the minorities treaties if it were the case that Poland seriously cared for this object or believed that it was attainable. We fear, however, that she is simply putting it forward as a pretext for repudiating her own national obliga-

tions. The post-war history of Poland's minorities (who amount to one-third of her population) proves their abiding need of all the protection that the existing treaty can afford them. The German minority, among the rest, has suffered severely; yet the Nazi Press has no hard words for Colonel Beck. Even when it is at a German minority's expense, the opening of a fresh breach in the sacrosanctity of the peace settlement is a matter for rejoicing in Nazi eyes. The Poles would be wise to ponder over the significance of this German attitude towards a Polish folly.

* * *

Deflation in France.—M. Doumergue's Government is still looking to deflation to find a way out of the intense depression now prevailing in France. The details of the 1935 Budget, which is to be balanced by new economies, and the Finance Minister's case against devaluation, are summarised by our Paris correspondent on page 534. M. Germain-Martin still believes that a reduction of expenditure, taxation and the cost of living will set recovery going. He was clearly conscious, however, of the fact that recovery has already gone far in the non-gold countries, and he consequently attempted to show that France was in an entirely different position. Japan had been forced to protect her gold reserve; the United States wished to raise prices; and Great Britain's trade was carried on almost entirely with countries dependent on sterling. France, on the other hand, was prepared to lose gold, wished to lower prices, and did not live by international trade. There is some substance in these distinctions of M. Germain-Martin, but we cannot agree with his view that France is no worse off than other countries or that British unemployment is "out of all comparison" with that of France. French unemployment to-day is at a record level—simultaneously with an almost record gold holding; and depression has been intensified in the last six months in France, while in the non-gold countries there has been fairly continuous recovery. The depreciation of the dollar and the pound last January undoubtedly left French costs out of equilibrium with the external value of the franc, and depression and unemployment were intensified. During the spring and early summer French prices fell while sterling and dollar prices rose, and some approach to a new equilibrium may have been made. Lately, however, sterling has again depreciated, and French prices have actually shown a tendency to rise. Almost certainly the franc is again over-valued. Unemployment is increasing, and the consequent pessimism has depressed the price of Government bonds and so interfered with the reduction in interest rates. Will not more, and still more, "economies" be necessary to balance the Budget in these circumstances? M. Germain-Martin wishes to bring French exporters' prices into adjustment with those of their foreign competitors by reducing French costs. And in order to do this he wishes to reduce the cost of living. But the cost of living is the one thing which cannot be reduced, thanks to agricultural protection and indirect taxes generally. If prices were high as a result of strong demand and not of high indirect taxes, trade would be booming and there would be no need for price reductions. If taxation is to remain, however, and prices are to be cut, costs will have to be cut still further. Holland is in the same dilemma, as our letter on page 536 shows. M. Germain-Martin revealed a remarkable confusion of thought in actually arguing that disboarding must not be encouraged, since it would lead to expenditure and so to higher prices. It is indeed a mad world in which the Americans artificially raise prices so high that people cannot buy and the French discourage them from buying in order to reduce prices! Despite all M. Germain-Martin says, we doubt whether anything but devaluation can correct the artificial value of the franc and release the purchasing power necessary to stimulate internal revival.

* * *

Spain in Ferment.—The breakdown of civilised government in Central Europe is alarmingly reflected in the latest developments in Spain. Imitation "Fascism"—the genuine article is no more conceivable in Spain than in France—has kindled the fire of revolution, which is only just below the surface of Spanish "democracy," and

in the first place brought about, again as in France, a "united front," which was strikingly demonstrated last week in the biggest political gathering on record. Some 40,000 persons assembled at the Madrid Stadium to celebrate the new Socialist-Communist alliance, a feature of the meeting being the parading in military fashion of squads of young men and maidens wearing red shirts. The speakers declared that the Second Republic was a broken reed and that only a Marxist regime could now fulfil the just demands of the workers. Moderate members of the Socialist General Union of Workers like Señor Besteiro and Dr. Juan Negrin have now yielded to the clamour from below and authorised the regional alliances of the Left which had sprung up everywhere against the menace of a Catholic-Fascist *coup* similar to that of Dr. Dollfuss last February. What is still more serious, provincial branches (though as yet not the Central Committees) of the anarchist and anarchio-sindicalist organisations have agreed to collaborate. Meanwhile the evidence accumulates that the workers' leaders like Señor Largo Caballero and firebrand Socialists impressed by the fate of their coreligionaries in Austria and Germany have taken steps to arm their followers in readiness for a bloody upheaval. Señor Horacio Echevarrieta, a well-known shipbuilder of Bilbao—who is one of the strongest financial supports of the Republic—has been arrested in connection with a large purchase of arms and ammunition from the semi-official trust which was made some years ago but which, it is said, was intended for a rising of the Left. A number of trade union leaders are also under arrest. But police measures, whether against Right or Left, cannot remove the causes of the threatened clash. Apart from the 60 days of the electoral period, there have only been 33 days since the establishment of the Right Centre regime following upon Señor Azaña's downfall just a year ago on which the normal rules of the Constitution have operated. State of Alarm has followed State of Prevention. And nothing has been done to check the unscrupulous wage-cutting and exploitation of workers, in districts where they are poorly organised, which must be counted against the "moderate" regime. *El Socialista* has been confiscated at least as many times as ever any Catholic or Monarchist sheets were during the rule of the much-abused "Casas Viejas gang." It is just this incapacity for tolerance and for steering a middle course which makes one despair of any escape from violence culminating in a dictatorship of the Right or Left. Señor Gil Robles, the white hope of the Right, seems to appreciate that conditions in Spain, where anti-clericalism is such a strong force all over the country, do not allow of any emulation of Dollfuss. But he is being hard pressed by his followers and seems to be lending an ear to those who would put the clock back and remove the federalising tendencies of the Constitution. The remedy for the present fermentation is, on the contrary, further devolution. And Señor Azaña alone, who is neither Socialist nor crypto-Fascist, seems to be the only Spanish statesman to appreciate this fact.

* * *

Militarism or Grand Guignol?—Many have remarked on the hypocrisy of a German Government which professes a desire for peace and simultaneously instils militaristic doctrines into the minds of children. The militarising of education has now spread to Italy, so infectious is the deterioration in European public life which has set in since the Nazi revolution. A Bill has been approved by the Italian Cabinet which is intended to ensure that, from the age of eight, "all Italians shall be soldiers." Military training is made compulsory. University students will not be allowed to take their degrees if "they have not followed efficiently the military courses"; and for ten years after a man has been discharged from the army he must undergo these practical courses. Special attention is to be given to "moral and spiritual preparation" for war, and boys are expected to become "passionately interested" in military life. They must also be taught that "the function of Italy in the World War was a decisive one." If the rest of Signor Mussolini's new policy is to be taken no more seriously than this last statement, we need not perhaps be too concerned about it. In his militarist interludes the

Duce has always had the air of one whistling to keep his courage up. The present outburst may perhaps be taken as a sign that the Fascist authorities feel uneasy about their hold on the Italian population; or else that they wish to impress one or another of Italy's neighbours by the trumpeting of her "warlike" intentions. Whatever the reason for Signor Mussolini's relapse into militarism, however, there is no excuse for it. It is impossible to conceive a worse crime against humanity than the perversion of children's minds with doctrines which came within an ace of bringing civilisation itself to destruction within the lifetime of young folk who are even now not yet of age.

* * *

German Trade Debts.—We went to press too early last week to be able to report the rejection by the Lancashire cotton spinners of the German offer for the gradual repayment over twelve months of the accumulated debts owed by German firms for goods already delivered. One of the chief objections to the German proposals appears to be the suggestion that future business should be transacted on the basis of six months' credit, whereas it is reported that purchases from Czechoslovakia, for example, which incidentally has a trade clearing agreement with Germany, are being made on the normal thirty days' basis. This form of discrimination is naturally viewed with disfavour by the Government as well as by the British traders, and the Master Cotton Spinners' Federation held a joint meeting on Saturday at Bradford with representatives of the Bradford woollen industry and the coal-exporting and shipping interests on the North-East Coast. As a result of this meeting a joint committee called the British Exporters was appointed and a deputation sent to make representations to the Foreign Office, the Treasury and the Board of Trade. Meanwhile Sir Frederick Leith Ross has gone to Berlin to discuss the future of Anglo-German trade prospects, including among other things the bearing of the new import control introduced by Dr. Schacht upon the recently concluded exchange agreement from which "controlled" imports were expressly excluded. Though the effect of Dr. Schacht's new scheme, as we explained last week, should be to prevent the re-occurrence of the thoroughly unsatisfactory position under which German traders were permitted to order British goods without being assured of the means of paying for them, it is by no means clear to what extent Dr. Schacht intends to use his new powers for the purpose of cutting down British exports to Germany. Should he be driven to measures of this kind, and should he persist in ignoring the legitimate claims by British trade creditors, which already amount in the aggregate to several millions of pounds, public opinion in this country will without doubt insist on the establishment of a trade clearing under the Act hurriedly passed through Parliament in the summer. That would indeed be an unfortunate eventuality, because it would inevitably tend to diminish Anglo-German trade on both sides of the account. But events undoubtedly seem to be driving once more in that direction. Meanwhile Lancashire has probably been wise to reject the German offer, even at the price of continuing the present stoppage of deliveries. For unless a more satisfactory basis can be found for Anglo-German trade, it is plain that there can be no guarantee against the repetition of these unfortunate incidents.

* * *

Monetary Dissensions in New Zealand.—Monetary policy does not appear to be a subject which inspires unanimity. The New Zealand Parliamentary Committee appointed to investigate the monetary system has presented three reports. The main report attributes the New Zealand depression to the fall in overseas prices and not to a failure of the internal monetary system; but the possibility of taking monetary measures to counteract the price fall is also discussed. The report puts forward the following recommendations:—

- (1) Amalgamation of the Government lending departments under a mortgage board financed with mortgage bonds.
- (2) The use of trade and agricultural bills to finance production.

(3) The grant to the Reserve Bank of control over all institutions performing banking operations.

(4) A programme of public works planned by the Government and the banks to mitigate booms and slumps.

The second report, signed by three Labour and one Country Party member, attributes the depression mainly to monetary policy, and proposes State control of credit to maintain price stability regardless of the level of the exchanges. Lastly, Mr Downie Stewart, the former Finance Minister, reports, in splendid isolation, against the adoption of any new monetary measures. The main report is undoubtedly right in attributing the New Zealand depression primarily to the fall in world prices. It is equally right, however, in urging that a country which is dependent like New Zealand on a few primary products can do something by monetary policy to lessen the shock of falling prices. In such circumstances an alteration of the exchange rate is easier, quicker and more equitable than a reduction in costs. But the depreciation of the exchange should not proceed further than is necessary to adjust export prices to the existing level of money costs. Nor should the volume of credit and currency be inflated beyond the point which is appropriate to the new exchange rate. A "raising" of the New Zealand exchange beyond the present level would almost certainly be excessive.

Vital Statistics.—According to the latest report of the Registrar-General 156,636 live births were registered in the second quarter of 1934 in England and Wales in the proportion of 1,057 males to 1,000 females, and 119,034 deaths in the proportion of 1,045 males to 1,000 females. The following table summarises the main findings of the report:—

Year	Marriages		Live Births		Deaths		Natural Increase in Population	Population (Mid-year estimate)
	Number (000)	Annual rate per 1,000 of Population	Number (000)	Annual rate per 1,000 of Population	Number (000)	Annual rate per 1,000 of Population		
1925	296	15.2	711	18.3	473	12.2	238	38,890
1930	315	15.8	649	16.3	455	11.4	194	39,806
1931	312	15.6	632	15.8	492	12.3	140	39,983
1932	307	15.3	614	15.3	484	12.0	130	40,201
1933	317	15.7	581	14.4	497	12.3	84	40,350
1933—1st qr.	44	8.9	149	14.9	170	17.1	21	
2nd qr.	85	17.0	154	15.3	109	10.8	45	
3rd qr.	103	20.2	148	14.5	96	9.4	52	
4th qr.	85	16.7	130	12.8	122	12.0	8	
1934—1st qr.	59	11.8	149	15.0	146	14.7	3	
2nd qr.	85	16.8	157	15.6	119	11.8	38	
10-year ave.	47	10.0	166	16.9	156	14.9	10	
1st qr.	81	16.5	172	17.5	113	11.5	59	
2nd qr.	95	19.0	167	16.8	95	9.5	72	
3rd qr.	95	19.0	167	16.8	95	9.5	72	
4th qr.	80	16.4	153	15.4	117	11.7	36	

The marriage rate has generally been taken as a fairly sure though, judging by the record of the past ten years, a not very sensitive indicator of the general economic condition of the people. Certainly, if the quarterly figures for the past year and a half are compared with the ten-year average for the different quarters, and those for 1934 with those for the corresponding period of 1933, it will be seen that they follow the course of the recovery of last year, with its slowing down in the spring of 1934, fairly closely. As far as its seasonal movements are concerned, the birth rate is a direct function of the marriage rate; but it is also clear that it is still being influenced by the increasing use of artificial methods of birth control. Whether or not this falling off in the birth rate is good or bad, is a matter on which opinions may be divided; but when it comes to the question of the death rate there can be no difference of opinion. Here, in spite of a marked reduction since before the war, we cannot congratulate ourselves very heartily. Deaths last quarter were 10 per cent. more than in 1933, and have only been exceeded in a corresponding quarter during the past ten years in 1929. The infant mortality was also somewhat higher. Taking a longer view, the apparent absence of progress during the past ten years can be attri-

buted in some measure to the rising average age of the population, which must sooner or later cause an increase in the death rate. To the extent that the average age has been raised, science has progressed in her grim struggle against death. But what of the position in other countries? The figures are illuminating and humiliating. The death rates in London, Birmingham, Manchester, Liverpool and Glasgow (which ranged from 11.4 to 15.3 per 1,000 living in the second quarter of 1934) were all higher than in any of the Scandinavian capitals, in Amsterdam, Antwerp, Budapest or Warsaw, in the largest German towns, in the Dominion capital cities, or in Chicago or New York, while the rates in Berlin and Paris were 11.9 and 12.4 respectively. The position with regard to infant mortality was roughly the same. In this respect Glasgow is a notorious offender. The number of infants under one year per 1,000 live births who died in the second quarter of 1934 was 102, as compared with 61 in London and Berlin, 85 in Paris, and figures ranging from 35 for Amsterdam to 80 for Liverpool in the main cities with over 500,000 inhabitants in Europe, North America and the British Dominions. It is hardly a consolation to point to those with even worse records than ourselves, as, for example, India, with infant mortality rates of from 200 to 300 per 1,000 births, and death rates of between 3 and 4 per cent. in Calcutta and Madras.

The Gold Clause.—At its recent meeting in Budapest the International Law Association has once again had under discussion the possibility of establishing a uniform international practice in regard to currency in which contractual monetary obligations should be fulfilled. A great diversity of views exists in the different countries on the degree to which freedom of contract can be allowed in this matter. The old German Pandectists held one extreme view, namely that obligations for monetary payments *ipso facto* imply the liability to pay according to gold or silver value. The other extreme opinion was expressed in the Joint Resolution of the United States Congress of June 5, 1933, by which it was declared that every provision contained in any obligation purporting to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the U.S.A. measured thereby, was against public policy. A great variety of intermediate opinions are to be found between these two extremes. The French point of view is that in transactions having no connection with foreign countries the French franc is to be the sole legal measure of value. In this country, the position appears to have been determined by the House of Lords in its recent judgment upholding the validity of the Gold Clause. But the decision is not of general application and our Courts will always examine the circumstances of each case and will construe the language of the contract in every instance to ascertain the real intention of the parties. In Austria, the "Goldklausenverordnung" of March, 1933, fully recognises the validity of terms in a contract as to gold or foreign currency, and in Hungary the Courts will enter judgments for debts in the currency of the contract. The latest report of the Law Association advocates the greatest possible freedom in this matter, and it regards it as one of the conditions of renewed prosperity in international life that there should be no restrictions as to the freedom to express debts in gold or a foreign currency. It even considers that that freedom should be extended to transactions between nationals of the same country, especially where the transactions are economically related to international credit movements. It does, however, concede that, from a practical point of view, it may not be desirable that a considerable part of inland transactions should be determined on the basis of a currency or measure of value different from the national currency. The Association came to the conclusion that it was impossible to adopt an absolutely strict point of view, since whenever vital national interests are involved, the force of legal principles, and arguments based upon them, cannot prevail. The following motion was accordingly presented to the Conference, and after unanimous adoption by those who attended the special session which dealt with this question, was referred to the Executive Council for consideration:—

The Conference declares that (1) it is desirable in the sphere of transactions of international character that freedom of contract should be secured for the parties so as to render possible the contracting of debts in any given currency or in gold. (2) It is desirable that the same freedom should also be secured for credit operations where both parties are residents of the same country. (3) If a Government should find it necessary to restrict the freedom provided in No. (2), it is desirable that these restrictions should not be applicable to such contracts as are in economic connection with credit transactions of an international nature. (4) It is desirable that it should be made possible to perform obligations contracted in gold or foreign currencies by payments to be made in the currency stipulated for payment. The Conference, however, admits that the economic situation in some countries might necessitate the suspension of such payment; in such case it is desirable that the creditor should have an option on whether he requires the settlement of the debt by payments made in the home currency of the debtor or whether he agrees to the postponement of the payment until the restrictive measures have been repealed.

This resolution, calling in effect for the restitution of the gold clause, will, it is hoped, be the starting-point for the reconstruction of a legal basis for international lending.

Productivity in Coal Mining.—The accompanying chart, based on official statistics, shows the trend of the output of coal per man-shift worked in various countries since 1913. It does not, however, afford a comparison of the actual output per man-shift worked in these countries.

OUTPUT OF COAL PER MAN-SHIFT
(1913=100)

The increase in productivity per head through mechanisation since 1913 was most pronounced in Germany, Holland, Poland and in the United States. It was least marked in the United Kingdom, France and Belgium. In an effort to stem the downward movement in the demand for coal and in the profitability of mining since 1929 by a reduction of costs, mechanisation was speeded up in most countries. Progress was more rapid abroad because in most foreign countries the industry is in the hands of relatively large concerns, and the geological structure of the seams lends itself more easily to mechanisation than in this country. Mechanisation has made some headway in the United Kingdom since 1932, but rapid progress is hampered by the existence of a large number of relatively small mines, their geology and advanced development. But in general the chart shows that the world's coal industry has advanced in technical efficiency. Continuous reduction in costs of coal production, coupled with increasing economy in its

An Income of 5% plus a return of Capital

The Society has devised a scheme whereby an income of 5 per cent. on the Capital invested is secured for life, and on death a return of a portion of the Capital is guaranteed. The investor, moreover, is entitled to participate in the profits of the Society in respect of this portion, and will thus obtain the benefit of any future favourable trend in the investment situation.

utilisation, will ensure the future of the industry. The chart, however, is a warning to British coal-owners not to fall behindhand in efficiency and thus lose their share of world markets.

Parsimony in Potatoes.—The Board of Trade announced last week that an Order will be issued in due course under the Agricultural Marketing Act, 1933, providing for the regulation of the importation of main crop potatoes. There is already a duty on imported potatoes, and imports of main crop potatoes are at present subject to voluntary regulation. From November 1st onwards no main crop potatoes will be allowed to be imported except under licence. The National Federation of Fruit and Potato Traders' Associations is setting up an association of potato importers, and the Board of Trade have agreed to issue a licence to this association. The quantities to be imported in specified periods will be announced from time to time. In general, imports will be allowed of quantities proportionate to the average quantities imported by each importer during the three years ended August 31st. The absurdity of restriction on foreign supplies of potatoes, and in particular the folly of fixing import by reference to the figures of some arbitrarily chosen period in the past, is evident from the following table, showing the course of imports and home production in recent crop years:—

IMPORTS OF POTATOES INTO THE UNITED KINGDOM
(In thousands of Cwts.)

Imports	1929-30	1930-31	1931-32	1932-33	1933-34
August	332	204	335	321	59
September	138	66	761	104	21
October	87	272	1,833	97	51
November	93	245	2,823	139	72
December	64	297	1,634	70	54
January	36	449	3,044	85	48
February	27	585	1,588	65	31
March	80	543	1,195	125	65
April	163	1,342	2,006	266	208
May	974	1,958	2,157	1,378	1,063
June	2,438	2,835	3,112	1,447	1,356
July	987	1,489	1,744	297	208
Total Imports	5,419	10,285	22,232	4,394	3,236
Home Crop	117,340	89,180	77,040	111,516	110,073
Total Supplies	122,759	99,465	99,272	115,910	113,309

The distribution of imports during the crop year shows that purchases of foreign potatoes are normally insignificant until May, when the supply of home-grown "old crop" varieties begins not only to run short but to deteriorate in quality. Only during the season 1931-32, and to a lesser extent in 1930-31, when the home crop was small, did imports assume substantial proportions earlier in the year. As the following table shows, in no year did the importation of potatoes towards the end of the season result in a collapse of prices. On the contrary, prices tended to be low when the home crop was large and imports were small.

PRICE OF POTATOES (GOOD ENGLISH)
(£'s per ton)

End of	1929-30	1930-31	1931-32	1932-33	1933-34
August	£ s. d. 5 0 0	£ s. d. 5 10 0	£ s. d. 6 0 0	£ s. d. 5 5 0	£ s. d. 4 15 0

June	6 0 0	7 0 0	6 10 0		
July					
Average	4 0 5	6 17 6	9 15 5	5 7 1	5 5 10

The average price of potatoes during the season 1933-34 showed no increase on the previous year owing to an abundant home crop and despite import duties and voluntary regulation of foreign supplies. As a result farmers reduced the acreage under potatoes from 811,000 in 1932-33 to 767,000 in 1933-34, and the total yield of the crop, forecast at 120 cwts. per acre, is estimated at about 92,000,000 cwts. Since this quantity is far below requirements, an attempt is apparently to be made to raise prices by a further turn of the restriction screw.

Iron and Steel Production in August.—Iron and steel production figures for August reflect the usual holiday influences. The number of blast furnaces in operation declined by 2 to 97 during the month, and production of pig-iron declined by 25,000 tons to 503,300 tons. Steel production, which in July amounted to 718,200 tons, fell to 667,000 tons. Compared with August last year, however, pig-iron production showed an increase of 38.7 per cent. and steel production one of 21 per cent. Imports of iron and steel at 102,200 tons were lower than in any previous month except June, while exports at 193,400 tons were higher than in any previous month except June and July. Exports in the three months ended August were 28 per cent. higher than in the corresponding period of 1933. The decline in imports in August as compared with July was due in the main to reductions in the imports of billets, blooms and slabs, and of steel bars, rods, shapes, etc. All but 555 tons of the 11,340 tons of pig-iron imported came from British India, and of this total 511 tons consisted of pig iron smelted wholly with charcoal and 44 tons of vanadium titanium iron produced in an electric furnace. Not only has Continental pig-iron been excluded from the British market, but certain tonnages of British pig-iron are being exported to Continental countries. In August 1,654 tons went to Belgium, 1,173 tons to France, and 2,165 tons to Italy. Of the 193,400 tons of iron and steel exported in August tinplates and sheets accounted for 29,500 tons; rails for 23,300 tons; tubes, pipes and fittings for 27,600 tons; steel bars, rods, angles, etc., for 17,700 tons; galvanised sheets for 16,400 tons, and blackplates and sheets for 15,500 tons. Of the tinplates exported 7,416 tons went to Canada, 3,043 tons to Australia, 2,973 tons to Argentina, and 1,602 tons to Holland. Great Britain's best markets in August for iron and steel taken as a whole were China (23,348 tons), Union of South Africa (17,078 tons), Canada (14,278 tons), Australia (12,958 tons), British India (12,247 tons), and Denmark (11,975 tons). The outlook for the autumn is considered favourable, especially in the home market.

August Overseas Trade.—The trade returns for August, though not as favourable as the figures for previous months, are still moderately encouraging. The percentage increase, both in imports and exports, compared with the corresponding month a year ago was not as marked as earlier in the year. Moreover, both re-exports and transshipments under bond were appreciably lower than in August, 1933. Consequently, the excess of imports over total exports was again substantial. For the first eight months of 1934 this excess amounts to £187,923,000, an increase of £27,714,000 over the corresponding period of 1933, and of £2,987,000 over 1932. When, however, economic activity increases in an industrialised country, it is natural that at first the trade balance should become un-

favourable owing to the time taken in converting materials into manufactures. At the present stage, therefore, there is no reason for regarding the state of the trade balance with anxiety. The tables below give the August figures and the cumulative figures for the first eight months of the year, with comparisons for the two preceding years:—

MONTH OF AUGUST					
	1934	Increase (+) or Decrease (–) as compared with			
		August, 1933	August, 1932		
Imports	£'000 60,027	£'000 + 3,352	% + 5.9	£'000 + 6,701	% + 12.6
British exports	32,090	+ 1,093	+ 3.5	+ 3,538	+ 12.4
Re-exports	3,302	– 999	– 23.1	– 190	– 5.5
Total exports	35,392	+ 94	+ 0.3	+ 3,348	+ 10.4
Excess of imports over total exports	24,635	+ 3,257	+ 15.3	+ 3,352	+ 15.7
Transshipments under bond	2,019	– 330	– 14.0	– 25	– 1.2

FIRST EIGHT MONTHS					
	Jan.–Aug., 1934	Increase (+) or Decrease (–) as compared with			
		January–August, 1933	January–August, 1932		
Imports	£'000 479,444	£'000 + 49,281	% + 11.4	£'000 + 13,504	% + 2.9
British exports	255,089	+ 18,911	+ 8.0	+ 10,211	+ 4.2
Re-exports	36,431	+ 2,657	+ 7.9	+ 305	+ 0.8
Total exports	291,521	+ 21,567	+ 8.0	+ 10,516	+ 3.7
Excess of imports over total exports	187,923	+ 27,714	+ 17.3	+ 2,987	+ 1.6
Transshipments under bond	15,651	+ 59	+ 0.4	+ 1,670	+ 11.9

The value of imports classified as raw materials and articles mainly unmanufactured, rose from £16,426,279 to £17,553,197 and imports of articles wholly or mainly manufactured increased from £13,049,205 to £14,747,087. The latter group, however, includes a substantial proportion of raw materials and articles subject to further processes of manufacture, which are largely responsible for the increase. Thus, the value of non-ferrous metals imported in August, at £1,942,511, showed an increase of £594,585 on the corresponding month a year ago, and imports of oils, fats and resins rose by £541,209. The only manufactured items to show an appreciable increase are machinery (chiefly from the United States and Germany) and motor cars (chiefly from the United States). The relatively small increase in British exports is largely due to declines of £611,798 and of £140,556, respectively, in our sales abroad of non-ferrous metals and manufactures thereof, and of wool (raw, waste and rags). The quantity of imports and exports of certain important products is shown in the next table:—

IMPORTANT COMMODITIES Month of August				
	1932	1933	1934	
Imports:				
Iron ore and scrap	thous. tons	112	240	400
Soft timber (sawn)	thous. loads	565	988	903
Other than planed or dressed	thous. loads	49	100	99
Planned or dressed	thous. loads	956	1,134	1,031
Raw cotton	thous. cents	31	46	23
Sheep's and lambs' wool	mn. lbs.	221	156	395
Raw rubber	thous. cents			
Exports:				
Coal	thous. tons	3,182	3,202	3,269
Iron and steel manufactures	thous. tons	156	155	193
Machinery	thous. tons	20	23	26
Cotton yarn	thous. lbs.	9,132	11,033	11,183
Cotton piece-goods	mn. sq. yds.	181	149	169
Wool tops	thous. lbs.	2,659	3,722	2,650
Woolen yarns	thous. lbs.	665	702	813
Worsted yarns	thous. lbs.	2,855	3,892	2,527
Woolen tissues	thous. sq. yds.	5,319	6,742	7,671
Worsted tissues	thous. sq. yds.	2,878	3,748	3,343
Linen piece-goods	thous. sq. yds.	3,509	6,132	5,354
Locomotives	tons	38	1,796	83
Motor vehicles and chassis	number	2,270	3,212	4,038
Re-exports:				
Raw cotton	thous. cents	40	40	75
Sheep's and lambs' wool	thous. lbs.	21	28	9
Raw rubber	thous. cents	72	59	87

The sharp increase in our imports of iron ore and scrap reflects the improvement in the iron and steel industry. The improvement in exports was most pronounced in the case of iron and steel, machinery and cotton goods, the increase in value exceeding £400,000 in the case of each item.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

DEADLOCK IN THE TEXTILE STRIKE

THE first week of the textile strike developed the expected bloodshed and deadlock. Apparently over half the mills have closed, some owners having locked out their employees because of fear of violence. Several States have called out the National Guard. There is no evidence that the strike is popular with any large proportion of the workers; and it is clearly very unpopular with at least a fair minority. A mediation board of three members has been appointed, under the chairmanship of Governor Winant of New Hampshire, a man who has won a distinguished reputation as a mediator in industrial disputes. The strikers' organisation is willing to accept arbitration on condition that pending decision all mills shall be shut down; but the employers' organisation has declined to accept such a premise. There is therefore a deadlock, with the strikers determined to close the mills now open and the owners intent on reopening the mills now shut, wherever the employees wish to return to work.

Despatches from Hyde Park (the President's vacation home) indicate that discussion of the modification of N.R.A. continues. The only dispatch that throws light upon the trend of policy confirmed the previous impression that price-fixing is not likely to remain as a permanent general feature of N.R.A.; and that in its next phase, the so-called codes of fair competition will be concerned chiefly with the regulation of hours and wages. This is, according to reports, the drift of industry itself, the code authorities having found it difficult to enforce the cartel prices and other features. The National Industrial Recovery Act would expire under Statute next June; but the Press reports that the Administration, which had been expected to ask Congress for permanent legislation, now intends to ask for an extension of only one year. It is hardly correct to speak of N.R.A. as collapsing or disintegrating. Its initial structure has proved too rigid for events and circumstances, and pressure both from inside and out is forcing modification.

GOVERNMENT REFINANCING AND THE DOLLAR

The Government financing, announced on September 10th for September 15th, met the market, but indicated some deterioration of Government credit. A short-term issue of about \$500 millions bearing 1½ per cent. is refinanced by a two-year note at the same rate. Two called series of 4th Liberty Loan 4½ per cent. bonds may be exchanged for a tax-exempt 2½ per cent. four-year note or a 3½ per cent. 10-12 year bond. In June the Treasury was able to sell a 20-year bond at 3 per cent. The weakness in Government securities since the silver announcement in early August has been pronounced, and this weakness was aggravated by the intimations that the intent to balance the Budget in the next fiscal year seemed to be abandoned.

The dollar has rallied smartly against foreign currencies in the past week. In part, this could be explained by the export of about \$12 millions of gold; but it is widely believed that the Stabilisation Fund intervened with an unreported export of about \$6 millions. At the same time, it is said that silver purchases by the Treasury were suspended; although silver imports by individuals for commercial purposes are currently permitted. The most confusing rumours circulate, ranging from opinions that a free market in both gold and silver is to be allowed, to those threatening a complete prohibition of private American transactions in silver. It is also said that the foreign exchange control has tightened perceptibly.

Under these influences it is not surprising that the dollar should have rallied, and the Press has remarked that this gold export gives the first positive test of the intent of the Administration to support the 59-cent dollar. The continued weakness of Government securities, however, reflects not merely Budget uncertainties, but doubt of the

permanence of the present Treasury policy regarding the dollar. The Committee for the Nation is again actively campaigning for further devaluation, and this time hinting that a gold price beyond \$41.34 might be its ultimate objective.

Meanwhile, commodity prices continue to rise, the month of August having been marked by a steep advance. The following table of the groups of the Bureau of Labour Statistics index illustrates the movement during this period:—

BUREAU OF LABOUR INDEXES (1926 = 100)				
Index	July 14, 1934	Sept. 1, 1934	Percent- age In- crease since lowest point in 1934	Percent- age In- crease since lowest point in 1933
All commodities	74.5	77.5	9.2	30.0
Farm products	64.5	73.5	28.0	82.8
Foods	70.8	76.6	22.0	43.4
Hides and leather	87.6	84.5	0.4	25.2
Textile products	71.4	71.3	0.7	40.9
Fuel and lighting	73.8	75.1	3.7	23.5
Metals and metal products	86.4	85.9	3.1	12.0
Building materials	86.9	86.3	0.9	24.0
Chemicals and drugs	75.5	76.3	4.1	7.2
House-furnishing goods	83.1	82.9	1.5	15.6
Miscellaneous	69.9	70.3	6.7	22.0
All commodities other than farm products	78.3	78.4	1.0	19.7

The advance in prices this year, although it has been sufficient to lift a comprehensive index of 784 commodities almost 10 per cent. since June 1, has been mostly concentrated on farm products, and notably on foods. It is the direct consequence of curtailed supplies, the drought superimposed upon the programme of the A.A.A. In a number of the industrial groups the recent tendency, as shown in the table, is slightly downward. The rise in food prices has become a matter of considerable comment in urban households.

No country seems to have experienced a recent rise in prices comparable to that of the United States. From the lowest point the Bureau of Labour index has risen from about 60 to about 78 in some eighteen months, with the index of farm prices, which was the special object of solicitude, almost doubled. An advance of 30 per cent. in so comprehensive an index as that of the Bureau of Labour Statistics, with more sensitive indices of primary commodities doubling in the same period, is an outstanding economic phenomenon, particularly when set against the simultaneous data for industrial activity and unemployment. Eighteen months ago public opinion was apparently unanimous in supporting a policy promising higher commodity prices; at the present time complaint of high prices is fairly vocal, and the resistance of the urban populations to high or higher prices may have some influence on Administration policy.

NEW YORK, September 10.

FRANCE

THE BUDGET FOR 1935

M. GERMAIN-MARTIN, Minister of Finance, has just laid his 1935 Budget before the Chamber. This Budget is made up as follows:—Revenue, 47,022 million francs; expenditure, 46,986 million francs; surplus, 36 million francs. These figures show a large decrease in the Budget, since "ways and means" reached 53,626 millions in 1930-31 and 50,000 millions in 1933.

M. Germain-Martin states in the preamble to the Budget that it is necessary to reduce expenditure, since the revenue has diminished, while it is impossible to increase the burden

of taxation. Since July, 1932, successive Governments have realised economies amounting to 4,500 millions. New taxes have been imposed to yield 3,000 millions, and exceptional efforts have yielded 2,500 millions. These strenuous resources, however, proved insufficient, and the deficit totals 21,082 millions in 1931, 1932 and 1933 inclusive. The 1934 Budget shows—following the latest fiscal receipts—an actual deficit of 2,300 millions. But the decree laws, which have been published between April 4th and June 30th, will wipe out this 1934 deficit, except, perhaps, 500 millions. These decrees, which will realise 4,000 millions of economies in 1935, have allowed the Budget to be reduced to 47,000 millions.

The question is whether the present equilibrium could be safeguarded during the fiscal year. The preamble to the Budget Bill states that this is principally a question of military expenditure. The credits for land and sea defence and Defence of Colonies have been limited for 1935 to the real expenditure of 1934. The preamble also points out that the balancing of the Budget will depend in the future upon business recovery. "We hope," it continues, "that a perfect equilibrium will be insured in the future by a recovery of economic activities which will be assisted by the proposed Reform of the State." The preamble adds that "general protectionism has gradually brought French foreign trade to a stop. In the internal market, consumption has been reduced. And the turnover and profits of companies have proportionately decreased." Reference is also made to tariff barriers which "will lead to material ruin and the gradual disappearance of civilisation itself," a remark which, perhaps, indicates that this policy will be modified. Again, the preamble shows that disbanding and a fall in interest rates should have a decisive influence on fiscal receipts. The movement in the long-term rate which has occurred since the constitution of the present Cabinet is shown by the price of the following bonds:—

	March 31	May 31	August 31
P.L.M. 3% new funding	299	347	340
Union d'Electricité 4½%	732	840	785
Crédit Foncier, 1930, 4½%	740	835	799

Prices, according to the preamble, show a slight decline at the end of August in comparison with May. This falling off "is a consequence of the grave events which characterised European policy during this period from an economic and financial point of view." The French capital market remains very sensitive both for long-term and for short-term money, and foreign policy as well as internal policy are affecting both subscriptions to Treasury bonds and the price of public funds. The preamble concludes by contending that the maintenance of the Doumergue Government is necessary to financial stability.

Public opinion has naturally received with satisfaction a Budget which has been balanced without any new taxes or sacrifices. Special attention has been directed to the promise made that the Government, which has till now concentrated principally on the financial problem, now intends to devote itself to the economic situation. The present excessive protection given to both agricultural and industrial interests is provoking much complaint on the ground that it lies at the root of the high cost of living and the depression of business. It seems evident that if the Finance Minister was at the same time Minister of Agriculture and Trade a lowering of trade barriers might be undertaken for the sake of business recovery and the balancing of the Budget.

THE CASE AGAINST DEVALUATION

M. Germain-Martin also argues in the Budget preamble that the balancing of the Budget, the reduction of expenditure, and the cutting of interest rates constitute a coherently connected policy, which is incompatible with devaluation. "Monetary experience," he says, "urges an opposite policy. The Government has already made its choice with a perfect knowledge of what Parliament and the country wishes." M. Germain-Martin accuses M. Paul Reynaud and other supporters of devaluation of ignoring differences which, he alleges, exist between the French situation and the situation in the countries which have devalued their currencies: Great Britain, United States, Japan, etc. In Great Britain, M. Germain-Martin argues, the deficit on the balance of payments and the burden of the public debt necessitated the devaluation of the pound.

The financial and commercial situation of Great Britain and the Dominions is an exceptional one, with the result that devaluation did not sensibly affect British prices. "In the markets of the whole world," he adds, "prices of raw materials are quoted in British money. As a consequence of the gold-exchange standard, the currencies of numerous export countries were connected with sterling. Lastly, the Dominions export products which are complementary to those of the Mother Country."

The Government of the United States devalued the dollar in order to increase purchasing power and alleviate the burden of internal debts. The devaluation of the dollar was to raise prices, liquidate debts, and induce the public to fly from the currency into the stock and commodities markets. In Japan the gold embargo was imposed to protect the gold stock, which would naturally be used in paying for imports.

"It appears thus," M. Germain-Martin concludes, "that devaluation is an expedient which is used as a last shift, when all other means have failed. If France has been severely hit by the economic crisis, its situation is not more alarming than that of other countries. The number of unemployed is not to be compared with that of Great Britain, or the burden of debt with that of the United States, or the extent of poverty with that of Japan."

The Treasury will have to face two maturities in the near future. On September 30th the maximum authorised issue of Treasury bonds must be brought back from 12,000 to 10,000 millions. Arrangements have been made for this. The Treasury will take the opportunity to reimburse the 500 millions of francs which represent the balance still owed of the 1,000 million francs loan which was launched in Holland last March. On the other hand, 6,000 millions of ten-year bonds are coming to maturity on October 25th. The long-term loan of June last, however, has provided for this maturity, since it both produced 3,000 millions of cash and enabled 2,000 millions of these bonds to be funded beforehand.

INDUSTRIAL PRODUCTION STILL FALLING

The Statistique Générale has just published its monthly figures showing industrial production in France:—
(1913 = 100)

	July, 1933	May, 1934	June, 1934	July, 1934
General index	112	101	99	97
Engineering	114	99	98	99
Iron and steel	90	80	80	80
Textiles	77	66	61	58
Mines	99	103	102	102

In the motor industry, 14,950 automobiles and 1,751 lorries have been put on the road, compared with 13,229 and 2,231 in July, 1933.

The figures for the cotton industry are as follows:—

	1934			
	April	May	June	July
Spinning (average per spindle in kilograms):				
Production	1,552	1,593	1,453	1,370
Deliveries	1,520	1,608	1,411	1,364
Stocks	2,626	2,634	2,423	2,482
Unfulfilled orders	5,373	5,126	4,568	4,459
Weaving (average per loom in pieces of 100 metres):				
Production	5.18	5.00	4.95	4.49
Deliveries	4.43	4.43	4.85	4.30
Stocks	8.88	9.62	9.09	9.87
Unfulfilled orders	14.51	12.75	12.63	11.74

The figures of bankruptcies show a new slight decline compared with the preceding months. Bankruptcies were 747 in August, against 860 in July and 1,036 in June; bankruptcies and judicial liquidations were 1,096, against 1,212 in July and 1,414 in June.

The sixty-eight largest French producers and distributors of electricity have sold, during the first six months of 1934: 5,248,652,328 kwh. against 4,964,532,676 kwh. for the same period of 1933; of which 1,978,077,663 kwh. (against 2,017,774,729 kwh.) was from thermic plants and 3,270,554,665 kwh. from hydraulic ones.

PARIS, September 18.

GERMANY

THE NEW IMPORT CONTROL SYSTEM

THE new system of State-control of imports which comes into force next week is expounded in some Government newspapers as not necessarily involving any further reduction of total purchases from abroad, but only an improved distribution of the imports of particular goods. Already before the creation of the ten new Supervision Boards, which brought all classes of goods under control, the principle had been put into force that current imports should not exceed the resources available for payment. The new system, it is declared, merely maintains this principle, while also preventing excessive imports of particular goods at a given time with the accompanying risk that the import of other necessary goods might have to be curtailed.

The "exchange certificates," which are henceforth to guarantee payment for imports, will be granted in principle to importing firms which will continue to be the direct debtors to foreign exporters, and will only be granted to consuming manufacturers if these were formerly in the habit of buying directly from abroad. The system threatens to aggravate the bureaucratisation of business which has proceeded ever since the Nazis attained power. Although it is denied that any general reduction of imports, other than what may be caused by increased payment difficulties, is designed, some Press comments treat the Supervision system as a means of punishing foreign countries for their alleged anti-German policies, in particular punishing the long-term creditor countries for enforcing the withdrawal of the complete default announced last summer.

Little progress towards independence from foreign materials is being made as far as substitutes are concerned. The home production of natural materials, however, is still being fostered, mostly at heavy cost to the public. The programme for 57 new petroleum borings in 1934 is being financed as to half the cost by Reich loans. Experts declare that in the next few years the home output of benzol, motor fuel (with admixture of spirits), Diesel oils, and benzine from hydrogenation will reach annually 1,500,000 tons, which is 68 per cent. of the highest recent consumption of 2,200,000 tons, leaving 700,000 tons to be imported. Experiments are being made with wood-generators for automotive vehicles, adaptation to which is being locally encouraged by loans to individuals of up to Rm. 800. The economic effects of these costly processes is officially ignored.

UNEMPLOYMENT AND FORCED LABOUR

Money this week has been somewhat easier. The wholesale-price index for September 12th was 100.3, against 100.5 for September 5th. The rise in the manufactures group continues. The cost-of-living index for August was 123.3, against 122.9 for July. The industrial situation is little changed. The Reich Labour Leader, Herr Hierl, describes the introduction of universal, equal Labour Conscription for one year, as among the most pressing Nazi Party problems. A report of the Konjunkturinstitut shows that unemployment in cities of over 100,000 inhabitants has fallen much less than in the country since March, 1933. The latest (July) Reich average of unemployed is 37.2 per 1,000. In the cities the drop has been from 128.1 to 67.3; in smaller towns and in the country from 67.7 to 23.9. In connection with the recent measure for replacement of young and unmarried by older workmen, it is shown that unemployment has up till now hit the elder more than the young age-classes. Under the redistribution scheme nearly all married persons of over 25 will be given work. Since the announcement of the scheme marriages of young persons have increased.

The iron and steel market reports for August are favourable. Foreign orders for pig-iron, bars and tubes are reported to have increased. Pig-iron production was 798,550 tons, against 767,200 tons in July; in the first eight months 5,461,800 tons, against 3,294,100 tons. Home and foreign orders for the engineering branch increased. The number of automotive vehicles on July 1st was 1,888,000, of which 984,000 were motor cycles and 674,500 private

cars, the total being 12 per cent. higher than a year earlier. The Ford Motor Company, of Cologne, has decided to reduce its capital by 50 per cent. in order to cover operating losses and to restore it to the former level by issuing new shares, which will be taken at par in discharge of debts by the creditors, the American and English Ford Companies. The monthly reports of the Associations of Cotton Spinners and Cotton Weavers are relatively favourable. The former Association mentions attempts to spin finer yarn numbers in consequence of the suspension of imports. The greater part of the textile industry has orders for some months ahead. Retail trade turnover in July was 9 per cent. higher than in the same month of 1933, and the turnover of the department stores was 7 per cent. higher.

The passive trade balance in August declined to Rm. 9 millions, the most active of this year with the exception of March, which had a small active balance. The July passive balance was Rm. 41 millions. The improvement over July was not due to the restriction of imports of raw materials, which declined very little, but to a big seasonal decline in imports of foodstuffs and to a small increase in exports, mainly of manufactured goods. Imports of textile materials, mineral oils, wood and rubber somewhat declined; of other materials, including oil seeds, increased. Imports from Great Britain and Sweden, the United States, the Argentine and Brazil decreased. A probable factor in the increase in exports was the decline, contrary to the seasonal rule, in July. The main increase was to overseas countries, the United States, Japan, Brazil and Turkey. Sales to Europe changed little; they increased, however, to Great Britain, Russia and Italy. In the increase of Rm. 12 millions in export of manufactured goods, the chief factors were: Textiles, Rm. 4.5 millions; chemicals, Rm. 2.5 millions; machinery, Rm. 2 millions; and paper, Rm. 1 million. Exports of potash salts also continued to increase. During the whole of this year the potash export trade has been very active, but export prices have fallen. As the August trade balance was influenced by seasonal factors, it does not necessarily foreshadow a lasting improvement. The following are the complete figures:—

	July	August	Jan.-Aug.
	Millions of Reichsmarks		
Imports:			
Livestock	2.4	2.5	23.6
Foodstuffs	98.9	81.4	674.6
Raw and half-manufactured materials	199.2	194.9	1,818.6
Manufactured goods	62.3	63.7	489.1
Totals	362.8	342.5	3,005.9
Exports:			
Livestock	0.2	0.2	2.9
Foodstuffs	8.8	7.1	87.0
Raw and half-manufactured materials	61.9	64.4	533.7
Manufactured goods	250.4	262.2	2,117.7
Totals	321.3	333.9	2,741.3

The Reichsbank's return for September 15th indicates increased tension. Total investments, contrary to the rule of the second week of the month, did not decline, and even slightly increased. In the first half of the month only 30 per cent. of the credit increase on the last August week was paid off, as against nearly 50 per cent. in the corresponding period of last year. Even advances increased against all precedent in a second week. Deposits have risen to the record high total of Rm. 723 millions, as against Rm. 390 millions at the same date last year. This great increase is an outcome of the restrictions on foreign payments—the Conversion Fund, bookings to the credit of foreign central banks, which it has been impossible to liquidate, and foreign-exchange rationing. The great expansion of deposits is one explanation of the swelling of credits, for

GOOD FARE and a cheap fare to Town for business men at the Laleham Hotel, Laleham-on-Thames, near Staines.

Write or 'phone STAINES 789

against funds thus kept idle business is taking Reichsbank credits. That the accumulation of untransferable debt-service money, a contingency envisaged by the Dawes Plan but never tested, would lead to undesirable developments in currency and credit was predicted here by experts soon after the formation of the Conversion Fund.

BERLIN, September 18.

AUSTRIA

RECOVERY IN HEAVY INDUSTRY

THE Austrian Konjunkturinstitut remarks in its report for August that the political events of the last week of July caused no disturbance to the Austrian economy. Figures now available clearly show that the process of consolidation has not been interrupted. Of industrial enterprises which have interest and capital payments to make to the banks only one-third were able to pay in 1933, while this year two-thirds of them have been able to pay. This means greater liquidity in Austrian banking, and especially at the Credit-Anstalt-Bankverein, but it also shows that the business situation is easier.

The Austrian Minister of Finance has informed the Finance Committee that the deficit on the 1934 Budget will amount to about 140 million schillings as a result of the increased expenditure for public safety during the February and July revolts. This is a maximum estimate which would be correct if revenue should not increase and further enhanced expenditure for armaments should be unnecessary. Immediately upon the return of the Minister of Finance from Geneva, negotiations began for fresh retrenchment, and it is believed that about 10 to 15 million schillings of expenditure can be saved.

On the basis of the Lausanne protocol the Government already has the power to issue Treasury bonds to a total of 75 million schillings. Of the deficit of 140 millions 82 million schillings "has been covered out of available cash resources," as was stated in the official Geneva communiqué. These cash resources consist of the remainder of the proceeds of the Lottery Loan, amounting to 27 million schillings, and of the proceeds of the Treasury bonds so far issued, namely 55 million schillings. In the next few months the Government still has the power to issue Treasury bonds amounting to 20 millions in order to bring the total up to the maximum limit of 75 million schillings. This would still leave a gap of 38 million schillings. As stated above, 10 to 15 millions may be saved by economies; for the rest the Austrian Government would have to secure permission to issue short-term Treasury bonds. It is assumed that this permission will be granted as soon as the necessity arises.

For the coming year the conversion of the League of Nations Loan will create a breathing space. At least 35 million schillings per year will be saved Austria through the present decision of the Finance Committee and of the Control Committee. But, if in the individual negotiations which are to be carried on by the Austrian Ministry of Finance in London, Paris, Berne and Rome, the term of the loan is lengthened by 15 instead of 10 years, and the first amortisation payments have to be taken up only after two or three years, the saving for the Austrian Budget would be 60 million schillings per year. This would avoid the necessity of issuing a new international loan.

The question of a new loan for productive investment appears to have been discussed in Geneva. Without such a loan the Government's investment programme could not be continued. For the Federal Railways, the Tobacco Monopoly, the salt works, the Austrian Federal Forests, and for the extension of the telephone system, sums amounting to about 200 million schillings would be necessary, and interest beyond 5 per cent. may not be paid. Only thus could the electrification of the main line from Salzburg to Vienna, and of the line from Vienna to Graz, be executed. That last year's investment policy affected the labour market, is proved by the fact that there are now 43,000 fewer unemployed in receipt of the dole than there were last year, a reduction of more than 20 per cent. Electrification, in particular, ab-

sorbs so many of the unemployed and helps so many branches of industry that a general improvement would be most likely as a consequence. The electrical industry and the building industry, which could be put on full time by the electrification work, are now working at only 30 per cent. of their normal capacity.

GERMAN DEMAND FOR WOOL

In other branches of industry there has been marked improvement within the last year. For example, as a result of large and steady orders from Japan, Russia and Germany, the steel industry has advanced to 80 to 90 per cent. of capacity, the cotton-weaving mills to 80 per cent. and the spinning mills to 70 to 80 per cent. At present nearly the whole of the heavy industry is working up to 50 to 60 per cent. of normal output, and an improvement is to be expected in the near future, as, since the beginning of September, Germany has been taking special interest in Austrian semi-manufactured goods. German industry, which is unable to cover its requirements of raw materials in Western countries on account of the exchange difficulty, is now trying to get either raw products or semi-manufactured goods by way of Austria. As foreign trade with Germany is strongly in Germany's favour, Germany hopes to get these fresh supplies from Austria against deliveries of German goods. Inquiries which have been received within the last 14 days by Austrian firms cover an amount of 40 to 50 million schillings and apply chiefly to rolled goods, yarn, leather, steel, cellulose, kaolin, magnesite and even cotton and wool. Inquiry for wool is so large that it has been resolved to set up new sheep farms with the help of foreign capital.

There has been practically no change in the general price level from May to September. The wholesale trade index (in gold) has remained unchanged at 110. The retail price index, which stood at 142 from December, 1933, to July, 1934, declined in August to 141. This is largely the result of the unusually low price of fruit on the Vienna markets, due to superabundance of supplies during the summer months. The new crisis tax has made some finished goods dearer, but since important articles of food such as bread and pork have recently fallen in price, the general cost of living has declined. Imports in July were down to 85 million schillings, the lowest point since the foundation of the republic. Austria is not buying abroad even one-third of the purchases she made during the boom period. The slow improvement in heavy industry, on the money market and in banking has not yet resulted in a recovery of consumption and trade.

VIENNA, September 16.

HOLLAND

DEPRESSION AND HIGH COST OF LIVING

DEPRESSION still dominates the situation. Although the Central Statistical Bureau's index of industrial unemployment was lower in the first quarter of this year than last, the improvement dwindled in April, and in May last year's figure was surpassed (26.7 and 26.2 per cent. respectively); for June the figures were 27.2 in 1934 and 24.8 in 1933. The index of the net imports of raw materials for the second quarter was 119, compared with 109 last year, although the improvement over 1933 has been vanishing month by month. Exports of manufactured articles were about 8 per cent. less in value in the second quarter of 1934 than in 1933, but there was an increase of about 4 per cent. in volume. The export industries are protesting about the slow progress being made in readjusting production costs to those of other countries.

Judging by the complaints of unremunerative prices also made by manufacturers producing goods for the home market, it seems that their rate of production, bad as it is, actually gives a flattering impression of the real state of affairs. The struggle to find domestic markets to replace those lost abroad has resulted in still fiercer competition in many branches.

Stock Exchange prices are still falling. The following table, compiled by the Central Statistical Bureau, sets forth the official index of Amsterdam Stock Exchange prices:—

	(1921-1925 = 100)				
	April	May	June	July	August
Industrials	38	36	34	34	33
Bank and financing....	68	65	65	65	66
Shipping.....	3.0	2.8	2.4	2.3	2.5
Other branches.....	43	42	41	40	41
Indies.....	38	39	37	37	38
Petroleum	50	49	50	49	48
Average.....	34	33	31	31	31

It is widely pointed out here that Holland is the most expensive country in Europe, apart from France. If the gold standard is to be maintained, deflation needs to be put into execution far more energetically, especially now that foreign competition is again making itself felt still more keenly than before, through the further depreciation of sterling. The cutting of production costs is a prime necessity, if unemployment is to be coped with effectively. Further wage cuts, however, are out of the question, as the high cost of living does not permit it. The cost of living, instead of falling, has again risen in August, as a result of a further rise in the price of food, as the following table shows:—

	General		Food	
	Price Index	Price Index	Price Index	Price Index
	(48 articles)	(28 articles)	(1901-1910=100)	(1901-1910=100)
1913	112	112	112	112
1928	167	176	167	176
1929	159	167	159	167
1930	131	134	131	134
1931	108	112	108	112
1932	87	93	87	93
1933	82	85	82	85
1933, August	81	82	81	82
1934, July	84	90	84	90
1934, August	85	92	85	92

A MOVEMENT FOR DEVALUATION

Because deflation is making such slow progress, voices are now being raised in some quarters advocating the devaluation of the currency as the best means of readjusting production costs. The movement for devaluation, however, must not be exaggerated, as the Netherlands Federation of Employers, in their recent annual report, stated they were opposed to devaluation, as such a policy would signify opposition to the present National Government under the leadership of Dr. Colijn.

The balance of trade for the month of August makes a better showing than has been the case for a long time:—

	(000,000 guilders)		Jan.-Aug.,		July,
	August,	1934	1933	1934	1933
Imports	105	89	773	714	86
Exports	62	69	474	466	58
Percentage of imports covered by exports	58.8	77.0	61.3	65.3	67.4

Imports of gold and silver amounted to 3,304,360 guilders and exports to 6,384,777 guilders.

The investment market is more cheerful, thanks to the falling trend of capital rates. The State has availed itself of this by announcing the marketing of a 4 per cent. Netherlands Indies conversion loan of 485 million guilders at 100. This loan is guaranteed by the Netherlands. Subscriptions open on September 14th.

AMSTERDAM, September 12.

ARGENTINA

GENERAL RECOVERY MAINTAINED

DESPITE easier prices for wheat, Argentine prospects warrant the belief that a sound and cumulative improvement in the general financial and commercial outlook has set in. First estimates for the area sown to wheat, linseed and oats show low figures for both wheat and oats, but are higher than last year for linseed. Current sales of maize and oats have been favourably affected by the decision of the U.S.A. to open its ports to all forage, and there is a fair likelihood

of linseed being also imported freely by the U.S.A. For maize sowing a great increase is confidently expected. Current prices are unusually high; indeed, the last week of August saw maize prices above those of wheat. Latest official figures giving yield of crops this year confirm the private belief that both in wheat and in linseed Argentina harvested more than the quantity officially stated in the final estimates, last year's production being the largest for the past decade. The following are the preliminary crop figures published by the Ministry of Agriculture:—

	Area sown to		Yield	
	Main Crops	Sown	1933-34	1933-34
	1934-1935	1933-34	Hectares	Tons
Wheat	7,480,000	7,957,300	7,480,000	7,787,000
Linseed	2,920,000	2,773,530	2,920,000	1,440,000
Oats	1,350,000	1,443,300	1,350,000	883,000
Barley	745,000	721,370	745,000	784,000
Rye	770,000	715,520	770,000	237,000

Spot quotations at the moment are as follows:—Wheat, \$7.10 per 100 kilos.; maize, \$7; linseed, \$13.55; oats, \$6 (Buenos Aires quotations in paper pesos).

The meat outlook, and that of the cattle trade generally, is also cheerful. Confidence has been strengthened by the substantial advance in prices paid for pedigree stock at the annual Palermo show, where the champion short horn bull fetched \$44,000, as against \$15,000 paid in 1933 and \$22,000 in 1932. Such a price has not been recorded for the past eight years; and that the improved tone is general is shown by the fact that 55 imported bulls were all sold in 24 hours, the average price being \$9,000. Improving traffics on the railways have led to requests by the workers for abolition of the various measures of economy adopted in 1933.

Revenue returns for the first eight months of 1934 show a slight decline of \$2,700,000 on the average, with, however, improvement in Customs, land tax, licences and income tax. Inland revenue returns are also good, totalling \$89,194,545 for the eight months, as against \$83,055,940 last year. The first-named figure is nearly six million pesos above the Budget estimate for the current year. The 1935 Budget estimates have not yet been completed, but may be laid before Congress before it ends its ordinary sessions on September 30th. National expenses are being kept well within revenue receipts, and, although sparing of publicity, the Ministry of Finance has given tangible evidence of a sound position by paying off the £855,000 balance of a short-term loan taken in 1929, and pointing out that short-term indebtedness, which was, roughly, equivalent to £20,000,000 in 1930, has been reduced to something under £5,000,000.

The Minister of Finance has denied the rumours of further conversion of internal indebtedness, which were in circulation at the beginning of August. Any proposition of this nature, he added, would be strongly opposed by the Government. The rumour took its rise from the firmness of quotations for Internal Credit Bonds and Cédulas, now standing about 95 for the various Five per cents. It is thought possible, however, that the Government may be able to convert advantageously certain of the external bonds held in New York; and it is probable that the Government will assist the Province of Buenos Aires to renew sinking fund payments, provided a scheme is arranged for reducing all Provincial bonds receiving more than 6½ per cent. to that figure, additional bonds being given in compensation. Arrangements have at last been made for meeting the cash payments due to those holders of Cédulas of the National Mortgage Bank who refused to convert, the Ministry of Finance having announced that a message will be addressed to Congress asking for the necessary appropriation of funds to be authorised. The amount required is \$22,716,000.

"A MILD FINANCIAL DICTATORSHIP"

The local money market remains easy, with the banks carrying ample funds on deposit and showing substantial cash percentages. Demand by borrowers is not, however, strong enough to be in any way competitive; there is a marked scarcity of trade bills for discount; and no immediate likelihood of Government requirements of any moment. For which reasons rates are low, ranging from 3½ to 5½ per cent. for first-class business, though deposit rates, strangely enough, have not fallen proportionately. There has again been some mention of a possible banking

law, but unless it can be introduced and carried before Congress rises at the end of September, its application this year is improbable. As, however, nearly all the current measures dealing with finance have been the subject of decrees, rather than of Congressional measures, it is thought not improbable that any further amendments to Argentina's financial procedure and technique may well be postponed until Congress is in recess.

Admittedly, such a course is tantamount to a mild financial dictatorship, but, though questionable from the doctrinaire standpoint, it has so far worked well in practice. It certainly would not arouse the least resentment in local financial and commercial circles were it to be continued, provided all abuse is avoided, as has been the case up to the present moment. Certain import interests might object, but though the Government undoubtedly believes in keeping the value of the peso round about its present level, it claims that it acts in the best interests of all, and, more specifically, to the advantage of the Argentine producer and resident; a claim which is not altogether unfounded when comparison is made with the course of currency and exchange in other countries during the past two years.

Buenos Aires, September 4.

CANADA

UNEMPLOYMENT AND THE DROUGHT

THE Bureau of Statistics' figures show that there was an ominous contraction in employment in July and that on August 1st the reporting firms had on their pay-rolls 931,429 persons, as compared with 941,941 on July 1st. This decrease, coming at a time when outdoor farm work is in full swing, indicates that the employment problem will again be serious during the winter, and the Government has now reached agreements with most of the Provinces under which it will continue its contributions to direct relief, but on a smaller scale. The latest report of the Bureau of Statistics about the Western crops, published on September 5th, states that harvesting is now well advanced in the Prairie Provinces despite delays caused in the past week by rains over a wide area. In Manitoba practically all the wheat has been cut, and, while threshing is nearly completed in the Southern part, it is only partially finished in the North. In Saskatchewan and Alberta, cutting is finished, and more than half the threshing has been done in the Southern areas, but in the Northern districts cutting is still in progress. There is evidence of substantial frost damage in Northern Saskatchewan and Central and Northern Alberta, where both yields and grades have suffered. The crop experts still place the Western wheat crop at below 300 million bushels. Pastures have benefited greatly on the Prairies by the recent rains, but the problem of feed for livestock remains acute in many places.

The Federal Minister of Agriculture has been conferring with representatives of the three Prairie Provinces and heads of the meat-packing companies about a plan by which some 125,000 cattle would be killed and processed into some form of low-grade beef. These cattle must either be fed at the public expense or slaughtered; and, if they were forced on the market in the next two months, cattle prices would fall to unprecedentedly low levels. The advocates of the plan assert that if the Federal and Provincial Governments will combine to finance this plan the cheap beef thus produced can be disposed of in Japan and other foreign markets, and the cattle industry saved from complete disaster. The farmers whose cattle were purchased would also get some cash, and relief expenditures would be lessened.

The Federal revenues continue to show improvement, and for the first four months of the present fiscal year ending July 31st the aggregate returns from income-tax, Customs duties, excise duties and taxes and sundry collections amount to \$117,918,070, as compared with \$98,582,603 in the parallel period of 1933-34. The gain in income-tax is less than a million dollars, but Customs duties are up by \$7½ millions and excise taxes by \$9 millions, and Mr Bennett, the Prime Minister, recently predicted that by the end of the fiscal year revenue would be balancing

ordinary expenditure. The Finance Department is preparing a new Dominion loan, which will be offered probably some time in October. It is expected that it will be for at least \$250 millions, as \$223 millions are required to refund the Victory Loan of 1919 now about to mature.

NOTE INFLATION POLICY

The latest Dominion currency returns indicate that the Government has been pursuing a policy of note inflation, for during July the issue of Dominion notes increased by more than \$18½ millions to a total of over \$191 millions. Of this increase about \$2½ millions represented additional advances to the Bank under the operation of the Finance Act, but apparently the rest was deliberately issued by the Government, which wants to encourage easy money and secure a lowering of interest rates generally. The Government is also believed to be anxious to prevent the Canadian dollar going to a higher premium in New York, on the ground that this might injure Canada's export trade.

As first Governor of the new Bank of Canada, the Government has selected Mr Graham F. Towers, Assistant General Manager of the Royal Bank of Canada. His appointment is generally commended. He will leave for Europe shortly to visit central banks, and it is expected that a deputy-governor with practical experience of central banking will be secured from Great Britain. The present plan is that the Bank of Canada should begin operations shortly after the New Year.

While there has been no real reversal of the general upward trend of business, the situation is now more or less static, and, in view of the lowness of the crop yield, the slowing down of industrial operations in some lines and the delicate situation in the United States, the optimism which has been prevalent since the spring has somewhat faded in recent weeks. A recent business survey published by the Bureau of Statistics shows that during the first seven months of 1934 ending July 31st the index of the physical volume of business based on 45 factors covering production and distribution was 92.9, compared with 73.7 in the parallel period of 1933, a gain of 26 per cent.; but there has been a slight recession in August in most lines, except in mineral production. However, one encouraging feature is an expansion of the programme of new building; contracts awarded in August were valued at \$13,543,900, which was an increase of 21 per cent. over the July figure, a rare occurrence. The movement of merchandise is being well maintained, and the carloading figure for the week ending September 5th, 48,220 cars, was the heaviest weekly figure for 1934. Commodity prices show a tendency to decline, and the Bureau's wholesale index (1926 = 100) had fallen on August 31st to 71.8, as compared with 72.2 on August 24th; the chief decline was in the "vegetable products" index. The Western farmers are being cheered by a better export demand for wheat, and wheat exports in August were 14,709,675 bushels, valued at \$12,868,422, compared with 8,652,970 bushels, valued at \$6,656,511, in August, 1933.

Ottawa, September 8.

AUSTRALIA

BUDGET STILL BALANCED

THE Commonwealth Budget for 1934-35 shows that, including Postal and Commonwealth Railway receipts and expenditure on a gross basis, and including total interest and sinking funds on account of the States with corresponding receipts from them, the gross estimated revenue is £95,693,000 and gross estimated expenditure £95,679,190, leaving a surplus of £13,810. The accounts for 1933-34 show a surplus of £1,301,570, against £3,546,608 for 1932-33, and £1,314,091 for 1931-32. But of the total of £6,162,269 for the three years, £4,160,000 is to be spent on defence equipment and £2,000,000 on financial assistance to the States, leaving only £2,269 remaining on account of the three years, to which will be added the "excess receipts" estimated for 1934-35 £13,810, making together £16,079.

The accounts are somewhat complicated owing to constitutional requirements, but the net result is that the Com-

monwealth Government is balancing its Budget after providing for sinking fund. The figures are arrived at after giving effect to the Budget proposals, which include reductions of £400,000 in primage duties and £220,000 in sales tax, and revenue concessions of £210,000 in telephone charges and wireless licence fees, together with more liberal treatment of war and other pensions and a partial restoration of salary cuts.

Loans maturing in London up to the end of December, 1935, amounted to £85,698,552, including £67,156,461 with optional dates, and the Treasurer, Mr Lyons, spoke with confidence of the prospect of conversions. As to loans outstanding in New York, action will be taken if any favourable opportunity arises. The floating debt in Australia and London at June 30, 1934, was £82,094,000, against £83,000,000 at June 30, 1933. The latest amount includes £33,625,000 in London, of which £30,125,000 is held by the Commonwealth Bank, and the remaining £3,500,000 will be taken up by it not later than September 30th.

The total debts of the Commonwealth and States at June 30, 1934, including the floating debt, amount to £1,222,558,798, the annual interest payable thereon being £49,299,637. The internal debt alone is £629,285,016, with interest £23,536,387. The total of £1,222,558,798 shows an increase of £17,900,675 as compared with a year ago, and a total increase of £121,961,600 as compared with June 30, 1930.

The quarterly average returns of the Australian business of the ordinary banks (exclusive of the Commonwealth Bank) show a large increase in deposits as compared with a year ago, with a relatively small increase in advances. Deposits for the quarter ended June 30, 1934, are £206,972,125, or an increase of £22,283,263 on the year; advances, £236,963,201, or an increase of £2,844,066; and Government and municipal securities (including Commonwealth Treasury bills), £52,111,986, or a decrease of £669,653. The figures continue to reflect the lack of enterprise which makes it difficult for the banks to obtain suitable employment for the funds available.

RECOVERY IN FOREIGN TRADE

The trade returns for 1933-34 (to June 30th) show an excess of gross exports over gross imports of £38,324,305, taking both sides in British currency, and including bullion and specie, the net exports of which were £7,333,499. The excess of exports, £38,324,305 gross, compares with £38,843,611 for 1932-33, £40,289,763 for 1931-32, and £27,944,509 for 1930-31, prior to which there was for a number of years an excess of imports. During the last few years the exports have included the current output of gold from the mines, and also the gold formerly held by the banks in addition to most of the gold held by the Commonwealth Bank as reserve against the note issue. This last item, which amounted to £2,001,116 gold pounds in 1931-32 and £7,999,412 gold pounds in 1932-33, does not count in estimating the balance of payments, as the proceeds are held in reserve in London in securities.

The following is a summary of Australian trade (in British currency on both sides) for three financial years:—

	1931-32	1932-33	1933-34
Imports:			
Merchandise	44,042,662	56,842,701	59,707,373
Bullion and specie	670,206	1,171,159	1,278,105
Total imports	44,712,868	58,013,860	60,985,478
Exports:			
Merchandise	74,838,385	78,031,055	90,698,179
Bullion and specie	10,164,246	18,826,416	8,611,604
Total exports	85,002,631	96,857,471	99,309,783

The increase in exports is due to the recovery in the wool market, but against this is a falling off in wheat and flour exports owing to the small wheat harvest of 1933-34 and the reluctance of farmers to sell freely at the low prices obtainable during the period.

The Royal Commission on the Wheat Industry has presented a report in which it recommends the establishment of a home consumption price following the principle observed in most other rural industries (by which is intended

especially such items as dried fruits, sugar and butter). It also recommends assistance to wheat growers during the coming season at a cost of £4,000,000, though arrangements are subject to the result of the harvest, prospects for which are at present uncertain.

One method of providing the money would be an excise tax on flour. The Government has decided to adopt a scheme to assist the growers on the basis of 3s. per bushel at shipping ports, with a sliding scale so that the relief would vary inversely as the price. At the moment, according to the level at which the market stands after the recent improvement, it looks as if the relief would hardly be required. Early this year the Melbourne market ruled at 2s. 5½d. to 2s. 6½d. per bushel, but it is now nearly 3s. 6d.

MONEY AND BANKING

THE FUTURE STOCK OF MONETARY GOLD

THE events of the last few years have established a firm connection in the minds of the general public between the gold standard and monetary deflation. The effort to maintain the restored gold standard in Great Britain imposed a certain degree of monetary stringency upon this country for several years before the onset of the world depression. The workings of the gold standard, by draining away the available supplies to Paris and New York, played their part in instituting a restriction of credit in 1929. In more recent months the continuance of deflation in the gold *bloc* has contrasted strongly with the beginnings of recovery elsewhere. In each of the periods into which the last ten years can be divided there have thus been reasons for associating gold with deflation.

These beliefs undoubtedly affect a great deal of the present discussion on the merits of the gold standard. It is frequently assumed, without argument, that rising prices will not be secured if the gold standard is restored. But there is no historical justification for this assumption. Gold has on occasions, as between 1896 and 1914, proved to be a strongly inflationary basis for the currency. It is therefore essential that we should have some idea of the volume of gold that is likely to be available for monetary purposes in the next few years. The adequacy of the supply of gold is not, of course, the only consideration to be borne in mind in considering the advisability of returning to the gold standard. There is, for example, the crucial question whether any international monetary system is possible without at least some approach to an international economic system. But the supply of gold has played a large part in controversy in the past and will doubtless do so again in the future. It is therefore opportune to examine the position.

We may conveniently begin with the end of 1928. At that time there was much talk of maldistribution of gold and some prophecies of an approaching shortage. But it would be difficult to establish that credit was being definitely restricted anywhere through lack of gold. The following table gives the Federal Reserve Board's figures for holdings of gold by Governments and Central Banks on December 31, 1928, in millions of gold dollars. The countries have been arranged in six groups; the "sterling group" includes Great Britain, Scandinavia, Portugal, India, Australia, New Zealand, South Africa and Egypt, and the "gold bloc" includes France, Italy, Switzerland, Holland, Belgium and Poland. The names given to these two groups refer, of course, to events that were still in the future in 1928.

GOLD HOLDINGS OF GOVERNMENTS AND CENTRAL BANKS
(Millions of "old" gold dollars)

	December, 1928	January, 1934
1. U.S.A. and Canada	3,860	4,099
2. Sterling Group	1,230	1,444
3. Gold Bloc	1,994	4,586
4. Other European Countries	1,431	1,189
5. Latin America	895	342
6. Remainder	618	279
Total	10,028	11,951

In addition to these holdings of gold, holdings of foreign exchange played some part in forming the monetary base. The amount of these holdings cannot be accurately ascertained. For Group 4 it apparently amounted to some \$325 millions, and for Group 5 to some \$240 millions.

The depression years brought a considerable increase in gold holdings, for various reasons. Production increased, particularly after the depreciation of the sterling currencies. The estimated world production of gold was \$450 millions in 1929, but \$499 millions in 1932 and \$512 millions in 1933. How much of the total production was available for monetary purposes is not accurately known. But since depression could be expected to reduce the demand for plate and jewellery and since the Eastern countries in these

years were not absorbing but were disgorging gold, the proportion of the total production available for monetary use certainly increased. But the annual production of gold is so small relatively to the total supply that even an increase of more than 25 per cent. in the annual addition to the monetary stock would not have greatly affected the total of that stock. There was, however, a large accession of gold to Western monetary reserves from Eastern private hoards. Exports of gold from British India alone in 1932 and 1933 totalled \$322 millions. Finally there was a certain amount of melting down of gold jewellery, etc., offset by some increase in private hoards of bullion. Whatever the source of the increase may have been, its size is shown in the second column of the above table, which shows the position at the end of January of this year. The figures are still in "old" gold dollars, the metal being valued at \$20.67 an ounce. It will be seen that each of the first three groups had increased its holdings. Group 4, consisting of the "restricted" European currencies, had lost rather less than one-fifth of its gold, and in addition its foreign exchange holdings had fallen from \$325 millions to \$165 millions. The other two groups had lost heavily. The total had increased by no less than 19 per cent.

For many of these countries, however, the figures are purely formal. The official valuation of the Bank of England's gold holding, for example, is less than its market value. It can be taken for granted that many, if not most, of the world's currencies will eventually be devalued. The dollar has already shown the way. The adequacy of the world's gold reserves should therefore be measured not by the "old" value of the bullion, but by the new value which it will eventually be given. What the new parities will be we do not know. But it is instructive to observe what will happen if the average devaluation is the same as that undertaken in the United States, namely 41 per cent. In the second table, accordingly, the world's gold holdings at the end of January, 1934, are revalued. In the first column the assumption (Assumption A) is made that there is no devaluation in the gold *bloc* or in the other European countries other than those in the sterling group, but that all other countries devalue their currencies by 41 per cent. In the second column it is assumed (Assumption B) that the 41 per cent. devaluation is universal.

The figures are in millions of "new" gold dollars, the price of gold being \$35 per ounce, with the exception of Groups 3 and 4 in the first column, which are in "old" gold dollars. The value of the gold holdings of these two groups has, of course, increased in terms of dollars, but for the purpose of assessing their adequacy as a monetary base, it is the value in gold francs, gold guilders, etc., that is important, and this can be represented by "old" gold dollars. The total of the first column is therefore partly in "old" and partly in "new" gold dollars; it is a purely conventional figure for comparison with the totals of the first table.

GOLD HOLDINGS OF GOVERNMENTS AND CENTRAL BANKS,
JANUARY, 1934

	Assumption A	Assumption B
1. U.S.A. and Canada	6,959	6,959
2. Sterling Group	2,445	2,445
3. Gold Bloc	4,586	7,761
4. Other European Countries	1,189	2,012
5. Latin America	579	579
6. Remainder	472	472
Total	16,230	20,228

These figures are quite striking. The American group has nearly twice as much gold—in monetary value, which is what matters from our present point of view—as in 1928, the sterling group almost exactly twice as much. The gold *bloc* shows an increase of 125 per cent. without, and of nearly 300 per cent. with, devaluation. The "restricted" European countries will show an increase of nearly one-

half if they devalue. Their gold holdings after devaluation will be \$400 millions in excess of their combined gold and foreign exchange holdings in 1928. On the other hand, the two last groups have considerably less gold even after devaluation. Nor are the assumptions underlying the figures essentially unreasonable. The dollar is already devalued. It can be taken for granted that the sterling and other non-European currencies will eventually be devalued, some of them, such as the Australian pound, probably to a lower level than the dollar. Some of the European currencies outside the gold *bloc* have already been devalued and others will doubtless follow, though the extent of the devaluation may be less than the 41 per cent. that has been assumed. Even in the case of the gold *bloc* he would be a bold prophet who would prophesy the indefinite continuance of the present parities.

It is clear, then, that there will be no shortage of gold in the immediate future. Indeed, the excess of the probable post-devaluation stock over the actual stock of 1928 is very large. Excessive stocks of gold will not by themselves lead to inflation, as Central Banks may prefer to maintain their reserve ratios at a high figure. But monetary history contains little warrant for the assumption that inflation will be staved off by mere moderation. There will still be maldistribution of gold but, with the important exception of Germany, every major country will start off with more than enough gold to satisfy its legal reserve requirements. It is thus not impossible that the restoration of the gold standard would be the preliminary to a very large gold inflation. It would certainly be a great mistake to assume that automatic dependence upon gold would produce either deflation or stability.

FINANCIAL NOTES

The Money Market.—Credit has been abundant all the week, with short money freely offering at $\frac{1}{2}$ per cent.

	Aug. 30, 1934	Sept. 6, 1934	Sept. 13, 1934	Sept. 20, 1934
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate :—				
Clearing banks	1	1	1	1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills :—				
(a) Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

The discount market has remained rather inactive and rates have weakened materially, as they almost always do at the end of September. They are now almost certainly at a seasonal nadir, and some recovery must be looked for from now on. Yesterday's Treasury Bill tender was the last at which December bills could be had, and a sharp increase in the rate of allotment is to be looked for next Friday.

The Foreign Exchanges.—The atmosphere of the foreign exchanges for most of the week has been similar to that known to yachtsmen as a butterfly wind; the movements have been as imperceptible as they were off Newport, Rhode Island, on Wednesday. The extreme range of the Paris rate has been between 74 $\frac{1}{4}$ and 75 $\frac{1}{8}$, that of the New York rate between \$4.99 $\frac{1}{4}$ and \$5.01 $\frac{1}{8}$. The tendency of sterling was very slightly upward before the week-end and as slightly downward this week, with the result that there was little change on balance. Indications of tendencies have to be sought in the forward rates. The discount on the dollar is very slightly narrower, being $\frac{1}{4}$ to $\frac{3}{8}$ cent for three months instead of $\frac{1}{2}$ to $\frac{3}{8}$. The forward franc, which was at par at the beginning of the week, has gone to a small premium. The slightly stronger tendency of the franc is ascribed to the announcement that the Budget for 1935 will be balanced. It is reported that the milreis has again

been pegged to sterling. On September 1st it was pegged to the French franc at the rate of 805 reis per franc, but with the recovery of sterling the peg was raised to 802 reis per franc and from the 13th it returned to the peg of 60 milreis to the pound. This is the official rate—the "free" milreis is still rising and is now in the neighbourhood of 70 to the pound. The reichsmark is a shade stronger and is quoted at 12.35-12.40. Security, credit and registered marks are available at 36.95-38.35, 29.70-30.30 and 20.89-21.04, respectively. Sondermarks are quoted at 12.62, which is about 2 per cent. discount, but as payments into the Bank of England's account at the Reichsbank have not been resumed, it is apparent that the demand for sondermarks is still very small. Dealings in forward sondermarks have now begun at par.

The Bank Return.—A further return of notes from circulation after the holiday season is recorded in this week's Bank return. The contraction during last week was £2.6 millions, bringing the active circulation back to £376.4 millions, against £383.9 millions on July 25th. A year ago the circulation was £370.5 millions, compared with £382.2 millions on July 26, 1933, so that the seasonal contraction has been less marked this year than last :—

BANK OF ENGLAND

	Sept. 20, 1933	Dec. 27, 1933	Sept. 5, 1934	Sept. 12, 1934	Sept. 19, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold.....	190.4	190.7	191.8	191.8	191.8
Note circulation.....	370.5	392.0	381.3	379.0	376.4
Banking Department :—					
Reserve	81.3	59.7	71.0	73.4	76.1
Public deposits.....	18.2	22.2	29.6	16.5	20.5
Bankers' deposits	105.7	101.2	88.9	103.2	99.8
Government securities ...	80.7	88.0	85.0	84.9	81.7
Discounts and advances ..	9.2	16.8	6.9	6.3	6.1

Proportion 48.5% 37.3% 45.6% 46.8% 48.1%

The other changes of note (apart from the £2,700,000 increase in the reserve corresponding to the shrinkage in the note circulation) are a fall of £3,200,000 in Government securities in the Banking Department, a decline in Bankers' Deposits of £3,400,000 from their rather high level of last week and a recovery of £4,000,000 in Public Deposits.

New York Money and Banking.—Money conditions in New York are entirely unchanged. The "official" call loan rate remains at 1 per cent., with "outside" money available at $\frac{1}{4}$ to $\frac{3}{8}$ per cent. There is some evidence of a slow expansion of bank credit; bank clearings in 47 cities for the week ended September 12th, for example, were 5.5 per cent. higher than in the comparable week last year. Bank deposits are also increasing, but the rise is largely due to the continued absorption by the banks of Government securities. The conversion of Liberty Loan has not been an unqualified success, only \$530 millions of the \$1,250 millions called for redemption having been converted as yet. Nervousness is also demonstrated by the fact that the holders of \$386 millions have elected to take in exchange four-year bonds, only \$144 millions preferring the 10-12-year issue. The project of a Government-owned Central Bank has again come to the fore. Professor Jacob Viner is believed to have prepared a report on the subject for the Secretary of the Treasury, which will shortly be published. If the proposed Central Bank were to be merely a centralisation of the cumbrous machinery of the Federal Reserve system, little objection could be taken to it, as the Reserve system, though owned by its member banks, is already dominated by the Government. But it has been assumed that the new Central Bank would compete with the existing commercial banks and that it would be used to finance the Treasury's deficit by printing notes. Both of these assumptions are feeding on nothing more substantial than surmise, but they have been sufficient to induce nervousness in banking circles and to start an "inflation" flurry on the Stock Exchange.

THE STOCK EXCHANGE

ANY HOPE FOR WALL STREET?

For the student of markets scanning the situation in Wall Street and trying to sum up its prospects there is at the moment only one question which it seems profitable to ask: "Can the outlook really be as utterly dismal as it appears to be and as every one (except Mr Angas) seems to think it is?" Before we face up to that question let us examine broadly what are the factors which have been recently influencing Wall Street and have been responsible for the heavy general fall in values which has taken place in the last two months. The most important single factor, beyond doubt, is the drought, which has reduced the wheat harvest to about half its normal figure and the cotton crop to its lowest level for thirty years. A consideration of share price movements in recent months is fairly conclusive on that point. The index numbers for general industrials reached their highest points for the year in February, following the devaluation of the dollar, but after moderate fluctuations they were back not very far below those high points in the second half of April. After that what appeared to be the normal spring recession set in and the market was reactionary almost throughout May. Then a good recovery set in—the general view was that the measure of the summer slackening of trade had been taken, and though the drought was by then commanding attention it was interpreted rather as a bull point by a market besotted with muddled ideas about the need for raising the price level. In the middle of July share values were still well above the level of the early days of January.

Then and not till then came realisation of the true seriousness of the drought. The summer slackening of trade suddenly began to develop into a real depression. The *New York Times* index of business activity dropped abruptly from 83.8 to 76.9 per cent. in the first week of July, and steel production fell off alarmingly, until by the beginning of this month it was very little above the crisis level of two years ago. In the second fortnight of July industrial shares lost almost 10 per cent. in value and rails not far short of 20 per cent.

There can be no doubt that at that period the dominating influence was the drought and the slump in business activity directly due to it. Politically it was the dead season. Congress was in recess and the autumn election, which in any case could hardly make things much worse from Wall Street's point of view, not yet imminent. But other serious troubles were even then visibly brewing. That unwieldy and inharmonious piece of machinery, the N.R.A., was beginning to creak more threateningly than ever. The waterfront strike on the Pacific coast had been dragging on for weeks—a small thing in itself but recognised by the clear-sighted as a symptom of widespread and deepening discontent among American labour in general with the working of the "collective bargaining" clauses of the N.R.A. codes.

In August, however, the July stock market slump flattened out and even gave place to a mild recovery in general industrials, though hardly in rails or utilities; and the re-

newed slump which, this month, has brought down many share prices to levels which they had not touched since they crossed them in the great upward surge of May, 1933, must largely be set at the door of the textile strike, now ending its third week.

In this account of Wall Street's descent to Avernus we have so far made no reference to the Securities Act or to the Securities Exchange Control Commission and its activities in the regulation of new issues and listing and of margin requirements. We do so now, but not to assign to the Commission any great share in the responsibility for the recent movements in Wall Street. The Commission, whatever its effect may be in the future, can hardly be accused of depressing the market by checking bull speculation at a time when all conceivable reasons for bull speculation were so notoriously absent. In any case though the speculator is now definitely shy of Wall Street it does not therefore follow that the average level of values as distinct from the average level of activity will be adversely affected by his absence.

We have now reached the point when we must face the question with which we opened—is the future outlook as dismal as it is generally held to be? Certainly there is no reason to look for any immediate improvement. Some seasonal recovery in trade there should be—and there are already signs of it—but as against that there must be set the effect of the third quarter industrial earnings, which are certain to make depressing reading; and, in any case, the election is now so close at hand as to repress any latent tendency to recovery. But when the election is over, what then? Until the Maine election the best hope seemed to be that the November polls would register some recession of the Democratic tide and that the President would thereafter lose his desire for experiments and "go conservative." Even now that is perhaps the best hope, or, at least, it is regarded as such by Wall Street. But the Maine election certainly opens up another possibility—the possibility of the Democratic tide, so far from receding, surging in with even more boisterous violence than in 1932 and carrying the President forward, willy nilly, to fresh inflationary exploits, to the 50 per cent. dollar and a new wave of public expenditure on drought and unemployment relief. It is far from improbable that Congress may take charge and infuse new momentum into an Administration now showing clear signs of entropy. From any but the very short point of view that would be a disaster. It would bring the danger of complete financial breakdown to the point of real imminence. The failure of the present Treasury bond conversion operation, relatively unimportant as it is in itself, is a warning that cannot be ignored. But from the very short point of view it might well be—almost certainly would be—good for Wall Street. Mr Angas is right on that point.

The alternative—and, after all, no doubt the more probable alternative—is that the electorate, while registering their undiminished confidence in the President (if not in some of his subordinates), will not go to the length of hoisting him shoulder-high and carrying him with them, but will leave him free to determine his policy. In what direction will he move? No doubt he will spend much more money on relief and public works, but he will probably respect the scruples of Mr Morgenthau in his preoccupation with the problems of conversion, leave inflation at least to run its course without artificial "supercharging" and concentrate upon straightening out the tangle of N.R.A. That in the long run is, no doubt, the sensible policy. But it does not follow that in the short run it will be helpful to American industry or to Wall Street. It has been suggested, for example, with some show of authority that the minimum selling price articles of the codes may be abandoned. A step back towards a free economy, and laudable as such; but very awkward for employers, unless other steps towards freedom, as regards hours and wages, are taken. And what would remain of President Roosevelt's electoral platform, what would remain of the New Deal, if they were taken? Nothing or next to nothing. The restoration, in fact, of any substantial measure of industrial freedom seems impossible. All that the President could possibly contemplate would be such "tinkering" with the codes in the hope of easing some of the worst points of friction as may be possible without any radical overhaul. With labour in its present temper, the prospects for the success of such procedure seem limited.

In the end, no doubt, the ship may find itself, but all the evidence goes to suggest that it may be years, rather than months, before that happy consummation is achieved.

But we are perhaps passing rather beyond the bounds of our subject, which is the outlook for Wall Street over the next few months. Wall Street will have its ups and downs, whatever the exact policy of the President; and it may well be that a seasonal pick-up of trade, coupled with the relaxation of tension that normally follows elections, may lead to a sharp recovery before the year is out. But that Wall Street can in the early future again become attractive to the external investor (except for an occasional short-term "flutter") we find it difficult to believe. That view seems to be shared by some of the London houses who not long since were staunch cultivators of the American investment field, but are now confining their recommendations to certain preferred stocks and bonds of attractive yield, with the proviso that the exchange risk must be hedged.

INVESTMENT NOTES

Gilt-edged Outlook.—In the last three months more than once we have suggested that continued firmness must be looked for in the gilt-edged market until it became clear whether the slackening of the trade recovery (which became evident about the middle of the year) was merely seasonal or more than seasonal. The soundness of this view is shown by the following table, giving the prices of a number of leading stocks at June 20th (the day when the post-Budget recession of gilt-edged came to an end), at the end of July and August and on Thursday last. These last are in several instances new high records:—

	Price, June 20, 1934	Price, July 31, 1934	Price, Aug. 31, 1934	Price, Sept. 20, 1934
2½% Consols.....	77½x	80½	80½	81½
4% Consols (1957 or after).....	112½	112½x	112½	113½
3% Conversion, 1948-53	101	101½	101½	102½
3½% Conversion (1961 or after)	102½	105	103½x	104½
4½% Conversion 1940-44	109½	110½	111½	111½
5% Conversion, 1944-64.....	117½	118½	119½	120
3% Funding, 1959-69	98½	98½	99½	98½x
4% Funding, 1960-90	113½	115½	116	116½
4% Victory Bonds	111½	113½	112½x	112½
3½% War Loan (1952 or after)	102½	104½	104½	105½
3% Local Loans	90½x	92½	93½	94½

The season of trade inactivity is, however, nearly at an end and the time of autumnal revival approaching. What is the outlook for gilt-edged *now*? Despite the pronounced buoyancy of the market in the last few days (due partly to possibilities which we discuss in the following note), it is no easier to be positive than it was three months ago. The only reasonable forecast seems to be a continuance of the "light variable winds" which for weeks past have kept the market on a mildly fluctuating but, on the whole, upward course. It is true that in the past month there has been a sharp recovery in industrial equity values—the *Financial News* Index has risen from 85.0 to 88.5 since the beginning of August—and that at this stage of the trade cycle would normally suggest some weakening of fixed interest values. On the other hand neither the tendency of discount rates nor the general impression of autumn trade prospects indicate the imminence of such pressure upon the money market as would appreciably affect gilt-edged stocks. Perhaps the most significant phenomenon of all is that the Clearing Banks, according to their latest monthly return, have re-entered the market as substantial buyers. The total of their investments rose, as between July and August, by as much as £13 millions to £563 millions. The banks, at least, do not appear to be apprehensive of an early setback in British funds.

A New Chapter in Conversion?—The firmness of the gilt-edged market, the example of Nigeria, and the season of the year—hardly an October has passed since the war but has seen its Government loan operation—have set the market thinking and talking busily of fresh conversion

possibilities. In respect of one at least of its suggestions it is almost certainly on firm ground. There can be very little doubt but that the Chancellor of the Exchequer will decide to call for redemption on April 15th next the outstanding £88 millions of the £110 millions 3 per cent. Treasury Bonds, 1933-42. These bonds are redeemable by annual drawings (in December for payment on April 15th) of "not less than 10 per cent." of the original amount, and as they have recently been standing well above par there is every reason why Mr Chamberlain should equate "not less than 10 per cent." to 80 per cent. (ignoring the foolish plaint of interested parties that that would not be cricket), and replace the issue by one carrying either a lower rate of interest or a longer currency. With the price of the 3 per cent. Funding Loan, 1939-69, at only just below par it is becoming temptingly near possible to substitute this early maturity by a long-term stock without cost to the taxpayer. But the market is hinting at other and more intriguing possibilities. The 5 per cent. Conversion Loan, 1944-64, is less than ten years from its first optional redemption date and stands at a premium of 18 points ex accrued interest. Many private holders are now finding the nearness of redemption and the prospective loss of capital value unattractive, and would be glad to exchange into a longer loan at a lower rate of interest which safeguarded their capital. Why, the market argues, should not the Chancellor oblige them—at a price? Why should he not offer to such holders as chose to take it, say, £118 of a long 3 per cent. stock for £100 of the present 5 per cent. stock? He would thereby effect the handsome saving of almost 1½ per cent. in annual interest on the nominal amount of stock converted, and also insure himself against the risk of having to replace the stock on worse terms than 3½ per cent. in 1944. These are very substantial advantages, but would the Chancellor regard them as compensating for the increase in the nominal value of the national debt which is necessarily involved? Time will show. In addition to the £323 millions of this loan there is £375 millions of 4½ per cent. Conversion Loan, 1940-44, now standing at about 110 (ex accrued) to which similar considerations apply.

* * *

The Stock Exchange and Saturdays.—A "House" correspondent writes: The final result of the petitions to the Committee—the one in favour of, the other against, Saturday opening—has not been announced, but it is clear that a surprisingly high proportion of petitioners have supported the "noes." A majority of the order of ten to one, even in a poll of little more than 50 per cent., on the question of whether, individual comfort and convenience aside, opening on Saturdays is really justified is not lightly to be ignored. It certainly lends weight to the contention that there is not enough Saturday business to give the market working leeway. In the House this week it has been noticeable that opinion among the senior members has been definitely adverse, and not a few of those who pressed for the re-establishment of Saturday markets in 1931 now seem to have changed their views, in the light of the experience afforded during the relatively active period of the past two years. It has now been fully established by experience that that stratum of clients from which the bulk of Stock Exchange business springs is five-day-week minded. And so they are likely to remain until a real revival of the Continental Bourses and Wall Street re-create those pre-war conditions in which week-end trade was substantial and significant. The present petitions do not, of course, necessarily imply that the Committee will decide against re-opening the "House" on Saturdays at the end of the present period of grace, but a result of such an emphatic nature is bound to exercise an influence on the opinions even of those who base their case for opening on the public institutional character of the Stock Exchange.

Railway Traffic's Trend.—Though the stock market has failed to respond and the leading ordinaries are still below the mid-August peak, the recent trend of railway traffic is not unencouraging. The following table compares the analysed receipts with 1933 figures, for the half-year,

and two four-week and one three-week periods of the third quarter:—

(£'000)					
1934 compared with 1933	Great Western	London Midland and Scottish	London and North Eastern	Southern	Four Companies
Passenger traffic— First half-year	- 31	+ 122	+ 58	+ 84	+ 233
Weeks 27-30	- 17	+ 60	+ 24	+ 24	+ 91
Weeks 31-34	+ 17	+ 78	+ 70	+ 31	+ 196
Weeks 35-37	+ 10	+ 20	+ 40	+ 15	+ 85
Change to date, second half-year	+ 10	+ 158	+ 134	+ 70	+ 372
Merchandise traffic— First half-year	+ 387	+ 1,013	+ 829	+ 80	+ 2,309
Weeks 27-30	+ 32	+ 80	+ 16	+ 9	+ 137
Weeks 31-34	+ 21	+ 78	+ 8	+ 7	+ 114
Weeks 35-37	+ 18	+ 56	+ 23	+ 9	+ 106
Change to date, second half-year	+ 71	+ 214	+ 47	+ 25	+ 357
Coal and Coke— Total for half-year	+ 43	+ 287	+ 592	+ 68	+ 990
Weeks 27-30	- 12	+ 3	+ 19	- 7	+ 3
Weeks 31-34	+ 9	+ 36	+ 50	- 3	+ 92
Weeks 35-37	+ 30	+ 56	+ 58	+ 6	+ 150
Change to date, second half-year	+ 27	+ 95	+ 127	- 4	+ 245
All Traffic— First half-year	+ 399	+ 1,422	+ 1,479	+ 232	+ 3,532
Weeks 27-30	+ 3	+ 143	+ 59	+ 26	+ 231
Weeks 31-34	+ 47	+ 192	+ 128	+ 35	+ 402
Weeks 35-37	+ 58	+ 132	+ 121	+ 30	+ 341
Change to date, second half-year	+ 108	+ 467	+ 308	+ 91	+ 974
