Of the total improvement, over eleven weeks, of £974,000, the two northern lines jointly account for £775,000. Both companies shared satisfactorily in the holiday traffic improvement, but the expansion of their coal and coke receipts is more auspicious on a long view. The increase in Great Western receipts under this head in the past three weeks, however, may be connected with the threatened stoppage in South Wales. Merchandise traffic is somewhat sluggish by contrast, and it should be remembered that returns in future weeks will compare with a rising trend which set in, broadly, at this time last year. Both the passenger and coal results reflect a greater seasonal movement this year, and further progress in the merchandise returns will be conditional upon the winter level of industrial activity. Here there are tentative signs of further advance, but the outlook is still inconclusive in a number of centres. Our second table presents the absolute figures for the same periods in comparison with the corresponding averages over the years 1927-30; a period which may be regarded as "normal" in recent years:—

(£'000)				
Four "Group" Lines	Passenger	Merchandise	Coal and Coke	All Traffic
26 weeks, 1934	29,781	25,866	15,535	71,182
Average, 26 weeks, 1927-30	35,885	33,771	17,813	87,469
Weeks 27-30	6,519	3,838	1,961	12,318
Average, corresponding weeks, 1927-30	7,683	5,006	2,479	15,168
Weeks 31-34	7,738	3,669	2,058	13,465
Average, corresponding weeks, 1927-30	8,834	4,788	2,424	16,046
Weeks 35-37	4,564	3,050	1,742	9,356
Average, corresponding weeks, 1927-30	5,407	3,895	2,007	11,309
Total, 11 weeks, second half 1934	18,821	10,557	5,761	35,139
Average, corresponding weeks, 1927-30	21,934	13,689	6,910	42,523

It will be seen that the leeway between the two series is steadily closing up in each class, and given further advance in business activity the outlook for the current year must be regarded as fairly favourable, although operating costs must be influenced by the coming into operation of the new wage agreement from October.

* * *

Actuaries' Investment Index.—The unspectacular upward course of industrial markets as a whole has continued this week, although prices in many directions have become easier owing to slackening of interest. The Actuaries' Index of 144 industrials has again advanced during the week, being calculated on Tuesday's quotations

at 72.0 (December 31, 1928 = 100), compared with 71.6 a week ago and 71.0 a month earlier. The yield figures are 3.66, 3.67, and 3.69 per cent., respectively. The component groups show narrow changes:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Aug. 21, 1934	Sept. 11, 1934	Sept. 18, 1934	Aug. 21, 1934	Sept. 11, 1934	Sept. 18, 1934
Investment Trusts (15)	49.4	49.2	50.5	3.85	3.87	3.83
Building Materials (4)	82.7	83.8	82.7	4.21	4.25	4.30
Coal (6)	88.4	90.2	91.0	4.03	4.11	4.11
Cotton (6)	46.8	44.0	46.8	2.27	2.29	2.30
Oil (5)	62.5	62.4	61.2	4.69	4.71	4.80
Home Rails (4)	77.0	77.7	76.1	1.82	1.84	1.85
Miscellaneous (50)	62.3	62.9	63.7	3.91	3.88	3.83

Building material shares have eased, on somewhat larger offerings, to the level of a month ago, and home rails are making ungracious response to reasonably satisfactory traffics. Interest in popular leaders in the miscellaneous group has been extremely selective.

* * *

Trustee Law Anomalies.—An enterprising firm of London stockbrokers has done service to their clients by ventilating the need for revision of the Trustee Act. Like the Stock Exchange itself, trustee investment is hampered by a system of dual control. There are two distinct codes under which trustees are authorised to invest—the Trustee Act of 1925 (largely a codifying measure), which sets forth eighteen categories of securities in which trustees may place funds, and the so-called "Chancery list" of "... securities ... authorised for the investment of cash under the control or subject to the order of the Court." The two codes overlap and, in one serious instance, conflict, for the 1925 Act requires the payment of a 3 per cent. dividend, and the Chancery List of merely "a dividend" for ten years on the ordinary stock of a British railway company whose prior charges are available for trustees. In addition, the authorised range of securities has been extended by local or private Acts, and is not identical in England, Scotland and Northern Ireland. More serious, however, is the divergence of principle between the two codes. Whereas the Supreme Court was originally guided solely by consideration for the safety of invested funds, Parliament has tended to grant trustee status, in some instances, out of consideration for the interests of the borrowers. The Colonial Stock Act of 1900 was designed as a measure of Imperial politics. Trustee status was conferred on the bonds of small local authorities in the housing campaign of 1919, and on the debenture stock of the Agricultural Mortgage Corporation by an Act of 1928. Without reflection on the merits of any particular issue, it is a thoroughly unsound principle that trustee status should be a privilege granted to selected borrowers for reasons which have nothing to do with the safety of the privileged securities. Finally, although the present list of authorised investment is anomalous and illogical, there is no revising authority, apart from the Court of Chancery, which would scarcely lay claim to expert knowledge of the art of investment. The circular from which we have quoted makes the sound suggestion that an expert statutory committee should be set up to review the list and recommend additions or removals, subject to Parliamentary approval by resolution. This committee, it is suggested, might include representatives of the law, the Stock Exchange, the Treasury, the banks, the actuaries, the accounting profession and the Public Trustee. Its decisions should be made on the ground only of investment merit. The writer of the article does not describe any method by which the committee could be protected against further quasi-political incursions into its territory by a Sovereign Parliament at the behest of the Government of the day. So far as its freedom to act on its own principles, however, is unimpeded, such a body would certainly appear to be best fitted to undertake an onerous but overdue task.

* * *

An Investment Primer.—Mr Hartley Withers' new book* arrives opportunely to render useful service to the small investor anxious to acquire the groundwork of investment technique. There must be many in this class to whom low interest rates represent considerable disadvantage. Mr

Withers insists emphatically on the need for an adequate foundation of security for the small man, whose savings are intended primarily as an indispensable provision for his own future. The chapter on life insurance, annuities, savings certificates and other safe investments for the smaller purse is accordingly the keystone of the book. But the restrictions imposed on building society share investments (see the Economist, September 1st, page 408) have severely limited the small investor's income opportunities. The author accordingly has the problem of assisting that growing "new investment public, which is innocent of all connection with stockbrokers or even bank managers" in its quest for more remunerative investment opportunities than the "austere severities of savings banks, savings certificates and building societies." This is a formidable undertaking when, as he points out, equity prospects are largely discounted, when management trust stocks are still regarded uneasily and are in any case difficult to obtain, and when the fixed trusts have yet to win their spurs. Mr Withers has, however, written a book which is both sensible and readable and will be of help to this section of the public.

* "Investing Simplified." Thornton Butterworth. 3s. 6d.

COMPANY NOTES

Light Engineering Shares.—Light engineering, though a well-defined classification in industry itself, does not convey any very definite group of companies to the investor. This is due to several causes which are themselves relevant to the investment qualities of light engineering shares. First, light engineering does not usually demand the same capital investment as heavy engineering, and is therefore largely carried on by small independent and privately-owned units. From this follows the relative lack of organisation in the more generalised branches of light engineering, with the inevitable consequence of serious price-cutting in times of depression. Secondly, a large part of

the light engineering industry has specialised in some one branch and is so closely allied to another industry (motors, for example, or gramophones) as to be included for purposes of investment analysis with that industry itself. The light engineers which remain sufficiently generalised to be independent of any other single trade are distinguishable from the heavy engineers mainly by the fact that they supply goods which are either sufficiently small or sufficiently simple (and therefore cheap) to be covered by normal maintenance expenditure (as opposed to definite new capital expenditure) or alternatively to be covered by current expenditure paid out as part of the material cost of producing something else.

This will include small tool and apparatus makers, makers of springs, axles or specialised parts, makers of chains for transmission of power, and the like. As in most cases such products are either capital goods or the goods of durable consumption, demand for them can be sharply curtailed in times of depression. Furthermore, as many light engineering products are relatively simple to produce, depression may create competition from other under-employed engineering businesses which are normally engaged in a different branch of the trade. Complaints of this type of competition, even coming from former customers, have been heard from several chairmen of light engineering businesses. As is shown by the accompanying table, therefore, depression can bring a sharp fall in profits. Owing to the relative cheapness of light engineering products, however, recovery brings fairly early revival of profits, since customers do not hesitate before making small replacements nearly so long as they would before entering into a large capital commitment. The accompanying table also illustrates this capacity for early revival in profits, though it indicates that recovery has still a long way to go in most cases before the pre-depression earnings are restored.

* * *

Austin Motor Bonus.—The directors of the Austin Motor Company have announced proposals for lowering the "gearing" of the company's capital in a manner extremely pleasing to the ordinary shareholders. For the year ended July 31, 1933, the company paid 100 per cent. on the 5s. ordinary shares (earning 285 per cent.) in the shape of a dividend of 25 per cent. and a cash bonus of 75 per cent. For the year ended July 31st last this cash distribution is to be repeated, but in addition it is proposed to distribute £450,000 out of the reserve in the form of a share bonus of three new 5s. "A" ordinary shares (which will be identical with the existing ordinary shares except that they will not carry voting rights) for each ordinary share now held. Furthermore, the directors are asking the shareholders to agree to the issue of another 100,000 "A" ordinary shares at the price of 10s. a share, of which 50,000 are to be offered to the board and 50,000 to the senior employees of the company. The combined effect of the proposals, if carried, will be to increase the ordinary capital from £150,000 in 600,000 5s. shares to £625,000, divided into 600,000 ordinary and 1,900,000 "A" ordinary shares. Substantially this will restore the original gearing of the capital before the 1927 reconstruction, when the issued capital was reduced from £3,350,000 to £2,150,000 by writing 10s. a share off the 1,500,000 10 per cent. £1 preferred ordinary shares (the future dividend rate on which was, however, correspondingly raised to 20 per cent.) and 15s. a share off the 600,000 £1 ordinary shares. That in itself is a good thing, but to say as much is not to express approval of the method of issue of the 100,000 shares to be offered at 10s. It is undoubtedly just that directors and employees (not merely "senior" employees) should participate in the exceptional prosperity of a company they serve. But failing a comprehensive profit-sharing scheme (which this is not) it would be better that such participation should take the form of a cash bonus or a straightforward increase in salaries. Nor does the amount of the Austin directors' self-sought gift seem unduly modest. Following the dividend announcement the existing ordinary shares rose to £7 a share cum dividend and bonus. This gives an equivalent value of approximately 32s. for the new shares, on which basis the total value of the rights offered is fully £100,000, after making allowance for the slightly lower prospective value of the non-voting "A" as against the ordinary shares.

* * *

Selfridge Provincial Stores.—This subsidiary of Selfridge and Company, Ltd., which now controls six London and eleven provincial businesses, has had a more satisfactory year. The profits of the controlled businesses have expanded by nearly £11,000 (though they are still well below the level of earlier years), and out of the share due to it Selfridge Provincial has appropriated in dividends about £9,000 more. Rents receivable have risen by nearly

£12,500, owing to the purchase of certain properties from subsidiaries, and, while debenture interest has increased for the same reason, the sum remaining for appropriations is getting on for £15,000 higher. The increase enables £25,000 (against £15,000) to be placed to reserve fund and £5,000 (against £4,000) to be written off leaseholds, whilst £13,362 is applied in redemption of debentures. The 2½ per cent. dividend paid for the three preceding years is repeated:—

	Years to August 31		
	1932	1933	1934
	£	£	£
Subsidiaries' profits (<i>less</i> due to outside shareholders)	182,745	153,127	164,302

Carried forward	1,564	3,207	5,968

* To write off balance of preliminary expenses.

Selfridge Provincial ordinary shares are currently quoted at 9s. 3d. which, allowing for the dividend of 6d. a share, gives a yield of 5½ per cent.

* * *

Three Coal and Iron Reports.—The reports of Staveley Coal and Iron, Sheepbridge Coal and Iron, and Manvers Main Collieries, published this week, largely confirm the general expectation of improved profitability in the "heavy" industries. The Sheepbridge results, exceptionally, are mildly disappointing, for trading profits are barely maintained at the previous year's level. Shareholders, therefore, must find consolation in the company's stability of earning power, for it appears from the directors' report that the handicaps in the coal trade have outweighed the benefits of expanding iron production. As will be seen from the following table, Manvers Main and Staveley have shown very satisfactory improvement during the year to June last:—

		Years to June 30		
		Manvers Main	Sheep-bridge	Staveley
		£	£	£
Total profit	1932	70,986	140,125	372,292
	1933	79,162	148,381	404,820
	1934	142,515	145,415	468,973
Depreciation	1932	24,039	23,106	146,346
	1933	41,584	23,041	177,485
	1934	44,338	23,041	197,748
Earned for dividends	1932	41,084	82,691	219,279
	1933	28,971	88,228	220,668
	1934	64,897	85,870	264,774
Paid ordinary shares		%	%	%
	1932	Nil	5	5†
	1933	2½	5	5†
	1934	4	5	6½†
Quotation, £1 ord.		...	22/-	35/-xd
Yield, per cent.		...	£4/14/0	£3/14/0†

† Tax free.

The advance in Staveley profits had already been foreshadowed by the increase in dividend from 5 to 6 per cent., tax free, and the full report discloses that, after providing over £20,000 more for depreciation, the amount earned for dividend has increased from £220,668 to £264,774, or from 6.5 to 7.8 per cent., tax free, on the issued capital. The balance sheet reflects increased activity, and the programme

of plant development continues. The Manvers Main figures are also gratifying. Trading profit has risen sharply from £79,162 to £142,515, and after special depreciation £64,897 is available to pay the 4 per cent. dividend, compared with £28,971 and 2½ per cent. for the previous year. The distribution policy in the past has been commendably prudent, and this year's results have been partially assisted by the starting up of the new coke ovens, financed out of the company's resources. The report emphasises the failure of the coal industry to participate markedly in trade recovery, but to secure more efficient marketing the company has appointed Stephenson Clarke and Associated Companies as sales agents. Current share quotations and yields for two of the companies are shown in the above table, but no business has been recorded in Manvers Main since March last.

* * *

Other Company Results.—Our summary table on page 563 sets out the results of twenty-five companies in addition to those discussed in preceding Notes. With few exceptions, the profits trend continues upward, particularly for companies in the "heavy" industries, and for those dependent on the price level of primary commodities. Thus, of the latter, eight rubber reports show improvement, with the exception of Bajoe Kidoel, which has suffered from the exceptional decline in coffee prices. The chief feature, however, is the improved profitability of domestic industrial concerns. Results such as Associated British Pictures (£133,933, against £95,860), Leyland Rubber (£50,307, against £35,408), Qualcast (£44,112, against £30,117), and Ferranti (£68,245, against £57,869) are giving pleasing confirmation to the market's expectations. Against this record, the reduction of the Cohen Weenen profits from £80,346 to £70,376, heralded by a reduction in the ordinary dividend from 27 to 18 per cent., is noteworthy in view of the cessation of coupon hostilities. Anglo-Continental Guano, which has resumed dividend payments (7½ per cent.) after a long period, has reported an improvement in net profits from £45,797 to £58,225 during the year to June last, but although its subsidiary, Genatosan, has maintained a 35 per cent. dividend, this company's net profits have fallen from £59,369 to £50,142 over the same period. This week's dividend list reveals that a number of tin mining companies have resumed dividend payments, and among home industrial companies Indestructible Paint has increased the interim payment from 5 to 6½ per cent. Preliminary figures for Malayalam Plantations show a large recovery for the year to March last, the net credit balance amounting to £150,099, against a loss of £67 for the previous year, and a dividend of 8 per cent. is recommended.

* * *

Company Meetings of the Week.—On page 555 will be found reports of meetings of Wall Paper Manufacturers and Industrial Finance and Investment Corporation. At the former meeting, Mr Sugden indicated that the soundest of all ways of meeting competition was to reduce prices and profit margins, and expressed the view that this policy would not diminish total profits. Mr Paul Lindenberg, chairman of the latter company, said that Corporation's assistance had been invoked in connection with the large order to Westinghouse Brake Company for the equipment of Polish rolling stocks, and observed that the benefit would only accrue to them during the next few years.

MINING NOTES

Johannesburg Consolidated.—The preliminary profits statement published in July had already acquainted shareholders with a further large expansion in profits for the year to June 30 last, accompanied by a dividend of 20 per cent. including bonus—a record distribution for nearly forty years. The increase in total earnings amounts to £528,890, representing 62 per cent. on the previous year's figure. The profits total of £1,380,935 requires to be read in the light of paragraph 2 of the directors' report, which points out that substantial profits have been

FOREIGN GOVERNMENT BOND TRUST

Dividend Declared

AT THE RATE OF

£6-7-0%

IN MARCH OF THIS YEAR the Foreign Government Bond Trust was formed and in the introductory pamphlet it was stated that a yield of 5½ per cent could legitimately be anticipated.

The first half-yearly dividend has just been declared at the rate of £6-7-0 per cent per annum on the initial Bond-Unit price of 20/-, and is payable on October 1st. Under present-day conditions this is a fine yield.

The Managers of Foreign Government Bond Trust are Municipal and General Securities Co. Ltd. (established in 1906 and the pioneers of British Fixed Trusts in this country). Due to the possibility of some measure of recovery in general world conditions, Foreign Government Bonds are already attracting more attention and investors in the Bond-Unit Certificates of this Trust should benefit accordingly. The day-to-day prices of Bond-Units reflect exactly the prices of the securities which they represent. The Trust's investments are selected from 122 published Bonds. Its operation is clearly defined in the Trust Deed, and the "spread" of the Trust's holdings by percentages is made available to the public every half year. The Trustees are Lloyds Bank Limited.

Interested investors can have full details of Foreign Government Bond Trust from their Stockbroker or Bank Manager, or from the Managers:

**Municipal and General Securities
Company Limited**

99 Cloak Lane, Cannon St., London, E.C.4

*Grams: Munigenco, Cannon, London *Phone: City 5201

realised on certain shareholdings, and that to some extent the profit expansion must be regarded as exceptional. It may be suggested in this connection that some segregation of the component items in the omnibus revenue figure would be helpful to shareholders, but the transfer of £450,000 to reserve fund, which the directors consider prudent, may afford some indication of the magnitude of the quasi-capital profits. A table of significant items in the accounts for the past three years follows:—

	Year ended June 30		
	1932	1933	1934
Stocks and shares	4,325,920	4,896,450	6,454,150
Mining properties and advances...	217,150	151,390	133,871

Cash	283,960	621,700	301,222
Sundry creditors*	849,150	1,188,220	1,908,026
Net profit	359,680	824,270	1,347,576
Dividends.....	220,710	592,500	790,000
Rate per cent.	7½%	15%	20%
From reserve	...	473,640	...
To Reserve	150,000	700,000	1,550,000
Carried forward	155,650	161,070	168,643

* Including dividend† † Includes £100,000 to staff pension fund.

Despite the realisation of certain holdings, the book value of stocks and shares has risen sharply from £4,896,454 to £6,454,150 (considerably under market value), and now accounts for over 80 per cent. of the total assets. The company has secured large interests in Rand Leases (Vogelstruisfontein), particulars of which were recently advertised "for information," and other new ventures have been acquired. The report gives brief details of some of the operating companies, upon which the incidence of the new taxation provisions is uneven. The diamond trade has failed to pick up, but the production quota, which also covers the Diamond Corporation's stocks, encourages renewed hopes of improved profitability. The directors find evidence of better conditions for copper production, but it is questionable if the long-term interests of the new low cost producers—in which the company is interested via Rhodesian Anglo-American—would best be served by an "agreement between producers to secure some improvement in price," at the possibility of which the report hints. At a current quotation of 3½ d. the £1 shares yield £6 3s. per cent.

* * *

New Modderfontein.—Our mining correspondent writes:—The annual reports of this company and of the associated Modder East undertaking rather strikingly indicate the extent to which the effect of the rise in the price of gold is being counterbalanced by the treatment of lower-grade ore with a view to reducing liability to taxation. Last year New Modder secured an average of 36s. 5d. per ton, or 2s. more than in the preceding period, although the value of the ore treated was 1½ dwt. less. The total working profit increased by over a quarter of a million; but shareholders received only an additional £35,000. Excess profits duty absorbed £337,330, as against £230,240 in 1932-33, when this impost was only operating for one-half the period. The draft made upon the carry-forward twelve months ago is now fully replaced. We contrast the results of the past three years:—

	1931-32	1932-33	1933-34
Ore crushed..... tons	2,000,000	2,082,000	2,122,000
Revenue	33/7	34/5	36/5
Costs	15/4	14/9	14/8
Profit	18/3	19/8	21/9
Total working profit.....£	1,822,050	2,049,469	2,304,860
Dividends	1,505,000	1,435,000	1,470,000
Rate..... per cent.	107½	102½	105
Carried forward.....£	220,250	205,850	224,690
Ore reserves available tons	6,009,500	5,300,700	4,654,600
ie per ton.....dwt.	7.7	7.3	7.1

On the basis of gold at 85s. per ounce the available reserves show a further contraction. For the current year results corresponding to those of 1933-34 can be anticipated; but looking a little further ahead, it seems evident that shareholders must be prepared for a falling off in the profits. The rise in the price of gold, in conjunction with a substantial increase in the tonnage of ore crushed, resulted in a sharp improvement in the earnings of Modder East too. Last year's working profit amounted to £606,550, as against £391,000 in 1932-33, which embraced only six months of the new conditions, and £194,700 in 1931-32, when South Africa was still on the gold standard. Nevertheless, dividends have been only moderately increased, the past year's total of 25 per cent. comparing with 22½ per cent. for 1932-33 and 20 per cent. in respect of each of the four preceding periods. Taxation last year absorbed in all £321,830 as against £191,560. Developments continue to be disappointing. Despite the performance of 66,700 feet of work as against 57,450 in 1932-33, the ore reserves are only about 200,000 tons higher at 2,245,100 tons, while the average value, at 5.8 dwt., is slightly less than before. In the new area of some 630 claims acquired during 1932-33, the values so far exposed have been unpayable. Application has been made to the Union Government for lease of the undermining rights of an additional 108 claims; and just recently negotiations have been initiated with a view to the acquisition of a portion of the Welgedacht company's property. The Modder East's mining property already comprises nearly 4,440 claims; but with development results so erratic, importance attaches to the acquisition of fresh fields for exploration.

* * *

Anglo-Oriental Mining.—The accounts of this leading tin finance company, covering sixteen months to June last, show some recovery from the abysmal profit levels of the previous year. Over the period income has run at the rate of £53,150 per annum, some 57 per cent. higher than for the last complete year. After making due allowance for the effect of the "time lag" between subsidiary companies earnings and their distribution to the principal company, the results are hardly a very striking tribute to the financial advantages of the tin restriction scheme, although current mining revenues are moving at higher levels. Comparative results for the last three accounting periods are set out below:—

	Years to Feb. 28,		Sixteen Months to June 30,
	1932	1933	1934
Income	34,349	33,823	70,871
Expenses, tax and fees	10,796	10,848	15,732
Investment reserve.....	5,000	5,000	5,000
Earned for dividends	18,553	17,975	50,139
Preference dividend.....	Nil	Nil	29,063†
Carried forward	103,412	121,387	142,463

† In respect of half year to February 28, 1931.

An issue of 1,000,000 5s. ordinary shares at a premium of 2s. 3d. per share in May this year has enabled the repayment of loans stated in the previous accounts at £335,773. The directors wisely recognise that the liquidation of outstanding preference dividend arrears, which at June 30th amounted to £222,812 and were covered to the extent of £176,526 by undistributed profits, would entail unjustified new borrowing. The alternative funding method is also rejected in view of the expanding interests of certain affiliated companies. The balance sheet, in which the assets are grouped in only four items, shows little change apart from loan repayments, and the investments, totalling £1,698,152, at cost, are above present market valuation. The development of Anglo-Oriental and General Investment Trust's interests may well enable the gradual liquidation of preference arrears, but until an adequate return is derived from the company's large holding in London Tin Corporation, the outlook for the 5s. ordinary shares, now quoted at 7s. 1½d., must be regarded with circumspection.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET September 25 | ACCOUNT September 27

The buoyancy of gilt-edged stocks has monopolised the attention of the market this week, with impressive rises for which a variety of plausible reasons have been adduced, but which bear witness to the fact that institutional investors are taking a confident view that long-term interest rates have yet to reach their turning point. By comparison the industrial markets have appeared laggardly, but the slightly easier trend must be attributed rather to temporary decline in public interest and to the absence of Jewish members on Wednesday, than to any dissatisfaction with recent dividends or to inability to take a view regarding the coming winter.

Gilt-edged stocks commenced the week in good fettle on the result of the Nigerian conversion success, and proceeded vigorously under the influence of unconfirmed rumours of an impending conversion operation, to new high levels on Wednesday. The outlook for gilt-edged is discussed in a Note on page 543. India loans followed the trend of the gilt-edged market, and Australian stocks were a feature among Dominion issues, on the outcome of the elections.

Conditions in the foreign bond market were distinctly active. On the better view of South American prospects, Brazilian issues were prominent, the Funding loans being particularly responsive. Argentine issues, although less active, in most cases improved fractionally. European loans were generally quiet, but firm. German bonds rose several points on Wednesday and Thursday on the new negotiations, the supply of stock being short. Japanese bonds were bought on the revenue surplus.

Home rails were quiet and made a poor response to a very satisfactory batch of profits, the market taking a cautious view of the coal situation. The traffic trend is discussed in a Note on page 544. The foreign rail market was fairly quiet. Argentine issues waned as the week progressed, despite reasonably good traffic returns. Brazilian rails, after quiet firmness, weakened under the influence of San Paulo, which fell sharply on the passing of the interim dividend. Transatlantic counters improved with the better tendency in New York, and Cables and Wireless preference improved on the favourable traffic index.

Business in the industrial markets was restricted on Monday and Tuesday, but improved somewhat on later days. Motor shares were perhaps the principal feature, under the influence of the Austin share bonus, on which we comment on page 546. The shares rose to over £7 on Wednesday, but reacted later. Rolls-Royce were also active, but other aviation issues were generally easier. Electric supply shares reflected some of the glory of the gilt-edged market, and some equipment issues received attention. "Heavy" industrial shares were mainly dull, although support was noticeable for Richard Thomas preference, on the assumption that the ground had been cleared for the capital reorganisation. Some early provincial inquiry for leading brewery issues petered out during the week, and prices became somewhat irregular. Tobacco shares also found public support at low ebb, although Gallaher responded to favourable dividend hopes. Under the influence of slack business textile shares lost most of their early firmness, and rayon issues, with the exception of American Celanese, ruled dull. More interest developed in store shares. Marks and Spencer and Woolworth led the revival, the former rising to over 12 on expectations of a new issue on favourable terms. In the miscellaneous group, attention was directed principally to such "second-string" favourites as Boots Pure Drug, Barry and Staines and British Oxygen, but, as elsewhere, interest followed the news of the moment. Popular speculative counters followed an irregular and less satisfactory course. Insurance shares were little changed, but among bank shares, Australian issues responded satisfactorily to the election results.

In the oil market dull conditions persisted, with Continental business extremely quiet. Turnover was small,

but quotations were little changed. The rubber market became steadier after considerable selling last week-end, but business was small and the tone decidedly cautious. Tea shares continued depressed under the influence of Mincing Lane, although a small inquiry for shares in short supply put some quotations better on Wednesday.

Although the mining market reassembled under cheerful conditions, business dwindled owing to the closing of the Johannesburg market on Wednesday. The Cape, in fact, sold Kaffirs, at somewhat lower prices on Tuesday, and speculative interest in newer flotations remained unwhetted in the absence of progress news. West African issues were fairly quiet, but Kwahu achieved a new high level on reports that a new property had been acquired. West Australian issues were quietly steady. Tin shares remained lifeless, and the falling price of copper prevented any interest in the shares.

FOREIGN STOCK EXCHANGES

NEW YORK

THE failure of the Treasury's refunding operation and the beginning of the third week of the textile strike were very depressing influences on Wall Street on Monday and further sharp falls both in the share and Government bond market occurred. Share prices, however, closed above the worst and on Tuesday the market was firmer, while on Wednesday a definite and pronounced rally, the first for some weeks, supervened, the Dow Jones index for industrials gaining almost two points at 89.34. Two principal causes were assigned for the movement—our old friend "inflation hopes" fastened this time on to the project for a Central Bank (the subject of a report by Professor Viner shortly to be made public), and certain reassuring statements as to policy made by members of the Securities Exchange Control Commission which has been visiting the financial district. Business news, however, continues unsatisfactory. Electric power consumption last week showed a decline of 1.8 per cent. below 1933, and the absence of seasonal recovery in steel mill activity, estimated by the "Iron Age" at 21 per cent. last week against 19.5 per cent. in the previous week, has created a bad impression.

PARIS

The market has been quiet and price changes in general insignificant. Rentes have hardly been affected by the announcement of a new loan in the form of short-term 4 1/2 per cent. Treasury bonds, redeemable in three years at par, in six years at 103 and in ten years at 106 at the option of the holder, and offered at 97.6 per cent. On the Coulisse Brazilian Bonds have been strong. Gold mining shares and rubbers have been dull.

BERLIN

The share market last week was firmish but irregular, with advances in certain steels, including Hoesch and Kloeckner, and in paper issues, Feldmuehle reaching a new highest point. Some steels and the potash group, however, were unchanged, and Reichsbank, Hapag, and Norddeutsche Lloyd declined. The "cash market" for minor stocks was active and there were some sharp advances. Home Government bonds were dull, with prices little changed. Converted dollar bonds mostly advanced somewhat, but certificated issues were weaker. The new week opened firm for shares, with special advances in electric cables, and a new rise of Feldmuehle; and Tuesday saw a sharp advance from which all the leading steels and most other groups profited.

CAPITAL ISSUES

THOUGH the third week in September sometimes sees the autumn new issue season definitely under weigh the past week has yielded only a single prospectus. This, however, is an interesting one, since it is an addition to the select band of English municipal stocks carrying interest at 3 per cent. The borrower is the ancient *City of Plymouth* (due in five years' time to celebrate the five hundredth anniversary of its incorporation as a borough), which has this week offered £1,000,000 3 per cent. stock due 1954 at 97 1/2, thus closely following, as to price and redemption terms, the example set last week by the Crown Colony of Nigeria. The £1,500,000 *Stoke-on-Trent* 3 1/2 per cent. 1955-65 stock issue, the arrangements for which were made before the latest

spurt in gilt-edged values had finally brought the 3 per cent. interest basis for corporation loans into the domain of practical politics, is to be offered for subscription at par early next week. A statement for information has been published by *Sungei Engun Rubber Estate, Limited*, which was incorporated in December, 1933, and owns an estate in Pahang, Federated Malay States.

ISSUES OF THE WEEK

By Prospectus or Offer for Sale

Total recorded, January 1 to September 15, 1934, excluding conversions, £118,177,069.
Total recorded, January 1 to September 15, 1934, including conversions, £283,393,287.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 551)
FORTHCOMING ISSUES

Associated British Picture Corporation.—An extraordinary general meeting will be held on October 2, to sanction proposals for increasing the capital of the corporation to £4,000,000 by the creation of 250,000 6 per cent. first cumulative preference shares of £1 and 1,000,000 5s. ordinary shares. Such extra capital will enable the completion of arrangements for funding subsidiary loans and for general development.

Austin Motor Company, Ltd.—At the annual general meeting of shareholders to be held on October 8th a proposal will be submitted for the issue of 100,000 fully-paid "A" ordinary shares of 5s. each at the price of 10s., of which 50,000 shall be offered to the present directors of the company for subscription and the balance to the senior employees of the company. A condition attaching to these 100,000 shares will be that they cannot be sold before July 31, 1935.

A. T. Hart, Ltd.—An issue of shares is expected to be made by this company.

Kawaran River Gold.—It is understood that 3,100,000 shares at 2s. each will shortly be issued at par.

Nokomai Gold Dredging.—An issue will shortly be made of 2,400,000 shares of 2s. each.

Wall Paper Manufacturers, Ltd.—At an extraordinary general meeting held on September 18, 1934, resolutions were duly approved increasing the capital of the company to £5,800,000 by the creation of 800,000 new shares of £1 each, 400,000 to rank as preference and 400,000 to rank as ordinary. The proposals were outlined in the *Economist* dated September 15th, page 501.

Herbert Green and Company, Ltd.—It is proposed to make an issue on behalf of this company early next week.

National Coke and Oil Company.—An issue is pending on behalf of this company in 5s. ordinary shares and 6 per cent. £1 preference shares, both at par.

Stoke-on-Trent Corporation.—An issue will be made early next week of £1,500,000 3½ per cent. redeemable stock, 1955-65, at par.

RESULTS OF ISSUES

Monsanto Chemicals, Ltd.—The list of subscriptions for 400,000 5½ per cent. redeemable cumulative preference shares of £1 each at 20s. 6d. per share was closed at 9.5 a.m. September 14th, owing to heavy over-subscription.

Nigeria Government 3 per Cent. Loan.—The cash lists for this issue were closed shortly after 10 a.m. September 17th, owing to heavy over-subscription. Conversion lists are open, and will not be closed until September 28th.

Plymouth Corporation.—Issue of £1,000,000 of 3 per cent. stock at £97 10s. of the Plymouth Corporation. Subscription lists were closed at 9.5 a.m., or five minutes after they were opened.

CALLS DUE SEPTEMBER 24 TO SEPTEMBER 29, 1934

The grand total of calls falling due in September, 1934, is £4,766,761, which compares with £25,747,684 which fell due in September, 1933. The following calls fall due from September 24, 1934, to September 29, 1934, inclusive:—

REPORTS AND NOTICES

BANKS

BANK OF ENGLAND.—Profits for the half-year ended August, after making provision for all contingencies, were £676,876, making the amount of the "rest" £3,700,897. A dividend of 6 per cent. is declared. Profits for the previous six months were £656,795.

MISCELLANEOUS

CERTIFIED ACCOUNTANTS.—The next examinations of the London Association of Certified Accountants will be held on December 4th, 5th and 6th in Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin, Edinburgh, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Nottingham, Plymouth and Sheffield. Women are eligible under the Association's regulations to qualify as certified accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the Association, 50 Bedford Square, London, W.C.1.

CABLE AND WIRELESS, LTD.—INDEX NUMBERS.—Monthly figures reduced to working day average: Working day average of comparable receipts year 1929=100. Index number, month of August, 1934, 70.7, against 68.9 for July, 1934, and 65.9 for August, 1933.

MEXICAN GOVERNMENT DEBT PLAN.—In a letter dated September 4th received by the British committee of Mexican Bondholders, the secretary to the Mexican Treasury states: "It is the intention of the Mexican Government very shortly, namely, during this present month, to formulate a complete plan for dealing with the exterior debt. . . ." The letter refers to the report of the Department of Finance, which has not yet been received in London.

"IRISH FREE STATE LAND BONDS."—Under this heading on page 497 of the *Economist* of September 15th, it was stated that no drawings have yet taken place of Northern Ireland 4½ per cent. loan. In an announcement in the *London Gazette* of August 24th, however, it was stated that bonds totalling £31,410 were drawn on August 20th for repayment on November 1st, in accordance with regular procedure.

LISSEN, LTD.—In view of the fact that the month of December falls within the company's busiest period of the year, the directors of Lissen, Ltd., have resolved that in the future the company's accounting year shall run from April 1st to March 31st, and that in order to effect this change the next accounting period will run from January 1, 1934, to March 31, 1935. The above resolution does not affect the rights of the preference shareholders and the dividends on the preference shares continue to be payable on March 1st and September 1st in every year.

THE ANGLO-SIAM CORPORATION, LTD.—The accounts show a net profit of £17,690 for the year ended March 31, 1934. After crediting £45,198 brought forward from the previous year, and transferring £5,000 from the equalisation of dividend fund, the balance at the credit of profit and loss account is £67,888. The directors have placed £3,000 to the staff provident fund, and recommend the payment of a final dividend of 5 per cent. on the ordinary shares, making 7½ per cent. less tax, for the year, leaving £45,338 to be carried forward to the current year. Meeting, September 25th, at 5, St. Helen's Place, London, E.C.3, at 3 p.m.

COMPANY MEETINGS, &c

WALL PAPER MANUFACTURERS, LIMITED

FURTHER BUSINESSES ACQUIRED

INCREASE OF CAPITAL APPROVED

An extra-ordinary general meeting of the Wall Paper Manufacturers, Limited, was held, on the 18th instant, at the Holborn Restaurant, High Holborn, London, W.C., to consider resolutions increasing the capital of the company to £5,800,000 by the creation of 800,000 new shares of £1 each, 400,000 to rank as preference shares and 400,000 as ordinary shares.

Mr Alan V. Sugden, J.P. (the chairman), said:—Ladies and gentlemen.—The circular issued to stockholders explains so fully the circumstances which have led up to the amalgamation proposals that I only propose to make a few comments amplifying them.

Although the last fifteen years have been profitable ones to this company they do quite definitely represent a condition of non-expansion on the sales side of wallpaper, our main interest, in spite of very great efforts to increase our trade.

PRICE POLICY

The policy of price maintenance referred to in my circular letter in all probability negated our exertions in the direction of expansion owing to the existence of such a large assortment of cheap goods obtainable elsewhere.

Our position of influence in the trade (I will not say monopoly, for we have not had nor shall we possess that qualification after this amalgamation) had been lessened and the proper regulation of price scales and discounts and of just and universal trade practices had been weakened.

For extremely good financial and other reasons, referred to in my circular letter, we have put up with such conditions for the time being.

We have, however, been standing still on this particular side of our business, that of rollage, a quite intolerable position as a normal experience for a great company.

In future and as a result of these acquisitions we propose in the interests of all concerned to adjust ourselves to changed conditions and to render it less easy for new competitors with machinery redundant to consumption to commence operations and also less easy for those already in existence to increase their share of the business obtainable.

LARGER TURNOVER ANTICIPATED

It may be urged that this policy, by reducing our margin, may result in decreased profits. I can only say that this is not my opinion or that of my colleagues on the board. We shall have, as we confidently anticipate, a much larger turnover and run nearer to capacity. We also believe it a healthier thing for our future that we should endeavour to increase the volume of our trade rather than that it should stand still.

I may also say that the present proposals have received a hearty welcome from the Labour Unions and from most elements in the trade.

The new mills which are being continued as branches of this company will not, of course, reflect the whole measure of their earning power in our results for the year just closed, as this in their case represents only four or five months' trading, including a period which is the least remunerative in the wallpaper manufacturing year.

The resolutions submitted were duly approved.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION, LIMITED

The ninth ordinary general meeting of the Industrial Finance and Investment Corporation, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Paul Lindenberg (the chairman), in dealing with the balance sheet, said that the items "Cash at bankers and in hand" and "Short loans, secured" were very much larger than in the preceding year, which meant that the financial position of the Corporation had very much improved. The liquid funds, together with marketable securities, exceeded in amount £1,100,000. The investments included gilt-edged securities amounting to £371,787, and other investments, all quickly realisable, amounting to £435,986. That increase was due to repayments of loans in accordance with the policy outlined at the last meeting.

"Loans and advances," together with "Advances and debtors," amounted to about £720,000, as against £932,287 a year ago. Unfortunately, existing exchange restrictions had made it difficult to transfer the money, and certain losses had encroached on the profits of the year. In spite of that, the board were continuing to reduce the loans outstanding in foreign countries, and since the balance sheet was drawn up there had been further substantial repayments.

The improvement in economic conditions in England made further progress during the last year, and the corporation had been useful in helping British industries by financial assistance and advice. The corporation's assistance had been very useful in connection with the large order to the Westinghouse Brake and Saxby Signal Company, Limited, for the equipment of the Polish railway system with brakes for the rolling stock. The benefit of that transaction would only accrue to them during the next few years.

Reports from industrial centres indicated that the improvement in trade had lately lost some of its impetus and the Board of Trade returns, though progressive, were not anything like as good as could be desired. That, however, was not surprising in view of the very unsettled world conditions, and it seemed as though some considerable time would elapse before it would again be possible to conduct international business with a greater certainty that contracts would be fulfilled and payments effected. At present large sums of capital were idle, and confidence on the part of investors to employ money in new enterprise abroad was still lacking.

The report and accounts were adopted.

GOLD

Messrs. Samuel Montagu and Company write on September 19, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,821,508 on the 12th inst., as compared with £191,762,212 on the previous Wednesday.

In the open market about £1,800,000 of bar gold was disposed of during the week. The demand was again general and sufficient to maintain prices at a premium over the gold exchange parities.

Quotations during the week:—

	Per ounce fine	Equivalent value
September 13	140s. 6 1/2d.	12s. 1-07d.

Average	140s. 6-25d.	12s. 1-10d.

SILVER

The market has been very steady during the past week and prices have shown little variation. There have been no new features, America and the Indian bazaars continuing to give support, the demand again being met chiefly by China sales; the latter have perhaps been made rather less freely, offerings in many cases being limited to prices slightly above those current. There has been some inquiry from speculators but sales to liquidate bull contracts have also been effected. The tone of the market remains steady.

Quotations during the week:—

IN LONDON			IN NEW YORK		
	Cash	Two Months' delivery		Cents per Ounce	-999 fine
September 13 ...	21 1/8d.	21 1/8d.	September 12 ...	49 1/2	
" 14 ...	21 1/8d.	21 1/8d.	" 13 ...	49 1/2

(d) Also 300 per cent. in "A" shares, £450,000, being met from reserve.
* Free of income tax. (a) Absorbed £72,075. (b) Absorbed £37,500.

BLUEBEL BROS., LTD.—The directors have decided to pay the final dividend on the 7 per cent. preference shares.

SAN PAULO (BRAZILIAN) RAILWAY COMPANY, LTD.—Warrants for an interim dividend of 2½ per cent. on account of the year ending December 31, 1934, on the 3 per cent. non-cumulative preference stock will be posted on October 24, 1934, to the stockholders on the register at this date. In the absence of any adjustment in the tariffs based on exchange below 4d. to the milreis and consequent on the continued low rate of exchange, the directors have decided to await the result of working for the whole year before making any declaration of dividend on the ordinary stock.

THOS. W. WARD.—The directors have decided to pay a further one year's dividend on the first preference shares, thus clearing off the whole of the arrears. They will also pay 1½ years' dividend upon the tax-free second preference and employees' shares. Warrants will be posted on September 29th, and the current quarterly dividend upon the first preference shares will be paid on the same date. One year's arrears of dividend on the first preference shares was paid in June. The payment on the second preference is the first since June 30, 1931.

UNITED MOLASSES.—The United Molasses Company announces that warrants will be posted on September 29th for the half-year's interest to September 30th next on the 4 per cent. cumulative funded income stock and the 6 per cent. cumulative unsecured income debenture stock, together with the half-year's dividend on the 6 per cent. cumulative preference stock.

CORDBO CENTRAL RAILWAY COMPANY, LTD.—(4½ per cent. First Debenture Stock.) Although the net revenue position as at the 30th June, 1934, will show some improvement as compared with that at the 30th June, 1933, the Directors regret that it will not be possible for the Company to meet the instalment of interest payable on the First Debenture Stock on the 1st October, 1934. The Board has decided, with the concurrence of the Trustees, to postpone payment of such instalment of interest for a period of 6 months, or until such later date as may, with the concurrence of the Trustees, hereafter be determined.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

REPORT OF DIRECTORS.—To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 20th November, 1934, at 11 o'clock in the forenoon.

ACCOUNTS.—1. The Company's Balance Sheet as at 30th June, 1934, and Profit and Loss Account for the financial year ended on that date, are submitted herewith.

PROFIT AND LOSS.—2. After making provision for Income Tax and for all charges, including the net amount required to adjust the values of quoted securities to cost or market value, whichever was the lower, at 30th June last, and to provide where considered necessary for possible loss in respect of unquoted securities and other assets, the profit for the year amounted to £1,347,576 0s. 3d.

Advantage has been taken of the opportunity afforded by active markets to realise substantial profits on certain of the Company's shareholdings. To some extent therefore the increase in profit must be regarded as being of an exceptional nature, and in these circumstances the Directors have considered it prudent to add to the Reserve Fund by transferring the amount of £450,000 from Profit and Loss Account.

Steps are being taken to establish a Staff Pension Fund, and for this purpose an amount of £100,000 has been allocated which it has been calculated will be sufficient to start it on a sound basis.

With the amount of £161,066 15s. 2d. brought forward from the previous year there remains an available balance of £958,642 15s. 5d. **DIVIDEND.**—3. On the 11th July, the Directors declared a Dividend of 3s. 0d. and a Bonus of 1s. 0d. per share, both less United Kingdom Income Tax, the gross amount absorbed being £790,000, leaving £168,642 15s. 5d. to be carried forward. The Dividend and Bonus are payable on and after 20th September, 1934, to shareholders registered on the Company's books at 31st July.

RESERVE FUND.—4. Including the amount of £450,000 transferred from Profit and Loss Account the Company's Reserve Fund now stands at £1,950,000.

VALUE OF SHAREHOLDINGS.—5. In cases where market quotations were available the Company's shareholdings appear in the books at cost or market value, whichever was the lower, at 30th June, 1934. Unquoted securities have been valued by the Directors on a conservative basis and in no case above cost. In aggregate the market value of the shareholdings shows a large surplus over the book value.

FINANCIAL POSITION.—6. The strong financial position of the Company has been maintained, and the assets include substantial holdings in British Government securities, so that advantage may be taken of any favourable opportunities for investment which present themselves.

GOLD MINING INTERESTS.—7. The periodical reports issued by the Gold Mining Companies of the Group contain full details of the operations for the year ended 31st December, 1933. A brief summary is given below. Generally speaking these reports show a satisfactory position not only as regards profits earned but also on account of the substantial addition to the lives of the mines resulting from the possibility of working low grade ore.

The Union Government has introduced a modified scheme of taxing the gold mines to take effect as from the 1st January, 1934. The alterations benefit certain of the mines of the Group, though others are adversely affected.

The supply of labour, both white and native, has been adequate for all requirements. An agreement relating to working conditions has been concluded between the mine workers' union and the mining companies which should strengthen the amicable relations with the white employees. The increased prosperity of the industry has enabled the mining companies to initiate a provident fund for the benefit of the white employees. An improved medical service in the native workers has also been inaugurated. During the twelve months ended 30th June, 1934, the total tonnage milled by the mines of the Group was 9,821,000 producing 2,799,600 ounces of fine gold valued at, approximately, £18,500,000.

In the following summaries payable ore reserves are estimated on the basis of gold at 120s. per fine ounce and working costs as during 1933.

GOVERNMENT GOLD MINING AREAS (MODDERFONTEIN) CONSOLIDATED, LIMITED.—The tonnage milled for the year ended 31st December, 1933, amounted to 2,478,000 tons, and a working profit of £4,241,921 was made. The share of profits paid to the Union Government under the terms of the Company's lease was £2,466,298, making a total of £19,851,159 to date. Dividends totalling 12½ per cent. were distributed in respect of the twelve months ended 30th June, 1934.

The ore reserves at 31st December, 1933, were estimated at 11,318,000 tons of an average value of 7.8 dwts. over a stopping width of 57 inches.

NEW STATE AREAS, LIMITED.—New records were created in tonnage milled, revenue and profit during the year ended 31st December, 1933. 1,085,000 tons were treated, resulting in a working profit of £1,938,604, the Union Government's share under its Lease to the Company together with taxation being £1,441,677. Dividends totalling 25 per cent. were distributed for the twelve months ended 30th June, 1934.

The ore reserves at 31st December, 1933, were estimated at 3,860,000 tons of an average value of 7.7 dwts. over a stopping width of 48 inches.

THE LANGLAAGTE ESTATE AND GOLD MINING COMPANY, LIMITED.—The ore crushed during 1933 amounted to 49,000 tons, resulting in a working profit of £2,640,822 of which £368,228 was paid to the Union Government in respect of Income Tax, Excess Profits Duty and share of profit. Dividends totalling 17½ per cent. were distributed for the year to 30th June, 1934.

The ore reserves at the 31st December, 1933, amounted to 1,090,000 tons of an average value of 4.2 dwts. over a stopping width of 42 inches.

The higher price of gold has brought within profitable exploitation large quantities of low grade ore on the two reefs which in the past supplied the great bulk of the tonnage. In addition, the main reef body, which generally is a low grade body underlying the Main Reef Leader, has become of considerable potential importance, and ore is now being won from this source.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.—The ore crushed during 1933 amounted to 3,160,000 tons, the resulting working profit being £2,008,813, of which the Union Government received £1,063,376 in respect of Excess Profits Duty and Income Tax. Dividends totalling 10 per cent. were distributed for the twelve months ended 30th June, 1934.

The ore reserves at 31st December, 1933, amounted to 9,019,000 tons of an average value of 5.1 dwts. over a stopping width of 43 inches.

The additions to the reduction works referred to in the previous report have been completed and operations are now on a scale of 4,000,000 tons per annum.

The poor percentage payability met with in the northern portion of the North Vertical Shaft and in No. 2 North Section in 1933 made it advisable to accelerate the shaft sinking programme in the Northern Division where development has been encouraging, and in consequence a new main shaft, named No. 3 North, was started in March, 1934.

VAN RYN DEEP, LIMITED.—During 1933 912,000 tons of ore were crushed resulting in a working profit of £661,763. The Union Government received £357,179 in respect of Excess Profits Duty and Income Tax. The dividends for the twelve months ended 30th June, 1934, totalled 26½ per cent.

The ore reserves at 31st December, 1933, amounted to 3,090,000 tons of an average value of 4.7 dwts. over a stopping width of 48 inches. The future of the Company has been materially affected by the enhanced price now being obtained for gold; large quantities of ore, particularly in the Western Section of the Mine and the Upper Leaders generally, have been brought within profitable exploitation.

WITWATERSRAND GOLD MINING COMPANY, LIMITED.—The ore crushed during 1933 totalled 879,000 tons, resulting in a working profit of £125,916. Dividends amounting to 17½ per cent. were distributed for the year ended 30th June, 1934.

The ore reserves at 31st December, 1933, stood at 954,000 tons of an average value of 3.4 dwts. over a stopping width of 57 inches.

The increased price of gold has made a considerable difference to the prospects of this Company. From a struggling concern, whose efforts to carry on profitable mining operations would have been brought to a close by any adverse circumstance, the Company has been placed in a sound position and is now earning regular profits.

OTHER GOLD MINING INTERESTS.—During the past year the Company has secured a large interest in Rand Leases (Vogelstruisfontein) Gold Mining Company, Limited. This mine is being rapidly opened up and equipped and there is every reason to hope that it will be producing in about two years. The Company is also interested in Vogelstruisfontein Gold Mining Areas, Limited, and East Daggafontein Mines, Limited. More recently interests in the Murchison Range goldfield have been acquired and prospecting is being actively pursued there.

DIAMONDS.—8. The diamond trade is still on a small scale, and it can scarcely be otherwise without a general improvement in business, particularly in the United States of America.

The scheme of reorganization mentioned in the last annual report was successfully completed, and the various South African producers, including the Government, have accepted a quota scheme. The Diamond Corporation's stock will also be liquidated on a quota basis, and all diamonds will be sold through one channel. The contracts with the outside producers terminate at the end of this year, but there is every hope that new contracts will be negotiated. Should this hope be realised the diamond business would be on a sounder basis than it has been for many years past, and any general improvement in trade would be quickly reflected in the industry.

COPPER.—9. The position of copper has much improved during the past year, and the large stocks which overhung the market are no longer a serious menace. The consumption has steadily improved and all that is needed to stabilize the position and secure some improvement in price is agreement between producers; this is difficult to secure, but it hoped not impossible. In the meantime the Northern Rhodesia Mines in which the Company is interested continue to make steady progress towards a higher scale of production.

PLATINUM.—10. The Rustenburg Platinum Mines, Limited, resumed operations in August of last year, since when there has been a regular production of platinum group metals. Constant attention has been paid to the metallurgical side of the operations, resulting in improved extraction. There has been a steady demand for platinum and no difficulty has been experienced in disposing of the output, though the price remains somewhat low.

COAL.—11. Dividends were paid by Consolidated Collieries, Limited, and New Springs Colliery, Limited. The Natal Cambrian Colliery, Limited, is now in a sounder position than ever before owing to the Land Sales Association and the Bunker Association which the Natal Coal owners have formed. The financial position of this Company was substantially improved during the year.

SOUTH AFRICAN BREWERIES, LTD.—12. The South African Breweries, Limited, continue to show satisfactory results and a dividend of 15 per cent., free of income tax, has been declared for the year to 31st March, 1934, being at the same rate as for the preceding year.

SOUTH AFRICAN CARBIDE AND BY-PRODUCTS CO., LTD.—13. This Company has continued to make steady profits. The increasing demand for carbide on the Rand has necessitated adding to the productive capacity. The enlarged plant is now in operation, and the prospects of the Company have considerably improved.

ESTATES AND TOWN PROPERTIES.—14. The improved outlook on the Rand has created an increased demand for stands on the Company's residential estates, and satisfactory sales of building sites have taken place.

DIRECTORS.—15. In terms of the Company's Articles of Association the four following Directors retire by rotation, and being eligible offer themselves for re-election; viz., Messrs. G. Imroth and Walter S. Webber, Sir Willem van Hulsteyn and Dr. J. G. Lawn, C.B.E.

You will also be asked to confirm the appointment of Mr G. H. Beatty, who has been appointed a Director of the Company.

LONDON MANAGER.—16. After over 28 years of service with the Company, Mr W. J. Benson, C.B.E., retired during the year from his position as London Manager.

The Directors wish to record their appreciation of his long and valuable service.

LONDON SECRETARY.—17. Mr A. W. Christie has been appointed London Secretary of the Company.

ELECTION OF AUDITORS.—18. Messrs. S. Thomson and F. Dix, the Auditors of the Company in Johannesburg, and Messrs. Kemp, Chatteris, Nichols, Sendell & Co., the Auditors in London, retire from office and offer themselves for re-election.

By Order of the Board, A. W. CHRISTIE, M. N. NICHOLSON, } Secretaries.

20th September, 1934.

We report to the Shareholders that we have audited the accounts of the Johannesburg Office of the Johannesburg Consolidated Investment Company, Limited, dated 30th June, 1934, and have obtained all the information and explanations we have required. The Balance Sheet of the Johannesburg Office of the Company is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs in Johannesburg according to the best of our information and the explanations given to us, and as shown by the books of the Company in Johannesburg. We have also verified the securities in South Africa. The Company has kept proper books and records.

SAM'L THOMSON, Chartered Accountant. FRANCIS DIX, Incorporated Accountant. } Auditors
Johannesburg, 7th July, 1934.

We report to the Shareholders that we have audited the Accounts of the London Office of the Johannesburg Consolidated Investment Company, Limited, dated the 30th June, 1934, and have obtained all the information and explanations we have required. The Audited Accounts of the Johannesburg Office have been properly incorporated in the above Balance Sheet and Profit and Loss Account, and, in our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company. We have also verified the securities in London. The Company has kept proper books and records.

KEMP, CHATTERIS, NICHOLS, SENDELL & CO., } Auditors.
Chartered Accountants.
London, 1st August, 1934.

IRON AND STEEL

MIDDLESBROUGH.—Makers find no difficulty in disposing of their output of pig iron. Home demand for Cleveland foundry iron continues steady. Shipments to Scotland and deliveries to local foundries are well maintained, and consumers are generally showing more disposition to cover their requirements ahead.

Quotations for home use are based on No. 3 Cleveland foundry pig iron at 67s. 6d. per ton delivered locally. East Coast hematite makers decided last week to increase the basis price for delivery locally by 1s. per ton, making the quotation for No. 1 iron now 69s. per ton delivered in the Middlesbrough area. But this increase in price has not affected the demand, and it is reported that business is being done at the advanced figure. For export prices are not fixed, but orders could probably be placed for No. 1 hematite at 62s. per ton f.o.b.

Shipments of all classes of pig iron from the Tees from September 1st to September 18th amounted to 9,454 tons, against 9,153 tons to August 18th.

Blast furnace coke remains at 20s. per ton delivered at the furnaces for good Durham qualities. Foreign ore is firm on the basis of 17s. per ton c.i.f. Middlesbrough for best Bilbao rubio, for prompt, but higher prices are indicated for forward.

In the steel departments production of semi and manufactured material is maintained. A further parcel of steel plates has been despatched to Russia, and good shipments of manufactured steel are being made to South Africa and other destinations abroad. Demand for shipbuilding material is poor, but home requirements for sheets are reported to be improving.

Scrap continues steady with no change in the price of heavy steel melting material.

SHEFFIELD.—The position of the local steel industry continues strong and the tone of the market is distinctly confident. The newer specialised products are in increasing demand. Plants turning out heavy hollow forgings for boiler drums and containers for the chemical industry are scarcely able to cope with the demand. Makers of stainless steels continue to extend their production facilities. The customary autumn expansion in all branches of the steel trade is now in evidence.

The export returns for August were less favourable with respect to Sheffield products than previous ones, reductions being recorded in steel, tool and cutlery, among other commodities. On the other hand the statistics revealed increased imports of such goods. A good deal of the export trade available is being held back by the disturbed economic conditions of a number of markets. There has been a recovery of trade with Australia and New Zealand, but the possibilities of these markets are still restricted and exports thereto continue greatly below the 1929 level.

Business generally is being helped by the steadiness of the prices of iron and steel material. In the tool and other finished products of steel demand is brisk, and makers are securing rather better prices. Business in cutlery and plate is on a moderate scale but order books are improving.

WORKINGTON.—There is a revival of interest in the North-West Coast hematite pig-iron trade, and during the past few weeks makers have sold the output of the eight furnaces in blast between Workington and Barrow for three months to come. The volume of business is steadily increasing, though not in sufficient measure to warrant any expansion of production this year. Local consumption continues to absorb more than half of the make, and needs of the Midlands and South Wales largely account for the spill-over. Scottish requirements are still inconsiderable and those of the Continent meagre.

In spite of the severity of East Coast competition prices are firm and inclined to harden. Bessemer mixed numbers are quoted at £3 9s. 6d. per ton at Glasgow; £4 0s. 6d. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham, while special brands are an additional 2s. 6d. to 5s. per ton. Malleable iron is a steady Midland trade at £5 15s. per ton delivered at Birmingham, and ferro-manganese is in improved request at from £10 15s. to £11 5s. per ton home.

Though the steel trade is quiet producers have well-filled order books and it is believed that there will be no diminution of activity this year. Workington, which has completed a new Bessemer plant to increase the maximum weekly output of steel from 5,500 tons to 7,000 tons, is engaged on rails, billets, bars and slabs, and

Barrow is on rails, small sections, strips and hoops. Native ore, at from 13s. 6d. to 14s. 6d. per ton, is in only local request. Imports at Workington of German and North African ore during the past thirteen weeks total 70,209 tons.

GLASGOW.—Only one new shipbuilding contract for the Clyde was announced this week—a cargo vessel which Messrs. J. and G. Harrison, Ltd., of London, have placed with Messrs. Lithgows, Ltd., of Port Glasgow—but there are a number of tenders now under consideration and it is hoped that further contracts will be placed at an early date. The position at the steelmaking plants shows no change. Works are fully employed and a considerable amount of work is still on order books. Makers of semis are able to keep more plant occupied and bookings are on a more satisfactory scale. Local sheet makers inform us that export bookings show a further increase this week while the home demand is well maintained. At the tube plants the position is practically the same as during the past few weeks. Demand for wrought iron remains quiet, but tonnage booked showed a slight improvement during recent weeks.

CARDIFF.—On the Swansea Metal Exchange on Tuesday there was little expansion in the current volume of inquiries, but production has been a little more active, and the works are at present engaged up to about 70 per cent. of capacity. Quotations for tinplates have been steady at 18s. 2d. for export and 17s. 9d. for the home market, while Welsh bars are unchanged at £5 7s. 6d. and galvanised sheets at £11 5s. to £11 15s. per ton f.o.b. Shipments of tinplates last week totalled nearly 106,000 boxes compared with 99,885 boxes the previous week, while stocks are estimated at 89,945 boxes compared with 95,711 boxes the previous week, and 117,815 boxes a year ago.

OTHER METALS

Copper prices on the London market moved within narrow limits during the week ended last Wednesday, and the New York quotation for export was also steady. Unofficial statistics for August, published this week, show the effects of the operation of the United States copper code. Although American stocks declined by 14,250 to 490,600 short tons, world stocks were reduced by only 6,150 short tons, on account of increased supplies in countries outside the United States. These changes were due to the recent heavy export of American copper to Europe. Another interesting fact which emerges from the August statistics is that world production is now again considerably in excess of deliveries. Although output in the United States showed a slight decline, this was more than offset by increased production in Canada, the Belgian Congo and Northern Rhodesia. World production totalled 112,616 short tons in August, against only 91,300 in January, whereas August deliveries amounted to about 108,550 short tons, as compared with 97,647 in January. The higher output of the low-cost countries seems dangerous for the market, especially in view of the fact that an increase in German copper imports is unlikely.

The tin market showed an irregular tendency and American purchases continued small. The quantities in the hands of New York merchants now appear to be larger than was previously supposed; some consumers who had ordered for September delivery have extended their contracts until October. But the United States must soon re-enter the market with larger contracts. In Germany, a new order prohibits the domestic consumption of high-grade refined tin and, although consumers must import lower-grade tin, this decree is expected to have an adverse effect on the market.

Lead and spelter were again weak and the price of the latter was lower than for well over two years. This may be traced to the bearish nature of the August statistics. The steady decline in the price of spelter is fraught with danger for the International Zinc Cartel, since it worsens the position of the gold-standard producers—chiefly Belgium, France, Poland and Germany. The currency question has become more topical among the members of the Cartel than ever before, and surprises from this quarter would appear to be quite within the bounds of possibility.

TIN.—Sales on the London Metal Exchange: 175 tons on Monday, against 170 tons last week; 205 tons on Tuesday, against 150 tons last week; 360 tons on Wednesday, against 200 tons last week. The New York quotation on Wednesday was 51.40 cents per lb., against 51.70 cents a week ago and 52.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 15s. to £229, compared with £228 17s. 6d. to £229 2s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,749 tons, an increase of 153 tons on the week.

COPPER.—Sales on the London Metal Exchange: 625 tons on Monday, against 850 tons last week; 450 tons on Tuesday, against 1,350 tons last week; 1,050 tons on Wednesday, against 875 tons last week. Domestic spot was quoted at 6.65 cents per lb. in New York on Wednesday, against 6.65 cents a week ago and 6.87½ cents a month ago. Wednesday's official closing price for standard cash in London was £27 10s. to £27 11s. 3d., compared with £27 8s. 9d. to £27 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 31,561 tons, show a decrease of 206 tons, and stocks of rough copper, at 7,042 tons, remain unchanged.

LEAD.—Sales on the London Metal Exchange: 450 tons on Monday, against 680 tons last week; 250 tons on Tuesday, against 1,500 tons last week; no sales on Wednesday, against 200 tons last week. The New York quotation on Wednesday was 3.70 cents per lb., against 3.70 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 6s. 3d. for shipment during the current month, compared with £10 1s. 3d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 325 tons on Monday, against 650 tons last week; 650 tons on Tuesday, against

1,200 tons last week; 450 tons on Wednesday, against 650 tons last week. Wednesday's quotation in East St. Louis was 4.00 cents per lb., against 4.15 cents the week before, and 4.25 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £12 7s. 6d., for shipment during the current month, against £12 7s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs. Foreign antimony was quoted at £37 5s. to £37 15s. per ton, as against £37 10s. per ton last week. Chinese wolfram was again quoted at 40s. to 42s. per unit, c.i.f., as against 40s. to 43s. per unit c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. — There has not been any decided change in the level of raw cotton prices, but the tendency, if anything, has been towards a lower level. A feature of interest has been the weakness of Egyptian saki, this development being due to heavy hedge selling, chiefly in Alexandria. Prices for American qualities are undoubtedly being held up by the 12-cent. loan plan in the United States. The basis is very stiff, thus making importing exceedingly difficult. Liverpool merchants are considering the question of extending the American futures contract to include outside growths. There continues an active business in Brazilian descriptions.

No change for the better can be recorded in the cloth market. In addition to the scarcity of fresh orders, some cases are being mentioned of buyers wanting to cancel contracts even when the goods cannot be bought to-day at the same price. The absence of practicable demand for India is causing some concern and operations have been confined to odd lots, chiefly in light bleaching descriptions and prints. A few poplins have been sold for China. Very little has been heard of buying for Egypt and the Near East. A fair trade has again been done for the Dominions and South America in cloths for printing and dyeing, and scattered sales have been reported in fine fabrics for the Continent, chiefly Switzerland. Poplins, case-ment cloths and linings have moved off fairly well for the home trade. There has been very little life in the yarn market. Spinners are harassed by declining order lists and increasing stocks. The Egyptian branch is depressed as a result of the German situation.

COTTON WEAVERS' WAGES.—After a deadlock lasting over ten weeks, the negotiations between the employers and the operatives in the weaving section of the Lancashire cotton industry have been resumed this week on the weavers' wages question. Last June the manufacturers' association put certain proposals before the trade unions for a new wages list, but these were definitely rejected by the workpeople, as they would mean a reduction in the earnings of the operatives varying from 10 to 40 per cent. In the meantime, quite a number of meetings of operatives have been held, and as a result of informal consultations the two sides met for further discussions on Thursday this week. It is anticipated that the negotiations will be of a protracted character. The trade union officials want the present uniform list of wages to be legalised under the Cotton Manufacturing Industry (Temporary Provisions) Act, but the manufacturers' association contend that such action is impossible, as numerous firms in Lancashire are paying their workpeople less than that list. It is estimated that the workpeople engaged on 120,000 looms come under this category. The problem is a difficult one, and both the employers and the trade union officials will have to be prepared to adopt conciliatory methods if a new list is to be formulated. The general opinion in the trade, however, is that it would be to the advantage of all concerned if wage rates could be legalised and made compulsory upon all employers.

JUTE.—Dundee. — A considerable decline has taken place in prices of raw jute since the issue of the final forecast figures. Apart from the fact that the estimate of 7,963,800 bales was rather in excess of what had been anticipated by the trade generally, several other factors have contributed to the weakness in prices. Imports into Calcutta have increased to a marked extent, while demand for jute goods, especially from the United States, has been curtailed. The cotton strike in the United States is adversely affecting business from that quarter. Dundee spinners and manufacturers are fairly comfortably placed meantime, and particularly the latter, who are unable to give delivery of the narrow widths for a few months. Prices of yarns and cloth are being well maintained, though business is quieter all round than it has been recently.

The Government of Bengal are taking steps to curtail the supply of raw jute for next season, but no definite policy has yet been pro-

RUBBER.—The announcement, on Friday last week, that the People's Assembly at Bangkok had refused to ratify the International Rubber Regulation Agreement, which allows Siam a quota of 15,000 tons of rubber per annum, came as a surprise to the market, and caused a sharp decline in prices. In New York, Wednesday's spot price for rubber, at 14½ cents per lb., compared with 15⅞ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for October-December, 1934, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week, at 110,502 tons, show an increase of 2,468 tons as compared with the preceding week.

ENGLISH SCOTTISH AND AUSTRALIAN BANK, LTD.

Head Office: 5 Gracechurch Street, E.C.3, and 389 Branches and Agencies in Australia

Subscribed Capital ... £5,000,000
Paid-up Capital ... 3,000,000
Further Liability of Proprietors ... 1,635,000
Reserve Fund ... 1,585,000
Special Current Reserve ... 1,585,000
Letters of Credit and Drafts issued on the Branches and Agencies of the Bank throughout Australia.
Remittances made by Telegraphic Transfer. Bills negotiated or forwarded for collection. Wool and Produce Credits arranged.
Banking and Exchange Business of every description transacted with Australia.
A. A. SHIPSTON, Manager.

BANK OF NEW SOUTH WALES

Established 1817

Incorporated in New South Wales with Limited Liability (With which are amalgamated the Western Australian Bank and the Australian Bank of Commerce Limited)
HEAD OFFICE—Sydney, N.S. Wales
General Manager: A. C. DAVIDSON
Paid-up Capital ... £8,780,000
Reserve Fund ... 6,150,000
Reserve Liability of Proprietors ... 8,780,000

Aggregate Assets to 30th September, 1933: £11,512,000
The London Office issues drafts on demand on its Head Office (Sydney, N.S.W.) and 720 Branches and Agencies in all the Australian States, New Zealand, Fiji, Papua, and Mandated Territory of New Guinea. Makes Mail and Cable Transfers. Negotiates and Collects Bills of Exchange. Arranges Wool and other Produce Credits. Receives Deposits for fixed periods on terms which may be known on application, and conducts every description of Australasian Banking Business.
LONDON OFFICE—29 Threadneedle Street, E.C.2
J. S. CAMPBELL, Manager

THE BANK OF AUSTRALASIA

(Incorporated by Royal Charter, 1855)
Head Office: 4 THREADNEEDLE STREET, E.C.2
West End Office: 17 Northumberland Avenue, W.C.2
Paid-up Capital ... £4,500,000
Reserve Fund ... £2,475,000
Currency Reserve ... £2,000,000
Reserve Liability of Proprietors ... £4,500,000
Under the Charter ... £4,500,000

Letters of Credit and Drafts are issued and banking business of every description is transacted through the numerous branches of the bank throughout Australia and New Zealand. Deposits for fixed periods received.

THE FINANCIAL NEWS

Special articles due to appear next week on the leader page of THE FINANCIAL NEWS are as follows:—

TUESDAY, September 25.—MINOTAUR—our Special Mining Correspondent—on EAST RAND PROPS. Confident and well authenticated reports have been in circulation regarding a large new share issue by EAST RAND PROPRIETARY MINES, LIMITED, to finance the heavy expenditure already planned which, together with sharp recent market movements, lend particular interest to this authoritative article.

WEDNESDAY, September 26.—CHILIAN BONDS, by a Special Correspondent. The outlook for the holder of Chilian Bonds is decidedly more hopeful than for a long time past.

THURSDAY, September 27.—Continuing our series of special articles on "INDUSTRY IN THE PROVINCES," this week's choice falls on STOCKPORT.

FRIDAY, September 28.—GERMAN SELF SUFFICIENCY—No. 3. Iron and Steel and Non-ferrous Metals, by a Special Correspondent.

Do not run the risk of missing any of the above articles, all of which are designed to interest the Investor first and foremost. The one certain way to avoid disappointment is to place standing instructions with your newsagent TO-DAY.

THE BIG SHIP

ON Wednesday last the great new Cunarder was launched under the highest auspices, and no sooner was the strapping infant—child of a long and troubled gestation—sent out into the world than the building of a not less glorious sister was foreshadowed in a declaration of the Cunard Company's chairman. The first comment on this event must be one of congratulation to the "Queen Mary's" builders on the successful issue of their tremendous task, which, though doubtless assumed by the marine architect, has for the layman the mystery and fascination of a latter-day miracle.

If the double event materialises there will be added to the volume of the world's shipping over 140,000 new tons, and by the strangest of paradoxes the addition comes at a moment when the fortunes of shipowners are almost, if not quite, at the lowest level they have ever reached, and when the passenger service across the Atlantic in particular is faced with extraordinary difficulties. Trade barriers between the nations and depression on both sides of the ocean have reduced the number of wealthy travellers probably to about one-fifth of the old figure. Emigration is dead. Loss of income and the need for economy have tended to swing traffic away from the very luxurious and expensive liners to the slower but cheaper boats which cater for the man who prefers to spend less money and more time in making the voyage. And there is unhappily at the moment no sign of such a recovery of trade in America as would set the traffic moving and the turnstiles clicking at their former speed. If rumour is correct one heavily subsidised luxurious foreign liner, not it is true in the Atlantic trade although on a very important sea route, reached its destination recently with six passengers, and in holds that could take about 20,000 tons of cargo exactly 40 tons. Is this a moment, it may be asked, for adding another 140,000 tons of luxury—or including the "Normandie" 200,000 tons—to the glutted shipping of the world?

Whatever the answer to the question may be, there is no doubt that the directors of the Cunard Company have been set one of the most perplexing problems that any shipping

board ever had to tackle. It is easy enough to state a case against fresh building of this kind, but the history of shipping and shipbuilding since the war must be considered as a whole if the problem is to be seen in its true light and in correct perspective.

The development of the big ship moves in more or less definitely marked periods, and the periods are usually started by the launching of one boat which for the time out-distances everything else afloat. The "Dreadnought" and the "Lusitania," each in her own sphere, set a new standard for their pre-war competitors and successors, but for some years after the war the old standards of passenger liners held good. The "Berengaria," the "Aquitania" and the "Majestic" provided the fastest and the most luxurious travelling then available, and what is fastest and most luxurious is just good enough for the American millionaire. But Germany, which had seen her proudest tonnage taken from her by the chances of war and the Treaty of Versailles, was nursing a grievance and an ambition. She was determined to come back into the market; she knew that to do this she must surpass the standard of the "Majestic" and the "Aquitania," so in 1929 she went one better with the "Bremen" and the "Europa," while Italy soon followed with the "Rex" and the "Conte di Savoia." In 1925 the Cunard Company had, it is true, added three boats to its fleet, but the largest of them was only 20,000 tons, and they could not challenge the new German liners. Four simple figures may serve to show the situation:—

	Tonnage	Time
"Bremen"	51,656	5 days
"Aquitania"	45,647	6 days

So long as the American millionaire chose the largest and the fastest ship without regard for expense there could be no doubt where his choice would rest, and the Cunard Company decided to take up the challenge and build, counting not merely on capturing lost traffic but on making two very fast boats do the work of three slower ones. This involved a decision to build ships capable of making the

to 26 per cent. in merino qualities. The fall in the quotations for tops and yarns was scarcely less pronounced.

The level of raw wool prices is an important factor in the national income of countries such as Australia, Argentina, New Zealand and South Africa. For example, the value of wool sold in Australia (as calculated by Messrs. Dalgety & Company, Ltd.) rose from £35,043,054 in the year ended June, 1933, to £52,165,778 in the past year, despite a reduction in the quantity sold from 3,059,555 bales to 2,579,789 bales. Similarly, New Zealand's wool proceeds increased from £4,327,692 in 1932-33 to £10,451,565 in 1933-34 and the quantity sold advanced from 576,224 bales to 650,688 bales. Wool growers are, therefore, anxiously asking if the downward movement in prices is likely to continue to a level at which production will once more become unprofitable. The answer turns upon supply and demand during the 1934-35 wool season.

In examining the development of wool production it should be borne in mind that the supply of wool, unlike that of metals, cannot be increased or decreased at short notice. Further, a large proportion of sheep are reared to yield mutton as well as wool, and the price of the latter is, therefore, not the only consideration influencing the size of the sheep population—a notable example of the price mechanism of "joint supply." According to the statistics of the Imperial Economic Committee, the world wool clip increased steadily between 1924 and 1928. Despite the fall in prices, production declined only slightly between 1929 and 1932, but in the following year the delayed effect of the unprofitable level of quotations prevailing in previous years was apparent in a 5 per cent. reduction of the wool clip:—

WORLD WOOL PRODUCTION*
(In millions of lbs., "greasy" basis)

Period	Australia	Argentina	New Zealand	South Africa	United States	United Kingdom	World
1909-13 ...	728	332	171	158	314	136	3,086
1924	777	322	247	176	295	98	3,261
1925	834	326	235	234	315	104	3,467
1926	924	371	256	246	335	110	3,713
1927	888	349	262	276	357	112	3,726
1928	968	353	272	287	384	112	3,875
1929	938	332	273	308	400	110	3,874
1930	912	354	271	299	433	109	3,782
1931	1,007	342	283	308	460	111	3,755
1932	1,061	359	288	322	434	117	3,734
1933	950	368	260	273	450	119	3,547

* The figures for the countries of the Southern Hemisphere refer to the wool season commencing in the year shown.

The six countries shown above are responsible for about two-thirds, and the British Empire alone for about one-half, of the world's wool production. The reduction of the total wool clip in 1933-34 was due chiefly to smaller clips in Australia, South Africa and New Zealand. While it is too early to estimate accurately the probable wool production in 1934-35, the latest information suggests that the combined clips of Australia and New Zealand may show an increase of about 150,000 bales, but that this increase may be partly offset by a further reduction of about 75,000 bales in South Africa. Forecasts of the probable clips of Argentina and Uruguay are not yet available, but no significant change is anticipated. Production in the United States in 1934 is estimated provisionally at 436 million lbs., as compared with 450 million lbs. in 1933. The new world clip is, therefore, not likely appreciably to exceed the output of 1933-34.

But despite the pronounced fall in prices, the smaller clip of 1933-34 was not fully absorbed in that season, and, as the following table shows, stocks at the end of the last season were somewhat larger than a year ago:—

STOCKS OF RAW WOOL AT END OF SEASON
(In millions of lbs.)

	Australia (a)	Argentina (b)	New Zealand (a)	South Africa (a)
	In Store at Selling Centres	All Centres	All Centres	All Ports (sold and unsold)
1928	10.5	9.3	24.0	...
1927	8.0	3.7	20.0	...
1926	9.9	18.5	19.5	7.4
1925	15.7	25.0	28.0	9.9
1924	32.8	19.8	82.8	6.6
1931	16.6	13.2	97.0	17.2
1932	44.5	26.5	117.9	24.0
1933	12.9	9.0	78.6	5.0
1934	65.0	...	49.8	29.0

(a) Season ended June 30th. (b) Season ended September 30th.

Although complete statistics of stocks held in the principal producing countries are not available, there are indica-

tions that they are heavier than a year ago. Stocks in public warehouses, at ports and at railway and canal depots in Yorkshire at the end of August amounted to 204 million lbs., as compared with 188 million lbs. a year ago. Moreover, supplies in the United States are fairly heavy. On the other hand, total stocks of tops at the principal commission combing establishments of Belgium, France, Germany and Italy at the end of August showed little change as compared with a year ago. In general, it appears that supplies of wool during 1934-35 will be only slightly larger than in the past season.

The past year has witnessed an appreciable increase in the demand for wool by some of the leading consuming countries. The following table, compiled by the Imperial Economic Committee, shows approximately the variations in the annual supplies available in the principal countries. Although no allowance could be made for changes in stocks, the figures are sufficiently accurate to indicate the trend of consumption over a period of years:—

RETAINED SUPPLIES OF RAW WOOL
(In millions of lbs.)

Year	United Kingdom	France	United States	Germany	Japan	Italy	Belgium
1924	469	450	530	354	59	129	(a)
1925	451	494	644	323	70	129	77
1926	543	581	620	347	72	132	93
1927	542	604	610	436	98	137	109
1928	521	542	619	386	115	151	110
1929	554	594	675	373	107	164	133
1930	589	606	593	356	115	163	126
1931	676	492	617	329	189	142	104
1932	689	503	486	335	204	198	89
1933 (b) ..	668	590	608	366	239	237	74

(a) Not available. (b) Provisional.

The increase in retained supplies was most marked in France; but Italy, Japan, Germany and the United States also took larger quantities. The United Kingdom remained the leading consumer of this textile fibre. The latest figures of imports of raw wool into the chief consuming countries show a marked decline as compared with a year ago. The reduction was most pronounced in France, whose imports had previously risen more than those of any other country. Thus France's imports during January-July, 1934, were 265.8 million lbs., as against 405.6 million lbs. in the corresponding period a year ago. During the same period Japan's imports fell from 152.3 million lbs. to 124.9 million lbs., and those of Belgium from 56.0 million lbs. to 45.4 million lbs. The United Kingdom imported 399.7 million lbs. in January-August, 1934, as compared with 449.5 million lbs. a year ago. On the other hand, Germany increased her imports during this period from 255.8 million lbs. to 260.2 million lbs. despite the restrictions on imports, and the United States also purchased larger quantities. Exports of wool tissues by the United Kingdom rose from 34.3 million lbs. in January-August, 1933, to 39.8 million lbs. in the corresponding period of 1934. Japanese exports rose from 4.2 million square yards in January-July, 1933, to the record level of 9.3 million square yards in the current year. On the other hand, the exports of France and Germany showed an appreciable decline.

The sharp decline in imports, especially in France and Japan, suggests that these countries had overbought during last year's rise in prices and were holding appreciable stocks at the beginning of 1934. Although activity in the wool textile industries of the leading countries, with the exception of Japan, has tended to decline, it is possible that a large proportion of the previously accumulated stocks has already been worked off. While prices realised at the current London auctions showed a decline of 5 to 15 per cent. as compared with those realised at the end of the last series, the market has shown more resistance, and demand has tended to improve at the lower level. Although the boom of last winter has probably been liquidated, it is unlikely that the trend of quotations will be sharply upwards during coming months. Moreover, present prices are still above the low level prevailing early last year, so that a return to last year's conditions of demand and supply would hardly justify much further increase. They are not unprofitable to growers, and the supply is therefore unlikely to decline. But they are not so high as to encourage an unjustified increase in wool production in the future.

CANADA AND HER PROVINCES

(BY OUR OTTAWA CORRESPONDENT)

ONE effect of the "great depression" upon Canada has been a growing complication of the financial relations between the Dominion Government and the nine Provincial administrations. The problems which have arisen have generated a widespread sentiment that some permanent readjustment of the present arrangements cannot be indefinitely postponed.

The old British colonies in North America, which had considerable autonomy, became the Dominion of Canada in 1867, under the British North America Act. The division of powers, as between the Dominion and the Provinces, which was given legal sanction by the British North America Act, was based upon political rather than administrative considerations. It was found necessary to leave the highly controversial questions of the day, education, civil rights, property, etc., to the exclusive jurisdiction of the Provinces.

But there were many governmental functions which the Central Government, if it was to have any real authority, must assume; and for its expenses it had to secure revenue. So a bargain was struck whereby the Provinces relinquished to the Central Government their right to levy customs duties and excise taxes, and conferred upon the latter exclusive control over such revenues. And by way of compensation for their loss of revenue, the Dominion Government bound itself to pay the Provinces annual subsidies from the Federal Treasury. The terms of the original subsidy arrangements are set forth in Section 118 of the B.N.A. Act, and the scheme came into operation in 1867.

It had been arranged that the Dominion should take over the debt of the four provinces, Ontario, Quebec, New Brunswick and Nova Scotia, which were the original parties to the Pact of Confederation; but instead of assuming the entire debt, the Dominion Government undertook to give a subsidy of 5 per cent. per annum of the amount of the Provincial debts to meet the necessary services. Then each Province was allocated an annual subsidy "for the support of its government and legislature"; and the original amounts of these subsidies, which were intended as compensation for the loss of taxation powers, were: Ontario, \$80,000; Quebec, \$70,000; Nova Scotia, \$60,000; New Brunswick, \$50,000. And over and above these the Dominion agreed to pay the Provinces a *per capita* subsidy at the rate of 80 cents per head of population up to a maximum of 400,000 persons, a limit which was later abandoned. New Brunswick was so reluctant to enter Confederation that to entice her into the fold she was given a special subsidy, based upon no intelligible principle; and she was allowed to retain the right to levy a tax on exports of lumber. Subsequently, British Columbia, Manitoba and Prince Edward Island entered Confederation, as a result of separate subsidy bargains which more or less conformed to the original arrangements; and in 1903 Saskatchewan and Alberta were carved out of the North-West Territories and added as new Provinces. In their case, the Dominion retained ownership of the public domain; and as it also controlled most of the natural resources of Manitoba, a special subsidy on this account was paid to all three Prairie Provinces.

On the whole, these subsidy arrangements worked reasonably well. The next important change was in 1906, when the Laurier Government revised all the subsidy arrangements and conceded more generous terms—British Columbia alone dissenting. Then, after the war, the three Maritime Provinces developed a sense of grievance; and when a secessionist movement showed its head, the King Government, following the report of a Royal Commission headed by Sir Andrew Duncan, added \$1,600,000 to the total of subsidies to these Provinces. This special grant was made on a temporary basis, "pending a revision of the subsidies," and of the total sum Nova Scotia secured \$875,000, New Brunswick \$600,000, and Prince Edward Island \$125,000.

Meanwhile, the Prairie Provinces, as their population grew, came to resent their loss of control over their natural

resources, and a prolonged agitation resulted in an agreement in 1929, whereby the Dominion Government consented to turn over to these Prairie Provinces control of all "unalienated" resources. The basis of the settlement was that these Provinces secured all unsold lands and other resources, and also retained the subsidy which had been given them on this account. They further claimed compensation for loss of revenue while the resources had been administered at Ottawa, and it was agreed that these claims should be sent to arbitration. The Arbitration Commission which handled the claims of Manitoba awarded that Province nearly \$5,000,000, which was paid in 1930. The claims of Saskatchewan are being heard by another board, and the proceedings in the case of Alberta are about to begin.

The total subsidies paid from the Federal Treasury to the Provinces since Confederation have cost about \$500 millions, and the annual ordinary payment in the last fiscal year reached \$13,686,177, allocated as follows:—

Canadian Federal Subsidy Payments:		\$
Prince Edward Island	381,932	
Nova Scotia	653,048	
New Brunswick	693,040	
Quebec	2,592,014	
Ontario	2,941,424	
Manitoba	1,694,195	
Saskatchewan	2,112,803	
Alberta	1,743,159	
British Columbia	874,561	
	13,686,177	

In addition there had to be added the special subsidy of \$1,600,000 to the Maritime Provinces, which brought the aggregate sum to \$15,286,171. To illustrate how these Provincial subsidies are made up the following detailed statements, covering a Central, a Western and a Maritime Province, are taken from the official accounts:—

Ontario:		\$
Allowance for Government and local purposes	240,000	
Subsidy on population at 80 cents per head for first 2,500,000 and 60 cents per head thereafter	2,559,010	
Debt allowance	142,414	
	2,941,424	
Manitoba:		
Government and local purposes	190,000	
Subsidy on population	560,111	
Natural resources subsidy	562,500	
Debt allowance	381,584	
	1,694,195	
New Brunswick:		
Government and local purposes	190,000	
Subsidy on population	326,575	
Debt allowance	261,465	
Indemnity for loss of export duty on lumber (surrendered for consideration in 1906)	150,000	
	693,040	

In addition, New Brunswick received its special "temporary subsidy" of \$600,000.

Now, as long as Canada was enjoying an era of progressive economic expansion, there was no particular problem

of Provincial subsidies. The issue was rarely heard of in the great Central Provinces of Ontario and Quebec, and even required artificial stimulation in the Maritime and Western Provinces, whose revenues were smaller. However, the termination of the boom faced all the Provincial Governments with a growing demand for social services of a type which were undreamt of at the Confederation. As a consequence, there has been a gradual increase of the demands on Provincial Treasuries and a heavy additional burden has been thrown on them by the cost of unemployment relief. At the same time there has been a sharp shrinkage in revenues and, as the debt obligations which had been contracted at an earlier date had to be met, deficits in the last few years have been chronic in most of the Provinces. So, since the limits of taxable capacity within the Provincial sphere were reached some time ago, it has become the preoccupation of Provincial Governments to secure increases in their subsidies from the Federal Treasury.

Their contention is that, by the terms of the Constitution, they have been loaded with responsibilities whose weight was not foreseen at the date of Confederation; and that in order to meet them they must obtain help from the Dominion Government. The Dominion Government has recognised the serious nature of their difficulties and, anxious to avoid defaults which might impair public credit, has been generous in its "special" monetary grants to the Provinces, which since 1930 have reached a total of over 50 million dollars. But some of the Provinces are not satisfied with this system of intermittent special grants, and some weeks ago the Premiers of the three Maritime Provinces, sinking their political differences, presented a united demand to Ottawa for a complete readjustment of the scale of the subsidies paid to them. The Bennett Ministry agreed to appoint a Royal Commission to investigate the problem. Almost simultaneously, the Liberal administration of British Columbia made a similar demand, and although no formal reply has been made, the probability is that a similar Royal Commission will be appointed. When the reports of these Commissions are available, the Bennett Ministry will have to formulate its policy; and the view prevails in Ottawa that it may seize the opportunity to raise far-reaching constitutional issues, and propose a drastic readjustment of the spheres of Federal and Provincial jurisdiction, giving the Federal Government responsibility for industrial and other problems now under Provincial jurisdiction. In such a measure, two birds could be killed with one stone, as the way would then be open for uniform Federal legislation on social insurance, wage and labour conditions; and the need of the Provinces for additional subsidies would be eliminated, while the powers of the Central Government of the Dominion would be greatly enhanced.

PROPAGANDA

(BY A CORRESPONDENT)

PROPAGANDA, spell-binding, national enlightenment, ballyhoo—or whatever we like to call it—seems to have come to stay in the modern world. Last month there was a Presidential Election in Germany. Dr. Goebbels refuelled his famous publicity machine. The word was given; the dampers were opened; the furnace roared at full blast for ten days; and the finished product, a 90 per cent. vote for Hitler, gave evidence to the world, not so much of the will of the German people, as of the wonderful efficiency of the machine.

The worst and latest perversion of modern democracy has been performed in the name of democracy itself. At the time of the French Revolution the prophets of Liberalism cherished a pathetic belief that the ultimate "General Will" could be discovered by a direct appeal to the assembled mass of the people. In the eyes of Rousseau, Godwin and Shelley it was greed and ambition, not stupidity, that perverted human Government. Strangle the last king with the entrails of the last priest; educate the common man in rational knowledge instead of superstition, and humanity would turn out before long to be perfectly virtuous and perfectly wise. Education and universal suffrage together would create a society of men

"equal, unclassed, tribeless, and nationless." Freedom of opinion was not only a good in itself, but a means to rational government. Such was the intellectual foundation, or rather the faith, of nineteenth-century Liberalism.

The Marxists disagreed. They argued, first that the great mass of mankind, "educated" or uneducated, were too stupid to conceive of ultimate ideals or even in most cases to discern their own self-interest. The only distinction, they said, was between the obtuse masses who were blind or indifferent to ideals and interests alike, and the cunning few who knew their own interests and consequently exploited the deluded masses in the pursuit of them. A cleverly devised sentimental appeal would always defeat reason in the mass mind. The truth would not prevail. Secondly, the Marxists maintained, all the professed ideals which men flaunted in the foreground of their lives were but the hypocritical cloaks of purely interested motives.

In adding this second point the Marxists overstated their case. But on the first point there seems to have been some truth in what they had to say. If you teach the mass of men to read, give them a vote, and leave reason and unreason to fight it out, unreason will only too often prevail. Stupidity is almost as potent a destroyer as greed or ambition. This is the great discovery which has perverted modern democracy more than anything else. Who was it, we may ask, who made this great discovery? Mr Aldous Huxley has suggested that it was the revelations of the psycho-analysts which discredited Shelley's all-too-rational view of human nature. In reality, however, practical rather than theoretical experiment seems to have perfected the modern demagogic art.

Ultimately, perhaps, the great Napoleon was the father of modern propaganda; for it is to him that we owe the device of combining the democratic form of the plebiscite with a censorship of the organs of opinion. Louis Napoleon—an inauspicious omen for Herr Hitler—carried the principle further, and set up a dictatorship in the name of democracy. But it was not till after the passing of the first Education Act in Great Britain and the teaching of the masses to read—in the sacred cause of democracy—that the full possibilities of propaganda were exploited with really triumphant effect. And here, beyond doubt, the palm must be given to the late Lord Northcliffe, as the great originating genius of modern publicity. It was he, above all, who discovered that the newspaper which makes the loudest appeal will usually defeat its rivals. In a different category stands Mr Lloyd George, whose intuitive understanding of mass psychology enabled him to carry the nation successfully through a great war. And now we have Herr Hitler, who tells us explicitly in *Mein Kampf* that he learnt the propagandist art from the example of Mr Lloyd George; finally, there remains Herr Hitler's own associate and collaborator, the inimitable, unshameable Reichsminister for National Enlightenment, Dr. Goebbels himself.

There are, of course, lesser men in the profession: Lord Beaverbrook, Mr Hearst, M. Coty, the Soviet propaganda experts, and, lastly, Mr Roosevelt. But among them all, it is the German exponents who have carried the art to the highest pitch of perfection. They have shown that the people can at one and the same time be fooled and terrorised; and that with a sufficiently subtle admixture of art and cynicism a mass mind can be created to order. As classical examples of the method, one may cite the Zinovieff Letter, the use of the Savings Bank story of 1931, the Reichstag Fire and the Hindenburg Testament. These four instances will doubtless figure prominently in future Nazi textbooks on the subject. They are the perfect examples; for in each case the "news" may quite well have been "true." The Reichstag indubitably caught fire; Zinovieff may very possibly have written a letter; and the Savings Bank resources were certainly borrowed for the Unemployment Fund. Let those who are inclined to under-rate the power of propaganda reflect on that. For it is a great mistake to suppose that it is the dissemination of views which influences the public mind. It is not. The public mind is influenced by the "news," which, as every journalist knows, is the product of selection, emphasis, and interpretation.

What is the sincere but intelligent democrat to do or think about it? In the first place, it is no good his hiding his head in the sand. More education, more sweet reason-

ableness, though we must foster them in every way for their own sakes, must take very much firmer root before they can be relied on to stem the tide of unreason. Schemes like "Education for Citizenship" are excellent; but they will not sweep back the Atlantic. Let the democrat take at least this leaf out of the Marxist's book, while maintaining his own unshakeable belief in the ultimate value of freedom of speech and opinion. About the latter he must not compromise. If there is anything which the reaction to tyranny in Europe has shown, it is the supreme value of the institution of free speech. Had there been no free press in the outside world, it is at least possible that the accused Russians in the Moscow engineers' trial and the Bulgarians in the Reichstag Fire trial might have lost their lives. Dictatorships, which are incapable of justice, are still susceptible to shame; and terrorism still pays to freedom its grudging tribute of hypocrisy.

Thus, in the immediately practical world the intelligent democrat is faced by two alternatives. Either he may adopt a Catonian attitude, preserve unsullied his regard for

truth and rectitude, and allow the causes in which he believes to be overwhelmed by the wiles of the propagandists—

Victrix causa deis placuit, sed victa Catoni.

Surely, however, the democrat who thus invites the displeasure of the gods, is merely saving his own soul at the cost of the ideals of peace and freedom in which he professes to believe. Is it really liberal or even reasonable to suppose that the common people will vote for free trade and disarmament in a world where the Press is largely controlled by industrialists and armament manufacturers?

The other alternative is for the democrat to take a hand in the game, to learn from the devil his own propagandist arts and practise the technique of unreason in the service of truth. Then truth and falsehood will at least be struggling on equal terms, and truth on these terms may as often as not prevail. Is this the better of the two alternatives? There are many sincere and intelligent democrats who have been driven to the conclusion that it is.

NOTES OF THE WEEK

Mines and Miners.—Last Saturday a terrible mine disaster occurred at Gresford Colliery, near Wrexham, in which, following an explosion in the workings, 264 men lost their lives. Despite extreme bravery on the part of rescuers, it was found impossible to reach the imprisoned men. The pit was eventually sealed on Monday, but on Tuesday the seal was blown off, and the work had to be done again. The whole colliery has been closed, thus affecting the livelihood of all the survivors and their dependants; and all that can now be done—the opening of the Lord Mayor of London's Mansion House Fund for the victims' relatives, and the institution of the official inquiry—is being done. Meanwhile, despite so grim a reminder of the risks which the miners run every day, negotiations to end the deadlock between the South Wales miners and employers continued to drag their slow length along. But on Thursday night it was announced that an agreement had been reached which is to be submitted to the constituent bodies for confirmation. The parties have been wise to come to terms at a moment when the public has been deeply stirred by the disaster, when trade generally could easily be given a set-back by industrial strife and when the industry itself is too vulnerable to be able to afford the luxury of a fight.

Gold Bloc Collaboration.—International co-operation to combat the crisis has been conspicuous by its absence since the Lausanne Conference of over two years ago. It is consequently welcome news that the gold bloc countries have agreed to co-operate not only in the monetary but also in the commercial field. A meeting of delegates from Belgium, France, Italy, Luxemburg, Holland and Switzerland was held at Geneva on Tuesday, and a statement of policy was afterwards issued. The statement at first reiterated the intention of the gold countries to maintain their present gold parities—a pronouncement which may be taken as a matter of common form since it is necessity rather than desire that is customarily the mother of devaluation. More interesting was the declaration that the gold countries "recognised that to contribute to the general work of recovery they should adopt as their principal aim the extension of international trade." In order to "arrive at concrete results as speedily as possible" a committee composed of delegates of the various gold countries was formed, and it is to begin its work by considering methods of facilitating trade, "tourism," and transport between the countries concerned. We wish every success to the committee, and trust that its efforts may soon achieve "concrete results." A co-operative relaxation of economic barriers between the gold countries, combined with the existing co-operation between their

central banks, should allow an expansion of mutual trade to take place. Such an expansion should enable cheap money to have its proper effect in stimulating consumption and investment and bringing internal prices into adjustment with costs. If devaluation is rejected—and avoided—it is probable that the fundamental disequilibria still existing in the world's economy are more likely to be corrected by an adjustment of gold prices to gold costs than by a prolonged effort to force down gold costs. If competitive deflation in the gold countries could be checked, the goal of exchange stabilisation would be substantially nearer.

Constitutional Reforms in France.—The long-awaited constitutional reforms proposed by the French Government were made known by M. Doumergue in a broadcast speech on Monday. Many Englishmen will be surprised, as well as complimented, to learn that British Parliamentary institutions are to be taken as the model for the contemplated French reforms. We have lately grown accustomed to such widespread criticism of our own Parliamentary methods, and in particular to eulogies of the superior efficiency and despatch of the French Committee system, that M. Doumergue's compliments have, on first hearing, an almost ironical note. It is possible, however, that each of the two great European democracies has something to learn from the political experience of the other; and in that case we may be able to return the compliment at a later date. In M. Doumergue's opinion the saving grace of British democracy is the fact that the Prime Minister "is invested with the powers of a leader," and that the Prime Minister and Government "are both assured of a long existence when they take office."

They are certain (he continued) of having the Budget, which contains only the receipts and expenditure provided for by them, adopted within the proper period; and finally they have the security of a body of State servants who are well disciplined, subject to their duties, and whose insurrection against the State would not be lightly tolerated.

The proposed reforms accordingly provide for the right to appeal to the country by a Prime Minister whose Government is defeated, for the withdrawal from Deputies of the right to initiate expenditure, and for the definition of the rights, duties and limitations of public servants. M. Doumergue concluded his speech by appealing for "unity, confidence and patriotism" in support of these reforms. This appeal would have been more effective if he had refrained from attacking the Left-Wing Parties earlier in his speech, if the "fiscal reforms" already carried out by his

Government had not been marred by a strong class bias, and if the Government had succeeded in bringing to justice those implicated in the Stavisky scandals. For it is the suspicion of corruption in high places, rather than any lack of "discipline" in the lower grades, which appears to the Englishman to distinguish the French civil service from the British. Similarly, M. Doumergue's assumption that all who urged devaluation were really aiming at a Communist dictatorship, seems unworthy of a responsible Minister. Whatever the Doumergue Government's record, however, its reform proposals would appear to have been genuinely conceived in the national interest.

* * *

The End of the U.S. Textile Strike.—The strike in the American cotton textile industry was settled at the end of last week. It had lasted three weeks and had been accompanied by the usual incidents, such as riots in Rhode Island and Maine, bloodshed in the Carolinas, tear gas and concentration camps in Georgia. The United Textile Workers' Union has demonstrated its ability to paralyse the industry. Whether it secured the voluntary adhesion of a majority of the workers is more doubtful, in view of the mass intimidation and violence which were apparently necessary to bring the mills to a standstill. The Board of Mediation appointed by the President made three major recommendations. The first was that the conduct of labour relations in the industry should be removed from the National Cotton Textile Industrial Relations Board—a subsidiary organisation of N.R.A.—and entrusted to a new Textile Labour Relations Board subordinate to the Department of Labour. Secondly, a special Board should be set up to regulate the "stretch out" ("more looms to a weaver"); and finally the Department of Labour should inquire into the problem of wages. The Union accepted these terms with an alacrity which contrasted strangely with its previous truculence, and work has been resumed. The Union proclaims the settlement as a victory, but it is difficult to see what it has achieved beyond the promise of an inquiry. Labour relations in the industry are brought within the purview of the Department of Labour, which is considered to be more favourably inclined to the Unions than the N.R.A., but the real struggle for power in the industry remains to be fought out in the elections of collective bargaining representatives which will now presumably be held in every mill. The National Labour Relations Board has ruled that the representatives of the majority of the workers in any firm shall be the exclusive agency for collective bargaining with the employer. This ruling will help a union which has enrolled slightly more than 50 per cent. of the workers in its industry, but it will hinder a minority union. On balance, the decision is considered to be favourable to the unions, and it is presumably the belief that this ruling will now be applied to the cotton industry which has pleased the United Textile Workers. But the ruling is not a legal decision, and it may be upset either by the courts or by the President, who is reported to be impressed by the arguments for proportional representation in collective bargaining. American labour relations are thus still in a state of confusion, and it cannot be said that the textile strike has clarified the issue.

* * *

The Twilight of the N.R.A.—The strike did serve to bring to a head the disputes within the National Recovery Administration. General Johnson had condemned the union leaders in his usual forthright fashion. A strike in the textile industry had previously been threatened in June, and was averted only by his intervention. He now alleges that the recent strike was a breach of the agreement then reached, and declares "with all solemnity that if such agreements with organised Labour are not worth more than this one, then it is not such a responsible instrumentality as can make contracts on which the country can rely." A charge of bad faith of this nature was a direct breach of the elaborate neutrality of the Administration, and it was obvious that General Johnson could no longer preside over the Governmental agency which was responsible for labour relations. Labour questions,

indeed, have been increasingly committed to the Department of Labour, but General Johnson's position had been undermined in other ways, and on Tuesday of this week he resigned. Hugh Johnson has occupied the centre of the American political stage during the past fifteen months almost as consistently as the President himself. A man of enormous energy and restlessness both of mind and of body, he was the ideal person to put over the great concentration of national enthusiasm that the N.R.A. was at first conceived to be. His direct speech and his racy language captured the imagination of the country, and he will take his place among the most picturesque figures in the historical cavalcade of Washington. But as N.R.A. developed from a national crusade for re-employment into an agency for the self-government of industry, the very bluntness and dash which had served him well as a cavalry leader or a crusader became liabilities which in the end ensured his departure. General Johnson's resignation leaves the future of the N.R.A. very open. Labour relations are passing to the Department of Labour, the enforcement of the codes of fair competition is clearly a matter for the courts and the Department of Justice. The traditional antipathy to trusts is reinforcing the opposition to any form of price-fixing, both on the general ground of protecting the consumer and also on the particular ground that high prices are impeding recovery. There does not seem to be a great deal left for the N.R.A. to do. The Chamber of Commerce of the United States has already petitioned for its disappearance when the Act expires in June next, but the idea of planned development of industry is so close to the President's heart that he is unlikely to acquiesce in anything so drastically reactionary. The machinery of the New Deal is being overhauled, but there is no reason to suppose that its supreme engineer has changed his conception of his destination or that he has lost the power to convince the nation of the desirability of pressing forward towards it.

* * *

Planned Marketing and Tinned Milk.—The Milk Marketing Board can only justify its operations if it succeeds in expanding the consumption of liquid milk. Some progress has been made in this direction by the new scheme for the provision of cheap milk in the schools. But only half of the cost of this scheme is being borne by the Exchequer. The other half comes out of the milk publicity fund, and so ultimately out of the retail price. So far the consumer does not on balance gain. Subsidies apart, however, consumption can only be increased by a lowering of production and distribution costs, and a consequent reduction of the retail price. At present prices there is almost certainly a surplus of milk being produced. But the Board, so far from inducing the consumer by lower prices to absorb the surplus, is diverting the surplus to the "manufacturing" market and subsidising the "manufacturing" price out of the liquid price. And, in order to prevent the manufacturing price falling still lower, the price of the manufactured product—butter, cheese, etc.—is being held up by artificial restriction of imports. A new turn of the restriction screw has just been announced. The whole of this policy ignores not only the interests of the consumer but the elasticity of demand for liquid milk. The Board apparently assumes that, however much the liquid price is held up, consumption will not fall off. But experience shows that this is not the case. Already, as a result of farmers being prohibited from selling more than one gallon of milk a day locally without registering as producer-retailers and charging the official retail price, the poorer rural consumers have been driven to drink tinned milk. Now it is announced that farmers are to be forbidden to sell even one gallon of free milk in this way. In effect, the milk diverted from consumption in liquid form owing to the high price is being transferred to the manufacturing market, and the producers' return in this market is being maintained partly by a subsidy from the liquid price and partly by import restriction. English liquid milk is being withheld from consumption and turned into butter and cheese, while we force the consumer to pay more than he need for imported butter, cheese and tinned milk. If this is Mr Elliot's idea of "national" planning it is not ours. An increased subsidy to the poor consumer of liquid milk would be better.

Exit General O'Duffy.—The resignation of General O'Duffy from the leadership of the United Ireland Party signals the victory of experience over immaturity. That nothing in the nature of a "split" has taken place is shown by the fact that he resigned alone. According to our Dublin correspondent, the solidarity of the United Ireland Party remains unimpaired, and it is extremely probable that the League of Youth, popularly known as the Blueshirts, will continue to co-operate fully with the political organisation under the guidance of Mr Cronin, its new chief. The Blueshirts are a disciplined and responsible body who will take orders from headquarters and will conduct their campaign for the preservation of individual liberty on the lines approved by their political leaders. Unfortunately the maintenance of obedience to authority is not so certain in the case of many farmers, who find themselves quite unable to discharge their obligations owing to the continuance of the economic war. If groups of harassed farmers resort to the traditional methods of Irish agrarian warfare under the strain of impossible demands, the blame must be placed upon the politicians whose policy has resulted in acute agricultural distress and not upon their own political leaders, who never cease to deprecate and denounce lawless and unconstitutional action. Mr Cosgrave laboured for ten years under the burden of an unconstitutional opposition, and the temptation to retaliate in kind must have been very strong. He has, however, shown the statesmanship and breadth of vision which his supporters expected of him, and has attempted to educate the politically inexperienced electorate of the Free State in the duty of a democracy to obey the legally constituted authority. The importance of General O'Duffy's resignation has been generally exaggerated in the Press, the truth being that the political situation remains practically unchanged in spite of this latest change in the *personnel* of the opposition.

* * *

Price Fixing for Fine Yarns.—The spinners of Egyptian cotton have decided to follow the example of their Royton colleagues at the coarse end of the trade, and to place their price-agreements on a legal basis. A meeting summoned on Thursday by the Bolton Master Spinners unanimously agreed to the preparation of a scheme of this kind by which the existing "Gentlemen's Agreement" can be reinforced with legal sanctions. Minimum prices are to be calculated by adding a fixed margin to the price of clean cotton, and a scale of penalties is to be drawn up to be exacted from spinners who sell below these rates. In this way it is hoped that weak-selling may be eliminated and the present losses avoided. Whether this arrangement can be made to work is a question which only the future can decide, but the willingness of the Egyptian section to try it is at any rate a welcome sign of a much-needed growth in the co-operative spirit. Meanwhile we may hope that it will not be forgotten that reducing costs rather than maintaining prices is the proper way to recover trade. The elimination of weak-selling may be a preliminary necessity, but it is not a substitute for re-organisation and efficient working.

* * *

Anglo-German Exchange Agreement.—A provisional arrangement has been made with the German Government as regards the working of the exchange agreement, which appeared to be threatened by the new system of import control introduced by Dr. Schacht. Up to the end of October, at any rate, the German Government has agreed to issue exchange certificates authorising payments into the special account of the Bank of England for the import of all goods covered by the exchange agreement made in August, from which imports of "controlled" commodities were specially excluded. This interim arrangement is only to apply to imports from Britain into Germany up to the present level of such imports. Meanwhile a new arrangement is to be negotiated. This means that for another month imports of British goods into Germany can be maintained at their present level, but it seems clear enough that in negotiating the new agreement Dr. Schacht intends to try to cut down British imports if he can. Meanwhile no progress appears to have been made towards the settlement of the outstanding debts of German importers to Lancashire,

Bradford, etc., though the negotiations are continuing. What further results may be expected from Sir Frederick Leith-Ross's exploratory visit to Berlin are not yet known, but all the indications point to the fact that the views of the British and German Governments are still very far apart. This is not at all surprising, seeing that the inflationary policy pursued by the German Government must progressively involve a drastic cutting down of imports if the mark is to be artificially maintained at its nominal parity. From the British point of view the chief danger of the situation is that Dr. Schacht, hemmed in by trade clearings with other countries, will be tempted to discriminate against British imports, in which case he will compel the British Government to institute a clearing also—a step which it would otherwise be reluctant to take, since it must tend to diminish Anglo-German trade on both sides of the account.

* * *

Palestine Potash, Ltd.: A Correction.—In a reference in last week's *Economist* to the potash output of Palestine, which is in the hands of Palestine Potash, Ltd., it was stated that "although litigation is at present in progress with regard to the validity of the concession, this company appears to have a fairly assured future." Our attention has been called to the fact that this reference to "litigation in progress" was incorrect. The action in question came before the High Court of Justice in the King's Bench Division in July last. No evidence or argument was adduced by the plaintiffs, and Mr Justice Roche directed that judgment should be entered for the defendants, Palestine Potash, Ltd., on the claim, with costs. We gladly give publicity to this decision, which removes any qualification as to the future of the company which might be inferred from our article.

* * *

A Russo-Japanese Agreement?—At the beginning of this week it was reported that an agreement was fore-shadowed between the Russian and Japanese Governments over the price and method of payment by "Manchukuo" for the transfer of Russia's interest in the Chinese Eastern Railway to "Manchukuo." Both sides appear to have shown greater readiness to agree on a price than has latterly been apparent; and the agreement is now the subject of last-minute negotiations on details. The coincidence of this reported agreement with Russia's entry into the League may be taken as an indication that the Japanese military authorities have renounced whatever anti-Russian plans they may have been preparing, under the guise of a dispute over the railway, at least for the present; for Russia's position in the West is now relatively secured, and may be even more secure if the Franco-Italo-Russian security projects are realised. Russia's recognition by the United States, and now her membership of the League, have made it impossible to treat her as an international pariah—that is, impossible without involving the State who so treats her in far-reaching international complications. So much must the Japanese militarists realise. But the news from the Far East this week, while holding out hopes of a greater measure of peace and stability in that disturbed region for a season, has evoked much speculation. If the C.E.R. agreement is duly signed, will Russia, a member of the League not bound by League decisions taken prior to her entry, ignore the Lytton Report and the Council's decision over the rape of Manchuria, and recognise Manchukuo? That would provoke a lively situation on the League Council. So far there is no sign that Russia would so mishandle her newly acquired tactical position in the world's councils. But again, the Far East is "in the news"; and this time, we hope, the signing of a Russo-Japanese agreement will not be long delayed, and that it will herald a real improvement in Russo-Japanese relations.

Anglo-Russian Trade.—It is now just six months since the Anglo-Russian commercial agreement was ratified; and the latest returns of British overseas trade provide some interesting evidence of the way this treaty is working out. It was intended during the present year to establish a ratio of 1:1.7 in Russia's balance of payments with this country. Colonel Colville told the House of Commons in July that the ratio of imports to exports in the first five months of the year was "rather more than five to two in Russia's favour." In the first six months of the year Russia had landed imports to the value of £7,700,000 and taken exports to the value of £2,900,000. The returns for August just published do not give the complete totals; but taking the items separately shown (nearly the whole of the total trade) Russia has shipped some £11,000,000 and taken £4,000,000 in exports. The *trade* ratio is still very much what it was in May; and to keep to the 1:1.7 ratio of *payments* Russia must have spent some £6,500,000 in all. But, in addition to goods shipped (excluding those not paid for), Russia is entitled to count as "payments" repayments of existing credits, charters, purchases of old ships and an amount equal to 6½ per cent. of the import-export turnover (about £1,000,000 up to date) to cover "invisibles." As visibles and invisibles alone account for £5,000,000 out of the necessary £6,500,000, and as charters

Sterling and International Prices.—The downward movement in British wholesale prices, noted a fortnight ago, has continued. Our primary products index number has fallen since September 12th by 1.6 per cent., and is now nearly back at its level of August 1st. Our complete index number has fallen by 1.2 per cent., and is now lower than it has been since early July. The decline is very general, the only exception being the minerals group, and the inference is that, except in the very short-run, the drought factor was not sufficient to overcome the general contraction in the world consumption of the leading commodities. American prices remain much steadier. The primary index number has only fallen by 0.9 per cent., while the Irving Fisher general index number has risen by 0.3 per cent. The maintenance of American prices at their August level suggests that internal influences, including the drought, continue to predominate. Gold *bloc* prices, as represented by France and Italy, have risen fractionally since September 12th. German prices are unchanged.

* These figures refer to Sept. 19th.

Details of the group indices comprising the complete *Economist* index number are given below:—

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	Aug. 29, 1934	Sept. 12, 1934	Sept. 26, 1934
Cereals and meat	64.5	76.8	76.0	74.1
Other foods	62.2	59.3	58.7	57.9

* "Report on the Progress of Civil Aviation, 1933." H.M. Stationery Office. 5s. net.

Juvenile Employment.—In view of the extension of the new Unemployment Act to cover juvenile unemployed persons, the report for 1933 of the local Committees for Juvenile Employment is of particular interest. In the country as a whole the situation improved very much during the year owing to increased trade activity and to the smaller influx of potential workers between the ages of 14 and 18. The number of boys and girls in this class fell by about 131,000 compared with 1932, and by about 390,000 compared with 1929. But the extent to which juvenile labour was absorbed into industry varied very much in different parts of the country. In some regions, such as London and certain Midland industrial towns, there was actually a shortage of young workers. At the end of December, 1933, there were 4,000 unfilled vacancies in London alone. In the depressed areas, on the other hand, there was no appreciable improvement in the rate of unemployment, as is shown in the following table:—

	INSURED JUVENILES		
	Percentage Unemployed		Number
	Jan., 1933	Dec., 1933	Unemployed Dec., 1933
South East	5·8	1·9	7,700
South West.....	6·8	3·9	5,100
Midlands	6·2	1·8	4,200
North East	9·8	5·4	16,800
North West	9·5	5·9	14,600
Scotland	10·4	8·2	16,500
Wales	11·6	9·3	7,600

The tendency of labour to shift from the heavy, notably coal-mining and textile, industries to distributive trades and lighter consumption industries, which has been apparent during the whole of the past decade, continued during 1933, but was not sufficiently pronounced to counteract the effect of depression in our basic industries. More than a quarter of the boys and girls working in insured industries are employed in the distributive trades, which are in the main dependent on the prosperity of the region they serve. Many districts had returned to pre-slump conditions by the end of 1933, but in other areas the situation was still very serious. What then will be the effect of the large increase in the influx of juvenile labour during 1934 and the three

The Bank was formed to facilitate Exports and Imports
from and to Poland, including Danzig.
INQUIRIES SOLICITED.

succeeding years? It seems probable that areas, such as London and the South-East, which have experienced a real trade revival, will be able to absorb this increased supply, but will not be able to take in additional labour transferred from others parts of the country. And clearly the position in the already depressed areas will be aggravated, particularly as the increase in the number of children leaving school will be concentrated in the large industrial centres. It therefore remains to be seen what effect the new Unemployment Act will have on the unemployed juveniles in these large centres of industrial stagnation. There are three clauses relating to boys and girls; first, the insurance limit has been lowered from 16 to the school-leaving age; secondly, it has been made compulsory on employers to notify their local Juvenile Employment Committee of the dismissal of boys and girls under 18 years of age; and, thirdly, the statutory duty has been imposed on Local Education Authorities to provide, and on the Minister of Labour to require attendance at, instruction centres or classes for all boys and girls under 18 who are unemployed for more than a week, whether they are insured or not. The first two clauses of the new Act should do much to improve the situation. More important, however, is the actual provision to be made for the occupation of unemployed juveniles. For this purpose it may be an advantage that unemployment is largely concentrated in certain clearly defined areas; for the two great difficulties in the way of organisation of centres of instruction for unemployed juveniles are the rapid turnover of unemployment, and changes in the total number to be catered for in any particular district. In the parts of the country where such centres are most needed, experiment will be unhampered by these difficulties. Moreover, it should be very much easier to arrange a satisfactory curriculum to suit different ages and capacities where considerable numbers of children attend the centres or classes regularly.

Poor Relief.—The statement, recently published by the Minister of Health, of the number of persons in receipt of Poor Relief in the quarter ending June 30, 1934, does not make very encouraging reading. It is true that the total relieved on the last Saturday of June was 83,782 (5.9 per cent.) less than on the last Saturday of March, and that the decline was continuous throughout the quarter except for the Easter and Whitsun holidays. But this is largely a seasonal movement. The total of 1,325,307 was 53,249 (4.2 per cent.) higher than that for the end of June, 1933, and the highest recorded for the middle of the year, except in 1922 and 1926. This was mainly due to the increased number of persons normally in regular occupation who received assistance, for the number of persons in institutions was lower than in any year since 1919, and the number of those not coming into the class of unemployed persons was only slightly higher than a year earlier. As compared with March, however, this class of unemployed has fallen the most—from 631,000 to 567,000 (including wives and dependent children)—in large part due probably to the cessation of coal allowances at the beginning of April, and to the fact that at any rate in the class of insured workers it seems to be on the whole the larger families

which have ceased to require assistance, either because of increased employment or because children's allowances become more adequate for the summer. While the average number of insured men assisted during the quarter has fallen by 7,000 as compared with the first quarter of the year, the number of dependants has been reduced by 30,000 during the same period; the average number of dependants of all insured men assisted is only two. The concentration of the burden of poor relief in the distressed areas continues, for in all districts which grant relief to more than 5 per cent. of their inhabitants, except Sheffield, there was an increase in relief during the year; and in Liverpool, where there was an increase of 18 per cent., there was even a considerable rise as compared with the end of March, bringing the percentage relieved up to 10.2 at the end of June. In Cardiff alone, of these heavily burdened areas, there was a substantial decline during the quarter, from 1,102 per 10,000 of the population to 520. In London the number in receipt of relief was greater than in June, 1933, but smaller than in June, 1932. The close connection between the incidence of unemployment and that of poor relief is thus still evident.

The Tin Monopoly.—A fresh rise in the price of tin to £234 and the reduction in production quotas which comes into effect next week have once again directed attention to the tin restriction scheme. It will be recalled that the policy of those in control of the scheme was recently subjected to severe criticism by Mr J. K. Eastham at the meeting of the British Association. Mr Eastham interpreted the tin control scheme as an attempt by those who had invested capital in ways which events had proved mistaken to restore the value of their property. He considered this impossible, because it was probable that a major change in prices had taken place. Substitution was likely to increase, and a prolonged and drastic depression of tin prices would be necessary to reinstate the metal in its old uses. We have always maintained that the International Tin Committee is pursuing a mistaken policy. The only justification for the control of raw-material supplies is the maintenance of a stable and reasonable level of prices. Sharp fluctuations in prices are disadvantageous to consumers owing to the impossibility of planning ahead, and stability, even at a price somewhat above the average of fluctuating quotations, may therefore be of definite advantage to consumers. Unfortunately the idea of a reasonable price as shown by the policy of those in control of the scheme is somewhat inflated. At the beginning of May last the International Tin Committee recommended a substantial increase in production quotas, and it seemed as if the restrictionists had adopted a wiser policy. Unfortunately, however, the Committee, strengthened by the adherence to the scheme of a number of additional countries, decided last August to cancel the increase in production quotas as from October 1st. The latest move seems to indicate that the Committee is anxious to maintain the price of tin at the high price of £225 to £230 per ton. We still hope, however, that wiser councils will prevail before it is too late.

OVERSEAS CORRESPONDENCE

UNITED STATES

LABOUR AND N.R.A.

CONFLICTS continue inside N.R.A. There are three distinct schemes of collective bargaining organisation advocated—the craft union, sponsored by the American Federation of Labour; the company union, favoured by employers (the prevalent form of labour organisation); and the vertical industrial union, which seems implicit in the Recovery Act itself. The question of employee representation is also unsettled. Last spring the President

authorised a system of proportional representation; this ruling has now been reversed by the National Labour Board of N.R.A., which prescribes majority rule. For violating this decision, an important engineering concern in Buffalo (N.Y.) has been deprived of its Blue Eagle. This fact is important, as from the character of its work an engineering factory is a supplier of many other industrial plants, none of whom, if they continue to purchase its products, can furnish the "certificate of compliance" required to be eligible to work on Government-financed projects. Since a very large part of American economy is now Government-financed, the situation is complicated.

Some idea of the ramifications of Government activity is given in a Washington dispatch detailing the work of the Public Works Administration. Some \$3,700 millions has been appropriated under P.W.A. in the past eighteen months, distributed over 17,000 projects. It has been claimed that 99 per cent. of all the counties in the United States have received at least one P.W.A. project. Of the total about \$1,000 millions was lent, of which about \$500 millions was to public bodies, \$200 millions to railways, \$140 millions to irrigation and hydro-electric projects, and \$125 millions for housing and slum clearance. The out-right expenditures or grants were not itemised in this statement. It is understood that all or virtually all of the \$3,700 millions appropriated for the P.W.A. has been exhausted; but, of course, activity under these expenditures will continue for some time to come, although on a receding scale.

OPERATIONS OF THE R.F.C.

Mr Jesse Jones, chairman of the Reconstruction Finance Corporation, has given a condensed summary of the operations of that agency over a period of about two and a half years. Loans for all purposes have aggregated \$3,610 millions, and repayments have totalled \$2,060 millions. It now owes the Treasury \$3,100 millions, of which \$1,500 millions has been distributed to other Governmental agencies, leaving \$1,800 millions for the present operations of the R.F.C. itself; against this it now holds \$1,600 millions in loans plus \$800 millions in preferred stock and capital notes of banks; against \$241 millions of the preferred stock it has issued its own notes. Altogether the R.F.C. has made 10,500 loans to more than 5,500 banks, totalling \$1,126 millions; of this 75 per cent. has been repaid, and the greater part of the remainder is owed by 670 banks that closed subsequent to the loans. Some \$600 millions was disbursed to the receivers of closed banks for distribution to depositors, and \$414 millions was lent to railroads, of which \$70 millions has been repaid. The ten-cent cotton-pegging loans of last year took \$140 millions, of which \$100 millions has been repaid; and of last year's 45 per cent. corn loans of \$121 millions about half has been repaid.

Both these summaries mention the sums lent to railways during the depression—\$414 millions (less \$70 millions repaid) by the R.F.C. and \$200 millions by the P.W.A., a total in excess of \$500 millions. These figures emphasise the difficulties of the American railways, most of which will again fail to cover their fixed charges in the current year. This problem comes into the Press intermittently; and so far three partial solutions have been suggested: (1) that the Government introduce a greater measure of regulation over competitive forms of transportation; (2) that voluntary reorganisations be made under the legislation passed by the last Congress; (3) that railway rates be increased, as petitioned by the roads themselves. Meanwhile, continued borrowing by enterprises not at present earning charges on existing debt is far from reassuring. It is rumoured that important and comprehensive legislation will be introduced at the next session of Congress; but the programme probably is still in process of formulation. In extreme circles, one hears talk of Government ownership, particularly for the purpose of validating the railway securities widely held by fiduciary institutions; but there is little evidence of public desire for such a solution.

The drought has completely dropped from discussion, for several reasons. First, since early August the weather has been more favourable, which has saved pastures. Second, the great August rise in prices of farm products was a compensation for the reduced crops. Third, the actual area most affected by the drought, while large in extent, is rather thinly inhabited; and fourth, except in animal foods the reduction in crops did not amount to actual shortage. Taking current prices, aggregate farm income is now estimated at about \$6,000 millions, compared with about \$5,400 millions last year. Reports from agricultural areas speak of retail trade as much better than a year ago. One gets a hearsay impression that the recovery has been quite irregularly distributed; and this is confirmed by the August figures of debits to individual banking accounts.

NATIONAL BANK OF GREECE

Dallas.....	340	359	453
San Francisco.....	1,718	1,768	1,984
Total.....	25,215	25,451	25,706

Two facts at once strike the reader. The increase in the total is small considering the increase in bank deposits, the great rise in the price level and the recorded increase in the indices of production. Second, the New York district shows an actual decline, while all other districts show an increase—greatest, proportionately, in the smaller and primarily agricultural districts.

NEW YORK, September 18.

FRANCE

CONSTITUTIONAL REFORM BUT NO DEVALUATION

The Government's proposed "State reforms" (which we discuss in a Note on page 577) were announced by M. Doumergue on Monday. These proposals will necessitate the meeting in Congress of both the Senate and the Chamber in Versailles. Four major constitutional reforms are proposed:—

(1)—The strengthening of the authority of the President of the Cabinet, who would have henceforth powers similar to those of the British Prime Minister;

(2)—The extension of the right of dissolution, which has been used only once since the foundation of the Republic. The fear of dissolution should check those party intrigues, notably in the Chamber. "Political crises," M. Doumergue says, "will be less frequent if the fear exists of an immediate dissolution which will curb the impatient and very often unjustified ambitions which lie at the root of most of these crises";

(3)—A new clause in the Constitution to provide that the Government alone shall have the power to propose new expenditure; the initiative power will thus be removed from the Chamber;

(4)—The introduction into the Constitution of a Statute for civil servants, which will reinforce the "discipline" to which M. Doumergue referred.

After these reforms have been carried through, M. Doumergue believes that new elections will be necessary to ascertain the will of the country. The Prime Minister will employ at once the new right to dissolve the Chamber

which has been embodied in the Constitution. M. Doumergue's speech is an event of great importance, since his Government intends to modify the laws and customs which have guided the Republic for sixty years. The authority of M. Doumergue is certainly great enough to carry the reforms through, although some of them will be opposed by certain political parties. The elections which should follow the reform of the Constitution must have an exceptional significance, since the new Chamber must derive a special importance from the occasion and must be conscious that it is destined to make crucial decisions. It consequently seems likely that, following the "Truce," the country will embark on a period of great political activity.

In the course of the same speech M. Doumergue declared most emphatically against any plan for the devaluation of the franc. He believes that any devaluation will reduce the value of the franc to zero. Consequently, he said, only the Communist Party and its allies could find hope from such a policy. "The ruin of the franc would offer to them the greatest chances to establish their dictatorship," M. Doumergue added, and expressed his astonishment that political leaders such as M. Paul Reynaud, who were neither Communists nor Socialists, should nevertheless associate themselves with the Socialists and urge the devaluation of the franc, which (in M. Doumergue's opinion) would "mean the ruin of all the hundreds of thousands of owners of Government stock; the ruin of all holders of private bonds; the ruin of all pension schemes and of all co-operative schemes; the ruin of all savings bank depositors—and they hold £780 millions; the ruin of the famous French stocking; the ruin of the workmen and the ruin of the peasant."

NEW TREASURY BONDS

The Ministry of Finance is now issuing Treasury bonds for the redemption of the heavy maturities for which preparations have already been made by means of last July's loan. The amount of short-term bonds will be reduced on September 30th from 12,000 to 10,000 million francs. Last year the total of these bonds reached 15,000 millions. On the other hand, a certain amount of Treasury bonds, notably the 5 per cent. 1924-34 bonds, of which a total of nearly 4,000 million francs is still not redeemed, will mature at the end of October and the beginning of November. The Minister of Finance will then issue 4½ per cent. Treasury bonds, 1934, redeemable in three, six and ten years. The issuing rate is 97.60 per cent. and the bonds will be redeemable at option of the subscriber at par on October 5, 1937, at 103 per cent. on October 5, 1940, at 108 per cent. on October 5, 1944. With this premium and the rate of issuing, the yield of the new loan is one of 5.45 per cent. in the case of a reimbursement in 1937, of 5.48 per cent. in 1940 and of 5.50 per cent. in 1944.

These conditions are a consequence of the present situation of the French capital market. Short-term money is superabundant, so that interest rates are very low. On the Stock Exchange the last carry-over rate did not attain ½ per cent. But long-term money remains dear, because capitalists dare not take a risk. The Treasury must therefore offer bonds with an early maturity. The amount of the new issue has not been fixed. It is thought that it will be closed when subscriptions reach 4,000 or 5,000 millions.

HEAVY REDUCTIONS IN IMPORTS

The volume of foreign trade is still dwindling, and imports are falling more quickly than exports, as the following table shows:—

	(000 francs)	
	First eight Months of 1933	First eight Months of 1934
Imports:		
Foodstuffs.....	6,591,683	4,969,147
Raw materials.....	9,413,178	8,079,757
Manufactured goods.....	3,456,266	2,951,729
	19,461,127	16,000,633
Exports:		
Foodstuffs.....	1,509,884	1,538,638
Raw materials.....	3,045,676	3,391,440
Manufactured goods.....	7,326,865	6,611,344
	11,882,425	11,541,422

For the first eight months of 1934 the total trade amounted only to 27,542 millions, compared with 31,343

millions in 1933. Total trade fell in July and August to its lowest since the stabilisation of the franc, the figure being 3,065 millions in July and 3,062 in August. The trade paralysis is thus steadily aggravating itself.

For the first eight months of the year the diminution is 341,003,000 francs only in exports, compared with 3,460,494,000 francs in imports. The import surplus for this period is thus much lower than last year—4,459 millions, compared with 7,579.5 millions.

Export trades are nevertheless complaining bitterly of the decrease in exports. For the period January-August exports of foodstuffs show an increase of 28,754,000 francs and those of raw materials one of 345,764,000 francs, but exports of manufactured goods show a diminution of 715,521,000 francs. M. Lamoureux, Minister of Commerce, has just answered these complaints in a speech before the Chamber of Commerce of Geneva. "As long," he said, "as we are faced by monetary manipulations abroad, France's interest is to remain attached to the quota system." In answer to those critics who are urging a more liberal application of the quotas, he allows that "this policy must be followed with a view to increasing transactions, and not diminishing them, which could lead us progressively towards a sort of autarky more or less avowed, the effects of which would rapidly prove disastrous to the French national economy." But he also observed that the policy of protecting French agriculture was the obstacle to a liberalising of the quota system.

As to the economic agreement with the countries of the gold bloc (discussed in a Note on page 577), it is known that Belgium is urging France to adopt a policy of collaboration. In reply to this suggestion, M. Lamoureux declared that he did not reject it in principle, but he emphasised the difficulties of realisation. He spoke in particular of "the difficulty which the most-favoured-nation clause raises against the grant of preferential accords to certain countries." M. Lamoureux seems to be more impressed by the difficulties than by the advantages of agreements between the countries of the gold bloc on the basis of preferential stipulations. M. Lamoureux favours the maintenance of the *status quo* until the point when new export markets for France can actually be secured. The communiqué, which was issued at the end of the Conference of the gold bloc at Geneva, seems to indicate such a policy.

PARIS, September 26.

GERMANY

THE COST OF AUTARKY

THE provisional arrangement reached in Berlin to ensure against any further reduction of German imports of British goods has been well received here. The negotiations, however, have made clear to the public that in future commercial relations with foreign countries the discretion which Germany will officially exercise in the international distribution of her purchases will play a considerable rôle, all the more so because owing to quota, compensation and other agreements with some countries, Germany herself has not an entirely free hand. Discussing the old, now practically frozen, trade debts to abroad, which are not in the competence of the new import supervision boards, the *Frankfurter Zeitung* estimates the total to all countries at Rm. 500 millions, including the special mark accounts in the Reichsbank.

The supervision boards are already at work. Their methods of procedure are not entirely clear, and although ordinance after ordinance has been issued in the last few days, many questions of detail have yet to be settled. Apparently the Reichsbank will at very short intervals instruct the boards as to the value of the "exchange certificates" they may grant. Payments in foreign exchange and in reichsmarks will be on the same basis. It is surmised that a certain priority will be given if a foreign seller offers favourable terms, and this should tend to increase the amount of certificates for deferred, as distinguished from immediate, payment. The definition of the scope of the 25 boards, which was at first only roughly laid down, has

made progress. The board for "various goods" is to embrace nearly all the fully manufactured articles in which Germany has an export surplus, including toys, jewellery, clocks and watches, firearms, woodwares, glass, stone, etc. A very long ordinance regulates exchange payments in transactions other than the import of merchandise, such as the exchange of services, transportation, storage, travel and insurance, for which the new boards are not competent. The former "general permissions" will be retained in so far as they are necessary in order to maintain German exports and shipping; in other cases only individual permissions will be granted. The principle of control-free payment for goods produced in Russia has been extended to goods in transit through Russia from Afghanistan, Persia, Mongolia and North and West China.

The internal control of wool has been extended to the final manufacturer; and "certificates of need" are to be required for buying in the home market. A new decree forbids the charging of higher prices for imported foreign goods than the world-market price plus outlay and a reasonable profit. As an alleged outcome of the exchange shortage, the Reichsbank has suspended payment of the half-yearly interim dividend on the Reichsbank's shares, which are largely held by foreigners.

Official statements concerning the food and fodder supply outlook are optimistic, despite the bad crops. The Reich Cereals Commissioner declares that it will be necessary at all costs to enforce delivery of rye in order to prevent its being used for fodder; and adds that, at all costs, the fodder deficit must be made up by imports. So far, farmers have been keeping rye out of the market, apparently as a fodder reserve, and fodder cereals have also not been offered. The assurance that bread cereals will not need to be imported is based on the fact that, while this year's cereals crop is 4,000,000 tons below last year's, a reserve of 2,250,000 tons was on hand. The Minister for Food and Agriculture, speaking on "One year of Nazi Agrarian Policy," emphasised the "success" with which prices have been kept up, and made the following comparisons for August, 1934: Rye (per ton), Rotterdam 56 marks, Germany 159 marks; wheat (per ton), Liverpool 69 marks, Germany 199 marks; hogs, Chicago 12 marks, Germany 47 marks per centner (100 metric lbs.); butter, Copenhagen 78 marks, Germany 254 marks; bacon, Copenhagen 107 marks, Germany 184 marks per double centner; eggs, Copenhagen 3½ pf. each, Germany 8 pf. each. Such is the cost of autarky! Actually the disparity between German and world-market prices has been brought about by measures dating from 1925, and the Nazis can claim little of the discredit. The farmers are, however, not much better satisfied to-day than they were nine years ago. They complain in particular of the imposition, this year for the first time, of maximum prices, which prevents their compensating themselves for the decline in volume of crops.

PRODUCTION AND EMPLOYMENT

The number of employed industrial workmen in August is returned at 60.8 per cent. of all available places, as against 60.2 per cent. in July. The highest percentages of employed persons are in the food-products, textiles, and non-ferrous metal branches; lowest in wood manufactures and building; but building has of late improved more than industry as a whole. The index figure for industrial production (1928 = 100; seasonal changes eliminated) was 89.8 in July, as against 70.6 in July, 1933. Since autumn, 1932, it is officially declared, two-thirds of the decline in production during the depression has been made good. The value of industrial production has risen less than the quantity, being Rm. 4,500 millions in August, Rm. 2,850 millions in August, 1932, and Rm. 7,500 millions a month in the spring of 1928. Ingot steel output in August was 1,067,600 tons; and in the first eight months 7,648,100 tons, against 4,782,100 tons in the same months of 1933. Export of heavy iron and steel in August rose to 151,940 tons, against 144,200 tons in July. Export of semi-products trebled, mainly in consequence of increased British and Japanese purchases. Reports from the machine manufacturing branch are favourable. Potash export this year has been 25 per cent. higher than in the same period of 1933, but the monetary yield was lower. The heavy passive trade balance in rayon has begun to

decline, export prices having risen of late much more than import prices.

Reich revenue from taxation in August totalled Rm. 643.5 millions, or Rm. 110 millions more than in August, 1933; the actual improvement, allowing for changes in the tax system, is officially put at Rm. 92 millions. In the first five months of the financial year tax revenue totalled Rm. 3,213 millions, or Rm. 483 millions more than in the same months of the preceding financial year; allowing for changes in the tax system (slaughtering, fats, corporation, and "flight" taxes), the excess amount is put at Rm. 263 millions. The taxes reflecting business conditions—wage and income-tax, corporation, turnover, bills, and traffic taxes—have developed satisfactorily; and there is some rise in receipts from taxes on consumption. An official return shows the indebtedness of municipal undertakings at Rm. 2½ milliards. In 1933 some 585 share companies, limited liability companies, and other independently organised business concerns were wholly or mainly owned by municipalities.

The Reichsbank's return for September 23rd shows again a marked deterioration, only 41 per cent. of the increase in credits and investments of the fourth week of August having been paid off, as against 90 per cent. in the third week of September, 1933. This is the more remarkable because the mid-August increase of credits was abnormally large. Circulation declined by Rm. 93 millions to Rm. 3,569 millions. Total circulation is Rm. 5,419 millions, as against Rm. 5,269 millions at the same date of 1933. Deposits again show a large increase, by 89 millions to Rm. 811 millions. The money market began to harden, in preparation for the month-end settlements, on September 25th, the day-loan rate being 4½ to 4⅞ per cent.

An official return of capital holdings in recent years shows that the lowest point was reached in 1932, and that in 1933 there was a small increase in the total and in most individual items. Public holdings of currency, bank deposits, and tax certificates, that is, short-term forms, at the end of 1933 were Rm. 17,918 millions; long-term claims—savings deposits, insurances, bonds, and private mortgages—were Rm. 43,134 millions; the total being Rm. 61,052 millions, against Rm. 59,725 millions in 1932. The total for 1913 was Rm. 134,476 millions, of which the short-term forms accounted for Rm. 18,875 millions. The latter item has changed little in the twenty years, whereas the long-term claims in 1913 totalled Rm. 115,601 millions. Of this sum savings deposits were 23,342 millions, and are to-day 14,599 millions; while insurances to-day are almost at their pre-war total. The greatest declines are in bonds and mortgages, and are a consequence of the inflation of 1919-23. Company shares are not included in this return.

The wholesale prices index for September 19th at 100.3 is unchanged. Industrial goods for consumption have again risen sharply in price.

BERLIN, September 25.

DENMARK

AGRICULTURAL DEBT CONTROVERSY

THE summer Rigsdag closed on September 7th after a deadlock had arisen in the Landsting (the Upper House). For several weeks it was hoped that a formula satisfactory to

HIGHER CONTROL

A Manual for Company Directors, Secretaries and Accountants

By T. G. ROSE, M.I.Mech.E., M.I.P.E., F.I.I.A., Author of "Business Charts," etc.

This book explains and describes the latest development of management technique. It shows a new method of setting out the facts and figures of a business in such a way as to facilitate enormously the control of every activity. "Is of the greatest value to all who are engaged in the direction and management of business enterprises."

—INVESTORS' CHRONICLE. 269 pages. 12/6 net

Order from a Bookseller, or direct from

PITMAN, Parker Street, Kingsway, London, W.C.2

the Government as well as to the Opposition (which holds a majority in the Landsting) could be found, so that the Bill designed to settle the remaining conversion and funding of the agricultural debts could be carried through. However, the conditions proffered by the Socialist and Radical Government were regarded as unacceptable by the majority of the Landsting. Nothing therefore will be settled till the opening in October of the Rigsdag.

Meanwhile, as bondholders are entitled to three months' notice, any large scale operations to convert the remaining hundreds of millions of unconverted agricultural bonds in the present year have been frustrated. The operations of the Crisis Fund Institution may also be hampered by the size of its present holdings, which already run into more than 150 million kroner. Money, however, is still plentiful, interest rates are low, and minor conversions can still be carried out according to the Act of December, 1933, under which a considerable number of outstanding bonds have already been converted.

The various groups of the committee which has been inquiring whether the Exchange Control Act (import restrictions) should be liquidated or continued have now published their findings. Each group of the committee makes recommendations according to its political standpoint. Although Clause 7 of the relevant Act contemplated the discontinuation of import restrictions at the end of the present year, the Government Parties want the Act prolonged until the end of 1936.

RECORD BUILDING ACTIVITY

In certain quarters it is now believed that building activity is near the point at which the market for new dwellings will be saturated. In 1933 and previous years the construction of new houses proceeded at a considerable rate. A Report issued by the Department of Statistics shows that on July 1st this year the number of new houses under construction had reached record figures, especially in the provincial towns. The following figures may be given:—

	Number of flats under construction Copenhagen with Suburbs	Provincial Towns with Suburbs
July, 1932.....	5,365	1,290
July, 1933.....	8,437	4,953
July, 1934.....	9,674	5,689

These figures, considering the total population and the declining birth rate, leave the impression that sooner or later supply will exceed demand. Construction has been concentrated on small, modern, self-contained flats, and in Copenhagen a gradual depopulation of the residential quarters of the inner town in favour of the new dwellings in the suburbs has been going on. Not only private contractors, but municipal councils and building associations are sponsoring this large-scale construction, and, as long as this continues, unemployment will be kept at a very low figure in the building and allied trades.

The balance sheet of the National Bank as at August 31st shows that 15.1 million kroner of the gold stocks have been transferred to the Bank for International Settlements at Basle. It is believed that this gold deposit has been made for clearing purposes. Liabilities to foreign banks have been reduced from 59.7 to 51.4 million kroner, but at the same time foreign exchange borrowings from Danish banks have gone up from 30.9 to 37.7 million kroner. The net result on the month—when certain minor accounts have been included—is that the foreign exchange reserves of the Bank have been reduced by the modest amount of 0.6 million kroner.

The wholesale price index for August has risen to 134 from 129 in July. The index of imports rose from 136 to 140 only, and the index of exports rose from 98 to 115. The number of unemployed on September 7th was 60,668, or 14,613 less than at the same time last year. Laid-up shipping is down to 16 ships, totalling 37,500 tons, the lowest figure for several years.

Sentiment on the Stock Exchange has been much affected by political uncertainty. Last week, however, there was a renewed outburst of strength on the share market.

COPENHAGEN, September 15.

JUGOSLAVIA

RELATIONS WITH ITALY AND GERMANY

WHILE a certain coldness in Italo-Yugoslav relations cannot be denied, all statements of a Yugoslav-Nazi *rapprochement* may be taken as entirely unwarranted. The facts may be summarised as follows. Without in any way eliminating France as a major factor in her foreign policy, Yugoslavia has more recently displayed a greater personal initiative and followed paths of her own. This had at one time encouraged Germany to make political overtures, all of which have, however, been politely declined. The only *rapprochement* achieved is purely commercial, as Yugoslavia is not blind to the fact that Germany with her need of raw materials is bound to continue a good customer in a market to which she can offer the necessary industrial materials. In addition there is a considerable minority of German colonised farmers in Yugoslavia who ever since Hitler's accession to power have displayed Nazi sympathies. These two facts have been seized by the Italo-Austrian Press in their counter-offensive against the snub administered by Yugoslavia to Mussolini when she declared that the question of Austrian independence was one to be decided not by Italian arms, but by the League of Nations. All pro-Nazi policy in Yugoslavia would be, in fact, impossible owing to the definitely critical attitude of both the public and the Press towards Hitlerism.

The economic recovery of the last few months has been quite notable. The number of officially unemployed, 8,186, is the lowest for the last three years, and that of the employed, 572,000, the highest, being 35,000 above last year's July figures. Industrial reports show equally good advance in practically all branches. Textiles, heavy iron and steel are doing particularly well, and only timber and chemicals show a reaction. Iron mining production during the second quarter increased by 200 per cent. over the first, pyrite by 55 per cent., chrome by 52 per cent., and copper by 22 per cent. Purchasing power appears to have somewhat increased, the fall in average wages from 23.27 dinars per day last year to 22.21 dinars per day this year having been more than compensated by the greater number of men employed. In addition to this there have been no further cuts in salaries, and the index of agricultural produce for exports is practically the same as last year, 57.3 as against 57.4.

The improved purchasing power has made itself felt in import trade also, the half-yearly imports having risen from a value of 1,295,300,000 dinars in 1933 to 1,750,500,000 dinars in 1934, or 35.14 per cent. Against this exports have risen by only 10.84 per cent. from 1,434,100,000 dinars to 1,559,600,000 dinars. This gives a passive balance of 161,000,000 dinars, as against an active balance last year of 139,000,000 dinars. The deficit has been more than compensated, however, by the largely increased tourist traffic, which is about 15 per cent. to 20 per cent. above last year, and which brings in annually about 300,000,000 dinars.

IMPROVED BALANCE OF PAYMENTS

The fact that the balance of payments has turned greatly in favour of Yugoslavia in spite of a passive trade balance may be seen indirectly from the continued firmness of the dinar. The black bourse rate, which has for some time been about 35 per cent., as against the official premium of 28.5 per cent., has for over six weeks now been about 30 per cent., so that the question has been raised whether the Government would allow a strengthening of the dinar below the official premium. This appreciation of the dinar is traceable to several causes: firstly, to the inflow of money from "tourism"; secondly, to the purchase of dinars before the export season, which promises to be very brisk; thirdly, to a considerable purchase of dinars by Austrians during and after the July revolt; and lastly, to the disbursements of foreign exchange by private persons who have hoarded it.

Increased confidence has contributed much to the re-appearance of hoarded money, and for the first time since 1931 saving deposits have begun to rise again since January. In May the sum reached 9,965,000,000 dinars,

about 300 millions above the figure for December, 1933, but has since slightly declined owing to withdrawals for export purposes. It is to be noted, however, that the entire increase is concentrated in Government-guaranteed and municipal banks, the State Mortgage Bank, the Postal Savings Bank, and the Zagreb Municipal Bank being responsible for the bulk of the new deposits, while deposits with private banks have declined by a further 44 million dinars during the second quarter.

This relative abundance of money has enabled the Government to push its policy of cheapening credit one step further. Since the end of August the State Mortgage Bank has lowered its interest charges from 8 per cent. to 7 per cent., the Agrarian Bank from 7 per cent. to 6 per cent., and the private bank rate has been fixed at a maximum of 4½ per cent. above the National Bank rate, making it now 11 per cent., as against the previous maximum of 12 per cent. At the same time the rate at which private people may loan money has been fixed at a maximum of 8 per cent. These measures, naturally, would hardly be effective were it not that the State-guaranteed banks now control more than one-third of all deposits in the country, and certainly the most liquid third.

On the whole, with a balanced Budget, an increasing gold cover at the National Bank, and a promising export season, the stage seems well set for a recovery that ought to last at least until the end of the year.

BELGRADE, September 20.

BULGARIA

ALTERATIONS IN IMPORT CONTROL

THE import quota system has been altered by a new ordinance. Restrictions on imports will no longer be limited to 50 per cent. of the quantity and value of goods imported during 1931, but will depend on the average figure for imports during 1930, 1931 and 1932. Supplementary quotas will also be granted on condition that the export of certain goods precedes the import. The new system, accordingly, involves the system of "compensation," according to which all imports have to be accompanied by corresponding exports. Four lists of articles of import and export have been drawn up for use on a compensation basis, including raw materials, semi-manufactured, fully manufactured goods and luxuries. The ban formerly existing on the import of certain "luxury" goods such as automobiles, wireless-sets, flowers, etc., has been entirely removed, but certain goods, such as coal, otto of roses, wines, lumber, mineral ores, etc., must be exported against them. These compensation deals, however, are being more and more resorted to by importers and exporters, who are extending the system of premiums paid by importers for securing foreign exchange from exporters in order to pay for their imports.

The Debtors' Relief Act, voted on January 1st this year, was not found satisfactory by the new Government, and a new law was passed. According to this law, all debts contracted before January 1st up to the sum of 300,000 leva by agriculturists, artisans and business men will be reduced by 40 per cent., 30 per cent. and 20 per cent., respectively. Whereas in the old law the relief granted to debtors consisted only in a reduction of the rate of interest to 6 per cent. and an extension for payment spread over fifteen years, the new law provides for a reduction of debts and fixes interest at 5 per cent. All debts are transferred to the State Sinking Fund, which takes over the rights of creditors and issues bonds bearing interest at the rate of 3 per cent., redeemable within a period of 20 years. The reductions of the debts are borne by the State, which settles the claims of the creditors in full with interest at the rate of 5 per cent. Relief is granted in each separate case by courts specially set up for the purpose.

SMALL BUDGET DEFICIT

The most recent report of the Commissioner of the League of Nations shows that the Budget for 1933-34 closed with a small deficit of only 250 million leva, which is a success for the Government. The balance of trade, although still

slightly active, does not enable the free supply of foreign exchange to be increased. The decrease in exports, which is mainly due to the delay incurred in the export of tobacco, resulting from the conclusion of a large compensation transaction, has also affected the situation. The new tobacco crop seems to be somewhat better in quality than the average, and rather less in quantity. For this reason the embargo on the export of maize will be removed.

At the beginning of August the Government issued an internal loan repayable within three years and bearing interest at the rate of 6 per cent. for the settlement of long-standing obligations originating from past Budgetary deficits. It was intended that the amount of the loan should be fixed at 150,000,000 leva, but as 473,000,000 leva was subscribed, the Government decided to increase it to 230,000,000 leva. The success of this internal loan, which was subscribed to by private banks and companies, is largely due to the fact that its amortisation is guaranteed by specified State receipts and to the grant of a right to have the bonds discounted by the National Bank of Bulgaria to 80 per cent. of their value.

SOFIA, September 18.

GREECE

THE COMING PRESIDENTIAL ELECTION

BEFORE the end of the year the new President of the Republic has to be elected. Owing to a disagreement between the Opposition Parties and the Government on several vital questions, it is possible that M. Venizelos will be the Opposition's candidate for the presidency. This possibility has raised a storm of protest from the Government's supporters, to which the Opposition reply that, failing an agreement, it is only by putting at the head of the State a strong man like M. Venizelos that the Government will be prevented from violating the constitution, and that the Republican regime itself will be saved. Should an agreement on the electoral law be reached, and the Government abandon its Electoral Bill—which the Opposition believe would destroy the will of the people to the advantage of the Governing Parties—M. Zaimis, the present President, would be re-elected and the principal problem of the moment solved. Otherwise, either M. Venizelos will be elected President, or the Government will dissolve the House at once and hold a general election—an action which the Opposition consider unconstitutional and dangerous.

Budget revenue for the current year is coming in satisfactorily and is conformable to the original estimates. Receipts from April 1st to the end of August exceeded those of last year by almost 200 million drachmas, which suggests that public expenditure for this year, though higher than last year's, will be fully covered. Receipts of revenue for the year ending March 30th were themselves higher, compared with the preceding year, by 700 millions; so that receipts from revenues assigned for the service of the public debt are again larger this year. Nevertheless, the authorities are allowing a difference with the foreign bondholders

Money, Foreign Trade, and Exchange

about the application of the London agreement to drag on to the dissatisfaction of the bondholders and the detriment of the credit of Greece abroad.

INCREASED HOME PRODUCTION

Import restrictions and currency depreciation have continued to favour home industry as the figures of industrial output show. In 1933 a new increase was recorded, the volume of manufactured articles having risen by 13.80 per cent. in comparison with 1932. Textiles, chemical, leather and metal industries show the greatest progress. More than three-quarters of the needs of home markets are now supplied by local industry. Imports of manufactured articles are on the decline, goods of a weight of 233,000 tons only having been imported in 1933, as against 258,000 tons in 1932. Exports of Greek products, however, increased from 41,000 tons in 1932 to 65,000 tons in 1933. Barter agreements with neighbouring countries have contributed to this increase. Index numbers of the production and export of industrial articles show a further increase for the first six months of 1934. For the same period, however, imports, particularly of semi-manufactures, show also an increase, due to the rising consuming power of the country.

STATE CONTROL OF INDUSTRY

State control of industry is being gradually introduced in this country. For some years past bureaucracy has been extending its grasp on an ever-increasing circle of activities. Notwithstanding the existence of numerous Governmental departments and services covering all branches of the national economy—which alone should be in a position to exercise whatever official control and provide whatever assistance might be required—semi-official, "autonomous" organisations spring up every day, like mushrooms, their purpose being to protect, superintend, guide and promote production and trade, not only of whole branches of economic activity, but even of isolated products. Some recent additions to these benevolent institutions are the fishing, tobacco and export trade offices or "autonomous" organisations. A comprehensive and compulsory scheme of social insurances has also just been drawn up.

ATHENS, September 17.

LETTER TO THE EDITOR

OUR AGRICULTURAL POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—Several correspondents have drawn my attention to a statement appearing upon page 259 of your issue of August 11th, where I am quoted as stating that "in direct grants, in relief from central and local taxation and in indirect assistance (such as tithe legislation), the value of State assistance amounts to over £45 millions per annum, or 15s. a week for every one of the 1,150,000 persons gainfully occupied in farming."

My 1933 "Address" to the Agricultural Economic Society, which is the source referred to, contained no such estimate, as you will see from the enclosed copy which I send to you. Your contributor has, I venture to think, failed to differentiate between the weight of *ad hoc* grants and subsidies and remissions of taxation. In regard to the former class, I hazarded the suggestion that in thirteen years some £70 millions have been directly expended upon British agriculture, viz., £6 million per annum, or nearly 5s. per acre of crops and grass. In the other category farmers have been relieved of local rates to the extent of some £16 millions per annum (or 12s. per acre), and there have been considerable remissions under the heading of tithe payments. Such tax reliefs have been equivalent to £40 per farm or over £50 per farmer per annum.

I would, however, emphasise the fact that remission of payment is quite a different thing from the receipt of grants in aid, nor can I agree that the value of State assistance is worth 15s. a week to every person employed in British agriculture.—Yours faithfully,

J. A. VENN.

The Lodge,
Queens' College,
Cambridge.
September 21, 1934.

[Dr Venn's Address gives the details of his estimates but does not add them up to a final total. We apologise for attributing

to him the results of our own addition. And if the value of State assistance to the agricultural industry is £45 millions per annum and there are 1,150,000 persons gainfully occupied in that industry, it follows with inescapable logic that the assistance is equivalent to 15s. per week per head. It is, of course, true that not every one of the 1,150,000 benefits equally; but we do not think that anyone could have drawn such an inference from our statement. We agree, of course, that there is a difference between the receipt of grants and the remission of payments, but the financial value of each is surely the same.—Ed., ECON.]

MONEY AND BANKING

EXCHANGE CLEARING FALLACIES

MANY years ago a famous judge had to explain to a witness the meaning of the word "bankrupt." "Not know what bankrupt means, my good woman," he said. "Why, a man goes bankrupt when he owes more than he can pay, and an accountant and an attorney come in and divide up his property between them." It is not too far-fetched an analogy to suggest that the imposition of exchange restrictions by a country is at least symptomatic of bankruptcy, and that other countries who seek to negotiate exchange clearing schemes with that country are fulfilling the rôles assigned by the judge to two eminent and highly respectable professions.

Exchange restrictions are only imposed when a country is unable to find the foreign exchange needed to discharge its outstanding or immediately impending external obligations. Human nature being what it is, it is only natural that other countries should at once seek to earmark any money going from them to the afflicted country for the discharge of the debts already due or likely to become due to them. This is the real object of an exchange agreement or clearing scheme, to enable each creditor country to steal a march on its neighbours, or at least to make certain that it is not left behind in the race. Exchange agreements and clearing schemes take many forms, some of which are more defensible than others; and in many cases they are supported by extremely plausible arguments. Their real object remains unchanged.

As regards differences in form, there is clearly a radical difference between an Exchange Agreement and an Exchange Clearing. The former is entirely voluntary, and no trader on either side is bound to make use of it. An Exchange Clearing is compulsory and applies equally to traders on both sides. Once such a scheme is in operation, all importers are bound to pay for their goods in their own currencies to the clearing accounts, and it is only to these accounts that exporters can look for payment. Procedure also varies as regards the disposal of any surplus in a clearing account after the claims of exporters have been satisfied. In some of the present schemes, e.g. the Franco-German and Dutch-German schemes, any surplus accruing in a given currency is at the free disposal of the other party to the agreement. In other cases the surplus may be earmarked for special purposes such as the discharge of outstanding indebtedness.

The ostensible motives behind the network of exchange agreements and clearings which has gradually enmeshed the Continent vary widely. In some cases the recovery of past debts may be thrust into the foreground, as in the case of our own threat to impose exchange clearing on Germany to ensure the payment of the Young and Dawes loan interest coupons. In other cases, the avowed object is the development of trade between the countries concerned. Here the argument runs that if each country agrees to apply the proceeds of its own sales to the other country exclusively to buying goods from that other country, then trade between the two countries can within limits be developed between them. Imports cease to be unwanted or harmful competition with home industries, but instead are directly creative of further exports and so of additional activity among industries making for export. Once exchange clearing is in operation, so the argument runs, imports need not be checked, but on the contrary can be encouraged, without damaging home industries. In some cases, indeed, exchange clearing schemes have been linked up with definite Customs rebates to goods imported under the scheme. This is, of course, a way of circumventing the most-favoured-nation clause—and this may indeed be the real object behind the plan. Some of the Central European clearings are of this kind.

Finally, countries may be driven to these schemes by the action of others; for if once some creditor countries begin to conclude agreements and clearings other creditor countries cannot afford to be left out. For in such circumstances the most dilatory of them will go to the wall. It is only because a country is in an unbalanced debtor position that it resorts to exchange restrictions and tempts its creditors to resort to clearings. And once the device is adopted by some of its creditors, its disequilibrium vis-a-vis the remainder becomes automatically increased.

So far these new devices have only met with indifferent success. In certain parts of Central and South-Eastern Europe, where the position had become so desperate as to justify the adoption of any new shift, they have probably proved their worth. A volume of international trade is certainly taking place to-day, which without a clearing scheme behind it might not be taking place at all. The Austrian clearing agreements, for example, on the whole have worked fairly well; but this may have been due to the fact that Austria was able gradually to relax her general exchange restrictions and so to allow her foreign trade to reach a natural equilibrium. Elsewhere, the schemes have not always been successful and some have broken down. This suggests that exchange clearing arrangements are able to increase international exchange of goods only when the financial position of the debtor country is in the milder stages of insolvency.

On the other hand, the system suffers from the disadvantage that it tends to drive trade into unnatural and uneconomic channels. The moment creditor country A concludes a clearing scheme with debtor country B, it is at once under the temptation to take its imports from B rather than from C, D or E, regardless of whether or not such a shift in trade is economically justified. Switzerland has found that in every case the conclusion of a clearing scheme has necessitated the import of commodities at unnecessarily high prices as an essential condition if Swiss creditors and exporters are to obtain any benefit from the scheme. The broad lesson is that once a creditor country enters into a clearing agreement it ceases to buy in the best market, but instead tends to buy where it hopes either to sell or to collect outstanding debts. Moreover, the inconveniences in which private traders can be involved through having to pay into or receive from the clearing accounts, with all the attendant red tape, can be left to the imagination.

There is, however, a far more serious consequence of the spread of the network of exchange agreements and clearings. This is the virtual elimination of all triangular trade and payments, and the replacement of the generally uninterrupted flow of world trade by a number of forced bilateral trickles, each rigorously dammed off from the remainder. Eventually this can only have one result, namely, the limitation of international trade to the extent that purchases and sales between each pair of countries can be precisely balanced. If the business of individuals or of towns were conducted on this basis it is obvious that the complex development of modern production would be largely stultified and we should return to a more primitive stage of economic development. A similar retrograde movement will occur if international trade, lending and finance are straitened by the imposition of this bilateral rule throughout the whole world.

The most, therefore, that can be said for exchange clearing schemes is that they provide breaches in the main wall of exchange restrictions. The breaches, however, are rarely in the right place, and, worse still, each new clearing scheme makes the general freeing of the exchanges and a revaluation of world currencies appear less urgent. As a temporary expedient exchange clearings may at times be

justified, but they cannot be regarded as a permanent or desirable modification of the general mechanism of international finance. In the long run they will divert, distort and finally choke world trade. By that time, so far from the accountant and the attorney dividing up the bankrupts' property between them, there will be little or nothing left to divide.

FINANCIAL NOTES

The Money Market.—With the impending arrival of January Treasury bills the clearing banks have followed their precedent of last year and have raised their buying rates for all maturities. This decision, which was only made after a delay of a few days, was welcomed by the market, but its immediate effect was to check business, which was already limited. Rates for October and November Treasuries have been raised from $\frac{9}{16}$ to $\frac{11}{16}$ per cent., those for Decembers from $\frac{3}{8}$ to $\frac{1}{2}$ per cent., and those for Januarys are fixed at $\frac{11}{16}$ per cent. No January Treasury bills have yet been issued, and this week the end-of-December maturity has been the hot bill. These are now almost entirely held by the clearing banks, and so there has been practically no business in them. Nominally they are quoted in the market at a fraction under $\frac{1}{2}$ per cent. Three months' bank bills are now being dealt in at $\frac{3}{8}$ per cent., against $\frac{5}{8}$ - $\frac{11}{16}$ per cent. last week.

(b) Others.....	$\frac{11}{16}$ - $\frac{7}{8}$	$\frac{9}{16}$ - $\frac{5}{8}$	$\frac{1}{2}$	$\frac{3}{8}$ - $\frac{5}{8}$
Three months' bank bills	$\frac{3}{8}$	$\frac{11}{16}$ - $\frac{1}{2}$	$\frac{5}{8}$ - $\frac{11}{16}$	$\frac{3}{8}$

Money has also stiffened in sympathy with the higher clearing bank rate for Treasury bills. The general position remains very easy, but the Stock Exchange has been borrowing a fair amount both from the banks and the discount market.

* * *

The Bank Return.—The only appreciable change in this week's Bank return is a heavy movement of funds from bankers' into public deposits. The transfer amounts to about £17.5 millions. The very slight increase in the note circulation foreshadows the approach of quarter day, and next week's return may show a larger expansion.

It may be that payments for Treasury bills have been concentrated in the early part of this week, and this would explain the expansion of public deposits to an unusually high figure. Apart from this, $2\frac{1}{2}$ and $3\frac{1}{2}$ per cent. Conversion Loan dividend payments, due on October 1st, will require nearly £15 millions, and so the Treasury may have been accumulating cash in readiness for these payments. These dividend payments will bring about a substantial reduction of public deposits and increase in bankers' deposits next week. Any increase in bankers' deposits, however, may be neutralised by the expansion in the note circulation foreshadowed above.

Foreign exchange

The Foreign Exchanges.—Interest this week has centred upon the New York rate, which has appreciated from a level \$5 to \$4.96 $\frac{1}{2}$. The settlement of the American textiles strike may have prompted some repatriation of funds, but the main influence has been the steady if limited commercial buying of dollars, coupled with the absence of any sales. This buying, of course, is mainly seasonal. Liverpool has been fairly active, and some tobacco shipments have also been covered. City opinion expects it to last for some time, especially in view of the August improvement in the American trade returns. It is also suggested that the undervaluation of the dollar is beginning to tell. Three months' dollars remain at a slight discount as a result of the uncertainty regarding the future value of the dollar. The Paris exchange moved in sympathy with the dollar from Frs. 74 $\frac{1}{2}$ to Frs. 74 $\frac{1}{2}$, but apart from a few small sales of francs by the Control, there was practically no business. Forward francs are at a small premium, equivalent to about $\frac{3}{8}$ per cent. per annum. It has been suggested that this may lead to a slightly greater demand for French Treasury bills, which already yield a better return than British Treasuries. The rate for free marks is now Rm. 12.30. Further small sales of sondermarks to British importers have been made, but the Bank of England's special account at the Reichsbank remains at its limit of Rm. 5,000,000, so that would-be payers of sondermarks into the account are having to wait their turn. The main obstacle to further sales of sondermarks in London remains the general custom of invoicing shipments of German goods to Great Britain in sterling.

* * *

New York Money and Banking.—New York money rates remain unchanged, and the credit position remains as easy as ever. The week ended September 19th witnessed a further reduction of \$51 millions in brokers' loans to \$745 millions. Bankers' acceptances outstanding at the end of August were returned at \$520 millions, compared with \$515.6 millions at the end of July. This is the first monthly increase to be recorded since January. The R.F.C. reports that new loans and other commitments undertaken during July amount to \$124 millions, of which \$40 millions represented loans to banks. The August trade returns give exports at \$171 millions, against \$162 millions in July and \$131 millions in August, 1933. Imports were \$119 millions, against \$127 millions in July and \$134 millions in August, 1933. For the first eight months of 1934 exports were \$1,369 millions, against \$944 millions in 1933; and imports \$1,110 millions, against \$889 millions. Gold exports for August were \$14.6 millions, and imports \$51.8 millions. On Tuesday Mr Morgenthau announced that of the \$1,250 millions of called Fourth Liberty bonds only \$248 millions had been converted into the new $3\frac{1}{2}$ per cent. 10-12-year bonds, and \$596 millions into the new $2\frac{1}{2}$ per cent. 4-year notes. Thus \$406 millions of bonds remain unconverted. Nevertheless, Mr Morgenthau considers this result to be very satisfactory. But the conversion of long-term debt into short-term debt is not usually accounted sound financing.

THE STOCK EXCHANGE

WOOLWORTH AND MARKS AND SPENCER

THE development of the fixed-price store system has been one of the most significant of post-war economic phenomena. Though the first effective retail store chain dates from about 1865, its offspring, the fixed-price general store, is of comparatively recent date. In Great Britain its rise can be directly traced to the inception of the Woolworth chain in 1909. The latter's remarkable success has encouraged the growth of many similar organisations, which in every commercial country are changing the character of the retail trade structure and exercising an increasing influence over industry.

The fixed-price store, essentially, is the distributive complement of mass production in industry. Its development embodies the view that production and distribution are integral and inseparable parts of one process, through whose agency man's inventive genius is translated into effective consumer's demand. It is a cardinal point in the relationship between the fixed-price retailer and the manufacturer that however closely their respective policies may be co-ordinated there shall be no actual community of ownership or management. The economy lies in the reduced cost effected under both heads, by planning ahead, and by the creation of conditions under which large-scale contracts can be placed and continuous production maintained. Many of the specialised intermediary functions of the wholesaler and the agent are eliminated. The possibilities of standardisation and "Small-Profits-Quick>Returns" are exploited to the full—even where the process involves the giving of financial support by the retailer to his supply firms and the exertion of pressure to secure reorganised methods. Between the retailer and the manufacturer, however, there is a definite rubicon. Co-ordination is seldom or never allowed to merge into financial interlocking or control involving the creation of "tied houses."

The fixed-price stores, having thus been enabled to offer a standard of value to their customers over an increasingly wide field, which cannot be matched by most of the older distributive methods, have claimed a growing proportion of the retail market. In countries like Germany under the Nazi regime, where the authorities have been disposed to limit the operations of the fixed-price stores, in view of the hardship they have imposed on many small retailers, the fact that their operations have invariably tended to increase the quantum of retail trade has been treated with less than due consideration.

Both the leading exponents of the fixed-price chain store in Great Britain are comparatively old established, though their period of geometric expansion has been mainly confined to the last decade. Marks and Spencer was registered, as a company of "Penny Bazaar" proprietors, in 1903, though the present company became public only in 1926. F. W. Woolworth and Company was registered in 1909 as a private company with a share capital of £50,250, and became a public company as recently as 1931. Both

businesses have been built up largely out of their own profits, but the Woolworth organisation had admittedly reached a more advanced stage of geographical development than that of Marks and Spencer before the admission of the public to a share in its equity. This question of relative "maturity" is of importance in considering the recent trend of earnings and dividends, which is summarised in the table at the foot of this page. It will be seen that while the results of F. W. Woolworth still show a perceptible upward movement, the company appears definitely to have reached the end of its period of rapid growth. At the beginning of this year, it had as many as 529 branches in operation. It is thus adequately represented in all the leading centres of the country. Although some 43 new stores were opened in 1933 they were mostly located in relatively small towns. In future, therefore, the increase in turnover per new store may tend to fall off, though there may still be considerable possibilities for expansion by way of increased floor space in existing branches. At present, the company's profits are equivalent to approximately 2s. per head of the entire population of the country. The possibility of a departure from the company's price limit of 6d. per article has not infrequently been canvassed by shareholders. Such a decision, however, may be regarded as unlikely in the extreme. It would strike at the roots of the company's business and might well endanger the maintenance of its hold on its *clientèle*.

The Marks and Spencer business, however, is adolescent rather than mature. Between 1929 and 1933 profits have trebled, whereas those of F. W. Woolworth have increased by only 42 per cent. Even when the company's building programme for 1934-35 has been carried out, the number of stores in operation will be no more than 200, i.e. less than two-fifths of the Woolworth total. The company's estate department is continuously engaged in the search for new sites. *Prima facie*, there appears to be no necessary reason why the total Marks and Spencer stores should eventually be less than those of Woolworth. Further, the company's range of retail prices, 6d. to 5s., may offer a wider field for eventual development of "selling lines" than the 3d. to 6d. of Woolworth. In view of these differences, significance may attach to the fact that, despite the much higher price range of the Marks and Spencer stores, the net profit of the average store is approximately 40 per cent. less than that of the Woolworth store. The long-term speculative appeal of Marks and Spencer shares is based largely on the market's assumption, right or wrong, that there is no necessary reason why the company's profits, given a sufficiently long period, should not eventually overtake, and possibly surpass, those of Woolworth, which, with its narrower field, has been quicker off the mark.

Despite the popular impression to the contrary, the two chains of fixed-price stores are largely non-competitive. It is rare indeed to find competing lines in any branch. The

Note.—Marks and Spencer figures relate to twelve months to March 31st of following year.
† i.e. Proportion of each year's total profits, available for ordinary, retained in the business.

frequent geographical proximity of existing stores is either accidental or the expression of the well-founded view that the *clientèle* which has visited one may be disposed to visit the other. On the other hand, though the two chains are in many respects complementary, suggestions of eventual amalgamation, when unofficially mooted, have been invariably and convincingly denied. So long as the executives of the two groups maintain their present distinctive character and personality, such an occurrence appears most unlikely.

The market has shown no lack of enthusiasm in valuing the equity prospects of either company. The 5s. ordinary shares of F. W. Woolworth, which were offered for sale at £2 in June, 1931, and dipped under 70s. last year, are now quoted at 115s. The 10s. ordinary shares of Marks and Spencer, which three years ago were as low as 68s., are now standing at 236s. 3d. The yield on the Woolworth share, on an 80 per cent. dividend basis, is £3 9s. 9d. per cent., while the yield on earnings of 112.8 per cent. for 1933 is £4 18s. per cent. Marks and Spencer ordinary yield only £1 9s. 9d. per cent. on the 35 per cent. cash dividend which has been paid for the last three years and £3 9s. 3d. per cent. on last year's earnings of 81.8 per cent. A capital bonus has regularly been paid for the last six years, its rate being raised from 10 per cent. to 12½ per cent. this year. Though this series of bonuses cannot legitimately be taken into account in any calculation of the income yield of the shares, it gives them a certain attraction to supertax payers. The operation of the law of compound interest, however, steadily raises the amount which it is necessary to capitalise, year by year, from general reserve for this purpose. The 10 per cent. capital bonus of 1929 required only £60,000, while the 12½ per cent. capital bonus of 1934 required £120,788. The company's bonus policy, in fact, may be regarded as a characteristic and not inappropriate phenomenon of its period of "geometric" expansion, and its duration may be governed by the same consideration. The prices of the two companies' equity shares clearly reflect the distinction drawn by the market between the prospects of an ordinary share of high "industrial" status, whose earnings, over a period, may be fairly progressive, and a share which may still have some years of geometric expansion to come. Will the market's expectations, in this respect, be borne out?

Critics of the rapidity of the rise in quotations, particularly of the shares of Marks and Spencer, in the last few months, have tended to stress two possibilities. The first is the potential growth of new competition. As yet, no potential competitor approaches even remotely the size and scope of either of the two great fixed-priced store companies, but, in any trade, spectacular prosperity affords a standing invitation to competitive enterprise. It was announced, a month ago, that the Great Universal Stores, which had previously confined itself to mail-order business, had decided to establish a chain of retail stores in the industrial areas of the country at an eventual rate of about twelve stores each year. The older fixed-price store companies may, however, enjoy a substantial degree of protection against the activities of new entrants, less on account of the long start they have obtained in the race, than by virtue of the fact that, though their profits may appear large in proportion to their issued capital, their margin per unit of turnover is relatively small. The existing small retailers, in fact, may have more to fear, in this regard, than the well-established chain stores.

A second, and possibly more valid, criticism is concerned with the extent to which the upward trend of chain-store profits in the last few years has been influenced by the abnormal decline in commodity prices as a whole. This factor has not only reduced replacement costs, in a trade which depends on ultra-rapid turnover of stock, but—even more important—has expanded the field of merchandise to which its operations are relevant. If a tendency towards higher price levels were established over the next few years, ingenuity in reducing costs and devising new lines might not necessarily be sufficient to offset its results. Broadly, such an adverse influence might be expected to be most potent in the lower price ranges, while its effects, in the higher ranges, might be sensibly mitigated by the improved purchasing power of customers which would presumably accompany a rise in the general price level.

INVESTMENT NOTES

"Closed on Saturdays."—"The Stock Exchange will be closed on Saturdays until further notice." This laconic announcement by the Assistant Secretary of the London Stock Exchange marks the temporary abandonment of a post-war experiment which, though laudable in intention, was unfortunate in the moment of its inception, and fell through lack of support from those for whose benefit it was primarily designed. It may be taken for granted that considerations of personal convenience influenced only a negligible proportion of the members who decisively voiced their preference for Saturday closing in last week's "petitions." Members have the best of reasons for refusing to quarrel with their bread and butter. If the clients of the Stock Exchange had evinced an unmistakable disposition to take advantage of the facilities of Saturday markets, their retention would never have been in doubt. The volume of Saturday business, however, has been suggestively and sometimes dangerously small, and certain large institutional investors have even gone to the length of insisting that orders placed after the close of dealings on Fridays should not be executed until the following week. A somewhat more helpful attitude on the part of certain ancillary City institutions might possibly have enabled the experiment to be carried out under slightly more favourable auspices. Broadly, however, it may be concluded that seventeen years of Saturday-less markets, before September, 1931, established a settled habit among investors, and the reopening policy has encountered the fate of all efforts to "put back the clock."

* * *

I.F.S. Land Bonds.—We have received from the Secretary to the High Commissioner for the Irish Free State a further letter covering a statement made to the Press under the authority of the Minister for Finance. This statement summarises the contentions made in the Secretary's letter to the *Economist* of September 8th, given *in extenso* on page 492 of our issue of September 15. It shows that the Land Acts render it legally impossible to include the £10 millions of Land bonds, which have not yet been allocated to individuals, in the forthcoming drawing, and confirms the fact that (for reasons described in the original letter) the amount of the drawing has been reduced from £300,000 to £255,000. Pressure has been exerted recently in some quarters for the withdrawal of a quotation from the I.F.S. 4½ per cent. Land bonds in the London Stock Exchange List. After the official explanation, these efforts will presumably be abandoned. Once the drawing has taken place, the price of the bonds may gradually approach somewhat nearer to that of their Northern Irish counterparts.

* * *

Proprietary Medicine Finance.—This week's public offer of 4,000,000 5s. ordinary shares in Eno Proprietaries, at 11s., follows within three months upon an issue by Griffiths Hughes Proprietaries, controlling the manufacture and sale of "Kruschen Salts" and other branded products. Both Montagu and Capulet, the representatives of hot and cold water, have now made their appeal to the highest tribunal. The amounts involved have been substantial. Griffiths Hughes Proprietaries has a total share capital of £2,500,000, worth, at present market valuations, approximately £4,750,000. Eno Proprietaries has a total capital of £2,000,000, worth £3,250,000 on the basis of issue prices. Both companies have taken over old-established businesses. Both are characteristic of the Age of Advertising, and their shares must be judged by somewhat different investment canons from those of companies engaged in most manufacturing industries. Some of these canons were discussed in the *Economist* of August 4th last, page 233. The market valuation of a patent medicine share includes, quite legitimately, a substantial allowance for "goodwill" and quasi-monopoly. Though there is no inevitable secrecy in patent

medicine manufacture, investors in established companies buy "names" protected by heavy past and present expenditure on advertising. "Fixed assets" may be strikingly small. The net total shown in the "Kruschen" prospectus was but £410,140, and in the "Eno" prospectus £624,770—exclusive of goodwill in both cases. A newly-established proprietary article share is, therefore, among the most speculative of all possible propositions. Even a well-established share should be priced to give a yield appreciably above the average, if the product is liable to be affected by changes of public taste. Both the companies under present discussion, happily, exist to provide physiological "satisfactions" which large numbers of people regard as desirable at all times. The price of earnings, however, is eternal vigilance. It is the more regrettable, therefore, that neither prospectus gave any particulars of the amounts spent on advertising during the periods for which profit figures were provided. The latter were themselves eloquent of the liability of patent medicine earnings to wide fluctuation.

EARNINGS, ACCORDING TO PROSPECTUS FIGURES

Financial Year	Griffiths Hughes Prop. Prospectus*	Eno Prop. Prospectus	Five Years' Average = 100	
			Griffiths Hughes Prop. Prospectus	Eno Prop. Prospectus
1929	190,739	307,566	50	104
1930	274,055	291,610	72	99
1931	526,172	326,163	138	111
1932	469,964	301,801	123	103
1933	451,370	242,866	118	83

* Twelve months to March 31st of following year in each case.

Next to total turnover, advertising expenditure is the most important item in the determination of annual profits, and it is not suggested that this item is constant. A company which decided to rest on its oars for a year or two might show a surprising ostensible increase in its net profits, but such a policy might well be literally equivalent to the payment of dividends out of "capital." No critic would suggest for a moment that the able managers of both Griffiths Hughes and Eno are not the best judges of the amount of expenditure, under all headings, calculated to provide a maximum return. It would, however, be distinctly helpful if future "proprietary" prospectuses and annual reports were to disclose detailed figures bearing on this all-important question.

* * *

Tea Scheme For Russia.—In the last few days there have been signs of a reversal of the downward tendency in tea prices and share values, to whose implications we drew attention in an article on page 495 of our issue of September 15th last. Although the welcome phenomenon may have been influenced only indirectly by the publication of details of a scheme drawn up by the International Committee for increasing the consumption of black tea in the U.S.S.R., the latter is regarded as an event of much importance by the industry. It is proposed to form a private company (under some such style as Anglo-Russian Tea Trading Company) to buy tea for cash and re-sell it to Russia on twelve months' credit. It is suggested that the company should have a nominal capital of £125,000, in 2,500,000 shares of 1s., to be issued at 20s., of which 1s. per share would be paid on allotment, and the premium of 19s. would be callable as and when required. The company is to be organised and controlled entirely within the industry. India, Ceylon and the Dutch East Indies are to form holding companies, which will participate in the Anglo-Russian Company in proportion to the standard exports, under the restriction plan, of the companies they represent. The company will buy tea, in auction, at the four main marketing centres—London, Amsterdam, Calcutta and Colombo. Its re-sales to Russian buyers will be designed to realise merely a nominal profit, for the price charged will cover simply costs plus 1 per cent., or some other small figure fixed by arrangement. The Russian buyers, further, will pay interest, at an agreed percentage, on their twelve months' sterling drafts. If the latter are not met on their due dates, the Governments of the three producing areas will levy cesses to the amount of the

FUNDS EXCEED £23,500,000

losses. Some of these details have a tentative appearance, and, if the industry accepts the scheme, there is room, possibly, for their modification. The method of selling on twelve months' credit is not new, but experience since the inception of the export regulation scheme has shown that the question is too big to be tackled by individual companies. By pooling the "risk," it is calculated that an increase of Russia's consumption by 40 million pounds of tea per annum, on an average basis of 1s. 3d. per pound, would involve producers in a liability of no more than 3d. per pound of their standard exports, even if Russia were to default on the entire amount. On the other hand, the possibility of adding £2,500,000 to the total value of the industry's annual sales is obviously attractive.

* * *

Rhodesian Copper Outlook.—The recent course of the copper share market has suggested in unmistakable fashion that the market's anticipations regarding the principal Rhodesian mines, whose accounts are expected during coming weeks, are considerably less roseate than original estimates. It is a tribute to their satisfactory mining costs that the shares of these companies have been recessive rather than pronouncedly weaker, but the feeble course of the metal market under the unabating sales of American electro stocks and the failure of consumers' demand to show adequate recovery powers are undoubtedly disappointing hopes of immediate large profits from the new producers. The first factor—a direct consequence of an artificial "code" price of 9 cents—is now less serious, but although the market is looking "sold out," revival in trade demand is yet to seek, owing largely to import restrictions to Germany. In some market circles it is pointed out that producers' sales policy has been unchecked despite the low price, and that tonnage is being sold for a considerable distance ahead with apparent indifference to the further deterioration of quotations. Such statements lend interest to the persistent reports that a meeting of principal producers will take place early next month, when the feasibility of some plan of action will be explored. The prospects for such a project are discussed in a "Note" on page 581 of this issue. The output figures published by the Rhodesia Chamber of Mines reveal that during the year to June last there was no regular trend of growth. It would be rash to interpolate from the tonnages, but the strongly marked quarterly variation may possibly be interpreted as a sign of an informal common policy among Rhodesian producers. As these companies are believed to sell their current mine production forward, implications of a reckless sales policy may be discounted. It is, perhaps, a more likely assumption that the achievement of record low costs by a satisfactory scale of mining gives the new Rhodesian producers greater assurance of profit than a restrictive policy in which higher cost producers would inevitably share the benefit. For these reasons, and with the recollections of the failure of an earlier scheme in the autumn of 1932 fresh in their minds, it would seem that

a change in their heart might be difficult to secure. Undoubtedly the lesson of the tin restriction scheme would ensure caution if restriction discussions were to eventuate. For the moment, the share market is merely disposed to temporise, although current quotations of 85s. and 23s. 6d. for Rhokana and Roan Antelope show appreciable decline from the levels of June. The market is now canvassing maiden dividend possibilities, but the speculative investor should have little to lose by awaiting the full reports in order to appreciate the position under a regime, since the end of their financial year, of lower copper prices.

* * *

Actuaries' Investment Index.—The share markets this week have suggested that speculative investors have reached the conclusion, assisted partly by works, but largely, as yet, by faith, that further earnings expansion is indicated for leading industrial shares. The calculation of the Actuaries' industrial share index at 72.7 on Tuesday last compares with 71.2 a month ago and 67.6 a year ago (December 31, 1928 = 100), the corresponding yield figures being 3.65, 3.68 and 3.61 per cent. respectively. Meanwhile, the gilt-edged market continues its search for Keynesian levels, on the assumption that further economic recovery is not destined to cause a perceptible upswing in long-term interest rates. Comparative movements of important groups are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			(Yields %)		
	Year ago (Sept. 26, 1933)	Month ago (Aug. 28, 1934)	Present (Sept. 25, 1934)	Year ago (Sept. 26, 1933)	Month ago (Aug. 28, 1934)	Present (Sept. 25, 1934)
Fixed Interest						
British Government (2)	123.5	130.2	132.2	3.49	3.31	3.26
Miscell. indus. deb. (12)	117.6	122.1	122.7	4.54	4.12	4.10
Do. Preference (42)	109.0	115.1	117.1	4.61	4.42	4.35
Ordinary						
Building materials (4)	66.8	84.5	84.1	3.79	4.12	4.24
Coal (6)	92.8	88.1	89.2	2.69	4.06	4.17
Iron and steel (6)	41.6	51.2	52.2	2.13	1.25	1.26
Oil (5)	67.4	62.6	62.6	3.47	4.69	4.70
Home rails (4)	79.9	77.6	78.3	1.39	1.54	1.49
Shipping (3)	22.8	15.0	17.3	0.82	...	...
Miscellaneous (50)	58.0	62.5	64.8	3.55	3.90	3.82

The gradual progress of industrial shares towards the Spring "highs" is fairly spread among the main groups, although market interest is selective, owing to speculative caprice. Shipping shares, whose citation in our selection from the Actuaries' Index is something of a *curiosum*, have made sympathetic response to this week's event at Clydebank and to the slight improvement in international trade prospects.

COMPANY NOTES

Textile Machinery Companies.—The profit record of the textile machinery manufacturers during the post-war period corresponds fairly closely with that of the textile finishers. The latter, as a relatively well organised group in, but not of, the textile trade proper, occupy a position similar in many ways to that of the machinery makers. Both the machinery makers and the finishers were able, for a number of years, to avoid the worst of the depression into which the textile trade proper was declining. But both were ultimately overtaken by the same troubles. As the machinery makers supply capital equipment, the collapse in their profits was the more rapid. After two relatively good years in 1928 and 1929, the majority of concerns suffered a sharp fall in profits. As a number of companies, however, had previously been making only meagre profits, and were somewhat weakly financed by bank loans or short-term notes, the deterioration in business brought a temptation to cut prices, which was increased by the competition of second-hand machinery. As the total number of Lancashire's spindles had been falling steadily since 1927, the excess supply had to meet a sub-normal demand. Until the depression opened, a very substantial export business went some

way towards making good the decline in home custom. At the last meeting of Platt Brothers, Sir William Preston recorded that against only £5,000,000 spent by British textile manufacturers on new machinery since the war, foreign countries had spent some £95 millions. Our export of textile machinery for both 1928 and 1929 was valued at over £11.6 millions. In 1930 this fell to £8.6 millions, and for 1931, 1932 and 1933 it was £5.3 millions, £5.5 millions and £5.2 millions respectively. Under pressure of these serious difficulties the machinery manufacturers attempted to form a comprehensive combine by the establishment, in September, 1931, of Textile Machinery Makers, Ltd. The combine, however, failed to secure the adherence of several important units, and serious price cutting continued. It

* Tax free.

was only in the autumn of 1933 that an agreement was finally reached to put an end to the trouble. Since then there have been indications of steady improvement. Employment reports for the trade have been better, and exports are running ahead of 1933, with £4,388,520 for the first eight months, against £3,392,233. Company chairmen, too, have been expressing better hopes. The considerable revival in orders for linen and jute machinery which accompanied incipient revival in jute and linen textiles suggests that revival in Lancashire should bring similar improvement. There would also seem to be room for further revival in exports. Beyond these general hopes of normal participation in recovery there is the possibility that Lancashire may decide that re-equipment is the only means to survival. The accompanying table indicates that there is, in any case, room for substantial recovery.

* * *

United Steel Report.—In a Company Note of September 8th, page 454, we set out the preliminary figures of this company, which significantly exceeded even the gratifying estimate made in the prospectus issued in connection with a "deal" in 4½ million shares last May. The full report for the year to June 30th, now available, shows that recovery has approached the spectacular. Although the company's output of steel increased only by 50 per cent., from 905,000 tons to 1,351,500 tons, the economies of a higher rate of operation in relation to productive capacity are reflected in an increase in the balance of trading profits of 136 per cent.—from £506,034 to £1,191,665. * Including gross dividends on shares in subsidiary companies (less reserve for losses of subsidiaries) before providing for depreciation; also including gross income from associated companies and subsidiary investments.

The company, very wisely, has applied a considerable proportion of the year's profits to the strengthening of the internal position. The central reserve for depreciation has been brought up to £900,000, some £150,000 has been placed to taxation reserve, and the "carry-forward" balance has been increased by £215,657. The position will be further improved by the consolidation of the loan capital of the company and its subsidiaries, which the directors propose to carry out at an early date. The amalgamation of the company's two subsidiaries in the North Lincolnshire iron and steel industry, under the name of Appleby-Frodingham Steel Company, will make for economies in management. The £1 shares, which were offered four months ago at 21s. 6d. have now risen to 22s. 6d., and it may be presumed that the issuing group will in due course exercise its option to purchase the remaining 2,077,000 shares at 23s. Although further improvement at the rate of the last two years can scarcely be expected, the possibility of higher dividends, in the near future, is likely to enhance the speculative appeal of the shares, which yield £4 17s. 9d. per cent. on last year's dividend and £8 10s. 9d. per cent. on earnings.

Murex.—After a decade of steady expansion, checked somewhat in 1931, the trading results of this welding and alloy company have shown rapid growth during the year to June last, which is indicative of the successful exploitation of the company's processes during a period of active construction. Total profits have increased by 100 per cent. to £156,812, but the reservation of £15,000 for obsolescence and £36,000 for staff pensions leaves the ordinary earnings little changed at 38.9 per cent. The table summarises the results of the three latest years:—

	Years to June 30		
	1932	1933	1934
Total profits	76,332	78,721	156,812

Carried forward	34,204	44,150	50,666

† Including £15,000 to obsolescence reserve. ‡ Earned percentage on new capital 29.2 per cent. 76,966 new ordinary shares ranked for dividend from October 1, 1933, only.

In view of the expansion of the company's existing market, shareholders are likely to give a warm reception to the proposal to issue 90,000 new 10s. ordinary shares at

£4 per share, necessitated by new developments which are under contemplation. Additional zest will be given by the subsequent bonus issue of 540,000 shares, which is conditional upon subscription of the cash issue, since the general reserve fund at June 30th amounted to only £145,680. Although this operation will be in the nature of a return of premium, the wider marketability of the shares, after consolidation to £1 each, will be advantageous. The balance sheet, which is commendably accompanied by a consolidated statement, indicates a strong liquid position, despite considerable expansion of "active" items. The need for new financing, therefore, may be taken to imply that a considerable further increase in fixed assets is in prospect. The 10s. shares are quoted at 6½ ex dividend, and, after deduction of "rights," valued at 10s., the yield is calculated at nearly £3 1s. per cent.

Austin Motor Report.—The report for the year to July 31st last confirms the impression given by the bonus announcement (discussed in our last week's issue) that in all respects 1933-34 has been a banner year in the company's history. The numbers of vehicles and chassis sold showed an increase of 24 per cent. in the home market and of 16 per cent. in the export market, and the gross trading profit was 27 per cent. higher at £1,505,212. The eight-year "profit record" which accompanies the balance sheet is a tribute to the management. On the basis 1927=100, gross trading profits for subsequent years have been as follows:—90 (15 months), 135, 89 (7 months), 143, 112, 123, 157. The total amount put to maintenance and depreciation for 1933-34 is £626,932, which is equivalent to 41½ per cent. of the year's trading profit and more than one-fifth of the balance-sheet valuation of buildings, plant, etc. Over the last eight years, indeed, the company has devoted more than one-third of its gross profits to maintenance and depreciation. The total ordinary dividend of 100 per cent. is four times covered by last year's earnings:—

	Years to July 31		
	1932	1933	1934

Total carried forward.....	319,220	357,497	362,933

* Including discounts, dividends and interest received. † Interest £80,000 and sinking fund £55,000.

Out of the £450,000 which is to be capitalised by way of a bonus of three new "A" ordinary shares for each existing ordinary share, announced last week, as much as £355,436 has been retained out of last year's earnings alone. The balance sheet is strong, as one would expect. Liquid assets (including stock-in-trade but excluding tools) total £2,690,594, against accrued charges and trade creditors of £762,884. The capital proposals will be considered at an extraordinary general meeting on October 24th. The company has clearly obtained an increasing share of the domestic car market, and the decision to broaden the ordinary capital basis does not involve or infer any departure from the conservative financial policy which has stood it in such good stead in recent years. The shares are now quoted at 7½, cum bonus.

Harrisons and Crosfield.—The report of Harrisons and Crosfield for the year to June 30th last is a statistical discourse on the text of Eastern recovery. Working profit has risen by 22 per cent. from £214,339 to £261,504. This figure, the highest since 1930, is equivalent to a rise of 44 per cent. from the low point touched in 1932. The deferred ordinary dividend is doubled at 20 per cent., out of earnings of approximately 21 per cent. The market, rightly or wrongly, has interpreted this division up to the hilt as a symptom of directorial confidence in the near future:—

	Years to June 30		
	1932	1933	1934
Profit on working*	182,032	214,339	261,504
Directors' remuneration	15,000	15,000	†
Preference dividend	37,800	37,800	37,800
Preferred ordinary dividend	100,000	100,000	100,000
Total deferred ordinary dividend	19,333	38,666	77,333
Total dividend on management shares	1,250	2,500	41,166
Deferred { Earned (%)	6.5	13.5	20.9
Ordinary { Paid (%)	5	10	20
Total carried forward	108,978	129,351	134,556

* After providing for bad and doubtful debts, depreciation and income tax.

† Directors drew £12,500, but refunded this amount, paid on account, pending alteration of No. 92 of company's articles.

The increased tempo of the company's business is reflected in a decline of surplus liquid assets of approximately £165,000. For the first time for some years, the market value of the company's investments in rubber, tea and other produce companies shows an excess of market value over book value, so that the special reserve of £350,000, previously set aside, remains intact. Subject to the absence of a further fall in tea prices, the outlook for the company's activities appears more promising than at any time in the last four years. The £1 deferred ordinary units, at 6½, yield only £2 17s. 9d. per cent. on a 20 per cent. cash dividend. Holders, however, are entitled to subscribe at par for new deferred shares to the extent of half the dividend declared in excess of 10 per cent., less tax, which is at 4s. in the £ in the case of this company. Thus, in the present instance, holders of £100 of deferred stock may obtain, at 20s., four new £1 units of stock with a market value of £27 15s.

Consolidated Main Reef.—Impressive figures are given in the report of this company to June 30th last, writes our mining correspondent. Thanks to alterations and additions to the treatment plant, the tonnage crushed—1,042,000 tons—exceeded the previous year's total by nearly 150,000 tons. This factor was mainly responsible for a reduction of 11d. per ton in costs. As in other cases, the enhancement in the price of gold more than offset a reduction—about 1½ dwts.—in average yield. Last year's operating profit of £601,300 compares with £410,380 in 1932-33 and £180,640 in 1931-32. Dividends, however, have risen only to 17½ per cent., against 13½ per cent. and 12½ per cent. respectively, owing to the incidence of taxation and capital expenditure incurred for additions to the plant. The balance carried forward is £181,420, against £149,840 brought in. The most striking feature of the report is the change revealed in the ore reserve position. Last year's development footage totalled 80,090—an increase of 24,120 feet compared with the total for the preceding year. On the basis of 1932 conditions, the available ore reserves show a small decrease both in quantity and value. After including material payable under present conditions, however, the tonnage (excluding shaft and safety pillars) amounts to 5,787,090 tons, averaging 5.1 dwts., and representing, after allowance for sorting, about five years' supply for the mill. This is a somewhat exceptional position for a Rand company. The portion of farm Klipspruit No. 8 on the dip (owned by the company) having been "proclaimed," the company has been awarded 143 claims and has applied for a lease of the remaining area, equivalent to 521 claims. If this ground is secured—as appears probable—the question of "life" will not assume importance for some considerable time.

Given capital expenditure on a reduced scale, the outlook promises some increase in future dividends. On last year's rate the yield is 6 per cent. gross—a moderate return which is accepted owing to the soundness of the position indicated above.

Nourse Mines.—The report of the Nourse mines, from June 30th last, reflects the results of certain minor interruptions to work, the tonnage crushed having actually fallen slightly below that of the preceding period. The yield averaged 4.9 dwts., against 5.6 dwts., but owing to the rise in the price of gold the revenue was 32s. 6d. per ton, as compared with 28s. 8d., and the gross profit £370,050, against £228,910. Taxation absorbed an increased sum, and a new debit item appeared by way of £16,790 for the Witwatersrand Gold Mines Employees Provident Fund. Dividends totalling 18½ per cent. (against 13½ per cent.) left a somewhat increased balance of £110,290 to go forward. The underground position required a reduction in the development footage, but the ore reserves at the standard price of gold, nevertheless, showed a small rise, their total, including material payable under present conditions, being 3,580,800 tons, averaging 4.9 dwts. The consulting engineer's report suggests the possibility of some falling off in profits, owing to the necessity of conserving ore reserves pending the opening up of the intact south-eastern area of the mine. Shareholders, accordingly, may be prepared for a temporary reduction in the rate of dividend.

Other Company Results.—Our summary table of profit and loss accounts, which is to be found on page 614 of this issue, includes results of 28 companies not discussed in preceding notes. These show a very satisfactory series of "pluses," indicative of increasing spread of rising earnings over a wide range of industries during the first six months of this year. In the miscellaneous list, the slight increase in Ardath Tobacco profits must be regarded as satisfactory in view of the possible effects of the coupon truce upon the company's brands. Net profits amount to £460,206, and the dividend is maintained at 12 per cent., tax free. Good recoveries in this section include Sir J. L. Hulett, the South African sugar growers. Assisted by larger crops, a higher average price and freedom from exchange losses, net profits have advanced from £34,310 to £76,440, and the dividend from 2½ to 6 per cent. Linotype and Machinery profits show a rapid increase from £20,398 to £106,004, and further progress has been made to reduce long-standing preference arrears. London Express Newspaper net earnings of £148,001, in view of the newspaper armistice, are adequate for the payment of 10 per cent. on the ordinary shares. Residential property earnings are showing slight recovery, to judge from Queen Anne Mansions and Whitehall Court results. Clothing company earnings are benefiting from an improvement in replacement demand. Prices, Tailors net profits have risen sharply from £63,587 to £142,672, and the dividend is doubled at 30 per cent. J. Hepworth and Son also show a slight improvement. Further rubber reports continue favourable. The full report of Malayalam confirms the excellent impression of the preliminary figures noted here last week, and a reserve allocation of £35,000 has been made. The week's dividend declarations call for little comment. Marconi International Marine interim is unchanged at 2½ per cent., and Rolls Royce disappointed some optimistic market quarters by maintaining a 5 per cent. payment. Electric and Musical Industries is paying its first dividend of 10 per cent. on the ordinary shares. British Oxygen interim dividend on the ordinary shares is raised from 2½ per cent. to 4 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-Siam Corporation, Bajoe Kidool Rubber and Produce, Chungloon Rubber Estate (1932), Gold Exploration and Finance of Australia, Clarendon Property, Associated British Picture Corporation, Anglo-Continental Guano Works, Prices, Tailors, and Kirklees. Presiding at the Anglo-Siam Corporation meeting, Mr William Greaves referred to the satisfactory financial position of Siam, and to signs of more settled conditions in India. At the meeting of Bajoe Kidool Rubber, the chairman declared that the outlook for coffee revenue which had shown marked contraction in the past year, pointed to a steady future price. The chairman of Chungloon Rubber stated that, on the basis of current prices, allowing for a possible restriction of output by 30 per cent., the company would be able to show a further improvement in the current year. At the meeting of Gold Exploration and Finance of Australia, Mr J. A. Agnew described the distribution of the company's interests in Kalgoorlie and other areas of Western Australia, Bendigo, Victoria, etc. At the Clarendon Property meeting, the chairman declared that, although the company had experienced normal changes of tenancies, the number of voids was less than at the time when the purchase was completed. Mr John Maxwell, presiding at the meeting of Associated British Picture Corporation, described the considerable addition to the volume of film production at Elstree made by the output of the Welwyn Studios of British Instructional films. At the Prices, Tailors, meeting, Mr H. P. Price declared that the company had only touched the fringe of its potential *clientèle*. The chairman of Kirklees stated that the company was now deriving full benefit in the increase in its production capacity, and would rely for its profits on ability to achieve a low cost of manufacture and not on higher selling prices.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

TICKET ACCOUNT
October 9 October 11

ENTERPRISING market meteorologists who profess to discern signs of steadier trade winds ensured an auspicious start for the new account. The course of gilt-edged has also continued on the windward tack, so that neither speculative nor institutional investors have had cause for dissatisfaction with the week's movements, despite the activity of the profit-takers in both markets. With business in full swing after the holidays, the industrial market in particular has reflected a more confident interpretation of the trade outlook, in place of recent questionings, and although speculative interest has flitted round the leaders, considerable business of an investment character has been transacted.

The gilt-edged market opened with assurance, following the unequivocal success of the Plymouth issue, but the sustained rise of earlier days tempted a certain number of profit-takers, whose operations persisted to Wednesday, after some recovery in tone at Tuesday's close. Quotations, in fact, were little affected on balance, and War Loan reached a new "high" at 105½ on Tuesday. India Loans were firm and steady, and although business in other Dominion issues tended to decline, interest in Australian loans was fairly sustained. Some home corporation three per cent. stocks were bought following the one point premium for the new Plymouth scrip.

Foreign bonds, which opened in active fashion, failed to maintain their recent firm tone. Brazilian issues were realised on Monday, and a partial recovery on Tuesday was not sustained. Support for Chilean bonds sagged owing to revised prospects of a debt settlement, but Argentine loans were consistently firm. Among Eastern issues, buyers were attracted to Japanese bonds on the Chinese Eastern Railway settlement, although they were less assured about its possible consequences on later days. Chinese loans were quietly firm. German bonds rallied a little in consequence

of the new exchange arrangements, but Roumanian issues provided the main feature in the European market on the debt agreement.

The home rail market remained a prey to strike fears, and an improving tendency early in the week was checked by news of difficulties on Tuesday afternoon. Favourable traffics, however, infused fresh heart into the market, and quotations made further advance on Thursday, on renewed hopes of a settlement in South Wales.

Idle conditions prevailed in the foreign rail market. Argentine issues failed to reflect either poor traffics or an enforced wages settlement. Brazilian issues were firm, and Nitrate Rails received some speculative attention. Canadian Pacific made further advance.

In the industrial markets a confident start was somewhat checked by the cashing of speculative profits, but a solid core of selective investment buying was at all times in evidence. The motor section was particularly active, under the lead of Ford, whose rapid advance was checked by heavy sales on Tuesday and Wednesday. Austin were active but recessionary, and among commercial motors, Leyland displayed strength. Aviation issues were realised after earlier firmness. "Heavy" industrial issues attracted attention, although price movements were only fractional. Electric supply shares were in steady investment demand, and equipment shares in several cases were higher. Business in textile issues remained limited, and if rayon shares were more active, they had no regular trend. In the Stores group, Woolworth (whose prospects are discussed in a leading article on page 591) were prominent on dividend hopes. Apart from a tentative advance in Guinness, brewery shares were not exciting, but interest in tobacco shares prompted an all-round advance led by Imperial Tobacco. Shipping issues derived support from the launching of the new Cunarder. The miscellaneous group was particularly influenced by mid-week profit-taking, but good business was transacted in leading favourites, while active "junior" leaders, such as British Oxygen, Murex (whose results are set out in a Note on page 596) and the cement group made further progress early in the week. Turner and Newall continued strong, and Dunlop were in request on interim dividend hopes.

Business in the oil market was more active than in recent weeks, and quotations showed a favourable, though limited, response. Turnover in the rubber market followed a declining course in sympathy with Mincing Lane, but prices were little affected in the absence of selling. Tea shares maintained a promising opening, under the influence of the Russian scheme outlined on page 593, and activity in low-priced Indian issues spread to Ceylon shares as the week progressed.

In the mining market, "Kaffirs" were maintained at levels which promised little to the hardy speculator, the investment character of the leading issues having been fully exploited at present prices. Professional interest found most opportunity in the West African market, which saw active trading in the more speculative new ventures. Australian gold shares were quiet and irregular. Tin share bargains were sought by professional operators following the rise in the metal, and suggestions of a copper conference (which are reviewed in a Note on page 593) were held to justify a mild rally in Rhodesian shares.

FOREIGN STOCK EXCHANGES

NEW YORK

THE settlement of the textile strike, and General Johnson's resignation from N.R.A., have had a marked effect on Wall Street. The elusive autumnal trade recovery may once again be only just round the corner. The steel mill activity index has taken a turn for the better, and although power output last week was fractionally below the figure for the corresponding week of 1933, improvement is looked for with the reopening of the textile mills. While conservative opinion continued to stress the fact that labour problems had been shelved and not resolved, market sentiment as a whole showed a disposition towards cautious hopefulness for the first time for some weeks. The share turnover rose from approximately 500,000 on Monday to over 800,000 on Tuesday and Wednesday, and prices showed measurable gains. Retail and "merchandising" shares were particularly firm, the August returns being encouraging. The bond market was featureless. Selling of Government issues ceased, but foreign bonds received a setback early in the week. The most speculative domestic industrial issues, however, were in fair demand, on the view that they would take the first impact of any autumnal recovery which might be experienced. The market is waiting, without visible excitement, to learn the effect of the regulations under which business will be done, by permission of the Securities Exchange Commission. At present, the revival in activity has fallen far short of the point at which "manipulation" finds a *raison d'être*.

* Two-hour Session.

PARIS

After a cheerful start, market sentiment became uncertain and, at times, heavy. On Tuesday, in particular, Rentes were easier, and offers of bank shares disclosed a paucity of professional support. The weakness of Brussels had an unfavourable influence on Paris. In the middle of the week the market was a little steadier, but dealings lacked vigour and price changes were slight. Industrial shares were in intermittent demand, but the well-advertised decisions of the gold *bloc* countries to maintain the value of their currencies have always tended to diminish the demand for equity shares in general.

were, on the whole, firm. The shares of Tietz department stores reached a new high level for the year. Farbenindustrie were lower, however, and most commercial bank shares reacted. The present week opened with a slightly lower level of share values, which was again in evidence on Tuesday. Some electrical issues, however, were better. Reichsbank shares dropped $1\frac{1}{2}$ points on the announcement of the suspension of the interim dividend. The shares subsequently suffered a sharp drop, and closed on Tuesday 143 $\frac{1}{2}$. The home bond market was firm. Among foreign securities Mexicans were strong. Conditions were firmer generally on Wednesday.

AMSTERDAM

The market opened dull, with a tendency to improvement in mid-week, though the volume of dealings remained restricted. The most significant feature was the revival in buying of tea shares, encouraged partly by hopes of a tightening of the restriction screw next year, and partly by the publication of the industry's plan for financing tea sales to Russia. Rubber shares, in contrast, opened better but failed to hold their ground. Industrials were irregular, the tendency to buy equities as a currency hedge being less in evidence. Philips Lamps improved on the publication of results for the sixteen months to April 30th, showing an operating profit of fl. 9,700,453, against fl. 7,312,594 in the preceding year. In the interim, some 25 per cent. of the face value of the share capital has been refunded. The directors ascribe the better results to continued rationalisation, but stress the fact that tariffs, quotas and other trade restrictions have necessitated the migration of an increasing share of the company's productive activities to foreign countries.

CANADA

For most of September the Canadian stock markets have been in a sluggish condition, reflecting the underlying weakness of New York. There has been no sharp break in prices, but the trend has been downward, with a small volume of trading. The boom in mining shares, however, has kept the Toronto Exchange much busier. There is evidence that a growing number of American citizens are conducting their stock market operations in Toronto. Distillery shares are still a leading speculative counter, but have recently been weaker. Power and construction stocks have similarly declined. Despite the improvement in grain prices, there is still little enthusiasm for the shares of companies with Western commitments. Though the mining market has been active, a break in one of the leading gold stocks, Teck-Hughes, affected the whole list in the middle of the month. The bond market has been firm but dull, with some shifting by investors from Government into corporation bonds to obtain a higher yield.

CAPITAL ISSUES

APPEALS for new capital are now showing a seasonal expansion after holiday quietude, and this catholicity of week's offers is well calculated to appeal both to the conservative investor and to the more speculatively inclined. The issue of a 3½ per cent. stock at par by the *City of Stoke-on-Trent* gave the market an opportunity, infrequent in these days, of acquiring a 21 years' minimum stock on distinctly favourable terms, and a good response was assured some days in advance. The *Eno Proprietaries* offer for sale is discussed in a Note on page 592. The mixed issue by *Herbert Green and Company, Limited*, is in respect of a patent exploitation which would appear to possess speculative possibilities. The Duo-Sol oil-refining process has been developed by large American interests, but it appears that the company's licence for its exploitation in this country is not exclusive, and prospects are closely dependent upon the directors' anticipations of the favourable prices to be obtained from existing oil distributors. The week's "introductions" include a placing of 4 per cent. debenture stock by *Nelson Financial Trust* at 99½ per cent., and particulars of the reorganised capital of *Joseph Terry and Sons*.

Mortgage loans amounting to £736,000 will be repaid out of this issue.

Herbert Green and Company, Ltd.—Issue of £150,000 6 per cent. first debenture stock, 290,000 7 per cent. preferred ordinary shares of £1, and 585,000 ordinary shares of 1s. at par. Company acquires licence to manufacture lubricating oils by Duo-Sol process, and 99-year lease of site, including

tanks and refining facilities. Additional plant to be erected in eight months, with capacity of 40,000 tons per annum, at cost of £272,550. Annual profit estimated, £120,000, after depreciation, royalties, etc. Consideration: for licence, £32,500 as to £20,000 in cash and balance of 250,000 ordinary shares; for refining site and plant, £70,000, as to £60,000 in cash and balance in preferred ordinary shares.

BY OFFER FOR SALE

Eno Proprietaries, Ltd.—Offer for sale of 4,000,000 ordinary shares of 5s. each at 11s. per share. Acquires business of Eno's Fruit Salt, comprising eleven companies, and capital of Thermogene Company, Ltd., and capitals of associated sales companies. Profits, after adjustment, of all undertakings acquired: 1931, £326,163; 1932, £301,801; 1933, £242,866. Net assets at end of 1933, excluding goodwill, subject to £131,347 dividends declared, £624,770. Consideration is £3,050,000, satisfied by issue of 1,000,000 5½ per cent. cumulative £1 preference shares and 4,000,000 5s. ordinary shares at 10s. 3d. per share.

BY STOCK EXCHANGE INTRODUCTION

Nelson Financial Trust, Ltd.—Particulars of issue of £300,000 4 per cent. debenture stock, 1959. Stock ranks with existing 4½ per cent. issue and will be repaid at par on October 1, 1959. Secured by floating charge on all assets. Stock sold to Cohen, Laming, Hoare at £99½ per cent. less 1 per cent.

Joseph Terry and Sons, Ltd.—Particulars issued capital, 464,370 7 per cent. first £1 preference, 116,040 7 per cent. second £1 preference, 77,360 5s. preferred ordinary and 850,960 5s. ordinary. Voting rights: preference shares (each class) one vote each; ordinary (each class) ten votes per share. By special resolution, dated September 13, 1934, the £1 ordinary shares have been converted into 5s. shares as above. Further particulars are contained in the Stock Exchange Official Year Book.

ISSUES TO SHAREHOLDERS ONLY

John Ismay and Sons, Ltd.—At an extraordinary general meeting, held September 5th, the authorised capital was increased to £300,000 by the addition of 100,000 6½ per cent. preference shares of £1 each and 1,000,000 ordinary shares of 1s. each. The directors have decided to issue 50,000 of the above preference shares to existing shareholders at 21s. per share. No underwriting or other commission has been paid.

Broadcast Relay Service.—The board has decided to issue 222,200 ordinary 1s. shares at a premium of 3s. per share. The new shares will rank *pari passu* with existing shares as from March 31, 1934, and are offered up to October 1st to shareholders registered on September 18th.

Murex, Ltd.—It is proposed to create 90,000 shares of 10s., which will be offered to the ordinary shareholders at £4 per share. They will be offered one new share for every five held on September 18th, payable £1 on acceptance (being as to 10s., the nominal amount of the share, and 10s. on account of premium); the balance of £3 will be payable as to £1 10s. on or before November 22nd, and £1 10s. on or before December 22nd next. As soon as all the new issue has been completed it is intended to capitalise £270,000 of the reserves and to make a bonus issue of fully-paid ordinary of 10s. on a share-for-share basis to ordinary shareholders, and subsequently the whole of the 10s. ordinary shares will be consolidated into shares of £1. The issued ordinary capital will then be £540,000 in 540,000 shares of £1. The whole of these shares will rank equally for dividend from July 1, 1934.

CONVERSIONS AND REPAYMENTS

Christchurch Tramway Board.—The Union Bank of Australia announces that it will pay on and after October 1, 1934, the principal and final half-year's interest due on the £61,400 Christchurch Tramway Board 4½ per cent. loan of 1910.

Baldwins Income Debentures.—Baldwins, Ltd., are notifying holders of 6½ per cent. non-convertible income debenture stock that the stock will be repaid on December 27, 1934. The amount outstanding is about £586,000 and repayment will be at 105, plus accrued interest. No new issue is being made to finance this operation, the amount being provided from the company's cash resources.

Queen Anne Residential Mansions and Hotel Company, Ltd.—The £250,000 5 per cent. first mortgage debenture stock will be redeemed on December 1, 1934, and will be replaced by £200,000 4 per cent. mortgage debenture stock.

The Victoria Falls and Transvaal Power Company.—The whole of the outstanding £5 per cent. first mortgage debentures, whether of Series A, B or C, will be redeemed at the rate of 110 per cent. on January 2, 1935.

Swedish 5½ per Cent. Bonds.—The Swedish 30-year 5½ per cent. gold bonds have been called for redemption on November 1, 1934.

OFFERS ABROAD

Amsterdam Loan.—The City of Amsterdam is to float a 4 per cent. loan, amounting to Fl. 31,600,000, for the purpose of converting a similar amount of the 5 per cent. and 4½ per cent. loans. It is understood that the price of issue will be 98½ per cent.

Canadian Government Refunding Loan.—A Canadian refunding loan of 250 to 300 million dollars (£50,000,000 to £60,000,000) is to be floated early next week. The loan will be in four maturities—of two, five, eight and fifteen years' duration, and bearing interest at 2, 2½, 3 and 3½ per cent. and yielding 2½, 2.90, 3.45 and 3.80 per cent. respectively. The issue will be entirely domestic, though American holders of maturing securities have the privilege of converting. There is \$60,000,000 of 4 per cent. notes due October 1st and \$35,000,000 of 4 per cent. notes due November 1st. On the last-named date the \$222,216,850 of Third Victory Loan 5½ per cents. of 1919 also mature.

Nova Scotia 3 per Cent. Loan.—Bank Montreal, Royal Securities, and Syndicate have offered a new issue \$3,500,000 Nova Scotia 3 per cent., due October 1, 1939, at 100. Issue well received.

Norwegian £2,400,000 Conversion Loan.—The Norwegian Finance Ministry announced the opening of subscriptions on September 27th for the Kr. 44,000,000 (about £2,400,000 at par) 4½ per cent. conversion loan at 97½. The offer is in respect of two 1915 5 per cent. loans, which originally totalled Kr. 47,000,000.

FORTHCOMING ISSUES

Lanarkshire County Council.—The Lanarkshire County Council has decided to redeem the existing £2,500,000 of 5½ per cent. redeemable stock, 1935 to 1955, on January 15, 1935, and to create and issue new redeemable stock, 1954 to 1964, to an amount sufficient to raise a sum of £2,141,677, balance required. The new loan will be floated in October at an issue price of not less than 95 per cent., the rate of interest being 3 per cent. per annum.

Kapala Rubber Estates of Malaya.—Underwriting arrangements have been made for an issue of capital by Kapala Rubber Estates of Malaya, under the auspices of Eastern Industries, Ltd. The capital of the new company is £320,000, divided into £160,000 in 7½ per cent. convertible preference

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

shares and £160,000 in 2s. ordinary shares. It is expected that the issue will be offered to the public next week.

Associated British Picture Corporation, Ltd. (formerly British International Pictures, Ltd.).—Arrangements are in hand for an early issue of first mortgage debenture stock, secured as a first direct specific charge on about £6,000,000 of properties.

Blackpool 3 per Cent. Loan.—Formal approval for the issue of £750,000 3 per cent. stock, redeemable in 1960, has been given by the Blackpool Council. Arrangements have been made for underwriting with a London firm, and it is expected that the issue will be made the week after next. The issue price has not yet been fixed.

RESULTS OF ISSUES

John Ismay and Sons, Ltd.—The issue to shareholders of 50,000 6½ per cent. preference shares of £1 each at 21s. per share has been heavily over-subscribed.

Stoke-on-Trent Corporation.—The list for applications for the issue of £1,500,000 Stoke-on-Trent Corporation 3½ per cent. redeemable stock, 1955-65, was closed at 9.5 a.m. September 26th, owing to over-subscription.

Herbert Green and Company.—The three issues, all of which were offered at par, were over-subscribed, the lists being closed at 9.45 a.m. September 26th.

CALLS DUE OCTOBER 1 TO OCTOBER 6, 1934

The grand total of calls falling due in September, 1934, is £4,766,761, which compares with £25,747,684 which fell due in September, 1933. The following calls fall due from October 1, 1934, to October 6, 1934, inclusive:—

* Free of income tax.

AMALGAMATED FIXED TRUST, LTD.—Williams Deacon's Bank, Ltd., announce that the first half-yearly income distribution upon Amalgamated Fixed Trust certificates, Series 1, is at the rate of 5-3604d. net per sub-unit. Warrants will be paid to certificate holders on October 15th.

ANTOFAGASTA RAILWAY.—The directors of the Antofagasta (Chili) and Bolivia Railway Company announce that, based on the official rates of exchange, the results for the current year to date show improvement compared with the corresponding period of 1933. Nevertheless, in consequence of the restrictions on exchange operations, the directors have decided to defer consideration of a payment on account of the arrears of dividend on the 5 per cent. cumulative preference stock until about May, 1935, when the final accounts for the year 1934 will be available. Net receipts for the year 1933 were £184,758. The dividend on the £2,000,000 of 5 per cent. preference has been paid to end-December, 1931.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY, LTD. 6 PER CENT. CUMULATIVE PREFERENCE SHARES.—A dividend of 3 per cent. (less tax) in respect of the six months ending September 30, 1934, being at the rate of 6 per cent. per annum, has been declared, payable on October 1, 1934, to shareholders on the register on September 22, 1934, and to holders of coupon No. 64 attached to preference share warrants to bearer. Coupons are payable at the Anglo-South American Bank, Ltd., 117 Old Broad Street, E.C.2.

STEWARTS AND LLOYDS, LTD.—The following interim dividends for the half-year ended June 30, 1934, are at the rate of 6 per cent. per annum on the cumulative first preference shares, at the rate of 10 per cent. per annum on the cumulative second preference shares, at the rate of 5 per cent. per annum on the cumulative third preference shares, all under deduction of income tax at 4s. 6d. per £, to be paid on October 31st to the shareholders on the register at this date.

COMPANY MEETINGS, &c.

THE ANGLO-SIAM CORPORATION, LIMITED

TRADE CONDITIONS IN THE EAST

IMPROVED INVESTMENT POSITION

The thirty-seventh annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held, on the 25th instant, at 5 St. Helen's Place, London, E.C.

Mr William Greaves presided in the absence, through illness, of Mr J. M. Ryrie, the chairman of the corporation.

After referring to the unavoidable absence of Mr Ryrie, who had taken the chair at every general meeting since the formation of the corporation, and to the loss the board had sustained through the resignation of Mr Henry Bateson, Mr Greaves reviewed conditions in India, Siam, and British Malaya, the countries in which the corporation operates.

Owing to higher prices ruling for both rubber and tin, there was, he said, a favourable trade balance of over £7,000,000 sterling in Malaya, while Siam had harvested another good crop of rice, but prices continued to fall, and this was reflected in the value of exports and affected the trade of the country generally.

A good feature in India had been the improvement in the credit and financial position of the Government, which had enabled them to pay off maturing loans and issue other loans both in India and in this country at much lower rates of interest.

REVIEW OF ACCOUNTS

Turning to the accounts, Mr Greaves pointed out that a small trading profit had been made at the branches, but that actually there had been no expansion in the volume of general trading. Sales of teak, however, had been larger than during the previous year, but prices were lower and continued to be unremunerative.

The investments stood at about the same figure as the previous year, but embodied a larger proportion of British, Indian and Colonial Government securities, and, apart from the investment depreciation reserve, there was a substantial surplus in the market value at March 31st last as compared with the cost.

As mentioned in the directors' report, the Bombay Woollen Mill had been sold at a price which fully covered the figure at which the written down advances to the Bombay Woollen Manufacturing Company, Limited, stood in the books, but payment was not received until after the close of the financial year.

The final dividend of 5 per cent. on the ordinary shares recommended by the directors was only made possible by the transfer of £5,000 from the equalisation of dividend fund, and as the net balance of profit in the accounts was mainly due to non-recurring items the ordinary shareholders could not look for a larger distribution on this occasion.

SATISFACTORY FINANCIAL POSITION OF SIAM

Mr Greaves then referred to the satisfactory financial position of Siam, and said that, although there had been periodical rumours about and a certain amount of agitation in favour of a devaluation of the tical, the Siamese Government continued to maintain the stability of their currency, and in a statement made last January had declared that the maintenance of the present sterling value of the tical was, in their opinion, the best policy.

Dealing with the Siam-Malay Rubber Company, Limited, in which the corporation had invested close on £50,000, he mentioned that tapping of the unbudded area commenced last May, but that it would not be possible to start tapping the important budded area until next year, and it was unlikely that the whole estate would be in tapping before 1937. The visiting agent continued to give thoroughly satisfactory reports on the estate, and with rubber at its present price the outlook was encouraging.

CURRENT YEAR'S PROSPECTS

As regards prospects for the current year, there was unfortunately no indication at the moment of any improvement in the price of and demand for teak, and sales were being made at under the cost of production. It was, however, proposed to reopen the sawmill next month, and he was glad to say operations would be restarted with practically no unsold stocks of cut teak.

There had been a check to the fall in the price of rice, but the spending power of the Siamese cultivators had been reduced as the result of a long period of acute depression; but any improvement in the value of the main export of Siam would have a favourable bearing on conditions generally.

The rubber restriction scheme had given more confidence in the future of the industry, and this had been reflected in an improvement in business in Malaya.

CONDITIONS IN INDIA

There were signs of more settled conditions in India, and an important agreement had been come to between India and Japan, whereby the latter country had undertaken to purchase certain quantities of raw cotton in consideration of being allowed to export a relative quantity of cotton piece-goods to India, and this should ensure a market for a large portion of the exportable surplus of cotton grown in India.

It was reasonable to expect that the general trading of the corporation would show better results, but until there was a substantial recovery in world trade and a return to more economic prices he did not look for any real improvement, and, failing an advance in the price of teak, he did not anticipate a larger profit for the current year.

The directors' report and statement of accounts for the year ended March 31, 1934, were adopted, and final dividends of 3½ per cent. on the preference shares and 5 per cent. on the ordinary shares were declared, making a total distribution of 7½ per cent., less tax, on the ordinary shares for the year.

Mr J. Mackenzie was re-elected a director, and Messrs Turquand, Youngs and Company were appointed auditors for the current year.

CHUNGLOON RUBBER ESTATE (1932), LIMITED

IMPROVED OUTLOOK FOR THE INDUSTRY

INTERIM DIVIDEND PROSPECTS

MR E. B. RIDSDAL'S SPEECH

The second ordinary general meeting of the members of the Chungloon Rubber Estate (1932), Limited, was held on Tuesday, September 25, 1934, at the registered offices of the company, 411-419 Salisbury House, London Wall, London, E.C., Mr E. B. Ridsdal presiding.

The representative of the secretaries and commercial agents (Messrs E. B. Ridsdal & Co., Ltd.) having read the notice convening the meeting and the report of the auditors,

The chairman said: Gentlemen, the report and accounts having been in your hands for the requisite period, with your permission I will take them as read. From the report it will be observed that during the year we harvested a crop of 257,061 lbs. of rubber, which, compared with the estimate for the year, represents an increase of 7,061 lbs. The output secured is equivalent to a yield of 522 lbs. per acre per annum and, although satisfactory, this is slightly less than that obtained last year, owing to the 1926 plantings not having been tapped for several months—though included in the mature areas—and to no reduction of acreage having been made for other areas rested during a portion of the year. In other words that really means that the actual yield was better than 522 lbs. to the acre.

Turning to the accounts, it will be seen that after allowing for all expenditure, we show a profit for the year subject to tax of £1,258 15s., compared with a loss of £324 3s. 8d. as shown in the previous accounts submitted. I would ask you to remember that the previous accounts only covered a period of approximately six months—that is, from September 19, 1932, the date of incorporation of the company, until March 31, 1933; so that the profit earned during the period under review must be considered very satisfactory, especially as enhanced prices were only secured during the last few months of the year.

current year can be made. I think, however, we can say that on the basis of prices now ruling—even though output may be restricted by 30 per cent. from December onwards—we shall be able to make a still better showing than that submitted in the accounts now before you.

Our cash position to-day, as can be imagined, is stronger than that disclosed by the accounts, and, subject to prices now prevailing being maintained, and to a reasonable assessment and export allowance being secured, it may be possible before long to pay an interim dividend. Having such a small issued capital, 5 per cent., as you will see, would only absorb £1,250, and if we can earn this sum with rubber selling at 3½d. per lb. as we have done, I think you can confidently look forward—with a continuance of existing conditions—to a very good return on the money invested in the company.

CONDITION OF ESTATE

As regards the condition of the estate, the manager in his report has given a satisfactory account of both the mature and immature areas. During the past year a considerable amount of thinning out work has been done—and carried out, I may say, at a very low cost—the benefit of which will be reflected in the future yielding capacity of the estate.

Before putting the resolution to the meeting for the adoption of the report and accounts, I would like to thank Mr Tuke, our manager, and all concerned in the East, for the satisfactory attention given to all estate affairs. I will now formally move that the directors' report and statement of accounts for the year ended March 31, 1934, together with the auditors' report thereon, be and they are hereby approved and adopted. I will ask Mr De la Bere to second this resolution, but before putting it to the meeting I shall be very pleased to answer to the best of my ability any questions you may care to put to me.

Mr R. De la Bere seconded the resolution and, after the chairman had replied to shareholders' questions, it was carried unanimously.

The retiring director, Mr E. B. Ridsdel, was re-elected; the auditors, Messrs Fitzpatrick, Graham and Company, were re-appointed; and the proceedings terminated with a vote of thanks to the chairman and directors and also to the staff at home and abroad.

BAJOE KIDOEL RUBBER AND PRODUCE COMPANY, LIMITED

COFFEE POSITION AND OUTLOOK

The twenty-third ordinary general meeting of this company was held, on the 27th instant, at 2, 3 and 4 Idol Lane, London, E.C.

Mr H. Eric Miller (the chairman), in the course of his speech, said:—The report and accounts incorporate the figures of Macassar Plantations, Limited, which was merged in our company as from April 1, 1933. As you know, this company has consistently worked two cultures, coffee and rubber. We have been very much in the position of the fair proprietor owning both swings and roundabouts, and our dividend record has justified that policy. In the year under review we were faced with a marked contraction in our revenue from coffee, as shown by the accounts of our Eastern companies, whose net profits from this product amounted to Gls. 58,884.61, as compared with a figure of Gls. 338,915.80 from the Bajoe Kidoel estates alone in the previous year. At current rate of exchange the decline is equivalent in round figures to £35,000.

The maintenance of the price of coffee to the producer even at its present low level depends almost entirely on Brazil maintaining her scheme for regulating exports. Her crop for the season 1934-35 is estimated to be a small one of about 14 million bags, whilst supplies of mild coffees from other countries are likely to be between 9 and 10 million bags. On these figures, production for the season would be rather less than consumption, and as the Brazilian scheme continues in force, it seems likely that before the middle of 1935 they will have eliminated all the surplus coffee in their interior warehouses except the 10 or 11 million bags which must be held as security for the 1930 Coffee Realisation Loan. The immediate general outlook for coffee, therefore, seems to point to a steady price with minor fluctuations.

Thanks to the improvement in the rubber market, brought about by the prospect of international regulation of supplies, the proceeds of our rubber crop enabled the local companies to show a balance of Gls. 9,141.29 to the good, against a deficit on this product of Gls. 143,260.08 in the previous year. The provisional standard crop allotted to us is just over 2,400,000 lbs.

The report and accounts were unanimously adopted, and a dividend of 6 per cent., less tax, was approved.

GOLD EXPLORATION AND FINANCE COMPANY OF AUSTRALIA, LIMITED

WIDESPREAD INTERESTS

The statutory meeting of the Gold Exploration and Finance Company of Australia, Limited, was held, on the 26th instant, at River Plate House, London, E.C.

Mr John A. Agnew, who presided, said in the course of his speech: The company was incorporated on July 23rd last. The issue was very heavily over-subscribed, and the directors have allotted the full number of shares offered in the terms of the prospectus. We are very widely interested in Western Australia. First, we hold most of the issued capital of Western Mining Corporation, Limited, a company which is actively engaged in the investigation and prospecting of extensive areas in the more important mining fields of the State. In development its major activities are centred in the Norseman field, where important interests are controlled, which are being actively tested on a large scale.

Secondly, we either own directly or have options to purchase leases on the very important Kalgoorlie field aggregating a substantial area. This we divide into three sections. The Northern Section is considered by our technical advisers to have important prospects of developing into a profitable producer. We are negotiating the purchase of certain properties adjoining this area, and if we are successful we will in all probability at no distant date create a subsidiary company to carry forward the prospecting and development of this section to the point of production. If we succeed in putting our policy into effect the shareholders of Gold Exploration and Finance Company of Australia, Limited, will be offered the opportunity of providing a portion of the necessary capital. The second or more central section of our interests at Kalgoorlie has an important prospective value.

The third section, the most extensive in area, which comprises our southern interest, is of a "long shot" prospecting nature, and our technical advisers will consider means of proving its value at an early date. Generally, we regard our Kalgoorlie interest as having a big prospective value. We also own a not unimportant interest in Triton Gold Mines in Western Australia, which will, we expect, begin profitable production in 1935.

EASTERN AUSTRALIAN HOLDINGS

In Eastern Australia our interests are distributed over three main sections, namely, Bendigo, Deep Lead Alluvials, and our interest in Gold Mines of Australia. In the Bendigo district we are large shareholders in Bendigo Mines, Limited, and indirectly through this company, and also directly by our own holdings, in the Napoleon and Nell Gwynne companies, the first two subsidiaries of Bendigo Mines, Limited. The reports of our expert advisers on this field are very encouraging.

A comprehensive scheme of development of the area under the control of Bendigo Mines, Limited, has been prepared by the technical advisers of that company, and once it is in full swing it should not be long before some definite reward is obtained. Bendigo has been a wonderful producer in the past, and, if the geologists are correct in their opinions, may again very soon become prominent among the goldfields of the world.

Adjacent to the Bendigo district we have also secured the main leases, comprising what has been the most important producing section in the Costerfield area. On the expert advice before us for an expenditure of £50,000 (Australian currency) we have a reasonable prospect of obtaining an annual profit of over £30,000 (Australian currency) from this important gold antimony property.

Outside of Bendigo we have very important interests in the Deep Lead Alluvials of Victoria in our own right and indirectly also through our shareholding in Gold Mines of Australia. The problem of the successful operation of these Deep Leads is admittedly a big one, but we believe it will be solved and that a reasonable reward for our efforts will be forthcoming.

Indirectly through Gold Mines of Australia we are interested in the New Morning Star Mine at Woods Point in Victoria, which has attractive possibilities, and also dredging areas in New South Wales, and also in goldmining in Queensland.

Our interests, you will see, cover a wide area. In the main they are so far exploratory, and therefore speculative, but we are firmly convinced that an excellent opportunity exists of developing a progressive and profitable business.

I am pleased to add that one of the companies in which a substantial interest has been acquired—viz., Gold Mines of Australia, Limited—has recently declared its maiden dividend (6d. per share).

No questions being asked, the statutory report was unanimously adopted.

KIRKLEES, LIMITED

SUBSTANTIALLY LARGER PROFITS

The sixth ordinary general meeting of Kirklees, Limited, was held, on the 21st instant, at River Plate House, E.C.

Mr William Tong, M.C. (the chairman), said that the accounts showed a substantial increase in trading profit, and the directors had greater confidence now in the future of the company than at any previous time. The profits would have been quite satisfactory but for drastic reduction in prices and the fact that the heavy development expenses—amounting to an increase of over 50 per cent. in their production—had been met entirely out of current profits.

The prices of viscose rayon in this country were largely controlled by Messrs Courtaulds, Limited, whose chairman had stated that it was intended to exercise such control of market prices as was possible to prevent margins of profit rising above the present level, which allowed a moderate rate of profit. Bearing that in mind the Kirklees policy was clear. Assuming that any other company could manufacture profitably in this country, under present conditions, they should, and he believed they would, be able to do the same. "Kirkstyl" products commanded as high a price as any in the market. This position had been further considerably strengthened during the year by improvements in organisation and technique, and they were now deriving the full benefit of the increase in their production capacity.

During the year £125,000 Five and a-Half per cent. First Mortgage debenture stock with convertible rights into Ordinary shares was created and £100,000 offered to shareholders and fully subscribed at par. Cash amounted to £27,522, and the liquid assets totalled £83,590, against current liabilities of £33,824.

The trading profit of £37,867 compared with £26,243 in the previous period.

A most encouraging factor, and one of fundamental importance, was the continued growth in the use of rayon. Consumption was keeping pace with record figures of production, and the lowering of the Excise duty to 6d. per pound was bound to increase its use. In his opinion the remaining 6d. ought to be removed. They had a sound business, with many good friends and customers, and did not fear any fair competition, and on that basis had confidence in the company's ability to return satisfactory results.

The report was unanimously adopted.

CLARENDON PROPERTY COMPANY, LIMITED

PROSPECTUS FIGURES EXCEEDED

The first ordinary general meeting of the Clarendon Property Company, Limited, was held, on the 21st instant, at the Hotel Victoria, London, W.C., Mr Louis Nicholas, F.C.A. (the chairman), presiding.

The Chairman, in the course of his speech, said: The net revenue from properties, after deducting expenses, including management and repairs, amounts to the sum of £89,946 16s. 9d., which is slightly in excess of the prospectus figures, but as against this the income covers a period of some three weeks more than a full year.

An interim dividend upon the ordinary shares of 2½ per cent., less tax, amounting to the sum of £8,137 10s., making a total leaving £17,589 9s. 1d., which the directors recommend should be appropriated in payment of a final dividend of 3½ per cent., less tax, amounting to the sum of £8,137 10s., making a total distribution on the ordinary shares of 6 per cent., leaving to be carried forward £9,451 19s. 1d.

The directors are glad to be able to confirm the statements contained in the prospectus as to the character of the company's properties. The advantageous terms upon which the properties were acquired are shown by the revenue statement, while their general condition, structural and otherwise, has been satisfactorily maintained.

In addition, certain capital improvements have been carried out during the period, and the cost of these, some £6,000 odd, has been charged to capital. Further improvements will be made from time to time.

Additional freehold properties and another leasehold property have been acquired during the year, and to finance these purchases a sum of £14,000 has been borrowed upon the leasehold property. Further properties will be acquired as and when the opportunity occurs.

We have had the normal changes of tenancies during the period under review, but the number of voids at the present time is less than when the company completed the purchase.

In conclusion, your directors confidently look forward to a progressive future for the company.

The report and accounts were unanimously adopted.

ANGLO-CONTINENTAL GUANO WORKS, LIMITED

The seventeenth ordinary general meeting of The Anglo-Continental Guano Works, Limited, was held, on the 25th instant, at Southern House, London, E.C., Sir Archibald Mitchelson, Bt., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said it was a matter of great satisfaction to the board that they were able to recommend a dividend of 7½ per cent. on the ordinary shares after so long a period without any distribution. The net profit amounted to £72,924, as compared with £61,489 in the previous year. The reserve fund had been brought up to £55,000, and their depreciation reserve to £30,000, while during the year an important financial change had been effected in the redemption of the outstanding £225,000 of 7 per cent. debenture stock and the substitution for it of £250,000 of 5½ per cent. debentures—a rearrangement financially beneficial to the company.

Most of their subsidiary companies had done well, and in the majority of cases the profits had been left in those companies with a view to strengthening their respective positions. As far as Genatosan, Limited, was concerned, the company had enjoyed another very satisfactory year and was again paying its dividend of 35 per cent., and their present holding in the company of some 1,200,000 ordinary shares stood in the books at a figure very considerably below the market value. As to their main business of fertiliser manufacture, they had sold more of their product than in any recent year, and the better showing of their trading account was due to the increased turnover. The high quality of their products was well maintained, and there could be little doubt that their increased sales were largely due to the improvement which had taken place in British agriculture and horticulture.

Their Broadfield superphosphate plant had rewarded them handsomely for the expenditure incurred, and if sales increased at the present rate they would have to duplicate that plant in the near future. They had had to increase their acid plant in order to provide for future requirements and cheapen production costs. In regard to their interest abroad in processes for the extraction of oils from vegetable seeds and from organic matter, the results during the past twelve months had been of an encouraging nature, and if expectations were fulfilled should prove of great importance to their company.

The report and accounts were unanimously agreed to.

ASSOCIATED BRITISH PICTURE CORPORATION

SUBSTANTIAL IMPROVEMENT IN RESULTS

The seventh ordinary general meeting of this Corporation was held, on the 25th instant, at Winchester House, London.

Mr John Maxwell (chairman and managing director) said that the combined figure of trading profit earned by the Corporation and Associated British Cinemas, Limited, amounted to the substantial figure of £573,198. After deducting the charge for interest on mortgages and loans, the reserve required for income tax, and a reserve of £100,000 for depreciation of cinema properties, they were left with a combined net profit for the year, after making full provision of every kind, of £273,591. The trading results of the current year to date showed that the improvement of the past year had been more than maintained, and the most recent figures showed that the further increase of profits had been substantial.

A proposal would be submitted to extraordinary general meetings of shareholders to increase the share capital of the Corporation by the creation of a further 250,000 6 per cent. first cumulative preference shares of £1 each and 1,000,000 ordinary shares of 5s. each. The proposal was made as part of a scheme which the directors had in view for funding the floating loans of the subsidiary companies.

Without exception, their subsidiary companies had done well throughout the past year. They had been able to add to the volume of their film production from Elstree a considerable output from the Welwyn studios of British Instructional Films, Limited. Both at Elstree and at Welwyn much work had been done during the year in the way of improving and extending the technical equipment for production, and he might safely say that their production facilities were as complete and up to date as could be found in any studio anywhere. Their distributing companies, Wardour Films, Limited, and Pathe Pictures, Limited, had both had a successful year's trading and had further established themselves in the goodwill of cinema exhibitors throughout the country. Their export company, B.I.P. (Export), Limited, had shown steadily improving results throughout the past year.

The report was unanimously adopted and the separate general meeting of preference shareholders convened to consider resolutions increasing the capital was, in the absence of a quorum, adjourned until Tuesday, October 2nd next.

PRICES, TAILORS, LIMITED

DIVIDEND DOUBLED

The annual shareholders' meeting of Prices, Tailors, Limited, was held, on the 27th instant, in London, Mr H. P. Price, managing director, presiding.

The Chairman said:—During the past year we have experienced an improvement in trading conditions, and this has been reflected in our accounts for the year ending June 30th. The trading profit is £255,313, against £141,933 for the previous year. We propose to transfer £50,000 to reserve, making that account £125,000, and leaving a balance of £45,295 to be carried forward to the next account, this being more than one year's interest on the whole of the preference and preferred ordinary shares after deduction of income tax.

We propose to increase the dividend upon the ordinary share capital to 30 per cent., less 4s. 6d. in the £ for the same period. I think you will have every reason to be satisfied with the results of our last year's trading. During the year it has been very gratifying to see the general increase in turnover.

Placed as we are, with depôts throughout the British Isles and the Irish Free State, we have a sure barometer of the state of trade, and from our experience we are now on the upward curve of better trade in our own country.

The conservatism of man, however, in the matter of clothes is proverbial, although, influenced as ever by women, we are not quite so hidebound as formerly. Every man to-day wants good clothes at the lowest possible price, and does not mind from whom he buys them, provided they are right. It is our business to see that as many as possible buy from us, and let me say that no firm is better placed and better equipped to deal with the immense demands which rational tailoring is bringing about than the Fifty Shilling Tailors' depôts, and in my opinion we have as yet only touched the fringe of rational tailoring.

The report was unanimously approved.

At the conclusion of the meeting Mr Price added:—I am sure you will be wondering about our progress during the new financial year to date. I am happy to say that our records are up very considerably, which, of course, is reflected already in increased profits compared with last year, and should nothing untoward happen in national or international affairs I think we can look forward to another record year.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 22, 1934, amounted to £9,547,500, against ordinary expenditure of £5,419,000. After allowing for a decrease in Exchequer Balances of £350,697 the operations for the week, as shown below, decreased the National Debt by £4,334,000 to approximately £8,097 millions.*

(000's omitted)

Treasury Bills	£ 41	Public Department Advances	£ 4,500
National Savings Certificates	£ 150	N. Atlantic shipping issues	£ 25
	£ 191		£ 4,525

* Including £200 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Funds.
† Revised on basis of official figures for March 31, 1934.

A complete analysis of the approximate position of the National Debt at June 30, 1934, appeared in the *Economist* of July 7.

GOLD

Messrs. Samuel Montagu and Company write on September 26, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,821,508 on the 19th instant, showing no change as compared with the previous Wednesday.

During the week the Bank announced the purchase of £64,566 in bar gold.

In the open market bar gold to the value of £2,100,000 was disposed of during the week. A good general demand was maintained and the premium over the gold exchange parities tended rather to increase.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
September 20.....	140s. 9d.	12s. 0-86d.
" 21.....	140s. 11 1/2d.	12s. 0-65d.

Average.....		

The s.s. "Corfu," which sailed from Bombay on the 22nd instant carries gold to the value of £205,000 consigned to London.

SILVER

Following stronger advices from the Far East, the market showed a firmer tendency and to-day prices advanced sharply to 22 1/2d. for cash and 22 1/4d. for two months' delivery, the highest quotations recorded since December, 1929.

Reluctance on the part of sellers contributed to the firmness, offerings on China account having been more restricted. There was re-selling by speculators and some sales were made on Continental account, but offerings were well absorbed by demand from the Indian bazaars and speculators. Purchases have also been made for America, but the demand in some cases was limited to slightly lower rates.

The present firmness of the market has been helped somewhat by the weakness of sterling, but the further outlook for silver continues good.

Quotations during the week:—

THE FINANCIAL NEWS

Special articles due to appear next week on the leader page of **THE FINANCIAL NEWS** are as follows:

MONDAY, OCTOBER 1—"HOW FARES RECOVERY?" Our Statistical Correspondent contributes his monthly survey of the Trend of Business.

TUESDAY, OCTOBER 2—Messrs. A. Strauss and Company contribute their expert Monthly Review of **THE TIN SITUATION**.

WEDNESDAY, OCTOBER 3—Our Special Mining Correspondent "MINOTAUR" in his series of articles on "Mines of the Rand" deals with **BRACKPAN**.

THURSDAY, OCTOBER 4—We recommence our "Stories of Famous British Companies" with the past history, present position and future prospects of **SCHWEPPES**.

FRIDAY, OCTOBER 5—Industry in the Provinces—No. 18. This week's choice falls on **PRESTON**.

Do not run the risk of missing any of the above articles, all of which are designed to interest the Investor first and foremost. The one certain way to avoid disappointment is to place standing instructions with your newsagent **TO-DAY**.

THE FINANCIAL NEWS

(Twopence Daily)

The first financial and commercial daily newspaper in the World—and still the best!

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription **8s. 2d.**

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the **NEUE FREIE PRESSE**. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

JOSHUA B. POWERS LTD.

Exclusive Advertising Representatives for Great Britain and U.S.A.

14 Cockspur St.,
London, S.W.1.

220 East 42nd St.
New York City.

"TAXATION"

(Edited by Ronald Staples)

The leading authority on the law, practice, incidence and administration of taxation.

"TAXATION" deals with

**INCOME TAX
SUR-TAX
DEATH DUTIES
BACK DUTY**

PRICE

6d.

WEEKLY

Subscription:
One Year 30s.
Half Year 15s.
Post Free

"TAXATION" offers

ADVANCE AND FULL REPORTS
AND NOTES ON TAX CASES
INFORMATION AS TO REVENUE
CONCESSIONS

EXPLANATIONS IN FIGURES OF
YOUR PROBLEMS

AUTHORITATIVE ARTICLES
AND NOTES

READERS' QUERIES AND
REPLIES, etc., etc.

From all Newsagents and from

A PATCHWORK RECOVERY

THE world has become so heterogeneous a collection of countries that it would seem extremely hard to say anything of its economic life and activity which would hold true universally. Much the same might be said of a crowd made up of all sorts and conditions of men. Yet, often enough, something "comes over" a crowd which gives it a common impression or a common purpose. In the same way it is obvious that the countries of the world are at times actuated by a common economic impulse. This has been forcefully illustrated in recent times by the engulfing of all nations by the wave of depression which began to surge round the world in 1929. Will some uncontrolled and incomprehensible force subdue the waves for all of them alike? Or will each have to fight its own way to the shore?

Anyone who desires answers to these pertinent questions will derive great help from Professor Condliffe's admirable *World Economic Survey*—the third of its kind—just published by the League of Nations.* The general impression left by his account of the world's economic experiences between July, 1933, and July, 1934, does not differ in its general outline from that which is already familiar to our readers. Through many hundreds of pages of the most valuable economic data, the reader sifts the evidences of recovery. The year 1933 was one of fairly general revival; and it continued into the present year; but recovery now shows some signs of hanging fire, and it has not even yet been translated into the sphere of international trade.

For answering the questions posed above, the significance of Professor Condliffe's Survey is that this hesitancy in recovery is itself the resultant of a number of varied, often conflicting, tendencies in different countries. If there is a general undercurrent of recovery, it is of equal significance, at least, that differences of economic policy have produced different trends in different countries. Much may be learned from examining the rôles which various countries have played. It may come as a surprise to some readers to find Japan and Great Britain bracketed together as the two countries chiefly responsible for the rise in the price of raw

materials, which has begun to lift the primarily agricultural countries, e.g. Australia, out of the depression. In both cases, Professor Condliffe finds the depreciation of the currency to be one of the influences which have contributed to the result.

Another illuminating contrast is provided by an examination of the building industry. In some countries, building activity has powerfully contributed to such recovery as has taken place. Classifying the countries by this criterion, it appears that building activity is attaining new records in Great Britain, but hanging back in the United States; that it is expanding in Italy, and contracting in France. In Britain it is going ahead owing to "cheap money"; in America it is handicapped by the high cost of building, and the almost complete absence of private activity is not compensated by the large, though fluctuating, expenditure of public funds. In Italy, Signor Mussolini has combined a large public works programme with cheap money and a deliberate plan for reducing costs. In France, all efforts are bent on reducing taxation and balancing the Budget; public works have had to be subordinated to these aims in the hope that they will stimulate private expenditure and investment.

These examples show the different ways in which some of the principal countries are tackling their difficulties. Much the most striking contrast, however, is that between the countries that are on and those that are off gold. The *prima facie* evidence is very striking: there is hardly a country which has depreciated its currency but is in some measure better off; while in the gold bloc and the countries with exchange restrictions the maintenance of the former parity seems to be a blight on all forms of enterprise. Professor Condliffe is a little inclined to infer that the relative gains of the former group are matched by the relative losses of the latter; but the recovery in the United States, and even in Great Britain, is demonstrably not the result of exchange stunts affecting the volume of international trade.

These are some of the many contrasts that emerge in this crowded canvas. What can we deduce from it all regarding our own position? How, in particular, are we to explain the fact that Great Britain showed signs of recovery so long before any other large nation, at least in the Northern Hemisphere? And why has our recovery, poor though it

undoubtedly is, proceeded further than in the majority of other countries?

There are some, of course, who would ascribe it all to the vague virtues of the national character, as represented—the vagueness, at least—in the National Government. But the vagueness of very much the same political complexion (if Governments of very much the same political complexion (if not so “national” in name) had not preserved us from doing very decidedly worse than the rest of the world throughout the ten years of chronic depression that preceded 1931, and those who take a less mystical view of events will look for some more tangible cause.

The ten years of chronic depression may, indeed, have a great deal to do with the matter. Inflation never infected the British financial blood-stream with its toxins. By the middle of 1930 there were not in London, as there were in New York, “ugly situations to clear up” before the advance could begin—the international position of the pound sterling always excepted. The importance of this absence of internal financial trouble can hardly be exaggerated. Nobody who has observed the creeping paralysis of financial insecurity in France, in Germany, in Austria, above all in the United States, can doubt the benefits we have enjoyed from the total absence of internal banking trouble.

Fiscal policy has also played a large part in preserving us from the full rigours of the economic storm. Throughout the period when prices were falling most steeply we continued to allow the completely free importation of food-stuffs, with the result that the cost of living was substantially reduced. The level of real wages rose by some 13 per cent. between 1929 and 1933, while even if allowance is made for the increased incidence of unemployment it can be shown that the real income of the working class as a whole increased by some 5 per cent. over the same period. Free Trade in food gave us the unique advantage of maintaining and even increasing the purchasing power of the working class, in spite of a reduction of over 5 per cent. in average money wages.

Since the advent of the present Government we have turned to protection. Restriction of imports—especially the restriction of food imports—will inevitably limit the advance of the standard of living of the population of these islands. But the conjuncture of circumstances at the time of its imposition was such that this disadvantage did not immediately appear. There is no escape from it in the long run, and rising food prices are already heralding its arrival. On the other hand, protection undoubtedly tends to increase employment in the protected industries, while the depreciation of the pound has prevented the usual unfavourable reaction on the export industries from appearing. Great Britain has thus, by great good luck, contrived to enjoy the best of both worlds. For the first two years of the depression we reaped the benefits of free trade. For the past three years we have been getting the advantages of protection without, for the moment, feeling its disadvantages. The reckoning must one day come.

In like manner, we might trace the special circumstances of each of the many countries that constitute the crowd. But these are the individual features. What can we learn of the whole mass movement, which at once influences, and is influenced by, the motion of each of its parts? The “swing of the pendulum” or—to put it another way—the reaction from the excesses of the depression is perhaps a universal influence. Cheap—or at all events cheaper—money is almost universal, while the agricultural price recovery—assisted this year by the drought—has been of great help in restoring a better balance both between the prices of industrial and agricultural products, and between the countries which produce mainly one or the other. These are perhaps the chief of the “unseen” influences at work. They are blocked by the hindrances to trade which are compelling the continuance of a distorted world economy and the prolongation of depression; and these obstacles are powerfully reinforced by political unease. Whether the whole crowd of countries moves forward, depends on the result of the struggle between these rival influences. And the fortunes of each country depend upon the outcome of that struggle. For, though any country may determine its own course, the moral of all recent history is that the extent to which any one of them may go ahead of, or fall behind, the average is limited by the progress of them all.

HIS MAJESTY'S OPPOSITION

THE next General Election can hardly be more than eighteen months ahead. Most of the delegates at the Labour Party Conference at Southport this week seem to have had their eyes already fixed on that Election. And doubtless the gaze of the Conservatives at present assembled at Bristol will be inclined the same way. For the National Government now appears likely to maintain its uneventful course until the end of its term; and if a different Government is then elected it can hardly be drawn from any other source than the Labour Party.

A year ago it seemed possible that the Labour Party might become seriously split by the issue of democracy and dictatorship. The conflict has now ceased to be one of principle, however, and has resolved itself into a dispute over emphasis, detail and tempo. Both in domestic and foreign policy the Southport Conference has given overwhelming support to the policy of the Party Executive and the T.U.C. in preference to that of the Socialist League. A year ago the Socialist League's dubious plans for “reforming” Parliamentary procedure were neither accepted nor rejected, but were referred to the Executive for consideration. This year the amendments embodying the League's policy were withdrawn in return for an undertaking by the Executive to approve in advance a paragraph of their forthcoming policy report on the House of Lords. This paragraph states that “a Labour Government meeting with sabotage from the House of Lords would take immediate steps to overcome it, and would in any event take steps during its term of office to pass legislation abolishing the House of Lords as a Legislative Chamber.”

Sir Stafford Cripps expressed himself satisfied with this amendment to the official policy laid down in “For Socialism and Peace.” But in doing so he seems to have sacrificed the substance of victory to the name. For, as the position now stands, the policy adopted towards the House of Lords by a future Labour Government will obviously depend on its interpretation of the phrases “sabotage” and “as a Legislative Chamber” in the above amendment. And, as Mr Lees-Smith pointed out, the existing Executive is emphatically opposed to the policy of claiming “emergency powers” and so provoking a quarrel with the House of Lords and possibly with the Crown, which might leave the Labour Government in a position of doubtful constitutional propriety. It is worth noting, in this connection, that a local Conservative Association, as if to show that the Socialist League has no monopoly in constitutional manipulation, is moving at the Conservative Conference that “it is better for the Peers to put forward proposals of their own for reform [of the House of Lords] before the next election for submission to the Government than for the Government to attempt to put any such proposals before the country.” At the Labour Conference the Socialist League's amendments were eventually withdrawn despite Mr Lees-Smith's exposition of official policy. The outcome of the whole controversy, therefore, is that although the Labour Party retains its right to revise Parliamentary procedure, it has not conceded one iota of democratic principle to Sir Stafford Cripps's campaign.

In the debate on economic policy the Socialist League's attack was repulsed after what Mr Herbert Morrison described as the “mildest fizzle” in the Party's history. The shining, and detailed, Utopia of Socialism-in-five-years had already, before the discussion began, paled into a mirage of vague generalities; and the amendment actually moved by Sir Stafford Cripps merely asked the Party “to change the whole basis of production and distribution so that productive power may be used to satisfy the needs of the people in accordance with planned economy,” etc., etc. And even this “sparse, skinny skeleton in italics,” as Dr. Dalton called it, was defeated by 2,146,000 votes to 206,000. Another Socialist League amendment to substitute terminable annuities for capital repayment, as compensation to owners of nationalised industries, was also heavily defeated. And it was no doubt principally in the hope of converting valour into discretion that the Conference later elected Sir Stafford Cripps to the Party Executive.

The most complete rout of the extremists came on the issue of foreign policy and peace. The Conference rejected not only the extreme pacifist, non-resistance policy, but also the Socialist League's fantastic and irresponsible proposal to support the League of Nations and at the same time refuse to make war in discharge of League obligations. The overwhelming victory of the principle of collective security at the Conference is remarkable, considering how strongly the tide of extreme pacifism has been running in the Labour Party in the last few years. But the Nazi revolution has done its work, and Mr Arthur Henderson's eloquent defence of the League system left the Conference with no escape from the irrefragable logic of the situation: without a collective system there can be no peace, and without the honouring of treaty obligations there can be no collective system.

Moreover, the Conference clearly realised that the disappearance of trade unions in more than one European country has made nonsense of the old Marxist policy of the international strike, and consequently that to contract out of the collective system is to abandon the rest of humanity, workers and all, to their fate at the hands of militant Fascists. “We cannot wash our hands,” Mr Attlee said, “of responsibility for our Socialist colleagues and the workers all over the world.” The Socialist League's policy of supporting the collective system except in case of war was aptly described by Mr Bevin as “comparable to a man joining a trade union on condition that he will not be expected to come out with his fellows in the event of a strike.” As a result of the Conference's eventual adoption of the official report, Labour's foreign policy has not only been clearly defined, but has been brought into line with that of the T.U.C. and the Liberal Party. Such a policy, we may add, in view of Lord Hailsham's extraordinary attack upon it as “dangerous and foolish,” amounts to no more than a re-affirmation of the League Covenant and the Kellogg Pact, of which Great Britain is a signatory.

Decisive, however, as was the victory of moderate opinion at Southport, it would be a mistake to suppose that the Labour Party has returned to the mild and tentative frame of mind of the 1929-31 Government. “For Socialism and Peace,” still stands, with its proposals for the complete nationalisation of banking, transport, the land and the key industries of the country. And Dr. Dalton made it clear to the Southport Conference that Labour, if elected with a majority, means to carry out that policy. The Executive intended, he said, that in these circumstances the Party would “take such steps within the normal lifetime of the next Parliament as to lay the foundations of the Socialist Commonwealth and to sweep away obstructions wherever found.” The policy is there. Only the timetable is uncertain, and remains to be decided by the Party leaders—whether before or after the General Election. If Labour secured a majority in the House of Commons, that is to say, it would be no more possible for the country to retard that time-table than for the Socialist League to advance it.

THE QUARTER'S NEW CAPITAL

WHILE trade and industry in this country are “marking time” after the improvement of the last twelve months, “cheap money” is no longer exerting so great an influence in lowering the capital cost basis of both State and private enterprise. The figures of the amount of new capital (excluding conversion operations) raised in the London market in the third quarter of the year are not usually as large as those of the first two quarters; but the figures for the quarter just ended are well below those of the third quarters in the last two years, and, apart from the low record of the crisis year, 1931, are the lowest for many years past. The total amount raised was only £28.5 millions, against £116.3 millions in the third quarter of last year—pulling down the nine months' total this year by an even greater reduction from last year's figure for the three quarters. This is almost entirely due to a marked fall in British Government borrowing.

The British Government borrowed nothing: indeed, there was a net debit of £200,000, as Savings Certificates were cashed to a total greater by that amount than the total of sales. British, Colonial and foreign corporations, and mining, finance and exploration undertakings borrowed £4 millions and £7.1 millions respectively—the main borrowing in the latter group being for gold-mining purposes; and the category “mainly home industry” accounts for the balance of £16.8 millions.

The geographical distribution of borrowings in the first nine months of this year is as follows:—

	DESTINATION OF NEW CAPITAL					
	First Nine Months					
	1913	1930	1931	1932	1933	1934
United Kingdom—Government	Nil	43,790,000	12,550,000	101,659,200	150,813,600	42,650,000
Other	25,595,200	79,309,200	38,146,900	43,514,100	46,550,400	57,989,300
	25,595,200	123,099,200	50,696,900	145,153,300	197,364,000	100,639,300
British Possessions—Government	20,003,800	27,294,800	30,571,600	16,041,200	21,969,500	8,461,200
Other	36,944,200	10,862,200	7,872,800	1,453,300	2,434,900	15,521,700
	56,948,000	38,157,000	38,444,400	17,494,500	24,404,400	23,982,900

	67,778,200	31,333,000	9,123,900	27,000	5,335,200	1,403,000
Grand total..	150,321,400	192,589,200	98,265,200	162,674,800	227,103,600	125,425,200

Here, the outstanding features are the increased proportion of new borrowing now going to undertakings domiciled in this country; the sharp rise in borrowings by concerns in British Possessions, again mainly gold mines; and the falling off this year in borrowing by all Governments, at home and

abroad. The slight rise in borrowings by foreign concerns in the last quarter is only due to an issue by an American trust interested in Mexican gold.

The next table shows the borrowers in their various categories, together with the amounts raised by them in the third quarter of the present year, in the first half of the year, and in the first three quarters of 1933 and 1934:—

ANALYSIS OF NEW CAPITAL APPLICATIONS				
Description	First Half-Year, 1934	Third Quarter, 1934	Total Nine Months to September 30	
			1933	1934
British Government Loans	£42,850,000	Dr. £200,000	£150,813,600	£42,650,000
Colonial Government Loans	8,461,200	Nil	21,969,500	8,461,200
Foreign Government Loans	Nil	Nil	5,298,600	Nil

Foreign Corporations	Nil	Nil	Nil	Nil
British railways	Nil	178,500	Nil	178,500
Colonial railways	Nil	Nil	Nil	Nil
Foreign railways	635,700	200,000	738,300	835,700
Australasian mines	1,520,600	2,167,500	1,581,200	3,683,100
South African mines	3,472,600	2,617,000	969,400	6,089,600
Other mines	Nil	Nil	358,700	6,661,900
Exploration, financial and investment trusts	4,548,500	2,113,400	4,977,100	1,478,000
Breweries and distilleries	1,478,000	Nil	Nil	Nil
Merchants, importers, etc.	Nil	629,800	1,755,800	629,800
Stores and trading	516,100	224,600	30,000	740,700
Estate and land	299,500	284,900	114,000	884,400
Rubber	Nil	469,300	Nil	469,300
Oil	5,462,500	8,332,400	Nil	13,794,900
Iron, coal, steel and engineering	3,164,700	317,500	1,016,200	3,482,200
Electric lighting, power and telegraph	Nil	Nil	Nil	2,153,600
Tramways, omnibuses, etc.	2,153,600	Nil	Nil	Nil
Motor traction and manufacturing	Nil	607,800	1,847,200	1,027,800
Gas and water	420,000	3,707,500	Nil	3,896,800
Hotels, theatres and entertainments	188,300	Nil	Nil	Nil
Patents and proprietary articles	Nil	Nil	817,000	Nil
Docks, harbours and shipping	9,708,000	2,919,600	14,124,500	12,627,800
Banks and insurance	Nil	Nil	Nil	Nil
Manufacturing and miscellaneous	96,880,200	28,545,000	227,103,600	125,425,200

In these figures, the extent of the drop in Government borrowings is the more evident; but British Corporation, County and Public Boards have also raised less new capital; while the borrowers which once accounted for so much of London's importance as a financial centre—foreign corporations and British and foreign railways—are still absentees from the new capital market, as also are Colonial railways, to all intents and purposes. The continued rise in the price of gold in terms of sterling, reinforced, no doubt, by fears of devaluation in the remaining "on-gold" countries and of a further devaluation in America, accounts for the extraordinarily heavy borrowings by gold-mining concerns. All the South African mines come under this observation; as also all the Australasian mines, and most of "Other mines." In the latter group new borrowings by West and East African gold-mining concerns are noteworthy; and even in the category "Exploration, financial and investment trusts" £1,000,000 at least of the new issues last quarter was for an Australian trust interested in Australian gold mining. The stable nature of the demand for beer may be reflected in the cessation of new issues by breweries and distilleries. And the absence of "Merchants, importers, etc.," from the new capital market is a reminder that, despite our internal recovery, international trading does not yet call for more capital. On the other hand, there is a faint sign of the need for new capital in the rubber group; though this may be little more than the effect of restriction. The effects of our iron and steel tariff and of the coal quota schemes are reflected in the extraordinary increase in borrowings by iron, coal, steel and engineering concerns—composed in the last quarter of issues by Stanton Ironworks, Powell Duffryn Steam Coal, Wm. Cory and Son, Carlton Main Colliery, and Welsh Associated Collieries, and, in addition, in the first two quarters of this year, of issues by Baldwins, Powell Duffryn again, United Steel, and Stewarts and Lloyds. Electric light and power concerns are still increasing their issues; but in the last quarter automobile and cycle manufacturers were absent from the market. Under "patents and proprietary articles" appears the big issue by the Eno concern last quarter, amounting to £2,200,000, and the £1,025,000 preference issue by Griffiths, Hughes Proprietaries. Further evidence of the poor state of international trade is the continued absence

of "Docks, harbours and shipping" from the market. "Manufacturing and miscellaneous" includes mainly home industries; but it is notable that a smaller proportion of total borrowings this year (excluding all Governments' borrowings) has gone to this group than in 1933. Among the new issues in this group during the last quarter are those by London Brick and Ideal Boilers, reflecting the activity in building; and the balance is spread over undertakings engaged in printing and publishing, paper, chemicals, metals, and the £360,000 issue by "Murex."

The distribution of the new capital raised among the different forms of participation in enterprise is shown in the next table:—

NATURE OF BORROWING					
		Debtentures, Bonds, etc.	Preference Stocks and Shares	Ordinary Stocks and Shares	Total
Year	1927 ...	228,958,000	36,836,600	89,371,400	355,166,000
"	1928 ...	212,917,900	45,062,600	111,177,600	369,158,100
"	1929 ...	137,670,300	31,543,400	116,025,700	285,239,400
"	1930 ...	227,658,500	15,548,800	24,593,300	267,800,600
"	1931 ...	74,835,599	6,911,859	20,296,833	102,044,291
"	1932 ...	170,172,800	12,773,800	5,963,400	188,910,000
First nine months	1930	157,669,400	14,817,100	20,102,700	192,589,200
First nine months	1931	75,165,300	6,223,000	16,876,800	98,265,100
First nine months	1932	149,022,000	8,045,700	5,607,100	162,674,800
First nine months	1933	213,084,841	7,329,566	6,689,204	227,103,611
First nine months	1934	75,051,038	13,408,856	36,965,315	125,425,209

After the 1928 and 1929 "equity boom," and dating from the onset of the depression and the fall in interest rates, the Government bond and the industrial debenture tended to absorb more and more of the new capital raised. This tended to increase the amount of industrial capital on which fixed charges had been incurred; and although the rate of interest of these charges has steadily fallen since 1932, the figures for the first nine months of the current year are a welcome sign that industry is redressing the balance, and that equity participation is returning to favour. This is a favourable feature, from the investor's point of view as well as from that of industry; for the latter is constantly tempted, at a time of depression when the investor wants a fixed return secured on specific assets, greatly to increase that proportion of an industry's capital subject to fixed charges. The preference share began its "come-back" a little earlier, as is only natural, for it is in the nature of the case a compromise between the fixed charge and the equity. Some of the increase in the amount raised on equity participation is due to the gold-mining issues, for which the ordinary share is the best adapted form of participation. The revival of speculative interest should also be borne in mind in this connection.

The entry of borrowers on to the public market by the circuitous route of the Stock Exchange "introduction" continues to be a feature of these figures:—

CASH INVOLVED IN ISSUES BY STOCK EXCHANGE INTRODUCTION

	United Kingdom	Dominions and Colonies	Abroad	Total

The greatly increased amount raised in this way for the Dominions and Colonies last quarter is once more almost wholly due to gold-mining issues for South Africa, Australia and West Africa. It is clear, however, that more capital is also being raised for the home market by this method.

Apart from the raising of new capital, the process of conversion, by which the previously fixed rates of return on existent capital are reduced, is still going on.

TOTAL CONVERSION OPERATIONS

	Total Conversions		Total Conversions
Whole year 1928	£324,041,983	Whole year 1932	£2,510,774,302 (a)
Whole year 1929	203,525,540	Whole year 1933	223,141,000 (b)
Whole year 1930	187,088,084	First nine months of 1934	188,783,701 (c)
Whole year 1931	12,246,375		

(a) Includes British Government conversions of £2,478,967,382.

(b) Includes British Government conversions of £50,757,000.

(c) Includes British Government conversions of £105,000,000.

Of the £186.8 millions of capital converted to lower rates of interest, British, Dominion, Colonial and foreign Government conversions account for £150.4 millions—including British Government conversions of £105 millions, and Argentine, Australian, Canadian, New Zealand, and Southern Rhodesian conversions; the remainder being on account of corporations and private concerns.

The following table shows the principal issues of the last quarter, with their issue prices and latest quotations:—

PRINCIPAL ISSUES OF THE QUARTER

Month of Issue	Name and Description	Nominal Amount	Issue Price	Price, Oct. 4, 1934
1934				
July	Kentian Gold Areas (10/-)	1,000,000	Par	14/6
July	Cory (Wm.) £1 shares	1,500,000	73/8	74/-
July	Griffiths Hughes Proprietaries 5½% cum. pref. £1	1,000,000	20/6	23/-24/-
July	New Zealand Government 3½% stk., 1955-60	3,989,100*	Par	2½-2½ pm
July	Welsh Associated Collieries 5½% pref., 4½% deb.	500,000	21/8	17/9-18/3

Sept.	City of Stoke-on-Trent 3½% 1955-65	1,500,000	Par	100-100½ pm
Sept.	Eno Proprietaries 5/- Ord.	1,000,000	11/-	13/-13/3

* For conversion purposes.

The combined effects of continued "cheap money" and of the revival of speculative interest are evident in the generally maintained or enhanced values of the securities concerned.

The history of the new capital market in the first nine months of the current year can therefore be summarised as follows: The continuance of "cheap money" has carried conversion a little further; the borrowings of Governments have been cut down from their recent high levels; concurrently, or perhaps consequently, speculative interest has revived and equity participation is coming back into favour almost exclusively in gold-mining or in home industries; but the total of new borrowing is on a reduced scale, which gives no indication of any rise in the cost of new capital in the foreseeable future.

SHUFFLES AND DEALS

THE diplomatic cards in Europe are being thoroughly reshuffled. As Mr Eden observed in a public statement, recently broadcast from Geneva, the most conspicuous characteristic of the present European situation is its fluidity. There seems to be a regular frenzy, on the Continent, for reversing the post-war alliances, or informal friendships, that have prevailed up to date. The small countries are now following the example of the Great Powers. The two Great Powers that started the movement were Russia and Italy. And these two countries themselves were moved by a growing uneasiness over the policy of Nazi Germany. The National-Socialist revolution in Germany thus seems to be the *primum mobile* to which the whole movement may be traced back. But because Germany has caused the movement, it does not follow that she has gained by it; for to inspire fear and hostility is not the same thing as to acquire strength. If we peer beneath the fluid surface of European politics we may find that the rock of French ascendancy, which has been the key-point of European politics since the withdrawal of the English-speaking countries from active participation in Continental affairs, has not been shifted, nor even seriously battered, by the Nazi flood.

The outstanding change, after all, in the European situation is the alienation of Russia and Italy from Germany and the accord between both these Great Powers and France. And, supposing that France did have to pay for the Russian alliance by losing the Polish, and for the Italian by losing the Yugoslav, can we say that France would be the loser on balance? Would she not rather be converting a pair of exposed and defenceless pawns into a knight and a bishop? As far as the post-war French system of alliances with the East European successor States was ever secure, it was so because France—as British critics of her policy have always rubbed in—was giving a good deal more than she was getting. To secure Polish support she was involving herself in all the grievances against Poland that were felt by Germany and Russia; and in order to have Yugoslav support she was involving herself, similarly, in Yugoslavia's feud with Italy. In fact, two small satellites were purchased at the price of vicarious quarrels with three Great Powers. This was not a good bargain, surely, from the French point of view! In fact, it was rather a bargain of which France might have been glad to be quit, even if the quittance had secured her nothing more than a cancellation of Italian and Russian hostility. If she can convert that hostility into friendship as the price of discarding her Polish and Yugoslav burdens she will have done remarkably well for herself.

If France retains at least the full extent of her former ascendancy, that is one fixed point that has not dissolved in the general European flux. And there is a second fixed point which is unfortunately only too obvious. There has been no change for the better in Franco-German relations. The two greatest Powers of the Continent remain

unreconciled, and now, as before, their enmity governs and poisons the whole European situation.

This gulf between France and Germany is not being bridged by Herr Hitler's repeated declarations of a desire for better relations. These declarations may be sincere; but the French pay more attention to the general spirit and policy of the National-Socialist regime. It may also be strictly true, as Herr Hitler says, that, if and when the Saar question is settled, there will be no territorial issues left outstanding between France and Germany. In this statement, however, there are two catches. The first, and the less serious, of them is that the Saar question has by no means been settled satisfactorily as yet. The second, and fundamental, catch is that the territorial issues are not the only, or even the most vital, question between the two countries. The crux is that, so long as France and Germany exist at all, wherever the precise frontier between them may run, each of them is capable of acquiring a hegemony over Europe; and a French hegemony is as intolerable for Germany as a German hegemony is for France. But it is important to realise that these alternative possibilities of hegemony depend on the general European situation, and not on local territorial arrangements.

Thus the main Franco-German problem will still remain to be solved, even if the Saarland plebiscite goes as well as it can be expected to go in the circumstances. But even this cannot be taken for granted; for the good effect of the Franco-German agreement over the conditions under which the plebiscite is to be held has been very largely undone by subsequent Nazi efforts to do just what, in that agreement, the Nazi Government of the Reich renounced. The persistent Nazi misdemeanours in the Saar have now drawn from the French Government the very plain and serious warning—delivered by M. Barthou in the League Council on September 27th—that France will, if necessary, intervene in order to prevent the plebiscite from being turned into a farce. Since then the Governing Commission of the Saar has had to issue an ordinance to prevent the *Deutsche Front* from securing, by intimidation, a monopoly of the use of all halls suitable for public meetings in the territory. The situation is not auspicious, since force is the only expedient at the Nazis' disposal for recovering the ground, among the population of the Saar, which their use of force in the Reich has lost for them. And since Herr Hitler cannot face the risk of a defeat in the Saar, it is to be feared that he may not desist from the use of his sole weapon, even if this threatens to bring him into a head-on collision with France.

While Franco-German relations are thus, at the moment, unpromising, Franco-Italian relations have been drawn closer by the publication, on September 27th, of a renewal of the declaration of February 17th in support of the independence and integrity of Austria. We advisedly speak of Franco-Italian relations only in this connection, though both the declarations in question have been subscribed to by three Powers. We do not, however, understand the attitude of His Majesty's Government in this Austrian affair; for they are apparently content to use the same form of words as France and Italy on the understanding that they will not take the same action if their bluff is called. If we are not prepared to act in order to uphold the independence of Austria, might it not be better to leave the brave words unsaid? This negativeness of British policy is another fixed point in the European situation, which has not changed.

It remains to take a glance at the "uneasy motion" of the lesser States in Eastern Europe. Hungary is now debating the desirability of enlisting under the German instead of the Italian banner, if Italy has really abandoned the revisionist camp and thrown in her lot with France. Yugoslavia is seeking, more eagerly than ever, to cover her rear, against all eventualities, by establishing a good understanding with Bulgaria. The Yugoslav royal visit to Sofia, in return for the Bulgarian royal visit of last year to Belgrade, is another step along this road. As for the present political crisis in Roumania, it looks as if M. Tatarescu—or, perhaps we should say, the forces behind M. Tatarescu—were seeking a path which leads away from M. Titulescu's foreign policy. And since M. Titulescu is the Roumanian pillar of the French system of alliances, we may infer that this is a gain for the party in Roumania

which favours an imitation of the present Polish policy of relaxing the ties with France.

We may add that a re-orientation of some of the successor States towards Nazi Germany would not at all necessarily have an adverse effect on the prospects of European peace. If Yugoslavia and Hungary, for instance, were both simultaneously to gravitate towards Berlin, the tension between them would tend to slacken. If Roumania did the same, the feud between Roumania and Hungary might be eased. Again, if Poland were to put herself into Germany's pocket, then the vexed question of the Corridor would perhaps become just Poland's funeral instead of Europe's nightmare. Anxious and unpleasant though the general situation may be, much may happen on the European stage before "certain eventualities" need be feared.

THE NATIONAL ACCOUNTS

BOTH taxpayers and beneficiaries of the State generally scan the Exchequer's position halfway through the financial year with care and premonition. They hope for some inkling of the fate they may expect in the following April. It is not possible, however, to base any accurate guess at the final budgetary situation on the results for the first six months of any year. A large proportion of income tax and sur-tax is paid in the second half of the year. Various items on both sides of the accounts, including miscellaneous receipts, death duties and certain supply service expenses, do not fall regularly in each half-year. Moreover, for the interpretation of this year's results to date, the figures for the first half of last year are somewhat misleading, owing to the fact that the usual half of the income tax due under Schedules B, D and E was collected in July, 1934, instead of only one-quarter which had to be collected in July, 1933.

On the whole, the figures are fairly promising. The deficit on September 30, 1934, was £54,643,844; a year earlier it was £48,590,155, but the whole year 1933-34 showed a surplus of some £30 millions. Ordinary revenue for the half-year at £273,883,086 is £1,853,756 less than in the first half of 1933-34; this appears auspicious, considering that total revenue for 1934-35 was expected to fall short of that for 1933-34 by £18 millions, owing to tax remissions in the current year and certain windfall receipts last year. Miscellaneous receipts were lower by £8 millions—though this item may pick up in the next six months. Death duties are down by £4 millions, which roughly corresponds to the rate of fall anticipated for the whole year; Excise by £1.5 millions, as compared with an estimated decline during the whole year of only £650,000; and sur-tax by £400,000, owing to the fact that assessments are based on the still dwindling incomes of 1932-33. On the other hand, income tax, which for the whole year was estimated to fall by £9.4 millions, shows an increase of £7.5 millions over the first six months, largely owing to the return to half-yearly payments in July of this year, while Customs increased by nearly £4 millions, as compared with an estimated increase for the whole year of only £4.5 millions. Receipts from the Post Office rose by nearly £1 million and from stamps by £600,000, as compared with estimated increases for the year of £2.3 millions in both cases.

Over the whole year, then, the income tax yield is likely to be well up to budgetary expectations owing to rising dividends; the expanding yield of Customs indirectly reflects the increase in industrial activity, and there is reason to believe that it will at least be maintained during the rest of the year. There seems little reason to doubt, however, that receipts from Excise duties will continue their downward trend and will show less elasticity than was expected last April. From the above analysis it looks as though by the end of the financial year revenue should exceed estimates. This is hardly surprising; for, as we pointed out in our comments on the Budget, the revenue had almost certainly been under-estimated.

But this is only half the story. Mr Chamberlain's colleagues are already finding plenty of outlets for any possible surplus. By September 30, 1934, ordinary expenditure amounted to £328,526,930—£4.2 millions more than at September 30, 1933, though last year we had paid £1.8 millions

on war debt account to the United States. Supply services alone have accounted for £5,886,743 more than a year ago, as compared with an estimated increase for the whole year of £10.8 millions—of this increase nearly £4 millions is attributable to civil service and revenue expenditure—and presumably expenditure will be still further swollen when the various subsidies to farmers, shipowners and builders, and the first expenditure on the Air Force expansion, for which no provision was made in the Budget, have to be

paid out. Moreover, the restoration of the 1931 unemployed benefit "cuts" will have slightly more effect during the next six months than hitherto.

It may be concluded from the accounts for the first half of the financial year that the Chancellor was by no means optimistic in his estimates of revenue, but that he will have to put a very strong brake on the spending propensities of certain of his colleagues if extraordinary expenditure is not to rob us of the surplus born of his extreme caution.

NOTES OF THE WEEK

Conservatives and India.—The Conservative Party Conference at Bristol met under the shadow of the Churchill and Page Croft Indian campaign, which was already embarrassing the Party Executive at Birmingham a year ago. On Wednesday this week an exchange of letters between Mr Baldwin and Sir Henry Page Croft was published in the Press. From the hint of malice which was discernible beneath the suave tones of this correspondence, it was already apparent that the cleavage in the Party on this issue, if not wide, was deep. At a meeting of the National Union of Conservative Associations some time ago Mr Baldwin had promised "to take counsel . . . with this great body" when the Select Committee on India reported. Sir Henry Page Croft inquired in his letter whether these phrases indicated that the whole body of delegates of the National Union were to be consulted or merely the Council of the Union. He added that if only the Council were meant, he would bring forward at the Bristol Conference a motion attacking the White Paper policy. Mr Baldwin made it clear in reply that "this great body" referred merely to the Council of the Union. He also pointed out that it was possible for a meeting of the larger body to be called at any time by the General Council or summoned on a requisition by 50 constituency associations. This did not imply, however, in Sir Henry Page Croft's opinion, the "complete frankness and freedom on the issues involved" promised by Mr Baldwin; and Sir Henry consequently decided to press his motion, which was debated on Thursday. The official amendment that it was "not in the interests of the Party" to pass any resolution was only carried by 543 votes to 520. This reveals a remarkable growth in the strength of the rebels since a year ago, when the adverse vote was 737 to 344. While it is a tactical victory for the Die-hard group, it means that the Party is still pledged to await the Report of the Joint Select Committee on the Indian reforms. This breathing space may be used to convince the Die-hards of the passions their policy is calculated to rekindle in India.

The Chancellor in the City.—Speaking at the Lord Mayor's annual dinner to the merchants and bankers of the City of London, Mr Neville Chamberlain made some explicit references to the Government's monetary policy and the present weakness of sterling. It was the policy of the Government, he said, for the present to maintain the independence of sterling. The Exchange Equalisation Account was founded for the purpose of ironing out excessive fluctuation in the value of the currency. The Government has never attempted and is not attempting now by means of that fund to fix the exchange at a given point, to maintain it, even within a fixed limit of values, in the face of, and in opposition to, seasonal or other powerful influences. This statement implies that for the moment the pound will be allowed to take its course, and that the control will only intervene on an appreciable scale if the natural fluctuations in the pound become distorted by abnormal operations. Mr Chamberlain proceeded to refer to the growth of the sterling area, which, so he said, was becoming a recognised feature of the international monetary system. He might have added that it also makes for the greater stability of sterling. Both he and the Governor of the Bank of England, who spoke later, welcomed the coming completion of the chain of

Empire central banks, while Mr Norman also referred to the utility of the Bank for International Settlements as an instrument in bringing about the co-operation of world central banks. Mr Chamberlain, on the other hand, was more pessimistic over international economic affairs. He roundly asserted that we could not hope to recover, at any rate for the present, our old international trade, and the Government must do what it could, for example, by the conclusion of commercial treaties, to increase our share of what was going, and to help industries to "help themselves" to meet foreign competition and to expand the home market. Such a statement is so nebulous as to suggest that, as he was speaking in the City, Mr Chamberlain suddenly found he had ventured on very thin ice. Mr Norman later pointed out the City's dependence upon international trade; and the Chancellor's audience would certainly have welcomed more definite evidence of the Government's determination to co-operate with other countries in the removal of trade barriers, of which the Government itself have provided most effective examples, and in the revival of world trade. But did the City really expect it?

Mr Roosevelt's Determination.—Those who regard Mr Roosevelt's radicalism as no more than the ephemeral caprice of a great opportunist are likely to be disappointed. Now, as a year ago, attacks by Conservatives on the New Deal only move the President to a more vigorous and unequivocal defence of his policies. The Federal Advisory Council, which consists of twelve leading bankers, one from each of the Federal Reserve Districts, issued a statement last week containing the following dictum:—

No real or permanent recovery can be had or can reasonably be hoped for until (the United States) has been placed upon a sound financial basis, and such a sound basis implies a standard gold dollar of definitely and permanently fixed gold content with other forms of currency and redeemable at all times in gold bullion in the amount so fixed.

The Council also urged the balancing of the Budget and added some rather sweeping statements of a theoretical character such as the following: "A currency of fluctuating value" (meaning, presumably, gold or exchange value) "will not materially affect the general price level." The whole document was sent by the Council to the Federal Reserve Board; but the Board returned it with the comment that the questions discussed were outside its jurisdiction. Mr Roosevelt, in a broadcast address on Sunday, declared that the American people would "not be frightened by reactionary lawyers or political editors," and proceeded to outline his future policy. He would confer during October, he said, with representatives of capital and labour, and would seek their co-operation in establishing "a specific trial period of industrial peace." He would stand or fall by his refusal "to accept as a necessary condition of our future" a permanent body of unemployed. He was not for a return to the definition of liberty under which "for many years the people were being gradually regimented into the service of a privileged few." He would modify the N.R.A.; but the policy of public works expenditure would be continued on the ground that "the demoralisation

caused by unemployment is our greatest extravagance morally." Finally Mr Roosevelt pointed to England, and claimed that the beginnings of recovery in this country were due, not to "orthodoxy," but to the abandonment of the gold standard and the conversion of the 5 per cent. War loan. In social security and the establishment of collective bargaining, Mr Roosevelt added, America had far to go before she could catch up with England. Almost simultaneously with this notable speech, the announcement was made that Mr Donald Richberg, one of the President's more radical assistants, had been appointed chairman of the new committee which is to supervise the revision of the N.R.A. It seems reasonably certain that Mr Roosevelt is still determined to stake, not only the November elections, but Recovery itself on his faith in the New Deal.

Contending Forces in Japan.—Ever since Japan ran amok on September 18, 1931, the foreign observer has been able to catch glimpses of a fierce struggle going on inside Japan. The military adventure on the Asiatic Continent was ultimately the work of the junior officers of the Japanese Army. These young men are, through the private soldiers, closely in touch with the difficulties and grievances of the Japanese peasantry; and they sincerely, if misguidedly, believe that a policy of military expansion will cure the peasantry's ills. The outbreak of this powerful element in Japanese life has been directed as much against the Japanese capitalist at home as against the foreigner in Manchuria or at Geneva; for, in the Japanese militarist's mind, anti-capitalism and xenophobia go together. The policy of the Japanese industrialists has been to keep at peace with the world in order to win as large a share as possible of the world market, in the belief that an increase in Japan's foreign trade is the best solution of the problem of providing for Japan's increasing population. But the young militarists, instead of regarding the Japanese industrialist as a national benefactor, denounce him as a vampire who deserves no more mercy than the Chinese or European or American, who is alleged to stand in the way of the Japanese nation's supposed interests. Last week the party which includes the Japanese Foreign Office as well as Big Business got in a telling blow when it came to terms with Russia over the price at which the Chinese Eastern Railway is to be sold to "Manchukuo." For this agreement has much reduced the risk of war between Russia and Japan. The Japanese War Office has promptly replied by issuing a pamphlet which is said to represent the personal views of the War Minister, General Hayashi, and which undoubtedly represents those of the Japanese officers' corps. The pamphlet insists that Japan is in formidable danger from the Russian Air Force and the American Navy; looks forward to an armaments race with both Powers at once; and forestalls the argument that such a policy would break the back of the present Japanese economic system by proclaiming in effect: "So much the worse for Capitalism! If Capitalism cannot meet Japan's military needs, then Capitalism must go!" The pamphlet advocates return to a "moral economy" in Japan, which may mean Fascism, or the revival of the old Japanese feudalism in an unsuitable economic environment. It remains to be seen whether this pamphlet is merely a defiance of Mitsui and Mitsubishi, or whether it is also a defiance of economic realities—a far more formidable antagonist for militarists to tackle. It is distinctly unfortunate that, at this rather tense moment, the Mission of the Federation of British Industries to "Manchukuo" should find itself in Japan and should be giving the occasion, which we feared it would give, for the Mission's Japanese hosts to enlarge upon its political significance.

Renewed Crisis in Spain.—Pressure from the Right has unhorsed Señor Samper's Government. Spain is once more trying the experiment of a Lerroux Cabinet, whose uneivable task it is to ride sufficiently on the Right to satisfy the agrarian and Catholic representatives in the Chamber, without provoking the Left to violence. Señor

Lerroux's previous performance in so slippery a saddle, which is the only kind of seat any middle Party in Spain can hope for, does not suggest that the new Cabinet will survive for long. When the debate opened last Monday, the Prime Minister's defence of his handling of the dispute between Madrid and Barcelona over the Cultivation Law met with a hostile reception. The Centre Group of the Radical Party commands only about 80 out of 472 votes, and the Samper Government had been kept alive by the support of the *Acción Popular* Party under Señor Gil Robles. The latter announced that to continue that support would be "to falsify the desire of the Spanish people as reflected in the last elections." This was tantamount to a bid for a Gil Robles Ministry, although hitherto the Right Groups had not admitted that they sought office in the present Cortes. The Government consequently had to resign. If the President of the Republic still pins his faith to a middle way, it is as a last resort and in order to avoid violence. Only a few days ago, Señor Martínez Barrios, formerly Señor Lerroux's adjutant, made a speech to the adherents of his new Republican Union Party which threatened "scaffolds—scaffolds which Republican generosity spared on April 13, 1931"—should the Right come into power. The President might, of course, have chosen to dissolve the Cortes and hold new elections, as he was advised to do by many of the Party leaders on Monday. He is unwilling to do so because he can only exercise this prerogative twice, and there is obvious danger in piling a possible Presidential crisis on top of the prevailing tension. The Right Parties would, on the whole, welcome elections in the near future, as it is doubtful whether the various elements claiming the title of "authentic Republicans" could at present show a united front. Meanwhile, all the old vexatious problems remain. If Señor Lerroux now attempts to impose the will of the Central Government upon the Generalitat in Catalonia, anything might happen in Spain.

* * *

Austria and the Nazis.—On Wednesday, the Austrian authorities published the official documents about the Nazi rising in Austria last July. From these documents, the complicity of German Nazi authorities in the July plot is plainly established. It was evident that, when the Reich Government apologised to the Swiss Government for the running by German Nazis of explosives into Austria across Swiss waters on Lake Constance, such complicity had been proved. But the Austrian documents now published reveal a much greater degree of complicity than Nazi apologists had been constrained to admit. For example, one document was taken from a Reich German who attempted to cross into Germany a few hours after the murder of Dr. Dollfuss, and was found to contain detailed instructions for a revolution in Austria. Another document found on the same man was a complete code for sending news of the revolutionary progress back to Germany. The official publication remarks: "It is a unique occurrence in European history that a revolutionary party should at great cost be organised and trained for violent action against a State by the governing party and by the Government of a neighbour State." And it points out that a revolutionary Austrian party was established on German soil, under German leadership, supported by wireless propaganda from German stations; and, finally, an "Austrian legion" was recruited, armed, drilled, equipped, and incorporated under the German Nazi S.A. Administration. The most damning indictment of the German Nazi authorities is the reminder that the Austrian Nazi organisation was incorporated in the German Nazi Party, and that on and after December 1, 1933, the unity of the German Nazi Party with the German Reich was laid down by law. German responsibility cannot be waived after this. The whole German Nazi campaign against the integrity, not only of Austria, but also of Dr. Dollfuss and of his Cabinet, is given in full. After the appearance of this publication, foreign observers both of Austria and of Germany will concentrate their attention on two points: first, on the course of Herr von Papen's Ambassadorship to Vienna and the activities of the Nazis in Austria; secondly, on the activities of the *Deutsche Front* in the Saar.

Overcrowding and the Slums.—The Government housing policy advances gradually under the pressure of public opinion. Lord Halifax officially admitted on behalf of the Government last July that overcrowding was as urgent a problem as slum clearance, and that a subsidy would be necessary if sufficient new houses were to be provided at rents within the means of the poorest workers. Sir Hilton Young has now announced further details of the scheme. A definition of overcrowding will be laid down, and local authorities will be made responsible for providing alternative accommodation by a fixed date. Financial assistance will be given on a scale sufficient to enable the authorities to provide adequate accommodation at appropriate rents; and such assistance will take the form of "an Exchequer subsidy for a term of years for each dwelling provided to reduce overcrowding, with a contribution also from the rates." The need of tenants will be taken into account in allotting these subsidised houses, as in the Leeds housing scheme. In its main outlines this is a practical and progressive policy, on which Sir Hilton Young can be sincerely congratulated. It is the greater pity, therefore, that he still refuses to set up the central housing authority which could undoubtedly help to reduce building costs still further by bulk buying of materials and centralised finance. Some success, however, ought to be attainable by Sir Hilton's present policy, provided he presses it on local authorities with sufficient urgency and determination. The experience of the slum-clearance campaign is not altogether reassuring in this respect. It is true that approved programmes of slum-clearance provide for clearing some 280,000 houses and rehousing 1,250,000 people by September, 1938. Only 25,000 houses, however, have yet been built, by Sir Hilton's own admission, and only 17,500 are at present under construction. Might not this mediocre record have been bettered if a central authority had been set up at the start?

* * *

The People's Bread.—Last century by dint of the export of settlers and capital, Europe fashioned for itself granaries in the world overseas. There, on virtually no-rent lands and under extensive methods of cultivation, the world's finest wheat was sent to feed the growing industrial populations of Europe, who, in return, exported the latest products of industrialism. For both the overseas settlers and the European workers, the growing volume of international exchange meant a rising standard of living. To-day *nous avons changé tout cela*—with the help of apostles of the "new economics." Nothing more points the moral than the entry of France, as an exporter on a considerable scale, into the world wheat market. Almost a decade ago the French Government began to protect the wheat farmer with a milling quota system. But this was not enough to prevent the price of home-produced wheat from falling, and a minimum price was consequently established below which wheat could not be legally sold. Then Nature took a hand and sent a bumper harvest in 1933. Growers obtained handsome profits, owing to a combination of the artificially maintained high price of bread and the indirect subsidy. They promptly, with Gallic foresight, cultivated more intensively for this year; and when the new cereal year opened a few weeks ago it was found that France had a carry-over of her own wheat from the 1933-34 year, as well as better yields than had been anticipated for the current harvest, despite the drought. Moreover, the North African Colonies of France, which are *départements* of the home country, have this year had a bumper harvest. So, the last few days, France is reported to have sold 230,000 tons of her wheat to Germany, Scandinavia, Italy and this country; a good quantity has already been shipped; and a further 220,000 tons is expected to be sold. These figures are not official, but the shipments have been heavy. "The jest is thin"—at least, for the French Government, taxpayers and consumers of bread; for the price fixed by the French Government for wheat in France is about 65s. a quarter, whereas the wheat for export has been sold at about 18s. a quarter, f.o.b. French ports. Thus it has been calculated that every 100,000 tons exported costs the French Government the equivalent, at the ruling rate of exchange, of about £1,250,000! Such is the cost of deprivation of the home consumer, and of benevolence to foreign con-

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK
LIMITED

Head Office: 41 LOTHBURY, LONDON, E.C.2

sumers, if only the Governments of the latter would allow them to get it! Moreover, at such a low price, not only has the world wheat price been brought tumbling down, but also the use of maize for fodder, at 21s. a quarter, has been adversely affected. If the European industrial nations go on maintaining bread and wheat prices in the interests only of farmers—our own Government's efforts are as noxious in principle, though they are limited quantitatively until 1935—the dumb animals will be the residuary beneficiaries of "the new economics"!

* * *

Mr Eden's Tour in Scandinavia.—In the course of this month Mr Eden is to pay successive visits to Denmark, Sweden and Norway. The courteous invitations from the three Scandinavian Governments did not include any suggestion of a fixed programme of discussion, and the Lord Privy Seal will not be accompanied by any permanent officials. The visits appear to be a natural and spontaneous sequel to a friendly intercourse between the representatives of the four countries at Geneva; but this does not mean that the visits are politically unimportant. The crisis of 1931, when the Scandinavian currencies followed the pound in going off the gold standard, and, in doing so, parted company with the Continental currencies, brought out the intimacy of the economic relations between Scandinavia and the United Kingdom. This important economic fact was made little of in this country at a time when extravagant hopes were being entertained about the possibilities of commercial relations within the Empire. And the trade agreements which we concluded with the Scandinavian countries gave little evidence of any appreciation, on our part, of the opportunities for increasing the volume of trade between us and them. Perhaps we are economically wiser to-day; and perhaps, also, it is not fanciful to discern a political as well as an economic aspect of Anglo-Scandinavian relations; for, *vis-à-vis* the Continent, the strategic—and, therefore, the political—situations of Scandinavia and Great Britain are now so similar that it would be only natural if a special political sympathy and understanding were to follow. Sweden and Norway, of course, have always in practice been as much of an island as this country; and even Denmark, in an age of flying, is not much more closely welded on to the Continent by the neck of Jutland than England is by the airways across the Channel. Scandinavia, like this country, is in Europe, but not altogether of it. And the more we realise our uncomfortable proximity to the Continent in the air age, the more acutely we feel a desire to be an *alter orbis*. In all this, Great Britain and Scandinavia have much in common; and, if the worst came to the worst on the Continent, our common interest in the European peace and in taking a more disinterested view of the issues involved might con-

ceivably be served by concerted action. These considerations may seem rather remote, yet they cannot be left out of account, and they certainly lend interest to Mr Eden's forthcoming visits to Copenhagen, Stockholm and Oslo.

* * *

Safety on the Railways.—September was one of the most calamitous months of recent years, and among its disasters must be counted two serious railway accidents, one near Glasgow and the other near Warrington. Full details of the causes of these accidents are not yet available. In Scotland there is no public coroner's inquest, while the evidence at the Warrington inquest, as reported in the daily press, contained at least one obvious technical lacuna. Still, an inspection of the lay-out of the track at the Glasgow accident shows that the main cause must have been that one of the trains ran past a signal at danger, while at Winwick Junction, the scene of the Warrington accident, the signalman admitted at the inquest that under pressure of heavy traffic he forgot the presence of one of the trains involved. For a full explanation of both tragedies we must await the reports of the Ministry of Transport's inspecting officers, who not only investigate every accident, but also make recommendations with the object of preventing a repetition. These reports will not be issued for several weeks, but meanwhile a few general comments are permissible. First, there has been in existence for many years an electric device called a track-circuit, which automatically enables a train to indicate its presence to the neighbouring signalman, and which also prevents the signalman from doing anything calculated to endanger that train. This device is now in extensive, though not universal, use, but its adoption is not compulsory, and it cannot have been in use at Winwick Junction or the accident could not have occurred. Secondly, as the official reports will doubtless point out, both accidents would have been prevented by the adoption of track circuiting plus automatic train control. The latter device renders it impossible for a train to pass a danger signal without the driver being warned and the brakes being partially applied. Certain safety devices, such as continuous brakes on passenger trains, the interlocking of points and signals, and the block system, are compulsory under legislation passed about fifty years ago. Track-circuiting and automatic train control had not then been invented, and quite apart from any technical reasons, their compulsory adoption all over their systems would involve the railway companies in heavy expense. In general, both drivers and signalmen have a fine record behind them, as the microscopic death-roll from railway accidents will prove, and this alone is a strong argument against panic measures. Still, the fact that both disasters were technically preventable must arouse misgivings, to which both the railway companies and the Minister of Transport would be wise to give heed. The railway companies, however, can fairly claim that before they can be compelled to improve their already magnificent record of safety, measures for lowering the appalling death-rate on the roads should be enforced, even if they involved road users in considerable trouble and expense.

Planning Empire Trade.—Mr Bruce, the High Commissioner for Australia, had some very pertinent things to say in his address to the Bradford Textile Society on Monday night. There were already signs of economic recovery, Mr Bruce said, in the internal trade of various countries. Nevertheless, "unless some steps are taken to bring about an increase in international trade, the present signs will prove a false dawn, and the world will sink back into even worse depression." If the British Empire was to organise its trade on economic principles alone, Mr Bruce admitted, Great Britain would concentrate almost entirely on producing industrial goods and the Dominions on primary products. For various non-economic reasons, however, the Dominions were determined to develop secondary industries; and this had been recognised at Ottawa. What had not been recognised was that Great Britain would set about, within two years, encouraging uneconomic agricultural production by artificial methods. If this policy was really to be continued, Mr Bruce pleaded, "the British

Government should definitely announce its objective." Mr Bruce is perfectly right. If we are to impoverish ourselves by producing at great loss those foodstuffs which we could import much more cheaply from abroad, let us at least decide how far the process of impoverishment is to go. At present we are trying to expand exports, to restrict imports, and to collect interest on our foreign investments all at the same time. But it cannot be done. The control which we have so far imposed on the exchange of goods has not organised but disorganised the course of Empire trade. If free trading is to be abandoned, let us at least have a plan and not a "tessellated pavement" of incoherent and conflicting regulations.

Retail Sales in August.—According to an article in last week's *Board of Trade Journal* the money value of retail sales in August was 4.8 per cent. greater than in August, 1933, which was the first month in that year to show an increase on the corresponding period of 1932. The improvement in August over the corresponding month a year ago was more pronounced than in any other month in 1934 with the exception of March and May, which reflected the stimulus of Easter and Whitsun respectively. The following index numbers of changes in the value of sales make no allowance for the normal spurt in demand before Christmas and for other seasonal influences:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1933—January	95	99	97
February	98	78	88
March	99	89	94
April	103	105	104
May	96	104	100
June	102	100	101
July	94	105	99
August	95	75	86
September	97	88	93
October	99	105	102
November	102	105	104
December	118	146	131
1934—January	98	104	101
February	101	80	91
March	104	95	99
April	102	100	101
May	103	113	108
June	103	103	103
July	98	107	102
August	100	79	90

The value of retail sales in August of food and perishable articles, which represent about 57 per cent. of the total value of reported sales, showed an increase of 4.6 per cent. on the corresponding month a year ago. Sales of other merchandise increased by 5.1 per cent. The increase in total sales as compared with August, 1933, was most marked in suburban London (6.3 per cent.). The returns for the South of England, where the improvement was least pronounced, showed a rise of 4.3 per cent. With the exception of dress materials, the value of sales of all classes of merchandise was higher than a year ago. In the furnishing departments the percentage increase was 12.2, a reflection of the building boom. Total sales in the period from February to August were 3.2 per cent. higher than a year ago, the percentage varying from 2.1 to 5.0 in the five districts. The value (at cost) of stocks of foodstuffs and perishables at the end of August was 6.1 per cent. higher than a year ago, but stocks of the total of other merchandise are unchanged on the year. The latest indications suggest that the improvement in retail trade is likely to be maintained in the near future.

The Gas Industry in 1933.—In contrast to the electricity industry, which publishes monthly returns of production, statistics relating to the output of authorised gas undertakings are only issued annually, eight months after the completion of the year to which they refer. The following summary of the latest return shows the development of the industry in recent years.

THE REVENUE

I.—AN ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1935, as compared with the corresponding periods of the preceding Year.

	Quarter from July 1 to September 30, 1934, compared with the corresponding Quarter of the preceding Year				Period from April 1, 1934, to September 30, 1934, compared with the corresponding Period of the Previous Year

OUTPUT AND SALES OF GAS BY AUTHORISED UNDERTAKINGS

Year	Number of authorised undertakings	Output of Gas	Sales of Gas	Number of Consumers	Length of Gas Mains
		(Mill. cu. ft.)	(Mill. cu. ft.)	(Thousands)	(Miles)
1921	797	250,345	229,077	7,559	39,548
1924	784	279,697	256,892	7,994	41,985
1927	782	303,037	280,202	8,698	45,821
1929	771	316,419	292,598	9,138	48,548
1930	767	313,046	289,991	9,344	50,218
1931	749	313,753	290,693	9,558	51,807
1932	734	309,336	286,988	9,773	53,156
1933	727	309,557	286,144	10,012	54,916

Although the quantity of gas sold by authorised undertakings showed a slight decline between 1932 and 1933, the gas industry made further progress last year. The length of gas mains was increased from 53,156 miles to 54,916 miles, and the total number of consumers rose from 9,773,015 to 10,012,379. The number of ordinary consumers rose only by 5,430 to 3,994,996, but the number of pre-payment consumers increased from 5,783,449 to 6,017,383. The quantity of gas sold to ordinary and power consumers declined from 164,883 million cu. ft. in 1932 to 162,235 million cu. ft. in 1933, presumably owing to a decline in the use of gas as a source of power. On the other hand, sales to pre-payment

consumers rose from 109,974 million cu. ft. to 111,666 million cu. ft., and the quantity sold for public lamps increased from 12,131 million cu. ft. to 12,243 million cu. ft. Among the materials used in the manufacture of gas, the quantity of coal carbonised declined from 17.0 million tons to 16.7 million tons, but the consumption of oil rose from 51.7 million gallons to 54.1 million gallons. The gradual reduction in the number of authorised gas undertakings in recent years is evidence of the steady progress of rationalisation. There is little doubt that the industry would benefit from greater concentration of production. The establishment of a national gas-grid is, however, precluded by the high cost of transmission over long distances, but there is undoubtedly scope for the development of local gas-grids in certain fairly thickly-populated areas. Co-operation with owners of coke-ovens is assuming increasing importance, for the quantity of coke-oven gas purchased by authorised gas undertakings rose from 1,325 million cu. ft. in 1921 to 15,441 million cu. ft. in 1932 and 16,327 million cu. ft. in 1933. The reduction of costs to the lowest possible level is especially important in view of the competition from the electricity industry. In the field of domestic heating and cooking, the challenge of electricity is not yet serious; and if the gas industry maintains its progressive services, its future seems assured.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

RESULTS OF THE TEXTILE STRIKE

At the end of the third week, and following the recommendation of the Board of Inquiry, the textile strike was abandoned. In some localities, however, the mills have not reopened and in others the workers have not yet returned. It was apparently near collapse for other reasons (a) the financial resources of the strikers were limited and, although they had apparently counted upon Federal relief funds, these funds proved not to be available in most of the affected States; (b) the strike never seems to have been effective in closing a large proportion of the mills by the vote of the workers, and with the mobilisation of the National Guard in seven States, attempts to close more mills by violence had but limited success. The Board of Inquiry did not settle the issues of the strike; its report consisted of a survey of the industry, an analysis of the conflicting views, and a series of recommendations for the future.

The following is a summary of its findings:—Before the adoption of the Textile Code, in July, 1933, the working week averaged 53 hours and wages \$8 or \$10 a week. The code provided a 40-hour week, with machine operations limited to two 40-hour shifts. Minimum wages were fixed at \$12 in the South and \$13 in the North. In the first months of the Code average earnings increased 70 per cent. Presently, however, the industry, which had been a chief beneficiary of the boom of May-June-July, 1933, began to slump. In December the Code Authority was allowed to cut production by 25 per cent., without increasing wages, and again in June, 1934. By August, the industry was running about 30 hours. Prior to the adoption of the Code, the United Textile Workers had a total membership of 15,000 or 20,000; but by May, 1934, it claimed about 300,000 in the cotton textile industry alone. A strike called in June was averted; the present strike began on September 3rd. The issues of the strike, briefly, were as follows:—

1. Recognition of the United Textile Workers as the sole bargaining agency of the industry.
2. Effective machinery for enforcing the labour provisions of the Code.
3. The 30-hour week, with the same pay provisions initially applicable to the 40-hour week.
4. Regulation of the "stretch-out."

Briefly, the Board dismissed the first of these with the statement that "an industry-wide collective agreement between the employers as a group and the United Textile Workers is not at this time feasible." For the second count, the report recommended the formation of a Textile Labour Relations Board. For the third, the report asked that the Department of Labour make a study of wages and earnings for the purpose of determining "whether a wage increase based upon reduction of hours can, under the prevailing conditions, be sustained"; and that this report should also cover the question of wage differentials. As for the stretch-out, it recommends that the new Textile Labour Relations Board shall appoint a "textile work assignments control board," but that between now and February 1, 1935, "no employer shall extend the workload of any employee."

The report is not a victory for the strikers, because their cardinal point was the recognition of the United Textile Workers; nor is it a victory for the employers, for the question of wages is virtually taken from them and vested in the Department of Labour, while at the same time the question of work-assignments is also transferred to a quasi-Governmental agency.

One paragraph of the report is so representative of the workers' sentiment in general that it is quoted herewith:—

The union contends that employment in the cotton textile industry has not increased to the extent that was expected under the N.R.A. in approving the forty-hour week and that the work-week should therefore be readjusted to absorb the employees attached to the industry; . . . that weekly *per capita* earnings have failed to increase in accordance with the predictions . . . and are now, particularly during periods of curtailment, too low to afford a living wage; . . . that, although the cost of living is lower than before the depression, workers as a practical matter do not find it true that present weekly wages are equal to the real wages of pre-depression times; that living costs of cotton textile workers . . . have increased since the adoption of the Code; . . . that . . . the minimum wage has tended to become the maximum.

From hearsay, these statements could be true of almost any industry.

The Report of the Board, if adopted, will introduce important changes in industrial relationships generally. The economic history of 1933 could be written in terms of Section 7 (a) of the N.I.R.A., and this strike, with its record of 16 killed and 200 wounded, is merely the most recent phase of the controversy.

THE MILLENNIUM IN KENTUCKY

The reports from various parts of the country indicate diversity of economic conditions. In and about New York sentiment is discouraged because conditions are discouraging. On the other hand, Mr Eugene Black, former Governor of the Federal Reserve Board, after a tour of the Southern States, was quoted in the Press to have said: "In most places I was told business was better than at any time during the last five years. In fact, I was told in Kentucky that if outside newspapers were barred from the State its citizens would believe the millennium had come." Kentucky is an example of an agricultural State which was untouched by the drought. The prevalence of strikes in industrial centres and the growth of extreme radicalism on the Pacific Coast and elsewhere are evidence that the millennium does not obtain in those regions. Broadly speaking, one can say that agricultural sections of the community, except those most stricken by the drought, are far more prosperous than the industrial sections; and that at present prices it appears that farm income is higher than last year or than at any time in the last few years.

Nothing like that can be said of any industrial area. In the middle of September the indices of industrial production were barely above the lowest levels recorded in 1932 or during the period of the bank holiday in March, 1933. This, of course, was directly due to the strike; but apart from the textile industry the indices are hardly above the level of a year ago. There are strong reasons for expecting an early lift from levels which imply industrial prostration. Retail trade has been better in recent weeks, and this suggests an actual increase in the volume of goods sold, since retail prices, except food, have not been rising in recent months. Steel output has been advancing for several weeks, and is currently at about 24 per cent. of capacity. The housing programme is being pushed with vigour, and committees are being appointed in each town and city to urge the work.

As November approaches, attention is focussed increasingly on the elections. It is generally conceded that the party relationships will not be materially affected; but many members of the 73rd Congress will not be returned. At present it is expected that the coming Congress will be considerably more radical than the last, as in several of the States the Democratic Party organisation is in the hands of personalities regarded as of the "Left."

ECONOMICS AND POLITICS

The resignation of General Johnson as National Recovery Administrator had been awaited for some time, as evidence of friction within N.R.A. had been appearing in the Washington despatches. His outspoken criticism of the textile union is, however, regarded as having determined the time and as having been the proximate cause.

The Treasury has characterised the September 15th re-financing as successful. Of \$1,250 millions Fourth 4½ Liberty bonds called, \$844 millions were presented for conversion, of which \$248 millions were exchanged for the long-term 3½ per cent. bonds and the remainder for 2½ per cent. four-year notes. The offer for the long-term bonds remains open. No major financing is now contemplated until December.

The rising cost of living, which was given as one of the causes of the textile strike, is probably responsible for much of the present labour unrest. The index of department store prices shows a rise from early 1933 of about 25 per cent.; the Bureau of Labour Statistics reports that retail food prices have risen 29.3 per cent. since April, 1933. With this advance in the cost of living there has been a distinct cooling, at least in the urban Press, toward the idea of raising the price level, and this change is not unlikely to influence the attitude of the next Congress towards monetary policy.

The silver programme was brought into the news again by a protest from China. In recent days a resumption of silver buying by the Treasury has been rumoured, and there is some concern in the financial district lest the silver programme force China to an embargo, and eventually to an irredeemable paper currency. On the other hand, the Silver Block is quite dissatisfied with the Treasury's slowness, and there is reason to give some credence to the rumours that the next phase of the programme will apply to the domestic price of silver.

FRANCE

PUBLIC OPINION AND FOREIGN AFFAIRS

FRENCH public opinion is not much encouraged by the diplomatic negotiations connected with the recent Assembly of the League. On the subject of Austrian independence, the delegates confined themselves to a declaration almost identical with that of February 17th. Yet the murder of Dr. Dollfuss and the European crisis which followed were not averted by that declaration. The claims of Italy, however, to obtain in Austria a sort of international mandate, the opposition of the Little Entente to this ambition, the reluctance of Great Britain to undertake any sort of new commitments on the Continent have prevented any more energetic or constructive solution. As to the Saar plebiscite, French public opinion fears new troubles and regrets that any decision has been adjourned until November 13th, barely two months before the plebiscite. Finally, the "Eastern Locarno" Pact has not made much progress since the accord between Poland and Germany restrained Poland from giving its adhesion to the proposed Pact.

Foreign policy, however, is less in the public eye than the Government's proposals for constitutional reform. Some important members of the Senate have shown themselves concerned at the audacity of the projected reforms. It is recalled how similar proposals made by M. Tardieu in the past were rejected by M. Herriot, who is a member of the present Cabinet. This does not appear likely, however, to restrain M. Doumergue, who still supports the proposals as he announced them last week. The departmental elections will take place on October 8th and 15th. Normally these elections have no political significance. This year, however, circumstances will give them a special importance, since their results will certainly have effects on the Radical-Socialist Congress, which will take place in a few days at Nantes, and also on the orientation of the Chamber when it returns from the recess at the beginning of November.

FINANCE COMMITTEE'S FEARS FOR THE BUDGET

The Finance Committee of the Chamber has begun its examination of the Budget Bill. The Budget purports to show a surplus of 36 million francs. The Committee fears, however, that this surplus will not be realised, and the rapporteur, M. Jacquier, rehearsed the series of deficits which have emerged since 1930. Moreover, the deficit for 1934 will be over 3,000 millions. The Committee fears that, for 1935, certain estimates of expenditure are too optimistic (credits for debts, for unemployment, for the revision of pensions, etc.), since the persistent crisis may belie expectations. Much anxiety derives from the fact that since 1930, in spite of the imposition of new taxes, the revenue is lower by 7,000 million francs. And the statistics of economic activity remain very unfavourable: industrial production being down by 15 per cent. since 1930, car-loadings down by 10 per cent., unemployment up by 50 per cent., bankruptcies up by 40 per cent., and foreign trade heavily down even in comparison with August, 1933. Finally, the long-term interest rate is at present rising.

M. Germain-Martin, Minister of Finance, in defence of the estimates, admitted that the balancing of the 1935 Budget was dependent on the evolution of the crisis. But he assured the Committee that the estimates had been calculated with the maximum of prudence, so that the deficit,

if it materialised, should not be higher than 1,000 millions. This figure is much lower than the annual amortisation of the public debt, so that such a deficit would not endanger the Treasury. M. Germain-Martin hoped, on the other hand, that the Budget would be favourably affected by decisions of the Government on measures against fiscal fraud, on its general crisis policy, and through the public works scheme, etc. In conclusion, he reiterated the intention of the Government to maintain Budget equilibrium, while maintaining the stability of the currency. The adjustment of French prices to foreign prices must be achieved, he said, by "reasonable" measures rather than "brutal" changes.

According to the statistics published by the Comité Central des Houillères de France, the production of French coalmines during August, 1934, totalled 3,918,839 tons in 26 working days, against 3,836,594 tons in July in 25 working days and 3,913,807 tons in August, 1933, in 26 working days. The average daily production was therefore 150,725 tons in August, 1934, against 153,464 tons in July and 150,531 tons in August, 1933. The number of men employed was 233,606 at the end of August, 1934, against 234,599 at the end of July and 247,345 at the end of August, 1933. The production of coke in the coke plants of the coalmines was 343,058 tons in August, against 340,152 in July and 331,863 in August, 1933.

PARIS, October 3.

GERMANY

THE NEW IMPORT CONTROL "PLAN"

THE "New (import) Plan," as it is now called, did not come into force effectively on September 24th as was promised. Several days later the Supervision Boards had little knowledge of their functions and competence, and had not the instructions from above, in the absence of which they could not handle applications for exchange-certificates. In spite, or because of, the daily appearance of extraordinarily lengthy, obscure, and in part carelessly compiled ordinances, importers were uninstructed on many material points. The bureaucratisation of the new system is extreme. It imposes, independently of the fees charged for administration on importers and manufacturers, a serious expenditure of money and also time, and requires them, under threat of criminal penalties, to solve problems which belong to metaphysics rather than to business, such as the continuous identity of a substance—e.g. a metal which may have passed through the hands of several independent concerns and undergone many successive industrial processes. During the first days the Supervision Boards, without organisation, instructions, or authority, were obliged to send away applicants. Delay and disorganisation resulted.

The Press is discussing the prospect of a Clearing agreement with Great Britain. It is affirmed that the Reich Government is prepared for this, with the material difference from earlier plans that clearing should embrace the Dominions, Germany's trade balance with the Empire as a whole being passive. The constitutional difficulties of this proposal, even in the unlikely event that London would accept it in principle, are not understood here, still less the difficulties of a homogeneous clearing system involving independent Dominion currencies. It is probable that the Empire Clearing suggestion, if it has been made at all, is merely meant as an obstacle to prevent Clearing with Great Britain only. It has always been a popular German argument that Great Britain, in view of the active Dominion balances, could not venture to insist on Clearing. Germany has now either Clearing or Payment agreements (numbering about twenty) with practically all European countries; and the original sharp distinction between the two forms of agreement is not always maintained. The only important exception is Russia, in whose case there is a special trade-payment agreement. The Clearing system naturally promises no good for Germany's trade balance. In general, export to the countries covered by agreements has declined, and in some cases imports from these countries have increased; in trade with France

and Czechoslovakia there has been a shift towards a passive balance. The German Press prints with great emphasis foreign complaints that this trend must retard the settlement of debt claims against Germany.

The movement of the total German export trade since the sudden change to a passive balance in January has not been as discouraging as is here officially represented and does not confirm the official argument that foreign impediments to import have become increasingly effective. Since the sudden drop in January exports have been almost stable, and since April have somewhat increased, both as a whole and also in the group of manufactures, which is much the largest group. As compared with the same period of 1933, when the whole balance was active, there has been an increased export of heavy iron and steel, tinplates, cables, screws and rivets, potash (quantity only), cement, several kinds of machines, motor-cars, mechanical articles, clocks, radio, apparatus, certain sorts of paper and glass, dyes, hats, etc. The trade balance has been most adversely affected by the decline of sales to Russia, which in the first half of this year took only Rm. 36 millions of imports, as against Rm. 357 millions in the first half of 1932; but the decline of this export trade, which was credit-financed, has not for the time being injured the foreign exchange balance; indeed, it has enabled Russia to reduce her German debts and to deliver gold in the first part of this year to a value of Rm. 187 millions. The German exports of cereals and milling products this year show a very large increase, exports of cereals having risen about 30 per cent., and of flour having nearly doubled.

FOOD SUPPLY FOR THE WINTER

From a new official report on food supply, it seems certain that, while no scarcity in the coming winter is threatened, wheat will have to be imported before the end of the crop-year of 1934-35. The cereals crop is now put at 20.5 million tons, as against 24.9 million tons in the last and best year, 1933. The available supply, including carry-over, will be 21.5 million tons, as against a consumption in the crop-year 1933-34 of 23.9 million tons. The supply of wheat, including carry-over, is put at 5.5 million tons, against 6.5 million tons in 1933-34; rye, 8.26 million tons, against 9.45 million tons. The supply of rye flour will be materially increased by the imposition of a higher milling percentage. The meat supply is expected to exceed the demand. The number of cattle and pigs is the largest since the war.

Dealing in wool has been further restricted by the prohibition, for an unstated term, of purchases in excess of one-third of the quantity fixed in the permits granted in September. Joint action has been taken by the Government and industry for the production of benzine out of lignite. The Ministry of Economy can decree the compulsory combination for this purpose of lignite-producing concerns. This method of producing light oils is already practised by the I.G. Farbenindustrie, and is technically satisfactory; but the new plan, which assumes that a very considerable part of the large benzine import will be dispensed with, requires the construction of large works and a heavy capital investment. The exchange of foreign securities into German foreign bonds has been limited. Instead of 25 per cent. of the resulting exchange receipts being deliverable to the Reichsbank, 35 per cent. is now claimed. These dealings have been of late very active, and the new restriction led to a sharpish fall in the price of various foreign bonds.

The September month-end demand for money was rather smaller than was expected. Buying of Reich Treasury bills and bonds hardly slackened, and day-loan rates declined earlier than usual after the settlements. In September, however, rather strained money market conditions had prevailed; and the Reichsbank return for the last week, while not itself showing any abnormal month-end increase of credits, carries into the new month Rm. 300 millions more of total credits and investments than the preceding month. This is a consequence of the very low credit repayments in the first three September weeks. Apart from the demands of industry and agriculture, the Reichsbank's position is determined by the growth of deposits, which continued, though at a slackened pace, after September 24th, when the "New Plan" came into force, and was due, as before, to payments into the special commercial accounts of foreign central banks.

A provisional official estimate puts the nominal national income in 1933 at Rm. 46,419 millions, as against Rm. 45,266 millions in 1932 (lowest reached) and Rm. 75,949 millions (highest) in 1929. In terms of the 1928 price level, the national income was: In 1913, Rm. 69,326 millions; in 1932, Rm. 56,795 millions; and in 1933, Rm. 59,428 millions.

The wholesale price-index number for September 26th was 100.7, as against 100.3 on September 19th. The agricultural and manufactures groups again show sharp rises. The cost-of-living index number for September was 122.5, as against 123.3 in August.

BERLIN, October 3.

ROUMANIA

POLITICAL PARTIES AND FINANCIAL REFORMS

SINCE Parliament went into recess about two months ago the political scene has been quiet. The National Peasant Party is consolidating its ranks in order to overcome the disorganisation which followed its defeat at the polls last winter and the conflict between its most prominent leaders, M. Maniu and M. Vaida Voevod. The Liberals have also been overhauling their party organisation, and a slight reshuffling in the Cabinet may be expected in the near future. There are already signs, however, of the recommencement of the political struggle which Roumania's financial problems arouse. The reorganisation of the civil service has to be undertaken in the interests of economy, and an internal loan has to be raised to consolidate the floating debt and obtain fresh funds.

The National Peasant Party has adopted currency reform as its official policy. This is naturally embarrassing to the Government's loan policy, and the Minister of Finance has made it known that the capital and interest of the new loan will be payable in gold lei as established by the Stabilisation Act of 1929. The Government is determined to make the loan a success by all means in its power. Its aim is to attract the large amount of hoarded capital now lying idle. It is even hinted that foreign money locked up in this country through exchange restrictions may be invested to advantage in this loan. The Government also states with great emphasis that the currency will be maintained at its established value.

Treasury receipts during August are reported to amount to 1,863,615,950 lei. This is the first time in the present financial year that the monthly receipts have reached a figure corresponding to the Budget estimates. This raises hopes that the deficit on the first four months of the financial year, amounting to close on 1,500 million lei, may be covered after all. Undoubtedly the Government is making great efforts to present balanced accounts at the end of the financial year. This is believed to be the most essential condition for the amelioration of the economic situation of the country.

GROWING PASSIVE TRADE BALANCE

The balances of trade and payments are in a serious position. While imports are very slightly increasing, there has been a steady diminution in exports; the passive trade balance for the first six months of 1934 is more than 3,000 million lei, compared with an active balance of 2,400 millions in 1933, 4,700 millions in 1932 and 6,400 millions in 1931. The following are the full figures:—

	Quantities in tons		Values (000 lei)		Active Balance (000 lei)
	Imports	Exports	Imports	Exports	
1931	560,812	10,047,001	15,753,995	22,196,818	6,440,823
1932	449,980	9,056,959	12,011,377	16,723,152	4,711,775
1933	466,962	8,777,730	11,741,850	14,170,833	2,428,983
1934—					
Jan-June	262,876	4,079,537	6,143,567	6,140,261	— 3,306

These figures explain the increasing scarcity of foreign exchange at the National Bank and the inability of the latter to supply the Roumanian importer with the means of paying his debts in foreign currency, which, through no fault of the debtor, are tending to remain outstanding for a long time beyond the three months stipulated by the foreign exchange regulations. At the same time, old debts

Why be content with 4%?

Do what many others are now doing—sell your stocks and shares and buy a Sun Life of Canada Annuity. If your age is 57 (male), you get an income equivalent to 8% on your capital and it is guaranteed for life. If older the income would be still greater.

Write in confidence, stating age and capital at disposal, and exact figures will be supplied to you.

H. O. LEACH (General Manager), Sun Life Assurance Company of Canada.
141 Sun of Canada House, Cockspur Street, London, S.W.1.

(Incorporated in Canada in 1865 as a Limited Company.)

which originated before 1932 are left entirely aside and can only be settled if the debtor can arrange an export in compensation at considerable expense. The situation is rapidly approaching a deadlock.

The clearing arrangements between Roumania and certain countries seem at first sight to have resulted in an excess of Roumanian exports over imports. Their real effect, however, is to reduce exports. New clearing arrangements have recently been concluded with France and Italy regulating the payment of mutual trade debts. The Italian agreement also includes financial debts. The arrangements provide that part of the proceeds of Roumanian exports to the countries concerned, about 20 per cent., is to be used for the payment of old debts of the Roumanian importer, and another similar part is to be placed at the disposal of the National Bank of Roumania for its own needs in connection with the public debt. The balances of Roumanian trade with these countries during the first six months in 1933 and 1934 were as follows:—

	(in lei)	
	Jan.-June, 1933	Jan.-June, 1934
France	339,074,000	15,440,000 in favour of Roumania.
Italy	12,959,000	6,407,000 against Roumania.

The Government apparently has faith in these agreements, and is credited with the intention of extending them to other countries. Commercial circles, however, look upon them with doubtful eyes. Exports in cereals and timber cannot be effected without the aid of a substantial premium, which must be paid either by the importer or by the Government. The latter has now instituted export premia for maize and barley amounting to 2,800 lei and 3,000 lei per waggon respectively, and payable as from October 1st next on exports to countries with which no clearing or compensation agreements exist. The time limit of August 1st last fixed for permits of compensations has meanwhile been extended to the end of the current month, and it is hoped that the pressure exercised by trade circles will persuade the Government to extend it again for a further three months.

The Association of Petroleum Industries has handed to the Government a memorial containing the complaints of the industry and giving diagrams of price movements. These diagrams show that prices of petroleum products have diminished between January 1st and August 15th of this year to such an extent as to change out of all proportion the relation between the money receipts of the refineries and the taxes charged by the State.

	Price per ton at the refinery, Jan. 1, 1934—Aug. 15, 1934		Taxes as a Percentage of value of product, Jan. 1, 1934—Aug. 15, 1934	
	Lei	Lei	Per cent.	Per cent.
Light petrol	1,683	843	26	41
Heavy petrol	1,080	601	35	49
Kerosene	1,190	472	23	44
Gas oil	949	335	29	54
Residue	340	250	42	52

Allowing for the crude oil, the value of the products obtained from a wagon of petrol amounted on January 1st to 7,750 lei and on August 15th to 3,630 lei only. While, therefore, the value of the products has diminished by more than 50 per cent., the taxes cashed by the State remain unchanged; they amounted to 48 per cent. of the value of the products on August 15th, compared with 31 per cent. on January 1st, 1934.

BUCHAREST, September 27.

ARGENTINA

EXPORTS STILL INCREASING

THE Cabinet is occupied in studying the Budget estimates for 1935. In the Chamber of Deputies there have been long discussions as to whether petroleum exploitation should be monopolised by the State, but no final measure has yet been sanctioned. The news that the conversion of the Argentine foreign debt, amounting to £9,023,220, has been satisfactorily arranged in London has received very favourable comment here. This conversion certainly indicates the faith which foreign investors have in the future of Argentina. The total saving effected will be £1,211,285 a year.

The following figures give exports during the first eight months of this year and last:—

	Quantity in Tons		Per Cent.	Value in Paper Pesos		Per Cent.
	1933	1934		1933	1934	
Total.....	9,914,776	10,598,490	+6.9	787,669,540	980,804,944	+24.5
Grain and linseed	8,387,779	8,981,874	+7.1	452,635,291	538,499,287	+23.4
Dairy products.....	25,589	19,688	-28.9	12,831,510	9,807,576	-22.4
Wool.....	117,749	84,297	-28.4	61,227,368	95,813,131	+56.5

Maize shipments have increased by 826,000 tons (27.4 per cent.) over 1933 figures, but wheat, linseed and rye all show a slight falling off in tonnage this year. The effect of the American drought was very noticeable during August, when Argentine exports increased by 177,712 tons, or 42 per cent. compared with August, 1933. If the present favourable trend of exports continues, there should be a corresponding easing of the exchange situation, with a consequent increase in the amount of exchange available for British-owned public utility companies operating in Argentina. Until the world economic situation improves it is highly improbable that the exchange control will be lifted altogether. It must be remembered that the system of control at present in force is not only proving lucrative to the Government, but is also useful when Argentina wishes to discourage imports from any particular country without raising a definite tariff barrier against that country. The drought in the United States has certainly proved beneficial to Argentina, probably more so than to any other country, as the resultant reduction in the purchasing power of the United States will have little effect here.

The undoubted optimism with which Argentina, at the moment, views the future must not be allowed to blind one to the fact that this year's harvest is not yet assured. It is not until October that a reasonable estimate of crops can be made. It must also be remembered that, even given a good harvest with high prices, the purchasing power of the community will not show a corresponding increase, as many farmers are burdened with debts and mortgages incurred during the crisis which will take the profits of several good harvests to liquidate.

The following are the latest quotations for wheat and maize compared with a year ago:—

	1933	1934
	Per ton	Per ton
Wheat	\$60.48	\$76.84
Maize	\$38.41	\$70.00

The rise is even more marked in the case of maize than that of wheat.

BUENOS AIRES TRAFFIC

The problem of co-ordinating the traffic in Buenos Aires and its environments is one which has been receiving a

considerable amount of attention from both the Municipality and the Government. That some steps must be taken is beyond question; the present modes of transport, apart from the suburban trains, are tramways, underground railways, and omnibuses, the two former being in the hands of five concerns, whereas the buses are run by fifty small companies. A few statistics showing the traffic handled by these concerns will give some idea of the magnitude of the task involved. During the first half of 1933 the electric traction companies (tramways and undergrounds) accomplished approximately three million journeys, covering 62 million kilometres, with gross receipts of \$28 millions, and the buses two and a quarter million journeys, covering 57 million kilometres, with gross receipts totalling \$19,300,000. The majority of transport companies are not doing well. This should simplify the formation of a unified transport board, since those concerns which are doing badly would be assisted by the elimination of competition.

BUENOS AIRES, September 24.

SOUTH AFRICA

THE "fusion" of the two chief political parties is now causing less excitement, owing to the paucity of serious opposition. At the recent Union Congress of the South African Party there were only eight dissentients, in a gathering of 460 delegates, to the proposal to accept the basis of the united party. Colonel Stallard took a formal farewell of his old friends. Among the Nationalists Dr. Malan commands more followers than Colonel Stallard, but the Party as a whole is strongly in favour of fusion, and the Cape extremist's influence is clearly waning. In some political circles an early election, to secure formal public approval of the fusion policy, is considered not unlikely.

A Customs Tariff Commission has been appointed, with the following terms of reference:—"To inquire into and report upon the following:—

- (1) The effect of the existing Customs tariff in so far as it has for its object the development of secondary industries in the Union.
- (2) The principles on which, and the extent to which, protection has been granted to industries, whether by protective duties, free admission of materials, or otherwise, and the extent to which it is necessary to maintain the present scale of duties, or the extent by which it might be deemed advisable to lower or raise the protection granted to particular industries.
- (3) The extent to which it is feasible to differentiate between revenue duties and protective duties."

The chairman of the Commission is Dr. J. E. Holloway, Financial Adviser to the Treasury; while the members are Professor C. S. Richards (University of the Witwatersrand), Mr F. J. Fahey (Board of Trade and Industries), Mr J. D. Heddon (Commissioner of Customs), Mr H. J. Laite (Secretary of Associated Chambers of Industry), and four others. The Commission is official and representative rather than impartial in personnel, and has been criticised as not being on the whole conspicuous for strength or balance, and as being predominantly Protectionist in tone. The chairman and Professor C. S. Richards are, however, prominent professional economists. It will be observed that the terms of reference postulate, by implication, the desirability of secondary industries *per se* even in a territory which must live by the production and export of gold. The chairman pointed out at the first meeting of the Commission that the adoption of the policy of Protection had been decided upon by Parliament—the Commission's duty was confined to its terms of reference.

The Commission of Inquiry into the affairs of the South African Railways and Harbours, for which the Government appointed Sir Guy Granet and others, has issued a report in which criticism is mostly on matters of detail. It suggests reductions in certain of the higher goods tariffs and certain reorganisation, but it is not the revolutionary document expected in some quarters.

CONTINUED EXPANSION OF BUSINESS

The expansion of imports continues, and during the seven months ended July 31st the total value was £35.4 millions, compared with exports of £39.5 millions (to which must be added the gold premium amounting to £14.4 millions). Imports are £10 millions above those of the corresponding period of 1933.

According to a statement of Exchequer receipts and issues, recently gazetted, the Exchequer balance on March 31, 1934, was £2,636 millions and on August 31st £5,234 millions. The Electricity Supply Commission has lately repaid a loan of £5,406 millions.

Business activity in general is still improving. In Johannesburg and the Reef mining towns property prices are very firm, and accommodation very difficult to secure for private or for business purposes. Employment is very good, many classes of artisans being almost unprocureable. Prices have so far shown hardly any rise.

No agreement has yet been reached at the discussions between the Union and Portuguese representatives on the Mozambique Convention. The percentage of the total tonnage of commercial sea-borne goods traffic imported to the "competitive area" via Lourenço Marques is supposed to be limited by the existing convention to a maximum of 55 per cent. and a minimum of 50 per cent. (The competitive area consists substantially of the Witwatersrand and Pretoria.) The percentage of this traffic actually coming through Lourenço Marques at present is admitted by the Portuguese to exceed 60. This matter of railway traffic is an old-standing source of some dissension between the two territories. The Union Government are exercising considerable pressure on their neighbours—the "experimental" admission of tropical labour must be causing the Mozambique Administration a good deal of thought. There is also the rather vague, admittedly arduous, but not impossible proposal to establish a harbour either at Kosi Bay or at St. Lucia; a railway through Zululand to either of these places would be much shorter than the 480 miles to Durban. But most of the country is at present fever-stricken, and this scheme, although it is understood to have had a good deal of serious official consideration, remains in the proposal stage.

JOHANNESBURG, September 20.

LETTERS TO THE EDITOR

GERMAN DEBTS TO LANCASHIRE

TO THE EDITOR OF THE ECONOMIST

SIR,—The report on the German trade debts in your issue of September 22nd does not adequately express the situation. Very strong feeling has been aroused in the minds of all British traders having overdue trade debts with Germany by the "intransigence" of Dr. Schacht in refusing to make any reasonable proposals for their liquidation. The Board of Trade sent out a delegation which returned empty-handed. A private delegation of cotton spinners also went to Berlin and received the same treatment. The Foreign Office sent a Note about August 15th. The Holden delegation went out again at the request of German yarn importers and brought back the ridiculous agreement which has been published. As soon as it was published, the whole of the cotton spinners interested refused to consider the proposed agreement. Germany intended these proposals to be a model for all British industrial debts.

The whole of British industry has now ranged itself in a solid refusal to listen to any conditions for future trade credits on which any liquidation of outstanding debts is to depend and in a demand that the Government take strong measures to safeguard British trade interests, as other countries have done. The Holden delegation, committed to recommend the German proposals, has impeded rather than hastened governmental action, as is now clear from the semi-official information that no better terms are offered to the Government delegation.

The present attitude of British industry is that the outstanding debts can be liquidated in a short period by a proper use of the one-way clearing system for which Germany has all the "mechanism" necessary, if they have the will to work it and agree that the proceeds of sale of goods and services to this country are to be used firstly for that purpose, and secondly to meet current trading and other obligations. It

is obvious that the sterling which ought to be used for payment of outstanding debts is now to be utilised in October or November for payment of Young and Dawes interest, and trade interests are being sacrificed to those of "finance."

There are only two methods available for payment of trade debts—one-way clearing by Germany or full two-way clearing by our use of the Clearing Offices Act; and it looks as though the latter will soon be necessary.—Yours, etc.,

LANCASHIRE EXPORTER.

DEFLATING THE TELEPHONE

TO THE EDITOR OF THE ECONOMIST

SIR,—May one use your columns to protest against the old-fashioned arguments and methods employed by the Postmaster-General in his attempt to secure extended use of the telephone? By reducing his charges he not only fails in his purpose but intensifies the horrific forces of deflation.

The "new economics" (according to Mr Elliot) clearly demonstrate that the correct method is to raise the charges so that the increased remuneration obtained by the telephone workers bestows on them a larger purchasing power for the products of the rest of the community, enabling the latter in turn to buy more telephone services; and so *ad infinitum*! After all, is not a prosperous telephone industry an essential condition of Britain's economic strength? Surely, the higher the prices, the greater the prosperity?

It is difficult to understand why a Government whose avowed object is to bring about a large rise in prices should tolerate the presence of this traitor in the camp. It is to be hoped that the Prime Minister will send Sir Kingsley Wood packing and merge his department with that of the Minister of Agriculture. Then, at least, we shall get something done!—

Yours, etc.,

G. L. SCHWARTZ.

By H. J. WELCH. 4s. 6d.

"Those interested in modern problems relating to national, international monetary and financial practices cannot fail to appreciate Dr. H. J. Welch's new book It is the work of a business man well qualified in his subject."—*Financial Times*.

Museum Street, London, W.C.1

MONEY AND BANKING

THE TREASURY AND LOMBARD STREET

In the current issue of its *Review*, the Midland Bank returns to its former charge that by contracting the issue of Treasury bills the Government has been guilty of forcing the banks to contract their deposits, thereby causing renewed deflation and threatening to arrest the trade revival. Many of the arguments advanced by the Midland Bank were examined by us in our review of the banks' half-yearly statements of accounts, published in our issue of July 21st. There, we reached the conclusion that unless the banks exercised their obvious power to expand credit, a net redemption of Treasury bills held by the banks would involve a contraction in deposits, and this has actually happened during the past eighteen months. Such a contraction, however, was not necessarily deflationary, for it might merely involve the disappearance of idle funds, part of which might be invested in the long-term securities issued in replacement of the redeemed Treasury bills. We added that the banks could easily make good the loss of available credit as soon as a legitimate demand for new credit arose.

While we cannot agree that the Midland Bank has made out its case, it has at least raised two important questions, namely: those of the functions of Treasury bills and the adequacy of the present and future supply. Beginning more conveniently with the second question, there is no doubt that, since the war, Treasury bills have come to occupy a predominant position in the London money market. In pre-war days they were insignificant. The total issue rarely exceeded £30 millions, and £15 millions or less was a far more common figure. These totals also included bills held "inside," so that the amount at the disposal of the money market was often considerably less. The total of commercial bills in existence is much less easy to estimate. At a pure guess, the quantity of London acceptances in connection with international trade was of the order of £250 millions, to which must be added inland bills of exchange which were then still in use. Our own Banking Supplements of that date suggest that the bills held in this country by British and foreign banks ran up to £300 millions and even higher.

By 1929, immediately before the depression, the position had completely changed. The inland bill had disappeared, and the Treasury bill had come to the centre of the stage. At a rough estimate the total of Treasury bills issued by tender in that year varied from £480 to £580 millions, against the negligible totals of before the war. The supply of commercial bills was much the same as in 1913, for the rise in prices, which tended to expand the total volume of bills, had been offset by the entry of New York, Amsterdam and Zurich into the field of international accepting. Even so, the total supply of bills in London had risen from, say, £300 millions in 1913 to about £700 or £800 millions in 1929, and for this growth the expansion in the Treasury bill issue was entirely responsible.

Since 1929 a serious contraction has occurred. By early 1933 the fall in prices and the shrinkage of international trade had reduced the supply of commercial bills from £240 millions to about £120 millions. The Treasury bill tender issue averaged about £600 millions in the spring of 1933, so that up to that time the total supply of bills was well maintained at just over £700 millions. The main contraction has, in fact, occurred during the past eighteen months. Commercial bills have further shrunk to just under £100 millions, of which £32 millions are standstill bills. The Treasury bill tender issue has fallen to about £425 millions. At a very rough guess, the total supply of bills to-day is only £520 millions, against £300 millions in 1913 and £700 to £800 millions in 1929.

So far it may not appear that the banks and the money market can complain that they are being starved of bills. Many new houses, it is true, sprang up in the palmy days immediately after the war, when Treasury bills were inordinately cheap and plentiful, but these hardly performed

an essential function in our economic system, and the disappearance of some of them during the past few years need not be regretted. The money market was badly in need of thinning down. On the other hand, bills of exchange are an integral part of our domestic and international monetary and banking system, and it is essential that the supply of bills should be adequate to enable that system to function smoothly and properly.

In particular there have been two recent developments, of which one is the direct result of Government action, while the other received an official welcome from Mr Chamberlain only this week. The first is the Exchange Equalisation Account, the sterling assets of which consist almost entirely of Treasury bills. Now these bills are not issued by tender, and so are additional to the totals which we have been quoting. On the other hand, the quantity of bills held by the Account varies every time the Account intervenes in the foreign exchange market, and this implies that if the Account is to operate successfully there must be an adequate and continuous demand for Treasury bills from bankers and other non-official sources. A wide and elastic money market is thus essential for the success of our new technique of exchange control, for otherwise passing disturbances would simply be transferred from foreign exchange rates to money and discount rates. This alone is a powerful argument in favour of providing London with enough bills to keep the discount market in active operation.

The second development is the growth of the sterling area. The whole essence of this is that the central banks of countries inside the area should hold a substantial part of these reserves not in gold but in some form of sterling. Their sterling assets must be thoroughly liquid, and in practice this either means balances with London banks or sterling bills. Even if these take the form of bank balances, then the London banks must hold liquid assets against those balances, and this brings us back to bills again. It may, therefore, be said that an adequate London discount market and a sufficiency of sterling bills are essential to the proper functioning of the new monetary system loosely described as the sterling area. It must also be emphasised that the growth of the sterling area means that an entirely new source of demand for sterling bills has come into existence, and that this new demand has by implication recently received an official welcome from the Chancellor of the Exchequer.

To sum up, there are reasons why the Government should make use of the present era of cheap money to fund another slice of the floating debt. The claims of the taxpayer come first, and apart from the obvious saving over a long period of years which should follow the issue of long-term loans under present conditions, it cannot be denied that a large floating debt constitutes a danger to the national finances. Discount rates are not going to remain indefinitely at their present low level, and past experience has shown that an unwieldy Treasury bill issue can offer an undesirable temptation to foreign unstable and volatile money.

On the other hand, our banking system, of which the discount market is an integral part, has definite needs and functions, and in particular it has had new duties thrust upon it during the past three years. To perform its duties it must be protected as far as possible from abrupt changes in the conditions under which it has to operate, and were the supply of bills to be reduced below a certain limit, certain undesirable consequences might easily follow. For one thing, London's position as the world's banking centre might be undermined, and while the presence in London of an excessive amount of foreign panic money is to be deprecated, no one would desire the impression to gain ground that foreigners could not find employment for their money in London. Again, were the supply of bills to be reduced, the banks might well feel diffident about buying fresh

investments as a substitute, and here we find a point of contact with the arguments of the Midland Bank. One result of this might be an undesirable spread between long-term and short-term rates, which would create a new element of instability and would not render easier the problem of Government financing.

In these circumstances the keynote of Government debt funding policy is the avoidance of abrupt or spectacular action. When allowance is made for the existence of the Exchange Equalisation Account of £375 millions, the real size of the Floating Debt is much less than the published returns suggest, and so the need of funding becomes less insistent. Admittedly the needs of the nation must override the narrower needs of the City, but even so the City has important contributions to make to the economic life of the nation, and indeed to that of the whole world. The Government thus has several claims to reconcile, and in formulating its policy for the near future it would be well advised to follow the middle road. Otherwise it can, from a national standpoint, easily do more harm than good.

FINANCIAL NOTES

The Money Market.—Government dividend payments have made money easier, and outside lenders have only been charging $\frac{1}{2}$ and $\frac{3}{4}$ per cent. Bill rates, however, are firm, partly because the contraction in Treasury bills issued by tender has for the moment been arrested. The clearing banks have left their buying rates unchanged at $\frac{1}{4}$ per cent. for January Treasury bills, $\frac{3}{4}$ per cent. for December, and $\frac{1}{2}$ per cent. for earlier rates. They have secured a certain number of November bills, while hot Treasury bills have been dealt in in the market at $\frac{3}{4}$ per cent.

	Sept. 13, 1934	Sept. 20, 1934	Sept. 27, 1934	Oct. 4, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	1	1	1	1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

While some members of the discount market allowed their holdings of bills to contract during August and September and re-lent their surplus funds to the Stock Exchange, the market as a whole has found itself well supplied with bills as a result of last week's tender. The market, therefore, was very hopeful that the tender on October 5th would go at $\frac{7}{8}$ per cent., compared with just under $\frac{3}{4}$ per cent. the week before.

The Bank Return.—Currency demands over the end of the quarter are responsible for the increase of £3.8 millions in the note circulation and for the corresponding contraction in the reserve.

	BANK OF ENGLAND				
	Oct. 4, 1933	Dec. 27, 1933	Sept. 19, 1934	Sept. 26, 1934	Oct. 3, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.4	190.7	191.8	191.9	191.9
Note circulation.....	373.7	392.0	376.4	377.0	380.8
Banking Department:—					
Reserve.....	78.1	59.7	76.1	75.5	71.7
Public deposits.....	9.5	22.2	20.5	37.9	13.7
Bankers' deposits.....	108.6	101.2	99.8	82.0	107.0

Discounts and advances	11.1	16.8	6.1	7.2	12.7
Proportion	47.4%	37.3%	48.1%	48.1%	45.4%

Government dividend payments on October 1st mainly explain the week's sharp contraction in public deposits, which have now returned to a more normal size. There is a somewhat inexplicable rise of £5.5 millions in discounts and advances. It does not reflect money market borrowing, but may reflect operations by one or more of the Bank's private

customers. As a result of these movements, bankers' deposits have expanded by £25 millions.

The Foreign Exchanges.—Commercial buying of dollars has continued on a fair scale, and as a result sterling has been weak against both the dollar and the gold *bloc* currencies. President Roosevelt's week-end broadcast was interpreted by some interests as favouring a strong dollar, and in consequence sterling fell on October 2nd to \$4.90. Forward dollars, however, remain at a slight discount, and this shows that confidence in the future of dollar is still lacking. By Thursday afternoon spot sterling had rallied to \$4.92 $\frac{1}{2}$. The franc and most of the other gold currencies moved in sympathy with the dollar, the Paris rate touching Frs. 73 $\frac{3}{4}$ on Tuesday and recovering by Thursday to Frs. 74 $\frac{1}{4}$. Belgas, however, developed sudden weakness as a result of the political crisis at the end of last week, for the Paris-Brussels cross rate fell from Frs. 355.75 to Frs. 354.25, while sterling appreciated temporarily from Bel. 21 to Bel. 21.18. A fair retail business has been done in sondermarks during this week, but the Bank of England's special account at the Reichsbank remains at its limit of Rm. 5,000,000, and German importers are now paying into an "interim" or "waiting-list" account.

New York Money and Banking.—Money remains easy and rates are unchanged. Brokers' loans stood at \$740 millions on September 28th, against \$745 millions the week before. The chairman of the R.F.C. announces that the corporation has since its foundation authorised the purchase of stock or notes in 6,692 banks to the value of \$1,162 millions, and has actually paid over \$891 millions to 5,392 banks. The Treasury deficit at the end of the first quarter of the current financial year is returned at \$541 millions, compared with a parallel figure of \$237 millions last year. Emergency expenditure during the quarter totalled \$828 millions. The public debt is stated to be \$27,190 millions, offset to some extent by "gold assets" of the Government amounting to \$7,978 millions. Meanwhile banking opinion is becoming even more restive at the trend of the national finances. Late last week it became known that at a recent meeting of the Federal Reserve Advisory Council opinions were expressed that unequivocal fixing of the dollar's gold content must precede recovery, that a fluctuating currency was a deterrent to business, that the steadily mounting Government debt and unbalanced condition of the Budget constituted a threat to confidence and credit, and that the use of Government money in competition with private capital should cease. The Acting Governor of the Federal Reserve Board has rejected these statements on the ground that the council had gone beyond its standing terms of reference, but no doubt they reflect the views of a considerable body of banking opinion.

Australian Interest Rates.—At the general meeting of the Commercial Banking Company of Sydney, which incidentally celebrates its centenary on November 1st next, Mr James Ashton had some interesting information to give regarding the effects of the reduction in interest rates on bank overdrafts. A few years ago the bank's overdraft rate stood at 7 $\frac{1}{2}$ per cent., but it has since been reduced to 5 per cent. The cost of this to the bank is estimated at £850,000 per annum, and to meet this the dividend rate has been reduced from 10 to 5 per cent., fixed deposit rates have been reduced from a range of 4 $\frac{1}{2}$ to 5 $\frac{1}{2}$ per cent. to one of 2 to 2 $\frac{1}{2}$ per cent., directors' fees and staff salaries have been reduced by 10 per cent., and the number of officers and other employees by 12 per cent. Taxation relief received by the bank only amounts to £20,000. Mr Ashton recalls that these reductions in overdraft rates coincided with a general fall in long-term and short-term interest rates affecting both the bank's London and Australian funds, and he points out that in these circumstances the diminution in the bank's profits is hardly surprising. These details of the cost to the banks of reducing interest rates are most illuminating, and Mr Ashton has made a point which is seldom realised by non-banking observers.

THE STOCK EXCHANGE

BRITISH FILM INDUSTRY

As it is unusual for little fish to swallow big fish, the Stock Exchange was somewhat surprised to learn from the *Financial News* this week that Mr John Maxwell, the chairman and managing director of the Associated British Picture Corporation, was negotiating with the Ostrer Brothers for the purchase of control of the Gaumont-British Picture Corporation. The issued share capital of Associated Company is only £2,933,557 (out of an authorised total of £4,000,000), while that of the Gaumont is £6,250,000 (the total authorised issue). The Associated is shortly to issue 5 per cent. debenture stock to the amount of £2,500,000; the issued 4½ per cent. debenture stock of the Gaumont parent company is £5,000,000. The Associated has a circuit of 200 cinema theatres, while the Gaumont group controls 323 houses. The basis of the Gaumont circuit is Provincial Cinematograph Theatres (controlling 112 houses), which was registered as long ago as 1909. The origin of the Associated circuit was the registration of Associated British Cinemas as recently as 1928. The Associated has extensive studios at Elstree, but the Gaumont has laid out even more capital on its studios at Shepherd's Bush. Financially, the Gaumont has been regarded as the strongest group in the British film industry. Since its recent financial reorganisation, however, the Associated group would appear to have obtained further backing, while interests in Gaumont have been willing to consider a change of proprietorship. The occasion calls for some review of the balance of power in the British film industry, which should not be without interest to the investor in cinema theatre securities.

In addition to the 323 theatres of the Gaumont group and the 200 theatres of the Associated, there are over 2,000 independently owned cinemas in this country. Numerically, therefore, the two circuits are dwarfed by the "independents," but as the latter are not organised for the co-operative booking of films they are compelled to pay what they regard as decidedly high prices for the films, both American and British, shown in their theatres. Moreover, the independents may be forced to take—or leave—the entire output, good or bad, of a film-producing company. Their only measure of "protection" against bad films may be to pay their hire price and refrain from showing them. This is sometimes resorted to in the case of the British "quota films" produced by American companies to satisfy the letter of the quota Act at the minimum of cost and trouble. The two circuits, on the other hand, can bargain effectively with the film-producing organisations, and in general are able to buy their films from 15 per cent. to 20 per cent. more cheaply than the independents. There has been a tendency, therefore, for the circuits to expand at the expense of the independents, partly by the purchase of

theatres which have given up the unequal struggle, and partly by the building of new "opposition" theatres.

The circuits, however, are themselves competitive, and the effects of this competition are emphasised when attendances fall in years with exceptionally fine summers. Of the subsidiary circuits of Gaumont-British, the Denman Pictures and General Theatres may possibly have been acquired on a somewhat higher basis than those of the Associated group, while the old-established status of the Provincial Cinematograph Theatres circuit, which has been a particularly profitable part of the Gaumont business, may itself involve, in the future, a considerable rebuilding programme. No circuit can stand still, for the building of new theatres in key positions may be undertaken at any time by any energetic speculator. This consideration may have influenced the parties to the reported negotiations.

As regards production activities, the policy of the Associated group has been to produce "economic" films whose comparatively low costs could be recovered from the box-office receipts of the tied houses. Occasionally "super" films have been produced, and lately the quality of the whole output has been raised. In addition to the productions at Elstree, a supplementary output is available from the Welwyn studios of British Instructional Films, now controlled by the group. The Gaumont group, on the other hand, has spent more heavily on its film productions, "super" films being more frequently turned out at Shepherd's Bush than at Elstree. Whereas the prosperity of Mr Maxwell's production company (British International Pictures) was able to offset the 1933-34 fall in earnings of the theatre circuit (Associated British Cinemas), now the two companies are amalgamated, it appears from a study of the preliminary figures of Gaumont that the Shepherd's Bush studios have not mitigated the decline in earnings of the subsidiary theatre companies. A statement of the combined earnings and distributions of the Associated subsidiaries, together with the earnings and distributions of Gaumont and Provincial Cinematograph Theatres, will be found at the foot of this page.

As regards the abortive negotiations for purchases of control of the Gaumont group, a complicated situation obtains. Of the 3,000,000 ordinary shares of the Gaumont-British Picture Corporation, 65 per cent. is held by the Metropolitan and Bradford Trust. Control of the latter trust is vested in 10,000 voting shares, of which 49½ per cent. is held by the Fox Film Corporation, 49½ per cent. by Messrs Ostrer and 1 per cent. by Lord Lee of Fareham. In spite of the apparent equal division of control between Fox Film and Messrs Ostrer, the articles of association give the Ostrer

Brothers an effective working control of the Trust and, consequently, of Gaumont-British. The Fox Film Corporation never obtained, as Mr William Fox had intended, the Gaumont-P.C.T. theatres as his "front shop-window" in Great Britain, and, being now in the hands of the bankers, it may be willing to sell its holding of 4,950 Metropolitan and Bradford shares at a price below that at which (according to report) Messrs Ostrer are prepared to part with their control. As we go to press we hear that the negotiations which would have brought under one control a group of interests with combined assets of over £20 millions have been broken off. This is to be regretted, for there is no doubt that a merger between the Gaumont and Associated groups would have strengthened the investment status of both groups of securities. The present market prices and yields are as follow:—

	Debentures			Preference			Ordinary		
	Rate	Price	Yield %	Rate	Price	Yield %	Rate	Price	Yield %
Gaumont British ...	4½	99½	£ s. d. 4 11 3 to red. at 102 in 1933	5½	197½	£ s. d. 5 12 0	7	13½ (10/- shs.)	£ s. d. 5 7 9
Provincial Cinematograph	...	...	...	7½	27/9 7½	5 8 9 6 1 3	15 7½	21/8 22/3	7 0 0 6 17 3
General Theatres	6½	82	£ s. d. 8 3 6 to red. at 103 in 1933	7½	6/-	NB	...	...	...
Associated British Picture	...	...	...	6	197½	6 2 3	6	5/9	5 4 3

It is not, of course, known whether the Associated British group intended to absorb the Gaumont-British or allow it to continue its independent existence if the present negotiations had been completed. But, merger or no, the film industry still remains highly speculative, from an investment viewpoint. Apart from the intense competition in film production, there is nothing to prevent the formation, later on, of another circuit of theatres in opposition to both the Gaumont and the Associated groups.

INVESTMENT NOTES

Course of Share Values.—September was the most cheerful month on the London Stock Exchange since February. While gilt-edged stocks were making new high

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS.

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares.
American: "Standard Statistics" Index of 50 Common Stocks.

"records" in the course of their advertised journey towards a 2½ per cent. basis, industrial share values, as the annexed chart shows, were making good the remainder of the ground lost in the early summer. The *Financial News* index, for

the third time this year, has reached a point, approximately 90 per cent. of the base figure, which has so far been the high-water mark of recovery. The chart suggests that the revival which has raised the index by nearly 25 points since April of last year has had three distinct phases—a sharp upward movement, which carried the index about 13 points up in the three months May to July, 1933; a much slower ascent, with numerous ups and downs, in the eight months to March, 1934, when the index rose a further 10 points; and a period of stationary trend over the ensuing six months, with a well marked "secondary recession" in the early summer and a recovery in the normally quiet months of August and September. The course of the Wall Street Index has been less encouraging. The initial phase of rapidly rising prices, after the accession of President Roosevelt in March, 1933, culminated at about the same time as its London counterpart, but was succeeded by seven months of wide fluctuations with a stationary trend, and has subsequently been moving unmistakably downwards. The explanation is not far to seek. The curves of industrial activity have closely followed those of equity share values, in both countries, with a moderate time lag. Money has been cheap in both countries, but the abstention of the British Government from a course of experimentation with the currency and with industrial organisation has created a feeling of relative confidence among British investors which has been lacking in America. At a moment when President Roosevelt's Administration appears to be inclining towards a more conservative policy (the prospective new Congress permitting), the British industrial share market appears to be waiting for a lead from industry. The market has recently shown signs of an increased "speculative" disposition, and if industrial re-recovery is tardy, the pressure of money, in a period of demonstrably low income yields, may produce a tendency to substitute capital profits for income considerations as the prime object of investment policy. In the past, such a disposition has frequently been the precursor of a downward movement in values.

* * *

London's Next Lord Mayor.—For the third time in the last 76 years the Stock Exchange has given London a Lord Mayor. The selection of Sir Stephen H. M. Killik, at Guildhall, last Saturday, sets the seal on a life's work of exactly sixty years in and for "The City." An accountant of wide experience, a pioneer in the business application of shorthand, and a felicitous writer and lecturer on financial subjects, Sir Stephen became a member of the Stock Exchange in 1900, and of the Committee for General Purposes in 1916. He has been a member of the Corporation of London for the last twenty-six years, and an alderman, appropriately, of the Stock Exchange Ward of Broad Street since 1927. His success, immediately after the war, in carrying through urgent reforms in the Corporation's finances was one of the greatest achievements of his career. His work for the Stock Exchange is, perhaps, less widely known, for the secrets of the deliberations of the Committee are far more closely guarded than those of the average British Cabinet. To his close friends and colleagues, however, Sir Stephen has always been known as having the educational side of Stock Exchange life deeply at heart. His attitude towards some of the more vexed questions of "House" organisation has been consistently progressive. Among the first advocates of reform of the half-commission system and a constructive supporter of the movement for the removal of some of the more striking anomalies of "dual control," Sir Stephen has always given the weight of his influence to any policy designed to add to the effectiveness of the Stock Exchange in serving the public interest. On the broader subject of Stock Exchange speculation, his views were clearly set out, twenty years ago, in a series of letters to the *Economist*. Legitimate speculation, as an indispensable adjunct to the conduct of modern business, has had no abler defender, and gambling—"the risking of larger sums than a man can afford, on ventures over which his own industry can exercise little or no control"—no more destructive critic. The Stock Exchange finds in him a worthy representative for the highest honour the City can bestow.

* £79,832 was transferred to general reserve from sinking fund, and £954,545 capitalisation of preference and "A" ordinary, together with £375,287 issue expenses written off from general reserve. x After tax. † Including £15,000 investment reserve. ‡ £100,000 transferred direct from general reserve. ** Preliminary figures of the Gaumont-British gave the profit available for ordinary dividend as £344,875, against £334,455 in the previous year; but a larger carry-forward was included. ‡ And £22,144 transferred from Debenture Sinking Fund Surplus.

Wall Street "Margins."—The announcement by the Federal Reserve Board, late last Thursday night, of the promised new "margin" rules caused scarcely a ripple on Wall Street's surface. The regulations authorise extension of credit in security transactions up to 55 per cent. of the current market price or of the lowest price at which the security in question has been sold in the past three years, with a proviso that the credit in no case is to exceed 75 per cent. of the current value. This regulation is designed to afford a permanent basis for "margin" dealings, but until July 1, 1936, the lowest price since July 1, 1933, is to be used where the "low price" method of computation applies. The Federal Securities Exchange Commission has postponed the date of application for these regulations from October 1st to October 15th, to enable the financial community to study their implications. In the present state of semi-suspended animation of the market, the "hardship" involved by the regulations is negligible. A Federal Reserve Survey at the end of July showed, in fact, that more than half the outstanding stock accounts contained at least twice as much collateral as the new requirements demand, and two out of every three stocks to-day, it is understood, are eligible for the minimum 25 per cent. cash margin. Whether an equally complacent view will be taken when the market is in the throes of its next period of intense speculative activity remains to be seen. Meanwhile, the impression, given by the President's week-end speech, that the Administration has no present intentions of embarking on new inflationary experiments has checked last week's incipient revival in Wall Street's activity. Another restraining factor is the tardiness of the Securities Exchange Control Commission in publishing its new trading rules, whose issue has been deferred to the end of this month.

L'Affaire McArthur.—Considerable discussion was aroused in New Zealand and Australia two months ago, when the Premier of New South Wales asked the Assembly to pass an immediate emergency measure, appointing a Royal Commission to enquire into the activities of the Investment Executive Trust of New Zealand, Ltd., and sixteen other companies. This step was taken at the request of the New Zealand Government, which, in the light of facts disclosed during the sittings of a Commission of Enquiry into company methods in the Dominion, had decided to take similar action. Subsequently, the States of Victoria and South Australia decided to make departmental investigations on the same lines. So far, although the New Zealand Commission has issued two interim reports, the results of the Australian enquiries have not been published. The evidence so far disclosed, however, leaves little doubt but that a group of financiers—headed apparently by two gentlemen named McArthur and McInnes—has been obtaining some hundreds of thousands of pounds by methods which would be illegal in Great Britain under the "share-pushing" clauses of the Companies Act. A large number of so-called investment trusts appear to have been formed, with a small share capital, which have issued large quantities of ostensibly high-yielding "debentures." Taking advantage of the high prices, and low income yields, of sound New Zealand and Australian securities, an army of high-pressure salesmen, by domiciliary visits and otherwise, persuaded private investors to part with their holdings in exchange for the debentures of the group's "trust companies" at a nominal figure slightly above the market price of the stocks transferred. No expense was spared in creating an impressive background for the sales campaign. A large and imposing building was purchased in Sydney for £100,000, and there appears even to have been a suggestion, at one time, that a wireless station should be acquired for publicity purposes! Pending the completion of the official investigations, it is impossible to say what action the Crown will take, but civil action is already threatening. The group's activities appear to have been on a wider scale in New Zealand, where they were originally started, than in Australia. The inevitable loss will, unfortunately, fall mainly on small private investors in the two countries. It is unlikely that the repercussions on the Stock Exchanges will be at all serious, though any effort to unload the sound securities which the group has obtained in the course of its

operations might cause a temporary weakening. The Sydney and Melbourne Stock Exchanges, eighteen months ago, issued timely official warnings against share hawking, but the affair may well bring to the front the advisability of strengthening the law on this point.

"Fixed" v. "Management" Trusts: A Suggestion.—We have received from a reader who, as a practising member of the accounting profession, has been closely following the development of the fixed trust movement, a well argued contribution to the growing literature on the economic relationship of the "fixed" to the "investment" trust. Our correspondent lays stress on the inability of the fixed trust, by its constitution, to finance progressive or new enterprises. When new shares are issued for cash by any of the companies whose shares are held in its "units," it has no power to subscribe, but must realise its "rights." On the other hand, its conspicuous merit for the small investor, which prevents its being regarded as a purely parasitic growth, is its property of "spreading" investment risks, in respect of comparatively small individual holdings, over a fair area of any given sector of the investment field, without the "gearing," due to the existence of prior-ranking debentures and preference shares, which has introduced a quite extraneous element of fluctuation into the earnings position of the equity shares of the management trusts. Our correspondent suggests, therefore, that the time is ripe for the building of a bridge between the two types of trust by the creation of what may be conveniently described as "un-gearred" management trusts. The latter, it is suggested, should be companies registered under the Companies Act, with a single class of share capital, prohibited by their articles from incurring debenture debts, sub-dividing their capital into shares with varying rights, or issuing further capital of a different class—but not from increasing their capital as need arises. They might well be formed under the most respectable management trust auspices, and might group, under one central management, various trusts, some of which might possess general powers of investment, while others were limited to particular geographical or other parts of the investment field. In all cases, however, a valuation and revenue statement should be furnished at regular and frequent intervals—say once every quarter, so that investors could appraise the break-up and earnings value of the shares with confidence. For such shares, it is suggested, the normal machinery of the Stock Exchange would provide a free market at a fair price. In this connection it would be useful to have the views of existing investment trust managers on the question whether increased stability in equity earnings and market quotations, resulting from low gearing or no gearing, is worth the sacrifice of the leverage factor in periods of rising receipts.

New Issues in September.—The capital market showed seasonal expansion of activity during September. We set out our usual analysis below:—

Monthly Average	(000's omitted)				Total
	United Kingdom	British Possessions	Foreign Countries		
1930	14,220	5,121	2,975	22,316	
1931	4,542	3,209	761	8,512	
1932	13,589	2,129	24	15,742	
1933	17,520	2,429	449	20,398	
Monthly Total	Govt. Other				
July, 1933	<i>Dr. 200</i>	3,369	212	Nil	3,381
July, 1934	<i>Dr. 300</i>	13,624	3,753	Nil	17,077
August, 1933	<i>Dr. 250</i>	485	15,045	4,334	19,614
August, 1934	50	1,500	471	Nil	2,021
September, 1933 ...	89,843	2,896	563	Nil	93,302
September, 1934 ...	50	6,759	2,148	300	9,257

Comparison with September, 1933, is rendered difficult owing to the large total under British Government resulting from the issue of 2½ per cent. Conversion Loan, which accounted for £90,243,000 a year ago. Home Corporation requirements amounted to £2,475,000, including a successful issue at 97½ of Plymouth 3 per cent. stock. Mining issues were largely restricted to existing shareholders on favourable

PRELIMINARY NOTICE.

The Subscription List will open on Wednesday next, 10th October, for an

ISSUE OF

£2,500,000 5 PER CENT. FIRST MORTGAGE DEBENTURE STOCK AT 101 PER CENT.

Trustees for the Debenture Stockholders: THE LAW DEBENTURE CORPORATION LIMITED.

The Prospectus will show (inter alia) that:—

- (1) The Business was founded in 1926 by Mr John Maxwell, the Chairman and Managing Director, and is now one of the largest undertakings in Great Britain, operating in all branches of the film industry. It owns or controls 200 Cinema Theatres widely spread throughout the country, which provide entertainment for approximately two million people weekly.
- (2) The Debenture Stock is covered by Net Assets totalling £6,135,446, or over 2½ times, and is secured by a first specific charge on freehold and long leasehold properties valued at £4,159,684, widely spread in key positions throughout the country.
- (3) After charging all working and administrative expenses, Directors' Fees, Depreciation and Amortisation, but excluding Income Tax and interest on loans and mortgages to be repaid out of the proceeds of this issue, the combined profits have been as follows:—

Year to 31st March, 1931	...	...	...	...	£495,452
" " " 1932	...	...	...	...	£394,487
" " " 1933	...	...	...	...	£303,108
" " " 1934	...	...	...	...	£439,686

- (4) Profits for the financial year ended 31st March, 1934, were sufficient to cover the interest on the Debenture Stock now issued over 3½ times. From the figures available for the first six months of the present financial year the Directors are satisfied that the profits will show an appreciable increase over those of the corresponding period last year.

Prospectuses, on the terms of which alone applications will be considered, can be obtained from—

Bankers:
NATIONAL PROVINCIAL BANK LIMITED.

Solicitors:
CLIFFORD-TURNER & CO., 11, Old Jewry, E.C.2.

terms. A feature of the month was the increase in proprietary article and patent flotations, such as Eno Proprietaries and Herbert Green, the latter formed to exploit a new oil process. The majority of the month's industrial offers were made to existing shareholders, and a vigorous increase in this class of investment is yet to seek.

* * *

South American Bond Outlook.—The result of the Argentine Conversion offer (discussed in the *Economist* of September 15, page 496) was regarded with satisfaction in the foreign bond market this week. London underwriters are required to take up 15 per cent. of their commitments. In view of her exemplary financial record during depression it is only fitting that Argentina should reap the fruits of recovery. In recent weeks, however, the market has given due recognition to the improvement in neighbouring States whose record, under acute economic stress, has been less satisfactory. Their story this year is encouraging, but is still a somewhat inadequate basis for further speculative operations. The position of Brazil, whose bonds have been a recent feature, shows some improvement. The export surplus for the first six months of the year amounted to 523.3 thousand milreis, against 357.9 thousand milreis for the first half of 1933, but in terms of gold pounds the net improvement has been achieved at the expense of a considerable fall in both imports and exports. Cotton shipments have shown some increase, and the expectation of smaller coffee crops for the 1934-35 season is a moderately favourable omen for the eventual liquidation of the stock carry-over, of which over 31 million bags have been destroyed since 1931. The Coffee Council is now understood to have destroyed all coffee surplus to the Realisation Loan security. The 1935 Budget estimates, submitted on August 30, provide for revenue of 2,170,017 contos and expenditure of 2,599,082 contos, the estimated deficit comparing with one of 268,745 contos for the current fiscal period. The Finance Minister has explained, however, that the Budget "has not been drawn up with the necessary technical accuracy which such a document demands."

(b) Interest paid in 20-year Funding Bonds, 1931, until October, 1934, thereafter included in grade 3 of Debt Scheme.

and hopes that reform of the tax collection will reduce the estimated deficit. The position in Chile is outwardly more favourable. The 1935 Budget estimates, which balance revenue and expenditure at 998.9 million pesos, are based on an expected increase in receipts of 142.4 million pesos, which, it is declared, is justified by the tax yield during the course of the current year, in particular from Customs. The trade figures indicate an export surplus of 167.2 million pesos (gold) for January to June, an increase of over 100 per cent. over the corresponding period of 1933. Nitrate exports have doubled in value and trebled in quantity in this period, while bar copper exports have increased from 64,000 tons to 101,000 tons. This definite recovery in the export situation has aroused some expectations of better times among bondholders, but there appears to be weight in the judgment quoted by a Stock Exchange firm (in a detailed and well-documented review, from which certain of the above figures have been extracted), that Chile can scarcely be expected to pay much in the near future. Uruguayan conditions are hampered by

exchange difficulties, although foreign trade, in currency, shows satisfactory expansion for the first six months of the year. The dependence of the State upon meat exports has been recognised by the favourable exchange facilities granted to pastoral export bills, but a rapid recovery in the grazing industry would require considerable alleviation of quotas and restrictions by importing countries. The Brazilian exchange position is improving slowly, and 50 per cent. of export bills (excluding coffee bills) may now be negotiated in the free market. There is no ground whatever for regarding full interest payments on all Brazilian loans as an imminent possibility, but the position will encourage hopes of a satisfactory revision of the debt scheme in 1937. Chile, for her part, is still handicapped by exchange depreciation and low taxable capacity, and the total collapse of the nitrate market during depression has left the exchange position in an illiquid state which will require careful thawing. The accompanying table illustrates the painful course of recovery from the low levels of 1929-33. Present quotations are slightly below this year's high levels.

* * *

Actuaries' Investment Index.—The general firmness of the week's markets is well illustrated by the movements of the Actuaries' Index. On Tuesday's quotations the index for 144 industrial shares is computed at 73.2 (December 31, 1928 = 100), which compares with 72.7 a week ago and 70.9 three months ago. The corresponding yield figures are 3.63, 3.65 and 3.70 per cent. respectively. Competent groups showing significant change are set out below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	July 3, 1934	Sept. 25, 1934	Oct. 2, 1934	July 3, 1934	Sept. 25, 1934	Oct. 2, 1934
Insurance Cos. (24).....	108.5	110.7	111.9	3.86	3.78	3.73
Investment Trusts (15).....	51.8	51.4	52.8	3.73	3.79	3.70
Coal (6).....	93.9	89.2	92.1	3.20	4.17	4.05
Iron and Steel (6).....	51.7	52.2	54.4	1.25	1.26	1.25
Electric Supplies (8).....	93.1	98.1	99.2	4.54	4.37	4.32
Home Rails (4).....	77.2	78.3	80.6	1.51	1.49	1.44
Miscellaneous (50).....	62.1	64.8	65.0	3.97	3.82	3.81

The "heavy industry" groups have staged a renewed advance, and home rail stocks have responded more vigorously to the hopeful trend of traffic receipts. Steady investment demand is still in evidence for insurance and electric supply shares, and there are some signs of stirring among the investment trust stocks. No adequate reasons for renewed buoyancy in the miscellaneous leaders have yet been discovered by speculative inquirers.

COMPANY NOTES

Shipbuilding Companies.—As a "capital construction" industry shipbuilding is unavoidably liable to wide fluctuations in activity, and as its unit of output is larger than in almost any other industry, the intensity of the fluctuations is increased. It is difficult, therefore, for the shipbuilder to organise his works and business with the economy possible to other trades. In addition, the continuing effects of the war have added a special problem during the last decade. The war-time and post-war building boom not only increased the country's shipbuilding capacity beyond what would normally have been required, but crowded into one or two years replacements which would otherwise have been spread over a much longer period. Thus excessive competition, on the one hand, led to price-cutting, while, on the other hand, the existence of an abnormally "young" merchant fleet interfered with the flow of renewal orders which would ordinarily have occurred. It happened that the problem which resulted was somewhat eased by the great expansion of demand for a new class of vessel, the tanker, and by the improvements in design which the shipbuilders were able to offer. Fundamentally, however, the industry was in a weak position and could not expect anything but a disastrous slump in the event of a general depression. It remains to be seen

whether the contraction of international trade which has been one of the salient features of this depression is to become permanent. That, however, is an influence external to shipbuilding itself. Within the industry the situation appears to be appreciably sounder than it was in 1929. By the mere lapse of time the post-war dislocation of replacement demand must have been reduced. At the

* A distribution of 1½ per cent., tax free, was made from capital profits. † Tax free.

moment there is still an ample supply of serviceable tonnage laid up; but the supply has been falling steadily for some time, both in this country and abroad. Moreover, according to the recent estimate of Lloyd's Register of Shipping, the world's mercantile marine has been reduced from some 70 million gross tons to some 65 million gross tons since 1931—this movement being in direct contrast to the steady growth of world tonnage in previous years. Finally, by the operations of the National Shipbuilders' Security, the excess capacity of the builders themselves has been substantially reduced. The conclusion seems justifiable, therefore, that if international trade is permitted to revive to anything like its old volume the prospect for shipbuilding should be good. Even on a restricted international trade, however, there should be room for a continuance of the shipbuilding revival from its present deep depression. As may be seen from the accompanying table, the investor is, roughly speaking, offered the choice between sound companies and companies which have suffered heavy losses in the past. The sound shares are already highly priced, while the others must be considered speculative. Possibly the wisest course is to take an indirect interest in the industry through the suppliers of marine accessories. Such companies would include Parson's Marine Steam Turbine, Marconi International Marine Communication Company, and Clarke Chapman.

* * *

More Motor Results.—Motor companies have again figured prominently in this week's company news. The Rover Company reports a trading profit of £133,938 for the year to August 4th last, comparing with £47,032 for the previous year. After depreciation (£35,170 against £30,888) and other charges, a net profit of £94,440 is shown, which compares with £12,511 for the previous year and a loss of £340,595 for 1931-32. This improvement has reduced the debit balance carried forward by approximately one-third to £177,073. The reorganisation, on which the chairman dwelt at last year's meeting, has thus borne rapid fruit, and from preliminary indications the directors regard the coming season as likely to be successful. Guy Motors, whose recent experience has been more unenviable, have also reported improved results, although the commercial section of the industry has made considerably less headway than passenger vehicle production. A

A Preference Share Investment

By the purchase of National Fixed Trust Certificates (Unit 'C') the Investor acquires a definite interest in a fixed number of first class preference stocks and shares. The above yield is calculated at the price of 19/9 per sub-unit, ruling on 1st October, and is amply covered by the earnings of the companies comprising the unit.

The investment combines the greater safety of widespread capital with stability of income. Sums of approximately £20 upwards can be invested.

trading profit of £9,122 for the year to June 30th compares with a loss of £9,365 in the previous period, and the addition to the debit balance is £23,207 against £69,840 for the year to June, 1933. The report refers to an improving scheme for consolidating the bank overdraft, eliminating the Star Motor guarantee and providing additional working capital. The former liabilities, actual and contingent, amount to £255,704, and as the debit balance carried forward now amounts to £337,493 against an issued ordinary capital of £432,703, the nominal writing down will necessarily be drastic, especially as other items require to be dealt with. The Birmingham Small Arms Company results must be regarded as disappointing. Profit, including total profits of subsidiary companies, has fallen from £252,794 to £135,143, and after meeting debenture service a surplus of £15,182 has been applied to reduce the debit carried forward to £69,714, leaving the preference dividend three years in arrear. This year's trading has been adversely affected by B.S.A. Guns, which experienced a loss compared with a substantial profit for 1932-33. While turnover has been maintained, profit margins have been reduced, a movement which may have significance in view of the company's interest in the Daimler fluid flywheel system. Attention has been directed to the affairs of S.T.D. Motors by an official statement denying the likelihood of receivership threats, and this declaration was confirmed at a meeting of note holders on Tuesday which favoured the acceptance of the company's moratorium proposals. Later reports, however, stated that the trustees for the note holders had decided to oppose the moratorium proposals, and to proceed to receivership. Among ancillary companies, Henlys report gave much satisfaction in view of the increase in trading profit from £132,243 to £177,796, and in the ordinary dividend to 50 per cent. from 7½ per cent. for the period April-August, 1933. The maintenance of the cash distribution on the doubled capital of Joseph Lucas was something of a disappointment to the market, and the £1 ordinary shares were quoted at 65s. on Monday against 70s. at the previous close. The report, however, showed that net profits had increased by £16,956 to £257,383.

United Dairies.—The fortunes of this company have continued their steady advance under the new organisation of the milk industry. In a preliminary profits statement issued this week the directors announce that distributable earnings for the year to June 30th last amounted to approximately £600,400, which is a record in the history of the company. This will doubtless reassure shareholders in view of the chairman's statement at last year's meeting that undercutting had been rampant and that much of the wholesale business had been conducted at a loss. The actual figures for the previous two years and computations for the latest year, from the preliminary announcement, are set out below:—

		Years to June 30,		
		1932	1933	1934
Earned for dividends	£	561,517	583,439	600,400†
Preference dividend.....	£	195,000	195,000	195,000
Ordinary Shares	Earned	366,517	388,439	405,400
	Paid	278,750	280,000	280,000
	Earned	17·8	19·0	19·7
	Paid	12½	12½	12½
Reserve	£	80,000	100,000	170,000
Carried forward	£	101,269	109,708	65,108†

† "Approximate."

The dividend allocation is maintained, but in addition the directors recommend that £224,000 from reserves be capitalised in the form of a 10 per cent. share bonus. This distribution will, in fact, be less than the reserve allocations for the two latest years, and the fund will stand at some £676,000 after the operation. Meanwhile, shareholders may like to undertake the congenial exercise of estimating the contributory factors in this year's improvement, pending the full report. Viewing the results at random, it may not be far from the truth to hazard that ancillary activities to the main business of milk retailing have made their full contribution to profits. The engineering subsidiary was reorganised during 1933, and substantial orders were reported

last October, while the steady expansion of general provision retailing, both by van and shop, will not have escaped the notice of the shareholders. The ordinary stock units are quoted at 68s.

A New Rubber Company.—The issue of £320,000 in preference and ordinary shares, by Kapala Rubber Estates of Malaya, Ltd., particulars of which are summarised on page 650, is of special interest for two reasons. In the first place, it is practically the first new public flotation, so far as our records show, in the rubber plantation industry since 1927. In the boom year 1926 as many as 48 companies obtained £5,602,125 of new capital in the market; while in 1927, 25 companies offered a total of £2,093,988. Between 1928 and the end of September, 1934, however, issues were confined to already existing companies, and were made almost entirely to shareholders only. During the whole six and three-quarter years only 82 offers, aggregating £7,514,776, were made. This week's issue, however, will probably be the herald of numerous others, which are in an advanced state of preparation. A second feature of particular interest in the prospectus is the method adopted for overcoming the difficulty of making estimates of future profits—without which no prospectus in a speculative industry would be worth its cost of printing—in view of the uncertain incidence of the restriction scheme on future prices and production quotas. The device adopted is ingenious and not unreasonable. An expert appointed by the vendors, after visiting the estates, has drawn up various figures of "estimated normal crops," which shows a total rise of 37½ per cent. by 1938-39, and are constant thereafter. The prospectus, having assumed that 75 per cent. of these crops will be exportable, and that a profit of 3d. per pound will be realised, sets out the estimated profit for each year and the equivalent earnings on the ordinary shares, supplementing these figures by a calculation of the additional profit which would accrue for every penny above 3d. Such estimates, of course, may turn out to be little more than pleasant arithmetical exercises, for rubber is notoriously an unpredictable industry. Potential subscribers, anxious to avoid too violent a leap in the dark, however, may obtain, on payment of a premium of 25 per cent., preference shares, with cumulative rights to a dividend of 7½ per cent., and an option to convert into ordinary, at par, on one month's notice, at any time up to December, 1939. The initial "cover" for the preference dividend is not large, and subscribers must needs assume the continued success of the rubber restriction scheme. In other words, the distinction in the speculative appeal of the preference and ordinary shares is of degree, not of kind; but the attempt to forge a new medium, by way of the convertible preference share, to attract a *clientèle* which in the past has tended somewhat to hold aloof from rubber shares, may be a precedent of importance. The issue came out on a falling rubber market, and underwriters were left with a moderate proportion.

"Grade Policy" on the Rand.—The policy of the Rand gold-mining industry with regard to "grade" has tended to diminish public interest in the Kaffir market, writes our mining correspondent. At first sight it certainly seems anomalous that, with gold valued at 140s. per ounce, the profits of the great majority of the companies should be little, if at all, larger than those earned when the metal was valued at 129s. Broadly, as the price of gold has risen, the grade of ore sent to the mill has been reduced. This procedure arises largely from the basis of taxation now in force. From the beginning of this year, excess profits have been levied on the average figures of the two months November-December, 1932, immediately before South Africa's departure from the Gold Standard. Where the excess over the standard rate does not exceed 2s. 6d. per ton, one per cent. of the dutiable amount is payable for each completed penny of such excess. Where the excess is greater than 2s. 6d., the amount payable is "a percentage of the dutiable amount of such excess profits" determined in accordance with a formula. The effect is to induce companies to mill a large—possibly an undue proportion—of the very low-grade ore. We contrast

below the working profits of six of the larger producers, other than lease mines, (a) for December, 1932, with gold at standard value, (b) for January, 1933, with gold at 120s., (c) for January, 1934, and (d) for September, 1934, with gold at 129s. and 140s. respectively. In the case of

	Working Profit			
	Dec., 1932	Jan., 1933	Jan., 1934	Sept., 1934
Crown Mines	104,730	260,620	275,820	279,980
Geduld Propy.	51,690	95,650	108,890	120,010
New Modder	137,120	227,410	181,880	183,160
Randfontein	70,190	190,400	148,070	107,230
Robinson Deep.....	27,610	64,820	75,390	75,830
West Rand Cons.	25,300	71,180	75,150	92,040

the Randfontein there is a reduction of very substantial extent. From a purely actuarial standpoint, the correct procedure, doubtless, would be to strip a property of its richest ore in the shortest possible time. From a mining point of view, however, this policy would be undesirable. It would certainly produce undue fluctuations in share prices. There may, however, be a certain substance in the contention that, on the Rand, treatment of low-grade ore is being carried to an extreme. Some shareholders are inclined to regard themselves as deserving of greater immediate benefit from the rise in the price of the precious metal. Their views, naturally, may vary widely from those of the managements, as regards the point of which the "golden mean" should be struck between handsome present dividends and the continuation of production from any particular property in, say, twenty years' time.

Other Company Results.—Our usual table of profit and loss accounts, which appears on page 654, summarises the trading results of 28 other companies. This week's batch of results includes no large industrial reports, but the trend shows a sustained moderate improvement. The Finance and Land section includes some interesting recoveries by three Argentine estate companies, including Leach's Argentine Estates, whose net profits have increased from £77,939 to £97,570, which, as in recent years, has been transferred in entirety to reserve. Among Iron, Coal and Steel reports, Thos. W. Ward record a net balance of £75,068, against £106. The first preference dividend arrears have been met, and the second preference cleared to 1932. Ransomes and Marles Bearing earnings are nearly 50 per cent. higher at £44,055, and the dividend has been increased from 6 to 7½ per cent. This week's Rubber reports are better without exception, and increased dividends have been declared by Brooklands Selangor, Kamuning (Perak), and Patani Para. Robinson and Cleaver, the linen specialists, show a small reduction in profits at £24,115, but the dividend of 6 per cent. has been comfortably earned. This week's dividend declarations include Gallaher, whose interim dividend has been raised from 3 to 5½ per cent., and Tube Investments, whose directors will recommend, subject to final audit, an ordinary dividend of 10 per cent. (against 8 per cent. for the past three years), and a share bonus of one ordinary for every ten held. British Celanese have decided to pay on October 31st to holders registered at close of business on October 19th a half-year's dividend on the 7 per cent. cumulative first preference shares.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Manila Railway Company (1906), Anglo-Oriental Mining Corporation, Leethems (Twilfit), E. W. Tarry, D. Gestetner, Kuala Muda Rubber Estates, Tarkwa Gold Mines, Morkwa and Malayalam Plantations. At the meeting of the Manila Railway Company the chairman discussed the possible changes in the Philippine sugar situation resulting from the recently granted independence of the Islands. The chairman of the Anglo-Oriental Mining Corporation, Mr John Howeson, expressed confidence in the outlook for tin, and defended the policy of the Tin Control Scheme, in the light of the results achieved. The chairman of Leethems (Twilfit) analysed the reasons for the company's

increased volume of sales in the home market and the export trade. Sir J. Fortescue Flannery discussed the improvement in the business of E. W. Tarry in South Africa, particularly at Johannesburg. The chairman of D. Gestetner declared that the past year's trading showed that the steps taken to preserve the company's goodwill during past years of difficulty had been justified, and that results in the current period should be at least as satisfactory. The chairman of Kuala Muda Rubber Estates pointed out that the low costs of the past year were unlikely to continue, in view of increased salaries and wages and the incidence of restriction. At the meeting of the Tarkwa Gold Mines, the chairman declared that the board was well pleased with development work to date. The chairman of Morkwa revealed that a lease to work the company's diamondiferous areas had been satisfactorily arranged. At the Malayalam Plantations meeting, Mr Henry J. Welch emphasised the necessity for increasing world rubber consumption.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
October 9

ACCOUNT
October 11

THE market has been inclined to doze this week, and, although one eye has been kept well open, it has failed to discern much reason for fresh endeavour or for diplomatic retreat. Quotations have consequently been somewhat softer on the whole, and although the Chancellor of the Exchequer's survey of the encouraging features in the domestic trade situation was welcomed, the industrial market regarded it as confirming its own views, which had already been fully discounted. The industrial horizon has yet to reveal the desired signs and portents of increased activity, and, in the meantime, low interest rates are linking most sections of the market in common assurance and stability.

The gilt-edged market accepted the half-year's revenue figures without noticeable comment, but support for recent active issues waned in view of the underwriting of the Sheffield issue and further Corporation financing in prospect. Local Loans and old Consols were fractionally lower, while among redeemable issues, War Loan and 3½ per cent. Conversion were chiefly affected. Indian loans, after maintaining a quietly firm tone early in the week, showed small improvements on Wednesday. The opening premium on the Nigeria scrip set a good tone among Dominion issues, Australia 3½ per cent. stock showing steady fractional improvements, while Canada 3½ per cent. loan was also supported. Home Corporation issues were affected by pending new issues.

German bonds cast a shadow over the foreign bond market, owing to fears of a failure of the Franco-German exchange agreement to secure the service on the French issues. The "Dawes" and "Young" loans were 4 and 6 points lower in mid-week respectively, while the Potash 7 per cent. and municipal issues were weak. Japanese bonds recovered slightly after nervous selling on political news, but Chinese were consistently dull. The South American market provided game for profit-takers early in the week, although there were signs of tentative support on later days. Argentine issues opened firm on the conversion result (detailed in a Note on page 644), but became unsteady on Tuesday.

The South Wales coal agreement gave operators a chance to exploit the satisfactory trend of home rail traffic. L.N.E.R. preference issues were in particular request, while Great Western ordinary also advanced. London Transport "C" stock made further headway. Business in the foreign section remained very quiet, and quotations showed few changes.

Activity in the industrial market ebbed as the week proceeded, and, after profit-takers had played their part, markets settled down to rather humdrum conditions. Attention was somewhat diverted from normal business by the large-scale "staggering" of last week's Eno issue, which opened at the expected premiums. Recent buoyancy in the

motor share market gave way to distinct irregularity on the publication of the Lucas dividend and B.S.A. reports (discussed on page 645), but subsequently Austin and Ford returned to speculative favour. Electrical supply shares met a small investment inquiry, but equipment shares showed irregular movements. Most iron and steel shares were firm, Tube Investments making satisfactory response to the increased dividend. Guinness remained the feature of the brewery section, despite some reaction on Tuesday, while tobacco shares, apart from Gallaher, were undecided in their trend. Little attention was given to store shares, but United Dairies moved up sharply in anticipation of the dividend-cum-bonus announcement. Business in textile shares picked up a little in mid-week, and there were signs of interest in British Celanese in anticipation of a favourable report. Movements among the miscellaneous leaders were rather irregular, although turnover was regarded as somewhat better on Wednesday. Dunlop were neglected, and Imperial Chemical were inclined to ease. Some brick shares received attention, and demand for British Oxygen was well sustained. Gaumont British (whose position is discussed in a leading article on page 640) made progress in anticipation of the full report. Bank and insurance shares were fairly well supported.

The recently improved tone in the oil market was not maintained this week, and interest ran very low. Quotations on the whole were little affected in the absence of selling pressure. The rubber market was dull owing to the weak tendency in Mincing Lane, where the commodity closed under 7d. on Wednesday. The unpromising outlook evoked sales from impatient holders, which, in the absence of any support, were sufficient to cause general recession in prices. Despite satisfactory sales at Mincing Lane, interest in tea shares declined, and sporadic sales depressed prices.

A new record gold price failed to revive a rather enervated Kaffir market. The further de-grading of ore revealed by the September returns gave no prospect of increased profits for the time being, and most of the leading shares were depressed. West African issues opened in active fashion, but interest was mainly professional, and subsided later. Copper shares were sold on the sharp fall in the metal, and the decision of the Roan Antelope directors to conserve the company's resources owing to the uncertain outlook. Tin shares opened with a fairly confident tone, but activity waned later in the week, despite the confident views expressed at the Anglo-Oriental meeting.

FOREIGN STOCK EXCHANGES

NEW YORK

THE President's radio speech to the nation last Sunday was disappointing to a large section of the stock market. Though its vague generalities left the Administration's future industrial and financial policy entirely in the air, the inflationary party read deep significance into the absence of any reference to fresh currency experiments. Professor Warren and his naïve theories of varying prices by gold content have finally lost the President's ear. No further devaluation of the dollar is contemplated. The Government is inclining towards an increasingly conservative policy so far as the next Congress will permit. These were the conclusions surmised—doubtless with a hazardous effort of the imagination, for silence, as a medium of expression, is notoriously difficult to interpret. They were sufficient, however, to check speculators, to arrest the incipient revivalist tendency of last week, and to reduce the volume of business to a semi-trickle. The average turnover of 526,000 shares a day during September was the smallest for any month in the last thirteen years, but Tuesday's figure of this week was reduced to 370,000, while Wednesday's was only 410,000 shares. The "margin" rules, issued by the Federal Reserve Board, have caused no stir, though their initial vagueness created a little confusion. There is no suggestion that they will involve hardship to anyone under present conditions. The slow motions of the Securities Exchange Control Commission have been criticised, the issue of the new trading rules having been postponed to the end of the month. A much more unsettling influence, in mid-week, was the weakness of grain prices, which spread from Winnipeg to Chicago. American industry shows no marked revivalist portents, though some branches report a slight gain of ground. Steel mill activity, for example, is put at 24 per cent. of capacity compared with 23½ per cent. last week, but forward buying is conspicuously deficient. Power output in the last week of September was 1.1 per cent. higher than in the previous week. The Treasury bond market has been a little stronger, partly, it is believed, on official operations to help the Treasury's refinancing of Fourth Liberty Bonds. The Secretary of the Treasury announced on Monday that \$890 millions of the \$1,250 millions had been offered for conversion up to that time. The Reconstruction Finance Corporation has reduced the interest rate payable by banks on its preferred stock and capital notes from 5 per cent. to 3½ per cent. for the next four years.

* Two-hour Session.

PARIS

The Stock Exchange opened irregular and became weak on Monday. Rentes lost ground. Bank shares were marked down, and, among industrials, Citroen were particularly weak. The Belgian position was not regarded with great confidence, and the tendency of Wall Street was unhelpful. In the middle of the week, however, the undertone became firmer, and bears of bank and industrial shares were inclined to take cover. Gold-mining shares made no response to the metal's new record sterling price, early in the week, and rubber shares reflected the fall in the price of the commodity.

	Sept. 26, 1934	Oct. 3, 1934	Oct. 4, 1934		Sept. 26, 1934	Oct. 3, 1934	Oct. 4, 1934

BERLIN

After a decline in the early part of last week, the share market advanced, the best gains being recorded by engineering and electric cable stocks. Among steel shares, Mannesmann were firm. Tietz department store shares reached a new high level for the year. Reichsbank recovered most of the loss which occurred after the announcement of the suspension of the interim dividend. In the rayon group, Aku advanced at the beginning of this week. Special interest was shown in steel shares in the Vereinigte Stahlwerke group, but there was little change in the general level of prices. The bond market opened steady and became active and firm on Tuesday, but foreign currency bonds were weak. A firm tone obtained on Wednesday, electrical and mining issues generally showing small advances.

	Sept. 26, 1934	Oct. 3, 1934	Oct. 4, 1934		Sept. 26, 1934	Oct. 3, 1934	Oct. 4, 1934

AMSTERDAM

The Bourse was erratic, though the undertone was firm at the outset. Subsequently, however, the volume of business declined and sentiment became much less settled. The fall in the price of rubber was an adverse factor. Offerings of rubber shares were widespread, Amsterdam rubber falling

CAPITAL ISSUES

THE firmness of the gilt-edged market is being progressively reflected in the price at which important gilt-edged issues are being floated. While the *Wolverhampton Corporation* has retained the medium of a 3½ per cent. stock, which has been used for recent issues, for a small "placing" of £250,000, the *Sheffield Corporation* has floated a public issue this week of 3 per cent. stock, with a twenty-year life, at 98½. These terms, favourable as they are to the borrower, are significant in view of the fact that other important corporation and county issues are pending—mainly for the funding of existing indebtedness, as in the case of this week's issues. Of the week's company prospectuses, the preference shares of the *Oxford and Berkshire Cinemas* are fairly well covered as regards their 7 per cent. cumulative dividends, and have speculative possibilities by way of their participating rights up to a further 5 per cent. The properties acquired have a successful record, but the issue should be viewed in the light of contemporary conditions in the industry, which are discussed in a leading article on page 640. The offer by *Kapala Rubber Estates of Malaya* is discussed on page 646. The week's "public notices" include particulars of the *Rubber Regenerating Company*, which carries on a rubber-reclaiming business at Trafford Park, Manchester.

ISSUES OF THE WEEK

By Prospectus or Offer for Sale

Total recorded, January 1 to September 29, 1934, excluding conversions, £125,425,209.
Total recorded, January 1 to September 29, 1934, including conversions, £312,208,910.

PUBLIC OFFERS

Sheffield Corporation.—Issue of £3,000,000 3 per cent. debenture stock, 1934, at £98 10s. per cent. Redeemable at par on October 1, 1954. Stock charged on general rate, and holders of mortgage bonds are offered preferential conversion to new stock. Statistics at March 31, 1934: Rateable value £2,785,199, per head £5 8s. 10d.; average rate, 15s. 7d. in £; total debt, £24,011,896, for productive undertakings, £18,113,841. Proceeds of issue applied to repayment of existing loans.

Oxford and Berkshire Cinemas, Ltd.—Issue of 150,000 7 per cent. cumulative participating £1 preference shares at par. Acquires ten cinemas and lease of theatre to be built valued at £307,780 subject to £39,500 outstanding mortgage, for £200,000 to be satisfied by allotment of 800,000 ordinary shares of 5s. Issue to provide for building and redemption of mortgages, £42,000. Profits after adjustment: 1931-32, £35,689; 1932-33, £45,134; 1933-34, £47,884. After management fee (£2,750), amortisation and depreciation (£1,707), and mortgage interest (£2,275), £41,151 will be available on basis of 1933-34 results. Shares rank for cumulative 7 per cent., and after 7 per cent. on ordinary, for cumulative 5 per cent. from up to one-half of remaining profits.

Kapala Rubber Estates of Malaya, Ltd.—Issue of 1,600,000 convertible 7½ per cent. cumulative preference shares of 2s. each at 2s. 6d. per share, and 1,600,000 2s. ordinary shares at par. Acquires rubber estates totalling 5,574 acres in Kedah, Malay, 5,554 acres planted, 4,146 fifteen to twenty years old, and 1,408 acres eight to ten years old. Profits estimates based on 75 per cent. export of normal crop estimates, and profit of 3d. per lb. are: 1934-35, £22,695, equivalent to 6·68 per cent. on ordinary; 1935-36, £25,298, equivalent to 8·31 per cent. Percentages require adjustment on alteration in crops and conversion of preference shares. Consideration, \$2,472,022 (Straits dollars) payable in cash plus £4,000, total £292,402 at par (£52 13s. per planted acre). Preference convertible to ordinary at par up to December 31, 1939.

BY STOCK EXCHANGE INTRODUCTION

Wolverhampton Corporation.—Particulars of issue of £250,000 3½ per cent. stock, 1934-64. £132,000 of proceeds required to replace mortgage loan, and balance for trading undertakings. Redeemable at par on July 1, 1964, or from July 1, 1954, on three months' notice. Population, 140,000; rateable value, £830,000; rates, 11s. 6d. in the £; net debt, £6,027,724, of which £1,335,935 is for productive undertakings and £2,897,831 for housing. Cohen, Laming, Hoare have purchased the stock at par, for 10s. per cent. commission.

Rubber Regenerating Company, Ltd.—Issued capital, 210,100 shares of £1 and 500 management shares. Incorporated in 1909, and converted to public company September, 1934. Company recently acquired certain inventions and processes, a rubber reclaiming business and other rights by allotment of 80,000 shares. Total assets at December 31, 1933, £171,178; land, £110,590; cash and debtors, £43,913. Dividend since paid, £26,566. Loss for 1933, after £13,215 depreciation, £1,924, leaving £36,357 at credit of profit and loss.

CONVERSIONS AND REPAYMENTS

Canadian Refunding Loan.—The terms of the Canadian Refunding Loan, which is restricted to \$250,000,000 (£50,000,000), are: Two-year 2 per cent. bonds will be sold at 98·90, to yield 25·7 per cent.; the five-year 2½ per cent. bonds at 98·15, giving a yield of 2·90 per cent.; the eight-year 3 per cent. bonds at 97, yielding 3·43 per cent.; and the fifteen-year 3½ per cent. bonds at 96·50, to yield 3·81 per cent. Of the proceeds of the loan \$220,000,000 will be required to meet the Victory Loan 5½ per cent. bonds which mature on November 1st. The lists will close on or before October 13th.

Reckitt and Sons.—All outstanding 4½ per cent. second debenture stock will be repaid on April 1, 1935, at 105.

ISSUES TO SHAREHOLDERS ONLY

Glen Muir Estates.—287,980 ordinary 2s. shares are offered to shareholders registered on September 25th at par, in the proportion of three new shares for every ten shares held, fractions being ignored. The new shares, when allotted and fully paid, will rank *pari passu* with the ordinary shares already issued.

PRIVATE PLACING

Cow and Gate, Ltd.—100,000 new 7½ per cent. cumulative preference shares £1 each have been placed privately.

FORTHCOMING ISSUES

Associated British Picture Corporation, Ltd.—It has been decided that the capital of the corporation be increased to £4,000,000 by the creation of the following additional shares: (a) Two hundred and fifty thousand 6 per cent. first cumulative preference shares of £1 each, ranking *pari passu* with the existing 6 per cent. first cumulative preference shares of the corporation; (b) one million ordinary shares of 5s. each, ranking *pari passu* with the existing ordinary shares of the corporation. An issue of £2,500,000 5 per cent. first mortgage debenture stock will be made on Wednesday next at £101 per cent. The issue is covered by net assets totalling £6,135,446 and will be secured by specific charge on freehold and long leasehold properties valued at £4,159,684. Profit after depreciation, before interest on loan, to be repaid out of proceeds of issue for years to March 31: 1932, £394,487; 1933, £303,108; 1934, £439,686.

Beryl Gold Mines.—The board of the Anglo-Australian Gold Development, Ltd., announce that it is considered sufficient work has now been carried out on the property of Beryl Gold Mines, Ltd., to warrant the provision of substantial capital to further develop and equip the mines for operation on a commercial basis. An issue will shortly be made, and shareholders of Anglo-Australian Gold Development will have special rights of participation. Holders of option certificates who exercise their rights of conversion before the issue is made will be entitled to the same advantages.

Canadian City and Town Properties.—A meeting of debenture stockholders is to be held on October 10th to consider a plan to modify rights involving: Postponement of redemption date from December 31, 1935, to December 31, 1960; allotment of further stock, as fully paid, to the amount of £2 per cent. on holdings; interest from July 1, 1934, to December 31, 1938, not to be payable unless the directors think there are distributable profits available; interest unpaid on December 31, 1938, to be satisfied by the allotment of further stock, fully paid.

P. J. Carroll and Company.—On October 8th P. J. Carroll and Company, the Irish Free State tobacco manufacturers, will offer for sale 388,887 £1 6 per cent. cumulative preference at 21s. per share and 270,116 £1 ordinary at 25s. per share.

City Gold Reefs and Dredging Company.—It is understood that a public issue of the 10s. shares will be made at an early date.

Colvilles, Ltd.—It is understood that arrangements are being made for an issue of preference shares by this company.

English Bricks, Ltd.—Underwriting is taking place for an issue of £175,000 by English Bricks, Ltd., and it is expected that prospectuses will be available shortly. The company will manufacture on the latest principles at Southall, Middlesex, where an extensive property is being acquired.

Gold Exploration and Finance Company of Australia.—We learn that in the near future an influence of the first importance to the Australian gold mining industry will be the flotation by Gold Exploration and Finance Company of Australia, Limited, of the first of two, and possibly three, subsidiaries.

Nottingham Corporation Loan.—The Nottingham Corporation have decided to issue a £2,000,000 loan. It is understood the greater part of the proceeds will be used for conversion purposes.

United Sua Betong Rubber.—It is understood that this company will shortly make an issue of shares.

United Steel Debenture Issue.—An issue will be made of £2,500,000 of 4 per cent. debenture stock. Holders of the existing 6 per cent. 15-year debentures will be offered conversion.

RESULTS OF ISSUES

Argentine 4½ per cent. Loan.—Of the 4½ per cent. bonds to be issued in connection with the conversion offer, £4,500,000 nominal was underwritten in London, and of this amount the underwriters will not be called upon to take up more than 15 per cent.

Broadcast Relay Service, Ltd.—Issue of 222,200 shares of 1s. each at 4s. per share. Allotment letters were posted mid-night on October 2nd in connection with this issue. Owing to the large number of applications from shareholders, the directors regret that they have only been able to allot to shareholders as near as possible in proportion to their existing holdings.

Camp Bird, Ltd.—The issue of 6,000,000 1s. shares of Camp Bird, which were offered to shareholders and debenture-holders with option rights last month, has been fully subscribed, and the allotment letters have been posted.

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

Canadian Conversion Loan.—The Finance Minister, Mr E. H. Rhodes, announced that subscriptions for the \$250,000,000 refunding loan at the end of the second day exceeded \$76,000,000.

Central Bank of Canada.—Nearly 14,000 applicants applied for shares in the \$5,000,000 capital stock offered by the newly created Central Bank of Canada. Their subscriptions total over 232,000 shares for 100,000 shares of \$50 each.

Clan Line New 5½ per cent. Preference Shares.—After satisfying the allotment by way of rights to the debenture stockholders, applications for the residue of the shares were received from debenture and share holders covering the amount available more than six times.

Eno Proprietaries, Ltd.—London and Yorkshire Trust, Ltd., announce that the list of applications for the offer for sale of 4,000,000 ordinary shares of 5s. each at 11s. per share in Eno Proprietaries, Ltd., was closed at 9.5 a.m. September 28th, the offer having been heavily over-applied for.

Fisher and Ludlow, Ltd.—The recent offer of 150,000 10s. ordinary shares at 20s. each to registered holders was oversubscribed by £30,000.

Nigeria 3 per cent. Stock.—Large cash applicants received about 10 per cent. of requirements. A full allotment was made to small applicants.

Kapala Rubber Estates of Malaya.—Subscription lists in connection with the issue of 1,600,000 7½ per cent. cumulative preference shares of 2s. each at 2s. 6d. per share, and 1,600,000 ordinary shares of 2s. each at par were closed at 10.30 on October 3rd. It is understood that underwriters were left with a moderate proportion of both the ordinary and the preference.

Oxford and Berkshire Cinemas, Limited.—Subscription lists for the issue of 150,000 7 per cent. preference shares were closed at 9.5 a.m., October 4th.

South-Western Gas Corporation, Ltd.—Messrs Close Bros. announce that the offer made by the South-Western Gas Corporation to the Blandford Gas Company has been accepted by the holders of over 80 per cent. of the preference and ordinary shares.

REPORTS AND NOTICES

The City office of the *Morning Post* has been removed to 15 George Street, Mansion House Place, E.C.4. The telephone number will now be Mansion House 3868.

MISCELLANEOUS

GALLAHER, LTD.—Messrs Gallaher, Ltd., announce that they have acquired the whole of the issued share capital of International Tobacco Company, Ltd., and Peter Jackson (Tobacco Manufacturer), Ltd., and that the businesses of these companies, in so far as they are concerned with the home trade, have been amalgamated with their own.

KULIM RUBBER PLANTATIONS.—The first report and accounts for the year ended June 30, 1934, shows that the crop for the year was 1,200,920 lbs., of which 1,161,937 lbs. realised an average price of 4-50d. per lb. London landed terms. The estates have been well maintained, and buildings and machinery are in good order. The profit for the year amounted to £7,828. This is utilised as follows:—Buildings and machinery reserve, £500; income tax reserve, £500; underwriting commission, £525; preliminary expenses, £414. This leaves an available balance of £5,889. A dividend of 3½d. per share equal to 3½ per cent., is paid for the year, absorbing £4,375, leaving £1,514 to carry forward. An interim dividend of 3½ per cent. is also declared on account of the year 1934-35. The annual general meeting will be held on October 12th, at 11.30 a.m., at King William Street House, Arthur Street, London, E.C.4.

KUALA MUDA RUBBER ESTATES, LTD.—The profit on working for the year ended March 31, 1934, amounted to £19,427, which compares with a loss of £4,034 for the year ended March 31, 1933. Debenture interest absorbed £9,450 and note interest £2,536, leaving a net profit of £7,441. Deducting this from the debit balance of £10,089 brought in to the accounts, there is a debit balance of £2,648 to carry forward. Profits earned since the close of the financial year show considerable improvement on the above figures. The average gross price realised for new crop to date is equivalent to 6-84d. per lb. London landed terms, as compared with 4-34d. per lb. for the year under review. The arrangement with the debenture holders, whereby the payment of debenture interest was postponed for three years, came to an end during the year. Payment of interest in cash was resumed on January 1, 1934, and the payment, added to the amount which accrued between that date and the end of the financial year, i.e., a total of nine months interest, has been charged in the accounts. A crop of 3,251,306 lbs. was collected during the year at a cost, f.o.b., of 2-17d. per lb., against 2-61d. for the previous year.

COMPANY MEETINGS, &c.

ANGLO-ORIENTAL MINING CORPORATION, LIMITED

BENEFITS OF TIN CONTROL

The sixth annual general meeting of this company was held, on the 3rd instant, at the Institute of Chartered Accountants, London.

Mr John Howeson (the chairman) said it was perhaps not generally appreciated that the actual curtailment during the 3½ years of statutory tin control amounted to nearly 300,000 tons, or 370,000 tons, including the potential output of plant in process of erection during 1929; and for not one ton of that amount was there any possible market. Those figures illustrated better than any mere words the remarkable results which had been achieved by the control, both in restoring to normal proportions an ever-increasing accumulation of stocks—which at one time amounted to at least three times the utmost requirements of the trade—and also in re-establishing an economic price. Other advantages were the maintenance of a stable price level, the endowment of research work and the very friendly relations that had been established with the principal consuming interests.

The accounts showed a final balance on appropriation account of £176,526, compared with £126,387 at the beginning of the period. An aggregate valuation of the combined assets of the corporation and the Anglo-Oriental Trust, its subsidiary, had been made. To offset the issued capital, plus the balance on appropriation account, that valuation should amount to £1,926,526; actually it exceeded £2,000,000.

After dealing with the investments in Anglo-Oriental (Malaya), which, he said, was by far the largest enterprise of its kind in Malaya; in Anglo-Oriental (India), a regular dividend-payer throughout the depression; and in the Ship Carbon Company, whose products to-day were regarded as the finest manufactured anywhere, the chairman drew attention to their interest in a gold-dredging property on the Tano River in West Africa. It was evident from the exhaustive data already collated that there was a sufficient yardage of rich alluvial to justify the formation of at least one successful gold-dredging concern, and the initial operating company, now in course of preparation, might be followed by others.

Summarising his review of the consolidated assets, he said that the investments had been valued at £1,805,198 and properties and ventures at £165,000, a total of £1,970,000. Cash, debtors and sundries, less creditors, added about £40,000, and it would therefore seem that they were covered as to capital and accumulated profits with a margin approaching £100,000. The directors looked forward to receiving from now onwards further repayments of the funds loaned to the Trust, and they proposed to utilise those repayments in discharging the remaining arrears of preference dividend.

Anglo-African Selected Investments, formed in May with the principal object of holding the Trust's very considerable investments in Lyndhurst Deep Level and Konongo Gold Mines, held marketable shares of a value of approximately £300,000, in addition to undeveloped concessions, and over £30,000 in cash, all of which were expressed by an issued capital of £100,000.

The two greatest dangers that he saw in the situation were the doctrine of national self-sufficiency and the unstable or frozen exchanges. He was convinced that the world would recover its economic health much more rapidly if Governments were to concentrate less on monetary manipulations and more upon the scientific regulation of commodity production.

The principal consumption of tin was in the tinplate industry, and it was to his mind extraordinarily comforting that neither American nor German scientists had been able to find any effective substitute for tinplate. The reason was that, apart from its hygienic advantages, tinplate was the cheapest and most convenient vehicle for preserving and transporting food supplies, and that applied equally whether the price was £100 or £300 per ton. The argument that the present price had stimulated a vast activity in outside countries was equally ill-founded. The increased exports by non-participating countries in 1933 compared with 1929 amounted to 2,322 tons, and there would have been no increase if 1929 had not happened to be a particularly bad year for China. There was no doubt that the demand for canned goods during the coming winter in America would be exceptionally large.

On nearly all sides there was evidence of improvement in the industries which consumed tin, and he believed that they might count upon a greater impetus in the rate of recovery next year and look forward to a substantial increase in the average quota of production allowed for 1935.

The report was unanimously adopted.

MANILA RAILWAY COMPANY (1906), LIMITED

IMPROVEMENT IN RAILROAD OPERATIONS

The meeting of the Manila Railway Company (1906), Limited, was held, on the 28th ultimo, in London, Mr C. B. Orme Clarke presiding.

Mr T. Morris Priestley (managing director) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the total income for the year was £237,278 and the balance of revenue account was £31,726, out of which the directors recommended a dividend of 3 per cent., less tax, on the preference shares, leaving £3,834 forward.

Shareholders would be interested to hear something about the railroad company. The result for 1933, notwithstanding an extraordinary charge in respect of exchange, was a credit balance of net income of 21,431 pesos, as compared with a debit balance of 97,377 pesos. Good crop yields, particularly in sugar cane, had resulted in a fairly large volume of freight traffic, while the decline in passenger traffic had been less severe than during the previous year.

Sugar, which constituted considerably more than half the total tonnage transported by the railroad in 1933, was the major export of the Philippine Islands, and its chief market was the U.S.A., where it had been received under favourable conditions of importation. A new factor in the Philippine economic situation might therefore be the Customs changes in the U.S.A. for Philippine sugar resulting from the law for complete independence, which the Philippine Legislature had recently accepted from the United States Government. There would be a transitional period of ten years, however, before complete independence was granted.

With regard to the railroad results for the current year, their latest information for the half-year ended June 30th last showed that the revenues were about the same as those for the corresponding period of 1933; in fact, the gross results for the half-year were a little better.

At their last meeting it was proposed that a member of the board should pay another visit to Manila, and he would like to say that Mr Priestley, who visited there in 1932, might probably go out again at the end of this year.

The report and accounts were unanimously adopted, and the retiring director was re-elected.

LEETHAMS (TWILFIT), LIMITED

INCREASED PROFITS

The sixth annual general meeting of Leethams (Twilfit), Limited, was held, on the 2nd instant, at Winchester House, Old Broad Street, London.

Mr C. H. Reynolds (chairman and managing director), in his review of the year's operations, said that it was with pleasure that the directors were able to submit accounts showing a profit for the year of £48,794, compared with £42,714 earned a year ago, an increase of £6,080. Their aim had always been to make their manufactures reliable and to give the best possible service and support to their customers. Their prices were based with a view to maintaining their standard of quality and they were thus able to guarantee what they sold. That policy had brought its reward, and during the past year they had obtained an increase in the volume of sales both in the home market and in their export trade.

They had again placed £10,000 to general reserve, raising that fund to £40,000, and they recommended the payment of a final dividend on the ordinary share capital of 6 per cent., making, with the interim dividend paid in May, 1934, a total of 9 per cent. for the year.

Leethams (Ireland), Limited, had been converted into a public company in January last and a block of shares in that company had been disposed of to persons resident in the Irish Free State. The net profit of that company for the year was £9,534 and dividends had been declared and paid of 6 per cent. on the preference shares and 12½ per cent. on the ordinary shares. A small trading loss had been made by the Belgian subsidiary; the English subsidiary had also made a loss, but the German company's accounts revealed a satisfactory profit.

It would be hazardous to make a forecast with regard to the current year. If the present improved turnover in the home trade was maintained, and they were not further handicapped in overseas markets by higher Customs duties and import restrictions, they might look forward to submitting twelve months hence an equally satisfactory account of trading. He could only assure the shareholders that they would do their best in their interests.

The report and accounts were unanimously adopted.

KUALA MUDA RUBBER ESTATES, LIMITED

SATISFACTORY IMPROVEMENT IN RESULTS

The ninth annual general meeting of the Kuala Muda Rubber Estates, Limited, was held, on the 4th instant, at the Great Eastern Hotel, London.

Sir Francis M. Voules, C.B.E. (chairman of the company), said: The year's working resulted in a profit of £19,427 3s. 2d., a figure reached after making allowance, to the extent of £4,122 12s. 11d., for depreciation of buildings, machinery and plant. Despite the criticism which has been made, we do not consider these figures a very sorry state of affairs. On the contrary, we feel that shareholders will regard them as satisfactory, especially when it is remembered that the increase in the price of rubber had not proceeded very far when our accounts closed at the end of March. Since the end of the financial year the price of rubber has further improved and the debit balance has already been converted into a credit.

The crop for the year amounted to 3,251,306 lbs. The yield on Kuala Muda Estate was at the rate of 773 lbs. per tapped acre. The whole crop was collected at an f.o.b. cost of 2.17d. per lb., compared with 2.61d. per lb. for the previous year. I regard both these figures as highly satisfactory. I must, however, warn you that such exceedingly low costs must not be expected to continue. They were achieved by economies, some of which cannot be maintained under present conditions. During the slump, staff salaries and fees of all kinds were drastically reduced and have since been revised. Coolies' wages also have had to be increased. It is likely that costs for the current year will be around 3d. per lb., but an accurate forecast is impossible until more is known of the effect of the restriction scheme upon our crop.

The transfer of our Tenang Estate to Kepong (Malay) Rubber Estates, Limited, approved by the shareholders on February 12th last, took place on April 1st.

As regards the outlook, I am convinced that, owing to the wise scheme of regulation which is now in force, a cheap and prolific producer like Kuala Muda has a great future before it. Our low costs are a matter of pride and satisfaction to the board and the management.

A resolution proposed by Capt. McCormac to appoint a committee of shareholders was defeated, and the report and accounts were adopted *nem con.*

D. GESTETNER LIMITED

GRATIFYING RESULTS

The annual general meeting of D. Gestetner, Limited, was held, on the 28th ultimo, at the company's works, Tottenham, Mr S. Gestetner (chairman and managing director) presiding.

The Chairman, after referring to the board's proposal to distribute bonus shares in the proportion of one in five to ordinary shareholders, said that he was sure it would be agreed that the results of the company's trading during the past year had been exceedingly gratifying. Such results surely indicated that their products were right, and that their sales organisations knew their job, and that the steps taken to preserve their goodwill in their markets during the difficult years have been justified.

If the spirit which ruled throughout their organisation, taken in conjunction with their current month's business and the fact that their monthly results during the closing months of the last period had been extremely satisfactory, afforded any indication, he thought they were justified in saying that they hoped, and were certainly determined, to do at least as well in the current period as they had done in the year under review.

RECORD HOME SALES

Their sales at home had again reached record figures, and their export sales, too, had shown a very substantial increase. Their research laboratories had been fully engaged, and several important improvements had been made. Their range had been increased by the production of larger-sized machines of the 66 type, which enabled sizes of paper known as Brief and Double Foolscap to be quickly and economically duplicated.

The balance sheet showed considerable changes, due to the repayment of surplus capital at the beginning of 1934. The directors had taken particular pains that the rights of the preference shareholders were fully respected, and he thought they could say that they had been successful in finding a scheme which was of benefit to the company, and as a result of which no one class of shareholders either had to suffer or were allowed to gain disproportionately.

The Chairman, having dealt with the balance sheet items, concluded by paying a tribute to the work of the staff.

The report and accounts were unanimously adopted.

TARKWA GOLD MINES, LIMITED

PROGRESS TO DATE

The statutory general meeting of the Tarkwa Gold Mines, Limited, was held, on the 2nd instant, at Winchester House, London, Mr M. L. Innes Browne presiding.

The Chairman, in the course of his speech, said: The company's properties, the Edua Priem and the Idua Priem Concessions which adjoin, are both well-known gold mining properties on the Tarkwa Goldfield.

These two properties have the Tarkwa banket reef exceptionally well developed, and the workings promise considerable pay ore even under the old gold values. They are situated about 3½ miles distant from Tarkwa railway station, being on the south-west part of the Tarkwa goldfield where the reef formation attains its maximum width, the auriferous conglomerates being here at their maximum.

In 1910-11, Tarkwa Banket West, Limited, expended £30,000 in developing these properties. The main banket reef was proved on the Edua Priem property for a distance of 8,000 feet and several hundred thousand tons of ore carrying good values were reported available by adits above water level. On the Idua Priem property, which adjoins the Edua Priem, a further 2,000 feet of main banket reef was proved, good values being reported. The company was, however, unable to equip the mine with the plant necessary to treat the ore, and work ceased.

In July, 1933, Mr O. A. L. Whitelaw, M.I.M.M., F.R.G.S., F.G.S., made a report to the company on the properties, and as a result of his report the workings were re-opened, the mine re-examined and the new work he advised carried out.

The results obtained from the work were very satisfactory and the company was formed to develop the mine on a larger scale and to equip it with a modern plant.

The board is very pleased with the work to date; plant to assist the development of the mine is being sent out and the staff is being increased.

Both good values and widths of ore are being maintained and we look forward with confidence to the company developing a large successful mine.

After the Chairman had replied to a few questions, the proceedings terminated.

MORKWA, LIMITED

DEVELOPMENT OF DIAMONDFEROUS AREAS

The seventh ordinary general meeting of Morkwa, Limited, was held, on the 2nd instant, at Winchester House, London.

Mr J. M. Laird (the chairman), in the course of his speech, said: The creditors are now only £47 7s. 10d., against £6,700 10s. 11d. last year, and the cash balance is £18,454 3s. 11d., as against £3 4s. 3d. last year.

The sub-lease of part of the diamondiferous areas was granted to a Continental group and we expect they will very shortly be starting to work, as they have recently informed us that their modern plant for winning the diamonds is installed close by our ground, although not on our property.

Some shareholders have asked us why we did not undertake this work ourselves. The answer is a simple one; at the time we had not sufficient capital available to tackle the job effectively and we were, I think, fortunate to find others who were interested in and had faith in the diamond market to take the lease on what seemed fair terms to both parties.

The lease is for two years certain, with the option to the lessees to continue for a further three, but the amount of ground to be handled in each year is limited and the rents we are to receive represent a fair return to us on the probable extraction of stones according to our estimates. Of course, if the diamond market improves, as has been foreshadowed in some knowledgeable quarters recently, the lessors may do very well, but we could then more readily deal with our other proved areas ourselves.

On the gold-mining side, the original dredging proposition in the bed of the River Prah presents some rather serious obstacles, owing to the rocky nature of the bottom, and after preliminary examination we have decided, in the first place, to more carefully examine the alluvial areas which are known to carry gold on the adjoining flats, and some interesting finds have been made, but it is too early yet to give any particulars.

We are also examining, with other companies with whom we are associated, a promising mining area (situated in the direct line on the Preston-Ashanti reef formation) with a view to taking a joint interest with them in its development should the examination prove as satisfactory as we hope.

The report and accounts were unanimously adopted.

E. W. TARRY AND COMPANY, LIMITED

IMPROVED RESULTS AND PROSPECTS

The annual general meeting of E. W. Tarry and Company, Limited, was held, on the 28th ultimo, at Southern House, London.

Sir J. Fortescue Flannery, Bt., D.L. (the chairman), said that the general improvement in trade in South Africa had taken place sooner than in some other of the Dominions, and it was satisfactory to find that the response by their company had been not less prompt than he had ventured to prophesy.

The company's branches in Johannesburg had shown a great improvement over last year, both in sales and profits, and it was gratifying to report that their branches at Kimberley, Port Elizabeth and in Southern Rhodesia had also shown an improvement. For the last two years the company's trading had resulted in losses, but this year they were back again to the happy position of reporting a profit of £18,898, which was more than sufficient to pay two years' dividend on the cumulative preference shares.

There was, however, a debit of £16,190 in profit and loss account at the end of last year, and after wiping out the whole of that amount the directors recommended a dividend of 1½ per cent., payable on January 1st next, on account of arrears of dividend on the preference shares.

Judging from the results of the current year's trading, it seemed possible that in twelve months' time a larger amount of the outstanding dividend on those shares might be paid off. A year ago it was foreshadowed that with a full year's trading, after South Africa had gone off the gold standard, and the higher price being obtained for gold, the advantages to the company would be considerable, and a perusal of the accounts showed that this forecast was correct.

The year's profit of £18,898 compared with a loss of £7,674 for the previous nine months' period, thus indicating a very satisfactory improvement in the company's operations. He believed that they could look forward to a continuance of better trade in South Africa. So far as Tarrys were concerned, they were able to state that the sales for the 5½ months of the current year had not only been maintained, but at some branches an improvement over last year's figures had to be reported.

The report was unanimously adopted.

MALAYALAM PLANTATIONS, LIMITED

PROSPECTS FOR TEA AND RUBBER

The ordinary general meeting of Malayalam Plantations, Limited, was held, on the 5th instant, at 3 Idol Lane, London.

Mr Henry J. Welch dealt with the recent fall in tea prices and the surprising absence of material reduction in the visible stocks in the United Kingdom, and anticipated that owing thereto the International Tea Committee would increase the percentage of restriction from April next. Once again he drew attention to the adverse effect of the British preferential duty on the relative demands for Indian and Ceylon teas as against those for Java, Sumatra and other foreign-grown teas in the out-markets of the world.

The outstanding events in the rubber industry during the past twelve months had been the great increase in world absorption of rubber, the unfortunate growth in world stocks and the introduction of the scheme for the regulation of exports. He thought that the various difficulties encountered in putting the scheme into operation would doubtless be adjusted, but the industry must never lose sight of the fact that its great hopes lay principally in an increasing world consumption and in achieving such a low cost of production to enable successful competition with native and unorganised producers in any part of the world. There now seemed no doubt that the absorption for 1934 would exceed that of any previous calendar year, and the industry could reasonably look forward to moderate profits for at least the next few years.

The accounts showed a credit balance of £150,098, against the debit balance in the previous year, and a dividend of 8 per cent. was proposed. After deducting the net surplus assets, the net cost of the planted areas, including the two new estates recently purchased was under £39 per acre. With the new estates the company now owned 20,873 acres planted with tea, 18,625 acres planted with rubber and 683 acres planted with cardamoms. Only about 5 per cent. of the tea and 10 per cent. of the rubber had not reached the production stage.

Estimates for the current year of tea production for export and local consumption were about 9,600,000 lbs. They expected to produce 4,115,000 lbs. of rubber, and, including forward sales and sales for local manufacture, the sales to date amounted to 1,430 tons and had realised about 4.84d. net.

The report was adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the eight days ended September 30, 1934, amounted to £8,866,500, against ordinary expenditure of £12,294,000. After allowing for an increase in Exchequer Balances of £91,353, the operations for the week, as shown below, increased the National Debt by £3,519,000 to approximately £8,088½ millions.*

(000's omitted)

Public Department Advances	+ 4,600	Treasury Bills.....	- 2,199
P.O. and teleg. capital expenditure + 1,300		Road Fund temporary advances....	- 160

DR. SCHACHT'S REMEDIES

Herr Hitler has declared that his Government's "economic ideas are something we do not propose to uncover now. They are, if you please, patented." This may or may not account for the fact that the economic policy of the German Government has hitherto been wrapped in mystery.

It has been left to Dr. Schacht, the President of the Reichsbank and a member of the German Cabinet, to reveal the Government's economic and political policies.

Dr. Schacht has now issued an Official Report of the speech he delivered at Bad Eilsen which dealt with Germany's attitude to the economic and political problems which confront the world.

In the course of this extraordinary speech, Dr. Schacht proves to his own satisfaction that holders of the Dawes Loan have really been overpaid.

He demands an indefinite moratorium on all German loans and requires large new credits for Germany.

He discovers the existence of a network of Communist cells in England.

He has knowledge of forthcoming revolutions in what he calls the "richest" countries in the world.

These are but a few of the great discoveries made by Dr. Schacht.

Everyone interested in Germany's industrial and political policies should read the October issue of THE BANKER.

In an article entitled "A Defence of Dr. Schacht" the Official Report of the President of the Reichsbank's speech at Bad Eilsen is subjected to a scathing analysis.

Many of Dr. Schacht's observations are quoted in full in order that their arrogance and absurdity may be properly appreciated.

"A Defence of Dr. Schacht" has been written by one who has had exceptional opportunities of observing Nazi methods in finance and politics.

The best and most recent survey of German policy, it should be read by all who are interested in finance and politics.

THE BANKER

will be sent (post free) for 2/9 to any address in the World on application to The Publisher, 20 BISHOPSGATE, LONDON, E.C.2

GOLD

Messrs Samuel Montagu and Company write as follows on October 3, 1934:—
The Bank of England gold reserve against notes amounted to £191,886,073 on the 26th ultimo, as compared with £191,821,508 on the previous Wednesday. Owing to the appreciation of the gold currencies in relation to sterling, the sterling price of gold advanced considerably during the week, the quotation yesterday was 142s. 2 1/2d. establishing a new high record. There was a keen inquiry for the amounts offered in the open market, about £2,100,000 being absorbed by a general demand, which maintained prices at a considerable premium over the gold exchange parities.

Quotations during the week:—

	Per fine ounce of £ sterling	Equivalent value
September 27.....	141s. 4 1/2d.	12s. 0-22d.
" 28th.....	141s. 0 1/2d.	12s. 0-56d.
" 29th.....	141s. 1 1/2d.	12s. 0-47d.
October 1st.....	141s. 6d.	12s. 0-09d.
" 2nd.....	142s. 2 1/2d.	11s. 11-37d.
" 3rd.....	142s. 2 1/2d.	11s. 11-37d.
Average.....	141s. 6-92d.	12s. 0-01d.

SILVER

The market continued to show a firm tendency with a further advance in prices which, yesterday, reached 22 1/2d. for cash and 22 1/4d. for two months' delivery. The weakness of sterling has been a factor, but sellers have been reluctant, although some China selling was in evidence at the advance, which also attracted some profit-taking sales. The Indian Bazaars and speculators have been consistent buyers throughout the week.

The undertone is good, but the market may continue to be influenced to some extent by movements of the exchanges.

Quotations during the week:—

	IN LONDON	IN NEW YORK
Bar silver per oz. std. delivery.....	22 1/2d.	22 1/2d.
" 28.....	22 1/2d.	22 1/2d.
" 29.....	22 1/2d.	22 1/2d.
October 1.....	22 1/2d.	22 1/2d.
" 2.....	22 1/2d.	22 1/2d.
" 3.....	22 1/2d.	22 1/2d.
Average.....	22-469d.	22-469d.

The highest rate of exchange on New York recorded during the period from the 27th ultimo to the 3rd instant was \$4-97 1/2, and the lowest \$4-90.

INDIAN CURRENCY RETURNS (in lacs of rupees)

	Sept. 22	Sept. 15	Sept. 7

PERUVIAN GOVERNMENT 7½ PER CENT. (GUANO) LOAN, 1922.—Baring Brothers and Company, Ltd., and J. Henry Schroder and Company, announce that they have received certain funds from the Peruvian Government together with instructions to apply the amount to the payment of 50 per cent. of the nominal value of the Coupons due June 1, 1934. Such coupons may accordingly be presented to J. Henry Schroder and Company, 145 Leadenhall Street, E.C.3, and, after being marked with the amount paid, will be returned to the holders. Acceptance of such payment will in no way prejudice the rights of the holders under the terms of the General Bond.

ITALO-BELGIAN BANK (BANQUE ITALO BELGE S.A.).—It has been decided to propose at the general meeting to be held on November 29th next for the financial year 1933-34 ending on June 30th last, a dividend per share of Frs. 35 (7 per cent.), free of tax, and to maintain the amount carried forward at over Frs. 10,000,000.

SHANGHAI-NANKING RAILWAY NET-PROFIT SUB-CERTIFICATES.—The Hongkong and Shanghai Banking Corporation, the trustees under the Declaration of Trust of July 19, 1904, notify that a dividend for the year ending December 31, 1931, of 14s. 9d. per sub-certificate, less income tax, will be paid on and after October 12, 1934, at 8, Gracechurch Street, E.C.3.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE feature of the past week was the collapse in the price of wheat and other grains. At this time of year wheat prices normally tend to fall owing to increased supplies of new wheat, but the precipitous decline of last week cannot be explained by seasonal developments. In fact, it was due to a number of developments, including heavy exports of subsidised wheat at low prices by France, heavy liquidation in some of the leading wheat markets, improved crop reports from Argentina and Australia, and a relatively low level of current demand.

The markets in coffee and raw sugar were dull, and quotations showed a sagging tendency. On the other hand, the London tea auctions were characterised by keen competition among buyers at rising prices. Meat prices at Smithfield market were generally lower than a week ago, and bacon prices continued to decline. Eggs rose sharply in price, but quotations for potatoes are practically unchanged on the week.

Among industrial raw materials, copper, lead and spelter showed an appreciable decline in price, and last week's rise in the quotation for tin was not maintained. On the other hand, wolfram was slightly dearer. The market in linseed oil was dull and prices easier, partly owing to favourable crop reports from Argentina. Quotations for rubber also tended to sag, but buyers showed more interest at the lower level of prices.

Some improvement was noticeable in the market for wool during the last week of the London sales, which closed last Wednesday. According to Messrs Balme and Thomas the sales opened with a decline of from 10 to 15 per cent. in the price of all fine wools, as compared with the closing prices of the last series. But the second week witnessed a complete change in the tone of the market, and there was keen competition from Yorkshire and France at rising prices. Reports of the development of wool sales in Australia are also more favourable; this confirms the view expressed in a leading article on wool in last week's *Economist* that the boom of last winter has probably been liquidated. The market in jute was also firmer. On the other hand, raw cotton prices continued in a downward direction.

The trend of the prices of a number of commodities in the United States in the past week was sharply downwards. In view of the continued stagnation of business this is scarcely surprising. The extent of the decline is shown in the fall of Moody's index of the dollar prices of staple commodities from 156.2 (December, 1931 = 100) on August 29th to 149.7 on September 26th, and 143.5 on October 3rd. A year ago the index stood at 131.0. The fall is remarkable.

The news from the principal industrial centres in this country remains moderately encouraging. Production of coal is increasing, but South Wales has suffered from a diversion of orders to other districts owing to fears of a strike. Business in iron and steel is quite active and a further improvement is expected. There has been an appreciable increase in new business secured by the jute industry, but the demand for Lancashire goods failed to expand.

COAL

SHEFFIELD.—More active conditions have developed in all sections of the South Yorkshire coal trade, and pits are working with more regularity. Both inland and export requirements have increased, and house coal is being ordered in larger tonnages. Small coals are scarce owing to the heavy consumption at the coke ovens. A considerable number of colliers have been withdrawn from the unemployment registers since the output quota was increased a month ago. Quotations are: Best steams, 16s. 3d. to 16s. 9d.; f.o.b.; best house, 22s. to 23s. at pits; blast furnace coke, 14s. 6d. at ovens.

NEWCASTLE-ON-TYNE.—The Northumberland steam collieries continue to be in a firm position, and everything points to a brisk trade this winter for all their various grades of coal. A much greater volume of trade has been booked than a year ago, and it is now becoming difficult to obtain supplies of any description for delivery this winter. On the other side of the River, however, the Durham market is quiet, there being ample supplies of unscreened gas and coking. The prime brands of bunkers are in a slightly better position, due to an improved demand from foreign coaling stations. Coke of all descriptions remains a steady market.

Current f.o.b. prices for export:—NORTHUMBERLAND.—D.C.B., screened, 14s. 9d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. DURHAM.—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking, unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

GLASGOW.—The market has become a little easier in places, due mainly to the drying-up of German business owing to currency difficulties. Germany had previously been taking considerable tonnages of Scottish coal. Washed nuts have been chiefly affected, and most sizes of these can now be had without difficulty. Steam coals are also more plentiful, but navigation sorts, as well as the best grades of splint material, are firm in price. Taken all round, the business passing is satisfactory.

Export prices, f.o.b. district ports:—LANARKSHIRE.—Ell best, 13s. 6d. to 13s. 9d.; splint best, 16s.; splint second, 14s. to 14s. 3d.; navigation, screened, 15s.; navigation, unscreened, 13s. 3d.; Hartley, 15s.; all per ton f.o.b. Glasgow; steam, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 13s.; singles, 13s. to 13s. 6d.; pearls, 12s. to 12s. 6d.; dross, 10s.; all per ton f.o.b. Grangemouth. FIFE.—Best unscreened navigation, 13s. 6d.; unscreened navigation, 13s. to 13s. 3d.; first-class steam, 13s. 6d. to 14s.; third-class steam, 12s. 3d.; trebles, 14s. to 16s.; doubles, 12s. to 12s. 6d.; singles, 12s. 6d.; pearls, 11s. to 11s. 6d.; all per ton f.o.b. Burntisland or Methil. LOTHIAN.—Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 6d. to 11s. 9d.; unscreened navigation, 12s. 9d.; trebles, 14s.; doubles, 12s. to 12s. 3d.; singles, 12s. to 12s. 6d.; pearls, 11s. to 11s. 6d.; all per ton f.o.b. Leith. Ayrshire.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 12s. to 12s. 6d.; trebles, 15s.; doubles, 13s.; singles, 12s. 9d.; pearls, 11s. 6d. to 12s.; dross, 10s.; all per ton f.o.b. Ayr or Troon.

CARDIFF.—The intervention of the Secretary for Mines in the South Wales coal dispute led to a provisional settlement, and as the terms accepted by the representatives of the two sides have since been ratified by a delegate conference of the miners and by the South Wales Coalowners' Association, there has been no interruption of work in the coalfield. The main points in dispute have been referred to a tribunal of three independent persons to be appointed by the Minister of Labour and the Secretary for Mines, after consultation with the owners' and the miners' leaders. The fear of a stoppage, however, accelerated contract deliveries last month, and possibly also diverted orders to other sources of supply, and so severe has been the reaction that a number of pits have already been compelled to suspend operations owing to the slump in demand; it is feared that the number will increase before the end of the week. Exports from the South Wales ports in September totalled 1,373,395 tons, compared with 1,258,916 tons in August, but the increase compared with the corresponding month last year was only just over 5,000 tons.

Prices have shown no change this week, and with few exceptions have ruled at the minimum schedule figures. Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s. 6d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rully culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s. 1d.; pitwood, ex ship, 22s. 7½d. (French); 19s. 3d. to 19s. 6d. (Portuguese).

IRON AND STEEL

MIDDLESBROUGH.—The tone of the market continues good, although actual transactions are few, most consumers having covered their requirements for some little time ahead. Production is, however, readily disposed of, and it is expected that another blast furnace for the production of basic iron will be put into operation in this district very shortly. Prices of both Cleveland foundry pig iron and East Coast hematite remain unchanged.

Shipments of pig iron from the Tees during September amounted to 12,331 tons, of which, however, only 2,884 tons went abroad. Denmark was the best foreign customer. Since the beginning of October, shipments have been made of over 900 tons of foundry pig iron to Scotland and a parcel of 650 tons of hematite to Italy. Export sales are, however, difficult owing to exchange restrictions and quota schemes abroad.

Blast furnace coke continues at 20s. per ton delivered at the furnaces, whilst foreign ore for prompt delivery is based on 17s. per ton c.i.f. Tees for best Bilbao rubio.

Steel makers were able to effect good shipments during September, the total quantity of manufactured steel shipped from the Tees being 38,809 tons, of which 24,715 tons went abroad. Some parcels have been shipped to Argentina, Canada, China, Russia, and other destinations. The demand for semis is inclined to improve, but shipbuilding demand remains quiet. Prices are all unchanged.

Heavy steel melting scrap is in good supply, but makers are not prepared to offer more than 50s. per ton delivered at the works.

SHEFFIELD.—The open-hearth basic steel furnaces are still working to capacity and booking fresh business regularly. The outlook for this branch is distinctly good. The increase in the use of steel in place of wood in building and ship construction is benefiting steel makers. While demand for some classes of stainless steel has eased, the mills cannot produce sheets and strip of that material sufficient to satisfy current requirements. Demand for best tool steels is less active. Suppliers of ferro-alloys report a poor demand for several materials, notably tungsten. It is reported that Russia has been buying British-made tungsten in large quantities this year for use in her tool steel factories.

The local unemployment figures continue favourable compared with a year ago, as regards the iron and steel and engineering branches. New machinery is still being installed in the city. Overseas trade tends to expand, but the pace is slow; the improvement is mainly with Empire markets. Not much business has been placed in Sheffield by Russia this year. Prices of steel materials continue steady. The tool and machine knife branches are

extremely busy. Apart from scissors and razor blades, trade in cutlery is quieter than twelve months ago. The same remark applies to silver and electro-plated ware.

GLASGOW.—In practically all branches of the iron and steel trades in the West of Scotland business continues to expand and the number of workers in regular employment shows an increase. Steel-making plants continue to operate to full capacity and the tonnage on hand is still quite considerable. Shipbuilding specifications are not coming in freely just now, but structural material, although not involving the same heavy tonnages, is in better demand than for some little time. There have been further bookings of thin black sheets for Japan and the local sheet rolling mills are likely to have all mills at present in operation fully occupied for a number of weeks. There is some expectation that it may be possible to find employment for mills which have been idle for some months. In addition to these Japanese sheets, bookings for other markets show some advance and the home business, both in ordinary and high grade qualities, is very satisfactory. Tube makers are also working almost to output capacity and have some weeks' work assured. In the manufacturing and engineering branches, new business is fairly plentiful and many shops are exceedingly busy. It is announced this week that the Blythswood Shipbuilding Co., Ltd., of Scotstoun, have secured the contract for a turbine steamer from Manchester Liners, Ltd. The machinery will be supplied by the Glasgow firm of David Rowan and Company.

CARDIFF.—On the Swansea Metal Exchange on Tuesday there was an improved inquiry for tinplates and prices were firm at 18s. 2d. per ton f.o.b. for export. Galvanised sheets were quiet but steady at £11 5s. per ton, while steel sheet and tinplate bars were unchanged at £5 7s. 6d. less the usual 5s. rebate. Shipments of tinplates at Swansea last week totalled 98,306 boxes, compared with 101,862 the previous week, but owing to smaller arrivals from works, stocks were nearly 9,000 boxes lower at 79,610. In the corresponding week last year stocks totalled 108,371 boxes.

OTHER METALS

The tone of the metal markets was again unsatisfactory this week, copper, lead and spelter all declining to new low levels. This weakness makes operators more and more nervous and no stimulus sufficiently strong to counteract this tendency is at present in sight. It is hoped that the latest slump in copper will favour the American endeavours to bring about a new copper conference, but up till the middle of this week the Rhodesians had apparently received no official information on the subject. The prospects of a conference being held in the immediate future do not, therefore, appear to be very good. Primary producers in the United States have abandoned the market to the "Customs smelters" until October 15th—a step which will do something to improve the market position, since it will diminish the selling pressure from that country. But since only the blue eagle copper produced by the "Customs smelters" is saleable in the United States, sales of non-blue eagle copper on the European market will not be diminished. Hence, the export price of American copper continues to fall, and reached a new low record of 6.55 cents per lb. this week—the domestic price being unchanged at 9 cents per lb. For the last quarter of the year Germany has introduced new consumption quotas, which amount to only 50 per cent. of the consumption during the first three months of 1934.

The tin market exhibited no new features this week; supplies are good, but purchases are still very restricted. Since October 1st, production quotas have been reduced from 50 per cent. to 40 per cent. of the standard tonnage, but since the last quota allotments have not been fully absorbed, this reduction will be less serious for the market than might at first sight be supposed. According to A. Strauss and Company, whose statistics have just been published, visible supplies declined during September by 96 tons to 15,177 tons. Since the carry-over in the Straits showed a reduction of 700 tons, total visible supplies were reduced by 796 tons to 16,919 tons, as against 34,329 and 56,297 tons, respectively, at the corresponding date in 1933 and 1932. Deliveries during September amounted to 6,648 tons, or 651 tons less than in

MONTREAL

the previous month. This is the lowest level of deliveries since the short month of February—a disappointing development after such a long period of restricted purchases.

Prices of lead and spelter showed a further fall, but there are no new developments to report. The International Zinc Cartel has denied the rumours regarding difficulties between its members, but the report of Georg von Giesches' Erben—the big German lead and spelter producers—speaks of the failure of the Cartel's policy.

TIN.—Sales on the London Metal Exchange: 250 tons on Monday, against 220 tons last week; 450 tons on Tuesday, against 260 tons last week; 275 tons on Wednesday, against 100 tons last week. The New York quotation on Wednesday was 50.87½ cents per lb., against 51.60 cents a week ago and 51.45 cents a month ago. Wednesday's official closing quotation in London for standard cash was £231 5s. to £231 10s., compared with £232 17s. 6d. last week. Stocks in London and Liverpool at the end of last week were 3,870 tons, an increase of 189 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,100 tons on Monday, against 1,200 tons last week; 1,050 tons on Tuesday, against 400 tons last week; 2,300 tons on Wednesday, against 1,100 tons last week. Domestic spot was quoted at 6.50 cents per lb. in New York on Wednesday, against 6.65 cents a week ago and 6.82½ cents a month ago. Wednesday's official closing price for standard cash in London was £26 6s. 3d. to £26 7s. 6d., compared with £27 10s. to £27 8s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,537 tons, show an increase of 1,196 tons, and stocks of rough copper, at 7,003 tons, a decrease of 39 tons.

LEAD.—Sales on the London Metal Exchange: 150 tons on Monday, against 300 tons last week; 750 tons on Tuesday, against 800 tons last week; 450 tons on Wednesday, against 50 tons last week. The New York quotation on Wednesday was 3.60 cents per lb., against 3.60 cents a week ago and 3.75 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 2s. 6d. for shipment during the current month, compared with £10 12s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 750 tons on Monday, against 300 tons last week; 350 tons on Tuesday, against 125 tons last week; 500 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 3.87½ cents per lb., against 3.95 cents the week before, and 4.20 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 16s. 3d., for shipment during the current month, against £12 10s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs., as against £11 10s. to £11 12s. 6d. per flask of 76 lbs. last week. Foreign antimony was quoted at £39 10s. to £40 per ton, as against £38 10s. to £39 per ton last week. Chinese wolfram was quoted at 42s. 6d. to 43s. 6d. per unit, c.i.f., as against 42s. to 43s. per unit c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. — Although the movement has not been very pronounced, the tendency of raw cotton prices has again been easier, most of the news from the United States being of a bearish character. It is anticipated that the Washington Government, in its crop report on Monday next, will increase the September estimate of the growth, and many traders believe that the ultimate crop will be around 10,000,000 bales. Exports from America and deliveries to world spinners remain small. On the other hand, there continues an active demand for outside growths, especially Brazilian and East Indian descriptions.

A fair inquiry has been experienced in piece-goods for abroad, but customers continue to send very poor offers, and progress on the part of manufacturers has been slow. Not more than a miscellaneous business has been done for India, chiefly in light whites and fancies. Some advices from China have been slightly better, and more contracts have been arranged in dyed goods for Hong Kong and Singapore. Necessary buying has taken place in printing and finishing styles for South America and the Dominions, but very little has been done for Egypt and the Continent. In certain quarters there has been a little more activity in home trade goods. The outlook for spinners of yarn does not improve. Users of American and Egyptian counts have continued their policy of purchasing from hand to mouth, but some special contracts have been arranged in fine Egyptian qualities for thread manufacturing.

COTTON YARN PRICE AGREEMENTS.—The movement towards price-fixing schemes in the spinning section of the Lancashire cotton industry is making further progress. Spinners of fine American mule and ring yarns have decided to recommend all firms to enter into a legal agreement binding themselves not to sell their products at less than fixed prices. A voluntary agreement has been in force in this section for nearly twelve months and has, on the whole, been adhered to. If this scheme is carried through it will be the fourth legal agreement arranged. In the meantime, there is increasing interest in the scheme of the Master Spinners' Federation for the reorganisation of the spinning industry, and it is understood that the details will be available some time next week. In the meantime, spinners and manufacturers are striving to make their production and selling departments more efficient.

JUTE.—Dundee. — A big improvement has taken place in the volume of business done in jute yarns and cloth in Dundee in recent days, and both spinners and manufacturers have been able to obtain advances on their prices. Notwithstanding the fluctuations in raw jute prices, buyers of yarns and cloth have purchased freely, placing producers in a very comfortable position for several months ahead. The obtaining of reasonably early delivery is now difficult, and where this can be assured, buyers are required to pay a premium. The improvement is welcomed in view of the depressing period through which the jute industry has had to pass for many months. Sellers of raw jute are showing some reserve, but they find it difficult to raise prices, though the Government of Bengal has stated that they will give every assistance to restrict the cultivation of raw jute next season, in the hope that growers will receive better prices. The Indian Jute Mills' Association has asked its members to support the market to keep up prices, and when they entered the market recently for a quarter of a million bales, there was a decided advance in quotations. When their support was withdrawn, however, practically all the advance was lost, and Daisee assortment has been sold this week at £13 13s. 9d. for full group to £13 17s. 6d. for Shiva, with four's at £13, Tossa assortment at £14 12s. 6d. and four's at £14, October-November. Good First Marks are obtainable at from £16 12s. 6d., and Lightnings at £15 15s., with Hearts at £14 10s., October-November.

Hessian yarns in particular have experienced a good sale, and the price of common 8 lb. cops has risen from 1s. 8d. to 1s. 9d. in a short time, with 8 lb. spools at 1s. 10d. Spinners are busy, and unable to give delivery for a few weeks ahead. Twist is steady at 3½d. for 3-ply 8 lb., sacking yarns at 2½d. for 24-lb. weft and 3d. for 8-lb. chains. Rove at £17 for 48 lb. and £14 for 200 lb., while the Rio yarns are of some little interest at unchanged rates, and carpet descriptions are firm at 2½d. for 14 lb. warp. All widths and weights of hessians have participated in the improvement of business, and linoleum hessians, which have for so long been dormant, have come in for much attention. Prices are firmer all round at 2½d. for 10½ oz. 40 in. and 2½d. for 8 oz. Calcutta goods have shown little change. Stocks of hessians at the end of September were reduced by 21½ million yards to 90,370,000 yards and those of sackings by 15½ million yards to 93,500,000 yards, compared with the end of August.

GRAIN MARKETS

WHEAT.—The decline in wheat prices, which has been in evidence since the middle of August, was accentuated this week, culminating in a sharp fall in quotations on Wednesday. December futures on the Chicago market were about 8 cents lower than a week ago, the slump in London and Liverpool being of even greater proportions. This depression of prices is to some extent seasonal, since new supplies are coming on to the market at this time of the year, but certain special factors were also operative. Crop reports from Argentina continue to be good and exports from that country have been on a large scale recently. Subsidised exports from France are exerting a depressing effect on prices while the demand from the importing countries of Europe is somewhat restricted. The Australian crop promises to be rather larger than was recently supposed.

According to Mr G. Broomhall, total shipments during the past week were 1,358,000 quarters, against 1,180,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 95½ cents per bushel, against 103½ cents the week before and 104½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 6d. per 496 lbs., against 34s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 9d., against 32s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 27s. 6d. to 29s., against 29s. to 30s. 3d. a week ago.

FLOUR.—North American shipments were 106,000 sacks in the past week, as compared with 136,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 25s. per 280 lbs., against 25s. 6d. last week; delivered London, 24s., as compared with 24s. 6d. a week ago. Manitoba patents, ex store, 24s. 9d. to 26s. 3d., against 25s. to 27s.; Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. 6d.

BARLEY.—Imported feeding barley continues to weaken in price, demand in this country and on the Continent being poor. Quotations for the medium and lower grades of English barley have also shown an easier tendency, although prices of first quality have generally been maintained. "October" futures were 48½ cents per bushel in Winnipeg on Wednesday, against 55½ cents last week and 61½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 32s. to 55s., against 35s. to 55s. a week before.

OATS.—Home-grown oats continue to meet a fair trade and the tone of the market has been steady. Little interest is, however, being taken in imported varieties, while prices in Chicago have been marked down this week. On Wednesday, "December" futures were quoted at 47 cents per bushel in Chicago, against 52½ cents a week ago, and 53 cents last month. Quotations in London, Wednesday: "River Plate," landed, 21s. 6d. per 320 lbs., against 21s. 9d. a week ago; "Chilean White," landed, 23s. 6d. against 23s. 6d. a week earlier.

MAIZE.—After an upward spurt at the end of last week, quotations for maize subsequently reacted, the low estimates for the remaining surplus not being confirmed. Wednesday's prices were rather lower than those of the previous week. "December" futures were quoted on Wednesday at 73½ cents per bushel in Chicago, against 78½ cents a week ago and 79½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 23s. per 480 lbs., compared with 23s. 6d. last week; "Plate," ex ship, 22s., as against 22s. 6d.; "Plate," "September," 22s. 6d., as against 23s. 3d. Yellow maize meal, ex wharf, was quoted £6 5s. to £6 7s. 6d. per ton, against £6 7s. 6d. to £6 12s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to September 29	Cwts. 59,230	Cwts. 188,043	Cwts. 450,462	Cwts. 648,646
5 weeks to September 29	219,233	530,003	1,999,700	2,610,347
Average price of English wheat per cwt.	s. d. 4 6	s. d. 5 8	s. d. 4 11	s. d. 5 2

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Sept. 22, 1934	Cwts. 596,600	Cwts. 294,021	Cwts. 76,372	s. d. 5 1	s. d. 10 0	s. d. 6 8
Sept. 29, 1934	648,646	354,189	72,248	5 2	9 10	6 8
Sept. 27, 1930	157,614	188,550	48,269	7 2	8 7	6 0
Sept. 26, 1931	59,230	223,719	35,024	4 6	9 5	5 7
Oct. 1, 1932	290,494	324,483	70,617	5 7	9 1	6 5
Sept. 30, 1933	450,462	424,149	62,056	4 11	10 6	5 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Oct. 4, 1933	Jan. 3, 1934	Sept. 26, 1934	Oct. 3, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	61½	65½	81½	74½
Chicago (No. 2 Winter)	55½	46½	90½	84½	104½	95½

The visible supply of wheat in Canada, at 110,986,000 bushels, shows an increase of 6,986,000 bushels. Supplies a year ago stood at 106,393,000 bushels.

OTHER FOODS

SUGAR.—The market in raw sugar was quiet during the past week and quotations tended to sag. Last week's advance in the price of British refined sugar was maintained. The spot price of raw sugar in New York on Wednesday was 3.00 cents per lb., as compared with 2.90 cents per lb. last week and 2.86 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 4½d. to 4s. 5½d., against 4s. 5d. to 4s. 5½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	50	1,010	1,458	1,242	26,901	25,773
Liverpool ...	5,629	10,077	14,960	13,356	97,752	95,506
Total tons....	5,679	11,087	16,418	14,598	124,653	121,279
Last week ...	4,238	15,638	17,167	15,046	135,392	124,790

COFFEE.—The New York coffee market has been dull and prices showed an easier tendency. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. At Tuesday's auctions in London, demand was restricted to Kenya varieties. Last week's movements of coffee in London were as follows: Brazilian, landed, 3 bags; delivered, for home consumption, 560 bags; exported, 253 bags; stocks, 27,048 bags, against 27,090 bags a year ago. Central American, landed, 193 packages; delivered, for home consumption, 1,332 packages; exported, 1,234 packages; stocks, 91,077 packages, against 85,157 packages last year. Other kinds: Landed, 251 packages; delivered, for home consumption, 2,221 packages; exported, 480 packages; stocks, 86,074 packages, against 84,568 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 5 cents per lb. on the corresponding day last week and 5½ cents per lb. a month ago. The London quotation for Accra, "October-December," was 19s. 6d. per 50 kilos, c.i.f. Continent, as against 20s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 1,398 bags; delivered, for home consumption, 10,816 bags; exported, 2,491 bags; stocks, 205,277 bags, against 148,604 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 50,883 packages of Indian and 22,015 packages of Ceylon tea. Last week's improvement in the market for tea was maintained. Competition among buyers was again keen and prices realised were generally higher than a week ago. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land
Sept. 28, 1933	15-55	12-71	16-84	9-73	9-72	10-36
Aug. 20, 1934	13-66	11-65	12-45	9-70	9-48	11-41
Sept. 6, "	13-12	11-38	12-40	9-43	9-26	10-95
Sept. 13, "	13-09	10-37	12-16	9-29	8-77	10-65
Sept. 20, "	12-25	10-67	12-01	9-30	8-70	10-26
Sept. 27, "	12-95	11-17	12-70	9-85	9-38	11-06

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 8s. 1½d. per cwt., shows a fall of 1½d. on the week. Movements in London during the past week were as follows: Landed, 797 tons; delivered, 79 tons; stocks, 3,914 tons, against 5,567 tons a year ago.

POTATOES.—The market in potatoes was moderately active, but demand and supplies balanced at about last week's level. At the London Borough Market on Tuesday new crop "King Edward" sold at 6s. to 6s. 6d. per cwt., as compared with 6s. to 6s. 6d. per cwt. last week.

SPICES.—"Black Singapore" was quoted at 5½d. per lb. on Wednesday, against 5½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 4 tons; delivered, 12 tons; stocks, 288 tons, against 333 tons a year ago. White, landed, 770 tons; delivered, 76 tons; stocks, 8,000 tons, against 1,260 tons a year ago.

MEAT.—The past week witnessed a moderate decline in meat prices at Smithfield Market. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,068 tons, against 8,815 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.2 per cent. of the beef supplies, against 81.7 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 73.1 per cent. of the total supply of mutton and lamb, against 65.5 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Quiet and somewhat variable conditions prevail with only a small business passing. Linseed is again easy, and in meagre demand by crushers, both here and on the Continent. Plate is more or less neglected, but is lower for shipment, current quotations for October being £10 2s. 6d. per ton. So far, there is little interest in new crop, which is quoted at £9 10s. per ton, January-February. Some business is reported in Bombay linseed on passage, for which £11 10s. has been paid, while Calcutta to London is quiet at £11 7s. 6d., October-November. Crop reports from Argentina continue on the whole favourable. The quantity of linseed now afloat for Europe is 117,700 tons (including 18,100 tons from India) or 9,000 tons more than last week; and for the United States and Canada 40,300 tons, against 66,300 tons a year ago. Egyptian cottonseed is more active, and a fair trade has been done at £4 17s. 6d. to £5 for shipment.

Trade in vegetable oils is slow. Linseed oil is again easier, with raw oil ex Hull mill quoted £18 10s. for October-December delivery, and £18 15s., January-April, per ton naked. Cotton oil is steadier. Egyptian crude, ex Hull, has advanced to £14 10s., and refined (technical and edible) to £16. There has been some little movement in other seed oils. Oilcakes are in slightly better request, and quotations are steady. Linseed cakes, ex mill, have been reduced 5s. per ton.

THE LONDON FUR AUCTIONS.—The autumn series of London fur sales was opened last Wednesday, with the auctions of the Hudson's Bay Company. On the first day offers amounted to 28,997 beaver skins, 616,916 musquash and 5,175 other skins. The market tendency was weak, on account of restricted demand.

and beaver skins sold at prices which were as much as 50 per cent. below the level of last April and May. Even so, only about half the offers found purchasers. Musquashes met a better trade, prices showing a reduction of only some 5 per cent., and almost the whole supply being disposed of. Only the cheaper varieties of other skins found a market. Buyers of cross-fox skins were not keen bidders and it is noteworthy that no representative from Leipzig was present. A large part of the supplies on offer was not disposed of and prices were 25 to 35 per cent. lower than in the Spring.

This weak opening was not surprising in view of the disappointing tendency in the open market during the past few weeks. Winter business normally begins at the end of July, but this year, political uncertainties, exchange restrictions, and the like, in the chief purchasing countries have prevented any seasonal improvement

in business. Prices of furs during the next few months will be largely influenced by the level of quotations during the current London auctions.

RUBBER.—Rubber prices tended to sag during the past week, partly owing to the weakness of commodity markets in the United States, but buyers showed more interest at the lower level of prices. In New York, Wednesday's spot price for rubber, at 14½ cents per lb., compared with 14½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7¾d. for January-March, 1935, as against 7½d. to 7¾d. a week ago. Stocks in London and Liverpool at the end of last week, at 113,507 tons, show an increase of 555 tons as compared with the preceding week.

himself, how his feelings towards M. Barthou have changed from exasperation and dismay to respect and even affection during the months that have passed since the French National Government took office. M. Barthou may have had a sharp tongue and a rough hand, but he has proved himself a constructive statesman. The entry of Russia into the League and the growing accord between France and Italy are both his handiwork, as far as they are not the unintentional outcome of the bull-in-the-china-shop foreign policy of Japan and Germany. Can M. Doumergue find another elder statesman to replace his murdered Foreign Minister? And if he cannot, can he prevent a disruption of his Ministry through a scramble for M. Barthou's portfolio between the partisans of M. Herriot and those of M. Tardieu?

The possibilities of political dislocation in Yugoslavia are more difficult to gauge, but manifestly still graver. There is wisdom in the late King's choice of regents who are to govern for the child who now succeeds to the throne. The regency triumvirate consists of Prince Paul and two other civilian members, both of whom are Croats. It is thus free from any association with the post-war Serb military hegemony over the Croats and the Slovenes. This is a Regency which may be willing to give the non-Serb Yugoslavs equal rights with the Serbs—as was, in fact, the ultimate aim of King Alexander himself. And it is reassuring that there has been no immediate insurrection in the Croat and Slovene provinces. At the same time, the internal situation in Yugoslavia is bound to be dangerous owing to the sudden release of the sectional forces that had been impartially repressed by King Alexander's royal dictatorship. The justification for the dictatorship was that the previous parliamentary regime meant, in practice, a Serbian hegemony which was maintained by military force and which was rapidly creating a deadly feud between Serbs and Croats. In Alexander's view—and he had the facts of experience on his side—the parliamentary regime was incapable of overcoming tribal antipathies and welding the old tribes into a new nation. In his mind, a temporary dictatorship was the indispensable crucible for this necessary political alchemy.

But now the crucible has been shattered before the operation is complete; and we are left wondering how these discordant Yugoslav elements—Serb and Croat and Slovene—are going to behave now that they are again at large. One serious danger is that the Serbian corps of officers, foreseeing that the Regency's policy towards the Croats and Slovenes will be conciliatory, may carry out a military *coup d'état* at Belgrade in order to restore a Serb hegemony based on force. That might mean, in the first place, civil war in Yugoslavia, with all the consequent temptations for foreign Powers to intervene. On the other hand, the Serb militarists might prove to be too strong to make it feasible for the Croats to take up arms; and, in that event, they might try to divert Croat minds from their sullen resentment against the Serb yoke by deliberately launching some foreign military adventure.

It is disturbing to learn that the press of Belgrade and Zagreb has been making the preposterous, and criminally provocative, assertion that the Marseilles crime was engineered in Italy, and to hear that there have been anti-Italian demonstrations at Zagreb and Ljubljana. These incitements in the Yugoslav press had their effect in the mobbing of the Italian Consul in Zagreb by an inflamed crowd on Thursday; and the anti-Italian feeling all over the country has reached a dangerous heat. This wicked work presumably comes from the same hand as the recent Yugoslav press-campaign against the Italian Army; and since this was a force in Yugoslavia which even King Alexander could not totally suppress, it is to be feared that it may break out more virulently now that his hand is removed. Of course, a Serb military adventure would mean the end of Yugoslavia; but, unhappily, the recent history of Europe shows that this will not necessarily be a deterrent to megalomaniac militarists. The creation of Yugoslavia has cost the world the war of 1914-18. It cannot afford to pay a similar price for her destruction. Let us hope, therefore, that in Yugoslavia, to-day, the counsels of wisdom and moderation will prevail.

THE CONSERVATIVE OUTLOOK

DISPLAYS of partisan spirit are to be expected at Party Conferences, and in this respect the Conservative Conference at Bristol last week was certainly no exception. Seen in retrospect, the Conference leaves two main impressions on the mind. First, the Party is showing unmistakable signs of that restless desire for a return to "true Conservatism" which preceded the break-up of the Coalition in 1922. Secondly, "true Conservatism" is being interpreted more and more as meaning a reactionary resistance to all constructive and progressive policies. The narrow defeat of Sir Henry Page Croft's attack on the Government's Indian policy was naturally the most spectacular event of the Conference, and the debates that followed, including Mr Baldwin's speech, were something of an anti-climax. They were marked, nevertheless, by the same negative and unconstructive temper that Sir Henry Page Croft exploited so successfully in the debate on Indian policy.

On the first day of the Conference the assembled delegates proved themselves to be chiefly interested in re-armament and the strengthening of the obstructionist powers of the House of Lords. Both debates were frank. Lord Lloyd wanted more warships, and Sir Arthur Steel-Maitland wanted more aeroplanes. The principal argument put forward by Mr Chamberlain in reply was that re-armament must cost something, and that the taxpayer would have to pay. No word appears to have been spoken at the Conference of the threat to the peace of the world involved in the tacit abandonment of the struggle to achieve disarmament. Nor, in the debate on the House of Lords, was any warning raised against the policy of deliberately rigging the Constitution in the interests of one Party without an electoral mandate. Instead, Lord Wolmer moved a resolution—which was passed—asking the Government to "rescue the Constitution from its present dangerous position before a Dissolution takes place." In other words, the Constitution is to be made safe from the expression of the will of the people.

In the debate on slum clearance, the Conference was at its worst. A motion was proposed by a delegate from Leeds protesting against the injury done to landlords by the alleged inadequacy of the compensation provided by the Government's slum-clearance policy. This delegate complained that the Labour City Council at Leeds intended to demolish about one-fifth of the dwelling houses in that city in six years, and he described the treatment being meted out to house owners as an unjustifiable violation "of the principles of sound Government and Conservative policy." It is true that another delegate moved an amendment supporting the Government's "vigorous policy of slum clearance and rehousing." But the amendment was rejected by a huge majority, and the original resolution carried although Sir Hilton Young's speech in reply was almost entirely occupied with a defence of the Government against the charge that adequate compensation was not being granted. Similarly, in the debate on agriculture, the chief accusation against Mr Elliot's policy was not that it exploited the poorer consumer, but that some of the fruits of that exploitation were allowed to accrue to the overseas as well as the domestic farmer.

The only constructive contribution to the Conference was Mr Harold Macmillan's advocacy of his idea of "self-government for industry." But the policy, as he expounded it, though constructive, is unfortunately full of pitfalls. Mr Macmillan wishes to pass an Enabling Act which will permit a majority of producers in any industry to impose industrial agreements on unwilling minorities. Such agreements, as all experience shows, are very liable to become nothing more than price-raising devices or agreements in restraint of trade. What Mr Macmillan is, in fact, proposing, despite the fair words in his motion about "proper safeguards for the public interest," may very easily amount in practice to the piling of monopoly on Protection—so that the consumer may be exploited not once but twice. He defends his proposals with sweeping assertions about technological unemployment and the breakdown of the competitive system. These generalisations go much too far and lead Mr Macmillan into the fallacy of prescribing a

general remedy which is really only appropriate to certain particular cases. Thus, in the coal, cotton and steel industries, where enlightened self-interest has failed to eliminate surplus capacity, concerted action to prevent overlapping and uneconomically low prices has become a necessity. But even in these cases the most stringent powers should be taken to safeguard the consumers', that is the public's, interest; and no price-fixing or other agreements supported by compulsion should be brought into effect without the Board of Trade's approval. The principle of coercing a minority is, on the other hand, quite out of place in most branches of production, as, for example, the motor industry, where competition has had its normal and healthy effect of stimulating efficiency and low prices without destroying profits.

It is noteworthy that the arguments used by Mr Macmillan are being exploited by Signor Mussolini, Sir Oswald Mosley and General Johnson, of N.R.A. fame, to justify a similar policy. As Mr Macmillan quite rightly observed, his policy is "the very opposite of Socialism." Indeed, the tendency to use technological unemployment as an argument for the grant of statutory monopolies is an interesting and significant one. Mr Macmillan's fellow Conservatives at Bristol, however, do not appear to have appreciated its significance, for his policy was attacked on the ground that it was "Socialist," and that it "would stifle initiative and kill competition." In the end the resolution was carried, but the majority of delegates refrained from voting.

Mr Baldwin brought the Conference to a close with one of the moderate, democratic, but unconstructive speeches which he is accustomed to make in a difficult political situation. Such speeches leave him free either to take immoderate action or to take no action at all. On this occasion he treated the Indian issue with masterly silence. He urged industrial employers to shorten working hours, but he offered no hope that the Government would co-operate with the International Labour Office in inducing them to do so. He quoted Disraeli's summary of Tory principles: "The maintenance of religion, the preservation of Empire, and the improvement of the condition of the people." But the words must have had an ironical sound in a Conference which had attacked the Government for clearing the slums and half suspected it of jeopardising the Empire. In effect, Mr Baldwin gave the impression that he is more concerned to keep his Party quiet for the rest of the present Parliament than to worry about what may happen in the next. Sufficient unto the day, he seems to have been reflecting, are the dissensions thereof.

BLOODSHED IN SPAIN

LIKE the great, and older, Republic north of the Pyrenees, the new Spanish Republic has led a precarious existence in the last year or two. As in France, Governments depended on "accords" between Socialists and Radicals, with a strong Right wing waiting for office. But in Spain the very newness of the Republic meant that the Right wing appeared to the Radicals and Socialists as the apostles of reaction, if not of a monarchist then of a Catholic complexion. Moreover, to these complications were added the centrifugal tendencies of the Spanish provinces, now tasting the first-fruits of autonomy in the new Republic. Finally, unlike France, Spain has always had a bewildering variety of "back-stage" parties of the Left—Anarchists, Syndicalists, Communists and political freebooters—who formed a floating population attached to none of the big national parties, though always ready for a dust-up. Recently, differences between Barcelona and Madrid had rallied Spanish Socialists to the support of the anti-Right Catalan autonomists; and it was obvious that a struggle was imminent.

We remarked, in a Note last week, that "if Señor Lerroux now attempts to impose the will of the Central Government upon the Generalitat in Catalonia anything might happen in Spain." What has happened within the last seven days is graphic enough, in all conscience. It has been the most bloody upheaval in the short

life of the second Spanish Republic. Acting with unexampled energy, the Government of Señor Lerroux, loyally supported by Army and police, has averted civil war; but at a terrible cost. It is no exaggeration to say that, like the French Revolution of 1830, the "democratic republic of workers of all classes" has disappeared, to be replaced by as *bourgeois* a creature as the regime prevailing before April 14, 1931, except that a President now occupies the monarch's position.

At midnight on Thursday, October 4th, the Casa del Pueblo, the trade union headquarters in Madrid, announced a general strike in protest against what they alleged was a Government tending to the Right. A few hours before this the Left Republican leaders in a body, including Martínez Barrios, not long ago Señor Lerroux's henchman, issued a statement of their intention to break off all relations with the President. At first the strike was pacific enough. Party discipline stood the strain. Communist organisations took no part in it. The Syndicalists, on the whole, seemed to be staying out. Some shooting was reported in the mining districts of Asturias, and troops were called in to reinforce the Civil Guard. In Barcelona, as in Madrid, it seemed to be just another Labour demonstration.

On the following day, however, violence took charge. A Catalan newspaper—usually considered the official organ of the Catalan President, Luis Companys—described the formation of the Lerroux Ministry as "a felony and an act of treason which placed the Republic in the hands of its enemies." A garbled version of this declaration seems to have gone the rounds in Madrid and other towns where the workers' organisations are strong, and the general strike became a general insurrection. At 10 p.m. on Saturday night a state of war was proclaimed in Madrid, following rather spasmodic attacks on Government offices.

The Generalitat, or autonomous Government of Catalonia, had been in communication with Madrid early on Saturday, and assurances were given that public order would be maintained. A few hours afterwards, however, pressure from the mob seems to have been too strong for the inexperienced leaders of the Catalan *Esquerra*. Suddenly, the Barcelona broadcasting station announced that the Catalan leaders proposed to exercise the sacred right of rebellion, to sever connection with the Lerroux regime in Madrid, and to set up a Catalan State as the nucleus of a new Spanish Federal Republic.

Feeling had been running high in Catalonia. Although the late Prime Minister, Señor Samper, had "found a formula" for setting at rest the dispute between Madrid and Barcelona over the Law of Land Contracts, there was a shrewd suspicion that the landowners had later applied further pressure in Madrid, and that the advent of Señor Gil Robles and the Right Wing Catholic Agrarians to power at the centre would mean a reopening of the whole question. But it is not likely that the Catalan Government would have chosen this moment to defy the Central Government merely for pleasure. It would appear that Señor Companys' hand was forced by the peasants, for whose

benefit the land contract law had been framed. They were seething with anger at Madrid's "treachery"—itself the result, as we have remarked in the *Economist*, of Señor Cambó's efforts to protect his fellow capitalists—and were proposing to take the law into their own hands. The danger of a Communist Workers' and Peasants' Republic may thus have led to a gambler's throw.

General Batet, Military Governor at Barcelona, was confronted with the alternatives of throwing in his lot with his Catalan comrades or of preferring loyalty to the Centre. He chose the latter; and exactly two hours after the proclamation of Catalan sovereignty regular troops were bombarding the Government building and the Town Hall, where the Catalan leaders were congregated. The rebels had no chance; most of the Generalitat Government were arrested and were then taken off to be court-martialled on a ship in the harbour. But the military had also to search for Señor Azaña, Marcelino Domingo, and other Left Republican leaders, who had assembled to take over the Government in the new Federal Spanish State, which was to arise if the Catalan revolt were successful.

But the trouble did not end with the quashing of the Catalan revolt. Sporadic outbreaks all over Catalonia were not entirely subdued by last Thursday. The violence engendered by the general strike in Madrid has proved even more difficult of suppression. As we go to press, the Spanish capital has been in a state of war for five days; Socialist snipers on housetops have kept up their grim work, and are not yet finally dislodged. In Asturias the strike became an organised rebellion; communications were cut, regular troops were hampered in their movements, the rebels possessed up-to-date weapons, and bombing aeroplanes and warships have had to be used against them. The armed revolt has been concentrated in the north of Spain, in the industrial districts where the Socialists were strongest. But the loyalty of the army to the Central Government spelled eventual suppression; and last Thursday Madrid and Barcelona were resuming their normal life—despite food shortage and transport difficulties—while the crushing of the revolt in the north and in all country districts seemed merely a matter of force and slow attrition. Señor Azaña was found and arrested late on Tuesday; and other Socialist leaders are either in hiding or have contrived to evade the frontier control and escape.

To look upon the rebellion of the Generalitat as another episode in the historic struggle between Castile and Catalonia is to misread the situation. The Second Republic, which has clearly failed in many spheres, has to its credit the one big success of having solved the Catalan question, by the grant of a kind of "Dominion Status" under a constitution which rightly defines Spain as "an integral State of federative tendencies." The members of the Catalan Government were therefore rightly indignant with Señor Lerroux's broadcast on Saturday night when he talked of "separatist madness." The idea of Catalonia breaking away from Spain altogether, and either linking up with France or living an independent life, does not enter any Catalan's head. Nevertheless, a large number of Spaniards brought up in the Bourbon tradition of a centralised administration really believe—or can easily be made to believe—that whenever the Catalans refuse to take orders from Madrid they are wantonly aiming at the destruction of the national unity. The ex-King, Alfonso, added fuel to the flames about a week before by an article in this sense. It will be difficult, in the present instance, for the Madrid Press to get that story believed. For the first action of the new independent Catalan State was to call upon Señor Azaña, the chief architect of the existing constitution, to design the new Federal structure. And Señor Azaña hails from Castile.

There are rumours that the Catholic members of the Government will press for the closing of the Labour Socialist headquarters and harsh measures against those who failed to comply with the orders to return to work. But the President's influence will certainly be exerted towards preventing any undue measures of repression. It will be for Señor Gil Robles's Party to attempt to get sufficient support in the Cortes (a two-thirds majority is required) for a Constituent Assembly to bring about the kind of revision on Conservative and Catholic lines which they are seeking. The fact that the mission to the Vatican

to arrange the terms of a *Concordat* has failed utterly does not suggest that theirs will be an easy task.

But the general situation is bad enough in all conscience. Señor Lerroux is left, alone of all the original Republican-Socialist conspirators who "made" the Revolution of 1931, to survey the ruins of their work. And Spain is left to face the almost impossible task of trying to work a Parliamentary Government, with the mobilised Left forces of the country driven to a condition of despair. The tragic result of sitting on the safety valve in a State composed of widely differing social and linguistic groups is bound to declare itself sooner or later—in Spain as in Yugoslavia, or as in pre-war Austria-Hungary. Some Federal solution sooner or later, whereby local affairs may be dealt with by local assemblies, would seem to be the only way by which Spanish democracy can learn the necessary lessons of responsibility. Most of those who know Spain agree that government from the centre will be as impossible now as it proved before the Dictatorship in 1923.

A QUARTER'S INDUSTRIAL PROFITS

Our annual records of the profits reported by British industrial concerns run from July to June of each year. The profits shown by companies which reported in the quarter just ended, therefore, begin a new series. But generally about two-thirds of the annual total of profits are reported in the first two quarters of the calendar year, while the third quarter's reports are few in number. The experience of those concerns which reported last quarter should not therefore be taken as an indication of the experience of all British industrial concerns which will report in the next nine months.

In the quarter which has just ended, 318 concerns reported total profits of £17.1 millions, against £13.4 millions for the same concerns a year ago—an increase of £3.7 millions, or of 27.7 per cent.

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, Etc.)

	No. of Companies	Reports published in		Increase (+) or Decrease (—)	
		1932	1933		
Third quarter	307	16,284,606	15,394,560	— 890,046	— 5.5
Fourth quarter ...	464	16,201,909	21,116,780	+ 4,914,871	+ 30.3
1933					
First quarter	547	52,925,902	55,751,307	+ 2,825,405	+ 5.3
Second quarter	642	56,970,575	67,334,795	+ 10,364,220	+ 18.2
Third quarter	318	13,425,013	17,139,932	+ 3,714,919	+ 27.7

A year ago 307 concerns reported a net reduction in their profits of £890,000, or 5.5 per cent., from the figures shown by those concerns in the third quarter of 1932. The increase in profits last quarter over the profits of the same concerns in the corresponding quarter a year ago is in keeping with the trend of each quarter's results over the last five years, as is shown in the next table:—

	1928	1929	1930	1931	1932	1933	1934
First quarter	+15.2	+1.5	+1.9	—10.6	—14.3	—8.9	+5.3
Second quarter	+1.3	—0.7	+9.6	—19.4	—19.4	+3.3	+18.2
Third quarter	—9.7	—3.0	—6.4	—35.5	—28.6	+5.8	+27.7
Fourth quarter	+3.1	+1.4	—18.1	—53.9	—2.9	+30.3	...
Year	+7.2	+0.0	—0.6	—22.5	—18.1	+0.5	...

Here the trends are unmistakable. Concerns reporting in the summer months of the year first recorded the trough of depression. Their losses during its course have been severe and their emergence from it slow; for in the concerns reporting generally in the third quarter are many dependent on British exports and on international trade. Concerns reporting in the first and second quarters showed a smaller decline and a quicker recovery; but it should be remembered that, as they account for two-thirds of each year's total profits, their smaller percentage falls and rises relative to the percentage movements in profits reported in the

third and fourth quarters represent greater absolute declines and rises reckoned in terms of money. The increase now recorded in the profits of those concerns reporting last quarter is the first third-quarter increase for seven years, and it completes the quarterly list of increases. The upward trend of profits is now general.

The next table analyses the experiences of the concerns which reported last quarter, according to their industrial groups:—

Miscellaneous	49	1,852,349	1,925,852	73,503	3.9	...	...
Total	318	13,425,013	17,139,932	3,714,919	27.7	...	...

Breweries have done uniformly better, and as many big breweries reported last quarter the improvement is a good measure of the breweries' experience as a whole. Land and property investment has been more profitable, especially in British properties. The two gas concerns are no indication of the fortunes of the gas industry. The improvement in the hotels group is exaggerated owing to the improved results of one or two big residential-suite concerns. The iron, coal and steel concerns which reported last quarter are important and representative; the increase in their total profits is therefore encouraging; but among both coal and iron and steel concerns experiences of separate undertakings vary widely. The very good Richard Thomas and John Lysaght results are counteracted by the heavily increased debit balance of Armstrong Whitworth Securities. The smaller coal and iron and steel concerns seem to have done uniformly better than their more important fellows. Nevertheless, the improvement is general. Austins and Rovers between them account for the increased profits in the motor and cycle group. A number of rubber companies have reported, and here again improvement is general, debit balances brought forward being wiped out or greatly reduced, following the sharp rise in rubber prices during the last year. In shipping, while the White Star Line increased their debit balance carried forward, Furness Withy maintained their net profits of £378,000, and coastal and smaller shipping lines increased their profits. Every single shop and store, both retail and wholesale, has done better. Owing mainly to the restriction scheme, tea companies in general converted a debit balance into quite a strong profit position. Textile concerns, so greatly dependent on export and on world conditions, only held their own. Trusts reflect the trading experience of other concerns, in which their funds are invested, after a time-lag of anything from six to eighteen months; but the results of the trusts which have now reported show that their finances are fast closing the gap so evident a year ago. Building-material concerns have all done better; so have those undertakings which cater in general for home industry and demand or which minister to our demand for "conventional necessities." We have separated into various industrial groups the vast category hitherto described in these articles as "Miscellaneous"; and from the details now given the extent of our "domestic" recovery in the last eighteen months is apparent. The three tobacco concerns have not done as well as was expected. Among

"Miscellaneous," wireless, furnishing, amusement and patent medicine concerns show improved results.

The profits made last quarter were distributed as follows:—

DISTRIBUTION OF PROFITS

	Net Profits after payment of Debenture Interest	Ordinary Dividend	Preference Dividend	To Reserve, etc.
1933	£	£	%	£
Third quarter	15,394,560	9,417,000	61.2	5,357,063
Fourth quarter	21,116,780	13,577,825	64.3	4,937,775
1934	£	£	%	£
First quarter	55,751,307	33,144,423	59.4	12,336,342
Second quarter	67,334,795	34,770,452	51.6	18,698,052
Third quarter	17,139,932	9,738,888	56.8	4,228,115
1933	£	£	%	£
Third quarter	15,394,560	9,417,000	61.2	5,357,063
Fourth quarter	21,116,780	13,577,825	64.3	4,937,775
1934	£	£	%	£
First quarter	55,751,307	33,144,423	59.4	12,336,342
Second quarter	67,334,795	34,770,452	51.6	18,698,052
Third quarter	17,139,932	9,738,888	56.8	4,228,115

Out of a greatly increased total of profits over the third quarter's results last year only roughly the same amount went to ordinary dividends; so that the percentage going to those dividends declined. The share of preference dividends declined absolutely, and more so as a percentage share. On the other hand, as against virtually no allocation to reserves this time last year, we now have an allocation of £3.2 millions, or 18.5 per cent., the same percentage allocation as in the first quarter of this calendar year. This continues the tendency, already remarked in recent articles of this series, to replenish the sadly depleted reserves of industrial concerns; and it should be noted that, though the percentage increases are striking, when the absolute increases in reserve allocation are placed alongside the drafts on reserves in recent years, the present greatly increased allocations appear fully warranted. The proportions of profits and reserve allocations to total ordinary and preference capital are shown in the next table:—

PROFITS AND RESERVES

	No. of Companies	Total Ordinary and Preference Capital	Net Profits after Payment of Debenture Interest	Carried to Reserve, etc.
1933		£	£	%
Third quarter	307	296,128,953†	15,394,560	5.2
Fourth quarter	464	417,816,381†	21,116,780	5.0†
1934		£	£	%
First quarter	547	697,704,983†	55,751,307	7.9
Second quarter	642	973,291,329	67,334,795	6.9
Third quarter	318	264,076,256	17,139,932	6.5

† Adjusted figures.

Here, it will be noted, the reserve allocation appears less striking, by reference to the capital involved.

The rates paid on the three forms of capital appear below:—

AVERAGE RATES PAID

	On Debenture Capital				On Preference Capital				On Ordinary Capital			
	1931	1932	1933	1934	1931	1932	1933	1934	1931	1932	1933	1934
1st quarter	4.92	4.30	4.77	4.73	5.8	4.9	5.0	4.9	8.5	8.7	7.5	7.5
2nd "	4.96	5.01	4.97	4.75	5.8	4.9	4.9	5.2	8.3	5.7	5.0	5.7
3rd "	5.24	5.09	4.94	4.88	4.5	3.6	4.4	4.1	5.4	4.3	5.3	6.0
4th "	5.18	5.16	5.04	...	3.8	3.6	3.2†	...	3.9	4.9	5.2	...
Year ...	5.01	5.01	4.99	...	5.2	4.2	4.6	...	7.2	5.9	5.8	...

Adjusted figure.

Debt rates are higher as a class in the concerns reporting in the third and fourth quarters of each year, but it is clear that conversions and/or defaults are still reducing the effective rate of debenture interest. On the other hand, preference dividends are generally lower in the third and fourth quarters, and here again the latest figure shows a sharp decline, not merely as against the previous quarter's figures, but in comparison with a year ago—as a result in part of the "passing" of more preference dividends. The rate of ordinary dividend last quarter shows a sharp jump to 6.0 per cent., absorbing (see Distribution table on page 673) 56.8 per cent. of the net profits, after payment of debenture interest.

From tables given on page 708 it is evident that increases of ordinary dividend in the breweries, motor and cycle, hotels, rubber, shops and stores, tea, and miscellaneous groups account for the rise in the average ordinary dividend. The consumption, construction and home-trade industries now classified separately in the tables on page 708 show how much of the rise in net profits and ordinary dividend reported last quarter is due to our purely internal recovery. For any real measure of recovery in our big exporting industries, in merchanting and in shipping—in which unemployment is mainly centred—we are still waiting. There is little sign of such a recovery in the figures of net profits here analysed. Indeed, taking recent figures of profits and reserve allocations on the one hand and the small amount of new industrial borrowing as revealed by our capital issues figures (see last week's *Economist*) it is evident that, though there is money to put into new enterprise, the demand for it is still limited.

THE BRITISH MOTOR INDUSTRY

I. THE PRIVATE CAR

(BY A CORRESPONDENT)

The British motor industry, whose annual exhibition of new models at "Olympia" opened this week, has just completed another record year. Although final figures will not be available for some weeks, total production of British cars appears to have reached nearly 255,000 for the twelve months October, 1933, to September, 1934, compared with 220,775 last year and 182,347 in 1928-29, the peak year before the depression. There has been a fairly marked change in demand during the past year, which, on the whole, has had the effect of increasing the output in terms of money rather more than proportionately to the increase in the number of cars. The proportion of new registrations of cars over 10 h.p. was 43.3 per cent. during October, 1933, to July, 1934, compared with 40.7 per cent. the previous year; while the average declared value of a British car exported has this year increased from £126 to £140.

The outstanding event of the year was the reduction of the horse-power tax from £1 to 15s. a unit, announced last April to take effect next January. This, combined with the increasing purchasing power of the motor-owning classes, has resulted during the past few months in a definite revival in the popularity of the large car. New registrations of cars of over 20 h.p., which amounted to only 4.0 per cent. of the total from October, 1933, to April, 1934, had increased to 8.4 per cent. by July. On the other hand, new registrations of 8 h.p. cars fell to 22 per cent. of the total for May-July, 1934, after the Budget announcement of the reduction in the H.P. Tax, compared with 26 per cent. in the corresponding months of 1933. The revival in demand for large cars has increased the opportunities of North American exporters. Imports from the U.S.A. for the eight months ending August, 1934, numbered 4,792, compared with 1,031 in 1933; while imports from "British Countries," which in this instance means Canada, increased over the same period from 1,244 to 2,061. The keen competition among American manufacturers for their steadily improving home market, the possibilities of mass-production due to its extent, and the fall in the dollar, have enabled them, in spite of the tariff, to sell vehicles in Great Britain, which in performance and price offer exceptionally good value. It is

very doubtful whether, apart from prohibitive tariffs or discriminatory taxation, the British industry can compete in the market for fairly cheap large cars. Under any sensible economic organisation, where each country specialised in the products it was best able to produce, it certainly would not attempt to do so.

Exports of British cars and chassis for cars amounted to 29,404 units, valued at £3,745,813, for the eight months ended August, 1934, compared with 26,832 units, value £3,270,649, the previous year. Although the increase in exports is substantial, it represents in fact a decreasing share of an expanding world demand. It is moreover one-sided. Apart from some second-hand cars exported in 1934, very largely to the Irish Free State and the Channel Isles, which were not separately analysed in 1933, exports to the Empire increased from 16,315 to 22,537 units, while exports to foreign countries fell from 10,517 to 6,867 units. The worst setback occurred in Holland, which during the depression became the principal Continental market for British cars, where British exports amounted to only 361 vehicles for the eight months ended August, 1934, compared with 2,157 units in 1933 and 2,487 in 1932. The trade has been virtually lost to American and French exporters. Even in the Empire, American sales have been increasing at a greater rate than British. This change is partly due to the gradual easing of the conditions under which the British export trade was built up during the depression, when the demand for small cars was certainly abnormal; but it also seems probable that the extraordinary prosperity of the home market has led British manufacturers to concentrate their efforts upon obtaining as large a share of it as possible to the detriment of the more difficult and less remunerative export business.

There is every indication that the home market for cars will continue to expand during the coming year, though certainly at a somewhat slower rate than in the past year. The total number of cars in use, which in 1929 amounted to 980,886, reached 1,203,245 last year and seems likely to exceed 1,300,000 this year. With an average life of eight years per vehicle, this means that, given a normal age distribution of the cars in use, there will be a steady replacement demand for 160,000 vehicles per annum, which provides a very useful basis on which the industry can operate.

The virtual certainty that demand next year, as in the year which has just concluded, will allow everybody to make a living in the motor industry, is perhaps responsible for a certain lack of originality in commercial policies. Prices are remaining almost unchanged, the only important exception being the Austin "Seven," which has been reduced by £4 8s., presumably in the hope of re-establishing its pre-eminence in the 8 h.p. market, where it must have lost ground rather heavily to the "Ford 8." The old competition in the number of models is continuing, the eight leading manufacturing groups, who are responsible for over 85 per cent. of total production, having 57 different models next year, which is the same number as last year, but with a slightly different distribution. The theory is that, given a sufficient number of models, one at least is bound to be a popular success, and profits on it will be sufficient to reimburse losses on others. There has of late been a tendency to make a virtue of supposed necessity, and base advertisements on the number of different models produced, on the ground that this enables more attention to be paid to individual requirements than is possible with mass-production. The most important change for next season is that Ford is entering the 10 h.p. class, which still remains by far the most popular. There has been no tendency to withdraw from the 8 h.p. class, the popularity of which is almost certainly on the wane, nor has more than one manufacturer taken advantage of the reduction of the H.P. Tax to put on the market a 10 h.p. car at an 8 h.p. price.

With regard to the fortunes of different manufacturers last year, there can be little doubt that Austin, who claims a 24 per cent. increase in home sales, against the average increase of 20.6 per cent., heads the list. The share of the market falling to Vauxhall must, however, have shown the most spectacular increase, although in the last few months the proportion of new registrations in the 12 h.p. and 14 h.p. categories, where Vauxhall is most important, has slightly declined. Apart from Vauxhall's advance, there have

probably been few changes in the order of popularity. Ford has been highly successful in the 8 h.p. class, while in the 10 h.p. class, which accounts for 27 per cent. of all new registrations, the lion's share has fallen to Austin, Hillman, Morris and Standard. In so far as it is possible to generalise, the tendency over the past year has probably been for Vauxhall and Ford to improve their share of the British market at the expense of the Midlands manufacturers, but the expansion in demand has been sufficient to shelter the Midlands from the full force of this competition.

There seems little likelihood of any important change taking place in the organisation of the British motor industry in the near future. No company dare withdraw models for fear of losing a certain, albeit small, amount of business from regular buyers, together with the goodwill of owners who require spare parts and replacements—a feature often overlooked. This, of course, is closely bound up with the question of amalgamation; for there is little in amalga-

tion if the same number of models must still be marketed, and much to be lost from the sales point of view through not having separate organisations whose existence depends on the success of each undertaking. Any agreement to allocate the market through different undertakings agreeing to specialise on particular horse-power categories would be difficult, if not impossible, since the incidence of demand between horse-power categories is closely bound up with the Government's taxation policy, any change in which might, if the market were allocated in this way, have disastrous repercussions on particular companies. It seems therefore probable that costs and prices of British cars will be maintained by the necessity for keeping an increasing number of models in production, a factor which must weigh most heavily on those concerns which have been in the front rank in the British market as manufacturers over the longest period, and which therefore have had the greatest opportunity to acquire a long range of models.

NOTES OF THE WEEK

Town-Planning and Road-Building.—Two important road schemes, at Bristol and at Penistone in Yorkshire, are to be resumed. This is good news, but it must not be taken as betokening a reversal of the Government's general policy of blocking public works schemes. It merely means that the expansiveness of our new Minister of Transport has worn down official resistance in one or two extreme cases. For the two schemes in question were abandoned in 1931, for "economy's" sake, after they had actually been begun; so that the money already spent, as well as the unemployed labour and capital, was being wasted in the intervening period. There are of course many other such half-finished schemes held up; not to mention others which have not been, but ought to be, begun such as the Charing Cross Bridge scheme. Mr Chamberlain's excuse a year ago for banning useful public works was that, though he approved of them in principle, no suitable schemes were available in actual fact. Yet Mr Hore-Belisha has discovered two such schemes not merely available, but only held up by the official ban of 1931. Mr Chamberlain did not allude to the resumption of these schemes in his speech at the Town Planning Institute in Birmingham on Saturday. But he adopted almost as negative an attitude towards town-planning as he has in the past towards road-building.

Some day (he said) the whole of the country will come under control of some kind or another. I shall not live to see it, and before it comes about irreparable damage will have been done, millions of pounds will have been wasted, and probably many thousands of lives will have been lost, for want of orderly and careful planning.

We agree with Mr Chamberlain that the organisation of complete town-planning must take time. But there is no excuse whatever for further delay in preventing the ribbon development and speculation in site values which are still going on all over the country. At present both new and old roads are being spoilt; the area of danger is being increased; and profits due to the enhancement of values by public expenditure are falling into private hands.

* * *

Salving the Cotton Industry.—All attempts to stop the rot in the cotton industry since the war have been blocked by an excess of Lancashire individualism. Last June another scheme, embodied in the report of the Federation of Master Cotton Spinners' State of Trade Committee on "means of improving the conditions of the spinning section," saw the light of day. In a slightly modified form these proposals, together with the report of the committee set up, under the chairmanship of Lord Colwyn, to draft a scheme to deal with surplus spindage, was considered by the General Committee of the Federation of Master Cotton Spinners' Associations on October 9th. Two distinct proposals, which are really inseparable, were approved by the committee for circulation to all members of the trade in Great Britain. The first proposal provides for the

formation of a voluntary association, backed by legally enforceable penalties, administering a quota system to regulate production and prevent sales below cost. It also provides for a pool to which mills exceeding their quota would contribute and from which mills producing less than their quota would receive compensation. The second proposal provides for the reduction of surplus capacity by a board to be set up under Act of Parliament to impose a levy on the trade and buy up mills for break-up or putting in reserve. The elimination of ten million spindles is envisaged. The cost is estimated at £2,500,000, of which £500,000 would be recoverable as scrap value. If the remaining £2,000,000 were paid off in fifteen years the cost in interest and sinking fund, to be met by a levy on the remaining 30,000,000 spindles, would be £180,000 a year. But in submitting the reports to the General Committee of the Federation, Mr W. H. Catterall, the president, pointed out that it was not proposed to establish the association unless the owners of 90 per cent. of the total number of spindles concerned are agreeable to these proposals. "If the association becomes an accomplished fact," Mr Catterall continued,

it will at the inception consist of all spinners of single cotton yarns in Great Britain. . . . It is envisaged that at a later stage it may be found desirable or necessary to include such processes as condenser spinning, doubling, etc., within the provisions of the scheme, as the committee consider that a definite liaison should be established between spinners and doublers for the purpose of assisting in stabilising the trade.

While some of the details of the schemes are open to criticism, they represent, nevertheless, a definite step in the right direction. But will it be accepted by the necessary majority? Past experience has taught us to be sceptical of the ability of Lancashire to unite in a common effort to save the cotton industry. If this scheme goes through, the reorganisation of the spinning section of the industry may prove a milestone on the road to recovery. But any real revival of the industry's fortunes cannot be looked for until all the sections of the industry, including its distributing organisation, are rationalised and costs are brought down to a more competitive level.

* * *

American Monetary Policy.—In an interview with the Press on Wednesday, President Roosevelt appended a sort of postscript to his broadcast speech of last week. This time he was dealing with the aims of monetary policy, but his approach and attitude were the same as those he adopted towards broader problems in the earlier speech. There was no sign, that is to say, of any change in the general direction of his policy, although the final objectives were stated in rather less dogmatic form and the methods to be used in attaining them appear now to be rather less uncompromising than before. The origins of his monetary aims, Mr Roosevelt said, lay in the fact that in 1933 the

country had more "liabilities" (by which he presumably meant debts outstanding) than "assets" (presumably the estimated market value of fixed capital). A country with a large internal debt structure is inevitably in such a position after a severe decline in values. Something had already been done to reduce the liabilities (e.g. by writing down farm mortgages) and to increase the assets by raising prices. Mr Roosevelt thought that the balance was now once more on the right side, but there was need for a larger margin, that is, for a further rise of prices. But the extent of this further rise, and the methods by which it is to be brought about, were left very vague. The price-level of the year 1926 was repudiated as the ideal and it was not admitted that "monetary policy" (presumably in the narrower sense of exchange and gold policy) would be more than "a factor" in the future programme. A great deal of this benevolent imprecision is doubtless to be ascribed to the nearness of the Congressional elections, and we shall probably get a clearer view of Mr Roosevelt's intentions in a month's time, but it begins to look as if the New Deal has emerged from its doctrinaire phase. If this is so, Mr Roosevelt must look for opposition on the Left as well as on the Right. The American Federation of Labour, for instance, is in no mood for compromise. At its convention it has been demanding a universal 30-hour week, the outlawry of company unions and the "closed shop," while its President has fiercely attacked Mr Donald Richberg—once considered an extreme Radical—for suggesting that in some circumstances and in some industries the process of collective bargaining might take some account of the wishes of minorities of the workers. Thus while Mr Roosevelt preaches comparative goodwill to nearly all men, including the capitalist and the banker, Labour is still seized with the notion that the millennium can be achieved by the simple device of demanding higher wages and shorter hours. Mr Roosevelt may yet finish up as the champion of moderation.

* * *

Signor Mussolini's Speech.—The Duce's speech at Milan last Saturday was manifestly intended as an overture to the late King Alexander of Yugoslavia's arrival in France this Tuesday. We ardently hope that the tragic personal sequel will not deprive Europe of the fruition of a constructive act of reconciliation to which the statesmanship of Italy, France and Yugoslavia has made notable contributions—among them, this Italian speech. The most important single thing that Signor Mussolini said was that we may expect to see a Franco-Italian agreement signed at the end of this month; and, considering how emphatically he brushed aside the rumours to this effect which were current a few weeks ago, we may take it that between then and now the last remaining obstacles have been surmounted. Signor Mussolini also declared that "precise *de facto* conditions already exist" for an Italo-Yugoslav understanding. In this connection, he disclaimed any ambition of imposing some kind of Italian protectorate upon Austria as a means of securing Austria's independence against Germany; and his reference to the recent campaign against the Italian Army in the Yugoslav press was as moderate as it was dignified. In Belgrade, Paris and Budapest alike it was noticed, with diverse feelings, that the speech contained no explicit mention of Hungary; and though Signor Mussolini sought to repair this studied omission by telegraphing, next day, to the Hungarian Prime Minister that, in "talking of peace and the justice that should accompany it," he was thinking of, and alluding to, Hungary, this is a very faint echo of a once loud-voiced pro-Hungarian revisionism. While Italy naturally does what she can to salvage her entente with Hungary, it looks as though, if she has to choose between Hungary on the one hand and France and Yugoslavia (or, rather, France and the Little Entente) on the other, she will sacrifice a pawn to win a queen and a bishop—just as France herself is prepared to lose Poland, if necessary, in order to gain Russia. If the disgruntled or discarded satellites of France and Italy make the obvious retort of gravitating towards Germany, the Wilhelmstrasse can hardly congratulate itself upon a reshuffle of alliances which replaces Italy and Russia by Hungary and Poland as Germany's principal European friends.

Germany's Commercial Indebtedness.—When the Agreement with Germany on the Dawes and Young Loans services was concluded last July, Sir Frederick Leith-Ross drew attention to the then "urgent question" of non-payment for goods already delivered to Germany. Since that date a cotton mission has twice visited Berlin and returned empty-handed; a Committee of the Federation of British Industries, under the chairmanship of Sir William Larke, has sent a strong reminder to the President of the Board of Trade; and now, on Tuesday of this week, Sir George Holden, the leader of the trade missions to Berlin, led a joint deputation of representatives of the cotton and woollen textile industries and of the coal and herring trades to the President of the Board of Trade. It is understood that the deputation urged on the Minister the necessity for a settlement of outstanding German commercial debts before the future of Anglo-German trade was considered; but they only obtained the formal and doubtful reassurance that "full consideration" would be given to their demands. If the outstanding British commercial debts are to be covered by a new system, there are two methods. Either a bilateral exchange clearing will be set up, which provides for meeting these debts from a surplus of German export-proceeds over British export-proceeds, perhaps over a two-year period. To this Dr. Schacht may have to agree, in order to keep up German exports and the employment to which they give rise. Such a system may have the effect of reducing British exports to Germany, in order that a German export surplus with this country should emerge. Alternatively, a new exchange agreement can be arranged, providing for a similar surplus of payments to this country to settle the outstanding debts. Here again, however, either British exports to Germany would suffer, or German exports here would have to increase without a corresponding increase in British exports. This plan requires a more complete co-operation by the trading community than the purely voluntary arrangement of July. It is said that in the Cabinet itself there are differences of opinion—as there certainly are outside—as to the choice that should now be made. But apparently one more effort is to be made to avoid the full clearing system. On Wednesday, Mr Runciman sent a letter to all Chambers of Commerce, urging traders to make more use of the *sondermarks* now mounting up in the Bank of England's account at the Reichsbank. To this end he suggests that British importers need not abandon the practice of having their purchases from Germany invoiced in sterling—the practice which caused *sondermarks* to be in over-supply—but that they should get German exporters to accept payment in *reichsmarks* equivalent to the sum due in sterling at the rate on the day of payment. If this attempt is made and proves abortive and if Dr. Schacht proves recalcitrant on the principle of allowing creditors some charge on the proceeds of existing trade, we may be driven unilaterally to impose a clearing in England. That almost inevitably means a shrinking of both sides of the trading account and is manifestly inferior to a co-operative effort to lift the level of trade. It is to be hoped, therefore, that Sir F. Leith-Ross and Mr Hill may have better success next week than heretofore.

* * *

The Naval Outlook in the Pacific.—Unhappily, the omens are becoming increasingly unfavourable to the prospects of the Naval Conference which is to meet next year. The stir produced in Japan by the War Office pamphlet has been hushed up. But it seems certain that Japan will denounce the Washington Treaty anyway; the only question remaining open is whether she will take this grave step before, or after, she has communicated her suggestions for an alternative arrangement to the other naval Powers. This Japanese policy of repudiating the existing 5—5—3 ratio is hard to understand; for the ratio leaves—and was deliberately designed to leave—the Japanese navy supreme in Far Eastern waters; and, at least in the immediate future, it is in the Far East that Japan's ambitions lie. For dominating China in defiance of the United States and the British Empire, the present naval ratio gives Japan all that she needs. Her apparent determination to risk a resumption of unrestricted competition in order to obtain theoretical parity can only be explained as a question of "face." The announcement that the prin-

cipal American representative at the preliminary conversations in London is to be Admiral Standish, the Chief of Naval Operations, is evidence that the "Big Navy" policy, which has been favoured since the beginning of the Roosevelt administration, is to be vigorously maintained. There seems no likelihood that the United States will renounce the existing ratios; and if she cannot keep her existing numerical superiority over Japan by agreement, she will keep it by outdistancing Japan, in open competition, to at least that degree. Nor will she meet Japan by abandoning aircraft carriers and bombing planes—the arms that offer the United States the best chance of fighting Japan in Japanese home waters. She will apparently retort to Japanese suggestions to this effect by making a counter-proposal for the abolition of submarines; and this stroke will be adroit, because it will command the sympathy of the British naval authorities. This brings us to the crucial question of what our British policy is to be if we are confronted with a Japanese-American naval race. That policy must be determined by the Cabinet and Parliament and the country, and not by the Admiralty and the navy. In fact, it must be decided by vital national interests, and not by points in the naval game. Our British admirals have at times felt sore at the decision of 1930, which gave their little American brothers as big a toy to play with as their own set. But these nursery jealousies are no proper foundation for public policies. In this naval question, as in other matters, the alpha and omega of British policy should be the maintenance of a cordial friendship with the United States.

* * *

Poland and Germany.—This week, two important steps have been achieved in the progressive *détentes* between Poland and Germany which has been deliberately and persistently worked for—and this on German initiative—since Herr Hitler's advent to power. A series of consultations set on foot last February, between officials of the Government departments concerned in the two countries, have now resulted in an agreement for the revision of Polish and German school text-books with a view to giving the children of each country a less jaundiced view of the other country than has been presented to them hitherto. This is good news. Indeed, the revision of school books in a reciprocally friendly sense is perhaps the most important single step that can be taken towards attaining that "moral disarmament" for which Polish diplomacy has long pleaded. The other step forward in Polish-German relations is the initialing of a trade agreement which follows the agreement signed on March 7th. In themselves, these steps towards reconciliation are both creditable to the two Governments that have agreed to take them, and also a valuable contribution towards the peace of Europe; for the territories transferred in the peace settlement from Germany to Poland and to the Free City of Danzig have been unfailing sources of hostility during the last fourteen years. Any easing of this friction is, in itself, to be welcomed—especially when it comes from the spontaneous and unaided action of the two protagonists. Unfortunately we cannot consider this Polish-German accord apart from its European setting—especially since both Germany and Poland have refused to enter the "Eastern Locarno." We cannot welcome it from a European point of view unless we can feel assured that, in making this remarkable effort to diminish the tension along their own common frontiers, the two Powers in question have not been actuated by a wish to prepare for a common adventure. When a feud which all the good offices in the world have found intractable for fifteen years suddenly yields to direct treatment by the two adversaries themselves, acting *à deux*, third parties are apt, rightly or wrongly, to look for some hidden motive. In this instance the rumour has been sedulously circulated that the secret of Poland's and Germany's present success in composing their own quarrel is that they have concerted a scheme for burying the hatchet in the flesh of their Russian and Czechoslovak neighbours. Marshal Pilsudski is credited with a readiness to retrocede the Corridor to Germany in exchange for the vast compensation which Poland might hope to derive from a conquest of the Ukraine and a partition of Czechoslovakia. It is now reported that Hungary is

being enlisted in this supposed plot for a gigantic "robbery under arms." The action of Germany and Poland in the wider field of general European diplomacy is the only way by which such rumours can be effectively denied.

* * *

Road Passenger Traffic.—The third annual report of the Area Traffic Commissioners, now published in a Blue Book, shows that the stability of the road passenger transport industry, which had been evident during the last few years, was maintained in 1933. The number of passengers conveyed by public service vehicles totalled 5,418,274,007, compared with 5,344,884,136 in 1932; revenue amounted to £57,916,846, as against £58,207,546 the previous year; and omnibus mileage was 1,309,806,864, compared with 1,323,721,070 in 1932. It will be observed from these results that the difference between the two years was negligible, nor is there any substantial variation from the 1931 figures. The reports of the various Commissioners indicate a tendency for fares to be reduced during the year, and this is confirmed by the average receipts per passenger journey, which fell from 2.61d. in 1932 to 2.57d. last year. It will be recalled that in the spring of 1933 the railway companies introduced "penny-a-mile" fares, and it is interesting to note the effect of these on long-distance coach services. The average receipt for ordinary long-distance services (excluding services run by local authorities) fell from 42.36d. in 1932 to 37.76d. last year. Total receipts from this class of traffic fell from £3,395,424 to £2,650,958—a decrease of £744,466; and the number of passengers conveyed dropped from 19,237,367 in 1932 to 16,850,943 last year—a reduction of 2,386,424. The chairman of the East Midland Traffic Area observes in his report that "it is quite evident that operators of long-distance services are being adversely affected by the issue of the railway companies' 'summer tickets' throughout the year." One of the regular features of this Blue Book is the particularly interesting report prepared by the Metropolitan Area Traffic Commissioner, Mr Gleeson Robinson. He gives a penetrating analysis of the difficulties of the motor coach industry during 1933. He observes that the first reaction of many road operators to the extended cheap travel facilities was to agitate for large reductions of fares, partly to induce the public to travel and partly as a gesture with the idea of endeavouring to prevent reduction of rail fares. "These conditions," the Commissioner adds, "constituted a severe test for the industry and for the machinery which operators had created to assist in the stabilisation of fares." But fortunately the regional fares committees were ultimately able to obtain practically 100 per cent. agreement between operators. Mr Robinson also gives the information that there are approximately 8,130 public service vehicles, 2,475 tramcars and 60 trolley buses in the Metropolitan Traffic Area. Of the public service vehicles 5,870 are operated by the London Passenger Transport Board and 2,260 by independent operators; while the average number of vehicles owned by each of the latter is only 4.8.

* * *

British Tramps v. British Liners.—Last July the President of the Board of Trade declared his readiness to provide a "defensive subsidy" for British tramp ships, not exceeding two million pounds for one year. One condition was that the subsidy should not be dissipated by competition between British ships carrying tramp cargoes. The shipowners were to prepare a scheme to obviate this competition before the subsidy could materialise. In his Parliamentary statement on December 13th, Mr Runciman remarked that competition between the various classes of ships under the British flag is just as keen as between ships sailing under different flags. The British liner, he pointed

out, often competes with the British tramp. Very promptly the Liverpool Steam Ship Owners' Association, whose members are mainly liner companies, realised this. They expressed their view that the basis must be an equal subsidy for an equal service, whether the service be rendered by cargo liner or tramp. The subsidising of one section of the British Mercantile Marine to the detriment of another section would entail the dissipation of the subsidy without benefit to those whom it was intended to assist, and be a source of weakness in withstanding foreign subsidised competition. This argument was urged by Mr Lawrence Holt, who, speaking in Liverpool the other day, said that to grant a subsidy on cargo carried by tramps and deny it to the same cargo carried by liners would dissipate the subsidy in lower rates of freight and damage the cargo liners by lowering rates. To find more cargoes for British tramps at the expense of British liners would be to strike a grievous blow at the very vitals and authority of British shipping, while to subsidise all British shipping was unthinkable. Our shipping should remain a contributing and not a withdrawing factor in the nation's balance sheet. Speaking almost at the same time, Lord Essendon, as chairman of Manchester Liners, Ltd., said almost the same thing. Liners in many trades are, he pointed out, far more subject to the competition of foreign subsidised vessels than are tramp ships. Thus, no scheme which the Government can say it will accept has yet been evolved; though it was reported this week that a scheme had been put forward which may be the subject of discussion. Lord Essendon, it is worth recalling, has urged a number of times that, apart from an improvement in international trade, the only salvation for the shipping industry is for shipping interests to get together internationally and make it clear that they are determined, for the benefit of all, to get rid of unnecessary barriers to trade and to lower many obstacles which now restrict traffic. In his view (as expressed at the Furness, Withy meeting in July) many nations are prepared to discuss this mode of co-operation with a view to putting the shipping industry on a sounder footing. Mr Runciman himself declared, when making his statement in the House early in July, that the Government would continue their efforts to secure international consideration of means to place shipping generally on an economic footing. Does the Government really intend to make any serious endeavour to translate these words into action?

Sterling and International Prices.—Both British and American prices have fallen during the past fortnight. The *Economist* complete British index has declined by 0.8 per cent., while sterling prices of primary products have fallen by 2.1 per cent. In the United States the reduction in the price of primary products is 1.5 per cent., while the complete Irving Fisher index number has fallen by 0.4 per cent. British and American price movements have been roughly parallel to each other. On the Continent, French prices are lower, but Italian prices show signs of a slow advance. German prices are also continuing their rise.

Oct. 10th	107.8	123.1	146.8	166.2	116.1	81.4	84.3	92.5	
				167.7	115.6	80.7	84.4	92.6	

* These figures refer to Oct. 3rd.

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Sept. 12, 1934	Sept. 26, 1934	Oct. 10, 1934	
Cereals and meat	64.5	76.0	74.1	72.1	
Other foods	62.2	58.7	57.9	58.7	
Textiles	43.7	52.1	51.3	50.9	
Minerals	67.4	75.6	76.0	75.0	
Miscellaneous	65.8	69.5	69.1	67.8	
Complete index	60.4	66.4	65.7	65.2	
1913 = 100	83.1	91.4	90.4	89.6	
1924 = 100	52.2	57.4	56.8	56.3	

The past fortnight has witnessed sharp declines in most cereal prices, which it is difficult to dissociate from the recent exportation, at subsidised prices, of French surplus wheat. Beef was slightly dearer, but English mutton was cheaper, and there was a further heavy fall in bacon. Among other foodstuffs, there were slight advances in butter and cheese, and an appreciable recovery in tea. In the textiles group, cotton has again cheapened, but wool and jute are firmer. In the minerals group, non-ferrous metal prices are all lower, but there is a further seasonal advance in house coal. Among miscellaneous materials, tallow is dearer, but there was a further decline in rubber.

Shipping Freight Index.—As measured by our monthly index number, the general level of the whole cargo shipping freights rose by 0.4 per cent. during September, following a rise of 5.0 per cent. during August. The current figure of 89.9 compares with 83.3 in September last year and 86.6 in September, 1932. Details of the index number are as follows:—

	(1898-1913 = 100)				
	Average, 1913	September, 1933	July, 1934	August, 1934	September 1934
European waters	110.0	85.3	89.5	91.1	90.3
North America	113.1	76.6	75.7	77.4	79.3
South America	123.4	76.5	83.7	85.4	82.8
India	106.3	92.7	88.3	96.1	98.6
Far East and Pacific	117.4	83.3	87.3	91.4	93.5
Australia	127.9	85.5	87.2	96.1	95.3
Total	116.3	83.3	85.3	89.6	89.9

East Coast rates are steady. At Hull they are slightly firmer, while in Scotland there has been some demand for tonnage from the Baltic coal trade. Liverpool reports a very moderate demand for tonnage from outward coal ports. South American rates, both homeward and outward, are all lower, but the market is not stagnant. North American freights are slightly higher, but demand for tonnage is still limited. The Mediterranean market is on the whole firm. Movements of the various sections of our index number are shown in detail below:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	82.1	+2.8	South America:		
Bay—outwards	104.6	-9.2	Outwards	67.1	-2.1
Bay—homewards	93.5	-1.7	Homewards	98.5	-3.1
Mediterranean:			India—outwards	74.4	...
Outwards	94.7	...	India—homewards	122.7	+5.0
Homewards	84.6	+0.4	Far East, etc.	93.5	+2.1
North America	79.3	+1.9	Australia	95.3	-0.8

Expressed as a percentage of the average for 1913, the total figure of our index number for September is 77.3, compared with 77.0 for August and 71.6 for September last year.

Employment in September.—The Ministry of Labour estimates that there were 10,233,000 insured persons in employment in Great Britain on September 24th. This figure is higher than at any time since November, 1929, and even higher than the average of 10,220,000 for that year of relative prosperity. The highest recorded number of insured workers in employment was 10,316,000 in September, 1929; the lowest

during the past ten years was 9,144,000 in September, 1932; so that in two years industry has almost recovered to its pre-crisis level, though this takes no account of the increase in population. The present figure shows an increase of 352,000 as compared with a year ago, and of 63,000 as compared with the end of August. As to the unemployed, there were 2,081,987 on the registers at the end of September, of whom 1,647,673 were wholly unemployed, 352,696 temporarily stopped, and 81,618 registered as "normally in casual employment," making a total decrease of 54,591 as compared with a month ago. Changes in different industries have been mainly of a seasonal nature. There has been a substantial falling off in building and public works contracting, in the distributive trades, and in hotel and boarding-house services; while there has been a marked improvement in coal-mining, in woollen and worsted manufacture, in the boot and shoe industry and in pottery manufacture; cotton, iron and steel, and hosiery manufacture also show a diminution in unemployment. These changes are reflected in the decreases in the numbers unemployed in the Midland and North-Eastern districts of 34,313 and 31,618 respectively, with smaller decreases in the North-West and in Wales, and increases in all other administrative divisions. It is noteworthy that the wholly unemployed actually increased during the month by nearly 50,000; since the industries which now record an expansion are those which normally work with short-time arrangements, while building and the distributive trades and services have no such organised arrangements. The

following table shows changes in various industries during the month and year:—

MOVEMENTS IN UNEMPLOYMENT BY INDUSTRIES: SEPTEMBER 24, 1934, COMPARED WITH				
	Aug. 20, 1934	Sept. 25, 1933		
	Number	%	Number	%
Coal mining	-48,648	-15.8	-83,669	-24.4
Iron and steel manufacture	-3,067	-6.3	-12,832	-21.9
Metal goods manufacture	-2,289	-3.2	-19,711	-22.4
Engineering	...	...	-60,407	-36.6
Shipbuilding and repairing	+3,584	+4.9	-21,273	-21.8
Woollen and worsted	-13,543	-25.0	+17,157	+73.6
Cotton	-7,726	-6.4	-1,708	-1.5
Hosiery	-2,920	-17.7	+4,946	+5.7
Boot and shoe	-10,809	-30.4	+1,663	+7.2
Pottery	-6,425	-34.2	-3,340	-21.2
Building	+8,464	+5.8	-17,687	-10.1
Public works contracting	+2,151	+1.8	-4,709	-3.7
Distributive Trades	+12,319	+6.0	-10,617	-4.6
Hotel and boarding houses	+10,007	+20.8	-996	-1.7
All industries	-54,591	-2.5	-254,740	-10.9

Unemployed boys and girls between the ages of 14 and 16 in insured occupations, or whose dismissal has been notified by employers to the exchanges under the new Unemployment Act, will not be included in the figures of registered unemployed persons until next month. Despite this, the figure of unemployed juveniles fell by less than 6,000 between August and September, as compared with a drop of 8,600 over the same period of last year. That is rather a serious matter, owing to the unusually large number of children who left school this summer.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

MR ROOSEVELT AND THE LABOUR ISSUE

THE President devoted a large part of his "fireside talk" over the wireless on the evening of September 30th to two phases of N.R.A. Referring to the numerous and costly strikes which have disturbed industry in the past year, he proposed a sort of truce between employer and employee; and he mentioned the changes now being made in N.R.A. in order to develop the permanent forms which will be presented to Congress against the Statutory expiration of the National Industrial Recovery Act on June 16, 1935.

Both these topics are uppermost in the minds of the business community. The three-weeks textile strike has ended; but there are complaints from labour against the discrimination of employers against participants in the strike, and as usual, there are rumblings of other major strikes—some for the early future, as of certain maritime unions on the Atlantic seaboard, others for mid-winter, as in the steel and motor industries.

As for N.R.A., various changes in form have been already effected; but its general programme or policy has not been clarified. In place of General Johnson, who resigned last week as Administrator, two Boards have been created; one is intended to determine policy, and is composed of Cabinet members and other heads of departments; the other is to be the administrative head of N.R.A. itself. The business community does not consider that it is adequately represented on either Board. Another disputed point is, of course, price-fixing. A great many of the codes authorise price-fixing, and although in some cases it does not appear that the code price has been effective, it exists in others. For example, the fixed price of copper produced under the code (called Blue Eagle copper) is 9 cents; the actual quotation, which is made in the scrap copper market, is a bit over 6 cents. The supply of 6-cent copper is so large that sales of Blue Eagle copper in September were only about 10 per cent. of the much-curtailed production quotas.

It is believed that the new N.R.A. Boards are not so well disposed toward price-fixing as was the former Administrator. The President's address also questioned "the wisdom of extending code requirements suited to the great industrial centres and to large employers to the great number of small employers in the smaller communities." The resignation of General Johnson marks the ending of one concept of N.R.A. and opens the way to a new set of industrial policies.

The first week of October is commonly the high tide of the seasonal autumn upturn. In the current year there has been as yet little lift above the summer depression. Steel operations are about 23 per cent. of capacity compared with a low point of 19 per cent. Retail trade figures, however, are rather encouraging; it is understood that the September trade was the best for months, and this is particularly significant as miscellaneous retail prices (other than food) have been sagging since the spring.

THE SUMMER RECESSION IN BUSINESS

The indices of the Federal Reserve Board for August are now available, and they show production above the extreme low points of 1932, but lower than the summer of 1933 and only a little above the autumn of 1932.

THE RISE AND GROWTH OF JOINT STOCK BANKING

By S. EVELYN THOMAS, B.Com., Ph.D. (Lond.)

Vol. I—Britain: to 1860. A new book of great interest throughout economic circles. It is a comprehensive and practical history of the development of Joint Stock Banking in England up to 1860. Presents a true picture of the events and an exact representation of the principles upon which joint stock banking has been developed and extended. An authoritative guide to an interesting and intricate financial subject. 689 pages.

FEDERAL RESERVE INDEXES

1923-5 = 100 (adjusted for seasonal)

	Aug. 1933	May 1934	June 1934	July 1934	Aug. 1934
Industrial production	91	86	83	75	73
Manufactures	91	86	83	74	72
Minerals	91	89	87	85	80
Construction contracts (total)	24	26	26	27	27
Residential	12	11	12	12	11
Others	33	39	38	39	41
Factory employment	76	82	81	79	79
Factory payrolls	59	67	65	60	62
Freight car loadings	61	63	64	61	59
Department store sales	77	77	74	73	79

It will be noted that the recession from May through August was most marked in manufacturing and consequently in pay-rolls. Building activity was virtually unchanged, and employment fell off remarkably little in comparison with either the index of manufacturing or of pay-rolls. It is rather paradoxical that in so severe a recession in manufacturing activity, department store sales should have declined so little between May and July, and should have risen in August above any figure reached in the spring or in 1933. While the data for September are not yet available, it does not appear that the manufacturing index will be much, if any, higher; while retail trade appears to have been rather better than in August.

The condition of the railways is far from satisfactory, as can be seen from the figure of freight car loadings. The railways, in urging an increase of rates, have presented certain information about their difficulties. On August 1, 1934, twenty-six Class 1 railways, operating 40,565 miles, were in bankruptcy. In 1933 the railways in the aggregate showed a deficit after fixed charges of \$6 millions; in the current year this deficit is estimated at about \$70 millions. This deterioration is due principally to three causes: (1) Wages were increased, (2) increased pension charges were prescribed by legislation, (3) raw material prices have risen largely as a consequence of N.R.A. Two further wage increases have been scheduled for early next year. In meeting the wage increase since July the railways have been remarkably successful in effecting economies, largely by further reductions of their personnel.

For some time no definite principle seems to have determined the proportion contributed by the Federal Treasury to relief expenditure. The question came to the fore in Washington during the past week, with the Relief Administrator increasingly insistent that a larger proportion should be contributed by the localities. There is good reason to believe that abuses could be reduced if the localities had more direct responsibility. In New York City, where relief is mostly at local expense, the problem of municipal finance has become acute, and the City Government, which was elected last year on a retrenchment programme, is finding it difficult, first to compress its Budget within the limits of its predecessor, and, second, to find new sources of revenue for relief. The devices proposed range from a municipal lottery to a municipal income-tax, and as yet no acceptable source has been discovered. The overhead costs of doing business in New York, of which taxes are a major part, are already high, and additional taxation threatens to expel both industry and population from the city.

China's note of inquiry or protest regarding American silver policy has not been made public. But there are rumours that China is considering the abandonment of the silver standard if the price of silver is to be indefinitely advanced. As a substitute, it is said that China contemplates a devaluation of the Yuan dollar to a ratio of five to the American dollar. This threat is viewed with some concern in Wall Street, where it is apprehended that such a move by China might be followed by a further devaluation of the Japanese yen. These apprehensions have been given point by the weakness of the latter currency in the past few days. Under the nationalisation order of August 9 about 90 million ounces of silver had been received by the Treasury up to September 28. It is believed that this transaction is virtually complete, although early unofficial estimates of the silver, in New York and liable to nationalisation, had run to almost twice that figure.

NEW YORK, October 2.

FRANCE

THE ASSASSINATIONS AT MARSEILLES

PUBLIC opinion here was stunned by the shocking crime at Marseilles on Tuesday. The death of M. Barthou will naturally necessitate a change in the Doumergue Cabinet. There is no reason, however, for an alteration in the foreign or domestic policy of the Government.

The Departmental elections, which took place on Sunday, normally have no great political significance, since the issues are purely local. This year, however, the Government invited the electors to give their verdict for or against the Doumergue Cabinet. In his broadcast speech of October 4th M. Doumergue pointed out that France was divided into two blocks—the "Common Front" of Socialists and Communists, and the Government's supporters. The Common Front is conducting a violent campaign throughout the country against the Government. M. Doumergue concluded his speech with an invitation to the friends of the Government to vote against the Common Front. The results of the elections are consequently a distinct success for the Government. Actually the first ballot has not changed the position in the Departmental Councils; the principal political parties have neither gained nor lost. But if one takes into account the sharpness of the economic crisis and the heated electoral campaign which the Common Front has carried on against the Government, the result of the elections suggests that the country remains hostile to the policy of the Common Front. Since in a large number of cases those who headed the poll did not obtain the requisite minimum of votes, the exact situation will not be known until next Sunday, after the second ballot. But it seems certain that the final results of the elections—which are the first held in the country since the riots of February 6th—will strengthen the position of the Government. Such at least was the generally held opinion when the assassinations at Marseilles occurred.

REDUCTIONS IN INTEREST RATES

The Minister of Finance announces that from October 8th there will be reductions in the rates of interest on ordinary Treasury bonds, of which 10,000 millions are actually in circulation. This reduction comes as a proof of the very satisfactory manner in which the new 4 per cent. loan is being subscribed, and of the extent to which the situation of the Treasury has been ameliorated. The reductions are as follows: one month bonds, $\frac{1}{2}$ per cent. instead of 1 per cent.; two months' bonds, 1 per cent. instead of $1\frac{1}{2}$ per cent.; three months' bonds, $1\frac{1}{2}$ per cent. instead of 2 per cent.; one year bonds, $2\frac{1}{2}$ per cent. instead of $3\frac{1}{2}$ per cent. These rates are the lowest since February, 1933. They show the improvement which has taken place on the short money market since 1933. Indeed, the stringency which made itself felt after the riots of February 6th has entirely disappeared. The following table shows how short-money rates have relaxed since the beginning of March:—

	Mar. 7th	May 19th	May 30th*	Oct. 8th
Treasury bonds:	%	%	%	%
(a) One month	2	$1\frac{1}{2}$	1	$\frac{1}{2}$
(b) One to two months	$2\frac{1}{2}$	2	$1\frac{1}{2}$	1
(c) Two to three months	3	$2\frac{1}{2}$	2	$1\frac{1}{2}$
(d) Three months to one year	$3\frac{1}{2}$	3	$2\frac{1}{2}$	$2\frac{3}{4}$
(e) One to two years	4	$3\frac{1}{2}$	3	3
(National Defence bonds)				

* June 8th for (d) and (e).

For many months the weekly returns of the Banque de France have shown a steady increase in the gold stock, which has risen by 8,300 million francs since the beginning of March, after diminishing by 2,889 millions between February 2nd and February 23rd. These gold imports have led to the issue of an equal amount of franc notes, which is a principal cause of the increased easiness on the money market. Dis-hoarding is another cause.

The receipts of the Suez Canal were higher in September than in the same month a year ago. In the three previous months the trend had been the other way. The receipts for the first nine months of 1934 are as follows in comparison with those of 1933.

	(francs '000)	1933	1934
January	71,400	78,230	
February	64,620	66,780	
March	76,220	77,000	
April	72,620	76,370	
May	69,880	73,020	
June	62,070	62,060	
July	65,250	65,210	
August	71,600	69,930	
September	67,320	67,860	
Total	620,980	636,460	

During the first three months of 1934 total receipts were 222,010,000 francs, against 212,240,000 in 1933. The reduction in rates has been in force since April 1st. The receipts for the three months after April 1st were sensibly higher than in 1933. But those of the third quarter show a reduction, which would have been more important if the improvement in September had not occurred.

PARIS, October 10.

GERMANY

CONTINUED EXPANSION OF HEAVY INDUSTRY

THE wholesale price index is still rising. It was 100.8 for October 3rd, compared with 100.7 in the previous week. Railway car-loadings in August were 10.5 per cent. higher than in August, 1933, but 10.9 per cent. lower than in August, 1930. In the first eight months operating receipts were Rm. 277 millions above those of the same months of 1933, but Rm. 1,409 millions below the figure for the same months of 1929. The turnover of the department stores has risen considerably, and in August it was 14 per cent. above that of August, 1933. Consumption of textiles, clothing and household articles has risen sharply. The Chambers of Commerce reports for September indicate a further general increase in industrial activity. The cutlery and small ironwares branches report for the first time some improvement in exports. The Steel Trust reports for the third quarter of 1934 a substantial increase in pig iron production and a small increase in steel. Its steel output rose in the quarter to 1,168,300 tons, as against a highest quarter's figure since the foundation of the trust in 1926 of 1,736,000 tons. Total export of semi-products and rolling-mill materials in the first eight months was 40 per cent. higher than in the same months of 1933. Machinery exports are stagnant, being 20,220 tons in August and 168,200 tons in the first eight months, as against a highest level of 700,000 tons in 1930. The Pig Iron Syndicate agreement, which was to expire at the end of 1934, has been prolonged for another three years.

The new import plan was not yet in efficient working order last week. Numerous doubtful questions, arising mostly out of insufficient definition, continued to hamper traders. The respective competences of the 25 new, or adapted, Supervision Boards and of the old Exchange Boards (*Devisenstellen*) were still not clear. The Supervision Boards, it is now officially declared, are competent in the case of import payments due on or after September 24th. The date of payment is taken as falling before September 24th where provision was made for a contingent later payment on the condition of a fine or the payment of interest; also when payment was to be by bills maturing before September 24th; finally, in cases of agreement for payment against documents before September 24th. Payment contracts with such conditions fall under the new Boards if the date of fulfilment is after September 23rd. The exact date is important to foreign exporters in view of the Reichsbank guarantee to deliver exchange for all transactions falling under the Supervision Boards.

The development of international compensation deals continues, and the newspapers publish long lists of German traders who seek compensation partners. The conclusion of private compensation agreements, however, is proceeding slowly. Development has been checked by an ordinance forbidding the taking or paying of premiums for the conclusion of deals, whereby private incentive has been weakened. The restriction on import of raw materials introduced gradually since March has had the effect in some branches

of increasing imports of manufactured goods. Whereas the total import has fallen off, mainly owing to the sharp decline in imports of raw materials, imports of manufactures have lately been rising. Imports of textile raw materials fell from the high volume of 96,900 tons in April to 49,600 tons in August; but imports of yarn (classed for trade return purposes as manufactures), after declining for several months, rose sharply in August, and imports of cloth also rose in August after a drop in July. Imports of cotton yarns from Switzerland have substantially increased.

THE BALANCE OF PAYMENTS

The official provisional balance of foreign payments for 1933 shows that the export surplus of Rm. 669 millions, plus Rm. 232 millions net from shipping and services, sufficed to cover foreign interest charges of Rm. 700 millions, plus Rm. 149 millions for various payments booked as "Reparations," leaving a surplus on the current liabilities account of Rm. 52 millions. There were available on capital payments account the above Rm. 52 millions, Rm. 524 millions paid out of the currency reserves, and Rm. 300 millions from deals in securities; at the same time there were repaid Rm. 547 millions of short-term credits and Rm. 250 millions long-term, and Rm. 79 millions in payments not specified. Net receipts from shipping, which reached a highest recent point of Rm. 704 millions in 1929, and were Rm. 435 millions in 1931 and Rm. 265 millions in 1932, fell further last year, but the pace of decline slackened.

The money market has been very liquid, largely owing to payments for redemption of Reich "Old-owned" loan and the half-yearly interest payment on municipal conversion loan. Reich Treasury bonds were sold out and a shortage prevailed in the market for Reich Treasury bills. Public interest has of late been concentrated on the markets for rentes and short-term Government securities, while standard high-priced industrial shares have been dull and weak. The official index for bonds of all kinds for September was 88.97, against 87.89 in August, since when there has been a new substantial rise. Official utterances,

A brilliant contribution to the vital problem of the cost of armaments

SEA POWER IN THE MODERN WORLD

by Admiral

Sir Herbert Richmond

VERE HARMSWORTH PROFESSOR OF NAVAL HISTORY, CAMBRIDGE UNIVERSITY

The results of the Naval Conference of 1935 will determine for many years to come whether the already vast sums spent by the nations in pursuit of sea power are to increase still more. In view of the importance of this conference, and to enable the public to realise its significance, Sir Herbert Richmond has written this non-technical survey of the whole question of sea power in the modern world, suggesting means whereby the expenditure may be reduced.

ros. 6d. net.

LONDON: G. BELL & SONS, LTD.

backed by rumours, have led investors to conclude that the policy of pushing up the prices of home bonds, initiated by the adoption by the Reichsbank of the open-market policy in September, 1933, will be continued.

The Reichsbank's return for October 6th shows substantial repayments of September month-end credits, the total of which was reduced in the week by 40 per cent., or by almost as much as the repayments of the first three weeks of September. This movement is connected with a decline of deposits by Rm. 50 millions. The reversal of the recent tendency towards increasing deposits is due not to liquidation of the claims of foreign central banks but to private withdrawals. The gold reserve increased by Rm. 3½ millions, delivered by Russia. Total circulation has fallen below the level of a month ago.

BERLIN, October 10.

AUSTRIA

PASSIVE TRADE BALANCE STILL FALLING

THE passive trade balance in August reached the lowest level recorded since the inflation ten years ago. The actual figure was 13 million schillings, compared with a monthly average of 91 millions in 1929 and 52 millions in 1932. Imports in August amounted to 85 million schillings, the same as in July, and two millions less than in August, 1933; exports were 72 million schillings, or six millions more than in July and three millions more than in August, 1933. Imports of raw materials show a decline, and are the lowest since January, 1933. This is due partly to the easing of the prices of certain raw materials in recent months; the volume of imports amounted to 3.48 million metric centners in August, compared with only 2.54 millions in April. The most remarkable feature of the improvement is still the expansion in exports of finished goods.

The improvement in foreign trade is not yet affecting domestic trade. The slow rise in consumption is due to the many wage and salary cuts that have taken place and the increased burden of taxation. Business improvement, in so far as it exists at all, has certainly not yet become noticeable in the form of an increase in the average earnings of the masses. There is also a serious shortage of capital, owing to the disorganisation of the capital market. The effect of low prices which have lasted for years on the share market is that even now the raising of capital by means of share issues cannot be contemplated. At the present moment, when the erection of new factories, or, at least, the extension of existing factories, is likely to be profitable, the complete impossibility of procuring capital by the issue of shares is felt most keenly.

Conditions are much better on the bond market. Quotations are very firm and last month there was a series of remarkable rises. The demand for bonds, which in most cases still yield about 8 per cent., is fully comprehensible in view of the amount of idle money and the low rates paid on deposits, etc. A further reduction of the bank rate from 4½ (the lowest level since the war) to 4 per cent. is under consideration. The liveliness of the bond market has been partially due to fluctuations in the rate of the dollar.

The savings banks have not yet given so much attention to the purchase of bonds as the actual interest obtainable would have led one to expect. This is because they were quite recently getting still higher rates from other financial institutions, and also because they were already making full use of their available funds. In view of the extraordinary amounts of free money which these institutions now have at their disposal, they do not welcome further increases of deposits since they have no opportunity to invest them profitably. This circumstance has completely changed the situation. Various savings institutions will be obliged to pay more attention to the bond market, particularly as it is proposed to arrange a binding agreement to reduce the rates paid on inter-bank business.

VIENNA, October 10.

JAPAN

DEFICIT ON BALANCE OF PAYMENTS

ACCORDING to a tentative estimate of the balance of payments in 1933, lately published by the Treasury, Japan had a debit balance of 4.9 million yen in her international transactions on income account, as against a credit balance of 56.5 million yen in 1932. While the excess of merchandise imports and net Government payments abroad totalled 225.3 million yen, or 82.3 million yen more than in 1932, the official estimate of invisible exports was put at 220.4 million yen, or 20.9 million yen larger. One of the outstanding features in the official calculation is a marked increase in net Government payments abroad, which is presumably attributable to heavy purchases of arms and ammunition. Invisible items, on balance, are set out below in comparison with the preceding year:—

OFFICIAL CALCULATION OF BALANCE OF PAYMENTS

(000's omitted)			
Debit			
	1932 Yen	1933 Yen	
Excess of merchandise imports (including that of Korea and Formosa)	58,787	77,886	
Net Government payments abroad	84,216	147,437	
Total	143,003	225,323	
Credit			
Net income from overseas investments and business	48,419	34,545	
Net national shipping income	99,701	125,698	
Net insurance premium income	8,899	8,968	
Tourists' expenditure	15,626	20,590	
Other items	26,827	30,584	
Total	199,472	220,385	
Excess of income over expenditure	56,469	— 4,938	

The rising tendency of imports of raw materials still continues, and imports during August gained heavily once more relatively to exports in spite of the usual export season. The August returns show that, in comparison with August, 1933, imports increased by 51.6 million yen, or 39.4 per cent., whereas exports rose by only 25.9 million yen, or 14.2 per cent., the export surplus being thus 25.6 million yen smaller at 26.9 million yen. The tendency is mainly ascribable to the continuous heavy purchases of raw cotton and the uninterrupted decline in raw silk exports. Besides raw cotton, notable increases were recorded in imports of iron and steel, machinery, petroleum and wheat, while raw wool alone showed a substantial decrease. On the export side, cotton piece-goods and all the other textile goods, with the exception of raw silk, fared considerably better, and a marked advance was shown after many months for tinned and bottled provisions.

The statements of the Japanese joint-stock banks for the June half-year make a better showing. The combined net profits of the five leading banks in the first half of this year totalled 26,465,000 yen, as compared with 24,105,000 yen in the preceding half-year and 22,156,000 yen in the corresponding half of 1933. The records of individual banks, however, are not uniform; the largest increase was that of 1,032,000 yen displayed by the Mitsubishi, while the Yasuda exhibited the smallest increase of 58,000 yen, but dividends were maintained in every case. In the absence of scope for remunerative employment of funds in loans, larger profits are generally accounted for by profitable sales of investments. The earnings of the two colonial banks also display a slightly varying experience; the Bank of Taiwan earned 631,000 yen in the past half-year, as compared with 576,000 yen in the December half of 1933, whereas the net profits of the Bank of Chosen were practically unaltered at 925,000 yen, as against 926,000 yen. Both paid their customary dividends.

RISE IN WHOLESALE PRICES

Commodity prices have reversed the downward tendency developed in May last. The Bank of Japan's index number

of wholesale prices for August registered a rise of 1.6 per cent. on the month and regained the loss of the three preceding months. The cereals group contributed mainly to the advance, there being a sharp rise in the price of rice owing to unfavourable crop prospects. There has been a deterioration in prospects for summer and autumn cocoon crops, a decrease of well over 20 per cent. being forecast as compared with a year ago. On the other hand, industrial production continues to be well maintained. The output of cotton yarn during August set another record at 116,036,000 lbs., and that of rayon yarn reached a high record at 12,426,000 lbs. The aggregate value of all shares listed on the Tokyo Stock Exchange on September 1st was 6,001.9 million yen, a rise of 46.4 million yen, or 0.78 per cent., on the month.

Trade disputes of considerable magnitude, which have been very few in recent years, are reappearing. The Tokyo bus and tramway workers' strike, which began on September 5th in protest against the proposed drastic reduction in wages, and is now in progress, involves more than 10,000 workpeople. The Japan Seamen's Union is threatening to call a general strike, demanding advances in wages or a restoration of wage-cuts. This union is the largest labour organisation in the country, with a membership of close on 100,000.

TOKYO, September 21.

LETTER TO THE EDITOR

OUR AGRICULTURAL POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—Referring to your editorial reply to my letter in the *Economist* of September 29th, may I say that I fear you have misread my original Address, for I cannot agree that the total of grants and remissions of taxation, therein enumerated, amounts to £45 millions per annum. Taking the items seriatim, I gave, for England and Wales, £6 millions per annum as the aggregate of subsidies, etc., £4 millions per annum under the heading of Ministerial expenditure (Education and Research), and £18 millions as the (annual) total of reliefs from local taxation and tithe. This represents a grand total of £28 millions, or rather less than ros. per head per week.

As I had separately enumerated the remissions, viz.: £16 millions upon agricultural land, £800,000 under the general Derating Act, and approximately a million under tithe, it occurs to me that these items may have been included by yourself in addition to the above-mentioned aggregate of £18 millions; if so, the divergence between us would be explained. In any case, I hope we can agree that £28 millions, while a very different sum from £45 millions, nevertheless still represents an enormous contribution by the State to the industry in question.

—Yours faithfully,
The Lodge,
Queens' College,
Cambridge.
J. A. VENN.
October 3, 1934.

[In view of Dr Venn's clarifications, we plead guilty to having made a false addition of his figures. We seem, however, to have erred in good company, for Lord Astor and Dr Keith Murray, in their book "The Planning of Agriculture" (page 17) have made precisely the same mistake. Dr Venn will, we think, admit that the wording of the relevant paragraph on page 19 of his Address is somewhat obscure. The paragraph deals exclusively with tithe and related matters, and mentions in conclusion that "by these combined reliefs a sum of nearly £18 millions per annum has been excused to rural interests in England and Wales alone." Whether this figure included, or was additional to, the £16 millions mentioned some paragraphs previously was not very clear. We were in some perplexity on this point, but finding the larger total to be in general agreement with the figure quoted by Lord Astor and Dr Murray, concluded that it was correct.

It now appears that we were wrong, and we desire unreservedly to apologise to Dr Venn for misrepresenting him. At the same time we are glad to agree with him that, even with a figure of £28,000,000, the contribution of the State to the agricultural industry is truly enormous.—Ed., Econ.]

MONEY AND BANKING

AMERICA'S BALANCE OF PAYMENTS

THE preliminary figures of the American Balance of Payments for 1933 were printed in the *Economist* of April 14, 1934. The detailed estimates, which are now available,* enable greater light to be shed on a number of the component items. This annual publication of the Department of Commerce is a most interesting economic document. Its hundred closely printed pages of estimates and discussion put to shame the half-dozen largely inferential figures which constitute the official estimate of the British Board of Trade. Many of the American estimates are doubtless wide of absolute accuracy. But all of them are based on careful sampling and estimation, and the methods of compilation are improved year by year.

This year, particular attention has been devoted to the effects of the depreciation of the dollar, especially its effects on the movement of capital. The results which emerge are interesting and not always in accordance with what might have been expected. The figures of the balance of payments are shown in the following table, to which the figures for 1929 and for 1932 have been added for comparison:—

BALANCE OF INTERNATIONAL PAYMENTS OF THE UNITED STATES
(Millions of dollars)

	1929			1932			1933		
	Cr.	Dr.	Balance	Cr.	Dr.	Balance	Cr.	Dr.	Balance
Merchandise trade	5,241	4,400	+841	1,612	1,323	+289	1,675	1,450	+225
Shipping and freight	206	272	-66	73	118	-45	49	65	-16
Tourist expenditure	183	821	-638	71	446	-375	71	292	-221
Immigrant remittances, charity, etc.	24	288	-265	6	169	-163	3	135	-132
Interest and dividends	979	414	+565	461	68	+393	452	63	+389
War debts	207	—	+207	99	—	+99	20	—	+20
Govt. transactions	60	182	-122	31	101	-70	32	85	-53
Miscellaneous current items (net)	—	—	-105	—	—	+3	—	—	-2
Balance on current account	—	—	+447	—	—	+131	—	—	+210
Gold movements (net)	—	—	-120	—	—	-11	—	—	+173
Currency movements (net)	—	—	-15	—	—	-80	—	—	-90
Total	—	—	-135	—	—	-91	—	—	+83
Long-term capital movement	2,328	2,469	-141	662	645	+217	1,505	1,456	+49
Short-term capital movement (net)	—	—	-80	—	—	-409	—	—	-385
Balance on capital account	—	—	-221	—	—	-192	—	—	-336
Errors and omissions	—	—	-91	—	—	+152	—	—	+43

The totals do not show any very striking change from 1932. The credit balance on current account was rather higher, and there was a net export of gold instead of a net import. The debit balance on capital account was consequently larger, but it was achieved almost entirely by an outward movement of short-term funds. On long-term capital account, indeed, the United States was still importing capital, as in 1931 and in 1932.

The interest of the figures centres on the individual items. Under the head of merchandise trade, for example, the effect of the depreciation of the dollar appears to have been to increase imports more than exports. Imports increased by about 10 per cent. measured either in value or in volume. Exports were unchanged in volume and 4 per cent. higher in value. Several explanations of this apparent paradox can be suggested. In the first place, there were no fresh restrictions—other than the depreciation of the dollar—on imports into America in 1933, while American exports undoubtedly suffered from the crop of restrictions imposed by other countries. In the second place,

* "The Balance of International Payments of the United States: 1933." By Amos E. Taylor. Department of Commerce Trade Information Bulletin No. 819. (Washington) Government Printing Office. 10 cents.

there was during the year a considerable revival of domestic industry which would normally lead to increased imports of raw materials. This inference is supported by an analysis of American trade by continents. The excess of exports to Europe showed little change. In the case of Latin America, the United States diminished her "adverse" balance. The great increase of imports, relatively to exports, came from Canada and the Far East. This result was achieved mainly by a reduction of exports to Canada and by an increase of imports from Japan. A further explanation suggested by the Department of Commerce is that the effects of a depreciating currency are different from those of a depreciated currency. The belief that the exchange value of a currency is going to fall further would lead to "forestalling" by importers, and to holding back by purchasers for export.

The tourist account shows a further sharp contraction. The fall seems to have been less in the case of tourist traffic to Mexico, and there was even a slight increase in expenditure on cruises. In the other divisions, however, there was a universal reduction. There appears to have been curiously little tendency among American tourists to discriminate in favour of those European countries with depreciated currencies. Comparing expenditures in 1933 with those in 1929, those in Switzerland have suffered a heavy reduction of 78 per cent., while the reduction for Germany is 80 per cent. On the other hand, the figures for France and the United Kingdom show almost the same reduction, namely 56 per cent. and 54 per cent. respectively. The reduction in the total is proportionately much the largest since 1929, and since the national income was on the whole higher in 1933 than in 1932, there can be little doubt that the decline in foreign travel was due to the fall of the dollar. The same cause presumably accounts for the fact that tourist expenditures of foreigners in the United States were unchanged for the first time since 1929.

The report states that there is no evidence to connect the decline in immigrants' remittances with the depreciation of the dollar. The report might, however, have mentioned that in some cases (notably the Irish Free State) the banking troubles led to a considerable repatriation of capital funds. Charitable contributions were 19 per cent. lower than in 1932, but it is interesting to note that while the remittances of Protestant and Roman Catholic institutions declined by 32 per cent. and 17 per cent. respectively, Jewish contributions showed an increase of 25 per cent. This fact is probably connected with political events in Europe. Interest receipts declined as expected. Even in 1933, however, the average rate of yield was 4.4 per cent., compared with 5.9 per cent. in 1930. The record of American foreign investments in the past decade is probably far sounder than is generally believed.

A large part of this year's report is devoted to the capital account. The outflow of short-term capital continued, as it has in every year since 1927. In the earlier years of this period the outflow resulted from new American short-term investments abroad exceeding the deposit of funds in New York by foreigners. After the onset of the depression, foreigners withdrew their funds from New York, but American banks were unable to reduce their foreign commitments owing to standstill arrangements, etc. In 1933, both foreigners and Americans were exporting short-term capital from America. Foreign funds in New York were reduced by \$383 millions and stood at the low figure of \$487 millions on December 31, 1933. On the other hand, American deposits with foreign banks and acceptance credits increased by \$135 millions, offset to some extent, but not entirely, by reductions in advances and short-term loans to foreigners. This outflow of capital is ascribed to the depreciation of the dollar, and the information is added that balances abroad have been largely repatriated since the devaluation of the dollar on January 31, 1934.

The changes in the long-term capital account in 1933 can be set out in tabular form:—

	(\$ millions)	
	Inflow (+) or Outflow (−) of Capital	
New foreign issues publicly made in U.S.	— 71	
Less refunding issues, commissions, discounts, etc.	+ 61	— 10
Bond-redemption and sinking fund payments:—		
Received from foreigners	+123	
Paid to foreigners	— 50	+ 73
Direct investments:—		
New direct investments abroad and privately taken foreign issues	— 91	
Direct investments of foreigners in U.S.	+ 7	
Resale to foreigners of direct investments made in previous years	+ 50	— 34
Purchase and sale of existing securities:—		
Purchases by Americans of foreign securities ...	—685	
Sales by foreigners of American securities	—580	
Purchases by foreigners of American securities ..	+760	
Sales by Americans of foreign securities	+565	
Net result of arbitrage transactions	— 40	+ 20
Balance of long-term capital account		+ 49

The net balance is not large, but some of the component items are considerable, and the whole turnover was much larger than in 1932, as can be seen from the first table. Transactions in existing securities dominate the account. The totals approximately balance over the year as a whole, but it would be interesting to know whether there were large movements in one direction in certain months, and reverse movements at other times. Flight of American capital undoubtedly played some part in these movements, as is shown by the large amount involved in purchases of foreign investments by Americans. In 1933 there was a net increase of \$120 millions in American holdings of foreign securities, compared with large declines in the preceding years. There appears, indeed, to have been a conflict of opinion between Americans and foreigners, as foreign holdings of American securities increased on balance by \$180 millions. Moreover, the purchases of foreign securities by foreigners represent largely "repatriation" of the dollar obligations of foreign countries and are, to that extent, not a symptom of foreign fear of the dollar. The report also contains an interesting analysis of foreign holdings in 52 of the largest American corporations. These holdings have been increasing steadily throughout the depression. The interesting fact emerges that more American securities were bought by foreigners in 1932 than in 1933. In 1932, Great Britain and Holland appear to have been the chief buyers; in 1933, France.

The facts here mentioned, together with many others of which space forbids mention, provide an interesting survey of the effects of the fall of the dollar. It is surprising that those effects were not larger. Imports both of goods and of capital offset to a surprisingly complete extent the increases that could be anticipated in exports of goods and capital. The increase in the net credit balance on current account, for example, is more than fully accounted for by the decline in tourist expenditures. The solution of these paradoxes is probably that already suggested, namely that the dollar in 1933 was a depreciating rather than a depreciated currency. If this is true, 1933 was a year of transition, and we shall have to wait until the figures for 1934 or 1935 are published to observe the final effects of the New Deal on the balance of America's international payments.

FINANCIAL NOTES

The Money Market.—Money remains very easy, with loans readily available at $\frac{1}{2}$ per cent. The discount market has perhaps become slightly more active. There is no increase in the total supply of bills, but bills are changing hands a little more freely. At the end of last week the clearing banks raised their minimum rates for October and November Treasury bills from $\frac{1}{8}$ to $\frac{1}{4}$ per

cent., so that they are now quoting $\frac{1}{4}$ per cent. for maturities before the end of the year, and $\frac{1}{8}$ per cent. for January Treasuries. There has been a good market demand for November Treasury bills at $\frac{1}{8}$ per cent. and for the hot bills at $\frac{1}{4}$ per cent. and a shade under. As a result the clearing banks have only secured a few November bills.

	Sept. 20, 1934	Sept. 27, 1934	Oct. 4, 1934	Oct. 11, 1934
Bank rate.....	2%	2%	2%	2%
Clearing banks' deposit rate	1	1	1	1
Short Loan rate:—				
Clearing banks	1	1	1	1
Others	1	1	1	1
Discount rates:—				
Treasury bills:—				
(a) Clearing banks.....	1	1	1	1
(b) Others.....	1	1	1	1
Three months' bank bills	1	1	1	1

Last week's Treasury bills only went at an average rate of 15s. 9.70d. per cent., against 14s. 2.38d. per cent. the week before. This result was a little disappointing to the market, but the authorities only allotted £31.5 millions out of their original offer of £35.0 millions. This reduces the outstanding volume of Treasury bills issued by tender from £423.9 to £423.4 millions. The volume of bills issued otherwise now amounts to £395.4 millions, against a "low" figure of £360.3 millions on June 23rd. On that date the tender issue total stood as high as £492.1 millions.

The Bank Return.—There is a slight and normal contraction in the note circulation, and as a result the Reserve is £1.3 millions higher. The note circulation is still higher than at the corresponding date last year.

	BANK OF ENGLAND				
	Oct. 11, 1933	Dec. 27, 1933	Sept. 28, 1934	Oct. 3, 1934	Oct. 10, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.4	190.7	191.9	191.9	191.9
Note circulation.....	372.4	392.0	377.0	380.8	379.6
Banking Department:—					
Reserve	79.3	59.7	75.5	71.7	73.0
Public deposits.....	10.7	22.2	37.9	13.7	18.6
Bankers' deposits	111.3	101.2	82.0	107.0	107.6
Government securities ...	81.1	88.0	81.6	81.7	83.4
Discounts and advances ..	10.9	16.8	7.2	12.7	14.0
Proportion	47.7%	37.3%	48.1%	45.4%	44.7%

Public Deposits have risen by £4.9 millions, but the 3 per cent. Funding Loan dividend is due next week, and so a contraction may be anticipated. There is a further small increase in discounts and advances, and Government securities are also a little higher. Bankers' deposits are practically unchanged, but are £3.7 millions smaller than they were a year ago.

The Foreign Exchanges.—The Marseilles assassinations naturally had a disturbing effect both upon Tuesday evening and all Wednesday, but by Thursday a normal atmosphere once more prevailed. The first reaction was pressure from the Continent to sell francs and other European currencies, and it is believed in the market that the British Control became a buyer of francs for a short time. On Thursday, however, when conditions were much quieter, sterling once more became weak, and American purchases of dollars through Paris were noticeable. The British Control promptly reversed its tactics and sold francs on a small scale, but sterling weakened in comparison with Wednesday's highest rates from \$4.92 $\frac{1}{2}$ to \$4.89 $\frac{1}{2}$ and from Frs. 74 $\frac{1}{2}$ to Frs. 73 $\frac{1}{2}$. Three months' francs stood on Thursday afternoon at a premium of 12 centimes. As a result of Thursday's rally in the franc, the London price of gold has risen to a new high record of 143s. 3d. per fine ounce. In view of the recent establishment of the New Zealand Reserve Bank, it is of interest to see that this week's return of gold imports records the arrival of

£500,000 in sovereigns from New Zealand. Pesetas have been a nominal market with no business. Free marks were quoted at Rm. 12.08½, with sondermarks at Rm. 12.37, equivalent to 2.3 per cent. discount. As stated on page 676, Mr Runciman has addressed a letter to all Chambers of Commerce urging that British importers should make increased use of sondermarks. Owing to the further restriction on the use of registered marks, their discount has widened to 47½ per cent.

New York Money and Banking.—New York money rates remain unchanged. Brokers' loans for October 3rd were returned at \$725 millions, against \$750 millions the week before. The Treasury placed this week an issue of \$75 millions of six months' bills at an average tender rate of 99.88½ per cent. This is equivalent to a rate of just under ¼ per cent. per annum. The Reconstruction Finance Corporation states that loans issued by it direct to industry, in furtherance of the Administration's desire to stimulate trade, amount to \$30 millions. Total authorisations and commitments of the R.F.C. up to September amounted to \$8,092 millions; \$4,549 millions of this total sum have been allocated to purposes other than advances to Government agencies and relief, and \$2,166 millions of this \$4,549 millions have been repaid. During September fifteen national banks with deposits of \$15 millions were reopened. The Treasury has let it be known that its silver purchases from abroad are being made in such a way as to facilitate foreign exchange operations, including the financing of American exports. It is estimated unofficially that Treasury purchases amount to about 35 million ounces a month, and that 240 million ounces have been bought to date, including the stocks of silver nationalised when the Silver Purchase Act was passed. \$80.3 millions of silver certificates have been issued by the Treasury, of which about \$57 millions are thought to have passed into circulation. This apparent determination of the Treasury to carry out the terms of the Silver Purchase Act has not been well received on Wall Street.

International Movements of Funds.—Recent comments suggest that some confusion exists in the public mind as to the effect of operations by the Exchange Equalisation Account upon the internal credit structure of the United Kingdom. This confusion largely arises from a failure to realise that the authorities operating the Account rarely initiate a movement of funds but usually counter a movement which has already begun to take place. Let it be assumed that French capitalists transfer the sum of Frs. 75 millions (equals £1 million sterling) from a French to a British joint-stock bank. To cover this movement the French banks may draw partly on their own deposits with the British banks or credit the British banks' franc accounts with them (thereby adding to the British banks' holdings of *devisen*), or even sell directly or indirectly sterling assets such as Treasury bills to the British banks. The net result of a combination of these three courses will be some increase in the grand total of British bank deposits, balanced by increases in the British banks' holdings of sterling assets and *devisen*. Thus, as has been pointed out recently, the net result of an influx of funds into London may be some increase in British bank deposits, but the increase will not necessarily equal the total influx of funds. Conversely, when money leaves London for Paris, all these changes will be reversed, and there may be some decrease in British bank deposits. There are, however, three important points to notice, all of which have been overlooked. Firstly, all these changes, inclusive of changes in British bank deposits, are independent of the operation of the Exchange Equalisation Account. Secondly, only the deposits of foreign banks or private money with the British banks are affected, and this money is rarely engaged actively in British internal trade. Hence it is wrong to regard these changes as inflationary or deflationary in the popular sense of these terms. Thirdly, it is open to the British banks to rectify these movements (for example, to maintain their cash ratios) in any of the well-known

ways. It is important to observe that neither the cash holdings of the joint-stock banks nor the position of the Bank of England are necessarily affected by the movements described above.

The Exchange Equalisation Account.—When the Account intervenes to offset a movement of funds from Paris into London it buys francs and indirectly sells Treasury bills. These operations in combination need not necessarily affect the position of the Bank of England or the cash holdings of the joint-stock banks. All that need happen is for the joint-stock banks to part with some of their *devisen* to the Exchange Equalisation Account and take up Treasury bills in exchange. Such a redistribution of their assets obviously does not affect their total deposits, and this is where several commentators have gone wrong. The same reasoning applies when, to counter an efflux of funds from London, the Account sells francs and takes up fresh Treasury bills. The joint-stock banks regain the *devisen* lost through the efflux, but instead lose Treasury bills to the Account. It is true their deposits may contract, but this is due to the original efflux of funds and not to the subsequent operations of the Account. Finally, it should be emphasised that these examples have necessarily been over-simplified, and in practice it is impossible to distinguish changes in bank assets due to international movements of funds and the operations of the Exchange Equalisation Account from changes due to more mundane developments such as a temporary revenue deficit and an increase in the floating debt. Again, any attempt at deduction based on the total statutory size of the Exchange Equalisation Account and its sub-division between *devisen*, gold and Treasury bills only complicates the argument to an unnecessary and fatal degree. The plain truth is that there is no evidence that operations of the Exchange Account need affect the general credit structure of the country, which is based on the position of the Bank of England and the cash holdings of the joint-stock banks, either one way or the other.

September Clearing Bank Averages.—As was to be expected, September witnessed increases in clearing bank deposits and cash as the result of the repayment to the banks of currency withdrawn for use during the holidays. There was a further increase in acceptances, endorsements, etc. This may reflect the autumn movement of primary products, but may equally represent fresh forward exchange business inspired by the weakness of the pound.

Balances with other banks and cheques in course of collection were fractionally lower than in August, and it is noticeable that there has also been a decline in provincial bank clearings. In early September, at least, money was not circulating any faster than during the holidays. There has been a further reduction of £9.1 millions in bills, which is easily explained by the reduction of about £20 millions which occurred in tender issues of Treasury bills between August and September. This last movement has driven the banks to add to their investments, which have increased by £5.4 millions. Advances have fallen by £1.9 millions, but are still slightly higher than a year ago.

THE STOCK EXCHANGE

TRUSTEE LAW ANOMALIES

WITHIN the last few months there has been a crescendo of protest against the anomalies of the law relating to investment by trustees. The inconveniences and inequalities of the system have been repeatedly urged in our columns during the last four years (see the *Economist* of September 27, 1930, page 578, and March 12, 1932, page 581). In the interim, the conversion of thousands of millions of eligible stocks to lower interest rates and the considerable rise in the market prices of all fixed-interest securities have resulted in reduced income and straitened circumstances for most beneficiaries, and have tended, significantly and continuously, to reduce the range of investments open to trustees, under the provisions rendering certain redeemable stocks ineligible at a premium of over 15 per cent., or at any premium if redemption may be effected within 15 years. Since Mr Chamberlain floated his War Loan conversion scheme, in June, 1932, an element of urgency has thus been added to the claims of logic and equity for thoroughgoing revision of a system which stands accused of inflicting avoidable hardship on a section of the community which can least afford it—the widow, the orphan and the tenant-for-life.

The mode in which a trustee can invest trust monies is primarily limited by the instrument creating the trust. Subject, however, to any express directions therein contained, a trustee may invest in any manner authorised by law, provided that he uses proper care and discretion in making his selection. The following paragraph describes the various groups of stocks, etc., authorised for investment by Section I of the Trustee Act, 1925—a codifying measure, founded mainly on the provisions of the Trust Investment Act, 1889, and the Colonial Stock Act, 1900:—

(a) Parliamentary stocks, public funds, or Government securities of the United Kingdom; (b) legal mortgages on freehold property in the United Kingdom; (c) Bank of England or Bank of Ireland stock; (d) sterling loans charged on the revenues of India; (e) securities, the interest on which is guaranteed by Parliament; (f) certain Metropolitan and London County Council stocks; (g) prior charge and preference stocks of railways in the United Kingdom which have paid 3 per cent. on their ordinary stocks for ten years; (h) the stock of railway or canal companies leased in perpetuity or for not less than 200 years at a fixed rental to any railway mentioned under (g) above; (i) debenture stock of Indian railways, carrying sterling interest guaranteed by the Secretary of State in Council; (j) certain annuities arising out of the purchase by the State of railways in India; (k) Indian railway stocks guaranteed by the State; (l) prior charge or preference stocks in British water companies which have paid 5 per cent. ordinary dividends for ten years; (m) stocks of British county councils or corporations with a population of over 50,000; (n) stock issued for water-supply purposes by commissioners with compulsory power of levying rates over a population exceeding 50,000; (o) securities authorised under the Colonial Stock Act of 1900; (p) local bonds under the Housing Act of 1919; (q) Northern Ireland Government securities; (r) securities authorised under the Rules of the Supreme Court; in addition, the Agricultural Credits' Act authorises investment in Agricultural Mortgage Corporation 5 per cent. debentures and Scottish Agricultural Securities Corporation stock.

With two nominal exceptions (the stocks of the Bank of England and the Bank of Ireland), all the securities authorised by the Trustee Act are fixed-interest securities. After the events of the last twenty years, no legislature can now retain the impression that fixed-interest stocks, however eminent their status, confer immunity from disturbing fluctuations in capital values, in sympathy with changes in general interest rates. Modern investment opinion is coming increasingly to the view that a "balanced" portfolio, containing both fixed-interest and equity stocks, is the best insurance against capital loss. The experience, however, in the last few years of certain investing institutions with far wider knowledge and discretionary powers than the average trustee, seems strongly to suggest that this "protection" is, to say the least, relative and not absolute. Research will need to be carried a good deal further before responsible public opinion will be prepared to sanction the eligibility of ordinary shares for all trustees. At present,

attention may be more profitably concentrated on the question of reform within the range of fixed-interest securities.

Within this limit the defects of the present law are sufficiently obvious. Some are the accidents of history. The phrase "legal mortgages on freehold property in the United Kingdom," for example, may have appeared to be sufficiently widely drawn to cover all possible contingencies. Earlier legislators, however, had necessarily no premonition that, in the decade from 1924 to 1933, nearly £700 millions of new advances on freehold property would be made by building societies with share and loan investments ineligible for trustees. Other anomalies reflect the failure of the law to "move with the times." The framers of the original Acts were railway-minded. The charmed circle of eligible investments completely excludes the prior charges of gas companies, electricity undertakings (including the Central Electricity Board), port and harbour authorities and the strongest "industrial" concerns. Some of the criteria of security, embodied in the law, are manifestly unsound. The quality of a corporation issue does not vary directly with the rate-paying population, nor is the 5 per cent. consolidated preference stock of the Great Western Railway, whose dividend has been short-earned for the last two years, necessarily sounder than the 4 per cent. debenture of the London, Midland and Scottish Railway, whose interest in the company's worst year has been twice covered by earnings. The former, however, remains a full trustee security, because the Great Western board has chosen to deplete its resources by paying recent 3 per cent. ordinary dividends mainly out of reserves, while the latter is no longer a trustee security because the L.M.S. has ceased to pay ordinary dividends. An even more serious defect in the law has been due to a conflict of aims. The original concept of protection for "those who trust" (*cestuis que trust*), and for trustees themselves, has been overlain by a desire to enable someone to borrow cheaply. The benefits of "trustee status" have been conferred, for quasi-political ends, on the Dominions under the Colonial Stock Act, 1900, on local housing authorities under the Act of 1919, and on British farmers under the Agricultural Credits Acts of 1928 and 1929. Finally, the law authorises the Supreme Court in England in effect to override the terms of a statute, for whereas Section I (g) restricts "trustee" railway prior charge and preference stocks to those of companies which have paid 3 per cent. on their ordinary stocks for ten years, the rules of the Supreme Court render stocks eligible in cases where "a dividend" (i.e. 0.001 per cent.) has been paid for that period.

In the light of these facts, the Committee appointed by the late Lord Cave in July, 1926, "to consider in what securities trustees should be authorised to invest," may appear to have been almost incredibly complacent in its report, after nearly two years' gestation, that "it cannot be suggested that there is any need felt by trustees for a wider range of investment than exists at present." It is but just to the Committee to record that it took strong exception to the anomalies and overlapping powers of the Supreme Court, although, at the time, the extent to which depression in railway earnings would emphasise the conflict between the two codes could not have been foreseen. The entire report, however, was informed by a conviction that any change in the list must necessarily involve "dilution." In view of the emphasis laid on "the very large issues of Government stock which have taken place, particularly since the beginning of the war," it needs no vast effort of imagination to reconstruct the Committee's mental background. Its members were anxious to avoid, at all costs, any queering of the pitch for the Treasury's programme of debt-funding and War Loan conversion. The subsequent metamorphosis of the gilt-edged position has been fundamental. If the Committee were reconsidering the matter to-day, there is no reason to doubt that its members would reiterate their conviction that "the only authority having power to authorise alterations should be

Parliament," but its judgment on the "undesirability" of "adding to the present list of authorised investments" would be seriously modified. Its assumption that any change must be a change for the worse was, from the outset, pure pedantry, which merely showed how far the Committee, which included no representative of the Stock Exchange or the investing public, was out of touch with contemporary financial tendencies.

We venture to suggest that the time is appropriate for the appointment of a Committee to go into the matter *de novo*, without regarding itself as bound in any way by the findings of its predecessor. Its terms of reference might be ample in scope but clearly defined, so as to envisage the presentation of a report laying down a series of sound general principles on which Parliament might be asked to legislate. The system which recommended itself to Lord Cave's Committee, under which every change in the Trustee List would require a new Act of the sovereign body, appears far too rigid, cumbersome and costly in its operation to be well adapted to the conditions of the investment market. The making of additions to or deletions from the list of trustee securities is, by its nature, better exercised by an impartial but expert executive committee, administering certain guiding principles, clearly laid down by Parliament, in the light of changing contemporary conditions. With all due respect, the Supreme Court would not appear the most suitable of all conceivable repositories of such authority. No body could be better qualified to adjudicate upon the legal aspect of the matter. The problem, however, is, at bottom, an investment problem, and its solution postulates specialised knowledge and experience which the most eminent of judges may have no opportunity to obtain. We strongly support the suggestion made in a report, recently issued by a well-known firm of stockbrokers, which emphasised the anomalous provisions governing trustee stocks, that a statutory body should be set up, whose personnel should include a judge or eminent barrister as chairman, together with a representative of the Stock Exchange, a banker, an actuary, an accountant, a Treasury official and the Public Trustee.

However this may be, there is little doubt but that such a personnel would be eminently suitable for an original committee of inquiry charged to devise a new "constitution" for trustee investment. It would be well if such a committee were to begin by deciding, once and for all, whether trustee status were designed for the benefit of investors or of favoured groups of "political" borrowers. If the committee decided against any attempt to make the granting of trustee status a species of Parliamentary "patronage" at the behest of the Government of the day, its next duty would be the discovery of a satisfactory definition of the term "security" in a trustee investment sense. In the process, a good many current anomalies would tend to disappear. It would be surprising if the committee were to find insuperable difficulty in laying down practical lines on which the basis of eligibility for inclusion in the Trustee List might be broadened without being lowered.

An Enabling Act, implementing the findings of such a body, for administration by a permanent statutory committee, whose decisions would be subject to Parliamentary approval by resolution, might well prove the best way of dealing with an intricate and urgent problem. Piecemeal treatment has produced many of the more unfortunate features in the present position. Further tinkering would tend rather to accentuate than to relieve them.

INVESTMENT NOTES

Capital Market Conditions.—Judged by "space-rate" terms, the capital issue market has been demonstrably active since the end of the summer "close season." During the past week alone, direct public offers have been made by borrowers of diverse status, including a county borough, two steel companies, a film concern, a rubber company and a new aircraft venture. The investor has been afforded a choice between fixed-interest stocks

yielding approximately 3 per cent., 4 per cent. and 5 per cent., and between 5s. ordinary shares at par and £1 ordinary shares at 12½ per cent. premium. Speedy and full subscription has been announced in almost all cases. It is, indeed, becoming *de rigueur* that an issue which opens at 9 a.m. should be closed at 9.5 a.m. All this gives a heartening appearance of activity, and investors may learn with surprise that some critics are still complaining that the pulse of the market is sub-normal. Close examination of recent facts and figures, however, lends a certain support to this view. The frankly speculative prospectus, issued by a new company in a new industry or an old company in a notoriously unstable industry, occasionally makes its appearance. One or two recent instances suggest that a high basis of capitalisation deters the gambler no more to-day than in any of the famous booms of the past. Occasional swallows, however, do not make a summer, and, since the end of the last period of gold-mining issue activity, the most striking feature of the "airy" prospectus has been its relative infrequency. At the other end of the scale, the large borrowers of the past are active to-day only on a small scale, or not at all. Since the British Government issued its 3 per cent. Funding Loan last April, it has been out of the market. Since Canada raised approximately £6,900,000 of new money in May, there have been only three Dominion and Colonial Government offers, all for conversion purposes. Iceland, Finland and Argentina have visited London by Treasury permission, but only to convert existing indebtedness. Since April some ten home counties and boroughs have raised £13,220,000 of ostensibly new money, but a considerable part of the proceeds has been used to repay pre-existing private and short-term borrowings. The pristine whiteness of our records, under such headings as "Colonial and Foreign Corporations" and "British and Foreign Railways," is unbroken by a single entry relating to a "public" offer. All these are borrowers whose requirements, in the past, have been measured in millions of pounds, where those of other applicants have been measured in hundreds of thousands. Industrial and commercial prospectuses, though more numerous, have been mainly for "conversion" and "funding," or for transferring the ownership of existing businesses from one set of persons to another. In short, now that ebullience in the mining markets has died down, temporarily at least, it may be no great exaggeration to say that a regime of the lowest borrowing rates for twenty years is mainly stimulating readjustment rather than extension of long-term obligations to-day. Possibly the British Government, or some other favoured borrower, may decide to remedy the deficiency.

Gas Finance Developments.—The recent activity, by way of amalgamation and absorption, in the provincial gas industry evoked timely comment at the British Commercial Gas Association Conference, recently held at Sheffield. The chairman of the Sheffield Gas Company urged that the need for competition with the electricity grid had compelled shareholders in small companies to seek refuge under the wing of larger interests whose resources and experience were an essential safeguard under the new conditions. This argument drew a warning from the chairman of the Croydon Gas Company that, while the movement towards amalgamation had solid technical advantages, certain small undertakings might succumb to "temptation from outside sources that hitherto had not concerned themselves with the gas industry." This caveat against the dangers of over-capitalisation was confirmed by Sir David Milne-Watson, who emphasised that amalgamation unrelated to technical requirements would inevitably engender future difficulties. These considerations deserve endorsement. The finance of gas-producing companies has been hitherto unexceptionable, and it would be regrettable if competition by "undesirable financial interests" (to quote one spokesman) were to result in inflated capital structures, with purely speculative earnings possibilities. The operating companies would retain their statutory protection against maldistribution of earnings, but weakness in holding company finance could not fail to have unfortunate repercussions on the whole of the industry. For purposes of record,

we set out in the following table the particulars of some recent amalgamations, with a caveat that none of the criticisms voiced at the Sheffield Conference necessarily applies to any of the companies mentioned:—

Holding Company	Formed	Interests acquired	
		Company	Stock
Severn Valley Gas Corp.†...	March, 1934	Cheltenham & Dist. Gloucester Gas ...	App. 50% ord. Large propor. 5% cons. ord.
		Ludlow Union ... Stroud	98% pref. and ord. Majority 5% cons. ord.
South Midland Gas Corp.	Dec., 1933	Witney Gas	88% ord.
		Banbury Gas	88% ord.
South Eastern Gas*	Dec., 1932	16 undertakings in Kent, including Broadstairs, Folkestone, Dover, Gravesend, Maidstone, Rochester and Chatham, Tunbridge Wells, and Hastings and St. Leonards.	All controlling interest
South Western Gas	Feb., 1934	Truro	88.6% ord.
		St. Austell	97.8% ord.
		Camborne	86.5% ord.
		St. Blazey	95.5% ord.
		Bude	90% ord.

		Padstow	96.8% ord.
		Blandford	Over 80% pref. and ord.

† Associated with Dawney Day and Co. † From British Gas Light Company. Associated with Gas Light and Coke Company, which owns 42.8 per cent. ordinary shares.

On the whole, the geographical "spheres of influence" appear satisfactorily compact, although contiguity of service areas, where population density is thin, may not, of itself, imply that considerable distribution economies are possible in the absence of further capital expenditure.

The Oil Prospect.—Recent news from America suggests that Mr Roosevelt's Government has virtually confessed its failure to control oil production within the United States. A new method of control is, apparently, being planned, with the object of co-ordinating the oil powers bestowed by Congress on the various Government departments. It may be questioned, however, whether this will be any more effective than its predecessor in dealing with the problem of "hot oil" (illegal production). Mr Ickes, the Secretary of the Interior, produced two schemes for eliminating "hot oil" production in East Texas. The first was to impose a tax of one-tenth of one cent on every barrel of crude oil produced and to send Federal officials into the oilfields to inspect books in order to collect the tax. This was intended to expose the oil "bootleggers," but for some reason it has not been made effective. "Hot oil" production in East Texas has continued to increase and is now in excess of 100,000 barrels a day. The second scheme was intended to induce the big oil companies to buy up the surplus stocks of gasoline in East Texas on the understanding that the refiners would agree not to purchase "hot oil." This plan was dangerous, for as surplus stocks disappeared, it was an encouragement to the "hot oil" producers to increase their output—which they proceeded to do. The purchase of surplus gasoline stocks was therefore suspended, and the result was a prompt reduction in the price of third-grade gasoline in the Mid-Continent refinery market. It is now generally expected that both the crude oil and gasoline price structures will break. Crude oil prices have been pegged for too long at \$1.00 per barrel in the Mid-Continent and East Texas districts. The only certain way to stop "illegal" production is to reduce crude oil prices to an uneconomic level. If "hot oil" could be eliminated, the situation in the American oilfields would be found to be greatly improved. Consumption has increased by more than 10 per cent., and production of legal oil has been declining. The daily average output for the week ending October 6th was 2,379,950 barrels, as compared with 2,402,100 barrels in the previous week, and over 2,500,000 barrels a day in August. The daily average output of crude oil is now at its lowest level since April, and both Oklahoma and California are below their production "quotas." A circular issued by a firm of Stock Exchange dealers calls attention to the relatively high yields return-

Those Children

happy in their care-free days, will soon grow up, when satchel takes the place of rocking horse. Maybe you vaguely think that when those days arrive your income will somehow be adequate to meet the sudden and increasing burden. Why not make certain that a fund will be available sufficient to ensure a sound education whether you are alive or not? Their future prospects depend so much on youthful training—would you risk their opportunities through lack of foresight?

Educational Assurance through the Legal and General means small outgoings in infant years to prevent, perhaps, a crippling drain on your resources later.

School Fees Insurance guarantees the continuance of an educational programme already commenced if your death occurred during the school period.

The enquiry form is for your convenience in making application for the booklet "Education" describing these plans in detail.

able on oil shares at the present time. Until the American situation has been stabilised, however, investors may be reluctant substantially to increase their stake in the industry. The market, further, has registered disappointment this week with the decision of the Burmah Oil Company to reduce its interim dividend in exact proportion to its recent "bonus" increase of capital.

Industrial Profits in September.—We received 89 company reports last month, showing an aggregate rise in profits of 40.63 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports Published in	No. of Companies	Rise or Fall in Profits*	Reports Published in	No. of Companies	Rise or Fall in Profits
1933—		%	1934—		%
July	160	— 3.20	February ...	209	+ 5.02
August	45	— 11.62	March	216	+ 6.34
September	102	— 4.06	April	188	+ 12.96
October	121	+ 17.06	May	251	+ 23.43
November	185	+ 79.64	June	201	+ 20.44
December	138	+ 13.04	July	197	+ 27.10
1934—			August	30	+ 35.47
January	122	+ 3.02	September ...	89	+ 40.63

* After payment of debenture interest.

The reports of the month disclose net profits of £5,766,918, as compared with £4,100,743 in the preceding year. The improvement is well distributed among the component groups, of which only Gas and Investment Trusts show a very small decline in profits. The iron, coal and steel group contributes a spectacular rise in net earnings of eleven companies from £669,103 to £1,461,540. Eighteen rubber companies have reported net profits of £224,748, compared with £7,714 a year ago, while the corresponding figures for five stores companies are £364,064, against £258,580. Miscellaneous industrial concerns continue to show steady expansion of earnings, the total for 27 companies reporting

during the month being £330,605 higher at £2,595,749. Some prominent results are set out in the following table:—

	Net Profits for Financial Years ending in		Change (%)
	1933	1934	
Ardath Tobacco.....	454,532	460,206	+ 1.2
Associated British Pictures ...	95,860	133,933	+ 39.7
Harrisons and Crosfield	199,339	249,004	+ 24.9
Malayalam Plantations.....	Dr. 67	148,676	...
Murex	55,413	119,435	+ 115.4
Prices Tailors	63,587	142,672	+ 124.4
Staveley Coal and Iron	230,668	274,774	+ 19.1
Union Cold Storage	951,530	947,460	- 0.4
United Steel Companies	351,438	947,680	+ 169.8
Total, nine companies.....	2,402,300	3,423,840	+ 42.5

These nine companies contribute nearly 60 per cent. of the total for the month, and show an overall increase of 42.5 per cent. on the previous year's results. Our quarterly analysis of Industrial Profits appears on page 672.

* * *

Actuaries' Investment Index.—The course of share quotations continues to evidence the feeling of hesitation which, for a variety of domestic and international reasons, still besets the markets. The renewed rise in industrial shares, which was a paradoxical feature of the holiday weeks, has been consolidated, but for the moment a halt has been called. The Actuaries' Index of 144 industrial shares, calculated on Tuesday's quotations at 73.2, shows no change during the week, and is only 1.6 points higher than a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.62, 3.63 and 3.67 per cent. respectively. Changes in certain component groups are set out below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Sept. 11, 1934	Oct. 2, 1934	Oct. 9, 1934	Sept. 11, 1934	Oct. 2, 1934	Oct. 9, 1934
Higher this week:						
Investment Trusts (15)	49.2	52.8	53.7	3.87	3.70	3.64
Electric Light and Power (14) ..	130.2	131.1	131.7	3.83	3.80	3.79
Gas (7)	136.6	136.6	137.1	4.42	4.42	4.41
Lower this week:						
Oil (5)	62.4	62.6	61.8	4.71	4.69	4.75
Home Rails (4)	77.7	80.6	79.4	1.54	1.44	1.43
Shipping (3)	15.0	17.3	16.8	...	...	...
Stores and Catering (15)	81.6	82.6	82.0	4.06	4.00	4.03

Speculative inquiry for investment trust stocks continues, while electric light and gas shares are finding steady investment favour. Oil shares have registered the general disappointment that illegal production has not been satisfactorily controlled. Recent speculation in shipping shares would appear to be losing much of its force.

COMPANY NOTES

Motor Shares.—Motor shares fall, in one respect, into the same category as aircraft shares and (probably) radio shares. While the progress of the industry is unquestioned, the position of individual participants may be more speculative. The post-war history of the motor industry has shown the demand for motor cars to be highly elastic. A progressive reduction in prices has been accompanied by a steady improvement in comfort and "availability." Maintenance and running costs have been cut impressively. As a result, the "saturation point" of the motor market has been pushed further and further back and does not yet seem to have been reached. Given continued economic recovery, still further expansion seems inevitable in an industry which, to a large extent, provides a popular luxury. It would appear, however, that though the process of price reduction has been retarded, the elasticity of public demand is keenly appreciated by manufacturers, and a species of price cutting is still to be expected. The great success of the 8-h.p. Ford at £120 has demonstrated the attraction of a low price, and has created several competitors among this year's models. The same process was

observed with the success of the Standard 9-h.p., and, in the higher-powered classes, is being demonstrated by the new competition of the Americans. The effect of this instability in prices is rather peculiar in the motor industry. Instead of damaging the profits of all participants, it tends to award bumper profits to whatever concern is fortunate enough to produce the "model of the year." This individual prosperity is counterbalanced by corresponding losses among the most closely competing companies. In the accompanying table there is ample evidence of this

	(Profits in £000)

condition, whose incidence, in any given year, may be largely unpredictable. The particular technique of designing a model for the year, fixing its price, and staking the company's fortunes on its success, produces quite surprising reversals from prosperity to losses and vice versa. The same reversals are traceable in liquid assets. This liability to fluctuation applies particularly to the smaller and medium companies. There is, however, no assurance that the largest concerns are immune from it. Even during its period of ascending prosperity, the Austin Company has seen quite substantial variations in annual profit rates. Similarly, the Morris Company has suffered an annual decline in profits since 1927, which might have received more comment had the company's ordinary shares been publicly held. It would appear, indeed, that a first-class name and an unrivalled distribution and service organisation are no guard against the natural vicissitudes of the trade. For investment purposes, motor shares may well be on a higher yield basis than certain other leading industrials, to allow for the "industrial" risk involved. After recent rises in market quotations, all motor shares do not appear to be conservatively valued.

* * *

Austin Motor Meeting.—The speeches of the chairman and deputy chairman of the Austin Motor Company, at this week's meeting, may be aptly read in the light of the views expressed in the preceding Note. As regards immediate prospects for the company, Sir Herbert Austin

GENERAL AIRCRAFT LIMITED

DIRECTORS:

SIR MAURICE BONHAM-CARTER, K.C.B., K.C.V.O. (Director of O. T. Falk & Company, Ltd.), *Chairman*.

ERIC CECIL GORDON ENGLAND, F.R.Ae.S. (Director of Vacuum Oil Co., Ltd.).

JOHN MACLAGAN FERGUSON, F.C.A. (Director of British Pacific Trust, Ltd.).

CHARLES FLETCHER LUMB (Director of Petroleum Storage & Finance Corporation, Ltd.).

HARRY METHUEN SCHOFIELD, R.A.F.O., *General Manager*.

HELMUT JOHN STIEGER, D.I.C., A.F.R.Ae.S., *Managing Director*.

ISSUE AT PAR OF 1,500,000 SHARES AT 5/- EACH

British Pacific Trust, Limited, of 4, Cleveland Square, S.W.1, announce that the subscription list for the above issue, which was opened on Wednesday, October 10th, 1934, was closed at 9.5 a.m., on the same date, the issue having been over-subscribed.

The Company has acquired the rights in, and the established manufacturing organisation and equipment for, the

MONOSPAR SYSTEM OF AIRCRAFT CONSTRUCTION

The Monospar System permits a saving in structure weight of aircraft of over 30 per cent. without reduction in strength, giving additional payload, increased flying range and greater safety. The significance of these advancements has already been acknowledged by the British Air Ministry, and Foreign Governments, who have purchased Monospar-built machines, and commercial flying organisations have extensively adopted similar machines.

General Aircraft, Ltd., will now acquire the valuable freehold property known as the London Air Park, Feltham, Middlesex, and will operate from this address. Full information will gladly be sent on enquiry to

GENERAL AIRCRAFT LIMITED LONDON AIR PARK, FELTHAM, MIDDLESEX

is indubitably cheerful. "I am still optimistic and I believe that the year 1934-35 will be even better than 1933-34." Last year sales of all models increased (presumably numerically) by 24 per cent. and export figures by 16 per cent. The number of orders in hand for immediate delivery in the home market is 72 per cent. larger than at this time last year, and orders for export show an increase of 100 per cent. These figures may reflect, possibly, certain changes in trade and individual custom as regards the placing of orders before and after the annual Show. Further, the experience of the Austin Company, whose efficiency and enterprise have given it a growing share of the market may, *pro tanto*, afford a somewhat exaggerated impression of demand as a whole, particularly on the export side. Whatever mental allowances investors may care to make, however, the industry has certainly room for confidence, in view of the facts discussed at length in a Leading Article on page 674. The centre of gravity of current home demand clearly remains with the lower horse-power models. The "most popular lines" of the Austin Company are still its seven h.p. and ten h.p. cars, though the company is turning out "many thousands" of commercial vans, and its taxi cabs, supplied in conjunction with another firm, accounted for 86 per cent. of the London registrations of that type of vehicle in 1933. There are, nevertheless, certain features to which the chairman of the Austin Company deems it necessary to make cautious reference. The industry is hedged round with taxes, regulations and restrictions. Since 1930, it has been the object of three major Acts of Parliament and 70 Orders, containing at least 455 individual regulations. The 25 per cent. reduction in the horse-power tax, which will come into force next January, may not, in Sir Herbert's opinion, greatly stimulate sales of the larger models. Sir Herbert is also frankly sceptical of future prospects in foreign markets, the entry into which, he believes, may become more, rather than less, difficult. From the viewpoint of shareholders in all motor manufacturing companies, the remarks of Mr E. L. Payton, the deputy chairman of Austin, are particularly significant. "Wastage of capital"—to borrow Mr Payton's phrase—is higher in this industry than in most. The Austin Company is convinced that if it had not spent, in eight years, some £3,388,427 on maintenance and depreciation—a figure considerably in excess of the present balance sheet valuation of all its land, buildings, plant, machinery and tools—it would have been unable to produce its cars at present prices. Ploughing back of earnings has been the policy on which some of the greatest motor manufacturing businesses, including Austin, Morris and the original Ford company, have been built up.

Royal Mail Group's Future.—The only concrete purpose served by the accounts of the Royal Mail Steam Packet Company for the year to December 31, 1933, is to re-emphasise the hopeless position of the preference and ordinary stockholders and the dubious prospects of many creditors. The deficiency account has now been raised from £9,011,362 to £11,303,114, but this figure includes no allowance for the overvaluation of the investments of three out of five major subsidiary companies, nor for the liability which may ultimately fall upon the company in respect of its guarantee of capital and dividends of £5,000,000 of preference shares of White Star Line, Ltd. Little revenue was received from shipping investments last year. The Royal Mail Lines, Ltd. (in which R.M.S.P. holds £880,000 of a total issued share capital of £4,000,000), made a profit of £409,812, but this was entirely applied towards depreciation of the fleet. Meanwhile, interest continues to accumulate on the R.M.S.P. Company's obligations to its creditors, and the sands are running out, for the Scheme of Arrangement sanctioned by the Court in June, 1932, expires at the end of this year. What will happen then? It is clear that three years, under contemporary world trade conditions, has proved much too short a period for the assessment of eventual possibilities under "normal" conditions. Suppose the creditors, in three months' time, decide that "normality" is too uncertain and distant a conception to be worth waiting for indefinitely? The posi-

tion, to-day, is not on all fours with that of early 1932. The Scheme of Arrangement has been successful in one, at least, of its main purposes, for the Royal Mail and Elder Dempster fleets have been maintained intact, their operations have been rationalised under new and able managements, and their continuance seems assured against all eventualities. In 1935, questions of national interest and prestige will no longer complicate the issue, and many of the interests most closely concerned may well ask themselves whether the prospect of receivership should not be squarely faced. Apart from the virtual impossibility of securing the consent of the representatives of a host of divergent (and in some respects conflicting) interests to a new moratorium, it is questionable whether the continued publication of documents like this year's R.M.S.P. report is likely to help the operating companies in their task of securing remunerative business in the freight market. A liquidation, however, which assumed the character of a general scramble might be injurious and inequitable to the interests of "marginal" creditors. The 4½ per cent. debenture stockholders of the R.M.S.P. might certainly obtain something approaching 20s. in the £, even if the company's assets came under the hammer at "knock-out" prices in a forced sale. The 5 per cent. debenture stockholders, however (not to mention other creditors ranking lower in the scale), might have slight prospect of obtaining anything worth mentioning in such an event. Their interests would be better served by realisation over a longer period, without pressure. The whole question, next year, may in fact tend to narrow down to the possibility of devising arrangements to secure a slow rather than a rapid demise.

S.T.D. Motor Affairs.—Indications of dissension between certain large noteholders of this company and the trustees regarding the desirability of proceeding to receivership were mentioned in last week's *Economist*, page 646. These alarms and excursions have, regrettably, developed into open hostilities. The directors, in conformity with their opinion that receivership should be avoided, circulated a letter to noteholders, dated October 6th, asking for a six months' moratorium for the interest payment due on September 30th. The letter stated that a scheme of reorganisation to separate profitable subsidiaries and to provide for the repayment of the notes and for the working capital had been proceeding for some time, and that its publication awaited the accounts for the year to August 31st last, which were shortly expected. In consultation with a committee of noteholders, the company agreed to call a meeting of noteholders for October 16th, at which proposals in this sense are to be submitted. The circular was supported by a letter from the committee of five, appointed at the informal meeting on October 2nd, which stated that an action which had been commenced by the trustees, claiming the appointment of a receiver and manager, had been "received with dismay by certain of the larger noteholders, particularly as they were neither consulted by the trustees beforehand nor informed that such a state of affairs was impending." The trustees have since forwarded a circular explaining the circumstances of their motion, and criticising the new proposals. They state that, having obtained insufficient information as to the company's activities in general, and as to its intentions with regard to maturing obligations, they decided to instruct a firm of chartered accountants to investigate the financial position of the company and its subsidiaries. Their report, which showed a loss of £40,109 for the nine months ended May 31st, and suggested that assets of £60,000 had been charged to the detriment of the noteholders' security, was placed before the chairman, with the intimation that, in the trustees' opinion, the company should consent to the appointment of a receiver. "No satisfactory reply was received," the statement proceeds, "nor was any undertaking given not to utilise any further assets to provide funds for assisting subsidiary companies." The trustees' motion, which was heard by Mr Justice Clauson on Tuesday, was adjourned until Friday in order to allow the defendants an opportunity of answering the evidence. As we write the matter is *sub judice*, and comment on the features of the dispute must await the outcome of present proceedings.

Colvilles' Issue.—The offer this week by David Colville and Sons, Ltd., of 1,600,000 5½ per cent. £1 preference shares of Colvilles, Ltd., at 20s. 6d. is of particular interest in view of the progress recently made towards the concentration of the Scottish steel industry (see the *Economist*, June 30th, page 1443, August 4th, page 227, and September 15th, page 498). As we suggested on June 30th, the capital structure of Colvilles, Ltd., has been reorganised, from 1,650,000 first preference, 920,000 second preference and 1,930,000 ordinary shares, all of £1, to 2,000,000 5½ per cent. preference and 2,500,000 ordinary shares. The objective, presumably, has been to achieve a convenient basis of marketability, since the whole of the share capital was issued to David Colville and Sons and James Dunlop and Company for the undertakings acquired by Colvilles. Between the company and Steel Company of Scotland a "personal" link exists, through Sir James Lithgow and Mr Henry Lithgow, both of whom are directors of Colvilles. The company, whose works at Clydebridge have an ingot capacity of 1,200,000 tons, has recently acquired Stewarts and Lloyds' Scottish and export plate business. The successful development of the Clydebridge plant has been measured by the rapid expansion in profits, which, before charging depreciation, rose from £103,305 for 1931 to £329,658 for 1933 and amounted to £316,489 for the half-year to June, 1934. A valuation of the fixed assets at £3,504,073 shows a deficiency on book value of £265,347. In view of the company's important position in the Scottish steel industry, the directors' estimate of £500,000 profit for the current year seems reasonable. If depreciation is calculated on the over-all rate of, say, 5 per cent. on the fixed assets at net book value, the balance available for preference dividend and dividend reserves, on the assumption that earnings are achieved and maintained at this level, would amount to over £310,000, giving an estimated earnings cover of nearly three times. Additional security will be afforded by the limitation of ordinary dividends to 2½ per cent. until the equivalent of three years' preference dividends has been specifically reserved. The shares may be regarded as a reasonably secured industrial investment on present earnings indications. There is reasonable likelihood that the reorganisation of the Scottish groups will result in further future economies.

Sub Nigel.—The results of this company for the year to June 30th last, writes our mining correspondent, reflect the increased price of gold for the entire twelve months, while those of the preceding year enjoyed this favourable influence for only six months. The latest figures, therefore, show considerable expansion in profits, and set up a record for the company. Increased efficiency of treatment plant finds expression in higher tonnage and reduced average working costs. Although the value of the ore treated was 1.3 dwts. less than in the preceding period, the yield and profit per ton show almost spectacular increases. Taxation absorbed nearly £600,000, against £368,100, and capital expenditure was £225,350, against £112,700. The amount carried forward, at £56,960, is somewhat reduced. Recent results are summarised below:—

	1932	June 30—1933	1934
Ore crushed..... tons	435,700	447,900	500,130
Yield per ton	72/11	95/9	112/7
Cost per ton	34/11	35/6	34/11
Profit per ton	38/-	60/3	77/8
Issued capital	£750,000	£843,750	£843,750
Total working profit.....	£827,900	£1,348,730	£1,941,590
Dividends, amount	£562,500	£848,440	£1,223,440
Dividends, per cent.	75	105	145
Development footage	61,650	78,350	88,650
Ore reserves..... tons	1,320,000	1,664,000	1,773,000
Average value..... dwts.	17.6	16.7	16.1

The ore reserve tonnage, shown in the table, has been calculated on the basis of gold at 130s. per ounce, with a pay limit reduced to 4.6 dwts., the inch dwts. being 467. In the estimate, as at June, 1933, gold was valued at 120s., and 5.0 dwts. was taken as the pay limit. A further estimate is made of the reserves, as in June last, on the basis employed in 1933, but the differences are not material. A lengthy explanation is given of the reasons for the relatively high ratio of working costs. One of the most striking facts is that, owing to the narrowness of the reef, develop-

Dividend Paid

AT THE RATE OF

£6-7-0%

BY

FOREIGN GOVERNMENT BOND TRUST

THE FIRST HALF-YEARLY DIVIDEND has just been paid by the Foreign Government Bond Trust at the rate of £6-7-0 per cent. on the initial Bond-Unit price of 20/-.

In March of this year, when the Foreign Government Bond Trust was formed, it was announced by the Managers that a yield of 5½ per cent. could legitimately be anticipated.

The dividend just paid exceeds this percentage by a substantial margin and, under present-day conditions, represents a fine yield.

The Managers of Foreign Government Bond Trust are Municipal and General Securities Co. Ltd. (established in 1906 and the pioneers of British Fixed Trusts in this country). Due to the possibility of some measure of recovery in general world conditions, Foreign Government Bonds are already attracting more attention and investors in the Bond-Unit Certificates of this Trust should benefit accordingly. The day-to-day prices of Bond-Units reflect exactly the prices of the securities which they represent. The Trust's investments are selected from 122 published Bonds. Its operation is clearly defined in the Trust Deed, and the "spread" of the Trust's holdings by percentages is made available to the public every half year. The Trustees are Lloyds Bank Limited.

Interested investors can have full details of Foreign Government Bond Trust from their Stockbroker or Bank Manager, or from the Managers:
Municipal and General Securities Company Limited
(Dept. U)
9 Cloak Lane, Cannon St., London, E.C.4
'Grams: Munigenco, Cannon, London 'Phone: City 5201

ment last year averaged 11s. 6d. per ton milled, as compared with approximately 2s. 6d. per ton for the remaining mines of the Witwatersrand. The first section of the new treatment plant is expected to be in operation during the current month, the full estimated capacity of 50,000 tons per month being due to be reached in January next. On the basis of last year's dividends, the indicated yield on the shares, at the current price, is approximately 6½ per cent. gross. Increased profits for the current year are, however, foreshadowed by the consulting engineer.

* * *

Other Company Results.—This week's company reports have had but limited appeal to the general investor. Reference to our table of company results, on page 709 of this issue, discloses that no fewer than 13 out of the 28 reports not discussed in preceding notes have been issued by rubber and produce companies. The trend of earnings continues satisfactory, although this week's improvements are in few cases spectacular. The rising profits of Argentine land companies which was noticed last week is exemplified by Tecka (Argentina) Land, whose net earnings have risen from £3,258 to £21,743, justifying a dividend of 8 per cent., against 5 per cent. for the previous year. In the heavy industry group, Sheffield Steel Products has transformed a loss of £38,097 into a profit of £25,641, and Vulcan Foundry shows an improvement from £3,577 to £17,358. The Joseph Lucas report evidences the continued popularity of the company's electrical equipment and accessories in an expanding motor market. The net profit of £273,405 (against £250,428), however, failed to appease completely the market's earlier disappointment with the maintained cash distribution on the doubled ordinary capital. The rubber group shows, in general, the substitution of small profits for the previous year's equally small losses, but the improved prospects have, in the case of six companies, encouraged directors to resume the payment of ordinary dividends. Among miscellaneous companies, Burt Boulton and Haywood report net profits of £43,739, against £10,500, but falling earnings are disclosed by Rosario Drainage (£14,789, against £57,454) and Ste. Madeleine Sugar (£53,419, against £71,741). Among this week's dividends, Ranks' payment of 15 per cent. per annum for the period to June 30th last was fully 10 per cent. below the market's earliest and most optimistic estimates, and disappointment was also registered with the Burmah Oil interim dividend of 3½ per cent., which was equivalent to the 5 per cent. payment before the recent bonus issue of one share for three. Babcock and Wilcox interim dividend is raised from 3 per cent. to 4 per cent.

* * *

Company Meetings of the Week.—On a later page of this issue will be found reports of the meetings of the Birmingham Small Arms Company and Thos. W. Ward. At the former meeting the chairman declared that although profits had not maintained the previous year's total, actual sales had not been far short of their previous record. An adverse factor had been the experience of the gun company. Activity on the motor car side of the business remained satisfactory. Mr Joseph Ward referred with satisfaction to the large output of the past year. He pointed out that increased capital expenditure and facilities to customers had rendered the provision of further capital very advisable, and stated that sanction would shortly be asked for an issue of £350,000 5 per cent. preference shares which would enable a reduction of the bank overdraft and a consequent saving in interest.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET ACCOUNT
October 23 October 25

MARKETS withstood, in an exemplary fashion which might well be taken as a pattern in the realm of international politics, the inevitable shock of Tuesday's outrage in Marseilles. Although some defensive lowering and widening of quotations was only to be expected, fears of nervous selling proved wide of the mark, and in the majority of cases prices gained ground during Wednesday's business. The event instilled heightened caution among would-be purchasers, for the new account had opened with a somewhat leaden tone. Such favourable indicators as the September unemployment figures, and the increased electricity returns were duly noted in the industrial markets, but were regarded as a rather narrow basis for estimating the course of activity during the winter.

The gilt-edged market opened in subdued fashion, but activity developed on Tuesday, when Old Consols and Local Loans were especially prominent. Wednesday dealings opened under a heavy cloud, but a confident start kept quotations firm. Indian issues followed the lead of gilt-edged, and Dominion issues showed no significant change. The foreign bond markets displayed no special weakness following the assassinations. Certain Central European issues were marked down, but the falls were in all cases moderate. The announcement of coupon arrangements produced a sharp rise in "Dawes" and "Young" bonds on Thursday. South American bonds—particularly Chilean and Brazilian issues—received support, although the latter showed a dull tendency in mid-week dealings, and Argentine loans hardly maintained their early firmness. Sino-Japanese issues lost favour as the week progressed.

Home rail ordinary stocks excited little interest at the beginning of the week, and a disappointing batch of traffics, after the better tendency of recent weeks, caused a sharp reaction, affecting also the preference issues, which had been fairly well supported. London Transport "C" stock was in steady request. Apart from some interest in Argentine preference stocks, the foreign rail market lacked lustre and quotations drifted to lower levels. Canadian Pacific fell abruptly after hours on Tuesday, but recovered on Wednesday.

The industrial markets were subjected to competition by a substantial increase in new issue business (some implications of which are discussed on page 688). For this reason business was appreciably affected on Tuesday, but prices showed general improvement on Wednesday after a very cautious opening. Purchasing continued selective, and responded to features which were "in the news." The motor group, for instance, was well exploited early in the week, on the Austin speech (reviewed on page 690), and opening of the Motor Show. Speculators, however, were not averse to taking quick profits, and some irregularity of prices ensued. Aviation shares were better supported than of late. Heavy industry shares became easier after a firm start, but South Durham were in consistent demand, while Dorman Long 5½ per cent. debentures also improved. Electricity supply shares were firm on the generation returns, and further activity in equipment issues developed following reports of good orders. Cables and Wireless stocks followed an uncertain course. Provincial demand for brewery shares remained limited, but Distillers were active. Most tobacco shares were uninteresting, but Gallaher continued to find provincial favour. Textile shares were steadier on the Spinners' Association meeting, while rayon issues were dull, British Celanese being rather uncertain. Store shares continued to fluctuate in illogical fashion, but provision shares showed an improving tendency. The miscellaneous favourites attracted specialised attention. British Oxygen, Imperial Chemical and Boots Pure Drug were firm in early dealings, but lost ground on Wednesday. Ranks showed strength in anticipation of the dividend announcement, but relapsed on sales

by disappointed holders. Bank shares showed little change and the insurance group remained firm.

The oil market showed more definite signs of life at the beginning of the week on the somewhat optimistic assumption that "hot oil" production might yet be brought under surveillance (see Note on page 689). The Burmah interim dividend was received with disappointment on Wednesday, and the trend of prices was generally to lower levels. The rubber market failed to stem a small volume of persistent selling orders by holders who saw no immediate prospect of a recovery in the commodity price. Conditions in the tea market were idle.

The Kaffir market opened under cheerless conditions, with considerable liquidation from Johannesburg. Some professional interest put the market in better humour, and as the weakness of the franc late on Tuesday was fully recovered on Wednesday, the market was little affected by this week's tragedy. Fair support was received on Thursday from Johannesburg, where selling by speculators involved in the aftermath of the Dornhoek incident showed signs of having spent itself. Tin shares found no particular favour, and Rhodesian copper issues failed to maintain a firmer start.

FOREIGN STOCK EXCHANGES

NEW YORK

AFTER fluctuating aimlessly and narrowly for some days, the markets took an upward turn in the middle of the week, after Mr Randolph Hearst, having been at the White House, had roundly rated industry for "hanging back." Wednesday's share turnover was only 10,000 short of the million. Rises up to two points occurred in quotations through a fairly lengthy list, including industrials, rails and merchandising stocks. The movement was, at least, sufficient to encourage the suggestion in some quarters that the overdue revival of market activity might be within sight, provided the Administration refrained from adverse action. The latter phrase, interpreted from the market's viewpoint, is more closely related to interference with the technical machinery of speculative security dealings than to possible currency developments. In quarters where a rise in equity share values, whatever its origin, would be welcome, the suggestion of President Roosevelt, in his conversation with Press representatives this week, that no attempt would be

made to stabilise "the price level" until commodity prices had risen further, was not in itself unwelcome, but it is by no means certain that the entire business world would regard with equanimity any prospect of e.g. a further reduction in the dollar's gold content. In the absence of external stimuli, the current trend of trade and industry does not provide a very encouraging basis for a prolonged upward movement in share values. Some autumn recovery is in evidence, but is not as yet pronounced. Steel operations are put at 23.6 per cent. of capacity, against 23.2 per cent. last week, but there is still a tendency among buyers to hang back for lower prices. The bond market has shown signs of greater firmness, and was only slightly affected by the news from Marseilles this week. It is understood that approximately \$950 millions of Liberty bonds were converted in the recent operation, and that the Government has made all arrangements to redeem the remainder in cash next Monday. Unofficial rumours have been circulating to the effect that a further refunding offer of Liberty bonds will be announced at the same time.

* Two-hour Session.

PARIS

The markets opened firm, and showed a strong resistance to the news of the assassination of King Alexander and M. Barthou. Prices were marked down at the opening of business on Wednesday, but in the absence of active selling, confidence was quickly restored. Rentes remained in fair demand, and bank shares were supported. Home industrial shares continued to show a perceptible upward tendency. On the Coudis gold shares were harder on the suggestion that the "de-grading" policy of the mines

would not necessarily preclude an increase in December dividends.

BERLIN

Share quotations declined last week on rumours that new restrictions on dividend payments were impending and that profits on speculative sales of shares were to be severely taxed. Lignite shares were depressed by the terms of the official plan compulsorily to combine the producing companies for the making of synthetic petrol. A slight recovery occurred, however, at the close of the week. The present week opened with a somewhat firmer tone, commercial banks shares in particular showing substantial advances. Sharp rises occurred in Reich and municipal conversion bonds. Dollar bonds, which had been undecided, became somewhat firmer. The German Loan Liquidation Debt rose over par, but fell back to a small discount on Wednesday. Electrical shares were steady, but rayon and steel shares remained dull, and shipping shares were easier in mid-week.

AMSTERDAM

The Bourse was quiet, with a firm undertone, on Monday and Tuesday. Rubber shares were in fair demand, in sympathy with the commodity market, and industrial shares were moderately active. The Marseilles outrage checked speculative interest, though there was practically no liquidation. Prices generally remained steady, but the volume of dealings showed a considerable decline.

CAPITAL ISSUES

THE number of prospectuses issued this week has been greater than for some time past. How far this feature is a true reflection of capital market activity, we discuss in an Investment Note on page 688. The suggestion, made here a week ago, that the Sheffield Corporation issue of a 3 per cent. stock at a relatively small discount would be a precedent for other issues of the same character has been quickly borne out. The *Blackpool Corporation*, regarded as among the soundest of corporation borrowers, has issued a 3 per cent. stock, with a twenty-year life, at 98½. Next week the *Lanarkshire County Council* will offer a similar stock, with a twenty-three-year life, at the slightly lower figure of 97½. Both are trustee issues, whose terms guarantee a strong response. Of the two offers made this week by important steel concerns, that of the *United Steel Companies* follows the lines mentioned by the chairman at the recent meeting. Its purpose is to fund and convert almost the entire existing indebtedness of the group as a whole. The stock appears fairly well secured and reasonably priced. Its issue has been followed by an announcement that the group of issuing houses which handled the offer of 4,500,000 shares last May, has exercised its option to purchase the balance of 2,077,233 shares at 23s. The *Colvilles* issue is discussed in a Note on page 693. With the position of the *Associated British Picture Corporation*, which has issued 5 per cent. first mortgage debenture stock this week, we dealt in a Leading Article in last week's *Economist*, page 640. The greater part of the issue will be

used to pay off obligations incurred during a period of active development. Its main security is a first specific charge on cinema properties. Although the film industry has, from its very nature, a permanently speculative element, the company has shown evidence of enterprising management, and its relatively high-yielding debenture stock is a reasonable security in its class. The improved fortunes of the rubber plantation industry have enabled an old-established company, the *Malacca Rubber Plantations*, to obtain a premium of 12½ per cent. for an ordinary share issue designed to repay the balance of a 7 per cent. convertible and redeemable debenture stock. Subscribers are necessarily backing the prospect of a return to something between the 7½ per cent. ordinary dividend paid for 1928 and the 35 per cent. paid for 1925, and in the rubber plantation industry a high yield basis is appropriate. Finally, the 5s. ordinary shares of *General Aircraft* carry the equity in a company formed to exploit the possibilities of the "monospar" system of construction, which is claimed to produce a saving in structure weight of approximately 30 to 40 per cent. This, like all "new process" issues, is intrinsically speculative, and will appeal to a specialised clientele of investors who are prepared to assume an "industrial risk" in the hope of a proportionate reward.

PUBLIC OFFERS

Blackpool Corporation.—Issue of £750,000 3 per cent. stock 1960 at 98 10s. per cent. (£300,000 already applied for and will be allotted in full). Stock redeemable at par January 1, 1960. Population estimated, 110,000; rateable value, £1,471,000; total current rate, 7s. 6d. in £; assets in excess of outstanding debt, which at March 31st last was £5,829,185, £2,013,727 being for undertakings and £1,136,656 for housing. Proceeds of issue to be used for replacing £476,069 short-term loans, and for general purposes.

ISSUES TO SHAREHOLDERS ONLY

Brighton Grand Hotel.—21,908 ordinary shares £1 at par to shareholders registered September 14th in proportion of one new ordinary share for every £4 stock held.

The United Sua Betong Rubber Estates, Ltd.—The company has acquired further rubber areas amounting to 7,337 acres, situated in Central Johore. The purchase price amounts to £31 15s. per planted acre, and has been paid in cash. It is estimated that £6 7s. per acre will be required to equip the estate and bring it to maturity. The company has also purchased a tea estate, situated in the Kuala Langat district of Selangor, for £2,940 in cash and the allotment to the vendors of 9,429 fully-paid shares of the company of £1 each. The directors have decided to issue 137,202 shares of £1 each at £2 10s. per share to shareholders, in the proportion of one new share for each five shares held.

Gold Coast Associated Companies, Ltd.—The company has a capital of £1,000,000 in 5s. shares, of which 1,200,000 are at present offered at par. Subscribers will be granted an option available to July 31, 1936, to subscribe for one share at 6s. for every two allotted, and the whole issue has been underwritten in consideration of similar option rights on 600,000 shares. The "associated companies" have applied for 400,000 shares of the present issue.

PRIVATE PLACING

Sphere Investment Trust.—A line of £100,000 4 per cent. first charge debenture stock of the Sphere Investment Trust has been placed privately.

CONVERSIONS AND REPAYMENTS

British Moulded Hose Company, Ltd.—This company will redeem the whole of 7 per cent. cumulative preference shares on January 1, 1935, at 22s. per share, together with interest to that date.

Tambora Rubber Estates.—The £30,000 7 per cent. convertible debenture stock outstanding will be redeemed at 106 per cent. on December 31st.

OFFERS ABROAD

Aktiebolaget Separator Debentures.—Stockholm Enskilda Bank and Gothenburg Bank issued on Oct. 6: 8th Kr.5,000,000 (£278,000 at par) of Aktiebolaget Separator Debentures out of the Kr.7,500,000 (£417,000) authorised. The debentures, which were issued at 99, carrying 4½ per cent. interest, were immediately over-subscribed, and the lists closed after 45 minutes.

P. J. Carroll and Company, Ltd.—Offer for sale of 388,887 6 per cent. cumulative £1 preference shares at 21s., and 270,116 £1 ordinary shares at 25s. per share. Tobacco business carried on for 110 years at Dundalk and now employs 600 persons. Assets revalued recently, and authorised capital increased to £1,000,000, £384,663 being capitalised from reserve. Profits after depreciation to end February: 1932, £27,170; 1933, £76,253; 1934, £105,620; six months to August 31, 1934, £45,181. Net assets (excluding goodwill), £450,900. Application for permission to deal will be made to Dublin Stock Exchange Committee.

FORTHCOMING ISSUES

Ault and Wiborg, Ltd.—An issue is about to be made of 150,000 5½ per cent. cumulative redeemable preference shares £1 and 200,000 ordinary shares £1, both at par.

East Rand Proprietary Mines, Ltd.—An extraordinary general meeting of shareholders will be convened forthwith for the purpose of considering increasing the capital from £1,500,000 to £1,800,000 by the creation of 600,000 new shares of 10s. each, which will be offered for subscription by shareholders at £2 5s. per share, in the proportion of one new

United Steel Companies, Ltd.—Issue of £2,500,000 4 per cent. debenture stock at par. Proceeds to repay fixed loan (£1,300,000) and temporary loan (£977,169). Company incorporated 1930, and now controls 16 per cent. of U.K. steel ingot output, 2 million tons coal, and coke and pig iron. Issue secured by specific charge on directly-owned properties, and on issued capitals of Appleby-Frodingham Steel and Samuel Fox and Company (subject to certain exceptions), and floating charge on undertaking. Book value total assets £11,389,929. Profits before depreciation for years to June 30: 1932, £371,237; 1933, £563,048; 1934, £1,208,936. Total depreciation for five years to 1933-34, £1,901,612. Stock redeemable by sinking fund purchases at various rates from September, 1935 to 1964, company having right to repay on three months' notice on various terms.

Associated British Picture Corporation, Ltd.—Issue of £2,500,000 5 per cent. first mortgage debenture stock at £101 per cent. Proceeds to pay off mortgages and bank loans and provide over £200,000 additional working capital. Company founded 1926, and owns 200 cinemas, and 3 producing and 1 distributing subsidiaries. Issue specifically secured on net assets of £5,294,834, and floating charge on remainder of undertaking (£873,752). Profits, after depreciation, for years to March 31: 1932, £394,487; 1933, £303,108; 1934, £439,686. Stock redeemable at £102½ from January 1, 1936, to January 1, 1966, or on three months' notice at £105 before 1940 and thereafter at £103½.

Malacca Rubber Plantations.—Issue of 120,000 ordinary shares of £1 at £1 2s. 6d. per share. Proceeds to be applied to repayment of 7 per cent. debenture stock. Company incorporated 1906. Plantations (book value £1,466,086) amount to 26,609 acres, 21,627 being under cultivation. Profits after expenses, before debenture interest has been paid: 1931, Dr. £1,810; 1932, £6,555; 1933, £22,825. Debenture interest for these years was £17,887, £19,004, and £18,998 respectively. Estimated crop 1934, 6,318,150 lbs.; anticipated assessments 1935-38 average over 8,000,000 lbs. per annum.

General Aircraft, Ltd.—Issue of 1,500,000 shares of 5s. each at par. Formed to acquire assets of company of same name including patent rights for Monospar construction system, designed to lighten structure and to increase pay-load. Also acquires London Air Park, Feltham, Middlesex, of 207 acres, providing factory site and lease to club tenants. Assets valued £243,215 (including £84,000 patents) acquired for £226,525 in cash, vendors having exercised option to subscribe for 400,000 shares. Profits estimate not less than £75,000 for full year.

BY OFFER FOR SALE

Colvilles, Ltd.—Offer for sale on behalf of David Colville and Sons, Ltd., of 1,600,000 5½ per cent. cumulative £1 preference shares at 20s. 6d. Company formed 1930 to acquire Clyde-bridge and other plants of David Colville and Sons and James Dunlop and Company, having capacity of 1,200,000 tons ingots. Has contracts with Harland and Wolff, Lithgows, and Stewarts and Lloyds for steel requirements. Capital recently reorganised to 2,000,000 preference and 2,500,000 ordinary shares. Profits, before depreciation: 1931, £103,305; 1932, £130,924; 1933, £329,658; six months to June, 1934, £316,489. Book values, fixed assets, £3,769,420; physical valuation, £3,504,073.

BY TENDER

Uxbridge, Maidenhead, Wycombe and District Gas Company.—Messrs A. and W. Richards offer for sale by tender £20,000 5 per cent. preference stock, minimum price £123 10s. per cent., yielding £4 1s. per cent., and £19,000 ordinary stock at minimum price £158 per cent., yielding £4 8s. 7d. per cent. on 7 per cent. dividends paid in last six years. Incorporated 1861, and supplies 245 square miles and 44,738 consumers. Ordinary stock subject to sliding scale, standard price being 15.2d. per therm, and present price 11.2d. per therm.

BY PUBLIC INFORMATION

South-Western Gas Corporation.—Issue of £75,000 Four per cent. debenture stock which has been subscribed at 100½ plus interest from 1st July last. The stock is a floating charge on the undertaking and assets.

Willsons (London and Provinces), Ltd.—Particulars of issue of 100,000 5 per cent. cumulative £1 preference shares and registered option certificates for subscription for 100,000 "A" 5s. ordinary shares at premium of 20s. per share before July 31, 1936. Company incorporated 1933 as ladies' costumiers and outfitters. Present issue required for acquisition of freehold properties, new branches and extensions. Profits, years to September 30: 1931, £36,820; 1932, £34,356; 1933, £39,313. Shares have been subscribed at par for £5,000 commission and option certificates as above.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is definitely stated at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividend when the stock stands at a discount and the earliest date when the quotation is above par. Allowance is made for accrued dividends in calculating the yield on "cum div." shares, dividends, account being taken of any enhancement or reduction of interim dividends.

Dividends, account being taken of the

share for every five shares held. The new shares will rank for dividends declared subsequently to January 1, 1935. The issue will be underwritten jointly by the Central Mining and Investment Corporation, Ltd., and the General Mining and Finance Corporation, Ltd., for a cash commission of 2½ per cent.

Irish Sugar Company.—An issue of 500,000 Irish Sugar 6 per cent. preference shares is expected in a few days.

Tano Gold Dredging.—This company has been formed under the auspices of Anglo-Oriental Mining Corporation with a capital of £750,000 divided into shares of 5s. each. The company will acquire large alluvial gold-bearing areas in West Africa.

Lanarkshire County Council Stock.—The cash list will open and close October 15th for the issue of £2,230,000 of Lanarkshire County Council 3 per cent. redeemable stock, 1954-64. The issue price is 97½. The conversion lists will be closed on or before October 24th.

Thos. W. Ward.—An issue of £350,000 in 5 per cent. first preference shares, ranking *pari passu* with the existing issue, is expected shortly.

RESULTS OF ISSUES

P. J. Carroll and Company.—The lists for issue of ordinary and preference shares were closed shortly after they opened on October 8th, having been over-subscribed.

Malacca Rubber Plantations.—The list for the issue of 120,000 ordinary shares of £1 each, at £1 2s. 6d. per share, in the Malacca Rubber Plantations closed within five minutes of the opening. It was ten times over-subscribed.

Sheffield Corporation 3 per Cent. Stock.—Underwriters of this loan were called upon to take up 43 per cent. of their commitments.

United Steel Companies.—The subscription list for the issue of £2,500,000 4 per cent. debenture stock at par of the United Steel Companies, Ltd., was closed at 9.5 a.m., October 9th. The issue was heavily over-subscribed.

General Aircraft.—The subscription list for the 1,500,000 shares of 5s. each at par was closed at 9.5 a.m. October 10th, the issue being heavily over-subscribed.

Associated British Picture Corporation.—The subscription list for the issue of £2,500,000 5 per cent. first mortgage debenture stock at 101 per cent. was closed at 11.30 a.m. October 10th. Underwriters had to take up 27 per cent.

Blackpool Corporation Stock.—The list for the issue at 98½ of £750,000 3 per cent. redeemable stock, 1960, was closed at 9.5 a.m. October 10th, owing to oversubscription.

REPORTS AND NOTICES

Mr William Favill Take, deputy chairman, has been elected chairman of Barclays Bank Limited, in succession to the late Mr Frederick Crauford Goodenough, and Mr Edwin Fisher, one of the vice-chairmen, has been elected deputy chairman of the bank.

BANKS

CHASE NATIONAL BANK.—The statement of the Chase National Bank for September 29, 1934, shows that the deposits of the bank on that date amounted to \$1,466,322,000, and certified and cashier's cheques amounted to \$22,640,000, the sum of which, \$1,488,962,000, compares with \$1,533,446,000 on June 30, 1934. Total resources of the bank on September 29th amounted to \$1,774,890,000, as compared with \$1,810,699,000 on June 30, 1934; cash in the bank's vaults and on deposit with the Federal Reserve Bank and other banks, \$318,001,000, as compared with \$412,911,000. The bank's investments on September 29th in United States Government obligations, direct and fully guaranteed, \$491,819,000, include \$46,222,000 of Reconstruction Finance Corporation notes, which were carried as a separate item in the same amount in the statement of June 30th, when the direct obligations of the United States Government owned by the bank amounted to \$417,366,000.

MISCELLANEOUS

COURTAULDS, LTD.—Courtaulds, Ltd., announces that it has come to an arrangement with La Cellophane of France and its allied companies, regarding the erection of a factory in England for the production and marketing of transparent paper under the trade marks "Cellophane" and "Viscagelle."

DORMAN, LONG AND COMPANY, LTD.—It is understood that the reconstitution of the board is nearly completed. The new board will be composed of three members nominated by the committee of 5½ per cent. debenture stockholders, four nominated from the present board—three of whom will be executive directors—and the Rt. Hon. Lord Greenwood, P.C., K.C., who has accepted the position of chairman. In agreement with their colleagues the following directors will retire: The Hon. Roland D. Kitson, who has acted temporarily as chairman, and Messrs C. L. Dalziel, Ivor L. Johnson, J. B. Peat, and Francis Samuelson, who agreed to continue in office pending the completion of a scheme of reconstruction. This is now agreed and will be published as soon as the directions of the Court can be obtained.

GERMAN 7 PER CENT. EXTERNAL ("DAWES") LOAN.—The Bank of England issued the following statement on the payment of the October Coupon of the Dawes Loan on Wednesday:—Pending an announcement by the Trustees of the loan, the Bank of England are authorised by His Majesty's Treasury to give notice that coupons due October 15th detached from those bonds of the above-mentioned loan, which are certified as having been in the beneficial ownership of "British holders," under Article 2 of the Anglo-German Transfer Agreement, dated July 4, 1934, should be lodged as usual with the paying agents of the various issues. Holders of coupons of bonds of the sterling issues in such ownership may obtain payment in full by presenting their coupons at the Bank of England. An announcement will be made in due course with regard to any further steps which may have to be taken by holders of coupons of bonds of other issues in similar ownership in order to obtain payment in full under the terms of the Anglo-German Transfer Agreement.

COMPANY MEETINGS, &c.

THOS. W. WARD, LIMITED

RECORD YEAR—PROPOSED NEW ISSUE

BIRMINGHAM SMALL ARMS COMPANY, LIMITED

TURNOVER MAINTAINED AND PROSPECTS GOOD

The annual general meeting of the Birmingham Small Arms Company, Limited, was held, on the 10th instant, at Coventry. Sir Alexander Roger (chairman of the company) said that the profit for the year, which included the total profits of the subsidiary companies, amounted to £127,550, as compared with £145,531 last year and a trading loss of £331,000 in the previous year. All the subsidiary companies except one had made a profit. The loss made by that company had been provided for before arriving at the figure of profit. Their actual sales had not been far short of their record sales of the previous year.

A factor adversely affecting their profit was the fact that they had made a loss in the Gun Company. Exports had been much hampered and reduced by official restrictions, while practically no orders had been or were being placed by the British Government.

Dealing with the activities of the Daimler Company, Limited, the Lancaster Motor Company, Limited, and B.S.A. Cars, Limited, the chairman said that the King had once again honoured the Daimler Company with an order for a new car, which would be delivered next year. In order to maintain the company's position in the market for chauffeur-driven cars, a new car with a Straight Eight engine of 25 h.p. rating had just been introduced. It had been received with approval on the part of the trade and the Press, and already the sales had exceeded their anticipation.

"FAMILY SALOON"

In order to meet the demand for a "Family Saloon"—an owner-driven car capable of carrying five passengers in comfort—a new 18 h.p. Lanchester had been designed and was in full production. It had many new features and dealers were enthusiastic about it. To meet the demand for a 6-cylinder engine in the smaller cars, a 12-h.p. Lanchester and a 12-h.p. B.S.A. had been introduced, and the complete range of cars for 1935 would include three Daimlers of 15, 20, and 25 h.p., three Lanchesters of 10, 12 and 18 h.p., and two B.S.A.'s of 10 and 12 h.p.

TECHNICAL ACHIEVEMENTS

All those models were fitted with the Daimler Fluid Fly Wheel Transmission, which was now as near perfection as a piece of mechanism could be. That and the other technical refinements had enabled them to sell many thousands of cars at a purchase price higher than could be obtained by their competitors for similar power and seating accommodation. Their aim was by improving their designs, their manufacturing processes and their organisation to make their technical successes reflect in profits the commercial achievements which they had made possible. Their motor cars remained the aristocrats of their class. He considered that one of the best auguries for the future was the fact that they again entered a new year with an organisation of dealers who were thoroughly enthusiastic about their products. Their cars were better than ever and offered better value for the money. It had not been considered wise to increase their prices and they were pursuing economy in every possible direction.

They were spending on suitable equipment as wisely as they knew how the money that they had earned and charged by way of depreciation. Shareholders might, therefore, be assured that in that matter they were pursuing a progressive policy, and one which they were confident would steadily improve their position.

In dealing with the activities of the various other subsidiary companies, the chairman said that last year their pedal cycle business, both single and tandem, had experienced the best year in its history. This year they had improved on that record. Continuing, the chairman said that until general conditions enabled them to secure full employment for all their various plants, producing a large variety of products, including motors, cycles, tools, guns, and steel, it was not possible to earn steady and substantial profits on their capital. Shareholders were no doubt disappointed that the results of the year were not so good as last year, but it was a comfort to be able to report that their turnover had been maintained, and that, given a maintenance of present conditions, they should be able to do at least as well next year. The energies of the board and management continued to be devoted to a cautious and steady building up of the business of the group, and it was their hope and belief that they would be able to reward the patience of the shareholders.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the eight days ended October 6, 1934, amounted to £12,242,000, against ordinary expenditure of £27,736,000. After allowing for an increase in Exchequer Balances of £104,504, the operations for the week, as shown below, increased the National Debt by £15,893,000 to approximately £8,104 millions.*

GOLD

Messrs Samuel Montagu and Company write on October 10, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,909,743 on the 3rd instant as compared with £191,886,073 on the previous Wednesday. During the week the Bank announced the purchase of £28,803 in bar gold. With a further appreciation of the gold currencies in terms of sterling, the price of gold continued to advance and new high records have been established during the week under review, the highest being 142s. 9d., the quotation of yesterday.

In the open market moderate amounts were available and the demand was keen, general buying maintaining prices at a considerable premium over the gold exchange parties.

Quotations during the week:—

	Per ounce fine	Equivalent value of £ sterling
October 4	142s. 1d.	11s. 11-50d.
" 5	142s. 4d.	11s. 11-25d.
" 6	142s. 3d.	11s. 11-33d.
" 8	142s. 6d.	11s. 11-08d.
" 9	142s. 9d.	11s. 10-83d.
" 10	142s. 6d.	11s. 11-08d.
Average	142s. 4-83d.	11s. 11-18d.

The s.s. "Viceroy of India," which sailed from Bombay on the 6th instant, carries gold to the value of about £575,000, of which £327,000 is consigned to London and £248,000 to New York.

SILVER

The market has been very active during the past week, and prices advanced rapidly. There was a rise of 1/2d. on the 8th instant followed yesterday by a further rise of 1/2d., which carried quotations to 23 1/2d. for cash and 23 1/2d. for two months delivery; to-day, prices again advanced,

cash being quoted at 23 1/2d. and two months at 23 1/2d., the highest since September, 1929.

America has been a buyer, but the strength was caused largely by demand from the Indian bazaars. The weakness of sterling has again been a factor, besides which the market found that sellers were inclined to hold back.

There has been buying on China account, as well as sales from the same quarter; speculators have given good support, but there was some profit-taking at the advance in prices.

Quotations during the week:—

IN LONDON			IN NEW YORK		
	Bar silver per oz. std.	Cash Two Months' delivery		Cents per Ounce	999 fine
October 4	22 1/2d.	22 1/2d.	October 3	50 1/2	
" 5	22 1/2d.	22 1/2d.	" 4	50 1/2	
" 6	22 1/2d.	22 1/2d.	" 5	50 1/2	
" 8	22 1/2d.	22 1/2d.	" 6	50 1/2	
" 9	22 1/2d.	22 1/2d.	" 8	50 1/2	
" 10	22 1/2d.	22 1/2d.	" 9	51	
Average	22-875d.	22-990d.			

The highest rate of exchange on New York recorded during the period from the 4th instant to the 10th instant was \$4-93 1/2 and the lowest \$4-89.

INDIAN CURRENCY RETURNS (in lacs of rupees)

	Sept. 30	Sept. 22	Sept. 15

(a) Also 4 1/2d. per share from capital accretions. (b) From capital accretions. † Free of income tax. (c) 5 per cent. paid on a smaller capital.
 (d) Also a capital bonus of one share in four, absorbing £30,000 of reserve fund.
 (e) Represents 5 per cent. on the capital as it stood before the recent increase.

THE SECOND EDINBURGH INVESTMENT TRUST, LTD.—The board have resolved to recommend the payment of a dividend on the deferred stock of 5 per cent. actual, less income tax at 4s. 3d. in the £, for the year ended September 30, 1934. While this has not been fully earned on the year, the board feel justified in recommending some encroachment on surplus revenue.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LTD.—The directors have decided to pay, on November 1st, an interim dividend of 10s. per share, less income tax, being at the same rate as that of the previous year, to shareholders whose names are on the registers on October 15th.

GAUMONT-BRITISH PICTURE CORPORATION, LTD.—The directors announce that the profit for the year ended March 31, 1934, available for ordinary dividend is £344,875 against £304,455 last year. A final dividend of 4 per cent. (actual) less tax on the ordinary shares is recommended, making 7 per cent. (actual) less tax, for the year (the same as last year). Balance to carry forward £134,875, against £129,455 brought in. The annual general meeting will be held on October 29, 1934.

PATERSON, LAING AND BRUCE, LTD.—The trading results for the year ended July 31, 1934, though showing an improvement, do not permit payment of dividends on the 6 per cent. cumulative preference shares and the 6 per cent. cum. "B" preference shares.

DUNLOP RUBBER COMPANY.—The directors announce that the trading results to date compare favourably with those of last year. The dividend on the company's preference shares will be paid on October 31st to shareholders on the register on October 17th. No interim dividend on the ordinary stock will be paid.

FOURTH BRITISH FIXED TRUST.—(First distribution on sub-units).—Municipal and General Securities announces the first distribution by the Fourth British Fixed Trust of 5 1/2d. per sub-unit, free of tax, payable November 15th, on presentation of coupon No. 1 at the City office of Lloyds Bank, Ltd., 72 Lombard Street, E.C.3. The payment is in respect of dividends due between February 6th last, on which date the trust was formed, and October 6th—a period of eight months. An earned balance of 0.125d. per sub-unit is carried forward.

keeping up. There are no special features in the market. Nuts are not so strong as they were a week or two ago, but most classes of large coal are firm in price.

Current export prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 13s. 9d. to 14s.; splint best, 16s.; splint second, 14s. to 14s. 3d.; navigation, screened, 15s.; navigation, unscreened, 16s. 3d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d. to 12s. 9d.; pearls, 11s. 6d. to 11s. 9d.; dross, 10s. FIRE.—Best unscreened navigation, 13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 6d. to 13s. 9d.; third-class steam, 12s. 6d.; trebles, 14s. to 16s.; doubles, 11s. 6d. to 12s. 6d.; singles, 12s.; pearls, 11s. 3d. to 11s. 6d. LOTHIAN.—12s. 6d.; singles, 12s.; pearls, 11s. 3d. to 11s. 6d. to 11s. 9d.; Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 6d. to 11s. 9d.; unscreened navigation, 12s. 9d.; trebles, 13s. 6d. to 14s.; doubles, 11s. 6d. to 12s.; singles, 12s.; pearls, 11s. to 11s. 6d. AYRSHIRE.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s.; trebles, 15s. 6d.; doubles, 13s. 6d.; singles, 13s.; pearls, 11s. 6d. to 12s.; dross, 10s.

CARDIFF.—The chief event on the Cardiff coal market this week was the breakdown of the scheme for the exchange of South Wales coal for French pitwood. Under the agreement concluded between the British and the French Governments on July 27th last, France undertook to purchase from this country a monthly quantity of 40,000 tons of coal in exchange for the purchase by this country of two tons of pitwood against three tons of coal. When this barter transaction was provisionally arranged in June, it provided for a c.i.f. pitwood price of between 21s. 9d. and 22s. 9d. The actual figure ultimately fixed for the period of three months ended September was 22s. 7½d., but the French pitwood exporters have been for some time past complaining that the price should be higher in view of the fall in sterling exchange, and in Paris last week the matter was considered by the joint committee of four appointed for the administration of the scheme. At that meeting the French representative asked for an increase in the c.i.f. price to 24s. 9d., but the application was resisted by the representatives of the South Wales coalowners and pitwood importers, and as the agreement contained no provision for dealing with the contingency of such a difference, the issue of pitwood and coal licences under it has been temporarily suspended. It is understood that the dispute is now receiving the attention of the Governments of the two countries. Business on the Cardiff coal market this week was very dull and prices for practically every class of coal ruled at the minimum schedule figures.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; French nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 22s. 7½d. (French) and 22s. to 22s. 6d. (Portuguese).

IRON AND STEEL

MIDDLESBROUGH.—The tone of the local market continues good; slightly more business is being done with home consumers, but export business continues extremely difficult, although a parcel of hematite iron has been shipped this week to Italy. The official price for Cleveland No. 3 foundry pig iron is based on 67s. 6d. per ton for delivery at Middlesbrough, whilst for East Coast hematite the price is based on No. 1 quality at 69s. per ton delivered at Middlesbrough. Shipments of all classes of pig iron from the Tees from October 1st to 9th amounted to 6,750 tons, against 7,163 tons in the corresponding period of the previous month.

Foreign ore is quiet, but sellers are basing their quotations on best Bilbao rubio at 17s. per ton c.i.f. Tees. Good Durham blast-furnace coke is easier to obtain, but producers are asking 20s. per ton delivered at the furnaces. Semi-finished steel is in slightly better demand and makers have good order books for finished steel, particularly constructional. Shipbuilding demands are poor. Works are still only prepared to pay 50s. per ton delivered for heavy steel melting scrap.

SHEFFIELD.—Activity in the electrical industry is bringing substantial business to the local steel foundries and the output of magnet steel is larger than for several years past. The output of permanent magnets is establishing fresh records owing to the heavy demand for electric meters, telephones and wireless sets. Prices of these components have been greatly reduced by casting them instead of forging them, as was formerly done. Output of steel in Sheffield in August amounted to 87,000 tons. Owing to the holidays, it fell short of the July figures, but was 9,000 tons more than in August last year. The mills rolling steel strip, both hot and cold, are extremely busy, mainly on home account, and a good deal of foreign strip is being imported. Trade in wrought iron keeps steady, but there has been no great increase of late. The output of basic semi-steel, both in the Sheffield and Lincolnshire areas, has been close up to capacity ever since the year began and there are no indications of the demand slackening. As regards expensive special alloy steels, trade is somewhat irregular and orders are smaller than formerly. Business with Russia has been quieter this year, but that country has been buying large quantities of ferro-tungsten in England during the past twelve months. Files and tools are selling freely and seasonal business in cutlery and plate is developing slowly.

GLASGOW.—Steel plants remain active, and while just at present new bookings do not individually cover large tonnages, the aggregate amount of new work placed is considerable, and there seems every

prospect of steelmakers being able to continue at the present rate of production for some time. Makers of semis also are fairly busy at present, with demand showing some expansion. Sheet makers are better employed than they have been for some time past and, although not able to keep all mills in operation, the increased export business has made it possible to add considerably to the number of mills operating and also to increase the length of the working week. Structural engineers have of late experienced a better demand and export business is somewhat more plentiful, although prices are keenly cut. In most of the manufacturing trades around Glasgow shops are busy and there is a good deal of work on hand for forward delivery.

CARDIFF.—There was little activity on the Swansea Metal Exchange on Tuesday. Shipments of tinplates last week were considerably below the recent weekly average figure, and it is stated that unfulfilled orders are down to about 3½ million boxes. Prices have remained unchanged at from 18s. 2d. to 18s. 7½d. per basis box, at 18s. f.o.b. works port for odd sizes, and at from 16s. 3d. to 16s. 9d. for wasters which are uncontrolled. Welsh steel bars are firm at £5 7s. 6d. and galvanised sheets quiet at from £11 5s. to £11 10s. per ton. Exports of tinplates at Swansea last week totalled 63,506, compared with 98,306 boxes the previous week, and 100,724 boxes in the corresponding period last year.

OTHER METALS

The metal markets have again been weak, psychological factors being responsible for a further marking down of prices. The one factor of far-reaching importance was the issue of a new German decree limiting stocks in the hands of dealers and consumers in that country. Stocks of consumers must not exceed their actual consumption during the first quarter of this year, while dealers may not hold more than their monthly average turnover during the first three months of 1934. Hence, considerable supplies of non-ferrous metals will be available to the German Bureau of Supervision and may be placed at the disposal of those consumers who have been unable to secure supplies. Import licences will be granted only to those importers whose stocks are below the above-mentioned level, so that German purchases will be more restricted than hitherto.

The worst setback during the past week occurred in the copper market, and rumours regarding a new conference are no longer current. Until the end of October, the United States market will remain exclusively in the hands of the "Customs smelters," and the primary producers hope that, at the end of this period, selling pressure from the former will be so much reduced that there will be no likelihood of further price cutting. But the European market naturally suffers from this step. Several times during the past few weeks blue eagle primary producers have exported copper to Europe, whereas previous shipments had been mainly of non-blue eagle metal. It is anticipated that these offers will cease after the end of October but, meanwhile, the New York export price has declined to 6-4 cents per lb. and the immediate outlook is not favourable.

Trade in tin has been dull and purchases are still restricted. It is understood that in future the International Tin Committee is to co-operate more closely with consumers. A new advisory panel is apparently to be set up and, so far as is known, the Governments of the main consuming countries (the United States and the United Kingdom) have agreed to collaborate in this direction. It remains to be seen whether any change in price policy will result from this step.

Lead and spelter have again encountered a dull trade and only a sharp increase in consumption can change the unsatisfactory market condition. According to the *Metallgesellschaft*, the world's output of smelter lead amounted to 102,502 metric tons during August, as against 114,520 metric tons in the previous month—the United States figures being 20,864 metric tons in August compared with 24,815 in July. The American Bureau of Metal Statistics reports that the United States output of zinc during September amounted to 26,000 short tons, or 300 short tons more than in August. These statistics demonstrate once again that lead and spelter production remain unaffected by the United States silver buying policy.

TIN.—Sales on the London Metal Exchange: 505 tons on Monday, against 250 tons last week; 195 tons on Tuesday, against 450 tons last week; 210 tons on Wednesday, against 275 tons last week. The New York quotation on Wednesday was 50-50 cents per lb., against 50-87½ cents a week ago and 51-70 cents a month ago. Wednesday's official closing quotation in London for standard cash was £230 5s. to £230 10s., compared with £231 5s. to £231 10s. last week. Stocks in London and Liverpool at the end of last week were 4,425 tons, an increase of 555 tons on the week.

COPPER.—Sales on the London Metal Exchange: 1,700 tons on Monday, against 1,100 tons last week; 1,075 tons on Tuesday, against 1,050 tons last week; 1,000 tons on Wednesday against 2,300 tons last week. Domestic spot was quoted at 6-17½ cents per lb. in New York on Wednesday, against 6-50 cents a week ago and 6-65 cents a month ago. Wednesday's official closing price for standard cash in London was £25 12s. 6d. to £25 13s. 9d., compared with £26 6s. 3d. to £26 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,589 tons, show an increase of 52 tons, and stocks of rough copper, at 6,974 tons, a decrease of 29 tons.

LEAD.—Sales on the London Metal Exchange: 1,050 tons on Monday, against 150 tons last week; 800 tons on Tuesday, against 800 tons last week; 600 tons on Wednesday, against 50 tons last week. The New York quotation on Wednesday was 3-60 cents per lb., against 3-60 cents a week ago and 3-70 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 3s. for shipment during the current month, compared with £10 2s. 6d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 375 tons on Monday, against 750 tons last week; 200 tons on Tuesday, against 350 tons last week; 500 tons on Wednesday, against 500 tons last week. Wednesday's quotation in East St. Louis was 3-80 cents per lb., against 3-87½ cents the week before, and 4-15 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £11 15s. for shipment during the current month, against £11 16s. 3d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £41 to £41 10s. per ton, as against £39 10s. to £40 per ton last week. Chinese wolfram was quoted at 41s. 6d. to 42s. 6d. per unit, c.i.f., as against 42s. 6d. to 43s. 6d. per unit c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester.—The trend of raw cotton prices remains downwards and it is very difficult at the moment to check this declining tendency. The American Government crop estimate of 9,443,000 bales was less than expected, but the consequent slight rise in prices was soon lost owing to heavy liquidation by long interests and the disturbing effects of the political news from Europe. A substantial business continues to be done in actual cotton, but practically all the buying has been in qualities other than American.

Although general inquiry in piece-goods for abroad has been of fair extent, no increased business can be recorded and the turnover has consisted of odd lots for several outlets. Shippers to India are discouraged by the offers coming through from the other side and most of the buying has been in light whites and fancies. A few more bids have been mentioned for China in bleached shirtings, which have not been bought for a long time back. Further buying has taken place in dyed goods for Hong Kong. Very little support has come from Egypt and the Near East, but miscellaneous sales have been arranged for South America, the Dominions and the home trade. Prices in the yarn market have favoured buyers and home users of American and Egyptian counts have purchased sparingly. Inquiry in bundles for India has been rather better.

AMERICAN COTTON CROP.—At the beginning of this week the Department of Agriculture of the United States Government published its third cotton crop estimate for this season at 9,443,000 bales, against 9,252,000 bales a month ago and 9,195,000 bales in August. The condition of the crop was given as 55-9 per cent., as compared with 53-8 per cent. a month earlier, indicating a yield per acre of 165-9 lb. against 162-6 lb. in September. The crop forecast was below the expectations of market operators by about 200,000 bales, and the report was considered slightly bullish. There was a slight rise in prices in New York and Liverpool, but since then the advance has been lost on selling by long interests and uneasiness with regard to the political situation in Europe. The Government has stated that up to the end of September 4,958,000 bales had been ginned and as this amount is over 50 per cent. of the estimated growth the opinion is held in some quarters that the crop will be larger than at present indicated, with a possibility of the final yield being 10,000,000 bales.

American cotton futures in Liverpool are now around 6½d. a lb. as compared with 7½d. a couple of months ago. Prices in New York this week have fallen below the 12 cent level and reports are being circulated that the Government is now making arrangements for a production next season of between 12,000,000 and 13,000,000 bales. The increasing use of foreign cottons, whilst the American staple is being neglected, is understood to be causing some concern to the officials at Washington. Some authorities are of opinion that world consumption of American cotton this season will not be more than 11,000,000 bales, as compared with 13,500,000 bales last season. This decline is due to the relatively high price of American cotton compared with the rates ruling for competitive growths.

WOOL.—Bradford.—The outlook in the wool textile industry has been improved by the encouraging indications at the fifth series of colonial wool auctions, which closed in London on Wednesday last week. At the beginning of these sales demand was somewhat hesitant, and although support from the home industry was relatively good the weak operations of Continental buyers caused prices gradually to fall. During the latter half of the sales, however, there was a marked revival in the demand from most sources, and quotations took a sharp upward turn. At the lowest point of the sales 64's warp tops were costing no more than 25d., but at the close the same quality top could not be made for less than 26½d.

At the same time, the primary wool markets in Australia have shown a hardening tendency, and although they are rather cheaper than London—as is only natural seeing that spot wool is at a premium—the present situation may be regarded as being quite encouraging and one which may lead to a further development of the upward price movement.

The immediate future, however, is dependent on that very uncertain factor, Continental support, and it is probably this fact which has prevented the Bradford top market from responding more freely to London indications. The majority of topmakers in this district have certainly revised their quotations to levels more in keeping with first costs, but Bradford is still definitely cheaper than either London or Australia. For instance, whereas 64's warp tops are quoted at 25½d. in this market, with occasional selling at prices ½d. below these quotations, the same quality top was costing 1d. more at the close of the sales. Topmakers have, indeed, great difficulty in relating selling prices to first costs, and as there seems to be strong opposition to granting concessions to spinners, especially for immediate delivery, turnover in this market has been small. It was generally believed that when there were some encouraging indications as to the stability of wool prices—such as those now ruling—a good volume of business would be placed; but spinners do not appear to be convinced on the price question, and argue that the strong close of London was chiefly occasioned by many users urgently requiring wool to cover old contracts booked at a time when the market was higher than at present. If the present levels in the Australian selling centres are maintained, however, much of the business that is at present being withheld on account of uncertainty over price will be brought out.

GRAIN MARKETS

WHEAT.—The slump in wheat prices which took place a week ago has been checked by increased buying at the lower level of quotations, and American markets have exhibited greater firmness this week. Quotations for futures in Chicago on Wednesday last ruled well above the level of the previous week, although London rates showed little change. The position of the home crop as revealed by the monthly report of the Ministry of Agriculture is discussed elsewhere in a note of the week. According to an official estimate of crops issued on October 11th, the United States wheat harvest is expected to yield 497 million bushels, as compared with an actual yield of 527 million bushels a year ago.

According to Mr G. Broomhall, total shipments during the past week were 1,526,000 quarters, against 1,358,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 99½ cents per bushel, against 95½ cents the week before and 105½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 32s. 6d. per 496 lbs., against 32s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 9d., against 30s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 27s. to 28s., against 27s. 6d. to 29s. a week ago.

FLOUR.—Trade in home-milled flour shows some improvement at the lower level of prices. North American shipments were 111,000 sacks in the past week, as compared with 106,000 sacks in the previous week. Wednesday's London quotations were: Straigt run, delivered country, 24s. 6d. per 280 lbs., against 25s. last week; delivered London, 23s. 6d., as compared with 24s. a week ago. Manitoba patents, ex store, 24s. 9d. to 27s., against 24s. 9d. to 26s. 3d.; Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s.

BARLEY.—The tone of the market has been steadier this week and, although London quotations show little change, American prices have moved upward. Medium grades of British feeding barley have been in only moderate request, but the higher grades have attracted considerable attention. "October" futures were 53½ cents per bushel in Winnipeg on Wednesday, against 48½ cents last week and 62½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), i.o.r., per 448 lbs., 32s. to 55s., against 32s. to 55s. a week before.

OATS.—The demand for imported oats has been poor but, in view of the shortage of supplies, last week's quotations have generally been maintained. American prices show a considerable advance

ANGLO AUSTRALIAN GOLD DEVELOPMENT LTD.

NOTICE TO HOLDERS OF OPTION CERTIFICATES TO BEARER

The Company announce that the Directors are proceeding forthwith with the registration of Beryl Gold Corporation, Ltd., with a capital of £400,000 in shares of 5s. each. The issue will be undertaken by Commonwealth Mining and Finance, Ltd., who have agreed to underwrite free of commission all the shares about to be offered in consideration of their being permitted to subscribe for 360,000 shares at the par price of 5s. per share.

The Beryl Gold Corporation, Ltd., is to be formed for the purpose of acquiring from the Anglo Australian Gold Development, Ltd., all the issued shares of the Beryl Gold Mines, Ltd., registered in Australia, for a consideration of £132,000, which is to be satisfied as to £32,000 in cash and 400,000 shares of 5s. each, together with an option to subscribe for a further 200,000 shares at 7s. 6d. per share at any time up to the 31st March, 1936.

An issue of 1,000,000 shares of 5s. each at par is to be made, and of these 640,000 shares will be offered to shareholders in Anglo Australian Gold Development, Ltd., in the proportion of two shares in the Beryl Gold Corporation, Ltd., for every five shares held.

This right to subscribe for shares in the Corporation will apply to all the holders of the fully-paid shares registered in the books of the Company on the 17th October, 1934. The holders of Option Certificates who exercise their right of conversion into shares by 4 p.m. on the 17th October will be entitled to subscribe for shares in the new Company in the same ratio.

Conversion of the Option Certificates may be effected by holders completing the form endorsed on the reverse of the Certificate or Certificates, and sending them to the Registered Office, 8 Great Winchester Street, London, E.C.2, together with a cheque for the amount payable at the rate of 5s. per share.

On Wednesday, December 17, 1933, the market for rubber was quiet. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago.

The demand for rubber in this country is poor. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago.

COMPARATIVE AVERAGE OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35.

Year	1931-32	1932-33	1933-34	1934-35
Estimated sale of home-grown wheat	1,137,232	1,137,232	1,137,232	1,137,232

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks and for the corresponding week in each of the years from 1930 to 1933.

Week ending	1934	1933	1932	1931	1930
Quantities sold	1,137,232	1,137,232	1,137,232	1,137,232	1,137,232
Average price per cwt.	1,137,232	1,137,232	1,137,232	1,137,232	1,137,232

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933.

Year	1934	1933	1932
Wheat	1,137,232	1,137,232	1,137,232

The supply of wheat in Canada at 100,000 bushels shows an increase of 1,000,000 bushels. Supplies a year ago stood at 100,000 bushels.

OTHER FOODS.—The spot market for raw sugar, both in London and New York, was quiet during the past week, with prices fluctuating within narrow limits. Trade in futures has been dull.

The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago. The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago.

The market for raw sugar in London and Liverpool last week was as follows:

Year	1934	1933	1932
Raw sugar	1,137,232	1,137,232	1,137,232

COFFEE.—Spot quotations in New York are unchanged on the week, and trade has been mainly quiet. Futures have shown an easier tendency. On Wednesday, Rio No. 7 (cash) was quoted at 12.50 cents per lb. as compared with 12.50 cents per lb. a month ago.

The market for coffee in London and Liverpool last week was as follows:

Year	1934	1933	1932
Coffee	1,137,232	1,137,232	1,137,232

Last week's movements of coffee in London were as follows: 1,137,232 bags; delivered, 1,137,232 bags; stocks, 1,137,232 bags; exports, 1,137,232 bags; imports, 1,137,232 bags; consumption, 1,137,232 bags; production, 1,137,232 bags; reserves, 1,137,232 bags; total, 1,137,232 bags.

The "spot" price of coffee in New York on Wednesday was 17 cents per lb. against 16 cents per lb. a week ago. The price of coffee was 17 cents per lb. against 16 cents per lb. a week ago. The price of coffee was 17 cents per lb. against 16 cents per lb. a week ago.

TEA.—The quantities of tea for this week's auctions amounted to 4,334 packages of Indian and 2,100 packages of Ceylon tea. Trade for the former was rather less active, prices showing a tendency to weaken. Competition for the Ceylon grades was generally good, but quotations were irregular and tended to slightly lower levels. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in London during the past week:

Week ending	1934	1933	1932
Tea	1,137,232	1,137,232	1,137,232

RICE.—The "spot" price was 8.50 per cwt. on Wednesday as compared with 8.50 per cwt. a week ago. The price of rice was 8.50 per cwt. against 8.50 per cwt. a week ago. The price of rice was 8.50 per cwt. against 8.50 per cwt. a week ago.

POTATOES.—Ample supplies were on offer at the London Borough Market on Tuesday, and although demand was rather quiet, prices were generally maintained; new crop, "King Edward" sold at 6.00 per cwt. as compared with 6.00 per cwt. a week ago.

SPICES.—"Black Pepper" was quoted at 1.00 per lb. on Wednesday, against 1.00 per lb. a week ago. The price of spices was 1.00 per lb. against 1.00 per lb. a week ago. The price of spices was 1.00 per lb. against 1.00 per lb. a week ago.

MEAT.—Trade for most descriptions was very slow at the beginning of the week, the demand for fresh pork being affected by the weather. Beef and mutton responded to a better market, with prices a shade higher than those ruling a week earlier. Wednesday's quotation for Argentine beef, chilled hindquarters, was 10.00 per cwt. as compared with 10.00 per cwt. a week ago.

According to the Smithfield official market report, supplies of meat amounted to 9,216 tons, against 9,216 tons in the corresponding week last year. Imports of meat, principally Argentine, formed 81.3 per cent of the total supply, against 81.3 per cent a year ago. Imports of meat, principally Argentine, formed 81.3 per cent of the total supply, against 81.3 per cent a year ago.

THE LONDON FUR AUCTIONS.—The tendency of the Hudson's Bay Fur Auction, which started on October 31, showed no important change during the second week. The uncertain international outlook on the one hand, and the absence of Leipzig's

rather better demand is still very restricted. Although the fur trade is improving, traders have only modest requirements, and are content to buy from hand-to-mouth, in view of the satisfactory outlook for supplies. Favorable news continues to be received of the new Argentine sowings, and reports of frost have had very little effect on the market, which on the whole is easy in sympathy with wheat. Shipments from Argentina last week were heavier than for some time past, and the estimated quantity of old crop still available has fallen below 300,000 tons. Shippers, however, have been ready to make concessions. Business in new seed is slow, and for January-February shipments 10.00 is quoted. Old crop, Argentine, is offered at 10.00. The quantity of mixed seed now offered for export is 110,000 tons (including 17,000 tons from India) to 7,500 tons less than last week; and for the United States and Canada 6,400 tons, against 7,100 tons a year ago. Cottonseed has been in good demand, but closer casing. Black Egyptian has been sold at 1.00 to 1.00. and rather less would now be accepted.

At the lower levels, interest in oil was in good demand from consumers and is steady. Current prices of raw oil for October-December delivery are around 1.00, and for January-April 1.00. Cotton oil is not so firm. Egyptian cotton oil is offered freely at 1.00, and refined at 1.00. per ton. Chicago quotations are unchanged.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933.

Year	1934	1933	1932
Wheat	1,137,232	1,137,232	1,137,232

The supply of wheat in Canada at 100,000 bushels shows an increase of 1,000,000 bushels. Supplies a year ago stood at 100,000 bushels.

OTHER FOODS.—The spot market for raw sugar, both in London and New York, was quiet during the past week, with prices fluctuating within narrow limits. Trade in futures has been dull.

The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago. The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago.

The market for raw sugar in London and Liverpool last week was as follows:

Year	1934	1933	1932
Raw sugar	1,137,232	1,137,232	1,137,232

COFFEE.—Spot quotations in New York are unchanged on the week, and trade has been mainly quiet. Futures have shown an easier tendency. On Wednesday, Rio No. 7 (cash) was quoted at 12.50 cents per lb. as compared with 12.50 cents per lb. a month ago.

The market for coffee in London and Liverpool last week was as follows:

Year	1934	1933	1932
Coffee	1,137,232	1,137,232	1,137,232

On Wednesday, December 17, 1933, the market for rubber was quiet. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago.

The demand for rubber in this country is poor. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago. The price of rubber was 17 cents per lb. against 16 cents per lb. a week ago.

COMPARATIVE AVERAGE OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35.

Year	1931-32	1932-33	1933-34	1934-35
Estimated sale of home-grown wheat	1,137,232	1,137,232	1,137,232	1,137,232

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks and for the corresponding week in each of the years from 1930 to 1933.

Week ending	1934	1933	1932	1931	1930
Quantities sold	1,137,232	1,137,232	1,137,232	1,137,232	1,137,232
Average price per cwt.	1,137,232	1,137,232	1,137,232	1,137,232	1,137,232

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933.

Year	1934	1933	1932
Wheat	1,137,232	1,137,232	1,137,232

The supply of wheat in Canada at 100,000 bushels shows an increase of 1,000,000 bushels. Supplies a year ago stood at 100,000 bushels.

OTHER FOODS.—The spot market for raw sugar, both in London and New York, was quiet during the past week, with prices fluctuating within narrow limits. Trade in futures has been dull.

The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago. The spot price in New York on Wednesday was 3.00 cents per lb. as compared with 3.00 cents per lb. a month ago.

THE FINANCIAL NEWS

Special articles due to appear next
week on the leader page of THE
FINANCIAL NEWS are as follows:

MONDAY, 15 October—Vernon Sommerfield
on THE GROWTH OF THE BRITISH FILM
INDUSTRY.

TUESDAY, 16 October—"MINOTAUR,"
our Special Mining Correspondent, continuing his
series on "Mines of the Rand," deals with
GEDULD.

WEDNESDAY, 17 October—THE ALUMI-
NIUM INDUSTRY—its Prospects following the
recent Paris Conference.

THURSDAY, 18 October—The Story of
Famous Companies—II. MARKS & SPENCER.

FRIDAY, 19 October—Our Special Metal
Industry Correspondent writes on the proposed
amalgamation of THE DUTCH TIN IN-
DUSTRY.

SATURDAY, 20 October—C. T. Brunner on
THE FUTURE OF THE MOTOR INDUSTRY.

Place a standing order with your newsagent TO-DAY.

THE FINANCIAL NEWS

(Twopence Daily)

The first financial and commercial daily
newspaper in the World—and still the best!

Review of Reviews

The address of the

is now

**11 Bream's Buildings,
Fetter Lane, London, E.C. 4**

to which all correspondence—editorial, advertising,
subscription or publishing—should be addressed.

The REVIEW OF REVIEWS has now moved to
larger offices in preparation for the improvements in
its make-up which were recently foreshadowed.
These improvements took effect from the September
number, published on September 1.

Thereafter, in common with other British
reviews and periodicals, the REVIEW OF
REVIEWS will be published on the first
day of each month.

In accordance with the trend towards simplicity which
has been evidenced in the REVIEW OF REVIEWS during
the past year, the cover has been changed, a better
quality of paper is now used for printing, and a slightly
larger size of page adopted. All the usual features will be
retained, and new features will be gradually added.

We hope that our readers will enable us and themselves
to realise the full benefit of these improvements by making
them widely known.

Order your copy of the October number from
your newsagent or from us, now. A specimen
copy will be sent on request.

BACK TO THE BLUE WATER

SCARCELY any success has attended the great efforts that have been made in recent years to achieve some measure of control over land armaments. But on the water the world has for twelve years enjoyed the inestimable advantage of an agreed limitation—which has not merely saved the taxpayers of the maritime Powers from a ruinous expense, but has avoided all the friction and ill-will that would inevitably have arisen if attempts to speed up the naval programme here or to steal a march there had constantly figured in the news of the day. Is this great boon to be lost or will the public be able in the next decade to dismiss from its mind, as it has done in the past, all idea of naval rivalry? The naval conversations which start in London this week will give the answer to that vital question.

It is as yet too early to say what are the prospects of success, but the Japanese delegate revealed a little of the mind of his Government in a conference which he held with the press on Wednesday. Japan, he said, should enjoy equal rights so far as provision for naval security is concerned. This means that "every country should be permitted to possess the minimum of armaments necessary for defence, and that the minimum should in no case be so large as to constitute a menace to any other nation." If by equal rights the Japanese spokesman implies that every nation is equally entitled to provide for its defence, the statement is platitudinous, while the reference to fixing armaments in such a way as to avoid the possibility of aggression bears a striking resemblance to the doctrine so much discussed at Geneva. So far so good. But when Admiral Yamamoto came down to detail it emerged that he wished to depart from the 5-5-3 ratio and substitute an agreement on global tonnage. He did not, however, suggest that within this total every country should be free to chop and change at its own discretion, but that the allocation would be the subject of discussion and would vary with the requirements of different countries. Though the Admiral refrained from specifically claiming parity of strength in the sense of parity in the number of capital ships, his proposal involves a departure from the principles of the Washington and the London Conferences and opens up the whole question afresh. Japan, however, will seek a reduction in the tonnage of the

navies of each nation in order to relieve the burden of taxation, and suggests, as a specific proposition, that aircraft carriers, which she regards as offensive weapons, should disappear entirely. She is not, however, ready to agree to the abolition of the submarine.

The reflection which inevitably suggests itself on these statements is that the objection to the present ratio agreement is almost certainly a matter of prestige rather than of security for Japan. Although the Admiral declares that "it had been found by experience that any such simple system . . . could not work out in a way that was satisfactory," this system has, in fact, made Japan the dominant naval power in the China seas. If by security Japan means more than this, and considers that she should be safe not merely against one powerful enemy, but against any possible combination of the powers of the world, she is defining her "right to security" in a way that would be impossible to apply all round. That the United States will accept an agreement which makes Japan her equal in capital ships is in the highest degree improbable. But if Japan is really concerned to avoid heavy naval expenditure and wishes, for reasons of prestige, to have the limitation expressed in a less crude form than the famous 5-5-3, it might be possible to meet her wishes.

As to the main theses of the United States delegation we have as yet no information. But the nomination of Admiral Standley as chief technical delegate suggests that, at all events, America will be out for a big ship policy and will not go far to meet Britain's often expressed desire to restrict further the maximum size and gun calibre of various classes of ships. It is in this respect that the attitude which the United States has so frequently taken up is most to be deplored. This question of size is one on which the last word should not be left to the technicians, but should be decided on more general considerations. The arguments of the experts should, of course, be fully considered. Obviously the distance from their base at which various categories of ships may be called upon to operate, the relationship between speed, striking power and armour, or, on the other hand, the many disadvantages of putting so many eggs into one basket, are matters of great importance. But in the last resort, as Admiral Richmond so clearly points out

in his latest book on "Sea Power in the Modern World,"* the growth in the size of ships does not put one country in the position of greater security against another, but merely ensures that all of them spend more. The monster cruiser, for example, has no justification except that it may possibly be a little bigger and a little faster than any cruiser it may have to meet. The primary purpose of British cruisers is to defend our shipping on the trade routes of the world. Cruisers of a moderate size can be built with sufficient striking power and radius of action to carry out these duties provided there are not on the seas much faster and larger cruisers attacking those lines of communication. If we once admit that no maritime nation will ever be permitted to maintain a fleet of ships which are definitely in a class above those of its rivals, there is no reason why the rule laid down for Germany in the Treaty of Versailles should not apply all round, namely, that armoured ships should be limited to 10,000 tons, and that a very much lower limit should be applied to small ships needed for commerce protection and other duties.

It is too much to hope that there will be an immediate scrapping of the big ships of the world, for in this matter common sense will, we fear, not be permitted to override that intangible but intractable thing—national pride. There is, however, no reason why the building of monster battleships should not henceforth cease and a programme be laid down by which those which at present exist should progressively disappear.

Even this may seem Utopian, but if it comes about it will do so because of the situation revealed in the following figures quoted by Admiral Richmond:—

Year	NAVAL ESTIMATES (in £ millions)				
	Britain	France	Italy	Germany	U.S.A.
1886	13½	7½	3½	2½	3½
1900	27½	12½	4½	7½	10
1912	44	17	8½	22	26
1934	55½	22	15	41½	57½

* Figures negligible.

Thus, if we exclude Germany and Russia, five great Powers have increased their expenditure from £105 millions before the war to nearly £192 millions this year. The startling increase in the past 50 years is, of course, due to the competitive increase in the size of ships. In this race Great Britain has taken a leading part. A courageous and drastic limitation of size would enable the figures to be enormously reduced without imperilling the security of anyone or preventing nations from protecting their essential supplies. Such an arrangement, moreover, would unquestionably make it more likely that the nations would agree to the abolition of the submarine and of aircraft carriers, neither of which aims is very likely to be achieved if navies are kept at their present strength, and still less if the door is opened to further naval expansion.

If the present conversations fail to achieve any substantial result it will be a severe blow to the cause of disarmament generally. But if the influence of the statesmen who have responsibility not only for defence, but for diplomacy and for the economic solvency of their respective countries, can secure a bold limitation of naval armaments, it would be the best possible way to stimulate a fresh effort to tackle the problem on the land and in the air.

THE ROLE OF AUSTRIA

THE assassinations at Marseilles have served forcibly to emphasise the unsettled state of Europe; and if good is to come out of evil the occasion must be seized to underpin the foundations of European peace. Although the latest act in the European drama has not, even indirectly, involved her, it is obvious that Austria is still the centre of the play. Clearly, the present European uncertainty will continue as long as Austria's fate remains obscure. The Austrian problem affects the whole European balance; and there is almost no country which would not be deeply affected by any change in Austria's status. Similarly, scarcely any move takes place on the European stage without producing repercussions on the internal situation of Austria. This sensitiveness to external events has been forcefully illustrated this year by the fact that already

* "Sea Power in the Modern World." By Admiral Sir Herbert Richmond. G. Bell & Sons Ltd. 260 pages. 10s. 6d.

two great civil disturbances have taken place in that country. Yet, paradoxically, the omens are, if anything, slightly more favourable; and it is now more possible to envisage the emergence of a stable State than at any previous time.

This may seem a bold statement when Austria is apparently split into irreconcilable camps suffering from that acute bitterness which is always the aftermath of civil war, and powerful nations across the frontiers seem waiting like beasts of prey to devour the carcass of the enfeebled victim. But the events of the past two years appear to be bringing about a change from the utter defeatism of the 1920's. Indeed, it is not an undue exaggeration to say that where the Allies failed in 1919, Herr Hitler succeeded in 1933. The students of Vienna University and many young men throughout the country are still obsessed with Nazi ideas. Events, however, in Germany, pressure from Munich, and, finally, the callous murder of Dr. Dollfuss, have made the mass of Austrian opinion realise that there is no affinity between the Austrian temperament and Nazi Germany. The Austrian Pan-Germans of former times are still strongly suspicious of Italian influence and determined that Austria's policy must be one leading to the closest friendship with the German people. But even they are disillusioned with the German form of Nazism, and have come to attach importance to the independence of Austria. The Socialists, who were originally anxious for the Anschluss, now fear it more than anything else; while Dr. Dollfuss's efforts to stimulate a national sense through the organisation of the Patriotic Front, have had their effect on the Christian Socialists of the Centre. Outside observers were disposed at first to regard Dr. Dollfuss's efforts as artificial and doomed to failure. Events have rewarded these efforts with some reality.

The two internal upheavals in Austria have also not been without effect. Almost to the surprise of the public, the police and the Army have together proved capable of suppressing both the Socialists in Vienna and the Nazis in the provinces. In spite of the civil war, the country survives. Whether the regime be regarded as rightly entitled to act for the nation or not, it is generally recognised that the forces of the Government are dominant and capable of suppressing any attempt within the country to seize power by force. Austria has discovered some power to act for herself.

What possibility is there that this situation can be turned to account and lead to the evolution of a stable State in the very heart of Central Europe? For this three conditions are necessary.

The first is that the ring must be kept. This a matter of constant anxiety to Austrians, who watch the situation across their borders with a concern which was reflected in the speeches of the Austrian spokesmen at Geneva, and in their very intelligible desire to secure an international guarantee of Austria's integrity. But it would surely seem that, guarantee or no guarantee, the odds are very strongly in favour of the ring being kept, precisely because of the incompatibility of the interests of surrounding countries and the certainty of conflict if any of them intervene. Austria is a body that is kept in position by forces that are bearing against her from opposite directions. It is, however, obvious that her immunity from intervention will increase in proportion to the development of her internal strength. Austria weak and tottering is a temptation to her neighbours, each anxious to forestall a rival from acquiring, overtly or covertly, influence or control. A reasonably strong and stable Austria could set about her own affairs in peace.

This brings us to the second condition of survival. A nation cannot hope to survive for long if it is hopelessly split into three or four warring elements. The essential need, therefore, is to effect a reconciliation between the groups whose quarrels in the last twelve months have had so tragic a result. This is easy to say but very difficult to achieve. The fighting in February and July has left behind very great bitterness. Propaganda and intrigue have been driven underground, and it will require very great gifts of statesmanship to heal the wounds. The task is not made any lighter by the fact that one semi-official armed force still remains at large in the Heimwehr. Some of the main principles of reconciliation are, however, evident. The dictatorship in Austria has in no sense been thrown up from

within by the wish of any important section of public opinion. It has been thrust upon Austria by external events. It is imperative that the Government should once again rest upon the will of the people. One of the key-notes of the Austrian temperament is toleration. The course must be set definitely and squarely towards a restoration of freedom of speech and of the Press, and a measure of democracy in the constitution if the Left is to be reconciled. The Government has not seen its way to make a dramatic gesture by granting a general amnesty to the Socialists who were sent to prison or concentration camp. But most of them have, in fact, been set free, three more of the leaders having been released in the present month. It is typical of the tangled state of affairs that this fact was not made public in Austria itself—presumably for fear of its effect in other quarters. Meanwhile the activists of the Socialist Party have evolved a programme which lays down that the present dictatorship must be superseded by a new dictatorship of the proletariat. There is not the slightest chance that any such ambition can be achieved in the centre of Europe in present circumstances, as the wiser Socialists are well aware. We have little doubt that the mass of the Socialist electorate would welcome a compromise peace.

But if unity is to be sought through greater liberty, terms must also be made with those whose dominant thought is that the Austrians are a German people. While this has no great importance from the point of view of the internal constitution, it requires that the Austrian Government must be free to engage in a foreign policy which does not lead her away from friendship and understanding with Germany. Herr Schuschnigg cannot be expected to ally himself with extreme Nazis who would bring Austria under the direction of an organisation dictating policy from outside her borders, or to agree with those on the Left whose only terms are that they should substitute their dictatorship for his own. But between these extremes there is a large mass of the nation upon whose goodwill it should be possible to draw. The difficulties are immense, for even within the Christian Socialist group there are many cross-currents. The greatest hope is that the Austrian people may at last realise the need to bestir themselves and not look for some solution to descend upon them out of the clouds.

There remains a third condition for the permanent restoration of stability, namely the creation of economic conditions in which the population may find employment. This mainly depends on external economic policy and requires a radical change in European trading relationships. We have no space here to deal with a long-range problem which we have often discussed; but it may be said that, within the limits of the prevailing restrictionism which dominates the world, the omens for Austria are not entirely unfavourable. Austria has to some slight extent felt the benefit of world recovery. In accordance with the ideas expressed at Stresa two years ago, she has been able to make some advantageous trading agreements with certain countries. Her currency position has strengthened; her banking crisis is over; her balance of trade improving; and there are slight signs of fresh enterprise in the internal market. Fairly good tourist traffic with other countries has been some compensation for the loss of German tourists, and the commercial earnings of Vienna have materially assisted her International Payments Account. A Budget swollen by expenditure on the police forces or repairing the damage done in civil war is the chief weakness of her financial position. Economic improvement has occurred in spite of the successive shocks that have been experienced in the political field, and it makes a more satisfactory story than that which many of her neighbours have to tell. It is significant that, of the countries of Central Europe, Austria is one of the very few that have been able to relax exchange control; indeed, she now has rigid Clearing Agreements with only one or two countries.

By no stretch of imagination can it be said that Austria is prosperous, or even that she is on the high road to prosperity. But at least she is no longer the economic Cinderella of Europe; and if the change has been brought about by the descent of the rest of the European family rather than by the exaltation of Austria, it should be a great encouragement to her to feel herself on a footing of greater economic equality with her neighbours—a fact that

may make it more possible to reach a sane solution of the economic problem of Central Europe.

If it be true that Austria can count on a respite from external interference, that there is a growing sense in Austria herself of a national individuality, and that her economic prospects are—to put it at its lowest—no worse than those of neighbours reduced to poverty by excessive economic nationalism, we have here the basis on which to build a new stability. This will require the goodwill not only of European countries, but of Great Britain. For nothing would be more favourable both to our own interests and to the ideas which we believe are necessary for civilisation than the creation of conditions on the Continent in which a country such as Austria can live.

THE WORKER'S HAZARDS

THE disastrous tragedy at the Gresford colliery a month ago has impressed on the people's imagination the dangers inherent in certain occupations, and the necessity for adequate precautions against them. Mercifully, accidents on such a scale are rare. But, according to the annual report of the Chief Inspector of Factories and Workshops* the numbers injured or killed in accidents of all kinds increased from 106,164 in 1932 to 113,260 in 1933, and the number of fatalities from 602 to 688. This increase he attributes largely to increased activity in certain industries, which involved the re-employment of men who had been out of work for a long time and who were both mentally and physically less alert than those in normal employment earning regular wages. But the Chief Inspector also points out that many of the accidents which occur could be prevented either by employers or by workers themselves.

Three means of increasing security are recommended. First, the introduction of safety organisations in individual factories; secondly, conferences of industrial associations for the discussion of safeguards; and, thirdly, the issue of educational circulars by the factory inspectors or by other bodies, informing workers of the risks to which they are exposed and employers of their obligations. In most factories where safety organisations have been introduced, marked results have been achieved almost at once in the reduction of the accident frequency rate. During 1933, many safety committees were replaced by a full-time officer, usually with good results, and in factories having committees there has been a welcome increase in the number of workers elected to them. It would be of great advantage, however, if employers could be persuaded to form area committees to co-ordinate the work of individual factories. As regards industrial conferences, employers' associations have apparently on the whole been very willing to make experiments and accept suggestions for increasing the security of their employees in specific cases brought to their notice. Action has been taken in the case of three

* "Annual Report of the Chief Inspector of Factories and Workshops for the Year 1933." Cmd. 4657. H.M. Stationery Office. 2s.

particularly dangerous machines—meat-mincing machines, although it is found difficult to enforce any regulations on retail butchers, who are the worst offenders; guillotines used in the printing trade; and hydro-extractors used in laundering. In each case guards have been invented which make accidents almost impossible, and the employers' associations concerned have recommended to all their members the installation of these guards.

But in spite of the fact that more care is being taken for the workers' safety than at any time in history, the incidence of accidents in some industries is still very high. The following table shows the number of accidents in various industries in 1933, and their incidence as a proportion of the total number of workers employed in 1928, the latest year for which such figures are available in most cases:—

INDUSTRIAL ACCIDENTS IN 1933
(Number in 000's)

	Male	Female	Children	Per cent. of No. employed in 1928	No. of Fatalities
Textile	5.1	4.0	1.8	1.3	45
Metal conversion, rolling and tube	9.6	0.2	1.3	10.1	60
Railway, tram and other vehicles	7.0	0.4	1.2	3.3	28
Founding	5.3	...	...	5.4	10
Docks	5.1	...	0.3	8.1	29
Shipbuilding	3.2	...	0.2	4.0	37
Chemicals	2.7	0.3	...	...	90
Building	2.4	...	...	...	...
Total of above ...	40.4	5.0	4.8	...	368
Other	43.4	6.7	12.1	...	320
Total of all industries	83.8	11.7	16.9	...	688

* No figures available because work is not done in factories. The above figures refer to accidents which have prevented a worker for more than three days from earning full wages.

Other trades in which the incidence of accidents is very high, though not producing a high death rate, are engine and locomotive building (8.3 per cent.), boiler making and constructional engineering (9.6 per cent.), and, a war danger which is rarely emphasised, the manufacture of ordnance and munitions (11.4 per cent.). The main causes of accidents during the past year, as also in previous years, have been hoists, especially in textile industries, and the cleaning of moving machinery. There have also been an unusually large number of potentially dangerous fires and explosions.

But while greater trade activity has increased accidents, there has been a further reduction during the past year in industrial disease, although as compared with 1920 there has been no very marked improvement. The following table gives the figures of the two main types of poisoning found in industry:—

	All Cases		Fatalities	
	1920	1933	1920	1933
Lead poisoning	289	168	1	19
Epitheliomatous ulceration ...	45	143	44	40
Total of all cases of poisoning...	532	423	56	61

Lead poisoning is definitely declining owing to careful precautions taken in almost all pottery and paint works, where it is most frequent, but epitheliomatous ulceration, or cancer of the skin, is becoming very prevalent, particularly among those returning to manual work after a long spell of unemployment, which has softened their skins. It can, however, be prevented from becoming dangerous in most cases if the patient undergoes examination at an early stage of the growth; unfortunately workers are very loth to take advantage of opportunities for such examination until it is too late. The other industrial diseases responsible for the largest number of fatalities are infections of the lungs, notably silicosis, which is often associated with tuberculosis. During the past few years 469 deaths have been reported as due to this disease, of which nearly half were in pottery trades. But by far the highest incidence is in sand-blasting, and as it has been found possible and practicable to substitute steel grit for siliceous material in most operations, this danger should be averted.

The ingenuity of man is gradually finding the antidotes for the ills which he himself has created. But, unfortunately,

he continues to create new ills. With the development of the chemical industry, in particular, new diseases are continually being contracted and often have dire results before they are even traced to their source. The Report of the Inspector mentions, for example, a case of so-called dioxan poisoning arising out of some process in the manufacture of artificial silk, which was responsible for a sudden series of deaths. Steps are, however, being taken by Imperial Chemical Industries, Limited, to ensure physiological testing of all new processes, in order to prevent this kind of occurrence.

In the above-mentioned Report there is a short review by Dr. Sybil Horner of the effects of industrial work on women. As 35.6 per cent. of the workers in industry are now women, on whose health depends largely that of future generations, this is clearly a very important question. She points out that women doing factory work, especially the considerable number in heavy industry, probably age more quickly than men owing to the fact that most of them have to work at home in addition; "physical attraction is early attained and quickly lost. But so it is with every group of women workers." On the other hand, factory life improves the personal hygiene of most girls, owing to facilities for medical attention, to regular discipline, to the higher standard of life possible to wage earners and to the comparatively good conditions of work in most factories. On the whole then, the net effect of factory work on women is probably good.

One of the most important tasks of the factory inspectors is the enforcement of regulations with regard to hours of work for women and young persons. It appears that during the past year several scandalous breaches of these regulations have been discovered, mostly in bakehouses, aerated water factories and dry-cleaning works. In one case a small boy was employed for 156½ hours in eleven days, including spells of 22½ and 37½ hours. His employer was fined £15. In another, girls of 14 and 15 were worked for 14 and 15 hours at a stretch with three-quarters of an hour for meals. In another, boys and girls were employed for 89½ hours in a week, exclusive of meals. The whole of this chapter of the Inspector's Report reads like a description of conditions in the first half of the last century; and "trade recovery" is alone made responsible. Apparently in certain areas there has been a shortage of cheap labour, women and juveniles, especially in the new industrial areas, at holiday resorts and in light metal industries round Sheffield. Even where there were no actual breaches of regulations, workers were employed up to the legal maximum. Over the whole of organised industry weekly hours of work average 47 to 48, with a few exceptional industries working only 40 hours.

It is not surprising that, during a quick trade recovery after prolonged depression, the safety of the industrial worker and his working conditions should suffer to some extent. But, by the same token, employers should then be able to afford those improvements in working conditions which are an indispensable condition of economic efficiency and social progress. It is reassuring, therefore, to know that we possess so observant and impartial a body of factory inspectors, whose concern it is to see that an increment of output is not purchased by human suffering.

THE BRITISH MOTOR INDUSTRY

II. THE COMMERCIAL VEHICLE

THE production of commercial vehicles in Great Britain for the year ending September 30th may be estimated at 76,000, an increase of some 16 per cent. on 1932-33, and easily a record year. Production in 1928-29 was only 56,500. The number of goods vehicles in use this year is about 410,000, compared with 387,488 last year and 329,794 in 1929. The omnibus undertakings, which are almost entirely dependent on the policy of the Traffic Commissioners, are somewhat less prosperous, the number in use having apparently again fallen slightly. A year ago the figure was 45,656, compared with 49,889 in 1929 and 52,647 in 1930, the last year before the Traffic Commissioners took over their duties.

Exports of commercial vehicles reveal the same general trends as exports of private cars. For the first eight months of this year they amounted to 7,565 units, valued at £1,317,392, compared with 6,808 units, valued at £1,043,725 last year. Exports to the Empire increased from 4,227 to 5,409 units, while exports to foreign countries fell from 2,581 to 2,156 units. As in the case of private cars, British exports represent a declining fraction of a rapidly expanding market, the percentage increase this year over last being 11 per cent., compared with an American increase of over 100 per cent. for the first half of the two years. The ratio of American to British exports, which in the first half of 1933 was 3:1, had risen to nearly 6:1 for the first six months of 1934, a great stimulus having been given to American exporters by the fall in the exchange value of the dollar and the improvement in their home market. Nevertheless, in spite of a relative setback in the export trade, the British industry has retained virtual monopoly of the home market, imports being still on a negligible scale.

Probably no industry has received so much attention from Governments in recent years as the road transport industry, and measures such as the Road and Rail Traffic Act of 1933 are bound to have a profound effect on commercial vehicle manufacture. The scale of taxation on the heavier classes of lorry was graded steeply upwards last January, the annual licence duty on a 5-6-ton petrol vehicle with pneumatic tyres, for example, being increased from £48 to £90, and on a 9-10-ton heavy oil vehicle on pneumatics from £48 to £225. The licensing of goods vehicles under the Road and Rail Traffic Act of 1933 has now been virtually completed, and already this is having the general effect of preventing new operators from entering the haulage business and existing operators from enlarging their fleets. It is also possible that, at the end of the two years during which the "A" or public carriers' licences are valid, the number of vehicles actually in operation will be reduced in order to prevent the supply of facilities outrunning the demand.

In the case of omnibuses, the operation of the licensing system under the Road and Rail Traffic Act of 1930 led to a sharp fall in new registrations from 8,398 in 1929-30 to 2,718 in 1932-33, and an estimate of 3,700 for the current year. The reduction in the total number of omnibuses in use by 7,000 in three years led to a glut in the second-hand market, and a level of new registrations for several years considerably below the normal replacement demand on the basis of an eight-years' life, or approximately 250,000 miles per vehicle. There is little likelihood that history will be repeated in such an extreme form on the goods side, as the "C" licence holder, or private carrier, who accounts for at least half of all the goods vehicles on the roads, is not limited under existing legislation as to the number of vehicles he may operate. He will therefore serve as a safety valve against any undue pressure on the second-hand market; while the public carrier, in so far as he allocates vehicles entirely to contract work—a rapidly growing development—will remain free to expand his fleet as much as he wishes. Nevertheless, as, on the whole, public carriers use larger

vehicles than private carriers, it may be expected that the difficulty of finding a market for the heavier types of lorry will increase considerably in the next two or three years, due to a combination of increased taxation and the overloading of the second-hand market.

If we compare the first eight months of 1934, after the new taxation scales came into force last January, with the corresponding period of last year, new registrations of vehicles of over 5 tons unladen weight decreased from 590 to 568, of which 162 were petrol lorries, 286 heavy oil vehicles, 119 steam vehicles, and 1 coal-gas vehicle. Vehicles of 2½-5 tons, which have, naturally, benefited from the reduced sales of heavyweights, increased from 3,021 to 5,136, of which 4,323 were petrol lorries, 775 heavy oil, 9 steam and 29 electric; 1-2½ tonners increased from 20,042 to 25,640, and light vans not exceeding 1 ton from 10,046 to 13,830. The heavy oil lorry, for the eight months for which information is available, has only accounted for 94 new registrations of vehicles under 2½ tons, but for 1,061 over 2½ tons. Of new vehicles of over 2½ tons unladen weight, 19 per cent. were "oilers." The steam lorry, in spite of the advantage given to it in the matter of taxation as against both the petrol lorry and the "oiler," has not fulfilled the expectations aroused by the higher level of registrations in the opening months of the year, when the new models introduced by the Sentinel Company in the Autumn of 1933 coincided with a vigorous sales campaign. New registrations of "steamers" have now dropped to 6 or 8 a month compared with 33 in January, and 36 in March.

On the passenger side the popularity of the heavy oil vehicle has been even more marked. New registrations of passenger vehicles of over 40 seats numbered 999 for the first eight months of this year, compared with 537 in the corresponding period last year, the figure this year including 482 petrol 'buses, 380 heavy oil 'buses and 137 electric vehicles, i.e. trolley 'buses. The increase in the latter is very noticeable, the corresponding figure for 1933 being only 23. New passenger vehicles of 9-40 seats increased from 1,638 to 1,894 over the eight months, the latter figure including 292 "oilers." Heavy oil vehicles thus accounted for 23 per cent. of all passenger vehicles of over 8 seats. Some revival in the taxi business, which should continue with the growing difficulty of using private cars in London on account of the increasing complexity of traffic regulations, is indicated by the increase in new registrations of passenger vehicles of under 9 seats from 725 to 846 in the eight months.

There appear to be two tendencies at work in the commercial vehicle market. In the first place, the prospects are that on the goods side the proportion of new vehicles in the "middleweight" category will increase at the expense of the "heavyweights." This will benefit Bedford, Ford and Morris Commercial, who enjoy the greater part of this trade. In the second place, an increasing proportion of the "heavyweight" and "semi-heavyweight" demand is likely to be for "oilers," both on the goods and passenger sides, and any concern which relies mainly on the

heavier section of the trade, but is not strongly entrenched in the "oiler" field, would seem to have poor prospects. Leyland and A.E.C. are both in a position to secure a large part of such demand as there is for the heavier vehicles, while Gardner are probably the largest manufacturers of heavy oil engines for both buses and lorries, though they largely supply engines for other manufacturers who specialise in making chassis. Any tendency to concentration of control among operators on either the passenger or goods side might be expected to benefit the larger manufacturers, and the indications are that such concentration of control is slowly taking place. There is little doubt that for the immediate future there will be enough work to keep the most makers reasonably busy, and the probability is that, in spite of the spurt in new registrations for goods vehicles, sales next year are likely at any rate to equal those for 1933-34. But, on a longer-run view, the narrowing of the outlets for "heavyweights" and "semi-heavyweights" will tend to encourage manufacturers who have specialised in that category to extend their activities to the smaller vehicles. This may possibly lead to price-cutting in the lower ranges. The companies which already hold the bulk of the "middleweight" market—by far the most important numerically—are, however, by reason of their size, capital and the suitability of their products for mass-production methods, undoubtedly in a strong position to compete with all comers.

TABLE D'HÔTE OR À LA CARTE

(BY A CORRESPONDENT)

WHAT should have been clear from the outset is gradually being realised by the advocates of planning—namely, that, whether applied piecemeal or on a universal scale, it involves a considerable dragooning of the consumer.

The case was frankly put by Sir Josiah Stamp at Aberdeen,* and although he reinforced his argument by relating it to the problem of a stationary population, it represents the general criticism of free enterprise at any time or place. The burden of this criticism is that the caprice of the consumer makes for too great instability in the system. At his or her whim (and perhaps the "her" should come first) industries are called into being and then callously left derelict. The "displacement of labour is an evil and the over rapid destruction of capital assets a social danger": the community *qua* producer would gain if it restrained itself *qua* consumer in the exercise of its choice. If it called for fewer tunes it would get better and, it is implied, more regular music. "The direction of resources and their transfer from one product to another in the interests of producing capital and labour other than in the interests of the consumer would be an integral part of planning. Effort would be given to protect old producers, both the skill of the workers and the capital of the investors, from immediate extinction." A certain amount of change would presumably be permitted, but the pace would be controlled lest it became too hot.

Now it is curious that this type of restriction should develop within the so-called economics of abundance. There might be a case for it in what we are assured is the bygone age of scarcity. Rationing and regulation are logically associated with siege conditions, and in war-time, when the supply of prime necessities is endangered, the consumer may legitimately be asked to narrow the scope of his choice. But why he should restrain himself under technocracy it is difficult to understand. Possibly the critics themselves are a little confused on this point, because occasionally they appear to be nagging the consumer because he is not bright enough to think of new wants or swift enough to adopt the innovations such as air-conditioning which some people believe lead the way out of depressions.

Nevertheless, the general line of argument is fairly obvious. Let the planning authority decide, as the railways

* "The Need for a Technique of Economic Change." Paper before British Association.

apparently decided in the 'fifties, that ham and beef are suitable and sufficient ingredients for the content of a sandwich. This at once places the ham and beef sandwich industry on a stable footing. Long-term ham and beef contracts can be concluded; ham and beef slicing machinery can be confidently ordered and installed. The specialised skill necessary for the composition, care and disbursement of ham and beef sandwiches can safely be acquired. Large stocks can be carried in anticipation of eventual demand. Now the person who heedlessly clamours for a liver sausage sandwich impinges with disruptive force upon this peaceful state of equilibrium. He introduces a disturbance which, applied on a universal scale, makes the economic system what it is—chaos. Only the restraining hand of a planning authority can deal with this anti-social action of the wanton consumer.

An adequate reply to this argument would necessitate a long incursion into economic analysis to demonstrate the continued practicability of meeting free consumers' choice and also the cost of meeting it. Incidentally, it would make clear that not merely in some circumstances, as Sir Josiah Stamp asserted, would the planning of production involve control of the consumer, compelling him to buy more or less than he wanted of a particular commodity, but that any form or degree of planning entails such arbitrary interference with consumers' choice.

Another line of retort would take the form of asking whether there is any savour in a world in which the cravings for liver sausage are authoritatively thwarted in the supposed interests of the ham-slicer who paradoxically enough may himself fancy liver sausage in his off-time. Whether, in short, we want our civilisation *table d'hôte* or *à la carte*.

Again, it could be pointed out that guarantees to producers would involve not only limitation but imposition of choice. The consumer could not be allowed to turn up his nose at ham or beef: he must accept willy-nilly. The sandwiches, for instance, must form part of the purchase price of a railway ticket, even if the traveller promptly throws them out of the window.

But a more immediate criticism, since it is pertinent to current developments, is to inquire on what principle industries are to be selected for this form of protection. It is here that the British practice of compromise is, if not unworkable, at least indefensible. To refer to contemporary experiments in planning, it cannot be denied, for example, that the railways have to some extent been protected against the consumers' tendency to switch over to the use of road transport. The most extravagant demands have been made by the railway representatives on this point; their counsel at one inquiry bluntly asserted that the public could not be permitted to travel by road for pleasure at the expense of the railways. The transport legislation now in force leaves no doubt that "existing producers' proclivities and abilities" have been considered at the expense of the consumer.

But what of the other case quoted by Sir Josiah, the displacement of pianos by radios? Has anything been done to protect the capital and labour associated with the piano industry? Will anything be done? Is it unfair to suggest that the piano industry is not as influential as the railway industry and certainly has not such skilled spokesmen? Can anything be said to justify a state of affairs in which displaced piano workers are forbidden to pool their savings for investment in a new motor-coach service as an alternative occupation? It is not generally realised to what extent the outlets are being stopped to ex-bank clerks displaced by office machinery and to such-like "victims" of technical change by legislation which shelters favoured groups from similar changes in their respective fields. In this extraordinarily law-abiding country such arbitrary legislation is respected, and the remedy of bootlegging is not employed. No desperate unemployed group defies the authorities by putting a bus on the roads, no coalminer, displaced by oil, sabotages the hop-growing monopoly. But if every section of the community were able and determined to enforce a claim for protection against the consequences of economic change, whether initiated from the consumers' side or in any other way, the resulting deadlock would soon teach the persons who so glibly diagnose the system of free enterprise as chaos the real meaning of the term.

NOTES OF THE WEEK

Raymond Poincaré.—A great French statesman died last Monday. Poincaré was one of those rare political figures who sum up in themselves the spirit of an epoch, and this not only for his own country, but for the whole of Europe. As the Russian Emperor Nicholas I incarnated the spirit which triumphed over the French Revolution a century ago, so the French President and Premier, Raymond Poincaré, was an embodiment of the implacable, indomitable force that defeated the Imperial Germany of Kaiser William II. Men could no more ignore or disrespect Poincaré than they could love and cherish him. For all that, he was in many respects a typical modern Frenchman of the highly educated bourgeoisie. This was, no doubt, the secret of his hold on France: he thoroughly understood, and was thoroughly understood by, his countrymen; and so they were ready to place their trust in him again and again, even when the obvious defects of his qualities produced results which were as unfortunate for France as for Poincaré himself. The greatest triumph of his career was his recall to the Premiership in 1926 in order to save the franc, little more than two years after the general election of May, 1924, in which his countrymen had so emphatically signified their recognition of the failure of his policy over the Ruhr. The truth was that the Ruhr policy, as part of the general shock which it gave to a war-weakened world, had actually started the franc on its downward career; and the fall of the French currency continued after the rehabilitation of the mark through Poincaré's grudging acceptance of the Dawes Plan. Yet it was undoubtedly true that the one man who could, and did, save the franc in 1926 was the very man who was the most responsible for its misfortunes. If "the franc in 1926-28" is the chief idea associated with Poincaré's name in French minds, "the Ruhr in 1923" is what he stands for to the rest of the world. His European reputation would have been very different if his life had ended upon the termination of his tenure of the Presidency of the Republic, which he held from 1912 to 1920; for he had taken a decisive part in preparing France for her indomitable resistance to the German attack; he manfully expressed this indomitability in his own bearing during the long ordeal; and he was effaced during the Peace Conference by the Prime Minister of the day, Clemenceau. It was Clemenceau, not Poincaré, who took the blood of the next generation upon his head; yet, if Clemenceau made the peace, Poincaré made it his own. No parent has ever watched more jealously over an adopted child than Poincaré watched over the Treaty of Versailles. As Prime Minister of France during the crucial post-war years 1922-24, he set himself to implement the Treaty to every jot and tittle, with a blind, backward-looking legalism that overbore the apologetic common-sense and the half-hearted generosity of a Briand or a Bonar Law. The Ruhr policy proved futile almost immediately; but France and Europe have not yet ceased paying for that glaring and avoidable error, and we do not yet know when we shall be quit, nor what the total of the account will be. This is Raymond Poincaré's political legacy.

Aftermath of Murder.—A good deal more is known this week about the murders at Marseilles. Whether or not the late French Minister of the Interior, and the officials whom he dismissed before tendering his own resignation, are directly responsible, it is clear that somewhere in the French police organisation someone has gravely blundered. Unfortunately, there seems to be some evidence that the assassin—now identified with a Macedonian revolutionary named Georghiev—had an opportunity for training himself in his murderous craft in a camp for Yugoslav refugee revolutionaries on Hungarian soil. The Hungarian Government must have been aware of this camp before it suppressed it last May, after the scandal of the camp's existence had been ventilated by the Yugoslav Government at Geneva; for the Hungarian Government had flatly denied the existence of the camp on

previous occasions. In justice to Hungary, it should be remarked that Hungary is not the only country in Eastern Europe that lives in a glass house. Yugoslavia, after all, is harbouring, at this moment, the Nazi refugees from Austria. Switzerland, France and Italy have harboured Yugoslav and other "political exiles." But while it is respectable, as well as generous, to give asylum to political exiles, such generosity takes on a very different aspect if the country of asylum becomes a training and jumping-off ground for criminal activities on their part. Meanwhile, both Government and people in Yugoslavia have been showing a praiseworthy self-restraint. Complaints against Hungary have been formulated with moderation; incipient anti-Italian demonstrations have been firmly suppressed; and there has been no outbreak of hostility between Croat and Serb. Evidently the atmosphere in Yugoslavia is heavy with apprehension; but, if the people go on keeping their heads under the present ordeal, the tension ought to relax—especially in view of the equally praiseworthy self-restraint and courteous sympathy with Yugoslavia displayed in Italy. After King Alexander's funeral, Belgrade will be the scene of a meeting of the Little Entente Council; and at the same time the Yugoslav Regency Council and Cabinet are to consult on future policy. Dr. Benesh, who is at this moment in Paris, is to visit not only Belgrade but also Rome; and M. Laval, according to plan, is to pay the visit to Rome that was to have been paid by M. Barthou. On the other hand, the sense of frustration and isolation which is acute just now in Hungary is to receive expression in a visit by General Gombös to Warsaw, following hard upon the visit, for another "hunting expedition," of Herr von Papen to Hungary. However, in spite of the murders of King Alexander and M. Barthou, we still look forward to seeing the policy which they would have set on foot carried through by their successors. The first step is an understanding between France and Italy. But this cannot bear its full fruit unless it is reached with the good will of both Hungary and Yugoslavia, and unless it is followed by an understanding between Hungary and all three members of the Little Entente. If France and Italy act together it is well within their power. It is, moreover, eminently desirable in the interests of Europe.

The French Government.—The full measure of the change that has come over French politics within the last year is shown by the bare fact that the Doumergue Ministry has survived a shock which even in normal times would have severely shaken any Government in France. To-day, French politicians of all parties seem to be aware that the French public will not stand any more political instability, and that the next fall of a parliamentary administration may carry away with it the parliamentary system itself. In any case, the present administration has not been broken up by the gaps made in the ministerial ranks through the tragic death of M. Barthou, the promotion of M. Laval to fill his place, the inevitable resignation of M. Sarraut, the Minister of the Interior, and the by no means inevitable drumming out of M. Chéron, the Minister of Justice. The Doumergue Ministry still stands, with that symmetrically balanced pair of opposites, M. Herriot and M. Tardieu, still holding up the hands of the President of the Council as ministers without portfolio. The most important of the new appointments—that of M. Laval to the Ministry of Foreign Affairs—seems to have met with general assent. M. Laval is profiting from his reputation of being the man who gave French policy towards Germany a stiffer turn after the gentle Briand regime. And M. Laval's promotion raises no questions of "face" or "prestige" in the realm of party politics, since, at the present stage of his career, M. Laval is conveniently unattached—being visibly on the move towards the Right, yet not far enough on his way to have lost touch with the Left from which (like so many Conservative politicians before him) he has sprung. The Radical Socialists have been placated by the appointment of another

of their own number—M. Marchandean, the Mayor of Rheims—to succeed M. Sarraut at the Ministry of the Interior. M. Sarraut's loss thus remains personal to himself, while his party retains a key-post which has almost come to be regarded as its own perquisite. M. Rollin, who succeeds M. Laval at the Ministry of Marine, has held Cabinet office under M. Tardieu. M. Lémyer, an Independent of Right-wing views and a vigorous opponent of the "Briand" foreign policy, succeeds M. Chéron at the Ministry of Justice. Thus everybody is more or less satisfied, and the victimisation of M. Chéron is evidently not enough in itself to overthrow the Government. M. Chéron seems to be the victim partly of a personal animus against him on the part of his late colleague Marshal Pétain, the Minister for War, and partly of the French public's general dissatisfaction at the failure to clear up the Stavisky case. That this failure is M. Chéron's fault is "not proven"; but the public has long been wanting a scape-goat, and the present upheaval has permitted M. Chéron to be cast for that rôle. M. Lémyer must be a bold man, for the Ministry of Justice in France to-day is no sinecure. Meanwhile, M. Doumergue's Government vessel, after two political storms have buffeted its cargo out of place, goes on its way with an ominous list to the Right.

* * *

The Slum Clearance Campaign.—Is any progress really being made with the rehousing of the poorer workers? We expressed doubts a fortnight ago whether, at the present rate of building, the rehousing provided for by the slum clearance campaign was likely to be achieved. Sir Hilton Young hopes to clear 280,000 houses and rehouse 1,250,000 persons in the five years ending September, 1938; but so far only 25,000 new houses have been built. The Building Industries National Council has now published some additional figures which throw further doubt on the building progress so far achieved. The total of houses built under the campaign during the first eleven months was only 12,789, though an average rate of 57,000 houses a year has to be maintained if the five-year plan is to be completed. It is natural that the annual total should be smaller in the earlier years of the campaign, but the rate of building has not been rising very rapidly in the last six months. According to the National Council's figures, the monthly total of completed houses only increased from 1,305 in April to 1,633 in August. More disquieting still is the fact that, though the number of houses built under the slum clearance scheme is increasing, the total of houses for lower-paid workers built with State assistance is decreasing. The actual total of all houses built with State assistance fell from 5,598 houses completed in April to 1,663 houses in August. This strongly suggests that the cancellation of the Wheatley subsidy has more than offset the slum-clearance campaign, since there appears to have been no countervailing increase in the provision of houses for the very poorest workers by private enterprise. It is evident, at any rate, that the real solution of the problem still depends on the Government's forthcoming plans to remedy overcrowding. Unless these plans are effective, neither private enterprise nor the slum-clearance campaign can achieve anything substantial.

* * *

The Port of London.—The Minister of Transport's decision to spend £1,500,000 on road development in the Port of London may at first sight appear paradoxical. Are we to build roads to the docks with one hand, it may be asked, while we do our best to destroy international trade with the other? An effective answer to this criticism, as far as London is concerned, is contained in the full report of the Port of London Authority, just published, for the year ended March 31st. This report reveals the remarkable fact that the total net register tonnage of vessels arriving and departing for the calendar year 1933 was 56,480,004, compared with a record figure of 58,085,598 in 1930. The smallness of the fall since 1930 is, of course, partly due to recovery since 1932, partly to the growing importance of London, and partly to the fact that the volume of international trade

has fallen much less than its value. Between 1932 and 1933 the tonnage of vessels arriving and departing from London rose by 2,576,118 tons. The value of all imports and exports, excluding coastwise goods and transshipments under bond, decreased by 0.8 per cent., compared with a decrease in the whole country of 2.3. In tonnage for the year ending March 31, 1934, there was an expansion of imports and exports under every head. The total movement of goods inwards and outwards showed an expansion of 7.1 per cent. Goods landed for warehousing or immediate delivery were greater by 5.5 per cent., and the export trade handled during the year expanded from 495,589 to 539,878 tons. These figures are eloquent evidence of the growing prosperity of South-East England. They are also a convincing proof of the wisdom of improving the inadequate road communications of the Port of London; and they may perhaps even persuade other Ministers than Mr Hore-Belisha of the advantages of increasing our international trade.

* * *

"One and Indivisible."—The Nazis claim that "the spiritual unity of the German folk" finds spontaneous realisation in the Nazi regime, and that Herr Hitler, the Führer and Chancellor, symbolises in his person and for his lifetime that spiritual unity. On Tuesday the German Nazi Cabinet decreed that all Ministers of the Reich and of the "unified" Regional (*ci-devant* State) Governments must take a personal oath of loyalty to the Führer. The concentration of all power in the hands of the Führer and Chancellor, and, through him, in the hands of the Party which is now the State one and indivisible, culminates in a theory of the State which Kaiser Wilhelm II himself might have shrunk from proclaiming. In an extremely interesting address on the evening before this latest decree Dr. Lammers, Secretary of State at the Chancery, said:—

There was no need for a Constitution regulating the affairs of State; at any rate there was no need for a written Constitution. In the National-Socialist State one thing sufficed: The fanatical will, based on leadership and following of the Führer and those whom he leads, to possess a German State which is the home of all Germans bound together by fate in a national and social community in which leader and following are filled through and through with the principle of National-Socialism—"the common interest before the individual interest." . . . Germany had a Constitution in the material sense; for the National-Socialist State wanted to be a *Rechtsstaat*, a State founded upon law, though not in the liberal sense. . . . Adolf Hitler had received the offices of Reich President and Reich Chancellor for the period of his life, and the one office was inseparable from the other. . . . The concentration of governing power would not be followed by administrative concentration. On the contrary, there must be as much decentralisation of administration as possible.

While all will applaud the aspiration, "the common interest before the individual interest," outside observers may be permitted to point out that this cry was emitted by the puny babe of Liberalism in the eighteenth century; that it was as a guarantee of its realisation that the *Rechtsstaat* and the rule of an objective law, which the Nazis now decry as "liberalism," came into being; and that to-day it is the common creed of Liberals, Communists, Fascists and Nazis. More pertinent are the questions: What is decentralised administration worth, if the final authority issues all orders from the centre? How can "self-government" be reconciled at all with the totalitarian State? What prospects lie before the Regional Governments, in view of the "totalitarianising" of the German Church? What possible law can the Nazi State be founded upon, if the law is the decree of the Party, which is the decree of the Führer? The world will watch with keen interest for the answers to these questions.

The Two Internationals.—The Spanish revolt seems to have succeeded, where even the Nazi Revolution failed, in producing a *rapprochement* between the Socialist and Communist Internationals. A meeting was held this week in Brussels between representatives of the two Internationals. The meeting was the result of a suggestion

received by the Socialist from the Communist International to arrange for "joint action to be taken immediately on behalf of the Spanish workers." At the time of the Nazi Revolution the Socialist International twice offered to negotiate with the Communists, but it received no reply. Since then much has happened. In Austria, France and Spain the Marxist forces have spontaneously closed their ranks in face of a common danger; and in Austria and Spain they have been in armed conflict with their enemies. More important still, Russia has joined the League. Her action in doing so, if it may be taken as sincere, implies that Soviet foreign policy in the future will not be inconsistent with the aims of the Socialist International. So far, the Comintern's new decision may be taken as evidence of the sincerity of Russia's intentions in joining the League. The whole sequence of events is, of course, the direct effect of the rise of Fascism. Adversity has created a unity out of the scattered forces of Social-Democracy and Communism which twelve years of pious aspiration was unable to achieve. It is of course impossible as yet to say how much this week's meeting in Brussels may portend. There are still many formidable obstacles in the way of Socialist-Communist solidarity. But the *raison d'être* of the Comintern seems to have vanished since Russia's entry into the League.

* * *

Creditors and Debtors of Germany.—Last Saturday the German Government denounced its commercial treaty with the United States. The treaty is to terminate on October 14, 1935. At the same time, Dr. Luther, the German Ambassador in Washington, informed the American Government that his Government would transfer only 50 per cent. of the payments due on October 15th to American holders of Dawes Loan in cash, and that the balance would be paid in Reichsmarks utilisable only in Germany at the current rate of discount—which means, in effect, that American holders of Dawes Loan will get about 75 per cent. of their due, and that only so long as the German authorities buy scrip and blocked marks at the prevailing discounts. This second German declaration to the American Government follows hard on the heels of the American Government's *aide-mémoire* presented in Berlin on October 10th. That Note voiced the American Government's expectation that "no discrimination will be practised against holders of bonds," and its reluctance to believe

that, having made provision for the full payment of all other bondholders, the German Government will either overtly fail to honour its written obligation to treat all tranches of the loan *pari passu* or plead inability to transfer less than \$1,000,000 to honour this obligation.

The German Government's case is, as usual, that, having long pressed in vain for reductions in the American tariff on certain German exports, and being unable to secure sufficient foreign exchange from exports, an unconditional most-favoured-nation treaty must be denounced, and new negotiations started, while Germany must default on her engagements to pay cash on the Dawes Loan services to American holders. But as to the treaty, the Americans themselves have complained of Germany's evasion of its most-favoured-nation clause, in the granting by Germany of certain import quotas to Denmark and Yugoslavia. So that, when the German authorities assert "It is necessary that a new form of exchange of goods be found, rather than that discussion should be carried on in attempts to place the responsibility for existing conditions," it looks as if the present denunciation is designed to facilitate Germany's negotiations with other countries as well as to relieve her from the burden of her debt to Americans. It is not unnatural that the German declarations have caused irritation in America and have increased diplomatic tension. Relations will not be sweetened by the suspicion in America that this decision to discriminate against American bondholders, which blithely ignores the American *aide-mémoire* of October 10th and was announced without even the courtesy of previous discussion, is based solely on the fact that the United States, having an active balance of trade with Germany, cannot retaliate, as Britain and other creditors have threatened to do, by imposing an exchange clearing. while, on our side of the Atlantic, Sir Frederick Leith-Ross left on Monday for Berlin, with instructions from the Cabinet to resume discussions with the German Government representatives on two questions. The new negotiations are to cover not only an agreement on the future of Anglo-German trade but also a settlement of the outstanding German debts to British exporters. It remains to be seen whether Germany will continue to favour those of her bondholders who, on balance, owe her money for current trade.

* * *

Spain Restores Order.—The attempted revolution in Spain has failed, as signally as it deserved to fail, and more egregiously than was expected. The revolutionaries have not only unleashed violence in a country that has already suffered much, but they have also betrayed the cause in whose name they took up arms. If Republicanism in Spain stands for constitutional parliamentary law and order, then the revolutionaries have struck the worst possible blow at this precious and precarious regime, and have given the best possible excuse to the vicious reactionaries for giving Spanish parliamentarianism a *coup de grâce*. They have done all this without adequate excuse, for they have palpably been the aggressors. Unlike the unfortunate Austrian Social-Democrats, the Spanish Syndicalists did not wait to be attacked. They took the offensive on the ground that the Catholic *Acción Popular*, which had received a place in the new Government at Madrid, was anti-Republican—and this in spite of the facts that the Catholics had explicitly declared their intention of respecting the Republic, and that their partial entry into power was a due reward for their perfectly legitimate gains in a parliamentary election. If the Catholics in office had broken their word this would have been another matter; but their opponents did not give them time to prove or disprove their good faith before anticipating their hypothetical treachery to the Republic by a rebellion. Equally wrong-headed and irresponsible has been the attitude of the Catalan leaders in attempting to take advantage of the country's distress in order to increase the local autonomy of Catalonia by a high-handed unilateral act. These misdemeanours have all been visited swiftly by poetic justice. The Catalan independence movement has been snuffed out by a Catalan general commanding Catalan troops; the general strike is petering out, and the working-class revolt in Asturias is being suppressed after grim and stubborn fighting. Now comes the test of the victorious Government's wisdom and strength. Will it accord lenience to the misguided rebels, and make no martyrs? Will it be willing and able to prevent the pendulum from swinging over to the opposite political extreme, and so to avoid giving its defeated assailants reason after the event? If Spain emerges from her present ordeal with parliamentary government intact, and with a reasonable measure of local

liberty and social reform, then she may find herself at the end of her long political fever. What she needs now, above all, is peace and quiet in order to recuperate.

* * *

Milk Prices.—The price-fixing policy of the Milk Marketing Board will be justifiable in so far as it is an attempt to bring order out of chaos in the milk trade and so ultimately to reduce production and distribution costs. It will not be justifiable if it becomes a conspiracy between producers' monopoly and a distributors' monopoly to exploit the consumer. There have lately been unpleasant signs that the Board is inclining towards the latter policy. In the first place, in arranging the new contract prices, the winter period of high prices has been extended at the expense of the summer period of lower prices. The scheme provides for the fixing not only of the wholesale price, but of the "minimum appropriate margin" and consequently of the retail price. But regional reductions in retail prices may be granted by the Board if a majority of retailers in any region recommend such a reduction. Already retailers in 90 districts, mostly in the distressed areas of the North, have asked for a reduction from the new fixed price; and the Board has permitted milk to be sold in these districts at 6d. instead of the official price of 7d. a quart. This very strongly suggests that the Board is trying to fix too high a price, particularly in working-class areas, and that the retailers are experiencing a consequent falling off in demand. Still further evidence comes from the Consumers' Committee's report. The Committee regarded the "margins" as too high during the last contract period; but it reports that they are now "in general even higher." It is possible that a return to free competition in retail prices, which the Committee suggests, would be better than the present system. But in any case, if retail prices are to be fixed, it is a gross anomaly that only farmers, and not distributors, as was originally contemplated, should be represented on the Board.

* * *

September Overseas Trade.—Between January and August of this year the rise in the value of imports into this country was proportionately more marked than the increase in British exports. This was largely due to the expansion in British industrial activity and the consequent increase in the immediate demand for raw materials and partly finished goods, before the rise in industrial activity could show itself on the export side. The value of imports between January and September, 1934, was 10.1 per cent. higher than in the corresponding period a year ago, whereas the percentage increase in British exports over the same period was only 7.7 per cent. In September a reversal of this trend occurred, for the value of imports was practically unchanged as compared with the corresponding month a year ago, while that of British exports rose by 5.4 per cent. Although the evidence of trade development contained in the latest returns is, therefore, slightly less favourable, it would be misleading to conclude from the statistics for one month that expansion has been arrested. The tables below give the September figures and the cumulative figures for the first nine months of the year, with comparisons for the two preceding years:—

MONTH OF SEPTEMBER					
	1934		Increase (+) or Decrease (—) as compared with		
	September, 1933		September, 1932		
Imports	£'000	£'000	%	£'000	%
British exports	57,738	+ 11	+ 0.02	+ 3,475	+ 6.4
Re-exports	33,957	+ 1,731	+ 5.4	+ 7,729	+ 2.9
Total exports	3,250	- 154	- 4.6	+ 348	+ 12.0
Excess of imports over total exports	37,207	+ 1,577	+ 4.4	+ 8,077	+ 27.8
Transshipments under bond	20,531	- 1,566	- 7.1	- 4,602	- 18.2
	1,858	- 174	- 8.7	- 107	- 5.4

	FIRST NINE MONTHS				
	Jan.-Sept., 1934	Increase (+) or Decrease (—) as compared with			
		Jan.-Sept., 1933	Jan.-Sept., 1932		
Imports	£'000	£'000	%	£'000	%
British exports	536,781	+ 49,141	+ 10.1	+ 16,584	+ 3.2
Re-exports	289,048	+ 20,658	+ 7.7	+ 17,940	+ 6.6
Total exports	39,674	+ 2,512	+ 6.7	+ 646	+ 1.7
Excess of imports over total exports	328,722	+ 23,170	+ 7.6	+ 18,586	+ 6.0
Transshipments under bond	208,059	+ 25,972	+ 14.2	- 2,001	- 1.0
	17,504	- 120	- 0.7	+ 1,558	+ 9.7

The value of imports of food, drink and tobacco declined from £29,701,641 in September, 1933, to £29,070,025 last month. The decline was most marked in the case of dairy products, imports of these having fallen from £4,922,158 in September, 1933, to £3,676,483 last month. The value of imports classified as "raw materials and articles mainly unmanufactured" rose from £14,512,912 in 1933 to £15,165,010 in 1934. Imports of rubber alone increased by £1,055,536, but those of raw cotton and wool declined by £406,462 and £244,366, respectively. The decrease in our purchases abroad of these raw materials reflects the stagnation in our two textile industries. The value of imports of wholly or mainly manufactured materials rose from £13,055,828 in 1933 to £13,196,257. This category includes, however, a substantial proportion of articles undergoing further processes of manufacture in this country. Among individual items in this group, the value of imports of non-ferrous metals alone rose by £522,136. The quantity of imports and exports of certain important products is shown in the next table:—

IMPORTANT COMMODITIES				
Month of September				
Commodity and Measure	1932	1933	1934	
Imports:—				
Iron ore and scrap	thous. tons	109	235	403
Soft timber (sawn):—				
Planned or dressed	thous. loads	444	938	744
Other than planned or dressed	thous. loads	38	83	99
Raw cotton	thous. cents	724	1,025	752
Sheep's and lambs' wool	mn. lbs.	34	26	20
Raw rubber	thous. cents	159	134	435
Exports:—				
Coal	thous. tons	2,824	3,418	3,541
Iron and steel manufactures	thous. tons	127	157	198
Machinery	thous. tons	20	25	27
Cotton yarn	thous. lbs.	9,989	11,685	9,510
Cotton piece-goods	mn. sq. yds.	3,341	3,727	2,842
Wool tops	thous. lbs.	498	761	841
Woolen yarns	thous. lbs.	2,530	3,436	2,580
Worsted yarns	thous. lbs.	4,237	5,683	6,327
Woolen tissues	thous. sq. yds.	2,067	2,893	2,518
Worsted tissues	thous. sq. yds.	3,824	7,259	5,501
Linen piece-goods	thous. sq. yds.	41	45	62
Locomotives	tons	2,354	2,470	5,094
Motor vehicles and chassis	number			
Re-exports:—				
Raw cotton	thous. cents	36	41	39
Sheep's and lambs' wool	mn. lbs.	8	8	5
Raw rubber	thous. cents	32	36	183

In the food, drink and tobacco group the value of exports of beverages and cocoa preparations in September showed an increase of £213,741 on the corresponding month last year. The principal items contributing to the increase of £1,639,912 in exports of manufactures are vehicles (£808,878, inclusive of a warship valued at £320,700), iron and steel (£685,093), and machinery (£328,052). The value of exports of cotton and woollen manufactures was slightly higher than a year ago, but sales abroad of non-ferrous metals showed a decline of £335,892.

* * *

Iron and Steel Production in September.—Production of pig iron is proceeding fairly steadily at a rate round about 6,000,000 tons per annum; in September the actual figure was 500,300 tons. Since March the output of pig iron has not fallen below the April figure of 496,300 tons, nor exceeded the July figure of 528,300 tons. The average daily rate since March has been 16,704 tons, and in no month has the daily rate been more than 3 per cent. below this average, nor more than 2 per cent. above. Steel production in September was 734,700 tons, the highest monthly

total since June, and higher by 65,700 tons than in September last year. In comparing September's production with previous months, however, it must be remembered that this year September contained five Saturdays and five Sundays. Imports of iron and steel in September amounted to 89,500 tons, a total lower than in any month since October, 1933 (88,900 tons). The reduction, compared with the previous month's figure of 102,000 tons, took place in spite of an increase in imports of billets, blooms, etc., from 21,200 tons to 26,900 tons, the principal declines occurring in sheet and tinplate bars (from 9,600 tons to 5,400 tons), steel bars, rods, etc. (20,700 tons to 17,200 tons), and girders, joists and pillars (10,500 tons to 5,300 tons). Exports of iron and steel, at 198,000 tons, were the highest since June (204,100 tons). Although there was a decrease, compared with the previous month, of 10,000 tons in the export of rails (to 13,300 tons) and of 4,000 tons (to 7,700 tons) in the exports of pig iron, there was an increase in the case of most other products. The most substantial increases were in tinplates, which rose by nearly 6,000 tons to 35,400 tons; and thick plates and sheets, which rose by nearly 4,000 tons to 14,300 tons. The outlook continues favourable as home demand is well maintained and export demand shows signs of expanding. Japan, for instance, has placed orders for sheets needed for reconstruction following the typhoon disaster; while increased buying is expected from India when the new Indian Tariff becomes operative on November 1st. The following are typical examples of the duties charged under the present and new Indian tariffs:—

	Existing Duties		New Duties as from Nov. 1, 1934	
	British	Non-British	British	Non-British
Angles, channels, tees, etc., not fabricated, not coated with metals.....	Rs. Per ton	Rs. Per ton	Rs. Per ton	Rs. Per ton
	23½	37½	5½	48½
Bars and rods.....	32½	46½	15½	44½
			or 10%	or 10%
Tinplates	60	60	44	65

Note.—When an *ad valorem* duty is given as an alternative to a specific, the higher duty always applies.

The British preference is substantially increased, though the general tariff is not lowered.

* * *

Coal Mining Results.—The quarterly statistical summary issued by the Mines Department reveals an appreciable seasonal decline in the output of coal during the second quarter of this year. Despite this setback, however, the working results showed a slight profit in this quarter for the first time since 1924:—

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Manshift	Earnings per Manshift
		Wages	Total net				
1930		s. d.	s. d.	s. d.	s. d.	Cwts.	s. d.

The commercially disposable tonnage raised during the second quarter of 1934 exceeded that of the corresponding period in 1933 by 4.1 million tons. The rise in output was due chiefly to the increase in home industrial demand, for exports, including coal shipped for the use of steamers, in April-June were only 761,000 tons higher than in the corresponding period last year. Total proceeds in the first

An Income of 5% plus a return of Capital

The Society has devised a scheme whereby an income of 5 per cent. on the Capital invested is secured for life, and on death a return of a portion of the Capital is guaranteed. The investor, moreover, is entitled to participate in the profits of the Society in respect of this portion, and will thus obtain the benefit of any future favourable trend in the investment situation.

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.

Established 1844 Funds exceed £15,000,000

quarter of 1934 were £30,929,203, compared with £36,202,666 in the previous quarter and £28,649,395 in the corresponding quarter a year ago. Net costs of production amounted to £30,813,163, as compared with £33,476,885 in the first quarter and £29,469,603 in April-June, 1933. Proceeds, therefore, exceeded costs by £16,040, as compared with a profit of £2,725,781 in January-March and a loss of £820,208 in the second quarter of last year. But although the results for the industry as a whole are a little better than a year ago, four of the nine districts shown separately in the return showed a loss. The result in the various coalfields varied from a profit of 6.15d. per ton in the district comprising South Derbyshire, Leicestershire, Cannock Chase and Warwickshire, to a loss of 5.29d. per ton in the groups of coalmines situated in Cumberland, North Wales, South Staffordshire, Shropshire, Bristol, Forest of Dean, Somerset and Kent. The latest information indicates that the output of coal remains well above the level a year ago, but that the need for reorganisation is as urgent as ever, especially in view of the steady increase in the efficiency of the industry in other countries.

Transvaal Output in September.—The output of gold by the mines of the Transvaal during September amounted to 857,442 ounces of fine gold at a value for purposes of declaration of £7 per ounce, as compared with 881,861 ounces in July at £6 18s. and 901,799 ounces in September last year at £6 9s. In the following table we show the monthly output since the beginning of 1928:—

Month of	1928	1929	1930	1931	1932	1933	1934
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	843,857	876,452	882,801	914,576	936,784	967,457	907,641
February ...	816,133	815,284	818,188	839,337	914,012	893,145	828,933
March ...	877,580	866,529	889,370	910,998	960,035	948,863	874,112
April ...	825,907	872,123	868,606	882,337	949,796	895,097	865,822

UNITED STATES

THE BUSINESS POSITION

BUSINESS, as the word is used colloquially, is better than the business indices. The following are the separate indices of production:—

INDICES OF MANUFACTURING PRODUCTION (1923-25 adjusted for seasonal)				
	August, 1932	August, 1933	May, 1934	August, 1934
Iron and steel	23	80	84	38
Lumber	23	46	33	36
Cement	48	50	57	48
Automobiles	23	60	78	61
Textiles	90	114	89	80
Food	85	95	98	106
Leather and shoes	84	102	115	95
Petroleum	135	153	153	156 (July)
Rubber	68	111	81	83
Tobacco	133	108	123	128

In the strictly "consumer" industries, the index makes a pretty good comparison with August, 1933, and also with May, 1934; while in steel there has been an extreme decline from either of those dates. From these figures, one readily understands the pessimism that is found in cities which are largely devoted to the heavy industries, and the optimism which one usually encounters among retailers and in the lighter industries.

Probably the simplest way to summarise is to note that the base period (1923-25) was one of great activity in building and consequently in the heavy industries, and that at present, and indeed for the past several years, building activity, except for public enterprises, has been almost non-existent. On the other hand, the demand for consumer goods is influenced by higher farm income and also by the liberal relief expenditures. The number of families on relief is not far from 5,000,000, representing close to 20,000,000 individuals. Hence although the figures of "unemployment" are large, the number of families without current income is comparatively small. The persistent inactivity of building is no longer attributed to an over-supply of buildings. While the country may have been over-built five years ago at the culmination of the nation-wide building boom, it can be statistically, if not conclusively, argued that the growth of population, the shifting of population and the diminution of available buildings by depreciation, fire, etc., have corrected this condition. The absence of building is therefore currently explained almost entirely in terms of the high costs. These high costs also explain the lethargic progress of the House Renovating Programme, which, in spite of energetic efforts, is achieving only mediocre results.

In the last few weeks certain changes have been made in N.R.A., such as the resignation of General Johnson. But on the matter specifically most in question—price-fixing through the limitation of production—the oracles are vague. In his radio address of September 30th, the President questioned the desirability of industrial price-fixing, but went no further than a question. The problem is by no means simple. When the N.I.R.A. was drafted, the idea of higher prices at any cost was very much in the mind of the community; and price-fixing was written into many of the codes. In the interim prices have been lifted, but the attitude of industry toward higher prices purchased by a limitation of markets has been modified. Some of the price cartels have broken down; in others, there is at least divided opinion on the merit of the device; in still others—and this is particularly true of some of the extractive raw materials—the alternatives to price-fixing are not clear, even though there is a good deal of dislike of it. In other words, where eighteen months ago the price cartel was looked upon as an industrial panacea, there is now in industry a varying degree of opposition to it, and among the population a strong opposition to it. Yet once having accepted price-fixing as an integral part of our industrial scheme, it is difficult to abandon it entirely or partially

in those industries which have become more or less habituated to it. Perhaps one could say that the tendency is away from price-fixing, but that no sudden or radical change is in immediate prospect.

CHINA AND SILVER

The text of the Chinese Note (or Notes) on silver has not been made public, and only a limited amount of information on the silver programme has been given to the Press. It will be recalled that Congress passed mandatory legislation, obliging the Treasury to accumulate silver to gold on a ratio of 25-75. The present gold stock is almost \$8,000 millions, hence the required silver is about \$2,700 millions. But the quantity of metal needed for that sum depends upon its valuation, which is left to the President's discretion—it might be 50 cents (current market) or \$1.29 (legal monetary value) or even \$2.18 (which would give a ratio of 16 to 1, with gold at \$35 an ounce). If the last-named value were authorised, the additional requirements of the Treasury would be nominal, as it holds 850 million ounces; at lower valuations they rise proportionately. According to the Press, the Treasury has adopted a policy of utilising the Stabilisation Fund to buy silver in world markets; the amounts, apparently, are related to the current active balance of our merchandise trade. This amounted to about \$250 millions in the first eight months of the current year; and it is understood that recent purchases of silver in foreign markets were at the rate of 40 or 50 million ounces a month. It is not stated that they will continue at that rate, but it is stated that they are designed to prevent our balance of payments causing an import of gold.

The prices of primary commodities have been sagging recently. Moody's index, which reached 156.2 on August 24th, is now about 144. It is reported that the high price of animal foods is forcing the marketing of livestock, but both beef and pork products have retained most of their gain. There have been some imports of rye and barley over the tariff, but the price has fallen substantially.

As the Great Drought of 1934 recedes into history, it is possible to make some appraisal. Broadly speaking, the farmer gained by it; for the increase in prices promises to prove more than compensatory for the decline in output. Second, surpluses have been largely eliminated. Third, cattle and sheep have been greatly reduced in number, and presumably several years will be required to build up flocks and herds. Fourth, the severity of the drought has reduced subsoil moisture in some areas to an extent that promises reduced yields in affected districts for the coming year. But while the drought, combined with the A.A.A. programme, has given the farmer the most prosperous autumn he has known for years, it has not solved the agricultural problem. The combined effects of the A.A.A. and of the drought merely reduced output to the general level of domestic consumption, without producing scarcity, except in animal feed. In cotton the crop still requires an export outlet, although the official loan price encourages foreign growths. The question still remains whether American agricultural policy is to be directed toward foreign markets or toward permanent and schematic reduction of supplies.

The drought has postponed for a year the facing of this question.

NEW YORK, October 9.

FRANCE

PUBLIC OPINION AND THE MURDERS

THIS week's succession of dramatic events has deeply moved French public opinion. Within a few days of the double murder at Marseilles, M. Poincaré died. He had not taken part in political life since 1928, but he was still a Senator and a Departmental Councillor. He died the same night as the counting of the votes in the cantonal

elections (second ballot). These elections have not seriously modified the political situation. They have resulted, however, in a slight increase of the Left and Right extremists; the number of Communist councillors has risen from 17 to 33 (out of a total of 1,518). The Radical-Socialists have lost the seats which were won by the extremists. Finally, the murders of King Alexander and M. Barthou have provoked a reconstruction of the Cabinet (which is discussed in a Note on p. 721).

Public opinion has, on the whole, remained calm, despite these dramatic events. The new Government loan, which was launched three weeks ago by the Finance Minister, has proved a real success. The Minister had three maturities to face which represented a total of 7,500 million francs; including 6,000 millions for the 5 per cent. 1924 bonds, 1,000 millions for the American French Cities (Lyons, Bordeaux, Marseilles), and nearly 500 millions for the Crédit National bonds. Subscriptions, which totalled 8,790 millions, were closed on October 15th. The Treasury has thus acquired the necessary sums for these maturities, with something to spare. As there is no important maturity during 1935 and 1936, the needs of the Treasury will become less pressing. It is hoped that this will facilitate a rise in bond prices and a lowering of the long-term rate of interest, since for the last two years a great part of the community's savings has been absorbed by the Treasury. The 8,500 millions of new short-term bonds, which have just been issued, will also contribute to enlarge the short money market, which has never been properly developed in France.

INDUSTRIAL PRODUCTION IN AUGUST

The Statistique Générale has just published its monthly figures of industrial production in France:—

	(1913=100)			
	August, 1933	June, 1934	July, 1934	August, 1934
General index	111	99	97	97
Engineering	114	98	99	100
Iron and steel	86	80	80	81
Textiles	78	62	58	55
Mines	98	102	102	100
Building (adjusted figures)	91	81	81	80
Leather (" ")	104	98	98	96
Paper (" ")	135	159	157	149
Rubber (" ")	987	892	856	856
Motors (" ")	435	456	463	470

In the motor industry, 11,180 automobiles and 1,540 lorries were put on the road in August compared with 9,135 and 1,777 in August, 1933. Production in the cotton industry, however, was still falling in August. The figures of bankruptcies show a new decline compared with the preceding months. Bankruptcies plus judicial liquidations were 903 in September against 1,096 in August and 1,212 in July.

The following table shows the production of the sixty-eight largest French producers and distributors of electricity during the first eight months of the years 1933 and 1934:—

	1933	1934	Difference
Thermic plants	2,672,574,906	2,602,866,494	— 2.62
Hydraulic plants	3,971,555,381	4,378,966,454	+ 10.25
	6,644,130,287	6,981,832,948	+ 5.08

In August, pig-iron output was 532,000 tons, compared with 511,000 in July and 509,000 in June. This is the highest figure since October, 1933. Ingot steel output was 533,000 tons, compared with 513,000 in July and 512,000 in June. The following table shows the receipts of the French railway system for the first three quarters of 1934 in comparison with the same period of 1933:—

	(⁰ 00 francs)	
	Receipts from January 1st to September 30th	Compared with 1933
Alsace et Lorraine	558,340	— 18,084
Est	1,125,474	— 61,996
Etat	1,309,293	— 43,457
Nord	1,250,750	— 67,489
Orléans et Midi	1,664,999	— 53,840
P.L.M.	2,287,530	— 87,850
Totals	8,196,386	— 332,746

On September 30th, therefore, the total receipts showed a fall of 333 million francs, that is 3.89 per cent., in com-

parison with 1933. This difference is all the more important as passenger fares were raised on November 1, 1933. The total of loaded wagons in the period between January 1 and September 30, 1934, was 11,482,156, compared with 12,233,522 in 1933, a diminution of 6.14 per cent.

PARIS, October 17.

GERMANY

IMPORT CONTROL AND BALANCES OF PAYMENTS

GERMANY's payments abroad and her regulation of imports raise new internal and international difficulties every week. Dr. Schacht's "New Plan" is by no means yet efficient or stable in working. The ports and shipping interests, which live mainly on foreign trade, are perturbed by the ineffective methods so far pursued, and in principle regard the New Plan unfavourably. It is alleged that the international credit of the mere importer is threatened; the foreign seller will never master the intricacies of the German regulations associated with the granting of exchange certificates; and he will hold the nominal importer responsible for defaults due to non-fulfilment of German rules or to official delays. Such objections, contrary to the general rule, are allowed to appear in the Press, probably owing to the fact that Dr. Schacht's elevation to Ministerial position is not welcomed by certain official Nazis, who suspect him of being still a "Manchester Liberal" and are made uncomfortable by his mobile, elastic, and un-Nazi intelligence.

Financial relations with foreign countries have not improved. The latest French Ministry of Commerce report shows a further large increase of exports to Germany, and so a deterioration of Germany's trade balance with France. A Swiss Government communication complains of an abnormal and unsound increase of exports to Germany which may endanger the clearing agreement, and exporters are warned that they may not be able to secure payment. The Dutch Press continues to criticise its own Government's policy. The German-Italian clearing agreement is stated to be working unsatisfactorily as far as it affects such German goods as are taken by small Italian traders and industrialists.

The denunciation by Germany of the most-favoured-nation treaty with the United States was officially declared to be necessary here more than a year ago. The discrimination against the United States in the bond service transfers is also not surprising. It was, indeed, officially implied here last summer, when the British initiative foiled the German plan to default entirely on the Dawes and Young Loans, that no discrimination against American holders would be attempted. But the new German theory that total payments abroad for all purposes, commercial and capital, with individual countries must be made as far as possible to balance, involves discrimination in the matter of debts. It is implied that America, with her heavily active trade balance with Germany, is helpless. German imports from the United States in the first half of this year were very little lower than in the corresponding half of 1933; but the German exports to America fell heavily, especially in the second quarter.

From a new official report on "The German Balance of Payments in 1924-33" it appears that German payments to the United States in 1933 for all purposes—goods, loans service, and capital repayments—exceeded all payments to Germany from the United States by some Rm. 800 millions. On current account, mainly goods, shipping and services, there was a net passive balance of Rm. 594 millions. The balance with Great Britain shows that in 1933 Germany's receipts exceeded outpayments by Rm. 100 millions. On current account there was a balance in Germany's favour of Rm. 49 millions. For raw materials there was a balance against Germany of Rm. 72 millions, for manufactured goods a balance in her favour of Rm. 229 millions, and for interest a balance against her of Rm. 95 millions. The movement of capital (debt repayments in various forms, etc.) involved net payments to Great Britain of Rm. 115 millions. Gold deliveries to Great Britain totalled Rm. 176 millions.

The introduction to this official report maintains that settlement of international accounts by trilateral methods cannot function, in view of official obstacles to international capital movements and impediments to trade. It implies that henceforth the disparities in the balances with individual countries must be reduced as far as possible by dealing direct with these countries. The conclusion apparently is that Germany must default on her debts to countries with which the German current (trade and services) balance is not sufficiently active. This principle, however, applied only when it favours German interests. There is no intention to devote the large surpluses of foreign exchange from such creditor countries as have active trade balances with Germany to the transfer of debt liabilities in full.

Money has been easy, with a day loan rate (Tuesday) of 4-4½ per cent. Demand for short-term securities, in particular Reich Treasury bills, has at times exceeded supply. The number of unemployed declined in September by 115,000 to 2,282,000, as against a decline of 274,000 in September, 1933. Of the present total of unemployed, only 298,000 are receiving insurance benefit, the remainder falling almost equally on "crisis" and municipal relief. Before 1933, September was usually a month of increasing total unemployment, in consequence of seasonal discharges.

INDUSTRIAL PRODUCTION SLACKENING

The latest report on industrial production, which refers to the end of August, is less favourable. It shows as compared with July a decline in the value of industrial production from Rm. 4,400 millions to Rm. 4,310 millions; and the volume index (1928 = 100) shows a drop from 88.8 to 86.6. While output of production goods rose slightly from 82.8 to 83.1, the output of consumption goods fell from 97.9 to 91.9, of which that of textiles fell from 103.2 to 87.9 in consequence of the reduction of hours prescribed in expectation of raw material shortage.

Textiles retail sales in August were 27 per cent. higher than in August, 1933. Pig-iron production in September was 775,517 tons against 798,547 tons in August, a longer working month; in the first three quarters it was 6,237,301 tons against 3,730,706 tons in the corresponding period of 1933. In the engineering industry there has been no material change; but total hours worked in September exceeded those of August. The cutlery industry, for the first time since the depression, reports some improvement in home and export business.

The preliminary work for replacing employees under 25 years of age by older persons progresses slowly; some local authorities complain that employers are delaying their returns, or are resorting to evasions, although these are punishable offences.

The foreign trade returns for September show a decline in the passive trade balance to Rm. 2 millions, against Rm. 9 millions in August. The best report of the year was for March, with an active balance of Rm. 3 millions. The passive trade balance for nine months is Rm. 266.5 millions. Imports in September totalled Rm. 352 millions, against Rm. 343 millions in August; exports, Rm. 350 millions against Rm. 334 millions. As import prices changed little, the value figures represent an approximately proportional increase in volume, which was mainly due to manufactured goods. At Rm. 75 millions, this import group now stands much higher than any monthly figure of 1934 or 1933, and is above the average monthly figure of 1932. The September increase consisted, however, largely of cotton yarn and cloth, leather, furs and iron, in partly manufactured condition.

The increase of Rm. 17 millions in exports consisted almost entirely of manufactured goods, mainly textiles, iron and copper wares, machinery, and toys. Exports of chemicals declined. An increase in total exports and in the exports of manufactured goods is usual in September. The Christmas export of toys is reported to be satisfactory. The decline in exports of pottery seems to have come to an end. Exports of cement, which began the year at under half the quantity in the corresponding period of 1933, have since more than doubled, and exceed the quantity a year ago. The German balance of trade in motor cars is becoming increasingly favourable.

BERLIN, October 17.

ITALY

THE CORPORATIVE STATE

PUBLIC opinion has lately been less focussed on foreign affairs than on the development of the new "Corporative" system. Signor Mussolini's words are eagerly waited. At Milan, on October 6th, after repeating the thesis that the present crisis marked the end of "Liberal capitalistic civilisation," the Duce rejected the alternative of State Socialism, on the ground, among others, that he did not want to multiply State employees by ten. The true solution, he said, was the Corporative one, which entrusted to producers the self-government of industry. This meant guaranteed work, a just wage and a decent home for the worker, as well as a more effective part in the regulation of the productive process. This speech will surely give food for reflection, but not for uneasiness, to the employing and capitalist classes.

The policy of deflation in order to maintain the present gold parity of the lira is being continued. To decrease the debt burden on property, the interest on land and real estate bonds issued by the "Credito Fondiario" Institutes (Land and Real Estate Banks) have been made convertible from 6 per cent., 5 per cent. and 4.50 per cent. to 4 per cent. Bearers were able to ask for reimbursement in the ten days from September 20th to 29th. Bondholders asked for the reimbursement of only 63.2 million lire out of a total of 4,300 million lire. Tax exemptions have been attached to the new loans which the Credito Fondiario Institutes will grant to assist the conversion of onerous private debts into the new 4 per cent. type. The new bonds are exempt from income-tax. On the other hand, the exemption granted in 1926 to bonds issued by joint-stock companies has been suspended. While taxation at 20 per cent. on the interest on industrial bonds will render the issue of new bonds more difficult, it will assist the issue of the securities through public institutes, such as the I.R.I. and I.M.I., which will presumably continue to be tax-exempt.

During the first two months of the current fiscal year (July-August, 1934) public expenditure was 2,420.6 million lire and public revenue was 2,563 millions. The deficit for the period was 315.7 million lire, against 717.7 millions in the corresponding period of 1933. Such a deficit is compatible with a cash surplus. The Italian Budget includes in "expenditure" not only sums paid, but sums which are legally due, but which may be actually paid in the distant future. In view of a decreasing Budget deficit and a surplus of cash, there is no need for the spectacular foreign loan which has been rumoured.

FLOATING DEBT AND GOLD RESERVE

It is possible that in the more or less distant future free conversion of the Floating Debt into a Redeemable or Consolidated security may be arranged. The Floating Debt amounted on August 31st to 11,161.7 million lire, a somewhat unwieldy proportion of the total debt of 103,159 millions. The whole Floating Debt takes the form of an overdraft at the Cassa Depositi e Prestiti, the State bank, which administers the postal office saving deposits. The total Floating Debt is approximately equal to the net amount outstanding of Postal Savings Certificates (11,523.6 million lire on July 31, 1934). These certificates, which have a maximum currency of 15 years, have proved a splendid instrument for the encouragement of savings. The certificate can always be cashed on demand, but as the interest paid increases progressively from 3 to 4.50 per cent., if the certificate is kept until the end of the fifteenth year, they are frequently allowed to run their whole life.

The position of the Bank of Italy continues to give rise to some concern, owing to the fall of the gold reserve (in million lire):—

	Dec. 31, 1932	Dec. 31, 1933	Sept. 30, 1934
Gold and gold devisen reserve.....	7,144	7,397	6,240
Notes issued	13,672	13,243	13,455
Advances and discounts	6,539	4,693	4,746
Official rate of discount	5	3½	3

It is hoped that the outflow of gold may cease, as the passive balance of trade is decreasing. According to the prevalent mercantilist theory, the decrease of the Bank's gold reserves is the effect of the foreign trade deficit. In recent speeches, however, Signor Asquini, Under-Secretary of State for Corporations, warned industrialists not to rely too much on prohibitions, protection and quotas, but on sustained efforts toward a reduction of costs.

TURIN, October 14.

HOLLAND

STILL MORE DEFLATION

THE 1935 Budget is estimated to show a deficit of 93 million guilders. The Budget includes a grant of 12 million guilders to the Netherlands Indies. The financial situation in the Indies is such that direct aid from Holland proved essential, and it was given in the form of a contribution towards the cost of the fleet. The Budget estimates (ordinary service) are as follows:—

	Million guilders
Expenditure	724
Revenue	631
Deficit	93

Proposed economies and new revenue are as follows:—

ECONOMIES	Million guilders
Pensions	3
Education	10
Grants to municipalities	20
Reduction in traffic fund deficit.....	17.5
Invalidity benefits and old-age pensions fund	14
Sundries	5

NEW REVENUE

Conversion of extra tax for municipality fund into extra tax for State income and property tax	19
Tax on mortmain property	3
	92

The Minister of Finances stated in a recent speech that, as the nation's standard of living would indisputably have to be stabilised upon a far lower level than at present, it was imperative to reduce Government expenditure nearer to that level. Expenditure at its present level, he alleged, could only be maintained by increasing the burden of taxation, which, in his opinion, would be detrimental to all branches of trade and industry. The Government were determined to maintain Dutch shipping by subsidies, and in order to obtain the necessary funds, the Minister said, additional retrenchment would be imposed. Many useful services would have to be abandoned. Wherever the Government granted relief or assistance, it would have to be given in such form that a lower standard of living would be obtained. It was only in this way, he said, that the reduction in production costs could be achieved which was essential to assist trade and industry and cope with unemployment.

ANTI-GOLD MOVEMENT GAINING GROUND

As a result of the acute depression the movement against the gold standard is gaining ground. Hitherto the gold standard controversy in this country had been of a purely theoretical and academic character. Now, however, a scheme has been announced for the foundation of a Netherlands Association for Stable Currency. A currency of stable purchasing power is meant. The founders, besides eight professors, include leading figures in Dutch trade and industry, such as Dr. A. Philips, of the Philips Lamps Works, Mr. G. A. Kessler, director of the Royal Dutch Smelting and Steel Works, Sidney J. van den Bergh, of the Board of Unilever, and Dr. H. F. van Leeuwen, director of the Twentsche Bank. The association's aim is to convince public opinion that a currency of stable purchasing power is a prime necessity.

Serious complaints are now being made about the position of exports to Germany and the payment for those exports. The difficulties are now so acute that the liquidity of numerous companies is being seriously menaced. The arrangement with the special account (Sonder-

konto) worked fairly well until the end of May, but not longer, because the German buyers importing foreign goods had their *devisen* rationed to an ever-increasing extent. Abuse was also made of the Sonderkonto by other countries which had no arrangement with Germany, as they also had their payments effected through the Netherlands Sonderkonto. By the agreement dated June 5th, measures were adopted to abolish these abuses, but nothing could prevent the balance on the Sonderkonto growing larger and larger, and the delay in realising claims growing longer and longer. Meanwhile negotiations with the German Government were opened, but failed.

The Dutch Government then instituted a compulsory clearing system. This measure was designed to stimulate the liquidation of the Sonderkonto. This failed to materialise, however, because Dutch imports from Germany underwent a considerable decline in the last few months, while Dutch exports to Germany increased, and the trade balance was consequently altered. Delays and arrears grew greater. Finally, on September 21st, a clearing agreement was signed. The Netherlands had, of course, attempted to get the arrears on the Sonderkonto settled by a lump sum payment from the German Government, but the scarcity of *devisen* in Germany made that impossible. The only solution was accordingly to withhold part of the clearing proceeds for paying off arrears on the outstanding Sonderkonto claims, and 10 per cent. of the payments to the Netherlands Bank is being reserved for this purpose. If payment of the arrears were insisted upon prior to any new transactions, as some dissatisfied parties have demanded, the export trade would necessarily be brought to a standstill.

AMSTERDAM, October 16.

NORWAY

INCREASED TRADE AND PRODUCTION

THE Budget accounts for the financial year ending June 30th have now been published, and reveal a surplus of 10.2 million kroner, compared with the estimates. There was a deficit in the preceding year of about 35 million kroner. The chief reason for this favourable outcome is the fall in the dollar exchange rate, in consequence of which there was a reduction of about 8 million kroner in the amount required for the service of the public debt. Further, there was a reduction of 6.2 million kroner in civil service expenses (salaries) as a result of the agreement in 1933 between the Government and the civil servants. The Government have floated a new 4½ per cent. conversion loan of 44 million kroner at 97½ per cent.

With the exception of the item "Balances abroad," which rose by 11.5 million kroner from August 31st to September 15th, the returns of the Norges Bank indicate only small movements in the course of the past month. Compared with the position in the same month last year, however, there is a considerable rise in the amount of notes in circulation and in loans and discounts, while deposits show a decline of 10 million kroner.

The foreign trade figures for August reveal a slight decrease in the turnover, as compared with the same month last year, but compared with July this year there was an increase of 11.4 million kroner. The following table indicates the figures for the first eight months of this year compared with the corresponding period of 1933 (in million kroner):—

	Imports	Exports	Import Surplus
January-August, 1934.....	479.75	370.3	109.45
January-August, 1933.....	431.45	350.5	80.95

Among imports, there was a remarkable increase in the number and value of private motor-cars. Among exports, paper and paper pulp rank first with an increase of 10 million kroner.

According to the figures published by the Statistical Bureau for foreign trade during the first half-year, Norway's trade with the "sterling" countries has increased substantially, while her trade with the "gold"

countries has receded, especially as regards imports. Great Britain's share amounts to one-quarter of the total turnover.

	Trade in First half-year			
	Imports		Exports	
	1933 Kr. Mill.	1934 Kr. Mill.	1933 Kr. Mill.	1934 Kr. Mill.
Great Britain	71	86	53	70
Germany	66	76	37	37
France	11	10	17	15
Holland	14	10	9	10.5

The index of industrial production rose in August to 106, compared with 98 in July and 91 in August, 1933. For the first eight months of the current year production is approximately 7 per cent. above that of the same period last year. In the last few weeks the large industrial concern, Union Company, has obtained a loan from England. This will enable the Centralbanken for Norges to liquidate its interest in the Union Company, which has been among the largest debtors of the bank.

In most parts of the country weather conditions have been favourable and the crops of grain and hay satisfactory. In the northern districts crops are far above the average, and considerable quantities of hay are being exported to England, Holland and Belgium at remunerative prices.

TRONDHEIM, October 14.

ARGENTINA

EFFECTS OF THE ROCA CONVENTION

In a recent address to the British Chamber of Commerce in Buenos Aires the British Ambassador reminded the Chamber that a year and a-half had now passed since the Roca Convention—at least, as far as the conditions relating to exchange and meat are concerned—began to operate, and he gave a summary of the results obtained. The main consequences have been as follows:—During 1933 the United Kingdom received, out of a total of available exchange amounting to \$1,091,000,000, some \$393,000,000, assigned as follows: 44 per cent. to general imports, 26 per cent. to British-owned public utility companies, 25 per cent. to debt payments to the United Kingdom and other countries in the proportion agreed, and the remaining 5 per cent. to private persons, etc. The exchange so granted covered 89 per cent. of the c.i.f. value of goods supplied from Great Britain. Other countries only received exchange covering 78 per cent. of their shipments.

The following figures are interesting:—

IMPORTS TO ARGENTINA FROM GREAT BRITAIN	
Year ended June 30, 1933	Year ended June 30, 1934
£11,881,000	£13,294,000
EXPORTS FROM ARGENTINA TO GREAT BRITAIN	
£45,629,000	£42,770,000

The decline in exports from this country might have been more marked had the Roca Convention not been signed during the first half of this year. There has been a marked improvement, a continuance of which, combined with an altogether healthier state in the financial condition of the country, should permit Argentina to consider the possibility of removing the 10 per cent. surcharge which the protocol of the Convention provided should be taken off as soon as the financial position of the country warranted. Removal of this surcharge should do much to increase imports from Great Britain.

The proposals for the Budget estimates for 1935 have now been sent to Congress. The 1935 figures are practically a replica of those for 1934, and result in an apparent deficit of \$20,000,000 paper pesos. No mention has been made, however, of one very important source of revenue, i.e. profit derived by the Government on their exchange operations. No figures are available about these operations.

LARGE INCREASE IN EXPORTS AND IMPORTS

The following are foreign trade figures for the first eight months of 1934 compared with those for the corresponding period of 1933.

ARGENTINE IMPORTS (TARIFF VALUES) DURING THE FIRST EIGHT MONTHS OF 1933 AND 1934

Origin	1933		1934		Percentage of Total	
	\$ Paper	\$ Paper	\$ Paper	\$ Paper	1933	1934
United Kingdom	133,258,624	146,060,302	21.4	23.0		
United States of America	74,280,170	96,112,798	11.9	15.1		
Germany	65,896,941	66,146,286	10.6	10.4		
Italy	59,953,009	46,719,440	9.6	7.4		
France	33,593,651	33,476,143	5.4	5.3		
Netherlands	12,015,992	10,724,368	1.9	1.7		

ARGENTINE EXPORTS (MARKET VALUE) DURING THE FIRST EIGHT MONTHS OF 1933 AND 1934

Destination	1933		1934		Percentage of Total	
	\$ Paper	\$ Paper	\$ Paper	\$ Paper	1933	1934
United Kingdom	283,615,928	312,944,984	36.1	32.0		
Belgium	82,992,895	78,341,311	10.6	8.0		
Netherlands	80,651,561	74,341,311	10.2	7.5		
Germany	55,793,607	70,108,252	7.1	7.1		
France	50,846,302	54,951,354	6.5	5.6		
United States of America	60,092,689	51,093,557	7.6	5.2		

TOTAL IMPORTS AND EXPORTS

	1933	1934	INCREASE	
	\$ Paper	\$ Paper	\$ Price	%
Imports ...	580,570,498	700,318,646	+119,748,148	+20.6
Exports ...	787,669,540	980,804,944	+193,135,404	+24.5
	+207,099,042	+280,486,298		

QUANTITIES IMPORTED IN TONS DURING THE FIRST EIGHT MONTHS OF 1933 AND 1934

	1933	1934	INCREASE	
				%
	4,497,576	4,575,791	+78,215	+7.1

These figures show a most satisfactory improvement, even after allowing for currency depreciation. The active balance of trade for the eight-months period exceeds by some \$57,000,000 paper that for the whole of 1933. The import figures, according to origin, demonstrate that Great Britain is getting at least a share of the general increase, but the United States have been even more favoured in this respect.

Attention has been called in the press to the fact that Argentine Government contracts seldom get awarded to British firms, and it is suggested in some quarters that Great Britain is not receiving fair treatment over these contracts. There is nothing, however, to suggest that all tenders are not treated in a strictly businesslike way; and it is possible that the real explanation of the apparent inability of Great Britain to secure such contracts is either that British firms have not tendered or that their tenders were not competitive. The chief difficulty in drawing up tenders for large Government contracts is the question how payment is to be effected. Fluctuations in exchange, and the occasional impossibility of obtaining *devisen* when required, make it most difficult for foreign firms, unless they are backed either by the banks or their own Governments, to quote competitive prices. Should Great Britain desire to obtain a share in such contracts, it would be wise to arrange, either through an industrial development finance corporation or through the banks, that firms tendering for such contracts should receive a guarantee of payment at a fixed date and for a fixed sum in sterling, the guarantors to reimburse themselves, plus commission, from the sums eventually paid by the foreign Government awarding the contract.

BUENOS AIRES, October 9.

CANADA

MORE CONSERVATIVE ELECTION LOSSES

THE Bennett Ministry suffered another severe reverse in a miniature general election held on September 25th, in which five Federal seats were contested. The Liberals easily retained the two seats which they previously held; they turned one Conservative majority of 398 into a Liberal majority of 3,654, and in a purely rural constituency, which had never before returned a Liberal, they transformed a Conservative majority of 3,371 into a Liberal majority of 2,498. The Government retained their third seat, but the Conservative majority over the Liberal was only about half the votes polled by a candidate of the Co-operative Commonwealth Federation. These results in seats which

Edited by
J.W.N. SULLIVAN
and
WALTER GRIERSON
(The Enquiring Layman.)

This work is written with great clearness without a dull page and is of enthralling interest. Both the Editors have been many times complimented for their gifts of clear and attractive exposition. Mr. Sullivan is the author of many "popular" scientific works, and Mr. Grierson is well known to a wide circle of readers as "The Enquiring Layman."

24 FORTNIGHTLY PARTS

The "OUTLINE OF MODERN BELIEF" is on sale at all Newsagents, Bookstalls and Bookshops, or by post 1/3 each part from George Newnes, Ltd., 8/11, Southampton Street, Strand, London, W.C.2.

MESSRS. George Newnes, Ltd., have pleasure in announcing the publication in part form of an important new work which will be eagerly welcomed by thousands of readers. It is something new. It is planned and written in a way that has not been done before.

The work is divided into three "Books" or Sections. The first and second are planned to meet the need that exists for a work which in a graphic but accurate way will give the lay reader a plain account of the new world-picture of Modern Science, and the resulting new ideas in Modern Thought. It tells you the essential things: the things you would like to know.

The third section deals with a separate subject. Here you get the full story, in history form, of the origin and evolution of the ancient Hebrew, the ancient Greek, and finally the Christian religion.

Traditional beliefs are slipping away. What is taking their place? You get a clear account of the new knowledge—the actual discoveries, the results of research, and of enlightened criticism.

THERE IS NO ONE BOOK QUITE LIKE THIS
SEE A COPY AND JUDGE FOR YOURSELF

represented a complete cross-section of opinion in Ontario, the great stronghold of Conservatism for the last thirty years, prove convincingly that the tide of public sentiment is running more and more strongly against the Bennett Government. Immediately after the results were known Mr Mackenzie King, the Liberal leader, again demanded the Government's resignation. The Conservatives are laying plans for an ambitious propaganda campaign.

The end of the third quarter of 1934 found Canadian business more or less stagnant. The latest business survey of the Bureau of Statistics covering the period up to the end of August gives the following weighted indices for different factors (monthly average for 1926 = 100):—

	Aug., 1933	Jan., 1934	Aug., 1934
Physical volume of business	89.8	86.8	99.0
Industrial production	89.5	84.5	99.8
Forestry	94.0	96.4	98.4
Mining	110.7	120.6	135.7
Iron and steel	46.4	55.5	66.9
Construction	27.2	47.4	40.7
Electrical power	168.0	162.9	184.8
Distribution	90.5	93.2	96.7
Agricultural marketings	197.2	48.2	172.8

Carloadings, bank clearings, railway earnings, industrial activity and mining and forestry production have all shown an upward trend during the past quarter, and reasonable confidence is felt about autumn and winter business. There was also a welcome spurt in building construction during September, and the value of the contracts placed in 61 leading towns is given at \$12,494,000, compared with \$8,386,900 in September, 1933. On the other hand, the employment index for September stood at 98.8, as compared with 99.9 for August and 88.5 and 86.0 for September, 1933 and 1932 respectively.

The Bureau's index of wholesale commodity prices (1926 = 100), fell to 71.8 for the week ending September 21st. The Federal revenues showed less buoyancy in August and September than in the preceding months, but aggregate revenue for the first half of the current fiscal year ending September 30th was \$162,410,766, compared with \$141,149,235 in 1933.

The gross operating revenue of the Canadian Pacific Railway for the first eight months of 1934 was \$78,908,000, a gain of 11.6 per cent. compared with the same period of 1933, and of the Canadian National Railway \$90,081,000, a gain of 13.4 per cent. There has been a welcome improvement in the export movement of wheat, which in August amounted to 14,709,675 bushels, valued at \$12,868,422, compared with 8,652,970 bushels, valued at \$6,656,511 in August, 1933. Canadian wheat in store on September 14th was reported at 216,863,848 bushels, as compared with 203,607,133 for the previous week and 212,129,649 for the parallel week of 1933.

WHEAT CROPS AND PRICES

The latest crop report of the Bureau of Statistics estimates the 1934 wheat crop of Canada at 277,304,000 bushels, of which the Prairie Provinces contribute 265 millions; this figure is slightly above the unrevised estimate of 269,729,000 bushels for wheat yield in 1933; but the 1934 yield comes from 8 per cent. less acreage. The estimates for the other important grain are: oats, 344,746,000 bushels; barley, 68,800,000; rye, 6,523,000; and flax, 1,096,000. Prolonged wet weather in the Prairie Provinces, however, has been responsible for serious damage to the unthreshed wheat, and the damage is described as so serious that very little of the wheat which was standing in the fields will be fit for anything but feed. If this is correct, a heavy reduction of Canada's exportable surplus would result.

Wheat prices have fallen sharply in the Winnipeg grain market during the past few weeks. During the last half of September wet weather stopped harvesting operations on the Prairies, and grain deliveries by the farmer, which had been averaging three million bushels per day, fell to half that amount. But during the same period wheat "futures" of a volume three or four times as large as the grain delivered were sold on the Winnipeg market, and the support given by Mr. John I. Macfarland, the Government's wheat agent, could not prevent a rapid decline in prices. Now Mr Macfarland, after expressing the view publicly that there is on foot a determined conspiracy on the

part of a group of powerful European importing firms to smash the price structure at Winnipeg when it is showing resistance in face of persistent weakness at Liverpool and Buenos Aires, has demanded a Governmental inquiry into recent operations in the Winnipeg market and suggested that similar investigations should be held at Liverpool and Buenos Aires. Communications are being exchanged with Mr Bennett, who is in London, and it is possible that the Government may close the Winnipeg market temporarily and assume charge of all wheat-marketing operations.

Foreign trade in August, although showing a decline from the July figure, is keeping up well:—

	August, 1933	August, 1934
Imports	\$ 38,747,030	\$ 43,507,331
Exports	\$ 44,723,252	\$ 55,249,375
Total	\$ 83,470,282	\$ 98,756,706

The increase of 10½ million dollars in exports was due entirely to gains in exports to countries of the British Commonwealth. The increase in imports from Britain has been proportionately smaller, but imports of British textiles have increased.

On October 1st the Dominion Government offered to the public a new refunding loan of \$250 millions in four denominations of two-year, four-year, eight-year and fifteen-year bonds bearing interest at 2 per cent., 2½ per cent., 3 per cent. and 3½ per cent. respectively at prices which will yield respectively 2.75 per cent., 2.90 per cent., 3.43 per cent. and 3.81 per cent. The banks have agreed to lend investors up to 75 per cent. of the par value of bonds purchased, and officials of the Finance Department profess themselves well satisfied with the response which, after four days, has already produced almost half the amount sought. Holders of the 5½ per cent. Victory Loan of roughly \$222 millions which matures on November 1st, are converting freely.

OTTAWA, October 8.

BOOKS RECEIVED

Quo Vadimus? A Criticism of the Government's Agricultural Policy. By a Tenant Farmer. (Reprinted with additions by the Author from *The Countryman* of January, 1934). "The Countryman," Idbury, Kingham, Oxfordshire. 8 pages.

A brief but effective attack on Mr Elliot's agricultural policy by a tenant farmer. The author would like to revive British agriculture by expanding demand and not restricting supply.

Outline of Modern Belief. Edited by J. W. N. Sullivan and Walter Grierson. To be completed in about 24 fortnightly parts at 1s. each. (London) George Newnes.

MONEY AND BANKING

THE SILVER STRUGGLE

ONCE again silver has appeared on the international scene. The announcement that the Chinese Government has raised the export duty on silver from 2½ to 10 per cent., with the reservation that the duty will be raised still further to counteract any further increase in the price of silver, is the culminating point of a concealed struggle which has developed between China and the United States.

At the end of last year, the American Government, in fulfilment of the London Silver Agreement, undertook to buy newly-mined American silver at the high price of 64½ cents an ounce. Last May, the Silver Purchase Act was passed, and on August 9th President Roosevelt issued a proclamation calling on all holders of silver in the United States to sell their stocks to the Treasury at a fixed price of 50.01 cents an ounce. Since then the American Treasury has also been a consistent buyer of imported silver, and though the price is undisclosed it is significant that the New York market price has risen from 50 cents to 55½ cents an ounce. It has also become clear that President Roosevelt has given way to the American silver interests, and intends to interpret the terms of the Silver Purchase Act in a generous spirit, at least until the Congressional elections.

To China these new American developments meant both a fresh drain of silver from up-country to the ports and thence to the London and New York markets, and also an appreciation of her dollar in sympathy with the rising trend of silver. Her position has also been accentuated by the autumn depreciation of sterling against the dollar, for if since August 13th the New York price of silver had risen by 11.2 per cent. from 50 cents to 55½ cents an ounce, the London price had risen by 15.4 per cent. from 21½d. to 24½d. an ounce. The sterling value of the Chinese dollar, which is the vital factor in China's external economy, had risen from 16½d. to 18½d. (on October 15th). The rise in the price of silver was thus having a serious effect on the Chinese exchange market.

In these circumstances, China imposed an export duty on silver; and City opinion holds that this was her only possible reply to the artificial inflation of the price of silver by American acts of policy. It is easy to see that the purposes of the Chinese Government are, first, to check a drain of silver, and secondly to prevent her dollar from appreciating as a result of purchases of Chinese dollars out of the proceeds, in sterling and American dollars, of the sales of Chinese silver in foreign markets. Make it unprofitable to export silver for sale abroad, so the Chinese Government's argument runs, and silver will cease to be shipped, and there will be no artificial demand for Chinese dollars as a result of silver shipments and sales. Moreover, the export duty can be increased in exact proportion to each successive advance in the London or New York price of silver, and so the Chinese dollar can be prevented from appreciating just as effectively as if the exportation of silver were prohibited. The main risk run is that the new duty may stimulate smuggling, though some London authorities hold that large-scale smuggling is impracticable.

As we have urged before, it is impossible not to feel a considerable degree of sympathy with China. From time to time attempts have been made, in this country as well as in the United States, to prove that a rise in silver and an appreciation of the Chinese dollar would be beneficial to China. Initially, no doubt, such movements would increase her power to import, and would also add to the purchasing power of all Chinese owners of silver treasure. In the long run, an artificial appreciation such as is taking place at present would have a most disastrous effect. It would be akin to a forced appreciation of her currency, imposed upon her from outside, and it could but end in an adverse trade balance, a continued drain of silver, and widespread deflation, bankruptcy, restriction of credit, and disappearance of her chief medium of purchasing power. An appreciation of her dollar as the result of active export trade and a favourable trade balance would no doubt be a healthy symptom. An artificial appreciation, coming at a

time when her external balance of payments is already unfavourable, is quite the reverse.

It is indeed possible to draw a fairly close parallel between China and France. When last January, by a stroke of the pen, President Roosevelt revalued the dollar at \$35 per ounce of gold, he artificially caused the franc to appreciate to 6.63 cents, though the franc was even then over-valued. The result has been exactly what every competent observer foresaw. French wholesale prices have since fallen by 7.4 per cent., and both French internal and external trade have gone from bad to worse. Now President Roosevelt, by artificially forcing up the price of silver, is threatening to bring about precisely the same enforced appreciation of the Chinese dollar. Up to this point the parallel is exact.

In China's case, however, the results are likely to be infinitely worse. France enjoys a stable central Government, and a well-developed currency, credit and banking system. China has none of these advantages. The writ of her Government only runs intermittently, and politically and socially the country is far from homogeneous. Her currency and credit system is over large areas of the country primitive in the extreme. Paper currency, or payments through cheques or other credit instruments, are almost unknown outside the maritime provinces. Even the metallic silver currency is so suspect that payment in weights of silver or even direct commodity barter is in many remote districts the general rule. Devaluation of the silver dollar by the Chinese authorities is, therefore, no remedy. It is clear that a drain of silver, or even the over-valuation of the Chinese dollar against foreign countries, might have the most serious consequences. On the purely economic side it might quickly end in general ruin, the stagnation of trade, and a drastic contraction of purchasing power. Politically it might well weaken the present tenuous hold of the Central Government and bring about a recrudescence of banditry and communism.

These considerations make it imperative for China to check by any means in her power an artificial appreciation of her currency, and it is to be hoped that her weapon of an indefinite export duty on silver will prove effective. It is easy to say that the United States is not playing the part of a good neighbour, and that President Roosevelt is sacrificing China to the clamour of the American silver interests. The latter, however, are only thinking of their own ends, and indeed it is reported that their real objective is the restoration of the old 16:1 ratio of silver to gold on the basis of a gold price of \$35 an ounce. This would raise the American price of silver to the fantastic level of \$2.19 an ounce, or to roughly four times the present New York price. A further point is that if the Chinese export duty successfully checks shipments of silver the world supply of silver will be correspondingly reduced, and a further advance in the price would be the natural consequence. In one sense, therefore, China is playing into President Roosevelt's hands, but in another sense her export duty constitutes just as effective a Chinese suspension of the silver standard as our relieving the Bank of England of its need to sell gold constituted a suspension of the gold standard. At the moment the Chinese dollar is nearly as free in terms of silver as sterling is in terms of gold.

So far the imposition of the new duty is operating in this direction. The immediate result was the cancellation of exports of about 10 million ounces of silver which was already on board in Chinese ports. On Tuesday the sterling quotation of the Chinese dollar lapsed from 18½d. to 17½d., to a discount, presumably, below the true parity with the London price of silver equivalent to the export duty of 10 per cent. The question is whether once it has penetrated the average Chinaman's mind that his currency is virtually divorced from silver, he will continue to have any confidence in his currency at all. For these reasons it is to be hoped that President Roosevelt and his advisers will see reason before irreparable damage is done.

Meanwhile, the rest of the world can do little to assist. The Indian Government is precluded by the terms of the London Agreement from increasing its sales of silver, even though the United States Government has torpedoed the Agreement in spirit, if not in letter. Bazaar sales from India will no doubt increase, and bazaar interests have ample connections in the London market. Even so, there is little prospect of freeing the silver market from American domination. Nor is there any early sign that official American silver purchases will be relaxed. President Roosevelt is still hankering after depreciation of the dollar at home, which in all probability means abroad as well, and even heavy imports of silver are such a very small item, when expressed in terms of dollars or sterling, that it may take him a long time to discover that official silver purchases are an ineffective lever. In these circumstances, China herself has taken the best measures of defence, though at the cost of temporarily divorcing her currency from silver. All we can do is to remind President Roosevelt that he is sacrificing his largest potential foreign market for the sake of his silver interests and to point out the unwisdom of allowing American silver Senators to ride roughshod over the needs of the rest of the world.

FINANCIAL NOTES

The Money Market.—Towards the end of last week the clearing banks unexpectedly reduced their rates for Treasury bills maturing this year from $\frac{3}{4}$ to $\frac{1}{8}$ per cent., thus recognising the difficulty of enforcing higher rates in face of the dwindling supply of bills. This week they have bought a few November bills at $\frac{1}{8}$ per cent., but as other interests have been ready to buy at $\frac{3}{8}$ per cent. and under, the banks' demand for short bills has not been entirely satisfied. Last week's tender rate averaged 14s. 5.74d. per cent., against 15s. 9.70d. per cent. the week before. This fall was disappointing to the market, but not unexpected in view of the reduction in the clearing banks' rates the night before. The supply of Treasury bills issued by tender has been reduced during the week from £423.4 to £422.4 millions, while the total Treasury bill issue has risen from £829.3 to £830.7 millions.

	Sept. 27, 1934	Oct. 4, 1934	Oct. 11, 1934	Oct. 18, 1934
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Short Loan rate :—				
Clearing banks	1	1	1	1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills :—				
(a) Clearing banks.....	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$
(b) Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Money has been very easy, and $\frac{1}{2}$ per cent. was the ruling rate, except on Thursday, when clearing bank calling raised the rate to $\frac{3}{4}$ per cent. Money is often a little dearer on Thursdays than on other days of the week.

The Foreign Exchanges.—The week has witnessed a fairly sharp recovery in sterling from \$4.89 $\frac{1}{2}$ to \$4.94 $\frac{1}{2}$ against the dollar and from Frs. 73 $\frac{3}{4}$ to Frs. 74 $\frac{1}{2}$ against the franc. The discount on three months' dollars has weakened from $\frac{3}{8}$ to $\frac{1}{2}$ cents, while three months' francs have receded from 12 to 1 $\frac{1}{2}$ centimes premium. The London exchange market has been very unsettled, and political uncertainties on the Continent and recent news from Washington have both played their part. The main doubt, however, is whether the period of the autumn weakness of sterling is drawing near its end. Here London bankers are pointing out that the autumn is not yet very far advanced. It is quite possible that a further commercial demand for dollars will develop during the next few weeks, especially as there has yet been no evidence of any seasonal increase in dollar acceptances against exports. The mark has weakened to Rm. 12.19 and sondermarks to Rm. 12.41. The first of a series of returns, to be published every Tuesday and Friday, shows that the unsold balance held by the

Bank of England at the Reichsbank on October 13th amounted to Rm. 5,200,000, or Rm. 200,000 in excess of the limit at which payments into the account are suspended. A sum of Rm. 11,400,000 was awaiting payment into the special account on that date. The Anglo-German Exchange Agreement is thus working very slowly.

The Bank Return.—There has been a reduction this week of £2.4 millions in the note circulation, but this movement is parallel to that of a year ago. The Bank's reserve has risen by the same amount. The quantity of silver coin held in the issue department has fallen below £3,000,000, this being due to an increase in the amount of silver in circulation. More active trade and employment is a possible explanation, but the banks may also be keeping silver coin in their tills in readiness for Christmas.

	Oct. 18, 1933	Dec. 27, 1933	Oct. 3, 1934	Oct. 10, 1934	Oct. 17, 1934

Discounts and advances	8.5	16.8	12.7	14.0	9.5

Proportion 48.0% 37.3% 45.4% 44.7% 47.2%

The only appreciable change in the banking department has been a decline of £4.5 millions in discounts and advances. This reverses the upward trend of previous weeks, which appears to have been only a temporary movement. These movements have not arisen out of any operations between the Bank and the money market, and possess no special significance.

New York Money and Banking.—New York money rates remain unchanged. The official call rate is $\frac{1}{2}$ per cent., and 90-day bankers' acceptances are quoted at $\frac{1}{10}$ per cent. During the week ended October 10th bankers' loans remained unchanged at \$725 millions. The Treasury sold this week a further \$75 millions of six months' bills at an average price of 99.894 per cent. Acceptances outstanding at the end of September were \$539.4 millions, against \$520.0 millions at the end of August and \$714 millions a year ago. There was therefore a slight seasonal increase during September, due to heavier financing of primary products in domestic warehouses. Acceptances against exports again fell by \$2,000,000 during September. According to the Treasury statement the Government's emergency expenditure for the first 15 weeks of the current financial year has exceeded \$1,000 millions.

American Currency Policy.—The probability of further changes in the currency policy of the United States Government continues to be eagerly canvassed in New York. The continued absence of an autumn recovery in trade and the very heavy burden of unemployment relief are undoubtedly increasing the political attractions of "drastic methods." The presence of Professor Warren at the White House last week and a declaration by a Democratic Senator, on emerging from the Presidential presence, that "the possibility of devaluation cannot be dismissed," gave rise to one of the recurrent but brief inflation scares in Wall Street. The dollar fell and the Stock Exchange boomed. *Démentis* followed quickly, another Democratic Senator declaring roundly that "neither the President at this time, nor the incoming Congress in January, will take steps to further devalue the dollar or resort to inflation, controlled or otherwise." Mr Roosevelt himself, however, was not so definite, answering a question on future policy by the statement that he was neither a prestidigitator nor an astrologer. He is, however, a politician, and politics will dictate future decisions. The indications are that the

President and his advisers are impressed with the demand for certainty and stability and disappointed with the results of previous "money magic" (the phrase is that of the Secretary of Agriculture). The truth probably is that the President would be as pleased as everybody else if he could make a final announcement of future policy. But having bent before the inflationary storm so often in the past, he cannot be sure that he will not have to yield to it once again. Another subject on which political considerations impose hesitant vagueness is that of banking reorganisation. It will be remembered that the last "inflation scare" was started by the forecast of the "nationalisation" of the Federal Reserve system, which was interpreted as foreshadowing an institution for the lavish distribution of Government credit to all comers. It now appears that what was intended was no more than a centralisation of the unduly regionalised Federal Reserve banks, together with an attempt to create one corpus of banking law instead of the 49 now existing. Both these projects are admirable and necessary, but they may be defeated by the small-town particularism which is the bane of Congressional politics.

The Lira's Weakness.—A slow but persistent drain of gold and a slight expansion in the note circulation have reduced the reserve ratio of the Bank of Italy from a normal figure between 47 and 50 per cent. to only 42.43 per cent. As the minimum rate is 40 per cent. it looks as if the Italian Government will very soon be forced to choose between abandoning the 40 per cent. minimum and going off the gold standard. It has been widely rumoured that had the political negotiations between Signor Mussolini and M. Barthou reached fruition, French financial help to Italy would have been forthcoming. M. Barthou's untimely death has delayed matters, and the indications are that within the next few weeks Italy may have to make this choice. For many months past the lira has been one of the weakest of the gold currencies. Last February the discount on forward lire was so great as to equal 17.5 per cent. per annum, while this week it is still equivalent to 4.4 per cent. In Paris the spot quotation is now Frs. 129.95 per 100 lire, against parity of Frs. 134.3. Thus the decline from parity is 3.3 per cent., which is unusually wide for a currency on the gold standard. Also the lira has recently received consistent support in Paris, and doubts have been expressed as to whether the full cost of such support is reflected in the Bank of Italy's statement. The general impression in the London exchange market is that with effective restrictions in force against outward capital movements the lira is in no immediate danger, but the cumulative deterioration of its position must be giving rise to anxiety.

The Italian Exchange Position.—The causes of the lira's weakness are fairly easy to determine. Italy's external debt position is fairly strong. Her main foreign obligation is a \$350 million American bond issue, and most of the bonds have already been repatriated. It is conceivable that the issue will soon be converted into a lira issue bearing a lower rate of interest, as was done with the United Kingdom 5 $\frac{1}{2}$ per cent. dollar bonds. The balance of "Invisibles," such as tourists' expenditure and emigrants' remittances, is still in Italy's favour; but these items have shrunk during the past few years, and in particular the better-class hotels are doing badly. The visible trade position, however, has lately deteriorated. Between 1928 and 1933 the import surplus was successfully reduced from 7,356 million lire to 1,464 million lire, but this year it already amounted to 1,540 million lire for seven months. The Bank of Italy's gold and *devisen* losses during these months amounted to 999 million lire, so that, allowing for invisible items, there is a fair correspondence between Italy's passive balance of payments and her gold losses. Italian exporters must be feeling the effects of the drastic German trade restrictions, for Italy normally does a big trade with Germany. Another source of weakness lies in the financing of the public works programme of the Italian Government, which to some extent resembles the German scheme, and in any case is

Crowns, Fmk. Zlotys.

bound to stimulate imports of materials. Since 1930 the national debt has risen from 95,000 million lire to 106,000 million lire, and if the various guarantees undertaken by the State in connection with the recent banking and industrial reorganisation schemes are taken into account, the effective size of the national debt may be as much as 160,000 millions. These circumstances go far to explain the persistent weakness of the lira.

Anglo-South American Bank.—Compared with a year ago, both deposits and the principal assets of the bank are appreciably lower than a year ago, but the shrinkage is more apparent than real. A year ago the South American assets and liabilities were converted into sterling at the official rates of exchange of the countries concerned, but this year in most cases the conversion has been made at free market exchange rates. To illustrate the effect of this change in procedure, it may be instanced that whereas last year about 13 Argentine pesos were taken as equal to £1, this year the ratio is approximately 20 pesos to the pound. Only with Chile has it been necessary to use the official rate, partly because there are prospects of the stabilisation of the currency at well above the free market value. So far as can be told from an examination of the accounts, both deposits and assets, when expressed in their original currencies, have been well maintained, especially as the repatriation of British funds from the Argentine under the Roca agreements must have brought about some diminution in both the bank's cash and deposits. The principal items in the accounts are summarised below:—

	1932	June 30 1933	1934
Liabilities :—	£'000	£'000	£'000
Issued capital.....	6,633	6,633	6,633
Reserve fund	72	96	70
Legal reserves abroad	3,208	2,479	2,410
Acceptances.....	25,564	28,429	24,585
Deposits	4,648	4,222	4,219
Bills for collection			
Assets :—			
Cash.....	4,356	9,228	7,320
British Government securities.....	380	370	875
Foreign securities	1,553	1,513	1,368
Bills receivable.....	4,401	3,367	2,916
Advances.....	15,988	14,723	12,670
Holdings in subsidiary companies	3,143	3,110	2,521
Suspense account, for depreciation of capital employed abroad	1,415	1,350	2,034
Net profits	466	63	61
Contingent liability	7,500	7,500	7,500

Both gross profits and expenses have been reduced somewhat by the change in the method of conversion, but with international business still at a low ebb it must be admitted that the bank's earning capacity remains limited. There are, however, slight signs of more active internal business in the Argentine.

THE STOCK EXCHANGE

TOBACCO SHARES

THE British tobacco industry may be described as a monopolist hierarchy, qualified by the competition of vigorous independent concerns. The financial strength of the leading concerns and the resilience of their earnings in the difficult circumstances of recent years has given their shares an enviable standing with conservative investors. Recent changes in the character of competition, however, within its limited range, may have far-reaching significance. After nine months of the "coupon pact," a review of trends and possibilities may be of interest.

Leading concerns, in the past, have been chary in providing extensive information to shareholders, who have necessarily "invested in names" to an extent unsurpassed in any other industry. Faith has been justified by works, but the element of mystery which shrouds the earning of tobacco profits is making assessment of individual company prospects somewhat hazardous. The demand for tobacco manufactures as a whole is inelastic, but for individual products it retains considerable elasticity. Post-war social changes, which confirmed the cigarette habit and encouraged its rapid growth among women, have earned a steady increase in demand for this most remunerative "line." The upper limit to consumption has probably not yet been reached; for tobacco is regarded, in all strata of society, as a conventional necessity. Makers of popular brands have been reluctant to lower the general price of 6d. for ten cigarettes, but competition by quality has been acute.

Behind the façade of an apparently stable retail price, certain factors which came to a head last year indicated that a change in relative position among the leading manufacturers was in progress. The apparent inability of all companies to enforce price maintenance encouraged a rapid growth of cut-price retailing, in which the brands of the youngest competitors were sold, usually, at the heaviest "discount." This development increased the turnover of the newer firms without making for any reduction of their wholesale profits margin. Simultaneously, "coupon" competition reached a pitch which certain units of the Imperial Tobacco Company could scarcely afford to ignore. Although at that time a packet of cigarettes presented as diverse a bundle of "utilities" as any economist would care to analyse—a large element of indirect taxation, the prestige of a name, the attractions of gifts which were becoming increasingly valuable, and the eventual solace of consumption—there seems little question that coupons were largely determining the demand for the majority of popular brands. Shareholders in the leading non-coupon concerns had every reason for apprehension that their quasi-monopoly powers were being seriously attacked. The rapid growth of the Carreras and Ardath companies—the two leading exponents of the coupon system—was an undoubted challenge to the popular Imperial Tobacco brands.

Although coupon competition never reached the limits achieved in the "newspaper war," its effects on profits were quite appreciable, as the table below suggests. After prolonged discussions, however, under the ægis of the Tobacco Trade Association (including manufacturers, wholesalers and retailers), agreement was reached in November last year to abolish coupon trading from January 1, 1934, to take the utmost precaution to prevent price-maintained brands from reaching the public at cut prices, and to prevent any reduction of minimum wholesale re-selling prices. A system of registration for wholesalers and retailers with the Association was evolved, which exposed non-signatory dealers to direct trading with the manufacturers on unfavourable terms.

Although no official pronouncement has been made, it is understood that the coupon manufacturers, who *prima facie* were likely to lose under such an arrangement, were able to secure the principle of a production quota for individual concerns. Their agreement was reported to be contingent

on the adoption of a compensation pool, to which members whose sales exceeded the basic quotas would contribute a cess, and from which concerns whose sales showed a short-fall would draw corresponding benefit. The cessation of coupon trading has been followed by a reduction of advertising allocations. The following figures, published by courtesy of the London Press Exchange, indicate the decline of display tobacco advertising, computed from their survey of 80 per cent. of the total number of periodicals and newspapers:—

ESTIMATED COST OF TOBACCO ADVERTISING				
Period Jan.-Sept.	Cigarettes	Tobacco	Total	
1933	965,398	197,836	1,163,234	
1934	817,951	167,295	985,246	
Decrease ...	147,447	30,541	177,988	
Decrease (%)	15.4	15.4	15.3	

These figures are calculated at normal position rates, and do not necessarily indicate the absolute change in the period. The proportionate change, however, is obviously important, and if the cost of coupon gifts and the probable fall in outdoor advertising is included, the publicity economies from the pact are likely to be substantial.

The new arrangement has certainly obviated the possibility of aggressive competition, following the negative conclusions of the Board of Trade Committee on coupon trading. It becomes, accordingly, simpler to assess the progress of individual firms from the course of the industry as a whole. The following table, which shows the trend of raw tobacco imports and Customs entries for home consumption, illustrates the fairly moderate impact of depression and the rapid recovery symptoms which, to judge from Customs entries for the first eight months of this year, are steadily continuing:—

UNMANUFACTURED TOBACCO				
	Imports			Entered for Home Consumption
	Quantity	Value	Av. Import Price	
	Thous. lbs.	£'000	d. per lb.	Thous. lbs.
1930	237,028	14,642	14.8	233,642
1931	194,046	10,397	12.9	192,045
1932	174,912	9,523	13.1	187,519
1933	211,234	10,975	12.5	194,177
Nine months to Sept.:				
1932	104,576	5,159	11.9	128,439*
1933	128,738	6,563	12.2	128,076*
1934	143,068	7,998	13.4	138,664*

* Eight months to August in each year.

The trend is also confirmed by the percentage of unemployed insured persons in the industry, which rose sharply from 7.1 to 11.4 between 1930 and 1931, but has since fallen steadily (assisted somewhat by a reduction in numbers insured) to below 6 per cent.

Although the movement of export trade in manufactured tobacco is no longer fully representative of the experience of companies trading overseas, in view of their increased productive capacity in leading consuming countries, the figures show some expansion from the low level of 1932:—

EXPORTS OF MANUFACTURED TOBACCO (EXCLUDING SNUFF)						
	Quantity	Value	Principal Importers—values in £'000			
			British Malaya	British W. Africa	China	Siam
	Thous. lbs.	£'000				
1930	33,127	8,437	2,165	644	906	...
1931	21,154	5,171	1,313	342	637	318
1932	17,146	4,157	1,028	386	220	454
1933	21,460	4,058	1,085	433	113	382
Nine months to Sept.:						
1932	12,929	3,174	808	287	176	326
1933	15,035	2,997	806	291	85	314
1934	20,159	3,215	970	207	83	322

* Nine months' figures of total tobacco exports, less "all other descriptions."

Particular interest attaches to the rapid decline in the Chinese market, which has resulted from the fostering of a domestic industry in which British-American Tobacco has played an important part.

Our next table is designed to show, in summary form, the inter-relationships of the Imperial Tobacco Company group and the recent profits record of these and certain non-combine companies. The organisation of the Imperial group is based on geographical principles, the Imperial company catering exclusively for the home market, while the associated British American Tobacco Company, through its widespread interests, has the rest of the world for its oyster.

Company	Principal Interests	Total Profits (£'000) years ending in		
		1931	1932	1933
IMPERIAL GROUP				
Imperial Tobacco	20 mfg. co.'s; 2 retail co.'s; U.S.A. buying organisation.	9,876	8,647	7,594
has large interest in				
British American Tobacco	100 co.'s in Canada, China, India, South Africa, etc.	5,334	5,438	5,403
whose Associated Co.'s include

Brit. Tob. Co. (Australia)	W. D. and H. O. Wills (Aust.) and other subsidiaries.	748	585	586
United Tob. Co.'s (South)	S. African business and 2 subsidiaries.	645	484	548
and an interest in				
Tobacco Securities Trust	Shares in B.A.T. subsidiaries; 47% interest in Tobacco Insurance.	649	677	807
OTHER COMPANIES				
Ardath*	Controlled by Universal Tob. Co.; B.A.T. holds large interest in connection with export trade.	500	455	460
Carreras	Working arrangement with John Sinclair in export trade; owns Melbourne subsidiary and factory in India.	770	787	868
Gallaher	International Tobacco, Peter Jackson and certain American interests.	286	309	329
Godfrey Phillips	11 subsidiary companies	150	125	124
Cohen Weenen*	which controls	108	90	82

* Profits in years ending in 1932, 1933 and 1934. † Believed to amount to £761,489 5 per cent. Pref., £1,473,695 6 per cent. Pref., and £6,526,074 Ord. Stock.

The profits figures for the Imperial group as a whole require to be read with caution. In accordance with holding company policy, it is the practice of these companies to bring into the parent companies' accounts sufficient profits from subsidiary companies to pay the dividend which the board from time to time determines. The omnibus profits figure in the Imperial Tobacco accounts is defined in five lines of description, and the indicated earnings, it is safe to say, are subject to a large element of "policy," and may not necessarily indicate the exact earnings experience of the group in any given year. Subject to this caveat, it will be seen that the indicated earnings of Imperial Tobacco fell by over £1,000,000 during each year since 1931, while the distribution was reduced from 22½ per cent. to 20 per cent. in 1932 and 1933. During this period the B.A.T. Company, for which 1929-30 was also a peak year in recent times, stabilised its declared earnings and dividend, despite exchange difficulties and problems of taxation. A significant feature of the table is the rising trend of certain non-combine firms. Carreras' profits, although well below the 1928-29 record figure of £1,316,945, showed considerable recovery during the year to October, 1933, while Gallaher, whose shares have recently attracted considerable attention on an increased interim dividend and the acquisition of two new subsidiaries, continued its steady growth.

In view of recent exuberant buying of tobacco shares, investors may reasonably inquire if the joint benefits of non-coupon trading and a steady expansion in production are, of themselves, sufficient to justify the anticipated expansion of earnings which is indicated by the return on leading equity shares in the annexed table of quotations. On some grounds it would be rash to budget for a large reduction in costs. The average import price of raw leaf shows an increase from 12.2d. per lb. to 13.4d. per lb. during the first nine months of this year, and although tobacco forms a relatively small proportion of total costs, and fluctuations in its price are in most cases covered by overt or hidden reserves, nevertheless the most recent estimate of the American crop for 1934 (1,043 million lbs.,

against 1,396 million lbs. in 1933 and 1,438 million lbs. for the average of 1928-32) suggests that competition for 1934 leaf will be keen. Present quotations suggest that less is feared on this score than is expected from the signing of peace in the industry:—

Company	Denom.	Dividend Latest Year	Quotations, 1934			Yield %
			High	Low	Oct. 17	
Imp. Tobacco	£1 ord.	20*	£6½	£5½	£6½	£ s. d. 3 0 6*
Brit. American	Ord. stk. (£1 units)	20*	£6½	£5½	£6½	3 0 6*

Gallaher	£1 ord.	11	93/1½	50/-	90/-ad	2 8 9
Godfrey Phillips	£1 ord.	7½	39/3	24/9	37/6	4 0 0
Cohen Weenen	7% cum. pref. £1.	8	29/-	23/9	25/-	6 8 0

* Free of income tax.

† Dividends paid free of South African normal income tax.

A yield equivalent to £3 18s. per cent., gross, on Imperial Tobacco ordinary, against £4 13s. 3d. per cent. on Carreras suggests that the market is budgeting, not unreasonably, for a considerable reversion of demand to the popular combine brands, which, by common consent, suffered most severely in the coupon era. Moreover, expectations are widely entertained that Imperial Tobacco may distribute part of a reported, but hidden, "fighting fund" which is no longer required. Two points, however, deserve emphasis. In the first place, any principle of compensation which may have been agreed upon may to some extent tend to stabilise earning power until a vigorous upswing in consumption makes itself felt. Secondly, the limited fall of tobacco earnings during depression has generated a not entirely logical assumption that recovery prospects are necessarily brighter than for other industries whose profits have slumped appreciably. The character of demand for tobacco, however, suggests that the limited falling off during depression is more likely to be followed by a relatively moderate increase when general purchasing power expands. Granted even the partial validity of this assumption, the special investment attention recently given to the tobacco group may well have already discounted recovery possibilities somewhat generously. At present levels the conservative investor is fully entitled to adopt a cautious attitude.

INVESTMENT NOTES

The "Grid's" New Loan.—This week's offer of £6,000,000 Central Electricity 3½ per cent. stock 1974-94 at 93 raises the total amount of stock issued by the Board to £50 millions. The actual proceeds of the issues will amount to £47,172,500, so that the Board will still be a considerable way from having exhausted its maximum borrowing powers of £60 millions. The new loan represents the cheapest borrowing by the "Grid," for it gives a "flat" yield of a penny or so under 3½ per cent., whereas the average rate paid on the previous loans was £4 14s. 9d. per cent. The effect on the average is to reduce it by three shillings to £4 11s. 9d. per cent., which still leaves the interest burden on the Board rather high judged by present-day standards. There is, moreover, some reason to suppose that a larger proportion of the present issue than of the earlier issues will be allocated to standardisation of frequency, in which case the "Grid" itself will benefit only very slightly. However, if the "Grid" has been somewhat unfortunate in having to raise the bulk of its capital in the dear money period of 1929-32 it has, as we pointed out in our full review of the "Grid's" finances in June (the *Economist*, June 16th, page 1320, June 23rd, page 1381), probably been fortunate in the time of its beginning to trade. Its estimates of future consumption of electricity

—and as the "Grid" finances itself by a toll on every unit carried over its transmission lines, it is every unit consumption that counts—were framed in the depth of the depression. It has been officially stated that, in fixing its tariffs, allowance was made "for the retarding effect of the world trade depression." It may be taken as certain, therefore, that the actual expansion of the demand for electricity (as much as 16.1 per cent. in the first nine months of 1934) has considerably outstripped the Board's estimates, and the "Grid's" finances have benefited thereby. The cost of construction of the "Grid," moreover, has come out creditably near the original estimates. The recent increases in the Board's borrowing powers have been due largely to the unexpectedly high cost of standardisation of frequency. This, though financed out of issues of Central Electricity stock, is borne by the supply industry, which repays to the Board the service of loans issued for this purpose. The prospects for the ultimate financial success of the Board have certainly improved in recent months, and the 3½ per cent. yield of the present issue may not be unattractive to the market under current conditions.

* * *

A Silver Boom?—The effect of the Chinese silver restrictions and the *de facto* abandonment of the silver standard is discussed in a leading article on page 733 of this issue. This week's movements in the price of the metal have attracted the attention of the speculative investor, on the assumption that the American silver purchase programme will reinforce the rising price for the metal, in the absence of Chinese selling and arbitrage transactions. Certain factors suggest, however, that the investment possibilities of the present movements can be over-rated. In the first place, part of the recent heavy buying of silver was of a forestalling nature, based on the general expectation that China would be compelled, sooner or later, to impose some check upon the external drain of her monetary stocks. Further, the present price is a direct consequence of the American purchasing policy, announced in May, by virtue of which the United States Government declared its intention to purchase silver up to one-quarter of the total monetary reserve. This essentially long-term programme (which was discussed in a leading article in the *Economist*, August 18th, page 313) is regarded by the Administration as "mandatory as to its general objective." In view of the traditional political influence of the silver interests, it seems at least possible that its vigorous exploitation may not have been unrelated to the imminent November elections, and that the cessation of this special stimulus may be followed by a reduction in purchases. The withdrawal of America's support to the market would undoubtedly cause a sharp fall from the present level. Such a possibility may have been a factor in this week's profit-taking, which put the spot price down to 23½d., against Monday's record of 24½d., per ounce. Moreover, the mining of silver is a classic example of "joint supply," since the ore is almost invariably found in association with lead and zinc. As the price of each of these metals has declined appreciably during the year, the rise in silver, even if it were maintained, would afford no necessary presumption of a rising trend in the earnings of such companies as Burma Corporation, San Francisco, Trepan and Mexican Corporation.

* * *

Rubber Restriction.—No spokesman of the plantation industries carries greater weight than Mr H. Eric Miller, whose speeches from the chair at the annual meetings of Harrisons and Crosfield are backed by a life's experience and an unrivalled knowledge of the inner counsels of the tea and rubber industries. At last Tuesday's meeting, Mr Miller was cautiously optimistic over the prospects of the tea industry, but the larger part of his review was given to the rubber trade. Mr Miller paid due tribute to the gratifying increase in the world's absorption of the commodity. Stocks, he declared, had ceased to exercise a depressing effect on the market, and for the next four years

the industry could look forward to a period of moderate prosperity. It was necessary, however, to take a longer view. The aim should be to have always available "a potential supply . . . in excess of expanding requirements." New plantations would not be effective yielders of rubber for six or seven years at the earliest, and would not really be in their stride for a matter of ten years. From these unchallengeable premises Mr Miller proceeded to draw the decidedly controversial, and in our view dangerous, conclusion that four years was too short a span of time for the existing International Regulation Scheme, and that "uncertainty as to what is to happen after 1938 should be removed at the earliest possible moment." In plain language, this can only mean that, before the present scheme has been in operation for six months, and before it has been brought into "completely efficient and effective working order" (to use Mr Miller's phrase) the influence of the chairman of the largest British agency company is to be thrown into the scale for securing its more or less indefinite prolongation. Rubber consumers the world over may suggest that four years is a sufficiently lengthy period to demonstrate the utility of an experiment whose benefits, so far, have been confined mainly to one side of the industry. When the International Committee has declared its policy for 1935, it may be clearer how far the producing side intends to live up to its ideal of "a potential supply always . . . in excess of expanding requirements," and how far recent advocacy, in some quarters, of higher prices has gained the day. There is much to be said for the view expressed by Sir George Maxwell at this week's meeting of another company—Sengat Rubber Estate—that regulation should be distinguished chiefly by its elasticity. Sir George urged that the objective of any fixed price level should be abandoned. The essential features of restriction he defined as the reduction of world stocks, the adjustment of current supply to current demand, and the ceaseless prosecution of research and propaganda. With this view there will be general agreement. It does not appear compatible, however, with the granting of indefinite powers to fasten regulation on the industry beyond the ample trial period assigned to it, at a moment when the industry itself is uncertain of the terms in which its objectives should be interpreted. As Sir George Maxwell aptly remarked, the world has never yet seen the successful conclusion of a regulation scheme.

* * *

Actuaries' Investment Index.—The recent hesitant tendency of industrial share markets has found its inevitable reflection, this week, in quotations. As the Actuaries' Index of 144 representative industrials suggests, waning support rather than liquidation must be held responsible for the slight decline. Calculated on Tuesday's prices, the index has fallen to 72.8, compared with 73.2 a week earlier, and 72.0 a month ago (December 31, 1933=100). The corresponding yield figures are 3.63, 3.62, and 3.66 per cent., respectively. Although this is the first check to the steady strengthening of prices which has been a feature of the last ten weeks, analysis of certain component groups brings out some special influences:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Sept. 18, 1934	Oct. 9, 1934	Oct. 16, 1934	Sept. 18, 1934	Oct. 9, 1934	Oct. 16, 1934
Building materials (4)	82.7	84.3	83.9	4.30	4.24	4.25
Coal (6)	91.0	92.0	91.0	4.11	4.05	4.11
Cotton (6)	46.8	45.8	45.1	2.30	2.30	2.32
Oil (5)	61.2	61.8	59.7	4.80	4.75	4.92
Home rails (4)	76.1	79.4	76.5	1.55	1.43	1.45
Stores and catering (15)	81.8	82.0	81.7	4.06	4.03	4.04
Miscellaneous (50)	63.7	65.1	64.9	3.83	3.79	3.79

The home rail market took last week's less favourable traffics rather to heart. Oil shares have been heavy in view of the increasing difficulty of controlling American production. Speculative groups, such as building materials, stores and catering, and the large miscellaneous section have been sensitive to the duller general trend.

The List of Applications will be opened and closed on Friday, the 19th October, 1934

CENTRAL ELECTRICITY BOARD

Issue of £6,000,000

Central Electricity 3½ per Cent. Stock, 1974-1994

Under the Electricity (Supply) Act, 1926, the Central Electricity Board (Increase of Borrowing Powers) Special Orders, 1930 and 1933, and the Central Electricity Board Borrowing Regulations, 1928, pursuant to a Resolution of the Board, dated the 15th day of October, 1934.

Interest will be paid half-yearly on the 1st May and the 1st November
A first payment of £1 per £100 Stock will be made on the 1st May, 1935

PRICE OF ISSUE £93 PER CENT.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND are authorised by the Central Electricity Board to receive applications for the above issue of Stock, payable as follows:—

On Application	£5 per cent.
On Friday, 2nd November, 1934	£13 "
On Wednesday, 12th December, 1934	£13 "
On Friday, 18th January, 1935	£25 "
On Wednesday, 20th February, 1935	£35 "
	£93 per cent.

The Stock now issued and the interest thereon rank *pari passu* with £3,000,000 Central Electricity 4 per Cent. Stock, 1938-1988, £10,000,000 Central Electricity 5 per Cent. Stock, 1950-1970, £9,000,000 Central Electricity 4½ per Cent. Stock, 1951-1971, £7,000,000 Central Electricity 5 per Cent. Stock, 1953-1973, £10,000,000 Central Electricity 4½ per Cent. Stock, 1957-1982, and £8,000,000 Central Electricity 3½ per Cent. Stock, 1963-1993, already issued, and are a first charge on the whole undertaking and the net revenues of the Board.

The Board reserve power to issue further Stock ranking *pari passu* with the above Stocks.

The Stock of the present issue will be redeemed by a Cumulative Sinking Fund, commencing not later than the year 1940, sufficient to repay the whole of the Stock by its maturity date. This Sinking Fund will be provided out of the Redemption Funds which the Board are required to provide for the amortisation of their capital expenditure and will be applied in the purchase of Stock or invested temporarily in accordance with the Borrowing Regulations. Any Stock not previously redeemed will be repaid at par on the 1st May, 1994, but the Board reserve the right to redeem by drawings or otherwise at par on the 1st May, 1974, or on any interest date thereafter, all or any part of the Stock then outstanding on giving at least three calendar months' previous notice by advertisement in two London daily newspapers.

The Central Electricity Board were constituted by the Electricity (Supply) Act, 1926, and are acting under statutory powers in adopting and carrying out the Schemes referred to in the Statement appended.

The Board are empowered, with the consent of the Electricity Commissioners, to borrow £60,000,000. Of this sum the Electricity Commissioners have already given consents in respect of £52,320,000 of which £16,725,380 is in respect of standardisation of frequency, and £35,594,620 is in respect of the construction and acquisition of main transmission lines, working capital and other purposes. The proceeds of the Stocks already issued and of that now being issued form part of the sum of £52,320,000 mentioned above.

The proceeds of the present issue will be used to provide further funds for the construction and acquisition of main transmission lines, the cost of standardisation of frequency, working capital and other authorised purposes including payment of interest on the Stocks already issued so far as it is payable out of capital and on the Stock now being issued until the 31st December, 1941, if and so far as the expenditure does not become remunerative at an earlier date.

The Register of the Stock will be kept at the Bank of England. The Stock will be transferable by ordinary Transfer Deed in multiples of one pound.

Applications which must be accompanied by a deposit of £5 per cent. will be received at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, E.C.2. In the case of partial allotment the balance of the amount paid as a deposit will be applied towards payment of the first instalment; should there be a surplus after making that payment such surplus will be refunded by cheque. Default in the payment of any instalment by its proper date will render the deposit and any instalments previously paid liable to forfeiture and the allotment to cancellation.

Applications must be for sums of £100 or multiples thereof. Interest on the Stock will be payable half-yearly on the 1st May and the 1st November. Warrants will be transmitted by post. A first payment of £1 per cent. will be made on the 1st May, 1935.

Scrip Certificates to Bearer in denominations of £100, £500 and £1,000, with Coupon attached for the interest payable on the 1st May, 1935, will be issued in exchange for the allotment letters. Fully paid Scrip Certificates may be registered forthwith.

A Commission of 5s. per £100 will be paid to Bankers or Stockbrokers on allotments made in respect of applications bearing their stamp. Prospectuses and Application Forms may be obtained at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, E.C.2, or at any of the Branches of the Bank; of Messrs. Mullens & Co., 13, George Street, Mansion House, E.C.4; at any Stock Exchange in the United Kingdom; at the Head Office of the Central Electricity Board, Trafalgar Buildings, 1, Charing Cross, S.W.1, or at any of the District Offices of the Board. BANK OF ENGLAND, LONDON, E.C.2.

17th October, 1934.

STATEMENT.

The Central Electricity Board consists of a Chairman and seven Members, appointed by the Minister of Transport pursuant to Section 1 of the Electricity (Supply) Act, 1926. The present Members are:—

SIR ANDREW R. DUNCAN, Chairman.
THE RIGHT HON. THE LORD BARNBY, C.M.G.
SIR JAMES DEVONSHIRE, K.B.E.
MR. FRANK HODGES.
MR. W. WALKER.
MR. DUNCAN WATSON.
SIR RALPH L. WEDGWOOD, C.B., C.M.G.
MR. W. K. WHIGHAM.

The main functions of the Board are to construct main transmission lines (commonly known as "the grid"), to concentrate the generation of electricity at standard frequency in the most efficient stations, to supply electricity in bulk for distribution, and by these means to increase the availability of electricity throughout the country and reduce the cost of production.

The revenues of the Board will be derived from the sale of electricity in bulk and by a levy by the Electricity Commissioners under Section 9 of the Electricity (Supply) Act, 1926, on the whole of the electricity supply industry within Great Britain of annual sums equal to the interest and sinking fund charges in respect of money borrowed for the standardisation of frequency.

The following schemes have been adopted by the Board under section 4 of the Act:—

- (1) Central Scotland Electricity Scheme, 1927;
- (2) South East England Electricity Scheme, 1927;
- (3) Central England Electricity Scheme, 1928;
- (4) North West England and North Wales Electricity Scheme, 1928;
- (5) Mid-East England Electricity Scheme, 1929;
- (6) North East England Electricity Scheme, 1929;

- (7) South West England and South Wales Electricity Scheme, 1930;
- (8) East England Electricity Scheme, 1930;
- (9) South Scotland Electricity Scheme, 1931.

These Schemes cover the whole of Great Britain except North Scotland. The initial grid system, comprising approximately 4,000 miles of transmission lines, has been completed except for a few minor sections the construction of which has been postponed until the load conditions necessitate their use. Some extensions of the initial grid have also been constructed.

Trading on a tariff commenced in Central Scotland and Mid-East England on the 1st January, 1933, in South East and East England and North West England and North Wales on the 1st January, 1934, and in Central England on the 1st April, 1934. In the other areas some of the transmission lines are in service for giving supplies to authorised undertakers who would otherwise have had to install generating plant or for facilitating standardisation of frequency where that work is still in progress.

In fixing a tariff the Board are required under Section 11 of the 1926 Act so to calculate it that, over a period of years to be approved by the Electricity Commissioners, the receipts on income account shall be sufficient to cover the expenditure on income account, including interest and sinking fund charges, with such margin as the Commissioners may allow. The Commissioners have approved 10 years as the period to be taken for the tariff for the areas for which it has been fixed except for Central England, in which case the period is 9½ years. To ensure conservative estimates and an economic basis for the tariff, surveys have been made by the Board of the probable increase in demand for electricity in those areas over the tariff period.

A tariff of the kind prescribed, applied to a growing industry, connotes that, in the earlier years of a budget period, the outgoings will be more than the income and that, in the later years, there will be surpluses sufficient to recoup the earlier deficiencies and leave a margin, the deficiencies being met meanwhile out of working capital.

The rapid growth of the Electricity Supply Industry can be judged from the figures given below which are taken from the Official Returns of the Electricity Commissioners, showing the total amount of electricity generated by all authorised undertakers and railway and tramway authorities in Great Britain; a few non-statutory undertakings are also included, but generation by private plants is excluded.

Year ended	Units Generated
31st March, 1922	4,884,666,093
31st March, 1923	5,738,718,485
31st March, 1924	6,681,524,272
31st March, 1925	7,415,375,529
31st March, 1926	8,122,361,823
31st March, 1927*	8,365,857,198
31st March, 1928	9,927,850,630
31st March, 1929	10,878,980,925
31st March, 1930	11,961,621,965
31st December, 1930†	12,332,849,844
31st December, 1931	12,809,359,246
31st December, 1932	13,652,292,324
31st December, 1933	14,963,649,597

* Year of General Strike.

† The official figures are now published for the calendar year.

The units generated by authorised undertakers during the first nine months of the present calendar year show an increase of 18.1 per cent. on the figures for the corresponding period of the previous year.

Notwithstanding the great and continuous expansion of the Industry shown by the above figures, there still remains a very wide field for growth, and in order to assist more rapid development the Board's tariff provides for progressive reductions in the scale of charges to authorised undertakers as their demands increase.

The Board are satisfied from detailed estimates of the financial operation of the several Schemes that when those Schemes are in full operation the revenue for the respective tariff periods will provide ample margins over and above the amount required to meet the interest and sinking fund charges in respect of the total expenditure on the Schemes.

This Form of Application may be used
CENTRAL ELECTRICITY 3½% STOCK
1974-1994

ISSUE OF £6,000,000 at £93 PER CENT.

TO THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND, E.C.2.

I/We request you to allot to me/us in accordance with the terms of the Prospectus

dated 17th October, 1934, £..... say..... pounds of the above-named Stock, and I/we hereby engage to pay the instalments as they shall become due on any allotment that may be made in respect of this application, as provided by the said Prospectus.

The sum of £.....being the amount of the required deposit (namely, £5 for every £100 of Stock applied for), is enclosed.

Signature.....

Name in full..... (BLOCK LETTERS) (State Title, if any, or whether Mr., Mrs. or Miss.)

Address.....

.....

.....

Date.....1934.

N.B.—Applications must be for £100 or for multiples of £100. Cheques should be made payable to "Bearer" and crossed thus:—

Bank of England,
a/c Central Electricity Loan.

COMPANY NOTES

Commercial Motor Companies.—Though almost every British commercial motor manufacturing company experienced an uncomfortably wide variation in profits between the years 1929 and 1931-33, fluctuations in this group differ essentially from those which we discussed in a Note on private motor shares last week. The movement of commercial motor profits, as the annexed table shows, is consistent and shows a recognisable trend among all companies. The fluctuations of the private motor manufacturers are contradictory and unpredictable. The market for the commercial motor manufacturer is much less subject to the chances of one year's model than that of the private car manufacturer. The losses (or serious reductions in profits) suffered by the majority of commercial manufacturers during the last few years are due partly to the natural effects of depression, and partly to certain special causes. First, depression happens to have coincided with a period of quite exceptional activity in road transport legislation, which has made for hesitation in buying. Further, anticipations of the 1930 Road Traffic Act (which dealt with passenger transport) caused an abnormal swelling of demand in the immediately preceding period, as 'bus proprietors pressed ahead with their development programme in order to establish a claim on given routes before the new restrictions should be introduced. It is possible that the deliberations of the Salter Committee in 1932 and the subsequent legislation had a somewhat similar effect on goods

* Broken period equated to 12 months.

† Tax free.

transport, though the severity of the depression tended to obscure the resulting effect on new registrations. In any case, the passenger section of the road transport industry found itself more than fully equipped at the opening of the depression. Until recent months it has been placing new orders on a scale much less than sufficient to provide for the theoretical maintenance of the existing fleet. The goods transport section has, perhaps, not suffered more than was to be expected in the depression, but it was, nevertheless, faced with a serious check in 1932. Secondly, on top of these difficulties the industry has had to find room for a number of new entrants in the list of manufacturers, as a result of the introduction of the Diesel engine. This new factor has inevitably led to a competitive reduction of prices, while imposing on the existing manufacturers the necessity of new research and multiplication of models. It would appear, therefore, that the industry has been suffering from an abnormal combination of depressing forces. It is highly unlikely that this combination will continue indefinitely. The revival in ordering for both goods vehicles and hackneys in recent months gives hope that the worst of the effects are passing. Moreover, the entry of new manufacturers into the field has, to some extent, been compensated by the elimination of certain

of the smaller units, while the prospects of increasing the market open to the manufacturers are reasonably good. Apart from a probable fresh expansion of road transport in its present form, there is a possibility of further replacing the horse by the new types of "mechanical horse," such as that of the Scammell Company, while experiments being made both in this country and abroad with internal-combustion rail cars indicate another potentially large market. On the whole, prospects for the leading manufacturers would appear reasonably satisfactory.

* * *

British Celanese Improvement.—A summary table of British Celanese results necessarily contains more footnotes than a railway time-table. Before the claims of shareholders to dividends can be considered, the company must make allowance for a wide variety of charges, comprising (1) administrative expenses and overheads (excluding royalties, price adjustments, etc.); (2) research, advertising and patent expenditure. The company writes off its new patent rights each year, but follows a four-year retrospective plan as regards research and advertising; (3) depreciation of fixed assets and reduction of intangible assets; and (4) service of debenture stocks. The list, indeed, has been so lengthy that past annual earnings have not been sufficient to cover it. For the three years to July, 1933, for example, no depreciation was written-off. The results for the year to June 30th last, however, are much the best achieved so far. Trading profits (including, for the first time, dividends receivable from subsidiaries) are 54 per cent. higher than in the previous year. Since the year to June, 1931, they have risen from £995,240 to £2,593,028—an increase of 160 per cent. in three years:—

	Year to July 2, 1932	Year to July 1, 1933	Year to June 30, 1934
Balance of trading account.....	1,471,892	1,685,550	2,593,028*
Total income (including interest, etc.).....	1,496,382	1,690,446	2,598,138
Miscellaneous working expenses†	996,664	1,077,622	1,410,957
Research, advertising and patent write-offs‡	126,577	117,340	127,036
Directors' remuneration	...	...	5,000

Balance	69,322	207,872	432,406
Non-recurring receipts	57,106§	30,000	189,553¶
Special allocations	12,452**	Nil	760,618††
Half year's 1st pref. dividend.....	...	...	54,250
Total carried forward.....	14,591	252,463	59,554

* Including dividends receivable from subsidiary companies.
† "General sales and administrative expenses, royalties, Excise Duty, adjustments of stock values, etc." ‡ Proportion of last three years' research and advertising expenditure, and year's additions to patent rights, written off. § Sundry reserves and provision for contingencies, no longer required. || Income tax provision written back. ¶ £13,602 income tax written back, and £175,951 surplus on realisation of investments. ** New issue expenses, written off. †† Expenses of mortgage debenture issue, £25,072; balance of premium on bond redemption, less special reserve, £8,068; depreciation for three years ended July 1, 1933, £727,478.

In the period covered by the above table the company has three major financial achievements to its credit. First, a debit balance of nearly £100,000 to profit and loss has been replaced by a credit balance of nearly £60,000. Secondly, the burden of debenture charges has been reduced by the conversion of 7½ per cent. second mortgage bonds into a 5½ per cent. stock. Thirdly, arrears of depreciation of plant, etc., have been cleared off with the help of one or two windfalls, including £175,951 surplus on realisation of investments. Provided that the company's present earning power is maintained (or, as the directors hope, improved), the future dividend prospects of the company's shareholders depend on the policy followed by the directors in the clearing away of the remaining debris of earlier times. The balance sheet still includes £3,274,568 of intangible assets, including goodwill, patents, commutation of royalties,

advertising and research expenditure, and debenture issue expenses. The board has made a beginning, this year, with an attack on this intractable mass. Outstanding arrears of dividends, by the end of October, will total £490,000 gross on the 7 per cent. first preference shares and £1,434,375 gross on the second preference shares. In the absence of any past financial legacies, current earnings would now be covering annual dividends on both classes of preference shares, with a little to spare. The prospects of the 7 per cent. £1 first preference shares (quoted at par) depend on the board's policy towards "intangibles," but if this is deliberate rather than heroic, the first preference arrears may be cleared off in a year or two. Arrears on the 7½ per cent. £1 participating second cumulative preference shares (quoted at 13s.) are a tougher proposition, and the practicability of a funding scheme (or cancellation in return, say, for equity rights) in the future will doubtless engage the board's attention. Until this position is cleared up it will be impossible to put any firm price on the 10s. ordinary shares, which are quoted at 10s. 6d.

* * *

Acetate Yarn Trade Conditions.—The prospects of shareholders in British Celanese, whose latest accounts are discussed in the preceding Note, depend ultimately on the answer to a single question. How far can last year's "record" earning power be maintained, or increased? In this connection significance attaches to a review of industrial and marketing conditions during the twelve months in which the company's profits were earned, which has been forwarded to us by a trade correspondent. This suggests that very substantial profits accrued in the first part of the company's year, which runs from July to June. During this period demand for acetate yarns reached record levels, and British Celanese were able to keep running on a high production for about five months. Prices were three times increased, and most of the company's customers were "rationed" with supplies month by month. Subsequent events gave colour to the suggestion, however, that some of the yarn bought at this period did not go immediately into consumption, and later buying in the acetate section has been appreciably more cautious. Viscose prices have been reduced, and, so far as weaving business is concerned, there has been a certain tendency for acetate yarns to lose ground to fine filament viscose. At present, brisk buying of yarns is in progress for the weaving trade, and some of the larger producers are beginning to fall into arrears with their deliveries. How far British Celanese is sharing in this buying movement is not clear. On the other hand, the company is showing its customary enterprise in introducing new products to the market, and the extent of their success may have an important bearing on financial results for the current year.

* * *

Lex Garages Capital Scheme.—The scheme of capital reorganisation put forward by the directors of Lex Garages, Ltd., suffers from an inept method of presentation. The company was registered in 1928 to take over various motor garages and other properties in West London. No dividends have been paid since 1928, and a debit balance of £29,995 has accumulated at profit and loss. Other dead items bring the total to be written off to £62,500. The directors propose to reduce the 7½ per cent. cumulative participating preference capital of £150,000 (in £1 shares) by 25 per cent., and the £50,000 of ordinary capital (in 1s. shares) by 50 per cent. Six years' arrears of cumulative preference dividends, aggregating 45 per cent. gross, are to be wiped out. In addition, the preference shareholders are to relinquish all their preferential rights and to receive three 5s. ordinary shares in lieu of each existing £1 preference share, while the ordinary shareholders will receive two 5s. ordinary for every twenty existing 1s. ordinary shares. Put in this way the offer appears to embody every injustice which can be offered to a preference shareholder in a reconstruction scheme—loss of arrears, loss of income, and loss of preferential status. In fact, it is more equitable to preference shareholders than might be imagined. After reconstruction the company will have a paid-up capital of

£137,500, all in 5s. ordinary shares, of which existing preference shareholders will have £112,500 and existing ordinary shareholders £25,000. Thus, the present preference shareholders will have 81.8 per cent. and existing ordinary shareholders 18.2 per cent. of the equity. At the moment, the preference shares are entitled to rank equally with the ordinary for a further 2½ per cent. dividend, non-cumulative, after the ordinary have received 7½ per cent. in any year. Had the directors appended to their letter a table showing how the two classes of shareholders would fare under the new scheme, by contrast with the *status quo*, in the sharing out of given amounts of profits, it would have been clear to all concerned that whereas on total earnings of anything up to £14,000 the preference shareholders would receive less under the new scheme than the old, they would obtain an increasing differential advantage with every rise of profits over that figure. Their position under the two regimes is shown:—

AMOUNTS ACCRUING TO EXISTING PREFERENCE HOLDERS			
Annual Earnings	Present Position	New Scheme	Change under New Scheme
5,000	5,000	4,090	— 910
10,000	10,000	8,180	— 1,820
13,500	11,250	11,044	— 206
14,000	11,250	11,453	+ 203

50,000	15,000	40,900	+ 25,900

The attitude of the preference shareholders will depend entirely on their view of the possibility that future profits will pass the point of "dead centre." On this matter the circular is vague, and, in view of the undistinguished record of the company so far, shareholders may ask for more detailed estimates before sending in proxy forms. The board will have power to issue £62,500 of capital, if required, after the scheme, but is pledged to make such an offer, in the first place, to shareholders.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Gaumont British Accounts.—The accounts of the largest British film-producing and exhibiting company are hardly presented with the degree of "showmanship" rightly associated with the company's productions. The balance sheet figures show a substantial rise after the debenture redemption and issue in 1933, which reflects the acquisition of Denman Picture Houses and Provincial Cinematograph 5 per cent. stocks. As these, however, represent one-third of the total assets, while shares in subsidiary companies amount to £5,185,410 (against £5,610,298), or nearly 40 per cent. of the total, the advantage of a consolidated balance sheet and income statement would be considerable. The apparent increase in total profits from £462,612 to £692,214, includes an amount of £120,857 for interest on the stocks acquired, while the Corporation has paid a substantially larger sum in debenture interest. Available earnings have increased in approximately the same proportion as the preference and ordinary capital, which is now fully issued. A three-year analysis of profits follows:—

	Years to March 31		
	1932	1933	1934
Profit, including investment income	490,301	462,612	692,214
Income tax and depreciation.....	80,241	62,949	56,173
Debt interest.....	83,709	88,687	216,871
Earned for dividends	326,351	310,976	419,170
Preference dividend	93,750	93,750	163,750
Ordinary			
{ Earned	232,601	217,226	255,420
{ Paid	150,000	175,000	210,000
{ Earned %	10.4	9.3	9.0
{ Paid %	6	7*	7
Reserve	79,833	Nil	40,000
Carried forward.....	87,229	129,455	134,875

* And a capital bonus of 20 per cent. in "A" ordinary shares.

To judge from the experience of the exhibiting subsidiaries, the expansion of earnings comes chiefly from the production side. The Provincial Cinematograph and Denman companies showed a moderate fall in earnings for their latest year, while the General Theatre report has been delayed pending a capital re-arrangement. The Corporation's shareholding in this subsidiary has been written off from reserve, together with commissions and debenture premium, reducing the balance from £1,000,000 to £500,000. The financial co-ordination of the subsidiary company's indebtedness is calculated to effect considerable interest saving in future years, since the subsidiaries' stocks now redeemed carried interest at 6 and 7 per cent. These financial arrangements, and the technical progress of the company, hold promise for the future, but a quotation of 12s. ex dividend for the 10s. ordinary shares, to yield £5 16s. 6d. per cent. on latest dividend, emphasises the speculative element in the film industry.

* * *

R.M.S.P. Meeting.—Sir Arthur Maxwell, reading the speech of Mr P. G. Mylne Mitchell, the chairman of the Royal Mail Steam Packet Company, owing to the latter's absence from Wednesday's annual meeting through illness, finally disposed of any hopes which may have lingered among holders of the company's £8,800,000 of share capital, of any salvage of their interests from the wreck of the company's fortunes. As we suggested last week (page 692), prospects of an extension of the existing Scheme of Arrangement after December 31st next may be regarded as negligible. In Mr Mitchell's words, "it may be necessary very shortly to consider the winding-up of the company." Such an event will not, of course, affect the continuance of the shipping services of the Royal Mail and certain of its associated companies, which have been transferred to a separate concern, Royal Mail Lines, Limited, in which R.M.S.P. holds £880,000 out of a total capital of £4,000,000. That company is making annual trading profits and earning part, at least, of its depreciation charges. The Scheme of Arrangement removed its management from the arena of conflicting creditor interests. A widespread recovery in trade between this country and Latin America would restore some of its old lustre to the Royal Mail flag. If the creditors of the old

Royal Mail Company, however, are to obtain the maximum return from the "carving" of *realisable* assets, it would seem desirable that special measures should be undertaken to avoid forced sales in a general scramble. Time, in fact, is the greatest asset the second-line creditors are likely to possess. The company's shareholding in Royal Mail Lines is almost certain to improve with keeping. Among the company's freehold properties, Royal Mail House, in Leadenhall Street, London, has not as yet found tenants to replace all the accommodation vacated by the company's subsidiaries, but revenue is improving. The company's other freehold properties, in Glasgow, Manchester, Southampton, Jamaica, Rio de Janeiro and Buenos Aires, will command an increasing realisable value in proportion to the rate at which international trade revives. The ultimate value of holdings in major subsidiaries, whose balance-sheet figure has now been reduced to £4½ millions, is more problematical. It is not likely, however, to be very large. Investments in allied companies should have "a substantial value," though the latter is probably below the present book figure of £2,583,592. The right to recover from the White Star Line, in respect of liabilities for preference dividends which have fallen on R.M.S.P., or in respect of the principal of the White Star Line's £5,000,000 preference capital (which will fall on the company in due course), is regarded, unfortunately, as practically valueless. This is a sorry story, which should spell the doom of "autocratic finance" in the British shipping industry. The lesson may be salutary, but experience, in this instance, has been bought at too high a cost.

* * *

S.T.D. Agreement?—This week's developments in the S.T.D. Motors case (whose leading features were outlined in our last issue, page 692) suggest that considerable progress has been made towards closing the breach between certain large noteholders and their trustees. The hearing of the trustees' motion for appointment of a receiver was resumed on Friday, October 12th, when it was intimated, on behalf of the company, that negotiations had been completed for obtaining funds for meeting note interest and redemption due on September 30th, upon which the security became enforceable on October 15th. The arrangement, however, was conditional upon the action being discontinued. On Monday last, specific proposals were discussed by opposing counsel, the motion again being adjourned. The meeting of the noteholders called by the company, at the recommendation of an *ad hoc* noteholders' committee, was held on Tuesday, when it was announced that a group, represented by British and International Investment Trust, had undertaken to provide £50,000 for payment of the note service, conditional upon the withdrawal of the trustee's motion and action, and upon the withdrawal of the proposed modifications of noteholders' rights. The Trust was also to nominate a financial controller and director to the company "with such powers as the Trust might require for him over the finances and expenditure of the company. . . ." Mr Birch Crisp, as a trustee, emphasised that the trustees would not acquiesce in any infringement of noteholders' rights without seeking their consent, and the trustees were accorded a vote of confidence by the meeting. Meanwhile the trustees' motion has been standing over until Friday of this week, and the outcome of the proceedings was not known when we went to press.

* * *

Other Company Results.—This week's reports give scope for an appreciation of the trend of industrial earnings. Of the twenty-six additional companies whose results appear in our summary on page 758, eleven cover a considerable section of miscellaneous industrial and trading activity. The general movement throughout the list is satisfactory, and significant reductions in earnings are restricted to Standard Motor (£106,795, against £131,962), although here the repeated payment of 15 per cent. leaves a satisfactory transfer to reserve and depreciation. The week's rubber reports evidence continued improvement

during the year to June last, and three out of five companies (including Karmen and Central Sumatra) have returned to the dividend list. Among investment trusts, quite small declines in net revenues are shown by British Canadian and Second Broadmount, while Staveley Trust shows an improvement from £16,814 to £17,762. Among the miscellaneous companies not dealt with in earlier notes, chief market interest has centred on Ranks accounts. The available balance of £366,430 somewhat appeased those holders who were disappointed with the 15 per cent. dividend, for the indicated earnings were little short of the prospectus earnings estimate. "Substantial sums," according to the report, have been earned by Joseph Rank, the principal subsidiary, and have been retained in this company's accounts, to constitute, in the opinion of the parent company's directors, an adequate reserve out of profits for the period. Fison, Packard and Prentice, the fertiliser and chemical manufacturers, report an increase in net profits from £46,065 for a broken period to £63,225 for a full year. The dividend is higher at 7½ per cent. Erinoid, which manufactures horn and bone substitutes from separated milk, continues its steady expansion of earnings, which amounted to £45,159 for the year to July, against £41,845. Herbert Morris, who specialise on conveyors for industrial plants, record net profits of £36,141, compared with £29,901. This week's dividend announcements include B.A. Great Southern and B.A. Western Railways. Both companies state that the net revenues for the year to June 30th are lower than for the previous year, but full dividends are to be paid on the 5 and 6 per cent. Great Southern preference and 4½ and 5 per cent. Western preference stocks. The dividends in each case are made possible by drawing on accumulated balances, and by remitting proceeds of bond sales in Buenos Aires through the free exchange market. It was announced on Thursday that the Central Argentine preference dividends would not be paid. Other features of this week's list include some lower tea interim dividends. The report of Wiluna Gold Corporation, received as we go to press, reveals an available profit of £403,427. A final dividend of 2s. 6d. per share, making 22½ per cent. for the year is recommended. Union Corporation have declared an increased interim dividend of 2s. 6d. per share, against 2s. a year ago.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Harrisons and Crosfield, British Rubber Estates of Java (1932), and Java Produce Company (1932). Mr H. Eric Miller's review of rubber trade prospects at the Harrisons and Crosfield's meeting, and some of its weighty implications, are discussed in an Investment Note on page 738. At the meeting of the British Rubber Estates of Java, Mr James Davenport declared that each of the company's nine rubber-producing estates had contributed to the year's profits, which had shown a marked improvement on the first period of operation after the company's reconstruction. At the Java Produce Company meeting, Mr G. R. P. Llewellyn declared that the barometer of the rubber industry was at present set fair for better times. In the current year it was hoped that profits from that source would be more than enough to extinguish the company's debit balance on profit-and-loss account.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET | ACCOUNT
October 23 | October 25

MARKETS this week again failed to find their desired lead. Conditions were good-humoured rather than cheerful, with little to show for excessive satisfaction or dissatisfaction. The atmosphere, indeed, was noticeably more easy-going, and the slight deceleration of speculative activity sufficed to encourage a gentle downward drift of quotations. Although markets showed no positive response to the improving export figures, they assisted in preventing any

erosion of the firm tone, but on the whole the week's limited business was no more conclusive than that of its predecessor.

The gilt-edged market was distinctly quieter and easier in tone at the opening, and it was not until late dealings on Tuesday that real activity was seen. This was checked by the underwriting of the Central Electricity Board loan (discussed on page 737) on Wednesday, but Conversion issues recorded fractional gains later, while War Loan, at 105½, achieved a new high record. India loans were quiet in early dealings, but recovered somewhat on Wednesday. Dominion issues attracted little business, but quotations were distinctly firm, particularly for small premium stocks.

Quiet conditions were reported in the foreign bond market. Brazilian issues were dull owing to a revision of recent favourable estimates, but staged a fractional recovery in mid-week. Similar conditions characterised the Chilean market, where dealers were less assured regarding the possibility of an early agreement on the debt service. Argentine loans were well supported on the favourable trade figures. Chinese issues were sold following the silver export restrictions, but Japanese bonds, after two uneventful days, were in moderate demand on Wednesday. Among European issues, German bonds declined irregularly, but other changes were slight.

Home rails were very quiet on the first two days, in consideration of the less favourable traffics of the previous week. This week's improved figures stimulated prices, although business showed no considerable expansion. London Transport "C" stock was in steady demand and was quoted at 87 on Wednesday. In the foreign group, absence of support, particularly for Argentine issues, caused a sagging tendency, and there was some short-lived panic selling of B.A.G.S. 6 per cent. preference, which was promptly reversed in correct anticipation of the dividend statement on Wednesday evening. Brazilian issues were steady.

Restricted business and continued inability to "take a view" were responsible for a slight softening in prices among leading industrial shares. Motor shares were active, but the rather sentimental background for recent buying was insufficient to resist a considerable element of profit-taking, and there was no regular tendency. Air race publicity did little to help the Aviation group, and prices were generally lower. Moderate investment business was transacted in electric supply shares, and equipment shares, such as Enfield Cables and Telegraph Construction, continued to attract steady interest. Activity in the Iron, Coal and Steel group was reasonably satisfactory, but price changes were irregular and limited. Brewing issues were rather languid, and some moderate selling depressed prices to a small extent. Tobacco shares, whose prospects are reviewed in a leading article on page 736, moved in unexciting fashion between narrow limits, and Distillery issues were little changed. In the Stores group, Woolworth were a feature of strength, and support was noticeable for some West-end houses, such as Harrods and Swears and Wells. In the Provision section Unilever issues were easier. Business in Textile shares was restricted, and prices, where changed, were lower. British Celanese were firm, in the Rayon group, on the record profits (upon which we comment on page 740), but Courtaulds declined owing to small selling orders. Narrow movements were seen among specu-

Address.....

.....

lative leaders in the Miscellaneous market. Milling issues were firmer on the Ranks results, but Building Material shares were noticeably duller. Imperial Chemicals, Murex, Turner and Newall and British Oxygen experienced fractional declines.

The Oil market was very disappointing. An increase in crude oil production, and the Standard Oil price cut, led to total disappearance of professional and public interest, and although selling was not on a large scale prices were generally easier. The Rubber market opened with a dull tone, and despite some partial support on Tuesday, and a firmer commodity price on Wednesday, interest was never aroused. The Tea share market became more clouded as the week progressed, despite anticipation of a tightening of restriction and the satisfactory tendency in Mincing Lane.

Interest in the Mining markets remained, broadly speaking, in a state of apathy. Some special features, such as Consolidated Main Reef extension and the Springs report, attracted interest, but the tone showed no particular improvement in the absence of authoritative statements regarding the grading problem. West African issues became quieter after fairly active trading on Monday. Ariston were the centre of attention, but other speculative favourites were inclined to recede slightly on Wednesday. The Australian section remained quiet, but there was some rather optimistic support (for which the pros and cons are discussed on page 738) for silver shares in consequence of the Chinese restrictions. Business in tin and copper shares remained at low ebb.

FOREIGN STOCK EXCHANGES

NEW YORK

ALTHOUGH prophets of a coming Wall Street boom freely announced last week's developments as the signal for "zero hour," the markets were already in two minds, by the end of last week, about the President's alleged re-orientation towards a policy of renewed currency experiments. The week's oracular and somewhat conflicting suggestions from the White House, indeed, left many investors convinced that the President was giving another consummate exhibition of the art of riding two horses at once, whose potential utility was naturally at a maximum before an election. Inflationary sentiment consequently tended to die down, and the announcement by the Treasury of its

intention of repaying another \$1,870 millions of Fourth Liberty Bonds on April 15th was regarded as a confirmation of the honourable nature of the Government's real currency intentions. On Monday, share turnover returned to the half-million level, and all groups were subject to moderate selling, with the exception of silver shares. The tone subsequently became a little firmer, but the market from time to time was subject to bouts of liquidation. There was an impression that, on the whole, the Administration was not likely to go out of its way to be unfriendly to business, but that the latter was unlikely to produce, unaided, any marked revival in the immediate future. Despite occasional rallies, oil shares continued to reflect pessimism regarding the fate of the industry's precarious price structure. The Chinese Government's new duties were interpreted in a sense favourable to silver shares, but the readiness of speculators to take profits in the middle of the week did not augur complete confidence in a situation whose elements of artificiality were only too evident. Although the Bureau of Agricultural Economics predicted higher autumn prices for farm products, the commodity markets were unsettled. The bond market was moderately active, Treasury Threes touching par again, though the volume of business tended to fluctuate appreciably from day to day. General trade news failed to give any definite lead to the markets. Steel mill activity showed a decline at 23.5 per cent. of capacity as compared with 24.5 per cent. last week, but the lost ground was expected to be regained before the end of the month.

(a) Columbus Day.

PARIS

Markets opened dull, under the influence of political uncertainties and the death of M. Poincaré. The success of the 4 1/2 per cent. Treasury Loan encouraged a firmer tone in the middle of the week, but business continued to be on a reduced scale. Rentes advanced on the loan announcement, but bank shares were undecided. Among utility issues, electrical shares showed weakness. Interest in gold-mining shares strengthened as the week progressed, and diamond shares made a sharp advance on Wednesday. The market was closed on Thursday, which was a day of national mourning for the late King Alexander of Yugoslavia.

BERLIN

The market had an undecided tendency last week, but quotations on the whole showed little change. The shares of the Reichsbank and the commercial banks were relatively firm. Lignite shares showed some recovery after their recent heavy decline, and a number of steel shares, particularly Mannesmann, were in demand. The present week opened with an easy tendency, though shipping shares, exceptionally, were firm and reichsmark bonds, apart from industrial issues, tended slightly to gain ground. Converted dollar bonds on the whole were weaker, though certificated bonds remained steady. The tone remained dull in mid-week, electrical shares in particular having a heavy tendency. The Official Bourse Index for September (1924-26 = 100) stood at 83.12 for shares and 88.97 for reichsmark bonds.

	Oct. 10, 1934	Oct. 11, 1934	Oct. 12, 1934	Oct. 13, 1934	Oct. 15, 1934	Oct. 16, 1934	Oct. 17, 1934

AMSTERDAM

Dull conditions were in evidence at the opening, and only a slight increase of activity occurred as the week wore on. Royal Dutch were subject to fairly heavy liquidation on Monday, and showed no appreciable recovery on subsequent days. Demand for rubber shares, however, tended slightly to strengthen, and sugar shares were firm on expectations of the discontinuance of Java sugar control. Tea shares, however, tended to lose ground, and the tone of tin shares was dull and undecided. A moderate business was done in industrial shares at slightly higher average prices.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

PUBLIC OFFERS

Central Electricity Board.—Issue of £6,000,000 3½ per cent. stock, 1974-94, at £93 per cent. The stock ranks *pari passu* with existing issues. Issue will be redeemed by operation of cumulative sinking fund commencing not later than 1940, by May 1, 1994, at par, but the board may redeem whole or part of the issue after May 1, 1974, on three months' notice. Maximum borrowing powers are £60,000,000 and consents have been given in respect of £52,320,000, including present issue, of which £16,725,350 is for standardisation of frequency and £35,594,650 for transmission lines and other purposes. Proceeds of present issue required for these purposes and for interest on stocks issued so far as payable out of capital. Trading on tariff commenced in certain areas from January.

Lanarkshire County Council.—Issue of £2,230,000 3 per cent. redeemable stock, 1954-64, at £97½ per cent. Redeemable January 15, 1964, or after January 15, 1954, on three months' notice, at par. Proceeds required for repayment of existing 5½ per cent. stock. Secured on the whole revenues of County Council, and ranks *pari passu* with other loans. Net debt on May 15, £11,861,048, comprised of rating services, £3,434,611, housing £7,592,218, and revenue undertakings £834,219. Total valuation £2,997,710, and average rate for current year 15s. 3d. in £. Applications for conversion will receive preferential consideration.

Ault and Wiborg, Ltd.—Issue of 150,000 5½ per cent. cumulative redeemable £1 preference shares and 200,000 £1 ordinary shares at par. Incorporated to acquire English printing-ink manufacturing business of similar name and formerly of American ownership. Profits, after estimated depreciation and directors' remuneration: 1931, £29,011; 1932, £32,453; 1933, £37,427; half-year to June 30, 1934, £19,953. Net assets acquired, on valuation and book value, £103,780. Purchase price £350,000 in cash, £246,220 being in respect of goodwill, expenses to be paid by vendor. Preference shares redeemable at 22s. to December, 1949, by allocation of £5,000 per annum out of profits to purchases, and thereafter at 24s. on three months' notice.

Lavers Optical Company.—Issue at par of 120,000 A ordinary shares of 5s. each.

BY STOCK EXCHANGE INTRODUCTION

General Gas and Electricity Company, Ltd.—Particulars of issue of 35,000 5 per cent. redeemable preference shares of £1. Company incorporated November, 1930, to acquire interests in gas and electricity companies. Shares redeemable at par on December 31, 1969, or from 1965 on six months' notice. £40,000 4½ per cent. debenture stock, redeemable at par on December 31, 1969, has also been issued, secured without trust deed as first charge on assets.

Gold Coast Associated Companies, Ltd.—Particulars of issue of 1,200,000 shares of 5s. at par, carrying option to July 31, 1936, to subscribe for one share for every two held at 6s. Company formed to finance and underwrite issues of associated and other gold mining companies in West Africa. Proceeds of issue will provide £293,500, which is estimated as sufficient for initial operations.

ISSUES TO SHAREHOLDERS ONLY

The National Omnibus and Transport Company.—This company is issuing to holders 150,000 new ordinary of £1 each at 27s. 6d. per share. The issue is being made to repay temporary borrowing undertaken to finance an extension of interests during the past year.

Central Portland Cement Company, Ltd.—To provide for expenditure on a new kiln, the directors propose that the issued capital should be increased by £75,000, by creating 250,000 ordinary shares of 4s., and to offer them with 25,000 unissued preference shares of £1 for subscription by shareholders, the ordinary shares at 4s. 3d. per share, and the preference shares at 22s. 6d. per share. The balance of the amount required (estimated at £92,000) will be provided out of the company's cash resources.

Sungei Telor Rubber.—In order to acquire a neighbouring property, the directors of Sungei Telor (Malaya) Rubber Estate propose to issue 291,700 1s. ten per cent. cumulative convertible preference shares at 1s. 8d. per share. The new shares will be convertible into ordinary at any time up to December 31, 1939. An extra-ordinary general meeting will be held on October 25th, to approve the necessary resolution.

PRIVATE PLACINGS

Jenson and Nicholson.—This company has placed privately 150,000 six per cent. cumulative pre-preference shares of 5s. each.

West London Property.—It is understood that 100,000 new 5½ per cent. preference shares £1 and 100,000 new ordinary shares £1 have been privately placed.

FORTHCOMING ISSUES

Argentine Navigation Company.—It is intended to market 975,000 10 per cent. cumulative participating preference shares of 5.04 gold pesos each of this company. Treasury permission has been obtained for the introduction, the proceeds of which will be utilised in liquidating obligations in this country.

Hancock (Wm.) & Co.—£500,000 4½ per cent. debenture stock at 99 will be issued on October 26th.

RESULTS OF ISSUES

Ault and Wiborg.—Lists closed at 9.5 a.m. October 16th. Heavily over-subscribed.

Colvilles, Ltd.—The list in connection with the offer for sale of 1,600,000 5½ per cent. cumulative preference shares of £1 each at 20s. 6d. per share in Colvilles was closed at 9.5 a.m. October 12th, owing to over-subscription. It is understood large applicants received about 30 per cent. of their requirements.

Gold Coast Associated Companies.—The list of applications for the issue at par of 1,200,000 shares of 5s. each to the shareholders was closed at 11 a.m. October 12th, the issue having been subscribed many times over.

Lanarkshire County Council Loan.—Lanarkshire County Council 3 per cent. redeemable stock, 1954-64, £2,230,000, closed October 15th at 9.5 a.m. in London and 10.5 a.m. in Edinburgh and Glasgow. The conversion lists will close at or before noon on October 24th.

CALLS DUE OCTOBER 22 TO OCTOBER 27, 1934

The grand total of calls falling due in October, 1934, is £3,366,662, which compares with £2,342,678 which fell due in October, 1933. The following calls fall due from October 22, 1934, to October 27, 1934, inclusive:—

Nominal amount of Stock	Company	Amount of Call	When payable	Making Paid

COMPANY MEETINGS, &c.

HARRISONS AND CROSFIELD, LIMITED

STRONG POSITION—TEA AND RUBBER PROSPECTS

The twenty-sixth annual meeting of Harrisons and Crosfield, Limited, was held, on the 16th instant, at 2/4, Idol Lane, London, E.C.

Mr H. Eric Miller (the chairman) said that they were most thankful for the improvement in their fortunes, which was attributable very largely to the fact that both the tea and the rubber industries had been put on their feet by international agreements to regulate supplies in an orderly manner. Their investments in tea, rubber and other produce companies, at £936,799, showed an increase of £65,000 on the previous year. The market value of those investments at June 30th was in excess of the figure at which they appeared in the balance sheet, thus leaving intact the special reserve of £350,000 previously created against those investments.

The net profit for the year of £261,503 showed an improvement of £47,164 on last year's figure. They proposed the payment of a final dividend of 15 per cent. on the deferred ordinary stock, making 20 per cent. for the whole year. They considered they were amply justified in making a full distribution of their profits this year without allocating any sum to general reserve by reason of the general improvement which had taken place in the position of the company. They felt, too, that shareholders would be glad to endorse that policy in view of the contraction in the rate of dividend during the last few difficult years. After the final dividends were paid, their free reserves and undistributed profits would amount to over £700,000, exclusive of the staff special reserve of £75,000. A very strong financial position was thus disclosed, and was further emphasised by the liquidity of a large proportion of their resources.

The international scheme for regulating the exports of tea from the principal producing countries had now been in operation some eighteen months, and they were in a better position to review it. It had saved the industry from chaos, and all producers had benefited by it, though in varying degrees. There was some natural disappointment that it had not reduced tea stocks in the United Kingdom to a lower level, but he thought that was due mainly to the fact that the extent of the invisible stocks in the country had been previously under-estimated. Another factor had been the falling off in shipments from the East to outside markets, London thus receiving a larger proportion of the outturn than usual. It was possible that in some of those outside markets, where tea was not the standard drink, consumption might have fallen off, but there was no reason to believe that that had been the case in the United Kingdom, where the public seemed to be consuming as much tea as ever, and the inference was that in the last year or two they had over-estimated consumption to some extent when they had measured it by the figures of deliveries.

The tea-producing industry, however, as a whole, was profoundly thankful for the steadying influence of international regulation of supplies, and all the main producing interests were working in harmony for the combined good of the industry. Regulation of output was in itself a palliative and not a cure for the disabilities of an industry in the predicament of tea. The power of good advertising was believed to be very great, and it was satisfactory to know that the Tea Producers' Associations were consolidating their efforts in a co-ordinated publicity campaign to impress the public of different countries with the slogan "Drink more and better tea."

Turning to rubber, although during June and July the exports under regulation had been about 70,000 tons less than the permissible quantities, heavy arrivals in manufacturing countries during the last three months of the year, when their absorption was at its seasonal low level, would bring about a considerable increase in the stocks in those countries, especially in the United Kingdom and the United States. On the other hand, world absorption had expanded at a gratifying pace, and during the next four years at least the rubber-producing industry could look forward to a period of moderate prosperity.

During the last few years the energies of producers had been absorbed in the struggle for survival, and great sacrifices had been made by all connected with the industry. At the same time the need for stimulating increased consumption had not been overlooked, and efforts in that direction had been, if anything, intensified during the period of low prices. An enormous amount of research work had been carried on during the last twenty years, more particularly on the manufacturing side. That had resulted in vast improvements in the quality

of the rubber goods produced, and the lower price range of the commodity had helped to add materially to the number of uses to which rubber was being put.

The report and accounts were unanimously adopted, and a dividend of 15 per cent. on the deferred ordinary stock, making 20 per cent. for the year, was declared.

BRITISH RUBBER ESTATES OF JAVA (1932), LIMITED

GREATLY IMPROVED RESULTS

The second ordinary general meeting of British Rubber Estates of Java (1932), Limited, was held, on the 16th instant, at the offices of the company, 58, Mark Lane, London.

Mr James Davenport (the chairman), in moving the adoption of the report, said: The result disclosed by the accounts—covering a period of six months only—is a marked improvement on that for the first period of 13½ months of the reconstructed company. For these 13½ months there was a balance at credit of profit and loss account of £6,698 before allowing for debenture interest and charging depreciation. The comparable balance of the accounts now before us is £15,585, which is more than double that of the previous accounts, although the period covered is only six months as compared with 13½ months. While the profit from rubber was increased largely, the profit from tea fell off considerably and the loss from coffee increased, but the loss on coffee is rather a book-keeping loss than an actual one. Dealing with rubber, which is our principal product, the explanation of the increased profit is to be found in the improvement in the price obtained for that commodity due to the working of the international agreement for the regulation of production. As that agreement is to continue at all events until the end of 1938, and if it should be found desirable it will no doubt be continued till a later date, we are justified in expecting that rubber will continue to be a profitable product for our company for some years to come. Meantime, it is a source of satisfaction that each of our nine estates producing rubber has contributed part of the profit.

In view of the fact that this is our first meeting since the international regulation for the production of rubber became law, you may expect me to give some indication of the quantity of rubber we are likely to be allowed to produce. Of course, we do not know what the percentage of restriction is to be in 1935, but we have had indications of what it is to be to the end of 1934, and if the scale for December, 1934, is to be continued in 1935 we may expect to be allowed to produce during our financial year a crop of about 2,750,000 lb. That would mean a restriction of 25 per cent. for the period from July, 1934, to June, 1935.

The report was unanimously adopted.

JAVA PRODUCE COMPANY (1932), LIMITED

IMPROVED RESULTS

The second ordinary general meeting of the Java Produce Company (1932), Limited, was held, on the 17th instant, at 58 Mark Lane, London.

Mr G. R. P. Llewellyn (the chairman) presiding, in the course of his speech, said that with an average selling price for rubber of 3½d. the company had made a trading profit, before taking into account loss on exchange, of £8,741, and they were able to add to this £2,333, which represented the reduction of Verponding due from them as the result of their Java agent's appeal. The fact that the balance carried to the balance sheet was reduced by only a little over £1,000 was largely due to loss on exchange, which amounted to £6,852, and was almost £2,000 more than it was last year.

Although two of the estates were tapped for only 10½ months, and one of these was on reduced tapping throughout the year, they harvested 1,564,640 lb. of rubber. The cost of production, inclusive of London expenses and debenture interest, amounted at par to 2.25d., or, at 8.01, the average rate of exchange for last year, to 3.08d. Thus, with a sale price of 3.417d., there was a profit for the year, after deducting the loss on exchange, of £2,190. Last year they harvested 7,516 cwt. of coffee, but the average price obtained was only 19s. 4d., as compared with 30s. for the previous year. The cost of production, inclusive of London expenses and debenture interest, and calculated at par, was 25s., so that there was a loss of £2,128.

Speaking generally, he thought that the barometer of the rubber-growing industry was at present set fair for better times. In regard to the company's prospects, the trading account for the

year ended March, 1933, showed a loss of £3,554, whereas for the past year there was a profit of £8,741, which surely indicated that the tide had turned. The estimated coffee crop for 1934-35 was 8,800 cwt., and the present prospect was that they would make very much the same loss as they did last year. Their standard allowance of rubber for the calendar year 1934 was fixed at 1,782,540 lb., which should be increased in 1935 by increased allowances for young rubber on Kadjaran Goenoeng Karet and Pengioeran.

As to the profit on rubber in the current year, they could reasonably hope, in the light of present circumstances, that more than enough would be earned to extinguish their debit balance on profit and loss account.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the eight days ended October 13, 1934, amounted to £9,324,000, against ordinary expenditure of £6,569,500. After allowing for an increase in Exchequer Balances of £191,284, the operations for the week, as shown below, decreased the National Debt by £2,487,000 to approximately £8,102 millions.*

Treasury Bills outstanding	973,005,000	799,810,000	830,745,000*	+ 1,435
Total Floating Debt	1,008,105,000	844,710,000	886,045,000	- 1,965

* Includes £4,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £35,000,000 Treasury bills were opened on October 12, 1934, and the total amount applied for was £54,275,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday at £99 16s. 3d., about 23 per cent., and above in full; Saturday, at £99 16s. 4d., and above in full. The average rate per cent. was 14s. 5-7/4d. The amount allotted was £31,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1932				
January 1	40,000,000	50,820,000	38,000,000	5 8 4

GOLD

Messrs Samuel Montagu and Company write on October 17, 1934, as follows:—

The Bank of England gold reserve against notes amounted to £191,938,546 on the 10th instant, as compared with £191,909,743 on the previous Wednesday. About £2,300,000 gold has been dealt with in the open market this week. Keen general buying has kept prices at a considerable premium over the gold exchange parities and this fact, coupled with a further weakness in sterling on the 11th, brought about a fresh record price—143s. 3d.—on that date.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
October 11	143s. 3d.	11s. 10-33d.
" 12	143s. 1d.	11s. 10-50d.
" 13	142s. 8½d.	11s. 10-87d.
" 15	143s. 1d.	11s. 10-50d.
" 16	142s. 9½d.	11s. 10-79d.
" 17	142s. 7d.	11s. 10-99d.
Average	142s. 11d.	11s. 10-66d.

The s.s. "Ranchi," which sailed from Bombay on the 13th instant, carries gold to the value of £39,000 consigned to London.

SILVER

At the outset of the past week, heavy speculative purchases, mainly on account of the Indian Bazaars, found the market bare of supplies and there ensued a sharp rise of 1½d. for cash and 1½d. for forward deliveries, bringing quotations to 24½d. and 24½d. Profit-taking and some Chinese sales failed to bring about any marked reaction and prices receded only ½d. on the next two days.

On the 15th instant was received the news of China's action in raising the export duty to a basic 10 per cent., with a further equalising duty adjustable upwards and which is to represent the difference between the exchange rate and the theoretical London silver parity. This stringent check on exports of silver from so large and important a source had the natural effect of raising prices still further and quotations on that date, at 24½d. for cash and 25d. for forward delivery, were the highest recorded since May, 1929. In spite of heavy re-sales these prices were maintained yesterday, but to-day, with heavy profit-taking sales and only poor demand, prices have reacted sharply, falling 1d. to 23½d. and 24d. The fall was the sharper for the incidence of "stop loss" selling orders, and as we write appears overdue.

Quotations during the week:—

IN LONDON			IN NEW YORK

† Free of income tax.

EGYPTIAN UNIFIED DEBT.—The Egyptian Public Debt Commission announce that the coupon of the Unified Debt maturing on November 1, 1934, will be paid in paper. In the event of a decision to pay this coupon in gold, holders will receive the difference between the sum actually collected and that payable to them, if calculated on the basis of gold parity. For this purpose, at the time of collection, certificates will be delivered to them showing their right in that event to the difference in question.

UNITED KINGDOM AND ARGENTINE 1933 CONVENTION TRUST.—Baring Brothers and Company, Ltd., announce that in respect of the year ending October 31, 1934, a final distribution at the rate of £1 10s. per cent. (less income tax) on the nominal amount of the "C" certificates of the trust will be made on November 1st next. The transfer books of the "A," "B" and "C" certificates of the trust will be closed from the 18th to the 31st instant, both days inclusive.

FIRST CO-OPERATIVE INVESTMENT TRUST, LTD.—The accounts for the half-year ended July 31, 1934, show a net revenue, after providing for preference dividend but before charging income tax (to which under the Finance Act of 1933 the Trust is now liable) of £22,411 4s. 10d. This compares with a net revenue of £20,011 6s. 2d. for the corresponding period of last year. The directors have declared an interim dividend of 1 per cent. (actual) on the ordinary shares (the same as a year ago, when the interim dividend was followed by a final dividend of 2 per cent.), and the amount

OIL OUTPUTS

ANGLO-PERSIAN OIL COMPANY, LTD.—Production in Persia for the month of September amounted to 708,000 tons, making a total of 5,769,000 tons for the first nine months of 1934.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of September are as follows:—Production of oil, 43,580 tons; deliveries, 45,790 tons. The totals for the year ended September 30, 1934, are:—Production of oil, 551,690 tons; deliveries, 549,120 tons; which compare with the previous year's figures of:—Production of oil, 545,813 tons; deliveries, 546,993 tons.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of September as 26,321 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended September 29, 1934, was 344,000 barrels. Production for the week ended October 6, 1934, was 349,000 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended October 6th:—Venezuela, 18,204 barrels; Trinidad, 30,336 barrels; total, 48,540 barrels. Production for September:—Venezuela, 77,360 barrels; Trinidad, 131,729 barrels; total, 209,089 barrels. Deliveries for September:—Venezuela, 74,934 barrels; Trinidad, 143,335 barrels; total, 218,269 barrels. Production for the week ended October 13th:—Venezuela, 17,684 barrels; Trinidad, 30,968 barrels; total, 48,652 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of September amounted to 93,940 barrels, or approximately 13,420 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended September 29, 1934, was: Bolivar district, 652,636 barrels; Maracaibo district, 35,554 barrels; total, 688,190 barrels. Production for the week ended October 6, 1934, was: Bolivar district, 634,315 barrels; Maracaibo district, 35,324 barrels; total, 669,639 barrels. Production for the week ended October 13, 1934, was: Bolivar district, 641,530 barrels; Maracaibo district, 36,267 barrels; total, 677,797 barrels.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE recovery in the world's grain markets was well maintained during the past week and, with the exception of barley, the prices of all grains have been firmer. This movement has been shared by rubber, cotton and jute, while wool prices are practically unchanged. Oilseeds and vegetable oils have had quiet markets, with quotations showing an easier tendency; but metal prices—especially on American markets—have exhibited greater firmness than for some time past. The slight gain in the case of copper was due to a reduction of American exports, while the

substantial appreciation of silver early in the week was the consequence of American policy (discussed in the Money Article this week). The improvement in American prices is reflected in Moody's index of the daily price of staple commodities (December 31, 1931 = 100), which rose from 144.5 on October 10th to 145.2 on Wednesday last. Prices have, however, not yet recovered to the level of a month ago, when the index stood at 152.6.

The firmer tendency of raw cotton prices has caused a slight improvement in quotations for Lancashire products. Reports from that area are more encouraging this week and,

although business in yarns is limited, cotton piece goods are in better demand. The improvement in the jute industry continues. Exports of coal from South Wales are still disappointing, but other areas report favourably, and export prices have, in some cases, been advanced. The industrial consumption of coal is good, and while there are signs that the rate is slowing down, the expansion of iron and steel production continues. Quotations for hides and leather are tending upwards and trade in the footwear and other leather industries is improving.

The past week has witnessed little change in the price of foodstuffs in this country. Butter prices are irregular, while eggs are seasonally dearer; but the prices of meat, vegetables, coffee, cocoa and tea show little change.

COAL

SHEFFIELD.—Conditions in the coal trade are rather more active. Heavy consumption of best steams at industrial works is causing a scarcity for export and prices have advanced to 16s. 9d. to 17s. f.o.b. Export business is quiet, with some increased inquiry. The tonnage of house coal going out is unsatisfactory, being below the level of twelve months ago, but small coal is in brisk demand. Coke continues to be an active market and the output of the ovens is barely sufficient for the ironworks and for central-heating purposes. Trade in foundry coke is fairly good. Best brands of blast-furnace coke command 14s. 6d. per ton at ovens.

NEWCASTLE-ON-TYNE.—The colder weather has brought more inquiry from the English coast, but there is little change in export trade, which remains at a steady level. Screened steam is a good market, and sized nut coal continues to sell well. Steam smalls are also firm, there being a brisk demand from the English coast. The Durham gas collieries are more active as a result of improving demand under winter conditions, but generally the position in this section of the market is quiet and more trade would be welcome. Prompt business in patent oven coke is still rather quiet, but the forward position is firm.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 14s. 9d.; smalls, 11s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 11s. 6d.; Tyne prime large, 13s. 6d.; smalls, 11s.; Hartley Main large, 13s. 6d.; smalls, 11s. DURHAM.—Lambton, South Hetton screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 20s.; Newcastle and district gas coke, 20s. 3d.

GLASGOW.—Despite Polish competition in various markets, the Scottish collieries are managing to keep up their improved level of shipments. The market, as a whole, is hardly so strong as some weeks ago, but there are no signs of weakness. Some good-sized cargoes have recently been dispatched to South America, and several of the Mediterranean ports are taking better tonnages. With the exception of prime Lanarkshire splints and some of the best grades of steams, all classes of coal are open for prompt shipment.

Export prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 13s. 9d. to 14s.; splint best, 16s. 6d.; splint second, 14s. to 14s. 3d.; navigation, screened, 15s.; navigation, unscreened, 13s. 3d.; Hartley, 15s.; steam, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 12s. 6d.; singles, 13s.; pearls, 12s. 6d.; dross, 10s. FIFE.—Best unscreened navigation, 13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 3d. to 13s. 6d.; third-class steam, 12s. 6d.; trebles, 14s. to 16s.; doubles, 11s. 9d. to 12s.; singles, 12s. 3d. to 12s. 6d.; pearls, 11s. 6d. to 12s. LOTHIAN.—Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 6d. to 11s. 9d.; unscreened navigation, 12s. 9d.; trebles, 13s. 6d. to 14s.; doubles, 11s. 9d.; singles, 12s. to 12s. 6d.; pearls, 11s. 6d. AYRSHIRE.—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s.; trebles, 15s. 6d.; doubles, 13s. 6d.; singles, 13s.; pearls, 11s. 6d. to 12s.; dross, 10s.

CARDIFF.—The Government have appointed Viscount Bridgeman of Leigh, Sir David Shackleton and Mr L. A. P. Warner (general manager of the Mersey Docks and Harbour Board) to settle the differences between the South Wales coalowners and miners over the minimum wage and subsistence allowances to be paid under the new wages agreement. The tribunal is expected to commence its sittings at Cardiff next week, and its decisions will be retrospective as from the beginning of the present month. Conditions on the Cardiff coal market are practically unchanged. The seasonal trade is normally active and there is a fairly good demand for sized coals, but the supply of other classes, and notably large coal, is much in excess of the demand, notwithstanding the reduced quota and local non-unionist stoppages. Business with France is suffering both from the extra shipments which took place last month owing to fears of a strike and from the suspension of the coal-pitwood agreement, and the shipping position at the South Wales ports is unsatisfactory. Only 58 berths were occupied on Wednesday.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; seconds, 12s. 6d. to 13s.; anthracite best large, 36s. to 38s. 6d.; Red Vein large,

22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; French nuts, 37s. 6d. to 48s. 6d.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel, 20s. to 21s.; pitwood, ex ship, 22s. 7½d. French, 23s. 6d. to 24s. Portuguese.

IRON AND STEEL

MIDDLESBROUGH.—The iron market continues firm, producers being well contracted; most of their output is going to home consumers, although occasional parcels are being shipped abroad, one lot having gone to Germany this week. More inquiries are in circulation and small lots are changing hands. Prices to home users are based as follows: For Cleveland foundry No. 3 pig iron, 67s. 6d. per ton, delivered Middlesbrough area; East Coast hematite is based on No. 1 quality at 69s. per ton, delivered this area. The hematite market is quite firm and regular consignments are being forwarded to the Midlands and South Wales. Shipments of all classes of pig iron from October 1st to 16th amounted to 7,884 tons, against 9,931 tons in the corresponding period in September. Although good blast-furnace coke is more easily obtainable, makers are firm in their quotation of 20s. per ton delivered furnaces. Foreign ore continues to be based on 17s. per ton c.i.f. for best Bilbao rubio.

The output of iron and steel in this district is being maintained, this now being the largest steel-producing area in the country. It is expected that departments furnishing steel for shipbuilding will benefit as a result of the orders placed on the Tyne recently for four destroyers. It is also understood that the Export Steel Association have booked an order for 4,000 tons of plates for Argentina, and a portion of this will probably be allocated to works in this district. Heavy steel melting scrap is firm at 50s. per ton delivered works, with merchants not inclined to go too far ahead at this figure.

SHEFFIELD.—The call for steel has broadened somewhat since the beginning of the month. The turnover may not be so large as during the first half of the year, but it represents a substantial increase on the two previous years. Business is still mainly on home account, the expansion of exports being less than was hoped for. September exports of iron and steel and their manufactures were only a few thousand tons higher than in August. Tools and cutlery, however, continue to improve in the export markets every month, and have made good most of the heavy losses experienced in 1931 and 1932, and works producing strips, stainless steel, tool steel and wire are well employed. The position of railway steel and rolling stock is better than for some time past. The motor, wireless and aeroplane industries are providing Sheffield with a great amount of trade for steel forgings, castings, tools and special steels in a wide variety of forms, and prices continue steady. Considerable quantities of steel and tools are being imported.

GLASGOW.—A good volume of business continues to be done at the steel plants in the West of Scotland; work is regular, plant fully employed and a fair amount of work still on hand. The demand for semis is expanding and makers are better off for work than has been the case for some time in this branch. The position as regards Clyde shipbuilding is further improved by the Admiralty orders announced at the end of last week, but the position at Clyde yards is not yet regarded as satisfactory. Sheet makers have been able to put a few more mills into operation, the recent increased export demand being maintained both for black and galvanised sheets. Railway carriage and wagon builders in the West of Scotland are exceedingly busy and further contracts placed within the past week ensure a continuance of regular employment in this industry.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported that the tinplate works were operating at approximately 70 per cent. of capacity, and that makers are well sold up to the end of the present year. Quotations have been ruling at from 18s. 2d. to 18s. 7½d. per basis box, but at the lower prices of 16s. 3d. to 16s. 9d. for wasters. The position in the galvanised sheet market has improved on the strength of an order for 12,000 tons from Australia, but prices are unaltered. Welsh steel bars are also nominally unchanged at £5 7s. 6d. per ton. Shipments of tinplates at Swansea last week improved from 63,505 to 108,063 boxes, while stocks, though slightly reduced, amounted to 105,695 boxes compared with 134,449 boxes at the corresponding period last year.

OTHER METALS

While the general trend shows little change, price fluctuations on the metal markets have been rather wider this week. United States consumers are strongly opposed to the maintenance of the

MUTUAL LIFE ASSURANCE

ESTABLISHED 1835

price of copper at 9 cents per lb.—at which level it has been held since the summer—but the producers are considering a further restriction of output to achieve this end. At the same time, they are somewhat restricting their exports to avoid depressing the European price still further. Hence, there has been some improvement on European markets. According to the unofficial statistics, published on Wednesday evening, there has been an increase in world stocks, for the first time since early in 1933, amounting to 6,750 short tons, despite a fall of 4,000 short tons in American stocks. Aggregate world stocks at the end of September were 497,000 short tons.

Tin has again been an uninteresting market. Although the tinplate industry in this country and Germany continues to work at high capacity, this is insufficient to counteract the unfavourable at American situation. The United States tinplate industry is at present working at only about 40 to 50 per cent. of capacity, while the output of motor cars during September was smaller than in the corresponding month of last year. Hopes of an early market improvement are limited, for purchases are very restricted at the present time.

The silver market has been much influenced by the increase in the Chinese export duty from 2.25 to 10 per cent., and on Monday the price in London reached its highest for over five years. This high level was maintained on Tuesday, but heavy selling on the following day pushed quotations down by no less than one penny. The increased Chinese export duty will doubtless reduce the level of exports from that country. During the past few weeks, heavy exports from America has been counterbalanced by exports from China, so that the reduction of the latter would seem to leave the market open for a further rise in the price of silver. But American market policy is an uncertain factor. Speculators have been very active in recent weeks, and it is known that President Roosevelt does not really favour the present silver policy. When the elections are over next month, it is possible that some change in the President's silver policy may take place.

TIN.—Sales on the London Metal Exchange: 175 tons on Monday, against 565 tons last week; 235 tons on Tuesday, against 195 tons last week; 240 tons on Wednesday, against 210 tons last week. The New York quotation on Wednesday was 50.85 cents per lb., against 50.50 cents a week ago and 51.40 cents a month ago. Wednesday's official closing quotation in London for standard cash was £231 to £231 5s., compared with £230 5s. to £230 10s. last week. Stocks in London and Liverpool at the end of last week were 4,253 tons, a decrease of 172 tons on the week.

COPPER.—Sales on the London Metal Exchange: 2,450 tons on Monday, against 1,700 tons last week; 2,100 tons on Tuesday, against 1,075 tons last week; 1,250 tons on Wednesday against 1,000 tons last week. Domestic spot was quoted at 6.17½ cents per lb. in New York on Wednesday, against 6.17½ cents a week ago and 6.65 cents a month ago. Wednesday's official closing price for standard cash in London was £26 to £26 1s. 3d., compared with £25 12s. 6d. to £25 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 33,163 tons, show an increase of 574 tons, and stocks of rough copper, at 7,324 tons, an increase of 350 tons.

LEAD.—Sales on the London Metal Exchange: 500 tons on Monday, against 1,050 tons last week; 800 tons on Tuesday, against 800 tons last week; 450 tons on Wednesday, against 600 tons last week. The New York quotation on Wednesday was 3.65 cents per lb., against 3.60 cents a week ago and 3.70 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 3s. 9d. for shipment during the current month compared with £10 3s. a week ago.

SPELTER.—Sales on the London Metal Exchange: 200 tons on Monday, against 375 tons last week; 600 tons on Tuesday, against 200 tons last week; 650 tons on Wednesday, against 500 tons last week. Wednesday's quotation in East St. Louis was 3.80 cents per lb., against 3.80 cents the week before, and 4.00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £12 for shipment during the current month, against £11 15s. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £43 to £43 10s. per ton, as against £41 to £41 10s. per ton last week. Chinese wolfram was quoted at 41s. to 42s. per unit, c.i.f., as against 41s. 6d. to 42s. 6d. per unit c.i.f. last week. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—**Manchester.**—Prices for raw cotton have hardened since a week ago, the tone of the markets in New York and Liverpool being firmer. The 12 cent loan plan in the United States is undoubtedly helping to sustain prices, and according to some authorities there is a possibility of an extension of inflationary measures by the Washington Government. Favourable weather continues to be experienced in the American belt, and the picking of the crop is proceeding satisfactorily. In Manchester and Liverpool there has again been an active demand for Egyptian, Brazilian and East Indian qualities. It is significant that the consumption of American cotton in the United States last month was the lowest for over twenty years.

Cloth inquiry has tended to broaden and quite a number of manufacturers have had more opportunities of selling. With

regard to India, offers are getting nearer to makers' ideas of prices and, although Calcutta has been disappointing, a rather better turnover has taken place in mulls for Karachi and fancies for India generally. Merchants with connections in China have been much interested in the silver developments, but the fall in the Shanghai exchange is, of course, an adverse factor and business has been at a low ebb, although further contracts have been arranged for Hong Kong. There has not been any particular activity for Egypt, South America and the Continent, but rather more orders have been placed for the home trade, chiefly in dress materials, fancy shirtings and casement cloths. The trade done in yarns has been of limited dimensions, but quotations have been firmer.

JUTE.—**Dundee.**—Improvement in the jute industry has continued and both spinners and manufacturers have been able to obtain an advance in prices of yarns and cloth, which has really been the result of the satisfactory position in which they have found themselves following a very good business done. Buyers have purchased for delivery some months ahead and altogether the position is better than it has been for some years past. Whereas formerly spinners and manufacturers had been increasing their stocks of yarns and cloth owing to lack of demand, there is now an urgent request for early delivery, which is very difficult to obtain in any width and weight of hessians and the hessian yarns. Due to the closing down of a large spinning mill, the machinery of which is to be sold next week by auction, the supply of yarns has been considerably curtailed.

Prices of raw jute have fluctuated to some extent, without moving far away from the level ruling for several months past. The Indian jute mills have occasionally entered the market for fair quantities, which has arrested any tendency for quotations to decline. The Government of Bengal are seriously tackling the question of restriction of the cultivation of raw jute next season on a voluntary basis, and are collecting all the data necessary to put the scheme into operation.

The price of Daisee-2/3 has varied from £14 to £14 5s., and yesterday there was a seller of the full group at £13 17s. 6d., with fours at from £13 2s. 6d., Tossa-2/3 being offered at from £14 15s. for the full group and fours at £14, October-November. The better qualities of jute are being maintained in price, because of the scarcity of good quality fibre this season. First Marks are quoted at £17 10s. and good Lightnings at £16 12s. 6d. for Green Circle Ram, with Heart Ram-D/E at £15 2s. 6d. and SCC-H at £14 15s., October-November. Large quantities of hessian yarns have been bought and up to 1s. 10d. has been paid for common 8 lb. cops and 1s. 11d. for 8 lb. spools, which are now the lowest rates quoted. The market is quieter, as buyers are not keen to pay these advanced limits for delivery next year. Twist is firm at 3½d. paid for 3 ply 8 lb., and sacking yarns rule at 2½d. to 2½d. for 24 lb. weft and 3d. for 8 lb. chains. Fair quantities of rove have been bought at £17 to £17 5s. for 48 lb. and £14 to £14 5s. for 200 lb., and the finer yarns are dearer at 2s. 7d. for second quality 8 lb. Rio warp, 2s. 3d. for third and 2s. for fourth. Carpet descriptions are firm and more active at 2½d. for 14 lb. warp. Jute cloth has been steadily purchased and the lowest rates are now 2½d. for 10½ oz. 40 in. and 2½d. for 8 oz. Calcutta goods are quiet, but quite a steady undertone prevails.

GRAIN MARKETS

WHEAT.—The week ended last Wednesday witnessed a further slight improvement in wheat prices, both in this country and in the United States, although the upward spurt at the beginning of this period was not fully held. Canada has been selling freely, and France continues to export, although apparently on a somewhat smaller scale than recently. Crop prospects have improved somewhat in Australia, but it is reported that slight frosts in Argentina may have done some damage; the effect on the size of the Argentine crop is, however, unlikely to be very significant. According to Mr G. Broomhall, total shipments during the past week were 1,476,000 quarters, against 1,526,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 100½ cents per bushel, against 99½ cents the week before and 103½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 3d. per 496 lbs., against 32s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 31s. 3d., against 30s. 9d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 27s. 6d. to 28s. 6d., against 27s. to 28s. a week ago.

Total	57,727,163	57,738,498	487,639,312	536,780,772

FLOUR.—Trade has been quiet at mainly unchanged rates. North American shipments were 68,000 sacks in the past week, as compared with 111,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 25s. to 27s., against 24s. 9d. to 27s.; Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s.

BARLEY.—The best qualities of English barley continue to meet a steady demand, but the lower grades tend to weaken in price. Quotations for futures in Winnipeg have shown a somewhat easier tendency. October futures were 52½ cents per bushel in Winnipeg on Wednesday, against 53½ cents last week and 56½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 32s. to 55s., against 32s. to 55s. a week before.

OATS.—Shorter supplies continue to meet a steady demand, and quotations show a tendency to harden. On Wednesday, "December" futures were quoted at 52½ cents per bushel in Chicago, against 51½ cents a week ago, and 52½ cents last month. Quotations in London, Wednesday: "River Plate," landed, 21s. 6d. per 320 lbs., against 21s. 6d. a week ago; "Chilean White," landed, 23s. 6d., against 23s. 6d. a week earlier.

MAIZE.—The tone of the market has improved considerably, a recovery in Argentina being an important contributing factor.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURES	Jan. 4, 1932	Jan. 4, 1933	Oct. 18, 1933	Jan. 3, 1934	Oct. 10, 1934	Oct. 17, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	58½	65½	80½	78½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	65½	46½	78½	84½	99½	100½
—Cents per 60 lb.						

The visible supply of wheat in Canada, at 111,312,000 bushels, shows an increase of 1,379,000 bushels. Supplies a year ago stood at 110,040,000 bushels.

OTHER FOODS

SUGAR.—Quotations for raw sugar, both in London and New York, have shown an easier tendency this week. The spot price in New York on Wednesday was 2-9½ cents per lb., as compared with 2-9½ cents per lb. last week and 2-86 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 4d., against 4s. 5d. to 4s. 5½d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports	Deliveries	Stocks
	1933	1934	1933
London	1,803	693	3,293
Liverpool	21,313	14,276	14,314
			13,424
			95,842
			98,579
Total tons	23,116	14,969	17,607
			14,496
			117,572
			122,972
Previous week	6,847	14,885	19,327
			13,665
			112,163
			122,499

COFFEE.—Dullness has characterised the New York spot market this week, but quotations show little change. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. Trade in London has also been quiet, although the tone on Wednesday was steadier than on Monday and Tuesday. Last week's movements of coffee in London were as follows:—Brazilian, landed, nil; delivered, for home consumption, 33 bags; exported, 79 bags; stocks, 27,592 bags, against 27,390 bags a year ago. Central American, landed, 637 packages, delivered, for home consumption, 1,318 packages; exported, 810 packages; stocks, 87,852 packages, against 80,726 packages last year. Other kinds: Landed, 559 packages; delivered, for home consumption, 2,597 packages; exported, 478 packages; stocks, 81,129 packages, against 88,932 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 5 cents per lb. a month ago. The London quotation for Accra, "November-January" was 18s. 9d. per 50 kilos, c.i.f. Continent, as against 19s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 218 bags; delivered, for home consumption, 6,152 bags; exported, 1,455 bags; stocks, 189,572 bags, against 139,534 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 52,625 packages of Indian and 23,048 packages of Ceylon tea. The Indian grades met with fairly keen competition, and prices were well maintained. Demand for the Ceylon varieties was good, but prices showed an irregular tendency, the higher grades tending to cheapen. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land
Oct. 12, 1933	14-42	13-11	17-32	10-90	9-45	10-83
Sept. 13, 1934	13-09	10-97	12-16	9-29	8-77	10-63
Sept. 20, "	12-25	10-67	12-01	9-30	8-70	10-26
Sept. 27, "	12-85	11-17	12-70	9-85	9-38	11-06
Oct. 4, "	13-08	11-62	13-84	10-19	9-76	11-00
Oct. 11, "	13-10	11-48	14-20	10-00	9-52	10-98

RICE.—The "spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 8s. 2½d. per cwt., also remains unchanged. Movements in London during the past week were as follows: Landed,

227 tons; delivered, 320 tons; stocks, 4,145 tons, against 5,332 tons a year ago.

POTATOES.—Ample supplies have been meeting a rather better demand, and prices are firm all round. At the London Borough Market on Tuesday, "King Edward" sold at 6s. to 6s. 6d. per cwt., this price being unchanged on the week.

SPICES.—"Black Singapore" was quoted at 5½d. per lb. on Wednesday, against 5½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 25 tons; delivered, 19 tons; stocks, 432 tons, against 392 tons a year ago. White, landed, 131 tons; delivered, 170 tons; stocks, 8,412 tons, against 1,232 tons a year ago.

MEAT.—Wednesday's quotation for Argentine beef, chilled hind-quarters, was 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. last week. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,747 tons, against 9,111 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.4 per cent. of the beef supplies, against 80.3 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 74.4 per cent. of the total supply of mutton and lamb, against 66.0 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Markets have a quieter feeling, and business is of small volume. Demand for linseed both here and abroad is only moderate, and trading in new crop Plate has not begun. Old crop is offered freely, but more interest is centred upon Indian. The progress of the new seed in Argentina continues to be satisfactory, and a larger yield than last season is now confidently anticipated. Argentine shipments are not so large, and about 175,000 tons of old seed is still available for export—25,000 tons less than the quantity actually shipped in the remainder of 1933; for this reason apparently it is at a premium over new seed, which for January-February loading is quoted around £9 7s. 6d. per ton. The quantity now afloat for Europe is 127,200 tons (including 22,000 tons from India) or 17,000 tons more than last week; and for the United States 50,900 tons, against 93,100 tons a year ago. A rather improved demand for cottonseed is in evidence, and £4 17s. 6d. has been paid for black Egyptian, November-January loading.

Trade in vegetable oils is not so active. Linseed oil is easier, and for October-December delivery ex Hull mill is quoted £18 15s., and January-April £18 17s. 6d. per ton naked. Cotton oil is quiet. Egyptian crude, ex Hull, sells at £14 5s., and refined at £16 5s. per ton. Oilcakes are in fair demand and steady in price.

HIDES AND LEATHER.—Quite a satisfactory amount of business has been negotiated in hides, leather and leather goods recently, and the general position of these markets is considered rather more hopeful than at this time last year. Although reports are somewhat divergent regarding the amount of sales made at the Shoe and Leather Fair in London last week, the general consensus of opinion is that this annual gather of the leather and allied industries was the best held for some years past. Exhibits of both leather and footwear were of a very high standard, and, taking the reports of the exhibiting firms as a whole, it would seem that sales were well up to, and in some instances surpassed, expectations. Business was not confined to the home trade, some quite good transactions during the earlier part of the fair having been negotiated with overseas visitors.

At the sales of hides and skins from home-slaughtered cattle held this week, prices for ox and heifer hides were steady to an advance of ½d. per lb., best clears changing hands at from 5d. per lb. for heavies to 4½d. for lights. Warbled in the same class sold at from 4½d. to 3½d., while second clear and warbled hides realised from 4½d. to 4d. and 4d. to 3½d. per lb. respectively. Cow hides were fairly steady, but there was an increase in the figures paid for bulls. The calfskin market was stronger, best heavies selling at 4½d. per lb. and lights at 5½d. Sales of imported hides have been on the quiet side, but there has been little change in prices. Wet-salted South American ox have made a fraction under 4½d. and dry B.A. Americanos are still quoted at 5½d. Cape hides have been a moderate market, sales of drys having been made at 6d. and 5d. per lb. for firsts and seconds, while drysalted have realised 5½d. and 4½d. for the same selections. Prices for Australians are nominal, with only a limited inquiry. A satisfactory feature of the recent demand for sole leather has been the inquiry for the better selections. Sales of English and wetsalted bends in the light and medium weights have been quite good, and in addition, request for light-weight dry hide bends has also shown an expansion. Turnover in regard to both shoulders and bellies has been moderate, and there is less tendency on the part of consumers to haggle over quotations. In the upper leather section, box and willow calf, together with black and brown glacé kid, account for the major portion of the business, but sales of reptiles are also frequent. Patent leather has been a rather better inquiry than of late, and although the position of this section of the industry may not be quite so active as is the case in the heavy leather section, hopes are entertained that recent inquiries at the Shoe and Leather Fair will eventually result in an increase in turnover.

RUBBER.—The steadier tendency in the market has continued, and prices show a slight advance over those recorded a week ago. It is reported that a slightly more optimistic view of the future is beginning to develop in American financial circles. In New York, Wednesday's spot price for rubber, at 13½ cents per lb., compared with 13½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for January-March,

1935, as against 6½d. to 7d. a week ago. Stocks in London and Liverpool at the end of last week, at 114,735 tons, show an increase of 2,519 tons as compared with the preceding week.

THE LONDON FUR AUCTIONS.—The auctions of the Hudson's Bay Company were concluded at the beginning of the week, when the other London auction firms began their public sales. At the auctions of Lampson, Huth, Aming and Colb, silver foxes showed the same price reduction of 10 per cent. as at the Hudson Bay's sales. The Chinese fur auctions on Monday met with so little interest that most of the offerings had to be withdrawn. Much the same was true of the Australian auctions on Tuesday. The supply of Australian opossum was rather small and it is therefore impossible to give an accurate judgment regarding prices, but New Zealand and Tasmanian opossum showed a depreciation of 20 per cent. Lack of interest in the darker colours led to their complete withdrawal. Wallaby met with a very restricted demand and

were 25 per cent. cheaper. There was no business in ringtails and most of the Australian red foxes were also withdrawn. At Wednesday's auctions some lower grades of beaver and otter were disposed of at lower prices. Ermine were 20 per cent. cheaper and sales were restricted. The South-West African Persian lambs, offered by Murley, were all sold, although prices showed a reduction of some 15 per cent.

It will be seen, therefore, that no important change has taken place in the market position, the uncertainties of the political situation and international monetary restrictions preventing any larger volume of business. Germany, which is usually the most important purchaser, has not been represented at the auctions. In Leipzig, prices are up to 50 per cent. above the London level, but exchange difficulties prevent her from entering the market. The unsatisfactory tone of the autumn auctions in London is, therefore, not surprising.

DEMOCRATIC EFFICIENCY

PARLIAMENT reassembles next week within a few days of the centenary of the destruction by fire of the old Palace of Westminster. It is recorded that the crowd which watched the blaze in 1834 was greatly concerned for the safety of Westminster Hall, but that the destruction of the Houses of Parliament themselves gave rise to jubilation rather than regret. The fire was taken to be a symbol of Divine agreement with the principles of the Reform Act—somewhat tardy, it is true, but none the less thorough. The old building stood for the tyranny of the unreformed system; the new should house that democratic legislature which was to usher in the age of liberty, prosperity and justice.

If the present Palace of Westminster were to be burned to the ground—a calamity which, save perhaps on structural grounds, we may well pray to be spared—how would the general public regard it? Would it be a matter for rejoicing or for gloomy forebodings of the end of democracy? In certain quarters Parliament is subject to criticism as violent as any that was rife before the Reform of 1832, and all over the world Parliamentary institutions have unquestionably lost credit as a method of guiding the destinies of nations. But British public opinion is still firmly attached to democracy, and the British Parliamentary system of government can claim to be the most successful of democratic constitutions. Indeed, it is notable that one of the other chief democracies of the world has in recent years been moving deliberately towards the British system; for M. Doumergue has openly ascribed to the influence of the British example his proposed reforms which aim at giving the Cabinets of France greater stability by making it easier for them to appeal from a troublesome Parliament direct to the electorate.

In our own case there has been some tendency to strengthen the power of the Executive. Naturally, the extent of this influence varies enormously with the size of the Government's majority in the House of Commons and at the present moment the Cabinet is in a position to exercise something like a democratic dictatorship. This in itself would not necessarily be resented as a method of Govern-

ment, for in the world as it is to-day public opinion is impressed with the need for speed, firmness and continuity of direction in government. It must, however, be admitted that the system is exhibiting several very grave defects in its actual working. Two of the most frequent criticisms may be selected for mention. The first refers to the functioning of the Cabinet. As it has worked since the war, the Cabinet has too often failed as a co-ordinator of policy and brought not coherence but confusion into the plan of government. Secondly, it is urged that Parliament, being in fact disregarded save for the formal ratification of the Government's acts, has become little more than a futile talking shop with no more than an occasional, indirect and accidental influence upon the course of events.

We have stated these criticisms—neither of which is new—in their severest form, for it is in terms such as these that they appear in the propaganda of the anti-democrats. But though the language may be exaggerated, and though a defence may be possible on both counts, they must be admitted to contain more than a grain of truth. Those who believe that the preservation of representative democracy is the only safeguard against a relapse into barbarous autocracy should be concerning themselves with the solution to the puzzles these criticisms propound.

There is already a substantial measure of agreement that the way to increase the efficiency of the Cabinet is to reduce its size. A body of more than a score of busy departmental chiefs is a most unwieldy organ for decisions on policy. In a crisis the Cabinet does not decide; the decisions are taken by a small group of dominating personalities. And in less critical times, the Cabinet does not succeed in efficiently co-ordinating policy. Issues are far more frequently settled in this country by the tug-of-war between departmental ambitions and Treasury control of expenditure than by decisions of the Cabinet. The remedy is to follow the precedent of the War Cabinet. In each Government there should be five or six leading men, relieved of all departmental responsibility, and devoting themselves entirely to the formation and co-ordination of policy. Cabinet

THE FINANCIAL NEWS

Special articles due to appear next week on the leader page of THE FINANCIAL NEWS are as follows:

MONDAY, OCTOBER 22—O. W. Roskill on THE SALT TRADE POSITION AND THE SALT COMPANIES—including Salt Union, Cheshire United Salt, Cerebos and Sudan Salt.

TUESDAY, OCTOBER 23—MINOTAUR in his "Mines of the Rand" series, chooses a recent centre of market interest—NEW KLEINFONTEIN.

WEDNESDAY, OCTOBER 24—GERMANY AND THE METAL MARKETS—What is in store for Whittington Avenue from the World's biggest Copper Buyer?—By a Metal Market Correspondent.

THURSDAY, OCTOBER 25—Industry in the Provinces No. 20—This week's choice falls on NOTTINGHAM.

FRIDAY, OCTOBER 26—THE SHELLAC POSITION. The new Indian crop coming on to the market centres attention once more on Shellac and the Big Pool operating in it. By our Produce Market Correspondent.

Committees, as during the war, should include one or more members of this Inner Cabinet and should be empowered to reach decisions on many matters which now have to go before the whole Cabinet.

The rehabilitation of the influence of the House of Commons is a more contentious matter. The duties of Parliament are to debate the general outlines of policy, to discuss the legislation presented to it by the Government, and to review the administration of the Departments. With the variety and complexity of present-day administration, a body of 615 members is competent to perform only the first of these duties, and it is in these general debates that the House of Commons is at its best. But legislation is being more and more accomplished by means of enabling Acts, often forced through by the closure. The orders issued under these Acts, even when in law they are subject to review by Parliament, in fact very rarely receive that review. Scrutiny of administration is performed only sporadically at question-time. As a result, the activities of the average private member consist of a few speeches on general principles, a handful of questions and, for the rest, voting in obedience to the whips.

The problem, then, is to increase both the time and the independence of Parliament—but without giving further play to mere obstruction and without threatening that stability of the Government which is the chief merit of the present system. There is a growing belief that these objects could be at least partially secured by an extension of the Committee system. One form of the proposal—to which, however, objections have been raised—is that the House should be divided into a number of permanent committees, each reproducing in miniature the party composition of the House and each being concerned with one subject, or group of subjects. These committees would deal not only with the details of Bills which concerned them, but with Ministerial orders and with the general course of administration. The time of the House as a whole would be set free for first and third reading debates and similar discussions of general principles. It would have to be understood that an adverse vote in a committee would not entail the resignation of the Minister in charge, still less of the Government as a whole. This would increase the volume of responsible and independent criticism, but it would be a necessary corollary that the Government should have the right to appeal from the committee to the whole House, where its decision would be backed, as at present, by the powerful sanction of the threat to dissolve.

Reform along these lines would allow the details both of legislation and of administration to be subjected to fuller discussion, while at the same time taking up less time than at present, when everything has to wait its turn to pass through the double bottle-neck of Cabinet decision and the House of Commons time-table.

These tentative suggestions barely touch the fringe of the subject, but they will perhaps suffice to indicate the direction into which thoughts of constitutional reform should be guided. Liberty and democracy cannot be saved by a purely negative insistence on their abstract virtues. We need to demonstrate that a free state can be as efficient as a dictatorship and that the traditional forms of Parliamentary government can be transformed to fit the new and baffling circumstances of the twentieth century.

The Economist will publish next week
as a Special Supplement

EMPIRE TRADE BEFORE & AFTER OTTAWA

by

Sir GEORGE SCHUSTER

Containing analyses of each British Country's trade
in 1913, and from 1924 to 1933

THE CARES OF A LEADER

In an age of dictatorships heads need not wear crowns in order to lie uneasy, and a nest of swastikas may prove as prickly as a bed of thorns. Indeed, at the present moment one would need more than ten fingers to tot up the German Führer's cares. There is "General Winter," who must seem as formidable to Herr Hitler in the autumn of 1934 as he proved to Napoleon in 1812. Secondly, there is the imminent plebiscite in the Saar territory. In the third place, there is the predicament in which the German National-Socialist movement finds itself to-day vis-à-vis both the Protestant and the Catholic Churches.

Of these three nightmares, the coming winter is perhaps the easiest for Herr Hitler's Government to face. Even here, of course, there are difficulties enough to occupy the whole attention of an ordinary statesman in ordinary times. The turn of the economic screw cannot be concealed from the public by such simple manoeuvres as a change in the method of calculating the cost-of-living index. Nor does devaluation offer an easy way of escape; for a nation with the German experience will find it difficult to imagine any devaluation of the mark stopping short of zero. All Dr. Goebbels' skill as a propagandist will be needed to reconcile the people to Germany's economic difficulties.

As for the Saar plebiscite, the question is whether the National-Socialist movement—being unable to face an adverse vote and being aware of the probable strength of the anti-Nazi minority—will succumb to the temptation to resort to "direct action," and thereby precipitate a military intervention by France for the maintenance of order in the plebiscite area. While it is clear that the French would now be rather relieved to be quit of the Saar through a *bona-fide* vote in Germany's favour, it is also clear that they do not intend to tolerate a stultification of the plebiscite by Nazi terrorism. If the plebiscite were to become the occasion of a clash between French troops and Nazi intimidators from beyond the border, the settlement of the Saar question might be indefinitely postponed and relations between France and Germany might be fatally re-embittered.

What stands, however, between a dictator and his sleep is not the catastrophe of the month after next, but the bother of the day after to-morrow, and we may conjecture that at this moment the problem of the Churches is weighing more heavily on Herr Hitler's mind than any other of his cares.

The negotiations between Berlin and the Vatican regarding the interpretation and the implementing of the Concordat are at a standstill, and at this stage it is evidently the Vatican that is showing itself the more intransigent. Some time ago it was supposed that Herr Hitler would temporise with the Vatican until after the Saar plebiscite had been taken, and would only show his teeth when the decisive Catholic vote in the Saar territory had been safely harvested in the Nazi interest. If this was really the Nazi policy, it was too transparent to escape the Vatican's notice; and if the Vatican has now deliberately reversed the two parties' respective rôles this must mean that, in the Vatican's opinion, the real attitude and intentions of National-Socialism towards the Catholic Church in Germany are now fully apparent. In these circumstances, the casting of the Catholic vote in the Saar must be one of the graver cares at the back of Herr Hitler's mind.

Unlike the Catholic crisis, the Protestant crisis does not appreciably affect the outlook in the Saar, and has, in fact, no direct relation to any of Germany's foreign affairs. Yet just because the German Protestants, unlike their Catholic compatriots, do not enjoy the foreign support which is inherent in membership of a world-wide Church, the increasingly vigorous—and increasingly successful—resistance that they have been putting up against the high-handed attempts to coerce them is all the more impressive. The sympathy which they have been receiving from their fellow-Protestants abroad is sincere but inevitably rather platonic, in view of the traditional fission of the Protestant Church into a number of independent national units. Substantially, the German Protestants have had to rely upon themselves alone. They have also had to make their fight in the teeth of their own ecclesiastical tradition; for German Protestantism has previously had a reputation for

subservience—if not to the civil power directly, at any rate to the pastors and masters whom the civil power has chosen to place in command of ecclesiastical affairs.

The crisis was brought to a head by Dr. Jäger's forcible but ineffectual suppression of the local Protestant churches of Württemberg and Bavaria the week before last. Outwardly, the previous organisation of these churches has been suppressed; Bishops Wurm and Meiser have been put under supervision by the State police; and the Bavarian Protestant Church has been re-divided into a Bavarian and a Franconian section, on the pedantic lines of the ancient German tribal divisions. But Dr. Jäger's high-handed actions have only affected the shell of the Church; the body has defied him. In actual fact, the Bavarian and Württemberg Protestant congregations are still following their nominally deposed bishops, and Dr. Jäger's *coup* in the South has evoked a counter stroke in the North which seems likely to lay him low. At Dahlem, last Saturday night, the Reich Confessional Synod of the German Evangelical Church, under the chairmanship of Dr. Koch, passed a resolution declaring that the violation of the South German Protestant Churches has broken up the existing church constitution, and that "the men who seized the leadership of the Church in the Reich and the regime have cut themselves off from the Christian Church by their methods." The Confessional Synod has at last constituted itself into an independent Church Government; and it has asked the Reich Government to take cognisance of this decision—demanding from the Reich Government, at the same time, "the recognition that, in matters affecting the Church in its doctrine and organisation, the Church is qualified to judge and decide, without prejudice to the State's right of supervision."

What will Herr Hitler do? Theoretically, he might crush the independence of the Protestant Church in Germany as he has crushed the Jews or the non-Nazi political parties. But this course is virtually ruled out by a combination of practical difficulties. In the first place, if this was to be his policy, he has left it too late; for things can be done in the early days of a revolution which cannot be done afterwards when the initial impetus has abated. In the next place, he could not carry his own Government with him; for some of his right-hand men are known to be strongly opposed to the Jäger-Müller policy—and this opposition is not confined to those Ministers who are strong Protestants, like Count Krosigk. There are also many leading Nazis who hold, on grounds of sheer *Realpolitik*, that the attack on the churches is bad policy because it is a dangerous excursion into a field with which the National-Socialist Movement has no concern. It seems impossible, then, that Herr Hitler should now put the whole weight of the National-Socialist power behind Herren Müller and Jäger. The logical alternative is that he should make his peace with the Free Confessional Synod—which is manifestly anxious to remain at peace with him—and should let the two would-be ecclesiastical dictators go. This, however, is not so easy. Herren Müller and Jäger are the Leader's own appointees; and he has allowed them to use his own political police as the instruments of their ecclesiastical tyranny. In successfully defying the bishop and his beadle, the Protestant insurgents have been automatically defying the police as well. However, Herr Hitler has so far supported the Reichsbishop in deed only, and not in word, and it is possible that he may find a way of rendering his two creatures innocuous, and of coming to terms with the free Protestants without "losing face."

For our part, we believe that this is the line that he will take; and we also believe that the Free Confessional Synod will do their best to build him a golden bridge for his retreat. At the same time, it seems unlikely that the long-tolerated mismanagement and misbehaviour of Herren Müller and Jäger can be liquidated without being paid for. The Synod's resolution of October 21st is, in effect, a declaration of independence. Such declarations are unhealthy for dictators—even when, as in this case, the tyrant who is defied is not the dictator himself. And then there are certain phrases that can neither be forgotten nor unsaid—for example, "the anti-scriptural introduction of the temporal leadership principle into the Church." If the Church cannot do with a Führer, and if the Church is to have its way, this is a notable precedent for other spheres of life. It seems

that poor Dr. Müller has done his old friend Herr Hitler a very bad turn. The Führer will need all his skill in leadership and political ingenuity to retrieve the spiritual unity of the German people.

TEN YEARS OF TRADE

DURING the past ten years the flow of international trade has changed its course very radically owing to the combined effects of governmental interference and the world depression. From the point of view of the United Kingdom, these changes have been traced quarter by quarter in an analysis of the official statistics, the last of which was contained in an article in the *Economist* of August 25th. These articles, however, relate to money values, which are influenced by price changes, and only show the relative progress of trade with different countries of the world. Changes are also taking place, however, in the character of our trade; and it is, therefore, useful to supplement the study of markets with an examination of the volume of trade in different groups of commodities.

There is, of course, no satisfactory way of measuring the volume of trade by adding together the physical units; but we can arrive at figures which reveal changes in the amount as distinct from the value of trade by valuing the individual items at the same price over a period of years. From 1924-30 the *Board of Trade Journal* published a quarterly index of the volume of our overseas trade, using 1924 as the base year. It then changed the base to 1930 and recalculated the figures for the year 1924 at 1930 prices; but it did not recalculate the statistics for the intermediate years. The old index for these years can, roughly, be compared with the new one; but the figures are not strictly comparable since the change of the price basis has involved a change in the weighting given to different commodities in the total figures and in the index based upon them. They have therefore been omitted from the present analysis; general movements during these years are, nevertheless, alluded to in the text.

Taking first the figures of retained imports, the changes in volume of our total trade and of the three chief categories, viz. food, materials and manufactures, are shown in the following table, which gives the statistics for each class revalued on a uniform basis—namely, the prices ruling in 1930—together with a series of percentages taking 1930 as 100. The percentages are shown diagrammatically below.

RETAINED IMPORTS VALUED AT 1930 PRICES
(In million £'s)

	1924	1930	1931	1932	1933	1934*
I. Food, Drink and Tobacco	399.3	451.4	488.2	472.3	461.2	454.8
II. Raw Materials and Articles Mainly Unmanufactured	211.2	212.1	199.1	202.9	222.4	239.6
III. Articles Wholly or Mainly Manufactured	217.1	283.3	288.1	184.6	190.2	213.2
Total (inc. Parcels Post and Animals not for Food)	842.5	957.1	985.3	866.6	877.9	917.2

INDEX NUMBERS (1930 = 100)

	1924	1930	1931	1932	1933	1934*
I. Food, Drink and Tobacco	88.5	100	108.2	104.1	102.2	100.8
II. Raw Materials and Articles Mainly Unmanufactured	99.6	100	93.9	95.7	104.9	113.0
III. Articles Wholly or Mainly Manufactured	76.6	100	101.7	65.2	67.1	75.2
Total (inc. Miscellaneous).....	88.0	100	102.9	90.3	91.7	95.7

* 1934 figures on basis of nine months' trade.

During the whole of the period covered by the above table, imports of food have amounted to approximately one-half of total imports, varying only from 47 per cent. in 1924 and 1930 to 55 per cent. in 1932 and 50 per cent. in the first nine months of 1934. The proportion of manufactured goods, on the other hand, increased from 26 to 30 per cent. between 1924 and 1930, largely owing to an increase of £18.4 millions in imports of oils, fell off to 21 per cent. in 1932, but has risen slightly to 23 per cent. in the first nine months of 1934. As regards imports of foodstuffs, etc., there was from 1924 until the end of 1931 a fairly steady though, considering the fall in agricultural prices and the increase in population, a not very rapid increase in their volume. Since then, in spite of a continued fall in average prices, the policy of restriction has succeeded in reducing them almost to the 1930 level. But the decline has not been rapid owing to the fact that Great Britain is not only the world's greatest market, but that by comparison it is still relatively open for foodstuffs, whereas world supplies are not easily curtailed. As has often been pointed

RETAINED IMPORTS

out, this means that we are in a peculiarly favourable position for commercial bargaining; but it also means that restriction by us is a principal influence in restricting the level of world food prices. Imports of raw materials, on the other hand, have recovered remarkably since their low point in the crisis year. At first sight it is surprising that they did not increase more between 1924 and 1930, especially as average values fell from 154 to 100 in these years; they did indeed rise till 1929, following the return to the gold standard in 1925 and the consequent fall in prices, but they slumped heavily in 1930. The suspension of the gold standard was followed by an expansion of imports of materials, owing to the stimulus to business activity given by the temporary check to the fall of all sterling prices during the winter 1931-32 and the accelerated fall of gold prices during the same period. This group, however, is very heavily weighted with textiles and the apparent inelasticity of demand for "raw materials" before the crisis, and the rather sudden recovery subsequently, are not typical of industry as a whole.

Moreover, the official classification is by no means a perfect one from the point of view of showing imports consumed by industry as distinct from goods ready for consumption—the Board's classification being based on the amount of work already done on the commodity in question, and not on the eventual use made of it by British industry. In the following table therefore we give a revised index of manufactured imports, which excludes such classes of semi-manufactured goods as smelted non-ferrous metals which are clearly the raw materials of industry and also manufactured oils, which consist chiefly of motor spirit and

lubricating oil. If we were to exclude this latter item alone, which in 1930 accounted for nearly one quarter of total imports in Class III, the index of volume in 1933 would be 60.0 instead of 67.1.

VOLUME OF RETAINED IMPORTS OF MANUFACTURES (1930=100)

	Class III of Trade Returns	Modified Index*		Class III of Trade Returns	Modified Index*
1924	73.7	96.0	1932	65.2	55.3
1930	100.0	100.0	1933	67.1	57.3
1931	101.6	102.7	1934 (6 mos.)	75.2	63.4

* These figures exclude oils, fats and resins; leather and manufactures thereof; non-ferrous metals and manufactures thereof; manufactures of wood and timber.

It will be seen that with the above-mentioned articles left out the volume of our imports of manufactures, in spite of a rise from the low level of 1932, is still far below the 1924 level. Tariffs have clearly been successful in keeping out foreign manufactured goods, and to attempt to reduce imports in Class III still further would be largely to cut off imports of essential semi-raw materials, as in 1930 these formed nearly one-third and in 1933 nearly half the total imports in this class. The following table gives details for various selected groups of commodities, some of which (Items 4, 5 and 6) include articles listed under raw materials and manufactured goods in the Trade Returns:—

VOLUME OF RETAINED IMPORTS (1930 = 100)

	1924	1930	1931	1932	1933	1934*
Grain and Flour.....	113.9	100.0	116.5	103.5	110.9	107.8
Meat	91.9	100.0	111.1	108.8	100.4	99.1
Iron and Steel	78.9	100.0	94.8	49.5	34.9	49.9
Non-ferrous Metals	82.7	100.0	95.6	73.0	75.5	93.0
Wood and timber	90.1	100.0	85.5	82.3	96.9	85.8
Paper, cardboard and paper materials	71.2	100.0	87.6	95.5	99.0	108.8
Raw silk	78.2	100.0	122.7	157.5	187.9	280.9
Cotton and woollen semi-manufactures	73.3	100.0	111.0	17.2	22.7	20.5
Undressed hides and skins	100.8	100.0	68.8	120.7	179.3	194.2
Machinery	61.3	100.0	89.7	50.5	41.9	58.2
Oils (manufactured)	57.7	100.0	95.9	96.2	107.2	110.4

* Figures for six months only.

Imports of grain are always fluctuating—being affected by the size of the crops at home and abroad and by the carry-over of stocks; but the figures reveal no general upward trend. The fall in imports of meat since 1932 is due to the restriction policy. The index of non-ferrous metals, which has this year shown a very marked upward trend, is a fairly good indicator of the general state of trade within the country. The enormous proportional increase in imports of raw silk, while throwing light on the development of a semi-luxury industry, is not of great industrial importance, as the value involved in 1933 (at 1930 prices) was only £2.8 millions. The increase in hides is of more significance. The index of imports of machinery reflects fairly accurately the real change that has taken place in the import of finished manufactures of an industrial type. Normally they are a good index of the state of trade; but they have been subjected to a heavy duty combined with a system of licences for speciality articles. It is instructive to notice that this was the only group in which average prices in 1933 were well above those ruling either in 1924 or 1930. The large increase in the imports of oils is due to the enormous progress of road transport.

We come now to an analysis of changes in the volume of British exports during the past ten years:—

BRITISH EXPORTS VALUED AT 1930 PRICES (In million £s)

	1924	1930	1931	1932	1933	1934*
I. Food, Drink and Tobacco	48.8	48.2	40.1	38.5	34.7	37.7
II. Raw Materials and Articles Mainly Unmanufactured	75.9	63.8	52.3	49.4	53.2	53.2
III. Articles Wholly or Mainly Manufactured	513.5	440.0	326.3	337.0	347.3	364.8
Total (inc. Parcel Post and Animals not for food)	663.2	579.7	435.1	438.5	447.5	466.0

INDEX NUMBERS (1930 = 100)

	1924	1930	1931	1932	1933	1934
I. Food, Drink and Tobacco	101.1	100.0	83.1	79.9	71.9	78.2
II. Raw Materials and Articles Mainly Unmanufactured	119.0	100.0	82.0	77.4	83.5	83.5

* 1934 figures on basis of nine months' trade.

While the volume of our imports was in 1933 the same as in 1924, exports were far below that level; they did not expand so much during the period of prosperity (1924-29) and they slumped very much more heavily in the crisis of 1930, to below the 1924 level. Since 1931, however, there has been a small recovery in the export of manufactured goods, which include more than three-quarters of the total exports, and since 1932 in raw materials. This latter increase is not accounted for, as might be supposed, by increased exports of coal, although these represent £33.4 millions of the £53.2 millions exported in 1933. The increase has been mainly in raw wool, and in some minor items. The figures of coal exports for 1924 and 1930-33 are as follows: 112.8, 100, 78.6, 73.0, 73.1.

Of the exports of manufactured goods by far the most important item is "cotton goods," which amounted in 1933 to £80 millions, followed by woollen and worsted manufactures, which in that year amounted to £35 millions. In spite of some recovery since 1931 in both these groups, our

BRITISH EXPORTS

exports of textile manufactures are only just over half what they were in 1924. The decline had mostly taken place by 1930. The index of iron and steel exports, which in 1933 were valued at £33 millions at 1930 prices, fell from 115 in 1924 to 100 in 1930 and to 63 in 1931, and has since remained at that level. Exports of machinery have fared even worse. They rose slightly between 1924 and 1930, but have since fallen by 43 per cent., from £47 millions in 1930 to £26.6 millions in 1933.

Lastly we give a table showing changes in average values of both imports and exports during the past ten years:—

AVERAGE VALUES (1930 = 100) RETAINED IMPORTS

	1924	1930	1931	1932	1933	1934*
I. Food, Drink and Tobacco	135.5	100.0	81.3	76.1	71.2	69.9
II. Raw Materials and Articles Mainly Unmanufactured	153.3	100.0	74.1	69.4	69.6	75.5
III. Articles Wholly or Mainly Manufactured	122.5	100.0	84.9	79.0	73.6	73.9
Total (inc. Parcel Post and Animals not for food)	135.0	100.0	81.0	75.3	71.4	72.4

BRITISH EXPORTS

	1924	1930	1931	1932	1933	1934*
I. Food, Drink and Tobacco	116.8	100.0	88.6	83.9	82.2	80.0
II. Raw Materials and Articles Mainly Unmanufactured	140.3	100.0	90.0	88.4	86.4	90.2

the rate at which we can exchange our exports for imports, has been moving in our favour. Average import values have fallen by 46 per cent. and export values by only 34 per cent. This would seem to be of advantage to our general standard of living. But under present conditions the waste of resources due to unemployment makes the volume of our exports more important than their value. It is true that if foreigners cannot be persuaded to buy more of our goods by a drastic reduction of prices, high average values help to maintain the balance of payments and to enable us to continue to import the foreign raw materials which are still essential to us. But this is a precarious basis for a trading nation; for though British quality goods may hold their market for a time, experience shows that in the long run this is not an enduring monopoly unless our prices are acceptable.

As was to be expected the prices of raw materials slumped most heavily in the depression and have been the first to recover. Prices of foodstuffs and finished goods are dependent partly on a recovery of general purchasing power, which is only generated when revival has permeated the whole of the industrial structure, and partly on costs. The absolute stability of the average values of our manufactured exports over three years in spite of the rise in prices of imported raw materials, however, is explained by the fact that the former did not fall as rapidly as the latter between 1924 and 1931. The large fall in all average prices of exports between 1924 and 1930 was due to reductions of 40 per cent. in cotton and coal following our return to the gold standard. Otherwise fluctuations were considerably less marked than in the case of imported goods. Since the depression the prices of our heavy exports have been well maintained. In the case of iron and steel, however, a drop of less than 10 per cent. in values between 1930 and 1931 was accompanied by a reduction in volume exported of one-third and this position has not appreciably improved.

MINORITIES AND NATIONALISM

NEVER in the history of modern Europe have there been so many nation States within her boundaries. Never have the frontiers of European States so closely corresponded to the limits of those communities which an impalpable bond of blood and culture has preserved as nations. Never, in modern Europe, have the proportions of national minorities living in other than their national States been so small. Yet Europe seems more than ever a prey to dissensions—both within and between her constituent States—arising from the status and treatment of minorities or from dissatisfaction with the existing boundaries of national States. At the end of the world war the three European Empires which ruled over subject nationalities had disintegrated; and the framers of the Peace Treaties set themselves to make the new frontiers correspond, as closely as possible, with the limits of nationality. Admittedly, considerations of strategi-

cal and administrative expediency often overruled the general principle, as in the giving of Austrian districts to Czechoslovakia and Roumania; and the new frontiers therefore created new national minorities, or merely removed some of those already existing into other States. Such allocations were in the nature of a sop to the post-war national States. But at the same time, the rights of minorities were recognised and safeguarded in the Peace Treaties or in parallel engagements, while provision was also made in the League Covenant for the reconsideration of treaties which might become obsolete or inapplicable (Art. XIX), as well as for amendment of the Covenant itself (Art. XXVI). These provisions, it was hoped, would allow the settlement to be adapted to changing conditions without resort to arms, and would permit the peaceful development both of the enlarged and of the reduced States, without calling into play the disruptive effect of thwarted national ambitions.

In the event, as Mr Macartney shows in a comprehensive survey of the European minority problem,* these hopes have been falsified. On the one hand, the new or enlarged States of post-war Europe have been mainly intent upon evading, in the sacred name of their own national sovereignty, their obligations towards their national minorities. On the other hand, national minorities have often proved recalcitrant or disloyal citizens and, in recent times, have even resorted to murder and terrorism.

The result after fifteen years has been painfully revealed by two recent events. At the beginning of the League Assembly last month, the Polish Foreign Minister, Colonel Beck, announced that his Government would unilaterally denounce the 1919 Minorities Treaty between Poland and the five Principal Allied and Associated Powers unless the terms of the Treaty were imposed upon all States members of the League. This Treaty had imposed upon the new Polish State "obligations of international concern" towards those national minorities which form one-third of her population; and the high-handed threat of the Polish Government, now in decent abeyance, drew sharp protests and reminders from the Foreign Ministers of France and Great Britain. The second incident is even more dramatic and disquieting. The recent assassination of King Alexander and M. Barthou was carried out by the hand of one belonging to the Macedonian minority which, as Mr Macartney shows, was not adequately protected by the Treaty of 1919 with Yugoslavia. Moreover, the murderer of King Alexander was working, not for a Yugoslav minority whose rights were safeguarded by treaty, but for the second largest national element in the triune Yugoslav State. The Croats are in a minority in the State, but they are not a minority in the League sense; they are partners, if sleeping partners, in the State. It is, however, the same nationalistic zeal which led fanatics to contrive the murder of an Austrian Archduke in 1914 that has tempted a few misguided Croats into terrorist activities, and has led equally fanatical "Germans" to murder an Austrian Chancellor, and no less fanatical Catalans into armed rebellion.

Here we touch the crux of the problem; and it is significant that Mr Macartney devotes the long introduction and equally long conclusion of his book to the development and future prospects of the nation State itself. Although the great Continental Empires holding sway over many "nations" have disappeared, and although we are nearer than ever before in Europe to the identity of the nation with the State, harmonious co-ordination of policy between these nation States has not yet emerged. Instead of the European States collaborating to minimise the importance, political and economic, of their frontiers, they have maximised it by every conceivable artifice of political and economic ingenuity. With this retrograde movement has gone the growth of authoritarianism, which in turn has fostered and intensified the sense of nationalism. In such a setting the outlook for a tolerant attitude towards national minorities is not bright. Almost equally gloomy are the prospects before the nation States of Europe themselves, if oppression and repression continue as at present to breed dissension. Indeed, it may well be doubted, though Mr

Macartney does little more than hint at the doubt, whether the nation can ever be sharply defined and created into a State as the statesmen at Paris attempted to do—whether, in fact, "the Balkanisation of Europe" after 1918 did not go too far.

What is the solution? Are we to witness, this century, under expansionist authoritarian regimes, a reintegration of the now numerous European States into larger, and federated blocs? That is a fascinating question to which no certain answer can be given. What is certain is that the force of nationality remains; that it is not to be stamped out; that it thrives on repression, and that it will only lend itself to the formation of larger political aggregations if its claims are met. If they are not met, it will be as disruptive a force in European affairs this century as it was last.

Mr Macartney concludes by quoting Lord Acton's condemnation of the modern theory of the nation State:—

If we take the establishment of liberty for the realisation of duties to be the end of civil society, we must conclude that those States are substantially the most perfect which . . . include various distinct nationalities without oppressing them . . . A State which is incompetent to satisfy different races condemns itself; a State which labours to neutralise, to absorb or to expel them, destroys its own vitality; a State which does not include them is destitute of the chief basis of self-government.

Post-war Europe appears to have profited little by the errors of its pre-war prototype. While in 1919 the avoidance of those errors was an inspiration, to-day most of the States of Europe have set their feet once more on the primrose path of centralisation, authoritarianism, "unification," and repression. Blind persistence along that path will only bring all of us in Europe—nation States or not—nearer the bonfire. Will the historian of our times, when he unearths Mr Macartney's penetrating analysis, have to record that the citizens of Europe were, individually, willing for peace and order, but the common spirit was too weak? That, in despair of reasonable solutions, they took the sword, and perished by it? Or will he record that under the pressure of penury and privation, and aroused in time to the menace of imminent self-destruction, Europe at last found salvation in mutual forbearance?

THREE WISE MEN

WHY has the world suddenly faltered in its pursuit of freedom? General Smuts, in his Rectorial Address at St. Andrews last week, affirmed his belief in political, intellectual and religious freedom as the highest ideal of human society; and he lamented the reaction towards tyranny now taking place in the world as even more dangerous than the possibility of war:—

The disappearance of the sturdy, independent-minded, freedom-loving individual and his replacement by a servile mass mentality is the greatest human menace of our time.

General Smuts's speech has been universally applauded. And it is certainly only in minds unbalanced by hysteria or self-interest that his central thesis, the ultimate value of human freedom, will be repudiated. But there must have been readers of his speech who felt that something important had been left out. If freedom is the only fundamental ideal, why is it that so many of the fanaticisms of the twentieth century ignore and some even attack it? Is the struggle over freedom really nothing more nor less than the struggle between Good and Evil, as General Smuts seemed to imply?

Mr H. G. Wells, in his recent and extremely interesting conversation with M. Stalin, which has been summarised in the Press, was expressing a point of view not altogether dissimilar to that of General Smuts. He wishes to preserve freedom. But he wished to preserve it as an essential element in the struggle for a second ideal, the achievement of economic equality, or at least economic reform. Mr Wells's advocacy of democratic methods was very much more effective for this reason. The mere affirmation of a faith in liberty is vain and sterile in a world beset by economic distress; for liberty loses nearly all its meaning in

face of gross economic equality. Moreover, it was the struggle against poverty, and the bitterness caused by poverty, both in Russia and Germany, that permitted the suppression of freedom. To deny or ignore the existence of economic inequality is a great disservice to democracy.

Mr Wells would accordingly aim at a "profound reorganisation" of the economic system without sacrificing the methods of free government and persuasion. This, he argued, was in fact what Mr Roosevelt was doing. M. Stalin, however, though apparently admitting sympathy with his aims, denied the validity of his methods. The best hope for reform, in Mr Wells's view, is to unite by conciliation all the "constructive movements," to proceed gradually and cautiously, and only to use force in the last resort and if absolutely necessary. The propaganda of violence, in his opinion, and the aggravation of the embitterment between classes, is a disastrous folly. "The Communist propaganda in the West is a nuisance to all constructive-minded people."

Here Mr Wells has an obviously strong case. It is ruinously foolish to engineer the destruction of the social system unless one is quite certain, not only that something better will quickly succeed it, but also that something better cannot be achieved in any other way. And in fact the "simple class-war antagonism," as Mr. Wells called it, on which M. Stalin based his whole case, is a grotesque distortion of the facts. In particular, his Machiavellian picture of the British propertied classes behaving with calculated moderation during the General Strike and after, in order the better to attain their ends, will strike the average Englishman as laughable.

Nevertheless there was undeniably some force in some of M. Stalin's arguments. Those who regard all owners of property as benevolent beings, waiting to be rationally persuaded of the necessity for their own dispossession, are as blind to the facts as the most fanatical Communist chanting the superstitious jargon of the class war. "What would you do with the Fascists?" M. Stalin asked Mr Wells: "Argue with them?" "Try to convince them?" And Mr Wells had no very effective answer. Again M. Stalin

had the better of the argument when he maintained that capitalism had by no means broken down, and that the coercive capitalism of the Fascist countries may, economically speaking, last indefinitely, despite its cruelty and injustice.

To a great extent both M. Stalin and Mr Wells seem to have been applying to the world in general a theory appropriate to their own countries, but not universally applicable. Certainly some members of the possessing classes in some countries would resist by force any appreciable measure of redistribution of wealth, even at the cost of their professed allegiance to democracy. Others would not. In Russia, possibly, the majority would have done so; and the policy of violence may consequently have been inescapable. There may even be some truth in M. Stalin's contention that Mr Roosevelt is now finding himself unable to proceed without the co-operation of the propertied class, and that he will have to modify his cherished schemes of reform. But the same is not true of this country, with its long history of political and economic reforms carried through by co-operation between the property-owning and the wage-earning classes. Nor is it true, we hope, of France; nor of Scandinavia; nor of the British Dominions.

Mr Wells's case, however, would have been stronger if his conception of economic reform had been a little more clear. He talked much of "reorganisation," "control" and "planning," as if any interference with the economic system is bound to make it work better. But he never explained in what way Mr Roosevelt's "plans" resemble those of M. Stalin. And he does not seem frankly to have asked himself the crucial question whether the national income must be not only increased by better organisation, but also more justly distributed. It may be that both will prove necessary. In that case, it is only if the propertied classes in the democratic countries are prepared to accept peacefully some mitigation of economic inequality, that those countries can honestly congratulate themselves, like General Smuts, on the enjoyment of freedom, and cast stones at a Soviet tyranny which crushes it in the name of equality.

NOTES OF THE WEEK

The Witches' Cauldron.—The simmering and bubbling, all over Europe, is still going on, without its yet being possible to foretell whether the eventual brew will be a wholesome broth or a lethal poison. In Yugoslavia—which may still, perhaps, be regarded as the key-country—M. Ouzounovich's reconstruction of his Cabinet without the inclusion of any representatives of the opposition parties is decidedly unfortunate. The personal tribute which was paid to the late King by the Slovene leader, Father Koroshetz, gave the Government an opportunity of taking the Opposition into partnership without loss of face. M. Ouzounovich is reported to have made overtures to Father Koroshetz and to the Muslim leader, M. Spaho, but to have failed to secure their support except on the condition that he would also make his peace with the Serb Radicals. With the Radicals left out in the cold—not to speak of the Croats—the reconciliation would indeed have been hollow; and M. Ouzounovich's rejection of Father Koroshetz's very reasonable terms implies either that the Prime Minister's own desire for reconciliation was half-hearted, or that he found himself in the soldiers' grip. The one important change in the Cabinet—a change which we cannot welcome—is the appointment of General Zhivkovich to the Ministry of War. Meanwhile, the Little Entente Council has duly held its meeting at Belgrade and has published a statement condemning political crimes, which has been endorsed by the representatives of Greece and Turkey. There is shortly to be a meeting of the Balkan Council (Greece, Turkey, Roumania, Yugoslavia) at Angora, which will probably reaffirm the solidarity between these two interlocking associations of South-East European States. The statement is one that might have been issued by the Central Powers in July, 1914—but with this vital and salutary difference: that the present denouncers of political assassination mention no names of

reprehensible countries and threaten no punitive measures. It is to be hoped that these counsels of moderation will continue to prevail.

Diplomatic Manœuvres.—At other points on the European stage, General Gömbös has returned to Hungary from Poland—meeting at Vienna his own Foreign Minister, M. de Kanya, hot-foot from Rome. The Austrian Government has made overtures to the Austrian Nazis for their co-operation, both in the Constitution and perhaps, later, in government. And M. Laval has put off the visit to Italy which he was to have paid next month in M. Barthou's place. General Gömbös's visit to Warsaw can be fairly accounted for on the economic grounds which have been the official pretext. Since her clearing agreements with Austria and Germany stabilised much of her foreign trade, Hungary urgently needs new or freer markets. We need not therefore necessarily assume that Poland is now marching off into the Revisionist camp (a dangerous place for her!) linked arm-in-arm with Hungary on one side and Germany on the other. As for the Austrian overtures to the Nazis, they must have had Italy's approval. Is Italy trying to improve her relations with Germany in order to place herself in a better bargaining position *vis-à-vis* France? Perhaps this may explain the postponement of M. Laval's visit to Rome. The delay will be worth while if in the end Italy is able to play the rôle—for which she is really equipped—of mutual friend.

King Fuad's Mantle.—Till this week, nothing much had been heard about Anglo-Egyptian relations since the late Labour Government came within an ace of negotiating

* "National States and National Minorities." By C. A. Macartney. Royal Institute of International Affairs and Oxford University Press (Milford); 540 pages. 18s. net.

a comprehensive Anglo-Egyptian Treaty with the Wafd. So long as no treaty exists, and so long as the British military occupation continues, the mere presence of our troops in the country involves us in the course of Egyptian politics. However sincerely we may protest our neutrality it cannot be denied that the presence of our troops has made it impossible for King Fuad to lose his throne in the manner of the last Sultan-Caliph of Turkey, or the late King Husayn of the Hedjaz, or the ex-King Amanullah of Afghanistan. On the other hand, the British garrison has not prevented King Fuad from setting aside the former Egyptian constitution by a *coup d'état* and governing Egypt since then as an autocrat. King Fuad's *coup*, which followed hard upon the breakdown of the last Anglo-Egyptian negotiations, was no doubt facilitated by the consequent lowering of the Wafd's prestige and by the general unpopularity which the Wafd had incurred among the people of Egypt by abusing the power entrusted to them in order to set up, like the Kuomintang, a single-party tyranny of their own. But King Fuad would hardly have attempted to seize power, and would assuredly not have succeeded, if the presence of British troops had not put all possibility of a revolution out of court. So long as the King could find an able Minister like Sidky Pasha to do his governing for him, things went smoothly, and the British Residency and garrison in Egypt were able to lead a quiet life. But the convenience of autocracy is always offset by its transitoriness. Sidky Pasha was forced into resignation last year because he failed to secure the King's assent to the exclusion from the Ministry of two Ministers who still adorn it. Latterly, the King himself has been incapacitated by illness, and the Government of the country appears to have been carried on irresponsibly, in the King's name, by Zaki Pasha Al-Ibrashi, Comptroller of the Royal Estates. When this fact became apparent, Yehia Pasha, the present Prime Minister of Egypt, asked the advice of the Acting British High Commissioner about the steps he should take. He appears to have been—very suitably—advised that if Ibrashi Pasha and the two contentious Ministers remain where they are, it will be difficult to persuade any Egyptian statesman of standing to accept the post of chief of the Royal Cabinet—a post which, in present circumstances, is tantamount to that of being the King's deputy. Ibrashi Pasha's Government (for the Ministry is virtually his) has replied by starting a press campaign in which the Acting High Commissioner is being accused of unwarrantable interference in Egyptian internal affairs. But the accusation is unmerited. It is scarcely "interference" to give advice when asked. And it is scarcely unwarrantable, on the part of the British Government, to dissociate itself from the regime of an Ibrashi.

New Zealand's Dairy Products.—Like other primary producing countries New Zealand has been struggling for the last five years with the problem of paying her foreign debts in commodities whose money value has been falling. The dairy industry has consequently been hard hit, and a Commission was appointed six months ago to investigate its difficulties. The report of this Commission, which has just been published, makes various and important recommendations. In present circumstances, the Commission declares, few farmers can cover expenses and pay interest charges. A drastic internal reorganisation of the industry is consequently proposed. A permanent Commission of Agriculture to advise the Government is urged by the Commission, as well as a reconstituted Dairy Produce Board, with half its members appointed by the Government, enjoying wide powers of research, production, manufacture and marketing. This Board, it is proposed, would rationalise butter marketing, but would not subsidise exports or exploit the consumer. Agricultural finance is also to be reformed by the establishment of a rural mortgage corporation, which would exchange existing mortgages for State-guaranteed bonds. Rates of interest on bonds and mortgages would be revised every three years. All these suggestions, particularly the last, are sensible, progressive and practical. Indeed, it is remarkable how enlightened agricultural planning can be when an export

and not a home market is involved. The Report recommends that the New Zealand Government should immediately begin negotiating with the British Government about future trade relations between the two countries. New Zealand's present difficulties have been brought about, according to the Report, by the "flooding of the United Kingdom market by the dumping of subsidised products from the Northern Hemisphere and Australia." It might perhaps be asked whether the Government-induced undervaluation of the New Zealand currency is in principle distinguishable from a subsidy; and, in point of fact, New Zealand's exports of butter to this country increased much more heavily between 1931 and 1933 than those of Australia or Denmark. In claiming, however, that New Zealand should have preferential treatment over other Empire countries in view of her liberal fiscal policy towards British goods, the Report has a far stronger case. New Zealand has interpreted the verbiage of the Ottawa Agreements in a much more generous spirit than certain other Dominions. And if virtue is to be encouraged it should be rewarded.

Weavers' Wages Agreement.—The representatives of the employers and operatives in the weaving section of the cotton industry last week succeeded, after prolonged and sometimes acrimonious discussion, in negotiating a new wages agreement, which if ratified by both sides will be presented to Parliament for statutory enforcement under the Enabling Act passed this summer. The new agreement, which contains different scales for four-loom and "more looms" working, and is drawn up on a "pick" basis (number of weft threads to the inch), will replace the old uniform list which can be traced back to the '50s of last century and has long been recognised as completely obsolete. The general effect of the new agreement is to lower wages of the four-loom workers by about 6 per cent., while increasing those of "more looms" workers by 4 per cent. This result has been criticised by some of the employers as unduly penalising "more-loom" working, to which a large number of operatives have always raised strong objection. But in accepting the "pick" basis the operatives have also made important concessions (besides accepting a "cost" for four-loom workers) in so far as they have abandoned many of their most cherished restrictions, which have for so long been hampering production. It is not anticipated that the new list will make much difference to the total amount of wages paid by the whole of the employers in this section of the cotton industry. Mr John Grey, the employers' chairman, has said: "No one in the industry knows what the position is exactly in the mills owing to the large number which have broken away from the agreements and the variations in the wages now being paid. My own view is that the advantages and disadvantages of the proposed new agreement will about balance one another and that it will be a case of fifty-fifty. The statements about it being a blow to the operatives are greatly exaggerated." A special meeting of the General Council of the Operative Weavers' Amalgamation is to take place in Manchester on November 3rd, and in the meantime the thirty-six District Associations are considering the matter. It is believed that the Council, despite some opposition, chiefly from the Nelson district, will ratify the terms arranged by the trade union officials. And it is anticipated that within the next few weeks the Manufacturers' Association and the Weavers' Amalgamation will make a joint application to the Government for the wages list to be scheduled under the Cotton Manufacturing Industry (Temporary Provisions) Act and thus make the agreement compulsory upon all manufacturers. It will be necessary for the two bodies to convince the Minister of Labour that they represent a sufficient majority of the industry. The agreement is greatly to be welcomed seeing that it re-establishes the principle of collective bargaining, which was threatening to break down altogether in this section of the industry; and we hope that the agreement will be ratified as quickly as possible, so as to enable the undercutting in wages—which has been going on for some time to the great detriment of the relations between employers and operatives—to be stopped once and for all.

A Little Freer Trade?—The broad division of the trading world into on-gold and off-gold countries has thrown a heavy burden on the former. The gold *bloc* countries have recently had to redouble their deflationary efforts to maintain a competitive position. These efforts have translated themselves in the domestic sphere into drastic cost-cutting schemes, which have provoked, as in France and Holland, political crises; and on the international plane they have usually ended in further intensification of import quotas or exchange rationing. The gold *bloc* received its official *cachet* and organisation, under a General Commission, after the failure of its representatives at last year's World Economic Conference to secure an agreement to stabilise the exchanges of both the on-gold and the off-gold countries. After that failure it was clear that the gold *bloc* would have to pass to positive measures for securing their currencies and increasing their mutual trade. Last Saturday the General Commission of the *bloc* concluded its meeting at Brussels by the adoption of a protocol, which reaffirms the intention of France, Italy, Holland, Belgium, Poland, Switzerland and Luxemburg "to maintain the present gold parity of their respective countries." But the protocol goes on:—

It is desirable to form a General Commission, composed of their respective delegates, with regard to international trade to see in what manner it is at present possible to increase trade among their countries (it regards as desirable an increase of 10 per cent. in the global volume of trade effected from July 1, 1933, to June 30, 1934); to open bilateral negotiations to this end without delay with the object of completing them within a maximum period of one year; . . . and to convene a meeting of the General Commission in Brussels in three months' time to take note of the position reached and to settle the continuation of its programme without losing sight of the interests of third parties and the necessity of a more extensive collaboration in the international field.

The protocol also provides for the setting up and immediate convocation of two sub-committees on travel and transport, and for a convention on commercial propaganda. This protocol is of happy augury. Any expansion of trade between an important group of countries, in the main contiguous, can hardly fail to be reflected in an increase of that group's purchasing power in, and therewith of its exports to, the rest of the world as a whole. A 10 per cent. increase of the seriously constricted volume of trade between the gold *bloc* countries in 1933-34 is more than is likely to be achieved if things drift on in their present direction. Whether bilateral negotiations will best secure the 10 per cent. is to be doubted; but of this we expect to hear more during the next twelve months. As it is, the gold *bloc* countries are threatening to breach the ramparts of economic nationalism. But it will be a pity if, failing response by third parties, economic nationalism is merely transferred to a broader canvas. The gold *bloc* has promised not to lose sight of "the interests of third parties." Will the very important third parties now be up and doing on behalf of world trade? We hope so, for all our sakes.

Trade Union Membership.—As one of the chief suppliers of funds for the second largest political party in this country, and as a unique electoral organisation, the Trade Union movement has as great a political as an economic significance. The Ministry of Labour has just published its annual statistical review of the position of the Trade Unions in 1933, with comparative figures going back to 1892. The figures relate to all associations of employees having as their function the arrangement of conditions of work by negotiation with employers. Towards the end of the last century a strong impetus was given to Trade Unionism by the great "dockers' tanner" strike of 1889; thereafter it touched for the first time the mass of unskilled workers. Trade Union membership gradually rose from 1,500,000 in 1895 to 2,500,000 in 1910. There followed a rapid expansion during the prosperity of the immediate pre-war years to 4,000,000 in 1914. The expansion was accelerated during the war by the inclusion of practically all the workers on war material; and it was reinforced after 1918 by demobilisation. The peak was reached at the end of 1920 with an aggregate membership of 8,346,000. It

had more than doubled in ten years. But during the depression which began at the close of 1920 the adventurous war-time increment fell away and there was a decrease of 1,700,000 in two years. Except during 1923-25 and 1928-30 there has been a steady downward trend since that period; and the 1927 Trades Disputes Act further weakened the political strength of the movement by replacing "contracting out" by "contracting in" for subscriptions to political funds. Aggregate membership at the end of 1933 was 4,383,000, as compared with 4,439,000 at the end of 1932 and 4,135,000 at the end of 1913—an increase over twenty years of only 250,000, despite an increase of 300,000 in the number of women members and an increase of about 1,500,000 in the total number of occupied persons. Particularly striking is the decline in the membership of the mining, metal and cotton unions, which in 1913 represented 45 per cent. and in 1933 only 30 per cent. of the total. Increases of nearly 100 per cent., on the other hand, have taken place in the paper and printing, commercial and financial, local and central government, and teaching unions (excluding in all cases transport and general workers). These are the only unions which have increased their aggregate membership during the past year. The biggest declines in 1933 took place in cotton manufacturing (24,000), railway service (17,000), building and contracting (15,000) and engineering, ironfounding and shipbuilding (13,000). At the end of 1933 there were 1,063 Trade Unions in Great Britain, as compared with 1,065 at the end of 1932. This was less than in 1913; and it carried on the downward movement, apparent since 1920, which the Ministry of Labour attributes largely to amalgamations and to the absorption of smaller unions by larger ones. The Trade Union movement seems rather to be consolidating its front than extending its operations.

Unemployment in Britain.—The accompanying chart shows the trend of unemployment since 1930 among insured males and females wholly unemployed and temporarily stopped in the United Kingdom. The number unemployed in each month since January, 1930, is shown as a percentage of the monthly average of unemployment in 1929. No allowance has been made for seasonal variations in unemployment:—

The divergence of the two curves during 1930 and 1931 is striking. The index of unemployed females rose sharply in 1930, far above the figure for males, and reached its peak in the autumn of 1931. Following the suspension of the gold standard in the autumn of 1931, the number of unemployed females declined sharply until the spring of the following year, when the improvement was arrested. On the other hand, the index of unemployed males rose more gradually and reached its peak at the beginning of 1933.

BRITANNIC ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income : : : : £5,600,000
Funds : : : : £23,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

From then onwards the movement of both indices has been almost parallel in a downward direction, but the figure for males remained well above that for females. The earlier impact of the depression on female employment is chiefly due to the sharp reduction of textile exports which employ an unusually large proportion of women. These industries were particularly benefited by the abandonment of the gold standard in the autumn of 1931.

Labour Captures North Lambeth.—The result of the North Lambeth by-election on Tuesday can only be reckoned a blow to the Government. The late member, Mr Frank Briant, had represented the constituency as a Liberal almost continuously since the war. He was a great supporter of all local interests; and his continued re-election testified to the personal nature of his appeal to the electors. At the 1931 general election, in a straight fight with the present member, he was elected by a majority of 7,602 out of a total poll of 25,134. This time there were four candidates—National Government, Liberal, Labour and Independent. The splitting of the electorate could hardly fail to favour the Labour cause; and Mr G. R. Strauss has captured the seat, with 11,281 votes, against 4,968 polled by the Liberal candidate—whose appeal was, like the late member's, mainly local and personal—only 2,927 by the National Government candidate, and a derisory 305 by the Independent. Labour has thus increased its vote by 2,515, despite a reduction in the poll from 25,134 in 1931 to 19,481 this week; and its present poll is even more than the 1929 figure. In 1931 Mr Briant stood as a Liberal supporter of the National Government; but he crossed the floor of the House with Sir Herbert Samuel a year ago. The combined total of Liberal and National Government votes last Tuesday was less than half of Mr Briant's poll in 1931; and the meagre polls of the National Government and Liberal candidates point to a considerable transfer of Liberal votes to Labour. If a separate Liberal platform has been ineffective, the National Government's appeal has been much more decisively rejected. The Government's "self-advertisement" will have to work overtime if North Lambeth is not to be taken as a straw in the wind of home politics.

Co-operative Trade Prospects.—While noting some improvement in the home market, the directors of the Co-operative Wholesale Society recognise that international affairs continue to be a restraining influence on trade. There has been a decrease of just over 12 per cent. in the society's export business, which amounted to £520,711 in the past six months. The total sales of the C.W.S. for the half-year which ended on July 14th were £43,376,425 (an increase of just over £5,000,000), representing a weekly average of £1,668,324. From the society's own productive works the supplies were £451,935 per week, or £11,750,320 for the half-year. Satisfaction is expressed that these increases have not been gained by higher price movements. The directors have pursued a policy of reducing the prices of certain of their own productions. The declaration of an additional dividend of 2d. in the £ on C.W.S. productions has stimulated larger purchases by retail societies and has given them £140,437 more than the usual trading dividend of 4d. in the £. The latter amounts to £671,027, so that £811,464 out of the trading profit of £885,788 is returned to the distributive societies for the benefit of their trading members. All the retail societies, with the exception of 18 small ones, are now banking with the C.W.S. Bank. This concern had deposits and withdrawals amounting to £322,462,646 last half-year, an advance of over £26 millions. In addition to 907 societies as clients, it has the current accounts of 8,923 branches of trade unions, 788 clubs and 6,631 other mutual organisations. While much is being done by centralised direction of the boot and shoe, furniture and textile works, the supply of foodstuffs is still the main source of the trade. In the productive output of £11,750,000, the flour and provender mills accounted for £3,522,358, and the output of the biscuit and preserve works £962,655. The effect of the cheaper rates ruling for butter is seen in the drop of 18 per cent. in the turnover of

the margarine works, which fell from over £1,000,000 to £870,638. Boot and shoe production amounted to £816,565; the output of the furniture factories rose 42 per cent. to £353,474; and of the woollen mills to £389,899. In all these industries a policy of centralised control has been adopted with a view to minimising the difficulties incidental to the possession of works in various parts of the country which were established in response to the demands of local societies to find employment for their own people. The C.W.S. is now setting about the co-ordination of its productive efforts—a policy urged by the president of the Co-operative Congress at Rhyl last Whitsun. The sales for the past half-year are approximately equal to those of 1930, which was a record, save for the phenomenal twelvemonth of 1920, when, at the higher level of prices then ruling, they rose to £105,439,628. This augurs well for the Society's trading future.

Sterling and International Prices.—British wholesale prices have moved irregularly during the past fortnight, but on balance there has been a slight recovery. The *Economist's* complete British index number has risen by 0.1 per cent., while the primary products index number has risen by 0.9 per cent. American prices have continued to fall, but the rate of decline is much less pronounced. The complete Irving Fisher index number has fallen by only 0.1 per cent., while primary products are only lower by 0.4 per cent. All these movements are very small, but taken in conjunction they are in opposition to the recent appreciation of the pound against the dollar. The result is that the dollar is more undervalued than it was a fortnight ago. There has been a further decline in French prices, while the recovery in Italian prices has for the moment been checked. It is noticeable that whereas French prices have fallen since a year ago by 8.3 per cent., Italian prices are practically unchanged, although the lira as well as the franc is on the gold standard. This divergence may have some bearing upon the weakness of the lira. German prices are unchanged:—

Details of the group indices comprising the complete *Economist* index number are given below:—

	"ECONOMIST" INDEX			
	(1927 = 100)			
	Sept. 18, 1931	Sept. 26, 1931	Oct. 10, 1931	Oct. 24, 1931
Cereals and meat	64.5	74.1	72.1	70.4
Other foods	62.2	57.9	58.7	58.5
Textiles	43.7	51.3	50.9	51.5
Minerals	67.4	76.0	75.0	76.4
Miscellaneous	65.8	69.1	67.8	69.1
Complete index	60.4	65.7	65.2	65.2
1913 = 100	83.1	90.4	89.6	89.7
1924 = 100	52.2	56.8	56.3	56.3

There has been a further general decline in cereals and meat prices, partially offset by an advance in bacon. Among other foodstuffs butter is higher, but tea, sugar and

cheese have all fallen. There has been a recovery in cotton and wool prices, and jute is continuing its recent advance, but flax is still falling. In the minerals group copper, lead and spelter are all higher, but tin is unchanged. Among miscellaneous materials, rubber has rallied after its recent decline, and there has been an increase in the price of Swedish timber. Linseed oil has fallen.

British Shipbuilding.—The latest returns issued by *Lloyd's Register* reveal a further, though modest, improvement in the British shipbuilding industry. Gross tonnage of mercantile vessels under construction at the end of September was 604,296, as against 587,142 at the end of June and 303,762 a year ago. The improvement was, however, more marked abroad, for mercantile tonnage under construction outside this country rose from 629,198 at the end of June to 707,091 at the end of September. As a result, the British proportion of the tonnage under construction in the world as a whole declined from 48.3 per cent. in June to 46.1 per cent. in September. Moreover, the tonnage under construction in this country for registration abroad or for sale declined further from 15.3 per cent. in June to 13.6 per cent. in September. The decline in this export industry is disappointing, for only two years ago the proportion of the total tonnage under construction for abroad was still 30 per cent. The returns disclose that the steam engine is still holding the field in the United Kingdom, but not in the rest of the world as a whole. Of the total horsepower of marine engines under construction in this country at the end of September, 62 per cent. is accounted for by steam engines, while of the total horsepower of marine engines under construction in the rest of the world only 41 per cent. is accounted for by steam engines. Gross tonnage launched in this country during the third quarter of 1934 was 183,422, against 35,954 in the previous quarter and 42,077 during the corresponding quarter a year ago. Launchings abroad rose from 113,438 gross tons in April-June to 123,375 in the past quarter. The immediate outlook for the industry in this country seems less bright, for tonnage commenced declined from 146,653 in the second quarter to 76,911 in the July-September period. On the other hand, tonnage commenced abroad rose from 125,912 to 181,177 during the same period. Of the total mercantile tonnage under construction abroad at the end of September, Japan accounted for 149,750, France for 120,868, Germany for 120,816, Denmark for 74,938, Holland for 70,735, and Sweden for 64,565.

Great Britain's Fish Supply.—The fish supply of Great Britain in the quarter ended September 30th was maintained at a level slightly below that of the corresponding quarter in 1933. In the case of England and Wales a decrease in the landings by British-owned fishing vessels of a quarter of a million cwt., or 6.6 per cent., was accompanied by an increase in aggregate first-hand value of 5.6 per cent. Compared with the April-June quarter there was a substantial decline in landings, owing to the cessation of the White Sea and Bear Island fishing during the summer months for the second year in succession. The following table, relating to wet fish only, is abstracted from the returns furnished by the Ministry of Agriculture and Fisheries and the Board of Trade:—

	Weight		Value	
	July-September 1933	1934	1933	1934
British caught	cwt.	cwt.	£	£
England and Wales	3,258,134	3,042,619	2,685,319	2,838,125
Scotland	1,895,930	2,061,558	1,254,908	1,046,534
Shellfish	...	...	110,505	115,927
Total	5,154,064	5,104,177	4,050,732	4,000,586
Foreign landings	142,621	114,990	176,868	164,103
Imports	283,796	225,508	588,279	544,175

The average value of British-caught wet fish at the ports of England and Wales was just under 18s. 8d. per cwt., as compared with 16s. 6d. per cwt. in the corresponding quarter last year, an increase of 13.1 per cent. The rise is due in part to the restriction of supplies and in part to the stimulus given to demand by the dearth of bacon. At times there was a distinct shortage of the kinds of fish most

in demand by fish friers, who were unable to pay "famine" prices. In some quarters the wisdom of the White Sea prohibition in summer is doubted. On the whole it has worked fairly well, though, of course, with fewer voyages it has involved a certain amount of enforced idleness for trawlers, their crews and dock workers. The results in Scotland were poor, for larger landings produced a smaller money total, while the average was only 10s. 2d. per cwt., as against 13s. 3d. per cwt. a year ago. Both foreign-caught fish from the sea and imports from abroad showed a decline in weight and value. As a set-off to imports, we exported fresh fish to the value of £125,276, as compared with £110,333; but exports of "cured or salted" (mainly herrings) were valued at £719,469, as against £991,524. Our exports of canned fish were small at £47,749, as against £50,479. As usual, there were considerable imports of canned fish (salmon, sardines, brisling, lobster, crab, etc.), the value of which was £957,753, as compared with £833,925 in the corresponding quarter of 1933; and of "cured or salted," valued at £38,166, against £56,940. Only a very small proportion was re-exported. The imports of canned fish for the nine months show an increase of over 33 per cent. in aggregate value. This, again, may be a reflection of the rising retail prices of bacon, as also of the higher prices of certain British-caught fresh fish.

Canada's National Income.—The surprisingly small part played by agriculture in Canada's national income is indicated by an estimate of the national income just issued by the Department of Trade and Commerce. On the basis of the annual census of industry and the occupational distribution of the population as ascertained at the decennial census of 1921 and 1931, the total value of the national output in each year from 1920 to 1931 inclusive was estimated as follows:—

CANADA'S NATIONAL INCOME
(In millions of dollars)

1920	5,523	1926	5,600
1921	4,215	1927	6,101
1922	4,520	1928	6,342
1923	4,696	1929	6,072
1924	4,643	1930	5,150
1925	5,178	1931	4,000

It will be seen that Canada's national income reached its highest level in 1928. But since no allowance is made for changes in the purchasing power of the dollar, the decline in real income between 1928 and 1931 was not as marked as the figures suggest. The report contains an interesting analysis of the sources of Canada's national income in 1930. According to the census of population of 1931, five-eighths of the gainfully occupied Canadians were then engaged in changing the "form" of the materials used in the productive process. The remaining three-eighths were engaged in the transport and communications industries, in wholesale and retail trade, in finance and in personal and professional service. The net value of the output of those engaged in productive processes in 1930 was \$3,216,746,735. An analysis by industries is given below:—

NET VALUE OF PRODUCTION BY INDUSTRIES IN 1930

Net Value of Output (in millions of dollars)	
Industry—	\$
Agriculture	758.8
Forestry	303.1
Fisheries	47.8
Trapping	9.9
Mining	279.9
Electric Power	126.0
Total primary production	1,525.5
Construction	297.0
Custom and repair	85.2
Manufactures	1,762.0
Total secondary production	2,144.2
Grand total	3,216.7

The item "manufactures" includes dairies, sawmills, pulp-mills, fish canning and curing, electric power production, shipbuilding and certain mineral industries, which are also included in other headings. The duplication, amounting to \$453,015,547, has, therefore, been eliminated from the

grand total. It will be seen that the value of "secondary production" in 1930 exceeded that of "primary production" by a substantial margin. The value of agricultural production represented only 14.7 per cent., and that of field crops alone only 10 per cent., of the total national income in that year. Of the total net value of production in 1930 (\$3,216,746,735) Ontario contributed 42.9 per cent.; Quebec, 27.7 per cent.; British Columbia, 8.4 per cent.; Alberta, 5.7 per cent.; Manitoba, 4.4 per cent.; Saskatchewan, 4.2 per cent.; Nova Scotia, 3.6 per cent.; New Brunswick, 2.4 per cent.; Prince Edward Island, 0.52 per cent.; and Yukon, 0.14 per cent.

* * *

Banks and the Woollen Stocking in France.—In an article contributed to the *Revue d'Economie Politique*, M. Léonard Rist draws attention to the fact that the remarkable increase in French savings deposits since the war was checked in the past year. The excess of new deposits over withdrawals declined from 10,751 million francs in 1931 to 4,735 million francs in 1932. In 1933 withdrawals actually exceeded new deposits by 102 million francs. The growth of savings deposits—including accrued interest—in France since the war is shown below:—

SAVINGS DEPOSITS IN FRANCE
(In millions of Frs.)

End of—	Caisse Ordinaires	Caisse Nationale	Total
1920	5,795	2,353	8,148
1926	11,551	4,418	15,969
1929	20,313	11,658	31,971
1930	23,570	15,033	38,603
1931	30,174	20,686	50,866
1932*	33,659	23,614	57,277
1933*	34,536	24,120	58,656

* Provisional.

According to M. Rist, the explanation of the excess of withdrawals over new deposits in the year 1933 is primarily to

be sought in the financial and political difficulties which tended to undermine public confidence and encourage hoarding in 1933. This suggests that the French public is at the moment placing more confidence in the time-honoured *bas de laine* than in the deposit institutions. And the over-coming of that disposition is an obvious task facing the present and any future Government of France.

* * *

British Crops.—The Ministry of Agriculture and Fisheries has published its official forecast of the acreage and yield of the principal crops in England and Wales:—

CROPS OF ENGLAND AND WALES

	Acreage		Production	
	1933	1934	1933	1934
	Thous. acres	Thous. acres	Thous. tons	Thous. tons
Wheat	1,660	1,759	1,573	1,673
Barley	751	861	631	690
Oats	1,494	1,401	1,226	1,073
Potatoes	519	487	3,478	3,070
Turnips and Swedes	553	520	5,951	4,382
Mangolds	237	246	4,136	4,245

It will be seen that the acreage under wheat has been further extended as a result of the wheat subsidy. The quality of this cereal and its condition is everywhere reported to be good. The yield per acre of wheat in England and Wales is estimated at 19 cwts., as compared with an average of 17.5 cwts. during the past ten years, and production is expected to exceed last year's level by 100,000 tons. The acreage and production of barley in 1934 shows an increase on last year, but the area under oats was considerably reduced, and the crop is expected to be appreciably smaller than a year ago. The area under potatoes and turnips and swedes was smaller than a year ago, and lower yields are forecast. The lifting and carting of sugar beet has been commenced, and the sugar content is reported to be above the average.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE PRESIDENT AND THE PRICE LEVEL

THE President's Press conference of October 10th has aroused more interest and conjecture than his broadcast speech of September 30th, particularly those passages describing his attitude toward prices. In the radio speech his only comment on prices was adverse to high prices; in the Press conference he reaffirmed his desire for higher prices. The two attitudes are not so inconsistent as they seem, for in the broadcast speech he was referring to the artificial prices established by certain N.R.A. cartels through the limitation of output; in the Press conference he was referring to the general level of prices.

As usual, such remarks, reported in the Press with varying measures of individual emphasis and supplemented by oral reports, have given rise to a flood of rumours, ranging from predictions of another advance in the price of gold to the early issue of Thomas Amendment greenbacks or the forced activation of bank credit by a punitive tax on excess reserves, an intensification of the Spending Programme, or what not. Meanwhile there is the genuine contradiction between our silver policy, which is steadily pushing up the value of Chinese currency, and the outspoken concern in Washington over the decline in the pound sterling in terms of the American dollar.

September brought few notable changes in the Reserve Bank statements.

RESERVE BANK ITEMS (\$000,000)

	Aug. 29	Oct. 3	
Bills discounted.....	21	15	- 6
Bills bought.....	5	6	+ 1
United States securities.....	2,432	2,431	- 1
Monetary gold stock.....	7,981	7,980	- 1
Gold certificates, etc.	4,979	4,959	- 20
Money in circulation	5,345	5,468	+123
Member bank reserves	4,127	3,895	-232
Industrial advances.....	1	2	+ 1
United States Treasuries	30	156	+126

It has been a long time since member bank reserves showed a decline; but the decline is of no particular significance despite its magnitude. It derives from an increase in Treasury balances and from a seasonal increase in currency in circulation of rather more than usual amplitude. The decline in the item "gold certificates and due from U.S. Treasury" evidently represents an internal transaction, since the gold stock showed negligible change.

EXPANDING COMMERCIAL CREDITS

Meanwhile the commercial banks continued to expand their credits—a change of trend which appeared in August.

REPORTING MEMBER BANK ITEMS (\$000,000)

	Aug. 29	Oct. 3	
Total loans and investments	17,708	17,811	+103
Loans on securities.....	3,247	3,047	-200
Other loans.....	4,555	4,747	+192
United States securities.....	6,627	6,636	+ 9
Other securities	3,279	3,381	+102
Reserves with F.R. banks.....	3,132	2,891	-241
Net demand deposits	12,926	13,083	+157
Time deposits.....	4,510	4,471	- 39
Government deposits	1,203	1,094	-109
Borrowings from F.R. Banks	5	1	- 4

These figures show a marked change of trend, whether temporary or not, which first became noticeable in August. The commercial banks, with about 40 per cent. of their total loans and investments in Government securities, in August and September turned to "other securities"; and expanded their "other loans," chiefly commercial, in a period when their loans on securities were repaid rather rapidly. Since August 1st collateral loans in these institutions have fallen by \$311 millions, while commercial loans have risen by \$232 millions. Such an increase in commercial loans may be described, but not dismissed, as "seasonal." It breaks a trend that had been continuous since the crash in 1929. Furthermore, every Federal Reserve district reports an increase in this period, and every district likewise shows an increase in net demand deposits.

The growth in demand deposits in the past year is everywhere apparent, but in some of the Reserve districts it is remarkable.

NET DEMAND DEPOSITS (REPORTING MEMBER BANKS)
(\$000,000 omitted)

	Oct. 4, 1933	Oct. 3, 1934
Federal Reserve District:		
Boston	725	895
New York	5,571	6,696
Philadelphia	537	687
Cleveland	515	650
Richmond	186	231
Atlanta	141	182
Chicago	1,178	1,698
St. Louis	269	340
Minneapolis	192	252
Kansas City	343	461
Dallas	224	297
San Francisco.....	567	694
Total	10,448	13,083

The total increase is about 25 per cent., but in the Chicago district it exceeds 40 per cent. For the same period only Philadelphia and San Francisco show net increases in commercial loans, and those small. This emphasises the change that has occurred in recent weeks.

NEW YORK, October 11.

FRANCE

PARLIAMENT AND CONSTITUTIONAL REFORM

THE political parties are now holding their congresses. The Radical-Socialists are meeting at Nantes between October 25th and 28th. The Neo-Socialists' congress, which has just been held, gave M. Marquet, the Minister of Labour, the choice of resignation from the Cabinet or dismissal from the Party. But M. Marquet left the Party without waiting for this ultimatum. The episode proves that the authority of the Doumergue Cabinet has begun to be challenged in political quarters where it was not questioned till recently. This is the result of the last few weeks' events, which have modified the attitude of public opinion towards the Government. The country is perturbed by the delays experienced in restoring the authority of justice, in reorganising the police, and in reducing the high cost of living, etc. The murders at Marseilles, as well as the prolonged mystery over the Stavisky and Prince cases, have also disquieted public feeling.

M. Chéron, the Minister of Justice, was sacrificed as a scapegoat. But it now transpires that M. Doumergue originally chose, as Foreign Minister, not M. Laval but M. Flandin, the present Minister for Public Works. So also M. Doumergue originally meant M. Marquet and not M. Marchandau to be Minister of Interior. But dissensions appeared immediately among the Cabinet, and M. Doumergue had to give way. M. Doumergue may still disregard Parliamentary intrigues if he has the courage, since public opinion would follow him if he acted energetically. His personal authority with the public is still great. If a conflict should appear between him and Parliament, public opinion would not be against him. Immediately on the day of its reassembly, Parliament will be occupied with the reform of the Constitution, and M. Doumergue appears to hope that the measure will be carried at once and that Parliament will go to Versailles to vote it. One of his proposals, however, the extension of the right to dis-

solve the Chamber, is meeting with great opposition, notably in the Senate. But M. Doumergue has declared that he will make it a question of confidence.

The initiative in calling the meeting of the gold *bloc* at Brussels (which is discussed in a Note on page 773) was taken by Belgium. The Belgian Government was very anxious to develop its exports, and since there is a very strong devaluationist party in Belgium, the Government wished to offer an alternative policy of commercial agreements with the other members of the gold *bloc*. Two main obstacles have hindered the negotiation of such agreements: (1) quotas; (2) the most-favoured-nation clause. In spite of these obstacles, however, the Conference is aiming at an increase of 10 per cent. in the volume of trade between the gold *bloc* countries. In France, at the moment, it is not intended to increase the quota percentages. M. Lamoureux, Minister of Trade, points out that if this were done in the interests of the gold *bloc*, other countries, such as Great Britain, would find their percentage automatically raised. The French Government is, accordingly, considering the possibility of distributing the unused quotas, which amount to nearly 50 million francs, among the countries of the gold *bloc*.

FRANCE'S BALANCE OF PAYMENTS

In his study of France's balance of payments in 1933, M. Meynial observes that French prices are still 20 or 30 per cent. out of adjustment with world prices. The following is a survey of the balance of payments:—

	(000,000 francs)		1932		1933	
	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.
Merchandise trade	2,000	10,015*	1,600	9,000*	..	..
Shipping and freight	300	..	500	..	..	..
Insurance	..	1,200	..	800	..	..
Immigrant remittances	3,000	..	3,000	..	..	..
Tourist expenditure.....	1,600	..	2,000	..	..	..
Interest and dividends	..	500	..	250	..	..
Government transactions ..	..	..	..	..	..	..
Balance on current account ..	..	4,815	..	2,950	..	..
Visible capital movements..	20,930	..	2,532	..	..	..
Gold movements	..	17,660	1,000	..	..	..
Invisible capital imports or exports	1,500	..	..	582	..	..

* Estimates, colonies excluded.

The depreciation of the dollar and the further depreciation of sterling have had the effect of increasing the passive balance of payments. Exports were only 51.6 per cent. of imports in 1933, against 66.1 per cent. in 1932, 72.1 per cent. in 1931, and 81.7 per cent. in 1930. And this deficit would have been higher without the support of the Colonies. In "Shipping and Freight," a slight increase of the traffic has been more than balanced by a reduction of freights (nearly 12 per cent.). Insurance receipts have benefited from two large claims and have brought in 500 millions this year against 300 millions in 1932. Immigrant remittances are diminishing as the number of foreign workers leaving France diminishes. Tourist expenditure is maintained at about 3,000 million francs, the

number of tourists have fallen only to 931,500, compared with 944,000 in 1932 and a maximum of 1,911,000 in 1929. "Interest and Dividends" was in the past a large credit item in the French balance of payments. According to the estimates of the Minister of Finance, this item is 1,550 millions in 1933, to which 1,500 or 1,600 millions must be added for interest collected from foreign countries by foreign persons living in France. Interest and dividends paid in foreign countries on investments in France have considerably diminished as a consequence of the selling of French stocks by foreigners and of the repatriation of the loans issued in these countries by the French Government and local authorities.

Among outstanding capital movements, foreign exchange sold by the Treasury and the Bank of France amounted to 3,632 millions in 1933, against 18,000 millions in 1932, and the stock of foreign exchange of both institutes does not now exceed 1,200 millions. Loans to the French Railway systems from foreign sources are not above 200 millions, and credits from the French market to foreign countries are not above 1,300 millions (600 + 300 millions to the Belgian Government and 400 millions to the Austrian Government). Gold movements are a little enigmatic. Customs statistics show imports of 17,583 millions and exports of 11,330 millions, an active balance of 6,253 millions, against 21,131 millions in 1932. Nevertheless, the gold stock of the Bank of France has diminished by 5,564 millions. It must be remembered that many foreign central banks have kept gold stocks in Paris since the depreciation of the dollar and the constitution of the gold bloc, and that French political instability has led numerous Frenchmen to hoard gold. These operations, however, do not affect international payments, since the proprietors of the gold remain the same. One may conclude that the exports of the Bank of France consist of a sum of 4,564 millions of gold sold to French citizens, and that 1,000 millions may therefore have been exported for the settlement of international balances. The balance of payments shows that the French economy is still out of equilibrium. The problem of reducing prices still awaits solution. Such a reduction would occur automatically if it were not impeded by tariffs and quotas. However, the convergent trend of prices in the gold and non-gold countries seems to indicate that the process of readjustment has begun. But this progress would be annihilated, and the strain which deflation exerts upon the French economy would become unsupportable, if there should be fresh exchange depreciation abroad, and a renewed fall in gold prices, this autumn.

PARIS, October 25.

GERMANY

PRICES AND PRODUCTION

THE index number of wholesale prices for October 17th was unchanged at 101.2. The rise in the price of manufactured consumption-goods continues. The basis of the cost-of-living index has been altered, with the result that it has dropped to 121.6 for September, as against 122.5 on the old basis. By agreement between the Reichsnährstand Corporation and the Syndicate, potash prices have been reduced by between 11 and 38 per cent. for different sorts on the ground that during the crisis prices were reduced only once, and then by only around 10 per cent. This measure was taken in the interest of home agriculture. The Bureau of Statistics reports that 62 per cent. of the number of possible workers' vacancies were occupied in September, as against 61 per cent. in August. The figure for the capital-goods industries is 62.5, against 61.2; for consumption-goods, 61.4, against 60.7; for the heavy iron industry 70.1, against 69.3; for engineering 63.4, against 62.7; for textiles 72.3, against 72.4. In rayon and linen there has been improvement, in cotton and wool a set-back. Ingot steel output in September was 975,890 tons, against 1,067,854 tons in August; even allowing for the shorter working month there has been a considerable decline. Output in the first nine months

was 8,624,000 tons, against 5,414,200 tons in the same months of 1933. Steel export is fairly active. The building industry has improved; sales of cement in September, were 607,000 tons, against 392,000 tons in September, 1933.

The Reich Budgetary return for August 31st shows ordinary revenue as Rm. 2,830.9 millions, expenditure Rm. 2,873.3 millions; extraordinary revenue nil, expenditure Rm. 4.6 millions. The deficit carried over from 1933 is Rm. 1,796.7 millions, covered out of short-term borrowings, of which on August 31st Rm. 400 millions consisted of Treasury bills and Rm. 1,549 millions of non-interest-bearing Treasury bonds. The Reichsbank's return for October 15th shows a slight increase in the reserve, consisting of Rm. 1,276,000 gold delivered from abroad in consequence of the artificially induced shortage of free marks.

TAXATION CHANGES

The Finance Ministry last week announced and in part promulgated in legal form important revisions of taxation. In general, these amendments are of Reich taxation only, but they include the municipal Citizens' Tax (*Bürgersteuer*). The Citizens' Tax is really a supplementary income-tax which was imposed during the depression, but which was at the time described as a poll tax, apparently because it was an evasion of a provision of the post-war taxation reform which made income-tax a Reich preserve. The present amendments of personal taxation are largely inspired by considerations of population. The present income-tax starts with a minimum rate of 10 per cent., subject to material abatements on a family basis. The new abatements are to be 15 per cent. for one child, 35 per cent. for two, 55 per cent. for three, and so on up to 100 per cent. complete exemption for six, only, however, when income does not exceed Rm. 100,000. The age up to which family abatements are granted has been raised from 21 to 25 years if the children are studying, even independently of the family, for any occupation. Besides the amendment of the exemption rates there is an important change regarding profits made by speculation. Speculative profits always constitute income, but such profits have hitherto, in income-tax law, been speculative only if more than three months elapsed between dates of purchase and sale, or, regardless of dates, if they were made through selling short. This applied to all securities.

Henceforth the exemption form for shares is lengthened to one year, whereas profits on Government securities will be in no case speculative and will therefore never count as income. The German income-tax in regard to speculative gains has so far been more lenient than in most other countries; but the amendment seems to have been partly determined by a wish to animate the market for bonds, which accord with the Reichsbank open-market policy embarked on a year ago. The amendment also comes into force on January 1st, but it is not certain that it will apply to profits made in 1934. The effect must be to check the frequency of purchases and sales and, other things being equal, to accentuate fluctuations in Bourse quotations. The immediate effect was a considerable weakening of shares on the Bourse, accompanied by a sharp upward movement in Government securities.

The turnover tax, the basic rate of which is 2 per cent. on value, has also been amended. Hitherto sales out of stock of a wholesale merchant paid the full 2 per cent. (in case of grain, meal and some other agricultural products only 1 per cent.), whereas sales not out of stock were exempted. The seller out of stock was thus at a disadvantage as against other wholesale dealers, and this discouraged the holding of stocks and made for spasmodic ordering of goods from the producers, causing irregularity in employment. Henceforth the tax is to be $\frac{1}{2}$ per cent. without discrimination. Entirely exempted from turnover tax in future are certain mass goods, cotton, wool, fuel, non-ferrous metals, products of smelting, mineral oils, fertilisers, grain of all sorts, flour, milk, vegetables and potatoes. The amendments of the municipal Citizens' Tax law grant abatements for families with more than one child when the income does not exceed Rm. 12,000. Other provisions in the amended laws aim at simplicity, and will probably save administration expenses. Less reassuring is a declaration in the preamble to the Tax Adaptation Law that "the tax laws are to be

"interpreted according to Nazi *Weltanschauung*" by the authorities. The tax amendments, according to the Secretary of State at the Finance Ministry, will involve an immediate loss of Rm. 320 millions.

In consequence of early liquidations for the month-end settlements, the money market has been fluid. Day-loan rates fell on Tuesday to $3\frac{1}{2}$ -4 $\frac{1}{2}$ per cent. A Berlin court has decided that the Reich Dollar Treasury Bills, issued in 1923 shortly before the currency stabilisation, are payable in marks at the current rate of exchange. On similar questions, in which commercial debtors were concerned, different courts have given different decisions. Savings bank deposits at the end of August totalled Rm. 12,160 millions, against Rm. 11,675 millions at the end of July, but Rm. 447 millions of this increase consisted of newly booked valorised savings.

BERLIN, October 24.

AUSTRIA

REVENUES AND TAXABLE CAPACITY

THE Minister of Finance, Dr. Buresch, recently published some State revenue figures which illustrate the resources of the Austrian economy from the point of view of taxation.

	Indirect Taxes	Direct Taxes (Millions of Schillings)	Merchandise Turnover Tax
1934 ...	654	189	170
1933 ...	637	179	163

The increase in the total public revenues by 17 million schillings was achieved chiefly through the introduction of new taxes, among which the Security Tax is to bring in about 20 million schillings in 1934. In certain quarters there is strong support for the idea of increasing consumption taxes still further. In recent years the total amount of these taxes remained fairly steady in the neighbourhood of 160 million schillings. Owing to a rise in consumption, the revenue from the wine tax has gone up from 10 to 13 millions and that from the sugar tax from 46 to 54 million schillings. On the other hand, there is a drop in the beer tax from 46 to 27 million schillings.

Within the last fortnight a further increase in the motor spirit tax has come into force. Even before this increase motor spirit was extremely highly taxed. The taxes on motor vehicles are also so high as to prevent any expansion of motor traffic. The Government is not merely anxious for tax revenue, but wishes to handicap motor traffic in its competition with the railways, which are largely in the hands of the State. Motoring is further discouraged by the high Customs duties on motor-cars and the very low quotas for foreign makes. Foreign cars cost several times as much in Austria as in the countries of their origin. The benefits of all this protection, in so far as mass-produced cars are concerned, now accrues, after the fusions in the motor-car industry, to a single enterprise and its workmen.

The latest reports from the railways are rather more favourable. In spite of the decline in passenger traffic, revenues have increased on account of the continued briskness in goods traffic. The assistance which the Government recently gave to the timber exporting trade has greatly benefited the railways, and the possibilities of further expansion of timber exports are being steadily exploited. Timber exports to Germany are also larger this year, even though no special arrangement has been made; and negotiations with France are going on. The railways are also profiting from the enhanced demand for raw materials. In the first eight months the increase in cotton imports was from 143,000 to 186,000 metric centners, of washed wool from 10,000 to 14,000, of rubber from 20,600 to 25,600, of copper from 38,000 to 52,000 and of zinc from 28,000 to 32,000. Moreover, exports of iron rods have risen from 28,000 to 48,000 metric centners, of steel rods from 90,000 to 126,000 metric centners. In August exports of these articles were more than 70 per cent. higher than last year. The principal customers are Japan and Germany.

Determined efforts are being made to expand exports of finished goods. This is the object of the coming negotia-

tions with Italy. With Czechoslovakia the trade balance is heavily passive; in the first eight months of 1934 it was 54 million schillings, though Austria's total passive balance was only 188 million schillings. The cancellation of the existing trade treaty is widely recommended. But the Government apparently desires to bring Czechoslovakia into the Austro-Italian economic group.

VIENNA, October 24.

POLAND

THE HOME POLITICAL OUTLOOK

PUBLIC opinion in Poland is perplexed not only about foreign relations but also about the internal political outlook. Many people here feel that recent international developments have a closer connection with internal politics than is realised abroad, and that in particular the "diplomatic success" at Geneva (where Colonel Beck on September 13th announced that the Polish Government would no longer co-operate with international bodies in the protection of minorities) has been exploited for its internal effect. While the Government can point to more tangible achievements in the foreign field than the *démarche* of September 13th—albeit the drift towards Germany and away from France and the League of Nations is running ahead of public opinion—its internal programme is vague and hesitant. It appears, for instance, quite unable to decide what to do about the new Constitution, which passed the Sejm on January 26th last, was sent to the Senate on March 12th, four days before the session closed, and has since been apparently forgotten. In the economic field, the Government is, on the one hand, pursuing a deflation policy by compelling the industrial cartels to keep on lowering prices, while on the other hand it is indulging in inflationary public spending appreciably in excess of ordinary revenue. The variety of interests of the Government *bloc* (which includes large landowners, and peasants, Jews and Nationalists, industrialists and representatives of organised labour, capitalists and Socialists) makes it extremely difficult to establish and carry through a long-range programme, and no doubt accounts for the day-to-day character of internal legislation. The element which holds the Government *bloc* together is unquestionably loyal to Marshal Pilsudski and has complete confidence in his judgment.

The Budget estimates for the present fiscal year, which began on April 1st, provide for a deficit of 48 million zlotys, after including as revenue the balance remaining from the National Loan of last October, now paid up to the amount of 330 millions. The balance of the loan carried forward to the present Budget was estimated at 175 millions, but it was probably not more than 150 millions. In any event, the National Loan will be about used up by the end of October, and the fiscal year will still have five months to run with a deficit of about 25 millions a month. The Government has accordingly published a decree authorising the Minister of Finance to raise 200 million zlotys by the issue of 5 per cent. permanent annuities, which will be purchased, it is expected, by social insurance funds administered by the State. Private insurance companies and banks, it is believed, may be asked later to use some of their surplus reserves for purchasing these annuities. The Ministry of Finance also has a non-interest-bearing overdraft of 90 millions at the Bank of Poland, and about 200 millions of short-dated certificates outstanding; while the increase in the circulation of token money from 326 millions on June 30, 1933, to 380 millions on August 31, 1934, has benefited the Treasury.

CROP RESULTS AND EXPORTS

The following are the latest available crop figures:—

	Average Harvest for the years 1929-33 (In millions of metric quintals; one quintal equalling 100 kilogrammes)	Estimated Harvest for 1934
Wheat	19.6	17.3
Rye	65.7	56.5
Barley	14.9	12.9
Oats	25.4	22.7
Potatoes	303.9	285.5

There has been an advance in grain prices of about 25 per cent. during the past three months and of more than 50 per cent., compared with a year ago, so that on the whole the farmers are no worse off than they were at this time last year.

More than 500,000 metric tons of grain and flour were exported in the first nine months of this year, an amount substantially greater than the average for the past five years. Unless the carry-over was much larger than it was generally understood to be, it would seem that too much grain has already been exported this year and that there is little more available for export. Shipments of grain and flour, combined with an increase in coal exports from 6,643,000 metric tons in the first nine months of 1933 to 7,361,000 in 1934, have contributed materially to the larger active trade balance shown below:—

	January–September 1933	1934
	(Millions of zlotys)	
Exports	683.7	713.9
Imports	595.2	592.2
Active balance ...	88.5	121.7

An agreement was reached early in October for "compensation" transactions involving the export of agricultural products from Poland to Germany, over a period of one year, to a value of approximately 20 million zlotys, and of imports from Germany (chiefly of machinery, it is stated) of a like amount. These transactions will be on a most-favoured-nation basis, and they represent a further step along the road to a full commercial treaty between the two countries which began on March 7th last with the agreement for the "normalisation" of commercial relations. In their trade during the first eight months of this year Poland had an active balance of 42,781,000 zlotys. If future trade with Germany is to be on a basis of equality it will make Poland more than ever dependent on the active balance with the United Kingdom, which amounted in the first eight months of this year to 76,261,000 zlotys.

WARSAW, October 23.

SOUTH AFRICA

A VOTE FOR FUSION

THE party Fusion policy has received an emphatic vote of confidence at the bye-election at Heilbron, a predominantly agricultural constituency in the north of the Orange Free State. There were four candidates—the Fusionist, a Malanite, a supporter of Mr Tielman Roos and a Labourite. The total poll was 4,619, something under 80 per cent. of the electorate. The Fusionist candidate was elected by a majority of one thousand over the Malanite, and both the others forfeited their deposits; the Fusionist candidate's majority over all his opponents combined was nearly 500. The result is an undoubted triumph for Fusion, as the size of the majority surprised even the most optimistic. The Free State's traditional attachment to General Hertzog evidently held good against the feeling amongst some of his old supporters that there is something unholy about the South African Party. On the day that the result was declared the Malanite Nationalists moved in the Supreme Court for an order to deprive the Fusionist Nationalists of the control of the funds, assets and books of the Central Committee of the Nationalist Party of the Free State, contending that the policy of fusion with the South African Party was unconstitutional (it was carried at the recent Party Congress by 107 votes to 27). The decision of the Court was given against the petitioners.

Employment and business in all trades are still on the upgrade, the most noticeable activity being in building and in property generally in the larger towns. In Johannesburg employers have found themselves obliged to bring men from other centres. The wages of building artisans are shortly to be increased from 3s. to 3s. 6d. per hour.

At the Road Motor Transportation Conference at Pretoria a week ago Mr Pirow, Minister of Railways, adumbrated the establishment of a Union Ministry of Transport, to co-ordinate the control of railways and road transport.

Unification of all transport services in the Union is understood to have attracted Mr Pirow for some time. It is questionable how far this attraction is based on a desire for an efficient transport system in a large and sparsely populated country and how much it owes to official anxiety to bolster up a railway system of which certain rural sections cannot possibly compete on merit with road transport.

SELF-SUFFICIENCY AND GOLD

At the recent annual meeting of the Johannesburg Commercial Exchange the chairman referred to the increasing extent to which the mines' stores requirements are being met from local sources. He quoted figures to indicate that the tendency at the moment is for the Union to become increasingly self-supporting in this and in other directions. (Mr Pirow, in the speech referred to above, also threw out strong hints on the possibility of manufacturing petrol and steam engines locally.) The vice-chairman of the Commercial Exchange expressed disapproval of any policy tending to make the Union self-supporting, pointing out the danger that we should experience difficulty in disposing of our gold in so far as any such policy succeeded. A large number of South African business people are extraordinarily obtuse to this rather obvious consideration.

The distribution of South African trade has lately been attracting a good deal of attention. Mr C. Te Water, the Union High Commissioner in London, is one of several who profess to consider that gold should be excluded from our figures of trade with Great Britain. In an interview on arrival in Cape Town he said, "It comes simply to this, that some of our purchases which are made from Great Britain to-day will have to be made elsewhere, unless Great Britain herself is prepared to bring level the trade balances between our respective countries." Mr A. P. J. Fourie, Minister of Labour, Commerce and Industries, takes the same view. This attitude appears to overlook the fact that in South Africa gold is an industrial product on a footing different from that which it occupies in the balances of other countries. There is also a tendency to think that "gold can be sold anywhere."

The Tariff Commission has opened its inquiry, but most of the evidence so far heard is not of major importance. The evidence given on behalf of a local starch manufacturing concern was of some note: the witness stated that if he could purchase maize at the world price instead of at the local price he could, without any tariff assistance, transact profitable business in the local market for his company's products. So far as can be judged from such points as this, much of our fiscal policy is likely to receive very critical consideration from witnesses and, one hopes, from the Commission. From various quarters there has lately been a noticeable tendency to look closely at the policy of exporting various products at a loss or by means of subsidies. Just at present there is something of an outcry because of a shortage of butter—which has been exported at a loss when South Africans would have been glad to buy it at a profit to the producers.

JOHANNESBURG, October 15.

NEW ZEALAND

THE NEW RESERVE BANK

THE Reserve Bank of New Zealand opened for business in Wellington on August 1st. Its first public announcement fixed its buying rates for telegraphic transfers at £124 and its selling rates at £125 per £100 sterling. It also stated its willingness to deal with other banks in forward exchange, and its intention to maintain the rates quoted unchanged for a long period in the absence of any marked change in conditions. Its discount rate was fixed at 4 per cent. The other banks thereupon announced a new schedule of exchange rates, the leading rates being reduced by $\frac{1}{2}$ per cent. The Reserve Bank's decision to maintain approximately the "high" rate fixed in January, 1933, removed a great deal of the uncertainty that prevailed during the past year or more about exchange policy. The Reserve Bank has taken over sterling exchange from the Government to the amount of about £20 millions, giving funds in New Zealand in exchange,

and the Government has used these funds to redeem Treasury bills held by the banks for about £22 millions. The Government's liability under the Bank's Indemnity Act, passed when the exchange was raised in 1933, has thus been terminated, the Act has been repealed, and a large amount of bank resources previously invested in Treasury bills has been made available for ordinary lending in the Dominion. In view of its admitted responsibility for fixing the present exchange rate, the Government has undertaken the liability for any profit or loss accruing from a revaluation of the Reserve Bank's assets consequent upon any future movement of the exchange rate.

The high rate of exchange, combined with higher export prices, particularly for wool, during the season just ended, has increased receipts from exports and brought bank deposits to the record high level of £64,750,000 in the June quarter. Advances at £41 millions were the lowest since 1920. The official share price index has advanced from a low point of 67 in May, 1932, to 96 in May, 1934.

The export year ending in June last was the best since 1928-29. Exports were valued in New Zealand currency at £49½ millions, against £56 millions in 1928-29, and £35½ millions in 1931-32. Imports were £27½ millions, an increase of £3 millions on 1931-32. Among exports the greatest improvement is in wool, where 822,000 bales brought £13½ millions, against £6½ millions for 801,000 bales in 1932-33. Meat, hides and skins all show the effects of higher prices, total values being greater though the quantities declined slightly. Most of the increase in imports has occurred during 1934; imports of motor-vehicles alone expanded by £500,000. Since the active balance of trade is very large, money is abundant and business is decidedly better, and a continued expansion of imports is anticipated during the second half of the year. The registered unemployed numbered 49,000 at mid-July, about 8,000 less than a year earlier.

THE BRITISH FOOD MARKET

There remains some uncertainty about the future of the British market for New Zealand produce. A Commission is investigating conditions in the dairy industry, and negotiations are in progress regarding meat, but very scanty information has been given the public about the situation. A recent restriction imposed on export to Britain of certain beef products caused alarm amongst dairy farmers, and a decision about future trade relations is anxiously awaited. Feeling in the country is solidly against export restrictions, and it appears that the Government is experiencing difficulty in finding a workable compromise between domestic interests and the desires of the British Government. But there is little doubt that, in present conditions, if the uncertainty could be removed, the immediate gain to British exporters from an expanding New Zealand market would be substantially greater than any probable gain to British primary producers from restriction of New Zealand imports to Britain.

The recommendations of the tariff commission which sat last year, and the tariff resolutions arising from them and introduced to Parliament in July, lean towards freer entry for British goods. Some minor protective duties were removed, but most changes were reductions in rates on British goods, including hats, caps, boots and shoes, leather manufactures, oil engines, etc., 25 to 20 per cent., paints and varnishes and biscuits 20 to 15 per cent., and a wide range of similar reductions on miscellaneous imports.

The Budget presented to Parliament on August 23rd is the brightest for several years. An estimated deficit for 1933-34 of £2,094,000 has been reduced to £709,000, and the estimates for 1934-35 provide for a surplus of £8,000. Revenue for the past year was £23,492,749 and expenditure £24,202,027, including debt services £10,397,332, and social services £6,841,819. For 1934-35 it is estimated that taxation, with some reductions in Customs duties, will yield £19,305,000, and total revenue will amount to £24,252,000, while expenditure will total £24,244,000. In view of the improved position the Government has restored part of the wage cuts to all public servants by adding 5 per cent. to present rates from April 1st last.

MONEY AND BANKING

THE ETERNAL TRIANGLE

AFTER a long period of comparative calm in the foreign exchange markets of the world, circumstances have again combined to attract attention to the movements of the pound, the franc and the dollar. The recent weakness of sterling continued long enough to give rise to a certain amount of somewhat far-fetched speculation and to establish a new record price of gold. But it was brought to an end by the assassinations at Marseilles, and in the last fortnight the pound has been in the ascendant rather than in decline. The conference of the gold bloc at Brussels, when it reaffirmed its devotion to the existing parities and declared its intention of finding means to increase trade among its members, appears to have had the effect of weakening, rather than strengthening, the gold currencies. The market has a suspicion that the gold bloc "doth protest too much" its innocence of any intention of devaluing, and it has not escaped attention that agitation for devaluation is making progress in every one of these countries. On the other side of the Atlantic, though the immediate "devaluation scare" is over, no one can feel too confident that the present gold parity of the dollar will endure for ever. Thus the pound has had a two-fold reason for appreciation, and the recovery from the lowest point has already been substantial. The Paris rate, for example, closed on October 25th at Frs. 75½, compared with the low point of Frs. 73½ on October 11th.

The general tendency of the markets has thus been sharply reversed within the past few weeks. At the moment the support of the pound sterling appears to be solid, but he would be a bold prophet who would deny the possibility of another sudden reversal in the immediate future. There is no obvious tendency which can be confidently predicted, and fluctuations are consequently erratic. This is due to the fact that the long-run factors which should underlie the day-to-day movements are not all, so far as sterling is concerned, pulling in the same direction. It is easy to say that the franc is overvalued and the dollar undervalued. But what can we say with equal assurance about sterling? In Paris the pound is obviously too low. In New York it appears, with almost equal definiteness, to be too high. But so long as the fundamental maladjustment between Paris and New York continues, the pound cannot be at the right figure in both cities at once. The pound might indeed exclaim—

How happy could I be with either
Were t'other fair charmer away.

The predicament may be illustrated with figures as well as with verse. On two previous occasions* we have attempted to calculate approximate "equilibrium rates" for the London-New York exchange by comparing the movements of different indices of prices in the United States and Great Britain since 1929. We have made it clear on each occasion that we regard such calculations as no more than rough indications of the field within which the true equilibrium rate lies. It is not possible to calculate precise "purchasing power parities." Least of all is it possible to do so by comparing indices of the prices of staple commodities at wholesale, for the movements of such prices are as often the consequence as the cause of exchange fluctuations. On the other hand, cost-of-living indices are of little help because of their excessively narrow basis. We have consequently attached most importance to broader indices of commodity prices and to indices of wage rates—hourly wages being taken where the length of the working week has been altered. Furthermore, we have attempted to allow for the probability that our base period, September, 1929, was not one of underlying equilibrium between the two currencies. We have consequently given two sets of figures: one based on the assumption (Assumption A) that the mint parity of \$4.86 = £1 represented in September, 1929, an equilibrium of price levels; the other based on the assump-

tion (Assumption B) that that parity overvalued the pound, relatively to the dollar, by 10 per cent. The figures worked out on Assumption B we believe to be the closer to the truth. We came to the conclusion that in April, 1933, the equilibrium rate was "in the neighbourhood of \$3.60," and that in September, 1933, it was "between \$4.10 and \$4.30."

The figures on which these conclusions were based are reproduced in the following table, together with new figures representing the position in August, 1934. The new figures have been calculated by the same method and on the same assumptions, and are presented with the same reservations, as the earlier estimates:—

EQUILIBRIUM RATES OF EXCHANGE BETWEEN POUND AND DOLLAR

Indices compared	Nature of Prices compared	Equilibrium Rates					
		April, 1933		Sept., 1933		Aug., 1934	
		A	B	A	B	A	B
Bureau of Labour—Board of Trade	Wholesale....	4.27	3.84	4.61	4.15	4.93	4.44
Irving Fisher—Board of Trade	Wholesale....	4.00	3.60	4.79	4.31	5.14	4.63
Nat. Ind. Conf. Board—Bowley	Wages	4.00	3.60	4.63	4.17	5.14	4.63
Bureau of Labour—Ministry of Labour	Cost of living	4.17	3.75	4.48	4.03	4.42	3.98

It will be noticed that the second and third comparisons, which are those to which on theoretical grounds most credence should be attached, were in agreement both in April, 1933, and in August, 1934. The figure resulting from the comparison of the cost-of-living indices merely illustrates the uselessness of such indices for the purpose. On the basis of the more reliable figures we would guess that the pound and the dollar would be in rough equilibrium at a rate about 5 per cent. below the old mint parity.

To make estimates by a similar method of the equilibrium rate between Paris and London is an almost hopeless task, because of the lack of statistical material. The wholesale price indices can, of course, be compared. The resulting "equilibrium rates of exchange," using the indices of the Statistique Générale and the Board of Trade, are, for August, 1934, Frs. 94 on Assumption A and Frs. 84½ on Assumption B. But if the pound was 10 per cent. overvalued in 1929 relative to the world's currencies in general, it is probable that the franc was undervalued, and we may add an Assumption C—to wit, that the combined maladjustment between the two currencies in 1929 was of the order of 15 per cent. On this assumption the equilibrium rate would be Frs. 80 to the pound. It must be remembered, however, that this is a comparison of wholesale prices, which always tends to understate the extent of the disequilibrium. The figure of Frs. 80 can therefore be taken as the lowest rate at which equilibrium between the pound and the franc could be obtained. Unfortunately, it is not possible to check this calculation. The French cost-of-living index is distorted by the effects of French agricultural protection. The only available wage indices show hardly any change since 1929—which can hardly be representative of the whole country. Judging by the wage indices published by the International Labour Office, wage rates in the five gold bloc countries in 1933 were on the average about 10 per cent. below the 1929 level. A comparison of this with Professor Bowley's index for Great Britain would give equilibrium rates of Frs. 118, Frs. 106 and Frs. 100 on Assumptions A, B and C respectively. But there is no means of telling what has happened since 1933. Perhaps the best that can be done is to guess that the equilibrium rate of exchange lies between Frs. 80 and Frs. 90 to the pound.

These figures enable us to give numerical shape to the pound's dilemma. If it is to be in equilibrium with the

dollar it will have to fall to about \$4.65; the corresponding London-Paris rate at the present gold parity between franc and dollar would be about Frs. 70. If it is to be in equilibrium with the franc it must rise to, say, Frs. 85 or \$5.66. The actual position of the pound in this range will depend on the respective "pull" exerted by the two opposing tendencies. At the moment the pound is about one-third of the way from the dollar equilibrium to the franc equilibrium, but the pound is notoriously weak in the autumn, and the present approach to the dollar is not necessarily due to any permanent superiority in that currency's attractions.

This, then, is the predicament of sterling. It could be solved by a further rise of American prices, or a further fall of French prices, by a rise of the dollar or a fall of the franc. But it cannot be solved by any movement of British prices or of the pound sterling. We have not directly contributed to the present disequilibrium, and it is hard to see what we could do to adjust it. The policy for sterling must consequently be, now as hitherto, to leave the rival "fair charmers" to fight it out among themselves—

But while ye thus tease me together
To neither a word will I say.

FINANCIAL NOTES

The Money Market.—The absence of any seasonal expansion in the Treasury bill tender issue has at last defeated the attempt of the clearing banks to enforce higher discount rates, and at the moment the scheme to agree upon a common minimum buying rate has broken down. On Thursday afternoon three clearing banks were quoting ½ per cent. for Treasury bills maturing this year and ⅞ per cent. for next year's maturities, while a fourth bank was adhering to last week's rates of ⅞ and ⅞ per cent. for this year's and next year's maturities respectively. The remaining member of the "big five" has for a long time preserved a free hand. Too much importance need not be attached to this divergence, as business this week has been limited to a few purchases of November and December bills by some of the banks who quoted the lower rate. Still, this development indicates that the lack of bills is becoming the dominating factor. This week the supply of Treasury bills issued by tender only rose fractionally from £422.4 to £423.2 millions.

	Oct. 4, 1934	Oct. 11, 1934	Oct. 18, 1934	Oct. 25, 1934
Bank rate.....	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short Loan rate:—				
Clearing banks	1	1	1	1
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills:—				
(a) Clearing banks....	½	½	½	½
(b) Others.....	½	½	½	½
Three months' bank bills	½	½	½	½

Money is very easy. In spite of the Stock Exchange settlement, funds were practically unlendable on Tuesday at a nominal ½ per cent. The usual clearing bank ceiling did not take place on that day, while the fact that all dealings in the gilt-edged market are for cash serves to minimise the movement of funds on settling day.

The Foreign Exchanges.—The main event this week has been a further sharp recovery in sterling. At one time on Thursday morning the New York rate touched \$5.00, against \$4.94½ the week before, and late on Thursday afternoon it stood at \$4.97½. The Paris rate rose during the week from Frs. 74½ to Frs. 75½. Three months' dollars remain at ¾ cents discount, while three months' francs have moved from a small premium to either side of par. Market opinion varies as to the cause of the pound's strength. Commercial buying of dollars is still in evidence, though the autumn tobacco movements have by now probably been covered. According to one report, the pressure to buy sterling has come from New York, and may be inspired by American monetary uncertainties. Another view is that

there are the beginnings of a renewed flight from Continental currencies into sterling. No intervention by the British control has been noticeable for over a fortnight, but it is only safe to regard the present exchange position as being most unstable. The latest returns show that the potential supply of sondermarks is still in excess of current demands. The amount in the Bank of England's special account has risen between October 13th and October 20th from Rm. 5,200,000 to Rm. 5,550,000, so that it is Rm. 550,000 in excess of the limit. The amount awaiting payment into the special account has risen from Rm. 11,400,000 to Rm. 11,600,000. The week's sales of sondermarks came to barely two millions.

* * *

The Bank Return.—There has been a further slight contraction in the note circulation and a corresponding increase in the reserve. Both these are normal movements for this time of year.

BANK OF ENGLAND

	Oct. 25, 1933	Dec. 27, 1933	Oct. 10, 1934	Oct. 17, 1934	Oct. 24, 1934
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	190.4	190.7	191.9	191.9	192.0
Note circulation.....	389.3	389.0	379.6	377.2	374.7
Banking Department:—					
Reserve	82.5	59.7	73.0	75.4	77.9
Public deposits.....	15.9	22.2	18.6	17.5	22.4
Bankers' deposits	104.1	101.2	107.6	104.5	100.7
Government securities ...	78.0	88.0	83.4	81.3	81.3
Discounts and advances	8.5	16.8	14.0	9.5	8.2

Proportion 49.7% 37.3% 44.7% 47.2% 48.5%
In the banking department the main change is a transfer of about £4,000,000 from bankers' to public deposits. This probably represents the mid-month excise duty payments.

* * *

New York Money and Banking.—Money rates are unchanged, with the official call rate at 1 per cent. and 90-day bankers' acceptances at ½-¾ per cent. During the week ended October 17th brokers' loans increased from \$725 to \$759 millions. This week, \$75 millions of six-months' Treasury bills were sold at an average of 99.9 per cent. This represents a fractional advance on last week's price. The Treasury announced at the end of last week the issue of \$50 millions of Home Owners' Loan Corporation 3 per cent. bonds, guaranteed by the Government. Silver has reacted on the New York market from 54½ cents an ounce on October 17th to 53 cents an ounce on October 24th. The new Montreal Exchange, which is primarily intended for trading in silver, was opened on Monday last. The American Treasury has ruled that all profits made by United States residents from dealing in silver on the Montreal Exchange are subject to the 50 per cent. profits tax imposed by the 1934 Silver Purchase Act. The Treasury has so far raised no obstacle to the transmission of funds to Canada for the purpose of buying silver.

* * *

Washington and the Bankers.—President Roosevelt has been at some pains in recent weeks to make his peace with the bankers and to reassure the conservative element of the country that his policy is neither as extreme in the present nor intended to be as permanent for the future as they had feared. In his speech to the American Bankers' Association on Wednesday, for example, he declared that though there was still need for the Reconstruction Finance Corporation and for the other Governmental credit agencies in which private bankers have perceived dangerous rivals, he would be "only too glad to curtail the activities of these public agencies in proportion to the taking up of slack by privately owned agencies." On the other hand, the President made it quite clear what he expected in return. He asked them "to renew their confidence in the people of this country," and he added "I assume and expect that private business generally will be financed by the great credit resources which the present liquidity of the banks makes possible." It is possible from this and other recent utterances to form an idea of the direction in which the President's mind is now moving. He is appar-

* Economist, June 17, 1933, page 1289; November 18, 1933, page 948.

ently anxious to restore confidence in the currency, in the banks and in the moderation of his own intentions with regard to the "profit motive." The probability of another devaluation is scouted at Washington, and the President has spoken very strongly in opposition to the demand for immediate encashment of the veterans' bonus certificates. The method of recovery at present in favour is that of Governmental spending, which of all the methods tried since March, 1933, is the least likely to frighten the business community. In the first three and a half months of the financial year a deficit of \$700 millions has already been incurred, making it seem unlikely that the President's estimate of a deficit of \$2,000 millions for the year 1934-35 and of a balanced Budget for 1935-36 will be realised, even without the further intensification of the public works and building programmes of which there are many rumours. Making terms with the bankers evidently does not mean returning to the narrow path of financial orthodoxy.

* * *

The Paris Money Market.—A correspondent writes calling attention to the improvement in French monetary conditions during the past few months. Since April the market discount rate has fallen from $2\frac{1}{2}$ to $1\frac{1}{4}$ per cent., while the rate for loans against National Defence Bonds, which is a far more representative rate, has fallen from $4\frac{1}{2}$ to $1\frac{1}{8}$ per cent. In consequence, the Ministry of Finance has been able to reduce the rate on 2-3 months' Treasury bills from 3 to $1\frac{1}{2}$ per cent., and the rate for longer maturities from $3\frac{1}{2}$ to $2\frac{1}{2}$ per cent. Our correspondent claims that this fall in rates is largely due to the restoration of confidence. Currency has lately been returning from private hoards to the banks, with the result that commercial bank deposits have been increasing and the banks have had more funds to lend to the market. The repatriation of funds from abroad has also helped to swell the supply of money, and it is pointed out that while the fiduciary note issue has fallen by about Frs. 1,000 millions, private deposits (largely bankers' deposits) at the Banque de France have risen since March by more than Frs. 5,000 millions. The Treasury bill issue has been reduced from a maximum of Frs. 12,000 millions to one of Frs. 10,000 millions, as from September 30th last. The immediate consequence was that the market found that one of the main outlets for its funds was suddenly narrowed, and this explains the recent weakness of discount rates. From a wider point of view, the chief problem is whether long-term interest rates are going to follow short-term rates in their downward trend. The success of the recent Government loan holds out hopes in this direction, but it is still possible to find reasonably safe securities yielding more than 6 per cent. The trouble is that the outlook is hardly such as to encourage the transfer of capital from short-term to long-term investments.

* * *

Gold Bloc Difficulties.—The monetary ease apparent in Paris and other gold bloc centres cannot safely be accepted as a sign that all is well. We discussed the outlook for the lira last week, but there are many indications that economic pressure upon most members of the gold bloc is becoming more acute. Only a very short time ago the Dutch Minister of Finance insisted that Government financial policy must be framed in such a way as to bring about a lower standard of living, and in face of this surprising statement it is hardly to be wondered at that leading representatives of commerce and industry are turning round against the maintenance of the gold standard. Belgian public opinion, too, is not wedded as firmly to gold as would appear on the surface. The real budget deficit has assumed serious proportions and has necessitated heavy drafts upon Government reserves. It is agreed that further wage reductions are a flat impossibility. The recent reorganisation of the Belgian banking system is open to criticism on the ground that while the banks are receiving Government-guaranteed bonds in replacement of their frozen industrial commitments, sound commercial undertakings find it very difficult to raise fresh loans. Both Holland and Belgium can hardly fail to be impressed by the contrast between their own position and that of the Scandinavian countries, which joined the sterling area at its inception. Switzerland is in a stronger position, but her

intimate connections with Germany may prove to be the heel of Achilles. The difficulties of French commerce and industry have long been apparent and French wholesale prices show no signs of recovery. The gold bloc has been thrown together by chance rather than by any outstanding similarity in the economic activities or in the post-war currency policies of the participating nations. The outcome of the recent meetings at Brussels seems to have been based on the principle that it is better to hang together than to hang separately. If the common danger can stimulate a real increase of trade among the countries of the gold bloc, the Brussels agreement will have been a real achievement. But the action of the foreign exchange market appears to imply a doubt whether common engagement in a desperate rearguard action will produce a community of economic interests that has not hitherto been attainable by other means.

* * *

China and Silver.—Some of the practical consequences of China's virtual suspension of the silver standard are already beginning to develop. Late last week the Nanking Government announced the establishment of an Exchange Equalisation Fund of 100 million Chinese dollars for the purpose of counteracting silver price fluctuations and fixing a foreign exchange rate. The fund is to be contributed by a Government Committee, the Central Bank of China, the Bank of China and the Bank of Communications, but no indication of the nature of its assets is forthcoming. Meanwhile, it is possible to see how the new variable export duty upon silver operates in practice. The basic duty is 10 per cent., but as this includes the normal minting charge of $2\frac{1}{2}$ per cent., it is for practical purposes equivalent to $7\frac{1}{2}$ per cent. To this is added an additional export duty known as the equalisation charge, which is fixed each morning by a foreign exchange stabilisation committee of three Chinese bankers. On October 18th it was fixed at 14 per cent., making the total duty $21\frac{1}{2}$ per cent., and on October 20th it was reduced to $10\frac{1}{4}$ per cent., or 18 per cent. total. So far as can be deduced from last week's fluctuations, the object is to vary the duty with the London price of silver in such a way as to stabilise the Chinese dollar at about 16d. or perhaps slightly less. China has thus essentially become a member of the sterling area, and it is not impossible that operations on behalf of the Chinese Exchange Equalisation Fund will be noticeable in the London market. This drastic action by the Chinese Government has given a shock to the London and New York silver markets, where a strong bull position had grown up. Notwithstanding the disappearance of China as a source of supply, there has been a sharp fall in silver during the past fortnight from $24\frac{3}{4}$ d. to $23\frac{3}{4}$ d. an ounce in London and from $55\frac{1}{2}$ cents to 53 cents an ounce in New York. So far China appears to be coming best out of the silver struggle, with the sterling area a close second.

* * *

Anglo-South American Bank.—At last Wednesday's general meeting Sir Bertram Hornsby alluded to the apparent shrinkage in the bank's liabilities and assets. As was pointed out in last week's *Economist*, this is entirely due to a change in procedure. Last year all foreign currency conversions were made at official rates of exchange, but this year the conversions are in most cases made at the free rates, which are much lower. One consequence of this change in procedure is that the suspense account for depreciation of capital has been largely increased and now exceeds £2,000,000. Sir Bertram also gave details of the effects of the dissolution of Cosach and the reorganisation of the Chilean nitrate industry. The producing companies have regained their independence and have assumed responsibility for the Ramirez debts, in which the bank is chiefly interested. These are to be repaid out of the proceeds of the gradual liquidation of stocks existing on July 1, 1933, and also out of future profits which are subject to certain prior charges. Sir Bertram pointed out that the repayment of these debts really depended on the future of the nitrate industry. Here he felt justified in suggesting that the cessation of price cutting in competition with synthetic producers offered better prospects in the near future.

THE STOCK EXCHANGE

SHIPPING SHARE PROSPECTS

BRITISH shipping has had many vicissitudes in its time, but the extremity of its fluctuation between fabulous prosperity and profound depression in the last twenty years has been quite unprecedented. At the post-war peak of 1920 freight rates were approximately six times as high as they are at the present time. It is hard to say which extreme has been the more destructive. The fantastic earnings of the later war- and earlier peace-years stimulated the building of surplus tonnage, whose existence was expiated by a decade of unprofitable competition. They also involved certain large shipowning groups in financial transactions whose ultimate effects, in one instance at least, were ruinous. The depression of 1930-33 has severely taxed the resources of the strongest companies, and threatened for a time to reduce the entire industry to a condition of unprofitability.

Shipping has legitimate complaint to make of its treatment at the hands of world statesmen. Its earlier troubles arose directly out of the bellicosity of nations, and its later difficulties have been immoderately increased by the translation of international rivalries into the economic sphere. To-day, when the results of "autarky" are evidenced by a decline of 25 to 30 per cent. in the total volume of international trade since 1929, the process of subsidisation of merchant fleets by the Governments of many countries (whose total cost, up to the present, has been put by the Chamber of Shipping at over £1,000 millions), has tended still further to force down the level of competitive freight rates.

Within the last few weeks, however, the first signs of a reawakening of interest in shipping shares have been evident on the London Stock Exchange. The past month has witnessed the launching of a £5,000,000 ship to restore Britain's former supremacy in a North Atlantic "luxury" trade which has still to be recreated, and the announcement of impending receivership for the leading company in the Royal Mail group, which ten years ago controlled nearly one-sixth of the British mercantile marine. Since the middle of September, however, Cunard ordinary shares have risen from 5s. to 5s. 6d., Furness Withy ordinary from 16s. to 18s. 3d., and P. & O. deferred units from 16s. to 18s. 6d.

Few investors, probably, will be prepared, under present conditions, to endorse the conclusion reached by a Stock Exchange firm in a contemporary brochure, that "a major revival is due in the shipping industry." The market, however, has a presentiment that, for all its handicaps, international trade, the "raw material" of the shipping industry, cannot entirely escape the beneficial consequences of a recovery in prosperity which, though halting and unequal, is almost world-wide. The industry, by general consent, has, painfully but not unfruitfully, been endeavouring to put its house in order during the last few troubled years. Since the middle of 1931 the world's gross tonnage of merchant vessels of 100 tons or over has been reduced from 70.1 millions to 65.6 millions. The world's total unemployed tonnage has been reduced in a couple of years from 15,000,000 to 8,000,000 tons, and in the last three months alone the total in British ports has fallen by $21\frac{1}{2}$ per cent. The *Economist's* index of shipping movements in British home ports was 5 per cent. higher in the September quarter of this year than of 1932.

At the same time, Great Britain's relative position has improved. Although her share of total world tonnage to-day is only 27.4 per cent., she owns 36.7 per cent. of the efficient ocean-going tonnage (excluding tankers, lake vessels, ships under 4,000 tons, and vessels over 25 years old). Some 80.3 per cent. of her tonnage is less than twenty years old, while the corresponding figure for other countries is only 68.6 per cent. Her relative advantage in "big ships" is even more striking, for whereas liners

of 15,000 tons and over account for only 5.6 per cent. of the world's total shipping capacity, the percentage in Great Britain and Ireland is nearly 50. The British policy of scrapping and selling has done much to raise relative efficiency in the last four years. If the Government's pending intervention as a paymaster succeeds in curbing excessive individualism among "tramp" owners without aggravating the unmitigated evil of subsidised international competition (these are bold assumptions), the stage may indeed be set for a moderate revival. Whether anything but a change of heart among the world's leading statesmen, however, can restore more than a modest part of its former prosperity to the shipping industry, and eradicate organic defects in its economy, may be questioned. It is essential, therefore, that investors who regard some revival in the fortunes of British shipowning concerns as an inevitable function of world recovery, should narrowly confine their investigations to those companies whose tactical position and financial stability are above the average.

At the moment, Cunard shareholders are awaiting revived American prosperity and the commissioning of the *Queen Mary* to learn how far future merger company earnings will cover Government-guaranteed additions to prior charges. The share capital of the Royal Mail Steam Packet Company is irretrievably lost, and a similar fate appears only too certain for holders of the preference shares of the White Star Line. For the rest, the facilities of a London Stock Exchange quotation (though not always of an active market) are enjoyed by the debentures (where issued) and preference shares of companies associated with the large shipping groups, and of a very limited number of independent concerns. For the most part, dividends have been paid regularly through the depression, and these stocks are quoted on a 4 to 5 per cent. yield basis. So far as "recovery equities" are concerned, however, the investor's immediate choice narrows down to two companies, P. & O. and Furness Withy. The current earnings statements of all shipping companies carry indelible evidence of the great depression, as the following table suggests:—

TRADING PROFITS (BEFORE DEPRECIATION)

(a) Net earnings after depreciation but before debenture interest in each year. (b) Total profits before depreciation were £2,152,583 in 1932 and £1,954,946 in 1933. (c) After depreciation. (d) Depreciation £230,000 in 1932 and £240,000 in 1933. (e) Net profits after depreciation were £392,000 and £238,000 respectively. (f) After making a transfer to contingency account; figures throughout exclude profit or loss on sale of investments. (g) After debenture interest. (h) Published earnings included a draft from tax reserve, presumed to be £100,000, as in 1932. (i) After crediting excess reserve for income tax.

Broadly, the larger public-owned British shipping companies which are not unduly burdened by past financial legacies are able, even under present conditions, to cover current expenses with a surplus. Their chief problem is

bound up with the question of depreciation, and the maintenance of a liquid position. Undue postponement of the replacement of tonnage which, though "serviceable" is no longer completely "economic," involves the certainty of ultimate loss of competitive efficiency. A fleet which is not earning its depreciation is not paying its way. The following table throws a certain light on contemporary conditions in this respect:—

DEPRECIATION, EARNINGS, AND LIQUID ASSETS

	Date of last Balance Sheet	Set aside for Depreciation		Earnings on Ordinary		Net Liquid Assets (Latest Year)
		1929	Latest Year	1929	Latest Year

† Free of tax. N.A. Not available. (a) Consolidated assets of P. & O. group, at same date, were £8,200,000. (b) No transfer from profits, but £200,000 from general reserve to depreciation reserve. (c) Now a holding company, Aberdeen-Commonwealth Line fleet having been written off to deficiency account. (d) Also £41,000 from surplus on realisation of investments, used to write down book value of fleet. (f) Equivalent to 7.7 per cent., apart from preference dividend arrears.

Since 1929, depression has undoubtedly compelled retrenchment in annual depreciation allowances, and prospects for ordinary shareholders in the strongest companies must be viewed in the light of the probability that part of the fruits of even a moderate increase in earning powers will be required for an enhanced rate of tonnage replacement. In this respect, the figures of "net liquid assets," shown in the final column of the table above, have obvious significance. The two companies in whose equity stocks investors are most interested, have at least the advantage of a satisfactory total of liquid assets. The Peninsular and Oriental Company, whose report for the year to September 30th last will be published in a few weeks' time, held, on September 30, 1933, nearly £3½ millions of net liquid assets, the total for the P. & O. group as a whole being nearly £8½ millions. The company (and some of its subsidiaries and associates), did not earn full depreciation, on a 5 per cent. basis, in 1932 or 1933. This fact may militate strongly against the payment of any dividend on the deferred stock for 1933-34. A gratifying improvement may well have occurred in earnings owing to higher Eastern freights, further economies in working expenditure, and reduced debenture service. Profits for 1933-34, however, may still fail to cover prior charges (including dividends on the preferred stock), and depreciation on the scale the company considers appropriate. The deferred stock units at 18s. 6d. may be regarded as fully valued for the present. The company, however, should have little difficulty in finding the wherewithal to maintain the efficiency of its fleets. The recent sale of 1,500,000 shares of William Cory, held by the P. and O., has itself produced over £5,000,000 for shipbuilding purposes.

Similarly, Furness Withy has recently taken advantage of market conditions to convert a substantial block of its shares in a profitable subsidiary, the Economic Insurance Company, into cash at a high premium. Its surplus liquid assets increased over the year to March 31, 1934, though on that date they were little more than one-half of their total two years earlier. On the other hand, the company, after reducing its depreciation allowance in 1931 and 1932 to £150,000, as compared with £250,000 in the two preceding years, has now raised it to £300,000. In any case, the liquid resources of the group are probably much in excess

of the parent company's figures. Ostensibly, there was a small surplus of earnings for Furness Withy ordinary shares last year, though no dividend was paid. During the depression, however, the company has drawn on internal reserves to the extent of about £100,000 annually. The prospect of an early resumption of dividends on the shares, which are now quoted at 18s. 3d., may be governed by the desire of a board, noted for its conservatism, to utilise the first fruits of any recovery in earnings to suspend further drafts on internal resources.

Both P. and O. and Furness Withy may well have an additional reason for conservation of resources at the present time. Important changes are pending in the "balance of power" in British shipping. The Royal Mail liquidation may shortly bring into the market large ship-owning interests which, acquired on a reasonable "going concern" basis, and nursed by powerful companies which can afford to wait for better times, may hold out attractive prospects of eventual profit. Companies in the P. and O. and Furness Withy groups have already made a joint purchase of the Aberdeen and Commonwealth Line from Royal Mail interests. It may be presumed that both groups are fully seized of the importance, and probable imminence, of wider opportunities for extending their scope.

INVESTMENT NOTES

Air Transport and the Investor.—The victory of two British airmen, Messrs C. W. A. Scott and T. Campbell Black, in the England-Melbourne air race has set up a "record" of 2 days, 22 hours and 58 minutes for a journey of 11,300 miles, whose previous shortest time for a sailing ship was 60 days, for a steamer 29 days, and for an aeroplane (to Northern Australia) 6 days and 17 hours. No previous flight has so completely revolutionised ideas of time and distance. We congratulate the two pilots on a superlative feat of navigation, and the designers of their aircraft, the De Havilland Company, on a fine engineering achievement. The contest, however, was designed by its promoter and prize donor, Sir Macpherson Robertson, as a test, not of human skill and endurance under exceptional conditions, but of the commercial possibilities of inter-continental transport under relatively normal conditions. Special significance attaches, therefore, to the completion of the journey in no more than 3 days, 18 hours and 17 minutes by a Dutch air liner of American construction, carrying four pilots, three passengers, and a quantity of mails, flying with maximum stages of about 1,000 miles at speeds exceeding 200 miles per hour, and providing its occupants with reasonable amenities by way of regular meals, etc. Apart from a slight mishap within 200 miles of the final goal, due not to structural or engineering defect but to the pilots' ignorance of the difficult Trans-Australian route, the flight was accomplished with a relentless regularity, from stage to stage, which suggests that, so far as physical factors are concerned, commercial voyages of less than four days to the Antipodes may become a commonplace of future experience. This week's achievements, in fact, mark much the same stage in the evolution of commercial aviation as was attained by road motor transport shortly before the war. Though still a relative luxury, it has become an "established" transport arm. The provision of capital for its development on a wide scale will occupy the attention of investors, doubtless, for some years to come. Its economic advantages are almost exclusively in the sphere of time. It is adapted, not for the carriage of heavy loads over short distances, but for the rapid transport of passengers and commodities of high value in proportion to their weight and bulk (including mails, financial and other documents) over relatively long distances. Its medium, the air, affords less "stability" than land or sea, but it is universal and of low resistance, and permits of direct transport between terminal points without congestion, transshipment, and the construction of an expensive roadbed or permanent way. Internal air transport may, perhaps, at the present stage, best be pioneered by

private ventures, on the lines, e.g., of the Hillman Company in England, before the investor is asked to take a hand. The provision of capital for long-distance inter-continental services, however, require the assistance, from the outset, of London and other organised capital markets, as well as the political co-operation of numerous Governments. Britain's sole long-distance air transport company, Imperial Airways, Limited, has been established for ten years under its present auspices, and has an issued capital of under £650,000. Its £1 ordinary shares stand at 40s. 6d. The company has just declared a 6 per cent. dividend (against 5 per cent.), for the year to March 31st last, out of profits of £78,571, after charging £191,335 for obsolescence. Profits and obsolescence allowances, however, still amount to less than the annual subsidy which the company is receiving from the British Government, on a decreasing scale, until 1939. The company, however, is required to develop and maintain services on certain Imperial routes for purposes not entirely "commercial," on which a high percentage of payability is not to be expected, in their early years at least. Under the best conditions, clearly, investment in long-distance air transport must be speculative in its early stages of development. The experience of Imperial Airways further emphasises the inevitably heavy burden of depreciation charges. A most promising field, however, may be the North Atlantic route between Europe and America, once the formidable engineering and technical difficulties of the long "over-sea" passage have been overcome.

Publicity for "Placings."—In connection with the "placing," through the London market, of a line of 10 per cent. cumulative participating preference shares of the Argentine Navigation Company Mihanovich, a one-time subsidiary of the Royal Mail, an interesting point arises. Certain particulars have been published in financial and other newspapers, which give an informative account of the company's recent experience and throw valuable light on its prospects under improved economic conditions. The facts are stated, not in the form required for "official" statements "for public information only" under the requirements of the Stock Exchange Committee, but in a form equivalent to that of a "market slip," to which Stock Exchange members are well accustomed. Other companies may follow this example in the future. "Market slips" may be less comprehensive and more selective than "official" statements, which need be advertised only in two daily newspapers—and have, of course, been so advertised, in due form, in the present instance. It is understood that members of the Stock Exchange Committee, unofficially approached recently in a similar case, raised no necessary objection to the practice, but reserved their right to call for explanation should any future question arise regarding the contents of an "unofficial" document.

International Stock Exchange Bureau.—A meeting was held in Paris last week-end at the offices of the International Chamber of Commerce at which representatives of stock exchanges were invited to be present. Its intentions were to discuss machinery to establish closer relations between the various exchanges, to improve the international market in securities and to set up a permanent international bureau of stock exchanges. The idea has been pressed for some time by Belgian interests, and eventually the International Chamber of Commerce undertook to convene a preliminary meeting. London and New York offered no active opposition to the general proposals, but decided not to send official representatives to Paris. Representatives, however, were sent from Paris, Brussels, Vienna, Berlin, Amsterdam, Zurich and Italy. A committee was appointed, under the chairmanship of M. Jacob, President of the Paris Bourse, to draft a constitution. When this work is completed further steps will then be taken to canvass for members, and the London Stock Exchange will doubtless consider whether it can see its way to take an official part in the new body.

FUNDS EXCEED £23,500,000

The Oil War.—In an Investment Note in our issue of October 13th (page 689) we referred to the breakdown of output restriction in the American oil industry, and suggested that the only certain way to stop "illegal" or "hot oil" production was to reduce crude oil prices, which had been pegged too long at \$1.00 per barrel. This week the break in crude oil prices occurred. The Atlas Pipe Line Company cut its price for East Texas crude oil from \$1 to 60 cents per barrel. As the "hot oil" producers are selling their output at 50 per cent. below "posted" prices, this cut would go some way to curb illegal production if the major crude oil purchasing companies followed the Atlas lead. At the moment of writing no such action has been taken. The large oil companies have agreed not to upset "dollar oil," while Mr Ickes, Secretary of the Interior, and the Attorney-General are doing their best to bring the "hot oil" producers into court for non-payment of the crude oil tax. An oil crisis, however, will not wait upon the law courts. The large oil companies have intimated to the Government that they cannot hold the posted prices much longer if restriction of output is not enforced. Many of them would no doubt be glad to replenish their stocks of crude oil at lower prices in view of the 7 per cent. rise in the consumption of gasoline which has been enjoyed so far this year, in spite of the trade depression. Meanwhile, the gasoline war in the Eastern States continues. The Standard Oil companies and the independents are fighting each other at the service stations, and cuts in retail prices range from 3 cents to 10 cents per gallon. At some stations the fortunate motorist is able to fill his tank with gasoline at 8 cents per gallon, including tax. A trade war of this ferocity does not usually last long, but unless the Federal Government finds new ways and means of enforcing restriction at the source of supply—or unless the Texas State authorities co-operate in enforcing the existing restriction orders—the war will shortly be extended to the crude oil market. Oil shares have naturally reacted to the depressing news from America. It is unfortunate that this should be the occasion for the announcement by the Mexican and Canadian Eagle Oil companies of a further postponement of their preference dividends.

A "Kaffir" Reaction?—The course of markets this week has been marked by a certain weakness in "Kaffir" shares. The movement is the result of a number of contributory factors, of which not the least important is the policy of the mining groups in utilising the rise in the price of gold to lower the grade of ore mined. This policy, which prolongs the lives of the mines at the expense of current dividends, is obviously well advised, so far as it concerns South Africa, whose economy, once the goldfields are exhausted, will be, to say the least, seriously affected. Whether or no the policy is beneficial to long-term shareholders depends on an actuarial calculation which the majority are unable or unwilling to make. It is certain

that the practice is unpopular with the short-term speculator who realises that increases in the sterling price for gold are not to be proportionately reflected in monthly returns from the mines. Many speculators in consequence have tended temporarily to abandon the market, and existing "bulls" have found few fresh purchasers to relieve them of their commitments. The "carry-over" for the account which ended on Thursday disclosed a rather large "bull" position in London, which coincided with a similar state of affairs in Johannesburg. A number of speculators were unable to obtain "contango" facilities, and the resultant liquidation gathered volume in snowball fashion. Unfortunately, the fall in prices did not attract the volume of investment support which might have been anticipated. It happens that sterling is at present enjoying a seasonal recovery. Uneasiness caused by a falling price for gold has been accentuated by fears for certain currencies of the "gold bloc," which are regarded in some sections of the market as clinging somewhat precariously to the gold standard. Were the gold currencies to be devalued, it is probable that competition would lead to a rise rather than a fall in the sterling price of gold, but the market would doubtless be temporarily upset. The long-term holder of investment "Kaffir" shares may have no fundamental cause for alarm over the present position. For the time being, however, the speculator will doubtless walk warily.

* * *

Actuaries' Investment Index.—With speculative forces in their present temporising mood, share prices as a whole have inevitably registered a further fall, and while there has been little forced or refugee closing of speculative positions, except in some sections of the mining market, traders have regarded the limited range of individual "bull points" strictly on their merits. The Actuaries' Index, computed from Tuesday's prices of 144 industrial shares, has again fallen to 72.4, compared with 72.8 a week ago and 73.2 a month ago (December 31, 1928 = 100), the corresponding yield figures being 3.68, 3.63 and 3.65 per cent. respectively. Figures of some component groups reveal the general nature of the week's declining trend:—

Group (and Number of Securities)	Prices (Dec. 31, 1928=100)			Yield (%)		
	Sept. 25, 1934	Oct. 16, 1934	Oct. 23, 1934	Sept. 25, 1934	Oct. 16, 1934	Oct. 23, 1934
Investment Trusts (15).....	51.4	53.7	54.0	3.79	3.64	3.63
Building Materials (4).....	84.1	83.9	81.6	4.24	4.25	4.38
Gas (7).....	136.7	137.3	138.5	4.42	4.40	4.36
Iron and Steel (6).....	52.2	54.4	53.7	1.26	1.24	1.34
Oil (5).....	62.6	59.7	59.4	4.70	4.92	4.88
Home Rails (4).....	78.3	76.5	76.0	1.49	1.45	1.46
Miscellaneous (50).....	64.8	64.9	64.2	3.82	3.79	3.90

Apart from some interest in investment trust and gas stocks, the list shows evidence of waning support, and in such cases as building materials and the miscellaneous group a more pronounced withdrawal of speculative influences. Home rail stocks have been recessionary on the slightly less favourable trend of traffics.

* * *

Credit for Industry, Limited.—The recent formation of this institution, in response to the recommendation of the Macmillan Committee, for the provision of finance below the economic limit of the new issue market, has aroused much interest among small and medium-sized concerns. C.F.I., to use its motto, has issued an explanatory booklet, entitled "Money for Industry," describing the need for its specialised functions in a modern economic organisation, and defining, in a general way, the conditions under which it is prepared to advance money to those tradesmen or manufacturers requiring additional resources in semi-permanent form. C.F.I. takes a broad view of the scope of business which it is prepared to assist, and, subject to the proviso that borrowers must have a successful trading record and can produce satisfactory evidence of their capacity for employing new loans, which may range from

£100 to £50,000, their applications will receive sympathetic consideration in principle. It is emphasised that C.F.I. has no intention of usurping the functions of the banks, nor will it grant funds for speculators and the exploitation of patents. The company has twelve branch offices in the principal provincial and Scottish centres. Those in need of new long-term finance of this character will find the booklet of great assistance in formulating their proposals to the company.

COMPANY NOTES

Motor Accessory Companies.—The market for the manufacturer of motor accessories is dependent not only on the number of cars sold, but on the number of accessories and refinements which the manufacturers see fit to include as standard equipment. Consequently, the decline in motor sales which came with the earlier years of the slump was to some extent set off for the leading accessory businesses by the more lavish equipment per car, through which the motor manufacturers sought to attract custom. The introduction of the small six-cylinder car considerably increased the demand for sparking plugs, while the suppression of the tourer by the saloon, corresponding with the standardisation of safety glass, greatly enlarged the safety glass market. On the demand side, therefore, the accessory trade has been fortunate during the depression. In the earlier period the effects of declining motor sales were "cushioned," and in the later period motor sales have led the recovery. Owing to the almost universal

† On capital as increased by 100 per cent. bonus in 1933.

application of their products, the accessory manufacturers have been relatively unaffected by fluctuations of individual units among the motor manufacturers. It happens, further, that the depression has seen the leading manufacturers in each department establishing themselves more firmly than ever before at the head of their trades. Among the smaller concerns in the accessories and safety glass trade the depression has wrought considerable havoc. Losses have been frequent, and liquidations not altogether absent. Some of the smaller concerns (Serck Radiators are a good example) have maintained a fair profit record. Generally speaking, however, the satisfactory experience of Joseph Lucas and S. Smith in the accessories trade, and of Triplex in the safety glass trade, is in direct contrast with the fortunes of most of their competitors. That Lucas's and S. Smith's profits have not risen more considerably, however, is evidence of the competition which they have to face in some departments. The future of the trade still depends on the total sales of motor cars (and kindred products from bicycles to aircraft) combined

with the number of accessories carried by each unit sold. There would appear to be room for some further expansion under each heading, while the much firmer position of the leaders may possibly allow of an increase in profit margins. It is perhaps significant, however, that such concerns as Triplex and S. Smith are seeking opportunities of expansion outside the motor trade, suggesting that their managements consider the opportunities within the trade to be limited. The conclusion would appear to be that the leaders provide sound industrial investments with the possibility of satisfactory increases in profits, but that the rate of expansion within the trade itself may be less, for some time to come, than in the recent past.

Rootes and S.T.D.—The discussions and dissensions in the S.T.D. motors case (summarised in the last two issues of the *Economist*, pages 692 and 742) have had a somewhat unexpected dénouement this week. On Wednesday it was

officially announced that Rootes Securities, Ltd., had obtained the direction of the Sunbeam, Talbot and associated companies of S.T.D. Motors, Ltd. This followed a further hearing of the trustees' motion for the appointment of a receiver, in which counsel for the trustees announced that an undertaking had been given, on behalf of the company, that a sum of £307,000 would be deposited in the joint names of the trustees and the company for the purpose of redeeming the notes outstanding. On the understanding that, if the money were not paid, the company would consent to receivership, the motion was allowed to stand over. At last week's noteholders' meeting an assurance of £50,000 for note service then due was given. The new arrangement suggests that the company, pressed for time by the trustees' motion and anxious to conserve the going-concern value of the assets, may have regarded the offer as a temporary expedient to allow arrangements for complete redemption of the notes to be made. The terms on which the funds have been provided have not been announced, but

Dated 23rd October, 1934.

These particulars are issued for information only and are not an invitation to subscribe for shares.

EXTRACTS FROM THE PROSPECTUS OF Carshalton (B.M.L.) Mines NO LIABILITY

To be registered under Part 11 of the Victorian Companies Act, 1928

CAPITAL £A400,000 in 800,000 shares of 10/- each

454,000 shares are now (being) offered for subscription (in Australia) at 1/- per share covering both application and allotment, the balance of 9/- per share being subject to calls not exceeding 6d. per share, per month. 80,000 shares, fully paid, are to be allotted to Bendigo Mines, Ltd., Derby & Carshalton Reefs N.L. and A1 Carshalton Gold Mining Company N.L., as Vendors, as hereinafter set out. 266,000 shares will be held in reserve, of which 80,000 shares will be under option to Bendigo Mines Ltd. for 4 years from the date of registration of the Company, at a premium of 2/6d. per share on the amount paid up per share on the contributing issue at the time of exercise of the option.

800,000

DIRECTORS:
GORDON LINDESEY CLARK.
EDWARD CLARENCE DYASON.
COLIN FRASER.
SIR WALTER MASSY-GREENE, K.C.M.G.
GENERAL MANAGERS:
BENDIGO MINES LTD., 360, Collins Street, Melbourne.
MELBOURNE OFFICE:
SECRETARIAT PROPRIETARY LTD., 360, Collins Street, Melbourne.

PREAMBLE.—The Sponsor of this Company, Bendigo Mines Limited, had its origin in the recognition of the fact that the Bendigo goldfield possesses large undeveloped areas, and that the increased price of gold, combined with the very considerable advance in mining technique, greatly enhances the probability of successful development of those areas.

Comprehensive investigation of these undeveloped areas has been carried out by competent advisers, and as a result Bendigo Mines Limited was formed, and has acquired a large number of leases and applications therefor on the goldfield.

Following the policy stated in the Prospectus of Bendigo Mines Limited, certain groups of leases offering substantial inducement for development, and lending themselves to development as major units under modern methods, are being made the basis of separate operating companies. Two such companies, Napoleon (B.M.L.) Mines No Liability and Nell Gwynne (B.M.L.) Mines No Liability, have already been formed and are making good progress with their comprehensive programme of development, which will be greatly expedited from the beginning of November when State electric power will be available at the shaft sites. The third subsidiary company, Carshalton (B.M.L.) Mines No Liability, is now submitted for subscription.

OBJECTS OF THE COMPANY.—The Company is being formed for the purpose (inter alia) of acquiring and taking over from Bendigo Mines Limited, from Derby & Carshalton Reefs No Liability and A1 Carshalton Gold Mining Company No Liability as at November 1, 1934, mining rights over certain areas at Bendigo comprising approximately 565 acres, and the Company will allot among the above-named Vendor Companies 80,000 fully paid shares of 10/- each as consideration for the transfer of these areas.

These lease areas extend for approximately three and a half miles continuously along the Carshalton line of reef at Bendigo, and also include the Lancashire line of reef for approximately one and three-quarter miles.

The portion of the Bendigo field which has proved most productive in the past is about 8½ miles long by 2½ miles wide, although both alluvial and reef gold have been found over a considerably larger area. The total gold production of the field is equivalent to approximately 16,000,000 fine ozs.

The more important reefs on the Bendigo field within the high-yielding area mentioned above are associated with narrow but persistent anticlinal folds, which traverse the region in a North-North-Westerly direction. Within this area gold is recorded as having been produced along 16 different anticlinal lines, but the major portion of the production mentioned has come from parts of three anticlinal lines, viz.: The Garden Gully, the New Chum, and the Hustlers, which have been worked to considerable depths. A fourth line, long regarded as unimportant and known as the Sheepshead, is the main source of present production.

An investigation by the Technical Staff of Bendigo Mines, Limited, including Dr. J. B. Stone, Chief Geologist, into the production of the four anticlinal lines before-mentioned has shown an apparently close connection between the more productive areas on these lines and certain geological features.

A study of other anticlinal lines in the central portion of the field which have not been adequately prospected shows that certain areas on some of these lines exhibit the same combination of geological features as are recognised on the four highly productive lines mentioned. Active exploration of these particular areas appears to be fully justified.

Portions of the Carshalton and Lancashire anticlinal lines falling within the areas to be taken over by the Company have been selected by Dr. Stone as having the attractive possibilities mentioned, and he recommends their early development. A comprehensive programme of shaft sinking and prospecting has been evolved by the Company's technical advisers similar to those now being put into effect by Napoleon (B.M.L.) Mines No Liability and Nell Gwynne (B.M.L.) Mines No Liability, and active work on the Carshalton line will be commenced at once.

A site for the Carshalton main shaft has been selected and certain preliminary surface work completed. In anticipation of the formation of the Company, orders for essential plant and machinery have been placed by Bendigo Mines Limited, and tenders have been invited for the erection of the necessary buildings.

UNDERWRITING.—The issue of shares now being made is being underwritten by Bendigo Mines Limited, who also guarantee payment of calls as made upon the whole of the present issue of 454,000 contributing shares until such shares are paid to 2/6d. each.

it seems clear, from a study of the last balance sheet of S.T.D. Motors and the auditors' report thereon, that little will remain for the preference stockholders. Rootes Securities thus continue their policy of acquiring motor companies which, through lack of working capital, adequate technical resources or efficient sales organisations, have fallen upon difficult conditions. The success of the Rootes' interests in the case of the Humber group (including Hillman, Commer Cars and, more recently, Karrier Motors) and the goodwill which attaches to the Sunbeam and Talbot names, suggest that the new interests will, in time, become adequately remunerative.

* * *

Recent Investment Trust Reports.—We have referred more than once in our monthly Notes on industrial profits to the steady contraction in the average decline of profits shown by each new batch of investment trust reports. The "time lag" factor might be expected to exert progressively less influence towards declining profits, and in due course to yield the fruits of recovery in industrial earnings, at second hand, to the trusts. We set out in the following table the profits record of nine trusts whose results for the most part fall within the second quarter of the year. Although the declines in incomes are still substantial, by comparison with 1932-33 results, it should be emphasised that, so far as industrial revenues are concerned, the income figures for the latest year have yet to benefit from the rapid expansion in industrial activity during the second half of 1933. The decline in profits, before charging debenture and other interest, amounts to 8.3 per cent. during the latest year. Individual figures are shown below:—

Trust (and Date of Accounts)	Net Profits (after tax, before deb. int.)		Earned for Ord.		Earned		Paid	
	1933	1934	1933	1934	1933	1934	1933	1934
	£'000	£'000	£'000	£'000	% Nil	% Nil	% Nil	% Nil
Atlas Electric (Mar. 31)	188.0	171.4	0.6	Dr. 18.7				
British Steamship (June 30)	166.1	157.7	74.6	64.7	5.5	4.7	5½	5
Continental & Industrial (May 31)	138.9	120.3	52.7	33.4	7.0	4.4	6½	4
Edinburgh & Dundee (June 30)	91.8	82.0	31.4	21.4	9.6	6.4	8	6
Investment Trust Corp. (May 1)	416.9	377.0	174.9	135.0	16.1	12.2	16	12
Mid-European Corp. (July 31)	122.5	108.6	44.9	30.3	4.9	3.2	4	3
Second Alliance Trust (July 31)	150.3	137.1	66.4	54.2	25.1	20.2	22	18
Trustees Corp. (May 31)	110.9	111.1	51.3	50.9	7.8	7.6	7½	7½
Witan Investment (Apr. 15)	160.1	151.8	111.9	103.5	10.4	9.7	10	8

Only in the case of Trustees Corporation, part of whose income is derived from office rentals, has there been a slight expansion in profits. The "gearing factor" has been fully operative in these cases, for the amounts available for ordinary shares have shown a total fall of 22.1 per cent. Although the trend of industrial revenues should show improvement in the current year, the position regarding overseas holdings is hardly more auspicious than in recent periods. The uncertain course of American recovery, coupled with the continuing though declining exchange losses, suggests that those trusts with large American interests are still faced with substantial handicaps to their own recovery. Moreover, the endemic nature of default among foreign States shows little appeasement, despite the tentative indications of trade and budgetary recovery in some South American States. Continuing appreciation in bond capital values, however, would assist the trusts' assets position appreciably, but this possibility is likely to be more effective for South American bonds than for the majority of European issues. Recently there have been slight speculative stirrings among representative investment trust ordinary stocks, on the assumption that the large weight of fixed charges enhances the equity appeal of sound trusts when recovery has been established. The present average yield of 3.6 per cent. on the 15 stocks included in the Actuaries' Investment Index, however, suggests that the market has allowed fair weight to the favourable portents for the current year.

Philips' Lamps Report.—The accounts of this Dutch company, which cover a period of sixteen months to April last, show that the rate of operating profit, as brought into the parent company's accounts, was maintained during the period. In view of the international scope of the company's business, and the inevitable effects of economic nationalism, this result must be regarded as satisfactory. The management report points out that the maintenance of revenues was only possible by a considerable increase in the sales of "key" products, at declining net proceeds per unit. This decline continues, and in view of the company's gold cost basis, and the substantial volume of sales to "off-gold" countries, the concern is still faced with the necessity of deflating its costs to extreme limits. The progressive technical policy of the company, and its practice of writing off extensions to factory buildings and machinery out of current revenue, confer considerable hidden financial strength, and five asset items, including Patents and Trade marks, are included at the nominal figure of Fl. 1. An analysis of profits in recent periods is shown below:—

(In thousands of florins)

	Years to Dec. 31, 1931	1932	16 months to April 30, 1934
Balance from operating account..	7,518	7,313	9,700

Extra provision for debtors	1,000	1,000	...
Staff and directors' allocations...	...	250	914
Available for dividends.....	4,231	5,448	7,686
Preference dividends	1,266	1,266	1,561
Ordinary shares—			
Earned	2,965	4,182	6,125
Paid	2,785	4,178	5,744
Paid %	4	6	7.42*
Carried forward	288	292§	381

† Exchange losses written off. ‡ Written off vacant building sites. || Fl. 600,000 written off vacant building sites, and Fl. 500,000 written-off participations in other companies. * Rate per annum after adjusting for capital repayment of 25 per cent. in October, 1933. § Against which taxes on dividends were chargeable.

It would be invidious to criticise the comprehensive report, which includes a full summary of the trading developments of the period, explanatory notes on the assets, a consolidated balance sheet, and a photogravure supplement illustrating the works and staff activities. Among so much that is laudable, however, it may be suggested that some analysis of the omnibus income figure would be welcome. The ostensible conservatism of the company's financial policy in the favourable years 1927 to 1930 has given it ample life to fight depression, but the management is the first to admit that currency and trade handicaps, which cannot be completely surmounted by erection of plants in protected markets, are still affecting earning capacity seriously. Public participation is limited to the Fl. 7.5 units of the holding company, which at a current London quotation of £2½ yield approximately £4 19s. per cent. on the last dividend.

* * *

Wiluna Results.—This West Australian enterprise, writes our mining correspondent, affords a striking example of the achievement of success after initial failure—with the help of the "gold premium" and the depreciated Australian pound. During the year to March 31st last the company's monthly output expanded from 33,000 to 41,000 tons and working costs were substantially reduced. Dividends totalling £430,280 were received from the operating Australian company. After providing for note interest and miscellaneous expenses, the balance was £403,430. Payment of a final dividend of 12½ per cent., making 22½ per cent. for the year, left £52,700 to be carried forward. The whole of the 10 per cent. notes were converted into shares during the year at the rate of £2 per share. Out of the premiums thus received the balance of income and expenditure account before the beginning of production was written off, together with expenses in connection with the increase of capital. Share premium account now stands at

£159,780. Last year's work resulted in the discovery of an ore body parallel to the West lode, whose values have so far tended to increase at depth. Recent drilling operations have exposed the existence on the 625 feet level of still another ore body situated between the West lode and the No. 2 West lode. Thanks to the increased price of gold and reduced working costs, it has been possible to include in the ore reserve estimate material formerly considered unpayable. The proved ore reserves, as at August 31st last, are calculated at 1,786,000 tons, averaging 28s. 6d. on the basis of gold at 85s. per ounce. The quantity shows an increase of 253,900 tons and the value a reduction of rs. 8d. as compared with the preceding estimate. Developments in a group of leases situated about three-quarters of a mile from the main shaft have been encouraging. Output having now been again increased, a further raising of dividends is expected in the current year. The shares stand at 64s., ex dividend.

* * *

North Broken Hill.—A striking improvement in results is shown by the telegraphed summary of the report of this important Australasian enterprise. The balance carried to profit and loss for the latest financial year amounts to £373,360, against £166,570 for the preceding period. Plant expenditure is on a reduced scale, but increased provision is necessary for taxes and royalties. The reserve for depreciation is unaltered at £30,000. Dividends absorb £192,500, against £105,000, and the increased balance of £446,040 will go forward. A larger tonnage of ore was treated, and the accounts benefited by the bringing in of a larger tonnage of lead, as a result of a new sale agreement between the company and the Broken Hill Associated Smelters. An interesting sidelight on the recent rise in silver is supplied by the announcement that unrealised stocks of the metal include 124,100 ounces withdrawn from sale under the terms of an agreement between silver producing countries, which has four years to run, as from January 1st last. The amount of money involved, however, in this instance is quite small.

* * *

Other Company Results.—An increased number of rubber reports has expanded our summary table of profit and loss reports, printed on page 808, to 41 companies. The consistent improvement throughout the list is steady rather than exciting, and so far as indications of current profitability are concerned, possibly more importance will attach to impending interim dividend announcements. In the heavy industry section, Fairfield Shipbuilding reveals a loss of £44,978—nearly twice the previous year's figure—and has made a draft of £50,000 on reserve to put the profit and loss account in credit. Lambert Brothers report profits of £16,495, a net improvement of £29,121, while Stothert and Pitt have similarly converted a loss of £24,666 into a profit of £6,899. This week's table includes fifteen rubber companies, whose net profits, largely to June 30, are, without exception, higher than in the previous year, while eleven companies have resumed or increased their dividend distributions. Interesting results include Eastern Sumatra (£16,661 against £3,553), Kenny Selangor (£14,119 against £1,293), Laras Sumatra (£14,245 against Dr. £4,897), and Tanjong Malim (£23,466 against £7,821). Two tea companies have shown uneven results, Carolina of Ceylon, earning £11,674 against £6,459, while New Dimbula reports net profits of £13,092 against £28,211. In the investment trust group, net earnings of Scottish and Dominions and Phoenix show a slight fall, but the Realisation and Debenture Corporation of Scotland has secured an increase in net revenue from £38,783 to £43,780 for the year to August 31st. In the miscellaneous section, the full accounts of United Dairies reveal net profits of £600,487 against £583,439. Herrburger Brooks, the piano manufacturers, show a considerable improvement in net profits at £24,333 against £8,566. Some interesting results come from companies operating overseas. Perak River Hydro-Electric net profits have risen sharply from Dr. £71,250 to £40,669, leaving a small credit balance to be carried forward. Profits of Maroc, Limited, an exploring and prospecting concern, have increased from £13,405 to

£35,722, and the dividend is 75 against 35 per cent. This week's dividends include some increased brewery distributions, while Bristol Brewery Georges and Company have announced a 50 per cent. capital bonus. The Horden Collieries' final payment of 3½ per cent. makes 5 per cent. against 2½ per cent. in the previous year, while Imperial Airways is to pay 6 cent. against 5 per cent. The final dividend of Pahang Consolidated of 10 per cent. brings the total distribution for the year to July 31st to 15 per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following meetings:—Anglo-South American Bank, Hosco Rubber, Tangoel Rubber Estates, Van Dyk Consolidated Mines, Perak River Hydro-Electric Power, and Murchison Gold Development. At the Anglo-South American Bank meeting, Sir Bertram Hornsby dealt with conditions in Latin America generally, and showed that the company's basic position was slowly improving. The chairman of Hosco Rubber Estates placed the company's issued capital at around £130,000, and expressed a hope that the rubber industry had been relatively stabilised on the basis of a fair economic return. At the meeting of Tangoel Rubber, the chairman declared that the past year's results had been largely influenced by forward contracts, whereas in the current period it would be in a position to profit from the fact that some 80 per cent. of its production could be marketed at higher ruling prices. Mr P. M. Anderson informed the shareholders of Van Dyk Consolidated Mines of the agreements made by the company and the formula under which the South African Government's share of profits would be calculated. The company, he stated, was assured of ample funds. At the Murchison Gold meeting hopeful statements were made of the company's future in the light of the past record and development prospects of the companies in which it was largely interested. At the Perak River meeting, Mr George Balfour, after reviewing the substantial progress of the past year, outlined an impending capital reorganisation scheme.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
November 6ACCOUNT
November 8

AN autumnal shiver, quite out of keeping with the mild atmosphere of Throgmorton Street, has penetrated into the Stock Exchange this week. The speculative sections of the market, which were thinly clad to resist the draught, have done some preliminary fastening of jackets before deciding whether the more ample protection of lower prices is definitely called for. The gilt-edged section, already well wrapped up, found nothing to hamper its movement to new high levels. Whether this week's declining trend in semi-speculative shares heralds a change of view is difficult to decide from the evidence. The strength of sterling brought the gold price to below 140s., with the inevitable effects on a rather sentimental Kaffir market, and although its dependence and reactions upon the domestic trade situation were regarded as somewhat remote, inchoate ideas about the future of the gold currencies promoted an uneasy attitude in the industrial section.

The gilt-edged market was strengthened by the movement of sterling, and after two quietly firm days, in which War Loan was especially prominent, a brisk business developed in mid-week, when 4 per cent. Consols achieved a new high record. India loans were steady, and Dominion issues were well supported on Wednesday. The new Central Electricity scrip was actively dealt in, and closed at 1½ premium on Wednesday.

The foreign bond market was rather disturbed by exchange movements early in the week, but a partial recovery was staged on Wednesday. German issues, including the Potash loans, displayed renewed weakness. French rentes reflected the trend of the franc. Brazilian issues, after two adverse days, showed some later recovery, and San Paulo 7½ per cent. bonds came into prominence on hopes of payment of outstanding coupons. Sino-Japanese loans, after a fair amount of selling, improved with the rest of the market.

Home rails were quiet, but the indifferent traffics were not followed by any significant selling. Prices followed a declining course, and an early demand for the preference issues was reversed when the figures were published. In the foreign section, selling of Central Argentine preferences spread to other Argentine issues, though the Government wages award served to steady the market. Brazilian stocks were quietly firm.

New business in the industrial markets was distinctly limited, and although the general tone was fairly well maintained, prices developed considerable irregularity. Interest was largely restricted to shares with contemporary news interest. Motor issues, in particular Austin, responded to good trade reports, while de Havilland enjoyed an active speculative burst on the success of the Comet in the Melbourne air race (some implications of which are discussed on page 786). Iron and steel shares were quiet, Tube Investments exceptionally being in good demand. Among electric supply shares, Edmundsons were an active feature, and equipment issues continued to attract specialised attention, although prices were lower on balance. Cables and Wireless stocks registered disappointment with the September traffic index. In the stores group, Marks and Spencer received support in renewed anticipation of a new issue, while Woolworth were lower on balance. Catering issues such as J. Lyons, Tate and Lyle, and United Dairies were sold. Interest in textile issues was severely restricted, and rayon issues were in limited demand. Brewery shares became more active in response to the Bristol Georges bonus, but tobacco shares were a distinctly uncertain market. Miscellaneous favourites showed considerable irregularity. Building shares, including Associated Portland Cement and London Brick, were offered. Turner and Newall, I.C.I., Murex, and Dunlop showed irregular movements, with no decided trend, but milling issues moved to lower levels.

The oil market remained a prey to American influences (which are discussed on page 787). After some favourable week-end news regarding price-cutting, the market became weaker following news of a "break" in crude oil prices, and the continuing petrol war. The rubber market improved somewhat on Tuesday, but reverted to a depressed state on the following day. Public interest was severely restricted and there was evidence of Continental selling. Tea shares also continued depressed under persistent, though not substantial, selling owing to uncertainty regarding the impending quota decision.

The mining markets were depressed by the reduction in the gold price, and there were indications that cash sales resulting from restricted carry-over facilities had been rather unwillingly received. New Kleinfontein were a particularly weak feature. A better sentiment was apparent on following days, fostered by hopes of higher-grade mining. This has yet to be achieved, however, and the situation in Johannesburg, which is outlined on page 787, robbed the market of any real impetus. The West African section remained depressed under forced selling, but Australian shares, though quiet, remained fairly steady. Rhodesian copper issues enjoyed only brief support on optimistic interpretations of the effects of a restriction plan, and tin shares remained quiet and recessionary, Pahang being an exception on the increased dividend.

FOREIGN STOCK EXCHANGES

NEW YORK

In the early part of the week, the markets subordinated all lesser interests to that of the President's forthcoming speech to the American Bankers' Association in Washington. The Stock Exchange has learned, and forgotten, a good deal since the days when the "boloney dollar" was hailed as the bulle of all conceivable market points. "Hard money" probably has more thoughtful support to-day than at any time since Roosevelt's accession. The expectation of a speech announcing co-operation between the Administration and the financial community in future revivalist efforts was sufficiently powerful to prevent the market falling away very far in the first half of the week. Late on Wednesday afternoon, indeed, a few hours before the speech, the whole tone of the market

strengthened unexpectedly. Railroad stocks in particular were largely bought, on the announcement that a district court had denied the constitutionality of the Railroad Pension Act, and that the Railroad Co-ordinator—Mr Eastwood—had drawn up a freight car pooling plan, between different lines, calculated to effect sizeable working economies. The Pension Act judgment, however, is subject to appeal in a higher Court. The President's address proved to be a moderate admission of the indispensability of the banking system to the community, and a reminder of the Government's supremacy as the arbiter of all national interests, including banking. The President expressed his readiness to curtail the activities of the new emergency credit agencies when recovery had gone sufficiently far. The President's reiterated emphasis on the maintenance of "confidence," possibly, more than any definite pronouncement in the speech, should tend to reassure the markets as to the Administration's future intentions. The signs of trade recovery are a little more discernible. Steel mill activity is put once again at 24½ per cent. (against 23½ per cent. last week), and power output has risen to a 3 per cent. higher figure than at this time last year. This is the sharpest increase recorded for some time. Retail trade is holding up well. The least favourable influence affecting the markets is the "oil war," in which the ability of Mr Ickes to ride the elements—or, Partington-like, to sweep back the "hot oil" with his broom—is seriously questioned.

* Two-hour Session.

PARIS

Neither the sharp reaction in the franc exchange after the week-end meeting of the gold bloc currency representatives, nor the political situation was conducive to Stock Exchange activity, and markets opened hesitantly. Though there was no considerable selling, prices had a downward trend in almost every section. On Wednesday, however, there was a more hopeful feeling after the previous day's Cabinet meeting. Doubts of the attitude likely to be taken up by the Radical Socialist Party at Thursday's conference were insufficient to prevent a stronger tone from manifesting itself, on the placing of small supporting orders. The market, however, subsequently relapsed into further quietude. Rentes opened heavy, improved in mid-week, and again became dull. Industrial shares were irregular. On the Coudisse diamond shares failed to attract sustained interest, and gold-mining shares were out of favour.

BERLIN

Last week's share markets, after opening steady, suffered a general though moderate decline on the announcement of severer taxation of speculative profits. Rentes, however, profited from their complete future exemption as regards profits on sales. Reichsbank and a number of public utility stocks showed considerable weakness. Potash and shipping securities, however, succeeded in holding their ground. This week opened with a re-buying movement, but the resulting advance was mainly confined to special groups of shares, among which the leading breweries were prominent. Potash stocks were weaker. The markets were irregular on Tuesday, Rentes being subject to realisation. Both certificated and converted dollar bonds profited at the outset from exemption under the tax law, but reacted appreciably this week. The Bourse was relatively quiet in mid-week, electrical, mining and shipping shares being particularly dull.

AMSTERDAM

The markets were listless at the opening, industrial shares being on offer, while "primary" shares, particularly those of sugar companies, were dull and depressed. The undertone was rather firmer on Tuesday, but slack conditions returned next day, the performance of the country's representatives in the Melbourne air race providing a welcome relief from the ennui of market operations. Rubber shares failed to stage the expected revival of interest, and oil shares, particularly Royal Dutch, were weak on unfavourable developments in the American "war."

CANADA

The Canadian stock markets pursued a very irregular course during the latter half of September. Their trend was downward until the end of the third week, when it turned sharply upward. The Bureau of Statistics' "Inverted Index" on September 27, at 91.1, was identical with the September 6 figure, but rose by October 4 to 91.7. For the most part, however, movements were narrow and the volume of trading light, the number of shares dealt in on the Montreal Exchange in September being only 185,206, against 279,144 in August and 433,747 in September, 1933. While Brazilian Traction has been the most active market stock, there has been a pronounced demand for the bank shares, and Canadian Pacific and International Nickel have also been favoured. The bond market has been hesitant, awaiting the issue of the Dominion Government's new refunding loan. This has, however, been successfully placed, and its low interest yield has tended to strengthen first-rate bonds. The mining market still attracts speculative interest, but had a sharp recession in the early days of October. Seasoned gold stocks, however, have been well sustained, Hollinger having shown notable strength.

CAPITAL ISSUES

THE work of funding short-term obligations, and transferring proprietorship of individual industrial units from private hands to those of the general investor, goes steadily forward. Of this week's five public offers, the largest was made by the *City of Nottingham*, which offered £2,000,000 of a 3 per cent. twenty-three year stock at 98½. The City's advisers were possibly induced by the favourable reception of last week's Central Electricity offer to raise the issue price by a full point over that of their predecessor in the market, the Lanarkshire County Council. The price, however, proved somewhat high, and the stock opened at a small discount on Thursday. Among industrial offers, *William Hancock and Company* offered a First Mortgage Debenture Stock to yield nearly 4½ per cent. The profits of the company, which carries on a brewing, spirit and catering business in South Wales, have shown somewhat wide fluctuation over the last five years, and the "cover" (which was only 1½ times profits in 1932-33), is not generous. *J. W. French and Company*, which offered 5½ per cent. £1 preference shares at a premium of 5 per cent., and 5s. ordinary shares at a premium of 100 per cent., has taken over an old-established flour-milling business, whose recent profits have been relatively steady. The allowance for goodwill is moderate, and the preference dividend appears to be well covered. The prospectus, however, should have shown the amount of recent charges for repairs, replacements, etc., which are declared to have been "heavy." Subscribers to the public offer do not obtain voting control. *Levers Optical Company* is a small concern which takes over a business established in 1919, has made good progress recently, and has satisfactory prospects. The *Galapitakande (Ceylon) Estates* is an Aberdeen company which takes over a tea estate whose purchase price is approximately seven times the average profits of the last nine years, and fifteen times the profits for 1933. The narrow market for the shares renders them unsuitable for many investors. The week's statements "for public information," include two Australian mining enterprises, *Car-*

shalton (B.M.L.) Mines No Liability and *Beryl Gold Corporation*. The formation of the former completes the organisation by the Gold Exploration and Finance group for the development of the Bendigo field. The *Argentine Navigation Company Mihanovich* statement is discussed in a Note on page 787. Brentford and Chiswick Loan will be issued on October 30th.

PUBLIC OFFERS

City of Nottingham.—Issue of £2,000,000 3 per cent. stock, 1957, at 98 10s. per cent. Stock is redeemable at par on May 15, 1957, by annual sinking fund provision, and is secured on all rates and revenues. Financial statistics: Estimated population, 283,000; rateable value, £1,953,739; rates for year ending March, 1935, 14s. 2d. in the £. Net loan debt at March 31, 1934, £14,091,823, of which £10,580,313 was in respect of productive undertakings. £1,375,000 of proceeds of issue will be used for repayment of short-term mortgages, and remainder for capital expenditure.

Levers Optical Company, Ltd.—Issue of 120,000 "A" ordinary shares of 5s. each at par. Company formed to acquire manufacturing opticians business established in 1919. Further provincial branches now contemplated, and will be financed out of present issue. Net profits after depreciation and mortgage interest for years to August 31: 1932, £6,907; 1933, £7,848; 1934, £11,056. Net assets after mortgage acquired £30,193, consideration being £30,000, to be satisfied as to £10,000 in cash, and as to balance by allotment of 200,000 "B" ordinary shares of 2s. each. Preliminary expenses payable by vendors. "A" shares entitled to *pari passu* participation with "B" shares up to 10 per cent., and thereafter to 25 per cent. of surplus profits.

Galapitakande (Ceylon) Estates, Ltd.—Issue of 20,000 6 per cent. cumulative preference shares at 21s. per share and 40,000 ordinary shares of £1 each at par. Applications received for 10,000 preference and 20,000 ordinary shares will be allotted in full. Company acquires tea estate of same name for £57,500, comprising 798½ acres, of which 515 are tea-bearing. Profits from transactions on account of the estate have been: 1931, £4,631; 1932, Dr. 613; 1933, £3,800.

William Hancock and Company, Ltd.—Issue of £500,000 4½ per cent. first mortgage debenture stock at 99 per cent. Holders of £361,149 6 per cent. stock, called for redemption

on June 1, 1935, have right to convert at par together with cash payment of £4 per cent. Company founded 1887 to acquire brewing business. Net assets, including net proceeds of present issue, £1,055,784. Profits for years to May 31: 1932, £38,684; 1933, £33,106; 1934, £52,335. Proceeds of issue required for conversion as above and for repayment of bank loans.

OFFER FOR SALE

J. W. French and Company, Ltd.—Offer for sale of 100,000 5½ per cent. cumulative £1 preference shares at 21s. per share and 100,000 5s. ordinary shares at 10s. per share. Company formed to acquire flour-milling business of similar name originally founded in 1855 and freeholds of mill sites. Net assets acquired valued at £200,000, including £32,851 for goodwill. Purchase consideration is £229,998 5s. as to £155,000 in cash and as to £74,998 5s. by allotment of 299,993 ordinary shares of 5s. each. Profits for years to December 31st have been: 1931, £26,760; 1932, £23,474; 1933, £27,197. Gresham Trust has purchased the issues at par for preference shares, and 3s. premium for ordinary shares.

BY STOCK EXCHANGE INTRODUCTION

Compañia Argentina de Navegacion Mihanovich Limitada.—Particulars of issued capital, £1,500,000 6½ per cent. first mortgage debentures, 975,000 10 per cent. cumulative participating preference shares and 975,000 ordinary shares of 5.04 gold pesos each. Company has virtual monopoly of river and coastal trade of Argentine. Net surplus assets (taking fixed assets at par and floating items at 16.55 paper pesos to £) after deducting debentures amounted to £2,156,952 at December 31, 1933. Adjusted profits before debenture interest, converted at varying rates, have been: Years to December 31: 1932, £174,329; 1933, £96,294; 6 months ended June 30, 1934, £85,756. Preference dividend is payable exclusively in London at fixed rate of 5.04 gold pesos to £.

Beryl Gold Corporation, Ltd.—Issued capital 1,000,000 shares of 5s. each. Company has acquired share capital of Beryl Gold Mines, Ltd., from Anglo-Australian Gold Development, Ltd., for £132,000 of which £32,000 is payable in cash, and £100,000 by allotment of 400,000 shares of 5s., with option on 200,000 shares at 7s. 6d. up to March 31, 1936. Preliminary estimates of profit, 40s. (Australian) per ton, and at output of 5,000 tons of ore per month, estimated operating profit is £96,000 sterling per annum. £209,200 will be available for working capital.

Carshalton (B.M.L.) Mines.—No liability.—Issued capital, 454,000 shares of A10s. each A1s. paid, and 80,000 shares of A10s. fully paid. Company formed under Victorian Companies Act, 1928, to acquire mining rights over 565 acres at Bendigo, for consideration of 80,000 fully-paid shares of A10s. each. Lease areas extend for 3½ miles along Carshalton line of reef at Bendigo. Site for main shaft has been selected, and orders for plant have been placed. Calls are limited to 6d. per share per month and guaranteed up to 2s. 6d. per share, by Bendigo Mines.

BY TENDER

Liverpool Corporation Bills.—Tenders will be received at the Chief Cashier's Office, at the Bank of England, London, on October 30th, at 1 o'clock, for Liverpool Corporation Bills to be issued under the Liverpool Corporation Act, 1921, to the amount of £1,000,000. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated November 2, 1934, and will be payable on March 30, 1935. The tenders must specify the net amount per cent. (being an even multiple of one penny) which will be given for the amounts applied for; and the tenders of private individuals must be made through a London banker. The bills will be issued and paid at the Bank of England.

ISSUES TO SHAREHOLDERS ONLY

Harrisons and Crosfield.—Harrisons and Crosfield is making an offer of deferred ordinary shares to deferred ordinary stockholders registered on October 16th. The stockholders, under the articles, have the option for one month to apply for new deferred ordinary £1 shares at par to the extent of one-half of that portion of the final dividend, less income tax, which is in excess of 10 per cent. per annum.

Hevea (Johore) Rubber Plantations.—The company's agent has obtained options over various allotments of land known as Hock Lim Estate, comprising approximately 1,040 acres fully planted in rubber, at a price of £39 10s. per acre, making a total purchase of £41,052. To provide the company with the requisite funds it has been decided to raise the sum of £52,756 by the issue of 422,052 ordinary 2s. shares at 2s. 6d. per share.

South African and General Investment Trust.—The directors intend to issue the balance of 40,000 ordinary shares of £1. These shares will not rank for any dividend declared before November 1, 1934. It is proposed to offer the shares to the holders of first debenture stock, preference and ordinary shares, registered on October 23rd at par.

PRIVATE PLACINGS

Brakpan Mines, Ltd.—With the object of obtaining funds with which to increase the company's holding of shares in the South African Land and Exploration Company, Ltd., the 28,000 reserve shares of the company have been sold to the Anglo American Corporation of South Africa, Ltd., at the price of £8 5s. per share, and with the funds thus made available, arrangements have been concluded for the company to acquire from the Anglo American Corporation of South Africa, Ltd., 70,000 shares held by that company in the South African Land and Exploration Company, Ltd.

Central Argentine Railway.—A line of £100,000 Five per Cent. Redeemable debenture stock, 1967-87, has been placed privately.

CONVERSIONS AND REPAYMENTS

Austrian 6 per cent. Loan Bonds.—The Bank of England has announced the numbers of 2,531 bonds, amounting to £656,800, of the Austrian Government 6 per cent. Guaranteed Loan, 1923-43, British tranche, which have been drawn for redemption on December 1, 1934.

Czechoslovakian Treasury Bills.—The 5, 5½ and 6 per cent. Czechoslovak Treasury Bills falling due for repayment on November 1, 1934, to the total amount of 850,000,000 crowns, are to be converted into two categories of bills running for more than two years, and carrying interest at the rate of 5 per cent.

Gold Coast 3½ per cent.—The Crown Agents for the Colonies announce that the principal of the Gold Coast Government 3½ per cent. Inscribed stock, 1934-59, will be repaid at par on May 1, 1935. There is £1,030,000 outstanding.

Gothenburg 4 per cent. Loan.—All bonds of the City of Gothenburg 4 per cent. Loan of 1899 have been called for redemption on February 1, 1935, from which day no interest will be paid.

Irish Free State 4½ per cent. Land Bonds.—Over £255,000 of Irish Free State 4½ per cent. Land Bonds have been drawn for redemption at par on and after January 1st next. The bonds drawn comprise 1,792 of series "A" (£1 each), 1,354 of Series "B" (£10 each), and 2,401 of Series "C" (£100 each). The amount of bonds outstanding at January 4th last was £24,875,732.

Italian Municipal Loans.—Local authorities are being empowered to repay in advance loans bearing an interest rate higher than 4½ per cent. Holders will be offered payment in cash or conversion into a new security bearing 4½ per cent. interest. The total involved is estimated at about 4,500,000,000 lire (£78,000,000 at current rates). The saving will be some 50,000,000 lire (£870,000), which will be used in reduction of local taxation.

Trafford Park Estates.—The company intends to redeem on April 16, 1935, the outstanding 5 per cent. first mortgage debentures at 105 per cent. In connection with such redemption, the company will create, and issue £550,000 (part of £750,000) 4 per cent. first mortgage debenture stock.

FORTHCOMING ISSUES

Alpha Cement Company.—An extraordinary general meeting is to be held on November 9th to consider resolutions that: (1) the capital be increased to £900,000 by the creation of 200,000 preference £1 shares carrying the right to a cumulative dividend of 5½ per cent. and to priority for capital and arrears of dividend without further participation, together with voting rights in certain circumstances only. The company is to have the power to create from time to time further preference shares (not exceeding in the aggregate 200,000 £1 shares) ranking *pari passu* with the 200,000 preference shares now created; and (2) the articles of association be amended.

(Continued on page 798)

(c) Interim dividend. (d) 10% dividend. (e) 15% dividend. (f) 15% dividend. (g) 15% dividend. (h) 15% dividend. (i) 15% dividend. (j) 15% dividend. (k) 15% dividend. (l) 15% dividend. (m) Dividend for 15 months yield worked on a 5% per cent. basis. (n) Based on a dividend of 15 percent. (o) Calculated on basis of 5 annas dividend per share paid for 1933-34. Taken at 16 annas to one rupee. (p) Annas per share. (q) Also bonus 300 per cent. from reserves in A shares. † Free of Income Tax.

(Continued from page 795)

Springs Mines, Ltd.—The consulting engineers have recommended that the capacity of the reduction plant should be increased. It is estimated that the cost of the new plant and the necessary additions to mining equipment, etc., to handle the larger tonnage will be in the neighbourhood of £450,000, and in order to provide the necessary funds arrangements have been concluded for the sale at the price of £8 per share to the Anglo American Corporation of South Africa, Ltd., of 60,000 new shares which it is proposed should be created. It is the intention of the board, if the latter authority is granted it, to sub-divide the present £1 shares into shares of the nominal value of 5s. each.

Vogelstruisbult Gold Mining Areas, Ltd.—In order to provide further working capital to meet the requirements of the development programme the directors have increased the capital of the company by the creation of 1,370,000 new shares of the nominal value of 10s. each, the total capital now being £1,700,000 in 3,400,000 shares of the nominal value of 10s. each. New shares will be subscribed for in terms of the agreement adopted by the company on formation.

National Coke and Oil Company.—The issue of ordinary and preference shares in National Coke and Oil Company is expected to be made next week.

Prices Trust Company.—An issue of 500,000 5½ per cent. cumulative preference shares £1 at 20s. 6d. per share will be made early next week.

Boulton and Paul Aircraft, Ltd.—An issue is expected of 1,000,000 shares of 5s. each at par.

RESULTS OF ISSUES

Central Electricity Board.—The list for the issue at 93 of £6,000,000 Central Electricity 3½ per cent. stock, 1974-94, was closed at 9.15 a.m. October 19th.

Nottingham 3 per cent. Stock.—The subscription list for the issue at 98½ of £2,000,000 stock was closed at the end of banking hours on October 24th.

Johannesburg Loan.—The subscription list for the issue by the Municipality of Johannesburg of a loan of £2,000,000 at an issue price of 98½ per cent. and bearing interest at the rate of 3½ per cent. per annum, was over-subscribed in Johannesburg within half an hour on October 23rd.

New Zealand Loan.—Authority to borrow £4,000,000 for public works, £1,000,000 for hydro-electric work, and £1,000,000 for the construction of main highways is sought in a Finance Bill to be introduced into the New Zealand House of Representatives.

J. W. French and Company.—Lists closed 9.5 a.m. October 25th.

Lanarkshire Loan.—3 per cent conversion, £2,230,000. Basis of allotment, 10 per cent.

CALLS DUE OCTOBER 29 TO NOVEMBER 3, 1934

The grand total of calls falling due in October, 1934, is £3,366,662, which compares with £2,342,678 which fell due in October, 1933. The following calls fall due from October 29, 1934, to November 3, 1934, inclusive:—

OIL OUTPUTS

THE ATTOCK OIL COMPANY, LTD.—Production for September: 6,913 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended October 20th: Venezuela, 18,094 barrels; Trinidad, 31,535 barrels; total, 49,629 barrels.

PHENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix group of companies for September was 79,340 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended October 13, 1934, was 342,000 barrels.

STEAUA ROMANA (BRITISH), LTD.—Production of the Steaua Romana Company, Bucharest, for the month of September was 101,559 metric tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during September, 35,500 tons; oil purchased during September from other companies, 66,300 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended October 20, 1934, was:—Bolívar district, 655,194 barrels; Maracaibo district, 35,938 barrels; total, 691,132 barrels.

COMPANY MEETINGS, &c.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED

IMPROVING TRADE CONDITIONS

The forty-sixth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 24th instant, in London, Sir Bertram Hornsby, C.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said: You will no doubt have noticed that in the directors' report we have permitted ourselves the luxury of a mild expression of hope regarding the future, and you may perhaps have wondered how this expression could be reconciled with the statement that there had been no improvement in international trade. I should like to quote certain statements from the last annual report of the Bank of International Settlements, an institution which, though of recent creation, is already fulfilling an important rôle and is well qualified to form an opinion on world conditions. This report—it is dated May 14, 1934—says:—

"In international financial and monetary relations the twelve months have seen a series of retrograde developments—more moratoria, more transfer impediments, more artificial clearings, more gold hoardings than during any year on record, more conversion of foreign balances and their repatriation into the home currency or in gold by private and central banks, an almost complete cessation of new long-term lending abroad, and a further limitation or reduction of the volume of short-term credits."

PROGRESS IN THE NATIONAL FIELD

It then goes on, however:—

"But in the national field, marked progress has been made. Indeed, as world conditions stand to-day, it may well turn out that the shortest, though hardest, route back to the healthy and stimulating financial and economic internationalism which existed almost unnoticed in so widespread a degree before the war will be found to pass first through an area of nationalism, in which each country endeavours to liquidate the past by its own efforts and strives for national reconstruction by isolated endeavour. In a considerable number of countries, national indices have begun to show signs of improvement; a recovery in industrial production, a great decline in unemployment, a brisker movement of goods to consumers, a strengthening in raw material prices, a lowering of the rates at which credit and capital are available, a firmer tendency on the stock markets, and an adjustment of production costs and prices. In other words, evidences that equilibrium is being gradually re-established, thanks to thousands of individual economies and efforts, and to those deep forces which determine the cyclical movements in economic life."

These quotations indicate very clearly that, in the opinion of this high authority, local trade and commerce are improving, and that such improvement is a condition precedent to a revival of international trade relations.

IMPROVEMENT IN CEREAL PRICES

With regard to the prices of some of the most important commodities affecting South American countries, we have to note that in Argentina, in particular, the price of cereals shows a marked increase, with corresponding advantage to the agricultural community. Had the increase in the price of wheat been due to the fact that more bread was being eaten the ground for satisfaction would have been more solid; unfortunately it is due to drought in other countries.

We still maintain a strong position of liquidity, the proportion of cash to deposits being 29½ per cent., as against 32½ per cent. the previous year and 17 per cent. the year before that. The apparent decrease in gross profits is £228,000 and in expenses £225,000. In actual fact, had the same rates of conversion as those used the previous year been employed, gross profits would have shown a decline of about £13,000 and expenses a decline of about £77,000. We have again decided to pay the dividend on the preference share capital, but to pursue the policy of conserving our resources. We propose to transfer the profit of the year to contingency account and to maintain the carry-forward at the same figure.

You will doubtless expect me to refer to the nitrate industry and the reorganisation of Cosach which took place a short time ago. In a matter of such complexity it would be impossible for me on this occasion to do more than give you a brief indication of the manner in which the bank's interests are affected.

I would begin by reminding you that the bulk of our claims was taken off our books as part of the arrangement made with the Bank of England and its associates in June, 1932, though we still have a contingent liability under a deferred guarantee for their realisation. The situation is now governed by a law

enacted by the Chilean Government in January last. The old Cosach has been dissolved, and its two subsidiaries, the Anglo-Chilean Nitrate Corporation and the Lautaro Nitrate Company, have regained their independence. The production of nitrate will be carried on by these two latter and by a new producing entity which has been formed in the place of Cosach. A sales corporation has been established, with the sole right of selling nitrate and iodine, to which the producers will sell their production at cost price, any profit arising therefrom being returned to them in due proportion after payment of expenses and certain prior charges. These prior charges include (a) a debt to the Banco Central; (b) 25 per cent. of profits to the Government, which, having taken back its own nitrate grounds against surrender of its shareholding in Cosach, makes no further claim on the industry; and (c) the service at a maximum rate of 6 per cent. on some U.S. \$52 millions of bonds, in which figure I include the £3 millions issued in Europe.

THE RAMIREZ DEBTS

The law provides that the so-called Ramirez debts, with which we are principally concerned, shall be assumed by the producing companies responsible, and shall be repaid, first out of the proceeds of the gradual liquidation of stocks existing on July 1, 1933, and also out of future profits, always subject to the charges already mentioned. In the case of the larger portion of these debts interest has ceased to run after June 30, 1934. It will be seen, therefore, that the repayment of these debts depends to a very large extent on whether nitrate can be sold in sufficient quantity and on such terms as to leave a reasonable margin of profit. Regarding the possibilities of the future in these respects I dare not venture a forecast. For the moment I can only mention that the cessation which has recently been brought about of a price-cutting competition with synthetic producers seems to offer better prospects for both parties in the near future.

I concluded my remarks last year by saying that it was not possible to offer an expression of opinion regarding the future until the result of the measures then being taken in the United States of America was seen. In the interval measures of even greater import have been taken in that country, and others still threaten, so that we seem farther away than ever from being able to form a judgment as to the future. Until conditions are more settled we must perforce live from day to day, trusting that in time the world will return to a more normal state.

The report and accounts were unanimously adopted.

HOSCOTE RUBBER ESTATES, LIMITED

POSSIBILITY OF FURTHER EXTENSIONS

The meeting of Hoscode Rubber Estates, Limited, was held, on the 23rd instant, at 1-4 Great Tower Street, London.

Mr Eric Macfadyen (the chairman), in the course of his speech, said that since the last meeting the position of rubber-producing companies had been much ameliorated by international regulation of exports. The new arrangements had been in force for only one month of the twelve covered by the accounts, but throughout the whole period there had been a growing belief in the probability of some scheme, and prices had gradually improved. This company's average price came out at 5.7d. per pound, as compared with 3.39d.

Costs, which had been cut to the bone when the crop was being sold at a loss or was barely paying, had also been on the upgrade, but the net result was that, whereas for thirteen months to June 30, 1933, their profits had been £180, for the twelve months ended June 30, 1934, they were £3,674.

The debenture stockholders had given the company power to convert the debenture stock into ordinary shares at par plus a cash premium of £10 per cent., which premium might be used to apply for seven fully-paid ordinary shares in respect of every £10 of premium. The board had decided to call up the outstanding liability of 4s. per share, thus ensuring cash resources adequate to all foreseeable capital needs.

It would be another week or two before they knew exactly the figure at which their issued capital would work out; but it would be round about £130,000. They had before them possibilities in the way of further extending the company's interests, to which they would give serious attention as soon as the balance sheet was definitely cleared up. It was impossible as yet to estimate the output for the current year, but he did not anticipate that they would have to curtail their rate of output to any great extent, if at all. The industry was now, they hoped, relatively stabilised on the basis of a fair economic return on the money invested in such a company as theirs.

The report and accounts were unanimously adopted.

THE TANGOEL RUBBER ESTATES, LIMITED

BETTER FORWARD SALES PROSPECTS

The annual ordinary meeting of the members of the Tangoel Rubber Estates, Limited, was held, on the 24th instant, at the registered office of the company, Fenchurch House, 5 Fenchurch Street, London, Mr Walter Hilliers, chairman of the company, presiding.

The Representative of the Secretaries (Messrs Rowley, Davies and Company, Limited) having read the notice convening the meeting and the auditors' report,

The Chairman said: You will have seen that, though the trading account shows a small profit, the result, after allowing for usual depreciations and staff commissions, shows a loss of some £369, which compares with £1,260 last year. As you no doubt understand, the price obtained for our rubber was, to a great extent, influenced by our forward contracts, which, though entirely justified at the time, have not turned out satisfactorily; it is, I believe, the first time in our experience that our forward selling has not proved profitable. However, there are only 30 tons to deliver now against the forward sales, so that to the extent of some 80 per cent. of our production we shall be able to profit by such prices as will be ruling.

We should always, of course, remember that we are heavily handicapped as regards exchange, and were it not for this it would be possible to show much better results.

The usual attention has been given to the upkeep and the condition of the estates and our reports are satisfactory.

The financial position is good, so that in this respect, also, we can look with confidence to the future.

I will now move: "That the directors' and auditors' reports and audited balance sheet and accounts to June 30, 1934, as circulated to the members, be taken as read, and that the same be and are hereby adopted."

Sir Edward Rosling seconded the motion, which was unanimously adopted.

MURCHISON GOLD DEVELOPMENT, LIMITED

BOARD'S PROGRAMME OUTLINED

The statutory meeting of Murchison Gold Development, Limited, was held, on the 19th instant, at River Plate House, London.

Mr. John Waddington, J.P. (the chairman), said that they were amply protected financially to carry out properly and efficiently the policy of the board and the development plans outlined. They had further arranged, as and when they might decide to assist the finance of Emu Gold Mines, Ltd., and Riverina Gold Mines, Ltd., the Western Australian companies in which they were so vitally interested, by making advances to them, to obtain the required money from their Western Australian bankers on overdraft.

Exploratory and development work advised by the experts was to be started immediately. Based on the reports received on the properties from Government and independent mining engineers alike they had every confidence in the future possibilities of the mines.

Mr. C. A. de Bernales said that he believed that their mines held a most hopeful future and an excellent prospect of success. The official records of Emu Reservations Nos. 577 and 661 showed that those properties had treated 925,632 tons, yielding £1,323,845, taking gold at 85s. per ounce. Uncovered gold in the residues had been estimated as equal to about 6s. per ton, thus making the gross head value of the ore treated 36s. per ton. The Waroonga Mine workings extended about 1,500 ft. lineally and vertically to 560 ft. They had every ground for believing that, given the expected continuity at depth of the ore body in size and value, they held a very important and payable gold producer.

The Riverina Gold Mine had a most attractive record, 28,450 tons of ore having been treated for an average of 15 dwts. A borehole put down for test purposes had struck the lode at a depth of 465 ft., and for 4 ft. its value was 23 dwts. fine gold. When worked the lode had maintained a long horizontal persistence and proved to continue vertically to nearly 500 ft. Their engineers estimated the probable ore above the No. 3 level at 20,000 tons, with an average value of 15 dwts. fine gold. The Riverina mine should be speedily brought into profitable production, and in 1935 bulk crushings to test the ore bodies could be expected.

He had no hesitation in expressing the opinion that in the Waroonga, Great Eastern and Riverina mines the company had become interested in properties possessing great possibilities.

VAN DYK CONSOLIDATED MINES, LIMITED

PREPARATORY WORK WELL IN HAND

PROGRAMME OF OPERATIONS

MR P. M. ANDERSON'S SPEECH

At the statutory meeting of the company, held in Johannesburg, on Friday, September 28th, 1934, Mr P. M. Anderson, the chairman of the company, presided, and in the course of his remarks said:—

The statutory report was framed as at August 28th, at which date 1,750,000 shares of the nominal value of ros. each had been allotted. In terms of the flotation agreement, 500,000 of these shares were subscribed at par by the Van Dyk Proprietary Mines, Limited, and 300,000 by the East Vogelfontein Exploration (Proprietary), Limited, out of the funds received by these companies as purchase consideration for transfer of their undertakings and assets; 250,000 were similarly subscribed by the Union Corporation, Limited, against cash received in respect of the cancellation of the indebtedness of the Van Dyk Proprietary Mines, Limited, and for waiving its option over 60,000 shares of that company; and the remaining 700,000 were subscribed at par by the Union Corporation, Limited, to provide working capital for your company.

Since the date of the report the capital has been increased to the full initial capital of 2,550,000 shares by the creation of 800,000 fully paid shares, which, in terms of the agreements, have been offered for subscription at par to the East Vogelfontein Exploration (Proprietary), Limited, as to 300,000 shares and to the shareholders of the Van Dyk Proprietary Mines, Limited, registered in the books of that company on July 7th as to 500,000 shares. The subscription of these 800,000 shares was guaranteed by the Union Corporation, Limited, free of Commission, and applications were received for a total of 780,133, leaving 19,867 to be subscribed by the guarantors.

AMPLE FUNDS ASSURED

The flotation arrangements have thus proceeded as planned, and ample funds, namely, £750,000, have been assured for the preliminary stage of mining operations on your extensive area of 5,330 claims, which is situated between the properties of the East Rand Proprietary Mines and Brakpan Mines. You are aware, of course, that a considerable amount of development work has been done in the past on both the Van Dyk Proprietary and East Vogelfontein sections, resulting in the exposure of a substantial quantity of ore averaging in value about 6 dwts. The first stage programme provides for the equipment of some of the existing vertical shafts, the further sinking of the No. 2 Vertical Shaft of the old Van Dyk Company to the reef, the sinking of incline shafts and the carrying out therefrom of prospecting operations by means of ordinary development. If, as is expected, the ore disclosures in the course of this work justify the erection of a reduction plant, the second stage would comprise the carrying out of further development and the full equipment of the property, including the erection of a reduction plant of suitable capacity, which at present is estimated at about 800,000 tons per annum.

SCOPE OF THE AGREEMENTS

The agreements adopted by your company envisaged that part of the necessary funds for the second stage operations would be provided by the holders of the preferent right to subscribe for 1,600,000 shares at par and the remainder by issues out of the 850,000 reserve shares at the discretion of the board of directors and in the best interests of the shareholders. With the consent of the holders of the preferent right this arrangement has been modified so as to permit of reserve shares being offered to shareholders concurrently with offers of shares to the preferent right holders and at the same price, provided that the number of shares so offered to shareholders shall not exceed one for every two offered to preferent right holders. Shareholders thus secure certain subscription rights at par concurrently with the guarantors of the venture.

When the production stage is reached a share of the profits will be payable to the Government, which is to be calculated according to the formula " Y " = $\frac{381.30}{19.06 - X}$ with a

minimum of 5 per cent. In this formula " X " is the ratio of profit (less amortisation of capital expenditure) to recovery expressed as a percentage and " Y " is the percentage of the net profit payable to the Government. Under this formula the Government proportion of the profit amounts to the minimum of

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 20, 1934, amounted to £14,583,000, against ordinary expenditure of £13,533,000. After allowing for a decrease in Exchequer Balances of £392,718, the operations for the week, as shown below, decreased the National Debt by £1,176,000 to approximately £8,101 millions.*

5 per cent. when the ratio of profit to recovery does not exceed 25 per cent., and the proportion rises gradually to 12.7 per cent. when the profit ratio is 60 per cent. This formula is applicable to the Consolidated area as at present constituted and is subject to adjustment in the event of any change in the proportion of lease area to consolidated area.

With regard to the commencement of operations, preparatory work is well in hand, but some delay is expected in obtaining delivery of winding engines, as overseas manufacturers appear to be fully occupied with orders owing to the general increase in mining activity. Dates of delivery of the winders are still uncertain, but they should be in use late in the first half of next year. Meanwhile all other sections of the preparatory work are being pushed forward.

The Statutory Report, together with the amendments to certain Agreements referred to therein, were adopted.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED

FORECASTS MORE THAN FULFILLED

The eighth annual general meeting of the Perak River Hydro-Electric Power Company, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C.

Mr George Balfour, J.P., M.P. (the chairman), said that the report and accounts submitted that day justified the somewhat bold forecast made at the last annual general meeting, when, after reviewing the position at that date, he had indicated an increase in the amount carried to the net revenue account of at least 100 per cent. over the figure for the previous year. The actual net revenue at £116,454 showed an increase of 126 per cent.

They had made marked progress during the past financial year, as shown by increased output and net revenue, but they had also made progress in other directions which he regarded as equally important. He referred to their relations with all parties with whom they conducted business or with whom they had to come into contact in the ordinary course of their affairs. The relations of the management and staff in Malaya with their consumers, prospective consumers and officers of the F.M.S. Government were based on a mutual understanding that they were working for the proper development of electricity supply in the Peninsula on sound lines.

Considerable progress had been made during the year in connecting new business, which, together with the improved demand from old consumers, should be reflected in another substantial increase in the current year's account. The world appeared to have emerged from its hopelessly chaotic condition and was beginning to settle down, so that the various consuming countries could set their houses in order. They had now every reason to believe that the trade upon which the Malay Peninsula so much depended was at a level which was likely to be maintained, and, under normal conditions, the present total value of the output of Malayan commodities should be considerably exceeded.

Having carefully considered all the factors in the situation, the directors had come to the conclusion that the time had now arrived to consider the reorganisation of the financial structure of the company, and would accordingly submit a scheme during the current financial year unless some very disturbing factor emerged which was not visible at present. Some time must necessarily elapse before a scheme could be presented. The scheme should make provision for the elimination of the prior lien at the earliest due date, and the 5 per cent. guaranteed stock should be the only loan or debenture charge on the scheme coming into force. The share capital structure should provide for future capital for proper development, and, in addition, provide power to issue capital for the acquisition of properties of sufficient revenue-producing capacity, and must also deal with outstanding loan, participating debentures, preference and ordinary shares to the fullest possible extent in order of priority.

The balance after paying all expenses amounted to £116,453, out of which they had paid or provided interest on the prior lien stock and guaranteed debentures, interest on the guaranteed debenture stock advance and guaranteed debenture stock redemption, leaving £159, which had been carried to the balance sheet, reducing the debit balance to £39,500.

Regarding the prospect for the current year, he thought he could hazard a guess that they might have a very substantial increase, though possibly not as great as that of last year. Whatever the profits, however, they had so much to write off that they could only look forward to paying the same charges as during the past year until they had carried out a capital reorganisation.

The report and accounts were unanimously adopted.

The aggregate revenue and expenditure to October 20, 1934, is shown below:—

FINANCIAL YEAR, 1934-35, APRIL 1, 1934, TO OCTOBER 20, 1934
(000's omitted)

Expenditure	376,366	Revenue	310,032
		Decrease in balances	123
		Gross increase in borrowing £70,456	
		Less—	
		New Sinking Fund	4,245
		Net borrowing	66,211
	376,366		376,366

* Authority will be sought in the Finance Bill to meet the amount of the Statutory Sinking Funds in 1934 by borrowing.

POSITION OF THE FLOATING DEBT

Ways and Means Advances Outstanding—	Oct. 21, 1933	Mar. 31, '34	Oct. 20, '34	Oct. 20, '34

Total Floating Debt	1,007,140,000	844,710,000	884,825,000	— 1,220,000

* Includes £4,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £35,000,000 Treasury bills were opened on October 19, 1934, and the total amount applied for was £52,340,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday at £99 16s. 4d., about 38 per cent., and above in full; Saturday, at £99 16s. 5d., and above in full. The average rate per cent was 14s. 3.27d. The amount allotted was £32,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1932				
January 1	40,000,000	50,320,000	38,000,000	5 8 4

quarter has been recorded. On the whole, the substantial offerings were well absorbed by American buying, assisted by a continued demand from the Indian Bazaars.

The tone seems steady at the moment, but in the present condition of the market, further wide fluctuations are not unlikely.

COMPARISONS WITH CORRESPONDING PERIODS, 1933 and 1934

	Great Western	L.M.S.	L.N.E.R.	Southern
First half-year 1934, compared with first half-year 1933:				
Gross increase or decrease	+ 399	+ 1,422	+ 1,479	+ 232
Net increase or decrease	+ 370	+ 1,000	+ 688	+ 90
Second half-year 1934, compared with second half-year 1933:				
Gross increase or decrease	+ 178	+ 609	+ 497	+ 135
Net increase or decrease	+ 11½	+ 38½	+ 31½	+ 8½
Weekly average second half 1934 compared with second half 1933	+ 9	+ 19	+ 16	+ 4

* Including receipts from ancillary businesses.

LONDON TRANSPORT

Week ending October 20, 1934	Takings	Compared with 1933
Aggregate 16 weeks ending October 20, 1934	£39,300	+ 4,500
	£8,485,500	+ 98,200

* For an explanation of the manner in which the figures are made up see the *Economist*, March 17, 1934, page 610.

Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted, on the basis of the best information available.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

An examination of the trend of sterling prices of the principal primary products during the week ended Wednesday reveals considerable irregularity. Among foodstuffs, the price of wheat declined sharply owing to the low level of demand by importing countries and improved crop reports from the Southern Hemisphere. Raw sugar also experienced a marked fall in price and quotations for refined qualities were reduced by 1½d. per cwt. At Smithfield market, beef prices were marked down. On the other hand, quotations for bacon and butter registered a sharp rise.

As far as textile raw materials are concerned, reports from Australia indicate that the improvement in wool prices has been maintained at recent auctions. In contrast, quotations for cotton, hemp and jute are slightly lower on the week. In the market for non-ferrous metals, copper prices rose a little on a report that a leading concern in the United States had decided to curtail production. Lead and spelter, too, were slightly dearer, but tin was marked down a little. The market in rubber underwent little change in the past week and is awaiting the decision of the International Rubber Regulation Committee concerning export quotas during the early months of 1935.

Reports from the principal coal-mining centres in this country are moderately encouraging, though the mild weather has so far prevented a spurt in demand for house coal. Business in iron and steel has tended to expand. The cotton trade has so far made little headway, but there has been a slight improvement in the demand for wool textiles.

In the United States, grain prices suffered a setback in the past week. Moody's index of the dollar prices of staple commodities fell from 145.2 (December 31, 1931=100) on October 17th to 145.0 on October 24th. A month ago the index stood at 150.3 and a year ago at 122.9.

COAL

SHEFFIELD.—On inland account large tonnages of fuel are being despatched regularly from the collieries. Confident of continued trade activity, industrialists are specifying freely, and are prepared to discuss forward contracts. Best quality steams are somewhat scarce and firmer, the export quotation having hardened to 17s. 3d. f.o.b. Secondary quality steams are somewhat weaker. Smalls of all kinds are in brisk request. Trade in house coal is quiet for the time of year. Best sorts are quoted at from 21s. 6d. to 23s. 6d. at pits. Coke is the briskest section of the industry, consumption being well up to output.

NEWCASTLE-ON-TYNE.—Whilst screened coal remains steady, mild weather appears to be affecting other sections of the steam market, particularly doubles and trebles, which are being offered

more freely. The Durham position remains quiet, there being abundant supplies of second quality bunkers, and all classes of coking coal are wanting trade from day to day. The mild weather is also affecting the coke trade, there being more of this commodity on offer for prompt shipment, although the position is steady for forward shipment.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B., screened, 14s. 6d.; smalls, 11s. 6d.; Howards, Bentinck, Newbigin, screened, 14s. 3d.; smalls, 11s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton, South Hetton, screened steam, 15s. 2d.; smalls, 11s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 2d.; coking unscreened or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 6d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 20s.; Newcastle and District gas coke, 20s. 3d.

WORKINGTON.—There is a livelier tone in the coal market, and demand is not more than 30 per cent. short of the winter peak. Scandinavian and Spanish orders are being booked, and there is a substantial volume of business, most of it from Ulster, in the Irish market. Landsale has improved considerably. There is hardly a sufficient tonnage of industrial fuel to go round, and coking plants are hard pressed to satisfy iron smelters' needs.

Prices are firm, but have not risen. Nominally, best round is quoted at 21s. 6d.; washed doubles, 20s.; washed singles, 18s., all f.o.b. Smalls, 15s. 6d. per ton. Best house coal 30s. 8d.; and house nuts 29s. at station. Gas coal 27s. per ton. Local coke 15s. 6d. to 16s. 6d. per ton.

GLASGOW.—The market has shown little change. Home demand is gradually expanding, and shipping business is moving on steady lines, although exporters are still encountering keen Polish competition in various markets. Most of the collieries are working steadily, and there is no great surplus of any class of coal. Among nuts, trebles are slightly weaker, but doubles have strengthened, and the other sizes are steady. Large coal generally is quoted firmly, but most classes can be booked for prompt or early shipment.

Export prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 15s.; split best, 16s. 6d.; split second, 14s. 6d. to 14s. 9d.; navigation, screened, 15s.; navigation, unscreened, 13s. 3d.; Hartley, 16s.; all per ton f.o.b. Glasgow; steam, 12s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 12s. 6d.; singles, 12s. 6d. to 12s. 9d.; pearls, 11s. 6d. to 12s.; dross, 10s. **FIFE.**—Best unscreened navigation, 13s.; unscreened navigation, 12s. 6d.; first-class steam, 13s. 3d. to 13s. 6d.; third-class steam, 12s. 6d. to 13s.; trebles, 14s. to 15s.; doubles, 12s. 9d. to 13s.; singles, 12s. 6d.; pearls, 11s. 9d. to 12s. **LOTHIANS.**—Prime steam, 12s. 6d. to 13s.; secondary steam, 11s. 9d. to 12s.; unscreened navigation, 12s. 9d.; trebles, 13s. 6d. to 14s.; doubles, 12s. 6d.; singles, 12s. 3d. to 12s. 6d.; pearls, 11s. 9d. to 12s. **AYRSHIRE.**—Best unscreened navigation, 14s. 3d.; jewel, 14s. 6d.; steam, 13s.; trebles, 15s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 10s.

CARDIFF.—An improvement in the shipping position at the South Wales docks permitted fairly regular employment at the collieries during the earlier part of this week, but there has been no appreciable expansion either in prompt or forward business. Inquiries for the drier classes of washed and sized coals are fairly active, and the prospects of this branch of the trade are good, but bituminous nuts are weak, while supplies of large steam coals continue in excess of the demand. Coke is firm, and the recent improvement in patent fuel is being maintained. Pitwood prices are affected by the suspension of business under the French coal-pitwood barter scheme, and are quoted at from 24s. 6d. to 24s. 9d. ex-ship. The Tribunal set up by the Government to determine the issues over the minimum wage and subsistence allowances in the coalfield has been sitting at Cardiff this week, and its award is expected in the course of the next few days.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s. 6d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. to 25s.; machine-made cobbles, 37s. 6d. to 48s. 6d.; French nuts, 37s. 6d. to 48s. 6d.; stove nuts, 35s. to 45s.; rubbly culm, 11s. to 11s. 6d.; special foundry coke, 32s. 6d. to 40s.; patent fuel (Crown), 20s. to 21s.; pitwood, ex ship, 24s. 6d. to 24s. 9d.

IRON AND STEEL

MIDDLESBROUGH.—Conditions continue to improve in the local iron market. Inquiries are more numerous both for foundry and hematite qualities. Only three blast furnaces are producing foundry pig iron in the North-East area and after works cover their own requirements, the available surplus is readily taken up by other consumers locally and in Scotland, good shipments having been made to Grangemouth during the past week. Ten furnaces are producing hematite pig iron, but existing stocks are practically all disposed of and makers have good contracts with Sheffield and Midland consumers, for delivery over the next two or three months. Export business is difficult, although producers here are now holding for better prices than indicated a little while ago.

For home consumption prices remain on the basis of 67s. 6d. per ton delivered Middlesbrough for Cleveland No. 3 foundry and 69s. per ton delivered Middlesbrough for No. 1 East Coast hematite, with the usual differences for delivery to other areas. Shipments of all classes of pig iron from the Tees from October 1st to 23rd amounted to 10,065 tons, against 11,265 tons for the corresponding period of September. Good Durham blast furnace coke is 20s. per ton delivered furnaces, whilst foreign ore prices are firmer for forward delivery, only odd cargoes for prompt delivery changing hands on the basis of 17s. per ton c.i.f. Tees for best Bilbao rubio.

Steel departments continue with heavy outputs, both of semis and finished materials. It is understood that the steel required for the Chelsea bridge, amounting to about 3,000 tons, will be manufactured by the South Durham Steel and Iron Company, Ltd. Further orders for steel plates are expected in this district as a result of orders placed recently for merchant vessels. The home demand for railway material and structural steel continues good. Heavy steel scrap is in good demand at 50s. per ton delivered works.

SHEFFIELD.—In the general improvement of the engineering industries demand for an increased proportion of the new superior steels is noticeable. This tendency is to the advantage of Sheffield, which enjoys almost a monopoly of such materials. At the present time many works are busy on supplies of special steels to the automobile, aeroplane and wireless industries. The call for stainless steel sheets is a feature of the situation. Railways and ship-builders are buying only moderately. The expansion of the demand for tools of all descriptions which has been in operation for two years continues, and there is little or no quietude in this branch.

Export trade generally tends slightly to expand. Cutlery and plate are patchy, and these departments are not wholly satisfactory. There is a scarcity of skilled mechanics, and plenty of employment for juvenile labour and girl clerks. The building trade is brisk locally, and much outdoor work is proceeding.

WORKINGTON.—A reduction of 2s. per ton in the price of West Coast hematite pig iron has restored to the Cumberland and North Lancashire makers the business they were losing to their East Coast rivals in their chief markets in the Midlands and South Wales. Order books are well filled, though the buying continues to be almost entirely of a hand-to-mouth character, and the absorption of the make is assured until the end of the year. Local consumption accounts for half of the production of the eight furnaces in blast between Workington and Barrow. Some demand from the Dominions is being experienced and from Workington this week 1,100 tons of special qualities were shipped to Nova Scotia.

Prices are firm, Bessemer mixed numbers being quoted at £3 12s. 6d. per ton at Glasgow; £3 18s. 6d. at Manchester; £4 3s. 6d. at Sheffield and £4 4s. 6d. at Birmingham, while special brands are an extra 2s. 6d. to 5s. per ton. Malleable iron at £5 15s. per ton delivered at Birmingham is a steady Midland trade. Ferro-manganese at from £10 15s. to £11 5s. per ton home is being sold from stock, but a furnace at Workington is to be lighted in December for the smelting of manganese alloys.

The steel trade is quiet. Few replacement orders are being obtained, but current contracts will keep the plants in operation on the present scale for another two months. Workington has this week shipped 1,100 tons of rails to Capetown and 400 tons of sleepers to Mombasa. Native ore, at from 13s. 6d. to 14s. 6d. per ton, is in only local request.

GLASGOW.—The situation is practically unchanged in the West of Scotland. Steelmakers remain busy and have work on hand for some time to come, the new tonnage placed for various classes of material being satisfactory. Makers of semis are also fairly busy and are evidently receiving from local and other consumers an increased share of the orders they have to place. Sheet makers are again doing more work this week, mainly owing to the growing demand for finely finished sheets for the home trade and also on account of the greater number of export orders which have been booked recently. Tube makers are still fully employed at almost all plants. It is announced this week that Messrs A. and J. Inglis, Ltd., of Pointhouse, Glasgow, have received an order from the L. and N. E. Railway Company for a Diesel-electric paddle ship which will be used on their Clyde Coast service. In the manufacturing trades there is no falling off and most shops are working full time.

CARDIFF.—On the Swansea Metal Exchange on Tuesday business in tinplates was comparatively quiet on foreign account, but prices were unchanged at from 18s. 2d. to 18s. 7½d. per basis box. Wasters were in fairly good demand, and there was a fair inquiry also for odd sizes in the home market. The sheet trade was a little more active under the stimulus of the recent Australian orders but prices remain at from £11 5s. to £11 15s. per ton. Steel bars are unchanged at £5 7s. 6d. per ton. Shipments of tinplates last week were below the average and as arrivals at docks were larger than usual the stocks in warehouse increased from 105,695 to 141,481 boxes.

OTHER METALS

The market tendency has improved during the past week and prices have risen, the chief cause being the latest developments in the United States copper industry. At the end of last week the Kennecott Copper Corporation (the Guggenheim group) announced a 20 per cent. reduction in output and, although other producers have not yet followed suit, it is hoped in the market that they will do so before long. But even if such a restriction scheme is announced, no lasting benefit is likely to accrue to the industry while American prices remain at the high level of 9 cents per lb. United States production amounted to 30,690 short tons during September and was thus a little lower than the code sales quota. Owing to the maintenance of prices, however, deliveries last month declined to 22,614 short tons—or rather more than would be produced if a 20 per cent. restriction were generally enforced. It was reported in London on Wednesday that Japan had ordered several thousand short tons of copper from the United States, but this is not an unusual feature, for Japan has been one of America's best customers during the past year.

At a meeting of the International Tin Committee on Monday last, it was announced that the tin consumers' panel, to which we referred a fortnight ago, will have no voting rights. Discussion of the quota was postponed until the next meeting of the committee on November 22nd. The market situation shows little change on the week.

The general improvement in market sentiment affected lead and spelter, but the outlook for both metals is still somewhat obscure. It is feared that any further rise in the price of silver would stimulate the production of lead and spelter, and reports have been current referring to the desire on the part of members of the Belgian Zinc Cartel for the fixation of the price of that metal. The likelihood of this desire materialising, however, appears rather remote. Stocks outside the United States, which rose during August, registered a further increase last month to 113,119 metric tons. This level is by no means dangerous, but the increase may have psychological significance, especially in view of the fact that certain important members of the cartel are already dissatisfied with its policy.

GERMANY AND THE ALUMINIUM CARTEL.—How rapidly Germany is being converted to the use of aluminium, writes a correspondent, was emphasised at the recent meeting of the cartel in Paris. Current German production is running at 40,000 tons per annum, against 18,400 tons in 1933. Perhaps the most important point on the Cartel's agenda was Germany's request for a further increase of 15,000 tons, which was granted. The advance of aluminium in Germany is being made at the expense of copper and tin, the use of which is prohibited for many purposes. A stimulus to the industry, in the shape of a subsidy, will enable the producer to sell in the home market, or the world market, or both, at very low prices. This is not likely to be of much assistance to the industry in the immediate future. Aluminium's price advantage over tin is so great already that there is no point in increasing it. On the other hand, the price is not likely to be brought low enough to put it on a competitive basis with the low-cost Rhodesian copper producers. But, taking a longer view, it is important that an expanding industry such as this should make every appeal to the consumer that it can, so that the German developments, upsetting as they must have seemed at the Paris meeting, may well be a blessing in disguise. Moreover, technical developments of importance for the aluminium industry may be expected from Germany in the near future.

TIN.—Sales on the London Metal Exchange: 140 tons on Monday, against 175 tons last week; 115 tons on Tuesday, against 235 tons last week; 310 tons on Wednesday, against 240 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 50.85 cents a week ago and 50.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £230 7s. 6d. to £230 10s., compared with £231 to £231 5s. last week. Stocks in London and Liverpool at the end of last week were 4,161 tons, a decrease of 92 tons on the week.

COPPER.—Sales on the London Metal Exchange: 2,350 tons on Monday, against 2,450 tons last week; 2,850 tons on Tuesday, against 2,100 tons last week; 3,300 tons on Wednesday, against 1,250 tons last week. Domestic spot was quoted at 6.32½ cents per lb. in New York on Wednesday, against 6.17½ cents a week ago and 6.50 cents a month ago. Wednesday's official closing price for standard cash in London was £27 17s. 6d. to £28, compared with £26 to £26 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 34,543 tons, show an increase of 1,380 tons, and stocks of rough copper, at 7,674 tons, an increase of 350 tons.

LEAD.—Sales on the London Metal Exchange: 550 tons on Monday, against 500 tons last week; 400 tons on Tuesday, against 800 tons last week; 650 tons on Wednesday, against 450 tons last week. The New York quotation on Wednesday was 3.70 cents per lb., against 3.65 cents a week ago and 3.60 cents a month ago. The official closing quotation in London on Wednesday for soft foreign was £10 12s. 6d. for shipment during the current month compared with £10 3s. 9d. a week ago.

SPELTER.—Sales on the London Metal Exchange: 450 tons on Monday, against 200 tons last week; 1,400 tons on Tuesday, against 600 tons last week; 600 tons on Wednesday, against 650 tons last week. Wednesday's quotation in East St. Louis was 3.85 cents per lb., against 3.80 cents the week before, and 3.87½ cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" was £12 15s. for shipment during the current month, against £12 last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium was again quoted at £100 per ton. Nickel, at £200 to £205 per ton, remains unchanged. Quicksilver was again quoted at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Foreign antimony was quoted at £43 per ton, as against £43 to £43 10s. per ton last week. Chinese wolfram was again quoted at 41s. to 42s. per unit, c.i.f. Platinum, at £7 15s. per ounce, shows no change on the week.

TEXTILES

COTTON.—Manchester. Raw cotton prices fluctuated within narrow limits during the past week. Speculative interest was at a low ebb and most operators are waiting for further developments relating to the policy of the American Government. It is understood that before the end of November an official announcement will be made from Washington relating to acreage plans for 1935. In the meantime more cotton than ever is going into the hands of the Government under the 12 cent loan plan. Prices remain high and importing is very difficult. Many people in the States are somewhat concerned at the big decline in exports. Business in actual cotton in Liverpool and Manchester continues to run on outside growths. The price of American is considered artificial.

The general inquiry in piece-goods has shown some expansion and quite a number of manufacturers have had more opportunities of booking orders, but most of the offers have been on a very low basis, a large part of the demand being quite impracticable. Holidays in India have interfered with negotiations, but a slightly

improved turnover has taken place in dhooties and light whites for Calcutta, Karachi and up-country, whilst a few more bids have been about in bleached shirtings. There seems to be no probability of increased activity for China and the outlook is worse as a result of the slump in the Shanghai exchange rate. A varied business has been done for several minor outlets east and west, chiefly South America and the Dominions, whilst some makers have secured rather more orders for the home trade. On the whole yarn inquiry has been on a rather larger scale, but spinners cannot improve their margins and the general situation is very unsatisfactory. There are very few signs of any trade improvement just at present. Buyers are nervous as regards future prices and conditions abroad.

WOOL.—Bradford. The wool market underwent no significant change during the past fortnight. First costs in the primary wool selling markets have moved upwards slightly, and this has been reflected in the rather firmer price position in the Bradford market. There is, in fact, a quiet growth of confidence among many sections of the industry, and although there seems little disposition to support this feeling by ordering large weights, it is generally agreed that, given freedom from untoward financial and political events, there will be little variation in prices from the present basis up to the end of the year. This view is consolidated by Australian and the recently-announced South African wool selling policy. In the former country brokers are offering restricted weights on account of the smaller Continental demand, and this policy, which has been pursued since the opening of the season in August, has resulted in supplies of wool in Bradford being much smaller than in previous years. The quantity of retained imports of wool in this country during the first three quarters of this year was some 50 million lb. less than a year ago. In South Africa, too, the report that the Government has offered to make an advance to wool growers so as to enable them to prevent sacrificing their wools at unremunerative prices means that, at least for some considerable time hence, no unduly cheap Cape wool will be available in this market.

It is this sub-normal supply of wool in England which is considered to be mainly responsible for the stability of top prices. Wool will probably be heaped up in Australia and South Africa towards the end of the season, and prices may then be expected to suffer, but for the moment the difficulty which topmakers have in securing adequate supplies of spot wool is causing a number of firms not to encourage orders for immediate delivery. A fair amount of top business is being done at prices based on first costs in Australia—26d. for warp 64's top—for January–February delivery, and spinners also report increased business in yarns.

GRAIN MARKETS

WHEAT.—Wheat prices took a sharp downward turn during the past week. The chief reasons for this setback are (a) the low level of demand by importing countries in recent weeks and (b) improved crop prospects in the Southern Hemisphere. Australia's crop was officially estimated at 136 million bushels, as compared with 175 million bushels in 1933 and 210 million bushels in the preceding year. Although this year's harvest is small owing to a reduction of 13.5 per cent. in acreage and a fall in yield per acre from 11.7 in 1933 to 10.6 in 1934, it is, nevertheless, larger than was expected earlier in the year. No official estimate is available of Argentina's wheat harvest, but the condition of the crop is understood to be fairly satisfactory. According to Mr G. Broomhall, total shipments during the past week were 1,208,000 quarters, against 1,476,000 quarters in the preceding week. On Wednesday, "December" futures were quoted in Chicago at 98½ cents per bushel, against 100½ cents the week before and 95½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver ex ship, 31s. 6d. per 496 lbs., against 33s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 6d., against 31s. 3d.; No. 3 Northern Manitoba, Vancouver, ex ship, was not quoted. Australian, ex ship, 26s. to 27s., against 27s. 6d. to 28s. 6d. a week ago.

FLOUR.—North American shipments were 182,000 sacks in the past week, as compared with 68,000 sacks in the previous week. Wednesday's London quotations were: Straight run, delivered country, 24s. 6d. per 280 lbs., against 24s. 6d. last week; delivered London, 23s. 6d., as compared with 23s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 6d., against 25s. to 27s.; Australian ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s.

BARLEY.—October futures were 52½ cents per bushel in Winnipeg on Wednesday, against 52½ cents last week and 48½ cents a month ago. Quotations in London on Wednesday were: "English malting" (new), f.o.r., per 448 lbs., 32s. to 55s., against 32s. to 55s. a week before.

Compañía Argentina de Navegacion Mihanovich Limitada.

(ARGENTINE NAVIGATION COMPANY MIHANOVICH LIMITED.)

Loan and Share Capital.	Authorised.	Outstanding
6½% First Mortgage Debentures...	£1,500,000	at 31st March 1934.
10% Cumulative Participating Preference Shares of 5.04 Gold Pesos Each	975,000 Shares.	£1,395,550
Ordinary Shares of 5.04 Gold Pesos Each	975,000 Shares.	975,000 Shares.

NOTE: The Preference Shares are of the nominal value of 5.04 gold pesos each and carry the right to an annual cumulative dividend at the rate of .504 gold pesos (2/-) per share payable before any distribution may be made on the Ordinary Shares. The Ordinary Shares are also of the nominal value of 5.04 gold pesos. After they have received a dividend equivalent to the fixed cumulative dividend on the Preference Shares, any further distribution of available profits will be made as to 25% to the Preference Shares and as to 75% to the Ordinary Shares. On liquidation, the Preference Shares are entitled to repayment of capital and arrears of fixed dividend in priority to the Ordinary Shares, and to a 25% participation in surplus assets after repayment of capital on the Ordinary Shares. Payment of dividend and repayment of capital in a liquidation in respect of the Preference Shares are to be made exclusively in London in pounds sterling at the fixed rate of exchange of £1 for each 5.04 gold pesos.

Over 80% of the Ordinary Shares are held by the Management.

DIRECTORS:

Chairman: ALBERTO A. DODERO. Managing Director: LUIS DODERO.
Dr. CARLOS M. MAYER. ROBERTO W. ROBERTS. Sir HILARY H. LENG, K.B.E.
Dr. ANGEL SANCHEZ ELIA. RICHARD E. HAMBRO. CARLOS A. TORNUQUIST.

BANKERS & TRANSFER AGENTS:

THE ANGLO-SOUTH AMERICAN BANK LIMITED, 117, Old Broad Street, London, E.C.2.

AUDITORS:

DELOITTE, PLENDER, GRIFFITHS & CO., Buenos Aires.

THE Company has a virtual monopoly of the River and Coastal trade of the Argentine, especially in the most productive and progressive zone of the country, and its fleet is specially adapted for service on the great Argentine rivers which form the natural highways of the country. The principal services operated are:—

- (1) A passenger and cargo service on the Parana and its tributaries between Buenos Aires and the up-river ports for a total distance of 2,400 miles.
- (2) A passenger and cargo service across the River Plate between Buenos Aires and Montevideo.
- (3) A towage, lighterage and an important ship repair service in the Port of Buenos Aires and various up-river ports.
- (4) A coastal cargo service in the Argentine, Uruguay and Brazil, and various miscellaneous complementary services.

In addition, the Company owns all the shares of the Compania Uruguay de Navegacion Limitada which operates similar services on the Uruguay River.

For the years 1928–1931, a strong development policy was adopted by the Company, and during this period, in addition to various small vessels, ten new passenger and cargo motor-ships were added to the fleet at a cost of over £1,200,000. The Fleets now consist of 43 passenger and cargo vessels and about 40 cargo vessels and 280 tugs, lighters, etc.

According to the last audited balance sheet of the Company dated 31st December, 1933, taking the fixed assets at the par rate of exchange and the circulating assets and liabilities at 16.55 (paper pesos) to the £, the net surplus assets, after deducting the amount of debentures outstanding, available for the Preference and Ordinary Share Capital amounted to £2,156,952.

As an indication of the profit earning capacity in past years, the profits of the Argentine Navigation Company (Nicolas Mihanovich) Ltd., the predecessor of the present company, for the five years from 1926 to 1930 (inclusive) averaged about £320,000 per annum after allowing for depreciation of the fleet and other assets and calculating the profits at the par rate of exchange.

Even in the worst period of depression, the Company has always earned sufficient profits, after allowing for depreciation, to provide for full debenture interest.

The adjusted profits of the Company and of its Uruguayan subsidiary, as certified by Messrs. Deloitte, Plender, Griffiths & Co., have been as follows:—

	Argentine Paper.	Converted at:	£
9 months ended 31st December, 1931 ...	1,654,390	13.30	124,390
Year ended 31st December, 1932 ...	2,231,415	12.80	174,329
Year 1933 ...	1,593,670	16.55	96,294
6 months ended 30th June, 1934 ...	1,509,314	17.60	85,756

These profits have been arrived at after deducting depreciation and all expenses, but before charging debenture interest.

The rate of exchange for importers with permits is now 17.10 Argentine paper pesos to the £ as against 17.60 to the £ at 30th June, 1934.

The improvement for the six months to June, 1934, over the figures of the previous year will be noticed from the foregoing table and this improvement is being more than maintained during the current six months. In the opinion of the Chairman of the Company, subject to no unforeseen circumstances arising, the total profits for the year 1934, after providing £90,710 in respect of interest on debentures, should be sufficient to pay the full dividend of 10 per cent. on the Preference Share Capital which requires £97,500.

During the nine months ended 31st December, 1931, and the years ended 31st December, 1932 and 1933, as the result of the charging to reserve of a large part of the depreciation, the profits shown by the accounts have been sufficient to pay the Preference dividends for those periods.

The Directors have declared an interim dividend of 4 per cent. on the Preference Shares on account of the fixed dividend for the current year. The Preference Dividend is payable exclusively in Sterling in London at the fixed rate of 5.04 Gold Pesos to the Pound.

OATS.—On Wednesday, "December" futures were quoted at 50½ cents per bushel in Chicago, against 52½ cents a week ago and 47 cents last month. Quotations in London, Wednesday: "River Plate," landed, 22s. per 320 lbs., against 21s. 6d. a week ago; "Chilean White," landed, 23s. 6d., against 23s. 6d. a week earlier.

MAIZE.—"December" futures were quoted on Wednesday at 75 cents per bushel in Chicago, against 77½ cents a week ago and 73½ cents on the corresponding day last month. Quotations in London, Wednesday: "Plate," landed, 22s. 6d. per 480 lbs., compared with 23s. 9d. last week; "Plate," ex ship, 21s. 6d., as against 22s. 9d.; "November," 22s. 6d., as against 23s. 9d. Yellow maize meal, ex wharf, was quoted £6 to £6 7s. 6d. per ton, against £6 5s. to £6 12s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to October 20	Cwts. 99,688	Cwts. 357,285	Cwts. 238,803	Cwts. 431,860
8 weeks to October 20	449,411	1,871,316	3,006,712	4,016,028
Average price of English wheat per cwt.	s. d. 5 9	s. d. 5 7	s. d. 4 10	s. d. 5 0

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1930 to 1933.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Oct. 13, 1934	Cwts. 426,155	Cwts. 453,715	Cwts. 68,250	s. d. 5 0	s. d. 9 8	s. d. 6 7
Oct. 20, 1934	431,860	424,488	53,875	5 0	9 4	6 5
Oct. 18, 1930	128,777	411,536	58,509	6 11	9 8	6 2
Oct. 17, 1931	99,688	509,409	65,763	5 9	9 6	6 4
Oct. 22, 1932	357,285	384,157	67,487	5 7	7 9	6 3
Oct. 21, 1933	296,803	476,392	43,097	4 10	10 2	5 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1932 and 1933:—

NEAREST FUTURE	Jan. 4, 1932	Jan. 4, 1933	Oct. 25, 1933	Jan. 3, 1934	Oct. 17, 1934	Oct. 24, 1934
Winnipeg (No. 1 Manitoba)	62½	46½	65½	65½	78½	76½
Chicago (No. 2 Winter)	55½	46½	88	84½	100½	98½
Cenals per 60 lb.						

The visible supply of wheat in Canada, at 116,704,000 bushels, shows an increase of 5,392,000 bushels. Supplies a year ago stood at 113,402,000 bushels.

OTHER FOODS

SUGAR.—Quotations on the spot market, both in London and New York, showed a sagging tendency early in the week. But greater firmness was manifest on Wednesday. Futures also declined under liquidation. The spot price in New York on Wednesday was 2-75 cents per lb., as compared with 2-91 cents per lb. last week and 3-00 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 2½d. to 4s. 3d., against 4s. 4d. last week. The movements of raw sugar in London and Liverpool last week were as follows:—

	Imports		Deliveries		Stocks	
	1933	1934	1933	1934	1933	1934
Tons	Tons	Tons	Tons	Tons	Tons	Tons
London	13	...	1,388	1,441	20,355	22,952
Liverpool ...	29,336	1,758	14,332	13,167	110,846	87,170
Total tons	29,349	1,758	15,720	14,608	131,201	110,122
Last week	23,116	14,969	17,607	14,496	117,572	122,972

COFFEE.—Conditions on the New York spot market have been quiet and prices have remained unchanged. Futures have also been rather featureless, with quotations a shade higher than a week ago. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week, and 9½ cents per lb. a month ago. The London market has been quietly steady this week. Last week's movements of coffee in London were as follows: Brazilian, landed, 47 bags; delivered, 27,500 bags, against 27,264 bags a year ago. Central American, landed, 473 packages; delivered, for home consumption, 1,847 packages; exported, 663 packages; stocks, 85,815 packages, against 80,135 packages last year. Other kinds: Landed, 285 packages; delivered, for home consumption, 1,938 packages; exported, 699 packages; stocks, 78,777 packages, against 88,694 last year.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. on the corresponding day last week and 4½ cents per lb. a month ago. The London quotation for Accra, "November-January," was 19s. 9d. to 20s. per 50 kilos, c.i.f. Continent, as against 18s. 9d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 74 bags; delivered, for home consumption,

7,501 bags; exported, 2,049 bags; stocks, 180,096 bags, against 134,166 bags a year ago.

TEA.—The quantities catalogued for this week's auctions amounted to 51,159 packages of Indian and 21,041 packages of Ceylon tea. On Monday there was a good market for all descriptions of Indian and prices of good medium grades tended to harden. The commoner grades, however, tended to ease in price on Wednesday. Competition for the Ceylon grades was not so active and quotations were a little lower than of late. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account during the past weeks:—

Week ending	Northern India		Southern India		Ceylon		Java		Sumatra		Nyasaland		Total
	d.	c.	d.	c.	d.	c.	d.	c.	d.	c.	d.	c.	
Oct. 19, 1933	14-08	13-16	17-67	10-85	9-91	Nil	14-77						14-77
Sept. 20, 1934	12-25	10-67	12-01	9-30	8-70	10-26	11-72						11-72
Sept. 27, "	12-95	11-17	12-70	9-85	9-38	11-06	12-38						12-38
Oct. 1, "	13-08	11-62	13-84	10-19	9-76	11-09	12-89						12-89
Oct. 11, "	13-10	11-48	14-20	10-00	9-52	10-98	12-94						12-94
Oct. 18, "	12-63	11-56	14-32	10-15	9-77	10-98	12-76						12-76

RICE.—"The spot" price was 8s. 6d. per cwt. on Wednesday as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., shows a fall of 5½d. on the week. Movements in London during the past week were as follows: Landed, 121 tons; delivered, 184 tons; stocks, 4,082 tons, against 4,963 tons a year ago.

POTATOES.—At present prices supplies are just about equal to demand and quotations continue to show little fluctuation. At the London Borough Market on Tuesday, "King Edward" sold at 6s. to 6s. 6d. per cwt., this price being unchanged on the week.

SPICES.—"Lampung" was quoted at 6½d. per lb. on Wednesday, against 6½d. per lb. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 60 tons; delivered, 57 tons; stocks, 345 tons, against 417 tons a year ago. White, landed, 155 tons; delivered, 39 tons; stocks, 8,528 tons, against 1,225 tons a year ago.

MEAT.—In general trade has been quiet, although beef and mutton were in fair demand early in the week. Trade in pork has, however, been poor, largely owing to weather conditions. Wednesday's quotation for Argentine beef, chilled hindquarters, was 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield official market report, supplies during last week amounted to 9,711 tons, against 9,737 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83-0 per cent. of the beef supplies, against 81-7 per cent. a year ago. Imported mutton, mainly from New Zealand, formed 71-9 per cent. of the total supply of mutton and lamb, against 68-7 per cent. in the same week last year.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions prevail and in most sections there is an easier feeling. Linseed prices have declined and demand, both here and on the Continent, is small, crushers being content for the time being with parcels near at hand and disinclined to commit themselves forward until the position of the new Plate seed is more definite. Favourable reports as to the progress of the new crop in Argentina continue and nothing has transpired to affect the anticipation of a larger output than last season. Argentine shipments are not so heavy and about 160,000 tons of old crop is estimated to be still available for export, or 20,000 less than that actually shipped in the remainder of 1933. The quantity afloat for Europe is now 136,000 tons (including 20,800 tons from India), 8,800 tons more than last week; and for the United States 39,400 tons, against 68,300 tons a year ago. Cotton seed is steady but in poor demand, current value of black Egyptian for shipment being £4 15s. to £4 17s. 6d.

Trade in linseed oil is not so active, despite lower prices. Raw oil for October and November-December delivery is quoted £18 5s. per ton (naked) ex Hull mill, and January-April the same. Cotton oil is steadier. Egyptian crude ex Hull offers at £15 5s. and common edible at £17 prompt. Soy and palm kernel oils are easier. Oil cakes are in fair demand and steady in price.

TIMBER.—Imports of building and joinery woods during September were lighter than in the corresponding month of last year, although the total for the first nine months of the present year was still 18 per cent. above the 1933 level. Demand has improved considerably during the past two years and, although stocks are larger than they were twelve months ago, it is anticipated that smaller arrivals during the remainder of this year will reduce these to more normal proportions. Canadian shipments are being well maintained and arrivals from Finland and Russia are on a heavier scale than of late.

Spot prices for softwoods remain steady, those for the better qualities being firm. A more active demand from the building trades has been in evidence this year, while the shipbuilding trades, though still very depressed, are doing better this autumn. Furniture woods (especially Canadian) are in more active demand, while American lumber is generally coming forward in larger quantities. A revision of the American Lumber Code would occasion no surprise, and United States exporters continue very keen on this market. The plywood section continues to make progress, stocks being moderate and prices firm. It is reported that overseas shippers are anticipating an expansion in the British demand for plywood during the coming months.

RUBBER.—Rubber prices fluctuated within narrow limits at the slightly lower level reached a fortnight ago. At a meeting to be held on October 30th, the International Rubber Regulation Committee will probably decide on the limit of export quotas during the early months of 1935. Permissible exports are fixed at 80 per cent. of the quotas allotted under the regulation scheme for October and November and at 70 per cent. for December.

In New York, Wednesday's spot price for rubber, at 14 cents per lb., compared with 13½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 7d. to 7½d. for January-March, 1935, as against 7½d. to 7¾d. a week ago.

Stocks in London and Liverpool at the end of last week, at 118,457 tons, show an increase of 3,722 tons as compared with the preceding week.

LONDON FUR AUCTIONS.—The trend of prices has shown no change during the past week. As compared with those realised at the last auctions, which were held in April, prices were reduced as follows: Blue foxes, 25 per cent.; Russian "Persian lambs," 25 per cent.; squirrels, 20 to 25 per cent.; red foxes, 20 to 25 per cent.; white foxes, 20 per cent. At the opening of the auction of American furs on Wednesday, it was evident that these were not exempted from the general depreciation of prices. Skunks were quoted at 20 to 25 per cent. below the April level, but only the poorer qualities attracted attention.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following list are revised with the assistance of an eminent firm in each department

THE FINANCIAL NEWS

(Twopence Daily)

The first financial and commercial daily newspaper in the World—and still the best!

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription **8s. 2d.**

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

THE RIDDLE OF THE FAR EAST

THE Pacific and the Far East have this week stepped to the front of the stage. Uneasiness about the naval conversations which are taking place in London, and the unpleasantness of the oil controversy which has been brought to a head simultaneously, by Japanese action, both in Japan and in "Manchukuo," have been the chief factors in this re-awakened interest. Merely in themselves, and at their present stage of development, these several transactions are uncomfortable enough. They assume a still graver aspect when we take into account, as we must, their background and latent possibilities.

What is at issue, under the surface, is the three-cornered relation between Japan, the United States and the United Kingdom in world politics. The present policy of Japan—or, rather, of the militant elements now in power in Japan—is clear. It is their intention, by a series of encroachments, to increase their naval power in the world, their military power in the Far East, and their political and economic control on the Asiatic Continent—in Manchuria in the first instance, but also in the rest of China as the occasion presents itself. Their tactics consist of springing acts of aggression upon their neighbours in doses, and at intervals, which are nicely calculated to give these neighbours the largest shock that they will stand without resorting to active resistance. These tactics are as hazardous as the policy itself is anti-social; but the Japanese apparently calculate that there is a sufficient division of counsels, both within and between the United States and the United Kingdom, to assure Japan of the requisite margin of safety.

In America the Japanese are counting on a mood which, under stress of the economic crisis at home, is eager to avoid foreign complications at almost any price, and is disposed to make a modest estimate of American interests in the Far East. The bulk of the non-Japanese trade in the Far East is not American, but British; the bulk of the non-Japanese territorial possessions in the Western Pacific are not American, but British and Dutch. If America really intends to withdraw politically from the Philippines and to concentrate her economic activities within a self-contained national unit, why should she want to pull the chestnuts out of the fire on the other side of the Pacific for people on the other side of the Atlantic? These may be genuine American feelings. But when a Japanese spokesman at the Japanese Embassy in Washington draws, for the benefit of American journalists, the specious inference that in that case America

needs no five-to-three naval ratio, and perhaps no navy at all, the American reaction is all the other way. Indeed, it seems probable that the United States will insist on retaining the present ratio by competitive building, if she cannot retain it by an agreed perpetuation of the Washington and London Naval Treaties. It is also possible that American opinion may not be willing to allow Japan, unchallenged, to establish that Monroe Doctrine, throughout the Far East, which is the present Japanese Government's semi-officially admitted objective.

This brings us to the question of British policy, which may well prove decisive—not only for the outcome of this Japanese-American controversy, but also for the fate of the British Empire.

As regards the relations between the United Kingdom and the United States, it is unquestionable that public opinion in this country is convinced that the maintenance, not of "correct relations," but of cordial friendship and mutual confidence between the two English-speaking Powers should be one of the cardinal points in British policy—and this in our own selfish national interest, just as much as in the greater public interest of the peace of the world. On the other hand, there are certain small but influential English minorities which are as unfriendly towards the United States as they are complacent towards Japan. In British naval circles, for instance, there seems to be a school which feels towards the Japanese Navy all the indulgence of a fond parent for an obstreperous child, while it cannot forgive the American admirals for having obtained, through "parity," the privilege of having as big a toy to play with as our British admirals.

Again, there are British business interests in the Far East which resent the "intrusion" of the Americans as unwelcome competitors, while they apparently hope to save some of their own business from the more formidable impact of Japanese competition by a timely deal—without inquiring too closely whether the contemplated Anglo-Japanese bargain may not be at other people's (e.g. China's) expense. To speak plainly, these minority interests in this country seem to be casting the British people for the rôle of white-faced jackal to a tawny Japanese lion. The rôle is so humiliating, as well as destructive of fundamental British interests, that we are confident that this country will never accept it.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

THE ECONOMIST

8 BOUVERIE STREET, LONDON, E.C.4

Unfortunately the words and acts of the F.B.I. mission to Japan and "Manchukuo" have already created a good deal of misgiving. In a despatch telegraphed from Washington last Saturday, the correspondent of *The Times* reports the currency, in the United States, of a rumour that the mission has come away from "Manchukuo" with an order for £8,000,000 worth of "railway and steel equipment," and he mentions the further rumour that there is to be a new Anglo-Japanese alliance, or, at any rate, an Anglo-Japanese understanding which would protect the commercial interests of Great Britain in the Yangtse Valley and elsewhere—in exchange, we may suppose, for British recognition of Japan's *de facto* mastery over Manchuria. There is a more sensational story that the business picked up by the mission in Japan includes orders for warships. Such stories are given colour by a statement, attributed to Sir Charles Seligman in an interview with the *Osaka Mainichi*, that "practically every thinking Briton is in favour of reviving the Anglo-Japanese alliance," and also by the opinion, which is attributed to the members of the mission by *The Times* correspondent in Tokyo, "that the Manchurian door is effectively open for trading, and that they have been impressed by the quantity of foreign goods already being accepted there on a price and merit basis." This sounds very fine; but what will the oilmen say? They must have been surprised to hear this just a week after they themselves had been summoned by the Monopoly Bureau of the Finance Ministry of the "Manchukuo" Government in order to be told that their own business in Manchuria is to be killed by the setting up of a "Manchukuo" oil monopoly.

This monopoly is plainly incompatible with the terms of Article 3 of the Washington Nine-Power Treaty on "principles and policies to be followed in matters concerning China." The nine Powers, of whom Japan is one, have here bound themselves "not to seek or support their respective nationals in seeking" either economic privileges or economic monopolies in the whole of China or in any part of it. Yet the new "Manchurian Petroleum Company," on which the "Manchukuo" monopoly is to be conferred, is to be financed with Japanese capital, public or private. The Japanese Government seems to have replied to the protests that have been made separately, on behalf of their respective oilmen, by the British, Dutch and American Governments, that they cannot control the business operations of their own capitalists, or, alternatively, that this is not really a monopoly, or, alternatively again, that Manchuria is no longer a part of China. We may reflect that solemn public assurances of the maintenance of the open door in Manchuria have been given, nine times, in the name of either the Japanese or the "Manchukuo" Government; and we may also remind ourselves that one of these answers was given to the British Government on an occasion when it ostentatiously confined its inquiry to the single question of the open door, instead of extending it, as had been done in an antecedent inquiry from the American Government, to the greater question of the independence and integrity of China.

Meanwhile, another, and much bigger, oil question has been raised simultaneously by the implementation of a Japanese law, passed last March, which hits the foreign oil interests in their business in Japan itself. The new law requires them to set up, at their own expense, additional storage plant in Japan (sufficient for holding a six months' supply) and also to set up refineries on Japanese soil. The same law empowers the Japanese Government to fix sale prices and to determine the quotas of oil imports to be allotted annually to any given company. In other words, the foreign companies are to be forced into a great new capital outlay without any assurance that they will in future be allowed to make any profit even on their existing outlay. In putting them under this pressure, the Japanese Government doubtless counts upon the value of their existing installations in Japan as a hostage. But what will the oilmen's respective Governments say? Are American, Dutch and British oil companies really to pay through the nose in order to provide facilities for the Japanese Navy to operate against the Philippines or Netherlands Indies or British Malaya in the event of war?

The Japanese are doggedly pursuing their chosen path; but what is our line to be? Scavenging in the new lion's tracks? Or solidarity with the United States?

EMPIRE TRADE

It is extremely difficult to perceive any harmony between the Government's many voices on the theme of Britain's economic policy; and the listener may be pardoned if he concludes that the Cabinet has not agreed what tune to sing. Thus, Mr Elliot makes it evident both by word and deed that the competition of Empire countries with British agriculture is an embarrassment to him, and apparently he is only waiting until our hands are free to modify the Ottawa Agreements. In other quarters of the Conservative Party there are definite indications of a readiness to pursue the policy of autarky to its logical conclusion. But though these may be significant signs of the times, we cannot, as yet, regard them as representing the bulk of opinion in the Party. We must, therefore, assume that it remains the intention of the dominant partner in the Government to foster international trade so far as it is consistent with moderate protection, and to concentrate in particular on the development of intra-imperial trade in the spirit of the Ottawa Agreements.

If this is a correct surmise of the Government's objective, it is clearly important to watch as closely as possible the course of British imperial trade under the preferential system that now obtains, to try to form some opinion of the possibilities of further expansion, and to see what steps can be taken to prevent the bias that is being given to British overseas commerce from prejudicing the important trade with foreign countries that remains to us. It is still early to answer these and many similar questions; but the Agreements are now two years old and the first results have begun to show themselves. In a Supplement which we publish with this issue of the *Economist*, Sir George Schuster has brought together from various sources a mass of statistics from all parts of the Empire, analysed them in a spirit of great objectivity, and presented a picture from which already certain conclusions may be drawn.

Sir George Schuster's method has been designed to compare a completed year of post-Ottawa trade with conditions obtaining in three previous periods—namely, the last pre-war year, the period of comparative prosperity in the later '20's, and the year of deepest depression preceding the Ottawa Agreements, i.e. 1931.

The first point that emerges is that the intra-imperial trade both of the United Kingdom and of the countries of the Empire was in 1933 a larger proportion of their total trade than in 1931; and that in most cases, though not in all, this intra-imperial trade had increased in total value. This change in the proportion of intra-imperial to other trade cannot, of course, be solely attributed to the Ottawa Agreements. All the countries of the Empire are off the gold standard, and most of them are more or less linked to sterling. Again, the Empire has been free from political disturbance and has eschewed the more extreme forms of trade interference, while intra-imperial debts have been to a large extent converted and are being honoured. All these factors have fostered intra-imperial trade. They cannot, of course, be disentangled and measured quantitatively in isolation, but they must all be borne in mind in reading Sir George Schuster's analysis. It must, however, be obvious that the Ottawa preferences have played an important part in bringing about the "shift" to which we have referred.

Secondly, this "shift" from foreign to intra-imperial trade is much more marked in the case of Britain's purchases from the Empire than in the case of the Empire's purchases from Britain, or of the trade between the Dominions themselves. In other words, when this country imposed an all-round tariff, but left our imports from the Empire on the free list, it afforded the Empire a much greater opportunity of gaining trade at the expense of foreign countries than Great Britain has ever obtained from the Dominions, either under the Ottawa Agreements or under the pre-Ottawa preferences.

Thirdly, looking at the picture from the Dominions' point of view, the outstanding fact of the last two decades has been the great growth of their trade—both import and export—with non-Empire countries. When the depression came, Dominion sales to foreign countries were very severely hit; but, thanks mainly to the stability of the

British market, "Empire sales" suffered less severely. To-day the Dominions are actually selling a larger proportion of their exports within the Empire than before the war. On the other hand, the proportion of Dominion purchases within the Empire has not recovered to the same extent. These percentage figures, however, only show the relative advantages, for it must not be forgotten that, as compared with the period of *post-war* prosperity, the total trade of the Empire, whether within the ring or with countries outside, is enormously reduced.

In the light of these three deductions we may conclude that as a unit Empire trade has been less vulnerable to depression than trade outside, that the chief factor in this stability has been the great British market of consumers, that the Dominions as buyers have contributed less than Great Britain to the recovery that has taken place in the group as a whole, but that the fiscal changes of which the Dominions have enjoyed the benefit have been more advantageous to them than those which have been conceded to Great Britain have proved to her.

Many other lessons can be learned from this study. Sir George Schuster, for example, has some interesting things to say regarding the impact of the depression in various parts of the world upon the Empire. His figures show that while European difficulties, and particularly the German crisis, have been very upsetting influences, the situation in the United States has been responsible for as great, if not a greater, disturbance.

Again, the figures demonstrate that our Imperial trade rests to a much larger extent than our foreign trade upon exchange of our manufactures for raw materials and food. They also show the difficulty of trying to make the trade between any two countries balance, and Sir George Schuster strikes a note of warning against the easy assumption that the trade of the Empire is complementary and self-sufficing, even when regarded as a whole.

But perhaps the chief interest of this study will lie in what Sir George Schuster has to say about the possibilities of the future. After examining in some detail the opportunities of trade development with our greatest Imperial market, namely India, Sir George Schuster raises what is, after all, the fundamental issue—namely, whether the countries of the Empire can take the initiative in checking and reversing the all-pervading drift towards the conception of self-sufficiency. If a new direction is thus given, it means that "each country cannot develop every possible section of economic activity equally, and demands courage on the part of political leaders to resist the demands of some sectional interests."

Will that courage be forthcoming? Some years ago certain Dominion statesmen were quite frankly saying that while the Dominions were prepared to go on buying Britain's specialties, new types of machinery or plant, and the means of enabling them to establish their own industries, they were not prepared to contemplate as a permanency the purchase from Great Britain of what might be called the "bread and butter" lines of industrial production, such as standard textiles, bulk steel products, etc. Clearly such a view if applied generally would mean that Australia and Canada could not expect to maintain the sale of vast bulk supplies of food or material. There are signs that many Dominion statesmen are alive to the danger to the economic structure of their countries of refusing to accept large and continuing imports from the purchasers of their natural products. At the same time, in the light of the known opinion of the Dominions and Sir George Schuster's figures, he would be a bold man who assumed that a change will take place in the attitude of the Dominions large enough to enable British trade with the Empire to revert to its pre-war nature and dimensions.

If this is a true reading of the situation, certain conclusions follow. It means that the "shift" illustrated by the trade statistics is to be regarded as an indication of the greater stability that has prevailed in Empire trade during the depression rather than as the beginning of a new trend towards an inter-dependent Empire in which we shall find all the markets we need for our goods. If this be so, it follows equally that if we are to avoid the necessity of a radical reconstruction of British economic life, we must find means not merely of fostering Imperial trade, but of

restoring the much larger trade we still retain with foreign countries. It must be a cardinal point in British policy that our arrangements with the Empire shall not be so drawn as to make it impossible to bring about this larger restoration.

DISAFFECTION

THE suspicion that the law is being twisted to the benefit of class or party, or the sense that civil liberties are being stealthily curtailed, have ever been potent causes of political unrest in this country. The National Government has braved the chance of such unrest with its Incitement to Disaffection Bill; and, in so doing, it has aroused the active resentment of its opponents and some uneasy suspicions even in the ranks of its supporters. When Parliament re-assembled on Tuesday this Bill entered at once on its report stage; and it is due to complete its course through the Lower House this week.

The objects of the Bill, according to Sir Thomas Inskip, the Attorney-General, are "to make fresh, and as I think better, provision for the trial of persons charged with attempting to seduce a soldier or sailor from his duty or allegiance, and to prevent the persons who engage in this underhand business from carrying out their designs."* To achieve these aims, the Bill originally provided that anyone who "endeavoured to seduce any member of His Majesty's forces from his duty or allegiance"† would be guilty of an offence; as would any person who "without lawful excuse has in his possession or under his control any document of such a nature that the dissemination of copies thereof among members of His Majesty's forces would be an offence under this Act." The original Bill further provided that any Justice of the Peace, if he were satisfied by a sworn information of reasonable ground for suspecting that an offence under the Act had been committed, could grant a warrant authorising any named constable to enter any premises at any time, by force if necessary, to search the premises and every person on them, and to seize "anything" so found which the constable "has reasonable ground for suspecting to be evidence of the commission of such an offence."

The powers arrogated to both police and magistrates in the original Bill appeared so drastic as to provoke widespread misgiving and opposition. The Bill was therefore substantially amended in Standing Committee "A." In the form in which it was reported to the House this week it throws on the prosecution the onus of proving that the endeavour to seduce was "maliciously and advisedly" made—no great alteration, since, in law, "maliciously" means only deliberately, and every man is taken to intend the natural and probable consequences of his acts. A greater concession by the Government was the new provision that the prosecution must prove "intent to commit,

* *The Times*, October 26, 1934.

† See below for the importance of the word "or."

or to aid, abet, counsel or procure the commission of an offence under this Act," besides the mere possession of documents calculated to cause disaffection in the forces if distributed. Again, the search warrant must now be applied for by a police inspector, at least, and, in deference to the strong feeling that local Justices of the Peace might well be swayed by political motives, the Solicitor-General on Wednesday accepted a notable amendment, making the issue of the search warrant dependent on the satisfying of "a High Court judge" in place of the two J.P.s. It is a far cry from a J.P., or even two, to a High Court judge, and the concession has certainly gone far to remove the fear that the Act might be misused for political purposes. Finally, on Wednesday, the Solicitor-General himself secured an amendment providing that the inspector applying for a search warrant shall also satisfy the judge that evidence of the crime "is to be found at any premises or place mentioned in the information."

It may therefore be claimed that the Bill is no longer destructive of civil liberties; that it is innocuous, even if not of great urgency. Yet we may ask what exceptional circumstances have been adduced to justify this stiffening of the law by methods more appropriate to the eighteenth century.

The Attorney-General—on whom almost alone, strangely enough, the duty of defending so controversial a safeguard for the armed forces of the Crown has fallen—has said that, under existing law, it was found too difficult to prosecute to conviction the actual framers and original disseminators of literature calculated to cause disaffection among the armed forces. He mentioned in particular a publication, "The Soldier's Friend," which had been so disseminated; and he justified the present Bill by his statement that "an organisation [sc. Communist] now exists for the deliberate purpose of changing that happy state of affairs" in the armed forces—the state of "splendid loyalty and discipline." "It would be folly," he said, "in my opinion, to wait till its poisonous work succeeds." Moreover, the Attorney-General and others have adduced precedents for search warrants—e.g. in the cases of missing property or suspected premises, official secrets, explosives for presumed felonious purposes, coinage tools, blasphemous and obscene libels and publications, and the detention of a girl or woman on premises for suspected immoral purposes.

We may therefore examine in what respects the present powers afforded by Statute and Common Law have proved deficient. Since 1817 the Incitement to Mutiny Act, first passed in the panic of 1797, has rendered every person guilty of felony who

maliciously and advisedly endeavours (1) to seduce any person serving in His Majesty's forces by sea, land [or air] from his duty and allegiance [not "duty or allegiance," as in the new Bill!], or (2) incites such person to commit any act of mutiny or to make or endeavour to make a mutinous assembly, or to commit any traitorous or mutinous practice . . .

In an indictment under this still valid Act "it is not necessary to specify any particular person or persons who have been approached by the accused. The jury are to consider whether the publication in question was addressed to persons serving in His Majesty's forces, and, if so, whether it amounts to an incitement to mutiny."† Apart from statute law, the remedy of prosecution for the common law misdemeanour of seditious conspiracy is also still open. A seditious conspiracy is, *inter alia*, an agreement to raise disaffection or to excite hatred and contempt of the Government of the day.‡ Thirdly, sedition itself, another misdemeanour at common law, consists in acts done, and words spoken or published with an intention, *inter alia*, to raise disaffection or discontent amongst His Majesty's subjects. Soldiers are subjects, and therefore come within this common law misdemeanour. But they are also under military law. Indeed, by the Army Act, any person subject to military law may have to answer with his life if, *inter alia*, when an intended mutiny or sedition has come to his knowledge, he does not without delay inform his commanding officer and do his utmost immediately to suppress it. The Attorney-General has, so far, given no hint that

the soldiers are esteeming their lives so lightly. And if the only end of the Bill is, as the Attorney-General stated on Tuesday, to preserve the reliability of the armed forces, it would seem that the existing powers can effect this.

Are we, then, to conclude that the Government are already nervous about the loyalty of the forces of the Crown? Or that the police cannot possibly, within the framework of the present law, rely on "a jury of twelve shopkeepers"? Or that Scotland Yard, which, as the Attorney-General admitted in the House, can send *agents provocateurs* to secure obscene publications, is quite unable to rout out the framers and originators of seditious or "disaffecting" literature without the vexatious creation of a new class of offences? If this is the case, the remedy seems to be with Scotland Yard—not with new legislation to circumvent judges, juries, and our common law safeguards.

Even as amended, the present Bill revives a right of search more arbitrary and general than those specific rights of search already cited. It has, moreover, elicited an official admission that the expression of views which ought to be permissible in a free community will not only become a crime more easily, but that it can already be treated as such. Thus, we have it on the Attorney-General's authority, in the debate on Tuesday, that anyone who has in his possession a number of copies of the recent speech by the Bishop of Birmingham against bombing from the air in Afghanistan, in which occurred the following passage, with intent to make it known to soldiers, would come under both the Bill and the existing laws:—

Knowing that my words as published in the English press may reach members of the Royal Air Force concerned, I say that I cannot think that a Christian man could act under orders in this way.

Such an interpretation of the right to the expression of opinion is one which has naturally made the public uneasy; and it has aroused the fear that the application of the new law in panic conditions might easily prove destructive of privacy, property and freedom.

This unfortunate measure was probably conceived in fear—fear that the praetorian guard of democracy might be seduced from their allegiance. But it has brought forth only a state of apprehension of the Government's intentions. In the absence of any proof that the danger which is being guarded against is either real or imminent, the Government has chosen a most unfortunate moment to unsettle the public regarding the preservation of its traditional liberties.

THE OCCUPATION CENSUS

THE Occupations volume of the 1931 Census has now been published and contains much information with regard to changes in occupations and in the geographical distribution of the population and to the total unemployment in the country in 1931, which cannot be gleaned from the regular reports of the Ministry of Labour based on data relating to insured workers only. The figures are more completely analysed than in previous censuses. Thus, the number of persons out of work is now shown separately for the first time; a more detailed geographical classification of occupied persons is now given, which covers the whole country instead of only six selected industrial areas; certain of the industrial classifications have been slightly altered. No children between the ages of 12 and 14 are now occupied as in 1921. On all these grounds strict comparison with 1921 is not possible. But on the whole no such radical changes in classification have been made as between 1911 and 1921, and it is therefore possible to discover fairly accurately what have been the main changes in the occupational and geographical distribution of the population in the ten years 1921-1931.

Between 1921 and 1931 the total population of England and Wales increased by 5.5 per cent. Owing to the decline of the birth rate, however, and the consequent rise in the average age of the population, the number of occupied persons increased by almost 10 per cent., from 17,178,000 to 18,853,000. The number of men of working age rose from 13,901,000 to 14,633,000, and of women from 15,700,000 to 16,411,000. The following table shows (in

thousands) the changes that have taken place among males and females in different economic classes:—

ANALYSIS OF POPULATION OF WORKING AGE

	Man- gerial	Opera- tive	Working on own account	Out of work	Total in and out of work	Unoc- cupied and retired
1921						
Males ...	563	10,800	749	Included in preceding columns	12,112	1,788
Females	74	4,665	327		5,066	10,634
Total ...	637	15,465	1,076		17,178	12,422
1931						
Males ...	922	9,806	835	1,684	13,247	1,385
Females	137	4,664	321	483	5,606	10,805
Total ...	1,059	14,470	1,156	2,167	18,853	12,190

Note.—1921 figures refer to persons over 12 and 1931 to persons over 14 years of age. In 1921 the categories "managerial" and "operative" were "employer" and "employee."

The decrease in the number of unoccupied and retired men is probably accounted for by the fact that in the 1931 Census those who were unemployed but normally had an occupation, were all counted under the heading "occupied," whereas a number of such persons probably registered as "unoccupied" in the 1921 Census. There is a rather surprising increase of nearly 100,000 in the number of those working on their own account, of which 46,000 are under "Proprietors and Managers of retail and wholesale businesses" and 16,000 under "Costermongers and Hawkers." The large increase in the managerial class is partly a real phenomenon and partly due to the change of title from "employer" to "manager," which would include employees excluded from the first. It is generally admitted in any case that the classification is very rough and that the whole class is probably inflated by persons whose vanity is flattered by describing themselves as belonging to a higher industrial status than is theirs by right. The numbers of occupied males and females have increased by 10 and 8 per cent. respectively. In the case of females the occupied have remained a fairly constant proportion of the total, as is shown in the following table, giving the proportion of women over 14 who were occupied in 1911, 1921 and 1931:—

PROPORTION OF WOMEN OCCUPIED

	Percentage of women over 14 occupied in			Number occupied in
	1911	1921	1931	1931
Single	69.6	68.2	71.9	4,320,000
Married	10.2	9.1	10.4	897,000
Widows and divorced	30.1	26.1	21.6	389,000
Total	35.4	33.7	34.2	5,606,000

The increase of 10 per cent. in the occupied population in the ten years 1921-1931 has not been equally shared by all industries. There has been a decline in metal mining (37 per cent.), precious metal mining (19.5 per cent.), railway transport (14 per cent.), coal mining (10 per cent.), tobacco (9 per cent.), agriculture (6.5 per cent.) and metal manufacture (3 per cent.). The manufac-

ture of textiles, of textile goods and clothing and trades connected with skins and leather have expanded less than 1.5 per cent. On the other hand, the number of persons engaged in the manufacture of electrical apparatus has increased by as much as 53 per cent., upholstering by 48 per cent., builders, stone and slate workers, etc., and those providing entertainment and sport by 37 per cent., chemical workers by 36 per cent., and those occupied in commerce (excluding clerks) by 32 per cent. Road transport, finance and insurance, brick and tile making, painting and decorating, paper and cardboard manufacture, drink production, stone and clay mining have increased by 20 to 28 per cent. It is interesting to notice that the progress of road transport and the decline of railway traffic almost exactly cancel each other out, so that workers engaged in transport of all kinds still form the same proportion of the total occupied population as in 1921—8.7 per cent. The following table shows the relative importance of different industries in 1921 and 1931, and also the percentage of unemployment in the latter year:—

OCCUPATIONS BY INDUSTRIES (MALES AND FEMALES)

	1921		1931		
	No. occupied 000's	% of Total	No. occupied 000's	% of Total	% Un- employed
Agriculture	1,254	7.3	1,172	6.2	5.4
Mining—Coal	993	5.8	894	4.7	18.3
Stone, slate, etc.	49	0.3	60	0.3	12.3
Metal working	1,449	8.5	1,446	7.7	18.5
Electrical apparatus ..	140	0.8	215	1.1	9.2
Textile manufacture ...	863	5.0	876	4.7	20.4
Textile goods	809	4.7	820	4.3	6.5
Food manufacture	170	1.0	196	1.0	8.5
Wood working	428	2.5	472	2.5	15.3
Building	505	2.9	693	3.7	14.2
Painting and decorating	238	1.4	297	1.6	13.5
Transport, of which—...	1,484	8.7	1,635	8.7	10.3
Road	538	3.2	690	3.7	9.3
Rail	316	1.8	272	1.4	3.2
Water	275	1.6	268	1.4	26.4
Commerce, of which	1,471	8.6	1,942	10.3	5.5
Salesmen	660	3.9	865	3.5	1.6
Retail proprietors, etc.	542	3.2	651	4.6	8.1
Professions	636	3.7	746	4.0	2.4
Sport	83	0.5	114	0.6	19.9
Domestic service	1,210	7.1	1,411	7.5	7.3
All occupations	17,119	100.0	18,853	100.0	11.5

As would be expected, the percentage of unemployment is greatest in the contracting industries, with the notable exception of the building and allied trades—painting and woodworking—in which, in spite of an expansion of about one quarter, 13 to 15 per cent. of the workers are unemployed. The only declining industry with comparatively little unemployment is agriculture, with only 5.4 per cent.

The total of 2,167,000 persons out of work compares with a figure of just under two million persons registered at Employment Exchanges in April, 1931, of whom 500,000 were temporarily stopped and would probably not have classified themselves in the Census as out of work.

* The Times, loc. cit. † Halsbury's Laws of England.
11th Edition. Ed. Visct. Hailsham. Vol. IX, page 307.
‡ R. v. Burns, 1886.

It is unfortunate that changes in classification make it impossible to show changes in detail over a long series of years; and even in broad categories comparison is complicated by differences of principle in analysing the figures. Prior to 1881, for example, retired persons were grouped with their appropriate occupation, whereas they have subsequently been grouped with the unoccupied. Again, clerks and typists are in a separate category since 1921, whereas previously most of them were assigned to various industries. Any general grouping can, therefore, only be approximate; but, after all allowance has been made, the following table clearly brings out certain trends which represent real changes in the occupational structure of the nation:—

DISTRIBUTION OF THE OCCUPIED POPULATION
OVER 10 YEARS OF AGE

	MEN									
	1851	1861	1871	1881	1891	1901	1911	1921	1931	
General Industry	51	51	54	52	52	53	52	45	42	
Agriculture	24	22	18	14	12	10	8	8	7	
Transport	5	6	7	8	9	10	10	11	11	
Other Occupations	8	9	11	9	9	11	14	19	21	
Unoccupied	12	12	10	17	18	16	16	17	19	
	100	100	100	100	100	100	100	100	100	
	WOMEN									
	1851	1861	1871	1881	1891	1901	1911	1921	1931	
General Industry	22	20	18	16	16	16	16½	11	10	
Domestic	13	15	16	15	15	13	12	10	11	
Other Occupations	4	4	3	3	3	3	4	10	10	
Unoccupied	61	61	63	66	66	68	67½	69	69	
	100	100	100	100	100	100	100	100	100	

The most striking feature of these figures is the large reduction in the proportion of the population, both male and female, engaged in general industry—which consists of all manufacturing and mining occupations—and the increase in the professions, distributive and commercial employment, administration, etc., which are included under "other occupations." Agriculture has continued to decline in importance during the past ten years; while transport, which developed steadily throughout the second half of the last century, has remained stable. Among women there has been a reversal of the tendency to scorn domestic service, but a part of the increase in this category is accounted for by the fact that it includes institutional and hotel service as well as private domestic service.

It has often been suggested by economists that a quinquennial be substituted for the present decennial census; while Sir Josiah Stamp has recently put forward a special plea for a census in 1936 on the ground that our population will reach a maximum in that year and that it would be deplorable if no detailed statistics were available concerning an important turning-point in our economic and social history. We hope the Government will take note of this very strong argument. But there is another matter to which they should also give serious thought. It is, in any case, essential that there should be accurate data on which to base social and economic legislation, dealing, for example, with changes in the school-leaving age, housing or provision for changes in the supply of labour, whose cost and effect are fundamentally affected by alterations in the age, geographical and occupational distribution of the population. Yet no one in authority appears to be alive to the practical importance of statistical knowledge. Statistics which are three or four years out of date lose their value as guides to policy and become merely a matter of academic interest. If the Government accede to the growing demand for a census in 1936, it is at least of equal importance that the census department should be provided with the necessary equipment of personnel and machinery to enable them to produce their results within a reasonable period of months—instead of years.

"I, GOVERNOR OF CALIFORNIA"

(By A CORRESPONDENT IN LOS ANGELES)

CALIFORNIA, the land of strange religions and the retreat of millions of guileless souls from Iowa, registers in its own characteristic fashion the currents of new political thought now sweeping across the United States of America. The serious book trade is in the depths of depression; but a best-seller has appeared, entitled "I, Governor of Cali-

fornia, and How I Ended Poverty." This little pamphlet is the work of that prince of propagandists Upton Sinclair, who many years ago startled the United States with "The Jungle," a savage attack which, in his own words, he aimed at the great heart of the American public, but which hit its stomach. One of the supplementary booklets to "I, Governor" describes Mr Sinclair's subsequent career as a publicist, making money by sensational sociological essays and losing money by silly sociological experiments.

Quietly using methods of personal propaganda, Mr Sinclair recently startled an incredulous country by winning, with a handsome majority, the Democratic nomination for Governor of California. In possession of this nomination, with an effective and enthusiastic machine built up of former Socialists, advanced Liberals and some Democrats, and with the somewhat reluctant endorsement of the Democratic Party leaders he suddenly loomed up as a serious contender for office.

His plan was magnificently simple—just plain, old-fashioned Socialism. No new-fangled notions or adjectival prefixes, but just Socialism. Robert Owen, with a dash of William Morris, and perhaps a little inspiration from any one of a hundred inflationists—but none from Communists, Guild, State or any other qualified sort of Socialists—provides the basic ideas of the EPIC (End Poverty in California) plan. A few weeks ago the betting was odds-on that Sinclair would be elected and the plan become a reality. Like so many booms, however, it seems to have reached its peak too soon. Opposition, slow and ineffective in starting, passed through a phase of over-bitterness and invective, which alienated many moderate voters, but latterly seems to have become more effective. The betting has swung against Sinclair. But California is a curious social phenomenon, and it is possible that there may have to be an amendment to the famous schoolboy howler which described the writing on the wall as "Aimée, Aimée, Sempile McPherson."

The EPIC plan consists of three main points, each of which is to be carried out by an alphabetical organ. The CAL (California Authority for Land) will take over any fertile waste land or abandoned farms and settle co-operative colonies on them. The CAP (California Authority for Production) will do the same with factories. The CAM (California Authority for Money) will issue scrip to pay the workers and bonds to purchase the land and factories. Mr Sinclair expects that, in addition to the 20 per cent. of unemployed already in California, half the unemployed in the rest of the United States will "jump the first freight." Capitalists he expects to leave, taking with them their bonds and cash; but not the land or the Californian climate. The co-operative colonies will not need capitalists, but only workers.

That such fantasies should be practical politics and should have enrolled themselves behind the Democratic banner must be very embarrassing to President Roosevelt and all respectable New Dealers. In the Democratic primary election which established his candidature, Mr Sinclair defeated a protégé of the Administration; but the primary once over, the party could hardly fail to support its duly nominated candidate. Mr Farley, the Postmaster-General and political strategist of the Administration, announced that the party would support Mr Sinclair, but he contrived to convey very clearly the reluctance with which he made the announcement. Mr Roosevelt said that he would receive Mr Sinclair, but that he would not talk politics with him; they were closeted together for two hours, presumably discussing the climatic contrasts of California and New York. Mr Sinclair emerged full of enthusiasm for the President, but there was no sign of the feeling being reciprocated. The confusion of the New Dealers was not diminished by the fact that Mr Sinclair's opponent, Mr. Frank Merriam, the present Governor, is not only a Republican, but an almost reactionary Conservative. The Republicans, of course, seized upon the whole episode with glee, and to judge by some of their remarks the Democratic Party was on the point of electing Mr Sinclair to the Presidency, the Senate and every one of the seats in the House of Representatives. Under the pressure of these attacks even the tepid support previously extended has been withdrawn, and Mr Sinclair has been more or less disowned by Washington.

Nevertheless, EPIC must apparently be taken as a portent. Its ideas have already spread to other Pacific Coast States, and the Democratic primary in the State of Washington was won by a candidate whose EPIW plan imitated Mr Sinclair's in all save its happy abbreviation.

Another widely discussed and popularly supported plan is that proposed by Dr. Townsend, of Long Beach, California, whereby any man or woman over the age of 60 years may retire on a pension of \$200 per month provided they promise to spend this amount before the next monthly payment is due. Eight million pensioners, therefore eight million jobs, and an added turnover of \$1,600,000,000 per month. The revolving fund will be provided by a sales tax, which, as Dr. Townsend points out, would raise prices

by at least 25 per cent. right away, thus fulfilling the purposes of the New Deal much more effectively than NRA has been able to do.

It would be optimistic to believe that Dr. Townsend and Upton Sinclair are the only Californians capable of producing such plans. And, as Mr Sinclair points out, the advertisement value of these schemes is considerable. If California, why not Florida or Middletown?

The New Deal is said to be in process of revision; but with humanity on the march—to or from California—it is a little difficult to say what form revision may finally take. It is one thing to go out for a ride on the Democratic tiger. Coming home may be a different experience.

NOTES OF THE WEEK

Parliament Resumes.—The reassembly of Parliament on Tuesday was marked by the welcome return of both the Prime Minister and the leader of the Opposition, each restored to health and to the House after a prolonged holiday. Mr Lansbury's first act, after congratulating Mr MacDonald on his recovery, was to ask for a debate on the private arms traffic during the present session. Mr MacDonald granted his request, as he could hardly have failed to do in view of the importance of the matter. Since last February's debate, when the Government professed scepticism about the need for action, the United States inquiry has been held, and extraordinary revelations, involving British firms, have been published. We trust that the Government will prove to have been as deeply impressed by these revelations as public opinion in general. It is at any rate satisfactory that Sir Bolton Eyres Monsell agreed on Wednesday to offer an independent investigation into the charge made at the American inquiry that the British Admiralty had shown partiality in granting submarine contracts. Apart from the discussion of the arms traffic, and certain concessions over the "Sedition Bill" [which we discuss in a leading article], the Opposition did not succeed in extracting much information or satisfaction from the Government. Agricultural policy was again under fire, but Mr Elliot and Lord De la Warr could promise little but restrictions in the case of imports and good intentions in the case of exports. Imports of milk products, Members learned, and, if possible, of beef would be further cut down; but no hope was offered to the desperately depressed herring fishermen beyond the possibility of an enlargement of exports to be negotiated with Germany, Poland and the Baltic States. It is interesting to observe that, where an export industry is concerned, Mr Elliot finds himself bankrupt. Similarly, on the subject of order at public meetings, Mr Anstruther-Gray and Mr Vyvyan Adams failed to secure any satisfaction from Sir John Gilmour. Sir John declined to say whether the Government would introduce the new regulations for preserving order which have been suggested as a result of the notorious Fascist meeting at Olympia. Ministers are presumably satisfied that police measures have proved sufficient and that the danger is passed. We sincerely hope that they will prove justified in their surmise.

The "National" Triumvirate.—The annual National Labour luncheon at the Trocadero has become a ceremony at which votaries of the Government worship with particular fervour before the shrine of "national unity." Last year the danger from which the country was being rescued by the Government was dictatorship; this year it seems to have been war. But the three high priests were still preaching to the converted with their accustomed complacency, and the familiar phrases floated symphonically from their lips. "The work of the National Government," said the Prime Minister, "has made the great centre of the Empire more honoured, respected and appreciated by

our sons and daughters in remote territories than ever before." The younger generation should see in the Government "the expression of a great philosophy of social progress." "The greatest guarantee of social and democratic stability," Mr. Baldwin added, "is the continuance of a broad-based Government bringing together faithful men from all parties." And Sir John Simon declared unambiguously that "the spirit behind the National Government is the spirit of the British people." The chief interest of the general public in the proceedings, however, will have been to discover what political future the "National" leaders are envisaging for themselves. Is there to be a "National" Party at the General Election, to embrace MacDonaldites and Simonites? Or a purely party election? Or a "National Government" election like the last? The third possibility is apparently the most likely; for Mr Baldwin spoke of his intention to "maintain the unity that at present exists in the National Government, and once more to persuade the people of this country to entrust that Government with a further lease of life." Mr Baldwin's language—"the unity that at present exists"—was not quite so confident as that of his two colleagues, who professed to look forward to an uninterrupted and indefinite period of harmonious co-operation. "In some quarters," Mr Baldwin said, "we find a slackening of interest and an expression of doubt." The difference of note is perhaps intelligible. For the "National Party," which would offer Mr MacDonald and Sir John Simon a secure and permanent asylum, might raise awkward questions of leadership as well as of local representation. A National Government, on the other hand, elected to deal with a temporary (if rather protracted) emergency, would enable embarrassing pilots to be dropped as soon as the weather permitted.

The Betting Bill.—The Government may well be congratulated on their firmness in sticking to their guns over the Betting Bill. The Committee stage has now been transferred from Standing Committee "upstairs" to the floor of the House; and though there does not, curiously enough, seem to be any exact precedent for this procedure, it is surely justified on grounds of common sense, as affording the Government the only way out of its dilemma. For otherwise the Government would be obliged either to carry over the Bill to the next session, which, owing to the congested state of its Parliamentary programme, would in fact have meant abandoning it altogether; or else it would have been forced to accept it in such a mutilated form that it would merely have stultified the purpose for which it was introduced, by legalising the "tote" on dog tracks without placing any limitation on the number of racing days permitted. That, of course, is what some of the opponents of the Bill, who have persistently obstructed "upstairs" in a very discreditable manner, would have liked to happen; and the last state of the betting nuisance would then have been worse than the first. Happily the Government have discovered this ingenious way of circumventing these obstructionist tactics, and there is every reason to hope that the

remaining stages of the Bill will now be completed before the end of the session. The Government must, of course, bear the blame for its initial error in permitting such an important piece of legislation to be delivered into the hands of its enemies; but the opposition of the Labour Party to the transfer of the Bill to the floor of the House smacks somewhat of pedantry. The Bill, for all its imperfections, is manifestly in the public interest, and there is no reason why the country should be made to suffer unnecessarily on account of the Government's tactical blunder in its original handling of the measure.

* * *

Mr Bennett and Mr Stevens.—Another blow has been struck at Mr Bennett's rapidly waning prestige by the resignation of Mr Stevens from the Canadian Cabinet. As long ago as last January Mr Stevens made a speech in which he attacked certain "unfair and unethical" methods practised by Canadian business. Various business interests protested, and Mr Bennett expressed disapproval of the speech. But Mr Stevens was supported by large sections of public opinion, and in the end Mr Bennett, in deference to this opinion, appointed a Committee, of which Mr Stevens was head, to inquire into the alleged malpractices. As soon as the Committee began to sit, evidence came to light which astonished and shocked the country. In the words of our Canadian correspondent:—

Social welfare workers, officials who administer the minimum wage laws, and labour leaders have given evidence, fortified with chapter and verse for specific cases, of scandalously low wages being paid in the clothing and other industries, of wholesale evasions of Provincial minimum wage laws, of workers on full time being compelled to seek public relief to save their households from destitution, and of men and women working long hours under appalling conditions who were afraid to lodge complaints through fear of losing their jobs. The Committee was presented with a picture of considerable elements of the working classes of Canada working for wages which were far below the acknowledged level of decent subsistence.

It was not forgotten by the public that Mr Bennett had justified his high protection programme on the ground that it would permit high wages to be paid to the workers. To allay the storm, Mr Bennett converted the Committee into a Royal Commission, of which Mr Stevens was again head. At the end of July, however, Mr Stevens read a paper privately to a group of fellow Conservatives, and in this paper he accused certain explicitly named business interests of "indefensible wage-cutting, stock-watering and other unethical practices." The paper leaked out and was published in the Press. Immediately the interests concerned demanded Mr Stevens' resignation; and Mr Bennett charged him with prejudging the issue and making untrue statements. Mr Stevens retorted that all he had said was true, and refused to resign from the Commission without resigning from the Cabinet. Mr Bennett persisted in his attitude, and so Mr Stevens has resigned. His courage and candour have not only won him widespread popular support; they are also likely to turn Mr Bennett's impending defeat at the General Election into an ignominious rout.

* * *

Coalition in Australia.—The free trade Country Party is after all to have a place in the new Australian Government. At the recent elections Mr Lyons's United Australia Party secured the largest representation, but failed to retain its clear majority over all other parties. The Country Party, led by Dr. Page, held the balance. Negotiations between Mr Lyons and Dr. Page were begun, but failed in the first instance. Dr. Page demanded the Deputy Premiership, four places in the Cabinet and a formal inquiry into the economic value to the nation of certain small protected industries. The first two requests, which Mr Lyons originally refused, have now been granted; but the last has been met by a compromise. Some "informal" investigation into the protected industries is to be made, and Mr Lyons has assured Dr. Page that the recommendations of the Tariff Board, which are shortly to be published, will prove acceptable to him. These assurances do not

sound very convincing. It almost looks, on the face of it, as if Dr. Page has abandoned his struggle for freer trade in return for the Deputy Premiership. To some extent, no doubt, he will be able to exert influence from within the Cabinet, and some minor reduction of tariffs will probably be made. But to hope for Empire Free Trade, or anything like it, from his inclusion would be Utopian optimism. Not only is the absolute level of the Australian tariff unlikely to be lowered; but the British preference will certainly not be increased. For the Australian Government, impelled by Mr Elliot's restrictions in Great Britain, is seeking fresh markets for Australia in foreign countries. And it is most unlikely that she will obtain concessions in these countries unless she offers something in return. Mr Elliot has killed the dream of Empire Free Trade; and Dr. Page will not be able to revive it.

* * *

The French Radical Congress.—The national congress of the French Radical parties, held at Nantes last week-end, was visibly under the shadow of the cloud that hangs over the whole of Europe. With the Marseilles tragedy just behind them, and the Saar plebiscite (as M. Herriot reminded them) just ahead, these French party politicians manifestly felt that party considerations and even important issues of substance in French home politics must be subordinated to the overriding need to keep the National Government in existence. The stumbling-block, of course, was M. Doumergue's still, perhaps purposely, rather nebulous project for constitutional reform. The party's downright dislike of that project, as far as its contents were known to them, was put on record in the report presented by the party committee on the subject, as well as in a resolution voted by the Radical senators. After that, however, M. Herriot was successful in carrying the congress with him in his insistence that, if the united national front is to be broken, then the breach shall not be made from the Radical side. (Details of the Congress decisions will be found in our Paris Letter on page 826.) Opposition centred upon M. Doumergue's plans for making possible a dissolution of Parliament before it comes to the end of its statutory term. At present this is theoretically possible, but practically it is a dead letter—partly by convention and partly because it can only be done with the consent of the Senate, where the Radicals have always held a very strong position. M. Doumergue is reported as desirous of abolishing the present constitutional necessity for the Senate's consent, and placing the power of dissolution in the hands of the Prime Minister. It is perhaps ominous that this proposal is being pressed by M. Tardieu; but, on its merits, it will not appear very wrong-headed to English observers, who remember French Parliaments which have lingered for months or years after they had quite lost touch with the electorate. Would it really be dangerous to republican liberties in France if the French constitution were to be revised in the direction of English practice? No doubt institutions which look the same on paper do work very differently in countries which differ in their political temper and traditions. There is something strange in the spectacle of a Radical party finding a palladium of liberty in a policy of constitutional die-hardism. Still, the Radicals have shown themselves conciliatory; and it is to be hoped that MM. Doumergue and Tardieu will now meet M. Herriot in the same spirit.

* * *

The German Protestants' Victory.—It was evident last week that Dr. Müller and Dr. Jäger were in retreat. But the extent of the Protestant Confessional community's success, as it has been revealed this week, seems to have taken even the victors by surprise. It is, indeed, remarkable that Herr Hitler should have abandoned his old friend Dr. Müller—as well as the ineffectively ruthless Dr. Jäger—so completely; for, after all, whatever the nominal autonomy of the Reichsbishop may have been, he was put into office by the Nazi Party in order to "unify" the Protestant churches of the Reich; and the police were put at his disposal for the purpose. The Evangelicals, in fighting to defend their own church liberties, have now achieved

a break-through which makes a deep breach in the grandiose structure of "the totalitarian state." The victors may not desire this, for many of them—and this is part of their strength—are convinced Nazis as well as determined Protestants. It is neither their wish nor their fault that the latent incompatibility between Protestant freedom of conscience and Nazi totalitarianism has been brought to light by a conflict which they did not initiate. But the harm—or the good—has been done; and on Tuesday Herr Hitler declared to Bishops Meiser, Wurm and Marahrens that henceforward he would leave the problems of the Church to the Church itself. The dissenting Protestants have, indeed, secured Herr Hitler's acquiescence in the fundamental demand which they formulated in their declaration of independence of October 20th; and everything points to Herr Hitler's capitulation being genuine, and no mere *ruse de guerre*. The unconditional release of the interned bishops over the week-end; their reception by Herr Hitler himself on Tuesday; the taking of the Chancery by storm, on the same day, when thirty delegates of the Bavarian Protestant peasants forced their way in past the Black Guards in order to make the Führer aware of their feelings; the collapse of Dr. Müller's pathetic eleventh-hour attempts to save some vestige of his face: all these things would seem to indicate the beginning of a profound change in the psychological atmosphere in Germany. There may be many elements in Germany which will be more eager than the Protestants themselves to occupy and organise the ground which the Protestants have won for the common cause of liberty. The wheel of Fortune seems to be coming full circle; and the Church may perhaps be destined to retrieve in the twentieth century the defeat which it received in the sixteenth at the hands of the State.

* * *

Confusion in Austria.—The most important fact in the internal political situation in Austria now is the hardening of Catholic feeling against the anti-religious totalitarian State. Although a breach has been made in the German Nazi structure by the firm stand of the German Protestants, the Austrian Catholics will certainly not revise their opinion about political totalitarianism until they have seen how the German Catholics fare. This stiffening of the Austrian Catholics' attitude has produced a certain tension between the Catholic and the Heimwehr wings of the present Austrian Government, and also a certain division of counsels in the ranks of the Austrian Nazis. The Austrian Catholics are no more enamoured of totalitarianism, if it is pressed upon them in a Heimwehr form, than they are of the Hitlerian brand. A speech by Prince Starhemberg on October 25th shows that he resents this. He hinted that the Heimwehr had borne the heat and burden of the day in the common struggle, on two fronts, against the Nazis and the Social-Democrats, and that they would not submit to being made use of by the Catholics and then thrown on the scrap-heap. It was still more significant that he staked out a claim for the Heimwehr to take control of the bringing up of the rising generation; for the recent history of Germany, Italy and Russia shows that this is the most contentious point in all the debatable ground between the Church and the would-be totalitarian State. If the Heimwehr are in earnest over this claim there can hardly fail to be a serious difference of opinion between them and their present Catholic partners. Among the Austrian Nazis, again, there is now a division between the intransigents—who inherit the nineteenth-century Styrian Liberal tradition "Free from Rome"—and the moderates who cannot bring themselves to renounce their Catholicism if Catholicism and Nazism turn out to be incompatible. On the 27th of last month some representatives of this milder school of Austrian Nazis had a conference with Dr. Schuschnigg and Prince Starhemberg, and were informed of the Government's conditions for admitting them into "the Patriotic Front." These conditions are likely to have been severe; for nobody in Austria has forgotten what happened to the Conservatives and the Centre Party in the Reich after they had allowed Herr Hitler to come into power; and the one point—and an important point—on which the Austrian Catholics and the Austrian Heimwehr

are in absolute agreement is their common desire to avoid the fate of being *gleichgeschaltet*. At the moment it looks as though in Austria, as in Germany, the decisive battle against the totalitarian State is likely to be fought on religious ground.

* * *

A Financial Inquiry in Ireland.—The rumours of a financial commission of inquiry which have been circulating in Dublin for many months were justified at the end of last week when the Minister of Finance announced the personnel of a Commission which is to complete the work begun by the Parker Willis Banking Commission of 1926. That inquiry led to the Currency Act of 1927 which now regulates the Free State currency. The new Commission is to be presided over by Mr Joseph Brennan, the chairman of the Currency Commission, and the "external" members are to be Professor T. E. Gregory, of London, and Mr Per Jacobsson, of the B.I.S. The other eighteen members include Professors Duncan, O'Brien, Busted and O'Rahilly, three representatives of the banks, five Civil Servants (including the Secretary to the Department of Finance), a Bishop, two trade unionists, two farmers and two business men. The personnel has given general satisfaction, the rather cumbersome size of the Commission being compensated by the representative character of its membership. The terms of reference are very wide, embracing "the system in Saorstát Eireann of currency, banking, credit, public borrowing and lending, and the pledging of State credit on behalf of agriculture, industry, and the social services." The chief topics of inquiry are likely to be the proposal for a Central Bank, the budgetary position and the link between the Saorstát pound and sterling. On the last point there is not the least likelihood of the Commission's reporting in favour of anything but the continuance of the present system, which works very smoothly. On budgetary questions the Commission may find it necessary to play the rôle of a May, rather than a Macmillan, Committee. The question of a Central Bank is the most open of the three. The banks will, of course, resist it, as they would lose their present right of note issue and would have to contribute interest-free deposits. The Bank of Ireland would, in addition, lose the custody of the Government deposits. It is difficult to see, in the circumstances of the Free State, much useful scope for a Central Bank. Nor would one have thought that the argument in favour of completing the chain of Dominion Central Banks would have weighed very heavily with the section of opinion now dominant in the Free State, though the organ of the Government party has linked the present inquiry with those which have recently been held in India, New Zealand and Canada. The report of the Commission will be awaited with great interest on both sides of St. George's Channel and, in the meantime, there is no excuse for the "scare or panic" which the Minister of Finance appeared to fear would result from the announcement of the Commission.

* * *

But the War Goes On.—There seems to be no prospect of submitting the dispute between the United Kingdom and the Irish Free State to a similarly patient inquiry. Mr Thomas declared in the House of Commons on Tuesday that there was nothing fresh to report, that no overtures had been made on either side and that "it would be a fatal

mistake to enter upon negotiations unless there was a real and genuine prospect of a settlement, because it would do more harm than good." If Mr Thomas means that further negotiations carried on in the same spirit and with the same negotiators as those which have failed would do more harm than good, he is probably right. But are we really to allow this suicidal "economic war" to become a permanency? If anyone had any lingering doubts about the damage inflicted by this insanity, they would be dispelled by a pamphlet recently written by Mr Henry Harrison and published by the Irish News and Information Bureau. The damage to Ireland is clearly large, though apparently by no means as catastrophic as the British Government ex-pects. The damage to Great Britain is no less. Our best customer has fallen to fifth place; our shipping, insurance and other "invisible" income has been diminished. Mr Harrison makes the point that both the Free State and Great Britain have been buying from other countries what they previously bought from each other, and that in so far as these other countries are not in the sterling area, the stability of sterling is thereby affected. Mr Harrison lays much more emphasis upon this argument than it deserves, but it is certainly true that no conceivable economic or financial interest of Great Britain is served by a continuance of the present dispute. A trade war with Germany, France or the United States would arouse insistent protests which the Government could not afford to disregard. Trade with Ireland was, until two years ago, more important than trade with any of these Great Powers. If the British public allows the economic war with the Free State to continue, it does so in ignorance of the magnitude of the issues involved.

Petrol and Policy in Germany.—Dr. Schacht, in his capacity of Minister of Economics, is rapidly forging ahead with his plan to make Germany self-sufficing in essential raw materials. In the space of one month he has made an association of ten lignite producing concerns and has given a Reich Commissar sweeping powers to compel it to produce benzine by the I.G. Farbenindustrie's hydrogenation process. According to our Berlin correspondent, a German expert recently estimated that Germany will in a few years be able to produce annually 1,250,000 tons of benzine—or 1,400,000 tons if the present compulsory admixture of alcohol spirit be included—against her current consumption of 1,450,000 tons. The lignite companies fused into a compulsory syndicate number ten, and include I.G. Farbenindustrie and other concerns which are not primarily lignite producers. The members of this syndicate, who are appointed and can be removed at the will of the Commissar, are to finance a company already founded, the Braunkohlen Benzin A.G., which is again almost entirely under the control of the Commissar, who can conclude contracts in its name and negotiate and act for it without hindrance. The capital is to be Rm. 100 millions. The Commissar may require the taking up of shares by other companies than the original ten. The compulsion of private concerns to supply capital for production of a kind which the Government considers necessary is new to Germany; and the law led to a further heavy drop in lignite shares on the Bourse. It is significant, as the Berlin correspondent of *The Times* has pointed out, that in 1937 the vast programme of motor-roads linking up the industrial districts with the frontiers is due to be completed. Herr Hitler's "four years" which he demanded of the nation in 1933 also end in 1937. Will Germany be as self-sufficing in 1937 as Dr. Schacht apparently intends to make her, and will it be only for the doubtful comfort of a costly self-sufficiency? Whatever may be the real nature and causes of external pressure upon Germany, her internal economic policy can hardly fail to arouse misgivings abroad, or to push farther and farther away any hope of a return to normal relations between Germany and her neighbours.

Lord Nuffield Expects.—Lord Nuffield now reiterates almost weekly that it is the patriotic and apparently moral duty of every Englishman to refrain from buying foreign cars. We are not clear how far Lord Nuffield's convic-

tions extend in this direction. Does he consider all international trade immoral? Or would he feel justified in purchasing some of his raw materials from foreign countries, if he could not get them so cheaply at home? We do not gather that he objects to foreigners purchasing cars manufactured in this country. Is his belief, then, that all countries should be allowed to import, but Great Britain alone to export? Or would he perhaps be willing to grant absolution to British motorists who buy petrol from the foreigner? Lord Nuffield should expound his system of ethics more fully. For we cannot suppose him to mean that the whole duty of an Englishman consists in his buying British cars.

The German Debt Agreement.—Mr Runciman announced in the House of Commons on Thursday afternoon that the negotiations between the British and German Governments have resulted in an agreement. The German Government has agreed that 55 per cent. of the value of German exports to the United Kingdom shall be definitely earmarked for the payment of British exports to Germany. This is expected to be sufficient to provide payment in full to British exporters. Foreign exchange permits for the import of British goods are, at the outset, to be issued without restriction, though the German Government reserves the right to restrict their issue temporarily, after consultation with the British Government. As for the outstanding debts, Germany undertakes to provide £400,000 immediately and to expedite payment by realising German commercial claims on the United Kingdom. If this should not suffice, a further percentage of the proceeds of German sales will be allocated for the purpose. This percentage has been fixed for the time being at 10 per cent., but it is in any case to be sufficient to liquidate the outstanding debts in twelve months. The sondermark arrangement is to continue. The German Government, in addition, undertakes to continue the payment in full of interest on the Dawes and Young Loans in British ownership on June 15th last. Holders of other loans will be offered 4 per cent. Funding Bonds guaranteed by the German Government and exempt from transfer restrictions provided they are accepted in full payment of any coupons funded. Mr Runciman added that provision has been made for the replacement of the agreement, should it be terminated, by a clearing arrangement, and he concluded with the warning that although this agreement embodied the principles which it had been the object of the Government to attain, it did not automatically remove all the difficulties from the path of Anglo-German trade, and that exporters should therefore continue to proceed with caution. These details have only become available as we go to press and considered comment must be withheld until next week. But it is obvious that an attempt has been made to make the agreement comprehensive and that the German Government has made considerable concessions to the British point of view. The provision for the holders of non-Reich loans is a slight, though welcome, improvement on the alternatives hitherto open to them. If these arrangements proceed smoothly, they are clearly preferable to an exchange clearing, especially to one imposed without German assent. But in view of the effects on foreign trade of past developments in Germany's economic policy, there is ample reason for Mr Runciman's caution. Moreover, even if Anglo-German relations are satisfactorily regulated by this agreement, it does nothing to improve the general economic position of Germany, which is one of the major hindrances to world recovery. We have been able to establish ourselves in a favoured position, but the wider question of Germany and her creditors appears to be still as far from solution as ever.

The Volume of Overseas Trade.—Last week's *Board of Trade Journal* contained the usual quarterly article showing the trend of our overseas trade by the elimination of changes in prices. The tendency of the volume of exports to increase faster than imports, which was first noticeable in the second quarter of 1934, continued in the July-September period. But compared with the corresponding periods a year ago, the increase in the volume of

both imports and exports in the third quarter this year was appreciably smaller than in the second quarter:—

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume
	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100
1924 ...	1,137	135.0	842	88.0	801	120.8	663	116.2
1930 ...	957	100.0	957	100.0	571	100.0	571	100.0
1931 ...	797	81.0	984	102.8	391	89.4	437	76.5
1932 ...	652	75.3	867	90.3	365	83.3	438	76.8
1933 ...	627	71.4	878	91.7	367	82.1	447	78.4
1931								
1st quarter	192.5	84.5	227.7	95.2	103.3	93.2	110.9	77.7
2nd "	189.6	82.0	231.2	96.6	95.8	90.8	105.6	74.0

3rd "	163.9	73.0	224.6	93.9	99.3	82.2	120.9	84.7

The increase in the volume of imports over the corresponding period in 1933 declined from 7.4 per cent. in the second quarter to 3.3 per cent. in the three months ended September, 1934. The increase in the quantity of British exports declined from 9.1 per cent. to 6.9 per cent. during the same period. The index of import prices was somewhat higher and that of export prices slightly lower than a year ago. But the rise in average import prices was almost entirely due to higher prices of industrial raw materials. The quantity of imports of raw materials rose by only 2.2 per cent. between the third quarter of 1933 and the corresponding period this year, for larger purchases of iron ore and scrap, non-ferrous ores, timber, silk, oil-seeds and rubber were partly offset by substantial reductions in our imports of raw cotton and wool. Sharp increases in imports of non-ferrous metals, oils and fats, iron and steel, machinery and motor-cars contributed largely to the rise of 12.1 per cent. in the volume of articles wholly or mainly manufactured. The figures show a decline of 5.1 per cent. in the volume of British exports of raw materials and articles mainly unmanufactured, but rises of 12.5 per cent. and 7.7 per cent. respectively in the two groups comprising food, drink and tobacco, and articles

wholly or mainly manufactured. The export industries which have made most headway include those engaged in the production of iron and steel, cutlery, hardware and instruments, electrical goods, machinery, silk yarns and manufactures, motor-vehicles and rubber manufactures. But despite the recent expansion, the volume of our exports remained well below the level of 1930, and compares even more unfavourably with the position ten years ago.

Retail Sales in September.—The sustained improvement in retail trade, of which further evidence was given in last week's *Board of Trade Journal*, is an encouraging feature of the recent economic trend in this country. In reading the following index numbers of changes in the value of sales it must be remembered that they are not adjusted to eliminate the normal fluctuations due to seasonal influences:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Other Merchandise		Total
	Food	Merchandise	
1932	102	99	101
1933	100	100	100
1933—September	97	88	93
October	99	105	102
November	102	105	104
December	118	146	131
1934—January	98	104	101
February	101	80	91
March	104	95	99
April	102	100	101
May	103	113	108
June	103	103	103
July	98	107	102
August	100	79	90
September	101	92	97

The money value of sales in September was 4.1 per cent. greater than in the corresponding month a year ago. Sales of food and perishable articles alone rose by 3.7 per cent., and those of other merchandise increased by 4.5 per cent. Among the latter group, all the items except piece-goods and hardware showed a rise as compared with a year ago. The improvement was most marked in the case of boots and shoes and in the furnishing departments. All the five districts registered an increase in sales over last year. The number of persons employed in the establishments making returns was 2.7 per cent. higher than in September, 1933. Restocking continued, though at a slow rate. Stocks first showed an increase on the corresponding month of 1933 in February. In September their value (at cost) was 2.2 per cent. higher than a year ago. Reports of the development of retail sales since the beginning of October continue to be moderately encouraging.

OVERSEAS CORRESPONDENCE

UNITED STATES

CHINA, SILVER AND STERLING

THE recent fluctuations in sterling have been disturbing, not so much because of their amplitude as because their erratic character is in contrast with a long period of limited movement. The nervousness has been somewhat increased by apprehensions of what may follow the *de facto* devaluation of the Shanghai dollar. As was expected, the rise in the price of silver led the Chinese Government to detach its currency from the metal, with the result that, although the price of silver has remained about 53 cents, the Shanghai dollar has dropped from 38.50 cents to about 32.50 cents, or about 15 per cent. This decline compensates for the 10 per cent. export tariff and the equalisation fee. There has been a slight weakness in the Japanese yen, but nothing which yet suggests competitive devaluation. Indeed, it would appear that the net monetary effect of the United States

silver policy has been to detach China from the silver standard and to attach it to the sterling standard; since it is understood that the Chinese silver equalisation fund is to be operated through the London silver market.

The opening of the Montreal silver market on October 22nd has introduced a new complication. There is, of course, little spot silver in Montreal, and the current Canadian output is scarcely large enough to provide material for a broad market. American trading in Montreal is subject to the 50 per cent. tax on speculative profits; but it is reported that our Foreign Exchange Control will not oppose the movement of American funds to Canada for the purpose of speculating in silver.

The anniversary of the Treasury gold-buying policy announced October 22, 1933, finds our gold policy quiescent at a price of gold established nine months ago, and an active silver policy which apparently implies the utilisation of silver rather than gold imports when our balance of payments is positive. Indeed, a well-informed article in the

Wall Street Journal of a recent date argues that upwards of \$40 millions of the Treasury's gold has been expended in the purchase of silver; the gold so used is said to have been bought in London and never shipped to this country.

The anniversary of the gold programme finds Moody's index of primary commodities at 144.5, against about 123 a year ago. Broadly speaking, it is the "drought" agricultural commodities which have advanced most, followed by those most effectively cartelised. Retail prices are substantially higher than a year ago, and real incomes on the average have probably fallen. When the President, a year ago, affirmed his objective of higher prices, the demand was on the whole received favourably by the public; a milder suggestion of higher prices in the official Press interview a few days ago received no more than a neutral response. Yet the issue seems dormant rather than dead. The price complaints of the farmers have been allayed by the fact of higher prices; but in its stead there is a growing resistance among urban consumers to the higher cost of living. Furthermore, the agricultural price structure is the result of a combination of subsidised curtailment and the drought. Obviously, drought cannot be depended upon as an annual phenomenon; yet there is opposition in agricultural areas to the arbitrary curtailment schemes, in part attributed to resentment at the surveillance of the "snoopers," as the Government enforcement agents are called, in part to disappointment at the amount of the individual subsidy as compared with the value of the unground crop at current prices.

This feeling is manifesting itself in widely separated areas. The cotton crop east of the river exceeded the Bankhead quotas; west of the river it was inferior, owing to the drought. Hence, the Bankhead Act is popular west of the river, where the planter is at least partially compensated for his crop failure; east of the river, although the crop was curtailed, the planter is penalised for the comparatively slight excess of production. In the corn-hog area, Mr Wallace, Secretary of Agriculture, has been conducting a plebiscite on the continuation of the scheme, and, while few farmers voted, the favourable vote amounted to a negligible fraction of the total canvassed. Feeling is particularly strong against the processing tax. The processing tax on wheat does not appear to have limited consumption; but in pork and cotton there is a widespread belief that it has done so.

MEMBER BANK ASSETS

With the statement of October 17th, the Reporting Member Banks' assets were presented in a new form—a distinct improvement in clarifying their position:—

ITEMS OF THE REPORTING MEMBER BANKS' STATEMENT (\$000,000)

	Oct. 17
Loans and investments—total	17,854
Loans on securities—total.....	3,083
To brokers and dealers in New York	706
To brokers and dealers outside New York	149
To others	2,228
Acceptances and commercial paper	465
Loans on real estate.....	984
Other loans	3,315
United States Government obligations	6,650
Obligations fully guaranteed by United States Government	446
Other securities.....	2,911

The magnitude of the real estate item is rather surprising, especially in comparison with the small figure for acceptances and commercial paper. And at that, over half of the "acceptances and commercial paper" is held by the banks of New York City. In some of the districts the proportions are striking. For example, a few districts are itemised below:—

COMMERCIAL LOANS OF REPORTING MEMBER BANKS (\$000,000)

	Cleveland District	Philadelphia District	San Francisco District
Acceptances and com. paper	5	19	24
Loans on real estate.....	76	72	344
Other loans	134	184	318

LABOUR AND THE ELECTIONS

The terms of the President's proposed truce between employers and employees have not yet been formulated, but a *de facto* truce is an actuality. The sudden tranquillity

is almost disconcerting, although certainly welcome to employers and probably to the workers. The total dues-paying membership of the American Federation of Labour is given as 2,600,000, a gain of 380,000 during the past year—an unexpectedly small increase.
