

THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXI

SIGNOR MUSSOLINI'S REFUSAL

In the House of Commons last Monday Mr Eden confirmed the report that, in Rome last week on instructions from His Majesty's Government, he had made an offer to Signor Mussolini which might have opened the way for a settlement of the Italo-Abyssinian problem.

Mr Eden was able to tell the Head of the Italian Government that, for the sake of obtaining a final settlement of the dispute between Italy and Abyssinia, His Majesty's Government would be prepared to offer Abyssinia a strip of territory in British Somaliland giving Abyssinia access to the sea. This proposal was intended to facilitate such territorial and economic concessions by Abyssinia to Italy as might have been involved in an agreed settlement. His Majesty's Government would ask for no concession in return for this arrangement, save grazing rights for their tribes in such territory as might be ceded to Italy. This suggestion, as Mr Eden assured the House, was not lightly made; and only the gravity of the situation could justify the cession of British territory without equivalent return. This was indeed unusual in the history of international

It is, indeed, unusual in the history of international relations up to date for any Power to offer spontaneously to cede territory without an equivalent return in kind. And to many speakers in the House evidenced misgivings over a proposal, the exceptional nature of which testified to the Government's grave concern at the turn which events may soon take in East Africa. Quite apart, however, from these misgivings, the British offer will assuredly be remembered in history as notable evidence of the British Government's recognition that the maintenance of peace is the supreme British interest—an interest for which sacrifices are eminently worth our while. But, as Mr Eden informed the House, Signor Mussolini "was not able to accept" the British suggestion "as the basis for a solution of the dispute." We prophesy with some confidence that, a year hence, all Italians who possess a grain of political understanding will look back with poignant regret to the blank refusal which Mr Eden's offer has just encountered at Signor Mussolini's hands.

Our Italian critics may perhaps object that our contribution turns out to be a mere bagatelle; and it is certainly

true that the territory which we have just offered to cede to Abyssinia is a very modest fraction of the territorial assets of the British Empire. It seems reasonably certain that the offer related to the western extremity of British Somaliland, including the port of Zeila; and we do not pretend that Zeila would be painfully missed either by King George himself or by any of his loyal subjects in this country if His Majesty's proposal to cede the place to his imperial cousin of Ethiopia had taken effect.

At the same time, Zeila happens to be a coin which is gold to Abyssinia, though it may be copper to the United Kingdom. Abyssinia once possessed a seaboard, and to this day the Abyssinian Christian population reaches to the Red Sea coast. But this proper national seaboard of Abyssinia has been in Italian hands now for half a century. It constitutes to-day the nucleus of the Italian colony of Eritrea; and the European partition of Africa, though it has failed, hitherto, to destroy the national independence of Abyssinia—alone among African States—has at any rate most effectively cut her off from the Red Sea and the Indian Ocean. On the political map of Africa, as it stands to-day, Abyssinia is completely shut out from the sea by a ring of Italian, French and British possessions.

Till lately this encirclement has not been severely felt. For French Somaliland—an enclave round the port of Djibouti, which depends on its Abyssinian hinterland for its commercial prosperity—has hitherto been always at Abyssinia's disposal *de facto*. From this French-owned seaboard a French-built railway runs up to the Abyssinian capital at Addis Ababa. 'So long as France was Abyssinia's friend and protectress and Italy's rival this arrangement served Abyssinia very well. But a few months ago a common fear of the resurgent power of Germany began to bring France and Italy together; and while a Franco-Italian understanding may be good for Europe it wears a sinister aspect from the Abyssinian point of view. One of the points in the recent Franco-Italian settlement was the concession by France to Italy of a share in the control of the Abyssinian Railway. And though this share may be small in financial terms, it may at the same time be

politically sufficient to deprive Abyssinia of that unfettered intercourse with the outer world which she has hitherto been able to maintain through a French channel. This loss has no doubt made the Abyssinians feel the desirability of acquiring a seaboard under their own sovereignty; and this is the pearl of great price which the British offer held out to the Abyssinian Government. If Zeila is worth little to us, it might nevertheless be worth to Abyssinia the cession to Italy of the large land-locked territory of the Ogaden in the hinterland of Italian Somaliland, together with almost as many commercial concessions as the Italians might have cared to ask.

But Abyssinia had no chance to have a say in the matter. For Signor Mussolini was not content merely with refusing the British offer. It was given out in Rome on Wednesday that Italy has interpreted her Treaty of Friendship and Collaboration with Abyssinia as setting the seal on the Italian "right" to colonial expansion in Africa; that under that Treaty she ought to have been enabled by Abyssinia to carry out a beneficial work of civilisation by pacific means; and that, having failed to realise her ambitions by pacific means, Italy must now "take her own means" for the safety of her present colonies and for further colonisation. These are the Italian reasons for the refusal of the British offer. They are buttressed by the Italian contention that even the cession of the vast Abyssinian province of the Ogaden to Italy is inadequate; Italy needs, not "desert," but land that can be settled and worked—presumably by Italians; and that land, notoriously, is the very heart and sinews of Abyssinia.

But in discovering these facts so late in the day Signor Mussolini forgets that it was his Government, in conjunction with France, that pressed in 1923 for the admission of Abyssinia to the League of Nations. Great Britain hesitated at the time; and as a result of her representations Abyssinia gave assurances about slavery and the traffic in arms—although the Italian delegate declared them to be quite unnecessary. Signor Mussolini now sings a different tune, and at its face value his declaration of policy can scarcely mean other than war—war by one Great Power, a member of the League, upon a small fellow-member. In these circumstances Mr Eden did well to recall to Signor Mussolini in Rome this country's view of League principles, and of its responsibilities as a League member.

Our motives were neither egoistic nor dictated by our interests in Africa, but by our membership of the League of Nations. I said that British foreign policy was founded upon the League. His Majesty's Government could not therefore remain indifferent to events which might profoundly affect the League's future. Upon this issue public opinion in this country felt very strongly. It was only through collective security that in our judgment peace could be preserved, and only through the League that Great Britain could play her full part in Europe.

Signor Mussolini's rejection of the British offer, and his subsequent contentions in the light of the above declaration, make it imperative that the British Government should demonstrate now that Britain will honour her undertakings if League action should one day be necessary. This is a matter which cannot be left to drift. For as things stand, it looks as though Signor Mussolini had made up his mind to turn his back on the very conception of a League of Nations, and to repudiate Italy's signature to the Covenant and to the Briand-Kellogg Pact for the renunciation of war as an instrument of national policy.

In these circumstances, the British Government's attitude is crucial. It is said that the Cabinet is divided. But the Peace Ballot has shown that the country would support any steps that may be necessary to preserve the League and to prevent the world from falling again into anarchy. This is not a case for a counting of heads in the Cabinet. It is for Mr Baldwin to decide to implement the pledges he has repeatedly given to the country. Where other nations stand, has yet to be revealed; but the leaders of France will be much less intelligent than we take them to be if they pursue a policy that will permit the collective system of security to perish before their eyes. Fortunately the occasion for positive decision has not yet arisen; and in the meantime there is still the opportunity to prove that the resources of diplomacy are not yet exhausted.

EXPERIMENTAL DEMOCRACY

Two years ago some people in England were beginning to wonder whether the Parliamentary system was not destined to give place before the vaunted superior efficiency of dictatorship. Government by committee, it was said, and the supremacy of "the talking shop" may be well enough in quiet, easy-going times; but they are hopelessly cumbersome and ineffective in dealing with such complex and urgent problems as those which all nations have to face to-day. In England this phase has passed. We have seen dictatorship abroad bringing not prosperity to the mass of the people but a tightening of the belt. The loss of liberty has not only been accompanied by continuous oppression and injustice to certain classes and creeds, but has been disfigured by crimes such as the Nazi "purge" of June 30th last year and the murder of Chancellor Dollfuss; while the political risks that a country runs when its destinies are entrusted to the uncurbed power of a single individual are at the moment being illustrated by the inexplicable, but highly dangerous, adventure of Signor Mussolini in Abyssinia. The idea of Fascism for this country is dead.

But the discrediting of the dictatorship idea does not mean that democratic countries have nothing to learn, and that the political machine can go on for ever in the same old way. The granting of special powers to M. Laval in France is an admission that the French Parliamentary system with its numerous groups is not a very effective means of dealing with certain types of problem. In America, the President has been conceded very wide powers by Congress, and the issues raised by the New Deal have cut across the never very logical distinction between Republican and Democrat.

In our own country, we endeavoured to meet the crisis of 1931 by adopting in peace-time the war-time expedient of "national government." Mr. Baldwin seems to think that this experiment should continue indefinitely, and it undoubtedly does command a certain measure of support from those outside its party adherents who dislike the distortions and the bitterness of party warfare. At the same time it has revealed two notable defects. In the first place, the Parliament of 1931 produced an unbalanced House of Commons which does not justly represent the balance of opinion among the electorate and has suffered from the weakness in numbers and debating strength of the Opposition. In the second place, the circumstances of its birth, and the need of reconciling the opinions of Cabinet Ministers who really differ widely in their views, has made the Government slow in action and often hesitating and indefinite in policy. Many hardened politicians think that this will all be put right after the next election, with a return to the two-party system, which, we are assured, is the only natural basis of Parliamentary government. In one sense, of course, Parliament always works on a two-party basis—those who support the Government and those who do not. But the conception of the nation as being divided into two groups is becoming increasingly remote from the facts. Such a division is artificial; for there are large numbers who do not fit naturally into the extreme right or the extreme left, while many of the most important issues of the day are tending to cut across old party divisions. The future of democracy depends largely on whether the party system and its alignments will prove elastic enough to adjust itself to the changing mind of the public or, by adhering to obsolete formulæ, will become discredited; and to more speedy action than in recent years.

These tendencies have been illustrated by two events that have taken place in the last few days. The first was the announcement of the final results of the vote in the Peace Ballot, to which we referred briefly last week. This was an enterprise organised by voluntary effort and designed to assess and notify to the Government the volume of opinion in Great Britain which they could invoke in carrying out a strong League of Nations policy in international affairs. It was, in fact, an unofficial referendum in which nearly 12 million ballot papers were returned containing answers not to vague questions whether we wish for peace, but on a fairly specific series of proposals as to the method of attaining it. Even if the general public have scarcely grasped its significance, political organisations have

realised the importance of this experiment; and there is no doubt whatever that it has already influenced policy. The second event is the Convention which met at the beginning of the week in response to a manifesto signed by a number of leaders of the Free Churches and by Mr Lloyd George and other politicians. The object of the movement is to make the two problems of peace and employment the dominating issues of the next election. These issues, in the opinion of the signatories, should be pressed forward, regardless of long-range political programmes or of party alignments, as the immediate task of Parliament. In the opinion of the Churches they are matters towards the solution of which the whole moral strength of the nation should be exerted. It was therefore proposed that support should be sought in all parties; and that through the use of a questionnaire and an organisation in every constituency a Parliament should be returned at the next election with as many members as possible pledged to give these issues priority over party programmes.

This second event has been denounced as a factious move on the part of Mr Lloyd George to regain political influence; the leaders of the Free Churches have been blamed for intervening in political matters; while others have dismissed the movement as a mere vague expression of good intentions which are common to all. What the future of this effort may be, remains to be seen. But whether it succeeds or not, politicians would be very unwise to ignore the forces that have brought it into being. It is significant, for example, that many of the speakers at the Convention itself declared themselves supporters of the National Government, but expressed, in terms more or less strong, their dissatisfaction with the results of that Government's activities in these two all-important spheres.

The grounds for this dissatisfaction are sufficiently obvious. All British Governments since the war have desired peace. But in spite of their good intentions, the world is spending enormous sums on bigger and more costly armaments; two great nations this year leave the League of Nations; aggression has broken out again in Asia, and threatens to do so in Africa, while in Europe the danger of war is clearly much greater than ten years ago. Almost all over the world the failure to secure real political co-operation has been accompanied by economic warfare which has gone to extremes unknown for several centuries. To meet this deteriorating situation many statesman-like proposals have been made and some wise steps taken—but they have nearly always been too late.

As to unemployment, the criticism is not without justification that the capital of the Empire has been indifferent to a very grave social as well as an economic problem, largely because unemployment is concentrated in distant parts of the country. But though "out of sight out of mind" may explain, it does not excuse the fact that insufficient enterprise has been shown in dealing with the problem of the depressed areas. It is perfectly right that our greatest effort should be concentrated on restoring the normal economic life of the country. But whatever may be achieved along these lines, everyone agrees that there will remain a large residuum of the population whose industries have gone for good and for whom a new place must be found in the national life. There is a growing feeling that this question has not been tackled with sufficient imagination. The system of doles may prevent this economic devastation from leading to social disturbance, and it has in fact kept these districts quiet. But such a system is unacceptable on social and moral grounds as a permanent solution.

The technique of the "Peace and Reconstruction" movement is likely to prove more difficult than that of the Peace Ballot—both because it is more difficult to translate policy in the economic field into simple terms, and because it will have to operate in the midst of the confusions of a General Election. If it solves the problem of method and if in the event it succeeds in rallying a large body of support, it may have the effect of modifying the rigidities of the party system as it exists to-day. But whether these two particular experiments prove to be the forerunners of lasting innovations in our democratic system, or turn out to be mere flashes in the pan, the fact that they have been made is a most encouraging sign. For they prove that political thinking in

Britain is very much alive, and that large sections of the public are both ready and anxious to make their influence felt—not merely at rare intervals in a General Election but on the course of current events. We shall be wise if we see to it that this stirring of interest in public affairs finds a suitable medium of self expression.

CONDITIONAL STABILISATION—I

In the following, the first of two articles by Sir Arthur Salter, the case for a "compromise" stabilisation of the exchange relations between the pound, the dollar and the franc is examined. In a second article he outlines a scheme whereby such a "compromise" stabilisation might be effected.

THE reasons against a definite stabilisation of sterling, in relation either to gold or to another currency, are familiar. They are likely to be decisive for at least a long time, and perhaps permanently.

There can be no doubt that a managed currency, on the basis of the kind of policy we have in fact pursued, has during these last three and a half years served us much better than a currency tied to gold. It has saved us from the deflation which France has been, and is, suffering. It has enabled us, without interruption by increases of Bank rate directed to arresting an outflow of currency reserves, to press on with our low interest policy and to encourage an internal recovery that would otherwise have been impossible. These advantages the country is not likely to forget. It will not link itself irrevocably to gold unless and until it is assured that a gold standard can and will be so worked as to protect the internal price structure from the violent impact of external deflation, and to ensure a large part of our industries from being drawn below the line of profitability in the process. The antecedent conditions for definite stabilisation, long ago formulated and frequently announced by the Government, will doubtless continue to govern our policy. It is equally clear that these conditions are extremely difficult of fulfilment, and are unlikely to be fulfilled for a very long period to come. Must we be content with the present exchange uncertainty during all that period? Or is there some form of limited and conditional stabilisation which would save us from the dangers of a fixed exchange and still give us many, at least, of its advantages?

The time has now come, I suggest, for considering very carefully whether such an intermediate course is technically possible; whether in that case we should not move a little from our at present negative policy; and in what form, and under what conditions, we should be ready to enter into conversations with other countries, especially the United States and France. If we have such a policy, the time is opportune, or likely at any moment to become opportune, to attempt to give effect to it.

For, in the first place, the existing currency policy and situation, though it has been more beneficial to us than any practicable alternative in the last few years, does certainly involve great disadvantages which are likely to become

greater. The expansion of internal activity, with the increase of employment which it has secured, has not, indeed, reached its limit. But its future progress must at the best be slower and more difficult. The greater part of our present unemployment is centred in our export industries, or industries dependent upon them. The process of transfer from them becomes increasingly difficult. If our export trade (which has lost about a quarter of its volume) could be restored, we might halve our unemployment figure. If it remains at its present level, still more if it further declines, we must probably be content for many years with an unemployment figure that is nearer two millions than one. It is, however, difficult to imagine any considerable revival of foreign trade while the relation of national currencies to each other is as uncertain as it is at present. In the last few months the pound has ranged from 4.70 to about 5 in terms of the dollar. This variation is in itself a serious impediment to the conclusion of contracts. But that is the least of the evil. The exchange restrictions, and even the quotas and the increased tariffs which are together strangling external trade, have been imposed mainly or largely as a result of currency strain and uncertainty. The rapid movements of fugitive capital are a consequence as well as a cause of exchange instability. The almost complete cessation of foreign lending, the partial resumption of which is a condition of any considerable expansion of foreign trade, is in part due to the same cause also. Negotiations for tariff reductions are practically impossible between countries whose currencies fluctuate in value, especially between those with "managed" and with "gold" currencies, since the latter could at once be deprived of the benefit of any tariff remissions by a further depreciation in the former. We may conclude, therefore, that any substantial expansion of external trade is unlikely without some recourse to stabilisation, and for the reason indicated the need for this expansion is both great and growing.

And if the advantages of some stabilisation are now increasing, the time is, or is soon likely to be, opportune for action. The dollar has now been stabilised in relation to gold, and therefore to the franc, for a year and a half. The American Executive clearly wish to avoid further devaluation. At the same time they remain under great pressure from the inflationists, and a further reduction at least to the legal limit of 50 per cent., and perhaps even with fresh legislation to below that point, is to be feared. It is in these circumstances, and in resistance to considerable pressure from the Administration's most dangerous opponents, that Mr Morgenthau has taken the initiative of advocating stabilisation. Meantime the French situation already supplies a strong reason for determining our policy, and may at any moment present the opportunity for action. Probably most people in this country consider that France would be wiser to attempt to regain equilibrium by a devaluation of, say, 20 per cent. than by deflation. But in one way or the other the solution is likely to be reached, and it could probably be both assisted and accelerated by a readiness to negotiate on the part of ourselves and the United States. It is to the disadvantage of the whole world, as well as of France, that she should go through a long period of slow and painful deflation; and it would be to the damage of all of us if, in the throes of a political crisis, she should be forced into an excessive devaluation. In these circumstances France is so anxious for some form of stabilisation that she would be less difficult than at other times both as to the ratio and as to the conditions of stabilisation. And, lastly, the determination of the ratio, the insuperable obstacle to earlier agreement, would now be much easier. While the dollar was greatly undervalued in much easier. While the dollar was greatly undervalued in much easier. While the dollar was greatly undervalued in much easier.

In the meantime, experience of currency depreciation has prepared the way, and determined the conditions, for an acceptable form of stabilisation. The evils of competitive depreciation are universally recognised. Every country now

recognises that it ought not, by deliberate action, to force its currency below its true equilibrium; though the public in America suspects, every time the pound falls below par (unjustly indeed; but, in view of the secrecy preserved not only as to present but as to past operations, naturally and indeed inevitably), that we have deliberately caused the fall by means of the Equalisation Fund. The American Executive, partially disillusioned with its 1933 currency policy, at least does not desire fresh depreciation; while our policy (declared, though not demonstrated), being directed not to depreciation but the evening out of fluctuations, presents no obstacle.

The need is therefore urgent; the conditions suitable; the time opportune. Is a limited form of stabilisation practicable? What should be its character? By what policy should it be pursued?

The main conditions are surely clear. On the one hand, it must put an end to the fact, and the fear, of any national policy of driving a currency below its true value (as reflecting comparative price levels and the balance of trade and payments) in order to secure a competitive trade advantage.

On the other hand, it is impossible for us to accept (and if the contingency arose it would be impossible for America to maintain) an engagement which would under any conditions force us to inflict deflation on our internal economy, to sacrifice low interest rates and to force down prices as a means of preserving our reserves and a fixed parity of exchange. It may be that, as France and the unconditional stabilisers here and in America urge, if the ratios are reasonably chosen, if general confidence is restored, and if recovery proceeds fairly evenly, there would be no great strain on any given currency, it would not be necessary to protect it by increases in Bank rate, and (since the amount of monetary gold has so largely increased) prices would tend to rise and not to fall. That may be; but there are too many "ifs." This country is determined, after its experience of recent years, not again to run the risk of having deflation forced upon it by currency policy. Even such a country as ours, with its large proportion of external trade, cannot afford to sacrifice its internal economy for the advantage of stabilisation. The resistance of most of the factors of costs to downward price adjustment makes Bank rate deflation capacity in the world market. Gold and Bank rate exercised an absolute, and in the past a beneficent, tyranny over economic activity. The crisis of 1931 was fundamentally a successful resistance to this tyranny. It was not the price structure but the currency parity that gave way. The rule then ended will not be resumed till it can be resumed as a constitutional, limited and democratic monarchy. In other words, we shall not be linked to gold, except under the condition of being able to change our parity if the only alternative is deflation—or until we can be assured that the banks that this alternative will always be prevented from arising—and that is certainly a long way off.

I suggest that it is unnecessary, and undesirable, to wait inactive till we may all feel it safe to entrust our destinies to a gold standard out of the control of national governments, and till a form of provisional stabilisation can be found, which would satisfy the essential conditions described. Such a plan will be suggested in a second article.

THE HALF-YEAR'S PRICES

STERLING wholesale prices, despite a relapse in recent weeks, have continued during the last six months the slow but steady, and fairly general, rise that has been in progress ever since the winter of 1932-33. The movement is a healthy one. For analysis shows it to be mainly due to an expansion of demand, both from individual and industrial consumers, and only in particular cases to droughts and restriction schemes.

The changes in the price of important individual commodities are shown in the following table. The general influence of expanding economic activity is clearly evident. As in the second half of last year, rises are very much more numerous than falls.

PRICE CHANGES BETWEEN JANUARY 2, 1935, AND JUNE 19, 1935

Increases:	Per cent.	Unchanged:	Per cent.
(a) 20 per cent. and more—		Cocoa.	
Creosote.....	+42	Coal, Durham gas.	—
Tallow.....	+41	Coal, Sheffield house.	—
Rice.....	+30	Coal, Welsh Admiralty.	—
Hides.....	+29	Fuel oil.	—
Coconut oil.....	+24	Iron bars.	—
Lead.....	+21	Petroleum.	—
Jute.....	+20	Pig iron.	—
Potatoes.....	+20	Portland cement.	—
		Soda crystals.	—
Total number.....	8	Steel rails.	—
(b) Under 20 per cent.—		Timber, English.	—
Wheat, English.....	+14	Tinplates.	—
Bacon, Danish.....	+13	Tobacco.	—
Cheese, Canadian.....	+12		
Leather.....	+12	Total number.....	14
Wool tops.....	+11		
Oats.....	+11	Decreases:	Per cent.
Beef, English.....	+10	Beef, Argentine.....	—1
Spelter.....	+8	Timber, Swedish.....	—2
Flour.....	+7	Sugar, cane.....	—4

Flax.....	+3	Mutton, English.....	—13
Hemp.....	+2	Butter, Danish.....	—18
Sulphate of ammonia.....	+2	Mutton, New Zealand.....	—18
Wheat, foreign.....	+2	Barley.....	—19
Sugar, refined.....	+1	Maize.....	—19
Tin.....	+1	Coffee.....	—20
Total number.....	21	Total of decreases.....	15
Grand total of increases.....	29		

Among the rises of more than 20 per cent., those in creosote, hides, and lead may be attributed to increasing demand; creosote in particular has benefited from the building boom. Tallow and coconut oil have been influenced by last year's drought in the United States; and the rise in jute prices is partly due to restriction. That in potatoes was seasonal and temporary.

Among the rises of less than 20 per cent. are a large number of important industrial raw materials which have felt the increase in demand: prices of leather, spelter, linseed oil (a building material), silk, petrol, Australian wool, flax and hemp all show healthy rises. Australian wool has been bought in greater quantities from this country, France, Germany and Japan, and has consequently recovered something of the 20 per cent. fall which it suffered in the second half of last year. Copper and tea prices on the other hand have been helped by restriction devices; though copper has lately experienced a relapse as a result of the N.R.A. breakdown. Wheat and oats are still feeling the effects of last year's drought; and the price of English wheat has now experienced an eighteen months' fairly continuous rise. The rise in wool tops and flour is the natural accompaniment of that in raw wool and wheat. Danish bacon and English beef prices still show the influence of the Government's persistent efforts to contract our imported food supplies.

In the list of commodities with unchanged prices, we find a group consisting largely of those raw materials of the capital-goods industries which are particularly subject to cartel agreements. The prices of coal, iron and steel and cement are now very "sticky"; and depression and recovery tend to produce a contraction and expansion of output respectively, rather than a fall and rise in prices. Thus coal prices have been fairly closely maintained throughout the last eighteen months' industrial recovery. Steel rails have also been unchanged for a considerable time; and pig iron and tinplates have maintained the moderate advance made last year.

The comparatively few important falls in the list have been mostly due to the vagaries of restrictionism or the vacillations of the weather. Raw cotton prices, American and Egyptian, have tended to fall as a result of uncertainty about the future of American restrictionist policy. Cotton yarn and cotton cloth have fallen with them. Rubber has fallen owing to the disappointment of exaggerated restrictionist hopes. Maize prices were affected by an excellent crop in Argentina. In the case of mutton the seasonal rise has failed to appear owing to increased imports from New Zealand; but prices are still well above the levels of two years ago. The fall in butter is seasonal.

It is interesting to set the present prices of certain particular commodities against the background of the last five years' movements. The following table shows the prices of seventeen important commodities at the end of

CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.
Offering complete services to banks and firms
doing business on Norway.

June in each year from 1931, just previous to the abandonment of the gold standard, until to-day:—

	End June, 1931	End June, 1932	End June, 1933	End June, 1934	End June, 1935
Wheat, foreign.....	496 lb. 26s.	26s.	31s. 9d.	28s. 6d.	30s.
Rice.....	480 lb. 17s.	19s. 8d.	18s. 6d.	20s. 6d.	17s. 6d.
Bacon.....	per cwt. 7s.	7s. 10½d.	7s.	6s. 9d.	8s.
Coffee.....	per cwt. 99s.	91s.	80s.	84s.	103s.
Cocoa.....	per cwt. 44s.	44s.	36s. 6d.	44s.	42s.
Butter.....	per cwt. 114s.	101s. 6d.	90s.	85s. 6d.	100s.
Coconut oil.....	per ton net £20	£24	£21 10s.	£18	£22 10s.
Cotton, American.....	per lb. 5-43d.	4-43d.	6-83d.	6-78d.	6-93d.
Wool, Australian.....	per lb. 21d.	21d.	29d.	26d.	23d.
Pig iron.....	per ton 58s. 6d.	58s. 6d.	58s. 6d.	63s. 6d.	68s. 6d.
Lead.....	per ton £15	£11	£15 5s.	£12 10s.	£14 15s.
Tin.....	per ton £113	£114	£225	£225	£230
Copper.....	per ton £37	£26	£37	£31	£30
Petrol.....	per gall. 14-5d.	15-5d.	15-5d.	16d.	17d.
Linseed oil.....	per ton net £19	£12	£20	£22	£20
Rubber.....	per lb. 3-25d.	1-75d.	3-44d.	6-75d.	5-87d.

Out of these seventeen commodities, only five—coffee, cocoa, butter, lead and copper—are lower in price to-day than in June, 1931. And of these butter, lead and copper stand higher than in June, 1932. Wheat, cotton, wool and rubber are all higher than in 1931 or 1932. In the case of bacon, coffee, tin and rubber, restriction and destruction have of course been preponderant factors.

When the movements of particular prices are grouped into our usual indices, the following changes are revealed:—

Average 1913=100

Date	Cereals and Meat	Other Foods	Textiles	Minerals	Miscellaneous	Complete Index
Average, 1924.....	159.9	169.9	210.6	145.2	113.5	159.3

End June, 1935.....	95.8	94.2	85.4	95.7	89.4	92.9

In general the increase in demand for raw materials has applied much more to industrial commodities than to food. Food prices have actually fallen in the last six months. The "minerals" and "miscellaneous" groups have risen notably, and the complete index is consequently two points higher than at the end of last year. In fact it is the highest six-monthly figure since the abandonment of the gold standard, though there has actually been slight fall in the last month. A considerable rise in wholesale prices of raw materials is of course a normal feature of recovery from cyclical depression. It is now fairly clear that such a rise is definitely taking place in the sterling area, under the influence of cheap money and internal stability.

Normally, such a rise should not affect the cost of living in the first instance, and should subsequently affect it to a less than proportionate extent. And this is in fact happening.

The accompanying chart shows the movement of British wholesale prices (*Economist* complete index) and the cost of living (Ministry of Labour) over the last four years.

PRICES, 1931-1935

Wholesale prices are now about 9 per cent. above August, 1931, and about 16 per cent. above June, 1932, the lowest point. The cost of living is still below August, 1931; but it is about 3 per cent. above June, 1933, the lowest point, and about 1.5 per cent. above a year ago.

A comparison between movements of British, American, French, German, and Italian wholesale prices yields some curious results:—

	Great Britain	U.S.A. (September, 1931=100)	France	Germany (many)	Italy
End June, 1934	108.1	113.1	82.7	89.6	83.9
" July	109.2	113.0	81.4	91.6	83.3
" Aug.	111.1	115.6	82.0	92.0	84.1
" Sept.	108.7	116.1	81.4	92.5	84.3
" Oct.	107.9	114.3	79.8	93.0	84.4
" Nov.	106.7	114.4	79.1	93.1	84.8
" Dec.	109.4	114.1	77.7	93.0	85.3
" Jan., 1935	110.3	118.3	79.1	92.8	85.6
" Feb.	109.9	118.9	78.6	92.7	87.0
" Mar.	109.4	116.9	77.7	92.6	89.4
" April	110.5	118.6	78.2	92.6	91.7
" May	113.5	119.3	79.8	92.7	94.2
" June	111.8	118.3	77.7	92.9	96.5

As against a fairly steady rise in sterling prices, there has been stagnation in America, after a sharp advance in the previous six months; further deflation and then some brief recovery in France; stagnation in Germany ever since last summer, as far as the figures can be taken as significant; and a sudden and apparently almost wild inflation in Italy, beginning in January this year. These figures prompt the reflection that the sterling area is almost alone at the moment in experiencing a normal, steady and balanced recovery.

TRIAL BALLOONS

MR JUSTICE GODDARD gave judgment this week in a case* which arose out of a most peculiar and dramatic episode of banking and insurance. The protagonists—plaintiff and defendant—were both parties of position and respectability, but there were other actors in the piece whose respectability was less intrusive. The cast included one London bank manager, now in retirement; one Lloyd's broker, now insolvent; one outside broker, now in gaol; and one financially-minded German, now in full enjoyment of life, liberty and the pursuit of happiness. These characters supplied the drama; they called the tune and it was left to Mr Justice Goddard to decide which of the unfortunate protagonists should pay the piper.

* Friedlander and another v. Lloyds Bank Limited.

The plaintiff, Mr Friedlander, is a German Jew of considerable wealth who wished last year to send his son out of Germany and start him on a career in America. His difficulty was to get capital out of the country, but permission might be had on terms from the German Government; and while he was pondering ways and means he learned that a Herr Brinkmann could help him. This gentleman made dirigible balloons, and not only made them but had a market for them in America with customers who wrote advertisements in the sky and were said to find dirigibles better for their purpose than aeroplanes. The firm, so he was told, was called Sky-Ads (the name might have been a pun devised by a Greek scholar to presage the shadiness of some of the transactions that followed), and if Herr Friedlander would finance the building of the balloons, Sky-Ads would pay in America so that Friedlander marks would by a simple operation be transmuted into Friedlander dollars.

But when would payment be made? Not, it appeared, till August, 1935, when bills accepted by Sky-Ads were to mature. Eighteen months' bills, replied Herr Friedlander, were not good enough; and if that was all the security to be had he preferred to leave the business alone. But it was not all the security. Not by any means. These eighteen months' bills could be insured in London, and Herr Friedlander, with the bills in his portfolio backed by an insurance policy, might look forward to the certainty of payment and rest completely happy. That, said Mr Friedlander, was another story, and if a reliable policy could be obtained he would be satisfied and would advance the required sum, which was equivalent to about £68,000.

To obtain the insurance Herr Brinkmann got into touch with an outside insurance broker in London named Smith, who was said to specialise in credit insurance. He declared that cover could be had for this risk and that Herr Friedlander had better be brought over to London to arrange details. He was brought to London, introduced to Mr Smith and taken by him to a branch of Lloyds Bank, where he was presented to the manager.

Up to this point there is little dispute about the facts, but here the stories diverge. Herr Friedlander (and the Judge believed him) says that he made it clear to the bank manager that he wanted 100 per cent. cover on a Lloyd's policy and would be satisfied with nothing less. Actually the insurance of bills is not permitted to Lloyd's underwriters, but the German did not know it and the Englishmen did not tell him. When a *pro forma* policy was produced for his approval, it contained phrases that made it read uncommonly like a Lloyd's policy, and at the same time the manager showed him a real Lloyd's policy and a Lloyd's broker's cover note to let him see what such documents look like. Herr Friedlander was satisfied and opened a joint account between himself and Brinkmann, authorising the bank to pay the premium against production of cover note and *pro forma* policy.

The insurance was not done at Lloyd's. It never went to Lloyd's. And by no conceivable device could it have been placed there. But as a corroborative detail a Lloyd's broker was introduced into the business, and he, with Mr Smith, placed it with a company called the Anglo-Marine, which was in no position to accept a risk of this kind or size. The Lloyd's broker's cover note was handed to the bank, together with a *pro forma* policy, signed this time by the Anglo-Marine, but with the addition of an extraordinary and highly deceptive clause: "Ten per cent. ourselves," it read, "ninety per cent. Lloyd's by re-insurance." The bank manager, whose ignorance of insurance must on his own showing have been abysmal, said he thought it was all right, and paid out £4,500 to meet the premium. He paid not by cheque but in notes. Between the time the notes left the bank and the time they reached the insurance company £1,500 of them had disappeared. Over £100 of them were afterwards traced to the bank manager's account. But Herr Friedlander was satisfied and, thinking that he had got complete security, made himself liable for the equivalent of nearly £70,000 for the manufacture of the dirigible balloons.

It was not long before he discovered that he was not so comfortably placed as he had imagined. He learned that Lloyd's underwriters do not do credit insurance; that his policy could not be a Lloyd's policy; that there was no insurance at Lloyd's; and that, even if there had been, it

would not establish any privity of contract between the original assured and the re-insuring underwriter. Attributing his position to the failure of the bank manager to follow the instructions given him he started proceedings against Lloyds Bank to recover £68,282, asking for a declaration from the Court that he was entitled to be indemnified against loss arising from non-payment of the bills on the due date. In this action he has succeeded, the judge finding that he did in fact pay over his money on the strength of the bank manager's acceptance of the cover note; and as the manager's acceptance was corruptly brought about, the bank is liable for the damages that flow from it, which are put at £68,000.

The balance of responsibility in this extraordinary story is difficult to calculate exactly. That somewhere there was gross fraud is undeniable; and on the most charitable interpretation the unhappy bank manager's action is in-

defensible and his ignorance amazing. If morals are to be drawn, we would respectfully suggest two—one for Lloyd's and the other for Lloyds Bank. For over ten years Lloyd's underwriters have debarred themselves from writing direct credit insurances, and any document that purports to be a Lloyd's bad debt or credit policy is *ipso facto* suspect. But this fact is not very widely known, and it might be advisable for steps to be taken to make it widely known so that no business man can have an excuse for considering such a policy as security. To the banks we would suggest that, as credit insurance has more than once been gravely abused, and as many managers know nothing of its technicalities, all branch managers should, when offered a credit policy as security or for any other purpose, refer the matter to an official with wider experience and more specialised knowledge than they themselves possess.

NOTES OF THE WEEK

India in the Lords.—The progress of the India Bill in the Lords is providing the Government with further opportunities for clarifying the provisions of the Bill. On Monday, Viscount Fitzalan moved an amendment to Clause 5, making the Proclamation of Federation dependent on certification by a special Commission that the financial situation of India justified it. Lord Hastings pointed out that this in effect would take the power of deciding on federation away from Parliament and confer it on a Commission. The Marquess of Zetland, for the Government, declared that an expert financial inquiry would be made in India before the establishment of provincial autonomy. He also informed their Lordships that the additional financial burden falling on the Central Exchequer as the cost of provincial autonomy would be only about £4,000,000 and that of federation roughly £500,000; and he informed the House that the Finance Member expected to be able to defray the cost of provincial autonomy and even reduce taxation if economic progress continued. The Government intended to appoint the expert body immediately the Bill became law. On Tuesday, the Lord Chancellor described the procedure by which the Governor-General's Instrument of Instructions is to be drawn up. He pointed out that the requirement in the Bill that the Instrument must pass through both Houses is a precedent, for hitherto an Instrument has been purely a matter of the Royal Prerogative. Now, both Houses would be free to examine it before approval, and the Executive would be free to amend it before it was issued. The Marquess of Linlithgow moved an amendment for direct, instead of indirect, election to the Mohammedan, Sikh and "general" seats on the Federal Council, and to these seats only. On Wednesday, after strong support for Lord Linlithgow's amendment had come from the Marquess of Lothian, Lord Snell, and others, the Marquess of Zetland accepted the amendment. He proposed, on behalf of the Government, the constituting of "an aristocratic electorate" of some 100,000 voters with a high electoral qualification. On Tuesday, the Government of India issued a statement in reply to the Indian Moslem leaders' contention that the amended Clause 304 will allow the British Government to abolish the separate electorates of the "Communal Award" without consulting Parliament or the Moslem community. The statement makes it clear that both Houses of Parliament must agree to any Order altering the provisions based on the "Communal Award," and that the Secretary of State must consult the Governments and Legislatures affected in India before an Order is laid before Parliament. Thus, this week considerable progress has been made at many points with the most complicated piece of legislation of modern times.

The President and the Utilities.—President Roosevelt's sudden burst of legislative energy, after many months of seeming to let Congress drift on its own course, has apparently stirred up some resentment. The House of Representatives has been considering the Public Utility Holding Companies Bill, a measure close to the President's heart and high up on his list of "must" Bills. In its original form the Bill provided that all utility holding companies, except a small exempt minority, should be dissolved within five years. In Committee of the House, however, this provision was changed to a grant of discretionary power to the Securities and Exchange Commission. The change may not seem to be an important one, but the President made it what in parliamentary countries would be called a "matter of confidence" and demanded the reinsertion of the original clause. The House refused by a majority of 70 in a vote which did not involve any record being taken of individual member's votes. The President secured a second vote, this time with a full record, thinking that the fear of appearing in opposition on a major issue would lead many members to vote for him. But the only result was to raise the majority against him to 110. Moreover, there has been open complaint among Congressmen of the pressure brought upon them by representatives of the Administration. It is no secret that there is a large, powerful and well-fortified "power lobby" in Washington; but this is so familiar to Congressmen as to be almost a constitutional institution. The Congressman's lot really becomes an unhappy one when he is pressed in opposite directions by equally persistent and minatory lobbies. To the nether millstone he is accustomed; it is the addition of an upper millstone which induces protest. Normally speaking, a vote in Congress adverse to the Administration would not be of much importance. But the subject and circumstances of this rebuff to the President make it somewhat more significant, for it indicates that politicians whose ears are necessarily close to the electoral ground are prepared to go on record, albeit unwillingly, against the President.

Cotton Trade Re-organisation.—On the recommendation of the Independent Board of Inquiry, the Minister of Labour has made an order under the Cotton Manufacturing Industry (Temporary Provisions) Act which legalises the agreement on weavers' wages recently arranged by employers and operatives. The new scale of wages, which will come into force on July 15th, is expected to lead to an upward revision of cloth prices, and, as our Lancashire correspondent points out in his report on page 51, it is feared that such an increase may adversely affect our export trade in cotton goods. Meanwhile, the

Cotton Spinning Industry Bill, designed to give effect in the main to the proposals of Lord Colwyn's Committee for handling the surplus capacity in the spinning section of the industry, was formally introduced in the House of Commons last Monday. Under the Bill, a Spindles Board will be established, with power to acquire redundant cotton spinning plant in both the American and Egyptian sections of the trade, and to borrow up to £2 millions for this purpose. Surplus plant so acquired by the Spindles Board must not be sold for export. Moreover, during the first two (or possibly three) years of the scheme, no new spindles may be installed, unless they have been acquired from the Spindles Board and equivalent plant surrendered, or unless it is shown to the Spindles Board that equivalent plant has been broken up. The sums required for the service of the loans and for the payment of the Board's administrative expenses will be provided out of the proceeds of a levy on cotton spinning machinery which the Bill obliges the owners of cotton mills to pay to the Board for fifteen years. The rate of the levy will be equivalent to 1½d. per mule spindle per annum. Two ring spindles are to be taken as equivalent to three mule spindles. The Spindles Board is expected to be self-supporting, but the Bill provides that, in the event of the levy being found insufficient, the Government are to assist the Spindles Board by meeting deficits, and by making such advances as are necessary to avoid any default on the loan obligations of the Spindles Board. Any sums paid by the Government to the Spindles Board are to be repaid by the latter, with interest at 2½ per cent. per annum, out of any surpluses subsequently shown by the revenue and expenditure account. The removal of the existing surplus of spinning capacity is an essential preliminary to any scheme of regeneration of the cotton industry; the Bill is accordingly to be welcomed on principle. But it is essential that it should be regarded as a first step only. Lancashire works in the main for the export market and her salvation is not to be found by price-raising. The elimination of surplus capacity will be useful only if it clears the way for a concentration of production upon the most efficient units of the industry and leads to a reduction of costs. Moreover, there will be doubts on some of the details of the Bill apart from the principle. Is it, for example, right to draw no distinction between the American and Egyptian sections of the industry? The scheme is to be voluntary, and the price offered by the Board must necessarily be sufficient to tempt the owners of idle spindles, although on a strict definition their spindles have no value other than a nuisance value. Is not this equivalent to saying that the price is to be excessive? And is it not bound to be reflected in the costs of even the most efficient spinners?

The Sugar Beet Scandal.—Every few weeks now the House of Commons has the uncongenial task of prolonging some agricultural subsidy originally introduced as "temporary." This week it has been the turn of beet sugar once again; and the House was at its very worst. Responsible spokesmen, both of the Government and the Labour Party, showed themselves to be anxiously concerned with the political pressure of vested interests, and hardly at all with the existence of a public scandal. Mr Elliot, noting gleefully that the Labour Party were as deep in crime as the Government, observed that it was "interesting that the matter was not being treated on a purely party basis of attack and defence between the Government and the Opposition, but that constructive ideas were being applied to it." Another year's subsidy was necessary, Mr Elliot suggested, to give the Government time to consider the Greene Committee's report (published nearly three months ago). Dr. Addison, equally incorrigible if slightly less hypocritical, remarked that "the sudden cessation of the subsidy would not be, politically or industrially, practicable or wise." Mr Amery indulged in casuistry, mysticism and blank assertion. "The gentlemen who framed the Greene Majority Report seemed entirely unaware that we were now living in a protectionist country." "Beet sugar had become of immense importance in the balance of production for the whole country." "The whole of the real subsidy paid for the development of our sugar in-

dustrial had come from the foreign producer." And so on and so on. The miserable chorus of sophistry and humbug was only broken by Mr Horobin, Sir Herbert Samuel and a few Labour Members. Mr Horobin remarked that "the assistance to this industry has the dimensions of an exceedingly unpleasant public scandal when we take into account the connection of politicians with the subsidy, the nationality of a considerable number of beneficiaries in the factories, and the enormous profits and enormous sums put to reserve by a considerable number of these factories." The general impression left by the debate was that the Government intend to replace the Exchequer subsidy by some "levy-subsidy" device. By this means the burden of this hopelessly uneconomic industry would be simultaneously hidden from view and shifted from the richer direct taxpayer to the poorer general consumer. If any such device is adopted, a discreditable story will have a disgraceful conclusion.

Milk and the Unemployed.—It is still doubtful whether the Milk scheme is to be used to cheapen supplies and increase consumption or to exploit consumers in the interests of a producers' monopoly. The plan to sell liquid milk at special cheap rates to unemployed in the distressed areas is meeting with great opposition from the retailers, and the Board may be forced to abandon its efforts. The retailers insist on the preservation of their normal margin; and if the Board attempts to arrange its own system of distribution, reprisals by the retailers might put it in a difficult position. In these circumstances it is hard to see how the scheme can go forward without a Government subsidy. Mr Baldwin, in his speech on Government policy on Saturday, said that the Cabinet were "examining whether further experiments cannot be made to make liquid milk more accessible to all classes of the community." If ever there was a case for a subsidy, it is here. There is a surplus of unsaleable liquid milk; and the unemployed and their families are suffering from malnutrition for lack of it. The money wasted on the substitution of expensive home-produced sugar for cheap imported supplies might be spent a thousand times better in this way. Notwithstanding all this, however, farming interests are not trying to bring milk to the unemployed by lowering the price of liquid milk, but to keep it away from them by raising the price of tinned milk which is at present the only variety of milk they can afford to buy. An application has been made by the National Farmers' Union, the Milk Board and the Creamery Proprietors' Association to the Import Duties Advisory Committee for an increased tariff on tinned milk. To grant this request, while leaving the liquid price unsubsidised, would be a glaring example of regressive "planning." Indeed, the dilemma confronting the Milk Board is an apt example of the difference between good and bad planning. Are we to use the Milk Board in the national interest by lowering the price of liquid milk, or in a sectional interest by raising it?

The French Armaments Credits.—It is interesting and encouraging to observe that, in democratic countries, the now rapidly accelerating armaments race is producing a powerful public demand for a stringent control over the private trade in arms manufacture. His Majesty's Government found it politic to announce, in breaking the news of their startling proposals for an increase in the air-arm, that they were taking effective steps to prevent this national misfortune from becoming an occasion for private profiteering; and they chose the same moment for setting up a Royal Commission to inquire into the conduct of "the trade." In France, this week, it has been the Chamber and not the Government that has taken the initiative in the same direction. Last Thursday, new credits for naval, military and air armaments, amounting to the equivalent of nearly £18 millions sterling, were demanded by the Government from the Chamber. The immediate result, in the Finance Committee of the Chamber, was the adoption of a resolution to make the manufacture of, and trade in, arms a State monopoly as from January 1, 1936. Another resolution

which the committee had before it provided for the limitation of profits in this industry, during the interim, to 5 per cent. In the small hours of Friday morning, last week, M. Laval announced his intention of taking these credits by decree, in virtue of the emergency powers which the Government has already been granted. And by the first of the two special decrees issued by the Laval Government on Wednesday, a Committee is appointed to supervise expenditure on defence in all Departments affected. This is at least a recognition of the need for central supervision, as well as of that for economies. But it seems hardly likely that so important and contentious a social question can be disposed of by so simple a cutting of the Gordian knot. The private manufacturers of arms will not, we fancy, be able to have it both ways. If they are to retain unlimited profits under an uncontrolled capitalist economy of the traditional type, they must see to it that the prospects for peace are promising and that the competition in armaments is correspondingly moderate. If there is to be cut-throat international competition in armaments, with its inevitable *dénouement* in a recurrence of war in Europe, then it is evident that the peoples are in no temper to allow their agony to be coined once more into profits by a few business men. Moderate armaments made for private profits or else immoderate armaments produced by a socialised industry: this, to all appearances, is the choice.

Bark and Bite in Germany.—At the end of last week an attempt to apply in Berlin the anti-Jewish boycott that is being preached and practised in Franconia by Herr Julius Streicher was vigorously quashed by the authorities. On Saturday, at a monster demonstration in the Tempelhofer Feld, Dr. Goebbels denounced Jews, Christians, pacifists, foreigners and the League of Nations, with an ultra-Nazi ferocity. What was the inward connection between this speech and the subsequent action? Are the present rulers of Germany really united in the will to pursue a moderate policy, while sagacious enough to realise that they can only pursue it—in the teeth of the public temper which they themselves have aroused—if they compensate for moderation in act by intemperance in word? Or does this latest divergence between Nazi speech and action reveal a genuine feud between the moderates and the extremists? Some colour is given to this second hypothesis by certain passages in Dr. Goebbels' oration. The Nazi Minister of Propaganda told his 110,000 hearers that the accounts between them could not be second, but that accounts between them could not be finally settled until all important governmental posts were occupied by National-Socialists. This was a plain allusion to the piquant fact that such key positions as the Ministry of Foreign Affairs, the Ministry of Finance and the Presidency of the Reichsbank are still occupied to-day by such eminent non-Nazis as Baron Neurath, Count Schwerin von Krosigk and Dr. Schacht. From his record, Dr. Goebbels might be expected to find himself on the right side of the fence a year ago, when so many of the radicals met with a bloody end at the "authorities' " behest; and a man of Dr. Goebbels' discretion would perhaps hardly choose the anniversary of the death of these former associates in order to proclaim ostentatiously his sympathy with views that proved so fatal to them. On this showing, Dr. Goebbels' latest bark at the Jews is more likely to have been a deliberate cover for the bite which had just been administered to Streicherism by the authorities in Berlin.

The Abortive Coup at Peking.—In the small hours of the morning of June 28th, an alarming incident occurred at the South Gate of Peking. A party of raiders, wearing armlets inscribed "Justice Autonomy Army," arrived by railway in an armoured train, which they had seized at the neighbouring junction of Fengtai, on the Peking-Tientsin line, and dropped a few shells over the wall into the city. Happily, the shells inflicted no casualties, and the remnant of the Chinese garrison made an unexpectedly effective reply—capturing the armoured train and pursuing the banditti across country. The city has been placed under martial law; and the Japanese have agreed to the

garrison being reinforced by two brigades of the troops from Chahar, to whom the Japanese themselves only the other day gave notice to quit that province. The incident is mysterious, for this Japanese complacency looks as though the attempted *coup* had been unwelcome to the directors of Japanese policy in Northern China; and yet the design attributed to the discomfited raiders is, on the face of it, exactly what would have suited Japanese policy as it appears to Western eyes. The raiders are reported to have had confederates inside the walls and to have intended, with their assistance, to set up a separatist régime, in opposition to Nanking. Would not this exactly have suited Japan's book? And was it not attempted immediately after the loyal garrison of Peking had been depleted at Japanese dictation? And did not the raiders come from Tientsin, which is the headquarters of the Japanese military forces in Hopei? If we argue *Cui bono?* the Japanese will be deeply suspect of having engineered the whole thing. In graciously permitting the Chinese to take precautions after the plot has failed, are the Japanese military authorities simply trying, in a rather clumsy way, to cover their tracks? Or was this abortive separatist *coup* at Peking really someone else's idea, and not the Japanese Army's? At the moment we cannot tell; we can only prophesy that, sooner or later, the Japanese will effectively sever Peking from Nanking by one means or other.

The National Accounts.—The national accounts for the first quarter of the financial year give no indication in themselves of the real financial position of the country; for the yield of direct taxes is concentrated in the last quarter, while expenditure is spread fairly evenly through the year. There is therefore always a large deficit at June 30, which this year amounted to £56,215,000, as against £49,718,000 in 1934. Ordinary revenue at £129,355,965 showed a net increase of £1,197,141 over the figures for the first quarter of last year. This included a rise of almost £3 millions in Customs and Excise, which were not expected to show any expansion at all, and are therefore likely by the end of the year to produce a substantial surplus over estimates. There was also an increase of £870,000 from estate duties compared with an estimated decline for the year of over £1,000,000. Receipts from sur-tax were £1,400,000 lower than in 1934, and those from income tax slightly higher; but it is impossible to divine the final yields of these taxes from this quarter's figures. Stamps and non-tax revenue fell by £610,000 and £980,000 respectively, although they were both estimated to increase by about £1,000,000 in the year. On the expenditure side, the cost of the National Debt was over £1,000,000 lower than last year; and as the fixed debt charge was put at last year's figure, there should be, as the Chancellor himself suggested, something available for debt redemption out of revenue. Supply services at £109,112,000 showed an increase of £8,738,000, of which defence accounted for £2,250,000 and civil and revenue expenditure for £6,488,000. Increases during the whole year were estimated in the Budget at £10 and £12 millions respectively, and an extra £4 millions was allowed for expenditure on projects such as agricultural and shipping subsidies already sanctioned by Parliament. In view of the Government's policy of accelerating and expanding their defence programme, the defence votes will certainly require supplementary estimates, although the increase over last year has so far been about proportionate to the estimated

increase for the whole year. As regards the civil votes, however, for which an increase of at most £4,000,000 might have been expected in one quarter, as against an actual increase of £6,000,000, the position is not quite as unfavourable as it appears at first sight. Last year the expenditure in the first quarter of the year was less than in the remaining three quarters because the partial restoration of salary cuts and the total restoration of unemployment cuts, which altogether cost £7,000,000, did not come into force until July 1st. This year again, there are restorations of cuts which came into effect on July 1st; but their cost is only £4,000,000. Accordingly, the increase over last year could be expected to be heavier than the average in the first quarter, even if the estimate were to be exactly realised.

Sterling and International Prices.—The slow decline in wholesale prices continues. It is becoming clear that the American N.R.A. judgment and the French crisis have between them given a definite check to the previous advance, and that a peak was established at the end of May. During the past fortnight, the *Economist's* complete British index number has fallen by 0.8 per cent., and the British primary products index number by 0.9 per cent. American primary products have declined by 0.8 per cent., and the Irving Fisher general index number by 0.5 per cent. In France the decline for the week ended June 26th is as much as 1.5 per cent. Italian prices continue to rise, and there is a slight drop in German prices. Since May 22nd, British prices have fallen by 1.5 per cent. for all items and by 2.5 per cent. for primary products. American prices for all items have fallen by 1.3 per cent., and for primary products by 5.5 per cent. French wholesale prices have fallen by 2.4 per cent., but Italian wholesale prices have risen by 3.2 per cent.

1913 = 100	83.1	93.7	93.7	92.9
1924 = 100	82.2	58.8	58.8	58.3

In the cereals group barley and English mutton were dearer, and there was an appreciable rise in bacon. There were declines in wheat, maize, rice, beef and New Zealand

mutton, and a sharp drop in potatoes. This last is the reaction from the seasonal rise of the previous fortnight. In the other food group, refined sugar and cheese are dearer, but butter, coco-oil, tea and sugar cane are cheaper. Among textiles, American cotton, cotton yarn and cloth, wool tops and hems have fallen in price, but there were advances in Egyptian cotton and in jute. There was a moderate rally in non-ferrous metal prices. In the miscellaneous materials group, creosote was dearer, but hides, linseed, oil, tallow and rubber all declined.

Coal Mining Results.—The latest quarterly statistical summary issued by the Mines Department reveals a slight decline in the activity of the British coal-mining industry between the last quarter of 1934 and the first quarter of 1935. The reduction in output in the first quarter of the current year was contrary to the movement in the two preceding years when activity showed a slight increase at the beginning of the year:—

The decline of 0.7 million tons in the commercially disposable output between October-December, 1934, and the first quarter of 1935 is due to a reduction in exports and in the quantity of coal shipped for the use of steamers. Total proceeds in the first quarter of 1935 amounted to £34,714,015, compared with £35,140,110 in the previous quarter and £36,202,666 in the corresponding quarter a year ago. Net costs of production were £32,890,354, against £33,579,390 in October-December, 1934, and £33,476,885 in the first quarter of 1934. Proceeds, therefore, exceeded costs by £1,823,661 in January-March, as compared with a profit of £1,560,720 in the fourth quarter and £2,725,781 in the first quarter of 1934. Only two of the districts shown separately in the return (Durham and South Wales) showed a small loss in the first quarter of the current year. Profits in the other districts varied from £24,503 (1.93 pence per ton) in Northumberland to £707,251 (1.93 pence per ton) in Yorkshire. The increase in the output per man-shift suggests a continuation in the process of mechanisation. While coal production in April continued below the level of the corresponding month a year ago, output in May was substantially higher than a year ago.

The Rise in Wool Prices.—The course of wool prices during the past two years has been erratic. The absence of unwieldy stocks provided a favourable setting for the wool market during the revival of demand in 1933. But, towards the end of that year, the rise in prices degenerated into a scramble for raw wool at any price, followed by a spectacular collapse in 1934. As we pointed out in our last survey of the world wool situation (in the *Economist* of September 29, 1934), the decline in prices had by then been arrested and a large proportion of the stocks previously accumulated had been worked off. Between September, 1934, and March, 1935, prices varied within

	1934 June 30	1935 June 30</
--	-----------------	-------------------

narrow limits, but since then the trend of quotations has again been sharply upwards. Thus, the index of raw wool prices, published in the *Weekly Wool Chart*, rose from 62 (July, 1914 = 100) in March to 73 in June. In July, 1934, the index stood at 72. Retained imports of raw wool by the ten principal consuming countries during the first four months of 1935, as estimated by the Imperial Economic Committee, amounted to 850 million lbs., a decline of 15 per cent. as compared with the corresponding period last year. It appears, therefore, that the recent improvement in demand was partly due to a desire to replenish stocks in consuming countries. As a result, the carry-over of unsold stocks into the new season in the principal wool exporting countries is likely to show a substantial reduction on last

season's carry-over. Thus, stocks of unsold wool in Australia declined from 213,000 bales at the end of June, 1934, to less than 100,000 bales at the end of the past month. South African stocks appear to have reached negligible proportions, and the quantity still available for sale in Argentina and Uruguay is reported to be small. Moreover, the Australian wool clip of 1935-36 is expected to show a reduction of 7 per cent. as compared with production in 1934-35. Although a mere physical transference of stocks from producing to consuming countries does not itself warrant an increase in prices, a moderate rise in quotations was probably justified by current market conditions, which will be tested at the wool auctions in Coleman Street next week.

UNITED STATES

TAXING THE RICH

THE message from the President outlining a series of new taxes was reported in the same newspapers that announced the passage of the Wagner-Connery Labour Disputes Bill and the Social Security Bill. The tax message was a surprise in view of the President's categorical announcement last January that he would ask for no new taxation at this session; the party leaders in both houses were well-known to be adverse to new taxation at this time; and Congress already had a routine tax measure extending the so-called "nuisance" excise taxes which terminate automatically on June 30th, the end of the fiscal year.

The manoeuvre puts Congress in a dilemma. It is anxious to go home; and it had expected to extend the nuisance taxes promptly and without controversy. The introduction of proposals not merely of new taxation but of new theories of taxation would seem to threaten to delay adjournment. The immediate reaction of public opinion was a belief that Congress would either ignore the message or would make only perfunctory concessions to it; but the specific proposals have considerable support, particularly in the Senate. Senator Wheeler, early in the session, introduced a measure calling for a graduated corporation tax; and the Progressive-Republican block, in this instance led by Senator LaFollette, have long advocated "soak-the-rich" taxes on personal incomes and fortunes.

The message generally received an unfavourable press. The outstanding fact is that this Congress, like its predecessor, is perfectly willing to pass appropriation bills *ad lib.* so long as the expenditures can be met by borrowing; but it shows a distinct aversion to increasing taxes. The measures outlined by the President are almost identical with those suggested some weeks ago by Mr Morgenthau as a means of paying the Soldiers' Bonus; and even for that sacred cause, Congress gave them no consideration whatever. For example, the revised A.A.A. Bill carries appropriations exceeding \$1,000 millions—but provides no additional tax revenue. In short, Congress likes to spend and hates to tax; and the Administration, when it proposes new taxes, advocates measures which regardless of their sociological merit, would, from their nature, yield revenues which would be microscopic beside our stately deficit. These taxes are undoubtedly the most popular that the Administration could devise.

RECOVERY IN 1935

As the first half of the year closes, it appears to have made a record comparing favourably with the first half of 1934 and brilliantly with the last half of 1934. The statistics have probably failed to give a complete picture of the facts. Steel output has declined rather steadily from January; the textile industry has, as usual, been depressed; and coal output has been erratic. The movement of freight on the railways has shown almost no gain.

But the manufacture and sale of motor cars has been beyond expectation; there has been a marked revival in residential building; and considerable activity in the varied forms of factory re-equipment. That is, the types of industry which cater for individual consumption have been well maintained, but show no particular increase. The strictly heavy industries, like commercial and industrial building, and railroad and utility equipment, are still languishing in the depths of depression. But between these two extremes, there is a large field of industry which sells to households (such things as dwellings, motor cars, refrigerators, etc.) and to the maintenance or renovation of existing industrial plant (such as machinery and tools) which is far more active than a year ago.

The oft-repeated charge that the heavy industries were chiefly repressed by the closure of the capital markets to new corporate issues has hardly been borne out by the facts. Under the modified Security Act, there has been a great recovery in the issue of securities, but almost without exception, these have represented re-financing rather than a demand for new capital. Broadly speaking, it appears that American industry is either amply supplied with physical capital, or is able to make such installations as it requires out of its own funds. This is not true of the railroads, and probably not true of the public utilities; the accessibility of the capital markets to the railroads being contingent upon a recovery in earnings, and to the utilities upon a clarification of their legal status. Nevertheless, although one could accurately describe the American economy in 1934 as a consumption goods economy, in 1935 we can recognise that demand has gone beyond that definition, even though it has not progressed to a stage that gives brisk activity to the so-called heavy industries.

Silver has fallen to the vicinity of 70 cents an ounce, and in spite of the protests of the Silver Block, the Treasury appears to be inactive. Silver imports in May amounted to 8 million ounces, compared with 15 millions in April and 34 millions in March. Gold imports, which reached \$125 millions in a single recent week, have stopped abruptly, with the French franc quoted above parity for the first time in weeks. Between May 29th and June 19th our monetary gold stock rose by \$250 millions, following an increase of \$114 millions in May, and \$150 millions in April. It is probable that owing to the radical change in our trade balance these gold imports represent capital movements provoked either by fear of loss at home or hope of profit in American security markets. There is, according to reports, a fairly continuous stream of European capital seeking investment here; but at no time in recent months has it been rumoured as large. As soon as the alarm over the French situation passed, the dollar, which throughout had been weak against the pound, promptly weakened against the franc as well. In short, it would appear that the recent strength of the dollar was for the most part a reflection of acute weakness of the gold bloc.

NEW YORK, June 25.

FRANCE

DEFLATION AND THE ALTERNATIVE

THE Chambers adjourned for the holidays on June 29th and will not return until the end of October or beginning of November. The Government has a period lasting till October 31st in which to publish the new "decree laws"; but it intends to announce most of them soon after July 16th. At the moment it is preparing public opinion for these decrees. M. Laval, the Prime Minister, is insisting on the importance of the deficit.

People speak (he says) of a deficit of 11,000 million francs. In fact it is considerably larger, and it increases every day. The exact figure of expenditure is known, but that of revenue becomes daily more uncertain. The present problem admits of only two solutions: to reduce Government expenditure or to create false money.

These remarks of M. Laval indicate two things: first, that the Government has rejected devaluation as consisting in a creation of "false money"; and, secondly, that the struggle against the deficit will necessitate very severe measures of deflation, affecting almost all classes of the community.

The campaign for devaluation, which gathered strength towards the end of May, has for the moment moderated. The Government is being given time during the present holiday period to produce its new "decree laws" and to test once more the deflationary cure. But in certain political circles it is observed that if M. Laval were to fail, the country might be obliged to take much more courageous decisions than it has so far. Obviously, the advocates of devaluation would demand the abandonment of the present franc parity. But a certain number of deputies think that devaluation alone would not suffice and that it would be necessary to carry through even more far-reaching reforms of the economic and financial organisation of the country. These deputies are mostly Left Wing politicians who would like to establish an authoritarian Government inspired by Socialist or at least Socialistic principles. At all events, it would be essential to renounce the "orthodox" policy of meeting the Budget deficit by cuts which has been pursued since 1932. M. Paul Reynaud, who has distinguished himself in the campaign for devaluation, recently remarked in the Chamber that "the cleavage in every parliamentary group between the partisans of movement and partisans of immobility is far deeper than that between the groups themselves."

THE FIGHT AGAINST THE FASCIST "LEAGUES"

This contrast between the partisans of "movement" and "immobility" is very manifest in the activities of a certain number of extreme Right Wing Leagues, notably the Croix de Feu, led by Colonel de la Rocque. These Leagues have one common trait: that of being violently anti-parliamentarian. They accuse Parliament of having paralysed Governments and resisted necessary reforms. Their actual programmes of action are mainly restricted to radical but vague generalisations. Colonel de la Rocque, for example, says that he is nearer to the Communists than the Communists are to their leaders. So far the Government has not stopped Croix de Feu demonstrations, even when they have been accompanied by aeroplane displays. But it is now officially announced that after July 14th (the day of national celebration) the Leagues are to moderate their public demonstrations.

This agitation by the Leagues, combined with suspense about the decree laws, has kept business stagnant. *Rentes* remain at very low levels. On the money market money is still scarce and rates are only slowly easing. On Monday last, owing to month-end liquidations, the house-rate for Stock Exchange loans was 4½ per cent. (as against 5½) and the curb rate 7½ per cent. (as against 8½).

On June 10th gross receipts from the principal railways were 597 millions (12.63 per cent.) lower than in 1934. The number of loaded wagons amounted to 6,375,928, compared with 6,896,250 in 1934—a reduction of 7.54 per cent.

PARIS, July 3.

GERMANY

LEGALISING DR. SCHACHT'S EXPORT SUBSIDY

THE *Reichsgesetzblatt* of June 29th promulgates a law of one paragraph only authorising the Reich Chamber of Economy to come to decisions about the imposition and use of levies on groups or associations of business men and business concerns. Control is also granted to the Chamber to collect the levies through the local Chambers of Industry and Commerce, Chambers of Handwork, and other associations of business concerns existing in public law. This law is designed to regularise the levy or tax, ostensibly for the subsidising of export, which has been the subject of negotiations between the Reich Minister of Economy and various industries. The levy has in fact already been collected, or at least accepted as a liability by industry. Within Germany no report of the negotiations has been allowed. One newspaper a month ago stated that Dr. Schacht had already obtained Rm. 720 millions by a special levy; but this statement seems to have been an editorial slip, and the matter was not mentioned again. The figure is believed to be correct. The explanation of the mystery-making is that the Government desires the population to believe that taxation is not being increased. A promise of reduced taxation was given in 1933.

Although it has at last been found necessary to legalise formally Dr. Schacht's actions, the mystification is still kept up; for the above-mentioned law is so worded as to conceal both the nature and the purpose of the new impost. And it has been taken by uninformed readers to concern merely the collection of unimportant dues for industrial reorganisation. In reality a 2 or 3 per cent. turnover tax has been imposed on the home sales of industrial undertakings and also, it seems, on gas and electricity consumption. This is probably the easiest way of imposing a heavy tax. The existing turnover tax, which is in general 2 per cent., is easily controlled and collected; and according to the Budget of 1934-35 it was to yield Rm. 1,700 millions out of a total tax revenue of Rm. 7,078 millions, and in fact yielded Rm. 1,872 millions. The turnover tax was regarded by business and by the earlier Finance Minister as a disagreeable necessity, and the declared official aim was to abolish it.

Apparently the Reich Chamber of Economy and the Chambers of Commerce have been associated in the above manner in order to give colour to the official pretext that no new taxation has been imposed. Speaking last week on "German Foreign Trade," a high official of the Ministry of Economy and director of the Gold Discount Bank referred merely to an undefined "self help" which is being resorted to by industry on its own initiative in order to maintain export. It is natural, said this official spokesman, that as "foreign methods" (bonds-scrip processes) have proved themselves insufficient to subsidise exports, industry should invest its own resources in a subsidy. He added that dumping or an attack on the international price level was not designed. It is understood that Dr. Schacht declared during the negotiations that the burden of the new impost must not be transferred to the consumer, so that the home price level, it is hoped, will not be raised. Industrial concerns are to pay the levy out of their increased profits on home sales. There have been many cases of increased or resumed dividends in the last year. According to an official return of this week the average dividend on Rm. 8,400 millions of company capital (nearly half of all capital) has risen to 4.15 per cent. as against 3.09 per cent. two years ago.

Reports from the light industries are in general not satisfactory; from steel and machine manufacturing better; from

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)
Annual Income : : : : £5,800,000
Funds : : : : £24,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

the cement trade very good. Sales of cement in May were 900,000 tons, against 535,000 tons in May, 1934. Coal production in the first five months was 56,400,000 tons, against 49,900,000 tons in the same months of 1934. The trade Press continues to discuss reports of impending negotiations for international regulation of the coal market; but is in general sceptical. Obstacles mentioned are the prevailing currency uncertainty, the absence outside Germany of closely-knit national organisations, and the inclusion of the coal trade in certain existing international commercial agreements. The motor-car industry is active. Exports amounted in five months this year to 8,500 cars, against 5,300 in the same months of last year. Exports of artificial silk are also rising, while imports have fallen heavily; but there is still a substantial import surplus.

An official report on textiles states that in consequence of increased imports in the last few months the fall in the stock of raw materials has ceased; and the decline in textile exports has also ceased. Capacity for production of the new substitute textile materials is not being fully utilised. Retail sales of textiles this year are 5 per cent. in quantity lower than in the same period of 1934. The consumption of footwear has also fallen heavily this year.

Money was in considerable demand last week for month-end and also quarter-end settlements. Interest rates began to decline early this week, however; day loans on Tuesday being 3½-3¾ per cent. The buying of Reich short-term securities was resumed. Reichsbank credits and investments at the last week of June were greater by Rm. 76 millions than at the March quarter-end. Treasury bills increased by Rm. 52 millions, other discounts by Rm. 483 millions, advances by Rm. 54 millions, and circulation by Rm. 393 millions. Circulation of all currencies was Rm. 5,984 millions, as against Rm. 5,781 millions on June 30, 1934. The gold reserve has further increased by Rm. 872,000 and now stands at Rm. 85,613,000. This brings the total increase for June up to Rm. 3,200,000. The balance sheets of the five leading Berlin banks for May 31st show a decline in deposits from Rm. 5,817 to Rm. 5,718 millions, mainly due to a fall in deposits in the Dresdner Bank.

An official return puts the national income from wages and salaries in the first quarter of 1935 at Rm. 7,645 millions, against Rm. 7,690 millions in the fourth quarter of 1934.

BERLIN, July 3.

HUNGARY

THE BUDGET DEFICIT

BOTH Houses of Parliament have passed the Budget for 1935-36. In view of the slightly increased deficit, estimated at 75.9 million pengő, the debate in the Upper House has centred on the importance of economy. Dr. Fabinyi, the Finance Minister, said that the Budget estimates had been drawn up with the utmost caution. Provided that extraordinary expenditure did not exceed its present proportions, it was not unreasonable to hope that in spite of the disclosed deficit the Government would have no budgetary difficulties. The foreign debt service was included in the estimates in full, though actual transfer in foreign exchanges is suspended, except for the League Loan service, as arranged with the London League Loans Committee.

General Gömbös declared in the Upper House that Hungary is not only ready to enter a Customs union with Austria and Italy, but would be willing to join a larger economic group. Unfortunately there is practically no hope for such a Customs union in the near future, and Hungary can do very little to promote it. Not much is heard here of the proposed Danubian Conference, and even less is expected to result from it, if it meets at all.

Foreign trade in May showed some improvement. Both exports and imports increased, as compared with the corresponding month of 1934. Trade returns for the first five months are shown in the following table.

	1934	1935
	In million pengő	
Exports	153.9	162.7
Imports	132.7	146.7
Export surplus.....	21.2	16.0

Crop prospects have somewhat improved. The official estimate of the Ministry of Agriculture forecasts a wheat crop of 19.5 million metric quintals, as against last year's crop of 17.6 million. But private estimates place the yield even higher at 21-22 million quintals; so that Hungary seems likely to have considerably more to export this year than last. Rye prospects are also satisfactory. As against a crop of 6.2 million quintals in 1934, more than 7,000,000 are expected this year. Negotiations are in progress with Austria and Italy to secure markets at adequate prices; and it is officially stated that Italy has bound herself to buy 1,000,000 quintals of wheat and has an option for another 1,000,000 quintals at higher than market prices.

Trade with Italy has shown a big increase in 1935. Exports in the first five months amounted to 25 million pengő and imports to 13.1 millions, leaving an export surplus of 12 millions. On the other hand, there is only a very meagre export surplus with Austria, exports being at 34.8 million pengő, against imports of 33.4 millions. Before the exchange restrictions and the clearing treaties Hungary's exports to Austria were almost double her imports. Another radical change in Hungary's trade relations under the restrictions is the disappearance of her import surplus with Germany.

The stock markets are rather dull, but commodity prices firm.

BUDAPEST, July 1.

SPAIN

DECREASE IN IMPORTS

IMPORTS in the first four months of the year amounted to 277 million gold pesetas and exports to 209 millions. Imports of raw materials increased from 105 millions to 110 millions, compared with last year; imports of manufactured articles fell from 134 millions to 126 millions; and imports of food fell from 47 millions to 37 millions. Exports of raw materials show very little change. Exports of manufactured articles fell from 37 millions to 33 millions, while food exports rose from 137 millions to 140 millions.

The Minister of Finance has now published the Budget figures for the first three months of this year. Revenue was 946 million pesetas and expenditure 774 millions. The Treasury owes 125 millions to the Bank of Spain, however, and this does not appear in the balance sheet. It is thought that the real deficit for the first three months will probably be about 37 millions.

The Minister of Finance has also presented a Bill to the Cortes for the reform of the Civil Service. The Bill includes measures for the suppression of those Special Departments which operate outside the provisions of the General Budget, for the reduction of personnel and office expenses, for the limiting of credits granted for agrarian reform, and for pension cuts. The last Spanish Budget surplus was that of 53 million pesetas, in 1930, and the succeeding four years showed deficits of 198 millions, 470 millions, 479 millions and 593 millions respectively. The total deficit for the last four years amounts to 1,680 million pesetas; and the Government had this in mind in resorting to the above-mentioned cuts.

At the end of March the stocks and shares held by the banks amounted to 5,993 million pesetas, as against 6,086 millions at the end of 1934, while current accounts totalled 3,198 millions against 3,244 millions. The index of industrial shares rose last April from 56.0 to 58.5 and the index of fixed interest securities from 88.4 to 89.6 (1930 = 100).

Following preliminary conversations in London the Spanish delegation, after consulting with leading industrial and economic interests here, has returned to London. It is believed here that Great Britain will ask for concessions for the temporary admission of tinplate and for certain advantages for floating coaling stations, internal combustion engines and sulphate of ammonia.

MADRID, July 1.

URUGUAY

ECONOMIC RECONSTRUCTION PLAN

THE proposed law of economic reconstruction has been submitted to Congress by the Minister of Finance. The project is accompanied by a statement, signed by the Minister, in which reasons are given for the revaluation of the gold held by the Bank of the Republic of Uruguay. In this statement the Minister contends that the \$49 millions Uruguay currency which it is expected will result from the revaluation will not signify a depreciation of the Uruguayan peso in terms of foreign currency (sterling, United States dollars, etc.). He states that "the extra value will be allocated entirely to expenditure outside the Central Government's finances." It is generally believed, however, in local banking circles that exchange depreciation is inevitable if this law is sanctioned.

At present, according to the Minister's statement, the currency circulation amounts to \$74,000,000, as compared with \$79,600,000 in December last, \$78,400,000 in the same month in 1933 and \$84,600,000 in December, 1932. It is proposed that under the new scheme the issue shall be as follows:—

Guaranteed by gold holdings	\$ 80,000,000.00
The equivalent of actual subscribed capital of the Bank of the Republic, guaranteed by the liquid assets of the bank.....	27,821,685.30
Guaranteed by silver holdings.....	8,800,000.00
	116,621,685.30
Less 20 per cent. guarantee on deposits of whatsoever nature	15,000,000.00
Balance	101,621,685.30

The Bank of the Republic will no longer issue currency. This function will be taken over by an autonomous body known as the Department of Issue, which will have its headquarters within the Bank and will be governed by a Board composed of banking, industrial and rural representatives.

The chief aims of the Government in proposing this plan are generally held to be as follows:—

- (1) To utilise the increased value of the gold holdings of the Bank of the Republic as a means of meeting heavy expenditure on public works and for the cancellation of debts to the Bank of the Republic and other State Departments.
- (2) To take possession of all foreign debt bonds held in Uruguay and exchange these for internal debt bonds, thus raising an internal loan by transferring the foreign bonds to the Bank of the Republic, which will have power to export the bonds if necessary for sale abroad.
- (3) To bring about one rate of exchange in place of the present three rates:—Free, compensated and official.
- (4) To control all imports and curtail them to such an extent that eventually Uruguay will have a sufficiently good trade balance to stabilise her currency.
- (5) To protect local industry by increasing tariffs.

USING THE "GOLD PROFIT"

The \$49,000,000 profit from the revaluation of the gold will be allocated as follows:—

To cover rural credits accorded by the National Mortgage Bank	\$ 1,615,231.50
" cover other credits accorded by the same bank	4,182,421.53
" subsidies to farmers on live stock.....	500,000.00
" losses on the Government intervention in the disposal of wheat stocks in 1933-34 and 1934-35	1,787,293.04

" Government services on the purchase of seed, seed potatoes, etc. (losses)	458,643.00
" credits to old age pensions fund.....	400,000.00
" credits to the government pensions funds..	374,379.33
" repay loan from the autonomous amortisation Bureau to the National Mortgage Bank.....	1,483,333.30
" repay loan from the same bureau to the government pensions fund	525,347.17
" repay loan from the same bureau to the old age pensions fund	845,000.00
" repay balance due to the National Mortgage on account of San Javier Colonisation Scheme.....	46,636.47
	12,218,285.88

The above accounts will therefore be considered as cancelled, leaving a balance of some \$36,500,000, which the Government intends to use over a period of three years as follows:—

Mortgages—	
Reduction in interest on mortgages on rural property to 4 per cent. estimated to cost by difference	4,500,000.00
Special reserve fund for National Mortgage Bank's bad debts	3,000,000.00
Colonisation schemes and assistance to farmers	1,000,000.00
Unemployment—	
Public works authorised by laws already in force.....	9,600,000.00
Construction of rural houses	1,000,000.00
Financial assistance towards construction of labourers' dwellings in Montevideo	500,000.00
Construction of hotels	2,500,000.00
Balance of cost of construction of the Clinical Hospital, Montevideo.....	2,000,000.00
Construction of country police stations.....	400,000.00
Construction of Army Barracks	800,000.00
Education, Culture and Art—	
Construction and establishment of country schools.....	2,000,000.00
Subvention for National Art and Culture ...	1,000,000.00
Subventions to Pastoral Production—	
Reserve fund	500,000.00
Compensation Fund—	
Stabilisation of old age pensions fund.....	3,000,000.00
Government's contribution to the Government (Civil Servants) Pensions Fund	3,000,000.00
Redemption of Public Health Bonds (Internal) ..	863,800.00
Adjustments corresponding to losses on interest, etc.	885,353.52
	36,549,153.52

It is difficult to see how the Government is to avoid heavy depreciation of the Uruguayan peso on the foreign exchange market. Such depreciation would, of course, up to a point be beneficial to Uruguay as an exporting country which relies substantially on the prices paid to her farmers for wool, hides, meat, etc., for her income.

MONTEVIDEO, June 20.

SOUTH AFRICA

THE OPPOSITION PARTIES

SINCE the latter part of last Session, there have been many complaints that Parliament was taking advantage of brisk business and easy financial circumstances to devote overmuch of its time to rural problems. It is further alleged that in its attention to these problems, its various solutions savoured too much of the dole system. That, of course, is the complaint of urban politicians, especially on the Rand. General Smuts recently met a number of Reef members and business men, and, considering that his audience consisted almost entirely of nominal supporters, had to encounter a considerable measure of criticism.

The mining interests still consider that they are treated unfairly over the taxation of "excess profits," while urban interests generally believe that the money raised from the

towns is spent heedlessly in the country. It is also suggested, rather freely, that the two Afrikaner parties having for the most part patched up their differences, British and British colonial views receive less consideration than ever. Most of Colonel Stallard's Dominion Party supporters are rather inclined to become excitable on this point; but they have a certain number of urban-dwelling Afrikaners in their ranks, and enough reason in their case to command a good deal of consideration. They talk freely of a "landslide" to their side amongst the Reef constituencies at the next election. The Government Party on the Reef—mostly representing former South African Party views—are certainly taking notice of the situation even if they are not seriously worried about the landslide. It seems very likely that part of this notice will take the form of an inquiry into mining taxation. The mining interests are still resentful of the total collection, and the method of assessment is extremely anomalous.

In the meantime, the Rev. Dr. D. F. Malan is raising a fiery cross on behalf of his own extreme wing of the Nationalist Party. In less progressive rural areas this very able gentleman permits himself to expound ideas—at times even to use language—which come oddly from a man who was once a minister of religion and now appears to aspire to be thought a statesman and leader of his people. One is forced to the conclusion that Dr. Malan believes devoutly in the traditionally abused "top-dog" policy in this country, provided the people under his leadership are at the top or can hope to arrive there. The Fusion Party are, in fact, in no danger of becoming inert for want of opposition. The "purified" Nationalist Party are detaching rural stragglers from one wing of their army, whilst the Dominion Party are flattering aggrieved and sometimes influential urban units on the opposite wing. On the whole, however, the Government retains and is likely to retain a sufficient measure of support. The leading members of the various oppositions are, for the most part, more lifelike on the platform than one would expect them to appear if in office. Dr. Malan is the possible exception.

THE EXPORT SURPLUS DECLINING

From figures recently published by the Department of Customs and Excise, it appears that the Union trade balance is moving in the direction of normality. The following are the figures for the four months January-April in 1934 and 1935:—

	Exports		Imports	
	1934	1935	1934	1935
Gold at standard price	14,305,133	9,475,988	—	—
Gold "premium"	8,161,845	6,438,951	—	—
Other goods	9,921,884	10,713,285	19,328,670	23,707,434
Total	32,388,862	26,628,224	19,328,670	23,707,434

The amount of gold exported has fallen from 3,368,000 ozs. fine in 1934 to 2,231,000 ozs. fine in 1935 and from £22,466,978 in total value to £15,914,939. The Reserve Bank holdings in the Union on April 27, 1934, were 2,191,354 ozs. fine and on April 26, 1935, were 5,759,149 ozs. fine, while the bank's ratios on these dates were 40 per cent. and 59 per cent. From this it would appear that there is room for a further expansion of imports.

The annual accounts of the South African Reserve Bank show that the bank's net profit for the year ended March 31st last was £307,000. Of this £120,000 was applied to the Reserve Fund, raising it to £1,000,000, a dividend of 10 per cent. (£100,000 the maximum permitted by law) was paid, and £87,000 became payable to the Government under the Currency and Banking Act. The report mentions that the capital stock of the bank (£1,000,000) is divided amongst 1,002 holders, and that half of these hold less than £500 each. With a Reserve Fund equal to its capital, and a ratio of gold holdings to public liabilities of 58.5 per cent., it will be seen that the bank is in an extremely strong position.

An interesting indication of the growth of the Reef is the decision of the Rand Water Board to increase its available supplies so that some 40,000,000 gallons per day will ultimately become available. The present population of the Reef (Johannesburg and the towns east and west thereof) is over 800,000. It is considered that by 1940 there will be more than 1,000,000.

JOHANNESBURG, June 14.

LETTERS TO THE EDITOR

THE I.L.O. REPORT

TO THE EDITOR OF THE ECONOMIST

SIR,—I concluded my recent letter dealing with the Report of the Director of the I.L.O. with three comments.

The first was that the scope of the I.L.O. has expanded beyond questions of labour and wages and now includes the whole field of economics and finance. Mr Butler makes no allusion to this statement with which, I presume, he agrees.

Secondly, I doubted whether the I.L.O. gives sufficient weight to views generally held on economic and financial affairs. I ventured to make this statement because of the uncritical way, as it seemed to me, in which the report treated currency depreciation, public works financed by loans, the adjustment of wages and the dragooning of the "recalcitrant minority." I am very glad to have drawn from the Director a denial of the sweeping views I attributed to him. When he suggested, however, that I have distorted his report, and that his comments "have been twisted into an advocacy of competitive exchange depreciation . . ." I fear I must disagree with him. I had already noted the passages he quotes in replying to my letter, but a sentence such as that extracted from page 15 is really a quite inadequate corrective to the obvious deduction from the graphs and the statements that currency depreciation is a paying policy, which appear on the following pages. It is, of course, all a question of emphasis, but reservations have a way of being ignored unless they are very emphatically stated.

In corroboration of my reading of the Report I quoted the British Press. I quite agree with Mr Butler that he "of course cannot be responsible for newspaper headlines," but I suggest the way in which a journalist sums up a report may perhaps give some indication of the deductions the general reader is also likely to make.

In conclusion may I repeat the third comment which I made in my original letter? The League of Nations has an Economic Section; if the I.L.O. is going to concern itself increasingly with financial and economic matters, should there not be a more close relationship between the two bodies?

The Davids,
Northfield,
Birmingham.

Yours truly,
L. J. CADBURY.

OBSTACLES TO RECOVERY

TO THE EDITOR OF THE ECONOMIST

SIR,—I have read your article with the above title which appeared in your issue of the 29th inst. with great interest. Your statement as to the sinister tendency on the part of many countries, including Germany, to indulge in rearmament as a means of relieving unemployment is true, and I can confirm it from my own experience as a result of a recent visit to that country. All the more reason for us to strain every nerve to restore world trade and get people fully employed in honest trade and industry.

Will you allow me to offer some comments on what you state with reference to stabilisation? I cannot quite follow what you mean as to a stabilisation agreement. The more countries which decide to stabilise their currencies, the better; but you surely do not stipulate agreement as a necessary preliminary to stabilisation. This is an act for the British Government and the Bank of England to decide upon, and for them alone. You also appear to base your approval of this action on a number of provisos such as the initiative must come not from "the sterling area but from the members of the gold bloc." This is surely to put the cart before the horse.

I venture to state that an initiative on the part of this country would lead to simultaneous action on the part of others. I entirely agree as to the advisability of a *de facto* or provisional stabilisation.

I am, Sir,

your obedient servant,

D. M. MASON,
Chairman, Executive Committee Sound
Currency Association.

London, S.W. 1.

BOOKS AND PUBLICATIONS

DUX IMPERATOR

JEREMY BENTHAM, who bridged the gap between the age of reason and the nineteenth-century age of materialism, thought that the mass of humanity could be systematically educated to elect their own welfare in accordance with a rational pleasure-pain calculus. But the technical developments of the age of materialism caused democracies to sin against the light of reason. The masses proved recalcitrant learners, indifferent appreciators, weak defenders of the limited forms of democracy. And the middle and lower middle classes, once having driven their stake into the terrain of Property, elected gods and leaders in their own image and enrolled armies when economic depression and social antagonisms incited the dispossessed classes to dispute the middle classes' assumption of democratic hegemony. Hence the post-war array of dictatorships in Europe, under a Leader, Duce, King, Field-Marshal—yes, even under a Russian Commissar, for the economic interests of the proletariat decreed that representation should not be granted to "foes of the regime." To-day, instead of Bentham's *lux effulgens* we have only the *dux effulgens* of dictatorship.

In this volume Mr Leonard Woolf analyses our Western dictatorships and dictators, the demand for them, the psychology of their supply, and the effects on their supporters and on the entire Western communities which have embraced them. He ascribes their origin to the crisis which comes in every civilisation, in his opinion, when civilisation "really begins to permeate the majority." "The minority is then faced with the necessity, if the civilisation is to continue and live and grow, of sharing its fruits with the common people." The struggle is most violent, Mr Woolf thinks, in the economic sphere; though he derides the Marxian assumption that the ebb and flow of civilisation is determined by economic causes. This economic clash, he says, is not the determining factor.

It is part only of a much wider and deeper historical struggle, which will determine whether the process of civilisation is to continue and be extended through all classes of the community, or whether the ruling classes will refuse to make the necessary "sacrifices" and will prefer to turn back towards savagery and barbarism.

Mr Woolf sees the tragedy of our age, therefore, in what M. Julien Benda described as "the intellectuals' treachery"—the unholy alliance between many of the most instructed minds and the raucous voices of the new barbarians and their Leaders, for the purpose of withstanding social progress. Mr Woolf's book is really splendid reading; for he lets loose broadside after broadside from his little *Revenge* against the fifty-three galleons which encircle him. Fichte, Hegel, Treitschke, Nietzsche, Bergson, Houston Stewart Chamberlain, Oswald Spengler; he goes for each of them; and then he goes for those who merely reaped where they had sown their intellectual treachery: Herr Hitler and Signor Mussolini. The dogma of the Brown-shirts and Black-shirts, the magic of manual gesticulation, the cult of symbols, the ritual and hierarchy of the "Chosen," the apotheosis of uncritical emotionalism, the flight from individual responsibility to collective irresponsibility, the myth of divine inspiration in the leader of the newly "co-ordinated" community—all these insignia of Western dictatorships come under the flail of his pen. As we should expect, there is good psychological analysis in Mr Woolf's book; mordant humour; and a wealth of historical parallels. Throughout, the author insists on the necessity for a rational approach to life and action, individual or collective, as the goal of civilisation. Reason breeds toleration; and then civilisation has its chance.

Mr Woolf has written a book which should have been written long ago. Now, it reads disconcertingly like a sharpshooting rearguard action by one of the leaders in the democratic retreat. But Mr Woolf might have given us more. What if "the people" will have it so? What if

"Quack, Quack!" By Leonard Woolf. Hogarth Press.
201 pages. 7s. 6d. net.

Jeremy Bentham's major premise, and Mr Woolf's inarticulate minor one, on the educability of the middle class, be false? What if the majority in the democracy vote for unreason, and ostracise *les honnêtes clercs*, the honest rationalists? Mr Woolf tends to ascribe the disparity in the distribution of the rational faculty through Western society too much to the unequal distribution of wealth. Experience shows that the rational faculty is no monopoly of wealth or of social class.

SHORTER NOTICE

"Principles and Methods of Taxation." By S. Armitage-Smith. Revised and Rewritten by R. G. Hawtrey. John Murray. 236 pages. 5s.

This is the eleventh edition of Dr. Armitage-Smith's useful little introduction to the study of public finance, published in 1906. It contains an elementary account of the origin, development and present method of national and local taxation in this country, supplemented by brief notes on the system of taxation in France, India and in the United States.

As a large part of Dr. Armitage-Smith's account was descriptive, its relevance to current thought and practice diminished as time went on. This deficiency has now been remedied by Mr R. G. Hawtrey, who has not only brought the book up to date, but has almost entirely re-written the section dealing with the incidence of taxation. In this chapter Mr Hawtrey traces in some detail the incidence of the various forms of taxation and he draws attention to the difficulties of satisfying the canon of equity.

MONEY AND BANKING

SIX MONTHS' FOREIGN EXCHANGE MOVEMENTS

THE past six months have constituted one of the most dramatic periods in the history of the foreign exchanges since Great Britain's suspension of the gold standard nearly four years ago. The only definite result has been the devaluation of the belga by 28 per cent. Yet a month ago France was within an ace of having to devalue her currency, a step which, among other consequences, must have involved the immediate disintegration of the gold bloc.

The fluctuations in the leading spot and forward foreign exchange rates are set out in the following table. In many respects the forward rates are the more significant, for they indicate the extent of the pressure to which a particular currency is subject at any time. The table also includes the Paris cross-rates upon New York and Milan, which help to illustrate the history of the franc and the lira:—

End of	Dec.	Jan.	Feb.	Mar.	April	May	June
SPOT RATES							
London on—							
New York	4.94½	4.87½	4.84½	4.79½	4.83	4.95	4.94½
Paris	74½	74½	72½	72½	75½	74½	74½
Amsterdam	7.29	7.24	7.10½	7.11	7.11½	7.34½	7.23½
Brussels	21.03	21.00	20.55	25.62	28.40	28.88	29.20
Zurich	15.22	15.14	14.85	14.84	15.35	15.07	15.07
Milan	57½	57½	56½	58½	58½	60½	59½
FORWARD RATES (three months')							
London on—							
New York	1d	30d	1½p	1½p	2p	1½p	1½p
Paris	10d	30d	26d	26d	49d	67½d	157½d
Amsterdam	1d	1½d	1½d	6½d	22½d	42½d	10½d
Brussels	25d	37d	26d	200d	17p	20p	22½p
Zurich	par	1½d	2d	28d	80d	115d	41d
Paris on—							
New York	15.13	15.27½	15.04	15.18½	15.10	15.19	15.06½
Milan	129.70	129.35	128.45	125.00	125.05	125.30	125.05

NOTE.—All sterling spot rates represent foreign currency to the £ sterling. For the forward rates "p" stands for premium and "d" for discount. The parities for the two Paris cross-rates are Frs. 15.07 = \$1, and Frs. 134.60 = 100 Lire.

The year opened with the pound subject to a certain amount of pressure. New Governments had recently been formed in both France and Belgium, and the confidence which they then created was responsible for the repatriation of a certain quantity of money which had previously been lodged in London. In addition, some seasonal buying of dollars was still in evidence. Early in January came the French Government's attempt to establish a wider discount market in Paris, which was accompanied by the appointment of M. Tannery as Governor of the Banque de France in succession to M. Moret. This attempt has largely proved abortive, for the only practical consequence has been that the Banque de France has undertaken to make short-term loans against approved collateral, but at the moment it encouraged the rentes market and led to a further repatriation of funds. A few weeks later came the London pepper and shellac failures, accompanied by temporary political difficulties of the British Government. Thus sterling remained weak.

Meanwhile, American influences began to bear on the Continent. At the end of January it became known that the United States Supreme Court's gold clause judgment was impending, and that there was a chance that the gold clause and also the 1934 devaluation of the dollar would be invalidated. This uncertainty inspired heavy Continental bull purchases of dollars, and as the future American price of gold was thought to be open to doubt, the Continent was reluctant to ship gold. As a result the Paris-New York cross-rate moved to well outside the export gold point of about Frs. 15.17 to the dollar, and at the end of January the dollar was quoted in Paris at Frs. 15.27½. On February 18th the gold clause was upheld by the Supreme Court, but, contrary to previous expectations, there was no great rush to sell dollars. The open bull positions may have been smaller than had been estimated, but it must be remembered that at this time sterling was still passing through its period of weakness. Early in March, in fact, there were heavy commercial pur-

chases of dollars against pounds, inspired by a sudden fear that the pound was about to depreciate.

Early March proved the nadir of sterling, for a few days later the gold bloc's difficulties began to develop. Belgium proved the first storm centre. The trouble began with speculative sales of belgas in such volume that the banks were unable to find buyers. The flight of funds from Belgium quickly reached the point where it began to imperil the stability of the banking system, and from that point onwards the belga was doomed. M. Theunis, the Prime Minister, made an abortive visit to Paris in the hope of obtaining customs concessions, but he had to return hurriedly in order to impose exchange restrictions, which were the only alternative to a general banking breakdown. A few days later M. Theunis resigned, and after a short delay was succeeded by M. van Zeeland, formerly Vice-Governor of the National Bank, at the head of a Coalition Government. A comprehensive series of reforms was at once introduced. The belga was devalued by 28 per cent. at the end of March, an Exchange Equalisation Fund was established, Government control over the banking system was instituted, and general reconstruction measures were put in hand. These reforms quickly restored confidence. Funds returned to the country, and the belga, at its new level, has since been much the strongest of the gold bloc currencies.

Belgium, however, had only rescued herself at the cost of a severe shock to the rest of the gold bloc. France and Holland found themselves threatened with Belgian competition fostered by a devalued belga. In Switzerland the banking position revealed weaknesses, while the pressure of deflation inspired a political movement towards a freer economic policy which crystallised out into a referendum held on June 2nd. During April, Holland and Switzerland stood the main shock of the assault. Both countries, however, announced their determination to remain on gold, and adopted the orthodox measures of defence. Early in April the Dutch Bank rate was raised from 2½ to 4½ per cent., and a month later the Swiss rate was raised from 2 to 2½ per cent. In the short run the defence proved successful. In early May the pressure on the guilder relaxed, and the Dutch Bank rate was reduced to 4 per cent. The Swiss franc remained very weak, but a breakdown was averted.

Late in May the crisis shifted to France and rapidly assumed much greater intensity. The French Budget position was known to be bad, and there arose some doubts whether the Treasury would be able to obtain sufficient funds to meet its immediate needs. This was enough to stimulate a flight of funds from France, and speculators at once jumped in and began large-scale bear attacks upon the franc. The Banque de France lost gold heavily and quickly raised its rate from 2½ to 6 per cent. Meanwhile the crisis spread to the political field. M. Flandin, the Prime Minister, failed to obtain powers to meet the crisis, and at once resigned. For a whole week France was without a Government, but finally M. Laval succeeded in forming a Ministry. During these critical days forward francs were at a discount, which at one time was as wide as Frs. 7 for three months' delivery, and the Banque de France lost gold to New York, Brussels and into private hoards at the rate of hundreds of millions of francs a day. The French crisis had repercussions elsewhere. Holland lost gold and the Dutch Bank rate had to be raised again to 5 per cent. In Switzerland the referendum gave the Government a qualified victory, but Switzerland continued to lose gold and the banking system developed fresh weaknesses.

In the middle of June the crisis subsided, the franc recovered against the dollar to within the export gold point and the French Bank rate was reduced to 5 per cent. The Dutch Bank rate was later reduced to 4 per cent. A few days later M. Laval obtained certain powers to deal with France's economic problems, and the French Chamber wen

into recess. Nevertheless, the cost of the crisis was severe. The Banque de France lost about Frs. 10,000 millions of gold and had to grant fresh credits amounting to about Frs. 5,000 millions. Thus the gold losses have only been balanced by a net restriction of credit of less than Frs. 5,000 millions, and the position of the Banque de France has been weakened. Even so, it is doubtful if the gold bloc countries could have withstood the crisis without external assistance. Both the British Exchange Equalisation Account and the American Stabilisation Fund gave support, and the Bank of England also took steps to check speculative operations in gold against francs.

The half-year closed in a period of calm, coupled with a belief that no further crisis would occur at least until the autumn. It remains to sum up the extent of the casualties. These are revealed in the following table, showing the French, Dutch and Swiss gold stocks and Bank rates at the end of each month during the half-year:—

End of—	France		Holland		Switzerland	
	Gold Stocks	Bank Rate	Gold Stocks	Bank Rate	Gold Stocks	Bank Rate
Dec., 1934	Frs. mn. 82,124	2½	Fl. mn. 842	2½	Frs. mn. 1,910	2
Jan., 1935	81,879	2½	815	2½	1,838	2
Feb. "	82,196	2½	811	2½	1,794	2
March "	82,635	2½	790	2½	1,713	2
April "	80,983	2½	645	4½	1,365	2
May "	71,779	6	621	5	1,193	2½
June "	70,770	5	627	4	1,169	2½

* 4 per cent. from May 15th to May 31st.

Over the whole six months the Banque de France has lost 13.8 per cent. of its gold stocks, the Netherlands Bank 25.6 per cent., and the Swiss National Bank 38.8 per cent. The lira has also been subject to serious weakness, even against the other gold bloc currencies. As the first table shows, it has depreciated against the French franc from Frs. 129.70 to Frs. 125, or to a discount of 7 per cent. Further evidence of its weakness is to be found in the course of wholesale prices, for during the half-year Italian wholesale prices have risen by over 13 per cent., whereas French prices have only risen by 2.3 per cent.

The outlook for the gold bloc, however, depends on many other considerations besides those of relative price levels. For the moment there is a breathing space, coupled with renewed talk of stabilisation, which the gold bloc countries hope will solve their difficulties. This question of stabilisation is discussed in an article on page 3, and there is no need to cover the ground again. The past half-year has shown that some solution must be found for the growing troubles of the gold bloc. What that solution will be, or whether an orderly solution can be found at all, remains for the coming six months to reveal.

FINANCIAL NOTES

Italian Exchange Clearing.—Steps have been taken by the Italian authorities to tighten up the clearing regulations and to eliminate the small mushroom concerns which sprung up solely to act as intermediaries. Henceforward both exporters and importers desirous of making use of the barter system must obtain a permit from the Institute for Foreign Trade. Both parties are forbidden to make direct arrangements with each other, but must apply to a bank, which will issue a barter certificate serving both as an export and import licence. The bank is not bound to marry any two particular transactions. It is pointed out that the new arrangements are simpler than the old scheme of special licences which were granted by the Customs after permission to barter had been obtained from the Institute for Foreign Trade. It will also help the authorities to ascertain more readily the volume and nature of the goods dealt in by barter, and will give them certain powers of discrimination when granting permits. Meanwhile the Anglo-Italian Payments Agreement is working badly, for during the past three months the amount due to exporters and still in arrears has risen from £452,000 to £1,162,000. One difficulty is that while Italian importers of British goods are obliged to pay the amounts due into the special Italian pay-

ments account, British importers of Italian goods are not under any converse obligation, but are able to make payment direct. By so doing, they save themselves a certain amount of trouble, but the net result is a serious reduction in the amount of sterling available for the settlement of the debts due to British exporters. Experience certainly suggests that once the method of exchange clearing is adopted in principle it is best to go the whole way and make the scheme operate compulsorily in both directions. It is, however, at the best a poor substitute for complete freedom in trade and exchange.

Brazilian Exchange Difficulties.—Failing a solution of the interdependent problems of the foreign exchanges, the coffee industry and the Budget, the exchange position is rapidly deteriorating. The Anglo-Brazilian Payments Agreement arranged last March to deal with commercial remittances overdue on February 11th, was followed by the suspension of allocations of official exchange by the Banco do Brazil, and the release to the "free" exchange market of 65 per cent. of all export drafts. Recent cables have indicated that the free exchange rate has been weakening and also that no business has been passing. All exchange rates, except for collections, had been suspended by June 19th, while on June 27th the Fiscalização Bancária issued a circular the effect of which was to re-impose direct control of exchange. Freedom of exchange has thus been short-lived, and, pending official announcements, export trade to Brazil is virtually at a standstill. The immediate cause of the difficulty lies in the shrinkage of Brazil's export surplus to only some £1,500,000 (gold) for the first quarter of 1935. The 1933 Commercial Frozen Credits Agreement absorbs about £1,500,000 sterling annually, while last year's Debt Funding Scheme rests upon the assumption that there will be an annual export surplus of about £8,000,000. In addition, the second Commercial Credits Agreement of March involves a further claim upon exchange of £1,200,000 a year, as well as a cash payment of £1,000,000. The coffee industry has been demoralised by the absence of any announcement of the Government's policy regarding the sacrifice quota and the export tax, while as the cotton crop is inferior, cotton exports are not likely to be of much fresh assistance. In these circumstances it is easy to understand how these new exchange difficulties have arisen, but it is much less easy to see any immediate solution.

The Money Market.—Borrowing from the Bank of England over the end of the half-year and the Conversion Loan dividend early this week have made money extremely plentiful. Every day this week some money has been repaid to the Bank, but even so all the clearing banks had ample funds available at their normal rates, and apart from a small demand every evening it was difficult to find borrowers. Discount rates have completely collapsed with the opening of the new half-year. Last Friday's Treasury bill tender rate was only 12s. 1.53d. per cent., against 16s. 0.69d. per cent. the week before, while this week some of the banks have been free buyers of August and September Treasury bills at their minimum rate of ½ per cent. There has been little business in hot Treasuries, as the banks were only offering ¾ per cent. and sellers refused to accept that rate. Three months' bank bills are now quoted at 1½ per cent.

	June 13, 1935	June 20, 1935	June 27, 1935	July 4, 1935
Bank rate	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1

Others	1½	1	1	1
Discount rates:—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1	1	1½	1½

The floating debt statement for June 29th showed that £877.1 millions of Treasury bills were outstanding. Ways and Means advances from Public Departments amounted to £17.4 millions, while £8.5 millions had been borrowed from the Bank of England. Of the £877.1 millions of Treasury bills, £485.0 millions had been issued by tender

and £392.1 millions through the tap. Since March 31st the tender issue has increased by £124.6 millions, and the total floating debt by £69.6 millions. The floating assets of Public Departments and others have decreased by £63.5 millions.

The Bank Return.—Currency requirements by the public over the end of the month were responsible for an increase of £4.5 millions in the note circulation. The year's increase now amounts to £15.6 millions, or to 4 per cent. The increase in the note circulation has caused a reduction of £4.6 millions in the banking department's reserve. Government securities have risen by £2.0 millions, while public deposits are reduced by £6.6 millions. The 4½ per cent. Conversion Loan dividend was paid on June 1st, and apparently the Treasury had to borrow from the Bank in order to meet this payment. The Floating Debt statement for June 29th reveals Ways and Means advances by

BANK OF ENGLAND

Proportion 41.7% 37.5% 37.3% 35.8% 32.8%
the Bank amounting to £8.5 millions. Discounts and advances have increased by £3.3 millions. As the £4.4 millions borrowed prior to June 26th was repaid by July 3rd, it appears that a further £7.7 millions has been borrowed during the past week, making the total borrowings over the end of the half-year as much as £12.1 millions. As a result of the Conversion Loan dividend payment and market borrowings from the Bank, bankers' deposits have risen by £8.1 millions.

The Foreign Exchanges.—The London Market has again been very inactive, and even a small amount of business has been sufficient to cause rates to move. To interpret the week's changes it must be remembered that the speculative forward sales of gold *bloc* currencies made early in April are beginning to fall due. Early in the week the general tendency was for speculators to cover by buying gold *bloc* currencies spot. This caused some strengthening of the franc and other gold currencies, together with a limited movement of gold back to the Continent. The British Control intervened in the middle of the week and sold a few francs in order to steady the rate. On Thursday a sudden feeling of nervousness arose lest disturbances might occur in Paris during the Bastille celebrations on July 14th. The feeling was sufficient to deter speculators from closing down their bear positions altogether, and there was further selling of forward French and Swiss francs. As a result the three months' rate on Paris widened from Frs. 1½ to Frs. 2 discount, while the three months' Swiss rate moved from 28 to 41 centimes discount. Nevertheless, the Banque de France felt justified in reducing its rate from 5 to 4 per cent. Three months' dollars remain at a premium of 1½ cents, equivalent to nearly 1½ per cent. per annum. Only part of this is due to the disparity between London and New York short-term interest rates, so that there is still a demand for forward dollars either against sterling or more likely against francs. Spot rates of exchange have shown little change during the week, dollars being quoted on Thursday at \$4.94½ and French francs at Frs. 74½. Forward rates, however, still provide the best indication of the tone of the market.

New York Money and Banking.—New York money rates are unchanged. During the week ended June 26th New York member banks' loans to brokers rose from \$85.8 millions to \$90.4 millions. Other loans granted by member banks against securities rose from \$75.1 millions to \$75.2 millions. The Treasury offer of \$100 million 3 per cent. 1946-48 bonds, to be sold by tender, was 4½ times oversubscribed. The average price was 103, equivalent to a yield of 2.26 per cent. if the bonds were redeemed at the earliest possible date. The recent set-backs to the New Deal have rendered uncertain the prospects of the Banking Bill, and considerable uncertainty is reported to exist at Washington. It is possible that the banks will be permitted to underwrite new security issues, but (according to one statement) to the extent of only 20 per cent, or \$100,000 in any single issue. So limited a concession would be valueless, as any profit would be insufficient to cover the cost of such operations. The Administration Bill designed to uphold the Gold Clause judgment against holders of United States Government securities has been introduced into Congress. It affirms that all holders must be treated upon a uniform basis and declares that no holder has suffered any damage as the result of the devaluation of the dollar. Gold imports for the week ended June 26th included \$8.3 millions from France, \$2.2 millions from Holland and smaller amounts from Canada and England.

The National Bank of New Zealand.—The latest accounts of the bank reveal the changes which have followed the opening of the New Zealand Reserve Bank. This has taken over certain of the central banking functions formerly performed by the leading banks, with the result that the National Bank of New Zealand's note circulation has shrunk to £152,000, while its special advances to the Government have entirely disappeared. Nevertheless the gross profits of the bank are higher than they were last year, so that the loss of its former central banking business has not so far affected its earnings. The increases in bills discounted and advances show that its general business is expanding:—

	1933	1934	1935
Liabilities:—			
Capital	£'000	£'000	£'000
Reserve fund	2,000	2,000	2,000
Currency reserve	2,000	1,000	1,000

Allocation to exchange and contingency a/c.	40	40	30
Dividend	4%	4%	4%

This year the board have decided to transfer £500,000 from the currency reserve to exchange and contingency account. The currency reserve was established a year ago to cover the depreciation of the sterling value of the bank's Australian and New Zealand assets. In making this transfer the board are providing in advance for any loss on exchange which may result from any future transfer of assets from New Zealand to London. Whenever such a transfer is made, an exchange loss at once is incurred, whereas so long as the bank's assets remain in New Zealand the loss is potential rather than actual. The same distinction can be drawn between the two reserve funds, for the currency reserve is a general fund intended to give recognition to the depreciation of the bank's Dominion assets, whereas the exchange and contingency account is used to provide for day-to-day losses on exchange, as and when they occur.

THE STOCK EXCHANGE

HOME RAILWAY OUTLOOK

SINCE the Recovery Express was checked, about fourteen months ago, home railway junior stocks have never quite succeeded in regaining their impetus. Between March, 1933, and March, 1934, the four railway ordinary stocks in the Actuaries' Index made a spectacular revival from 49.4 to 101.6 (December 31, 1928 = 100). Never again, however, has the index gone over par. It has been as low as 64.5 this year, and is even now no better than 69.3. It is clear that home rail equities are both a sensitive and a somewhat disillusioned market. As the functional relationship between railway earnings and the state of general trade has been stressed in every report and chairman's speech for the last decade, the investor's attitude is, *prima facie*, difficult to reconcile with the fact that the *Economist's* revised business activity index, in the first five months of this year, has been running, on the average, 2½ per cent. above last year.

The publication of a complete half-year's batch of railway traffic receipts affords stockholders a jumping-off ground for an inquiry into this apparent anomaly. The figures, as issued week by week, have obvious limitations. They relate to railway traffic only, and exclude receipts from shipping, docks, hotels and other ancillary services. They are gross and not net figures. They are subject to subsequent adjustment, within a usual but not invariable limit of about 2½ per cent. Until the companies, however, issue their customary provisional net revenue figures with their end-July dividend statements, the gross returns afford the only available basis for estimating current earning power.

The following table shows the total receipts, under the main traffic headings, on each of the four route lines of Great Britain during the first twenty-six weeks of this year, and the percentage change as compared with the corresponding weeks (a) of last year and (b) of the years 1927-30. The latter, in the absence of any post-war period which railwaymen have agreed to recognise as "normal," afford as serviceable a pre-depression basis of comparison as can be devised:—

GROSS RECEIPTS, JANUARY-JUNE, 1935

	L.M.S.	L.N.E.R.	G.W.R.	S.R.
Passenger receipts (£)	11,389,000	7,581,000	4,694,000	7,059,000
Change compared with 1934 (%)	+ 9.49	+ 2.73	+ 1.60	+ 2.10
Change compared with 1927-30 (%)	- 14.8	- 16.6	- 20.0	- 9.6
Merchandise receipts (£)	11,593,000	8,006,000	4,670,000	1,565,000
Change compared with 1934 (%)	+ 0.09	- 0.99	+ 0.65	- 6.13
Change compared with 1927-30 (%)	- 22.8	- 26.8	- 19.1	- 25.2
Coal receipts (£)	6,125,000	5,894,000	2,584,000	795,000
Change compared with 1934 (%)	+ 0.20	- 2.36	- 1.00	- 4.21
Change compared with 1927-30 (%)	- 13.4	- 13.0	- 19.8	- 9.0
Total receipts (£)	29,107,000	21,251,000	11,948,000	9,419,000
Change compared with 1934 (%)	+ 1.04	- 0.12	+ 0.66	+ 0.98
Change compared with 1927-30 (%)	- 17.8	- 19.9	- 19.6	- 12.1

The general impression is one of stagnancy in aggregate receipts. On no line have the total gross takings for the half-year varied by as much as 1½ per cent. from the corresponding total of 1934. The London, Midland and Scottish has fared best, with a rise of 1.04 per cent. The Great Western shows an increase of 0.66 per cent., and the Southern one of 0.08 per cent., while the London and North-Eastern registers a negligible decline of 0.12 per cent. This state of affairs is the resultant of an improvement in passenger receipts, ranging from a little over 1½ per cent. on the Great Western to about 2½ per cent. on the London and North-Eastern, a stable revenue from a merchandise traffic (except on the Southern) and a decline in coal traffic. The L.M.S., exceptionally, has succeeded in maintaining its receipts under both the latter headings, though with very little to spare.

Receipts on three of the four railways are still running about 18 to 20 per cent. below the pre-depression average. On the Southern, however, the leeway amounts only to about 12 per cent. The company is predominantly a passenger-carrying line, and the largest decline in railway receipts, since 1927-30, has been under the heading of general merchandise. The Southern, moreover, with its extensive electrification programme, has maintained its total passenger revenue better than any of the other three companies.

The last six months' figures, at first sight, suggest that the renewed upward movement in industrial activity, after a tremor at the end of the winter, has been unaccompanied, as yet, by any corresponding change in the trend of railway receipts. Before investors, however, assume entirely static conditions it may be well to break up the figures, under each heading, into approximate four-weekly periods, and to ascertain whether any dynamic change is indicated by their recent trend. In the following table, which is based on the aggregate figures for the four railways, adjustments have been made for the varying incidence of Easter and Whitsuntide. Separate percentages are given for each of the last two weeks:—

TRAFFICS OF ALL LINES COMPARED WITH 1934 AND WITH 1927-30.

Weeks	Change compared with 1934 (%)				Decrease compared with 1927-30 (%)			
	Passenger	Merchandise	Coal	Total	Passenger	Merchandise	Coal	Total
1-4 ...	+ 3.2	- 1.0	- 2.7	+ 0.1	17.5	22.1	12.5	18.1
5-8 ...	+ 0.7	- 2.4	- 3.0	- 1.4	14.6	24.9	13.3	18.5
9-12 ...	- 2.4	- 2.4	- 4.2	- 1.6	16.6	25.2	13.9	19.5
13-17 ...	+ 3.2	+ 0.3	- 9.9	+ 0.7	16.4	24.2	13.6	18.7
18-19* ...	+ 12.9	- 5.5	- 3.8	+ 2.6	5.2	28.3	19.0	17.8
20-24 ...	- 0.8	+ 3.0	+ 6.4	+ 1.8	16.8	20.8	12.2	17.8
25 ...	+ 2.4	+ 2.6	+ 11.0	+ 3.9	12.0	20.6	16.6	15.9
26 ...	+ 4.9	+ 1.6	+ 4.6	+ 4.7	7.6	19.9	19.3	13.9

* Jubilee fortnight in 1935.

The figures for "Jubilee fortnight" may be disregarded as unrepresentative. For the rest, the returns suggest that the railways are holding their own on the passenger side. There is no evidence of a further loss of traffic to the roads. In the latest weeks, with the summer holiday season in full swing, "losses," as compared with 1927-30, have tended to drop from over 16 per cent. to 12 per cent. or less. As regards merchandise and coal, plus signs have recently replaced minus signs in the comparison with 1934. The impression of a favourable change of trend is borne out by comparison with 1927-30—at least as regards merchandise traffic, though the coal percentage figures are less easy to interpret.

The table, in fact, supports the tentative view that, after a rather disappointing experience in the early part of the year, home railway traffic may lately have taken a turn for the better. The figures, indeed, have closer correlation with those of industrial activity than the six months' returns, taken as a whole, might lead investors to suppose. How far can these results be translated into estimates of net earnings?

The problem is unusually difficult this year, because the whole question of expenditure under the heading of local rating has been thrown into extreme uncertainty by the reduction of the Southern Railway's assessment and the nil valuation awarded to the London and North-Eastern. These judgments involve a host of complexities as regards reimbursement for past overpayments, the position of the Rebates Fund, etc., but until the House of Lords has given a final ruling on appeal, in the Southern's case, the whole matter must remain in abeyance, so far as stockholders are concerned. No allowance for reduced rating is likely to be made by any railway when deciding its half-year's dividend

policy. Even the accounts for the whole of 1935 may be framed on the old basis if no final legal decision is reached before the end of the year. Investors, however, may be over-pessimistic in assuming that no relief whatever will be ultimately obtained. We may therefore make two separate sets of calculations, representing, respectively, the best and worst that can happen, in this respect, from the railways' viewpoint. If the present reassessments are confirmed, the Southern will save (in round figures) about £300,000, and the London and North-Eastern £1,300,000 this year. The savings on the London, Midland and Scottish and Great Western (on roughly the same scale as in the Southern's case) may come out at around £1,000,000 and £400,000 respectively.

In the second place, allowance must be made for the cost of the supplementary wage restorations which came into effect on January 1st last. This may be estimated, broadly, in a full year, at about £360,000 on the L.M.S., £170,000 on the G.W., £290,000 on the L.N.E. and £120,000 on the Southern. Finally, experience suggests that a larger percentage of increased receipts is usually offset by higher costs when traffic is rising than is "saved" when the trend is the other way. We have assumed, as a conservative basis, in the light of recent results, that additional costs have absorbed 60 per cent. of the half-year's gain on the L.M.S. and 50 per cent. on the G.W. and Southern, while economies have offset 30 per cent. of the decline on the L.N.E. The degree of approximation is not important, since both gains and losses, in this instance, are modest.

If the railways, in the second half of the year, fared exactly as they have done in the first half, and ancillary receipts remained unchanged, percentage earnings on the "marginal" stocks for a full year, on the assumptions described above, would come out approximately on the following lines:—

ESTIMATED EARNINGS, 1935 (Equivalent Annual Rates)

Stock	On Present Rating Assessment	On Reduced Rating Assessment
L.M.S. 4% Preference (1923)	1% to 1½%	3½% to 3¾%
L.N.E.R. 4% First Preference	2½% to 2¾%	Full
" 5% Redeemable Preference	3½% to 3¾%	Full
" 4% Second Preference	Nil	2% to 1%
G.W.R. Ordinary	½% to ¾%	1½% to 1¾%
Southern 5% Preferred Ordinary	3½% to 3¾%	4½% to 4¾%

Without making hair-splitting comparisons, investors may draw significant conclusions from the figures. L.M.S. senior preference stocks appear to be well covered by earnings, even in the absence of any reduced rating assessment. Last week's postponement of a dividend announcement on L.M.S. 5 per cent. redeemable preference stock may, presumably, be regarded as a conservative decision, taken without prejudice to any future announcement. Given a reduction in rating, a moderate further rise in traffic might put the 4 per cent. 1923 preference stock within sight of a full future dividend. A purchase of this stock, at its present price of 56½, therefore, is a dual speculation on rating and recovery. Similarly, although the L.N.E. first preference stocks are earning only a little more than half their full requirements on the existing rating basis, a rating assessment of *nil* might well leave their dividends covered, given the maintenance of the present level of earnings. As it is more than possible, however, that in the last resort the company would agree, for obvious reasons of broad expediency, to *some* payment of rates rather than none whatever, the latter calculation should be interpreted conservatively. The 4 per cent. first preference and 5 per cent. redeemable preference, therefore, at their present respective prices of 65 and 82½, may be regarded as fairly discounting immediate possibilities. The prospects of the L.N.E. 4 per cent. second preference, now standing at 25, would appear to be entirely dependent upon a considerable further improvement in traffic receipts.

By no method of computation can earnings on Great Western ordinary stock be regarded as approaching the 3 per cent. which the directors have paid in recent years.

The current price of 50 clearly presupposes a continued subvention of dividends from reserves and extraneous receipts. As regards Southern 5 per cent. preferred, which has long been one of the most favoured stocks in the market, earnings of 3½ per cent., for a full year, would appear to be covered, at the current level of receipts and rating charges. A reduction under the latter head might restore earnings nearly to a full dividend basis. At 84 the stock, though adequately valued on current indications, may have not unattractive future possibilities. Southern deferred stock, however, though now quoted at 23, may be deemed, at present, to lie outside the earnings zone.

In the light of these figures investors may conclude that present Stock Exchange values take known traffic factors fully into account, and even discount more favourable possibilities, such as reduced rating, to a moderate—though not, as yet, to a considerable—extent. Any new and marked revival of speculative interest in railway stocks would presuppose an acceleration of the improving tendency of recent traffic figures and/or a final settlement of the rating question on terms favourable to the companies.

INVESTMENT NOTES

Course of Share Values.—Although a certain amount of profit-taking has been in evidence in the equity share market this week, there has as yet been no serious interruption to the upward movement in values which, as the annexed chart shows, has lasted longer than any corresponding movement for a considerable time past. It has been accompanied by a roughly parallel rise in American equity share prices. The latter has persisted despite the political and "constitutional" vicissitudes of recent weeks. Such checks as have occurred have been purely

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

temporary. At the end of last month, however, the index had not succeeded in breaking beyond the point reached early in 1934. Current American forecasts remain moderately optimistic. A "technical" reaction in the more active ordinary share markets in London, however, would not come as a surprise. The Actuaries' Index of 158 ordinary shares has risen in the past month from 75.8 to 78.1 (December 31, 1928 = 100), and the average yield figure has declined from 3.83 per cent. to 3.78 per cent. The extent of the rise of some of the more important constituent groups is indicated in the following table.

Group (and No. of Securities)	Prices (Dec., 1928 = 100)			Yield (%)		
	Month Ago (June 4)	Week Ago (June 25)	This Week (July 2)	Month Ago (June 4)	Week Ago (June 25)	This Week (July 2)
Insurance Co.'s (24)	118.2	120.4	121.8	3.55	3.49	3.45
Investment Trusts (14)	53.3	54.0	55.8	3.74	3.68	3.63
Cotton (6)	38.7	42.1	44.1	2.27	2.27	2.25
Iron and Steel (8)	57.5	59.9	61.4	3.58	3.33	3.28
Motors (5)	51.2	54.5	55.8	5.01	4.77	4.69
Electric Supplies (8)	110.6	117.3	117.7	4.51	4.37	4.36
Breweries and Distilleries (19)	129.7	132.2	133.4	4.07	4.00	3.98

Some of the more depressed groups in the index, such as investment trusts and cotton textile companies, have recently shared in the rising tendency of markets generally. The main features of the security outlook, as a whole, were discussed in a leading article on page 1489 of last week's *Economist*.

London Transport Earnings.—The results of the London Passenger Transport Board for the year just concluded may be regarded as satisfactory. Gross takings have aggregated £28,020,100. Exact comparison with 1933-34 is not possible, in view of the fact that the Board has absorbed additional undertakings during the year. The Board's calculations, however, suggest that, comparing like with like as far as possible, the increase in receipts is of the order of £592,200, or approximately 2 per cent. On the basis of the provisional figures issued in respect of the year to June 30, 1934, this total would appear to indicate earnings of around 4½ per cent. on the "C" stock, subject to any allowance which may be necessary for adjustments under the "pooling" scheme, whose terms have been agreed with the four group railways this year. Such a figure must necessarily be tentative, but it suggests, at least, that the attainment of the "standard" dividends, within the years of grace allowed by the Act, should prove within the Board's capacity. The present quotation of the "C" stock is 99.

American Utilities.—The action of the House of Representatives in refusing to stiffen its version of the Public Utility Holding Company Bill, which is mentioned in a Note on page 7, has naturally cheered the public utility market. The Standard Statistics index of 37 Utility securities (which as recently as last March, a month after the text of the Bill was published, stood as low as 52.2, against a high figure of 327.9 in 1929) had recovered by last Wednesday, after the double vote in the House, to 70.9. It would be rash, however, to conclude that the troubles of the utilities are over. The weakness of these securities, as we argued in a leading article on March 23, 1935, has been due in the main to the impact of falling revenues upon their "highly-g geared" financial structures and only in minor degree to political attacks. The major obstacle to increased dividends is unaltered by this week's events. Moreover, it remains to be seen what practical effect emerges from the House's action. The Securities and Exchange Commission has shown itself to be a moderate body, but there is no reason to suppose that it will not insist upon the dissolution within five years of *any* holding companies. The investor's task consequently becomes one of attempting to guess which are the "good" and which are the "bad" holding companies. It is to be presumed that holding companies whose subsidiaries are both wholly owned and also form part of what the Bill calls "a geographically and economically integrated public utility system" will have little difficulty in either justifying their existence or reorganising as operating companies. Of the securities known to British investors, it may be suggested that Public Service of New Jersey, Consolidated Gas, Electric Light and Power of Baltimore, and solidated Gas and Electric, among others, fall into this category. At the other extreme, corporations such as United Corporation and American Superpower may succeed in asserting on the grounds that they do not hold a majority

The Distinctive System

of
The Scottish Provident Institution

Under the Distinctive System the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to bonuses.

Write for an explanatory booklet

in any utility and are therefore more akin to investment trusts than to holding companies. The Securities and Exchange Commission is consequently likely to devote most of its attention to the holding companies and "management companies" lying between these two extremes. Here the test will presumably be the degree of "geographical and economic integration" in the different systems. Some holding companies such as North American, Consolidated Gas of New York, Commonwealth and Southern and American Gas and Electric are likely to emerge either whole or in comparatively few independent and viable parts. But others are likely to fare worse. Most of the constituent companies of the Electric Bond and Share group, for example (the American, Electric and National Power and Light Companies) spread their interests fairly widely over the country, and other systems, such as Columbia Gas and Electric, Associated Gas and Electric and Utilities Power and Light, may have greater difficulty in establishing a high degree of integration between their properties. The prices and dividends of the common stocks of some of these companies are shown in the following table:—

	Highest Price, 1929	Price, July 3, 1935	Dividend, 1929	Present Div.	Earnings 1934	Yield on Present Price and Dividend %
Public Serv. N.J.	137½	38½	3.40	2.40	2.82	8.80

The investor will probably be well advised in the long run to look to the earnings and capital asset position of securities rather than to political ultimatums from Washington.

Argentine Railway Year.—The decision of the Buenos Aires and Pacific Railway to pay one and a half years' arrears of interest, to June 30, 1933, on its Second Debenture, after the agreed extension, a week earlier, of the moratorium, suggests that improvement is beginning to be apparent in the Argentine railway situation. The traffic figures of the other three major systems of the

Republic, however, for the financial year which has just ended, are peculiarly difficult to interpret. The Buenos Aires Great Southern and the Central Argentine show gratifying increases in peso receipts, but the "sterling equivalent figures," published by the managements, show considerable declines as compared with the previous year, since the average rate of exchange for the peso, over the twelve months, has been appreciably lower. These so-called "sterling figures," however, are not strictly relevant from the point of view of stockholders, since the railways do not remit home their gross receipts. The comparison is affected, further, by the fact that the heaviest depreciation in the peso took place near the end of 1933. In the first half of the last financial year, therefore, comparison was made with an "undepreciated" peso, while in the last six months, it has been effected against a "depreciated" peso. The following table shows, accordingly, that while peso traffic improvement, in the first half of the year, was accompanied by lower apparent sterling figures, peso movements in the second half year were duly reflected in the sterling computations:—

GROSS RECEIPTS			
	B.A. Gt. Southern (\$000)	B.A. Western (\$000)	Central Argentine (\$000)
PESO RECEIPTS			
Half-year, July-Dec., 1934	54,471	18,612	51,262
Change Cp. same months 1933 ...	+ 2.7%	+ 3.7%	+ 10.6%
Half-year, Jan.-June, 1935	70,926	21,724	57,089
Change Cp. same months 1934 ...	+ 5.1%	- 4.1%	+ 1.8%
Complete year, 1934-35	125,397	40,336	108,351
Change Cp. 1933-34	+ 4.2%	- 0.7%	+ 5.8%
STERLING EQUIVALENTS	(£000)	(£000)	(£000)
Half-year, July-Dec., 1934	3,169	1,083	2,981
Change Cp. same months 1933 ...	- 21.6%	- 21.2%	- 15.7%
Half-year, Jan.-June, 1935	4,185	1,281	3,367
Change Cp. same months 1934 ...	+ 5.4%	- 3.8%	+ 2.2%
Complete year 1934-35	7,354	2,364	6,348
Change Cp. 1933-34	- 8.1%	- 12.7%	- 7.1%

While stockholders may be assured that the actual sterling "losses" for the year will be less than those indicated by the "equivalents" in the table, they cannot, obviously, look for any considerable recovery in earnings and dividends in the reports which will be published next October. The improvement in traffic conditions has not—exchange factors apart—been striking as yet. The B.A. Western actually showed a decline in peso receipts in the second half of the year, while the Central Argentine, over the whole year, failed to earn its preference dividends. While, therefore, any further recovery in Argentine conditions should be duly "passed on" to stockholders, the traffic trend, at the moment, is too uncertain to allow of definite conclusions on the earnings' prospects of junior stocks. Investors may also be reminded that, under a recent Presidential decree, dividends have been made contingent on the restoration of wages "cuts," and that the recommendations of the Argentine Transport Commission (which were examined in a leading article on May 11, 1935, page 1081), cannot be expected to have any decisive influence on earnings in the near future. While, therefore, the freer exchange conditions now prevailing may encourage the boards of the stronger lines, like the B.A. Great Southern and the B.A. Western, to consider the possibility of some preference dividends, the more conservative type of investor may be inclined, for the present, to concentrate his attention chiefly on the debenture stocks. Securities like B.A. Great Southern 5½ per cent. Debenture at 102 and 4 per cent. Debenture at 84, and B.A. Western 5 per cent. Debenture at 96½, offer a relatively high yield of around 5 per cent. Their income would appear, on any computation, to be "covered," and likely to remain "covered," by earnings, with an appreciable margin. In the case of the Central Argentine debenture stocks, the present "margin" may be less substantial, but prospects would be proportionately enhanced by any further rise in traffic receipts.

New Issues in June.—Activity in the new issue market was perceptibly accelerated during June:—

National Savings Certificates sales again exceeded purchases by £150,000. After a break since January, home corporation borrowing was resumed to the tune of £12,309,000, Manchester, Birkenhead, Leeds and Liverpool all borrowing at slightly over 3 per cent. Among a host of "industrial" flotations, aircraft enterprises were prominent.

Industrial Profits in June.—We received 191 company reports last month, showing an aggregate rise in profits of 11.07 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—			1935—		
April	188	+12.86	December ...	159	+25.09
May	251	+23.43	January	111	+14.15
June	201	+20.44	February ...	218	+ 8.43
July	197	+27.10	March	261	+22.54
August	30	+35.47	April	242	+16.49
September	89	+40.63	May	244	+11.07
October	165	+49.70	June	191	+21.72
November	143	+33.97			

* After payment of debenture interest.

The reports of the month disclose net profits of £22,966,935, as compared with £18,868,692 in the preceding year. The trend of profits remains eminently satisfactory. Brewery earnings show a slight further rise, while twenty-five iron, coal and steel companies' reports register increased net earnings of just over 60 per cent. Oil companies contribute largely to the month's "recoveries," satisfactory figures being recorded by Anglo-Iranian, "Shell" and Lobitos. The year's story will be fully discussed in an early issue of the *Economist*.

COMPANY NOTES

Rayon Shares.—The most striking development of the rayon situation in the last few years has been the resumption of a rapid expansion in demand, common to all producing countries. In the United Kingdom the volume of yarn and waste excised recovered from the depression level of 47,817,000 lbs. for 1930 to 55,089,000 lbs.—or almost the equal of the 1929 record—in 1931. Since then the figure has risen to 92,578,000 lbs. for 1934. For the first five months of 1935 it has been 50,964,627 lbs., against 38,602,282 lbs. for the first five months of 1934. This expansion of the market has been secured largely by the industry's own efforts (under the lead of Courtaulds, Ltd.) in improving quality and reducing prices. A representative viscose yarn which cost 7s. 1d. per lb. in 1929 now sells at 3s. 3d., and only 6d. of the reduction is attributable to the halving of the excise duty a year ago. There is no sign, at present, of a check to progress. Improvements in quality continue, and the possibility of further price reductions cannot be ruled out—though recently Courtaulds appear to have suspended their policy of lowering prices, possibly owing to the almost embarrassing vigour of demand. Further, the relatively new policy of encouraging the use of staple fibre for spinning on existing Lancashire machinery is opening a new market

PRELIMINARY ANNOUNCEMENT

GREAT BOULDER MINING & FINANCE LIMITED

(Incorporated under the Companies Act, 1929)

CAPITAL - - - - £1,500,000

Divided into 6,000,000 Shares of 5s. each.

Of which 2,800,000 will be offered for Subscription, 2,044,000 will be allotted to the Vendors as part of the Purchase Consideration, 560,000 will be subject to the Option Rights given to allottees under this issue, 560,000 will be subject to the Option Rights given to certain of the Vendors, and 36,000 held in reserve for future issue.

The Subscription List will open and close on Tuesday, the 9th day of July, 1935, for an
ISSUE AT PAR OF 2,800,000 SHARES OF 5/- EACH
Payable: On Application, 2/6 per share; on Allotment, 2/6 per share

Directors:

JOHN WADDINGTON, J.P., 19, Brunswick Terrace, Hove, Sussex (Chairman of The Great Boulder Proprietary Gold Mines, Ltd.), Chairman.
MAJOR-GENERAL THE HON. SIR NEWTON JAMES MOORE, K.C.M.G., V.D., Mayes Park, Warnham, Sussex (Director of The Great Boulder Proprietary Gold Mines, Ltd.).
ALFRED HENRY COLLIER, 36, Buckingham Gate, London, S.W.1 (Director of The Great Boulder Proprietary Gold Mines, Ltd.).
CLAUDE DE BERNALLES, Alton Lodge, Roehampton, S.W.15 (Director of The Great Boulder Proprietary Gold Mines, Ltd.).
COLONEL SIR WILLIAM ROBERT CAMPION, K.C.M.G., D.S.O., Danny, Hurstpierpoint, Sussex (Late Governor of Western Australia; Chairman of Commonwealth Mining and Finance, Ltd.).
EDGAR PROTHOROE JONES, 5, Meadow, Epsom, Surrey (Director of Boulder Perseverance, Ltd.).
ELFRID JOHN MORRIS, Dornston House, Sandy Lodge, Northwood, Middlesex (Director of The Associated Northern Blocks (W.A.), Ltd.).

GALL & EKE, 13, Norfolk Street, Manchester 2, and Stock Exchange.

Solicitors:

BIRKBECK, JULIUS, EDWARDS & CO., 49, Moorgate, London, E.C.2. (For the Company.)
OSWALD HICKSON, COLLIER & CO., Cromwell House, Surrey Street, Strand, London, W.C.2. (For the Issue.)
BROAD & SON, 1, Great Winchester Street, London, E.C.2. (For The Great Boulder Proprietary Gold Mines, Ltd.)
RICHARDSON SOWERBY, HOLDEN & CO., 5, John Street, London, W.C.1. (For Australian Machinery & Investment Company, Ltd.)

Auditors:

CHALMERS WADE & CO., 24, Coleman Street, London, E.C.2, and at Liverpool, Chartered Accountants.

Consulting Engineers:

Messrs. JAMES BROS., Finsbury House, London, E.C.2.

Registrars:

THE MERCERS TRUST, LTD., 8, Great Winchester Street, London, E.C.2.

Secretary and Registered Office:

R. BACKER, 341, Salisbury House, London Wall, London, E.C.2.

The Prospectus will show (*inter alia*) that:—

- (1) Shareholders of the Great Boulder Proprietary Gold Mines, Ltd., will receive preferential allotment in respect of 1,166,661 shares in the proportion of one for every two shares at present held. Shareholders of the Associated Northern Blocks (W.A.) Ltd., will receive a similar right in respect of 350,000 shares in the proportion of one for every share at present held. Shareholders of Commonwealth Mining and Finance, Ltd., will receive preferential allotment in respect of 500,000 shares.
- (2) All subscribers to the issue will be granted an Option for two years from the date of the incorporation of the Company to take up one share for every five allotted to them at 6s. 6d. per share if exercised within twelve months, and 8s. thereafter. Option Certificates to Bearer in respect of such right will be issued after allotment.
- (3) The Company has been formed in particular to acquire—
 - (a) from the Australian Machinery and Investment Company, Ltd., the whole of the issued shares in the Gladiator Gold Mines, Ltd., Lochinvair Gold Mines, Ltd., Black Range Gold Mines, Ltd., Woolgar Gold Mines, Ltd., and Bindah Gold Mines, Ltd.;
 - (b) from the same Company options over the whole of its holding of shares in the Jupiter Gold Mines, Ltd., the Fitzgerald Brown Coal, N.L., the Pericles Gold Mines, Ltd., and the Crescent Gold Mines, Ltd.;
 - (c) from the Great Boulder Proprietary Gold Mines, Ltd., 40,000 fully-paid shares of 5s. each in Yellowdown Investments, Ltd., and its share and other interests in other Mining Companies;
 - (d) from Yellowdown Gold Development, Ltd., 60,000 shares of £1 each; and
 - (e) from the Associated Northern Blocks (W.A.), Ltd., the whole of that Company's assets, both in cash and in shares.
- (4) Particulars of assets and shares to be acquired from the Associated Northern Blocks (W.A.), Ltd., and the Great Boulder Proprietary Gold Mines, Ltd., respectively.
- (5) The properties of the Companies, shares in which are to be purchased or over which options are to be acquired, comprise some of the best-known gold mines in Western Australia.
- (6) All the properties other than that owned by Bindah Gold Mines, Ltd., have been reported upon by Messrs H. J. Urquhart, T. Blatchford, B.A., and E. P. Mackey, all of whom are in the employ of the Australian Machinery and Investment Company, Ltd., and whose mining experience in the particular districts in which the properties are situated is well known. Mr. G. O'Brien (Manager of the Southern Cross United Mines, Ltd.) has very satisfactorily reported upon the Bindah Gold Mines, Ltd.
- (7) After payment of preliminary expenses the Company will have a working capital of £475,000.

Copies of the Prospectus and Forms of Application may be obtained from LLOYDS BANK LIMITED, Bank Department, 72, Lombard Street, E.C.3, and Branches, National Bank of Australasia, Ltd., 7, Lothbury, London, E.C.2, the Solicitors, Messrs. Birkbeck, Julius, Edwards & Co., the Brokers, and from LONDON & INTERNATIONAL FINANCE CORPORATION, LTD., 2, Austin Friars, London, E.C.2, or THE MERCERS TRUST, LTD., 8, Great Winchester Street, E.C.2.

with great potentialities. Last year's British output of staple fibre, though a "record," was only 3,300,000 lbs., and in the United States only 2,200,000 lbs., compared with 22,000,000 lbs. in Italy and 20,900,000 lbs. in Germany. In view of the present greatly increased output and the cessation of reductions in prices so far, the prospect would seem inevitably to be for higher profits in 1935, subject always to the avowed Courtaulds' policy of checking any tendency towards boom conditions. Expansion at the present rate must, however, be recognised as abnormal. It

* Broken period equated to 12 months.

imposes on the industry, and especially on the leading concern, the necessity of planning ahead to meet still greater markets a year or two years hence if "booming" prices are to be avoided. Such conditions bring prosperity, but they also imply the risks that if demand were unexpectedly to stop expanding, the production side of the industry would rapidly become excessive owing to the maturing of already planned extensions. In that event the leading concern would no doubt revert to its well-tried remedy of rapid price reduction, and profits would necessarily fall. So long, in short, as the monthly returns of "consumption" (yarn and waste excised) continue to expand, sound rayon shares may be held with confidence. The investor, however, should not lose sight of the abnormal nature of the present expansion, nor of the difficulties of many of the smaller concerns, as exemplified by their profits record in the accompanying table.

Some Capital "Bonuses".—Four important industrial companies have, for varying reasons, decided in the last few days to make "bonus" distributions of ordinary shares. The largest and most important of these is a free issue of three new shares for every two now held by that great South African electricity enterprise, the *Victoria Falls and Transvaal Power Company*. The company has at present an ordinary capital of £1,000,000, on which it is paying a dividend of 15 per cent. and a cash bonus out of No. 2 reserve of 5 per cent. It may be felt, perhaps, that for a public utility concern this is a rather provocative rate. However this may be, the company is proposing to capitalise £1,500,000 of the Reserve Fund of £1,720,000 in order to bring the issued capital more into accordance with the actual capital employed in the business. The company, which has a fine record for stability of earnings, shows net revenue for 1934 at £1,318,066, against £1,269,905 for 1933. The *British Oxygen Company* has benefited very strikingly from the recovery of the steel and construction industries and from its own almost monopolistic position in its particular field. Three months ago the company paid a final dividend for 1934, making 15 per cent. for that year, against 9 per cent. for 1933. It now offers a

further reward to its shareholders. It is to increase its capital to £3,500,000 by the creation of 1,250,000 1/4w £1 shares and to offer part of these to the holders of the existing £1,657,116 ordinary stock in the proportion of one new share for each £6 stock at 70s. per share. The company will thus obtain nearly £1,000,000 of fresh capital for its rapidly extending business. At the same time (since the present units stand at 114s.) it will confer an acceptable bonus upon their holders. *Montague Burton*, the multiple tailoring concern, proposes a bonus share issue of a less ambitious kind. In maintaining the 6 per cent. dividend on the ordinary shares (which are privately held) it is adding, for the year ended March, 1935, a further 2 per cent. in new 10s. ordinary shares, no doubt because the directors consider it prudent to retain in the business the £40,000 which a cash payment of the same percentage would require. The company has appreciably extended its business during the past year. Trading profit, as a matter of fact, is slightly down but, thanks to lower charges for mortgage interest, net profits make a fresh record at £415,116, against £362,559. A less defensible type of bonus share issue is that proposed by the directors of *E. K. Cole, Limited*, the radio manufacturers, who are submitting a resolution at the forthcoming meeting, authorising the issue at par of the remaining 54,400 unissued 5s. shares and their offer to the working directors and the chief executive officials. This practice of rewarding officials by a share in the equity of the business is followed by a number of reputable companies, but that does not make it, in our view, desirable. The company is also proposing to increase the capital by the creation of 150,000 5½ per cent. preference shares, to convert the unissued 100,000 preferred ordinary shares into 5½ per cent. preference shares and to offer the whole 250,000 such shares to the preferred and ordinary shareholders. Profits for the year to March 31st were £250,178, against £166,618, and 30 per cent. is being paid against 20 per cent.

Tea Company Results.—The poor results of tea plantation companies continue to justify the cautious view which we took in a recent leading article (May 25th, page 1200). As is shown in the accompanying table, 1934 earnings are consistently and substantially below those for 1933. The full accounts suggest that the profit margin has been simultaneously attacked from two sides. Disappointing prices have reduced the proceeds on crops, which in general are not much different from those of the previous year, while costs have almost invariably been somewhat higher. On the "highly-g geared" companies the effects have been serious, as the following table of recent results suggests:—

Company	Earned for Divs.*		Ord. Div.		Share Prices			Present Yield
	1933	1934	1933	1934	Nominal	High, 1933-35	July 2	
Assam Consolid.	£1,110p	£,280p	Nil	Nil	£1	11/9	5/-	£ s. d.
Baracora (Sylhet)	36,139p	28,533p	20	17½	£1	76/8	55/-	Nil
Budla Beta	14,754	12,130	6	4	£1	65/-	33/9xd	8 7 3
Chargola	22,424p	4,289p	Nil	Nil	£1	21/1	8/9	2 7 6
Doom Dooma	33,490	13,250	12½	5	£1	70/-	37/6	Nil
Lethenty	2,757	Dr. 1,862	2½	Nil	£1	31/7½	13/9	2 13 3
Moabund	23,783p	Dr. 7,617p	15	Nil	£1	57/9	22/8	Nil

* I.e., for preference if in issue. Preference earnings marked p.
† After paying 3 years' preference dividend.

The accounts now being published provide interesting evidence of the relative inelasticity of costs on a tea plantation. Temporary economies are possible in a crisis year, as was demonstrated during the worst of the depression. Such savings, however, after a given point, can only be made at the expense of good cultivation or by cuts in wages and salaries. The cultivation savings cannot be continued indefinitely, while wage cuts are conceded to improve. There has, consequently, been no general or material reduction in the cost of producing tea as there has been in the cost of producing rubber. The restriction scheme has been partly, but only partly, responsible for holding up costs. Chairmen's speeches do not suggest that

there will be any general movement towards lower costs this year, though some companies report success in that direction. If a reduction is to come it will evidently be a slow process, depending on changes in general policy and on the possibility of rational amalgamations. Meanwhile, the prospect for tea shareholders must depend almost exclusively on the price movement. If the further 5 per cent. cut in this year's production quota has the desired effect on prices, it will more than compensate any extra burden which the cut may lay on costs. Our opinion, expressed at the end of May, however, would still seem to hold good—that, though prices may move to somewhat higher levels, no major recovery is in prospect. If this view proves correct the prices still being paid for some tea shares, though substantially lower than the "highs" of 1933-34, would appear to be discounting rather distant recovery possibilities.

Farewell to the "Underground".—On June 27th, Lord Ashfield took an official farewell of shareholders in the Underground Electric Railways Company of London, Limited, which was formally put into liquidation by a resolution passed on July 28, 1933, after the taking over of its main undertaking by the London Passenger Transport Board. Lord Ashfield appears to have fulfilled his obligations as liquidator with the same skill which distinguished his tenure, formerly, of the chairmanship of the company. Altogether, receipts during liquidation amounted to £1,979,912. Shareholders have received distributions of 6d. and 2d. respectively, and will receive a final payment this month of 1.3137d., making a total cash return of 9.3137d. Broadly, on the basis of a holding of 100 ordinary shares of the "Underground" Company, the total distribution under all headings has been:—

- (a) £117 of London Passenger Transport Board "C" Stock.
(b) 4½ North Metropolitan Electric Power Supply Company £1 Ordinary Shares.

- (c) 13½ Associated Equipment Company £1 Ordinary Shares.
(d) The right to subscribe for 5 North Metropolitan Electric Power Supply Company Ordinary Shares at 42s. 6d. per share, compared with an approximate market price at the time of 58s. per share.
(e) Cash distributions amounting to £3 17s. 7d.

This is a satisfactory showing, and there was no tinge of regret in Lord Ashfield's valedictory speech. The "Underground" has had an honourable and useful career, and its work will be continued on a larger scale.

The Twin "Eagles".—Until the Amatlan lawsuit has been settled and more stable labour and political conditions prevail, the directors of the Mexican Eagle Oil Company have decided to economise in every possible direction and to refrain from further development work. Sales last year actually exceeded production and purchases, so that there was some decline in stocks. The production and purchases for the past three years have been as follows:—

	Production (Barrels)	Purchases (Barrels)	Sales (Barrels)
1932	13,537,822	4,524,414	16,755,947
1933	14,271,675	5,261,883	18,593,917
1934	17,346,231	4,023,394	22,779,421

The trading account has now been given in pounds sterling. Trading for the year, after Mexican income tax, showed a profit of £663,653, from which had to be deducted income tax relating to past years (£145,240) and an amount for import duties payable as a result of the cancellation of the 1906 concession (£422,535). The trading account in pesos for the last two years is as follows:—

	(In Mexican pesos)	
	1933	1934
Available for distribution	6,072,978	...
Statutory reserve	810,446	...
Balance	5,262,532	11,856,096
Income tax for past years and import duties	...	10,154,254
Preference dividend	1,108,281	1,503,395
Total carried forward	5,532,745†	193,448

† After deducting Mexican income tax.

PRELIMINARY NOTICE

MANN & OVERTON LIMITED

AN ISSUE ON WEDNESDAY, 10th JULY, 1935,

OF

150,000 6% CUMULATIVE PREFERENCE SHARES of £1 each at par

AND

150,000 ORDINARY SHARES OF 5/- each at 6/6 per share

The Prospectus will show (inter alia):—

- The new Company is acquiring the undertaking of Mann & Overton's Limited, established 1901, whose business is the sale of taxi-cabs and other motor vehicles, together with a hire purchase finance business in connection therewith. The Company is taking over the exclusive concession for the supply of Austin Taxi-Cab Chassis for the whole of the Metropolitan Police Area of London.
- THE PREFERENCE SHARES ARE COVERED 5½ TIMES on last year's profits, and one-and-three-quarter times by tangible assets, of which £189,760 is in cash.
- The profits are increasing, and for the year ended 30th November, 1934, are shown as £50,282, SUFFICIENT TO PROVIDE OVER 27% ON THE ORDINARY SHARES, subject to reserves.
- THE COMPANY IS ACQUIRING THE PROFITS EARNED FROM 1st DECEMBER, 1934, AND THE TURNOVER FOR THE CURRENT YEAR SHOWS A SUBSTANTIAL INCREASE OVER LAST YEAR.
- A constant market is assured by the fact that as from the 1st January next THE AGE LIMIT FOR TAXI-CABS IN THE METROPOLITAN POLICE AREA OF LONDON IS TO BE REDUCED TO 10 years.
- There is a reserve of profits at 30th November, 1934, totalling £56,250, accruing to the Company over the next three years.
- The whole of the purchase price is satisfied by an allotment of Ordinary Shares, there being NO CASH CONSIDERATION.
- The net proceeds of the issue are to be utilised as additional working capital.
- The successful management of the old Company is being retained.

Prospectuses are obtainable on Monday, 8th July, from:—

WESTMINSTER BANK LIMITED, New Issue Dept., 9, Old Broad Street, London, E.C.2, Head Office or Branches.

BENNETT & TILLING, 4, Copthall Buildings, London, E.C.2, and Stock Exchange.

(*) Also bonus of two new ordinary 10s. shares for each 100 held. † Free of income tax. (s) On 1,074,863 shares (4/-). (i) On 955,256 shares (4/-).

COMMERCIAL FIXED TRUST, LTD.—National Provincial Bank, Ltd., announces that the third half-yearly income distribution upon gilt-edged fixed trust certificates will be paid to certificate holders registered as at June 15, 1935, at the rate of 3-2937d. net per sub-unit on the due date, July 15, 1935.

TAYLOR WOODROW ESTATES, LTD.—A full half-year's dividend on the 6 per cent. preference shares, will be paid on July 1, 1935. This company was incorporated on February 1, 1935, but acquired the undertakings of the vendor company on November 1, 1934, so that the dividend may be said to be in respect of a half-year's trading results interim payment on the ordinary shares, but to conserve the profits accrued during the life of the company to date until the end of the financial year on October 31, 1935.

BRITISH GLUES AND CHEMICALS LTD.—The directors will pay on July 31, 1935, two half-yearly fixed dividends on the 8 per cent. cumulative participating preference shares bringing the preference dividends up to date.

THE UNDERGROUND ELECTRIC RAILWAYS COMPANY OF LONDON.—The Liquidator of the Underground Electric Railways Company of London, Ltd., announces that a final cash distribution at the rate of 1-3137 pence per share will be made to shareholders on July 9th.

CHASE NATIONAL BANK.—The directors have declared a semi-annual dividend of 70 cents per share on the common stock, as well as the semi-annual dividend accrued to August 1, 1935, on the preferred stock, both payable August 1, 1935, to stockholders of record July 13, 1935.

BARCLAYS BANK LIMITED.—An interim dividend at 10 per cent. per annum on "A" shares and 14 per cent. per annum on "B" and "C" shares, respectively, subject in each case to the deduction of income tax payable on and after August 1st to shareholders registered on night of June 30, 1935.

COMPANY MEETINGS, &c.

THE IMPERIAL BANK OF PERSIA

FURTHER PROGRESS IN IRAN

The forty-sixth ordinary general meeting of the Imperial Bank of Persia was held, on the 28th ultimo, at Southern House, Cannon Street, London, E.C., Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the chairman), presiding.

The Chairman, in the course of his speech, said:—One of the most interesting events of the past year has been the expressed desire of the Government of H.I.M. the Shah that outside the country the name "Iran" should, as far as possible, be substituted for the name "Persia."

The Chairman, after dealing with the balance sheet, said:—Turning to the profit and loss account, it will be seen that, after making ample provision for income tax, bad and doubtful debts and other contingencies, we are able to show a profit of £75,760, which is only £1,408 less than last year.

We have again felt, though to a lesser degree, the lower earning power of money, which has not been entirely set off by better trading conditions in the East. So long as European countries cling to their trade restrictions, Eastern countries cannot be good buyers of their manufactures, and banks operating in these countries will only attain a full measure of success when trade barriers are removed and the products of the East can be marketed at a remunerative price.

This year we are again placing £10,000 to reserve fund, bringing up the total to £730,000.

You will, I am sure, be pleased to note that we propose to pay the same dividend and bonus as for the last five years, namely, 7s. per share and a bonus of 2s. per share, both free of income tax. This, with the interim dividend of 4s. per share, makes a return for the year of 13s. per share, free of tax, and leaves us with the slightly increased sum of £49,818 is. 9d. to carry forward to the new account.

PROGRESS IN IRAN

In my address last year I referred to the stimulus given to the country's progress by the energy and the resourcefulness of H.I.M. the Shah. The erection of factories, railway and road construction and the liberation of exchange dealings, all of them due to the Shah's initiative, have afforded a wide scope for the employment and education of labour, and have given opportunities for closer international relations in commercial matters than formerly existed. Provided the modern craze for economic nationalism and self-sufficiency is not carried too far, all this is to the good. The balance of trade has been preserved by the continued application of import and export licences. As regards currency, since we surrendered the note issue to the Iranian Government, the circulation has been controlled entirely by the Government's own financial experts in Teheran. By a law passed last September, the note issue, which is in the hands of the National Bank, has been fixed at Rials 800,000,000, equivalent approximately to £10,000,000 sterling, against which a metallic reserve of not less than 60 per cent. must be maintained.

The industrial development of the country continues to make progress. In addition to the factories I mentioned last year, we are informed that cotton spinning mills are also under construction in Yazd, Teheran, Kazvin and Kashan. A shoe-making factory has been started in Isfahan and another for printed cotton in Ashraf.

As regards the Trans-Iranian Railway, this year the figures given to us are in miles. Last year they were in kilometres. We hear that the track of the Northern section has now been completed for 120 miles, of which 93 are open to traffic. Completed for 120 miles, of which 93 are open to traffic. Completed for 120 miles, of which 93 are open to traffic. Completed for 120 miles, of which 93 are open to traffic.

In the south 156 miles are reported to be open to traffic, and an additional 31 miles of line have been completed beyond Salehabad. Contracts have been given for the construction of a further 178 miles. Even when this latter section is completed, there will still, I understand, be a further 370 miles to be built before the southern line will reach Teheran.

As stated in the report, our London manager—Mr Eldrid—proposes to retire after spending 42 years in the bank's service. He will be succeeded as manager by the sub-manager—Mr Hale. In whose knowledge and ability we have every confidence. Mr Hale has been with the bank for 28 years. Mr F. A. Ayrton, one of our senior managers in Iran, will take Mr Hale's place in London.

The report and accounts were unanimously adopted, and the change of name of the bank to "The Imperial Bank of Iran" was approved.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED

DIVIDEND AND BONUS OF 30 PER CENT. MAINTAINED

The fifty-sixth ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 28th ultimo, at the Great Eastern Hotel, London, Sir Montague Hughman (chairman of the company) presiding.

The Chairman, having referred to the balance sheet, said: If you will turn to the profit and loss account the balance of the trading account is practically the same as last year at £279,000, and net profit is £209,000, which is pretty well the same as last year. We have transferred £33,000 from contingent reserve set aside out of profits in former years to be made use of on an occasion like this when we desire to maintain our dividend, but have not quite earned sufficient money to do so.

During the year commodity prices remained low, and in the case of copper and lead record low levels were reached. These low prices are not good for our business, as the lower the price of commodities the less our cash turnover is. As a matter of fact this year at our Woolwich works we have had a record output, and our Gravesend works have maintained the high output which they reached last year. Taking Gravesend and Woolwich together the number of hours worked during the year shows an increase of 7½ per cent. over last year, and from this you can assume that we have been able to increase our employment.

Business during the last year has been difficult, and what with competition and the low price of commodities, the tendency is to a lower percentage of profits. Our business abroad continues to expand. This expansion is almost entirely due to increased business within the British Empire, but, as you can imagine, business with foreign countries is handicapped by difficulties in exchanges and other restrictions. In doing business with foreign countries we take care to ensure that if payment cannot be made to us in sterling, we cover ourselves by selling forward foreign currency to the amount of our account, so that we run no risk should the currency fluctuate.

The late Sir George Sutton at our annual general meeting held in 1927 told the shareholders of an agreement entered into with certain other cable companies for an interchange of knowledge and co-operation which embodied certain financial arrangements. The agreement has now been running for over eight years, and in many respects I can tell you that the alliance has been of great benefit to all those concerned. Research is continually going on, and the exchange of ideas and methods of manufacture have undoubtedly helped us to produce our cables at more economical rates, and certain savings have undoubtedly been effected. These savings have enabled us to lower our prices, and this in due course must lead to an increasing demand.

Competition has been of a severe nature in certain classes of our business, and co-operation of the allied companies has undoubtedly been of use to us in this direction. There are, however, still one or two matters regarding which we are not yet in smooth water; one is the financial arrangements which have not worked out equitably between the parties as was anticipated when the agreement was entered into.

I would like to say a few words about our tyre company, which in the past had been run entirely as a separate concern. It was recognised that the giant pneumatic tyre which we were manufacturing was not entirely satisfactory, and that the methods adopted for manufacture were not as up to date as modern requirements demanded.

Our new Vanguard pneumatic tyre will stand comparison with any other tyre on the market, and our tennis ball has been again selected as an L.T.A. official ball for use in championships and tournament play, and is recognised as being as good as the best.

Whilst the tyre company has made a loss during the past year, as you will see by the report, this has been met out of the tyre company's own reserves, and we look forward during the next few years with confidence to greatly improved financial results from the tyre company, and to the extension of this business at home and abroad.

In conclusion, the Chairman said that there were at last prospects of the prices of copper and lead increasing, and, as they used both of these commodities very largely, this should show an increase in the value of their turnover. They had maintained during the year the high position both in quality and manufacture which they had held for so long, and had carried forward a substantial amount of work for next year's account.

The report was unanimously adopted, and the proposed distribution of 30 per cent. for the year was approved.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED

SUCCESSFUL YEAR—DIVIDEND MAINTAINED

The thirty-ninth ordinary general meeting of Callender's Cable and Construction Co., Ltd., was held, on the 3rd instant, at the Waldorf Hotel, Aldwych, London, Sir J. Fortescue Flannery, Bt., D.L., M.Inst.C.E. (the chairman), presiding.

The secretary (Mr Howard Foulds, J.P., F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: It is my good fortune to be able to announce that the trading for the year 1934 has resulted in a profit which permits for the sixteenth time a dividend of 15 per cent. to be paid, with an increase in the carry-forward of £12,141. Although certain of the investments of the company have been disposed of during the year at a profit, credit for this has not been taken into the accounts.

Although the competition which the company has to meet has substantially developed, yet, thanks to the efficiency of the production department, whose organisation has been most carefully examined and improved, we have been able to meet this competition satisfactorily. The efforts we have put forward and the heavy expenditure we have incurred in order to design and manufacture a super-tension cable of the highest quality are reaping their reward, and the quality and reliability of the super-tension cables which we manufacture is recognised by the engineers under whose guidance purchases are made.

STREAM OF ORDERS UNABATED

The stream of orders generally remains unabated, and the relations between the company and its customers never stood higher than they do to-day. The goodwill of Callender's, although it stands at nothing in the balance sheet, is a valuable and substantial asset. As regards our subsidiary company, the Anchor Cable Company, the changes we are making at the factory and the new up-to-date machinery we are installing will enable us to meet the change in demand in the nature of the smaller cables required for railway signalling and internal house wiring, and to give prompt delivery.

There is no doubt that, from the figures that are published by the Central Electricity Board as to the amount of electricity that is being distributed in the country in ever-increasing quantities, the demand for the manufactures of this company must continually increase, and when it is remembered that, assisted by a Government guarantee of several millions sterling, there was a substantial scheme of electrification of the suburban lines of London, and possible further extensions of some of the main lines of the railway companies running out of London, there appears to be every reason to believe that, in addition to the ordinary normal demand which should maintain our trade, there are developments being evolved which should reflect themselves in increasing sales by your company. I think we can look forward to this present year with great hope that, well as we may have done in 1934, we may do equally well, or perhaps better, in 1935.

SIR TOM O. CALLENDER'S SPEECH

Sir Tom O. Callender, J.P. (deputy chairman and managing director), said it must be borne in mind that the company specialised in a very wide range of cable manufacture, from wire for low-pressure distribution, which delivered electricity to the domestic consumer, right up to the maximum voltage at present in use. An important part of their business was the manufacture and installation of cable for working pressures of 30,000 and 66,000 volts. To obtain the results for which the company had become famous their Wood Lane Research Department had been of the greatest possible assistance. Their researches showed that they had by no means reached the limit of development, and it would in future be possible to use their materials for higher pressures and with higher efficiency.

In respect to business generally in this country, it was with great pleasure that he confirmed the impression generally held as to the improvement of the home trade. The company's records showed that business was improving. Their marine department had secured the important order for the "Queen Mary," and this had brought them further orders for cables for ships. Their business overseas was mainly drawn from the British Empire, including the vast amount of work they were doing regularly in India. In various cities and towns there they had received contracts for the erection and laying under ground of their supply systems.

The report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting a resolution was passed altering the Articles to enable the board to elect three additional advisory directors.

GENERAL MINING AND FINANCE CORPORATION, LIMITED

FINANCIAL POSITION FURTHER STRENGTHENED

The annual general meeting of the General Mining and Finance Corporation, Limited, was held in Johannesburg on June 11th last, Sir George Albu, Bt. (chairman and managing director in South Africa), presiding.

The Chairman, in moving the adoption of the report and accounts for the year 1934, said that it was his pleasant duty to refer to the excellent results achieved during that period. The financial position, which had progressively been strengthened during the past few years, had more than been maintained and consolidated. The net profit of £371,892 was larger than the corresponding figure of the previous year by £8,538. This profit, together with the unappropriated balance of £125,870 brought forward from 1933, made the total available profit £497,762, from which a dividend of 20 per cent. for the year had been paid, thus maintaining the rate distributed in respect of 1933.

With regard to the assets side of the balance sheet, he drew shareholders' attention to the fact that British, South African and other Government and municipal securities were now incorporated in the balance sheet with stocks and shares, etc. The total standing under this head amounted to £1,629,759, an increase of £476,802 as compared with the combined figures at the end of the previous year. This increase was largely composed of revenue-producing gold-mining investments, together with certain interests in new gold-mining companies at present in course of development. The market value in the aggregate of the corporation's holdings was very considerably higher than the figure shown in the balance sheet.

He pointed out that the cash and cash assets (including stocks and shares, the bulk of which were readily realisable) exceeded current liabilities by a very considerable amount. Even this did not wholly reflect the strength of the position, in view of the fact that the market value of the corporation's investments was so much higher than the figure at which they appeared in the balance sheet.

Dealing with the more important interests of the corporation, the Chairman stated that at the Van Ryn Gold Mines Estate, Limited, operations for the first five months of 1935 had resulted in a profit of £67,369, an increase of £20,681 as compared with the corresponding period of the previous year, which was due chiefly to the higher price realised for gold. Since the end of the year certain small additions had been made to the plant which had resulted in the capacity being increased from approximately 54,000 tons to 60,000 tons per month.

During 1934 the West Rand Consolidated Mines, Limited, had earned a total profit of £1,123,411, which showed an improvement of £227,348 on the figure for the previous year. For the first five months of 1935 the profit was £458,277, representing an increase of £11,120 on the earnings for the corresponding period of 1934.

An active programme of development continued to be carried out, and was opening up highly satisfactory values both on the Main and South reefs. In addition to this, development on the Bird Reef Series indicated that a substantial tonnage of ore, distinctly payable at the present price of gold, would be derived from this source. In view of the highly encouraging outlook for the company, it had been decided to increase the milling capacity by erection of a new unit in the vicinity of the South Shaft, capable of treating an additional 25,000 tons per month. This plant had been brought into commission on May 20th last, to treat ore primarily supplied from development faces, and later on from the Bird Reef Series.

Sir George Albu said that the corporation held a very large interest in the East Rand Proprietary Mines, Limited, on whose board they were represented. This mine crushed during the year 1934 2,102,500 tons, and although the yield exhibited a decrease, this had been more than offset by the higher price received for gold, and a profit of £1,033,033 had been realised, an improvement of £94,853 on the previous year's figure.

Development in the central portion of the mine, from the Driefontein incline to a point some distance east of the Hercules incline, continued to be highly satisfactory.

The corporation also held a large interest in and was represented on the board of the Durban Roodepoort Deep, Limited, as a result of its amalgamation with the New Steyn Estate Gold Mines, Limited. An active programme of shaft sinking and development had been taken in hand prior to increasing the scale of operations of the enlarged property. An increase in tonnage milled might be expected by about the end of the current year, although the mine would not be placed on its full productive basis until the new No. 5 vertical shaft (which was located on the New Steyn Estate section of the property to the south of the circular shaft) was brought into commission in 1937.

P. & O. BANKING CORPORATION, LIMITED

INCREASED PROFITS

BETTER CONDITIONS IN INDIA

MR W. E. PRESTON'S REVIEW

Mr W. E. Preston, chairman of the P. and O. Banking Corporation, Limited, presided at the bank's fifteenth annual meeting, held, on the 3rd instant, at 122 Leadenhall Street, London, E.C. The report and accounts were taken as read.

Before turning to the year's operations, the Chairman referred to the loss which the board had suffered by the death of a very old and valuable colleague, Sir Montagu Turner, a close friend of the late Lord Inchcape, who had joined the board on the foundation of the bank. He, personally, he said, had had many years intimate association with Sir Montagu Turner as chairman of the Chartered Bank, and he and others received at his hands much kindness and warm-hearted interest.

The result of the year's transactions, after making all necessary provisions, showed a profit of £113,422, compared with £112,393 in the previous year. They had written off £5,000 on their premises account and were carrying forward a balance after payment of the usual dividend, to the next year's account, which was £2,946 in excess of the amount brought in.

DIFFICULT CONDITIONS

The Chairman referred to the work and care of their managers both at home and abroad, who had been unremitting in their endeavours to make the best of the very difficult conditions which continued to beset trading generally and particularly the international exchange of commodities and manufactures; he added that though there had been both in this country and in India an improvement in local conditions from which internal trade and internal industry had benefited, there had been no equivalent expansion in the foreign trade. Both in volume and in value the amount of trade which was handled between this country and India and the Far East had not sensibly increased and was very far short of the figures which they would like to see them grow to. In China in particular, economic and trading conditions had been almost undermined by the silver policy of the U.S.A.; merchant business under conditions such as recently prevailed, with silver fluctuating within the short period of 3 months from 36d. to 31d. could only be conducted at hazards which it would require the stoutest heart to undertake.

IMPROVEMENT IN INDIA

In India there were, fortunately, signs of better conditions. More cheerful advices had reached them from Bombay, where the mill industry had been to some extent protected from the intense competition of Japan. In Calcutta the jute industry recorded a welcome recovery in the early part of the year under review; some of this recovery had since been lost in consequence of the measures introduced by the Government for the restriction of the production of the raw material. Tea had not realised the hopes formed of the effects of the restriction scheme, consumption having only to a limited extent increased. In the Straits the experience of the tin and rubber industries was similar to that of other industries for which restriction schemes had been created. There could, in his opinion, be no well-based expectation of continued improvements so long as artificial restriction schemes provided temporarily sheltering conditions.

In the circumstances, there was cause for satisfaction in finding that the figures of their advances and bills showed increases respectively of £413,559 and £1,575,335 on the figures of the previous year.

They had reduced their holdings of securities from the high figure of £6,218,406 to £4,856,194.

THE ALLAHABAD BANK

The shareholders would be pleased to know that their affiliate, the Allahabad Bank, had again had a successful year's trading. Their figures, which were attached to the report, showed that they had also seen an improvement in the demand in India for loans, cash credits and overdrafts.

The Chairman concluded by moving the adoption of the report and accounts.

Mr E. F. Mackay seconded the resolution and it was carried unanimously.

The proposed dividend of 5 per cent. for the year was approved; the retiring directors, the Rt. Hon. the Earl of Selborne, K.G.,

G.C.M.G., the Hon. Alexander Shaw and Mr M. M. S. Gubbay, C.S.I., C.I.E., were re-elected, and the auditors, Messrs Peat, Marwick, Mitchell and Company, were reappointed.

Mr E. T. Hargraves proposed a hearty vote of thanks to the chairman, directors and staff, which was seconded by Sir Philip H. Browne and unanimously accorded, a brief acknowledgment by the Chairman concluding the proceedings.

OHLSOON'S CAPE BREWERIES, LIMITED

INCREASED PROSPERITY

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 4th instant, at 6 Bloomsbury Square, London.

Mr W. D. Buxton (the chairman) said that the prospects of improved trade of which he had spoken last year had been realised. There was an increase of £33,613 in the profit, and so far as the present financial year had gone the improvement was more than maintained. That characterised each of the branches of their business. The increased prosperity of the Dominion, of which they could look for the continuance, was mainly attributed to the activity in the mining industry, by which, of course, they had benefited, and he would ask shareholders to support the resolution to divide a total dividend on the ordinary shares amounting to 10 per cent.

They had, as usual, made a transfer to reserve for contingencies and had been enabled by the improved results to increase such transfer to £35,000, which they considered necessary in order to continue their policy of modernising and extending their licensed properties to satisfy present-day requirements. During the year they had written off an amount of £19,224, which, in former years, had been expended upon structural additions and permanent improvements to sundry licensed and other properties.

They had had a balance left of £111,247, to which they added the amount brought forward from last year, £53,059, making £164,307. Out of that they provided for the dividend on the first and second preference shares £11,500, the interim dividend on the ordinary shares paid in January last of £15,750, the transfer to contingencies reserve £35,000, or £62,250 in all, leaving £102,057, out of which they proposed to pay a final dividend of 7 per cent., less tax at 2s. 11d. in the £, making 10 per cent. for the year, carrying forward £65,307. They had added £57,501 to the main asset, land, breweries, houses, etc. The expenditure covered the purchase of sundry hotels as well as the completion of the Lion Hotel in the township of Springs. The brewery plant was maintained in its full efficiency, and Mr Ferrier, who had recently returned from South Africa, would confirm the directors' assurance of the soundness of the business and of the excellent quality of the beers that were being produced.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

BARCLAYS BANK

LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,000 Branches in England and Wales

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

KEPONG (MALAY) RUBBER ESTATES, LIMITED

INCREASED OUTPUT—TAXATION BURDENS

The thirtieth annual general meeting of this company was held, on the 3rd instant, at Great Eastern Hotel, London, Sir Francis Voules, C.B.E. (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The output of rubber for the past year was 4,048,485 lbs., including crops accruing to our company in respect of estates in Selangor, which we purchased during 1934. This compares with an output of 1,915,385 lbs. for 1933. The average gross price realised, London landed terms, was 6.45d. per lb.

Costs during 1934 were increased, chiefly owing to the general rise in labour, and the f.o.b. cost for 1934 of 3.50d. per lb., exclusive of depreciation, compares with 2.21d. in 1933. We earned a net profit for 1934 of £30,596, and propose paying a dividend of 5 per cent. (less tax), and to carry forward £8,474.

The company's estates have been assessed under the Restriction Enactment for a production of 8,294,697 lbs., which the board consider satisfactory. This amount is, of course, subject to the "cuts," which have been announced in addition to a domestic cut imposed by the Malayan authorities of 5 per cent. It is estimated that, should no further cuts be announced, the estates should have an exportable crop of about 5,750,000 lbs. for 1935.

The new acquisitions in Selangor were all first-class properties in the vicinity of their older estates. The properties in Johore consisted of large compact blocks and would give a good account of themselves as soon as they got into full working order. The large reserves of young rubber represented a valuable asset, in view of the prohibition of further planting.

Working costs are still tending to rise. It is estimated that with the payment of full quit rents and the duty levied on exported rubber, the authorities in Malaya receive approximately 4d. per pound from a company such as ours. A reduction in duty from 1 cent to .7 cent per pound has recently been announced, which should help matters, but there is still room for further concessions.

The report and accounts were unanimously agreed to, and an extraordinary general meeting subsequently held a resolution increasing the capital to £750,000 by the creation of 1,000,000 additional shares of 2s. each was unanimously approved.

HOVIS, LIMITED

INCREASED NET PROFIT

The thirty-seventh ordinary general meeting of Hovis, Limited, was held, on the 3rd instant, at Caxton Hall, Westminster, London, S.W.

Mr A. H. Dence (the chairman) said that they had made some very useful additions to their mills and depôts during the year. He would particularly refer to the extensions and improvements at their Haverhill mill, also to the new van works at Exeter and the new warehouse and landing stage at the Albert Bridge Flour Mills, which belonged to their subsidiary, Marriage, Neave and Company, Limited.

The amount of net profit on trading brought into profit and loss account for the year showed an increase of £9,000, a very substantial and satisfactory figure. It demonstrated progress, and the annual progress which, up to the present, they had been able to record was not only satisfactory and gratifying to the directors, but was, he was equally sure, a pleasure to all the shareholders. They felt, as the years rolled on, they were indeed fortunate that, in spite of periods of trade depression, of National and International difficulties and financial stress, the company had shown no retrogression, but had, on the contrary, continued to advance and prosper. Their results this year were surely another indication that trade in the country was on the up grade. If they had managed even during the years of great depression to hold their own and even to make some small progress, surely then they might hope to receive their share of the increased trade as economic conditions improved.

In past speeches he had called attention to the very serious fact that bread consumption generally in this and other countries was on the decline, but that did not apply to Hovis, as, following a record of sales for the year under review, it was gratifying to state that in the current year they had started beating those records.

There were times when their margins of profit were small, but they felt that stability of price was in itself a good advertisement. In order to make the position more sure and more satisfactory, they were proposing this year to place £10,000 to a reserve for the equalisation of dividends.

The report was unanimously adopted.

GREAT BOULDER PROPRIETARY GOLD MINES

The forty-first annual general meeting of the Great Boulder Proprietary Gold Mines, Limited, was held on the 28th ultimo. Mr John Waddington, J.P. (the chairman), said that the total tonnage treated during the year under review was 118,053 tons, against 106,897 tons in 1933. The gold produced amounted to 65,842 ozs., and after allowing for exchange and gold premiums received, less cost of minting, the total realisation was £303,614 (Australian currency). The year's working showed a net profit of £86,671 sterling, compared with £82,108 for 1933. Two dividends of 12½ per cent., making 25 per cent. for the year, had been distributed, and £40,206 remained to be carried forward. As a result of development work carried out during the year, 196,415 tons of ore had been added to the reserves, and after allowing for 118,053 tons treated, the reserve ore in sight at December 31, 1934, was 356,370 tons, compared with 278,008 tons at December 31, 1933, an increase of 78,362 tons.

Dealing with the future policy of the company the Chairman said that with a view to taking full advantage of the present and future gold-mining possibilities of Western Australia, the board had decided to participate in the formation of a company specially devoted to developing and financing new gold-mining properties. The new company would take over from the Great Boulder Proprietary the whole of its mining interest other than the Great Boulder Mine itself, and also all mining options and shares in other companies held by it at the moment.

The name of the new company had been decided upon as Great Boulder Mining and Finance, Limited, and it would have a registered capital of £1,500,000 in 6,000,000 shares of 5s. each, of which 2,800,000 shares would be offered for public subscription at par at an early date, thus providing £700,000 in cash. Registered shareholders in Great Boulder Proprietary as at July 2, 1935, would have the right to apply for one share in Great Boulder Mining and Finance for every two shares held by them in Great Boulder Proprietary. Great Boulder Mining and Finance would own the whole of the issued shares in five well-reported gold mines in Western Australia and approximately a one-sixth interest in the Yellowdine Gold Field. The cash resources of the company would be strong, as it was estimated that no less than £450,000 sterling would be actually held in cash.

The report was adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the eight days ended June 30, 1935, amounted to £9,529,000, against ordinary expenditure of £14,431,000. After allowing for a decrease in Exchequer Balances of £338,952, the operations for the week, as shown below, increased the gross National Debt by £4,779,000 to approximately £8,110 millions.*

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period July 1st to 10th at 38.38 per cent. The previous rate was fixed as from 21st at 138.79 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on May 8, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 184 1/2 pesos per 100 United States dollars on June 12, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on April 30th, 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on June 12, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York is at present maintained at 3.91 1/2 bolivares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on July 3, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £192,716,341 on the 26th ultimo, as compared with £192,716,335 on the previous Wednesday.

In the open market about £2,900,000 of bar gold has changed hands. The gold exchanges have shown small fluctuations against sterling and in consequence the price of gold has moved within arrow limits. Gold has been taken from London by Holland and Switzerland.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
June 27	141s. 3 1/2d.	12s. 0.30d.
" 28	141s. 3 1/2d.	12s. 0.30d.
" 29	141s. 4 1/2d.	12s. 0.22d.
July 1	141s. 4 1/2d.	12s. 0.22d.

" 3	141s. 6d.	12s. 0.09d.
Average	141s. 4.83d.	12s. 0.19d.

The s.s. "Rajputana," which sailed from Bombay on the 29th ultimo, is reported to carry gold to the value of £67,000, of which £58,000 is consigned to London and £11,000 to Amsterdam.

SILVER MARKET

The market has continued to rule quiet and rather heavy in one and prices have moved within very narrow limits. Selling from India and from China has again been a feature, and except for a short burst of buying on Saturday, which effected a temporary recovery of 1/4d., general demand has been poor. American support has been well in evidence at the lower level, but no disposition has been shown in that quarter in any way to press the market.

Operators in general await encouragement and in the meantime very considerable amounts continue to leave the hands of speculators, thereby affording a prospect of lessened resistance, if and when any upward movement should occur.

Quotations during the week:—

REPORTS AND NOTICES

THE LONDON ASSURANCE has reduced the rate of interest on loans under its house-purchase scheme to 4½ per cent. gross, and the new rate applies to both old and new loans. This takes effect as from July 1, 1935.

Mr Theodore David Neal, J.P., has been elected a director of Enfield Cycle Company, to take the place of Mr Alexander Ramsay, M.P., O.B.E., who resigned on his appointment as director of the Engineering and Allied Employers National Federation.

Captain A. F. Logan, M.C., assistant secretary of British Tin Investment Corporation, Ltd., has been appointed secretary in the place of Mr F. Gurdon Palin, F.C.I.S., retired; and Mr J. A. W. Gibson has been appointed assistant secretary.

The board of the Rohilkund and Kumaon Railway Company have appointed Lt.-Col. T. Gracey, R.E., to be a director of the company, with effect from July 1, 1935, in place of Lt.-Col. W. R. Izat, D.S.O., R.E., resigned.

Sir Henry Burt, K.C.I.E., C.B.E., has resigned the chairmanship of the Bengal and North Western Railway Company, after holding that position for the past 16 years, and the Board have appointed Lt.-Col. T. Gracey, R.E., to be chairman of the company, with effect from July 1, 1935. Sir Henry Burt retains his seat on the board.

At a meeting of the London board of directors of the Royal Insurance Company, Ltd., held on July 3, 1935, Mr J. A. Swan was elected to the chairmanship in succession to the late Mr Frank Henderson.

BANKS

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).—Sir John Calcutt has been elected deputy-chairman of Barclays Bank (Dominion, Colonial and Overseas) in succession to the late Mr Raoul Hector Foà. He is relinquishing the general management of the bank, and Mr Harry Robert Bradfield and Mr Julian Stanley Crossley, assistant general managers, have been appointed general managers.

CHASE NATIONAL BANK.—The statement of the Chase National Bank for June 29, 1935, shows deposits were \$1,735,108,000 and certified and cashier's cheques, \$25,023,000, the sum of which, \$1,760,129,000, compares with \$1,706,154,000 on March 4, 1935, and with \$1,533,446,000 on June 30, 1934. Total resources on June 29, 1935, amounted to \$2,027,704,000, as compared with \$1,979,297,000 on March 4, 1935, and \$1,810,699,000 a year ago; cash in the bank's vaults and on deposit with the Federal Reserve Bank and other banks, \$528,863,000, as compared with \$531,988,000 and \$412,911,000; investments in United States Government securities, \$573,664,000, as compared with \$542,343,000 and \$417,366,000; securities maturing within two years, \$86,017,000, as compared with \$77,341,000 and \$94,195,000; other bonds and securities, including stock in the Federal Reserve Bank, \$122,032,000, as compared with \$127,244,000 and \$132,857,000; loans and discounts, \$639,395,000, as compared with \$615,071,000 and \$621,566,000. On June 29, 1935, the capital of the bank consisted of \$50,000,000 preferred stock and \$100,270,000 common stock and \$50,000,000 surplus, unchanged from March 4, 1935, and from June 30, 1934. Undivided profits on June 29, 1935, were \$20,851,000, as compared with \$14,816,000 on March 4, 1935; \$18,839,000 on December 31, 1934, and \$16,521,000 on June 30, 1934. Semi-annual preferred and common dividends amounting to \$6,198,889.20 were paid to shareholders on February 1, 1935.

GUARANTY TRUST COMPANY OF NEW YORK.—On June 30, 1935 deposits were \$1,412,601,413.97, the largest in the history of the company. Deposits were \$1,268,883,103.48 on March 31, 1935, and \$1,203,475,411.17 a year ago. The company's total resources are \$1,730,209,418.50 as compared with \$1,581,795,947.01 on March 31, 1935, and \$1,539,221,442.59 a year ago. The statement shows capital, \$90,000,000.00 and surplus \$170,000,000.00; undivided profits, \$7,067,129.50, giving total capital funds of \$267,067,129.50.

MISCELLANEOUS

ACQUISITION OF SUNBEAM MOTOR CAR COMPANY, LTD. BY MOTOR INDUSTRIES, LTD.—Rootes Securities, Ltd., announces that one of its associated companies, Motor Industries, Ltd., has acquired the undertaking and assets and goodwill of the Sunbeam Motor Car Company, Ltd., including the share capital of Sunbeam Commercial Vehicles, Ltd., and that the sale has been sanctioned by an order of the Court. Motor Industries, Ltd., has already entered into possession of the premises and it is intended that the name of the company will shortly be changed so as to incorporate the word "Sunbeam," and that the company will continue the manufacture of high-class motor cars and trolley buses hitherto manufactured by the Sunbeam Motor Car Company, Ltd.

WEST AUSTRALIAN COMPANIES AND DEATH DUTIES.—The following statement is issued from the office of the Agent-General for Western Australia in London: The Administration Estate and Succession Duties Amendment Act, 1934, under which death duties are imposed in certain circumstances on shareholders in companies operating in Western Australia, even though the shareholder may be domiciled outside of Western Australia, specifically exempts from such duties all bona-fide railway, timber, mining, insurance and development companies. It follows that no West Australian death duties whatever are chargeable in the case of deceased persons domiciled out of Western Australia on shares or interests in any companies of the kinds enumerated, registered in this country, and carrying on business in Western Australia.

THE ASSOCIATION OF INVESTMENT TRUSTS.—The Association of Investment Trusts has been informed by the board of De Beers Consolidated Mines, Ltd., that they do not intend to proceed with their proposals relating to the share capital of the company. There

is therefore no further necessity for shareholders who disapproved of these proposals to send in their names. The association desires to express its appreciation of the substantial support accorded by the shareholders, and of the consideration given by the board to its representations.

DUFFIELD COAL PRODUCTS, LTD.—The board now consists of Mr F. Lindley Duffield (chairman and managing director), Mr A. Windsor Richards, Mr J. H. Macaulay and Mr J. S. Harrison. Mr J. H. Macaulay stipulates for certain rights to acquire at par for cash unissued capital of company, viz., 340,000 ls. ordinary shares which terms directors have accepted. Commercial-size unit is expected to be completed in October or November this year. Cost will be fully provided for by amount due from recent call of 2s. 6d.

EUROPEAN GAS COMPANY, LTD.—Stockholders representing more than the requisite 75 per cent. of the nominal capital having accepted the offer of Messrs R. de Lubersac and Cie., the agreement has now become absolute.

ASSOCIATED AUTOMATIC MACHINE CORPORATION, LTD.—At the meetings held June 28th to consider the scheme of reconstruction of the share capital of the company the voting was as follows: Extraordinary general meeting: For the resolutions, 2,376,508; against, 140,274. Preference shareholders' meeting: For the resolution, 285,128; against, nil. Ordinary shareholders' meeting: For the resolution, 2,047,559; against, 143,674.

SKODA WORKS.—Trading profit for 1934 was Kr. 88,399,420 (against Kr. 62,602,723), plus Kr. 11,074,293 (same) brought in; to taxes, Kr. 6,109,526 (Kr. 6,641,143); to staff funds, Kr. 27,789,187 (Kr. 24,912,306); depreciation, Kr. 43,260,758 (Kr. 31,049,274); leaving balance Kr. 22,314,242 (Kr. 11,074,293). Dividend, 9½ per cent., against nothing for 1933, Kr. 18,125,000; to directors, Kr. 123,995; further allocation to staff, Kr. 2,000,000; forward, Kr. 2,065,247.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

ALTHOUGH the general downward movement of commodity prices appears to have been arrested last week, the trend of quotations was again irregular.

Among industrial raw materials, cotton rose sharply in price. The higher quotations will be put to the test of the market early next week when the first official forecast of the United States cotton crop will be published. Quotations for hemp and wool were also slightly higher than a week ago, but flax remained unchanged in price and jute was marked down a little.

The price of copper dropped below £29 per ton owing to fears that the voluntary agreement to maintain the main features of the United States copper code may not be carried out. Subsequently, however, prices recovered again, and Wednesday's quotation showed a slight advance on that of a week ago. Lead and spelter are scarcely changed on the week, but tin was slightly dearer. The market in vegetable oils was quiet and quotations were generally lower than a week ago. Demand for rubber failed to improve, and Wednesday's quotation was slightly below last week's level.

Wheat prices rose sharply in the United States on reports of a deterioration of the standing crops, but quotations in this country failed to respond. Competition at the Mincing Lane tea auctions was keen at firm prices, but the market in coffee was quiet, and there was no recovery in raw sugar prices. Business in meat at Smithfield Market continued on a restricted scale owing to the warm weather. Eggs were also cheaper, but bacon was slightly dearer. Demand for fruit and vegetables was active.

In the United States the trend of commodity prices was again slightly firmer. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 158.8 on Wednesday, compared with 156.3 a week earlier, 156.6 a month earlier and 138.8 on the corresponding day last year.

COAL

SHEFFIELD.—The July quotas for South Yorkshire have been fixed as follows: Output, 52½ per cent.; inland supply, 52½ per cent.; export supply, 55 per cent. In June the export supply was 70 per cent. Best steam coals for export are scarce and quotations have advanced to 17s. 6d. and 18s. f.o.b. Prompt shipment business is quiet, but inquiries for forward supplies are increasing and the outlook is believed to be better. Inland trade continues brisk for industrial fuel but there is little business in house coal. Supplies of blast furnace coke are in excess of demand, and prices are again weaker.

NEWCASTLE-ON-TYNE.—Shipments of coal and coke from the Tyne during June were 1,043,602 tons, a decrease of 37,828 tons compared with the same month last year. Loadings in the first half of 1935 showed a reduction of 378,000 tons on the corresponding

period in 1934. Screened steam coal continues to be a good market, prices being firm. Other grades of steam coal are offered more freely. Durham collieries producing gas and coking coal are short of business and have difficulty in obtaining a full week's work. Patent oven coke is fairly steady.

Current f.o.b. prices for export: **NORTHUMBERLAND**—D.C.B. screened, 14s.; smalls, 11s.; Howards, Bentinck, Newbiggin screened, 13s. 6d.; smalls, 10s. 6d.; Tyne prime large, 13s. 6d.; smalls, 11s.; Hartley Main large, 13s. 6d.; smalls, 11s. **DURHAM**—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 18s. 6d.; Newcastle and district gas coke, 20s.

GLASGOW.—Steady conditions are the rule in the Scottish coal market, outputs moving relatively well for this season of the year. Domestic demand has fallen off with the improvement in the weather, but the collieries are finding some compensation in the outlet to industry. Coastwise business is also keeping up, and the export branch is maintaining the recent improvement. In general, collieries are now benefiting from pre-holiday buying, an indication of which was seen in the expansion in shipments last week to 292,000 tons.

Shipment prices f.o.b. district ports: **LANARKSHIRE**—Ell best 15s.—15s. 6d.; splint best, 17s.; splint second, 13s. 9d.—14s. 6d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.—13s. 9d.; Hartley, 16s.; steam, screened, 13s.—13s. 6d.; trebles, 13s.; doubles, 12s. 6d.—12s. 9d.; singles, 12s. 3d.—12s. 6d.; pearls, 10s. 9d.—11s.; dross, 10s. **FIFE**—Best unscreened navigation, 13s. 3d.—13s. 6d.; unscreened navigation, 12s. 9d.—13s.; first-class steam, 13s. 6d.—14s.; third-class steam, 12s.—13s.; trebles, 13s. 6d.—16s. 6d.; doubles, 13s. 6d.—14s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 10s.—10s. 6d. **LOTHIANS**—Prime steam, 12s. 6d.—13s. 6d.; secondary steam, 12s.; unscreened navigation, 12s. 6d.—12s. 9d.; trebles, 13s.—13s. 6d.; doubles, 12s. 9d.—13s.; singles, 12s. 6d.—12s. 9d.; pearls, 10s.—10s. 3d. **AVRSHIRE**—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s.; doubles, 12s. 3d.—12s. 6d.; singles, 12s. 6d.; pearls, 12s.; dross, 11s.

CARDIFF.—The recent slight improvement in the volume of the export trade of the South Wales ports is being maintained. Last week shipments in the foreign and coastwise trades totalled 400,600 tons compared with 306,784 tons in the corresponding week last year, and during the past few days the number of loading berths occupied has been above the average. Still, conditions in foreign markets are very dull and increasing difficulties are being experienced in the transfer of payments, particularly from Italy. Sized classes are the only qualities possessing any strength, and with few exceptions, current quotations are ruling at the minimum figures. This week an arbitration has been held by the South Wales Executive Board under the control scheme into an application for a lower minimum price for small coals supplied for carbonisation purposes. The application has been made by a colliery belonging to one of the largest of the local iron and steel combines. The Coalowners' and Coke Owners' Associations have applied for an inquiry by the Railway Rates Advisory Committee into coal shipment charges at the South Wales ports; this course has been taken as the result of the discontinuance as from the end of May last of a special rebate of ½d. per ton on tipping and weighing.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 9d. to 19s.; Black

IRON AND STEEL

MIDDLESBROUGH.—The market for pig iron, both foundry and hematite grades, remains firm. Trade continues chiefly with home consumers, export trade being very restricted. Shipments of pig iron from the Tees to foreign destinations during June amounted to approximately 3,500 tons. According to the latest figures of production, this area is the biggest producer in Great Britain of both pig iron and steel. Prices of pig iron are firmly maintained to home users at 67s. 6d. per ton for No. 3 Cleveland foundry pig iron and 69s. per ton for No. 1 East Coast hematite pig iron, delivered locally. Durham blast-furnace coke is quoted at 19s. per ton delivered at the furnaces here, but it is understood that this price can be shaded. Works generally are not interested in purchases of foreign ore for early delivery as shipments are coming forward regularly under existing contracts.

Semi-finished steel is in good demand and the finished steel departments have good orders on hand for bridge steel, constructional steel and other qualities. The order for three motor vessels of about 9,000 tons, recently booked by the Furness Shipbuilding Company, will provide further work for the plate mills, etc. Heavy mild steel melting scrap is in good demand at 52s. 6d. per ton delivered at the works here.

SHEFFIELD.—Reports from the works continue favourable. Turn-over in the steel branches has been increasing and the position is stronger than at the corresponding period of last year. Business with Russia is rather disappointing, although that country has since the beginning of the year taken from British works very large quantities of tungsten and other ferro-alloys used in the manufacture of special steels. Formerly Russia was a regular buyer of such steels from Sheffield; to-day she is obtaining them from her own plants. The heavy export of these ferro-alloys has been a feature of British trade this year. This is a new industry for the United Kingdom. Before the Great War British steel-makers obtained their ferro-alloys from Continental sources. Makers of high-grade steels in Sheffield are fully employed. Export trade expands but slowly, but the tendency is ever upward. Tool factories are busy: business in cutlery and plate is quiet.

GLASGOW.—Steelmakers in the West of Scotland are very busy, and some of the works are finding difficulty in completing the orders, of which delivery is required before the holidays. Conditions are improving with makers of semis and with re-rollers, and orders have been much more plentiful within the last few weeks. Home consumers are still taking the larger share of the sheet-makers' output, but export business continues to show signs of improvement and tonnage placed with local sheetmakers is quite substantial. Almost all branches of the engineering trade in the Glasgow district are busy now and in many cases have well-filled order books for forward delivery. Works in the Falkirk district are closed this week for the annual holidays.

CARDIFF.—There has been practically no change during the past week in the position of the South Wales iron and steel trade. On the Swansea Metal Exchange on Tuesday it was reported that there was a steady demand for tinplates both for the inland and the export trades at recent scheduled prices. The slight improvement in the market for galvanised sheets is also being maintained. Prices for finished products as well as for steel bars are unaltered. Shipments of tinplates at Swansea last week totalled 65,399 boxes, compared with 46,127 boxes the previous week and 105,471 boxes in the corresponding period last year. Arrivals in warehouse were higher than in the previous week and stocks increased to 127,586 boxes, as against 101,198 boxes the previous week and 96,887 boxes a year ago.

OTHER METALS

TIN.—The feature of the past week has been the narrowing of the backwardation on forward tin. While the cash price remained fairly steady, the three-months' quotation rose by over £5 a ton and—for the first time for several months—there was a fair supply of cash tin as well as a considerable demand for the forward metal. It may well be, as is supposed in London metal circles, that the operations of the buffer pool were mainly responsible for these developments, but it also seems likely that the publication of the June statistics induced consumers to cover their requirements. According to Messrs A. Strauss and Company, deliveries declined by a further 444 tons to 7,737 tons during June, while supplies fell by no less than 2,400 tons to 5,264 tons—the lowest level since February of last year. Total visible supplies (including the Straits carry-over) were thus further reduced by 2,907 tons, to the record low level of 14,383 tons. When one remembers that a substantial part of this quantity is controlled by the buffer pool, one can easily understand why consumers became anxious about their supplies.

understand why consumers are not buying more.
Sales of tin on the London Metal Exchange : 480 tons on Monday, against 270 tons a week ago ; 750 tons on Tuesday, against 430 tons last week ; 445 tons on Wednesday, against 110 tons last week. The New York quotation on Wednesday was 51.90 cents per lb., against 51.62½ cents a week ago and 51.30 cents a month ago. Wednesday's official closing quotation in London for standard cash was £230 5s. to £230 10s. per ton, compared with £229 15s. to £229 17s. 6d. last week. Stocks of tin in London and Liverpool at the end of last week totalled 2,822 tons, a decrease of 194 tons or the week.

COPPER.—Although the undertone has not changed, prices on the London market have recovered a little from last week's slump. Attention is still directed to the United States, where the market in copper remains unsettled. Last week's reduction in the domestic price from 9 to 8 cents per lb. (the first for over a year) has done little to stimulate consumers' demands. Consumers have adequate supplies at present—especially in view of the seasonally quiet period which has just set in—while it is generally anticipated that the customs smelters will soon cut the domestic price even further. All hope of a renewal of the copper code appears to be dwindling away, which means that equilibrium between the American price and the world price of copper must eventually be restored. In so far as this will remove the incentive for American producers to dump supplies on the European market, it is a bull point for the latter. During the past month, however, arrivals from America appear to have been heavy, for stocks in the official warehouses of the London Metal Exchange have again increased from 77,763 to 80,559 tons. Some fall in these stocks may possibly occur as a result of the disappearance of the distinction between blue eagle and non-blue eagle copper in the United States; for there is no longer a class of copper which is saleable only on the domestic market.

Sales on the London Metal Exchange: 1,700 tons on Monday, against 3,700 tons last week; 2,500 tons on Tuesday, against 1,800 tons last week; 1,800 tons on Wednesday, against 4,500 tons last week. Domestic spot was quoted at 7.22½ cents per lb. in New York on Wednesday, against 7.07½ cents a week ago and 7.77½ cents a month ago. Wednesday's official closing price for standard cash in London was £30 7s. 6d. to £30 8s. 9d., compared with £29 5s. to £29 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 69,275 tons, show an increase of 1,465 tons, while stocks of rough copper, at 11,309 tons, show a reduction of 100 tons on the week.

LEAD AND SELLER.—Prices for these metals fluctuated within narrow limits during the past week, the general market situation showing little change. On Monday the House of Commons approved a clause empowering the Import Duties Advisory Committee to reduce the duties on these metals to below 10 per cent. It is to be hoped that the decision regarding the future of the duties will be published at an early date, so that the uncertainty which has hung over these markets for some time past may be dissipated.

Sales of lead on the London Metal Exchange; 500 tons on Monday, against 1,000 tons last week; 850 tons on Tuesday, against 250 tons last week; 550 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 4.00 cents per lb., against 4.00 cents a week ago and 4.10 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £13 16s. 3d. per ton, compared with £13 13s. 9d. a week ago.

Sales of spelter on the London Metal Exchange, 125 tons on Monday, against 600 tons last week; 625 tons on Tuesday, against 500 tons last week; 375 tons on Wednesday, against 700 tons last week. Wednesday's quotation in East St. Louis was 4:30 cents per lb., against 4:30 cents the week before and 4:30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 17s. 6d. per ton, against £13 17s. 6d. last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was steady at £11 12s. 6d. to £11 15s. per flask of 76 lbs. Chinese antimony was quoted at £69 to £70 per ton ex warehouse, against £70 to £71 per ton last week. Chinese wolfram for July–August shipment was quoted at 29s. 6d. to 30s. 6d. per unit c.i.f., against 29s. 6d. to 30s. for June–July shipment last week. Platinum remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—**Manchester.**—The market has been rather firmer. Raw cotton rates have tended to harden and in certain directions there has been more resistance on the part of spinners and manufacturers against low offers. Quite a number of private estimates of the area under cultivation for the new crop in the United States have been published, the Government forecast being due on Monday next. There is a disposition to anticipate an acreage of about 30,000,000 acres, with an output of between 10,500,000 and 11,000,000 bales. The weather in the belt has recently shown some improvement and on the whole the plants are now doing better. The crop, however, is late. Consumption of American cotton continues to decline whilst there is increasing use of material grown in other countries.

The legalisation of the new weavers' wages agreement has resulted in a revision of cloth quotations and business has been somewhat disorganised. Numerous manufacturers have been compelled to put up their prices and buyers have resisted the higher rates. A fair miscellaneous trade has been put through for India, chiefly in mulls for Karachi and printed and dyed goods for Bombay and the up-country markets. The natives of India to an increasing extent are obtaining their supplies from the home mills. News from China continues disappointing. Scattered sales, which in the aggregate have totalled to moderate dimensions, have been arranged for the Dominions, the Crown Colonies, South America and the Continent, most of the contracts being in finishing and printing styles. The better feeling in the home trade section has been maintained, there being more activity in light dress goods. Sales of any importance in the yarn market have been quite exceptional. A slightly better turnover, however, has taken place in medium American qualities. Irregular operations have been reported in Egyptian descriptions.

COTTON TRADE REORGANISATION.—As anticipated, the Ministry of Labour, on the recommendation of the Independent Board of Inquiry, has made an Order under the Cotton Manufacturing Industry (Temporary Provisions) Act providing for the legalisation of the new weavers' wages agreement recently arranged by the employers and the operatives, and the new list will come into operation on July 15th. In the circumstances, during the last few days Lancashire manufacturers have been busy revising their cloth quotations in accordance with the new wage rates. The new list means a variation of the old list without any important change in the official wage rates, but during the last twelve or eighteen months numerous manufacturers have not been paying their workpeople according to the official list and therefore it has been necessary for such firms to advance their prices for cloth to a moderate extent. The tendency of this legislative action will be, if anything, to make Lancashire cotton cloth dearer and it is feared in some quarters that it will be extremely difficult to maintain even our present export trade, in view of the severe competition from abroad, especially from Japan and India. It is recognised, however, that the stabilisation of prices is a distinct advantage and the chaotic conditions which have existed in Lancashire for such a long time will now be removed. There are rumours that some firms contemplate getting round the Act of Parliament, but this will not be easily done, and it is understood that the trade unions will be on the alert to report any breaches of the agreement.

The Bill has now been presented to Parliament by the Board of Trade for the elimination of redundant cotton spinning machinery. Its implications are discussed in a Note of the Week. It is uncertain when the second reading will take place, but there are fears that there will be a good deal of delay in obtaining legislation on this matter. Although opposition to this movement appears to be increasing, the Government is determined to force the scheme upon the industry.

WOOL.—**Bradrd.**—The Associated London Wool Selling Brokers have issued their list of available supplies to be catalogued at the forthcoming next Tuesday. They declared an available quantity of 131,500 bales, which is a little larger than generally expected. Arrivals from Australia appear to exceed expectations. Victoria, New South Wales and Queensland are contributing a considerable weight of wool, and there are 69,000 bales from New Zealand. However, writes our correspondent, the outlook points to a very good series, and there is nothing to prevent an upward advance in prices of both merinos and crossbreds.

The interval has been one of the most active and successful that has been witnessed in the Colonial wool trade for a long time. Merinos will have to advance 10 to 12½ per cent, and crossbreds 5 to 7½ per cent, to come into line with the improvement in Australia since May. It is to be hoped that the bulk of the buying will not have to be done by the home trade, but that both France and Germany will contribute towards lifting the wools available. Stocks, especially of merinos, are very light in consuming centres, and good support should be forthcoming, particularly from Bradford topmakers. Turnover in crossbreds has recently been much smaller than in merinos, but it is generally thought that the outlook for the former has improved as a result of the marked advance in prices of merinos. The weak spot to-day is the relatively poor conditions among woollen manufacturers compared with worsted spinners and manufacturers. A small volume of business among woollen manufacturers means a lessened consumption of all classes of clothing wools. The past fortnight has witnessed a further advance in the price of tops, many firms to-day demanding 30d. for good 84's. Machinery continues to be fairly well run. The forthcoming London sales should do much to stimulate confidence and encourage the placing of new orders for tops, yarns and pieces.

GRAIN MARKETS

WHEAT.—The fear that the American spring wheat crop may be damaged by black rust was the main reason for the advance in Chicago quotations during the past week. This movement influenced prices in Canada, and the United Kingdom. Harvesting of the winter wheat crop continues to make slow progress in the United States, rainy weather hindering operations. Growth in Canada is decidedly backward, and rain is needed in parts of the Southern region. Australian crop prospects appear to be good. *to the Corn Trade News*, total shipments during the

According to the *Corn Trade News*, during the past week were 1,198,000 quarters, against 993,000 quarters in the preceding week. On Wednesday last, "July" futures were quoted in Chicago at 86 cents per bushel, against 80½ cents the week before and 83½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. 9d. per 496 lbs., against 31s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, against 30s. a week ago.

FLOUR.—Home milled is in slow request, with prices showing little change. Shipments from North America in the past week totalled 99,000 sacks, compared with 89,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 26s. per 280 lbs., against 26s. a week ago; delivered London, 25s., as compared with 25s. a week ago. Manitoba patents, ex store, 24s. 3d. to 26s. 3d., against 24s. 3d. to 26s. 3d. a week ago. Australian, ex store, 20s. 6d. to 21s., against 20s. 6d. to 21s. a week ago.

BARLEY.—Imported varieties are a trifle easier in price, and trade is slow. English malting barley is scarce, and only occasionally quoted on English markets. "July" futures were quoted at 37½ cents per bushel in Winnipeg on Wednesday, against 37½ cents at last week and 42½ cents a month ago. Quotation per 448 lbs. in London on Wednesday were: "English malting" at farm, 30s. to 35s. (nominal) and "English feed" at farm, 23s. (nominal), these prices being unchanged on the week.

OATS.—Home grown oats have been in quiet request on English markets, but prices are unchanged. The weather has recently been favourable for the growing crop, which is in good condition. On Wednesday, "July" futures were quoted at 34½ cents per bushel in Chicago, against 36½ cents a week ago and 35½ cents last month. Quotations in London, Wednesday: "English Black" at farm, 22s. to 24s. per 336 lbs., against 22s. to 24s. a week ago; "English White," at farm, 22s. to 24s., against 22s. to 24s. last week; "Chilean White," landed, 26s. against 26s. a week earlier.

MAIZE.—Quotations for maize are again generally easier this week. "July" futures were quoted on Wednesday at 81½ cents per bushel in Chicago, against 82 cents a week ago and 80½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 6d. per 480 lbs., compared with 18s. a week ago; "Plate," ex ship, (new), 16s. 6d., as against 17s. a week ago; "Plate," "July," 16s. 6d., against 17s. 3d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s. to £4 17s. 6d. per ton, against £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35 :—

	1931-1932	1932-1933	1933-1934	1934-1935

NEAREST FUTURE	Jan. 4, 1935	Jan. 9, 1935	July 3, 1935	Jan. 2, 1935	June 26, 1935	July 3, 1935
Winnipeg (No. 1, Manitoba)	46½	65½	75½	82½	81½	81½
Chicago (No. 2, Winter)	46½	84½	87½	98½	80½	86

The visible supply of wheat in Canada, at 113,088,000 bushels, shows an increase of 2,090,000 bushels on the week. Supplies a year ago amounted to 99,101,000 bushels.

OTHER FOODS

BACON.—The Pigs Marketing Board announce that, in accordance with the provisions of the present contract, the price of the Class 1, Grade C pig for the month of July is 11s. 9d. per score. This compares with a price of 11s. 5d. for June. Following a rise in the official prices last week, demand for most descriptions of bacon has been steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 99s. to 101s.; Canadian, 90s.; Danish, 102s., against 97s. to 99s., 90s., and 97s. respectively a week earlier. Arrivals in London last week included Danish, 14,161 bales; Canadian, 4,220; Dutch, 2,179; Lithuanian, 1,872; Polish, 2,907, against 14,212, 4,358, 2,442, 1,432 and 2,579 bales, respectively, in the previous week.

BUTTER.—Following the recent rise in prices, demand has slackened and the market has been quiet this week. Colonial descriptions and Danish are about 2s. cheaper than a week ago. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 88s. to 89s.; Australian, choicest salted, 86s.; Danish, 100s., compared with 90s., 87s. to 88s., and 102s. respectively, last week.

CHEESE.—English cheese has been in quiet request at unchanged rates during the past week. Colonial descriptions have been steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: English, finest farmers', 82s. to 90s.; Canadian, June to September make, finest coloured, 64s.; New Zealand, finest coloured, 44s. 6d. to 45s., against 82s. to 90s., 61s. to 64s. and 45s. respectively, a week ago.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 4½ cents per lb. last week. The London quotation for Accra, "June-July," was 21s. 9d. per 50 kilos, c.i.f. Continent, against 22s. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 16,432 bags; delivered, for home consumption, 6,277 bags; exported, 275 bags; stocks, 195,492 bags, against 267,723 bags a year ago.

COFFEE.—The markets, both in London and New York, have been quiet during the past few days, with quotations mainly unchanged. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 7 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed 150 bags; delivered, for home consumption, 213 bags; exported, 490 bags; stocks, 16,078 bags, against 28,531 bags a year ago. Central American, landed, 1,264 packages; delivered, for home consumption, 1,521 packages; exported, 1,037 packages; stocks, 114,052 packages, against 116,987 packages last year. Other kinds, landed, 621 packages; delivered, for home consumption, 2,308 packages; exported, 1,333 packages; stocks, 117,355 packages, against 111,902 last year.

EGGS.—Plentiful supplies of eggs have reached the London market this week and, with a carry-over from last week, prices are easier for most descriptions. At Smithfield Market on Wednesday (ordinary packing, Grade I, about 15-15½ lb.) realised 9s. 3d. to 9s. 9d. per 120, against 9s. 9d. to 10s. 6d. a week earlier while Danish (15½ lb.) made 7s. 9d. to 8s. 6d. per 120, against 8s. 3d. to 8s. 9d. last week.

FRUIT.—According to *The Fruitgrower*, trade at Covent Garden has been good, the slump usually experienced in other lines when the strawberry season is at its height not being noticeable this year. Supplies of strawberries have been heavier than anticipated and, though small and indifferent fruit is not wanted, the good samples have encountered a steady demand. Prices are easier. English cherries are also a shade cheaper. English raspberries have made a moderate showing and some loganberries are now arriving. Green gooseberries sold well. Australian and New Zealand apples have been a steady trade, with prices holding up well for the time of year. Australasian pears have also sold well and are only a little cheaper. Hothouse grapes are a little easier on heavier supplies, but sell well. With larger arrivals from South Africa, oranges are rather more plentiful, but prices are steady. Lemons are dear and grape-fruit firm in price.

MEAT.—Trade at Smithfield market, especially for fresh-killed meat, has again been slow and prices for some descriptions are easier. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 2d. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. last week. New Zealand frozen mutton was 2s. 6d. to 3s. 4d. per 8 lbs., against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,685 tons, a decrease of 1,148 tons on the corresponding week last year. Beef and veal accounted for 4,162 tons, mutton and lamb 2,677 tons, and pork and bacon 468 tons, as compared with 4,823, 2,774 and 573 tons, respectively, in the same week of 1934.

PEPPER.—Black pepper has been a quiet market and prices have again eased. Wednesday's spot price for Lampung was 2½ d. per lb., against 3d. last week. Movements of pepper in London, during the past week were as follows: Black, landed, 5 tons;

delivered, 13 tons; stocks, 2,135 tons, against 303 tons a year ago. White, landed, nil; delivered, 65 tons; stocks, 18,709 tons, against 6,129 tons a year ago.

RICE.—The market continues quiet. The "spot" price of Burma No. 2, cleaned, new crop, was 8s. 7½ d. per cwt. on Wednesday, as compared with 8s. 7½ d. per cwt. a week ago, while the forward quotation, at 8s. per cwt., was 1½ d. lower on the week. Movements in London during the past week were as follows: Landed, 730 tons; delivered, 363 tons; stocks, 10,202 tons, against 848 tons a year ago.

SUGAR.—The markets have had a quiet undertone, with quotations showing little change. The spot price in New York on Wednesday was 3.28 cents per lb., as compared with 3.29 cents per lb. last week and 3.35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 6½ d. to 4s. 7d., against 4s. 7d. to 4s. 7½ d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 25,546 tons, against 15,426 in the previous week and 1,604 in the same week of last year; deliveries, 14,220 tons, against 14,828 and 18,687 respectively; stocks, 119,485 tons, against 108,159 and 206,725 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
June 28, 1934	12-98	13-02	13-24	11-30	8-98	12-47	12-94
May 23, 1935	11-61	13-23	14-51	9-88	8-70	10-01	12-93
June 30, "	11-38	12-35	13-90	9-45	8-22	10-03	11-93
June 8, "	11-37	11-88	13-27	9-68	8-36	10-04	11-77
June 20, "	11-59	11-82	13-11	10-05	8-82	10-15	11-84
June 27, "	11-41	11-58	12-95	9-84	8-39	10-12	11-68

The quantities catalogued for this week's auctions included 53,101 packages of Indian and 26,564 packages of Ceylon tea. Competition was strong for the Indian grades and the market firm, with an improved inquiry for medium sorts. At the Ceylon sales on Tuesday the market was very firm up to 1s. per lb., while good liquoring teas advanced ½ d. to ¾ d. per lb. Export demand showed an improvement.

VEGETABLES.—*The Fruitgrower's* Covent Garden correspondent reports that tomatoes have continued to sell particularly well, although prices eased a little during the week. Cucumbers have been in brisk demand and green peas an active market. Cabbage and cauliflower have cleared well while new carrots have been inquired for. Lettuce, spring onions and mint are all selling well. At Spitalfields, cabbage met a somewhat slow trade, while heavier arrivals of peas cleared regularly. Broad beans were only in moderate demand but cauliflower was in shorter supply and maintained late rates. Home-grown tomatoes encountered an improved demand at higher prices, while cucumbers were also dearer. At the principal London markets, old crop potatoes encountered a fair inquiry at lower rates. English new potatoes have been in brisk demand, fetching about 18s. per cwt. Trade in Jerseys has also been good, with quotations showing a recovery from last week's slump. At the Borough on Tuesday, best light soil "King Edward" realised 5s. to 6s. per cwt., against 6s. to 6s. 6d. last week, while Jersey were quoted 16s. to 18s. per cwt., compared with 12s. to 14s. a week ago.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Trade continues very quiet, consumers covering only immediate wants. Vegetable oils in particular are unsettled in the absence of information concerning the fate of the seed crushers' application for a substantial increase in the duty on imported linseed oil and in view of the fact that the duties on all vegetable oils are under review by the Import Duties Advisory Committee, consequent upon the imposition of a duty on soya beans as from August 1st next. In addition, the large quantity of linseed oil for Europe is being only slowly absorbed, requirements both here and on the Continent being at a minimum owing to the slackness in oil and cake. Plate linseed to Hull dropped to 9 2s. 6d., at which figure a small trade was done. Indian prices are nominal and still out of line with Plate. The quantity now afloat for Europe is 151,200 tons (including 7,800 tons from India) or 5,400 tons less than last week. That afloat for America is 38,600 tons, against 22,500 tons a year ago. The quantity remaining for shipment is over a million tons, or 300,000 tons more than that actually shipped in the last six months of 1934. Old crop Egyptian cottonseed is firmly held for 6 12s. 6d., and new October-November is quoted at 6s.

Linseed oil is in quiet request and shares with other vegetable oils a certain easiness. Raw oil ex Hull, July-August delivery, is quoted at 21 and September-December at a small discount. Cotton oil is neglected. Egyptian crude is available at 23 10s. and refined at 26 10s. ex Hull. Oilcakes are in normal demand for the season.

RUBBER.—Prices on the London market have fluctuated within narrow limits during the past week, but have shown a sagging tendency. The market has been inactive. In New York the "outside" market has been quiet, but ribbed smoked sheet is now rather dearer than it was a week ago. In New York the spot price on Wednesday was 12½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½ d. per lb., against 5½ d. on the corresponding day last week. In forward positions, business has been done at 6½ d. for October-December, 1935, against 6½ d. to 6½ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 170,389 tons, against 170,954 tons a week earlier. A year ago stocks amounted to 99,872 tons.

A TIGHT CORNER

SIR SAMUEL HOARE made his maiden speech as Foreign Secretary in the House of Commons on Thursday afternoon in very inauspicious circumstances. On Tuesday the Conciliation Committee, sitting at The Hague to unravel the rights and wrongs of the Wal Wal incident, broke down owing to the refusal of the Italian members to listen to the legal adviser of Abyssinia, who had the hardihood to speak as though the wells at Wal Wal were in Abyssinian territory. They equally refused to discuss the appointment of a fifth member to act as arbitrator. It is true that Baron Aloisi has insisted from the outset that this Commission should not consider the question of the frontier, which should be dealt with by quite other procedure; nor do we know precisely in what way the Abyssinian witness offended against the terms of reference. But the two other members of the Commission, who are respectively an American and a French subject, clearly did not think that the witness was going beyond the legitimate scope of the enquiry; and the scarcely concealed delight in Italy that these negotiations have broken down has given the whole world the impression that the Duce was only looking for a pretext to be rid of them. Every fresh step, indeed, confirms Abyssinia's fears that Italy is definitely determined on a war of conquest.

If these negotiations have definitely come to an end, it is surely clear that the next step is for the Council of the League to take up the matter at once. Nothing is to be gained by waiting; for the event which is most likely to intervene in the meantime is not a relaxation of the strain, but a premature outbreak of hostilities. Unfortunately, there is only too good reason to fear that even if the Council met it would fail to act with the necessary firmness and decision. Although it is said that the British Cabinet is divided about sanctions, the feeling in the country that our only possible foreign policy is to support the collective system is so strong that we believe Great Britain would be ready to implement whatever action the League as a whole might decide to take. But what will France do? Gossip still makes vivid play with stories of what M. Laval said about Abyssinia to Signor Mussolini in Rome in January.

Did he promise Italy "a free hand" to conquer the country, or only to exploit it economically? Even if he promised him nothing at all, the fact that a French general has been in Rome making arrangements for the strengthening of the Italian frontier and for military action in the event of Germany marching into Austria, clearly places France in a very embarrassing position. In a matter of this kind you cannot run with the hare and hunt with the hounds—not, at least, at one and the same time.

Yet if another great Power repudiates its undertakings, and the rest of the world shows itself either unwilling or unable to give that moral and material support which membership of the League of Nations is supposed to confer upon its signatory States, the League will have received a shattering blow. In 1932 Japan proved that it is useless in Asia; in 1934 it acted too late to stop war in South America; if its fiat does not run in Central and Northern Africa, nations will inevitably ask whether any reliance can be placed upon it even in Europe. And if the Covenant should prove a broken reed, Washington's *non possumus* has served notice on Abyssinia that the vaguer promises of the Kellogg Pact are even less to be relied upon in an emergency.

Thus our new Foreign Secretary is taking over the reins at a moment when we are in grave danger of seeing the breakdown of 15 years' effort to build up machinery for ensuring peace, just as the Concert of Europe disintegrated over a century ago. Small wonder that the Secretary-General of the League, M. Avenol, is holding anxious colloquies with leading statesmen in London and elsewhere.

Unfortunately things have come to this crisis at a moment when British diplomatic prestige is not at its highest. What ever may be said for the Naval Agreement with Germany—and, as we indicated at the time, the arguments are in our opinion conclusive in its favour—European countries were disturbed by what they regarded as the indecent haste with which we concluded it, by the assumed breach in the Stresa front, and by the implied condonation of Germany's treaty breaking. And as though to lend colour to these criticisms Germany has this week revealed that she

has one submarine ready, that the building of others has been going on for a long time past, and that two 26,000-ton battleships were begun before ever she admitted that the Treaty had been broken. Again, though the offer to Abyssinia of an outlet at Zeila was a very striking evidence of Great Britain's willingness to make substantial contributions in the interests of peace, it was not a proposal which really met Italy's desires; and it was capable of being misinterpreted as a subtle plan for furthering British interests. Its almost scornful rejection by Signor Mussolini is a rebuff which makes it very difficult for us to take any fresh diplomatic initiative.

In these unpromising circumstances the Foreign Secretary was well advised to emulate Herr Hitler and to give a conspectus of the whole field of our international relations. Starting with an appeal to all classes and nations to impart a little more good nature, commonsense and kindly tolerance into the consideration of foreign affairs, Sir Samuel Hoare reiterated the Government's fidelity to the principle of collective security through the League of Nations, adding thereto the observation that "as things are, as long as there is an effective League and a system of collective security, we are ready and willing to take our full share of collective responsibility." The significance of this phrase, which disposes of the idea that Great Britain is going to revert to "isolation," will not be lost on our European neighbours. The recent Anglo-German Naval Agreement was not a sign of our intention to play a lone hand, but an agreement which it would have been folly to refuse, and one, moreover, which was specially designed to fit into and facilitate a general naval agreement. Britain accepted the principle that peace was one and indivisible—the implication being that we would not seek to negotiate *seriatim* with Germany on separate points such as the Air Pact. Indeed, with a view to furthering a general appeasement, the Foreign Secretary appealed to Herr Hitler to make a great peace contribution, and at the same time to serve his own cause, by helping on the negotiation of the Eastern and Danubian Pacts, "thereby giving a great impulse to the conclusion of an Air Pact which I know that he desires." Thus did Sir Samuel Hoare endeavour to clear up our position and to remove some of the mists of distrust which have recently arisen.

Passing to Abyssinia, Sir Samuel denied that our interest in the question was primarily selfish—except to the extent that the avoidance of war is the selfish concern of all nations. We understood and sympathised with Italy's desire for overseas expansion and ten years ago had given practical effect to this sympathy by the cession of Jubaland. Britain admitted also the justice of some of the criticisms directed against the Abyssinian Government. But neither the need for expansion nor the complaints against the Abyssinian Government were sufficient cause for plunging into war, and Great Britain would do its utmost, whether through the machinery of the Treaty of 1906 (between Great Britain, France and Italy) or through the machinery of the League, to avert it. There was no truth in the rumours that we had asked the French Government to join in a blockade of Italy, or were preparing some isolated form of coercion; but we stood for peace and would not abandon any reasonable chance for helping to avert a disastrous war. The offer made by Mr Eden in Rome had only this end in view and had no ulterior motive.

To some members of the House it seemed that these statements did not carry us very far; and, indeed, it must be admitted that, hitherto, little indication has been given in any quarter how the "Powers with great possessions" intend in the long run to meet the "need of expansion" of countries such as Japan, Germany and Italy. It is this question which needs an answer; for clearly it underlies a great part of the world's political troubles. But for the moment, and in regard to the immediate crisis, the resources of diplomacy, as we said last week, are not exhausted; Italy has not yet violated the Covenant; and no statesman can yet assume that she will do so. There is little doubt that France, who most earnestly desires to avoid having to choose between Italy and the League, is making strenuous efforts to prevent a crisis. She knows now where the British Government stands, and that it is ready to support the League. It is to be hoped that her efforts will succeed before the fateful hour has struck.

BRITISH INSURANCE

To an old fogey whose mind is still clear enough to recall life as it was lived in the Victorian age it is a pleasant task to handle the mass figures of the British insurance offices. Their strength and solidity remind him of the happy certainties of a strong and solid world, and he may tell himself as he considers them that they have been achieved by the Victorian qualities of independence and self-reliance. The offices are not afraid of competition, and when they are faced with difficulties, they do not in the modern fashion run round to Whitehall and ask a politician to provide a remedy; they deal with the problem for themselves, and if ever they do visit a Government department it is rather that the Government wants their advice than that they seek the Government's help. Like the Victorian industrialist, they manage, by virtue of price and quality, to sell their goods abroad, and in the worst of times they provide the country with the most stable and reliable of all its invisible exports. It is surely no small thing to have met new conditions, recurring crises, economic barriers and intensive competition, and by a mixture of enterprise and caution come through them all with ever-increasing resources. The figures which are set out this week in our Insurance Supplement are a tribute to this British industry, of which the directors, managers and officials have every right to be proud.

The Victorian habit of thrift is seen at work in the figures of life insurance, which indicate that in 1934 there was a greater volume of insurance placed with British life offices than in any previous year of our history. The year's increase in the total new business of 48 offices is equivalent to more than 13 per cent., an increase which would be remarkable if it stood alone, but becomes more remarkable still in the light of the Board of Trade figures published since 1922. It seems practically certain that when the Board of Trade discloses its own figures for 1934 they will show that the total new business of British offices, apart from industrial assurance, amounted in twelve months to more than £200 millions. As the corresponding figure for 1922 was only £106 millions we shall learn this outstanding fact—that in a period of thirteen years the annual new business figure of British offices has been very nearly doubled and that the aggregate new business entered into in these thirteen years is little short of £2,000 millions. That is one of the encouraging facts brought out by our statistics; and we venture to direct the attention not merely of insurance specialists but of the more general reader to these figures of life insurance and to the explanatory articles that accompany them in this week's Supplement.

Other departments—fire, accident and marine—which are accustomed to mark progress not by the size of their new liabilities but by their premium income, show less startling figures than those of their life colleagues. Marine and fire both suffered when commodity prices fell, and both of them, but especially marine, have seen their rates decline and so aggravate the difficulty of maintaining the premium incomes. But in 1934 the incomes of the fire departments began to go up again and our tables show an increase this year of nearly £400,000 with a very much better percentage of profit than in 1933. Among the tables of our Supplement will be found one that is always of great interest, setting out the aggregate premiums derived from all sources (except life) and the percentage of profit recorded by them. It covers a period of six years and shows from 1929 to 1933 a drop in the total premiums of rather more than £17 millions, which, in view of the size of the total and of all the unpleasant things that have happened to the world since 1929, is remarkably small. In 1934 we see the tide turning, and the total has risen again by over £3,000,000. The actual figure is £105,427,999, and on this gigantic total the percentage of underwriting profit is 2.7. The regularity of this profit percentage is an annual miracle, for in those six critical topsy-turvy years it has never been higher than the present 2.7 and never lower than 1.2.

Between the different companies the percentage of fire profit varies greatly from 3.3 to 23.0, and it is a noticeable fact this year that the best percentage of all is recorded by a non-tariff office—an event comparable (if the analogy may be drawn without disrespect) to the winning of the F.A.

Cup by a club in the second division of the League. In the accident departments, though the aggregate premium income is a good deal larger, the underwriting profit and the profit percentage are much lower. The problem for an accident manager is not to keep his income up, but to keep clear of the wrong kind of business. It is for this reason that the non-tariff offices, which have recently caused so much misery by their collapse, specialised in motor insurance, which if conducted without the necessary caution builds big premium incomes at incredible speed, but leads to unpleasantness when the chickens so easily hatched come home to roost. The total premium income of the accident business in 1934 was over £53 millions, but the profit was only £985,585, or 1.8 per cent. of the premiums.

A very important feature of British insurance is the amount of business transacted in the United States. The extent of this business is considerable, and the income from it contributes greatly to the total revenue of all the British offices. Our figures for this American share of British insurance enterprise in 1934 are not yet available, but certain indications of its extent can be given. There is a considerable volume of marine premium derived from America, and outside the scope of the offices. Lloyd's underwriters do a large American business in marine, fire and accident. To get anything like an exact statement of American premiums paid to British offices and underwriters is not possible, but it would probably not be an overestimate to put it at £56 millions a year. And in these days of dwindling international trade that must be considered a very remarkable achievement. The results of the fire insurance business undertaken in America by British offices have been steadier than those of other branches of insurance; and last year the British offices increased their earnings from this source. Not so with motor insurance in the United States, as is indicated in the Miscellaneous section of our Supplement; and in consequence the underwriting results of motor insurance have been poor.

If from the figures which we have brought together in our Supplement and from the common experience of insurance managers a general inference may be drawn as to the future, we would hazard a guess that the accident managers are going for some years yet to have more and more opportunities of business opened up to them, but will have to exercise an increasing vigilance in their underwriting to keep the undesirable risks off their books. The problem of the fire underwriter is likely to be different. He will probably find his main difficulty in keeping up his premium income as fire hazards improve, since improving conditions business increased proportionately, but without an increase in the value of insurable property it must make it more difficult for the market to keep itself fed. As for the future of the marine underwriter, he had best commend his soul to God and leave it at that.

CONDITIONAL STABILISATION—II

In the first article by Sir Arthur Salter, which was published in last week's Economist, the case for and against exchange stabilisation by Great Britain was stated. In the present article Sir Arthur Salter suggests a compromise solution.

The United States, Great Britain and France, after consultation with other countries looking to them as leaders in currency policy, might agree to direct their policy (within the limits defined below) to maintaining specified ratios. The ratio between the dollar and the pound might be 4.86 (or, conceivably, if American prices should advance more rapidly than English prices before the agreement is reached, the ratio at 5, which would be arithmetically convenient). The ratio with the franc might be chosen by France herself at not less than, say, 80 per cent. of the present parity, deflation than, achieving the required equilibrium if she prefers not to devalue.

Each country would then undertake to aim at maintaining these ratios (within a reasonable margin, wider than the old

gold points, but limited), and in particular engage itself not to aim at currency depreciation below the agreed ratio by any form of policy.

For positive support there are several possible methods, separately or in combination. First, each country might undertake to support, as need might arise, by buying and holding the threatened currency (without immediate conversion into gold) up to defined amounts. Secondly, the Bank of International Settlements might be entrusted with a central equalisation fund, contributed to by all the signatories up to defined amounts. Thirdly, the National Equalisation Funds might be operated in consultation for the same purpose of supporting the ratios, and continuing to do so until the funds had been depleted to a substantial (and perhaps a defined) extent.

If, in spite of this action, a given currency remained weak, there would be a strong presumption either that the original ratios were wrong or that they had become wrong. In that case no country would be expected to make the ratio right by deflation. It would be free to make a *corrective* change of ratio. Indeed, it would be well for us to lay it down quite clearly that this is what we should do. It would not be wise to create any temptation to the Bank to raise the Bank rate in support of the ratio. Where the alternative is an increase of Bank rate or depreciation, the latter must be chosen. Unless a low Bank rate is continuously maintained, and there is an assurance that it will be maintained, the low interest rates which are essential to recovery will never penetrate to the whole of our economy. There must be no temptation to the Bank in this respect. There is otherwise only too much reason to fear that, under such a temporary strain as brought down the pound to 4.70 a few months ago, the Bank rate would be raised.

There are obvious technical difficulties in such a scheme or, indeed, any scheme of stabilisation whatsoever. I cannot now discuss these, but I cannot believe that they are insuperable if we are clear as to the goal to be aimed at and the negotiations are skilfully handled.

Assuming that, with whatever technical modification, some such scheme can be carried through, the prospective advantages are very great.

First, the knowledge that at least the three countries with large gold reserves were agreed as to ratios, and were directing their policy and utilising their reserves to maintaining them, would give confidence that the ratios would last for a long period. Speculation—if the ratios allow a reasonable discretionary margin—would be too hazardous; the violent movements of mobile short-term capital would be reduced, and in both respects the strain on the equalisation funds would be eased.

Secondly, this measure of confidence in the currencies would increase general confidence. Recovery everywhere would receive just the stimulus it needs. In particular, there would certainly be a tendency for prices generally to move upward simultaneously, in view of the increase that has taken place in monetary gold stocks. (If account is taken of the present price structure, the volume of internal and external trade, and the increase in gold, it is roughly true to

say that, owing to hoarding and lack of confidence, each ounce of gold is only now doing half the work it did in 1928. There is an ample basis, with restored confidence, both for some increase of prices and a large increase in business.)

Thirdly, the danger, and the apprehension, of deliberate competitive exchange depreciation, with all the ill-will involved, would be eliminated. American public opinion, which now thinks we want our Equalisation Fund in order to "bear" sterling, would begin to be restive about American dollars being used to support sterling. The two suspicions would encounter, and largely correct, each other. And when a change of ratio was required (e.g. a lowering of sterling) there would be the great advantage that it would come after a strain on other equalisation funds as well as our own. The change would not only be, but be recognised to be, a *corrective* one, removing and not causing a disequilibrium.

Fourthly, the exchange restrictions, and even the quotas, which have been enforced for currency reasons, would tend to disappear. Moreover, negotiations for reciprocal tariff reductions would become possible. A tariff treaty might, for example, be concluded subject to a provision that if one of the signatories changed its currency parity, any other signatory could withdraw if it considered that the currency change had deprived it of the advantages of the tariff concessions. The withdrawal clauses in the two treaties would thus be complementary. The one permitting a change of currency ratio would enable us to join; the one enabling a termination of the tariff treaty would enable a country like France to come in. At the same time, each agreement would provide an inducement to refrain from exercising the contracting-out clause except in case of real need. We should be more inclined to try to keep our currency ratio if its change might deprive us of reductions in the French tariffs which we had found advantageous. And if we did have to change it, France would have an inducement not to exercise her right to withdraw from the tariff agreement if that had proved advantageous to her, and if our currency change had really been a corrective one.

If, then, some such goal of policy were decided upon, how should we proceed in practice?

There is one, not essential but useful, preliminary step which would, I think, be of great value in any case and for many reasons. The working of our Equalisation Fund is wrapped in complete secrecy, not only, as is obviously necessary, as regards current operations, but as regards past action, except for quite general statements to the effect that its purpose is not to change the value of our currency, but merely to even out the fluctuations. It cannot be expected that such general statements, unsupported by any detail as to actual operations, would suffice—as they clearly have not sufficed—to prevent a general public belief in America and elsewhere that we have at times used it for the purpose of deliberate competitive depreciation. The objections to publicity as to current operations are obviously decisive. But surely it would have been possible to publish accounts of the past after a reasonable interval. A great deal of unnecessary and dangerous suspicion and ill-will could thus have been prevented. Much of the evil done is now incurable, but it would still be very valuable to have more information than we now have as to how the fund has, in fact, been used. This action, however, though useful in relation to any currency proposals, is not an integral part of what I am now proposing. Let me be more specific.

Mr Morgenthau's recent speech is an open invitation to further discussion. The first step would clearly be for private conversations to take place between the British and American Treasuries, along the general lines indicated. These conversations might, if successful, result in a public statement of British policy to this effect. "In present circumstances we are content with a ratio of \$4.86 to the pound. While we should allow this ratio to change if the situation so developed that the alternative would be an increase of the Bank rate with other deflationary measures, we are at present using our Equalisation Fund for the purpose of keeping the pound near this ratio." By agreement the American Treasury might simultaneously issue a similar and complementary statement. This might be accompanied or followed by a statement that the two funds were being used in consultation for an identical purpose. Meantime, conver-

sations would be proceeding with the sterling group countries to encourage them to keep in line, and with France to secure her adhesion on the basis of whatever policy of devaluation or deflation she might prefer (with the help that prospective conditional stabilisation and mutual support would afford her).

Later these measures, which in themselves would do much to restore confidence and so to encourage some expansion, might be followed by further arrangements either to establish a central equalisation fund or to work out a method for concerted use of national funds as already proposed.

This plan is one of compromise, designed to meet the conditions set by the preoccupations and cardinal principles of policy of the different countries. It would neither encounter the obstacles, nor involve the risks, of a plan of complete stabilisation, which it is evident will not be practicable for a long period to come, if ever. At the same time, it would give most of the advantages of stabilisation, and would open the way both to general expansion and to a revival of external trade. Moreover, it would not only give these positive benefits, but be a safeguard against the many dangers which remain in the existing situation: a new and destructive course of competitive depreciation, a further devaluation of the dollar, either prolonged deflation in France or a sudden and excessive devaluation—any one of which might arrest the hesitating movement of recovery and start a new depression. Surely it is worth trying?

A YEAR'S INDUSTRIAL PROFITS

THE company reports published during the quarter which has just ended bring to a close another year's record of industrial profits in this country. For reports published in the first and second quarters of the calendar year usually refer to a trading year ending on the previous December 31st or March 31st, and cover about two-thirds to three-quarters of the total of industrial profits reported in each year ending June 30th. In the quarter just ended, 694 companies reported, as compared with 642 companies a year before; and the total of companies reporting in the twelve months just completed amounted to 2,072, against 1,960 a year before. The 694 concerns which reported last quarter together show an increase in net profits (after payment of debenture interest) of £12.1 millions (17.8 per cent.) over the results reported by the same concerns a year ago. This time last year there was an increase of £10.4 millions (18.2 per cent.) recorded by 642 concerns reporting in the second quarter of last year over their corresponding 1933 figures. The total profits reported by the 2,072 firms in the year just ended, at £193.0 millions, show an increase of £31.5 millions (19.5 per cent.) over their total profits published a year ago. At this time last year, 1,960 concerns showed total profits of £159.6 millions, an increase of £17.2 millions (12.1 per cent.) over their 1933 figures.

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

	No. of Companies	Reports published in			Increase (+) or Decrease (—)	
		1934	1933	1934		
Third quarter.....	318	13,425,013	17,139,932	+ 3,714,919	+ 27.7	
Fourth quarter....	468	21,520,528	28,611,449	+ 7,090,921	+ 32.9	
		1935	1934	1935		
First quarter.....	592	58,577,585	67,137,498	+ 8,559,911	+ 14.6	
Second quarter....	684	67,975,150	80,076,325	+ 12,101,175	+ 17.8	
Total.....	2,072	161,498,274	192,965,202	+ 31,466,928	+ 19.5	

The increases shown in last quarter's reported profits as compared with a year before, and in the total of profits reported in the twelve months just ended, are alike "record" increases; and we are now virtually back at the 1928-29 total profits figures, though the amount of capital involved is greater. In 1928-29, 1,742 concerns showed net profits of £197.3 millions, a slightly greater total than that revealed for 1934-35; but in the second quarter of 1929, 639 concerns showed profits of £78.1 millions—less than last quarter's results. The dimensions of the increase in the total profits for 1934-35 over those for 1933-34 are striking, in all conscience. A 20 per cent. rise in so great

a proportion of the country's total industrial profits is a rare and refreshing phenomenon.

Our chronicle of the percentage movements of profits, quarter by quarter, follows:—

	1929	1930	1931	1932	1933	1934	1935
First quarter.....	+ 1.5	+ 1.9	- 10.6	- 14.3	- 8.9	+ 5.3	+ 14.6
Second quarter....	- 0.7	+ 8.6	- 19.4	- 21.8	+ 3.3	+ 18.2	+ 17.8
Third quarter.....	- 3.0	- 6.4	- 35.5	- 28.6	- 5.5	+ 27.7	...
Fourth quarter....	+ 1.4	- 18.1	- 53.9	- 2.9	+ 30.3	+ 32.9	...
Year ending June 30	+ 0.0	- 0.6	- 22.5	- 18.1	+ 0.5	+ 16.6	+ 19.5

Though the percentage increases are now slowing down, it should be remembered that the absolute increases in each quarter's profits are often larger than before; for each new percentage increase is calculated on the increase of the year before.

In the next table we give an annual summary of the results recorded by various industrial groups in the last twelve months together with those of the last quarter:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

Group	No. of Reports	Reports published in Quarter ended June 30th			Reports published in Year ended June 30th		
		1935	Compared with 1934	+ or -	1934-1935	Compared with 1933-1934	+ or -

On the year's showing as a whole, the recovery in profits is as encouraging as it is widespread. The number of unfavourable items is now definitely the exception. The two public utility groups, gasworks and waterworks, are still laggards. Textile concerns and tramway and omnibus undertakings are also behindhand; but there are many concerns operating abroad in these groups which have not done as well as their British-operating *confrères*. In the beginning of the year just closed, tea companies appeared to be doing better; but the large block of the year's results which sees the light of day in the second quarter of the calendar year was definitely disappointing, especially in the case of Ceylon concerns.

When we turn from the few disappointing to the favourable entries, the oil and rubber groups appear in their old traditional guise among the very leaders in the profits race. Yet even they, the overseas traders, have been completely eclipsed by the showing of some of our purely domestic industries, working mainly for domestic demand. Breweries; motors, cycles and aviation; building materials; food, confectionery and drink; electrical equipment—these are groups which minister in the main to domestic demand, and their results are striking. The two financial groups—the financial, land and investment group, and the trusts group, which latter is now beginning to derive increased revenues from the better dividends of concerns in which the trust funds are invested—together show remarkably improved results. Beside these groups, the results of the tobacco group also appear striking; newspaper and printing concerns have increased their profits; while the steadily increasing profits of hotels, and shops and stores, reflect the general improvement in domestic business. Shipping concerns are now doing better, though they have much leeway to catch up. The Miscellaneous group's good showing is mainly due again to the domestic recovery, as evidenced in those undertakings producing patent medicines and foods, domestic appliances, wallpaper, paints and varnish, entertainments (cinema, wireless and gramophones), chemicals, glass, and patented articles.

But what must strike the observer as the outstanding feature of these figures is the recovery in the iron, coal and steel group. In 1933-34, the net profits of this group showed an increase over the 1932-33 results of 85.0 per cent. (£3.0 millions); now the 1934-35 results show a further increase of 85.4 per cent. (£6.1 millions). Greatly increased profits were shown by United Steel Corporation, Lancashire Steel, English Steel, Consett Iron, Richard Thomas, Stewarts and Lloyds, Babcock and Wilcox, Vickers-Armstrongs, Firth and Brown, and Guest, Keen and Nettlefolds; and among coal companies, Welsh Associated Collieries and Amalgamated Anthracite Collieries made the best showing. The improved profitability, however, is evident throughout this important group; and it is evidence that, in the calendar year 1934, the British iron and steel industry was in a very favourable position to profit from the safeguarded home market.

Our next table shows how the net profits were distributed.

DISTRIBUTION OF PROFITS

	Net Profits after payment of Debenture Interest	Ordinary Dividend	Preference Dividend	To Reserve, etc.
1934				
Third quarter...	17,139,932	9,738,898	56.8	4,228,115
Fourth quarter	28,611,449	17,149,005	59.9	5,600,522
1935				
First quarter...	67,137,496	40,175,817	59.8	13,968,058
Second quarter	80,076,325	41,418,843	51.7	20,376,163
Total ...	192,965,202	108,482,563	56.2	44,172,858
			22.9	40,309,781

We have frequently commented on, and commended, the prudent decision, evidenced in these figures, to reduce the proportion going to ordinary dividends (though not, of course, the absolute amount), and to increase the allocation to reserves. In 1934-35, both the percentage and absolute amount of net profits put to reserve constituted a record since the immediate post-war years—an even greater sum and proportion than was allocated in 1929-30. (For comparisons, see *Economist*, July 14, 1934.) In the quarter which has just ended, the same tendencies are visible. A year ago, the figures showed that £90.9 millions (57.0 per cent.) of the year's net profits went to ordinary dividend; this year it has been £108.5 millions (56.2 per cent.). A year ago, £41.3 millions (25.9 per cent.) went to preference dividend; this year it has been £44.2 millions (22.9 per cent.). And a year ago, £27.4 millions (17.1 per cent.) went to reserves; this year it has been £40.3 millions (20.9 per cent.). The two tables on page 104, for the whole year and the last quarter, show that, of all the various industrial groupings, only the warehouses and trading group made a draft on reserves—and this was due to one greatly increased debit balance. Breweries, oil and rubber concerns, and tobacco companies paid considerably more than the average ordinary dividend; and some of the industrial groups which showed the best results in the year paid less than the average ordinary dividend, but placed more than the average allocation to reserves—notably the iron, coal and steel group, motors, cycles and aviation, electric light and power, and shipping.

The next table shows the ratio of net profits and of reserve allocations to total ordinary and preference capital:—

PROFITS AND RESERVES

	No. of Companies	Total Ordinary and Preference Capital	Net Profits after Payment of Debenture Interest	Carried to Reserve, etc.
1934				
Third quarter	318	264,076,256	17,139,932	6.5
Fourth quarter	468	401,504,146	28,611,449	7.1
1935				
First quarter	592	754,001,613	67,137,496	8.9
Second quarter	694	980,620,210	80,076,325	8.3
Total	2,072	2,400,202,225	192,965,202	8.4

On this occasion, the total of net profits is equivalent to 8.4 per cent. on the combined ordinary and preference capital of the 2,072 companies which reported in the year; this compares with 6.7 per cent. for the 1,960 companies which reported in 1933-34, and with 5.7 per cent. for the 1,949 concerns which reported in 1932-33. The reserve allocation in the year just ended amounts to 1.7 per cent. of the capital involved, compared with figures of 1.1 per cent. in 1933-34 and of 0.5 per cent. in 1932-33. In 1929-30, net profits were 10.6 per cent. of ordinary and preference capital, and reserves were 1.9 per cent. The approximation to the last favourable figures before the slump is therefore much greater this year. The next table shows the rates paid on the various forms of capital:—

AVERAGE RATES PAID

	On Debenture Capital				On Preference Capital				On Ordinary Capital			
	1932	1933	1934	1935	1932	1933	1934	1935	1932	1933	1934	1935
1st quarter	4.80	4.77	4.73	4.64	4.9	5.0	4.9	5.1	7.5	7.5	7.5	8.3
2nd "	5.01	4.97	4.75	4.75	4.9	4.9	4.9	5.2	5.7	5.7	5.7	6.7
3rd "	5.09	4.94	4.88	...	3.6	4.4	4.1	...	4.3	5.3	6.0	...
4th "	5.16	5.04	4.95	...	3.6	3.2	3.7	...	4.9	5.2	6.8	...
Year	5.01	4.99	4.82	...	4.2	4.6	4.8	...	5.9	5.8	6.5	...

The decline in the rate of interest on debentures seems to have been stayed; the average rate of preference dividend has jumped up, mainly due to resumed payment of dividends by concerns which had suspended them; and the rate of ordinary dividend last quarter carries on the chronicle of quick rises which is apparent in the figures quarter by quarter.

The ways in which the various groups have distributed their earnings in 1934-35 are shown in the following table:—

REPORTS ISSUED IN YEAR ENDED JUNE 30, 1935

Group	Debenture Capital	Rate of Int.	Preference Capital	Rate of Int.	Ordinary Capital	Rate of Div.	Rate of Div. a Year Ago
Breweries	58,051,016	4.5	48,836,753	5.0	74,272,810	13.6	12.0
Canals and docks	4,158,124	4.1	6,501,821	4.0	10,377,864	1.2	1.1
Electric lighting and power	48,443,080	4.8	34,476,352	5.1	54,622,180	7.6	6.9

(a) Not classified separately. Included in miscellaneous figure of 8.3 per cent.

It is impossible to deduce any hard and fast correlation between "high-gear" groups (those with a high proportion of fixed-interest capital to equities) and higher than average ordinary dividends. But if the capital structure of the various groups be set against their relative dependence on domestic or foreign trade, it will be seen that the groups mainly dependent on home trade—e.g. building materials, foodstuffs, electrical equipment, newspapers, tobacco, shops and stores, miscellaneous, electric lighting and power, hotels and restaurants—can pay not only higher than average rates of debenture interest but also higher than average ordinary dividends. The generally increased earning capacity of the equity share in 1934-35 is evident in virtually all groups.

The net profits figures of the 2,072 companies which reported in the year just ended are therefore very encouraging. The analysis covers a very wide sector of the whole field of British industrial enterprise; and, for the first complete year since the depression began, there are remarkably few distortions in the purely financial skeleton of British industry. The skeleton is not the whole living organism; but it supports the latter; and, thanks to a purely internal recovery, our financial structure has at least been carefully set and repaired. Whether British industry as a whole will prove as healthy and animated as before the crisis would seem now to depend on other factors than purely financial ones.

CONFLICT IN SPAIN

(BY A CORRESPONDENT)

In the history of the young Spanish Republic, which a few weeks ago entered on its fifth year, the elections of 1933 were a turning point. From these elections the forces that had succumbed in April, 1931, issued victorious—thanks in no small measure to the women's suffrage which the Parties of the Left had introduced according to their programme,

though they should have known the influence of the clergy on Spanish women. Henceforth the strongest Party in the Cortes was the Catholic *Accion Popular*, which is also known as CEDA and whose leader, Señor Gil Robles, a young Professor of Law, is believed by many to have a considerable future. His Party had won in alliance with the Monarchists and with the Radical Party of the old Republican Señor Lerroux; and this intermediate position between monarchical and republican outlook characterises the CEDA.

The very leanings of the CEDA towards the monarchy were the reason, however, for its not participating in the Government until two years after its victory at the polls. For wholehearted Republican circles were unwilling to tolerate the rule of the country by the CEDA; nor was the latter prepared to assume responsibility for control of the Republic. Accordingly the Radical Party provided the Prime Minister and the majority of Ministers; and even now, when Señor Gil Robles and four of his collaborators have taken over leading posts in the Cabinet, the Premiership still remains in the hands of Señor Lerroux. The peculiar and unhealthy situation, in which the whole of the Left as well as the majority Party in Parliament took no part for years in forming Governments, necessarily led to political unrest, and so to economic depression. Ten Cabinet crises and a civil war shook Spain. The civil war broke out last autumn when, after the fall of Señor Samper, a collaborator of Señor Lerroux, for the first time three members of the CEDA (though not Señor Gil Robles himself) entered the Government. After weeks of fighting the Socialist rebellion, which a rising of the Separatists in Catalonia had compromised rather than aided, was repressed.

Then, however, the unexpected happened. The Left did not, as many had expected and many also had demanded, become extinguished. On the contrary, its Party organisations and trade unions, in spite of all persecution, remained powerful, and, as far as can be judged, the general feeling of the people seemed to incline rather to the vanquished than to the victors. One reason for this was the incapacity for action of the successive Lerroux Governments. The conflicting forces collaborating in these Governments nullified one another. This spring brought fresh Cabinet crises and, for a time, enmity between the Radical Party and the CEDA; and, after this had been patched up, an open tension appeared between the leaders of the Governmental Parties and the President of the Republic, who by broadening the basis of Government sought not only to promote his plan of constitutional reform, but also to ward off the danger of reactionary developments. In these dramatic circumstances the sixth Lerroux Cabinet was formed early in May. In this Government Señor Gil Robles became the real though not the nominal head.

Whether, as many think, this is only a preliminary step toward a Gil Robles Ministry, time must show. At any rate, the Radical Party is now represented this time by only three members, as against five of the CEDA; whereas the ratio hitherto had been exactly the reverse. Above all, Señor Gil Robles has now taken over in person the Ministry of War, an important post, since it gives him control of the Army. It is quite possible that the Army, as so often in the recent history of Spain, may play a decisive rôle in the near future. The proclamation of martial law in Barcelona, a town that has of old given trouble to Spanish Governments by its Separatist and anarchical tendencies, is considered by many to be a move in this direction.

The tasks with which the Lerroux-Gil Robles Government is now faced are the more urgent because they have been neglected throughout the years of crisis. A characteristic instance of this neglect is the conduct of the national finances. The last Budget duly approved in the Cortes was passed in 1932 and has remained in force until now by means of quarterly extensions, involving Supplementary Estimates and Extraordinary Estimates. The abundance of money available on the market has enabled the Government to finance these estimates by the issue of Treasury bonds. The new Minister of Finance, Señor Chapaprieta, who belongs to no party and enjoys a high reputation as a financial expert, now intends to restore normal conditions. He first of all obtained the consent of Parliament to a Budget run-

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

ning up to the end of the year, but which, owing to the short time available, does not contain any thorough reform. He then set about preparing a fresh Budget for next year, of which the predominant note is retrenchment; and he has announced his intention of eliminating the deficit altogether by the end of 1937 at the latest.

Economy is also the keynote of the Unemployment Act recently passed. Spain has suffered severely from unemployment since the slump set in; official statistics give the figure of 732,034 for the end of April, of which 469,101 are wholly, and the remainder partially, unemployed. More than half are agricultural labourers. These statistics, it is true, do not pass uncontested. On the one hand, many unemployed may not be included at all; while, on the other hand, according to the Minister of Labour, the municipalities have an interest in swelling the figures returned by them.

The lack of precision apparent in the Unemployment Act also impairs the value of the Wheat Act, which, after many months of discussion, has been passed in the last few weeks. Of its 24 Articles the editor of a Madrid trade review writes that, after reading them over and over again, he could only say that he felt giddy. The immediate cause of the measure is the over-abundant wheat harvest of last year. In the last ten years an annual average of 4,000,000 tons were produced, which represents approximately the consumption of the country; last year's harvest amounted to 4,600,000 tons. The difficulty of coping with the surplus of 600,000 tons has kept the Government, Parliament and public opinion busy for close upon a year. For this year's harvest is already on its way and, to all appearance, will again prove abundant.

This abundance is not merely the result of favourable weather such as prevailed particularly last year—in this year a prolonged drought in the spring threatened for a time to lead to a failure of the crop—but is also connected with improvements of the soil and extensions of cultivation. Spanish agriculture has not reached anything like the high stage of development of the North of Europe. But it has made great progress in the last decades, leading naturally to an increase in supply. In addition, land settlement received an impulse from the revolution of 1931 which was not indeed so strong as the partisans of Agrarian Reform had hoped, but nevertheless had an effect on the extension of corn-growing. After the bountiful harvest of 1932 the Government protected the wheat market from the free play of economic forces by introducing a legal minimum price, which is now fixed at 51 pesetas per 100 kilos, i.e. a price about twice the price ruling in the world markets. Naturally this minimum price has not been observed, and could not be observed; for the farmers were forced to sell in order to meet their obligations, particularly as agrarian credit organisation is elementary in Spain. The peasants accordingly sold wheat, in so far as it could be sold at all,

considerably below the minimum price, though they were always ready to sign a receipt for the legal price so as not to get the purchaser into trouble.

Such a state of affairs entails far greater inequity than the lowering of the price to its natural level would do. It is precisely the small farmers who, with their granaries replete, are at their wits' end how to pay their debts, whereas large growers, who are better able to tide things over, have been able to dispose of their wheat. It is a case of the usual dislocation that occurs when a price fixed by the authorities bears no relation to the facts of supply and demand. The Government's present policy is to remove part of the wheat from the market, and a Bill has been tabled providing for the formation of a monopoly company with a view to storing wheat, and for the granting of a premium or bounty to purchasers of wheat. After protracted struggles, this Bill was passed in March, that is to say, at a date already far advanced; but its terms could not be applied. For not a

single concern was prepared to co-operate in forming the monopoly company.

Accordingly a fresh law was promulgated last month, providing for the purchase of 400,000 tons by the State itself through the semi-official Bank for External Trade and for the payment of a bounty of 9 per cent. on voluntary withdrawals of wheat up to 100,000 tons. To help cover the cost of this action a tax of one peseta per quintal has been imposed on all transactions in wheat. In these purchases by the State preference is to be shown for the wheat on which the (Catholic) Federations and the banks have lent money. This provision has not unnaturally provoked fresh criticism, and the Government is being reproached with having planned its scheme of relief not primarily in the interests of agriculture, but in the interests of the institutions granting agrarian credit. The incident aptly illustrates the interplay of political and economic conflicts which is now apparent in Spain.

NOTES OF THE WEEK

Without Portfolio.—The recent "Musical Chairs" in the Cabinet ended with a rather surprising growth of the number of members without departmental responsibilities. We now have Mr Ramsay MacDonald, Lord President of the Council; Lord Londonderry, Lord Privy Seal; Mr Eden, Minister without Portfolio for League of Nations Affairs; and Lord Eustace Percy, also Minister without Portfolio, but for no affairs in particular beyond a general mandate extending to "social services and unemployment." In the House on Wednesday, Mr Lansbury vigorously attacked this multiplication of sinecures. He bluntly maintained that the whole reshuffle had been designed not to secure the best men for the various positions, but to find offices for certain individuals and to maintain the "masquerade" of an alliance between the three "national" parties. In particular he asked why Sir John Simon had left the Foreign Office, why Lord Sankey had been "sacked," why Lord Londonderry had become Lord Privy Seal, and why Mr Malcolm MacDonald and Mr. Kenneth Lindsay had received such sudden elevation. It is doubtful whether the country will echo Mr Lansbury's indignation very loudly. Probably the general feeling was more accurately expressed by Sir Herbert Samuel, whose criticism of the proceedings was mild and humorous. He suggested that the office of Chancellor of the Duchy of Lancaster might have been used for one of the sinecure appointments; and he protested against the introduction of the Continental term "Minister without portfolio." Lord Eustace Percy's appearance in the Cabinet he found particularly curious. It had been rumoured that his job was to think. Was this the real explanation of his presence, Sir Herbert asked; and if so, might he suggest as his Ministerial motto the famous aphorism of Descartes: "Cogito, ergo sum"? Mr Baldwin replied by refusing to discuss personalities on the ground that the appointment of the Ministers was a matter for which the Prime Minister was alone responsible. The increase in the number of posts he defended as necessary to cope with the ever-increasing work of the Cabinet. For this contention at least there is doubtless justification. But if the growing functions of Government call, as they well may do, for an increasing number of Ministers of front rank, the corollary is surely that the present Cabinet system needs to be supplemented by the formal institution of an inner Cabinet whose chief function would be to ensure unity of direction and to keep under constant review the major problems of national policy.

Ireland and the Empire.—On Wednesday night the question of our relations with the Irish Free State was raised on the motion for the adjournment of the House of Commons. Mainly as the result of the recent Privy Council decision that the Irish Free State has legally abolished the right of appeal to the Privy Council (see the *Economist*, June 15th, page 1357), Members tended to concentrate on

the discrepancy between the advice given to the House by the Attorney-General when the Statute of Westminster was being debated four years ago, and the recent Privy Council decision. Mr Churchill's point was that the Government four years ago allowed the law officers of the Crown to assert in the House that there was no danger of the Statute of Westminster overriding the Irish Treaty, and that it left the Treaty intact. Now the Privy Council affirms that, only since the passing of the Statute in 1931, the Irish Free State did possess the right to abrogate parts of the Treaty of 1921 and of the Constituent Act which brought the Irish Free State into being. Sir Stafford Cripps asked whether the new discovery that Mr de Valera was within his constitutional rights would alter the Government's attitude. Sir Thomas Inskip could only reply that, though we had the power, before and after the Statute, to alter the Treaty, we had kept faith; and that it was up to Mr de Valera to decide whether he wished to recognise the Treaty as binding, though not legally so, or to stand pat on his literal, legal rights and incur the charge of breaking faith. Mr de Valera's insistence on his (now valid) right to establish a Republic "closed the door to any accommodation" in the annuities dispute or the consequent tariff war. Mr J. H. Thomas, putting the Government's case, answered Sir Stafford Cripps by showing that the Government's attitude had hardly varied. The annuities debt was owing to us; we should collect it by any means we could use. Either the Free State was to be in the Empire—as understood by the British interpretation of the 1921 Treaty as an "honourable agreement," which should be scrupulously observed despite the Statute of Westminster—or it must be outside it. The Government would take "any step they could to prevent Southern Ireland going out of the Commonwealth." Mr Thomas would uphold the sanctity of treaties and agreements; but "we were anxious to be friends." In all this there was very little for Mr de Valera to seize upon. The truth seems to be that Mr de Valera stands pat on rights which only lawyers, not statesmen, would recognise as the final criterion; while the Government, conversely, are taking a stand for the sake of prestige without any well-founded basis in law. And meanwhile the citizens of both countries suffer.

President and Congress.—Mr Roosevelt is in still difficulties with Congress. The Public Utility Holding Companies Bill, with its "death sentence" clause removed by the House of Representatives, has been returned to the Senate, which has sent it to an inter-cameral conference without agreeing to the House's amendments. The final compromise will therefore be worked out behind closed doors, and if the President is unlikely to get the "death sentence" revived in its full severity it is equally unlikely that the clause will be left as the Utilities wish it. The Chairman of the

Securities and Exchange Commission has publicly disclaimed any desire to have discretionary powers to inflict capital punishment upon holding companies, on the grounds that the exercise of such powers would certainly be impossible and their grant would probably be unconstitutional. When this controversy is settled, there is another pending on the Banking Bill (to which reference is made in our Banking and Finance Leader on page 76). As originally conceived, this Bill had two purposes: to concentrate control of the Federal Reserve system in the Federal Reserve Board, and to give the President control over the Federal Reserve Board. A Senate Committee, presided over by the redoubtable Senator Glass, has retained the first objective, but entirely reversed the second; the Board, under the terms of the amended Bill, would be far more independent than at present. At the moment three out of eight members of the Board can be changed by the President at will, the remainder being appointed by the President for a comparatively short term of years. Under the new proposals, the Board will have seven members, each sitting for fourteen years and one of them retiring every two years. A President, even if he retains office for eight years, would therefore be able to get a majority of his nominees on the Board only at the very end of his own term of office. Judged by any considerations other than the political, these amendments are improvements, though they can hardly be to the liking of the President. But he will be fighting on a poor terrain if he attempts to re-assert political control of the banking system, and he may deem it more prudent to accept the Bill as it stands. The other Bills on the list—those dealing with agriculture, with the Tennessee Valley and with the coal industry—are almost equally controversial and on each a fierce battle will be waged before Congress adjourns. Mr Roosevelt is having no more trouble with his nominal supporters in Congress than other Presidents have had; but the fact that his relations with the legislature have relapsed into the normal anarchy of "checks and balances" is in itself a striking illustration of the change that has come over American politics since the dictatorial days of 1933.

Tension in France.—The political dangers of France's present economic policy are becoming plainly apparent. M. Laval's proposed deflationary measures, to be announced "soon after July 16," continue to hang ominously over the heads of the people. In this situation, when no one even knows what sacrifices are to be asked, or from whom, political tempers are naturally rising, and sweet reasonableness is naturally at a discount. To-morrow is July 14th. And the Left-wing "United Front" of Socialists and Communists is to demonstrate appropriately in the Place de la Bastille. On the same afternoon the Fascist Leagues are to foregather round the tomb of the Unknown Warrior at the Arc de Triomphe. The Radical-Socialists are anxious to affirm their attachment to democratic government. But they do not much like co-operating with the Communists, even though the Communists now profess democratic sentiments. M. Herriot and his following of Radical-Socialists at Lyons are opposed to co-operation. But the more Left-wing elements in the Party, who seemed likely during the recent crisis to form a separate group under M. Daladier, have this time carried the day. The Party is to be officially represented at the Bastille to-morrow. Meanwhile the utterances of Colonel de la Rocque, the leader of the Fascist Croix de Feu, have become more menacing, if no more coherent, than before. The situation is not dangerous, but it is undeniably disquieting. One cannot forget that in Germany it was the emergence of rival factions of extremists, embittered by the steady deepening of the 1929-32 deflation, which led to the collapse of democracy. France and Germany are very different countries. But if M. Laval produces nothing but measures calculated to intensify France's present depression, the outlook for October, when Parliament re-assembles, is assuredly bleak. Already the rentes are falling, and the discount on forward francs is again widening. If a serious political crisis in the autumn—or sooner—is to be avoided, the Government will have to devise something more constructive than a mere repetition of M. Dugumergue's budget cuts.

The Habsburgs on the Horizon.—The Austrian State Council has tabled and passed a bill for the repeal of the "Habsburg Law" of April 3, 1919. By the latter measure all members of the Habsburg Dynasty who would not renounce their former prerogatives in Austria were banished from the country and were further penalised by the confiscation of their real and personal property. In Germany, under the Weimar regime, the members of the various deposed dynasties in the Reich, from the Hohenzollerns downwards, all eventually received very generous treatment in settlement of their property claims without this leading to their reinstatement on their subverted thrones. At the same time, considering the very different circumstances of Austria to-day, it is difficult to believe that this Austrian bill will be without effect upon the Habsburg dynasty's prospects. For in Austria the question of a monarchical restoration is undoubtedly in the air. Indeed, it is hard to see how, in the long run, the present regime can avoid identifying itself with the Habsburg cause. If this regime stands for anything, it stands for Austria's historic "mission" and historic individuality in contrast to the "Prussia-Germany" of which the Hitlerian "Third Reich" is the latest version. This "mission" and individuality are both bound up historically with the House of Habsburg. In fact, post-war Austria—being to all appearance incapable of permanently existing as "a thing in itself"—probably has the choice between an *Anschluss* (or "co-ordination") with Nazi Germany, and a Habsburg restoration which would make Vienna once again into a political magnet for all the former lands of the Habsburg crown. The statesmen of the Little Entente have never concealed their fear lest the attractive power of this magnet might prove formidable in its influence upon pre-nationalist-minded peasants, and perhaps even upon post-nationalist-minded urban proletariats which have latterly despaired of the Marxian solution of their troubles. For the Little Entente, the Habsburg peril is still more terrifying than the Nazi peril. And there is a rumour that the Little Entente Council has taken the occasion to warn the French Government, once more, that they would regard a Habsburg restoration in Austria as a *casus belli*. This rumour illustrates the important underlying fact that the New Europe of the Successor-States and the New Europe of Herr Hitler both fit into the same pattern of a continent re-mapped politically on a nationality basis. If Herr Hitler can convince the Little Entente that he is sincere in his repeated protestations of the same regard for other people's nationality and rights as he demands for those of the German race, he may yet succeed in winning their friendship as he has won Poland's.

Japan Moves On.—Apparently the present bout of the Japanese offensive on the Asiatic mainland is not yet coming to an end. This week there is further activity to report on three fronts: in Hopei; on the borders of the Soviet Union and of Outer Mongolia; and in the third place

at Shanghai. In Hopei, it appears that one of the conditions that have just been imposed by Japan is an extension of the Tangku Armistice zone for another seventy miles inland, towards Kalgan, which is the key point on the railway which links Peking with Inner Mongolia. There are also rumours of a Japanese scheme for a large-scale exploitation of the economic resources of Hopei under the auspices of the South Manchuria Railway Company. In the history of Japanese-Soviet relations, the latest event has been the despatch from Moscow to Tokyo of a strongly worded note of protest against a number of alleged Japanese violations of the Soviet-Manchukuo frontier during the last two months. To this the Japanese Minister for Foreign Affairs, Mr Hirota, has adroitly responded by proposing that a joint commission for dealing with frontier-incidents should be set up. The proposal has been accepted by the Soviet Government with some alacrity; and no doubt such a commission will be of real value in preventing the peace from being broken as a result of local incidents, so long as these incidents are not being deliberately engineered by the masters of Japanese policy for the express purpose of precipitating a war. Meanwhile, the establishment of the commission will mean *de facto* co-operation between the Soviet Government and the officially still unrecognised Government of Manchukuo. Simultaneous negotiations are also taking place between the Governments of the Japanese puppet state of Manchukuo and of the Russian puppet state of Outer Mongolia over recent incidents on this section of the frontier between the Japanese and the Russian domains in the Far East. The new and serious incident at Shanghai has been opened by the Japanese Foreign Office and not by the Navy or Army. An alleged insult to the Emperor of Japan in a Shanghai journal called *The New Life Weekly*, which is published indirectly under Marshal Chiang Kai-Shek's auspices, has been seized upon as a pretext for presenting four Japanese demands: for the dismissal of the Chinese Director of Social Affairs in the municipality of Greater Shanghai; for the abolition in Greater Shanghai of the Kuomintang and Blue Shirt organisations; for an apology from the Government at Nanking; and for a guarantee that the central Kuomintang authorities will prevent a recurrence of such incidents. This week, the spokesman of the Japanese Embassy in China has announced that these Japanese demands have received satisfaction. Does this mean that Greater Shanghai—i.e. those parts of the treaty port that lie outside the boundaries of the two foreign settlements—has now been reduced to the same political status as the two northern provinces of Hopei and Chahar?

A New Party in Canada.—The events of last week are likely to prove a turning point in Canadian political history. On Friday the Federal Parliament was prorogued; and a feeling seems to have prevailed that Mr Bennett's five-year reign was virtually at an end. On Sunday it was announced that Mr H. H. Stevens had decided to found a new party pledged to a policy of reconstruction and reform. Mr Stevens was formerly Minister for Trade and Customs in the Bennett Cabinet. In January, 1934, however, he made a speech accusing various large business interests of "unfair and unethical" practices. Mr Bennett at first tried to muzzle his troublesome subordinate, but public opinion proved too strong, and a Committee of inquiry was appointed with Mr Stevens at its head. This Committee brought to light remarkable evidence of dubious financial practices and deplorable labour conditions. Mr Bennett's popularity was not enhanced by the proceedings; since it was not forgotten that his high tariff policy had been mainly defended on the ground that it would bring the high wages. In November Mr Stevens resigned from the Cabinet, and in May his Committee reported recommending drastic social reform legislation. By this time, however, Mr Bennett, who could not have been unaware of the waning electoral fortunes of his party, had undergone a remarkable conversion. In a speech in January, he announced his belief that "any attempt to operate capitalism under the old system was doomed to failure"; and he outlined a programme of unemployment insurance and minimum wage legislation. These measures, criticised by

some business interests as likely to raise costs, have now been passed. But though they undoubtedly improved Mr Bennett's legislative record, they completely failed to satisfy the group of reformers which had been gathering round Mr Stevens. For the notice taken by Mr Bennett of the Stevens' Committee report has in effect been perfunctory. All that the Government is doing, as our Canadian letter on page 72 reports, is to give certain new powers to the Tariff Board! This and the Grain Board Bill, discussed in a note on page 72, have been its main concern in the last few weeks. And on this record Mr Bennett will face the electors in the General Election in August. How far is Mr Stevens's intervention likely to affect the issue? Recent by-elections still suggest a sweeping Liberal victory; and it may be that Mr Stevens's candidates will prove more embarrassing to the Co-operative Commonwealth Federation (Farmer-Labour) Party and to the Conservatives than to the official Liberals. For the C.C.F. is much more the Party of social reform in Canada than the Liberals, who are mainly distinguished from the Conservatives by their free trade views. Moreover, Mr Stevens's original supporters were left-wing Conservatives. On the whole it seems most unlikely that his new party will seriously prejudice the chance of a Liberal victory.

Pepper and Shellac.—The Senior Official Receiver's report on the compulsory liquidation of James and Shakspeare, Limited, was issued on Tuesday. It clarifies certain transactions which were mentioned in his interim report (summarised in the *Economist* of April 13th last, page 843) but, in its final form, differs little from the earlier document. It is stated that purchases for the shellac "pool" were begun as early as October, 1933, by Williams, Henry and Company, Limited, of which Mr. Louis Hardy was managing director and the entire issued capital was controlled by a company in the "Howeson group" of companies, the beneficial interest in whose shares in turn was held as to 55 per cent. by Mr Howeson and as to 45 per cent. by Mr Bishirgian. The purchases were made through Bishirgian and Co., and the Dean Finance Company financed Williams Henry's shellac holding to a great extent. Further, the Official Receiver points out that between February, 1934, when the "pepper lunch" took place, and June of that year, Williams Henry had bought 2,460 tons of pepper and were arranging for the purchase of a further 6,000 tons for future delivery, through Bishirgian and Company. The flotation of James and Shakspeare, Limited, as a public company, absorbing Bishirgian and Company and controlling Williams Henry and Company, comes in for close scrutiny in the report. On September 3, 1934, the date of the James and Shakspeare prospectus, Williams Henry had contracted to purchase 109,000 cases of shellac (at a contract price of £756,744) of which 41,300 cases had been financed by loans raised by Williams Henry, and 67,700 cases had not been financed at all, "apart from a purported sale of 35,400 cases." Williams Henry had also contracted to buy 11,640 tons of pepper of the approximate cost price of £1,055,000—as compared with pepper commitments for 2,460 tons on the previous June 30th. Yet the prospectus of James and Shakspeare on September 3rd, and the balance sheet of Williams Henry as at June 30th mentioned in that prospectus, gave no details, either of the Williams Henry commitments at June 30th, or of their vastly swollen commitments at September 3rd. The auditors of Williams Henry stated that they were never shown any pepper contracts when they examined the balance sheet drawn up by Hardy for the James and Shakspeare prospectus, though they did have access to the shellac contracts, which they regarded as within the normal course of business. The Official Receiver states that he feels justified in concluding in view of the haste with which the James and Shakspeare issue was launched, and of Williams Henry's "enormous future commitments in shellac and pepper," a large proportion of which fell due for payment on September 7th, that there was "an ulterior motive in omitting from the prospectus any reference to this state of affairs." In his summary, the Official Receiver says that it seems clear that

Messrs. Hardy and Bishirgian were actively engaged in the scheme to convert James and Shakspeare into a public company, and also in both the purchasing of pepper and shellac. He also states that Mr Howeson was "in a general way informed of the company's position and also of that of Williams Henry and Company," besides which Mr Howeson had a large financial interest in the company through James and Shakspeare was "directly attributable to the action of the directors in involving the company in the highly speculative transactions in shellac and pepper . . . without having made any arrangements for finance."

—and the Moral.—The City will draw several useful morals from this unhappy history. First, the commodity and other markets should be more chary in future of giving unlimited credit to any purchaser who adduces, as evidence of his financial backing, only a string of important names, without proof of their precise participation in the operation. Secondly, it is obvious that the regulations under which prospectuses are issued are not yet stringent enough to prevent grave abuses, notably the suppression of information on running commitments. Thirdly, where subsidiary companies are directed by, or come under the direction of, men in influential and public positions in the City, they should jealously scrutinise the companies' activities lest the reputations and influence of the persons concerned lend the companies a significance wholly out of proportion to their capital and operations. Equal care is needed when it is a case of underwriting some new issue. The Official Receiver states that there is no foundation whatever for the suggestion that Mr Reginald McKenna was interested in pepper or was aware of the true nature of James and Shakspeare's business. He did, however, sub-underwrite the issue, which was discussed with him previous to the date of the prospectus; and the Official Receiver mentions the connection of Dean Finance with Mr McKenna and Sir Hugo Cunliffe-Owen on the one hand, and its financing of Williams Henry's the other, and its purchases and holdings on the other. In view of the unfavourable impression created by the association of Mr McKenna's name with James and Shakspeare and Williams Henry—and his name must necessarily have given a cachet to the operations as well as to the James and Shakspeare issue itself—the City will be glad to receive this clear and official denial of the suggestion that the Chairman of the Midland Bank was cognisant of the pepper and shellac speculations.

The New Insurance Bill.—The Government's Bill for making it easier to put unsound insurance companies out of action has been published this week. It is a step in the right direction, but not a very big step, and whatever sins may be laid to the charge of the Board of Trade, it cannot be accused in this Bill of being rashly experimental. In 1933 an Act was passed called the Assurance Companies (Winding up) Act which has, to put the matter bluntly, been a laughing stock. One company after another has tottered and tottered and finally fallen, while the Board of Trade has stood by with the Act in its hand and waited for the collapse. The new Bill, if passed, will alter one section of the 1933 Act and will enable the Board of Trade, whether it has or has not reason to believe that the company cannot meet its liabilities, to call for information and accounts and then if it sees fit appoint inspectors to investigate the affairs of the company. If the company objects to this appointment it may appeal to the Courts and the onus will be on it of proving that the appointment "cannot reasonably be required." The Bill will make it easier for the Board of Trade to launch an investigation into a company's solvency, but the weakness of it is that it still leaves it to the Board to prove insolvency instead of putting the duty on the company of proving that it is solvent. Action directed against a particular company is difficult for a Government department, and the problem of weeding out the weak insurer before he has worked his mischief will not be settled until all insurers have at regular intervals to prove their solvency. The key to the problem

lies in setting up a standard of solvency and making every company or underwriter show once a year that his resources are up to that standard.

Eliminating Surplus Cotton Spindles.—The scheme to eliminate redundant spindles in the cotton trade, embodied in the Cotton Spinning Industry Bill (summarised in the *Economist* of July 6th), was severely criticised at a hearing given by the Lancashire and Cheshire group of Members of Parliament to opponents of the scheme on Tuesday. The opponents claimed to represent 112 cotton-spinning firms owning about 11 million spindles—equal to about one-third of the active spindles in the industry—and they asked for a further ballot before the Bill progressed further. The opponents pointed out that there were about 5 million spindles which had been idle for a long period. Many of these had been acquired at scrap prices, and the possibility of this plant restarting was remote. The money paid by the Spindles Board for these spindles would go to those (mainly the banks) having a first charge upon the concerns owning the plant, and would not help to revive or re-equip the industry. They might even receive a price representing five times the present market value of the spindles. Since 1931, 9 million spindles had ceased to exist without any cost to the industry; and a scheme designed to remove 10 million spindles at a cost of 3d. per spindle was rejected by the industry in 1932. Moreover, it was felt to be unfair that an entire industry should be compelled to contribute to a levy to keep afloat a mere section of it. As the cotton trade depended mainly upon the export trade, low costs were essential. The Bill would increase costs and would prevent the erection of new plant. Further, purchase of spindles by the Spindles Board was to be by agreement, and if those who wished to sell were not offered a price they considered satisfactory, the scheme would fail and the industry would be hampered by the Bill. On Wednesday, Lord Colwyn and other members of the Committee responsible for the scheme were given an oppor-

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

tunity by the groups of M.P.'s to reply to the criticism of the objecting minority. They did so in a long statement, but some of their arguments are not altogether convincing. True, something is necessary to reduce the depressed, un-economic section of the industry. And to the argument that the scheme will raise costs of production, the Committee retorted that it would actually lower costs by enabling a mill to spread its overhead expenses over a larger volume of production. They consider it an improvement on the scheme originally proposed because the levy is to cover all spindles, whether active or idle, and is to be a flat rate for both the American and Egyptian sections of the industry, though the Egyptian section is much less depressed than the American. The Committee are particularly anxious that the Bill should be proceeded with during the remainder of the present session, and they are therefore against a second ballot, which would cause delay. But in view of the strength of the opposition it would seem that there is little chance of the Bill being proceeded with before the recess.

* * *

Employment in June.—Employment in June, instead of showing a slight seasonal sag, rose to the highest figure since records have been kept. The number of insured persons aged 16 to 64 in employment in Great Britain on June 25th was estimated at 10,361,000—an increase of 27,000 during the month and of 188,000 during the year. The number of unemployed persons on the registers of Employment Exchanges at the same date was 2,000,110—the lowest figure since July, 1930. Of this total 1,555,184 were wholly unemployed, 361,825 temporarily stopped, and 83,101 classed as "normally in casual employment." The largest percentage decline during the month was in this latter category, while those temporarily stopped increased by some 47,000, owing mainly to decreased activity in coal-mining, especially in Yorkshire. Unemployment among women and juveniles fell by 10,000 and 19,000, respectively, as against a fall of only 15,500 for men; but compared with 1934 there are now 24,000 more children out of work, while the number of men has fallen by over 100,000. The following table of unemployment in different industries shows that the position of the heavy trades continues to improve and that even clothing and textile industries have expanded activity compared with a year ago. There has, however, been a rather more than seasonal recession in employment in tailoring, boots and shoes and motor vehicle, cycle and aircraft manufacture.

GREAT BRITAIN: INSURED PERSONS UNEMPLOYED

	June 25, 1934	May 20, 1935	June 24, 1935
Coal mining	358,120	262,879	300,079
Iron and steel manufacture	44,450	43,310	41,384
Engineering	103,307	90,883	88,528
Shipbuilding and ship-repairing	74,229	65,916	63,559
Cotton	107,907	97,474	98,285
Hosiery	13,559	17,338	13,100
Woollen and worsted	48,750	33,037	32,951
Tailoring	22,696	13,787	21,649
Boot and shoe	26,748	18,044	20,190
Building	132,943	129,860	127,847
Public works contracting	115,695	118,218	114,716
Distributive trades	197,726	214,084	200,315
Hotel, boarding house, etc.	50,273	61,010	52,051
Shipping service	43,576	43,543	39,972
Dock and harbour service	47,669	52,009	49,656
Motor vehicles, etc.	25,646	24,679	28,415
All industries (persons registered) ..	2,092,586	2,044,752	2,000,110

The large increase in the mining figure is purely seasonal, and was in fact much greater in 1934. On the other hand the improvement in building and public works contracting is not very satisfactory, in view of the fine weather. These industries, however, should show expansion in the near future as a result of increased borrowing by municipalities. Although much of the increased activity shown above is merely seasonal, the aggregate figures show that recovery is still going ahead in this country.

* * *

Excitement in the Wheat Market.—The monotony of the gradual but persistent decline in wheat prices since last autumn gave way to hectic dealings and wide fluctuations in prices during the past fortnight. At first it was the news that "black rust," the dreaded wheat pest, had in-

festated the North American crop which caused prices in the Chicago wheat pit to rise between June 26th and July 1st from 80½ cents per bushel (July futures) to 86½ cents per bushel. The Winnipeg and Liverpool markets, however, did not follow this upward movement. Then it was the fear that the Canadian Government might throw overboard its stocks of nearly 200 million bushels, which drove down prices in Liverpool from 5s. 2½d. per cental on July 1st to 4s. 6½d. per cental on July 6th. Mr Bennett's assurance to the Canadian House of Commons on July 4th that his Government had no intention to dump stocks at "fire-sale" prices failed to calm the world's wheat markets. On July 8th, however, "black rust" assumed once more greater importance in the minds of dealers, and prices advanced rapidly in Liverpool from 4s. 6½d. per cental on July 6th to 4s. 9½d. per cental on July 10th. It is quite evident that the wild gyrations of wheat prices, which, incidentally, appear to have brought down a firm of Liverpool grain merchants, are due to exaggerations of the importance of "black rust" and Mr Bennett's Wheat Marketing Bill. Perhaps the heat wave has unnerved the grain dealers in Liverpool. Although there have been reports of "black rust" in certain parts of North America, the extent of the damage is still unknown. Moreover, although the amendment to the Canadian Wheat Marketing Bill, which provides that the Grain Board shall take over the stocks of the Government wheat pool and sell them as quickly as possible, foreshadows a change in Canadian wheat policy, it does not follow that these stocks are to be sold "at best." On the contrary, the amendment of the Select Committee of the Canadian House of Commons specially provides that due regard should be had to market conditions. Owing to the maintenance of wheat prices at a high level in Canada, other exporting countries, especially Argentina, have been able to increase their share of world exports. Thus, although Canada's crop in 1934 was only 275 million bushels, as compared with an average of 411 millions in 1928-32, her stocks on July 1, 1935, at 196.8 million bushels, showed an increase of 10.3 million bushels on last year's carry-over. As world exports during the past two seasons were below 600 million bushels, Canadian exports at any price would indeed lead to a headlong collapse in prices. But such a policy would be neither practicable nor in the interest of Canada.

* * *

A New Index of Wage Rates.—There are at present three indices of wage rates regularly published in this country—one by the Ministry of Labour, one by Professor Bowley and one by the National Joint Council of the Trades Union Congress and the Labour Party. All these indices, however, are based on somewhat too narrow a sample of industries to be completely representative, the Ministry index, which is the most comprehensive, being based on 32 industries. Mr E. C. Ramsbottom, of the Ministry of Labour, in a very interesting paper read at a recent meeting of the Royal Statistical Society, gave the details of a new index of wage rates which has been calculated in his department and is shortly to be given regular publication in the Ministry of Labour Gazette. The index comprises 69 industries with several wage-groups in each industry; it includes changes in piece-rates and covers many of the smaller localities which were ignored in the earlier indices. It is also more balanced as between men and women, adults and juveniles, and skilled and unskilled workers. The index is weighted in proportion to the approximate total amount paid in wages in the different industries in 1924, but Mr Ramsbottom gave a tentative recalculation based on 1934. If there is a more comprehensive wage census in conjunction with the census of production to be taken in 1935, the base will presumably be shifted on to the present year. The new index does not vary very greatly from the existing indices, but its statistical basis is obviously more satisfactory and it is a very welcome addition to our knowledge of movements in wage rates. The new index is shown in the accompanying chart, together with the Ministry of Labour index of the cost of living and an index of normal weekly hours taken from Mr Ramsbottom's paper.

WAGE RATES, COST OF LIVING AND HOURS OF LABOUR, 1920-35

If the Ministry of Labour would proceed to compile a new and much more satisfactory index, or set of indices, of the cost of living the gratitude which statisticians owe them would be more than doubled.

* * *

Co-operative Trade Expansion.—The recent progress of co-operation in the South of England has been greater than that in the North. The directors of the Co-operative Wholesale Society have therefore recommended to the business meeting that the London branch representation be increased to ten instead of eight, while that of the Northern area working through Newcastle-on-Tyne be reduced from six to four. Manchester will retain its present number of fourteen, so that the total of 28 will be unaltered. Our Co-operative Correspondent points out that since 1929 the membership of the societies federated in the C.W.S. has risen from 4,881,753 to 6,124,837. But the percentage of these in the South has advanced from 32 per cent. to 38 per cent. Their proportion of the share capital has gone up from 29 per cent. to 38 per cent. and the trade from 33 per cent. to 38.6 per cent. That transacted through the Manchester headquarters was formerly 54 per cent. of the

total, whereas, for the first time in the history of the movement, it fell to less than half (49 per cent.) for the year which closed in January last. Hence the reason for the revision of the directorial representation, which suggests that the central organisation of the movement's trading operations may ultimately follow the industrial trend to the South. The trade returns for the first quarter of this year show a turnover of £23,042,587, an increase of 7 per cent. Included in this sum is £8,024,842, accounted for by production in the Society's own factories. As this represents an increase of 10 per cent., it is evident that the policy of a higher rate of dividend on purchases of C.W.S. products has had the expected result of stimulating the placing of orders for those commodities by local societies; but higher prices have helped to swell the totals. There has been a setback to the co-operative export trade, which stands at £220,750 for the quarter, compared with £487,742 in the corresponding period of last year; and the directors "cannot anticipate much improvement in our exports until exchange difficulties and the various restrictions imposed upon international trade are removed." From the Manchester branch the sales were £10,629,526, an increase of 8½ per cent.; but the sales of the London branch showed an advance of 9½ per cent., the total being £8,724,939. The Newcastle-on-Tyne section, operating in depressed areas, shows an improvement of 9 per cent., with sales at £2,478,027. This is mainly due to the loyalty of the mining villages, where the people have been wedded to co-operation for two generations. Several purchases of land and buildings have been made this year for extensions—notably the development of a mantle factory near London, the enlargement of the distributing centre at Spitalfields Market, the increased acreage of glasshouses in the Lea Valley, and for the developments of the glass works at Worksop, the boot factory at Derby, the preserve works near Manchester, and the hearth furniture factory at Dudley, for which latter purpose the "National Projectile" factory was acquired. Annual donations amounting to 3,589 guineas are being recommended, besides grants totalling more than £4,000 to various co-operative organisations. The latter sum includes a grant of £1,000 to the Co-operative Political Party, thus bringing the C.W.S. into line with the policy endorsed at the Whitsuntide Congress at Cardiff and described in our issue of June 22nd.

OVERSEAS CORRESPONDENCE

UNITED STATES

TAXING LARGE FORTUNES

THE furore over the proposal to attach the new taxes on the very rich to the extension of the "nuisance" taxes has subsided, and the measure will proceed through Congress by the usual routine. Expectations of an early adjournment of Congress have diminished, but not necessarily vanished. Extraordinarily little legislation has actually been passed by this Congress in its six-month session; but bills are customarily passed *en masse* in the closing days.

The details of the new taxes scarcely fulfil the apprehensions raised by the President's message. The increase in personal income taxes begins with incomes of \$1,000,000, and consequently is applicable to only a handful of persons; on the new inheritance taxes begin with 4 per cent. on the new inheritance taxes, in place of a uniform rate of 13½ per cent., would range from 10 per cent. to 17½ per cent., making the maximum increase about 4 per cent. Estimates of the revenue obtainable range from initial suggestions (before the schedules were published) of over \$300 millions down to subsequent guesses of about one-tenth that sum. The additional proposal for a constitutional amendment eliminating tax-free securities has not yet taken concrete form. About one-third of the tax-exempt securities outstanding are the short-term issues of the Federal Treasury

itself, and it would require no more than a Treasury ruling to end that exemption.

The proposal to tax State and Municipal securities would certainly encounter strong opposition from the localities, for the tax-exemption feature has, in effect, been a kind of Federal subsidy. Because of the exemption, the States, Municipalities, etc., have been able to borrow at rates lower by the amount of the tax than the rates on corresponding taxed securities.

The Bill is, therefore, a revenue measure only in name; its social aims predominate. The changes in the income tax are negligible; but the new inheritance taxes, combined with the Federal and State taxes now in force, would probably go some distance in preventing the transmission of very large fortunes.

The Federal Reserve Board's economic indices for May show a slight decline for the month, and also for the year:—

	BUSINESS INDICES (1923-5=100. Adjusted for seasonal)		
	May, 1934	April, 1935	May, 1935
Industrial production (total)	86	86	85
Manufactures	86	86	85
Minerals	88	87	89
Construction contracts (total)	26	27	25
Residential	11	18	19
All other	38	33	29
• Factory employment	82.6	82.3	81.3
Factory payrolls	67.1	70.8	68.5
Freight carloadings	63	61	61
Department store sales	77	73	76

Whether this series of data gives a representative picture of the economic situation is open to question. Most people believe that current business is somewhat ahead of last year. Furthermore, in some sections there is a real boom in residential building, which is having important local consequences.

THE DEFICIT IN 1935

The fiscal year of 1935 ended on June 30th with the gross public debt at \$28,700 millions, compared with \$27,053 millions at the end of the 1934 fiscal year, an increase of \$1,650 millions. Total expenditure was put at \$7,300 millions, substantially below the Budget estimates of \$8,581 millions. Revenue amounted to \$3,800 millions, slightly in excess of the forecasts; and the deficit was approximately of equal amount, namely, \$3,500 millions, almost \$1,400 millions under estimates. Revenues were almost \$700 millions above those of the previous fiscal year. The Budget for the 1936 fiscal year is put at \$8,520 millions, with estimated revenues just under \$4,000 millions.

The gross debt, therefore, increased by only about half of the deficit. In part this may be attributed to repayments, especially from the Reconstruction Finance Corporation. Indeed, in the last half of the fiscal year the increase in the gross debt was only about \$200 millions, while the interest-bearing public debt actually declined by \$200 millions in that period. This interest-bearing debt may be further reduced in the near future by the retirement of the bonds used as collateral for the National Bank currency (almost \$650 millions), as this form of currency will cease after August 1st, being replaced by Federal Reserve notes issued against "gold certificates" representing a monetisation of a part of the gold profit not allocated to the Stabilisation Fund. The abstention of the Treasury from any substantial demands for new money during the past six months, taken in conjunction with the increase in the excess reserves of the banks (in turn derived mostly from gold imports), has certainly facilitated the enormous refunding operations of the period.

In spite of the very low yields on long-term obligations, the general policy of the Treasury has been to prefer the short-term market, where the yields were still lower. This did not, strictly speaking, involve a shortening of maturities, since the bonds converted into short-term securities were already *de facto* in that category. Nevertheless, the floating debt is now very large, the aggregate maturities in the current fiscal year amounting to about \$6,800 millions, the largest single element being the remainder of the fourth 4½ per cent. Liberty Loan called for redemption on October 15th.

TURMOIL IN THE COAL INDUSTRY

Although the forebodings of chaos and collapse predicted as the sequel to the termination of N.R.A. have not materialised, certain developments have occurred which may be traced to it. In copper, the cartel price of 9 cents has fallen to 8 cents. In coal, conditions have reverted to the state of turmoil which may be described as normal. The proposed Guffey Coal Bill is the Administration's answer to this problem. Something of the same sort may be said of the cotton textile industry, where the truce between the southern and northern sections seems to be breaking. But, broadly speaking, there have been surprisingly few reports of reduced wages, lengthened hours or even lower prices; although there are rumours that purchasing agents are withholding orders rather commonly in the expectation of price concessions.

Industrially America is a "free trade area" composed of a number of competitive areas, as distinct economic entities as the components of the British Empire, and, to a degree, less complementary. These regions are unable to erect tariff barriers against one another or to resort to the equivalent in the form of competitive devaluations of a local currency unit. Both in coal and cotton, N.R.A. endeavoured to "equalise competition" between competitive areas, one of which had a lower level of costs than the other, and both of which sought their outlet in a common market. If one pictures New England and the South as economic areas comparable, in textile manufacturing, let us say, to Lancashire and Belgium, one can understand why there were, and are, so many irreconcilable opinions about N.R.A.

FRANCE

THE 14TH OF JULY

On July 14th, the anniversary of the fall of the Bastille, two large demonstrations are to be held in Paris: one by the Fascist Croix de Feu, under Colonel de la Rocque; and the other by the Front Populaire, which includes the left-wing Radical Socialists, the Socialists and the Communists, and is led by MM. Daladier, Pierre Cot, Blum, Cachin, and others. The Government has authorised these demonstrations, on condition that they do not meet one another. The Croix de Feu will march to the Place de l'Etoile, and the Front Populaire to the Bastille.

As a preface to these demonstrations, the two parties have been indulging in violent pronouncements. The Front Populaire is denouncing the Government's deflationary policy; appealing to the working masses, and calling for the disarmament of the Croix de Feu. Colonel de la Rocque, on the other hand, made the following declaration last Friday:—

In five days I shall give the order to mobilise against the revolutionary movement of MM. Blum, Daladier, Cachin and their associates.

Colonel de la Rocque added that his object was to dispense with Parliament, seize power, silence what he called "high finance," expatriate foreign workers, etc., etc. His economic policy is not precise. Politically, however, it embodies the various diverse strands of French Fascism. The Front Populaire, meanwhile, declares that it will never accept the coming Budget cuts, which are expected to involve a 6 per cent. to 10 per cent. reduction in all Government payments, including civil servants' pay, ex-servicemen's pensions, etc. Nevertheless, the impression is widespread that July 14th will go by without serious disturbance, partly because of the measures taken by the police and partly because the leaders of the rival movements do not seem anxious to take definite decisions.

The general political tension, however, is making the task of financial surgery even more difficult. Capital is not flowing into business, and the rentes are very depressed. The Bank of France has nevertheless again reduced its discount rate, which now stands at 4 per cent. The following table shows the fluctuations of the Bank's rates during the five months:—

1935	Discount Rate %	Rates for Advances		
		Against Securities %	Against gold %	30-day Advances %
March 1st	5	...	...	2½
May 23rd	3	...	4½	3
May 25th	4	...	5½	4
May 28th	6	6½	7	6
June 20th	5	6	...	5
July 4th	4	...	...	4

Last week the Treasury reduced from 5 per cent. to 4 per cent. the rate on issues of from three months to one year's life. This rate had been reduced from 6 per cent. to 5 per cent. on June 28th.

Nevertheless, money remains tight. A rigid supervision over foreign exchange operations is being maintained, to prevent "speculation against the franc." Exchange operations which are not of a genuine commercial kind are being rendered difficult. Forward purchases of gold or advances against gold or foreign exchange are encountering the opposition of the banking authorities.

SUEZ CANAL COMPANY AND STERLING

The Suez Canal Company has just decided to substitute the pound sterling and the Egyptian piastre for the gold franc in calculating both the canal dues and the service on its capital obligations. A decree signed on May 2nd by the King of Egypt in effect annulled the gold clause in international contracts. Before this decree the company's position with regard to the gold franc was as follows: various legal cases, of which one had been undertaken at the request of the British Government, stipulated that the franc to be used by the company in making statutory and contractual payments was the "international franc," in which the company calculated its receipts, in effect the pre-war gold franc. But as a result of the decree of May 2nd the company reconsidered the position.

It has now taken the following decision:—

From July 8th the shipping dues provided for by Article 7 of the company's regulations will be fixed on the basis of 7s. 6d., or 36·56 Egyptian piastres, per ton. At existing exchange rates this is equivalent to 5·75 old gold francs. Rates for ships under ballast will be fixed at 3s. 9d., or 18·28 Egyptian piastres, a ton. The rate for passengers will remain at 10 gold francs.

From August 1st the company will pay the service on its capital obligations in Egyptian piastres and no longer in gold francs. But it does not regard the question as definitely settled. It will therefore remit to shareholders scrip designed to safeguard their rights.

There will be remitted to shareholders (the company states) scrip which will permit them to receive the sums thus safeguarded in case, as the company hopes, the right of payment in gold may be finally conceded to the shareholders.

From this double decision by the company it follows that Suez Canal shares, which had hitherto been considered gold securities, now in effect become sterling securities.

For the first six months of 1935 the Canal's receipts were 436,240,000 francs, against 433,460,000 francs in the first six months of 1934. This was entirely due to an increase in the second three months. Receipts in the first three months were smaller.

PARIS, July 10.

GERMANY

20 PER CENT. RISE IN COST OF LIVING SINCE 1933

ECONOMIC conditions have not improved recently. The impetus of industrial revival, first felt during the Papen Administration of 1932, has not ceased; but it is now mainly kept going by rearmament. The immediate effect of rearmament is to increase employment in a small number of important industries. But the increase seems to have been at the expense of other industries. Reports from the consumption trades are unsatisfactory; and there has been an almost complete cessation of the formerly rapid recovery in retail trade.

It seems that the total of national earnings really available for private expenditure has heavily declined. A decline in the first quarter of 1935 is indeed admitted by the official return of earnings from salaries and wages, but this decline is, in part correctly, attributed to seasonal factors. These returns of wage totals, however, show what the employer pays and not what the employee receives after the numberless compulsory subscriptions and official and party exactions have been met. Side by side with the resulting decrease in the effective nominal wage, there has been a sharp increase in the cost of living; so that the real wage has declined still more than the nominal. The official cost of living index, which shows the advance to have been only from 122·4 in January to 123·0 in June is misleading. It is naturally impossible to provide a correct index; but it is certain that for middle-class households the cost of living has risen 10 per cent. this year and 20 per cent since the Nazi Administration took office, despite the stability of house-rents. The prices of meat and of certain necessities of secondary importance have recently risen considerably. Unquestionably the manual workers have been very hard hit; and in private they express their resentment at the exactions, at the personal extravagance of certain Nazi magnates, and at the almost complete absence of public and semi-public accounts.

Owing to official concealment of the real methods of financing rearmament and "work-creation," which are mostly the same thing, the part played by Public Finance in the decline of the individual's prosperity is difficult to ascertain. There is no overt currency inflation. The great semi-secret credit-inflation of the past two years has not been accompanied by an increase in the circulation of money sufficient to account for the rise in the cost of living. There need be no currency inflation, of course, so long as the holders of bills representing public liabilities (which are not officially admitted to exist) are compelled by the

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Total New Business in 1934 in Great Britain and Ireland
£7,000,000

Total Assurances in force at November 15th, 1934, in Great Britain and Ireland

artificially induced shortage of more substantial investments to hold on to their bills. But it seems that the bank notes and coins now in circulation to a total of Rm. 5,800 millions, as against Rm. 5,600 millions a year ago, are circulating at a much increased pace.

The official Reichskredit-Bank's calculations, which are based on Reichsbank and post-cheque clearings, indicate a substantial speeding-up of the money circulation. The continuation of the rise in the share-market regardless of very low or non-existent dividends points to a progressive internal depreciation of the reichsmark. This depreciation may have something to do with the recent deterioration of working-class conditions; but the ultimate cause is the absorption by the Government for armaments and capital goods of an ever-increasing part of the income from productive work. In this respect conditions here closely resemble those in Russia.

Money last week was in greater demand than is usual early in the month; but this week it is plentiful, with day-loans at 3-3½ per cent. or lower. The market discount-rate remains at 3 per cent. The Reichsbank's return for July 6th shows repayment of 52·3 per cent. of the June month-end increase of credits and investments, and a heavy drop, by Rm. 101 millions to Rm. 718 millions, in deposits. The latter change represents a reaction from commercial bank window-dressing for the June-end balance sheets, which had led to a substantial increase in deposits.

The Reich Foreign Exchange Board has issued regulations facilitating transit trade. New Reichsbank regulations for the amortisation of bonds in pursuance of the settlement at the transfer conference of May 1934 have appeared. The regulations provide for general amortisation by the use of moneys paid in for this purpose to the Konversionskasse. Holders of the bonds already due for amortisation will be enabled to exchange them for bonds of the same issue or bonds of another solvent German long-term debtor. Independently of this, the Konversionskasse will apply receipts for amortisation in the buying up of bonds. The Konversionskasse's return for June 30th shows a sharp increase in liabilities to the foreign creditors. These now total Rm. 355 millions, as against Rm. 162 millions a year ago. The increase is naturally lower than the total of interest and amortisation liabilities falling due in the twelve months, having been reduced by special transfer agreements with creditor countries, repurchases of scrip, and investment within Germany on long term. The total of scrip outstanding has slightly fallen, to Rm. 47·8 millions. Sterling funding-bonds for English creditors have increased to Rm. 18 millions. In spite of the large debt-service liability maturing in June, the Konversionskasse's deposits in the Reichsbank did not increase, and they now total only Rm. 176 millions, as against a highest total of Rm. 292 millions at the end of April; but its investments, which were only Rm. 22 millions in April, have risen to Rm. 172 millions.

The now complete return of Reich revenue from taxation and of the subventions to the States in the financial year ending March 31st, is as follows (in millions of Rm.).

	Estimated		Realised	
	Gross	Share of States	Gross	Share of States
Direct taxes				
Income tax	1,275.0	876.1	1,720.4	1,136.9
Property	300.0	...	303.4	...
Turnover	1,700.0	510.0	1,872.6	561.7
Corporation	180.0	135.0	319.5	239.5
Total	4,073.0	1,650.0	4,969.6	2,076.1
Indirect				
Customs	1,080.0	...	1,148.6	...
Tobacco tax	775.0	...	802.6	...
Sugar tax	300.0	...	299.9	...
Salt tax	65.0	...	58.6	...
Beer tax	370.0	84.5	267.3	90.3
Spirits tax	145.0	...	176.3	...
Fats tax	140.0	...	238.8	...
Total	3,124.7	276.5	3,253.2	285.0
Grand Total	7,197.7	1,926.5	8,222.8	2,361.1

Tax revenue in the financial year 1933-34 was Rm. 6,846.2 millions, of which the States' share was Rm. 1,804.5 millions. The States therefore appear to have received in the last financial year Rm. 556.6 millions more than in 1933-34. Owing to adjustments resulting from changes in real-estate taxation, the actual excess sum was Rm. 603.2 millions.

The provisional crops report shows that yields per hectare are substantially larger than in 1934, which was a bad year, and were rather over the average of 1929-34. The rye crop is estimated at 8,130,000 metric tons, against 7,610,000 tons in 1934; wheat and spelt 4,830,000 tons, against 4,670,000 tons; barley 3,410,000 tons, against 3,200,000 tons; and oats 5,450,000 tons, against 5,450,000 tons. The crop of bread-cereals is 700,000 tons larger than last year.

BERLIN, July 10.

ITALY

RATES OF INTEREST RISING

DURING past months there has been a continuous and steady fall in the prices of fixed interest securities and a rise in prices of variable dividend securities. According to the Milan Economic Council, the index of 14 leading debentures (December, 1925 = 100), after touching the high point of 113.79 on August 31, 1934, had fallen to 104.79 by May 25, 1935. Prices are, however, largely nominal; and the total value of debentures daily transacted oscillates between 0.21 and 0.05 per thousand lire of total issues. The decrease is partly due to conversions, which have reduced the net yield of securities during the past year. The 3.50 per cent. State Redeemable stock, which enjoys a very large market, after being quoted at 97.17 in the first ten days of February, 1934, when it was still on a 5 per cent. basis, had fallen to 85.02 by December, 1934, and to 70 by the end of the present week.

It appears that the current rate of interest for high-class securities is again as high as 5 per cent., with a few exceptions for land and real estate (Credito fondiario) debentures, which are on a 4.50 per cent. basis. The rise in the rate of interest is general. Private discount rates on fine commercial bills, which in May, 1934, were 3 per cent. to 3.50 per cent., were 3.50 per cent. to 4 per cent. in May this year. For financial bills the rise is from 3.75-5.50 per cent. to 4.25-5.25 per cent. Carry-over rates in the Stock Exchanges rose similarly for the best industrial securities from 3.75-4.25 to 4-4.50 per cent.

Variable dividend shares (December, 1925 = 100) advanced from 48.12 in December, 1932, to 65.14 in December, 1934, and to 75.01 on May 25, 1935. The biggest relative increases (between December 31, 1932, and March 25, 1935) took place in the textiles (12.15 to 24.21), iron and steel and engineering (35.41 to 73.06), electricity (46.70 to 84.03), food and miscellaneous (64.76 to 101.67) markets. The money absorbed by the shares market is not, however, very great.

Bank deposits are not increasing. Between December, 1934, and April, 1935, postal saving bank's deposits decreased from 20,431.9 million lire to 20,257.6 million lire; and between December and March deposits in the ordinary

saving banks decreased from 19,572.8 millions to 19,394.2 millions. In the public banks, ordinary banks and popular and regional banks there was a slight increase between December and April; saving deposits increased from 9,415.8 millions to 9,447.6 millions, and current account deposits from 2,349.2 millions to 2,388.4 millions. The correspondents' credits item at the ordinary banks, which in Italy includes most current accounts, fell between December and April from 13,641.8 to 13,450.9 millions.

PRODUCTION INCREASING

Production is increasing, as the new indices of the Department of Corporations demonstrate:—

	(INDUSTRIAL PRODUCTION, 1928=100)			
	December, 1929	December, 1932	December, 1934	April, 1935
Textiles	101.7	67.4	73.6	89.7
Iron and steel	111.2	72.6	91.7	112.5
Engineering	104.0	70.5	75.5	90.2
Paper	106.8	103.0	120.5	129.6
Building	139.6	78.9	136.0	184.2
Electricity, gas	106.5	110.3	125.5	128.4
General index	109.1	73.0	88.3	106.8

Industrial activity is not much below the 1929 level; and in the iron and steel, paper, building and electricity industries it is even higher. The figures do not prove the usual hypothesis that only war industries are working at high pressure, because the last three groups are not directly connected with war activity. The spectacular increase in building activity is reacting in many ways upon general activity.

Unemployment had fallen to 755,349 at the end of May, against 941,257 at the same time last year. The dispatch to the Colonies of 600,000 to 700,000 more young men has obviously eased the labour market; but the unemployment statistics could never be literally trusted. Compared with a total unemployed figure rising sometimes to over 1,000,000, the number of men receiving relief in 1934 was only 155,650 on the average. In countries like Italy or France, however, where people live mostly on their farms or in small shops or are independent artisans, the total may not be as alarming as it looks. It may be that in Italy, when the figure falls to, say, 600,000, there are no true unemployed. Some of the 600,000 do not care to work at all, and the rest are simply waiting for a better opportunity, earning a living meanwhile on casual jobs. Notwithstanding the 755,349 men and women now on the unemployment rolls, entrepreneurs are at times finding it difficult to obtain good hands.

The wheat yield promises to be better than in 1934. It will probably be over 7,000,000 tons, against 6,200,000 last year. The State is this year advancing 900 lire per ton of wheat to the farmers who deposit it in public granaries, and leave to public bodies the task of selling it at the most favourable moment. As a result of the very low prices paid last year for cocoons (2 to 2.50 lire per kilogram), the Government has promised a premium of 1 lira in cases where the sale of cocoons is trusted to co-operative bodies.

TURIN, July 6.

AUSTRIA

HEAVY INDUSTRY STILL ACTIVE

THE seasonal improvement in Austria's economic activity this year is of satisfactory intensity, and there is much statistical evidence that a marked advance has been made over last year:—

	Monthly			
	Average, 1934	May, 1934	April, 1935	May, 1935
Iron ore output	38,700	39,300	46,000	63,100
Crude steel output	15,300	18,800	12,600	19,700
Exports in millions of schillings	73.4	67.6	79	72.4
Goods wagons in use	124,000	117,000	118,000	126,000

The deficit on the Federal Railways in 1934 amounted to only 89 million schillings, compared with 104 millions in 1933. Industrialists report that orders in hand at the beginning of July were ten per cent. better on the average than they were at the corresponding point of last year. Recovery however, is not at all uniform. Heavy industry has a

satisfactory number of orders on hand. On July 9th the Alpine Montangesellschaft lighted its second furnace, and the hands employed by this most important Austrian heavy industrial enterprise have multiplied about fivefold during the last two years. There are other iron and steel works, as well as metal-working industries, that are running two or three shifts; the vehicle industry in particular is enjoying a boom.

Next to heavy industry, the trades that are doing best are textiles and chemicals. The number of unemployed on the dole at the beginning of June was the lowest recorded since 1931. There are now only 236,000 such unemployed, compared with a monthly average of 288,000 in 1934. And it is believed that contracts yet to be allotted will reduce the figure to less than 200,000 by autumn.

The rise in exports is slowing down. But various circumstances suggest that the general movement of foreign trade is satisfactory. In finished goods alone there was an export surplus of 90.7 million schillings in the first five months of 1935. Nevertheless, exports of finished goods, upon which industry chiefly relies, are expanding most slowly.

No great hopes of further expansion can be entertained as long as the huge German market for Austrian products is circumscribed by the present clearing treaty, according to which the exchange of goods must balance. The recent Italian import restrictions are also injuriously affecting the Austrian market. Efforts are being made to expand trade with Germany by means of so-called "supplementary compensations." Austria buys in Germany certain goods which it previously bought in other countries, such as coal; and can then export to Germany goods of corresponding value without affecting the clearing treaty. This operates, however, almost exclusively in the interests of agriculture. Exports of timber, dairy produce, cattle, etc., are increasing; but industry cannot count upon such supplementary exports, apart from steel. Meanwhile Austrian industrialists, following their German competitors, are demanding export subsidies.

VIENNA, July 10.

POLAND

COLONEL BECK IN BERLIN

THE official visit of Colonel Beck, the Foreign Minister, to Berlin early in July was primarily one of courtesy, designed to assure the German Government that Polish foreign policy has not been changed by the death of Marshal Pilsudski. The main lines of this policy, it has been repeatedly stated, are:—

(1) A strong Poland able in case of need to look after herself; (2) Peaceful and correct relations with Soviet Russia and Germany; and (3) Complete respect for the treaties of alliance with France and Roumania.

The contention here is that there is nothing conflicting or ambiguous about this policy, and that Poland is not to blame for Soviet suspicion and intrigue. The importance of the Berlin visit appears to have been magnified from the German side, and the impression left on Polish public opinion is that the military ceremonies which attended it were somewhat out of place, the more so as "Colonel" Beck is in no sense a military person.

The extraordinary session of Parliament convoked at the beginning of June to pass the new electoral laws dissolved on July 5th. Parliament will presently be dissolved and new elections held in October or November. The new electoral law for the Sejm divides the country into 104 constituencies, each of approximately 200,000 voters, with two Deputies to be appointed for each constituency. There are 444 Deputies in the present Sejm. The number of Senators is to be reduced from 111 to 96, two-thirds to be elected under a very restricted franchise (in which less than 500,000 people will have the right to vote) and one-third appointed by the President. The new laws abolish the party system of representation.

The feeling is widely held that the Government has not acted wisely in refusing to accept any of the amendments proposed by the Opposition parties for modifying some of the more objectionable and reactionary features of the new electoral system. Two of the strongest Opposition groups have already announced their intention of boycotting the coming elections, and others will probably follow. Even though the prerogatives of Parliament under the new Constitution have been greatly curtailed, the Sejm could still have performed the useful function of a forum for the Opposition forces—representing several million voters—to give vent to their feelings. Without this "safety valve," the Opposition may be forced to express itself in some other way.

Polish imports in May were valued at 70.0 and exports at 68.2 million zlotys. The passive balance of 1.8 million follows that of 0.2 million in April, and reduces the active balance for the first five months of the year to 24 million zlotys. The passive character of the trade balance is partly due to the Danzig situation, and is felt to be only temporary. Import restrictions would certainly be increased, if necessary, to render the balance active. The foreign exchange reserve is now much too low to admit the possibility of Poland returning definitely to a passive trade balance.

PRODUCTION STAGNANT

The May index of industrial production at 65.0 (1928=100) was above the May average for the past three years. The improvement which has taken place, however, is very slight, and is based largely on Government expenditures for public works. But the feeling is general that industrial production has touched its lowest point. This belief is strengthened by the resistance which wholesale prices have shown since the beginning of 1935, the May index of 52.8 comparing with 52.7 in January and the low point of 52.1 in March. Alone among the gold countries Poland has adjusted her wholesale price level to the enhanced value of the currency, and in the broader sense the process of deflation is considered to have been completed. There is still, however, a great deal of disequilibrium in the internal price structure, wholly at the expense of the farmer, whose position is deplorable in the extreme. The wholesale index of farm prices at the end of May was 33.0, while the index of manufactured goods' prices was 60.7.

The condition of the crops is good, and the harvest yields are likely to be somewhat better than last year. Prices are lower.

WARSAW, July 7.

JAPAN

DECLINE IN RAW COTTON IMPORTS

THE outstanding and most disquieting features in Japan's foreign trade returns in recent months are the decreasing exports of cotton piece-goods and the decreasing imports of raw cotton. The May returns, however, show that exports continue to compare favourably with last year's figures. The total for last month, 228,167,000 yen, represents an increase of 38,411,000 yen, or 20.3 per cent., compared with May, 1934; the expansion again being due to larger shipments of manufactured goods, almost with the single exception of cotton piece-goods. Imports were larger by 23,739,000 yen, or 11 per cent., than a year ago, at 238,482,000 yen. Petroleum, iron and steel and machinery continue to increase, while raw cotton and raw wool again show heavy declines, the former having fallen by 24,155,000 yen. The import surplus in May was more than halved at 10,315,000 yen. For the first five months of 1935, however, it amounts to 188,089,000 yen, as against 159,102,000 yen a year ago.

In company reports for the past six months a consistent general improvement is still evident, except among the rayon companies; and dividend increases and resumption have been numerous. Shipping firms, electric power companies, and silk-reeling mills are prominent in the rise of profits, whereas rayon company reports are

proving disappointing. Nippon Yusen Kaisha has increased its dividend for the past half-year from 3 per cent. to 5 per cent. The Daido Electric Power Company has paid a 5 per cent. dividend for the first time for two years. Katakura and Gunze, the two biggest rayon firms, have also resumed a 6 per cent. and 10 per cent. dividend respectively. But the Tokyo Rayon Company has reduced its dividend by 5 per cent. to 15 per cent.

RAYON OUTPUT STILL INCREASING

Despite uncertainty of general prospects owing to unfavourable developments abroad, trade conditions in this country, as revealed in other economic statistics, have changed little in recent weeks. Industrial activity has been well maintained. The output of cotton yarn during May totalled 121,219,000 lb., a decrease of 1,860,000 lb. over April; but this was entirely due to a smaller number of working days. The rayon yarn production during last month set another record at 16,887,000 lb., and was 1,171,000 lb. larger than in the preceding month. The Bank of Japan's wholesale index number for May recorded a slight rise of one-tenth of 1 per cent. on the month. But the value of all shares listed at the Tokyo Stock Exchange on June 1st was down by 337 million yen, or 5.2 per cent. as against a month ago.

Money remains easy, and money rates are unchanged. Overnight loans are obtainable at a fraction less than 2½ per cent., fine bills are quoted at 4½-3½ per cent., and bankers' acceptances at 5½-4½ per cent. The note circulation has rapidly contracted, after the turn of the month, to the normal level of 1,200 million yen. Bank deposits continue to increase more rapidly, while there has been no appreciable recovery in discounts and advances. Joint-stock banks are buying Government securities on a larger scale from the Bank of Japan, their purchases in the first week of the month amounting to 55 million yen.

Mr H. Hijikata resigned from the Governorship of the Bank of Japan on June 4th. Mr E. Fukai, Deputy Governor, succeeded him, and Mr K. Shimidzu, the senior director, was appointed Deputy Governor. The change in the Bank Court was well received in banking circles. But it was admittedly a disappointment in inflationist quarters; for it is not likely to involve any alteration in the bank's policy as hitherto pursued.

The cocoon market at Numadzu opened with unusual liveliness, and the first crop of the season was sold at as high as 4.91 yen per kamme; but prices soon tended to sag, and the ruling quotations are at around 4.00 yen on the average. This is still some 1.50 yen higher than the mean for last spring. Although the trend of cocoon prices depends largely upon the American situation, there will be no further appreciable fall since the carry-over from last year and breeding for the current year are both smaller. At ruling prices the farmer is able to earn a profit by cocoon-raising this year, whereas he lost heavily last year. This affords a somewhat bright spot in the dismal agricultural situation.

TOKYO, June 20.

ARGENTINA

A RECORD MAIZE CROP

OFFICIAL figures have now been published by the Ministry of Agriculture estimating the maize crop for 1934-35 as 11,500,000 tons. This is a record, and leaves an exportable surplus of 8,379,316 tons. There has been considerable agitation on the part of the producers, who wish the Government to raise the basic price from \$4.40 per 100 kilos. to \$6. This, however, the Ministry have refused to do on the ground that the above surplus is more than sufficient to supply the amount required by importing countries, and that if the basic price were raised, the Government would almost certainly have to raise the whole crop. They would then be forced to dispose of most of it under pressure and so depress world prices to a figure below that ruling

to-day. The available exportable surplus from the Argentine, South Africa and the Danubian countries is estimated at 11,659,000 tons, whereas the average annual requirements of the importing countries is calculated at 9,100,000.

The outcome of the negotiations in England about meat imports from Argentina and the Dominions is awaited with considerable interest. The general opinion is that Argentina will be loath to make any concessions until the completion of the Roca Agreement. A decision to place a tax of 1½d. per lb. on all foreign meat would place a heavy burden on the Argentine producer.

EXPORT SURPLUS INCREASING

The following are the figures of foreign trade during the first five months of 1935, compared with those for a similar period of 1934:—

Imports and exports for the first five months of 1934 and 1935			
	1934	1935	%
Imports	\$ 417,373,534	\$ 467,393,176	+12.0
Exports	611,051,745	704,270,819	+15.3
Export Surplus	193,678,211	236,877,643	

Argentine imports according to the country of origin for the first five months of 1934 and 1935

	1934	1935	Percentage of total 1934	Percentage of total 1935
United Kingdom ...	\$ 86,346,650	\$ 94,280,639	22.7	22.0
United States	55,361,780	62,374,987	14.6	14.6
Germany	42,535,318	37,373,181	11.2	8.7
Belgium	16,185,531	28,025,597	4.3	6.6
Italy	31,210,273	22,589,257	8.2	5.3
Japan	7,239,445	20,143,170	1.9	4.7

The export surplus is some \$43 millions larger than last year. Imports are steadily increasing, except foodstuffs and tobacco, etc. Drink imports, which had previously shown a decline, are now on the upgrade owing to very heavy imports during May.

Imports from Japan continue to increase enormously, and there is now an Argentine import surplus with Japan of \$15 millions. It is presumed that the bulk of these Japanese goods are in direct competition with the British articles, since most of them are textiles. Imports from Great Britain, although still increasing, are not increasing as fast as the total.

The Government has announced its intention of tackling the very important problem of the co-ordination of transport during the July sessions of Congress. At the moment the railways are seriously embarrassed by road competition.

BUENOS AIRES, July 1.

CANADA

[The dissolution of Parliament, the foundation of a new Party by Mr H. H. Stevens, and the recent amendment to the Grain Trade Bill are discussed in Notes on pages 64 and 66.]

THE WHEAT POSITION

THE Government recently introduced its Bill for the establishment of a board to control the Canadian grain trade. The board is to consist of three salaried members, and is to have the assistance of an advisory committee of seven members, of whom four are to be representatives of the producers. It is to be granted full control of any inter-provincial or export trade in wheat and other grains; and no elevator will be operated by anybody except it or its agents unless special exemption is granted. The producers are to deliver all their grain to the board, and they will receive an interim payment on delivery, and documents to be known as "participation certificates." Later, when the full sale of a crop has been completed, the balance of the proceeds, after all expenses of marketing have been deducted, will be distributed *pro rata* among the holders of the participation certificates.

The Bill has the support of the Co-operative Commonwealth Federation and of the Western wheat pool organisation. The grain trade is strongly opposed to it; and the Liberal Party objects to parts of it.

Mr Sidney Smith, a large exporter and former President of the Winnipeg Grain Exchange, recently stated in evidence before a Special Committee of the House that he disapproved of a 100 per cent. compulsory wheat pool system. He believed that the majority of Western farmers would dislike marketing their grain through a single Governmental agency; and that, unless the speculative market were kept open to give producers some incentive for holding their grain, there would be a torrent of selling in September, with disturbing consequences. So he proposed that there should be established a Board as well as a minimum price for wheat; but that the Board should only intervene to buy wheat when the price fell below the minimum and should sell its holdings as soon as possible and so long as the price exceeded the fixed minimum. The exporting houses would operate as usual.

During the hearings of the Committee some illuminating evidence about the transactions of Mr McFarland, the Government wheat agent in Winnipeg, was given under pressure from the Liberals. Apparently Mr McFarland, when he took over the holdings of the embarrassed wheat pools, started operations with 76,720,000 bushels of wheat, which as on August 31, 1931, stood at an average cost of 60½ cents per bushel. There were periods when paper profits of substantial dimensions could be shown, but after the summer of 1933 they became deficits. On May 31st last the Government's holdings of wheat and wheat futures were estimated at 228 million bushels, held at an average cost of 85.9 cents per bushel, which meant a total commitment of \$198 millions. On June 22, 1935, the state of the Government's wheat account was that the indebtedness to the banks was \$79,333,000, deposits against margins amounted to \$27,510,000, and stocks in hand were valued at \$40,202,000, leaving the net obligations to the banks at \$11,621,000. So Mr Findlay, the Treasurer of the wheat pool organisation, who gave the figures, stated that it would be necessary to sell all the Government's stock at 5 cents above the present market price, which is still "pegged," to avoid a loss.

The export movement of grain is very feeble. Only 782,550 bushels of wheat were exported in the week ending June 14th, compared with 3,858,973 in the parallel week of 1934. On June 14th visible stocks of Canadian wheat were placed at 199½ million bushels, compared with 196½ on the corresponding day of 1934.

The latest reports from the prairie country assert that the outlook for the grain crop is more auspicious than it has been for several years at this date. At present, figures ranging between 350 and 400 million bushels are being hazarded as an estimate of the prairie wheat crop.

THE NEW TRADE AND INDUSTRY COMMISSION

The Bill to establish a Federal Trade and Industry Commission which is supposed to implement the report of the Price Spreads Commission has now been introduced. All it amounts to is that the present Tariff Board of three members is to be given the task of exercising a general supervision over commerce and industry and to have the help of a Director of Prosecutions, who will be paid \$12,000 per annum for seeing that people guilty of infractions of the laws dealing with business practices, which are either already on the Statute books or about to be enacted, are properly punished. The most important clause in the Bill is Section 14, which ordains that if the Commission finds that "wasteful and demoralising" competition exists in any specific industry, and that agreements for mitigating such competition by and that agreements for production and prices need the control and regulation of production and prices need not necessarily be detrimental to the public interest, it may recommend the Cabinet to give its approval to such agreements; and that the Cabinet shall make regulations requiring the Commission to determine from time to time whether such agreements are producing an undue restraint of trade contrary to the public interest, in which event their cancellation would be ordered.

The Commission is also to be empowered to investigate and report upon all matters relating to commodity standards for the protection of consumers, and it is to have available the co-operation of the National Research Council of Canada for this purpose. It is also to exercise

a certain degree of supervision over corporation finance. It is authorised to review at the request of the Secretary of State, who issues all Federal charters for corporations, the capital structure of any corporation which is proposing to issue new securities to the Public and to recommend a veto upon them or changes in the plan of issue.

The Bennett Ministry has secured authority from Parliament to revalue the gold reserve, although it has intimated that it does not necessarily intend to exercise this immediately. It has also secured power to set up an exchange stabilisation fund, for the creation of which the profits from the revaluation of gold are to be applied, and to borrow up to \$750 millions for refunding purposes.

The new Liberal Government of Ontario is involved in a bitter feud with the investment houses of the Province. When no tenders were forthcoming for a recent issue of Provincial bonds, the Premier, Mr Hepburn, declared that a deliberate boycott had been organised, and threatened reprisals. He has managed to place the issue successfully.

The general business improvement visible in the last half of May was carried on into June, but there has lately been some setback owing to the inclement weather. The Statistical Bureau's general economic index for the week ending June 15th was only 97.8, compared with 102.3 for the previous week and 91.9 for the parallel week of 1934.

Foreign trade returns for May were reasonably satisfactory.

	1934	May	1935
Imports	\$ 52,886,861		\$ 54,547,747
Exports (domestic)	57,899,511		62,100,891

There was a welcome gain in May in exports of newsprint, which totalled 4,797,619 cwt., valued at \$8,224,031, compared with 4,141,416 cwt., valued at \$7,618,467, in May, 1934.

OTTAWA, June 28.

LETTERS TO THE EDITOR

OBSTACLES TO RECOVERY

TO THE EDITOR OF THE ECONOMIST

SIR,—With all due respect to the office which Mr D. M. Mason holds, I venture to point out the importance of the view which your original article under the above title put forward, viz., the necessity of an agreement as a condition precedent to the stabilisation of currencies.

Mr Mason feels the influence of Great Britain in monetary matters to be strong, so that "an initiative on the part of this country would lead to simultaneous action on the part of others," but he overlooks the very serious and far-reaching changes which have supervened in the operation of the monetary mechanism in the past fifteen years. Exactly the position which he upholds was maintained in the controversy which preceded England's return to gold in 1925, and the details of the operation of the gold standard in the subsequent years largely proved its falsity. Messrs Samuel Montagu and Company, in their Annual Bullion Letter for 1925, wrote: "The return by the United Kingdom to an effective gold standard was dictated by the hope that it would impart an atmosphere of confidence at home and abroad, and have a stabilising and favourable effect upon prices," and the same opinion, with even more emphasis on the direct influence of Great Britain, can be found in many other equally authoritative sources.

INVALUABLE GUIDE TO BETTER VALUE IN INSURANCE

1/- "The subject is treated in a masterly way. The Science of Insurance from the standpoint of the policy-holder could scarcely have been illustrated and explained with greater ability."—City Press. 1/-

J. WHITAKER & SONS, LTD., 12 WARWICK LANE, LONDON, E.C.4

Had conditions in the realm of finance been still as they were before the war, there is no doubt that these views might have proved themselves correct. But in point of fact the "post-war" world found itself saddled with factors which can be designated as "putely external" to the real mechanism of the gold standard, but which none the less exercised the highest influence on the *modus operandi* of that standard. This has been emphasised time and time again in recent publications: I instance the various Reports and Documents of the Gold Delegation of the Financial Committee of the League of Nations.

Anyone who has studied in detail the working of the monetary system during the years since the return to gold in 1925 cannot have any doubt of the necessity of definitely agreed action in the matter of stabilisation. The very process by which the various stabilisations were carried out in the years 1925 till 1928, with all the different levels, systems of operation, reserve standards, and so on, made the gold standard almost impossible of harmonious working over the world as a whole. Events in and since 1931 have probably increased the significance of the "external" factors and the weight of their influence on the operation of the stabilised monetary mechanism. To try, then, once again to build up a series of separately stabilised currency systems is to court the same failure as characterised the years 1925 till 1931.

In the world of to-day, as in the world of 1925, the only sound road to stabilisation of world currencies lies in co-ordinated action based on definite agreements, and not in independent and individual "simultaneous action" as Mr. Mason suggests.

Yours, etc.,

EDWARD F. L. BRECH, B.A., B.Sc. (Econ.).

TO THE EDITOR OF THE ECONOMIST

SIR,—In the leading article of your issue of June 29th, under the title of "Obstacles to Recovery," you characterise the influence of armaments as not only sinister (as most of us may agree) but also economically unsound. "Armament production may create employment, but it is employment which contributes nothing to the real wealth of the nation . . . it is activity which does nothing to raise the nation's standard of living."

Does not this statement require some qualification?

It is doubtless true, in the sense intended, of the direct effect of expenditure on armaments; but it seems to ignore the indirect effects, and it is not clear why the latter should

be assumed to be negligibly small. For example, the indirect economic effects of using money, now awaiting investment, in employing a number of men, who would otherwise remain idle, on making engines for *fighting* aeroplanes, are surely the same as the indirect effects of using the same money to employ the same men in making the same engines for *commercial* aeroplanes; in each case there will be the same stimulus to the trades producing the things on which the men spend their wages and the employers their profits—say, clothes, furniture and motor-cars; and the additional output of these trades—more clothes and more furniture and more motor-cars—is surely just as real wealth in the one case as in the other.

It may be that what the *Economist* denies is that a net increment of real wealth is created in either case if the expenditure is "artificially" initiated by the Government; but this issue has nothing to do with armaments as such. It is merely the well-known question of the efficacy of Government expenditure in improving trade; in this connection the utility of armaments would seem to be a red herring.

The primary object of rearmament is security; and few people, at least among those who are convinced—as you urge—that rearmament will not attain security, would care to bolster up the case for it by the argument that it helps trade recovery. But in fact, at a time when both capital and real resources are lying idle, the expenditure of *borrowed money*, whether by the Government or by private persons, and whether on armaments or on anything else, does add to real wealth indirectly, even if not also directly, by setting some of the idle capital and resources to work without impinging on resources already occupied; and the right answer to this argument is surely, not to deny the indirect economic effect of rearmament, but to point out that an equal expenditure of borrowed money on objects of direct use—such as housing or electrification—would add still more to our real wealth.

I am, etc.,

HUGH TOWNSEND.

21 Hillcroft Crescent,
Ealing, London, W.5.
July 8, 1935.

[It is only if expenditure on armaments, or public works, is "inflationary," and not financed by taxation, that they give an indirect stimulus to general economic activity. In so far as armaments are financed by taxation, the effect will be an actual fall in the standard of living. If either armaments or public works are financed by other means, they may be a stimulus to further activity by setting the ball rolling. But whether the movement is inflationary or not, the *direct* effect of e.g. building working-class houses will be a rise in the standard of living; while the *direct* effect of rearmament will not. Moreover in actual fact the expenditure of large sums on armaments in Germany, Italy and Central Europe has led to practically no increase in consumption—as our letters from Germany, Italy, and Austria this week clearly illustrate. Intensified agricultural protection is probably the reason for this.—ED., *Econ.*]

BOOKS AND PUBLICATIONS

LONDON'S LEISURE

THE final volume of "The New Survey of London Life and Labour,"* directed by Sir Hubert Llewellyn Smith, is a study of Londoners in their leisure hours, "using the word 'leisure' to cover all that part of life which is not occupied in working for a livelihood, in travelling to and from work, in eating or in sleeping." Unfortunately, however, a study of "the working of political machinery would have required a large extension of the scope of the Survey," and has therefore been excluded; a study of religious activities has been excluded for the same reason. Yet an account of leisure which excludes politics and religion must seem somewhat distorted; and this impression is emphasised by a lack of balance in the book itself. Thus three chapters in Part I on Amusements and Entertainments, Sports, Games and Hobbies, Holidays and Outings, take 47 pages; two chapters in Part II on Social Organisations for Adolescent Boys, and Social Organisations for Adolescent Girls, take 143 pages. The total membership of these clubs, whose activities are analysed in great detail, is some 120,000. The cinemas of London, on the other hand, with their repeated programmes, can entertain one quarter of the population every day, and do entertain one-third of the population every week. Presumably the space given to Part II is

accounted for by the educational value attributed by the authors of the Survey to the activities there described, and by the difficulty of applying any exact standards to the activities described in Part I.

Part III, on Indulgence and Delinquency, reaches a higher standard of analysis and observation than the preceding sections. Mr Nicholson's chapter on *Drink* is admirable. He analyses the amount, quality and distribution among various groups, classified by sex, age and social status, of the alcoholic liquor consumed in London. Where statistical methods fail, he is able by acquaintance and sharp observation to give a living and enlightening account of the drinking habits of Londoners. This chapter emphasises two conclusions. (1) Given the decrease in the strength of beer, consumption of beer per head in London fell, in "bulk," by about two-fifths in the last 20 years. (2) Nevertheless, average expenditure on drink, and the average proportion of family income it represents, has almost certainly increased in the same period.

Thus the instinct to escape from existing conditions of life, which is satisfied by drinking, has to a certain extent been baffled by the rise in the cost of liquor. But so strong an urge is not easily defeated; and we find, in the same period, an unmistakable increase in gambling, which has grown despite attempts at legal suppression and has created, for the working class, its own typical institution—the greyhound racing track.

The two chapters on drink and gambling show the strength of the urge to escape from the monotony of working-class conditions. The two following chapters, on sex delinquency and crime, analyse the decrease in prostitution; progress in dealing with sexual offences and diseases; the supply of prostitutes, particularly among the domestic servant class; the high proportion of mental deficiency among prostitutes and sexual offenders; the large increase in crime in the Metropolitan district; its distribution by sex and age groups; the proportion of recidivism in different groups of criminals; the connection between poverty and crime; and the adaptation and improvement of forms of punishment. Both chapters insist, in agreement with Dr. Cyril Burt, that the chief cause of crime and delinquency is lack of other interests and the emptiness, cultural and moral, of the environment which breeds criminals.

The conclusion strengthens the impression left by other sections of the book. The Survey emphasises the new opportunities for raising the level of London's recreations: the wireless, the cinema, increased popular education. It points out the increased opportunities of leisure; compared with 1890, a fully employed London worker has one hour more of leisure each day; 40 per cent. of aggregate family working-class income remains over after expenditure on necessities. Yet, despite the optimism of the Survey's authors, an unprejudiced reader will be struck by the sterility and insufficiency, by any cultural standard, of London's pleasures. He will not be surprised that they translate themselves into the tables of crime and delinquency given in this book. The book ends with twelve first-hand accounts of working-class life by working men and their wives. They are fascinating by their monotony and their drabness. Their authors call themselves happy, and one cannot argue that; but one may notice that their happiness springs almost entirely from the strength of family relationships. The rest of life is not a development and an enrichment of these relationships, but an insecure and exhausting affair from which they are a refuge.

In his excellent introduction, summarising the results of this volume and of the whole Survey, Sir Hubert Llewellyn Smith says: "Up to the present, the forces for good have on the whole been gaining. But it is an uphill fight, the issue is still undecided, and any relaxation of effort would spell disaster." But he continues: "Of all the manifold impressions left upon my mind by the Survey, the deepest and most abiding is not the gravity and multiplicity of the still unsolved problems of London Life and Labour, but the energy and vitality of the human response to each new need as it has arisen. And so far there is no sign that the sources of this vital energy are running dry." This is an expression of opinion by one so well fitted to judge that it is hard to disagree.

SHORTER NOTICES

"Public Ill Health." By C. E. McNally, Gollancz. 224 pages. 5s.

This book is a serious challenge to our health services. In the first place it presents an urgent plea for the raising of that standard of health which is taken as normal for the population. It accuses the Ministry of Health, as represented by the Annual Report of the C.M.O., Sir George Newman, of glossing over and even misconstruing the facts when it denies the prevalence of under-nourishment and a consequent tendency to ill health among large sections of the community, especially in distressed areas. The writer points out that if comparisons between infant mortality, the general physique of school children, the incidence of tuberculosis, maternal mortality, etc., are made between different income classes or between different geographical areas, instead of being confined to some different periods of time, not only does the wide one group at different periods of time, but it shows that variation leave no room for complacency, but it shows that the conditions found among the poorer sections are preventable.

The author next attacks the general policy of the Ministry. He points out that health depends not so much on medical care as on general living conditions: overcrowding, lack of food, wrong food, kind of occupation, etc. In this connection he rightly emphasises (as does the C.M.O. in his Report), the fundamental importance of nutrition, and gives interesting

summaries of various dietetic investigations. He also rather unfairly attacks the Ministry for taking no active steps to prevent the restriction of food supplies inherent in the present Government's policy of agricultural protection, and further accuses it of failing to ensure pure food supplies through fear of vested interests, or, in the case of milk, of the cost involved.

These are after all matters of Government policy, which do not come within the province of the Department. But Government policy and public opinion on such matters may be strongly influenced by the case put forward by the public health authorities. The author consequently asks for more scientific research into the state of public health, and makes the pertinent suggestion that in assessing the extent of malnutrition some use might surely be made of the money standard set up by the Ministry's own Committee. In general, his book, if not fair in every respect, is not to be disregarded.

"Tradesman's Entrance." By John Benn. (London) Philip Allan. 128 pages. Price 3s. 6d.

This brightly written book discusses the university man's reactions to a business career. The author's story of his own development—learning the accepted duty of a gentleman at Harrow, examining the "single-track" ambition of the American graduate, and his final recognition that a liberal education is not only a good thing in itself but also the best for business—is persuasively recorded. Then he turns to the trials and temptations of the commercial traveller, discusses the point of making money, is sceptical about the "heavy day at the office," questions the advantage of competition in all its phases, and talks agreeably about the use of leisure. Although of no great substance, the book has a pleasant essay flavour which may help to reconcile the hard-worked business man to his lot. It is certain that the writing of it has so served the author.

MONEY AND BANKING

AMERICAN BANKING REFORM

(BY A CORRESPONDENT)

THE present position of the American banking system is puzzling to many observers. The reserves of the member banks are at a record level, roughly twice as large as in 1929, and total deposits are well up to the 1929 level. But the volume of advances to industry and the size of the stream of expenditure, as revealed by the figures of cheques drawn, are both most obstinately low. With everything arranged for reflation, or indeed for inflation, nothing happens beyond a very gentle and agonisingly slow expansion. Something would appear to be wrong with the mechanism, and the succession of Banking Bills, of which one is passing through Congress at the moment, is attempting to remedy the defects.

Friends of this Bill praise it, and foes attack it, on the assumption that commercial banking of the traditional type has survived the post-war surfeit of capital and the stresses and strains of the post-1929 period. But since the assumption is becoming increasingly unsafe, the hopes and fears of both sides are likely to be falsified. Even before the great banking disaster of 1933 there had been a continuing change in short-term credit practices in the United States. "In the post-war period there had been a steady decline in commercial banking in the strictest sense of the word amongst not only National and State banks, but also amongst Trust companies. While the total volume of credit increased by nearly 50 per cent. from 1921 to 1929, short-term loans to commerce and industry showed practically no growth whatever. Likewise the bankers' share of financing agriculture declined rapidly during the decade."* This decline in commercial banking has been accelerated rather than retarded during the past two years.

One reason for the persistence of deflationary influences is to be found in the increasing frequency and severity of bank examinations. American banks have been accustomed to periodical inspection by examiners appointed under the National and State banking laws and also by the Federal Reserve Banks. But since the Banking Holiday of 1933 two more sets of examiners have been added: those of the Federal Deposit Insurance Corporation and, in some cases, those of the Reconstruction Finance Corporation. Moreover, the inspections have been directed towards tightening up the standards of banking assets, particularly in respect of liquidity, at a time when the policy of the Government has been towards expansion and a certain degree of accompanying laxity. An investigation into the availability of credit, carried out in the Chicago Federal Reserve District at the request of the Treasury itself, reported "that there exists a genuine unsatisfied demand for credit on the part of solvent borrowers, many of whom could make economically sound use of working capital." But the report further states that while the total of this demand is considerably smaller than is popularly supposed, "one of the most serious aspects of this unsatisfied demand is the pressure for liquidation of old working capital loans, even sound ones." This opinion is supported by reports from individual investigators. "The day your investigator called at this bank, the . . . examiner had left. The President was in a very disturbed state of mind as a consequence. He said that the examiner had marked the paper he had renewed several times as slow and required collection in part at least. 'He won't let us do a banking business.' He then proceeded to tell your investigator of several recent applications for loans that he had been considering, but 'this settles it'; he said 'We can't let them have the money.'"

In addition to the deflationary influence exerted by the bank inspectors, the N.R.A. codes have not been without effect. Both retailers and wholesalers have been financed in America to a very large extent by the use of trade credit, extended to wholesalers by jobbers and manufacturers, and to retailers by wholesalers and others from whom they buy. "Nearly all the complaints we have received," says the report, "concerning trade credits refer to certain provisions of the N.R.A. codes, which shorten credit terms and prohibit the allowance of discounts after the established discount period has passed." "The small business men find that it is the suppliers of their raw materials or their inventories who are their genuine bankers" and that "one consequence of the reluctance of banks to make working capital loans has been an expansion of the activities of finance companies which advance funds to business men . . . chiefly on the basis of pledging funds receivable."

In addition to these difficulties, the commercial banks have had to meet the competition, both direct and indirect, of Federal agencies in the form of the Farm Mortgage Corporation and the Home Owners Loan Corporation. The former lends money on typical commercial banking assets at 4 per cent. It is true that the rates charged by the banks in some rural areas are nominally not much more than 5 per cent. But for purposes of comparison this latter figure should be increased to $5\frac{1}{2}$ or 6 per cent. to allow for the American banking practice of requiring borrowers to keep on deposit during the currency of the loan a certain proportion of any advance. Moreover, the banks are hindered in reducing their rates by the constant insistence of the R.F.C. that they should increase their capital by issuing preferred shares, on which they have to pay 6 per cent.

Taking all these things together, it can be seen that the cumulative effects of the so-called "expansionist" policy of the United States have been to accelerate the decay of commercial banking. "There has continued to exist," said a Chicago banker, "a vicious contradiction of policy between the banking department and the administration proper." But the effect is to render abortive the hopes of those who expect reflation as a result of closer political control of the Federal Reserve System. Commercial banking as it has been known in the rest of the world is being increasingly divorced from the holding of deposits and the clearing of cheques, and as a result has escaped in part from the conflict of legislation in the United States. But a new system will be of slow growth, and the country is meanwhile correspondingly impoverished. The banks have become passive holders of Government securities, and it is in this connection that the real significance of the new Banking Bill is probably to be found. The Secretary of the Treasury takes great credit to himself that the total service charge on the debt of the Federal Government is now smaller than it was in 1933 in spite of the increased total of the debt. But his achievement in this regard is not to be compared with that of the British Treasury because it has been brought about only by a shortening of maturities. About five years ago the total of five-year notes outstanding was \$1,500 millions; to-day it is in excess of \$10,000 millions. Baby bonds, with relatively favourable encashment terms, are being offered to the public to yield $2\frac{3}{4}$ per cent. compounded, and this suggests some fear as to what the true American long-term rate is or may become if there is any substantial recovery. Consequently, control of open-market operations and of the reserve requirements of member banks has assumed a new importance in the eyes of the Administration. It is true that the Governor of the Federal Reserve Board himself introduced an amendment to the Banking Bill during the Senate Committee hearings, requiring the Board to exercise its powers to promote "conditions making for business stability and to mitigate by its

influence unstabilising fluctuations in the general level of production, trade, prices and employment, so far as may be possible within the scope of monetary action." Nevertheless, it is difficult to believe that any President will in the future be able to decline to use the great powers given to him over the personnel of the Board if it is represented to him that changes are necessary to enable the Treasury to refinance its debt in such a way as to prevent the "unstabilising" action of increasing taxation.

The Bill has been drastically altered in the sub-committee of the Senate; in particular, the President's power of appointment to the Board is very severely limited. Some of its provisions must be passed rapidly into law to prevent the chaos that would result from the unreplaced lapsing of expiring legislation, and if the Administration, through the pressure of time, has to accept the Bill as amended, the continued financing of the deficit by selling short-term securities to the banks will be much less directly under its control. If this method of financing should become impossible and the Treasury should be forced to compete in the market, the effect on interest rates might be considerable. The conflict between the Budgetary policy of the Government, the demand for recovery and the need for rebuilding a sound and liquid banking system is gradually becoming more insistent. Sooner or later it will have to be resolved, and the future of American banking will very largely turn upon whether considerations of politics or of banking are uppermost when that time comes.

FINANCIAL NOTES

The Silver Reaction.—Speculators in silver who relied upon American Government purchases to maintain the price have received a sad disappointment. By early May American purchases had driven the London price up to 35½d. an ounce and the New York price up to 76½ cents. Since then the price has been steadily sagging, until last week-end a critical point was reached. On Saturday, and again on subsequent days, the London market opened with a flood of selling orders and practically no buyers. To pre-empt a collapse in prices which might have had serious consequences, the unprecedented step had to be taken of postponing the fixing until someone in authority in New York or Washington could be fetched out of bed and told that now was the time to buy. On each occasion American official buying orders at once came forward and proved sufficient to prevent more than a moderate decline in price. Even so, in spite of a rally in the middle of the week, by July 10th the London price had fallen to 31½d. and the New York price to 68½ cents; and the decline has been particularly marked during the last few weeks. In reply to criticism, Mr Morgenthau has repeatedly asserted that the Administration has continued to buy silver, but that the cause of the weakness has been that during the last part of May and the whole of June, American imports of silver were chiefly made from Mexico; and once at least gold was shipped in exchange. At a rough estimate, 40 per cent. of the United States' imports during the past two months have come from Mexico, 35 per cent. from England, and the remaining 25 per cent. from Canada, South America and China. Mexico is not normally a seller in London, and so these American purchases gave no support to the London market or to speculators in the Far East. It is possible that the Administration feels strong enough to ignore the American silver interests to the extent of making its statutory purchases of silver as cheaply as it can, but during the past fortnight shipments from England have again increased. There is probably still a big bull position in being, and apart from this the price of silver is still high enough to cause considerable embarrassment to China and to all interests connected with that country. The reduction in the interim dividend of the Hong Kong and Shanghai Banking Corporation from £3 to £2 10s. per share has come only this week as a warning to that effect.

Italian Exchange Weakness.—The lira remains weak in Paris at a rate of Frs. 124.40 per lire 100, and there is further evidence of the difficulty the Italian authorities are experiencing in obtaining foreign exchange. We commented last week on the growth in the arrears due to British exporters under the Anglo-Italian exchange agreement, and another sign of weakness is to be found in the low prices current in London and New York for Italian sterling and dollar bonds. The 7 per cent. Kingdom of Italy 1941-51 dollar bonds are quoted in New York at 68, equivalent to a running yield of over 10 per cent. The sterling tranches of the Italian Credit Consortium Bonds, also bearing interest at 7 per cent., are quoted in London at 93-96 (nominal) for the issue redeemable in 1937 and at 86-89 for the 1947 issue. The corresponding dollar tranches are quoted in New York at 87-88 nominal and at 71. These prices are so low as to call for an explanation. At the New Year the Italian Government ordered Italian holders of bonds issued abroad to declare their holdings to the Bank of Italy, and the Bank has power to acquire these bonds compulsorily, paying for them in lire at the market price and at the day's rate of exchange. It looks as if the Bank has been exercising this power and then has been selling these bonds abroad for what they would fetch. The obvious inference is that the Italian authorities are being put to these shifts in order to supply themselves with foreign exchange. It is also questionable whether exchange leakage is not occurring through the under-valuation of invoices declared to the authorities in respect of exports, and corresponding over-valuation of declared import invoices, but naturally there is no definite confirmation of such suspicions.

Brazilian Exchange.—Further light is thrown upon the Brazilian exchange difficulties, referred to a week ago, by official statistics since received which show that the export surplus—virtually the sole source of foreign exchange—for the first four months of 1935 fell to only 91,898 contos of reis, against 385,350 contos in the same months of 1934—or, expressed in gold, only £1,716,330 (gold), against £4,058,435 (gold). Since February last, all export exchange has had to be sold in the "free" market to the authorised banks, 65 per cent. being left for the market and 35 per cent. being deliverable to the Bank of Brazil for Government requirements. Brazil's exports for the first four months of 1935 totalled £10,574,104 (gold), of which 35 per cent. would represent around £3,770,000 (gold), or, on a twelve monthly basis, say, £11,100,000 (gold). While the latter figure when converted into sterling should be sufficient to meet Brazil's official commitments in respect of the reduced bonded debt service and the commercial payments agreements, the disquieting factor is that for the first time since October 1930, a surplus of imports—on a milreis basis—was established in March amounting to 7,220 contos, followed by one of 16,412 contos in April. A continuation of this movement might mean an eventual situation in which Brazil would have to choose between reducing the proportion of exchange remittances either on official debt or on import account. While the further exchange regulations issued on June 27th apparently preserve the 35 per cent. quota for official payments, the position with regard to the 65 per cent. "free" exchange has reverted to that prior to May, 1934, cover for imports being once again subject to the prior authorisation of the Fiscalisation Department. The position becomes increasingly confused by reason of the lack of continuity of policy. The new regulations are anything but clear, exchange dealings are increasingly difficult and burdensome, and the tendency will be to restrict imports, while there is danger lest a further mass of frozen remittances may accumulate.

Danzig Exchange Restrictions.—Our Warsaw Correspondent writes that the exchange restrictions introduced by the Danzig Senate early in June caught Polish financial and commercial interests with about 60 million zlotys tied up in Danzig. The Lodz textile industry and the lumber

* Goldschmidt, "The Changing Structure of American Banking," pages 53-57.

industry appeared to be most involved. By introducing exchange restrictions, which are alleged to be in direct violation of the Polish-Danzig Convention of 1921, Danzig has virtually impounded foreign exchange which actually belongs to Poland, and on which the Polish balance of international payments to some extent depends. Moreover, since Danzig firms play, as intermediaries, an important part in Polish foreign trade, their difficulties affect not only the commercial reputation of Danzig but that of Poland as well. The exchange restrictions are therefore held to be prejudicial to Polish credit abroad. Poland is also concerned because she supplies Danzig with most of her primary requirements, and these must be paid for in zlotys. Our correspondent is fully justified in stressing the difficulties in which Poland is involved, but as we pointed out in the *Economist* of June 15th, the Polish Government have so far adopted a generous attitude, and have done their best unofficially to help Danzig in her troubles. The return of the Bank of Danzig for June 29th shows that during the preceding month, the Bank's gold stocks had fallen from 23.0 to 15.8 million gulden, while its holdings of *devisen* had risen from 1.6 to 7.9 million gulden. This transfer of approximately seven million gulden from gold to *devisen* must increase the previous fears that part of the Bank's gold stocks have been transferred to Berlin, and the Danzig authorities should realise that the only way to restore confidence is to issue a complete explanation. Meanwhile they are making considerable demands upon Polish forbearance.

The Money Market.—Discount rates have kept up well, for the Treasury bill tender rate for July 5th was 12s. 4.32d. per cent. against 12s. 1.53d. per cent. the week before. This week one or two banks were buying small quantities of August and September Treasury bills at $\frac{1}{2}$ per cent. Hot Treasury bills were offered at $\frac{1}{2}$ per cent., but few buyers were in evidence. There are signs of an increase in the supply of commercial bills. The declared market rate for three months' bank bills is $\frac{1}{2}$ per cent., but the rate is rather indefinite. Some banks are able to obtain bills from the provinces at $\frac{1}{4}$ per cent., while on the other hand competition in the market has at times driven the rate down to $\frac{1}{8}$ per cent. It is unusual for bank bills to be thus dealt in at less than the market rate for Treasury bills.

	June 20, 1935	June 27, 1935	July 4, 1935	July 11, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate :—				
Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Money remains very easy. The clearing banks have experienced some demand for loans every afternoon, but there is no real change in the position.

The Bank Return.—A small amount of the currency withdrawn at the end of the month has now returned from circulation, with the result that the Reserve has increased from £51.9 to £52.6 millions:—

	BANK OF ENGLAND				
	July 11, 1934	June 19, 1935	June 26, 1935	July 3, 1935	July 10, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—

Other deposits	36.2	37.0	38.8	38.0	36.4
Government securities.....	82.6	94.9	96.2	98.2	95.8
Discounts and advances	7.8	5.8	10.2	13.5	10.4
Other securities	11.0	14.1	12.4	12.5	12.6

Proportion 44.7% 37.3% 35.8% 32.8% 34.3%

In the banking department Government securities are reduced by £2.4 millions. The floating debt statement dated

July 6th showed that £4.3 millions of Ways and Means advances had been repaid to the Bank, which amply explains the reduction in Government securities. Although the half-year borrowings have now been completely repaid to the Bank, discounts and advances still remain at £10.4 millions, so that other borrowings must have taken place during the preceding three weeks. Bankers' deposits have been reduced by £1.9 millions during the past week.

The Foreign Exchanges.—The main event in London has been heavy offerings of spot dollars against official American purchases of silver. These lasted from Saturday to Wednesday, and on the first two days of this week are estimated at \$18 to \$20 millions. Somewhat to the surprise of the market this large amount was easily absorbed, but on Tuesday the spot rate depreciated to \$4.98 $\frac{1}{2}$, returning on Thursday to \$4.96 $\frac{1}{2}$. The cheapening of dollars stimulated general commercial buying of forward dollars for various dates as far ahead as the New Year, and the three months' rate has hardened from 1 $\frac{1}{2}$ to 1 $\frac{3}{4}$ cents premium. Gold *bloc* currencies have been very steady, with some slight demand for forwards towards the end of the week. Rates, both spot and forward, show very little change. The latest week's Customs returns record an export of £1.3 millions of gold to France, while our Amsterdam correspondent states that the Netherlands Bank is beginning to replenish its gold stocks. A further reduction in the Dutch Bank rate from 4 to 3 $\frac{1}{2}$ per cent. was made on June 27th. It is, however, strongly rumoured that the Dutch banks will very shortly receive strict orders only to take names for forward exchange dealings against *bona fide* commercial documents. The object is to check speculation, while still permitting exchange hedging against genuine commercial transactions. The French banks have also received a circular from the Banque de France asking them not to lend francs for speculative purposes—that is not to sell francs spot and buy them forward. It is not impossible that these measures against speculation were concerted at Basle during the B.I.S. Board meeting at the beginning of the week, but they may be inspired by fears of future speculation, particularly if the Bastille holiday on July 14th is attended by disturbances in Paris.

New York Money and Banking.—Money remains easy. During the week ended July 3rd New York member banks' loans to brokers rose from \$904 to \$952 millions. Other loans granted by member banks against securities declined from \$752 to \$748 millions. The Treasury has made an issue of \$500 millions of 1 $\frac{1}{2}$ per cent. notes maturing at the end of four years and five months. Although the rate of interest is believed to be unprecedentedly low for this class of security, the issue was over-subscribed three or four times. It represents the first new borrowing on a major scale since the end of last year, and the proceeds are to be used for financing the new work relief programme. Silver imports during the week ended June 28th amounted to \$3.2 millions, of which \$1.0 millions came from England and \$1.6 millions from Mexico. The recent fluctuations in the price of silver have given rise to some uncertainty. The silver interests continue to exert pressure upon the Government, but although President Roosevelt has let it be known that there is no change in policy, doubts are felt whether the Administration is ready to buy silver indefinitely at the present high prices. It is believed that the American Treasury bought heavily in London at the week-end and during the early part of this week, and the amount mentioned ranges from £4.0 to £5.5 millions, equivalent to between 20 and 30 million ounces. The British Customs returns, however, only report shipments to July 11th of £497,000. One difficulty is that such large quantities of gold have been imported during recent months, that it is impracticable for the Treasury to purchase sufficient silver to one ratio of gold to silver. As it is, this week's purchases have affected the exchanges, and on Tuesday sterling was quoted at \$4.97 $\frac{1}{2}$ and the French franc at 6.64 $\frac{1}{2}$ cents or one cent above parity.

THE STOCK EXCHANGE

IRON AND STEEL SHARES

IRON and steel shares, after more than a decade in the wilderness, have recently been in the forefront of the Stock Exchange advance. Since 1933 the market capitalisation of a representative range of steel securities has been doubled. Shares which a few years ago were regarded as mere option money are now the theme of enthusiastic market circulars. Companies which for years have been overlaid with bank debt are now coming to the market for funds on favourable terms. Rarely has an industry's investment rating changed so dramatically and completely. What are the reasons for the advance? Is the present demand for steel likely to be maintained? Above all, could the industry withstand any future decline without serious impairment of earning power?

British production of steel ingots and castings increased from 5,261,400 tons in 1932 to 7,024,000 tons in 1933 and 8,859,700 tons last year. So far this year production has run 6 $\frac{1}{2}$ per cent. above the 1934 level, and close to the 9,636,200 tons achieved in 1929, the peace-time "record." The output of finished goods, however, is still some 10 per cent. below the 1929 level, a substantial proportion of sheets and tinplates having been made, before the slump, from imported semi-finished steel. The difference is entirely accounted for by the loss of exports and the decline of shipbuilding. Consumption by the engineering and construction industries is a little higher than in 1929, despite the decline in machinery exports. In the first four months of this year some 84,800 tons of forgings and 753,400 tons of sections, girders, etc., were produced, compared with 1929 outputs of 243,300 tons and 2,157,400 tons respectively. The demand, however, for lighter goods—wire, strip for automatic machines, sheets for motor bodies, tinplate for containers, etc.—is probably as great as it has ever been.

So far as the industry's immediate prospect is concerned, the outlook is not unsatisfactory. Even to-day approximately one-quarter of the total production is exported. Under the agreements now being negotiated, Britain's share of the world market is to be stabilised at the 1934 level, which was the lowest for many years past. There may, however, be a gradual future improvement in world exports, which in 1934 were 43 per cent. below the 1929 level, though this is unlikely substantially to influence British output in the immediate future. In the home market, however, a slow advance in demand from the railways and shipyards is not improbable. Its pace would be immensely quickened if, on the one hand, the railway companies decided to replace wooden by steel carriages, and if, on the other, the "battleship holiday" were to end in a naval race. Demand for the lighter goods may well continue to increase. Engineering and construction, however, provide the key to the position from the investor's viewpoint. Between them they account for little short of one-half of the home steel consumption, and they are at the very centre of "recovery." Although they have attained the 1929 level, and more, the outlook for coming months remains good. Modern construction uses more steel than did building practice a decade ago. In the longer run, fluctuation in demand is inevitable. How far do conditions on the production side bear on the industry's ability to withstand any possible future tendency to lower prices and profits?

A very great deal of technical improvement undoubtedly has been lately undertaken. From the purely technical aspect, the industry is better equipped than at any time since the war. There is some evidence, however, that capacity is being increased without extensive scrapping of less efficient plants. Such a form of reorganisation will not itself tend to improve the ultimate situation if the industry continues to rely solely upon price and quota arrangements. The German experience showed how these may even accentuate any recession in demand. The Germans, moreover, in depression were able to "dump" exports in order to help to meet overhead costs—an alter-

native which is not open to the British industry. For the present, however, some strengthening of prices may well be indicated—the price of semi-finished steel has already risen under the tariff—which will find due reflection in increased profits. Arrangements with Continental producers to share the world market will certainly strengthen the export price structure, though whether reorganisation will assist in maintaining profits, if and when demand falls, remains to be seen.

For these reasons profits are likely to advance during 1935 at a greater rate than the increase of output. The nearer production approaches capacity, the cheaper it becomes; the wider, with fixed prices, is the profit margin. Our industrial profits table, on page 58, shows a rise of as much as 85.4 per cent. in the latest earnings of 52 steel and coal companies. A further increase may be secured, though it is unlikely to be of anything like the same dimensions. The whole, however, is unlikely to be distributed to shareholders. The fact that, for reasons not, perhaps, wholly within the industry's control, past depreciation and reserve allowances have not in all cases been generous, puts a premium on conservatism.

For the semi-speculative investor, the most attractive of contemporary companies may be, first, those which cater for the home market, and secondly, those which are manufacturers of pig iron and semi-finished steel. The latter have derived most benefit from the exclusion of imports and such increase in prices as has already occurred. The attached table shows the highest and lowest profits attained by a number of companies in the last six years. Those of the heavy steel producers, as might be expected, show much the wider range. Nearly all companies, however, are now making higher profits than in 1929. As a closer guide to the relative prosperity of different companies, we have set out figures of increased output in the region in which each company operates. Though these cannot be directly used as a yardstick for future profits, they are *a fortiori* more relevant for that purpose than the national output figures.

IRON AND STEEL PROFITS AND SHARES

* These high levels were achieved in the latest accounts. † Before depreciation and debenture interest. (a) South Wales pig iron. (b) National output of tinplates and sheets. (c) North-East acid steel. (d) North-East basic steel. (e) Staffordshire basic pig iron. (f) Cumberland, Lincolnshire and Sheffield steel. (g) Sheffield steel. (h) West Coast basic pig iron. (i) Derby, Leics, Notts, Northants foundry pig iron. (j) National tinplate output January to April, compared with the monthly rate of 1934. (k) Cum eight years' arrears. (l) Cum 4 $\frac{1}{2}$ years' arrears. (m) On the new capital.

For Guest, Keen and Nettlefolds no figure has been given, in view of the diversity of the company's interests. The market price of the shares appears to discount probabilities somewhat generously. As a "steady" share,

with a year ago. The collapse in bill rates which proved so serious an impediment to the profitable use of short money early in the year has been followed by a steady strengthening in recent months, although the average for the half-year has been abnormally low. The rising level of deposits, however, finds its main counterpart in the continued increase in investments, which have broken new high records in each month of the year. The total holdings of the ten clearing banks for May amounted to £619.9 millions, representing some 31.5 per cent. of total deposits. These factors may have assisted a slight advance in banking earnings during the half year, and it seems likely that the quality of the loan accounts has been maintained during the period without calling for special writing off. Despite their abnormal participation in the gilt-edged market, the banks can take care of any reasonable hardening of interest rates from inner reserves, if and when the movement sets in, but on any criterion of "good banking" an increased use of funds in advances would be welcomed, not least in the City. We set out the latest dividends in the following table:—

Name and Shares (fully paid unless stated)	1934		1935		Price July 4, 1934	Price (ex divi- dend) July 10, 1935	Present yield* (%)
	Int.	Final	Int.	Final

* Based on dividend for 1933.

Compared with a year ago, bank share prices are a little firmer, in sympathy with the further rise in fixed-interest securities. The equity appeal of bank shares, which is invariably overshadowed by considerations of stable dividends, remains as yet little affected by "recovery" considerations. We propose to discuss the banking experience of the half-year in a leading article when the remaining June figures have been published.

Perak River Hydro-Electric Scheme.—The scheme of reorganisation promised by the chairman at last year's meeting has been published this week. It deals drastically with an unenviable financial position, but appears to treat all classes equitably. No less than £1,633,116 is required for elimination of intangible assets and reduction of concession values, an amount which would absorb the entire preference and ordinary capital and a substantial amount of the 7 per cent. participating debentures. To avoid this, it is proposed, in the first place, to maintain the status of the 4 and 5 per cent. debenture stocks, whose service has been fully covered. The F.M.S. Government is to receive preference shares bearing not more than 6 per cent. per annum in repayment of advances totalling £850,000 and to forgo arrears of interest totalling £212,500, while the junior prior charge—the 7 per cent. stock and accumulated interest—will be replaced by approximately 90 per cent. of the equity. Finally, the F.M.S. Government is to receive £75,000 of ordinary shares, in substitution for its £500,000 preference share holding, and the ordinary capital is reduced to one-tenth of the existing issue of £431,240. The present revenue of the company, it is stated, is adequate to cover the new preference dividend, and economic recovery and the fruits of reorganisation offer hope of ordinary dividends without untoward delay. The 7 per cent. debenture holders are not likely to demur at the *ex gratia* provision for the preference and ordinary capital under the scheme, for the only preference shareholder—the F.M.S. Government—has already made considerable sacrifice, and relinquishes con-

trol of the company. The company is inevitably exposed to fluctuating fortunes in sympathy with the tin-mining industry, but it will enter happier times if and when more generous production conditions return.

Actuaries' Investment Index.—The upward movement in industrial share values which started at the beginning of April has at length been checked, though the recession, which has been mainly due to profit-taking by satisfied "bulls," has not yet attained significant dimensions. The figure for the 158 industrial ordinary stocks in the Actuaries' Index shows a decline this week to 77.7, as compared with 78.1 a week ago, and 76.7 a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.81, 3.78 and 3.80 respectively. It will be seen that, although the price index is a full point higher than it was a month ago, the average yield has scarcely changed, the rise in quotations having, in fact, merely kept pace with the increased dividends which have been declared. Movements in constituent groups are summarised in the following table:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (June 11)	Week Ago (July 2)	This Week (July 9)	Month Ago (June 11)	Week Ago (July 2)	This Week (July 9)
Higher This Week.						
Insurance Co.'s (24)	118.7	121.8	122.8	3.54	3.45	3.43
Investment Trusts (14)	53.1	55.8	56.1	3.75	3.63	3.63
Breweries & Distilleries (19)	131.1	133.4	138.8	4.04	3.98	3.97
Lower This Week.						
Cotton (6)	39.5	44.1	49.9	2.25	2.25	2.24
Iron and Steel (8)	58.6	61.4	60.2	3.37	3.26	3.31
Motors (5)	52.6	55.8	54.3	4.86	4.69	4.81
Electric supplies (8)	118.7	117.7	117.0	4.22	4.36	4.40

"Money" stocks, like those of the insurance companies and investment trusts, have continued to reflect the generally firm tendency of Gilt-edged securities. On the other hand, profit-taking has been evident in those groups which have shown greatest market activity in the last few weeks, particularly iron and steel, motor (including aircraft) and electric supply shares.

COMPANY NOTES

Cotton Spinning and Weaving Companies.—Investors who, having regard to the profits made on the spectacular revival of British steel, may be tempted to seek similar opportunities in cotton, will find some superficial evidence to encourage hope. Present efforts to reorganise the old cumbersome wage lists in the weaving section and to eliminate redundant spindles in the spinning section show a growing readiness to admit the necessity of reorganisation. The slight tendency towards recovery shown in the accompanying table of representative results suggests that, even though trade has been stabilised at a low "depression level" for the past two years, earning power is nevertheless reviving slightly. The analogy with the steel industry, however, pushed further, may be dangerous. The latter has long been organised in relatively large units and for years past has been ready to accept amalgamations. Outside the fine cotton spinning section and the finishing section, however, the cotton industry is divided into a multiplicity of small units, each still obstinately independent. Even an amalgamation of small units cannot rapidly produce the full advantages of large-scale organisation, as the history of the Lancashire Cotton Corporation has shown. Moreover, the lack of means that any given unit is incapable of ensuring large savings in the ultimate product which is to compete on the world's markets, so that the incentive to efficiency is reduced. Finally, the balance sheets of many cotton textile public companies suggest that a considerable proportion of liquid resources has been invested in stock and debtors, in

a scramble for business. Some of these resources might, given rationalisation, be liberated for physical re-equipment, but the industry, unfortunately, is not in a position to raise fresh capital at present. These considerations do not necessarily preclude ultimate revival, but they certainly suggest that the steel precedent cannot be applied to cotton at present. On the demand side, the depression period has brought, besides its usual difficulties, a great increase in the Japanese invasion of export markets. Equally important, it has seen the Indian and Chinese domestic cotton industries grow to supply a much larger share of our largest export outlets. A grave diminution of our export trade may therefore be permanent. The result is already apparent in price competition for the remaining business. In some cases, spinners and manufacturers have attempted to secure any orders which may have been available whether their

Aircraft Developments.—Reports appearing in the Press at the end of last week suggested that an important consolidation of interests in the aircraft industry might shortly be expected. A company is to be formed under the title "Hawker-Siddeley Aircraft Company, Limited," to acquire the Ordinary capital of Armstrong Siddeley Development Company, and one-half of the Ordinary capital of Hawker Aircraft, Limited. The latter concern is in a paramount position in the military aviation business and supplies, in all, nine types to the Air Ministry. Early in 1934 it acquired a controlling interest in the Gloster Aircraft Company, which has started delivery of "Gauntlet" Aircraft to the R.A.F. Considerable liaison already exists with two aircraft subsidiaries of the Armstrong Siddeley Development Company (namely Armstrong Whitworth Aircraft and A. V. Roe), which have received important sub-contracts for Hawker types. A further subsidiary, Armstrong Siddeley Motors, has been developing aero engines. Investors will tend to infer that the announcement may mark the beginning of a process of consolidation in the industry, in a similar manner, historically, to that experienced in the motor industry. Hitherto, the industry has displayed a degree of specialisation "by firm" in which a few key concerns producing engines supply a larger number of aircraft designing and assembling works. Already, however, the capacity of existing engine-producers whose types have been adequately tested is strained, and new assembling concerns may conceivably experience difficulty in obtaining prompt delivery, particularly for civil and export aircraft. Further details of the present amalgamation may presently become known, as a public issue is expected.

Distillers' Accounts.—So far as the accounts of this strongly entrenched holding company lend themselves to analysis, it would appear that the latest year has provided only a modest increase in profits. Reasons for a cautious estimation of the prospects of further recovery in the industry have, indeed, been apparent for some time, and the advance in profits, after unstated provision for contingencies, from £2,219,157 to £2,293,032, is not wholly surprising in

works were suited to them or not. The slight revival of profits indicated in our table may be more due to a cessation of stock losses (since raw cotton prices have become more stable) and to the introduction of forced economies, than to fundamental improvement in the position or prospect. The Egyptian spinning combines have, possibly, better "recovery" prospects than the rest of the industry, since they are already organised in large units and are more dependent on home and European markets than on the "coarse" markets of the Far East. European revival would substantially improve demand, and an elimination of redundant spindles would probably find the fine spinners sufficiently well organised to take advantage of the firmer structure. That objective, however, has still to be fully achieved.

Shell

its modesty. The trend of potable spirit consumption in this country has been steadily downward for a decade—a result of changing tastes and, as the trade argues, unalleviated fiscal disfavour. The re-opening of the American market has also provided little more than a moderately satisfactory expansion in exports. Of greater moment, however, is the apparent slowing down, during the last twelve months, of the rapid expansion of industrial consumption of alcohol. These factors argue a relative stability of earning power, which is disclosed in the published figures set out below:—

	Years to May 15th,		
	1933	1934	1935
Profits and dividend receipts after providing for taxation and contingencies	1,850,796	2,219,157	2,293,032

† After writing off £45,000 premium on debentures redeemed.

Little significant change is revealed in the balance sheet. Of a total of £28½ millions, interests in subsidiary concerns (gross) total £19½ millions, and cash and sundry investments approach the £7 millions mark. The position is one of evident strength, which could not be impaired and, indeed, would be greatly illuminated by a consolidated statement. With the traditional 20 per cent. dividend soundly restored, the £1 stock units offer little speculative opportunity, particularly as economic recovery guarantees no automatic improvement in consumption. At a current quotation of 93s. 6d. the units yield £4 4s. 3d. per cent. and are a stable industrial investment.

Union Cold Storage Accounts. The report of a company eleven-twelfths of whose capital consists of preference stock is not ordinarily an exciting market document. Particular importance, however, attaches to the report of Union Cold Storage for 1934, for it shows that, on the disclosed figures, the directors' fears of a fall in revenue have not, happily, been as yet borne out by events. It is true that the company may not have felt the full force of restrictions which have, in some centres, brought the meat business to a virtual standstill. Since the 1934 profit figure is but £50 below that of the previous year, however, preference stockholders will congratulate the directors on their ability to cope with a difficult situation with a success appreciably exceeding their own earlier appraisal of possibilities. The 10 per cent. dividend on the privately held ordinary stock is covered with a slightly higher margin than before:—

	Years to December 31		
	1932	1933	1934
Profit	985,999	962,172	962,124
Depreciation reserve	125,000	125,000	125,000
Fees and interest	34,469	17,112	14,619
Earned for dividends	826,530	820,060	822,505
Preference dividends	720,000	720,000	720,000
Ordinary stock—			
Earned	106,530	100,060	102,505
Paid	100,000	100,000	100,000
Earned (%)	10.9	10.0	10.3
Paid (%)	10	10	10
Carried forward	203,537	203,597	206,102

In addition to £125,000 transferred from revenue, depreciation reserve receives £410,091, consisting of surplus on sale of assets and an amount from provision for contingencies. As much as £587,104 has been utilised for writing down assets, leaving a balance on the account of £1,638,590. The balance sheet reflects the acquisition, at a cost of £1,466,381, of certain subsidiary companies abroad in July last. No accounts are yet available in respect of these concerns for the six months, however, but

they are anticipated to show an aggregate profit. The auditors' report is given subject to this matter, and also "subject to the value of the shareholdings in subsidiary companies," which now account for £8,057,488 out of total assets amounting to £17,560,463.

Cable and Telephone Developments.—In earlier days when Wall Street was interesting itself in leading British companies, an important electrical equipment concern took special steps to prevent voting control from passing into the hands of American investors. This week has provided news in the contrary sense, whereby control of an established British concern is to be restored to British interests. British Insulated Cables, which occupies a strong position in the cable and electrical engineering industry, has acquired from Associated Telephone and Telegraph of Delaware the £100,000 "A" deferred capital of International Automatic Telephone Company of London. Since these shares rank equal in total voting power to the £684,379 Ordinary shares in issue, B.I.C.—already interested in International Automatic—now has voting control. The new interests are of great importance, for they include automatic telephone equipment and, through a subsidiary, signal systems, traffic control equipment and the like. It is understood that the Telephone and General Trust, which has successfully financed telephone undertakings abroad, is linked with the transaction, which should in time prove a valuable step towards the vertical integration of the telephone industry, from the earliest stages of manufacture to finance and management.

Johannesburg Consolidated Dividend.—For the year to June 30, 1934, the Johannesburg Consolidated Investment Company distributed 4s. per share, of which 1s. was declared as bonus, having regard to the exceptional conditions which had prevailed during the period. Stock Exchange anticipation that a similar total would be disbursed for the latest year has been proved correct, writes our mining correspondent. The summary of the year's results, however, shows a set-back of some £205,580 in net profits, at £1,142,000. Earnings again include substantial receipts from share dealings. Reserve receives £350,000 this year, against £450,000, and now stands at £2,300,000. No further allocation is made to staff fund (against £100,000 a year ago). The balance of £170,640 is carried forward and slightly exceeds the amount brought in. On the dividend in the price of the shares, a satisfactory yield of 5½ per cent. is indicated.

Other Company Results.—This week's table of other company results, on page 103, includes sixty-three reports. Plantation companies swell the total, with a number of important reports. Among rubber companies, a profit of £105,421 and pays 4 per cent. Anglo-Java has earned £81,987 during its first year of reconstruction, without exception, the list of tea companies shows an un- happy comparison with the results of the previous year. Considerably reduced profits are reported by Singlo, Upper Assam, Empire of India and Ceylon, and Dima. Only Bogawantalawa, with the help of profits on investments, shows a favourable movement in available revenue. British industrial reports are rather few this week. In the brewery section, chief place is accorded to South African Breweries, whose profits, consistently with active conditions in the Union, have increased from £298,667 to £359,114. Booths' Distilleries reports an increase in profits from £60,959 to £65,696. W. and T. Avery, the Birmingham weighing machine manufacturers, have enjoyed increased business, and profits have advanced to £124,087. The first report of Aga Heat, covering fourteen months, closes a trading profit of £24,039. This result is rather disappointing in comparison with prospectus estimates. It may be inferred from the report that the first year's trading has not been without difficulties, for provision is made to

meet "the situation of the subsidiary company in Africa and the possibility of a protracted legal action in connection with Allied Ironfounders, Limited, in connection with an infringement of the company's patent rights." The accounts are accompanied by an offer, on behalf of Allied Ironfounders, to purchase Aga Heat shares at the rate of one Allied for five Aga shares. Although it squares with current market values, the offer must be considered in the light of prospective earnings of the two concerns, and the "gearing" element resulting from the Allied preference capital. Important investment trust reports, such as Melville Trust and Trustees Corporation, suggest that revenues are now showing more buoyancy in accord with the rising trend of profits. The directors of Courtaulds, in announcing an interim dividend of 2½ per cent. tax free, state that the distribution is made with the sole object of equalising payments, as already foreshadowed, and that conditions in America are not likely to permit of a higher total distribution for the current year.

Company Meetings of the Week.—On later pages of this issue will be found the report of the following companies:—National Bank of New Zealand, International Tea Company's Stores, Tanami Gold Mining, H. E. Proprietary, British Glues and Chemicals, Sedenak Rubber Estates, Powell Duffryn Steam Coal, Amalgamated Dental, and John Ismay and Sons. Sir Austin E. Harris, in the course of a comprehensive survey of economic conditions at the National Bank of New Zealand meeting, declared that the further recovery must come through an improvement in the prices of primary foodstuffs. He referred with satisfaction to the high standing of the Dominion's credit in the London market. Mr Frank Wilson declared that every concern in the International Tea Company's Stores group had contributed to profits, and referred to the developments which would gradually take shape in the recently acquired Mason group of stores. At the Powell Duffryn meeting, Mr E. L. Hann declared that economies had already resulted from the merger with Welsh Associated Collieries, but that full benefits would require time for their achievement. The chairman of Amalgamated Dental saw some improvement in the company's overseas business. The progress of the manifold products of the company was outlined at the H. E. Proprietary meeting, described the financial arrangements for the flotation of West Spaarwater. The chairman of Tanami Gold Mining reviewed the progress which had been achieved on the Rosterman and Government Reef properties. Proposals for the acquisition of other properties were approved at the Sedenak Rubber meeting, thus effecting a compact estate of 7,846 planted acres. At the meeting of John Ismay, the chairman discussed the reasons for the formation of the new parent company, Ismay Industries, and stated that turnover was increasing.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
JULY 23

ACCOUNT
JULY 25

THE markets, this week, were a little more than regressive and a little less than reactionary. Although industrial shares lost only a little ground, the profit-taking which occurred had a slightly experimental appearance, as if those concerned were trying the strength of the market before deciding whether to sell more or to buy again. By analogy with recent weeks, this irregularity in industrial ordinary shares should have synchronised with firmness in gilt-edged securities. Italo-Abyssinian war threats, however, held the market subdued at the beginning of the week, and it was not until Wednesday, when some large financial institutions gave support, that prices made perceptible way. "Undated" British Government stocks suffered most from the selling with which the week opened. After the

Carlisle House, NEWCASTLE-UPON-TYNE
Apply to above address for particulars of Sites for Works

first day, however, the tone perceptibly improved, and the mid-week demand found the market not too well provided with stock. India loans were steady, the new 3 per cent. issue (discussed on page 80), being regarded as a welcome and opportune symbol of the improved state of India's credit. The New Zealand conversion result was also deemed very satisfactory. Signs of renewed interest in Australian stocks were viewed as a portent of conversion operations to come. Among foreign bonds, Italian "B" were marked down still further at the beginning of the week. Brazilian bonds also lost heavily on debt service delays, though a partial recovery occurred in the middle of the week on the report that the paying agents had been put in funds for the mid-July payment on the 1914 bonds. European stocks were dull, and Far Eastern bonds were on offer throughout the week. Home rail "marginal" stocks made further progress, in one of the "independent cycles" with which the market has become familiar in recent months. The week's batch of traffic returns did not come fully up to market expectation, but every line showed an increase in receipts. In the foreign rail market, Argentine stocks were idle despite the particularly good showing made by the traffic figures on three of the four largest railways. The market, indeed, was a little puzzled over the conclusions to be drawn from the returns for the last few weeks.

The new account opened undramatically in the industrial share market, which for once refused to hear the voice of Mr Chamberlain. Speculative enterprise was damped by disturbed conditions in the silver and wheat markets. Steel shares were easier, and little interest was taken in coal shares. The decision of Amalgamated Anthracite to pay no preference dividend, though not unexpected, was unwelcome. A fair business was done at the outset in stocks with a Wall Street interest, but America, in mid-week, did not give the strong "lead" which was expected. Electrical equipment shares were again on the dull side, though price declines were few and fractional. Motor and aircraft shares continued gradually to give ground, the news of the Hawker-Siddeley arrangement (described on page 83) causing no enthusiasm. Textile shares made a mixed showing. Rayon shares, apart from American Celanese, were neglected, but wool textile shares were slightly better on balance, in sympathy with the trend of prices at the week's wool sales. Patons and Baldwins, in particular, were an active market. Store shares came intermittently on offer, and tobacco shares remained dull. Breweries opened with an appearance of moderate strength, but public interest fell off as the week progressed.

Idle conditions prevailed in the oil share market. Amsterdam gave a little support from time to time, but Paris was as uncertain as ever. The failure of Phoenix to pay even a small dividend was not unexpected, and a sharp marking down in the shares brought in a number of speculative buyers. Business in rubber shares remained on a small scale, though the undertone of the market was a little stronger in mid-week than in the opening days. So long as the commodity remains only slightly below or above sixpence, no significant change is looked for in the featureless tenor of the market. The revival in tea shares, however, which started so unexpectedly last week, continued to run its course. Buying was centred largely on Indian company shares, with which the market continued to be somewhat scantily supplied.

High temperatures, disturbed commodity markets, and "gun-carriage politics" did not provide a favourable setting for activity in the mining markets. Reports of an early, though modest, amelioration of South African taxation fell on stony ground in the Kafir market, where prices continued to sag in the absence of sustained demand either on London, Johannesburg or Paris account. Johannesburg Consolidated were sold on disappointment over the

dividend and preliminary profits statement (which is summarised on page 84). Despite the early closing of the Great Boulder lists, the market found itself with two opinions as to the opening price, and interest in Western Australian shares generally showed a perceptible cooling off. East African shares were again intermittently firm, but few price changes occurred among West Africans. A somewhat better tendency prevailed in the Rhodesian copper share market, though no perceptible expansion occurred in the volume of business. The rise in the cash price of tin to £231 5s. on Thursday caused no ripple of interest in the share market.

FOREIGN STOCK EXCHANGES

NEW YORK

This week's upward trend on Wall Street has resisted waves of profit taking in satisfactory fashion. Turnover has remained consistently well over the million shares mark. There has been little in the news to turn the market, but it seems evident that the resistance facing the Administration in such important matters as the taxation proposals, the Rayburn Bill and the Banking Bill has given the private investor a long-awaited cue to re-enter the market. The week's chief feature—a pronounced rise in steel output by some four points to 36.5 per cent. of capacity—encouraged the steel and implement groups. Industrials generally were firm, although they felt the effects of recurrent waves of profit-taking more considerably than other sections. Railroad stocks were active, but utilities tended to ease in mid-week dealings. On the bond market, Treasury issues were very firm. Second-grade rail bonds, however, tended lower, and among foreign issues, Italian bonds were weak. Efforts are being made to achieve the emasculated legislative programme of the Administration before the summer adjournment, which, if present indications are correct, may mark a further general improvement in economic conditions. If Wall Street can resist this week's troubles in the wheat and silver markets, and is not unduly disturbed about the rearguard action which is being fought by the Administration, the outlook may be better than for some time past.

* Two-Hour Session.

PARIS

The feature of the week's dealings has been provided by rentes, which after falling last week to the lowest point of the year, after the reduction in bank rate, staged a moderate recovery in early dealings. The tone, however, of political disturbance on Sunday and the market in any case would hesitate in view of the issue of the first Cabinet decrees two days later. The recovery encouraged industrials improved in early dealings, without, however, showing much spirit. Suez Canal shares were heavily sold on the adoption of a sterling basis for dues, but subsequently regained their losses. Mining shares were generally quiet.

(Continued on page 90)

BERLIN

THE share-market last week continued to advance without any considerable reaction. Trading was active, and direct dealings between banks increased. A specially firm market developed in chemicals and electrical cables, while steel issues, in particular Steel Trust and Mannesmann, were well supported. Electrical equipment shares continued active under the lead of Siemens and Halske, while Salzdetfurth was a feature in active potash dealings. The new week opened firm, with leading steel, potash and shipping issues in demand. Tuesday's close was somewhat weaker, but a firmer tone was evident on Wednesday. Reichsmark bonds changed little, municipal conversion loans being slightly weaker. In the certificated and converted dollar bonds list advances predominated. An official warning by the directors of the Berlin Stock Exchange refers to the "dangers of recent advances in share quotations" as a result of which the yields obtainable compare unfavourably with those on high-grade bonds.

	July 3, 1935	July 8, 1935	July 10, 1935	July 3, 1935	July 8, 1935	July 10, 1935

Norddeutscher Lloyd (New)	36.25	39.60	39.25			

AMSTERDAM

The Bourse has been quiet this week, and with little public interest quotations tended gently downward. An early demand for Philips Lamps gave a little life to the industrial market, and oil shares were also supported. A quieter tendency supervened in these groups, however, and commodity shares became listless.

	July 3, 1935	July 8, 1935	July 10, 1935	July 3, 1935	July 8, 1935	July 10, 1935

CAPITAL ISSUES

THE course of events in the market for new trustee securities suggests that it is now the turn of Dominion borrowers to effect conversion operations. This week's *chef d'œuvre*, the new India 3 per cent. loan, is discussed in a Note on page 80. The New Zealand conversion issue, offered half a point higher with slightly longer life, was most successful, and the stock opened at ½ premium, easing to ¼ later. It seems probable that Australia will have a further innings in the near future. The largest industrial issue of the week is a debenture conversion operation by Kelly's Directories, which saves 1 per cent. in interest. Although pre-depression earnings have not been restored, the stock is well covered by latest profits and net assets. Of the latter, it may be noted, nearly £3 millions represent investments and interests in subsidiary companies. Great Boulder Mining and Finance has been formed to consolidate gold mining interests in Western Australia, which, so far as results to date reveal, give promise of ultimate success. Chief interest, however, will undoubtedly attach to the company's interests in Yellowdine. The shares are necessarily speculative at this stage, but the company's management is fully qualified in Westralian mining. The mixed issue of Mann and Overton will more than provide for repayment of existing loans employed in the taxicab hire-purchase business of the company. The purchase consideration appears reasonable on latest profits, and is taken in ordinary shares. Profits in the last three years have shown very considerable increase, and prospects of further—though more moderate—expansion may be possible. A preference issue on behalf of Range Boilers is reasonably covered by latest earnings, which have shown strong recovery powers, but the small size of the issue suggests that the market for the shares may be narrow. This week's notices "for information only" are confined to "the trade," for they refer to issues of debenture stock by Eldridge Pope, the Dorset brewers, and the Palatine Bottling Company, the latter issue being made to finance extension of properties.

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

[illegible]

(a) Likert dividend. (b) Likert dividend. (c) Last two yearly dividends. (d) Paid in New Zealand Currency.

BY STOCK EXCHANGE INTRODUCTION

Palatine Bottling Company, Ltd.—Particulars of £400,000 4½ per cent. first mortgage debenture stock. Unconditionally guaranteed by Walker and Homfrays, Ltd. Proceeds for redemption of existing debentures and for new properties. Redeemable by June 30, 1965, at par, or on three months' notice at various premiums. Profits, after depreciation, etc., years ended October 31st: 1932, £22,195; 1933, £32,867; 1934, £42,769. Total assets October 31, 1934, £210,233.

Eldridge, Pope and Company, Ltd.—Particulars of £150,000 4 per cent. "A" debenture stock. Redeemable by July 1, 1985, at £102 per cent., or from 1945 on three months' notice. Secured by first charge on properties valued £225,000. Profits, after all interest and taxation, years to September 30th: 1932, £27,136; 1933, £29,376; 1934, £38,310. Stock purchased at par, less 1 per cent. commission.

OFFERS BY SEVERN VALLEY GAS CORPORATION

Dawley Gas Company. The Severn Valley Gas Corporation offers to acquire all the issued shares of the Dawley Gas Company. The offer is to exchange these shares, at the option of each shareholder, either for cash or for shares of the Severn Valley Corporation. The terms are as follows: Each share of £12 nominal value of the Dawley Gas Company to be exchanged for (a) £13 in cash or (b) 11 ordinary Severn Valley shares of £1, together with 12s. 6d. in cash. The 11 ordinary shares will be credited as fully paid.

Whitchurch Salop Gas. Whitchurch Salop Gas states that the Severn Valley Gas Corporation offers to acquire all the issued shares of this company. The offer is to make an optional exchange either in cash or in Severn Valley shares on the following basis: For each share of £5 nominal value of Whitchurch Salop (a) £8 in cash, or (b) 7½ ordinary shares of £1, credited as fully paid, of Severn Valley Gas.

BONUS ISSUES

W. and T. Avery, Ltd.—An extraordinary general meeting will be held at the Grand Hotel, Colmore Row, Birmingham, on July 23, 1935, at 12.30 o'clock, to consider that £100,000, part of general reserve, be transferred to a pensions fund, and £142,363, part of general reserve, be capitalised by distribution to holders of issued ordinary shares registered on July 23, 1935, one new ordinary share £1, credited as fully paid-up, for every five ordinary shares held on that date.

CONVERSIONS AND REPAYMENTS

Kelly's Directories, Ltd.—Issue of £1,500,000 4 per cent. first debenture stock at £104 per cent. Holders of existing 5 per cent. stock may convert into equal nominal amount of new stock, plus cash adjustment. Established 1837 and owns printing and publishing interests. Profits, after depreciation, years to March 31st: 1933, £266,338; 1934, £243,509; 1935, £282,997. Net assets, £3,466,204. Secured by first charge and redeemable by December 18, 1975, at £105 per cent., or to December 1, 1942, at £108 per cent. on three months' notice. List closed 9.5 a.m., July 10th. Substantially oversubscribed.

Edmundsons Electricity Corporation, Ltd.—An extraordinary general meeting will be held at Thames House, Millbank, S.W.1, on July 29th, at noon, to adopt new Articles which will accord with the provisions of the Companies Act, 1929, and with the present structure of the company's share capital. The new Articles will confer powers on the company, should the board consider it expedient, to make arrangements with their shareholders into 6 per cent. preference shares including power to issue additional 6 per cent. preference shares to them by way of bonus.

Malacca Rubber Plantations.—The company intends to redeem its 6 per cent. first mortgage debenture stock on October 12, 1935, at 110 per cent. and accrued interest.

Malayan Rubber Loan and Agency Corporation, Ltd.—It is proposed to reduce the share capital to a figure more in accord with the present value of the assets by writing off a sum of 1s. from each issued 2s. share and to re-arrange the capital by consolidating each two of the reduced 1s. shares into one share of 2s. fully paid.

The Garrard Engineering and Manufacturing Company, Ltd.—At class meetings followed by an extraordinary general meeting of the shareholders, the resolutions dividing each £1 preferred ordinary share into two shares of 10s. was carried unanimously.

Van Ryn Gold Mines Estate, Ltd.—An extraordinary general meeting is called for July 29th with a view to sanctioning the reduction in the capital of the company from £500,000 to £250,000 by the repayment of 10s. per share in cash. The reduced capital will then consist of 500,000 shares of 10s. each.

Sociedad Anonima Gila (Hidro-Eléctrica de Tucuman).—The Royal Exchange Assurance are prepared to receive offers of 5 per cent. first mortgage debentures for purchase.

Manchester Guardian and Evening News, Ltd.—This company is offering to holders of its 6 per cent. first mortgage debentures the right to convert their holdings into 4 per cent. consolidated debenture stock. Holders electing to convert will receive a cash bonus of £5 per cent., payable July 31st. The 4 per cent. stock will be redeemable at 105 per cent. on January 31, 1950.

Associated London Properties, Ltd.—At the annual general meeting held July 9th, the chairman, Mr. W. Henderson-Cleland, M.C., said that with reference to the 6½ per cent. mortgage debenture stock, it had been raised when the price of money was dear and they were entitled to give notice of repayment on January 1, 1936. At the present moment negotiations were in progress to obtain a considerable reduction in the rate of interest and if for any reason it was not possible to arrange satisfactory terms, it was the board's intention to pay off the debenture as early as possible commencing on January 1, 1936.

OFFERS ABROAD

United States Treasury Notes.—The United States Treasury has announced the offer of notes to the value of \$500,000,000 (£100,000,000 at current rates), maturing in 4 years 5 months and paying interest at the rate of 1½ per cent. Issue oversubscribed three or four times.

FORTHCOMING ISSUES

Gold Coast Selection Trust, Ltd.—This company has acquired a considerable share interest in the Amalgamated Banket Areas, Ltd. To provide the necessary funds for this and for further financing of operations on their own properties, it is proposed to increase the capital from £500,000 to £750,000. Subject to approval at meeting on July 16th at Winchester House, London, at noon, it is proposed to offer the additional 5s. shares to existing shareholders at a price of 15s. in ratio of one new for each two held.

Hawker-Siddeley Aircraft Company.—This company proposes to acquire the whole issued ordinary share capital of Armstrong Siddeley Development and 50 per cent. of the (Continued on page 91)

CALLS DUE JULY 15, 1935, TO JULY 20, 1935

The grand total of calls falling due in July, 1935, is £14,880,189, which compares with £38,114,125 which fell due in July, 1934. The following calls fall due from July 15, 1935, to July 20, 1935, inclusive:—

† Free of income tax.

REPUBLIC OF EL SALVADOR 6 PER CENT. STERLING BONDS, SERIES "B."—The Council of Foreign Bondholders are informed that the Government of El Salvador has failed to remit to New York the sums necessary for the payments due on July 1st last. The Council and the American Committee have made representations to the Salvadoran Government and it is understood that negotiations will shortly be resumed.

PROVINCIAL BANK OF IRELAND, LTD.—The directors have declared a dividend at the rate of 12½ per cent. per annum, less income tax for the half year to 30th ult., payable on August 1, 1935.

WILLIAMS DEACON'S BANK, LTD.—The directors of Williams Deacon's Bank, Ltd., have declared an interim dividend for the half-year ended June 30th at the rate of 12½ per cent. per annum, less income tax, upon the "A" shares and upon the "B" shares.

THE GREAT NORTHERN TELEGRAPH COMPANY'S HOLDING COMPANY (LIMITED) OF DENMARK.—The board propose to pay for the seventh financial year ending June 30, 1935, a total dividend of 23½ per cent., or Danish kroner 12.50, per share of Kr. 54, to set aside Kr. 500,000 for taxes and to carry forward Kr. 5,357.47 to year 1935-36. The dividend will be payable in London at the rate of exchange ruling on the day on which coupons are presented.

THIRD BRITISH FIXED TRUST (Distribution of 5d. per sub-unit).—The Municipal and General Securities Company announces the third distribution by the Third British Fixed Trust of 5d. per sub-unit, tax free, payable August 15th on presentation of coupon No. 3 at the city office of the trustee, Lloyds Bank, Ltd., 72 Lombard Street, E.C.3, in respect of dividends for the half-year ended July 6th. An earned balance of .06775d. per sub-unit is carried forward.

ISMAY INDUSTRIES, LTD.—The directors of Ismay Industries, Ltd., have resolved to pay a special interim dividend of 4 per cent. actual on the ordinary shares numbered 1/1,269,000, principally to recompense the ordinary shareholders of John Ismay and Sons, Ltd., who have converted their shares. It was further resolved that the dividend be payable on July 24th and the books of the company be closed from 2 p.m. July 19th until July 24th inclusive.

AMALGAMATED ANTHRACITE COLLIERIES.—The directors announce that they have considered the payment of the dividend on the 7 per cent. cumulative preference shares due August 1st next, and have come to the conclusion that the trading results for the first six months of the year do not warrant such payment. During this period several of the collieries have been idle due to lessened demand occasioned by the mild winter and to difficult labour conditions. When the trading results for the full year are available the board will reconsider the matter.

HONG KONG AND SHANGHAI BANKING CORPORATION.—The London managers have received a telegram from the head office in Hong Kong informing them that an interim dividend of £2 10s. per share, subject to deduction of income tax, has been declared for the half-year ended June 30, 1935. The dividend will be payable on August 22nd next. For the corresponding period of last year the dividend was £3 per share, the rate paid for many years.

LAMPSON AND HOLT, LTD.—Regarding the contemplated second distribution. The Receiver, as announced, is applying to the Court for leave to make a second distribution at the rate of 15 per cent., but the 15 per cent. will be calculated by reference to the amount of stock now outstanding. When the Receiver was appointed in August, 1930, the outstanding stock amounted to £2,843,912. In 1934 a first distribution of 50 per cent. was made (partly in specie and partly in cash) and in consequence the outstanding stock was reduced to £1,471,956. The amount proposed to be distributed by the Receiver is £220,793, viz., 15 per cent. on the stock now outstanding of £1,471,956 (but 7½ per cent. on the stock outstanding at the date of the Receiver's appointment).

JOHANNESBURG CONSOLIDATED INVESTMENT CO.—The directors have declared a dividend of 3s. and a bonus of 1s. per share, in British currency, both less United Kingdom income tax, for the year ended June 30, 1935, payable to all shareholders registered on the company's books on July 31, 1935. The profit for the year, after providing for all ascertained and estimated depreciation, amounts to, approximately, £1,142,000. As a substantial amount arising from share dealings is again included in the profit, the directors have decided to transfer the sum of £350,000 to the reserve fund. This will raise the fund to £2,400,000, and leave, approximately, £171,000 to carry forward. The transfer books of the company will be closed from August 1 to 10, 1935, both days inclusive. The dividend and bonus will be payable on and after September 19, 1935.

W. BARRATT AND CO.—W. Barratt and Company, Ltd., the footwear manufacturers, recommend a final ordinary dividend of 6 per cent. This raises the year's total from 9 per cent. to 10 per cent.

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED

IMPROVED TRADING CONDITIONS

SIR AUSTIN HARRIS'S INTERESTING REVIEW

The sixty-third ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 9th instant, at 17, Moorgate, London, Sir Austin E. Harris, K.B.E. (the chairman) presiding.

Mr A. O. Norwood (secretary and London manager) having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said: We are able to show an improvement in net profit of £7,000. Gross profits are £20,000 better, but Dominion income-tax, under the heading of expenses, has absorbed the whole of this improvement. Income tax is still a very serious burden on the banks in New Zealand, but we are not without hope that before long the method of assessment will be placed on a more equitable and less onerous footing.

This year the sum required to meet the cost of exchange on profits brought into the accounts in New Zealand currency is £30,000, as against £40,000 last year.

Pension and gratuity funds receive the usual grant of £14,000, and we are not this year making any allocation to premises, as we feel that at £629,000 they are conservatively valued, and we have no extensive building schemes in view.

We propose to pay a final dividend in sterling at the rate of 4 per cent. per annum, free of income tax, and the carry-forward is £115,400, as against £106,400 last year.

GENERAL BANKING POSITION

With regard to the general banking position in the Dominion, you will find comparative figures for the trading banks and the savings banks in the statistical summary, and I will here only refer briefly to the average deposits and advances of the trading banks for the March quarter, which are the best indication.

Deposits (excluding Government) were unchanged at £61,100,000, while advances, at £43,077,000, as compared with £41,574,000, show an increase of £1,503,000. With regard to deposits, however, it should be noted that the interest-bearing deposits showed a comparative decrease of £2,300,000, while free deposits showed an increase of a similar amount.

Last year I stated that, owing to the heavy surplus of banking resources and the impossibility of finding a profitable outlet for them, the deposit rates had been reduced shortly before our annual meeting, and in November last a further reduction of ½ per cent. all round was made, so that the rates are now:—Three months, 1½ per cent.; six months, 1½ per cent.; 12 months, 2½ per cent.; and 24 months, 2½ per cent. The minimum advance rate was reduced by ½ per cent. to 4½ per cent. on December 1st last.

The Reserve Bank of New Zealand has nearly completed its first year, and I think I may say that the change has been effected with the minimum of disturbance to all concerned, and that we, in common with the other banks, have given our hearty co-operation with a view to facilitating the new development.

The Governor, at the first annual meeting of the Reserve Bank, held recently in Wellington, indicated that the bank would pursue a steady course, and would not embark on any rash experiments which would have a prejudicial and unsettling effect upon the credit of the Dominion. He also made it clear that in the absence of any change in conditions, of which he saw no indication, the bank would aim at maintaining the rates of exchange at their present level.

TRADE CONDITIONS

The more settled feeling with regard to exchange is reflected in the balance of trade figures. The excess of exports this year is £9,903,000, as against last year's excess of £15,926,000. Importers, relieved from exchange anxiety, were evidently encouraged to buy, and latest figures show that this tendency is persisting.

Exports were disappointing towards the end of the year, especially as regards wool and butter prices. The average price per bale received for wool was £12 12s. 9d., as against £14 5s. 11d. last year, and the quantity shipped was 621,070 bales, as compared with 811,719.

The average price received for butter was 8.7d. a pound, as compared with 9.1d. a year ago, and the quantity was about 4,000 tons less. The quantity of cheese exported was slightly less,

but the value was maintained at 5.1d. a pound. I am glad to say that prices for wool and, to a lesser extent, butter have since improved, and this is an encouraging factor.

With regard to meat, lamb, mutton and beef showed an improvement in both quantity and value, the average price of lamb advancing from 5.5d. to 6.7d. a pound, and that of mutton from 3d. to 3.9d. a pound. There is, of course, a certain amount of anxiety in this market as to the final outcome of the discussions now taking place in London, and it is to be hoped that some satisfactory agreement will be reached.

You may remember that last year I referred to the interesting and successful experimental shipments of chilled beef from the Dominion to this country, indicating that chilled beef can be carried as well from New Zealand as from the Argentine. I went on to say that this should open up further possibilities of trade in this direction, and now that the Dominions—I include Australia—have demonstrated that chilled beef can be sent over in good condition, it seems only reasonable to hope that they may receive a greater proportion of the total beef imports to this country, of which at present 75 per cent. are foreign and only 25 per cent. from the British Empire.

NATIONAL FINANCE

The Minister of Finance was able at March 31st last to show a Budget surplus of £1,626,000, as opposed to the deficit of £709,000 last year. This is a very satisfactory result, in spite of the fact that some of this surplus has been obtained from the profitable realisation of part of the gold taken from the banks.

That New Zealand credit stands very high in London is shown by the success of the issue of £8,000,000 three per cent. stock which will be used to repay the five per cent. stock maturing in October next. It is pleasing to see that the New Zealand Government has been able to borrow here on terms almost as good as those obtained by our own Government.

I am glad to say that the figures of unemployment show a steady improvement. In March, 1934, the number of men wholly or partly a charge on the Unemployment Board was 62,114; this year the corresponding figure was 50,345. The revenue of the Board for the year to March, 1935, was £4,623,000 and the expenditure £3,913,000.

The past year has again been a very difficult one for bankers, and we have been hard put to it to find profitable employment for our funds.

SIGNS OF RETURNING CONFIDENCE

The signs of returning confidence to which I referred at our last meeting became more apparent during the year, and I am pleased to be able to tell you that trade conditions within the Dominion evince a somewhat more healthy tone, so that we are encouraged to hope that we have seen the worst. However, the conditions are still far from normal, and we are not yet out of the wood.

Any further substantial improvement would seem to be largely dependent on a corresponding improvement in overseas prices for New Zealand's primary produce.

As I have already pointed out, wool prices show an encouraging upward tendency, but prices for dairy produce, although somewhat better, leave plenty of scope for further appreciation. The meat problem has yet to be solved. It is not for me to deal with world problems of stabilisation, tariffs and exchange, which are still as acute as ever. It must, however, be a source of great satisfaction to all of us that Great Britain seems to be emerging from her troubles more rapidly than other countries, and any benefits accruing should in due course be reflected in our Dominion trade.

A balanced Budget, with the possibility of the continuance for some time of satisfactory revenue conditions, encourages us to hope for some relief in the direction of the present taxation.

Our own efforts, as in the past, will be directed towards giving all the assistance and encouragement we can to our customers, and as conditions tend to improve we shall hope to see a greater demand for accommodation.

The bank is in a strong and healthy condition and we shall be in a position to take full advantage of any further improvement which may manifest itself.

The report and accounts were unanimously adopted.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED

YEAR'S RECORD PROFITS

MR GUY COLLIER'S REVIEW

The fortieth annual general meeting of the International Tea Company's Stores, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London, Mr Guy Collier (chairman and joint managing director) presiding.

Mr Frank Wilson (director and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said that the profit of £886,591 was a record in the history of the company. It was true that since the meeting of last year they had acquired a controlling holding in the business of George J. Mason, Limited, but although that deal was concluded in December, a dividend based only on the profits earned during four months was included in the International balance sheet, and the balance of the year's profit earned by the Mason Company had been utilised to write down the purchase price of the ordinary shares acquired.

SATISFACTORY TRADING

The figures in the balance sheet were made up by thoroughly satisfactory trading on the part of the International Company and all its associated companies. Every concern had contributed its share towards the general prosperity, and no company had shown a loss. This result had been achieved in a year of very severe competition, and they had had no very advantageous markets to help them. It had been made by the close personal supervision of all the executives concerned to the most minute detail of management and the rigid control of expenditure, but, above all, he believed it had been achieved by the loyal and unswerving support of the millions of customers who used the company's stores week by week and month by month all the year round. He believed that they were less subject to the vicissitudes of the casual shopper than any other food company trading throughout the United Kingdom.

To the profit of £886,591 we added £106,965 brought forward; and we depreciate fixtures and fittings by £80,000 and place £100,000 to the reserve account. The directors recommend a final dividend of 18 per cent. on the ordinary shares, making 30 per cent. for the year, the ordinary shares issued during the year receiving the final dividend only. A provision of £50,000 is made for income tax, and the balance carried forward is £108,845. The reserve account stands at £1,437,034 and the dividend equalisation reserve is £200,000. The item of freehold properties has now reached £1,841,028, and the amount invested in I.T.S. Properties Development Company, Limited (which belongs to the International) has reached £248,549. The total value of property you own is therefore £2,089,578. I do not think it possible to over-emphasise the important freehold shops to a company like ours, especially as competition to secure commanding positions in all important towns is becoming more and more apparent.

GEORGE J. MASON ACQUISITION

With regard to the acquisition of George J. Mason, Limited, he stated at the extraordinary general meeting in January, that the board was convinced that the acquisition was a most desirable one, and, as a result of six months' close co-operation with their Birmingham friends, the directors were convinced that that conclusion was abundantly justified. He wished to make it clear that apart from the dividend received, no very substantial benefit had yet accrued to their company as a result of the fusion, because the George J. Mason Company had contracts which had to be honoured, trade agreements that had to be observed, and to be honoured, but little by little, in cordial stocks of goods that had to be sold, they were introducing agreement with their Birmingham friends, they were introducing lines of their own manufacture into the Mason group of branches, and the board was confident that the prognostications made at and the time of the fusion would be confirmed in every detail, and that the great volume of business that would ultimately be transacted would be of material help to the profits of both balance sheets.

Mr Colin Cooper (vice-chairman and joint managing director) said that the steadiness of their business was the result of a policy laid down several years ago based on quality and service and to the development, in addition to their cash customer trade, of a family trade which to-day formed the major part of their business.

The report was unanimously adopted.

TANAMI GOLD MINING SYNDICATE, LIMITED

INTERESTING UNDERGROUND DEVELOPMENTS

The third annual general meeting of Tanami Gold Mining Syndicate, Limited, was held, on the 9th instant, at the offices, 20 Copthall, London Wall, London.

Captain A. H. Moreing, the chairman of the company, who presided, said:—Last year, owing to my absence in Africa, you were addressed by Mr Scovell, who gave you a survey of the work that had been done at the Rosterman mine up to that time, and it is pleasing to know that the work done since has more than confirmed the opinions that were held as to the value of this property.

On December 11, 1934, we decided to exercise our option on the property and to form a company to equip and work the mine. The issue (Rosterman Gold Mines, Limited) was a great success, being largely oversubscribed, and the lists were closed in five minutes. This successful flotation by us of our first venture was naturally most gratifying and has completely transformed the company's prospects.

It has been my good fortune to visit East Africa no less than three times since December last, visits that were made possible by the facilities afforded by air travel.

No doubt you will like me to give you an eye witness's impression of our various interests and my views upon the possibilities of East Africa as a gold mining region.

I will begin with the Rosterman mine. The property is known to contain three reefs which have been proved for considerable lengths on the surface and which we knew at that time gave every promise of continuing in depth.

The main shaft has been sunk to a depth of 275 feet as a three-compartment hauling shaft and levels have been started at depths of 180 feet and 260 feet. On the Horst Reef a length of 760 feet has been driven at a depth on the incline of 270 feet, but trenching on the surface has proved the reef for a further 500 feet beyond the present limits of the drives. The Horst Reef at this depth has fully borne out our hopes, and I am satisfied from my own observations that it is a strong, well-defined ore body, which will live in depth.

Owing to shaft sinking no driving on the Ross Reef has been possible, but a most interesting discovery has been made which greatly affects the prospects of the mine. At a point some 900 feet west of the main shaft a short adit has been driven, from the end of which a winze has been sunk on a reef which has given good values over a width of 40 inches. This reef is undoubtedly the Ross Reef and the effect of this discovery is to add 650 feet to the length previously known, and to make the known length 1,180 feet instead of the 530 feet given in the report embodied in the prospectus. Our belief that other reefs would be found has recently received most interesting confirmation. At 240 feet in the main shaft a reef fracture has been met which appears to bear no relation to the Horst or Ross reefs.

There is one feature in connection with the mine which is unusual in its early days, and that is that we are already actually producing gold. Up to the middle of June 911 tons of reef material from the opencast workings of the three reefs was treated for a return of 1,360 ounces of fine gold. It is estimated that 450 ounces of gold remains in the tailings, which will be retreated in the permanent mill. This represents a head value of the ore treated to date of close on two ounces to the ton. Altogether the Rosterman mine is a concern of which we, as its sponsors, may be proud.

Now I will turn to the Government Reef. This is situated in what is known as the No. 2 area and is about 50 miles from Kakamega.

In the early stages work was confined to trenching along the strike to ascertain the length of the three reefs known to exist and to diamond drilling at selected points to determine its behaviour in depth. The results attending this exploratory work justified a more ambitious programme, and when I was on the property in March a programme was laid out which consists of sinking two shafts some 500 feet apart to a vertical depth of 125 feet, and of crosscutting and driving along the reef in both directions from the bottom of both shafts. The necessary plant to enable this to be done expeditiously has been installed and the work is progressing most satisfactorily.

With regard to East Africa in general, I believe that what I may term the backbone of Africa will prove to be a most important gold mining region and that our company will play a prominent part in its development. We are only beginning to grasp the possibilities presented by this region and to appreciate it at its true value.

The report and accounts were unanimously adopted.

H.E. PROPRIETARY, LIMITED**RECORD PROFITS****WEST SPAARWATER RIGHTS**

The ordinary general meeting of the H.E. Proprietary, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, Mr F. H. Hamilton (chairman of the company) presiding.

The secretary (Mr R. Q. Cruttwell) read the notice convening the meeting and the report of the auditors.

The Chairman said that the results for the year reflected the uniformly favourable progress of the producing mining companies in which the company was interested, and the continuous activity in the mining markets during the year under review. The capital of the company remained unchanged at £300,000. Out of the net profits for the year of £156,666 an interim dividend had been paid in July last of 10 per cent. and the directors recommended the payment of a final dividend of 15 per cent., making 25 per cent. for the year ended December 31st last. A sum of £50,000 had been transferred to reserve account, and the balance to be carried forward to the current year's accounts was £59,281. In respect of the profits earned during the present year, the directors had declared an interim dividend of 10 per cent. Since the present company was formed in December, 1931, the value of the assets had greatly improved and their market value was considerably in excess of balance-sheet figures.

WEST SPAARWATER, LIMITED

They had 100 per cent. of the shareholders of the South African H.E. Proprietary, Limited. One of the properties owned by that company was the Farb Klippoortje, near the Sub-Nigel. The mineral rights of this farm had recently been absorbed by "West Spaarwater, Limited," which had obtained a Government lease upon a great and compact area of over 6,300 claims. The South African H.E. Proprietary were to receive £150,000 for its rights, which would be applied to subscribing for 600,000 shares in West Spaarwater, Limited. A preliminary working capital of £750,000 had been guaranteed by important South African houses. Shareholders in the H.E. Proprietary would have the right to subscribe at par for one West Spaarwater share in respect of every H.E. Proprietary share held, and in respect of every five shares allotted, they would receive option certificates entitling them to call for two shares at 7s. 6d. for two years and a further two shares at 10s. for three years. If any conclusion could be drawn from the liberal character of the terms and the numerous recent over-subscriptions of similar issues of Far East Rand properties, it would seem reasonable to think that these rights would be of considerable value, and the shares of West Spaarwater should establish a substantial premium.

THE LUIPAARDS VLEI ESTATE AND GOLD MINING COMPANY, LIMITED

Their holdings in Luipaards Vlei Estate and Gold Mining Company, Limited, consisted of shares and convertible notes, and they had every reason to regard the future of this company with the greatest possible confidence. The Luipaards Vlei Company had paid 50 per cent. dividend for the last financial year.

CANADA AND AUSTRALIA

Their Canadian interests were centred in the Anglo-Huronian, Limited, a company with large liquid resources amounting to nearly \$5,000,000 and interests in mining ventures which represented great possibilities of appreciation.

The Wiluna Gold Company in Western Australia had paid 2½ per cent. dividend for last year, and recent developments were particularly encouraging. The H.E. Company had a large holding in Gold Fields Australian Development Company, Limited, which owned a considerable area of ground adjoining Wiluna to the north. Gold production would begin next year, and the results of exploration so far obtained justified the expectation that this area would ultimately rank as an important producer.

The Gold Fields Australian Development Company also owned a 20 per cent. interest in the Yellowdine Mine, where it was claimed that the lodes had now been shown to extend over nearly 3,000 ft. and had so far been proved to a depth of 100 ft. with an average width of 17 ft. and an average value of 1 oz. 15 dwts.

PROSPECTS

General world conditions still presented enough possibilities of trouble to discourage prophecy or long views, but the portion of the current financial year that had already elapsed had resulted very satisfactorily; their main assets were in excellent shape, and the prospects of the near future were favourable.

The report and accounts were unanimously adopted.

BRITISH GLUES AND CHEMICALS, LIMITED**AN INCREASED PROFIT**

The fifteenth ordinary general meeting of British Glues and Chemicals, Limited, was held, on the 11th instant, at the Connaught Rooms, London.

Mr T. Walton, F.C.A. (the Chairman), in the course of his speech, said:—Apart from disclosing an increased profit, the accounts will, I am sure, be pleasing to you in that they give very full information as to the position of the company and its subsidiaries as a whole, and that they incorporate for easy reference and comparison the corresponding figures of the previous year.

The profit and loss account reveals a profit of £71,470, compared with £45,726 in the previous year, and again there is £5,000 surplus income tax reserve brought to credit. During the year realisation of investments has given a surplus of £11,044, which, together with £13,715 transferred from contingencies reserve account, being £5,615 similar surplus realised in an earlier year and £8,100 which two or three years ago was set aside out of profits for that purpose, has been written off fixed assets; and, of course, in the accounts before you full provision for depreciation has been charged.

Referring to the consolidated balance sheet, I am able to assure you that all our working factories are maintained in a high state of efficiency, and that it is the considered opinion of the board that our fixed assets are fully worth the figure at which they stand in our books; and it is satisfactory to note that, viewing parent and subsidiaries as a whole, our liquid assets total £461,000, whereas the whole of our liabilities, including provision for the dividend shortly to be paid, aggregate only £128,000.

THE COMPANY'S SPECIALITIES

And now as to reasons for our increased profit. Trade generally in this country has tended to improve, and you know as well as I how interdependent one trade is upon another; our grease production and sales increased, and of glues in their various forms we have produced and sold greater quantities than in the previous year, though in both cases prices obtainable have averaged rather less. Our speciality glues, such as "Cascade" glue flour for the dry distemper trade, make progress; gradually more glue is being sold in forms suitable for the convenience of the actual user, e.g. in liquid form "Croid," and in the form of beads and powders, "Cascade" and "Kristals." Incidentally, to me it insisted upon supply of their requirements in such forms. Our and other cattle feeding stuffs have been in good demand. We are successfully consolidating our soap interests in the face of severe competition: and demand for our "Fleetwing" soap products and laundry specialities is encouraging.

To summarise, we have, by increased production and sales and by lower costs, improved our profits even in face of lower average selling prices, and we are naturally pleased that we have been able to pay or provide two years' preference dividends. We are keenly alive to the necessity for investigation of every possibility of profitable development in our industry, and we are well with manufacturers desirous of obtaining speciality glues or other of our products with special properties; and it is opportune to remind you that shareholders can be helpful by buying their own company's products.

We have an excellent team, and I look to the future hopefully in that the new year has started better than did the one just closed; meantime, I am convinced that our policy of conserving the company's resources, which is in the immediate best interests of the preference shareholders, is in the ultimate best interests of our ordinary shareholders.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

SEDENAK RUBBER ESTATES, LIMITED**AMALGAMATION APPROVED**

An extraordinary general meeting of Sedenak Rubber Estates, Limited, was held, on the 10th instant, at Winchester House, London, to approve the purchase of the Pontian (Malay) Rubber Company, Limited, and the Glencoe estate of Siam-Malay Rubber Company, Limited, and to increase the capital of the company to £350,000 by the creation of 150,000 new ordinary shares of £1.

Mr Philip C. Turnbull, O.B.E. (the chairman), said that the directors felt that the proposed amalgamation was a very beneficial one for all parties. Adjoining the boundary of Sedenak was a new and very fine estate which had been planted by a local company before the rubber industry experienced the full effects of the world depression, and at a time when it was never dreamed the price of rubber could go down below 2d. per lb. The originally subscribed capital of that company had now been used and it had to decide whether to raise fresh capital or join in with its larger neighbour—Sedenak—in the scheme now under consideration, and the board were very pleased that the decision had been taken to throw in their lot with them.

By taking shares in Sedenak for their estate they would share in whatever prosperity came to the rubber industry. Sedenak, on the other hand, acquired a young and vigorous new estate whose trees were just getting into the bearing stage. The principal advantage of the proposal was that it gave the current and improving yields of Pontian to add to those of the existing Sedenak estate during the time that Glencoe was maturing.

When the amalgamation of the three companies had been effected, they would have a compact estate of 7,846 acres of planted rubber, out of which 5,250 acres were in full bearing, whilst the remainder would reach the bearing stage at varying periods up to the year 1940. Out of the total planted area 2,578 acres were bud-grafted. The issued capital of the Sedenak Company would, after completion of the scheme, be £315,722, and the total cash and Government securities approximately £35,000.

The resolutions were carried unanimously.

An extraordinary general meeting of Pontian (Malay) Rubber Company, Limited, was subsequently held, when the sale of the company's undertaking, property and assets to the Sedenak Rubber Estates, Limited, was unanimously approved.

POWELL DUFFRYN STEAM COAL COMPANY, LIMITED**SATISFACTORY RESULTS**

The annual general meeting of the Powell Duffryn Steam Coal Company, Limited, was held, on the 11th instant, at Southern House, Cannon Street, London.

In dealing with the profit and loss account, which disclosed a trading profit of approximately £450,000, the Chairman, Mr E. L. Hann, said he thought they could be justifiably satisfied with the result. He was confirmed in his belief in the ultimate benefits of the merger with Welsh Associated Collieries, Limited. Already economies had been made, but shareholders must not expect full benefits to be achieved immediately.

In dealing with the position of coke and by-products, the chairman referred to the wild and completely unfounded statements made by certain miners' leaders, as reported in the Press, to the effect that colliery companies made profits in their coke-oven by-products plants at the expense of the colliery part of the undertaking, and thus at the expense of the miners. There was not a shadow of truth in this. Powell Duffryn Steam, though primarily a coal-producing concern, had spent a very large sum in its coke and by-products undertaking, and had thus created markets for its coal that it would otherwise not have had. Employment had thus been given to thousands more men and more regular employment had been created. The colliery side had been credited with better prices for the company's coal than would otherwise have been obtained and so far from being detrimental to the interests of the miners, by-products had contributed materially to the miners' welfare even during periods when coke and by-products were in themselves unprofitable.

In referring to difficulties of trading in the past year, the chairman said that since South Wales was primarily an exporting district, it was particularly affected by the economic restrictions imposed by foreign countries.

In spite of the difficulties with which the company was faced, the chairman had no doubt that these would be solved as difficulties as great or even greater had been solved in the past, and he was full of confidence as to the company's future prospects.

The report was unanimously adopted.

JOHN ISMAY AND SONS, LIMITED**IMPORTANT DEVELOPMENTS**

The second ordinary general meeting of John Ismay and Sons, Limited, was held, on the 9th instant, at Southern House, Cannon Street, E.C.

Mr John Ismay, chairman and managing director, said that it would be seen that they had increased their profit from just over £20,000 to rather more than £33,000, and he would like to point out that in paying the dividend recommended they would really only divide among the ordinary shareholders about two-thirds of the available profit.

Quite recently they became a subsidiary to a new company called Ismay Industries, Limited. They found that their lamp business was steadily increasing and that it was necessary to manufacture quite a lot of the component parts. That looked like becoming a major business and could not very well be handled as a branch of John Ismay and Sons, Limited. In fact, the whole structure of their company looked like becoming rather involved. They therefore decided to form the new company and gave the shareholders the opportunity to transfer their shares on the same terms as those which the directors and their friends had done. Ismay Industries, Limited, held about 97 per cent. of the ordinary capital of John Ismay and Sons, Limited.

So far as John Ismay and Sons, Limited, was concerned, it was still going ahead. Lamps and mantles were the two chief interests. Their sales of lamps for the first three months of the current year were more than double what they were in the corresponding period of last year. He was also pleased to say that mantles were now being marketed on a more remunerative level than they had been for two or three years past. There had been an increase in prices. They also had a lot of other lines, but they were of minor importance when compared with the lamp business. Their possibilities, however, were considerable.

He would like to point out that while they were paying a final dividend of 17½ per cent., making 27½ per cent. for the year, they had made an issue on bonus terms which had given the shareholders a considerable capital appreciation. It was very difficult to prophesy, but he could not see any reason why the profits should not go on increasing. Their turnover was going up.

The report and accounts were unanimously adopted.

AMALGAMATED DENTAL COMPANY, LIMITED**STEADY PROGRESS**

The thirtieth annual general meeting of the Amalgamated Dental Company, Limited, was held, on the 11th instant, at the Holborn Restaurant, London.

Mr E. Russell Polden (the chairman) said that international trade channels were no less restricted than had been the case a year ago and one might not derive any encouragement that conditions were likely early to improve to an extent which would facilitate international trading operations. As to the conduct of their overseas business and of their interests in concerns in other countries, they did not enjoy that progress and expansion which more normal conditions would assure, but the general position showed improvement when compared with that existing a year ago.

They might regard the present time as one of steady progress and development.

Many speakers at recent dental professional meetings had referred to the need for organised national dental services, and he had no doubt that those views would in due course receive the attention of legislators.

He had referred in the past to the company's policy in regard to production and their insistence upon the finest quality obtainable in all departments of the business. It was their constant aim to extend and improve research facilities, and the confidence shown in the demand for the company's products by the dental profession of the world affirmed their view in that respect.

In the production of dental instruments in particular, the development of highly specialised manufacture and the employment of the finest grades of British steels, each particularly suited to its purpose, placed them in the position to command an ever-increasing world market in such commodities. The nature of the demand was such that they were in course of extending their British factories with a view to still more effective supply. The mark "Ash-England" to be found on their steel manufactures was synonymous with the finest British steel products available for the use of the dental profession.

The report and accounts were unanimously adopted and a balance dividend of 4 per cent., making 8 per cent. for the year on the cumulative preferred ordinary stock, was declared.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 7, 1935, amounted to £13,006,000, against ordinary expenditure of £23,885,500. After allowing for a decrease in Exchequer Balances of £113,276, the operations for the week, as shown below, increased the gross National Debt by £11,000,000 to approximately £8,121 million.*

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on May 8, 1935. Export selling rate 80 bolivianos per £ on March 25.
Colombia.*	Sight rate, 188½ pesos per 100 United States dollars on July 3, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on June 14th, 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on June 12, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York is at present maintained at 3.91½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

Messrs Samuel Montagu and Company write on July 10, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £192,716,841 on the 3rd instant as compared with £192,716,341 on the previous Wednesday. About £1,875,000 bar gold has been dealt with at the fixing during the week, the principal buyers again being Switzerland and Holland. The recent heavy American purchases of silver have no doubt influenced the dollars-sterling rate, and in consequence the prices of gold and silver can be said to have moved almost in sympathy one with the other. Temporarily, at any rate, the dollar has seemed to wear a faintly bimetallic complexion.

Quotations during the week:—

July 4	Per fine ounce	Equivalent value
" 5	140s. 11d.	12s. 0.69d.
" 6	140s. 11d.	12s. 0.69d.
" 8	141s. 0d.	12s. 0.60d.
" 9	140s. 9d.	12s. 0.86d.
" 10	140s. 7d.	12s. 1.03d.
Average	140s. 11d.	12s. 0.69d.

The s.s. "Chitral," which sailed from Bombay on the 6th instant, is reported to carry gold to the value of about £247,000 consigned to London.

SILVER MARKET

The movements in prices during the past week hardly reflect the exceedingly large liquidation which has been so important a feature. That they do not do so is due to heavy absorption by America, which has translated what must otherwise have been an extremely large fall into a gradual and orderly decline. Nervousness has been induced in the market by a somewhat protracted period of dullness, and sagging prices. Little was needed to induce general selling on an almost unprecedented scale. On Saturday and the two subsequent working days, sellers were persistent, whilst buyers, other than the American Government, were conspicuous by their absence. In these circumstances prices declined to 30½d. quoted yesterday for both deliveries, but at that orders and fresh buying orders received that afternoon, found little silver on offer so that the market closed buyers well over the rate. This movement has gone further to-day when prices at 31½d. for 1½d. for the respective deliveries.

The temporary re-establishment of even prices for both deliveries was of course to be attributed to the fact that, whilst the selling orders were for varied delivery dates, the demand, by America, was only for cash delivery.

To-day's rise seems at the moment to have been overdone, and some reaction is, therefore, not unlikely. The market is, however, and the healthier for the heavy liquidation and should react well to a general renewal of confidence.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.	Cash Two Months' delivery	Bar silver per oz. std.	Cash Two Months' delivery
July 4	31d.	July 3	69½
" 5	31d.	" 4	69½
" 6	30½d.	" 5	69½
" 8	30½d.	" 6	69½
" 9	30½d.	" 8	68½
" 10	31½d.	" 9	68½
Average	30.750d.	30.885d.	

The highest rate of exchange on New York recorded during the period from the 3rd to the 10th instant was 4.98½ and the lowest 4.93½.

Stocks in Shanghai on the 6th instant consisted of about 279,000,000 dollars and 44,600,000 ounces in bar silver as compared with 278,000,000 dollars and 44,600,000 ounces in bar silver on the 29th ultimo.

LONDON TRANSPORT

Week ending July 6, 1935. *Takings compared with corresponding period of last year + 8,400
 * For an explanation of the manner in which the figures are made up, see the Economist, March 17, 1934, page 610.

Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted on the basis of the best information available.

(b) Not classified separately. Included in miscellaneous figure of 7.8 per cent.

NOTE.—The figure in the last column of the above table for the rate of dividend in the second quarter of 1934 does not correspond with the figure for that quarter in the historical table in the text on page 58 as the number of companies reporting in 1934 was 642 as against 694 in 1935.

REPORTS AND NOTICES

Mr F. Norton Lones has been unanimously appointed a managing director, and Mr Derwent Davey Cole, who is assistant secretary, has been elected a director of Mitchells and Butlers, Ltd., brewers, Birmingham.

Mr Vincent Jobson, chairman and managing director of Qualcast, Ltd., chairman of Aga Heat, Ltd., and director of Peacock's Stores, has joined the board of Simms Motor Units, Ltd., and Major S. A. Currin has joined the board as sales director.

The directors of Anglo-Scottish Amalgamated Corporation, Ltd., announce that Mr Henry M. Andrews has resigned from the board.

BANKS

BROWN BROTHERS HARRIMAN AND COMPANY.—The statement of June 29, 1935, shows deposits of \$39,375,597, an increase of 77 per cent. over deposits on June 30, 1934, when the firm's statement was standing at \$33,343,109 three months ago. Total assets of the bank increased to \$64,703,609, compared with \$57,240,344 three months ago.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

months ago, and \$48,057,014 a year ago. Surplus on June 29th, was \$8,675,455, against \$8,550,786 on March 30th. The June 29th statement shows cash at \$10,814,982, and holdings of U.S. Government securities at \$9,759,191, as compared with \$7,949,919 cash and \$6,365,000 government securities on March 30, 1935.

BANK OF AMERICA.—On June 29, 1935, total deposits stood at \$993,651,000, an increase of \$130,947,000, and total resources at \$1,113,896,000. Cash increased by \$34,187,000, investments in U.S. Government bonds and other securities increased by \$74,135,000, and the surplus has been increased \$2,500,000 by a transfer from undivided profits.

During the first six months of 1935 Bank of America N.T. & S.A., earned \$8,033,717. Of this amount \$2,500,000 was paid in dividends on capital stock, \$3,406,291 was added to reserves, and \$2,127,426 on undivided profits. After the addition of this amount to undivided profits and the transfer of \$2,500,000 to surplus, the undivided profits account stood at \$16,791,766 on June 29, 1935.

BANKERS' TRUST COMPANY.—The balance sheet June 29, 1935, shows cash item stands at \$173,290,513; exchanges for clearing house at \$29,088,829; and United States Government securities at \$445,114,393, making total for these three items of \$647,493,735. Demand loans, at \$43,933,822, compare with \$58,816,405 on June 30, 1934; time loans and bills discounted are \$171,683,809, against \$170,164,946; and holdings of State and municipal bonds are \$36,134,105, against \$32,760,524. Total assets are shown at \$961,296,549, compared with \$927,752,644 a year ago. On the liabilities side capital, at \$25,000,000, and surplus fund, at \$50,000,000, remain unchanged; but undivided profits have been increased from \$10,008,980 to \$13,316,119 in the twelve months' period. Total deposits, at \$848,303,731, show a substantial increase from the corresponding figure of \$808,860,223, notwithstanding a contraction from \$145,023,603 to \$44,490,700 in the amount of United States Government deposits. Provision for the usual dividend at the rate of 30 per cent. payable to stockholders on July 1, 1935, amounts to \$1,875,000, i.e. same as last year.

BANK OF THE MANHATTAN COMPANY, NEW YORK.—The total assets of this bank on June 30, 1935, stood at \$483,626,406.23, as compared with \$502,828,052.41 on June 30, 1934. Of these assets \$38,357,182.19 are deposited to secure public and trust deposits and for other purposes required by law. Cash has risen from \$85,137,306.90 to \$112,989,651.89, but holdings of United States Government securities have fallen from \$107,637,178.91 to \$91,939,100.92. Loans and discounts at \$102,542,520.02 compares with \$103,373,922.77. The deposits of the bank now amount to \$407,462,870.32. The capital of the bank stands at \$20,000,000.00, and surplus is also \$20,000,000.00. Undivided profits have fallen from \$6,931,681.01 to \$5,431,681.01. Reserves for contingencies has been increased from \$1,776,104.24 to \$3,655,987.05. Dividend payable, July 1, 1935, is lower at \$750,000.00, as against \$1,000,000.00. The London representative of the bank is Mr L. S. Chanler, Jr., Vice-President, 4 Adams Court, E.C.2.

RUBBER

GORDON (MALAYA) RUBBER.—Profit for 1934 £12,049. Deduct preference dividends payable in respect of period to December 31, 1934, £2,424, and add £11,544 brought in. Ordinary dividend is 4 per cent., against 2 per cent. for 1933, less tax, absorbing £10,280; carried forward, £10,890. Rubber produced, 1,745,726 lbs., against 1,713,161 lbs. The meeting will be held at Great Eastern Hotel, London, E.C., on July 15th at noon.

MISCELLANEOUS

SALFORD CORPORATION 3½ PER CENT. STOCK, 1953-63.—Williams Deacon's Bank Limited give notice that in order to prepare the interest warrants due September 1, 1935, on Salford Corporation 3½ per cent. stock, 1953-63, the books will be closed from August 1st to 31st inclusive.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of June, 1935, as compared with the corresponding month of 1934, show an increase of 8 per cent. of units sold.

SALFORD CORPORATION 3½ PER CENT. STOCK, 1954-64.—Williams Deacon's Bank Limited give notice that in order to prepare the interest warrants due September 1, 1935, on Salford Corporation 3½ per cent. stock, 1954-64, the books will be closed from August 1st to 31st inclusive.

POSTAL TELEGRAPH BANKRUPTCY (BONDHOLDERS COMMITTEE).—Following the filing by the Postal Telegraph and Cable Corporation of its petition under Section 77B of the American Bankruptcy Act, a Bondholders Protective Committee has been formed to protect the interests of holders of the corporation's 25-year collateral trust 5 per cent. gold bonds due July 1, 1953, and the 25-year collateral trust 5 per cent. debenture stock due July 1, 1953. The chairman of the committee is Mr Robert Lehman, chairman of Lehman Bros. Bondholders should write to Paul E. Manheim, 1 William Street, New York.

WORKING PROFIT, TRANSVAAL.—Total estimated working profit of the gold mines of the Transvaal for the month of May, 1935, amounted to:—Witwatersrand, £2,762,951; Outside Districts, £12,017; total, £2,774,968. The estimated working profit in April, 1935, was Witwatersrand, £2,672,368; Outside Districts, £14,868; total, £2,687,236.

ARGENTINE NAVIGATION COMPANY MIHANOVICH, LTD.—Gross takings and those of the Associated Concern, Cia Uruguaya de Navegacion, Ltd., are, both companies:—May, 1935, A.P. \$2,515,963, May, 1934, \$2,071,645, increase \$444,318—21.45 per cent. Aggregate, January-May, 1935, A.P. \$12,757,231, aggregate, January-May, 1934, \$10,871,001, increase \$1,886,230—17.35 per cent.

RUSTON AND HORNSBY, LTD.—The scheme of arrangement involving the reduction of capital, the cancellation of arrears of preference dividends and the conversion of shares into stock, which was approved by meetings of shareholders of Ruston and Hornsby, Ltd., on May 31, 1935, has been sanctioned and approved by the Court.

PHENIX ASSURANCE COMPANY, LTD.—The directors announce the retirement on June 30, 1935, of Mr A. T. Winter, F.I.A., deputy general manager of the company. The directors of the London Guarantee and Accident Company, Ltd., have elected Mr Winter to a seat on the board of that company.

BRITISH INSULATED CABLES, LTD.—We are officially informed that British Insulated Cables, Ltd., have acquired from American interests the "A" deferred shares of The International Automatic Telephone Company, Ltd., London.

TOKYO ELECTRIC LIGHT COMPANY, LTD.—Return for May, 1935.—K.V. hours sold, 438,148,473; gross revenue, Yen 9,929,354.45; sterling equivalent at par of exchange £1,016,930. Increase over corresponding period last year, £90,680.

SOUTH AFRICAN DISTILLERIES AND WINES LIMITED.—Report for June 30, 1935, shows aggregate of net profits before charging South African taxation, of Castle Wine and Brandy Company, Ltd., and its subsidiaries for the year ended February 28, 1935, and of E. K. Green and Company, Ltd., and its subsidiary for the year ended October 31, 1934, amounted to £226,815 (South African currency). Transferred to capital reserve in books of these companies proportion of profits earned up to June 30, 1934 (date of acquisition of shareholdings of the operating companies) £91,978, leaving £134,837. Add profits E. K. Green and Company for four months to February 28, 1935, £32,678, making £167,515. Preference dividend £41,980. Preliminary expenses, which amounted to £69,685, have been written down to £14,000 by applying £50,000 premium on issue of ordinary shares and absorbing £5,685 from profits. Ordinary dividend 9 per cent., absorbing £90,000. Carry forward £386. Meeting, Winchester House, London, July 19th, at 11.30 a.m.

NORTH AMERICAN COMPANY.—The electric output of the subsidiaries of the North American Company for the first six months of 1935 was greater than for any half year period in the history of the present subsidiaries. The output for the twelve months ended June 30, 1935, exceeded 5,000,000,000 kilowatt hours for the first time in over four years. Compared with the three month, six month and twelve month periods ended June 30, 1934, the increases were 5½ per cent., 6 per cent. and 5 per cent. respectively.

COMMERCE AND TRADE

slightly dearer than a week ago, but potatoes declined in price as a result of an increase in supplies of new crop varieties.

Business in iron and steel has begun to be influenced by the holidays in industrial districts, but prospects remain good. Industrial consumption of coal has so far been well maintained, but the market in house coal was inactive. Among non-ferrous metals, quotations for lead and tin were marked up a little, but copper and spelter was slightly cheaper than a week ago. The market in vegetable oils was dull and prices tended to sag. Little interest was taken in rubber. The recent improvement in raw cotton

SURVEY OF COMMODITY MARKETS

The tendency of prices on the principal commodity markets was again irregular. Towards the end of last week there occurred a sharp break in wheat prices, discussed in a Note on p. 66. There was keen competition among buyers at the Mincing Lane tea auctions, and slightly higher prices were realised than a week ago. Raw sugar was again marked down in price. Demand for coffee was slow. At Smithfield market, business in meat was not very active, largely because of the hot weather. Eggs were

prices was maintained, for unofficial estimates of the acreage under cotton in the United States were confirmed by the first official forecast issued last Monday. The fourth series of Colonial wool auctions began in London last Tuesday and prices showed a rise of 5 per cent. to 15 per cent. over those realised at the May auctions. Jute prices declined on rumours that the officially sponsored restriction scheme in India may not be continued next year. Flax was a little cheaper, but hemp prices are scarcely changed on the week.

The gradual upward movement of commodity prices in the United States continued during the past week. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 159.9 on Wednesday, compared with 158.8 a week earlier, 159.0 a month earlier and 139.3 on the corresponding day last year.

COAL

SHEFFIELD.—The depression of the market for blast furnace coke is less pronounced, although supplies continue rather excessive and current prices are low. To-day's quotations are 12s. 6d. and 13s. at ovens. Best large steam coals for export are somewhat scarce, and command 17s. 12s. to 18s. f.o.b. Forward business is being hampered by the uncertainty of supplies which will be available under the present low quota. Trade in house coal is stagnant.

NEWCASTLE-ON-TYNE.—In general, demand for coal in the North East is much the same, and for this time of the year can be considered satisfactory. Screened steams are not quite so firm, English coasting trade having fallen away, but foreign demand is steady and shipments are good. Other classes of coal are quiet, Durham coking and gas being freely offered at schedule figures. Prime bunkers have a good sale, shipments to foreign coaling stations being active. Coke is inclined to be better, Continental competition not being so keen.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 14s.; smalls, 11s.; Howards, Bentinck, Newbiggin, screened, 13s. 6d.; smalls, 10s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 18s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Steady conditions prevail. With shippers well covered, there has been less than the usual pressure for supplies before the holidays, which begin on Saturday, but orders on hand provide a good outlet for production of most varieties, and surplus parcels have been readily taken up. Secondary grades of steam coal and washed pearl nuts have, however, been quite freely offered. With industrial demand still good and export business tending to improve, prospects for business after the holidays are bright.

Shipment prices f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 14s. 6d.—15s.; splint best, 17s.; splint second, 14s.—14s. 6d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.—13s. 9d.; Hartley, 16s.; steam, screened, 13s.—13s. 6d.; trebles, 13s.; doubles, 12s. 6d.—12s. 9d.; singles, 12s. 6d.—12s. 9d.; pearls, 10s. 6d.—10s. 9d.; dross, 10s. **FIFE.**—Best unscreened navigation, 13s. 3d.—13s. 6d.; unscreened navigation, 12s. 9d.—13s.; first-class steam, 13s. 6d.—14s.; third-class steam, 12s.—13s.; trebles, 13s. 6d.—16s. 6d.; doubles, 13s.—14s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 10s. 3d.—10s. 6d. **LOTHIANS.**—Prime steam, 12s. 6d.—13s. 6d.; secondary steam, 12s.; unscreened navigation, 12s. 6d.—12s. 9d.; trebles, 13s. 6d.—13s. 9d.; doubles, 12s. 6d.—12s. 9d.; singles, 12s. 3d.—12s. 6d.; pearls, 10s.—10s. 3d. **AYRSHIRE.**—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s.; doubles, 12s.—12s. 3d.; singles, 12s.—12s. 3d.; pearls, 12s.; dross, 11s.

CARDIFF.—The tonnage position at the South Wales docks has been better during the past few days than for many weeks past. The number of tips occupied has averaged 60, as against 55 a week ago, and shipments consequently have been greater in volume. Coal exports in the foreign and coastwise trades last week totalled 385,700 tons, compared with 400,600 tons the previous week, and 370,365 tons in the corresponding period last year. The Customs returns of consignments to foreign countries during June give a total volume of 1,216,430 tons, as against 1,372,386 tons in May, and 1,335,188 tons in June, 1934. Last month's trade was adversely affected by the Whitsun holiday. Shipments to France and French Possessions were 80,000 tons less than in May and 23,000 tons less than in the corresponding month of 1934, and to Italy 48,000 tons and 83,000 tons lower respectively. Diminishing consumption as well as import restrictions are mainly responsible for the loss in the French market, while trade with Italy is suffering both from the increased severity of the competition of German coals and from the unsatisfactory operation of the agreement between the two countries for the settlement of trade debts. Current inquiries are very limited, and collieries are almost entirely dependent on their contract commitments. Sized and certain other classes of washed coals are firm, but large grades are in abundant supply at the minimum schedule figures. Pitwood, patent fuel and coke prices are unaltered.

Current approximate quotations are as follows:—Best Admiralty, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams (washed), 13s. to 13s. 6d.; second steams, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; French nuts, 35s. to 48s. 6d.; machine-made cobbles, 35s. to 48s. 6d.; stove nuts, 34s. to 45s.; rubble culm, 11s. to 11s. 6d.; special foundry coke, 35s. to 37s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, 24s. 6d. French; 19s. 6d. Portuguese.

IRON AND STEEL

MIDDLESBROUGH.—The holidays at the works in Scotland will have a retarding effect upon the shipments of Cleveland foundry pig iron. This will, however, only be temporary as some parcels have already gone forward during this month. Business in both foundry and hematite pig iron is active with home consumers, and buyers are now contemplating making purchases up to the end of the year. Actually the production of East Coast hematite at the present time is hardly sufficient to meet the demand, but output will be increased by the end of this month as two furnaces will probably be put into operation before the end of July. Prices are maintained on the basis of 67s. 6d. per ton for No. 3 Cleveland foundry iron and 69s. per ton for No. 1 East Coast hematite delivered locally. Total shipments of pig iron from the Tees from July 1st to July 9th amounted to 2,687 tons as compared with 2,102 tons for the same period in June.

There is little business in foreign ore as works are well covered for their requirements, and the price of best Bilbao rubio remains at 17s. 6d. per ton c.i.f. Tees for early shipment. Blast furnace coke is still quoted at 19s. per ton delivered works, but there is likely to be an increase in the consumption of coke when the two additional furnaces are put into blast.

The heavy steel trade continues strong, home consumers taking good deliveries of both semi-manufactured and finished steel. Heavy steel melting scrap is realising 52s. 6d. per ton delivered at the works and demand is steady.

SHEFFIELD.—Activity at the local steel works is still expanding although the booking of new contracts tends to decline owing to the approach of the holiday season. Nearly all sections of the industry are participating in the present spell of good trade. Some authorities prophesy the continuation of these favourable conditions for at least a couple of years. Steel requirements for aircraft construction, the automobile and electrical industries and armament construction are on a heavy scale. Work for the railway companies is easier. The basic steel plants are running full time. There is some surplus plant on acid steel. Tool makers are fully employed. Inquiries have been received from Soviet Russia in that country. A start is to be made with table knives of a cheap quality. The silver and electro-plate branches are quiet.

GLASGOW.—Steel makers and manufacturing concerns in Glasgow and surrounding districts are working at high pressure this week to complete deliveries required before closing down for the annual holidays. These begin on Thursday of this week and in most workshops a re-start will be made on July 23rd. During the holiday period a large amount of repair work will be carried out. It is understood that this year an exceptionally large amount of such work will be undertaken and in a few instances the holidays will be prolonged. Demand for all classes of steel material, excepting shipbuilders' requirements, is good, and it is anticipated that steelmakers and others will be able to continue operations at the present rate of production for some time after the resumption of work. Most of the business done is on home account.

CARDIFF.—The position in the South Wales tinplate trade has not undergone any material change during the past week. A slightly better export demand has been experienced and the small improvement in the market for galvanised sheets has been maintained. Tinplates are unchanged at scheduled c.i.f. prices based on 18s. 2d. per box f.o.b. and galvanised sheets at £11 5s. per ton increased price of £5 5s. per ton subject to an additional 2s. 6d. per ton on small orders. Exports of tinplates from Swansea last week totalled 91,687 boxes compared with 65,399 boxes the previous week, and 63,863 boxes a year ago, and as there was a decrease in the deliveries to warehouse stocks were lower at 103,508 boxes.

OTHER METALS

COPPER.—After declining to £29 13s. 9d. per ton, prices experienced a slight recovery, and closed on Wednesday at about the same level as a week ago. The slump earlier in the week was probably due to the fact that American exports during May (the first month in which exports were restricted) amounted to 12,649 short tons, against a quota of only 8,000 tons. It is significant that the Schechter judgment was not delivered until the end of May. Latest news from the United States has been more encouraging, for domestic demand, which has been stagnant in recent weeks, has made for the delivery of 10 million lbs. of electrolytic copper. Although this contract was based on a price below 8 cents per lb., it is hoped that the latter price may be maintained as a result of the decline in selling pressure. Japan is reported to have bought considerable quantities of American copper during the past week, which, coupled with the increasing domestic demand, must diminish the amount available for export to Europe. This tendency increases the possibility of an improvement in the European position in the near future.

Sales on the London Metal Exchange: 1,000 tons on Monday, against 1,700 tons last week; 1,200 tons on Tuesday, against 2,500 tons last week; 1,400 tons on Wednesday, against 1,800 tons last week. Domestic spot was quoted at 7.30 cents per lb. in New York on Wednesday, against 7.22½ cents a week ago and 7.62½ cents a month ago. Wednesday's official closing price for standard cash in London was £30 6s. 3d. to £30 8s. 9d., compared with £30 7s. 6d. to £30 8s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 70,231 tons, show an increase of 956 tons, while stocks of rough copper, at 11,258 tons, show a reduction of 51 tons on the week.

TIN.—The backwardation again widened during the past week, for the cash price hardened slightly while the three-months' quotation eased off by about £1 per ton. This circumstance lends colour to the belief that recent forward purchases were connected with the their buffer pool, for if genuine consumers had been responsible, the demand would not have suffered so sudden a contraction in the absence of any change in the statistical position of the metal.

Sales of tin on the London Metal Exchange: 125 tons on Monday, against 480 tons a week ago; 305 tons on Tuesday, against 750 tons last week; 280 tons on Wednesday, against 445 tons last week. The New York quotation on Wednesday was 52.20 cents per lb., against 51.90 cents a week ago and 50.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £231 to £231 5s. per ton, compared with £230 5s. to £230 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 2,314 tons, a decrease of 508 tons on the week.

LEAD AND SPELTER.—Neither of these markets showed any important new development during the week ended last Wednesday. It is of interest to note, however, that the price of lead, which was 1s. 3d. below the spelter price a week ago, had once again recovered its position at the end of the period under review. The firm position of lead as compared with spelter (although spelter used to be about £2 or £3 per ton dearer than lead) is mainly traceable to the relative statistical position of the two metals.

Sales of lead on the London Metal Exchange: 400 tons on Monday, against 500 tons last week; 550 tons on Tuesday, against 850 tons last week; 850 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 4.15 cents per lb., against 4.00 cents a week ago and 4.00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £13 18s. 9d. per ton, compared with £13 16s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 250 tons on Monday, against 125 tons last week; 350 tons on Tuesday, against 625 tons last week; 525 tons on Wednesday, against 375 tons last

week. Wednesday's quotation in East St. Louis was 4.30 cents per lb., against 4.30 cents the week before and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 13s. 9d. per ton, against £13 17s. 6d. last week.

SILVER.—The market in silver has been affected by heavy selling pressure during the past week and selling orders have surpassed previous records. The cause of this pressure was the nervousness which has been growing since the end of the April boom. Since that date, the price has gradually fallen from 36.25d. to 31d. per ounce, in the absence of American support. On Saturday last the price would probably have been reduced by at least 2½d. or 3d. if the bullion brokers had not delayed the fixing until American orders came through. According to the *New York Times*, the American Treasury has spent at least £4 millions during the past few days to prevent a slump in the price of silver on the London market. On Wednesday, President Roosevelt stated that his silver policy was unchanged, and it may be that this will prevent a further set-back; but the market awaits an explanation of the precise implications of the President's policy.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was held at £11 12s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, against £69 to £70 per ton last week. Chinese wolfram for July-August shipment was quoted at 30s. 6d. to 31s. 6d. per unit c.i.f., against 29s. 6d. to 30s. 6d. last week. Platinum remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—*Manchester.*—Rather more business has been done in some sections in the past week, but the buying has not been of a general character. The prices secured have given no satisfaction whatever, and in the circumstances spinners and manufacturers experience difficulty in preventing loss of ground. With regard to raw cotton affairs, the feature of the week has been the acreage estimate of the United States Government at 29,166,000 acres, and this was about equal to expectations, with the result that prices have shown practically no change. The weather in the belt continues better and the plants are making more rapid progress than for some time back. Considerable interest is still being taken in the loan policy of the Washington Government relating to the 1935 crop, and now and again there are rumours that the figure will be less than 12 cents.

A mixed business has been done in piece goods, but no foreign outlet has been really active. With regard to India, now and again

inquiry broadens and there are hopes of a general improvement in turnover, but demand seems to fade away, largely owing to offers being very low and dealers on the other side being prepared to raise limits. Despite many difficulties, however, a useful business has been done in dhooties, light whites and fancies, chiefly for Calcutta, Karachi and the up-country markets. There has been no better news from China. A steady trade has been put through for several minor outlets East and West and a little more activity has shown itself in the home trade section as clearances in the retail and wholesale establishments are now improving. A rather featureless state of affairs has prevailed in the yarn market. Moderate lots of medium American counts have been booked. Some Egyptian spinners have done slightly better for Germany.

AMERICAN COTTON CROP.—At the beginning of this week the United States Government published an estimate of the area under cotton for the season 1935-36, the figure being 29,166,000 acres, against 27,883,000 acres planted a year ago, the amount harvested being 26,987,000 acres. According to the Washington Government, the forecast represents an increase of 4.6 per cent. on a year ago. A short time back it was anticipated that the area might be 34,000,000 acres, and it is quite evident some land has been abandoned owing to the heavy rains. Ideal weather is now being experienced in most parts of the belt and the plants are doing well. As is well known, the yield per acre of cotton varies considerably from year to year, as in the season which is now closing the figure was 170.9 lb. and in the previous season the output was 208.5 lb. On the present acreage, taking the average yield for the past ten years, the crop should be about 10,600,000 bales. The climatic conditions in the growing area will be the deciding factor as to whether the ultimate yield is more or less than that amount. World consumption of American cotton at the present time is about 11,500,000 bales per annum.

TEXTILE WAGES.—Further developments have taken place this week in connection with the demand of the operatives in the bleaching, dyeing, finishing and calico printing trades for an advance in wages. The trades union has decided to give one week's notice to terminate employment on July 18th. About 80,000 workers in Lancashire, Yorkshire, Cheshire and Scotland are involved in the dispute, and if a stoppage should take place, it will mean the closing down of numerous mills in Lancashire and Yorkshire. At a meeting in Manchester on Tuesday of the Allied Association of Bleachers, Dyers and Finishers, the employers' organisation, it was decided that unless notices to cease work are given in each individual case, striking workers would be held responsible for damages for breach of contracts. The application of the operatives is somewhat complicated, but according to the chairman of the employers' association, the demand is equal to an advance of from 2s. 2d. to 8s. 11d. per week. It is generally believed that some way out of the difficulty will be found without any stoppage of work.

JUTE.—Dundee.—The new jute crop acreage figures indicate a short crop for the season 1935-1936. The acreage is estimated at 1,858,200 acres, compared with the revised figure for last year of 2,607,000 acres, representing a decrease of 28.7 per cent. in sowings. Last year's crop of 9,710,000 bales was just sufficient to meet world requirements. This year's acreage points to a supply of about seven million bales. Nevertheless, prices of raw jute have displayed marked weakness since the result was known, and are now 25s. per ton below the recent peak. Any shortage of fibre from the next crop will to a certain extent be made up from the carry-forward from previous seasons. There are stocks in the hands of consumers of about seven million bales, while, in addition, there are 1,500,000 bales in press houses, ships' holds, etc., and carried forward up-country. It is anticipated that the large stocks of consumers will be reduced by approximately one million bales during the coming season. There is some uncertainty as to whether the Bengal Government will continue the restriction of sowings scheme for the following season, as was originally intended, and it is considered that the possibility of the Government not continuing the scheme is responsible for the easier tendency in prices.

Daisee-2/3 is now offered at £18 15s. for old crop and £18 17s. 6d. for new, with fours of the latter at £17 15s., October-November. Tossa-2/3 has been reduced to £19 5s. for old and £19 17s. 6d. for new. Good First Marks are offered at £22 17s. 6d. and Lightnings at £21 for Double Triangle DS, at which business has been done on several occasions, to £22 for Red H and Green Circle Ram, with not inclined to purchase at the lower rates and business in the fibre has been very slow. Jute yarns are more or less nominal owing to the quietness of trade. Spinners are quoting 2s. 2d. for common 8-lb. cops and 2s. 3d. for 8-lb. spools, but there seems to be little

doubt that 1d. or even 1d. less might be accepted if buyers were interested. Twist continues at 3 1/2d. for 3-ply 8-lb., and sacking yarns have been sold at 2 1/2d. for 24-lb. web and 3 1/2d. for 8-lb. chains. Rove remains at £18 5s. for 48-lb. and £14 10s. for 200-lb., while the Rio yarns are in small demand at 2s. 9d. for second quality 8-lb. warp, 2s. 6d. for third and 2s. 4d. for fourth. Carpet yarns are slow at 3 1/2d. for 14-lb. warp.

Cloth is in small demand and only trifling lots are being bought for quick delivery, with buyers reluctant to purchase any distance ahead. Prices are notably unchanged at 2 1/2d. for 10-oz. 40-in. and 2 1/2d. for 8-oz., but good orders might go through at less. Linoleum hessian makers have sufficient orders to take them to the end of this year and prices are very firm, while heavy goods remain quiet but steady. Calcutta goods have declined in sympathy with the raw material.

GRAIN MARKETS

WHEAT.—The wide fluctuations of wheat prices during the past fortnight are discussed in a Note of the Week, where the rumours regarding the damage done by black rust and the uncertainty as to the policy of the Canadian Government are examined. In Australia, weather conditions are now rather more favourable, rain having fallen in some of the areas where drought had prevailed. According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 864,000 quarters, against 1,198,000 quarters in the preceding week. On Wednesday last, "July" futures were quoted in Chicago at 84 1/2 cents per bushel, against 86 cents the week before and 80 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. per 496 lbs., against 31s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 3d., against 30s. a week ago.

FLOUR.—Demand for both home milled and imported flour continues dull and prices have declined about 1s. per 280 lbs. since last week. Shipments from North America in the past week totalled 81,000 sacks, compared with 99,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 25s. per 280 lbs., against 26s. a week ago; delivered London, 24s., as compared with 25s. a week ago. Manitoba patents, ex store, 23s. 9d. to 25s. 3d., against 24s. 3d. to 26s. 3d. a week ago. Australian, ex store, 19s. 6d. to 20s., against 20s. 6d. to 21s. a week ago.

BARLEY.—There has been no change in the market position this week. Imported varieties encounter competition from Plate maize and are easier in price. English malting is scarce. "July" futures were quoted at 36 1/2 cents per bushel in Winnipeg on Wednesday, against 36 1/2 cents last week and 39 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English malting," at farm, 27s. to 30s. (nominal) and "English feed" at farm, 23s., against 30s. to 35s. (nominal) and 23s., respectively, a week ago.

OATS.—On Wednesday, "July" futures were quoted at 33 1/2 cents per bushel in Chicago, against 34 1/2 cents a week ago and 34 1/2 cents last month. Quotations in London, Wednesday: "English Black," at farm, 22s. to 24s. per 336 lbs., against 22s. to 24s. a week ago; "English White," at farm, 22s. to 24s., against 22s. to 24s. last week; "Chilean White," landed, 26s., against 26s. a week earlier.

MAIZE.—With demand only moderate quotations have been rather easier during the past few days. "July" futures have been quoted on Wednesday at 82 cents per bushel in Chicago, against 81 1/2 cents a week ago and 80 1/2 cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. per 480 lbs., compared with 16s. 6d. a week ago; "Plate," ex ship (new), 16s., as against a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. per ton, against £4 15s. to £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to July 6.....	Cwts. 27,376	Cwts. 27,971	Cwts. 64,080	Cwts. 80,134
45 weeks to July 6.....	8,847,800	8,429,096	10,673,300	13,601,426
Average price of English wheat per cwt.	s. d. 6 6	s. d. 8 6	s. d. 5 6	s. d. 5 6

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 4, 1931.....	Cwts. 48,173	Cwts. 6,750	Cwts. 9,892	s. d. 6 2	s. d. 5 11	s. d. 6 8
July 9, 1932.....	27,376	1,303	7,149	6 6	6 8	6 0

June 29, 1935.....	84,653	9,834	10,353	5 6	7 2	7 6
July 6, 1935.....	80,134	4,563	9,704	5 6	6 9	7 7

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	July 11, 1934	Jan. 2, 1935	July 3, 1935	July 10, 1935
Winnipeg (No. 1, Manitoba).....	46 1/2	65 1/2	83	82 1/2	81 1/2	80 1/2
—Cents per 60 lb.	46 1/2	65 1/2	83	82 1/2	81 1/2	80 1/2
Chicago (No. 2 Winter).....	46 1/2	84 1/2	92 1/2	98 1/2	86	84 1/2
—Cents per 60 lb.	46 1/2	84 1/2	92 1/2	98 1/2	86	84 1/2

OTHER FOODS

BACON.—The official prices of several descriptions were reduced a few shillings per cwt. at the end of last week. Since then, demand has continued quiet, and the market has displayed a rather weak tendency. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 99s. to 101s.; Canadian, 86s.; Danish, 102s. against 99s. to 101s., 90s. and 102s. respectively a week earlier. Arrivals in London last week included Danish, 14,759 bales; Canadian, 4,341; Dutch, 2,390; Lithuanian, 1,772; Polish, 3,140, against 14,161, 4,220, 2,179, 1,872 and 2,907 bales, respectively, in the previous week.

BUTTER.—Colonial descriptions have been an active market during the past week, and are quoted a little above last week's level. Supplies of Danish are increasing seasonally, and this description is a shade cheaper. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 89s. to 90s.; Australian, choicest salted, 86s. to 87s.; Danish 99s. to 100s., compared with 88s. to 89s., 86s. and 100s., respectively, last week.

CHEESE.—Trading has been on quiet lines during the past week, with New Zealand a shade easier in price. English Cheddars have not been quoted on the London market. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows:—Canadian, finest coloured, 61s. to 64s., against 64s. a week ago; New Zealand, finest coloured, 44s. to 44s. 6d., compared with 44s. 6d. to 45s., last week.

COCOA.—The "spot" quotation in New York on Wednesday was 4 1/2 cents per lb., against 4 1/2 cents per lb. last week. The London quotation for Accra, "June-July," was 21s. 9d. per 50 kilos, c.i.f. Continent, as against 21s. 9d. per 50 kilos last week. Last week's movements of cocoa in London were as follows: Landed, 1,556 bags; delivered, for home consumption, 8,943 bags; exported, 943 bags; stocks, 187,162 bags, against 262,409 bags a year ago.

COFFEE.—Demand has been rather quiet during the past week, but the undertone of the market is steady. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6 1/2 cents per lb., as compared with 6 1/2 cents per lb. last week and 7 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 157 bags; delivered, for home consumption, 167 bags; exported, nil; stocks, 16,674 bags, against 29,267 bags a year ago. Central American, landed, 2,171 packages; delivered, for home consumption, 1,569 packages; exported, 1,155 packages; stocks, 108,369 packages, against 117,076 packages last year. Other kinds, landed, 817 packages; delivered, for home consumption, 2,300 packages; exported, 1,569 packages; stocks, 113,952 packages, against 109,394 last year.

EGGS.—At Tooley Street on Monday supplies were somewhat short and prices were marked up. At Smithfield Market on Wednesday English (ordinary packing, Grade I, about 15-15 1/2 lb.) realised 10s. 9d. to 10s. 9d. per 120, against 9s. 3d. to 9s. 9d. a week earlier while Danish (15 1/2 lb.) made 8s. 3d. to 8s. 9d. per 120, against 7s. 9d. to 8s. 6d. last week.

FRUIT.—Demand for most lines at Covent Garden remains active, soft fruits in particular going out well, states *The Fruit Grower*. Strawberries have continued in special request, larger supplies of moderate samples being sold at lower prices, down to 6d. per lb. Raspberries, loganberries and red currants are now well in evidence. English cherries have been in substantial supply and are of good quality; sales are steady. Green gooseberries are also clearing well. Hothouse grapes are a point easier, on increasing supplies, but a steady demand is in evidence. Melons have been in particular request. English peaches are firm in price, but Italian easier. Apples are slightly easier, but continue to sell well at prices above the average for the season. Pears are also in good request. Oranges sell consistently, but are a little lower in price, owing to heavy arrivals of South African. Grape fruit are plentiful, and inclined to be cheaper, but lemons are in short supply and higher in price.

MEAT.—Except on Monday, trade at Smithfield has again been slow for most descriptions, prices showing little change. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. last week. New Zealand frozen mutton was 2s. 6d. to 3s. 4d. per 8 lbs., against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,562 tons, a decrease of 215 tons on the corresponding week last year. Beef and veal accounted for 4,470 tons, mutton and lamb 3,015 tons, and pork and bacon 499 tons, as compared with 5,023, 2,950 and 405 tons, respectively, in the same week of 1934.

PEPPER.—Black pepper has been a quiet market. Wednesday's spot price for Lampong was 2 1/2d. per lb., against 2 1/2d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 49 tons; stocks, 2,086 tons, against 250 tons a year ago. White, landed, nil; delivered, 134 tons; stocks, 18,575 tons, against 6,181 tons a year ago.

OVER ONE HUNDRED YEARS OF SERVICE

SCOTTISH UNION & NATIONAL

INSURANCE COMPANY

ASSETS - EXCEED - £16,000,000

FIRE LIFE ACCIDENT MARINE

Edinburgh: 33, St. Andrew Square
London: 5, Walbrook, E.C.4, and 45, Pall Mall, S.W.1.

RICE.—The market continues quiet. The "spot" price of Burma No. 2, cleaned, new crop, was 8s. 7 1/2d. per cwt. on Wednesday, as compared with 8s. 7 1/2d. per cwt. a week ago, while the forward quotation, at 8s. per cwt., was unchanged on the week. Movements in London during the past week were as follows: Landed, 279 tons; delivered, 349 tons; stocks, 10,132 tons, against 958 tons a year ago.

SUGAR.—The New York market has shown no new features, and quotations are unchanged. Trading in London has continued quiet. The spot price in New York on Wednesday was 3.28 cents per lb., as compared with 3.28 cents per lb. last week and 3.35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 3 1/2d. to 4s. 4 1/2d., against 4s. 6 1/2d. to 4s. 7d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 26,529 tons, against 25,546 in the previous week and 1,711 in the same week of last year; deliveries, 15,532 tons, against 14,220 and 16,092 respectively; stocks, 130,482 tons, against 119,485 and 195,844 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
July 5, 1934.....	d. 13-01	d. 12-85	d. 13-28	d. 11-13	d. 11-06	d. 12-47	d. 12-89
May 30, 1935.....	11-38	12-35	13-90	9-45	8-22	10-03	11-83
June 6, ".....	11-37	11-98	13-27	9-68	8-36	10-04	11-77
June 20, ".....	11-59	11-82	13-11	10-05	8-82	10-15	11-84
June 27, ".....	11-41	11-58	12-95	9-84	8-39	10-12	11-86
July 5, ".....	11-49	11-54	13-00	9-94	9-38	10-20	11-74

The quantities catalogued for this week's auctions comprised 49,326 packages of Indian and 25,995 packages of Ceylon tea. Demand at the Indian sales on Monday and Wednesday was active, and quotations fully maintained. At the Ceylon auctions on Tuesday there was good competition for all descriptions, and a better demand on export account. Quality occasionally showed an improvement, and this resulted in higher prices for good teas.

VEGETABLES.—*The Fruit Grower's* Covent Garden correspondent states that tomatoes have been in increasing supply during the past few days, prices having fallen. Cucumbers are selling well, but are a little cheaper. Mushrooms are dearer. Green peas are selling well, but the increasing supplies are being offered at rather lower rates. Carrots and spring onions have also dropped in price, and good cabbage can be had for 2s. 6d. to 3s. 6d. per bag. At the various London markets, old crop potatoes have been in limited demand, and have suffered a decline in price. Increasing supplies of English new potatoes are now arriving, and tend to displace supplies from other sources; prices have ranged from 10s. to 14s. per cwt. A few Dutch have been making 11s. to 12s., but Jerseys are reaching the end of their season. At the Borough on Tuesday, best light soil "King Edward" realised 5s. to 5s. 6d. per cwt., against 5s. to 6s. last week, while Jersey new potatoes were quoted 9s. to 10s. per cwt., compared with 16s. to 18s. a week ago.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions continue. There is a lack of tone and prices generally are on the easy side. Linseed has declined in sympathy with wheat and in the absence of market support. Crushers both here and on the Continent are buying very sparingly owing to the small trade in cakes and oil and the uncertainty regarding the future of the import duty. Plate declined to £9 per ton (delivered terms) for shipment to September. No business is passing in Indian seed, prices of which are still above buyers' ideas. Smaller shipments and large arrivals have brought the quantity of linseed afloat for Europe down to 111,700 tons (including 9,100 tons from India), or 41,000 tons less than last week. That on passage to the United States and Canada totals 37,600 tons, against 24,400 tons a year ago. Old crop Egyptian cottonseed is firmly held for £6 10s. for shipment, and new crop is quoted at £6, October loading.

Trade in vegetable oils is moderate. Linseed oil is in poor demand and a shade lower. Raw oil for July-August delivery is quoted at £20 10s. per ton (naked) ex Hull mill, and September-December £20 5s. Cotton oil is neglected, but quotations are maintained at £23 10s. for Egyptian crude and £26 10s. refined ex Hull, prompt. Oilcakes are in about normal demand for the season and prices are steady.

RUBBER.—The uneasiness of operators on American produce markets generally has affected rubber, which has fallen in price in New York, following the rise of the previous week. On the London market quotations are a shade higher than a week ago. Business continues on a small scale and stocks in the United Kingdom have again increased. In New York the spot price on Wednesday was 12 1/2 cents per lb., compared with 12 1/2 cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked

sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for October-December, 1935, as against 6½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 172,513 tons, against 170,369 tons a week earlier. A year ago stocks amounted to 102,573 tons.

FURS.—The ninth series of Leningrad fur auctions is due to begin on Monday next. Soviet Russia, one of the world's principal producers, had previously sold the bulk of her furs through Leipzig and London, but some of her best skins have recently been offered in Leningrad. Thus the Leningrad auctions have been of increasing interest and importance for the international fur market. The last sale at Leningrad, held in March of this year, was attended

by well over a hundred representatives from all the leading centres, and prices showed a firm tendency. More than 80 per cent. of the offerings were sold at prices ranging from 10 to 15 per cent. above those realised at the previous sales. At the auctions next week a large selection of Persian lambs, pony skins, white fitches, squirrels, ermine and Mongolian marmots will be on offer. The bulk of these are already dressed and dyed, and will probably attract special interest, since Russia usually sells her finished skins at the lowest prices. In view of the fact that the market is now preparing for the winter season, the result of the sales at Leningrad will be awaited with interest. Prospects appear to be favourable, since prices on the open market have hardened somewhat since the close of the last London auctions.

ALL THE KING'S FORCES

WITH the return to Portsmouth on Wednesday afternoon of the Royal yacht at the head of the Fleet, the King brought to an end the series of Reviews in which he has surveyed the defence forces of the Empire in the air, on land and at sea. The spectacles at Duxford, at Aldershot and at Spithead have in their respective spheres all been very impressive pageantry; that of the Senior Service being, as is fitting, the most impressive in its scale and its duration. It is not surprising that many foreigners at the Naval Review—where representatives of the Merchant Service, from giant liners to humble fishing trawlers, were ranged behind the ships of war—felt themselves in the presence of the symbol and epitome of the British Empire.

Every observer of these three spectacles, however, must have come away with his mind full of strange questioning, to which it is very hard to find the answer in the present state of the world's affairs. In the case, at all events, of the Army and of the Navy, few can fail to have been impressed by the contrast of old and new. On the Rushmore arena, although the scarlet and gold of old times had given place to the more sober khaki, the Review was a curious mixture of troops parading in mass formation to the music of life and drum, and of curious mechanical creatures in all shapes and sizes. For what kind of military operation is this British Army preparing? Is it going to fight with rifle and bayonet or with machine guns? Are the combatants going to march into action or are they going to crawl over the ground in tanks? Is it still true that the next war, if there is to be one, will be won by the infantryman, as so many soldiers still declare, or are the "revolutionaries" right who think that the movements of a mechanised force seizing and holding certain bases for the use of aeroplanes are the only operations that will take place on the surface of the ground?

And what of the "home front"? If we are to prepare for military operations—whether as a means of establishing international order or otherwise—what sort of war have our military advisers in mind? Are they planning to mobilise the factories of this country to produce millions of shells to be used for destroying enemy trenches as in the Great War? Or are they preparing to call on the inventive resources of our engineering and chemical industries to find new ways, less destructive of life, of attaining military ob-

jectives? It has been cynically said that the military experts always prepare for the last war. Many must have asked themselves at Aldershot last week whether this is true of the British War Office to-day.

Similar conundrums are suggested by the vast conglomeration of ships at Spithead. Great Britain has gladly and loyally conformed to the limitations laid down in the Washington and London Treaties. The Navy that saluted the King this week is the product of these agreements. Since the Treaties are now approaching the replacement period, most of the ships are old. The number of our battleship and cruiser units is small; and as most of them are war-time products, and as the Navy has since been experimenting, the effect of the parade was that we have to-day a Navy of samples. We have only one "Hood"; and the layman naturally wonders what strategic use could be made of a single ship of such colossal power and speed even when used in conjunction with the two other battle cruisers which the Navy possesses.

Before long much of this Navy will be replaced, either with or without treaty limitation. Are we going to put our money on a few vast battleships, as the French and Italians are doing with their 35,000-ton ships, or are those experts right who think that the 27

and quantity of armaments, but are determined to adapt to war purposes every scientific advance and every step forward in human knowledge, we must reconcile ourselves to the complete mechanisation of the Army, the rebuilding of the British Navy and the creation of a vast new air arm.

The forces which the King has reviewed in the last fortnight are fully adequate, indeed in many respects more than adequate, for the defence of the Empire and of its trade in a world in which the chief powers do not intend to use war as "an instrument of national policy," and in which the principle of mutual support embodied in the Covenant of the League will be honoured. Indeed, British citizens will have read with pride the account given by Lord Stanhope on Wednesday of the effective work done by naval sloops in reducing the slave trade in the Red Sea "from a stream to a mere trickle." In these and other ways the King's Forces have a proud part to play in support of international order. But if the world is to be abandoned to international anarchy these same forces are already becoming antiquated and out of date. If our statesmen cannot ensure the former of these conditions, they condemn us all henceforth to crushing financial burdens which will prevent any progress in the material standard of the people; and ultimately they condemn us to destruction.

FRANCE AND STABILISATION

THE immediate future of world monetary policy hangs on events in France. French costs are at present out of equilibrium with the level of prices involved in the present exchange value of the franc; and not till this disequilibrium has been removed is any world monetary stabilisation likely. Holland and Switzerland are in the same position. French official opinion holds that equilibrium can best be established by a reduction in French costs, accompanied by a definite fixing of the franc-dollar and franc-sterling exchange rates. Most outside observers, on the other hand, believe that the easiest cure would be a limited devaluation, followed by provisional exchange stabilisation. Belgium has already adopted the second method with a considerable degree of success; but M. Laval's Government is still firmly set on the former. The issue is one on which the future of politics and Parliamentary Government in France may well depend. For the Left-wing parties are as resolutely opposed to deflation as the Right to devaluation. And peaceful as were the rival demonstrations of Right and Left last Sunday, an intensification of the present depression might easily convert tension into tumult.

Close on the heels of Sunday's demonstration M. Laval's Government has announced its new deflationary decrees. They are remarkable in at least one respect. The 10 per cent. cut in general public expenditure is to be extended to the interest on the *rentes*. With a few exceptions, all wages, salaries and pensions are to be cut; those up to 8,000 francs by 3 per cent., those between 8,000 and 10,000 francs by 5 per cent. and those above 10,000 francs by 10 per cent. At the same time, the income tax on all incomes of over 80,000 francs will be increased by 50 per cent.; and a special tax of 20 per cent. is to be imposed on profits from the sale of war materials. The tax on bearer bonds, a notorious source of evasion, will be raised from 17 per cent. to 24 per cent. The 7,000 millions of economies thus obtained, or 15 per cent. of the whole Budget, will be supplemented by 4,000 millions to be saved by the railways and local authorities. In this way the deficit will be practically covered—provided there is no further fall in revenue. At the same time cuts are also to be made in rents, mortgages and the prices of various articles of consumption such as bread, gas and electricity. This last measure is intended to reduce the cost of living at once; but some scepticism about its practical working is perhaps permissible.

The extension of the new cuts to the interest on the *rentes* is a striking and courageous decision. It has long been a powerful objection to Budgetary deflation that its incidence is inequitable since the *rentier*, for a long time at any rate, escapes scot free. "Voluntary" conversions, which were in effect virtually forced, have been carried through in Australia in the last five years; compulsory interest reductions have been made in Germany both by Dr. Brüning

and Herr Hitler; and the Dutch Government is now taking steps to impose by legislation a cut in mortgage interest and rents. But no Government has yet during the present crisis imposed a simultaneous and proportionate cut on all Government expenditure including interest on the national debt. M. Laval's Government must therefore be congratulated on having the courage of its deflationary convictions. In particular, his decrees are entirely free from the calculated inequity with which M. Doumergue reduced direct taxation at the same time that wages and pensions were being cut. Nevertheless, there is a pointed irony in a situation in which the Belgian *rentier* loses only 4 per cent. of his real income as a result of the rise in the cost of living following devaluation, while the French *rentier* loses 10 per cent. of his in the struggle to maintain the gold parity of the franc. We have now reached the point where even the *rentier* may lose more by deflation than by devaluation.

In any case, the equity of M. Laval's novel plan will not determine its economic consequences. What are these likely to be? In the first place, the "cut in the coupon" will not nullify the effect of the other cuts in reducing the community's purchasing power. It will reinforce it. The money saved on the *rentes* will not be spent in any other way; since the whole purpose of the plan is to abolish the deficit. A very marked shrinkage of consumers' incomes is bound therefore to result; and such a shrinkage is likely to have a boomerang effect. In periods of depression, just as reductions in wages are apt to depress prices before increased profits appear, so reductions in Budget expenditure are apt to depress revenue before the Budget is ever balanced. This has happened several times over in France in the last five years; and there is no reason why it should not happen again. Indeed, the present crisis is entirely due to a fall in revenue and not an increase in expenditure, as our Paris letter on page 123 demonstrates. Revenue from Customs and the turnover tax in April, May and June was actually 20 per cent. below the estimates!

Secondly, M. Laval is credited with the hope that the cut in the *rentes*, and certain other measures, will initiate a cheap money regime. Here again the hope seems precarious. It is true that the voluntary conversion of the War Loan in this country initiated the present cheap money period. But throughout the depression, in almost every country of the world, the fundamental barrier to cheap money has been the existence of an overvalued currency. As long as overvaluation and the consequent pressure on the exchanges and the gold reserve has remained, cheap money has proved impossible. As soon as overvaluation has gone, cheap money and recovery have intervened. It is most unlikely, therefore, that a mere compulsory interest cut can offset the influence of an overvalued franc in precluding a cheap money policy. Undoubtedly M. Laval's measures will have some potency in rallying confidence in the exchange value of the franc and the credit of the Government. But such a rally is not likely to last long in face of deepening industrial depression. The fundamental necessity for a readjustment of the value of the franc seems, therefore, to remain, despite M. Laval's heroically deflationary measures.

This conclusion is emphasised by the report of a meeting of economists held in Antwerp this week to discuss the future of the gold, sterling and dollar currencies. The meeting was called by the Antwerp Chamber of Commerce; and it included representatives from Great Britain, France, Holland and Sweden, as well as Belgium. Mr J. M. Keynes, Mr H. D. Henderson and Mr R. F. Harrod were the British economists present. Agreement on the main issues was reached by 10 out of the 15 representatives. All three British economists were in the majority, and the one Frenchman present was in the minority. The majority report (which is given in full in our Belgian correspondent's letter on page 125) begins by asserting that such monetary stabilisation as will secure the world against arbitrary fluctuations of foreign exchanges is "a necessary condition" for the adoption of policies that will lead to recovery. It then proceeds as follows:—

Present economic conditions make it, however, necessary that the margin within which the external value of each currency can vary may be considerably wider than the distance between the gold points in the pre-war gold standards; and further, that the limits fixed may be provisional and subject to the possibility of alteration in the

event of large unexpected disturbances of the balance of payments... Where existing costs are too high, they cannot be considerably adjusted within a reasonable space of time through a deflation of costs, and a large and rapid inflation of costs cannot be expected where they are relatively low. In view of this and of the lack of confidence widely felt to-day in the existing parities of the gold-bloc countries... no early stabilisation can be practicable without a devaluation of the parities of those countries sufficient to reduce the problem of international equilibrium to manageable dimensions.

The report then suggests that countries which have already depreciated their currencies should not depreciate them further; that "the countries which have maintained gold so far should not be asked to devalue before they have some assurance that a further considerable depreciation will not occur"; and that all countries with depressed economies should pursue expansionist monetary policies. Finally, the removal of trade barriers, and in particular of quotas, is strongly urged.

As a whole, therefore, the majority report conceives of a transitional recovery period in which exchange parities would be provisionally fixed, but still movable, and in which cheap money and the lowering of trade barriers would go hand in hand. In the first instance the countries with depreciated currencies would give some sort of undertaking not to depreciate further; and in return the gold countries would devalue sufficiently to offset the present overvaluation. This proposal is an interesting compromise between the advocates of immediate unconditional stabilisation and of uncontrolled exchange fluctuation. As such it is not far removed from the "conditional stabilisation" which Sir Arthur Salter suggested in two recent articles in the *Economist*. The experts, it seems, in both groups of countries are moving much nearer to agreement. Is there any hope that the politicians may follow them? If so, some mitigation of exchange chaos may conceivably now be in sight. For the compromise solution suggested above has the advantage of being practicable as well as economically sound.

THE HALF-YEAR'S OVERSEAS TRADE

THE figures of our overseas trade in the first half of the year are mildly encouraging. Exports have been higher in every month than in the corresponding month of 1934. Imports, especially of raw materials, have declined during the six months, although throughout the second quarter the daily average was higher than in the corresponding months of 1934. The net result is that the unfavourable balance of trade on merchandise account (at £124 millions) has fallen by over £19 millions as against an increase last year of £23 millions.

The recent movements of imports and exports are only to be expected in the second phase of recovery, for the first stage of increased industrial activity, both for domestic and foreign markets, is characterised by increased imports. Thus net imports were expanding much more rapidly than exports in 1933 and 1934. There may then follow an interval of from six months to a year before these imports are transformed into exports. This year we have witnessed a continued rise of exports. The slowing-down of imports in the first half of the year might seem to indicate that prospects for industrial production are not as bright as last year. But the improvement in the past quarter may signify a renewal of the upward trend.

The following tables show the foreign trade figures for June and for the first half of the year:—

OVERSEAS TRADE First Half Year (000's omitted)					
	1933	1934	1935	Change between 1934 and 1935	
Total imports	320,335	362,186	359,377	- 2,810	- 0.8
British exports	175,280	188,704	206,475	+ 18,771	+ 8.9
Re-exports	25,203	28,016	28,844	+ 838	+ 3.0
Total exports	200,483	216,720	235,319	+ 18,599	+ 8.6
Excess of imports over exports	119,852	145,466	124,058	- 21,408	- 14.7
Transshipments under bond	41,397	11,921	13,561	+ 1,640	+ 13.8

7, CHANCERY LANE, LONDON

OVERSEAS TRADE

Month of June

(000's omitted)

	1933	1934	1935	Change between 1934 and 1935	
Total imports	£ 53,777	£ 61,172	£ 57,827	- 3,345	- 5.5
British exports	28,468	32,120	32,914	+ 794	+ 2.5
Re-exports	5,267	4,818	5,222	+ 404	+ 8.4
Total exports	33,735	36,938	38,136	+ 1,198	+ 3.2
Excess of imports over exports	20,042	24,736	19,691	- 5,045	- 20.4
Transshipments under bond	1,905	1,799	3,563	+ 1,764	+ 98.2

The figures for June are rather deceptive, for Whitsun fell in that month this year. On a daily basis imports rose by 4.2 per cent. and exports by 13.5 per cent., as against an apparent decline in the monthly total of the former class and an increase of only 4.7 per cent. in that of the latter. Average daily exports were higher than in any month since February. Both in imports and exports the main increases were in manufactured goods; other categories of imports remained stable, while those of exports rose slightly. The main alterations in the movements of trade in individual commodities were similar to those shown below in the tables for the complete half-year.

The following table shows movements in the classes of commodities by value, and details of the volume of imports and exports of individual articles are given in the subsequent tables:—

OVERSEAS TRADE BY CLASSES

First Half Year

(£ millions)

	Retained Imports			British Exports		
	1933	1934	1935	1933	1934	1935
Food, drink and tobacco	158.5	160.8	160.0	12.8	14.6	14.0
Raw materials and articles mainly unmanufactured	69.9	91.8	86.5	22.0	24.1	26.3
Articles wholly or mainly manufactured	65.2	78.8	82.5	134.9	145.7	160.6

The net decrease in imports of food, drink and tobacco covers an increase in the value of imports of grain and flour, feeding stuffs and dairy produce (mainly owing to a rise in the price of butter). The total value of meat imports fell by £945,000, but the Empire's share continued to increase. As compared with 1933, the total value rose by £1.6 millions, while the value of imports from our most important foreign suppliers, Denmark, the Argentine, Poland and the Netherlands, were all effectively reduced. The fall of £1.6 millions in imports of beverages is accounted for by a sharp fall in the price of tea, but this is still appreciably higher than in 1933, owing to the restriction scheme. On a daily basis, imports of raw materials have been continuously lower than last year since January. As will be seen in the following table,

rubber, metal goods, and hides are the only commodities to show any substantial increases:—

RETAINED IMPORTS

First Half Year

Item and Measure		1933	1934	1935
Wheat.....	'000 cwt.	56,511	50,096	49,276
Beef and veal.....	'000 cwt.	5,946	6,304	6,086
Mutton and lamb.....	'000 cwt.	3,970	3,739	4,123
Sugar (unrefined).....	'000 cwt.	20,057	20,472	17,392
Iron ore and scrap.....	'000 tons	1,326	2,331	2,428
Wood and timber, soft:—				
Planned or dressed.....	'000 loads	278	409	395
Other than planned or dressed.....	'000 loads	1,246	2,004	1,555
Raw cotton.....	'000 centals	5,860	6,478	5,140
Sheep's and lambs' wool.....	'000,000 lbs.	413	376	399
Raw silk and waste.....	'000 lbs.	2,496	3,859	3,007
Flax, hemp and jute.....	'000 tons	149	183	176
Crude petroleum.....	'000,000 gallons	193	250	259
Hides, wet and dry.....	'000 cwt.	604	581	676
Wood pulp.....	'000 tons	902	1,077	1,001
Rubber.....	'000 centals	1,085	1,604	1,874
Unwrought copper.....	'000 tons	64	103	166
Pig lead.....	'000 tons	137	151	170
Tin:—				
Ore and concentrates.....	tons	14,481	17,780	21,186
Blocks, ingots, slabs and bars.....	tons	920	3,521	3,592
Iron and steel manufactures.....	'000 tons	468	708	606
Machinery.....	tons	19,077	28,890	34,240

The sharp fall in the imports of timber, which occurred mostly in June, is largely due to speculative overstocking last year on account of the building boom, and does not necessarily point to any immediate decline in building activity. Reduced imports of cotton and wool may also be attributed in part to overstocking in 1934 and to the prospect of falling prices, which is causing manufacturers to buy only from hand to mouth. Total imports are still slightly above the 1933 level. A rise in the price of jute and flax—the latter rise due to increased buying in Germany—partly accounts for the decline in our purchases of those commodities.

Among the imports of goods officially described as "manufactured," the chief features have been an increase in all non-ferrous metals, in machinery from the United States and Germany, in motor vehicles from Canada and the United States, and in motor spirit, mostly from Persia. The increased imports of motor vehicles are more than offset by our increased exports in the same category.

The next table shows that the expansion of our exports compared with last year has been fairly general. The only items which show any considerable decline are coal, beverages to the United States (the quantity exported in 1934 was unusually high owing to the repeal of prohibition) and apparel—mainly boots and shoes.

BRITISH EXPORTS
First Half Year

Item and Measure		1933	1934	1935
Coal	'000 tons	18,959	19,448	19,006
Iron and steel scrap	'000 tons	116	112	96
Pig iron and ferro-alloys	'000 tons	49	64	83
Railway materials	'000 tons	60	75	84
Total iron and steel manufactures	'000 tons	904	1,038	1,157
Textile machinery	'000 tons	27	41	35
Total machinery	'000 tons	128	157	189
Cotton yarns	'000 lbs.	66,142	68,642	70,856
Cotton piece goods	'000,000 sq. yds.	1,083	969	1,001
Wool tops	'000 lbs.	22,024	22,694	29,767
Worsted yarns	'000 lbs.	14,883	17,765	16,175
Woolen tissues	'000 sq. yds.	27,880	32,607	33,117
Worsted tissues	'000 sq. yds.	15,034	17,075	17,890
Linen piece goods	'000 sq. yds.	39,057	44,522	44,894
Leather boots and shoes	'000 doz. pairs	254	217	172
Leather	'000 cwt.	105	102	146
Paper and cardboard	'000 cwt.	1,792	1,815	1,916
Locomotives (complete and parts)	tons	5,352*	3,050	6,720
Motor vehicles and chassis	number	26,930	29,058	34,716

* Complete only.

More than 60 per cent. of the increase in the value of our exports of manufactures is accounted for by exports of metal goods of various kinds, and of vehicles. There was a welcome increase in exports of locomotives and parts; and there is little evidence yet that our export trade in motor cars is threatened by foreign competition. There has been a large expansion of our Empire markets for these goods, especially in British India, Australia and South Africa, and also in other markets of the "sterling area," notably Argentina and Denmark. Sales to the chief European countries have in the main remained stable or slightly declined. Demand for our textiles has expanded, but in the case of cotton yarns and textiles this has done little more

than restore our exports to the 1933 level. The level of exports to British India and Germany, two of our chief customers, was exceptionally low in 1934. Raw wool exports to Germany in the first half-year amounted to £3.0 millions in 1933, £4.2 millions in 1934 and £3.4 millions in 1935; but of this total British wool and wool treated in Britain accounted for £470,000 in 1933, £900,000 in 1934 and £2 millions in 1935. This is a reflection of the increased sales to Germany after the exchange "clearing" was introduced. Exports of both woollen and worsted yarns declined, but exports of piece-goods increased. On the whole, sales of all textiles were well maintained in British African and West Indian countries and in Scandinavian countries compared with the past two years; but the Far Eastern, Mediterranean and Western and Central European markets, with the exception of Germany, showed a distinct tendency to contract.

On the whole, the foreign trade figures for the first half of this year show that our exports are being well maintained within the "sterling area." But the industries which once formed the mainstay of our export trade have not recovered their pre-eminence. The coal trade is in the doldrums, and the exports of the cotton and machinery groups have not made as much headway as those in the categories of "newer" industries. The foreign trading position of this country in the half-year was better than a year ago; but our export trade has still a very long way to travel before it can approach the level of activity and prosperity which characterises those branches of industry supplying the protected home market. "Recovery," indeed, is still largely the monopoly of the home trade.

MOTOR GOODS VEHICLES

(BY A CORRESPONDENT)

THE transport of goods by road in this country increased by leaps and bounds until, in recent years, Parliament intervened to control its progress. The licensing system imposed on goods vehicles under the Road and Rail Traffic Act, 1933, became effective from the middle of last year. It has not had the same depressing effect on sales of new vehicles as had the more stringent licensing system imposed on omnibuses and motor-coaches by the Road Traffic Act of 1930. The Traffic Commissioners have, of course, no power to limit the numbers of new vehicles put on the road by ancillary users (or "C" licensees), who, according to the best estimates, account for something over 50 per cent. of all goods vehicles in number; but, owing to the fact that on the whole these consist of the smaller vehicles with the lower mileages, they account for a good deal less than 50 per cent. of the total of goods transport by road. The Commissioners have made it practically impossible for newcomers to become whole-time or part-time hauliers ("A" or "B" licensees), but, generally speaking, have shown a readiness to license additional vehicles for established operators, where it could be shown that the growth of business made a larger fleet necessary. It is an interesting fact that, as a result of their close contact with the road haulage industry, the rôle of friends and protectors of road transport interests, rather than that of mere restricters, as was at one time feared by many sections of the hauliers.

Although increased taxation, statutorily limited hours of work for drivers, more rigidly enforced speed limits, inspection of vehicles with reference to mechanical fitness, and minimum wages, have all tended to increase the cost of road haulage, there has, on the other hand, been a counterbalancing drive to reduce costs by the consolidation and grouping of existing haulage undertakings. Though this tendency it still only in its infancy, it has been directly encouraged by the virtual elimination of new entrants to the industry, by the better adaptation of vehicles to the service they must perform and by a close study of vehicle types and weights. This has led to a contraction in the use of steam vehicles and an expansion in Diesels, as well as to the steadily improving technical efficiency and falling price of the new motor lorry of all types. On the side of receipts, the improving state of trade has increased the business

available, in spite of acute railway competition in certain directions, particularly where "agreed charges" have been authorised. Again, the local groupings of operators, largely under the leadership of the Road Haulage Association and with the moral support of many of the Traffic Commissioners, have enabled road charges to be agreed for a large part of public haulage work, and greatly decreased the extent and severity of the rate-cutting which has been a feature of the industry in the past.

The changes in the legal conditions under which the transport of goods by road may take place have naturally been reflected in the trend of demand for new goods vehicles, but, in comparing results with last year, it should not be overlooked that, a year ago, sales were inflated by reason of a widespread anxiety on the part of operators to get new vehicles on to the roads before the licensing system came into operation in the middle of the year. The latest official figures of the progress of sales of new goods vehicles cover seven months of the season from October to April. The indications are that, since then, sales have been at approximately the same rate as last year. It is noteworthy that the greater part of the increase shown in the following table occurred in the earlier months of the season:—

REGISTRATION OF NEW GOODS VEHICLES

Unladen Weight	Oct., 1932– April, 1933	Oct., 1933– April, 1934	Oct., 1934– April, 1935
Not exceeding 1 ton	8,299	12,599	14,445
1–2 tons	12,532	14,185	13,197
2–3 tons	3,699	8,010	10,621
3–4 tons	1,772	3,800	3,185
4–5 tons	548	964	602
Exceeding 5 tons	617	652	382
Total	27,467	40,010	42,432

The new taxation rates, which came into force in January, 1934, together with the stricter enforcement of the speed limit, which, for lorries, is 20 m.p.h. for vehicles exceeding 2½ tons unladen weight and 30 m.p.h. for vehicles not exceeding that weight, are responsible for the sharp increase in sales in the 2–3 tons category. A further important consideration is that the Road and Rail Traffic Act of 1933 aimed at limiting haulage operators' fleets to a total unladen weight rather than to a specific number of vehicles; this has encouraged many operators of fleets of "heavyweights" to replace them gradually by a greater number of light vehicles, thus gaining in flexibility and mobility.

The swing of demand away from the "heavyweight" class, which had formerly been the stronghold of the "steamer" and latterly of the Diesel, has had important repercussions on technical development, as it has compelled Diesel manufacturers to concentrate their efforts on bringing the Diesel down to the lower weight categories. No figures of Diesel registrations are available prior to January, 1934, but a comparison of the first four months of 1934 and 1935 very clearly brings out the tendency for the Diesel to penetrate the lower weight classes:—

REGISTRATION OF NEW GOODS VEHICLES

Unladen Weight	Jan.–April, 1934			Jan.–April, 1935		
	Total	Diesels	Diesels as % of Total	Total	Diesels	Diesels as % of Total
Not exceeding 2½ tons	21,109	25	0.1	22,572	117	0.5
2½ to 4 tons	2,288	185	8.1	1,767	221	12.5
4 to 5 tons	598	249	41.6	337	148	43.9
Exceeding 5 tons	342	139	40.6	224	148	66.1
Total	24,355	598	2.5	24,900	634	2.6

New registrations of steam vehicles numbered 17 in the seven months October, 1934–April, 1935, compared with 126 in the previous year, while "electrics" numbered 259, compared with 175. The contraction of the "heavyweight" market is compelling the manufacturers who formerly specialised in it, and who naturally were the first to turn their attention to the development of the Diesel, to cater increasingly for the rapidly developing "middleweight" market. There they compete with the manufacturers who already supplied it, the most important of whom

had graduated from being manufacturers of private cars and of "lightweight" vans.

The lessened demand for "heavyweights" is having the effect of increasing the competition for the remaining business and is already leading to price-cutting. In particular, although the equalisation of the tax on heavy oil and on petrol will do no more than slightly retard the rate of Diesel development on the goods side, owing to Diesel economy in fuel consumption—is unlikely even to do that on the passenger side—it will undoubtedly compel manufacturers to bring the price of Diesel vehicles more into line with that of petrol vehicles in order to effect sales. The concentration of both Diesel and petrol vehicle manufacturers on the "middleweight" market will make the competition for business very keen there also. Competition in the light van trade is already very keen, as private car manufacturers find it a most useful adjunct to their main activities.

Commercial vehicle imports have not shared to any extent in the spurt which has characterised imports of private cars, the total for the eight months October, 1934–May, 1935, numbering only 200, compared with 149 in the previous year. Exports have, on the other hand, shown a substantial increase in total from 8,216, valued at £1,267,376 to 10,206, valued at £1,568,774, although proportionately this represents a decline, as American exports have grown at a much faster rate. The average declared value of complete commercial vehicles exported has increased from £228 to £285, and of chassis from £135 to £150, due probably to an increase in the average size of vehicles exported. The markets showing the best increases in British commercial vehicle and chassis exports include especially South Africa, Denmark, India and the smaller Asiatic countries.

The indications are that the goods vehicle industry has very nearly reached its peak under existing conditions. A further moderate expansion in exports may be looked for, but it is not likely that the absorption capacity of the home market will in the near future exceed its level this year. Nevertheless, sales this season bid fair to establish a record, owing to the exceptionally high level at which they were maintained during the earlier months. The number of goods vehicles in use at the end of June is estimated by the Society of Motor Manufacturers and Traders at 416,000, an increase of 21,000 over last year. This represents a good average increase, but does not reveal any particularly marked tendency on the part of ancillary users to use their own vehicles instead of employing the various public transport agencies. Part of the increase is undoubtedly due to the replacement of large by a greater number of small vehicles. The fact that the "A" licences for whole-time public haulage vehicles come up for reconsideration and renewal next year may possibly cause operators to defer purchases of new vehicles in the coming months, while in other directions there is nothing in the present position to suggest that the level of sales this year will be exceeded next season. It is more probable that they will continue at the same, or at a slightly lower, rate.

ABYSSINIA: SOME FACTS

If and when Italy chooses to state her case against Abyssinia, it is clear that the juridical position of both countries will be a vital issue. We therefore publish the following summary of the international agreements and negotiations which govern the relations of Abyssinia with the League of Nations and the Great Powers. The account is based on a Memorandum compiled by the Information Department of the Royal Institute of International Affairs, which will be available on July 25th.

The relations between Italy and Abyssinia were first regularised by the Treaty of Ucciali in 1889, when, in return for Italian support in his bid for the throne, Menelik of Shoa (later the Emperor Menelik) agreed to "avail himself of the Italian Government for any negotiations which he may enter into with other Powers or Governments." This was unilaterally denounced by Menelik in 1893 owing to Italian encroachments; and after the Italian defeat at Adowa in 1896, the peace Treaty of Addis Ababa in 1896 annulled the Treaty of Ucciali. Meanwhile, in 1891 and 1894 three Anglo-Italian agreements had recognised almost the whole of Abyssinia as belonging to the Italian sphere of influence. In 1902 the Anglo-Abyssinian Boundary Treaty gave Great Britain rights within the recognised Italian sphere, and the Abyssinian Government undertook not to permit any operations diverting the Blue Nile Sobat or Lake Tana (Tsana) waters from their main Nile course.

THE 1906 THREE-POWER TREATY

In 1906, a tripartite Agreement between Great Britain, France and Italy was accepted by the Emperor Menelik. It guaranteed the *status quo* in Abyssinia, as set out in existing treaties. Art. III states: "In no case shall one of the three Governments interfere in any manner whatsoever with Ethiopia 'except in agreement with the other two.' If the *status quo* were disturbed, the three Powers 'shall make every effort to preserve the integrity of Ethiopia. In any case, they shall concert together, on the basis of the Agreements enumerated in the above-mentioned Article (defining the *status quo*) in order to safeguard:"

(1) The interests of Great Britain and Egypt in the Nile basin, more especially as regards the regulation of the waters of that river and its tributaries . . . without prejudice to Italian interests mentioned in para. (2).

(2) The interests of Italy in Ethiopia as regards Erythraea and Somaliland (including the Benadir), more especially with reference to the hinterland of her possessions and the territorial connection between them to the West of Addis Ababa.

(3) The interests of France in Ethiopia as regards the French Protectorate on the Somali coast, the hinterland of this Protectorate, and the zone necessary for the construction and working of the Jibuti-Addis Ababa railway.

This tripartite Agreement of 1906 is still in force.

THE EFFECTS OF THE GREAT WAR

In 1915 under the secret Treaty of London, which brought Italy into the war on the Allies' side, Italy was given the following undertaking by France and Great Britain:

"In the event of France and Great Britain increasing their colonial territories in Africa at the expense of Germany, those two Powers agree in principle that Italy may claim some equitable compensation, particularly as regards the settlement in her favour of the questions relating to the frontiers of the Italian colonies of Eritrea, Somaliland and Libya and the neighbouring colonies belonging to France and Great Britain."

In November, 1919, "as part of a wider negotiation of a Colonial character," Italy proposed to the British Government, *inter alia*, the following offer:

(1) Italy would support Great Britain's claim for a concession to carry out works on a barrage on Lake Tana "within the Italian sphere of influence" as defined in the tripartite Agreement of 1906.

(2) Italy would support a British claim to construct a motor road from Lake Tana to the Sudan.

(3) In return, Great Britain should support an Italian claim to a concession for a railway connecting Eritrea and Italian Somaliland and running to the West of Addis Ababa.

(4) Italy would reserve to herself all rights in the Italian zone.

This offer, according to the British Note to Italy of December 14, 1925 (see below), "was not entertained at the time, chiefly owing to the strong objection felt to the idea

of allowing a foreign Power to establish any sort of control over the headwaters of rivers so vital to the prosperity and even to the existence of Egypt and the Sudan."

Great Britain, France and Belgium had proved to be the revisionaries of Germany's African possessions. Italy could only settle her grievances piecemeal. Her dispute with France over the boundary between Libya and French North-West Africa was quickly settled. Her dispute with Great Britain over the boundary between Kenya and Italian Somaliland was settled by the cession to Italy of Jubaland by Great Britain on July 15, 1924. Lastly, the disputed boundary between Libya and Egypt (then a British Protectorate) was settled by the Italo-Egyptian Agreement of December, 1925.

ABYSSINIA JOINS THE LEAGUE

Meanwhile, these post-war alterations of the map of Africa had perturbed the Ethiopian Empress Judith, Menelik's daughter, and the Regent and heir, Ras Tafari. They feared encroachments upon Abyssinia under pretexts of "cleaning-up" the slave trade and the means to that trade, the arms traffic. The Abyssinian Government consequently applied for League membership in 1923.

The Sixth Committee, which examined her request were divided. Australia, Great Britain and Switzerland were in favour of an inquiry into Abyssinia's capacity to fulfil the obligations incidental to League membership. France and Italy were strongly of opinion that the admission of Abyssinia would pave the way to the abolition of slavery, and would

strengthen the centralising hand of the Government in Addis Ababa. The Italian representative emphatically urged Abyssinia's application, minimised the nature of slavery in arms for her defences as an independent State. A sub-committee of seven was set up (British Empire, Finland, France, Italy, Latvia, Persia, and Rumania), and reported that Abyssinia was a sovereign State with a stable government and well-defined frontiers. But "in order to assist Abyssinia to overcome the difficulties which may in the past have been the obstacles to . . . fulfilment" of her engagements, her admission to the League should be made subject to her signature of a Declaration containing three Articles:

In Arts. I and II, Abyssinia undertook obligations contained in the 1919 St. Germain Arms Convention. This Convention amended the provisions of the 1885 Berlin Act and the 1890 Brussels Act, both relating to the African slave trade and, in particular, to the supply of arms for the express purposes of that trade throughout the whole of Central Africa. (But the 1919 Convention, and the succeeding 1925 Geneva Convention on the Supervision of the Traffic in Arms were never ratified. This led Britain, France and Italy in 1930 to regularise Abyssinia's position, as a sovereign State and a member of the League, with regard to the supply of arms. See below.)

In Art. III "Abyssinia declares herself ready now and hereafter to furnish the Council with any information which it may require, and to take into consideration any recommendations which the Council may make with regard to the fulfilment of these (the above) obligations, in which she recognises that the League of Nations is concerned."

On Abyssinia's signature of this Declaration, the League Assembly unanimously adopted her application for membership by 45 votes on September 28, 1923. She thereupon assumed all the obligations set out in the Covenant and became a member of the I.L.O.

THE 1925 ANGLO-ITALIAN AGREEMENT

In 1924 the British Labour Government entered into negotiations with Abyssinia over Lake Tana, without result.

The succeeding British (Conservative) Government, on their own initiative, concluded an Agreement with Italy in December, 1925, under which, according to the British Note of December 14, 1925 (see above), the British Government undertook, in return for Italian support in obtaining a concession from Abyssinia for a barrage on Lake Tana and a motor road from Sudan to Lake Tana, to support an Italian request for the power to build the desired railway from Eritrea to Italian Somaliland, *via* territory west of Addis Ababa. Further, if Great Britain obtained the Lake Tana concession and if Italy undertook not to tamper with the flow of water into the main Nile, the British Government would promise to

"Recognise an exclusive Italian economic influence in the west of Abyssinia and in the whole of the territory to be crossed by the above-mentioned railway. They would further promise to support with the Abyssinian Government all Italian requests for economic concessions in the above zone."

This Anglo-Italian Agreement conflicted, on the face of it with the terms of the 1906 tripartite Treaty; but on August 2, 1926, Sir Austen Chamberlain told the House of Commons that he believed that "the French were entirely satisfied with the explanations received." Meanwhile, however, quite apart from France's preoccupations, the Abyssinian Government strongly protested to Italy and Great Britain against the Anglo-Italian Agreement and its terms; and they finally protested to the League. The matter never came before the Council. For Great Britain and Italy published modest "interpretations" of their 1925 Agreement, which, according to these explanations, merely secured Great Britain against Italian rivalry in the obtaining of the Lake Tana concession, and secured Italian against British commercial competition in the zone of Italy's "exclusive economic interests."

THE 1928 ITALO-ABYSSINIAN PACT

On August 2, 1928, Ras Tafari signed a 20-year Pact of Friendship and Arbitration with Italy. By Art. II of that

Pact, both Governments pledged themselves not to take any action detrimental to the independence of the other. Art. V runs:

"The two Governments agree to submit to a procedure of conciliation or arbitration any questions which may arise between them and which it has not been possible to settle by the usual diplomatic means, without having recourse to the force of arms. By common agreement, Notes shall be exchanged choosing arbitrators."

ABYSSINIA AND THE ARMS TRAFFIC

In August, 1930, Ras Tafari entered into a Treaty with Britain, France and Italy (now in force) concerning the traffic in arms. Neither the St. Germain nor the 1925 Geneva Arms Convention had received sufficient ratifications to enter into force. Great Britain, France, Italy and Abyssinia therefore regularised the position among themselves, with the double object of enabling the Emperor of Ethiopia

"To obtain all the arms and munitions necessary for the defence of his territories from external aggression and for the preservation of internal order therein,"

and of preventing acquisition of arms by unauthorised agents. The 1930 Treaty empowered Abyssinia to order arms abroad, but laid down that imports into Abyssinia should only be allowed under signed and sealed order of the "Emperor or his authorised representative."

THE 1935 FRANCO-ITALIAN AGREEMENT

On January 7, 1935, M. Laval and Signor Mussolini in Rome came to an agreement over Franco-Italian disputes concerning their respective spheres of interest in North Africa. France gave Italy 2,500 out of 34,000 shares held by France in the Jibuti-Addis Ababa railway; a strip of territory adjoining South Libya; and another strip adjoining the southern frontier of Eritrea. This agreement was greatly to the advantage of France, especially in her European policy, and it was credibly reported that France had come to a clear understanding with Italy over Italian aims in regard to Abyssinia. On June 19th last, however, M. Laval, before the Foreign Affairs Committee of the Chamber, categorically denied that the French Government had agreed to leave Italy "a free hand" in Abyssinia.

NOTES OF THE WEEK

Mr Lloyd George's Proposals.—The document which Mr Lloyd George submitted to the Cabinet, and which forms the basis of his "New Deal" proposals, was published as a pamphlet* on Tuesday. Mr Lloyd George starts his argument by describing the ravages of unemployment in the depressed areas. The distress in these areas is mainly due, he thinks, to two causes: the decline in exports and the displacement of labour by the machine. Both causes are likely to operate, in some degree at least, for some time to come; accordingly the nation must face the problem of dealing with an irreducible minimum of 2,000,000 unemployed workers. In the next section of the pamphlet Mr Lloyd George establishes with some care that there are idle savings as well as idle men; he estimates the surplus of unused savings at about £200,000,000 a year. Accordingly his main proposal is that a National Development Board should be set up, charged to act as a permanent authority for reviewing, guiding and planning the economic progress of the nation and directing its financial resources into the most beneficial channels of investment. To assist the Board in developing its plans, it is urged that the Cabinet should be reconstituted on War Cabinet lines, and should consist of the Prime Minister and four or five colleagues without departmental responsibilities but free to concentrate on the formulation and initiation of policy. The bulk of the pamphlet is taken up with suggestions for the sort of projects which might be put in hand by this Board. None of these, except the projects of land improvement and land settlement, is described at any length; they range in variety from housing and town planning to the improvement of all forms of transport, by road, rail, air and canal, as well as coastal shipping. Electrification plays a large

* "Organising Prosperity." By the Rt. Hon. David Lloyd George, O.M., M.P. Ivor Nicholson and Watson. 6d. net.

part and land settlement, as might have been expected in view of Mr Lloyd George's known opinions, an even larger part. The Government's reply is to be published on Monday and is believed to amount to a rejection of the majority of Mr Lloyd George's specific proposals; though it is unlikely that such an uncompromising attitude will be taken up on the main issue of financing public works by borrowing as that which became known as the "Treasury View" in 1929. Indeed, this main issue is so much more important than the practicability of this or that individual project that it will be a very great pity if the controversy is allowed to degenerate into a wrangle over details. If the Government is convinced of the necessity of initiating works of this kind, plenty of worthwhile projects can be found, either in Mr Lloyd George's list or outside it. Indeed, the private citizen is hardly in a position to compile a list of projects, the details of many of which can only be available to the Government or the local authorities. The merit of Mr Lloyd George's pamphlet is that it discusses the case for public works in the conditions of 1935. That case is usually argued, both for and against, in far too general terms, and Lord Snowden is undoubtedly right in maintaining, in the pamphlet which we reviewed in the *Economist* of March 30th last, that there are times for starting public works and times for stopping them. This being so, it is obvious common sense to set up an impartial and permanent body to watch the development of the economic situation and to adjust the programme of capital works, and the borrowing that is necessary to finance them, to the needs of the moment. If Mr Lloyd George's initiative leads to no more than the creation of such a National Development Board, it will have taken us a long step farther in the evolution of the technique of preventing, and curing, cyclical depressions.

The Special Areas.—Mr Lloyd George has received a certain amount of fortuitous support from the First Report of the Commissioner for the Special Areas, which was issued on Wednesday. Mr Malcolm Stewart has written a careful, informative and sympathetic report which should be very widely read. But if the hope is still cherished in any sections of the Government's supporters that the appointment of Commissioners would advance more than an inch or two the solution of the problem of the Special (*nées* Depressed) Areas, the publication of this Report will effectively kill it. For the atmosphere of gloomy frustration which hangs over the Report, three reasons can be given. Much the most potent is, of course, the intractable nature of the problem itself, which is not removable by any number of Acts or the most complete change of heart. But the other two reasons could be remedied. In the first place, Mr Stewart makes it clear that the terms of the Act and their interpretation have very seriously hampered him. He has to obtain the sanction of the Ministry of Labour for any expenditure, which makes him "as much subject to orthodox financial control as any Government Department." He cannot assist works which relieve unemployment unless they also contribute to the economic development of the areas. He cannot supplement grants already made or offered by a Government Department; nor, as the Act has been interpreted, can he assist projects of a kind which *might* be eligible for a grant if the relevant Department chose to make it. This interpretation has precluded him from making any grants, for example, for roads, even where they are essential and integral parts of schemes of industrial site improvement, and, being dead-ends, would not in any case receive a grant from the Ministry of Transport. He cannot go outside his areas, even to set up hostels in more prosperous areas for men who have been transferred; he cannot assist any enterprise working for profit; he cannot even appoint assistants without the consent of the Ministry of Labour and the Treasury. This is a formidable catalogue of limitations and rather effectively makes nonsense of the Government's contention that the Commissioner has been given a free hand. He has, in fact, been set the impossible task of finding methods of rescuing the Special Areas from their plight without trespassing on the activities, actual or potential, of any other branch of the Government or any form of private enterprise. No wonder he has achieved very little.

Remedies and Palliatives.—The second removable cause of the pessimistic tone of the report lies in the basic assumption with which the Commissioner approached his problem. He takes it for granted that the export trades, upon which the Areas are mainly dependent, will never again be able to employ a substantially greater volume of labour than they do at present, and his efforts are consequently directed in the main to methods of persuading new industries to move into the Areas and the present population to move out. In the case of coal, for example.

The over-riding conditions under which favourable exports were enjoyed have ceased to exist. Will it not require every effort to retain the present not too secure position so long as a protective policy is a national need? Much improvement of the export trade for coal in the near future can hardly be looked for.

This is unduly pessimistic. Mr Stewart himself points out that exports of coal in 1934 were, by volume, less than two-thirds of those for a year as recent as 1929. Nor does his significant proviso "so long as a protective policy is a national need" really meet the case. An intelligent commercial policy, even without the abandonment of tariffs, could very greatly increase our exports. It is, of course, true that exports of steel, coal and ships will never be large enough to absorb all the unemployment in the Special Areas. The sort of palliative measures which Mr Stewart proposes will therefore in any case be necessary. The report has a number of interesting suggestions for measures that could be taken in the Special Areas themselves—"self-help" schemes, "buy locally" campaigns, a special fund for the provision of capital for new industries migrating into the Areas, etc.—but he places his main reliance upon measures for increasing prosperity, and the demand for labour, in the country at large. It is here that he comes significantly

close to Mr Lloyd George. For his main suggestions are public works; the extension of education, though of a technical and physical character, up to the age of 16; the provision of pensions at 65 sufficiently large to encourage workers to retire from industry; the reduction, wherever possible, of hours of work. All these are measures which appear among Mr Lloyd George's proposals and all are also measures which the present Government has certainly not accepted and may, by Monday, have decisively rejected. To an appeal which is undoubtedly popular with the electorate and has now received such powerful unexpected support, the Government can hardly continue to turn a deaf ear, in spite of their dislike of some of the political implications of Mr Lloyd George's Council of Action. Mr Malcolm Stewart has joined Mr Lloyd George in forcing the question of Economic Reconstruction upon the attention both of the public and of the Government as one of the major issues of the coming General Election.

A Stirring in Germany.—Ever since the spring the Nazi Brownshirts (S.A.) and Blackshirts (S.S.) have been politically astir again in Germany. The offensive against all "foes of the regime" was intensified by violent attacks, even of a physical order, upon both Protestant and Catholic priests and officials. Indeed, both Churches have gradually become victims of the Nazi fanaticism for the totalitarian State which is inflamed by the notorious Dr. Alfred Rosenberg. His neo-pagan cult is being forced on the youth movement throughout Germany; and this the Churches are bound to withstand with their very life-blood. More recently, the wave of anti-Semitism surged upward once more, at the behest of Dr. Goebbels, the Minister of Culture and Propaganda, and of Nazi Provincial Governors like Julius Streicher, of Franconia, Mutschmann of Saxony, and Sprenger of Hessen. Apparently the Jews have been adjudged guilty of "inference," which consists simply in their having ventured forth into cafés and theatres again. As a consequence, all the powers of Dr. Goebbels, the local Governors, the omni-present Secret Police, and the Blackshirt detachments have been let loose during the last few days against the Jews. The offensive reached its climax in Berlin this week, when Jews in cafés, theatres and the streets were manhandled by Brownshirts and other Nazis. The authorities, having allowed Dr. Goebbels to foment such trouble, immediately blamed "certain turbulent elements" which were goaded to action by the "manifest public disapproval" of the conduct of the Jews. But there is more in all this Nazi turbulence than anti-Semitism or religious intolerance; for the Nazi Press, which is under Dr. Goebbels' complete control, has been let loose in an onslaught on monarchists, nobles, and feudal landlords *à propos* a Heidelberg Korps students' rowdyism. And this week the Nazi attack has veered to the Stahlhelm, whose meeting with the delegates of the British Legion in Berlin was cancelled at the last moment. Are the spirits of those who perished on June 30th last year now walking in the Nazi ranks? If so, who is calling the Nazi tune? And how will the piper be recompensed? These are the questions which Nazi conduct prompts. Whatever the answers, it seems that the state of Germany is scarcely totalitarian; it is more like one of acute divisions and grave tension.

The Roumanian-Jugoslav Conversations.—There has been no more significant commentary upon Sir Samuel Hoare's speech than the report of the conversations which took place two days later, on July 12th, at Sinaia, between King Carol of Roumania and his Prime Minister, M. Titulescu, on the one side, and the Regent of Yugoslavia, Prince Paul, on the other. The Yugoslav and Roumanian statesmen evidently found it advisable to persist in what one might almost call their "traditional" post-war policy, instead of plunging into new and hazardous courses. They will stick to the French Alliance notwithstanding the doubt whether it might not be wiser to follow Poland's example and to make friends with a resurgent Germany quickly, while they are in the way with her,

instead of waiting to see how she may choose to deal with them if and when she fully recovers her strength. For the time, at any rate, these rather risky ideas seem to have been rejected by the Yugoslav and Roumanian Governments; and it is extremely interesting to observe one point which has evidently counted for much in their minds. This is the present attitude of the British Government towards East European affairs, as indicated in Sir Samuel Hoare's speech. Evidently in that region it is felt that British policy may be the determining factor in East European destinies. If the British Government declares itself, even rather platonically, as opposed to any change of the *status quo* by brute force, this British attitude—it seems to be felt by the people on the spot—may avail to make it impossible for "the Third Reich" to change the *status quo* to her own liking.

Europe and Africa.—It is not difficult to read between the lines of the report from Sinaia that a significant intention, on Great Britain's part, to disinterest herself in Continental affairs might precipitate an East European *saute qui peut*, in which every successor-state would compete with every other in a panicky race to make the best terms with Germany that could be coaxed from her. But if Great Britain does really hold the balance in Eastern Europe, this is a political factor of first-class importance; for the British public—and therefore the British Government—can never be induced to undertake responsibilities in Eastern Europe as a mere matter of power-policy—simply in order to keep Germany weak and Germany's neighbours strong. Our interest in Eastern Europe is essentially one of principle. We are concerned—there, as elsewhere—to uphold the fundamental principle of the collective system: that there shall be no change of the *status quo* except by peaceful and orderly means. But this British interest in the maintenance of League principles applies to Africa no less than to Eastern Europe; and French statesmen ought to realise that, if they allow the League to suffer shipwreck on East African rocks for the sake of an Italian alliance, they will be destroying the only possible basis for collaboration between France and England in Europe. It is now fairly certain that the Council of the League will meet on July 25th or 26th to decide the sequel to the breakdown of the Conciliation Commission's attempt to heal the Italo-Abyssinian breach. The paramount necessity, which Lord Cecil urges this week in a cogent article in the *News-Letter*, is that the two disputants should be brought to state their grievances before the Council. Here is a clear line for British and French statesmen to follow. And only along that League line can this country work for both the League's and its own interests.

A Surprise from West Toxteth.—The result of the West Toxteth by-election is interesting and in some respects surprising. A Conservative majority of 5,635 in 1931 has been converted into a Labour majority of 5,343. The full figures, however, are more significant:—

	1929	1931	1935
Conservative.....	16,309	20,613	9,565
Labour.....	19,988	14,978	14,908

The most obvious feature is the heavy fall in the total vote. Only 25,000 persons, or 53 per cent. of the electorate, voted this week compared with about 35,000 in 1929 and 1931. The Labour poll was slightly less than in 1931, but the Conservative poll actually fell by over 50 per cent. To some extent, no doubt, normal by-election apathy affects Conservative more than Labour voters; and in this case the Conservative candidate was by all accounts not a happy one. Not only was he locally unknown, but both Lady Houston and Mr Randolph Churchill insisted on supporting him. It would be rash, however, to attribute too much weight to these peculiar factors. The voting at West Toxteth suggests that there has been a considerable weakening in the electoral influence of the Jubilee celebrations and the re-armament of Germany, which a few months ago were

supposed to be making the triumphal re-election of the present Government a virtual certainty. Indeed, the sweeping deductions, made by commentators of all parties, from the Scotch by-elections of the early summer were never very securely grounded. At West Toxteth neither the Jubilee nor the Hitlerite menace were the dominating issues. The Labour candidate based his case against the Government on the economic distress imposed on our great exporting districts by our present quota and tariff policy. And the result showed that Mr Baldwin's new Government will not arouse any enthusiasm, at any rate in Northern industrial areas, as long as it refuses to face this issue. But has the Labour Party any more realistic solution to offer? Apparently the electors were doubtful. It would be interesting to know how a candidate supporting Mr Lloyd George's programme would have fared this week at West Toxteth.

The Beef Subsidy.—The beef controversy has now been laid to rest until October, 1936. Twelve months' undignified negotiation and vacillation have thus been brought to an end. But the end is as lame and impotent as it could well be. A year ago a subsidy was introduced and scheduled to run from September until March. The alleged purpose of the subsidy was to give the Government time to persuade Argentina and the Dominions to renounce their rights under Ottawa and the Argentine Agreement. These agreements forbade either the imposition of a duty on any imports or the imposition of a quota on foreign imports alone. Unless both the Dominions and Argentina, therefore, waived their Treaty rights, the only alternatives before the Government were a general quota or a continued subsidy. In these circumstances we expressed some scepticism about the "temporariness" of the subsidy. The Government announced boldly, however, in a White Paper issued in February, that if the levy was not voluntarily accepted, "the only practicable means at present available" for subsidising the home farmer "is a drastic reduction of importation to the United Kingdom from all sources." Was this bluff? Or has the Government since changed its mind? Or has the approach of the General Election made food taxes seem less attractive? At all events, the subsidy was extended from March till June, then from June till September, and now from September till October, 1936. Nominally Mr Elliot believes that agreement may yet be reached before November, 1936. But this may be dismissed as no more than a pious hope. Presumably, the Government has decided that it dare not provoke the resentment of the Dominion producers by the imposition of a quota more drastic than the present voluntary one. This at any rate seems a more probable explanation than that any solicitude for the British consumer is responsible for the continuance of the subsidy. For Mr Elliot still reiterates his intention to impose a "levy subsidy" after the expiry of the Argentine Agreement, and so at long last to transfer the burden from the direct taxpayer to the consumer. Will this, however, be so easy? There is a faint possibility that Mr Elliot may not be Minister of Agriculture in November, 1936. Moreover, a new Agreement with Argentina will clearly be necessary when the present one expires. And, in negotiating this agreement, Argentina has some very solid bargaining counters in the shape of the substantial debt she

owes and the numerous goods she buys. There is still, of course, the possibility that a rapid increase in purchasing power and consumption in this country might render further protection unnecessary by the end of 1936. But the secular trend of taste against beef, and the intensification of protection in other importing countries, unfortunately, make this improbable.

* * *

Hiding the Subsidy.—The Minister of Agriculture has been even more than usually before the attention of the public during the past week. For in addition to the extension of the cattle subsidy and the chronic difficulties of the Milk Marketing Scheme, he has also been asking the House of Commons for more money for the beet sugar industry. The debate did not differ very widely from the many previous beet sugar debates, except that the tone of the supporters of the subsidy is becoming notably more apologetic. The discussion was, however, enlivened by a further development by Mr Amery of his ingenious argument that the subsidy costs nothing. "I contend," he said, "that if you give a person a subsidy which you at the same time take away in the form of excise, you are, in fact, giving him nothing." Now it is true that excise duty is paid on sugar manufactured from British beet, and that the rate of excise is nearly as large as the rate of subsidy. But it happens also to be true that all other forms of sugar pay a very much higher rate of duty, and in calculating the cost of assisting the beet sugar industry the amount of duty which the Exchequer loses through the rebate of excise is quite rightly added to the cost of the actual cash subsidy. But now Mr Amery comes along, forgets all about the rebate and proceeds to deduct from the subsidy the excise that is paid on domestic sugar, triumphantly convincing himself and anybody else who is willing to be equally purblind that the subsidy costs nothing at all! The only wonder is that Mr Amery did not also subtract the income tax paid by the beet sugar companies, their cheque stamp duty and their motor vehicle licence duties and prove that the Treasury was actually making money out of the industry. Both protection and beet sugar have the peculiar quality of making their devotees talk all sorts of fantastic nonsense and dub it economics. But when the two cults are united in the person of Mr Amery, the result is to leave mere rational mortals breathless.

* * *

Cheap Electricity?—At last we are to have a Government examination of the distribution of electricity. The Minister of Transport has appointed a committee of three (Sir Harry McGowan, Sir John Snell, and Mr John Morison) to—

bring under review the organisation of the distribution of electricity in Great Britain, including the control of statutory electricity companies by other companies, to advise on methods by which improvements can be effected with a view to ensuring and expediting the standardisation of systems, pressures, and methods of charge, further extending facilities (including supplies in rural areas) and reducing costs, and to make recommendations.

This preliminary step towards cheap electricity is long overdue, for although critics of the existing chaos in electricity distribution may disagree over the sources of the confusion and the methods by which it can be remedied, most are agreed that drastic steps must be taken by someone. Time and again, attention has been drawn to the drawbacks of our present system which divides up the country into 373 local authorities, 254 companies, 8 joint authorities and boards, and permits supply of electricity at 45 different voltages between 100 volts and 480 volts, from 284 undertakings which supply A.C. only, 279 supplying A.C. and D.C., and 92 D.C. only. Over 1,000 different ways of charging for one commodity must surely be a world's record! Electricity supply is an industry which cannot fulfil our legitimate expectations without standardisation at every point from generating station to appliance; and until the supply system and commercial organisation are overhauled both technically and economically, the work already done through the Central Electricity Board will be unable to yield its maximum results. It is fitting that the

Committee is to review "the control of statutory electricity companies by other companies," i.e. holding and management companies. These are institutions which have great power for good and for evil, and no scheme of reorganisation would be complete which did not refer to them. Whatever the Committee investigates it is bound to find some opposition, for there is always resistance to change; the Committee can only achieve what the public expects if it takes as its motto President Roosevelt's dictum on the same subject "when public and private interest conflict, the public interest must prevail." And when the Committee makes its recommendations, we hope for speedy legislation and no repetition of the long delays and obstructions which preceded the formation of the Central Electricity Board.

* * *

More Money for the Air Force.—The Supplementary Estimate rendered necessary by the Government's undertaking on May 22nd to accelerate the Air Force expansion scheme was published on Tuesday. The sum required is £5,335,000, of which £3,150,000 is for new machines, engines, and equipment of formations. Of the latter sum, £2,725,000 is for aeroplanes and spares, bringing the total revised Vote under this head to £9,621,000. The Air Minister points out that most of the cost of the new programme will fall in the coming financial year, 1936-37, at the close of which the objective of 123 squadrons and 1,500 first-line aircraft is to be reached. Even so, nearly £5.3 millions on top of an original estimate of £23.9 millions is striking evidence of the scope and rapidity of this year's expansion. Of the 2,500 new pilots for which the scheme provides, it is anticipated that 1,300 will be recruited this year. An additional vote of £947,500 is asked for under the heading of New Works. Additions and alterations, of which nearly a half is apparently required in connection with the speeding up of works already authorised—the balance being needed for additional items now to be included in the programme. The civil aviation companies do well out of the Supplementary Estimate, for under Vote 9 an extra £140,000 is required for "payments to civil companies for preliminary flying training of regular personnel," as compared with only £19,000 in the original Estimates. Evidently, the new programme has put a sudden strain on the training capacity of the Air Force. In default of a general international agreement to limit and reduce national air forces, the nations of Europe are in full flight on an armament race. The effects on the German, Italian and French finances are already evident in budgetary and fiscal difficulties. In our own case, the Supplementary Air Estimate raises the total of Supplementary Estimates presented in the first three months of the current financial year to £11,734,412—of which £3.4 millions were for Public Assistance, £2.8 millions for the Beet Sugar Subsidy and the present £5.3 millions for the Air Force. The Chancellor of the Exchequer allowed only £4.0 millions in the Budget for "several items not included" in the Supply Services. The Government has already pledged three times that sum; and almost half of the total is to go "in the air."

* * *

British Shipbuilding.—In contrast with the expansion of activity in the majority of capital equipment industries, mercantile shipbuilding has made no headway at all since the beginning of 1935. The latest returns issued by *Lloyd's Register* actually show a decline in the tonnage of mercantile vessels under construction as compared with a year ago. Thus, the gross tonnage under construction in this country at the end of June was 560,321 tons, against 555,815 at the end of March and 587,142 a year ago. On the other hand, work in hand abroad rose from 629,198 gross tons at the end of June, 1934, to 713,719 at the end of March and 722,210 at the end of June, 1935. As a result of the relative improvement abroad, the British declined from 48.3 per cent. at the end of June, 1934, to 43.7 per cent. at the end of last month. The tonnage under construction in this country at the end of June for registration or for sale abroad was 14 per cent., as com-

pared with 15.3 per cent. a year ago. Of the total mercantile tonnage under construction abroad at the end of June, Germany accounted for 237,045 tons, Sweden for 94,473, Holland for 75,446, Japan for 65,970 and Denmark for 65,753. The steamer is still holding its own in this country, for of the total tonnage under construction in this country at the end of June, only 43.5 per cent. are motor ships, as compared with 70 per cent. abroad. Unfortunately, the immediate outlook for the British shipbuilding industry is not bright, for the gross tonnage commenced in the second quarter of 1935 was only 108,122 tons, as compared with 144,386 in the first quarter and 146,653 during the corresponding period a year ago.

* * *

Sterling and International Prices.—There is some evidence that the decline in British and American prices, which began at the end of May, is now being arrested. During the past fortnight the *Economist's* complete British wholesale price index number has only fallen by 0.2 per cent., while primary products have fallen by less than 0.2 per cent. In the United States the complete Irving Fisher index number has also fallen by only 0.2 per cent., while primary products have risen by 0.4 per cent. There is no evidence that the Boston judgment against the constitutionality of processing taxes has yet affected the American prices of wheat or cotton, but the case has still to come before the Supreme Court. On the Continent, French prices continue to fall, and there has been a rather more rapid rise in German prices. The latest available Italian index number shows that the advance in Italian prices is continuing.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	June 19, 1935	July 3, 1935	July 10, 1935
Cereals and meat	64.5	71.1	68.4	66.3
Other foods	62.2	60.1	59.1	59.0
Textiles	43.7	55.0	55.5	56.4
Minerals	67.4	78.1	78.7	79.7
Miscellaneous	65.8	75.3	75.0	75.0
Complete index...	60.4	68.1	67.5	67.4
1913 = 100	83.1	93.7	92.9	92.7
1924 = 100	52.2	58.8	58.3	58.2

Most food prices are lower than a fortnight ago. The decline is most marked in barley, Argentine beef, and Danish bacon, but wheat, flour and maize have all fallen by about 4 per cent. There has been a slight recovery in

tea. Among textiles, raw cotton is a shade cheaper, but there have been sharp rises in wool and hemp. Flax is at last beginning to decline from the high prices touched earlier in the year. In the minerals group, non-ferrous metal prices are all higher, the recovery being greater in the case of lead and copper. Miscellaneous materials were irregular. Hides, leather and linseed oil are dearer, but rubber, tallow and creosote are slightly cheaper.

* * *

Iron and Steel Production in June.—Activity in the iron and steel industry remained at a high level during the past month. The returns of the British Iron and Steel Federation show that production of both pig iron and steel ingots and castings in June was substantially higher than in the corresponding month a year ago. Calculated on a daily basis, the output of crude steel rose from 32,200 tons in June, 1934, to 35,600 tons in May and 35,800 tons in June, 1935:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9
1932 " "	297.3	498.5	132.7	157.4
1933 " "	344.7	585.3	80.9	180.2
1934 " "	498.2	738.3	113.9	187.8
1935—				
May	527.9	780.0	122.2	190.6
June	514.9	757.5	98.0	204.1
July	528.3	718.2	126.4	197.1
August	503.3	667.0	102.2	193.4
September	500.3	734.7	89.5	198.0
October	527.1	812.0	120.2	220.9
November	507.6	766.0	104.1	219.9
December	513.5	654.5	114.5	186.8
1935—				
January	521.2	757.8	130.5	181.2
February	483.1	769.5	103.3	172.9
March	554.2	841.9	126.0	175.8
April	526.3	808.7	62.7	240.9
May	558.9	853.3	86.4	213.9
June	529.3	770.0	98.2	195.1

Imports of iron and steel materials in June were slightly higher than in May, but almost unchanged as compared with a year ago. On the other hand, exports show a reduction on May and on the corresponding month a year ago, but it must be remembered that June, 1934, contained two more working days than the past month, on account of Whitsun. South Africa, Canada, British India and the U.S.S.R. were our best customers in June, but exports to South Africa, British Malaya, Finland, Denmark, China and Argentina showed a substantial reduction as compared with a year ago. The decline in exports to these countries was only partly offset by increased shipments to British India, Canada and the U.S.S.R. There has been no significant change in prices of iron and steel materials in recent weeks. Negotiations concerning the details of the five-year agreement between the British Iron and Steel Federation and the Continental Crude Steel Cartel, which should come into force on August 8th, have not yet been concluded. Meanwhile, there has been a seasonal decline in the demand for iron and steel, but the outlook for the principal consuming industries, including engineering, building, and motor vehicle construction, remains good.

* * *

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 0.4 per cent. during June, following a rise of 0.4 per cent. during May. The current figure of 84.0

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)

Annual Income : : : £5,900,000
Funds : : : £24,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

compares with 83.8 in June last year and 81.9 in June, 1933. Details of the index number are as follows:—

	Average, 1913	June, 1934	April, 1935	May, 1935	June, 1935
European Waters	110.0	86.7	89.1	87.9	91.4
North America	113.1	76.6	82.2	81.7	79.8
South America	123.4	80.6	79.6	80.1	82.4
India	106.3	88.0	90.8	88.7	86.5
Far East and Pacific	117.4	86.3	80.1	79.2	77.7
Australia	127.9	84.6	78.3	84.6	86.4
	116.3	83.8	83.4	83.7	84.0

Reports from many centres are a little more encouraging. Newcastle states that the improvement in the Mediterranean market has been maintained, while Hull freights remain steady. The Cardiff freight market is firm, particularly for large vessels, the main weakness being in routes to the Bay. At Liverpool the homeward River Plate market has hardened, and enquiry for outward coal tonnage is well maintained. Eastern freights are weaker. Demand for

shipping at Glasgow is confined chiefly to the Baltic. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	87.2	+10.4	South America—		
Bay—outwards	104.6	+1.9	Outwards	65.7	+1.7
Bay—homewards	88.7	-3.2	Homewards	99.2	+3.0
Mediterranean—			India—outwards	82.8	+0.7
Outwards	105.2	+2.4	India—homewards	90.2	-5.0
Homewards	75.4	-1.1	Far East, etc.	77.7	-1.5
North America	79.8	-1.9	Australia	86.4	+1.8

Expressed as a percentage of the average for 1913, the total figure of our index number for June is 72.2, compared with 71.9 for May and 72.0 for June, 1934.

Italy's Mobilisation.—In last week's Italian letter, owing to an error in transmission, it was stated that "the dispatch to the Colonies of 600,000 to 700,000 more young men has obviously eased the labour market." This should have read "the dispatch to the Colours," etc.

UNITED STATES

THE INCREASE IN BANK DEPOSITS

THE increase in bank deposits continues to be the most spectacular feature of American statistical data. In the calendar year 1934 the net demand deposits of the Reporting Member Banks rose by some \$2,700 millions, while their total loans and investments rose by \$1,600 millions. The latter increase is considerably less than the purchase of Government and Government-guaranteed obligations.

In the first half of 1935 the net demand deposits of these same banks have risen by about \$1,700 millions, but their total loans and investments have been increased by only about \$400 millions. In this six-month period virtually all of the increase has been in Government and Government-guaranteed securities; although there has been no great decline in either loans on securities or in the various categories of commercial loans.

These net demand deposits have been fed by the transfer to private account of over \$500 millions of Government deposits, which were at an extremely high level at the end of 1934; and by the imports of gold, which have come close to \$800 millions in the first half of 1935. In other words, while in both years gold imports contributed heavily to the expansion of bank deposits, in 1934 the continuous financing of the deficit by the banks was the greatest single factor in expanding them. In the first half of 1935 there was a small decline in the interest-bearing public debt; and while the banks increased their holdings of Government securities, they did so by purchase from the public, rather than from the Treasury. This fact was a reason for the extremely low rates on which the Treasury refinancing was conducted; while the form that much of this refinancing took (from bonds to short-term securities) was probably conditioned by the desire of the Treasury to provide securities acceptable to the banks, and the hesitancy of the banks to accept long-term issues on the basis of prevailing money rates. The net effect was, of course, to reduce the average interest charge on the public debt, which at the end of June was stated to be 2.71 per cent.

Neither the fall in money rates nor the modification of the Securities Act has developed a demand for new capital on the part of corporations. While there has been a marked revival in the issue market this spring, it has practically been confined to refunding operations.

The history of the Reserve Banks during this period has been the counterpart of that of the Member Banks. The only change in the statement reflects the gold imports; for the monetary gold stock has risen by \$879 millions, and this combined with the reduction of Treasury balances with the Reserve Banks has lifted the member bank reserves above \$5,000 millions, or at least double the legal requirements.

The demand for currency, however, is substantially higher than a year ago. The figure at the end of June was up almost \$200 millions over the previous year. This corresponds roughly with the increase in silver certificates in the period; but it is somewhat unexpected, none the less, for most people had anticipated that the return of currency from hoarding would offset any expansion in the demand for hand-to-hand currency arising from increased pay-rolls. One of the outstanding features of United States monetary data is the small reflux of the large-denomination currency which was hoarded during 1931. The persistence of this "hoarding" is almost certainly not due to lack of confidence in the banking system; possibly it can be attributed to the nominal yields on short-term securities, which make a non-interest-bearing obligation of the Government equally attractive and less troublesome. The same explanation would account for the retention by the public of considerable amounts of matured Government securities, on which interest has ceased.

AN IMPORT SURPLUS IN MAY

The foreign trade figure for May showed imports of \$170.5 millions and exports of \$165.5 millions, giving a passive merchandise balance of \$5 millions. Net gold imports amounted to \$140 millions and net silver imports to \$10.6 millions. For merchandise, exports were \$5 million above May, 1934, but imports were \$16 million higher, thus continuing the general trend of recent months. For the year to date the figures are as follows:—

FOREIGN TRADE OF THE U.S. FIRST FIVE MONTHS (\$000,000)				
Merchandise exports	1934	1935		Change
Merchandise imports	866	854		- 12
	728	838		+ 110
Export surplus	138	16		
Silver exports	5	11		+ 6
Silver imports	14	81		+ 67
Import surplus	9	70		
Gold exports	7	1		- 6
Gold imports	782	575		- 207
Import surplus	775	574		

For the first five months of 1934 the visible balance was passive by \$646 millions. For the first five months of 1935 it was passive by \$628 millions; increased imports of merchandise, and silver having displaced almost \$200 millions of gold imports. Gold imports in June, 1935, however, were extremely heavy; but it is noteworthy that as soon as the flurry over the gold currencies ended, their exchanges rallied smartly to a level that shut off the gold movement. It is understood, however, that the Treasury has been a substantial purchaser of silver.

NEW YORK, July 5.

FRANCE

THE NEW BUDGET CUTS

THE Government's new decree laws, which will result in total economies and new revenues of 10,959 million francs [about £147 millions], are divided between the different Budgets as follows:—

	(Million francs)
State Budget (economies and new taxes) ...	7,063
Caisse d'amortissement	195
Departments and communes	1,385
Railways (July decrees)	1,066
Railways (previous decrees)	1,250
Total	10,959

These decrees include the following measures: the suppression of abuses and pluralism; the abolition of certain special items of excessive expenditures; an increase of the tax on income from bearer securities; an emergency levy on incomes over 80,000 francs; and a special tax on profits realised by businesses working for national defence, etc. But the main deflationary weapon is the cut of 10 per cent. in all State payments, including interest on the National Debt. This levy hits both civil servants, war pensioners and rentiers. The total of 11,000 million francs of economies should be sufficient to cover the deficit—provided revenue does not fall further.

Others of the decree laws are intended to stimulate economic activity by lowering prices. There is to be a reduction of 10 centimes in the price of bread, a reduction in the charge for gas and electricity, a reduction of 5 to 15 per cent. in the price of coal and of 10 per cent. in rents, etc. Finally, a general decree suspends inconvertibility clauses in loans; so that any debtor who has hitherto had to conform to such a clause can henceforward repay his creditor, after due notice, if he can find the necessary capital on better terms.

The Government maintains that the sacrifices demanded are being equally shared by everyone. They affect industrial securities as well as rentes, and private capital as much as official salaries. Devaluation is once more firmly rejected on account of the "social repercussions" which it might have in France. The Government's position is stated as follows:—

It does not seem possible that in a country where speculation is easily stimulated, where the people are excitable, and where political passions abound, devaluation could be carried through peaceably and calmly. In present circumstances only the blind could believe in the possibility of an ordered and scientific currency revision. The immediate reaction of the French public, with its present state of mind and traditions, is to treat with grave suspicion any suggestion of an ordered adjustment of our currency. In our country there could only be a sudden, brutal collapse of the franc, accompanied by all the disturbances, injustices, and discontents which can already be sensed in the general public unrest.

The new decree laws have already led to protests. But there has been no suggestion of a general strike or of a strike against tax payments. The Confédération Générale du Travail has apparently thought it expedient to leave its constituent organisations to take their own decisions about any further action. If this mood continues, the Government will have succeeded in restoring financial equilibrium with the least possible psychological disturbance and without being forced into devaluation.

BIG FALL IN BUDGET REVENUE

Budget revenue in the second three months of 1935 showed an even greater falling off than in the first three months. The deficiency, compared with the estimates, of receipts from indirect taxation was 798 million francs in January, February and March; and 1,264 millions in April, May and June. There is not yet any figure for receipts from direct taxation, but they have undoubtedly fallen off. The Minister of Finance will certainly have to present to the Chamber supplementary estimates, which will naturally swell the deficit.

If ordinary Budgetary receipts for this year are compared with those of 1934, a shrinkage of 1,346 million francs is apparent; made up of a fall of 769 millions in

direct tax receipts, a fall of 590 millions in indirect receipts, and an increase of 13 millions in receipts from State lands. The shrinkage of revenues has been particularly severe in the second three months of the year. The turnover tax, in particular, yielded only 1,427 million francs in April, May and June; a fall of 329 millions compared with the estimates, and 179 millions compared with the same three months of 1934. Apart from the turnover tax, the total Customs revenue in April, May and June, 1935, was 18 per cent. below the estimates. Finally, Stamp Duty receipts, including receipts from Stock Exchange operations and from the duty on bearer bonds, amounted to 2,007,109,000 francs. This is a fall of 287,720,000 francs compared with the estimates, and of 128,971,000 compared with 1934.

The deficit, in fact, for the financial year, 1935, must be put at 6,500 million or 7,000 million francs, apart from the railway deficit, which exceeds 4,000 millions. The Government is insisting on the gravity of this total in order to justify its economy decrees.

The figures published by the Statistique Générale show that a complete stagnation in industrial production persists. The general index has stood at 93 (1913 = 100) since the beginning of the year. A year ago it stood at 101.

INDUSTRIAL PRODUCTION (1913 = 100)

CORPORATION LTD.
10 MOORGATE, E.C.2

The number of private cars put on the road in May was 14,558, compared with 15,100 in April and 15,026 in May, 1934. The number of lorries was 1,772, compared with 1,837 in April, and 2,046 in May, 1934. In the cotton industry the usual seasonal recovery is apparent:—

	February	March	April	May
<i>Spinning (average per spindle in kilograms) :—</i>				
Production.....	1,307	1,281	1,272	1,442
Deliveries.....	1,339	1,420	1,356	1,486
Stocks.....	2,392	2,152	2,083	2,148
Unfilled orders.....	4,262	3,851	3,877	4,690
<i>Weaving (average per loom in pieces of 100 metres) :—</i>				
Production.....	3.65	3.71	3.60	4.28
Deliveries.....	3.53	4.51	3.61	4.36
Stocks.....	11.49	10.05	9.83	9.89
Unfilled orders.....	12.52	11.72	12.09	14.91

Withdrawals by the Caisse d'Epargne Ordinaire from the Caisse des Dépôts et Consignations exceeded deposits in June by 368,204,272 francs. This reduces the excess of deposits since the beginning of the year from 772,743,235 francs to 404,538,963 francs.

PARIS, July 17.

GERMANY

SHARE PRICES AND DISTRUST OF THE CURRENCY

LAST week the Bourse Committee, which practically means the Ministry of Economy, intervened in order to check the rapid rise in share quotations which has been proceeding since the beginning of the year. The Committee declared that recent advances in prices have in part lacked any solid foundation; that trade and industry must expect the imposition of new burdens; and that investors and savers run the risk of loss through a reaction in prices. This unusual official intervention made a considerable stir. Coming after a prolonged bull movement, it might have been expected to cause heavy selling and a considerable decline in prices. In fact, shares declined only two or three points, and after a new advance early this week the average price of the more active shares is less than 1 per cent. below the level of immediately before the intervention.

The intervention has an important bearing on industry, public finance and currency. The active shares in the variable dividend Stock Exchange list have risen this year about 25 per cent. but many less important stocks have risen 50 to nearly 100 per cent. At the present prices dividend yields are often down to 2 or 3 per cent., which is much lower than the interest yield on public and private loans, despite the recent conversions of the former.

The most important reason for the rise in share prices is distrust of the currency, in consequence of which the holder of solid industrial assets will often not sell even at a large nominal profit. This factor has been visible only in the past six months. It is a result of official concealment of the total of public liabilities, public ignorance about the manner in which these liabilities will ultimately be met, and widespread conjectures that the easiest way may prove to be formal devaluation. The actual depreciation of the mark in the shape of rising prices for commodities as well as shares is visible to everyone. But the advance in share prices runs counter to the Government's desire for a rise in bonds, which would facilitate public borrowing. Investors, however, who buy shares because of their distrust of the currency have an equally good reason for avoiding bonds. Fixed-interest securities rose very much last year in consequence of the open-market policy adopted in late 1933 at a time when currency stability was taken for granted. But this year they have not risen at all. And the Bourse Committee's intervention failed not only to depress shares, but also to raise bonds.

The number of unemployed fell in June by 142,000 to 1,877,000. Pig-iron production in June was 979,400 tons, as against 1,001,300 tons in May; the average daily output, however, increased slightly. In the first half of the year 5,603,300 tons were produced, as against 3,896,000 tons in

the same period of 1934. The home market for coal is active. Ruhr Syndicate sales to "contested districts," that is to foreign countries and parts of Germany accessible to foreign competition, have increased some 10 per cent. since April. The German Wire Syndicate has been extended until the end of 1936; and the "group protection" agreement, under which important steel works undertake not to embark on branches of production which are the special domain of other works has also been prolonged.

The officially fixed prices of cereals for the crop-year ending July, 1936, have been announced. In Berlin the price of rye per metric ton is to rise from Rm. 157 in July-August, 1935, to Rm. 177 in June-July, 1936, and of wheat from Rm. 194 to Rm. 214. At the beginning of the crop-year prices will be little changed from those of 1934-35; at the end they will be considerably higher.

FURTHER FALL IN FOREIGN TRADE

Imports and exports in June balanced exactly at Rm. 318 millions, against an export surplus of Rm. 4 millions in May. The equilibrium in June was the result of a large decline in exports. This, however, was seasonal. Imports of wool, cotton (from Egypt), flax and oil seeds decreased, and imports of mineral oils and pulp-wood increased. The decline in exports was mainly in the manufactures group, particularly textiles, chemicals, machinery, electro-technical goods, and glass. The decline in imports mainly affected overseas countries; the decline in exports was to Great Britain, Holland, Sweden, Denmark, Belgium and the United States. The official figures are as follows:—

	May	June	Jan.-June
<i>Imports :</i>			
Livestock.....	3.0	3.1	19.0
Foodstuffs.....	68.7	67.4	499.1
Raw and half-manufactured materials.....	218.5	203.3	1,296.9
Manufactured goods.....	42.3	44.1	311.9
Totals.....	332.5	317.9	2,126.9
<i>Exports :</i>			
Livestock.....	0.3	0.2	1.4
Foodstuffs.....	5.3	5.6	32.8
Raw and half-manufactured materials.....	61.7	56.8	364.1
Manufactured goods.....	269.7	255.4	1,564.0
Totals.....	337.0	318.0	1,962.3

Compared with the first half of 1934, the value of foreign trade in January-June, 1935, shows a shrinkage, due in the main to a decline in average prices. The value of imports declined by 7.6 per cent., the quantity rather less. Export prices declined 8 per cent. and the value of exports by 6 per cent.; so that in quantity exports slightly increased. The half-year's import surplus was Rm. 165 million marks, against Rm. 216 millions in the first half of 1934.

In June, German exports to the United States were one-third below the May figure. This sudden, and officially unexplained, drop suggests that the Ministry of Economy's policy of balancing commercial accounts with individual countries may meet with difficulties. Through the Supervision Boards the Ministry can reduce imports from any country to any level it likes, buying from a competitor in policy has been successfully pursued towards countries with which formerly Germany had heavy import surpluses. Purchases from the United States in the first quarter of this year were 60 per cent. lower than in the same quarter of 1934, though total German imports declined only 2.7 per cent. But purchases from Yugoslavia were 155 per cent. over the 1934 figure, from Roumania 85 per cent., Norway 100 per cent., Turkey 189 per cent., and Brazil 142 per cent. These changes are much greater than would occur if imports were left to themselves; and it is officially admitted that Dr. Schacht's "New Plan" is administered in order to divert orders. The immediate effect is to reduce correspondingly the various import surpluses, and the large import surplus with the United States mine, however, the quantity of German exports to indi-

Money late last week was in increased demand. The income-tax settlements for 1934, now under way, involve considerable supplementary payments. Day loans have been at 3-3½ per cent. and sometimes lower. The savings banks' balance sheet, now appearing under the new Bank Law every two months, totals for April 30th Rm. 16,670 millions. On the liabilities side savings deposits proper total Rm. 13,100 millions and current account deposits Rm. 1,806 millions. The chief investments are mortgages Rm. 6,476 millions, securities (unspecified) Rm. 3,100 millions, business credits Rm. 1,880 millions, and communal long-term loans Rm. 1,400 millions. Contrary to report, only small sums are invested in Treasury and other bills. The Reich's floating debt on June 30th is returned at Rm. 2,900 millions, besides tax-credit certificates amounting to Rm. 1,500 millions.

BERLIN, July 17.

HOLLAND

UNEMPLOYMENT SITUATION WORSE

THE easing of the crisis in the foreign exchange market has not brought any improvement in the economic situation or in the security markets. An enquiry instituted by the Central Statistical Bureau, in conjunction with the Netherlands Economic Institute of Rotterdam, shows that no improvement can be recorded in May or June. In May the number of unemployed registered at the labour exchanges actually decreased by 13,000 persons, but there is normally a seasonal decrease for May of about 30,000 persons. The number of registered unemployed amounted to 355,000 on May 31st, compared with 295,000 a year ago. The decline in activity is apparent in almost all branches of industry, including the building and woodworking trades, in which there was actually more unemployment this June than in the winter of the past two years.

Exports in May, after seasonal adjustment, show an advance of 6 million guilders compared with April. Imports were, after seasonal adjustment, slightly smaller in May than in April. The trade returns for June, as given by the Central Statistical Bureau, are summarised below:—

VALUE (excluding Gold and Silver)					
(In millions of guilders)					
	June, 1934	May, 1935	June, 1935	Jan.-June, 1934	Jan.-June, 1935
Imports.....	89	78	73	537	455
Exports.....	59	58	51	339	319
Percentage of imports covered by exports.....	66.8	74.3	69.5	63.1	70.0

Imports of gold and silver in June amounted to 14,077,411 guilders, and exports to 35,766,424 guilders.

Neither the gilt-edged nor the share markets have responded to the easing of the exchange crisis. The prices of numerous leading shares advanced steeply in Amsterdam as a result of the recent weakness of the guilder and the possibility of devaluation; while gilt-edged prices declined considerably. Some people expected that the return of confidence on the foreign exchange market and the drop in interest rates on the money market would have combined to bring stock market rates back to approximately their former levels. Nothing of the kind has occurred, however. In fact, leading ordinary shares have maintained their prices, whilst the recovery in gilt-edged prices has been very small.

COMPULSORY REDUCTION OF INTEREST RATES

If the Government's deflationary policy is to succeed its new Retrenchment Bill, involving further Budget cuts, will have to be passed by Parliament. But this Bill is strongly resisted by more than one section of the Opposition. Accordingly, in their latest memorandum on the Bill, the Government have conceded several points to the Opposition; so that the Bill now has a better chance of passing the Second Chamber. The danger of a Cabinet crisis does not therefore look quite so threatening as it did. The Government have not only resolved to embark upon a more con-

structive policy, but they now intend to reduce fixed interest charges. They have introduced a Bill into Parliament which reduces interest on all mortgages, both first and second, to 4½ per cent. The interest on mortgage bonds is to be reduced at the same time to 4 per cent. The Government's explanatory memorandum states:—

The relief of permanent burdens on property has become inevitable. The Government are of opinion that this can be achieved, without endangering mortgage credit, by reducing the interest payable on the mortgagee to what has become the interest rate on State loans. This rate is not quite stable, varying as it does with the extent of the National Debt and the state of the money market; but the Government consider they will not be far out of line in taking 4 per cent. as the basis around which that rate of interest fluctuates.

The Government have also decided to initiate rent reduction by prescribing that rents shall not exceed 80 per cent. of the 1931 level.

AMSTERDAM, July 12.

BELGIUM

MEETING OF ECONOMISTS IN ANTWERP

A MEETING of Belgian and foreign economists was held in Belgium this week on the initiative of the local Chamber of Commerce. Great Britain was represented by Mr J. M. Keynes, Mr R. F. Harrod and Mr H. D. Henderson; France by M. Nogaro; Sweden by M. Ohlin; and Holland by M. Verrijn Stuart. There were also nine Belgian representatives.

The general problem of monetary stabilisation was first examined. All present were of the opinion that exchange stabilisation is desirable in principle. But a certain divergence appeared on point of detail. The views of the British representatives were supported by M. Verrijn Stuart.

BIBLIOGRAPHY OF ECONOMICS, 1751-1775

Prepared for the British Academy

By H. HIGGS. 42s. net

A comprehensive chronological catalogue of the literature of economic interest scattered throughout the great libraries has long been needed. The present volume covers the period which marks the dawn of economic science and the entries under each year are grouped under headings such as Agriculture, Shipping, Manufactures, Finance, Transport, etc.

An Account of the Finances of the College of St John the Evangelist in the University of Cambridge 1511-1926

By SIR H. F. HOWARD

2 graphs, 1 map. 21s. net

Sir Henry's book is written with immense care. It displays a lavish wealth of detail, furnished with notes, lists, abstracts of rentals and a map of properties. It is clear and readable and well produced; and one is always liable to stumble on some human touch, among much that tells of national as well as of university life.

The Times Literary Supplement

CAMBRIDGE UNIVERSITY PRESS

July 20, 1935

and by the Belgians from the University of Louvain. The latter entirely accepted Great Britain's reasons for refusing to abandon a monetary system which is proving internally satisfactory. The same group of Belgian economists also regretted that Belgium did not link the belga to sterling instead of gold after devaluation.

Out of the fifteen economists present, ten, M. Baudhuin, M. Chlepner, M. Graen, M. Dupriez and M. Muller (all of Belgium); Mr Keynes, Mr Henderson and Mr Harrod (of Great Britain); M. Ohlin (Sweden); and M. Verrijn Stuart (Holland), signed the following majority report:—

(1) A monetary stabilisation which gives a guarantee to the world that arbitrary fluctuations of the foreign exchange rates will be avoided is a necessary condition for the adoption of credit and trade policies which will permit a durable world economic revival.

(2) The present economic conditions make it, however, necessary that the margin within which the external value of each currency can vary, may be considerably wider than the distance between the gold points in the pre-war gold standard, and further that the limits fixed may be provisional and subject to the possibility of alteration in the event of large unexpected disturbances of the balance of payments.

(3) Such a system can only be established through an international agreement between the financially most important countries.

(4) It is a condition of stabilisation that confidence should be felt in competent international circles that the initial parities are durable (apart from unforeseen changes) and reasonable having regard to the relative price- and cost-levels of different countries, their tariff policy and the prospects of the attitude of their investors to international lending.

(5) It must, however, be recognised that, where existing cost-levels are too high, they cannot be considerably adjusted within a reasonable space of time through a deflation of costs, and that on the other hand, a large and rapid increase of costs cannot be expected where they are relatively low.

(6) In view of this and of the lack of confidence widely felt to-day in the existing parities of the gold-bloc countries, the condition set forth in clause 4 means that no early stabilisation can be practicable without a devaluation of the parities of those countries sufficient to reduce the problem of international equilibrium to manageable dimensions.

(7) The advantages of a devaluation would, however, be lost if the nations, which have already depreciated their currencies in recent years, were to let them undergo a further considerable decline.

(8) The countries which have maintained gold par should not, therefore, be asked to devalue before they have some assurance that a further considerable depreciation of this sort will not take place.

(9) Hence, a first step towards the re-establishment of an international monetary system should be a declaration on the part of the most important countries, with devalued or depreciated currencies, that they will not seek to bring about a depreciation of their currencies such as would offset a reasonable measure of devaluation in the gold-bloc countries, but are willing to co-operate in an attempt to secure exchange stability of the sort mentioned above.

(10) It must also be clearly understood that a re-organisation of the monetary system, even when it is completed, means nothing more than that a basis has been laid for an economic policy which can lead to general recovery.

(11) As regards national policy, countries where industry is depressed should pursue a policy of easy money and should, generally, try to favour economic expansion and in that way re-establish a relation between internal costs and prices which makes profitable production and investment possible.

(12) An obligation to do this rests particularly on the countries which have large surplus reserves of gold and foreign exchange, as they are in a position to pursue a policy of expansion without any danger to currency stability.

(13) When a reasonable equilibrium has been reached, governments and central banks should co-operate with one another in an endeavour to avoid the development of a situation of an inflationary or deflationary character and to secure conditions compatible with economic progress and stability.

(14) Acceptance of the above propositions does not involve adhesion to any specific monetary theory. In so far as these propositions entail modifications in monetary practice, some of us consider that they are only justified by exceptional world circumstances.

(15) As regards international policy, it is imperative that the obstacles to international trade are reduced and that countries with a strong international trade liquidity take the lead, thus contributing to a strengthening of the position of the weaker nations which will enable the latter in their turn gradually to mitigate import restrictions and exchange regulations.

(16) Measures which favour domestic expansion, provided they do not involve either direct or indirect protection, tend to

stimulate international trade and are thus to be welcomed as a means of facilitating the removal of trade obstacles.

(17) An attempt should be made to secure so far as practicable the abolition of quantitative restrictions of imports. As an immediate step it is suggested that quotas should be gradually enlarged so as to reach as soon as possible the points where imports are admitted without restrictions of aggregate quantities.

(18) As far as quantitative restrictions are retained, they should be administered on a basis which accords equality of treatment to different countries.

(19) Multilateral agreements designed to foster trade within certain groups of countries, provided that they are open to every country on equal terms, should be made possible through the acceptance of appropriate exceptions to the most-favoured-nation clause.

A minority of four Belgian representatives advocated a rigid adherence to the gold standard and condemned the recent devaluation of the belga. This attitude is visibly losing ground in Belgium. The French representative was inclined to join the majority, but was restrained by reasons which were perhaps more sentimental than scientific. The resolutions concerning international trade were adopted by everybody; and there was general agreement about the possibility of arranging preferential conventions despite the most-favoured-nation clause, provided that the conventions were accessible to every country. This policy has been supported by Belgium ever since the time of the Ouchy Convention signed with Holland in 1932.

ECONOMIC RECOVERY CONTINUED

The economic situation continues to be favourable. Unemployment is declining slowly but regularly. The traffic in the port of Antwerp has improved a little, and fiscal receipts are satisfactory. At the moment some industries selling in the home market are doing less well. The export trade, on the other hand, is more active; and the building industry is reviving. No further rise is apparent in wholesale prices or the cost of living.

LOUVAIN, July 16.

NEW ZEALAND

25 PER CENT. INCREASE IN IMPORTS

DETAILED trade returns now available for the year ending March 31st show that merchandise exports valued at £N.Z.44.9 millions are £N.Z.1,000,000 lower than those for the preceding year. Wool exports fell from 812,000 bales, valued at £N.Z.11,600,000, in 1933-34, when a heavy carry-over from previous seasons was sold, to 621,000 bales, valued at £N.Z.7,848,000, in 1934-35. Butter and cheese exports also decreased slightly both in quantity and in value. These reductions were largely offset by increases in the value of meat exported. Frozen lamb increased in quantity from 2,626,000 cwt. to 2,814,000 cwt. and in value from £N.Z.6,733,000 to £N.Z.8,866,000; while mutton, pork and beef all increased in both quantity and value. Specie exports amounted to £2,065,000, of which £1,350,000 is known to have been gold exported by the Reserve Bank. This is valued at par in the trade figures, and a profit of about £N.Z.1,500,000 on its sale goes to the Government and should be added to the recorded export values.

Imports for the year amounted to £N.Z.32,600,000, an increase of £N.Z.6,400,000 over the previous year. The increase, nearly 25 per cent., covered a wide range of goods, and affords convincing evidence of improved business activity in the Dominion. Increases in the yield of the sales tax give further evidence of internal recovery. Taking the six-monthly periods ending with March, bank debits for 1933-34 showed an increase of 18 per cent. over the previous year, and 1934-35 a further increase of only 3 per cent.

As a result of the large excess of exports during the last two years, exchange funds held abroad by the banks have accumulated. At the end of March the Reserve Bank held £N.Z.22 millions in sterling exchange; and the trading bank returns of New Zealand businesses showed that assets exceeded liabilities abroad by £N.Z.23 millions, making a

July 20, 1935

total of £N.Z.45 millions in funds held overseas. This represents an increase of £N.Z.7,000,000 since August last, when the returns were first published.

The Reserve Bank, which opened on August 1, 1934, has published its first annual report for the period ending March 31st. Gross profits amounted to £N.Z.100,917, expenses to £N.Z.66,063, and net profits to £N.Z.28,854, after transferring £N.Z.6,000 to staff pension fund. The 5 per cent. dividend on shares absorbs £N.Z.25,000, and the remaining profit accrues to the Government under the Reserve Bank Act. The balance sheet is as follows:—

LIABILITIES	£N.Z.	ASSETS	£N.Z.
Capital.....	500,000	Gold	3,001,731
Reserve	1,000,000	Sterling Exch.	22,458,017
Notes issued	9,382,722	Subsidiary coin.....	176,704
Demand liabilities—		Investments	2,069,771
(a) State	12,223,301	Other assets	30,456
(b) Banks	4,519,047		
(c) Other	39,611		
Other liabilities	43,144		
Profit and loss	28,854		
	27,736,679		27,736,679

The abundance of funds abroad is reflected in record high bank deposits and low bank advances. For the March quarter total deposits, including Government deposits at the Reserve Bank, amounted to £N.Z.71 millions, compared with £N.Z.55 millions two years earlier; while advances were £N.Z.43 millions, against £N.Z.48½ millions in 1933. Money is plentiful, and rates of interest probably the lowest on record; but though business has expanded considerably, there is as yet little sign that new investment and enterprise are being stimulated. Despite exchange depreciation and other attempts to adjust matters, the level of internal costs is still high in relation to external prices, the decline in price indices from 1928 to 1934 being 34 per cent. for export prices, 20 per cent. for retail prices, and 17 per cent. for wages.

UNCERTAINTY ABOUT BRITISH MEAT POLICY

The recovery of confidence is also affected by uncertainty about the export market in Great Britain. Little authentic information about the negotiations with Great Britain was disclosed in New Zealand until the British White Paper and the New Zealand Government's reply were published early in the year. Local opinion is at a loss to understand the British attitude. The White Paper quotes total meat imports to illustrate what is mainly a beef problem. For lamb prices, in which New Zealand is chiefly interested, have been satisfactory despite increases in supply; while beef prices have declined despite reductions in supply. The White Paper, too, in concentrating on merchandise trade, ignores the more important items in New Zealand's payments to Britain.

It is estimated here that, excluding specie and expressing all figures in sterling, Great Britain paid £38 millions for imports from New Zealand in 1934. From this sum New Zealand paid Britain £11½ millions for her exports to this country, about £10 millions for freights, etc., on both exports and imports carried in British ships, and about £10 millions for debt service, commissions and tourists' expenses, etc. New Zealand's payments with other countries balanced roughly, and the remainder, £6,500,000, was added to funds held in London to meet future payments. Apart from the possible assumption that restriction of supply will be compensated by proportionate increases in price, the British Government's view appears to ignore the fact that reduced purchases from New Zealand will reduce the Dominion's capacity to buy British exports, to utilise British shipping both ways, and to meet the service of her debt held in Britain. In these circumstances local opinion is prepared neither to accept the White Paper as the final expression of a rational and permanent British policy, nor to make the considerable internal adjustments which acceptance of that policy would require.

CHRISTCHURCH, June 1.

LETTER TO THE EDITOR

COST OF LIVING AND COSTS OF PRODUCTION

TO THE EDITOR OF THE ECONOMIST

SIR,—Kindly permit me to raise my humble voice against the very questionable practice, which has grown up (and been popularised, it seems, by Sir Henry Strakosch in your columns and given general credence and currency by you as well as by many of your correspondents) of assuming cost of living indices to be "approximate" measures of labour costs or unit costs of production. Neither Sir Henry nor anyone else has so far demonstrated the logical soundness of this assumption. To my mind, cost of living indices have as little to do with costs of production (so far as cyclical fluctuations are concerned) as Timbuctoo with Tipperary. Cost of living indices represent a higher stage of production, in the scheme of economic life, even than wholesale prices do and are the apex of a price structure whose basic ingredients are wholesale prices, costs of production and other items. To take such a final index-group as cost of living to represent what is in sequence earlier and causal is to put the cart before the horse.

The fallacy becomes even more glaring when this assumption is used to show disparity between wholesale prices and costs of production, both of which are correlatives in the scheme of prices. There is no more reason for taking cost of living indices to be a fair indication of costs of production than there is for taking wholesale prices to be such an indication, and apart from the mere verbal similarity between cost of living and costs of production, I do not see that the two notions have anything in common. It would be far better to admit agnosticism in the construction of costs of production indices than to build vague and precarious theories on false assumptions.

I am,

Yours faithfully,

B. P. ADARKER.

THE TRADE BALANCE

A Problem in National Planning

By Lt.-Col. K. E. Edgeworth

D.S.O., M.C., A.M.I.E.E.

3s. 6d.

The suggested solution of the international currency problem is a continuously variable rate of exchange limited in normal times to .04 per cent. per week, a compromise which avoids the disadvantages of the fixed gold standard on the one hand and of the system of independent exchanges on the other.

"A decidedly stimulating and interesting essay which in many directions breaks quite new ground."—*The Economist*.

"It is possible that some such solution will ultimately be adopted."—*The Times*.

George Allen and Unwin Ltd.

BOOKS AND PUBLICATIONS

IN DEFENCE OF DEMOCRACY*

THIS book is a sober, competent and exceptionally sincere discussion of the faults and merits of modern democratic government. The authors write in a straightforward and undistinguished manner. In the course of their argument they gradually build up a central figure, called "the man of good will," for whose sake and round whom the book is written. As a whole, the book consists in an attempt to determine the standpoint of this being in relation to the positions occupied by his enemies, the Communist, the Nazi and the Fascist, who despise and persecute him and sometimes succeed in giving him a sense of social guilt.

The authors intend their analysis to demonstrate three propositions: (1) that liberal democracy as it was understood in the nineteenth century, provided it is suitably mended, is still better able to secure the ends of government than any rival form of organisation; (2) that the objections produced by its enemies, serious though some of them are, are not fatal; and (3) that the alternative to democracy, i.e. the authoritarian state, whether Communist or Fascist, defeats the purpose of the state, which, they contend, is to secure the welfare of the individual.

Of these theses (2) is obviously the most important, since it is the increasing force and increasing bitterness of the attack on democracy that has made this volume topical. The treatment of it is, however, the least effective in the book. The authors accept as one of their basic assumptions that humanitarian individualism, that absolute faith in salvation by reason which became fully self-conscious in Rousseau and the Encyclopædia, which animated the revolutionaries of 1848, the Liberals of 1880, and the Socialists of the year which immediately followed the war. This attitude, they point out, is attacked by Marxists and Fascists for its social ineffectiveness, its alleged blindness to the sinister forces which are supposed to be the real causes of the chaos and confusion in which we live: as they themselves put it: "The Communist flatly denies that he [the man of good will] does or can exist. The Fascist says that he exists indeed, but that he is a poor, weak creature who is incapable of getting anything done." The authors then proceed to argue that their client—the ordinary decent citizen—does exist and could be made to play the decisive rôle in communal life, provided certain social reforms were passed.

These last are hinted at rather than stated. But we are told that an improved system of adult education, together with measures to bridge the gap between middle-class and state education, would increase the chances of effective democracy; whereas a Fascist or Communist society, while it may increase the productive efficiency of the community and even impose a certain mechanical equality of status on its members, would turn them into bored and dreary robots. This, say the authors, is an impossible price to pay, since the means frustrate the ends; the full development of the individual is permanently warped; the procedure is ultimately self-stultifying. Nor could any democrat, or man of good will, dissent from that. It is this picture of robot-like uniformity which makes Mr Aldous Huxley's Utopia so ugly and so terrifying, this which has formed the staple argument of all reformers against the weapon of revolutionary dictatorship.

As an attack the book hardly succeeds. Indeed, there is in reality no common ground on which a discussion between the Communist and "the man of good will" could take place; since the former at the outset disqualifies the latter, and the latter misinterprets the former.

Yet we must allow the authors their due; they always think on the level of enlightened common sense, and if they say nothing arresting or profound they do at least write easily and clearly. The questions they ask are real, i.e. so framed as to be in principle answerable. And it is a great relief to anyone acquainted with the recent literature of this subject to come upon writing which is never pompous, rhetorical or obscure, which seeks neither to bully the

reader nor to flatter him, which appeals to reason and prefers a precision of language to the coining of a ponderous and eccentric vocabulary, and which after it has said what it wished to say comes to a stop without a flourish. These are rare enough virtues in any authors. And if the critical power of Messrs. Morris and Fulton had been of the same order as their intellectual integrity, the book would have been a masterpiece of its kind.

SHORTER NOTICES

"The Income Theory of Prices." By J. S. Robertson. Frederick Warne. 96 pages. 3s. 6d.

According to the author, the object of this book is "to present, in a simple form, the development of the main ideas of a new monetary theory, differing sufficiently from the 'quantity theory of money' as to require a name of its own." Such a limited object should not be difficult to attain, especially when the "quantity theory" referred to is stated in its most elementary form. But the author's success may be doubted.

The new theory may be stated in the author's own words. "The income theory of prices states that prices vary directly with the amount of consumers' income and inversely with the production of new goods." It is assumed that there are transactions only in finished goods, that monetary "income" is constant, that the output of finished goods is constant. Thus "under these conditions the average price of goods cannot be other than the monetary income divided by the quantity of goods produced." When, however, the author proceeds to discuss change we find, as we might expect, that he is back with the old quantity theory. Thus (cf. Chap. VII): "The main results obtained from the two theories are identical; it is always the behaviour of the general level of prices under the influence exerted by the other factors of the monetary equation, and under either theory an increase or decrease in the quantity of money if velocity of circulation remains unaltered... must have the effect of causing prices in general to rise or fall."

Those who seek simple theories thus seem likely to come back to the elementary quantity theory.

"State Finance." By R. J. Mitchell. With a Foreword by Viscount Snowden. (London) Sir Isaac Pitman and Sons, Ltd. 136 pages. 3s. 6d.

This book is not a treatise on what is usually comprehended by the phrase "Public Finance"—that is, the theory of taxation. It is a clear and painstaking account of the Parliamentary and administrative procedure by which money is raised in taxation and spent by the various Departments of State. It is perhaps a little too detailed for the general reader, but will be invaluable as a text book and as a guide for those who are called upon to trace the intricacies of British public finance.

MONEY AND BANKING

THE BANKING HALF-YEAR

As had been generally expected, the interim dividends declared at the half-year by the leading British banks were unchanged from a year ago. No profit and loss details are issued on June 30th, but there is no reason to suppose that the banks have earned less than during the first half of 1934. Earning assets generally are greater in volume, while last February's agreement to peg discount rates at a minimum of $\frac{1}{2}$ per cent. must have assisted the banks. The set-back in the gilt-edged market since the New Year has been so slight that the banks must have had no difficulty in allowing for it, while the progress of the trade revival must have released further funds originally set aside as provision for bad and doubtful debts.

The position of the British banks, as shown in their statements of accounts for June 30, 1934 and 1935, is set out in the two following tables. The first table embraces the banks' deposits, acceptances and engagements, cash, and balances with other banks and cheques in course of collection, while the second table includes the banks' chief earning assets:—

DEPOSITS, ACCEPTANCES AND CASH ON JUNE 30TH

	Deposits		Acceptances and Engagements		Cash		Balances and Cheques	
	1934	1935	1934	1935	1934	1935	1934	1935
Barclays.....	364.3	382.8	6.4	6.9	43.9	44.3	11.6	12.2
Lloyds.....	350.8	385.0	38.5	34.2	34.2	43.2	13.2	14.3

To consider the minor items first, acceptances and other engagements are lower than a year ago, but there is some internal evidence that acceptances taken by themselves are slightly higher. The decreases are confined to those banks which show the largest entries under this heading, and these larger entries are swollen by outstanding forward exchange contracts. Balances and cheques are higher than last year, which suggests that a larger number of uncleared cheques were outstanding on June 30th last than on June 30, 1934. This confirms the evidence of the note circulation that money is circulating more freely.

The main interest in the results lies in the increase in deposits, which for the "big five" alone amounts to £112.2 millions. The comment has recently been made that this represents money flowing into the banks from some mysterious source, but the true explanation is much simpler. Cash held by the banks has increased by £19.0 millions, and to prevent an increase in the normal cash ratio of 10 per cent., deposits would have had to be increased by £190 millions. The actual increase is much less than this, and in point of fact the cash ratio for the "big five" has risen from 10.2 to 10.6 per cent.

This places the expansion in bank deposits in its true perspective. Through circumstances beyond their control, the banks have had fresh cash pumped into them, which would have justified the acquisition of fresh earning assets up to about nine times the size of the extra cash. Up to a point the banks have been able to find their additional earning assets. The trade revival has brought with it a moderate increase of £19.3 millions in advances. There was practically no reduction in tender issues of Treasury bills during the past year, and so the banks have been able to add £7.4 millions to their discounts. The gilt-edged market has been sufficiently settled to justify the addition of £54.7 millions to the "big five's" investments. All these acquisitions, together with the increase in cash itself, are responsible for the expansion in deposits, but the banks have not thought it practicable to acquire earning assets up to the full limit justified by the expansion in their cash. This explains the rise in their ratio of cash to deposits.

As the expansion in deposits is directly due to the increase in cash, the next step is to find how the banks had new cash pumped into them. The Bank of England's return affords some guide, for it shows that during the year ended July 6th the note circulation increased by £15.6 millions and bankers' deposits also by £15.6 millions. The former increase has added very little to bank cash. The banks are accustomed to hold about 5 per cent. of their deposits in till money, and so an increase of £113 millions in deposits would not entail an increase of more than £6 millions in till money. The Bank of England's statistical summary shows that during the year ended last May till money held by the clearing banks actually rose by only £3.2 millions. The important point is that the expansion in till money is a consequence and not a cause of the expansion in deposits. The bulk of the additional notes in circulation have passed into the hands of the public.

The increase of £19.0 millions in clearing bank cash compares very closely with the sum of the May increase of £3.2 millions in till money and the July 4th increase of £15.6 millions in bankers' deposits, and so the latter increase is the main cause. The Bank return links up the expansion in bankers' deposits with a drop of £17.0 millions in public deposits (probably fortuitous and also off-set by a drop of £14.5 millions in the reserve) and with an increase of £15.4 millions in Government securities. This last may be the ultimate key to the increase in bank cash and so in bank deposits. If so, it suggests that during the past year there has been a limited inflation of credit, which must have been acquiesced in, if not pre-determined by, the Government. Whatever the merits behind this expansion, there is no doubt that those bankers are right who say that the size of their cash holdings is beyond their control, and that they have to do their best within the limits of banking prudence to attune the total amount of their earning assets and deposits to the amount of the cash with which they are supplied.

The next question is how have the different banks reacted to this extra cash? This is illustrated in the following table, which shows the ratio of cash and the chief earning assets to deposits for each of the "big five":—

RATIO OF CASH AND ASSETS TO DEPOSITS ON JUNE 30TH

	Cash		Discounts		Investments		Advances	
	1934	1935	1934	1935	1934	1935	1934	1935
Barclays.....	12.0	11.6	11.2	11.6	27.8	27.5	42.9	42.7

Total.....	10.2	10.6	12.4	12.0	28.1	29.9	40.7	39.3

A year ago four of the banks' cash ratios were on the low side, and so it is not surprising that three of the banks

have permitted a rise to take place in preference to adding to their assets. Barclays, on the other hand, which had the highest cash ratio a year ago, has since managed to effect a reduction. The ratio of discounts to deposits is in most cases unchanged, but the Midland ratio is reduced while the Westminster ratio is increased. There is a fairly general increase in the ratio of investments to deposits, but it is not striking, and in conjunction with the rise in the cash ratio it looks as if the banks have been acting with caution during the year. Still, investments in the aggregate have increased by £64.7 millions during the year. The net additions to the banks' advances have not been sufficient to keep pace with the expansion in deposits, and so the advance ratio has fallen. While the moderate increase in advances is gratifying, it looks as if any further addition to the banks' cash will force the banks into the two alternatives of tolerating a rise in their cash ratios or adding still further to their investments. The latter must already have nearly reached the limits of prudence, and a serious set-back in the gilt-edged market would at once affect the banks' profits. These reflections call in question the main lines of Government policy, which consist of making money cheap and plentiful in the hope that trade will thereby be stimulated. This policy has met with a certain measure of success, but at the moment the supply of credit is outstripping the demand. In one sense this is not a bad thing, for the supply must exceed the demand or else credit ceases to be plentiful and will not long remain cheap. Still, it throws into sharp relief the passive character of the Government's policy, and the inability of the banks to translate plentiful credit into active trade. This lends support to the view that the time is ripe for a more active policy, for while the soundness of the banks remains unquestioned, they can only work within the limits of their functions of providing credit to those who ask for it and deserve it. Other instruments must be found and used if the trade revival is to make much further progress.

FINANCIAL NOTES

The Foreign Exchanges.—The French financial reforms have on the whole had a good reception. The reduction in the interest on *rentes* has not affected the Paris Bourse, and there is no sign of any movement of funds out of Paris. On the contrary, on Thursday afternoon the Banque de France reduced its rediscount rate from 4 to 3½ per cent., and while that is the natural corollary to the general spirit of scaling down which is to be found in the new Decrees, the Banque de France would have left its rate unaltered if it had the slightest fear that it would be unable to maintain the lower rate. The Netherlands Bank has also reduced its rediscount rate from 4 to 3 per cent. The gold *bloc* currencies have all strengthened this week. The three months' Paris rate has moved from Frs. 2½ to Frs. 1¾ discount, while three months' Swiss francs have improved from 44½ to 28 centimes discount, and three months' guilders from 10½ to 8½ cents discount. The narrowing of the discount on forward French francs and guilders is in part due to the decline in short-term interest rates in Paris and Amsterdam, but it also indicates a revival of confidence. Spot francs are also better at Frs. 74½ against Frs. 74½ a week ago. Dollars have been in slightly greater demand this week, but there is little change in rates. Three months' dollars have in fact eased slightly from 1½ to 1¼ cents premium. Speculative sales of silver have completely ceased, and the American authorities have not had to support the London market. Total shipments of silver from England to the United States reported during the fortnight ended July 18th were valued at £1,232,000. This represents a bullion equivalent of nearly 10 million ounces. This week's return also shows that just over £1,000,000 of gold bullion has been exported to Norway. £467,000 of gold was imported from France, but other movements to and from the Continent or the U.S.A. were

Belgian Banking Control.—Our Belgian Correspondent writes that the Royal Decree instituting the new system of banking control has now been published, and is regarded as a very moderate measure. An independent Banking Commission will be appointed by the Government to supervise the banking system and the flotation of new capital issues. The power of the Commission over new issues is limited to a temporary veto of three months, and so this veto will act as a warning to the investor and not as a prohibition. The Commission has certain powers to reduce interest rates charged by the banks, but these powers are not viewed with any anxiety. "Revisers" or controllers will also be appointed, subject to the ratification of the Banking Commission, and they will have the same relation to the banks as that of the existing commissars of joint-stock companies. Any failure to comply with the law must be reported to the Banking Commission. Bank directors may no longer be directors of other companies, but holding companies which have developed from the former mixed banking system may continue to own the major portion of the capital of the new deposit banks. Still there will be a definite separation of direction and responsibility, which will place the deposit banks in an independent position. Neither the bank "revisers" nor the Banking Commission will have power to interfere between banker and customer, nor will any information obtained by them be available to the taxation authorities. In general, the Banking Commission will not interfere positively in the conduct of banking. Instead it will act as a watch-dog to ensure that there is no infringement of the law. Apart from this, its powers will be mainly advisory and it will depend for its usefulness upon the establishment of a salutary moral authority.

Austrian Bank Rate Reduction.—In view of the easier money conditions, the Austrian National Bank has reduced its rate from 4 to 3½ per cent. As on the occasion of previous reductions, in June, 1934, and in February, 1935, the National Bank made the reduction conditional upon the other banks reducing the interest rate on deposits to a corresponding extent. In order to assist the bond market and to facilitate further conversions, particularly that of the International Federal Loan of 1930, it is the practice to maintain an adequate margin between deposit rates and the yield on public loans. On this occasion bank deposit rates were duly reduced on July 1st to between 2 and 2½ per cent., whereupon the reduction of the bank rate followed. There is ample justification for these lower rates. Rediscounting at the National Bank has sunk to a minimum, the end of the first half-year showing an actual decrease of the bill portfolio, while owing to financial uncertainties elsewhere the influx of foreign currency into Austria continues in extraordinary volume. To some extent this influx consists of panic money, and only that portion of the influx which can be regarded by the bank as regularly invested in Austria is so, this item has swollen during the second quarter of 1935 by no less than 50 million schillings. During the same period the national cover went up by 3 per cent. and at the Creditanstalt-Wiener Bankverein alone cash holdings now stand at 150 million schillings. These easier conditions are due not only to the return of Austrian money and to the influx of foreign panic money, but also to the sale of foreign shares in the possession of the Creditanstalt and to the repayment of State interim credits and of the credits previously granted to the Federal Railways. It is an unusual experience for Austria to be counted among the "cheaper money" countries, and she is to be congratulated upon the remarkable recovery she has made during the past four years.

Active or Passive?—When is a country's foreign trade balance both active and passive? The answer is when its official statisticians employ different exchange rates in valuing its imports and exports. Such a paradox arose in the case of the Brazilian trade returns for last April,

which gave imports as being 305,514 contos, equal to £3,799,034 (paper) and exports as 289,102 contos, equal to £3,998,914 (paper). Expressed in national currency there is an import surplus of 16,412 contos, but expressed in sterling there is an export surplus of £198,800 (paper). Before joining Euclid in dismissing these results as absurd, it is best to see how they are reached. The explanation is that imports are paid for and valued in the returns at the "free" exchange market's rate, which in April averaged 80.35 milreis per pound. Exchange arising from exports was sold as to 35 per cent. at the official rate of 57.2 milreis per pound, and as to 65 per cent. at the free rate of 80.35 milreis per pound. The average rate of exchange at which exports were disposed of was therefore 72.25 milreis per pound, this being the average of the free and official rates weighted according to the above proportions. This average rate is used in calculating the sterling value of exports, and gives the paradoxical result cited above. In actual fact the sterling valuations are scaled down in the returns into pounds gold, but this does not affect the paradox, and we have given the calculations in paper pounds for the sake of simplicity. In any case, the path of the student and also of those concerned in Brazilian affairs is made extremely hard. Has she an active or a passive trade balance? Only Humpty-Dumpty would dare to attempt an answer to this question, and he is the only person who could give an answer which sounded at all convincing.

June Clearing Bank Averages.—The June returns of the nine English clearing banks reveal several interesting changes. First and foremost deposits have risen to a new record level of £1,965.9 millions. Cash, however, is slightly lower than in May, so that the ratio of cash to deposits has fallen from 11.2 to 10.8 per cent. A further interesting result is that the cash ratio for the whole of June is slightly higher than the cash ratio of 10.6 per cent. shown by virtually the same banks in their half-yearly statements of accounts for June 29th. This proves that making-up for balance sheet purposes is now reduced to a minimum.

	June, 1934	Mar., 1935	Apr., 1935	May, 1935	June, 1935
Capital and reserves.....	123.4	125.7	125.7	125.7	125.7
Acceptances, etc.....	109.0	117.6	120.4	113.8	109.1
Deposits (including undivided profits, etc.).....	1,832.2	1,885.2	1,902.4	1,923.4	1,965.9
Total liabilities.....	2,064.6	2,128.5	2,148.5	2,162.9	2,200.7

Total assets.....	2,064.6	2,128.5	2,148.5	2,162.9	2,200.7

Among the banks' chief assets there are welcome increases in advances and in cheques, balances and items in transit. Both these increases provide evidence of the continuance of the trade revival. The expansion of £26.4 millions in discounts is a little surprising, as the banks were not ready buyers of bills during June. Still, the average volume of Treasury bill tender issues during June was £50 millions greater than during May, and the banks have had to take up their share. One bank, in fact, is believed to have continued buying bills (at remunerative rates) up to the end of June. The increase in investments is only £4.5 millions, so that at last the banks are beginning to find other outlets for their funds.

The Money Market.—Money remains very easy. The clearing banks have experienced a fair afternooon demand for loans, but there is no lack of accommodation at ½ per cent. against eligible bills. The banks have been buyers of August and September Treasury bills at ½ per cent., which is their minimum rate, and also of Treasury

bills maturing in the first week of October at ½ per cent. The rate for "hot" Treasury bills is nominally ½ per cent., but there are practically no buyers. Three months' bank bills are quoted at ½ per cent. and under.

	June 27, 1935	July 4, 1935	July 11, 1935	July 18, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1	1	1	1
Discount rates:—				
Treasury bills.....	1-1	1-1	1-1	1-1
Three months' bank bills....	1-1	1-1	1-1	1-1

During the next few weeks Treasury bill maturities will be at the rate of £35 millions a week, and if issues continue at the rate of £40 millions, the total tender issue, which now stands at £495 millions, will steadily increase. This may help to check any tendency of discount rates to weaken.

The Bank Return.—There has been a further slight reduction of £1.1 million in the note circulation, which is now just below £400 millions. Compared with a year ago it has risen by £15.7 millions.

	June 18, 1935	June 28, 1935	July 3, 1935	July 10, 1935	July 17, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold.....	191.6	192.7	192.7	192.7	192.7
Note circulation.....	383.9	396.9	401.4	400.7	399.6
Banking Department:—					
Reserve.....	68.3	56.5	51.9	52.6	53.7
Public deposits.....	20.6	16.2	9.6	8.4	7.9
Bankers' deposits.....	96.9	102.4	110.5	108.6	103.6
Other deposits.....	35.8	38.8	38.0	36.4	38.8
Government securities.....	83.2	96.2	98.2	95.8	91.9
Discounts and advances.....	7.5	10.2	13.5	10.4	9.3
Other securities.....	12.5	12.4	12.5	12.6	13.5

Proportion 68.3% 55.8% 52.8% 54.3% 55.7%
In the banking department there has been a reduction of £3.9 millions in Government securities, which agrees fairly closely with the week's repayment of £4.2 of Ways and Means advances from the Bank shown in the floating debt statement of July 13th. Discounts and advances at £9.3 millions are still some four millions above their level of early June, this movement probably representing fresh bills discounted by the Bank. The increase in other deposits doubtless reflects the application money in respect of the new London Transport issue. As a result of all these movements bankers' deposits are reduced by £5.0 millions.

New York Money and Banking.—Money rates in New York are unchanged. The official call rate is ½ per cent., and 90-day bankers' acceptances are quoted at ½ per cent. During the week ended July 10th, New York member banks' loans to brokers were reduced from \$952 to \$883 millions. Other loans granted by member banks against securities fell from \$748 to \$745 millions. Bank clearings of the leading 47 cities of the United States for the same week were \$4,327 millions, against \$4,740 millions a year before, or a drop of 8.1 per cent. Commercial loans by member banks and trust companies throughout the country have fallen since the New Year from \$4,553 to \$4,449 millions, and are now only \$10 millions above the record low figure of \$4,439 millions for July 18, 1934. The Treasury is making a further offer of \$100 millions of 2½ per cent. 1955-60 bonds, to be sold to the highest bidders. Mr Morgenthau, in evidence before the State Banking and Currency Committee, said that the Treasury must refund next autumn \$1,250 millions of Fourth Liberty Bonds. This will complete the \$8,000 millions War Loans refunding operations. Fresh borrowing will also be necessary to replace \$3,750 millions of bills and notes maturing during the current fiscal year, while if the year's Budget deficit corresponds to the President's estimate \$4,000 millions of new money will also be required. This makes a total borrowing of \$9,000 millions, of which \$5,000 millions will represent debt refunding.

THE STOCK EXCHANGE

RUBBER IN THE DOLDRUMS

By far the most significant development in the recent course of the rubber market has been the virtual absence of any new development whatever. This industry—which in the last ten years has sounded the highest and lowest notes in the price scale, has moved from restriction through decontrol back to restriction, and, having made, as it were, a fortune, has lost it and begun laboriously to accumulate another—this of all industries, in short, has recently appeared to be settling down to a humdrum existence, with no annals worth mentioning. For the present, questions whether a price of 9d. or more per pound is desirable or defensible have become academic, for the London price for the last eight months has been anchored at 6d. There has been a little ebbing and flowing each way with the tide—the average went up to 6½d. in January and down to 5½d. in April, but the mean price for the first half of this year is 6d. exactly.

This showing is the more significant because it is not in any sense due to the "pegging" of the market. Within the limits imposed on total production by the international restriction scheme, supply and demand have free play. The rubber manufacturer, indeed, seems to have accepted 6d. as a fair price—for the time being, at least. Whenever the quotation goes higher, he is prepared to hold off the market and draw on his ample stocks. When it has fallen below the datum point buyers have sooner or later come in, from America, Japan, Great Britain and, latterly, Germany. In short, the restriction scheme, at present, is attaining its avowed main objective of a "stabilised" price, but whether the plantation companies, and those who purchased their shares at last year's relatively high levels are satisfied is another matter.

The steps by which this "anchoring" of the market has been brought about may be briefly recapitulated. On its inception in the spring of last year, the International Committee fixed the permissible percentages of the basic quota for the remainder of 1934 at 100 for June and July, 90 for August and September, 80 for October and November, and 70 for December. From the beginning of 1935 the basic quota for the participating countries was raised, on a pre-arranged scale, from under 1,000,000 tons to 1,073,000 tons. In October some divergence of view appeared between the Dutch and the British interests represented on the Committee, and in the following month the percentage for the first quarter of 1935, as a compromise, was fixed at 75. Early this year, percentages were announced of 75 for the second and 70 for the third quarter, but in March, having regard to the state of the market, the Committee exercised its prerogative of a change of mind and reduced the figures to 70 for the second quarter and 65 for the remainder of the year. As a special concession to the Dutch interests; however, the latter were given a slightly higher percentage for the early months, with a compensatory drop to 60 in the later months of the year. These findings have, indeed, been loyally implemented. The Dutch Government has raised the export duty on native rubber to a level equivalent to approximately 3d. per pound, with only a slight subsequent remission. Native shipments, which were running well above the permitted level, have shown themselves extremely sensitive to an impost which, at the present level of rubber prices, leaves the native producer with a painfully small return.

The table in the adjoining column shows (a) the basic quotas under the restriction scheme, and (b) the comparison between "permissible exports" and "actual exports" since the scheme came into force.

It will be seen that while Malaya, in the twelve months to last May, had shipped about 20,000 tons less rubber than she was entitled to do, shipments from the Dutch East Indies had exceeded the allotted total by rather more than 10,000 tons. The latter excess may well be "ironed

† Last seven months.

out," in the next few months, if native taxation is maintained and the price of rubber does not increase. The right of Malayan producers to "carry over" unused export licences will expire next September. On the whole, it would appear that restriction, so far, has been effective in "maintaining discipline," for world shipments as a whole have been held down to the prescribed levels.

It is, however, tacitly admitted by many who should be in a position to speak with authority, that restriction, with its present percentages, has reached something like its uttermost limit of practicability. Any endeavour to compel further curtailment of production might have dangerous social and political consequences in certain areas, and any future enforcement of restriction percentages comparable to those obtaining, say, in the tin industry is quite out of the question. Market psychology may well be somewhat disturbed in the autumn, when the Committee will be considering its policy for 1936. Whatever the price may then be, conservative market opinion believes that no Draconian tightening of the screw will be attempted, though the possibility may be considered of postponing the increase in basic quotas which would otherwise raise the world datum figure by 80,000 tons.

Investors may find it difficult to resist the conclusion that the initiative has passed to the rubber consumer. The best clue to the latter's position may be obtained from consideration of the statistical trend in recent years, which is summarised in the following table:—

PRICES, PRODUCTION, ABSORPTION AND STOCKS
(In thousand long tons.)

	Av. Price London (pence per lb.)	Exports			Absorption		
		Malaya	Dutch East Indies	World	U.S.A.	United Kingdom	World
1920	22.4	181	80	354	229	215	311

1934 (four months)	5.0	155	135	346	506	176	336
1935 (do.)	6.0	146	95	298(a)	549†	179(b)	30(c)

* In U.S.A., United Kingdom, Singapore and Penang (dealers' and port stocks only). N.A. Not available. † End May, 541,000. (a) Approximately 77,000 in May, against 113,000 in May, 1934. (b) For May, 41,800, against 44,600 in May, 1934. (c) For June, 36,800 against 41,200 in June, 1934. (d) For May, 9,800, against 9,700 in May, 1934. For June 6,700 against 13,000 in June, 1934.

There would appear to be little intrinsically wrong with a world demand for rubber which has been capable of multiplying itself more than two-and-a-half times over the nine years 1920-29 and in 1934 was 16 per cent. greater than in the pre-slump year. Although world stocks of rubber accumulated rapidly during the slump (and have shown no net decline, so far, under restriction), demand

for rubber has at no time suffered the cataclysmic decline characteristic of many other primary commodities. The tabulated figures, in fact, strongly suggest that the low prices of 1931-33 had a stimulating effect on consumption during the worst phase of world depression, while, by 1934, the forces of recovery had progressed sufficiently far to enable an increased price of around 6d. to be carried without arresting the process of revival in demand. During 1935, so far, however, there has been no further increase. A stable price, in short, has coincided with a stable demand.

There is no prospect of an early falling off in rubber consumption, for the extension of road construction and motor transport is proceeding apace in many countries. The evidence, however, does not encourage any optimistic budgeting by the plantation industry for a new and spectacular increase in rubber consumption in the near future. From the viewpoint of shareholders, the implications of this statement need to be squarely faced. The first fine careless rapture, associated with the inception of restriction, is over. Calculations of increased ordinary share earnings per penny rise in the price of rubber have ceased to have relevance. The company balance sheets which are now being published show profits based largely on an average price for rubber very little different from that which now prevails and—if the arguments of the present article are valid—seems likely to be the industry's Ultima Thule for some time ahead. It follows that present dividend yields are unlikely to be significantly increased. The companies are working on a lower production basis this year than last. Their expenses per pound of output, inevitably, have been increased. In some of the older areas, further, there have been reports suggesting that the productivity of the rubber tree is not eternal, and that after a sufficiently long period of years certain natural properties appear to be largely extracted from the soil, which becomes unresponsive to manuring and is unfit for any alternative form of cultivation. In the absence of authentic and scientific data, these reports must be accepted with great reserve. If they were found, eventually, to have substance, it would be necessary to regard rubber shares in an entirely new light, as securities with a limited "life," whose annual return was subject to provision for amortisation in much the same way, say, as a gold mining share.

The latest figures for a number of important rubber companies which have published their reports in recent weeks are set out in the following table:—

YEARS TO DECEMBER 31ST

† Results to March 31st in following years.

‡ Including £14,500 from reserve for losses of subsidiary companies.

§ Surplus after payment of £43,125, being 5 years' dividend on 7½ per cent. participating preference shares. (a) Absorbed £31,022. (b) Absorbed £23,902.

The latest figures, naturally, show considerable improvement by comparison with those for 1933, when the average London price for rubber was only 3½d. The yields on ordinary shares, however, at current prices, are definitely low for a tropical industry whose securities cannot for a moment be placed in the same investment category as those, for example, of leading domestic industrial concerns. Current market prices, indeed, appear still to be discount-

AN
EVER-PRESENT ANXIETY
TO PROFESSIONAL MEN

YOU plough a lone furrow. Upon your unaided efforts depend the well-being and comfort of yourself and your family both now and in later life. Few can help you, none can take your place. If ill-health visits you your income ceases until you are back in harness again. Small wonder that such eventualities cause you anxiety.

A practical method of dispelling the anxieties which though "out of sight" can never entirely be "out of mind" is the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT

2. AN INCOME FOR DEPENDANTS

3. AN INCOME DURING DISABLEMENT

The "Triple Income" plan provides the most complete safeguard that any professional man can desire. Protection so comprehensive is worth investigating. Send to-day for full particulars and learn at what moderate cost security may be achieved.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Established 1836. Assets exceed £33,000,000.
General Manager: W. A. WORKMAN, F.I.A.

ing an appreciable further rise in quotations for the commodity. What may happen in 1936 no one at the moment can say. So far as the immediate outlook is concerned, however, the omens do not appear favourable to such a *dénouement*, and investors may do well to re-examine their position in that light.

INVESTMENT NOTES

The London Transport Loan.—The event of the week in the new issue market has been the successful issue of £32,000,000 2½ per cent. debenture stock, 1950-55, by the London Electric Transport Finance Corporation, which is the new company formed to take charge of the financing of the £40,000,000 London transport extension plans. The issue represents much the largest "new money" operation with which the London capital market has had to deal in recent years. Its importance may be gauged by the fact that the amount of the loan is only just under half the aggregate total of "new money" raised on the market in the first six months of the present year. The stock carries the full guarantee of the British Treasury and at the issue price of 97 it yields £2 11s. 6d. per cent. flat and £2 15s. 6d. per cent. to the final date of redemption. These returns are appreciably above those obtainable on similar short-dated issues. Thus the 2½ per cent. Conversion Loan, redeemable 1944-49, which bears the nearest resemblance to the new loan, stands at 101½ and yields only £2 9s. per cent. flat, and barely 2½ per cent. assuming redemption in cent. flat, and the new loan will, however, suffer from the slight disability that after June of next year stamp duty will be payable on transfers. In virtue of its favourable terms, the stock was quickly over-subscribed, the lists being open for only an hour. This success is the more striking in that it is understood that applications from the Public Departments played no part in it. Apart from the intrinsic importance

of the loan, a good deal of interest was aroused by the decision of those responsible to issue at once so large a proportion of the whole £40,000,000 required for the transport extensions. Only a small part of the money will be needed in the next year or so, and it is held in some quarters that the size of the issue must be read as evidence of a modification of the "Treasury view" on the duration of cheap money. A large part of the proceeds of the issue must presumably be invested temporarily at interest well below the rate payable on the stock. It seems, therefore, reasonable to assume that those responsible for the issue felt, at any rate, that the risks attendant on the alternative course of piecemeal borrowing on the lines of the successive Central Electricity Board issues were greater than they could justifiably incur.

Uruguayan and Brazilian Debt Service.—As the official summaries of the Anglo-Uruguayan Trade Agreement which were issued to the Press were more concerned with trading conditions than with finance, the Stock Exchange did not realise until this week that very substantial benefits had been secured under the Agreement for holders of Uruguayan bonds. The main agreement provides that in a full year not less than 80 per cent. of the c.i.f. value of United Kingdom imports from Uruguay, as shown in the British trade returns, must be set aside by Uruguay as a British Exchange Quota to provide exchange for Uruguayan payments to this country. So much was recorded fully in the published summaries of the Agreement. No mention, however, was made of the contents of the Supplementary Agreement, which provides that interest on the Uruguayan external sterling debt (except for such debt as is held in Uruguay itself) shall be the first charge on the British Exchange Quota, ranking even before payments for imported goods. This puts the interest payments in a very secure position. Under the present debt agreement Uruguay is paying a flat rate of 3½ per cent. interest on all external loans, and has suspended sinking funds. On this basis the interest charge is covered more than four times by the exchange quota which would have been provided by Uruguayan exports to the United Kingdom during 1934. The Agreement has also secured favourable terms for the exchange requirements of British public utility companies operating in Uruguay, giving their interest and rent charge requirements a claim on the Exchange Quota second only to that of the public debt service, and stipulating that "the Uruguayan Government, so long as they retain exchange obtained at the official rate for payment of their own obligations in the United Kingdom, undertake to allocate at the official rate to the British-owned public utility companies as large a proportion as possible of the sterling exchange falling due to them under this Agreement." The terms of the Agreement have induced considerable interest in the 3½ per cent. bonds, which have risen from 47 a week ago to 52½, and offer a flat yield of some £6 15s. per cent. By contrast, Brazilian issues have suffered renewed weakness, touching the lowest levels of the year. A pronounced fall in the export surplus during the present year and growing uneasiness as to the ability of the Government to withstand economic and political pressure to sacrifice the interests of bondholders have weighed heavily on an already disturbed market.

Cable and Wireless Finance.—Comment has been heard this week about the formation of Cable Investment Trust, in relation to the recent offers for repayment at par of up to one-third of the 5½ per cent. preference stock of Cable and Wireless (Holding), Ltd. The original offer was described in these columns as unexceptionable, for it was made at a time when the stock was nine points below the par purchase price, and acceptance was entirely voluntary. When the offer was introduced, reference was made to the return currently obtainable from the group's £17,615,361 investment holding. The chairman stated that the yield on that holding was between 4 and 4½ per cent., while the preference stock carries a cumu-

lative 5½ per cent. Preference stockholders, with the consolidated profits figures for 1934 in mind—of a total of £1,150,149 over one-half was contributed by investment income, despite the recovery in traffic profits—may have inferred that a further advance in group revenue might be somewhat tempered, for a time, by the difficulty of maintaining the average rate of investment income. In extending the final date of acceptance, the directors emphasised the opportunity for preference stockholders to contribute to a scheme "in the common interest of all concerned." The terms of the prospectus of the new trust company, however, may prove somewhat disconcerting to certain stockholders who tendered stock, at a profit to themselves, but with the latent assumption that they were thereby making a sensible contribution to the first stage of a financial reorganisation of the group. The new Trust acquires investments from Cable and Wireless (Holding) for £7,000,000, which have yielded 4½ per cent. during the year to June 30th last. Some £5,020,000 is to be raised from the public at an average rate of under 4 per cent. and the balance will be obtained from the subscription, by Cable and Wireless, of 200,000 £10 ordinary shares at £10 17s. per share. The premium will, in fact, cover estimated preliminary expenses, and the return on the equity is computed at 4.85 per cent. Cable and Wireless, by the adoption of a geared capitalisation for the new Trust, thus retains its equity interest in the investments sold, and will receive a higher return on some 30 per cent. of their total value. The parent company, Cable and Wireless (Holding), has to find £6,450,000 for repayment of assented stock, which will save £354,750 in dividend in a full year. The investments sold produced £315,000 in the latest year, of which one-third will still be available for the equity holding of Cable and Wireless, subject to the share to be taken by Globe Telegraph and General Trust. Apart from the question of duplicate that the prospects for the investment holdings may be better than at one time appeared likely. Although the full intentions of the board may not have been formulated when the repayment offer was originally made, it is possible that some acceptors might have preferred to retain their stock on its independent recovery merits if later developments had been anticipated.

Tea Share Prospects.—During the past fortnight there has been some revival of interest in tea share prospects. At the end of June the *Investors' Chronicle* index of tea share prices stood at 69.6, the lowest point for many months. Since then tea prices have tended to harden slightly and the shares have improved. Though good reports of the new season's teas have contributed to the movement, the main cause has been a growing belief that the invisible stocks in distributors' hands have been allowed to fall exceptionally low. On a number of occasions in the past four years the rise or fall of invisible stocks has had a determining influence upon prices, but evidence on the true state of distributors' stocks has more than usual significance in present circumstances. If the distributors have not been lightening their holdings over the past year, it can only be concluded that real consumption of tea has been falling—by, say, 27,000,000 lbs. in quarters of world tea consumption, such a decline in total at a time when the Empire has been leading the revival of general prosperity. It has already been questioned whether fruit drinks are not encroaching on tea drinking. With production showing a decided tendency to rise in shrinkage of demand could have serious effects. If, on the other hand, the fall in recent "absorption" by distributors turns out to be due simply to a lightening of internal stocks, then buying must eventually be resumed at its normal pressure. Combined with the reduction of some 40,000,000 lbs. in the current season's quota, a substantial inroad into visible stocks, with a rise of 2d. per lb. in average prices by no means out of the question.

For the current year such a revival would do little more than make up for lost ground in many profit and loss accounts, but it might bring a sharp advance in share prices. So far there is not sufficient evidence either way as to the true state of internal stocks to justify any definite conclusions on the prospect.

A New Industrial Share Index.—The relative market importance of the different industrial share groups has changed so much during recent years that the lists of representative shares on which the best-known ordinary share indices are based have inevitably tended to become somewhat out-of-date. The compilers of the "Financial News" daily index have accordingly undertaken a complete revision of the series. Each of the thirty companies represented in the new index is engaged primarily in British industry, and every share is an active market counter. Heavy industry is more strongly represented than before—a reflection of the improved market status of steel shares—and an interesting sign of the changing times is the inclusion of Hawker Aircraft. In most of the groups, of course, there is little scope for originality of choice. Such shares as Imperial Tobacco, Distillers and J. & P. Coats select themselves. On the whole, the list is satisfactory, and it should give a very fair representation of the changes of market temper. From the theoretical point of view, the main interest of the change lies in the compilers' adoption of a geometric average. This will permit of an alteration of the base date when called for, whereas a change in the base date of an arithmetic index may lead to contradictory results, as a comparison of some of the daily commodity price indices will show. Moreover, the use of a geometric average facilitates the substitution of a new share for one which has become unsuitable. The main difficulty, in a change of this magnitude, is to provide a basis of comparison with the previous index. For this, the new index has been calculated back at fortnightly intervals this year, at monthly intervals in 1934 and at irregular dates back to the depths of the slump in June, 1932. The similarity between the extent of the movement of the old and the new indices during that period suggests that rough comparability may be attained simply by rebasing the old index with July 1, 1935, as origin. The new figures for the current week are quoted in our usual table on page 139 of this issue.

The "Ten-Year Record."—Reference books are not intended for the bedside, and the twenty-seventh edition of this valuable work* will be as welcome as usual to City bookshelves. Apart from the unquestioned utility of the work, however, its contents are of real interest—and warning—to the investor. There was a day in 1928, for example, when Swedish Match "B" stood at £26½, while in the following year initial dealings in Cable and Wireless (Holding) "B" ordinary were marked as high as 104. Investors who bought Austin ordinary shares at 4s. 6d. in 1925 will not have complained, while Tate and Lyle at 26s. 10½d. in 1926 were evidently a remunerative purchase. The work, useful as it is to investment historians, has great practical utility in its arrangement of dividend statistics. These are shown under date of payment, thus facilitating tax assessments. The volume fully maintains its reputation for comprehensive information and clear arrangement.

Actuaries' Investment Index.—The lustreless condition of the share markets this week is well evidenced by the Actuaries' Index number for 158 industrial shares, which has declined to 77.5 this week, compared with 77.7 last week and 77.4 a month ago (December 31, 1928=100). The respective yield figures are 3.83, 3.81 and 3.77 per cent. Examination of the component series, of which a

NATIONAL FIXED TRUST CERTIFICATES

UNIT 'D'

An investment in these Certificates offers to Investors a holding in the following twenty-two important Industrial Companies:

Arthur Guinness, Son & Co. Ltd.	Lever Bros. Ltd.
Associated Portland Cement Manufacturers Ltd.	London & Thames Haven Oil Wharves Ltd.
Burma Corporation Ltd.	London Brick Company & Forders Ltd.
Burmah Oil Co., Ltd.	London County Freehold & Leasehold Properties Ltd.
Great Western Railway Co.	Manbré & Garton Ltd.
Imperial Chemical Industries.	Marks & Spencer Ltd.
Imperial Continental Gas Association.	Michael Nairn & Greenwich Ltd.
Imperial Tobacco Co. (Great Britain & Ireland) Ltd.	Reckitt & Sons Ltd.
International Tea Company's Stores, Ltd.	Spillers Ltd.
Johannesburg Consolidated Investment Co. Ltd.	Staveley Coal & Iron Co. Ltd.
	United Dairies Ltd.
	Wiggins Teape & Co. (1919) Ltd.

Sums of approximately £20 can be invested, and on the basis of dividends paid for the past year at the current price of 21s. 3d. per sub-unit the Yield is

£4 . 10 . 7 per cent.

with prospects of an additional yield from the sale of Bonuses and Rights, which in the same period amounted to

£1 . 17 . 9 per cent.

NATIONAL FIXED TRUST CERTIFICATES

are issued by the Trustees

MIDLAND BANK EXECUTOR &
TRUSTEE CO. LTD.

All dividends, bonuses, etc., are collected direct by the Trustees, and distributed by warrant half-yearly to Certificate Holders.

The expenses of maintaining the Trust, including the cost of dividend distributions to the Certificate Holders for the Trust period of 20 years, are specially provided for.

Full particulars can be obtained from any Branch of the MIDLAND BANK, from any Stockbroker, or by writing direct for booklet 'D 44' to

NATIONAL FIXED INVESTMENT

selection is given below, shows that small losses have predominated over smaller gains:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month ago (June 18)	Week ago (July 9)	This Week (July 16)	Month ago (June 18)	Week ago (July 9)	This Week (July 16)
<i>Lower this week:</i>						
Banks and discount co's. (12)	115.1	116.3	115.3	4.07	4.03	4.07
Coal (8)	93.0	89.0	88.3	3.74	3.96	4.00
Electric supplies (8)	118.5	117.0	116.1	4.42	4.40	4.44
Home rails (4)	69.4	72.0	70.9	1.55	1.51	1.51
Breweries and distilleries (19)	132.1	133.8	131.8	4.00	3.97	4.02
<i>Higher this week:</i>						
Insurance co's. (24)	120.1	122.8	123.3	3.50	3.43	3.41
Oil (5)	70.1	66.8	67.9	3.46	4.69	4.57

Interest in home rails has been desultory, and brewery shares have been realised from the provinces. A decline in bank share quotations may be associated with the recent trend of gilt-edged prices. A little investment support has been given to oil shares, but in general the series suggest that the investor's interest is forsaking the markets for sunnier places.

COMPANY NOTES

Wool Textile Shares.—Owing to the peculiarities of organisation and custom in the British wool textile industry, different sections of the industry offer widely differing risks to the investor. In the "woollen" trade one concern will usually handle the goods through every process from the raw wool to the dyed and finished cloth, whereas in the "worsted" trade, not only may the material change hands several times in process of manu-

general prosperity of the industry has some effect on the combing charges, but the excellent organisation of the wool combers is, in general, strong enough to maintain rates in all normal conditions. In 1933 the organisation was further strengthened by the formation of the Woolcombers' Mutual Association, Limited, to contribute by levy to the buying up of redundant and obsolete combing plant and to raise combing charges from the levels to which excessive competition had forced them. There are some outside firms still prepared to undercut the standard rates, but the two representatives of the combing trade in the accompanying table give evidence of relative prosperity in the last few years. In contrast with them, the fluctuating profits of the two worsted spinners shown in the table illustrate the extent of the market rise on raw wool which the spinner has to carry. A similar risk is involved for the cloth and hosiery manufacturers, but as the raw wool cost is a smaller element in their total cost, its incidence is less than for the spinners. The wool textile industry as a whole is in a reasonably satisfactory position. While there is still much obsolete plant in existence, considerable progress has been made with modernisation, and the tariff has undoubtedly diverted work to the home industry. Although Japanese competition is not unknown, the wool textile industry has a smaller stake in coarse goods for export than has the cotton textile trade, and is, in general, dependent on exports for a much lower proportion of its total market. It would seem that while the shares of such a concern as Woolcombers, Limited, may be classed as a high-grade industrial of considerable stability, the shares of even so well-managed a business as Paton and Baldwins in the spinning section must be considered more as a specialist's investment owing to the inevitable market risk on raw wool prices. It happens that, after the sharp fall in 1934, raw wool prices have recently been rising.

† Tax free. * Of which 2½ per cent. tax free in 1930 and 7½ per cent. tax free in 1933. § Broken period equated to 12 months. ** Six months' dividend 1933; 18 months' 1934; and 12 months' 1935. †† Years to December 31st until 1934.

facture, but such important operations as combing and finishing are normally given out to specialist companies on a commission basis. Thus the combers (and the finishers, which will be considered in a subsequent note) are virtually free from the market risk on raw wool prices, for their earnings fluctuate mainly with turnover. The

Richard Thomas Proposals.—The proposals for the conversion of the debenture stock of Richard Thomas, and for the issue of new ordinary shares, announced by Sir William Firth at the meeting on Monday, have puzzled the market. The scheme is complex. The 4½ and 7 per cent. debentures, of which £1,268,722 is outstanding, and which in any event are redeemable in two years' time, will at once be replaced by a new 4 per cent. issue amounting to £1,250,000. The existing £450,000, 4½ per cent. debentures will be replaced by the new stock at £99 per cent. The holders of 7 per cent. stock, however, are to be offered the right to convert into ordinary shares at a price sufficiently below the market to enable holders at once to recoup a 5 per cent. cash profit in excess of their sacrifice of 3 per cent. interest for two years, and the 3 per cent. redemption premium. The proposal is ingenious, for it apparently enables the company to anticipate redemption by two years, broadly, at the expense of the equity. It may be noted, however, that benefits from reduced prior charges and other economies bring part compensation. This will be followed by an offer to present equity holders of £750,000 new ordinary shares at par. The net result is that the debenture capital will be practically unchanged, but will bear interest at 4 per cent., and the ordinary capital will be increased from £2,998,640 to £4,638,988. The cash £960,000 will be used for the repayment of bank and mortgage indebtedness. For the preference shares—which even at 30s. yield 5.6 per cent. gross—this is evidently a bull point. As much as £50,000 a year will be saved in prior charges. Moreover, by closing down the Raglan collieries, the company has saved another £26,000 a year. The total suffices amply to cover the 6 per cent. dividend on the extra ordinary capital. At the same time, the change lowers the attractions of the ordinary shares. On a short view, despite the reduction in tinplate production so far this year, the equity outlook is not unfavourable. From March to June, net profit increased by £75,000, against an increase in the latest year of only £100,000. The rate of progress, however, may not be maintained through the year, for it was

not until last July that the International Tinplate Agreement enabled prices to be strengthened. Sir William disclosed, however, that only about one-half of the company's profits accrued from tinplate sales, so the profit gain on the year should, in any event, be considerable. On a longer view, much will depend upon the new plant which is to be erected at Redbourn. With modern coke ovens, a modern strip mill, and pig iron on the site, instead of being brought from Lincolnshire to South Wales, costs should be reduced substantially. The new strip technique has, in fact, destroyed the economic case for the centralisation of tinplate production in South Wales.

Courtaulds' Interim.—Last week's announcement by Courtaulds, Limited, of an interim dividend of 2½ per cent., tax free, has considerably disappointed the market. In view of the indications at the last annual meeting that more equal interim and final dividends would probably be made in future, an increase was naturally expected. In their announcement, however, the board declared that they could hold out no hope of a total dividend exceeding the 7½ per cent., free of tax, paid for 1934. The Courtauld board has a reputation for caution, and this last announcement really chilled the market. Experience suggests, however, that the board, with their unequalled opportunities for visualising the world position in the industry, are generally neither too pessimistic nor too optimistic. They acknowledge that business on home account is satisfactory; the fly in the ointment is the American situation. The important contribution to Courtaulds' profits obtained from America in past years may not always be appreciated. It is now clear that despite good business in this country, increased dividends cannot be expected until the American subsidiary is working with a more adequate profit margin. Business in the United States rayon market has indeed been far from satisfactory during the first half of the year, and at the moment makers are endeavouring to get out their autumn ranges under a cloud of uncertainty as to future political developments. There is therefore every reason for the caution shown by the board. Even if improvement sets in, it seems unlikely to arrive in time to assist the dividend receipts of the parent company. The market is inclined to take the announcement at its face value, and at 54s. 4½d. the ordinary shares have recovered little of their fall from last Thursday's price of 58s. 6d. As they offer a gross yield of only £3 11s. 3d. per cent. on last year's total dividend of 7½ per cent., tax free, speculative interest in the shares seems likely to be dulled for some time.

Zinc Corporation.—Despite the fall in the price of the Corporation's chief product, lead, which averaged £11 1s. per ton during 1934, compared with £11 16s. 1d. for the preceding year, and the fact that sundry revenue declined by £4,441, an increase in net profit of £11,002 to £131,227 was achieved during 1934. This improvement is due to the higher price ruling for silver (22.90d. per oz., compared with 19.57d. for 1933), and also to an adjustment of accounts in respect of deliveries of lead and zinc concentrates, not wholly attributable to the year. The Appropriation Account shows a total amount available of £208,041. After paying the fixed preferential dividends, the two participating dividends are raised to 1s. 6d. per share for the year, against 1s. 3d. per share for 1933. The sum of £40,000 is appropriated for mine development and expenditure on the new grinding plant, leaving £51,491 to be carried forward, against £45,024 for 1933. Mining operations were well maintained during the past year. While the ore reserves in the Lead Lode at December 31st show a reduction of 100,000 tons to 2,700,000 tons, the fall is attributable to restricted development from 1930 to June, 1933, and will continue until No. 13 Level is developed. The lag in development, however, will not affect production in any way. The construction of the new all-flotation de-leading plant with an average capacity of 400,000 tons per annum has been authorised, following the satisfactory results obtained from the pilot unit. Combined

PRELIMINARY NOTICE.

EARLS COURT LIMITED.

The Subscription Lists will open and close on Tuesday, 23rd July, for an ISSUE AT PAR of £400,000 5½ per Cent. Second Mortgage Debenture Stock and 1,600,000 Ordinary Shares of 5s. each. £650,000 4½ per Cent. First Mortgage Debenture Stock, when created, will be subscribed by THE PRUDENTIAL ASSURANCE COMPANY LTD.

Directors:

MAJOR SIR RALPH GLYN, Bart., M.C., D.L., M.P., Chairman (Director, London Midland and Scottish Railway Company).

SIR MAURICE BONHAM-CARTER, K.C.B., K.C.V.O. (Director, O. T. Falk & Co. Ltd.).

SIR FELIX BRUNNER, Bart. (Chairman, West London Property Corp. Ltd.).

FRANK REGINALD LEWIS, Managing Director.

Trustees for Second Mortgage Debenture Stockholders: THE LAW DEBENTURE CORPORATION LIMITED.

Solicitors:

CLIFFORD-TURNER & CO., 11, Old Jewry, London, E.C.2.

Auditors:

THOMSON McLINTOCK & CO., 71, Queen St., London, E.C.4. Chartered Accountants.

The full Prospectus (to be published on Sunday and Monday) will show (inter alia) that:—

- The Company will acquire a 99 years' lease of Earls Court Exhibition Grounds of over eighteen and-a-half acres. On this site, with the co-operation of the London Passenger Transport Board, the Company has planned to erect, with British materials and labour, a modern and completely equipped building, at a cost of £1,230,750. The plans provide for 12 acres of Exhibition space, which can be subdivided for five separate Exhibitions or Entertainments each complete with its own entrance and services. Seating accommodation will be available for 23,000 people for large-scale sporting events and entertainments. Contracts provide for the completion of the buildings by December, 1936.
- Among the Exhibitions which have already been secured, commencing in 1937, are the three most important:—

BRITISH INDUSTRIES FAIR

"DAILY MAIL" IDEAL HOME EXHIBITION

THE MOTOR SHOW

- The London Passenger Transport Board is considering the reconstruction of Earls Court Station and the installation of Escalators giving direct access to the Exhibition Buildings. Special facilities will be provided for the parking of cars.
- The Company's income, being mainly derived from lettings, will be largely independent of the results of the Exhibitions, and anticipated revenue from sources other than tenancies already arranged are believed to be on a conservative basis. Including agreements for leases or tenancies already signed amounting to £71,000. Net Profits commencing in the year 1937, after allowing for Sinking Fund charges and interest on the First Mortgage Debenture Stock, are estimated at £158,418. This amount is more than six times the sum required for the Annual Interest and Sinking Fund on the Second Mortgage Debenture Stock now offered, i.e., £24,581, and would leave a balance of £133,837 for reserves and for dividends on the Ordinary capital.

Copies of the full Prospectus and Forms of Application are now obtainable from:

mining and milling costs showed a small increase at 23s. 8d. per ton, compared with 22s. 10d. for 1933, but this was due in some measure to the extra expenditure involved in running the mill pilot plant. While a helpful contribution can be made to future profits by increased efficiency of the plant and greater grinding capacity, the future earnings of the Corporation largely depend upon the course of base metal prices. The rise in the price of lead during the current year to a present price of just over £14 per ton is of favourable augury for an average price well above that ruling in 1934, while the activity in silver earlier in the year should prove an added benefit. Granted some improvement in world conditions, and a consequent, if gradual, increase in the consumption of lead and spelter, the Corporation is in a position to take advantage of any further recovery in base metal prices. The 10s. ordinary shares are quoted at 32s. 6d. to yield £4 12s. 3d. per cent.

* * *

Other Company Results.—Our usual table on page 157 summarises the profit and loss account of 53 companies. Further banking results show general stability of earning power, except for the Standard Bank of South Africa, whose profits have advanced from £433,180 to £502,590. The dividend has been increased from 10 to 12 per cent. The heavy industry group makes less impressive reading this week, for it includes the results of Ebbw Vale and Armstrong Whitworth Securities, to whom recovery has yet to bring its refreshing fruits. Trading conditions in the South Wales coal industry have shown no improvement, and the Ebbw Vale furnaces and steel plants remain closed. In the case of the Armstrong Whitworth companies, an improvement in heavy engineering during 1934 came too late to assist the revenue figures, but a 40 per cent. reduction in the losses sustained by subsidiary companies was effected. Ruston and Hornsby report an advance in profits from £45,335 to £80,265, after depreciation, and payment of uncanceled preference dividends has been recommended. In the Finance group, City of London Brewery Investment Trust has declared a first dividend on the deferred shares. Net profits for the year amount to £183,067. Further rubber reports, including Laras (Sumatra), Craigielea, and Timbang-Deli, show an expected improvement. The depressed state of recent tea company revenues receives further confirmation from Jokai (Assam), whose profits have fallen from £89,542 to £20,411, involving a reduction in the dividend from 12½ to 2½ per cent. The loss of £219,951 sustained by Anglo-Argentine Tramways compares with £584,003 in the previous year, but the conversion of peso items at par of exchange has been discontinued in favour of the average free market rate, and accordingly the charge for exchange differences disappears. The report is of cheerless tenor, for competition by other transport has become more severe, and chief hope resides in the eventual passing of the Co-ordination Bill. A number of interesting reports by concerns of moderate size illustrate the even spread of recovery in home industry. Eastwoods Cement reports increased profits, from £18,706 to £34,388, and the dividend is doubled at 15 per cent. The first report of Griffiths Hughes Proprietaries confirms the preliminary figures announced some time ago. Profits of the Proprietary Company amount to £246,581. In the operating company's accounts £90,000 is placed to reserve, and the results have been satisfactorily received, despite the difficulties in the overseas trading subsidiaries. W. Barratt and Company have obtained a full share of increased business in the boot and shoe industry. Profits are £21,000 higher at £126,811 and the dividend is increased to 10 per cent. Falk Stadelmann report net profits of £104,370, against £88,492, and declare an increased dividend of 8½ per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Trustees Corporation, Anglo-Spanish Construction, Consolidated Tin Smelters, Richard Thomas, Kalidjereok Rubber, Gordon (Malaya) Rubber Estates, Victoria Falls and Transvaal Power, Gold Coast Selection Trust,

South African Breweries, and Petters. The capital proposals submitted by Sir William Firth at the Richard Thomas meeting are discussed on page 136. At the Trustees Corporation, Mr W. Sandford Poole referred to the death of Sir George Touche. He attributed the rise in income to the large holding of British investments. Mr Arthur E. Hadley, at the Victoria Falls and Transvaal Power meeting gave details of expanding consumption, and discussed the New Klip Power Station and the new agreement controlling the company's rights at the Victoria Falls. The chairman of Anglo-Spanish Construction emphasised the validity of the company's claims, amounting to 62½ million pesetas, against the Spanish Government, although he recognised the political difficulties which had swept the country. The economic effects on conditions in South Africa of prosperity on the Rand were discussed at the South African Breweries meeting. An increase in capital was sanctioned at the Gold Coast Selection meeting, to provide for purchase of a large interest in Amalgamated Bank Areas, whose prospects were favourably described by Mr J. A. Agnew. At the Kalidjereok Rubber meeting, the chairman referred to "the not too hopeful" prices now prevailing, but saw signs of some improvement. The chairman of Gordon (Malaya) also looked for a further reduction of rubber stocks and a higher price. The chairman of Consolidated Tin Smelters referred to the prospects of a further increase in the tin production quota, which would give the company increased smelting business. At the meeting of Petters, Limited, the chairman gave details of the public capitalisation of the Westland Aircraft department.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET JULY 23 | ACCOUNT JULY 25

As was only to be expected at the approach of the holiday season, markets were again quiet this week. The tone, however, was not unsatisfactory, and there was definitely less profit-taking than at the beginning of the account. In addition, the weight of new issues made itself felt. The £32 millions London Electric Transport loan somewhat diverted new investment demand from gilt-edged securities and the "investment" industrials. There was thus an inevitable lack of business, and, where prices eased, it was for that reason rather than on account of profit-taking.

The announcement of the terms of the London Electric Transport issue on Monday morning caused an immediate set-back in British Government securities, particularly in Conversion 2½ per cent., which is the most comparable stock. The losses, however, were recovered later, on the steady, although the market received little support. Business, after an intervening decline to ½ discount, and in the new India 3 per cent. issue at ¾ premium, a margin which was well maintained. Colonial and Home Corporation issues followed the lead of gilt-edged, and improved towards the middle of the week. Among foreign bonds, the fund payment arrangements had been carried out according to plan, considerable doubt was felt regarding the prospects of the debt service, both in the long term and in the short. Confidence began to return later, however, and some, at least, of the losses were recovered. Elsewhere, Far Eastern issues were dull, but the improvement in the kept European issues steady. The home railway traffic proposals, hardened. On the eve of the interim announcement, however, the market is unwilling to enter into new commitments. In any event, traffic gains are insignificant compared with the vast sums at stake in possible assessment revision. The Argentine railway traffic were again uninspiring, and the market remained dull.

The industrial share market refused to respond to the satisfactory trade figures, and, with little new investment business, prices were irregular and inclined to ease. Steel shares continued to sag under the influence of unfavourable rumours about the progress of the talks with the Cartel. There was also some confusion regarding the possible effects of the Richard Thomas scheme outlined on page 136. Although prices recovered from the worst levels, the whole of the initial losses was not recouped. Electrical equipments, similarly, were uninteresting. There was a certain measure of support, however, for selected motor and aviation shares. The success of the Hawker Siddeley issue brought with it a demand for Fairey Aviation, and in the motor group Raleigh were well supported. Textiles were a better market at the beginning of the week, and J. and P. Coats, in particular, were steadily bought. Rayons, however, remained weak, under the influence of the Courtaulds interim (discussed on page 136), although American Celanese again received support from New York. Tobacco shares opened the week in good style, and building material issues, also, showed some advance. Despite the record Eastwoods Cement profits, however, prices were not maintained at the best levels. Store and provision shares were dull and irregular, and elsewhere, apart from the introduction of the new British Oxygen shares, and the slight set-back in Cable and Wireless stocks, on the formation of the new investment trust, on which we comment on page 134, there were few movements of any note.

Leading issues in the oil market remained steady, but despite some investment demand for Shell, business was at a low level, for news from the United States was not conducive to new buying. The market became more active on Thursday. The rubber share market continued its even tenor, and refused, quite creditably, to be dismayed by the unsatisfactory American consumption figures. The inevitable profit-taking after last week's revival, however, affected tea shares, and by the middle of the week most of the Indian shares—the centre of the advance—had receded again. The undertone, however, is not unsatisfactory, and it would seem that much of the buying was of a stable investment character.

The better tendency in gold shares, which appeared towards the end of last week, was very moderately maintained. For Kaffirs there was little support either from the Cape or from Paris, but none the less, after a disappointing start on Monday, prices were steady. Spaarwater, in particular, attracted attention on forecasts of the contents of the quarterly report shortly to be issued. Otherwise there is little to attract the market, and, indeed, until the French position is clearer and the sabres cease from rattling in Abyssinia, the dullness may continue. The "Jungle" was again almost deserted throughout the week, but East Africans remained active and firm. Western Australians were again irregular, although Commonwealth was bought on the latest cable. Rhodesian copper shares failed to make progress, and although the price of tin reached a new high level for the year, the share market sternly refused to respond.

FOREIGN STOCK EXCHANGES

NEW YORK

DESPITE A.A.A. shocks, the trend on Wall Street remains firm. At the beginning of the week the market was quiet and the turnover fell below the million mark, but on Wednesday there was an active burst of buying, and prices strengthened. The impetus is still industrial rather than political. The rise in steel output by four points, for the second week in succession, was the main influence, but the satisfactory electric power production figures, and the encouraging nature of many of the second quarter profit statements, also contributed to the advance. The weight of investment demand, too, is tending to push prices higher, whenever the industrial auguries provide a suitable opportunity. Steels and implements, inevitably, were in the van, but motor shares provided the main excitement, and touched their highest levels of the year. In the rail market the improvement was much less marked, and utilities opened the week in poor style, to recover later. The bond market followed the lead of industrials. Treasury issues were again firm, and even rail bonds took on a better, if irregular, aspect. Broadly, the market prospect is not unpromising, for there are definite signs of improving business confidence, and the political setback which the Administration has suffered of late is not regarded—even in sympathetic quarters—as an adverse long-run pointer.

* Two-Hour Session.

PARIS

The market has not yet had time fully to appreciate the implications of the decrees for balancing the Budget, and prices, therefore, have been somewhat irregular. The first reaction to the proposals was a marked improvement in rentes, a movement which had previously been stimulated by the peaceful character of Sunday's demonstrations. Banking shares, on the other hand, and industrials were, not unreasonably, weaker on balance. Thomson Houston, in particular, lost nine points. The mining market, after maintaining the firmer tendency which set in at the end of last week, lost ground once more.

	July 10, 1935	July 15, 1935	July 17, 1935

Royal Dutch	18,680	18,880	18,980

BERLIN

The share market opened active and firm last week. There was an increase in direct dealings between banks, and heavy buying of steels and chemicals. Reichsbank and Salzdettfurth Potash attained new record levels for the year, the latter touching 200. A general but only slight reaction followed the appearance of the Bourse Committee's warning against excessively high prices, but at Saturday's close, buyers again predominated. The new week opened steady, and on Tuesday the general advance was resumed, with steel, electrical, engineering and potash issues in the foreground. Towards the middle of the week, however, a bout of profit-taking ensued, and the electrical group, in particular, lost ground. Ford Motors, however, were slightly firmer. Bank shares were unaffected, and continued their advance. The bond market was hardly affected by the Bourse Committee's intervention, and remained dull at about the preceding week's prices.

	July 10, 1935	July 15, 1935	July 17, 1935
Reichsbank	194.50	187.60	187.00

Industrie	39.25	37.25	38.40
Norddeutscher Lloyd (New)	39.25	37.25	38.40

AMSTERDAM

For yet another week, the Bourse has been quiet, but prices have been fairly maintained. There has been a steady demand for Philips Lamps, and oil shares, also, have been bought. Rubber shares, however, were marked down after the publication of the disappointing American consumption figures.

CAPITAL ISSUES

In contrast with the Stock Exchange, which has worn a holiday appearance, the new issue market has experienced an extremely busy week, both in the number of issues and their quantitative importance. It is many months since subscriptions achieved this week's total of £39,934,250, a figure which is the more impressive since the £32 millions loan for *London Electric Transport Finance Corporation* represents the largest "new money" operation in recent times. We comment on the issue in a Note on page 133. Considerable interest has been aroused by the mixed issue of *Cables Investment Trust*. The Trust has been formed to acquire investments from Cable and Wireless (Holding) which must be realised to provide for repayment of assented preference stock. The debenture stock has a fixed life of thirty years, subject to the annual redemption operation, while the preference shares, unique among investment trust issues, are redeemable, by 1970 at latest, and at the Trust's option at 5 per cent. premium. Both issues are very sound investments in their class. The large debenture issue of *West London Property Corporation* is intended primarily to finance substantial acquisitions during the past eighteen months. The cover provided by the properties charged appears reasonably adequate, but the possibility of less active demand for residential accommodation in the London area in the future deserves consideration. The *Hawker Siddeley Aircraft* issue links two well-established aircraft concerns. Although giving adequate detailed figures, the prospectus does not contain a joint profits estimate, and the Hawker figures are shown before deducting losses sustained by a subsidiary company. Current prospects are favourable, but the outlook for the ordinary shares, issued at 200 per cent. premium, must be assessed in the light of the heavy burden of development expenditure, which is the cost of leadership in a young industry. *Morrell Estates and Development Company* is a relatively young concern, which has enjoyed rapid expansion around London within the last three years. Profits have advanced in striking fashion, but the terms of the issue themselves suggest that the speculative element in not been overlooked. *Ismay Industries* is a holding company with a 97 per cent. interest in an illuminant and domestic appliance manufacturing concern. Profits of the issue are highly competitive. If the directors' confident anticipations are realised, this mixed issue may be regarded as of good speculative industrial merit. The preference share of *Leeds and Wakefield Breweries* is made at 22½ per cent. premium, but is adequately secured on the estimates 2s. ordinary share, issued at 225 per cent. premium. A medium chosen for the public capitalisation of *Silentbloc*. The company exploits the patent rights in an anti-vibration device, which has apparently proved successful. Although profits have run at high levels, the tangible assets are small and the price therefore contains a considerable element of goodwill. The dual issue of *R. H. O. Hills (Blackpool)* also adopts a 50 per cent. premium for the 5s. ordinary shares. The concern has made progress during the last two years, and although of predominant local interest the shares would

seem to possess fair prospects. The profits trend of *C. F. Taylor and Company* has shown a satisfactory recovery in recent years. The public offer is small, but the shares may offer opportunities to investors with local knowledge of the industry. Two introduction notices have appeared this week, in respect of *Trans-Oceanic Trust* debenture stock, and *Lowmont Estates*, a Ceylon plantation concern.

or on three months' notice from 1945. Preference dividend reserve of £67,500 to be established. List closed 9.15 a.m. July 17th.

BY OFFER FOR SALE

Silentbloc, Ltd.—Offer of 300,000 2s. ordinary shares at 6s. 6d. per share. Acquires undertaking manufacturing anti-vibration devices including patented "Silentbloc" joint. Net assets, £51,525 acquired for £50,000 in 2s. ordinary shares. Profits, after depreciation, years to May 31st: 1933, £16,626; 1934, £32,414; 1935, £29,009. Issue purchased for £89,000 (est.). List closed 9.5 a.m. July 17th. Oversubscribed.

C. F. Taylor and Company, Ltd.—Offer for sale of 160,000 6 per cent. cumulative £1 preference shares at 21s. and 160,000 5s. ordinary shares at par. Worst-spinning concern, established 1854. Total assets, £476,573; current liabilities, £115,048. Profits, before depreciation and interest: 1932, £11,689; 1933, £43,324; 1934, £44,361.

BY STOCK EXCHANGE INTRODUCTION

Lowmont Estates Company, Ltd.—Issued capital 341,110 2s. shares. Incorporated 1911 to acquire 761 acres rubber plantations in Ceylon. Standard production assessed at 385,000 lbs. Cost of production per lb.: 1934, 2.949d.; estimate, 1935, 4.287d. Total assets December 31, 1934, £43,761. Total profits, 1934, £3,693.

Trans-Oceanic Trust, Ltd.—Issued capital: Ordinary stock, £400,000; 5 per cent. cumulative preference stock, £600,000; debenture stocks, 5 per cent., £250,463; 4 per cent., £150,000. Issue of £99,537 3½ per cent. debenture stock at 99 per cent., to be repaid at par June 1, 1939, or after June 1, 1969, at six months' notice. Ranks *pari passu* with existing stocks.

PRIVATE PLACINGS

Railway Share Trust and Agency.—This trust has placed privately £100,000 3½ per cent. debenture stock. In January last the company issued £500,000 3½ per cent. debenture stock at 101½ to redeem the similar amount of 4½ per cent. stock.

UNITED KINGDOM GAS OFFER

United Kingdom Gas Offer.—Stockholders of the Rhymney and Aber Gas Company have received an offer by the United Kingdom Gas Corporation to purchase the Consolidated ordinary stock (ex dividend to June 30th) at £124 cash per £100 stock.

ISSUES TO SHAREHOLDERS ONLY

United Dominions Trust.—The company is offering 175,000 ordinary shares of £1 at £4 10s. The shares are offered to existing holders whose names were on the register July 12th in the proportion of seven for every ten held. The new shares will rank in full for all dividends for the current financial year.

Gold Coast Selection Trust.—It is proposed to increase the capital from £500,000 to £750,000, by the creation of an additional 1,000,000 shares of 5s., ranking in all respects *pari passu* with the existing shares. Additional shares will be offered to existing shareholders at 15s. per share in ratio of one new share for every two shares held.

North Metropolitan Electric Power Supply.—£700,924 new ordinary stock at £2 per £1 stock will be offered to each ordinary stockholder on the register on June 29th in proportion of £1 of new ordinary stock for each £3 of existing ordinary stock held.

Tigon Mining and Finance Corporation, Ltd.—The directors have created 1,200,000 new ordinary shares 5s. each and have decided to issue, in the first instance, £165,000 of new capital, equivalent to 660,000 shares of 5s. each at par. It is proposed to utilise (a) £20,000 to £50,000 on the development of, and marketing arrangements for, the Chilean sulphur business, which is considered amply sufficient to increase the output to 50,000 tons per annum; (b) £50,000 for the redemption of the 7 per cent. first debentures now outstanding; (c) the balance for general purposes.

English and Caledonian Investment Company, Ltd.—The directors propose to issue up to £100,000 3½ per cent. redeemable debenture stock and to offer it at par in the first instance to existing members and debenture stockholders of the company. The stock will be redeemed at par on January 1, 1975, but the company retains the right on or at any time after that date to redeem at par the whole or any part of it on giving three months' notice. The company also reserves the right at any time to purchase the stock in the open market or by private treaty.

CONVERSIONS AND REPAYMENTS

Associated Electrical Industries.—Associated Electrical Industries is redeeming £1,036,353 4 per cent. mortgage debenture stock. The whole of the sum required is being found out of liquid resources.

Cable and Wireless (Holding), Ltd.—Cable and Wireless (Holding), Ltd., announces that approximately £8,450,000 of preference stock has been tendered to the company for repayment under the terms of the two offers recently made, both of which are now closed.

Pennsylvania Water and Power Company.—£10,000 first refunding mortgage 4½ per cent. series "B" gold bonds of the Pennsylvania Water and Power were purchased by the New York Trust Company, trustee under the mortgage and deed of trust securing the issue, for account of the sinking fund, October 1, 1934. Of this series \$61,000 have been redeemed through the sinking fund, leaving outstanding July 9, 1935, \$11,189,000.

The Lancashire United Transport and Power Company, Ltd.—Three general meetings are to be held July 26th at Winchester House, London, the resolutions to be proposed at which, if passed, will result in increasing the capital to £600,000, and in a conversion of the deferred debenture stock into ordinary shares of a like nominal value.

FORTHCOMING ISSUES

Earl's Court.—An issue of £400,000 5½ per cent. second debenture stock at par and 1,600,000 ordinary 5s. shares at par will be made on Tuesday next, July 23rd. The prospectus will show that net profits available for the second debenture stock are estimated at £156,416. The terms of the building contract provide for completion of the exhibition buildings by December 25, 1936.

Westland Aircraft.—An offer for sale of 500,000 ordinary 5s. shares at 7s. will be made next week.

Rest Hotels, Ltd.—An issue of 160,000 ordinary shares 5s. at par will be made on July 23rd.

British Drug Houses, Ltd.—This company is calling an extraordinary meeting on August 7th to raise the capital to £750,000 by the creation of 108,000 new preference shares ranking *pari passu* in all respects with the existing 242,000 preference shares of £1. The proceeds of issue will be utilised to repay the bank loan and to finance further developments and improvements.

A. W. Gamage, Ltd.—It is understood that an issue of £250,000 4 per cent. first mortgage debenture stock will be made shortly.

OTHER RESULTS OF ISSUES

Great Boulder Mining and Finance, Ltd.—Shareholders in the Great Boulder Proprietary Gold Mines, Ltd., Associated Northern Blocks (W.A.), Ltd., and Commonwealth Mining and Finance, Ltd., have received allotments in full. Applications from the public up to 100 shares have been allotted in full. Applications for over 100 shares have been allotted approximately 83 per cent.

Trust Houses.—The 6 per cent. cumulative preference shares of £1 at 20s. 6d. each have been heavily over-subscribed.

AN AMERICAN TRUST

RECORD OF DIVIDEND SHARES, INC.

A large section of British investors have felt during the past two years that American business progress has been retarded by the N.R.A. The recent Supreme Court decision, however, has now made many American shares attractive to investors here.

In view of the present rapid change in conditions, there is need of expert advice and guidance. Moreover, diversification is desirable. Both of these requirements appear to have been fulfilled in Dividend Shares, Inc., one of the leading American trusts.

RECORD OF THE COMPANY

At the very low levels of 1932 there were many dividend-paying shares standing at prices far below their intrinsic value. A trust then formed to invest in such shares was a logical development, although paradoxically few trusts are formed at such times. In August, 1932, Dividend Shares, Inc., was organised to invest in high-grade dividend-paying shares.

In the 31st December, 1934 balance-sheet earned surplus was approximately one million dollars, and unrealized profits stood at over three million dollars. The price of the shares, which is based each day in relation to the market value of the holdings, rose from a low price of \$.94 to a recent price of \$1.50.

NEW TYPE OF TRUST

Dividend Shares, Inc., marked a new development in investment trust practice. By combining the best features of the Scottish type management trusts and the newer fixed trusts, it overcame the disadvantages of each.

Unlike the former, it has no prior charges and it cannot borrow money, thereby giving greater safety to the share capital and its dividends. It differs on the other hand from the fixed trust in that its shares carry full voting power, that the holders own the Company, and elect the directors; and that it is not committed to a fixed list of holdings. An investment which for any reason becomes no longer attractive may at once be sold and the proceeds re-invested in a more promising undertaking.

Reports showing latest holdings, together with other current information as to the Company's activities, are sent quarterly with dividend cheques to all registered holders. The latest list of holdings shows investments in 42 leading companies, the five largest in percentage value being: Du Pont, Standard Oil of N.J., Union Carbide, General Electric and Continental Can.

There is an active market for the Company's shares. In addition, shareholders have the privilege of presenting their shares to the Company for repurchase at liquidating value to the extent that surplus is available for the purpose. No fee is charged shareholders whose shares are repurchased by the Company.

No investment may be made if, as a result, more than 5 per cent. of the Company's assets are invested in the securities of any one issuer (except the U.S. Government) unless the holders of 25 per cent. or more of the outstanding shares do not object in writing to such investment after they have been duly notified. It is not obligatory to sell shares held if, as a result of unusual appreciation, the

amount invested in such shares temporarily exceeds this 5 per cent. limitation.

Dividend Shares, Inc., has attained wide popularity because of its endeavours to provide broad diversification in a conservative group of common stocks, ready marketability, regular dividends, and an opportunity to participate in general market recovery.

MANAGEMENT

It has a management contract with the house of Calvin Bullock, established in 1894, and one of the pioneers in the investment trust movement on the other side. The record of Calvin Bullock in the investment trust field has been outstanding.

By pooling the management resources of its group of trust companies, various experts in different investment fields are available.

During 1934 the asset value of the trust as compared with the Standard Statistics 90 Stock average, adjusted for dividends in each case, showed an increase of 5.49 per cent., as against a decline of 1.98 per cent. in the latter.

Because of the funds at his command, the wealthy investor is theoretically able to achieve satisfactory diversification. For this reason, it has been stated that investment company shares appeal only to the smaller investor. Figures, however, do not substantiate this attitude. In a recent report by Dividend Shares, Inc., ten of the larger holders each held an average of 76,772 shares, or an average investment of more than £23,000 on the basis of the recent offering price.

AMERICAN PROSPECTS

According to a New York Times compilation, corporate dividends in the first five months of 1935 were approximately 3.6 per cent. greater than in a similar period a year ago, and 16.7 per cent. greater than in the first five months of 1933. Dividends totalling \$328,858,312 were paid by 776 corporations in May, 1935, while in the same month of 1934 731 corporations paid \$267,400,363 in only in giving testimony as to the extent of recovery, not also as evidence of the increased income which can be derived from American common stocks.

The American market would appear to offer substantial scope for capital appreciation while also showing attractive yields. The needs of the average English investor appear to have been met by Dividend Shares, Inc., a great many of these shares now being held in this country.

The price is published daily in the London financial papers, the current price being around \$1.47 (6/-). On the basis of present dividends, the yield is over 5½ per cent. Dividends are payable either in dollars or sterling.

Explanatory statements can be obtained from any English stockbroker or latest reports from the London representative of Messrs Calvin Bullock, Mr J. McG. Dalenz, 3 Newman's Court, Cornhill, E.C. 3, or Kinloch & Company, 2 Austin Friars, E.C. 2.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 13, 1935, amounted to £12,369,000, against ordinary expenditure of £8,168,000. After allowing for an increase in Exchequer Balances of £250,636, the operations for the week, as shown below, decreased the gross National Debt by £5,735,000 to approximately £8,115 million.*

GOLD MARKET

Messrs Samuel Montagu and Company write on July 17, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £192,716,841 on the 10th inst., showing no change as compared with the previous Wednesday. In the open market about £2,000,000 of bar gold changed hands at the daily fixing during the week. Movements in prices have been narrow, but the premium over gold exchange parities has tended to increase slightly.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
July 11	140s. 8d.	12s. 0.95d.
" 12	140s. 11d.	12s. 0.69d.
" 13	140s. 11d.	12s. 0.69d.

" 16	140s. 11½d.	12s. 0.65d.
" 17	141s. 0½d.	12s. 0.56d.
Average	140s. 10.58d.	12s. 0.73d.

The s.s. "Mantua," which sailed from Bombay on the 13th inst., carries gold to the value of about £630,000 consigned to London.

SILVER MARKET

The sharp recovery in prices seen at the end of last week was not maintained and an easier tendency was again apparent during the week under review. There have been further liquidations by the Indian Bazaars and speculators, and sales have been made on China account.

Although not in evidence during the first part of the week, the American Government was a buyer at the lower levels, good support being given without, however, any disposition to exert pressure.

Speculative resales have tended to ease, but on the other hand, except for American buying, there has not been much demand. The tone of the market appears steadier at the moment, but movements in the near future may continue to be erratic.

Quotations during the week:—

REPORTS AND NOTICES

RAILWAYS

THE CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED.—The result of the polling on the Scheme of Arrangement submitted at meetings of holders of the various debenture stocks of the Central Uruguay Railway Company of Monte Video, Ltd., and Allied Extension companies, and of the preference and ordinary shareholders of the North Eastern of Uruguay Railway, was an overwhelming majority in all cases in favour of the scheme. The scheme has now to await the approval of the Court.

MINES

TANGANYIKA CONCESSIONS, LTD.—The report shows that the profit was £100,816, against a loss of £35,306 the previous year. The debt balance carried forward is £176,690. Union Minière du

Haut Katanga, of whose shares Tanganyika is a large holder, has improved its position, the gross working profits last year being over £650,000.

MISCELLANEOUS

ANGLO-SPANISH CONSTRUCTION COMPANY, LTD.—At the tenth annual general meeting the chairman stated that at January 31, 1935, the sums due by the Spanish Government amounted to approximately 62,500,000 pesetas, equivalent to more than £1,730,000. The company's claims were reaffirmed by the Spanish Supreme Tribunal and supported by the British Government. The chairman spoke hopefully regarding the prospect of the Government getting the amounts due.

VICKERS, LTD.—Vickers, Ltd., now holds the entire £17,464,251 of share capital of Vickers-Armstrongs. This has been accomplished by the acquisition of 2,657,612 1/1 ordinary shares; 400 7 per cent. £1 "A" cumulative preference shares; 2,000,000 6 per cent. £1 "B" cumulative preference shares in Vickers-Armstrongs from Armstrong Whitworth Securities Company, the A.W. Second Stock

Trust and A.W. Consolidated Stock Trust. The ordinary shares were held by Armstrong Whitworth Securities, and the "B" preference equally by the A.W. companies.

A. W. CONSOLIDATED STOCK TRUST, LIMITED.—The Directors announce that, with the approval of the trustees of the income debenture stockholders, they have agreed to sell the trust's holding of £1,000,000 Vickers Armstrong, Ltd., 6 per cent. "B" preference shares to Vickers, Ltd., at the price of 15s. per share. A meeting of the income debenture stockholders will be called at an early date to decide as to the employment of the proceeds.

GENERAL THEATRE CORPORATION.—Mr Justice Eve, in the Chancery Division, on Wednesday, June 17th, confirmed a petition by the General Theatre Corporation for the confirmation of the reduction of its capital from £2,000,000 to £549,166 13s. 4d. His Lordship also sanctioned a scheme of arrangement between the company and the holders of its Six and a-Half per Cent. First Mortgage Debenture stock, Seven and a-Half per Cent. Cumulative Preference and its ordinary shares.

VEGETABLES.—According to *The Fruit Growers' Covent Gard* correspondent, tomatoes recovered in price during the past week.

IMPORTS (Value C.I.F.)

KINGDOM (Value F.O.B.)

recently reached. In France, the "outsider" Mines de Potasse de Blodelsheim until recently constituted a threat to the Cartel, but this danger has now been removed. Blodelsheim has stopped the process of development and, from 1938 onwards will receive from the State mines and the Kali Ste. Thérèse a fixed bonus on every ton of potash produced by them. The Palestine Potash Company, which exploits the potash deposits of the Dead Sea, is to hold its annual meeting in London next week. This company has found a ready sale for its product, although its prices have suffered as a result of heavy competition. No new developments have been reported from Spain, but the reserved sales of Spanish producers indicate that the understanding between them and the Cartel has already become effective.

UNITED KINGDOM

THE prices in the following are revised with the assistance of an eminent firm in each department.

be available. The balance of the Egyptian old crop of cottonseed is held for £6 10s., but there is little response. New crop, Oct.-Nov., is offered at £5 17s. 6d.

Vegetable oils lack adequate support and in certain cases are inclined easier. Raw linseed oil ex Hull, July-August delivery is quoted at £20 15s., and September-December at £20 10s. per ton, naked. Demand for cotton oil is negligible, but quotations are maintained at £23 10s. per ton for Egyptian crude and £26 10s. for common edible, ex Hull. Oilcakes are in fair request for the time of year and steady.

RUBBER.—The market in rubber has been quiet, and prices tended to sag. Among the factors which have had a depressing influence are disappointing returns of consumption in the United States, and excess shipments of native rubber from the Dutch East Indies. In New York the spot price on Wednesday was 12½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½ d. per lb., as against 5½ d. on the corresponding day last week. In forward positions, business has been done at 6d. for October, December, 1935, as against 6½ d. to 6¾ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 173,311 tons, against 172,513 tons a week earlier. A year ago stocks amounted to 104,049 tons.

POTASH.—The world price of potash has not yet shown signs of any improvement, but continues to fluctuate around the lowest level ever touched. Nevertheless, in various centres, certain favourable omens have recently made their appearance. In the

VEGETABLE OILS AND OILSEEDS.—Markets generally are quiet, and little trade is passing. A rather firmer tone has developed in linseed on reports of continued drought in Argentina, but demand is still very poor, and confined to near delivery. Plate is about 5s. per ton dearer. Business in Indian linseed is very small, as shippers' quotations are considered too high. The quantity afloat for Europe is 111,200 tons (including 9,600 tons from India), 500 tons less than last week; and for the United States and Canada 35,300 tons, against 25,500 tons a year ago. Shipments from the Plate are at a fair level, and to date total 1,132,000 tons, leaving 763,000 tons (estimated) available for export, as against 575,000 tons actually shipped in the remainder of 1934. Shipment of the new seed from India is proceeding slowly but about 225,000 tons are expected to

THE Frankfurter Zeitung

Founded in 1856

The newspaper for home
and foreign news

The Frankfurter Zeitung has a wide Home circulation and in addition is read throughout the world for its up-to-date and reliable survey of important economic and political events in Germany and all other countries.

Surveys are made by its own correspondents in all the principal capitals. The Frankfurter Zeitung considers the English point of view on various subjects. There is therefore an ever-growing demand in England for the Frankfurter Zeitung and its various supplements.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, JULY 22—PAPER AND PULP COMPANIES. The price of paper and pulp, unlike that of many staple manufactures in the British market, went on declining until the beginning of this year. Now, however, there is a better tone and, it is thought, a better outlook. The position of the industry and the investment opportunities to be found in it are surveyed in this article.

TUESDAY, JULY 23—MINING FINANCE SHARES by "Minotaur." Following his article on Rand Mining share prices and yields last Tuesday, our Special Mining Correspondent "Minotaur" now turns to the "Shop" shares and deals with the leading South African Mining Finance Houses from the same point of view.

WEDNESDAY, JULY 24—THE COFFEE POSITION. In view of the current uneasiness regarding the position of Brazilian Bonds and Brazil's undoubted difficulties over her foreign exchange situation, particular interest attaches to the market outlook in this, Brazil's principal export product.

THURSDAY, JULY 25—TEA PLANTATION COMPANIES. In this article, a market expert, recently returned from the East, discusses the position on the Indian and Ceylon Estates, and the factors on the production side which merit the attention of the Tea Share Investor.

FRIDAY, JULY 26. Continuing our series of articles on Industry in the Provinces, this week's choice falls on NEWCASTLE and TYNESIDE.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE GOVERNMENT'S REJOINDER

THE country is now in possession of the Government's reply to Mr Lloyd George's proposals. That reply, as had been freely predicted, amounts to a rejection—not only so, it is an emphatic and uncompromising rejection. Item after item of the proposals is discussed and flatly turned down, on one ground or another; and the statement concludes with the assertion, breath-taking in its confident comprehensiveness, that "in every field which he [Mr Lloyd George] explores the Government have already taken action which has produced results wider, more comprehensive, and more beneficial than any that his programme can effect." If this is true, it is a fact which has not hitherto been apparent even to many of the Government's supporters. It is not the habit of this, or indeed of any, Cabinet to do good by stealth, and the public can be pardoned for its surprise at learning the full tally of the benefits which have been thrust upon it.

There can be little doubt that the Government's memorandum has been received with a feeling of disappointment, not least among the more sensitive and perceptive of their supporters. But in an extremely negative document there are nevertheless several crumbs of comfort for those who will take the trouble to pick them out. There is, for example, the unequivocal statement that "finance need be no obstacle to any sound and solid scheme—there is an ample supply [of money] to be borrowed." To most people this has been obvious for a long time. Nevertheless, until the issue of the present memorandum, the Treasury have allowed the public to believe that in their view money could not be found for any expenditure upon public works. Indeed, the actions of the Treasury, their rigid control over the capital market, their marshalling of applicants for loans in a slow-moving queue, have appeared to be the actions of those who fear a shortage of capital rather than a shortage of borrowers. But we now learn that we have been mistaken, that the Treasury sees no financial obstacle to a policy of public works—just as Mr Chamberlain told the House of Commons somewhat plaintively the other week that he

has always been an advocate of public works. One could have wished for enlightenment at an earlier stage of the depression; but better, a little better, late than never.

There are some other most encouraging statements in the memorandum which it is not altogether easy to reconcile with the Government's past actions. For example, there is a surprisingly emphatic denunciation of the policy of restricting food imports, on the grounds that it would involve "severe dislocation" for the food-exporting countries, that it would "fatally impair the ability and willingness" of these countries "to take our exports of manufactured goods, and might increase, instead of decreasing, unemployment in this country." Admirable sentiments indeed! It seems ungrateful, and a little cruel, to point out that they are uttered by the Government which has reduced imports of food by £70 millions a year since 1931—a Government of which Mr Walter Elliot is not the least vocal, least active or least influential member. But once more we may welcome the tardy conversion, and hope that the Government intends to prove its new-found faith by contrition for the past and good works for the future.

Such good works as may be in contemplation, however, apparently do not include public works on the scale urged by Mr Lloyd George. The memorandum is quite definite about that; and this impression was confirmed by the speech made by the new Minister of Labour in the debate on Tuesday on the Report of the Commissioner for Special Areas. Mr Ernest Brown had plenty of defences for the past, but, as Mr Harcourt Johnstone remarked, it was impossible to glean from his speech "even that he proposes to continue the financial aid which has been given to the Commissioner by Parliament up to the present time." In truth, the Government has no plans. In Mr Baldwin's speech at Himley Hall last month there was a vague mention of other schemes similar to the London Suburban transport project. But this week's memorandum has a different tone. "There may be," it says, "other plans of like character in the provinces justifying similar facilities. They have not as yet, however, been laid before the Government."

In these circumstances it is more than ever necessary for those who believe in a policy of expansion stimulated by the Government to restate their case. It is easy, of course, to ridicule the advocacy of action for action's sake, and the Government's statement makes effective play with the argument that to announce a large plan of development and then do nothing would have a very harmful effect upon industry. Of course it would; but it is not proposed that the policy of expansion should stop short at announcement. There are definite plans of action, which have been pointed out again and again and which the Government could initiate, with or without the blare of trumpets, if it chose to do so.

The report of the Commissioner for Special Areas has served to consolidate public opinion behind the belief that it is a localised problem which we have to solve. Southern England is not unprosperous. The four territorial divisions of London, the South-East, the South-West and the Midlands, which comprise half the population, have an average unemployment percentage of less than 10 per cent. What, then, are the lines of action which would grapple with the problem of the Special Areas? First and foremost comes the revival of foreign trade. Revival of the coal trade alone, to a level no higher than that of 1929, would provide work for nearly 20 million manshifts of labour a year. Moreover, the revival of foreign trade is not a mere pious aspiration; the means of securing it have frequently been canvassed in the *Economist*. The Government's statement itself is pessimistic about the future benefits to be derived from purely bilateral negotiations; the case for a radical change of policy is therefore all the stronger.

Even the most optimistic forecasts of the probable results of a vigorous new initiative in commercial policy would not, however, provide for the reabsorption into employment of more than a portion of the unemployed in the Special Areas. For many of these people the conclusion must be reluctantly reached that they will never work again, either in the Special Areas or elsewhere. The second line of action, accordingly, is to treat these people as a special case, outside the main corpus of cyclical unemployment and to formulate special measures of relief for them. This is the sphere in which the Commissioner might have done very valuable work if he had not been restricted by the unduly narrow terms of the Act under which he was appointed.

The third line of action is that of Transfer. Even with a revival of exports and a segregation of those who, either from age or for any other reason, must be regarded as permanently unemployable, there will remain many thousands of eager and competent workers. Either they must have industry fetched to them or else they must be taken to industry; in both cases there is a problem of transfer. Encouragements to industries to settle in the depressed areas have hitherto been unavailing. Indeed, the problem is more one of an exodus of industries from these areas than a migration to them, as is shown by the recently-announced decision of Messrs Richard Thomas and Company to move part of their tinplate business from Glamorganshire to Lincolnshire. Transfer is likely to be more the transfer of men out of the Areas than the transfer of industries into the Areas. But it is no good transferring men unless there is work for them to go to. This is the final justification for a forward policy of capital development throughout the country. It is no answer to this policy to say that the works of development would not be in the Special Areas. Their economic justification is, at least in part, to provide a means of getting men, especially young men, out of the Special Areas.

The Government's answer is thus not conclusive. Since finance is no longer an obstacle, they are forced to argue that Mr Lloyd George's schemes are impracticable. But since the Government have no schemes of their own, they have to maintain that there are no worthwhile projects. But this is patently untrue and carries no conviction. As *The Times* so truly remarked last week, "when a Government wants activity there is activity; when it does not want activity, there is none." The Government agrees with Mr Lloyd George's objectives, but the electorate is likely to judge it by its refusal to will the means rather than by its agreement to wish the end.

AUSTRIA PAST AND FUTURE

TWELVE months have now elapsed since the murder of the Austrian Chancellor, Dr. Dollfuss, by Nazi gangsters on July 25, 1934. The first anniversary of this political martyrdom reminds us to look before and after and to take stock of the position of a country whose destinies are as closely interwoven with the general fate of Europe in 1935 as they were in 1914.

On the eve of the crime in which Dr. Dollfuss lost his life only the very boldest of men would have ventured to wager that, in July, 1935, there would still be a sovereign independent Austrian State on the political map of Europe. This mutilated remnant of the former Habsburg Monarchy had seemed doomed to perish from the moment when it issued from the uncreative hands of the Peace Conference. Was not this independent German-Austrian republic simply a by-product of the victorious Powers' determination to keep the European balance tilted in their own favour? What was the meaning of an independent Austria that had ceased to be the centre of an empire? And how could this mountainous, agrarian, poverty-stricken caricature of an Austrian State ever hope to support the former Imperial capital of Vienna, which now hung like a great millstone round its emaciated neck?

At the very outset, this post-war Austria had to be kept alive by artificial respiration. The Reparations Commission, which had been appointed to suck her blood, was constrained to administer relief instead. The League of Nations had to step in to help her put her finances in order with the backing of the victors and the neutrals. And so she had painfully lingered on—seeing no ray of hope except in an *Anschluss* with Germany that was perpetually vetoed by Powers whose *fiat* she could not resist. Then, in January, 1933, the National-Socialist revolution in Germany exposed her to a "raging tearing" campaign of propaganda-cum-terror which was intended to sweep her into "co-ordination" with the Third Reich through a forcible process of Nazification.

To the world's surprise, this Nazi campaign was boldly resisted by the regime which had then recently come into power in Austria under Dr. Dollfuss's leadership. It was a regime which, to begin with, had not attracted much notice and had been written off by those foreign observers who did glance at it as a typically Austrian milk-and-water brand of Fascism, calculated no doubt to prepare the way for the genuine article which was now being imported from a Hitlerised Germany. The growing astonishment with which the world watched Dr. Dollfuss's successful defiance of the Nazi offensive was followed by something like consternation when, in February, 1934, the Heimwehr right wing of Dr. Dollfuss's coalition suddenly fell upon and crushed the Social-Democratic Party in Austria by military force—and this with Dr. Dollfuss's retrospective acquiescence. How could a Government which had thus wantonly and violently destroyed the principal anti-Nazi organisation in the country hope to hold its own against the Nazi offensive any longer? How many people were there in Austria who were neither Nazis nor Social-Democrats? Had the Dollfuss regime any real backing at all? Was it anything more than a political façade, built with Italian money, buttressed by Italian military force, and compelled to lean upon the foreign Power that was maintaining it? By July, 1934, the Nazis—both in Austria and in the Reich—had evidently come to the conclusion that this Austrian game of defiance was quite played out. The *Putsch* at Vienna, which miscarried after costing the Chancellor his life, was to have given this impossible regime its *coup de grâce*.

But the event has turned out exactly contrary to expectation—and contrary, too, to the sequel to the assassination of the Archduke Francis Ferdinand just twenty years before. The assassination of the Archduke had been duly followed by the break-up of the old Austrian Empire, whereas the murder of Dollfuss seems to have set the seal upon Dollfuss's work. What Dollfuss died for was an *Austria Rediviva*, and we have indeed been witnessing the spectacle—at once tragic and exhilarating—of an Austria being reborn through ruin and bloodshed. Austria, indeed, has largely found the forces of her regeneration within herself. The sound improvement in her national finances; a recovery of her trade which brought her international balance

into equilibrium; the Schuschnigg Government's gestures of appeasement to the Social-Democrat workers; and the acute social and economic tension inside Nazi Germany—these are the influences which have rallied the majority of the Austrian people on behalf of Austrian integrity. The German Nazi regime in the last year has hardly been an attraction to Austrian Catholics, industrialists, workers and peasants; and, as will be seen in a Note on page 172 this week, the Nazi screw in Germany is now being given another violent twist towards extremism, which can only render Nazidom more obnoxious in Austria. Moreover, the Franco-Italian agreement of last January, coupled with the new British Foreign Secretary's reiteration of Britain's concern to maintain Austrian integrity, mean an acquisition of morale for Dr. Schuschnigg's Government—and perhaps much more than morale.

But only "perhaps." Austria's place in Central Europe cannot be maintained, save within the setting of a regional Danubian agreement which provides for the relaxation of both economic and political tension in that vexed arena. Only so can that great capital, Vienna, support its industries and workers; and only so can Austria maintain her independence. But here the internal and external problems facing Dr. Schuschnigg's Government merge into one. For the internal solidarity of the Austrian population—the Chancellor's Catholic supporters, the none-too-amenable Heimwehr under the young Prince Starhemberg, and the groups of Socialists, Monarchists and Nazis—is as yet far from being established. There is little doubt that an independent Austria could most easily find the link it needs in a restoration of the monarchy. Unfortunately, the Little Entente, under the unyielding leadership of Dr. Benesh and M. Titulescu, are bitterly opposed to this—even to the extent of regarding a Habsburg restoration in Austria as a *casus belli*. They cannot view it otherwise than as a threat to recreate the whole Austro-Hungarian Empire at their expense. In their eyes, apparently, the return of Otto of Habsburg to the throne of his ancestors would be as grave a danger as a Nazi irruption into Central Europe.

And yet it seems to us that the Little Entente statesmen protest too much. Is it so inconceivable that a united, independent Austria with a Habsburg monarch should confine itself to the fulfilment of a very high vocation—the fashioning of a State which, as Dr. Seipel hoped, should embody all that is highest in the German culture in Central Europe; of a State which could forswear territorial aggrandisement because, as a centre of toleration, it enjoyed unimpeachable relations with its neighbours? Is it so sure that Hungary would join again with Austria in an imperialist forward policy at the expense of the newly-won sovereignties of the Little Entente? After all, European monarchs have in these latter days had good reason to curb their ambitions. But even if the Little Entente are right, their rejection of the monarchist solution means that they must help Austria to find some other way out. Clearly, for them Austria's independence is of paramount importance, and they must take some risks to secure her political and economic appeasement. If they were prepared to do so, they could count on French, Italian and British support, both on the political and the economic plane. And they would ensure the security of Central Europe.

For these cogent reasons we echo the hope, expressed by Sir Samuel Hoare a fortnight ago, that negotiations for the long-delayed Danubian Pact may speedily begin. Few would dispute that the future of Austria will form the focus of these negotiations. And as the auspices in Austria herself are now more favourable than at any time in the last two unhappy years, the opportunity should not be allowed to slip.

MERCHANT FLEETS OF THE WORLD

In shipping, as in foreign trade, national pride and prestige seem now more important than national incomes. When a member of the French Chamber of Deputies dared to draw attention to the heavy burden on the State of running the "Normandie" he was promptly silenced with the reply that the indirect gain from enhanced national prestige far outweighed the charge on the taxpayer's purse. As a result of such tendencies, a large por-

portion of the shipping capacity in countries which have hitherto acted as carriers for other nations has been rendered redundant.

Sustained recovery of the profitability of the shipping industry can only take place through an adjustment of the world's carrying capacity to the volume of international trade. Such an adjustment can be brought about by a reduction in shipping tonnage and/or by an expansion of international trade. So far the policy of national self-sufficiency, reflected in trade restrictions and unstable currencies, has prevented anything but a slight expansion in the volume of world trade. The index of the volume of international trade, calculated by the Economic Intelligence Service of the League of Nations, rose from 73.9 (1929 = 100) in 1932 to 74.9 in 1933 and 77.2 in 1934. Yet there has so far been little reduction in the world's shipping tonnage. As a consequence, freight rates have remained low and the profits of British shipping concerns, though slightly higher than a year ago, remain at a low level. Meanwhile, the international scheme to raise freight rates by the withdrawal from the market of a proportion of the world's shipping tonnage remains in the draft stage. And, in any case, the scheme, which is meeting with considerable opposition, could at best be only a palliative.

With these unpromising facts in mind, it is of interest to examine the changes that have taken place in the size and composition of the world's merchant fleet, as recorded in the 1935 edition of *Lloyd's Register Book*, published this week. As the following chart shows, the tonnage lost and broken up in 1934 was again slightly in excess of new launchings in this country and abroad:—

GROSS TONNAGE LAUNCHED AND LOST AND BROKEN UP IN THE BRITISH ISLES AND ABROAD

The gross tonnage launched in the world, exclusive of vessels of less than 100 tons and of barges and sailing ships, rose from 479,559 in 1933 to 954,777 in 1934, as compared with 2,774,191 in 1929. On the other hand, the gross tonnage lost and broken up declined from 2,733,458 in 1933 to 2,071,662 in 1934, as compared with 1,458,665 gross tons in 1929. As a result, the gross tonnage of steamers and motorships declined from 64,357,792 in June, 1934, to 63,727,317 in June, 1935.

Changes in the ownership of the world's steam and motor tonnage since 1929 are shown below:—

Country	June, 1929	June, 1933	June, 1934	June, 1935
Great Britain and Ireland	20,046	18,592	17,630	17,298
United States (Sea)	11,036	10,088	9,795	9,665
Japan	4,187	4,258	4,073	4,086
Norway	3,218	4,078	3,980	3,967
Germany	4,058	3,888	3,680	3,693
France	3,303	3,470	3,260	2,989
Italy	3,215	3,093	2,875	2,838
Holland	2,932	2,759	2,612	2,554
Sweden	1,480	1,658	1,597	1,541
Greece	1,267	1,417	1,507	1,711
World	66,407	66,628	64,358	63,727

It will be seen that, with the exception of Germany, Greece and Japan, the carrying capacity of the principal countries declined between 1934 and 1935. Only Greece, Norway and Sweden increased their shipping tonnage between 1929 and 1935. The decline was again most marked in the British Isles, whose proportion of the world's total capacity fell from 30.2 per cent. in 1929 to 27.4 per cent. in 1934 and 27.1 per cent. in 1935.

The total figures include certain specialised classes of vessels. Thus in 1935 there were 1,104,960 gross tons of steam and motor trawlers, whalers and other fishing vessels, as compared with 1,053,089 gross tons in 1934. A still larger proportion of the world's tonnage consists of vessels specially fitted for the purpose of carrying bulk oil. World tanker tonnage, excluding vessels of under 1,000 gross tons, showed a slight increase during the past twelve months:—

	1929	1933	1934	1935
British Isles	2,350	2,269	2,212	2,313
United States	2,510	2,502	2,480	2,491
Norway	1,450	1,508	1,507	1,565
World	8,550	8,757	8,668	8,896

Eliminating tankers, lake vessels, ships of less than 4,000 tons gross and tonnage over 25 years, there remains in 1935 a world tonnage of 30,174,691 gross (against 30,653,015 in 1934) of large, efficient ocean-going vessels, available for general cargo and passenger purposes. An analysis of this figure by nationalities is given below:—

Country	June, 1934 Tonnage	Percentage of World %	June, 1935 Tonnage	Percentage of World %
Great Britain and Ireland	11,256	36.7	10,899	36.1
United States	5,421	17.7	5,339	17.7
Germany	2,215	7.2	2,259	7.5
Japan	2,094	6.8	2,133	7.1
France	1,850	6.0	1,710	5.7
Italy	1,712	5.6	1,682	5.6
Holland	1,551	5.1	1,479	4.9
Norway	1,005	3.3	1,005	3.3
World	30,653	100	30,175	100

This analysis shows that the efficiency of the British merchant marine still compares favourably with that of the rest of the world. Although the British proportion of world tonnage declined from 30.2 per cent. in 1929 to 27.1 per cent. in 1935, the British fleet still includes 36.1 per cent. of the more efficient ocean-going tonnage available for general cargo and passenger purposes. Of the total tonnage owned in this country, only 8.5 per cent. is less than five years old. The countries possessing the largest proportion of new tonnage are Norway (16.6 per cent.), France (12.4 per cent.), Japan (11.4 per cent.), Spain (11.1 per cent.), Holland (10.4 per cent.), Denmark (10.3 per cent.), and

Australia and New Zealand (10.3 per cent.). The United States sea-going tonnage includes only 4.2 per cent. of vessels less than five years old. On the other hand, of the tonnage registered in Great Britain and Ireland 80.5 per cent. is under 20 years old and 60.9 per cent. is under 15 years old, as compared with 68.8 per cent. and 41.8 per cent., respectively, in overseas countries. Big liners of 15,000 tons and upwards represent only 5.6 per cent. of the total tonnage. Although the proportion of these owned in this country has declined, it is still about 45 per cent. There are now 1,522 steamers of 10,928,473 tons fitted with turbine engines or a combination of steam turbines and reciprocating engines, and 5,511 vessels (including auxiliary vessels) of 11,304,691 tons, fitted with internal-combustion engines, as compared with 730,000 tons and 220,000 tons respectively, in 1914. During the past twelve months the world's tonnage of motorships increased by 700,000 and that of vessels fitted with steam turbines by 36,000 tons. The tonnage of steamers fitted solely with reciprocating steam engines has declined by 1,366,000 since June, 1934. The total motor tonnage now accounts for 17.4 per cent. of the aggregate tonnage of the world. In this country motor tonnage represents only 16.6 per cent. of the total merchant fleet, as compared with 48.6 per cent. in Norway, 41.8 per cent. in Denmark, 36.5 per cent. in Sweden and 33.0 per cent. in Holland.

In general, the past year has shown little change in the world's merchant marine, and the problem of surplus capacity is still far from solution. In a draft resolution, formulated at a recent congress in Paris, it is stated that

The International Chamber of Commerce, while supporting the attempt by shipowners to meet their immediate problems, is convinced that the return of the industry to stable prosperity depends upon the revival of international trade which alone can employ the ships.

Thus, the Chamber rightly regards the distress of the shipping industry as one more indication of the imperative need to remove existing obstacles in the way of international trade.

DANZIG'S DIFFICULTIES

(BY A CORRESPONDENT)

THIS year the Free City of Danzig has been a centre of kaleidoscopic changes, both in the political and the economic fields. The Nazi Government of the City, which was elected in May, 1933, shortly after the assumption of power by its German prototype, installed the Nazi Dr. Rauschning as President of the Senate. He became suspect because he withstood extreme Nazi demands; resigned last November; and escaped to Poland a few months ago. The Nazi Government then went to the people last April, demanding a two-thirds majority in order to alter the City Constitution. They obtained just under 60 per cent. of the poll, the Social-Democrats and Centre holding their ground. Then in May the gulden was devalued overnight, and rumours of a further devaluation have crowded thick relations between Germany and Poland, a serious tariff and currency war has broken out between the Free City and Poland; so that Nazidom in Germany and Nazidom in Danzig, though only different sides of the same medal, appear radically different to the Poles, who treat them differently. What factors have been at work behind all these strange variations in the Free City?

Four days before he resigned last year Dr. Rauschning made an apology for his attitude, in which he warned his fellow-Nazis that reckless extravagance with the City's funds would hasten a collapse of the external value of the gulden, and exclude all possibility of foreign borrowing; for it was clear that Germany could not stand in the gap. Five months, said Dr. Rauschning, would suffice to exhaust Danzig's gold cover, after which "this bankruptcy would deliver Danzig up to the clemency or inclemency of the foreigner."

Danzig is a small and not highly industrialised economic unit. But it is reported that close on a million pounds had been spent on public works alone since the Nazi Government came into office. Since the Bank of Danzig was forbidden by its statute to lend money to the Government, a Stadtbank was started, and under the cover of the Stadt-

bank money was in effect extracted from the Bank of Danzig. Meanwhile no complete Budget statement has been issued for two years; it was pleasanter not to confess that subsidies were coming in all the time from Germany to the tune of 3 million gulden a month. From the beginning of 1935, confidence dwindled; people drew out their savings and hoarded foreign currencies; and there followed in quick succession the shock of the election failure (upon which, by the way, the Nazis spent about 1,500,000 gulden, largely contributed by Germany), the end of German subsidies, and finally a German default on debts for Danzig agricultural produce, which left at least 15 million gulden frozen in Germany. The statutory minimum gold cover for the currency was 40 per cent.; but gold fell to 35 per cent., and at last on May 2nd the Nazi regime was compelled to announce the devaluation which they had always proclaimed unthinkable (173 new gulden equivalent to 100 old gulden). Though the Nazi propagandists naturally declared it was all the fault of the Jews, the collapse was inevitable.

During the first half of June the flight from the currency revived in a growing stream, and by the middle of the month the Bank of Danzig found itself forced to introduce a Draconic ban upon this flight into foreign currencies, all possibility of which it had previously denied. The June foreign exchange decrees were so sweeping as to be quite unworkable in practice; they were therefore modified and relaxed by a new decree on July 17th, which satisfied the most urgent demands of foreign traders. (Incidentally, the British and Polish Trade Bank has been flourishing in the Danzig crisis, and it has become clear that the capital for the transit trade of Danzig will be almost entirely Polish and British in future.) This control of the exchange was bound to have disastrous consequences for a small State largely dependent upon international trade, and already threatened by the competition of the new Polish port, Gdynia. The Poles, moreover, condemned the measure as an infringement of the Treaty of Warsaw of 1921, and protested against the freezing of a sum of Polish zloty. This is estimated to lie between 8 and 70 million zloty, and probably very much nearer to the second figure, since the Lodz textile industry alone could account for very nearly 8 millions. The Polish Minister in Stockholm, M. Roman, came to Danzig to negotiate. But the Danzigers refused to introduce the currency of Poland which was indirectly, if not directly, proposed; and on June 22nd negotiations were broken off. The Poles then started reprisals; they insisted on prepayment of freights on Danzig transit traffic; but they allowed goods to lie in Gdynia for three weeks without payment.

The outlook for Danzig was already gloomy when Dr. Schacht visited the Free City in the middle of June. He could offer little but moral support; for it seems that the policy of Berlin is to try to maintain the Nazi regime in Danzig at a minimum cost to Germany. On October 1st, however, the interest on foreign loans falls due; and the necessary funds must be raised, if Danzig is not to go bankrupt. The Government will try to pay at a lower rate, but it will probably make efforts to pay something. Com-

mercial relations with Poland are therefore crucial; but they will not now improve, for Danzig's benefit, until Danzig accepts the introduction of the currency of Poland. Although this would hit at the vested interests of the Bank of Danzig, it is generally felt that Danzig will be compelled to accept the zloty; even in June the Danzigers were perhaps nearer to doing so than is generally supposed. There is naturally a great deal of apprehension about such a surrender to the "clemency or inclemency of the foreigner." But this very week the Poles have issued an order prohibiting all imports into Poland via Danzig as from July 21st; and it looks as if Gdynia's existence will be the means of forcing the zloty on Danzig.

In spite of their chauvinistic declarations, the Nazis may surrender. For after all their inflationary excesses, they are now embarking upon a policy of most drastic deflation which seems, in the peculiar circumstances, likely only to cause terrible hardship and the further impoverishment of Danzig. The effects of the new policy are not really visible, for they can only gradually make themselves felt. While wages and unemployment pay have nominally remained at the pre-devaluation level, many retail prices are already up by about 50 per cent., and are bound to rise further. People who have been receiving pensions from Germany are to be sent into Germany, while numbers of workmen and officials are being told they must accept work in Germany or starve in Danzig. As the offer is chiefly made to enemies of National Socialism, it is mostly refused; in either case purchasing power in Danzig is reduced. No one can feel surprise at the rising tide of opposition feeling.

It is clear that the historic riches of Danzig will never return to her, but Danzig's prospects need not therefore be regarded as desperate. The Danzigers have dreaded the zloty, partly because they feared that to share Poland's currency would drag down their standard of life to the Polish level. But the standard of life must in any case fall. If they come to terms with Poland while they still have something to bargain with, trade with Poland will obviously be facilitated. There seems no good reason to doubt the Polish contention that Poland can very well feed two big ports. The Danzigers have naturally been embittered by the favours officially showered on Gdynia by Poland, but it should be possible to make a reasonable plan for co-operation. Though the herring trade is showing signs of moving to Gdynia, Danzig is still better equipped for the wheat trade, and more conveniently placed for timber coming from East Poland. It should also be remembered that industry (e.g. machine-making and the refinement of oils and fats) plays about twice as large a part in the economic life of Danzig as the traffic of the harbour. Danzig's immediate future seems to depend on the abnegation of extreme Nazidom, and closer co-operation with Poland. This means a diminution of her dependence on Germany and a renunciation of anti-Semitism. It would also necessitate a working agreement with Poland, within whose economic area the Danzigers should strive to provide the skilled labour. Finally, Danzig could with advantage cease to squabble with Geneva, and by dropping a "Nazi tone" towards Russia, more fully develop her commercial relations with the U.S.S.R.

BULL'S-EYES

INCIDENTS sometimes come to light which illustrate in a vivid and disconcerting manner the lack of imagination and elasticity of the "expert" when faced with a new and unexpected situation; and Mr Lloyd George's memoirs showed that these defects are particularly in evidence in time of war. One of the most striking examples of this woodenness of the official mind was the notorious episode of the British rifle orders placed in the United States. In the winter of 1914-15 the British War Office was hard put to it to find rifles for the newly recruited armies, and under pressure from certain members of the Cabinet orders for British calibre rifles were placed with the Winchester and Remington firms of America, which were ultimately increased to no less than 3½ million rifles. In their enthusiasm, the contractors promised that deliveries would commence in the autumn of 1915, and set to work to build factories and housing accommodation for the large staff needed to cope with these colossal orders. But, alas, like so many other contractors, they failed in their promises, and deliveries in bulk did not start until the winter of 1916. Fortunately for the British troops, the wastage of rifles in trench warfare proved negligible, and the Kitchener armies were finally equipped, after some delay, from the output of two British factories. By Christmas, 1916, however, the American rifles were arriving in large numbers, and in February, 1917, the American factories were probably producing more rifles per week than any factories had ever turned out in the world's history. As, however, the rifles were slightly different in type, though of the same bore as the British Service rifle, they were not sent to France, but were issued by our War Office to home defence troops, stations overseas, etc.

At about that moment America abandoned her neutrality and entered the war. And with the object of co-ordinating American and European war activities, the Balfour Mission landed in the United States in mid-April, 1917, almost on the very day when a law was rushed through Congress conscripting the young manhood of America. One of the many important suggestions that the Mission brought to Washington was that the American Government should take over the colossal new factories, continue production, and equip the new recruits with rifles without keeping them waiting for weeks or months as had been necessary in Great Britain. America bought the factories; but the head of the Ordnance Department was unfortunately a technician keenly interested in a new American rifle, which he claimed to be the best in the world. This Springfield rifle had a calibre of .300 inches

against the British .303. The Mission urged that the British rifle had, in fact, fulfilled all practical requirements in the field; that it would carry a bayonet and that it would shoot straight and effectively enough at the ranges and in the conditions for which it was in practice used. It was, in fact, an excellent campaigner, whatever its merits at the shooting butts might be. Clearly, moreover, it would be a great advantage for the American troops in the field to be able to draw small arms ammunition from British ammunition dumps, instead of introducing the complication of yet another type. Surely the Americans must appreciate the advantages of standardisation! But, as so often happens, expert prejudice prevailed. Production was stopped while the machinery, jigs and gauges were changed over in the factories and adapted to the new rifle. Nothing was produced until the winter of 1917, and in the meantime millions of America's recruits were drilled with broom-sticks. Meanwhile, those American troops which in fact fought in Europe were, of course, re-equipped, when they landed, with British or French rifles, according to their position in the line.

And now for the sequel. For a long time past the experts who shoot at Bisley have been dissatisfied with the British Service rifle. The War Office is soon to produce a new rifle; but as it has not yet been put into service it cannot yet be used for the national competitions. The National Rifle Association, however, knew that the War Office had in stock a certain number of what was known as the 1914 pattern rifle, most of which were abroad, but a few thousands of which were in this country. To meet the growing criticism of the Service rifle, which is no longer being manufactured, the Association obtained the consent of the War Office to use these 1914 type rifles in this year's competition which ended last week. The result was a fantastic number of full scores at medium ranges. Over 100 out of 1,000 competitors scored the maximum number of bull's-eyes in one competition, and in one case thirty additional shots had to be fired before a decision could be reached. In view of the phenomenal success of this 1914 rifle, the Association intends to make the targets smaller for next year's competition. And these 1914 type rifles, which have been lying in grease for nearly twenty years, are the despised and rejected weapons from Winchester and Remington whose supposed defects delayed for so long the training of America's armies!

NOTES OF THE WEEK

The League takes a Hand.—The British and French Governments agreed on Tuesday that the League Council should be called together next week to examine the Italo-Ethiopian dispute. The President of the Council, M. Litvinov, has now to fix the date of the meeting; and, if report speaks true, the French and British Governments are agreed that the Council's examination of the dispute should not be confined to the responsibility for the Walwal disturbances, but should cover the entire range of the two disputants' claims. Hitherto, Signor Mussolini has never stated his precise grievances and claims against Abyssinia. The Council, acting under Article XI of the Covenant (a dispute constituting a threat to peace) and Article XV (a dispute not settled by arbitration and referred to the League) can now proceed to examine the dispute; call for the disputants' statements of their cases; decide on an inquiry, if necessary by a majority vote; and issue a report. This, in fact, seems the most probable line of action. For Italy has made it plain that she will not extend the interpretation of the Conciliation Commission's terms of reference, so as to cover the boundary dispute and to admit of a settlement, with or without the fifth arbitrator. She has notified Ethiopia of her preparedness to re-convoke the Conciliation Commission; but the Abyssinian attitude is

understandable. What is the use of the Commission, or of the fifth arbitrator, if Italy restricts the terms of reference? Far better leave the dispute to the League. And this sentiment is finding an echo in the world at large. Opinion is evidently crystallising, in France, America and this country on the necessity for a firm attitude on the part of the Council next week. Italy's warlike preparations are going ahead as fast as ever; but Abyssinia is having difficulties in securing the means of legitimate self-defence. France and Belgium have prohibited exports of war material both to Italy and to Abyssinia; and on Thursday our own Foreign Minister announced that for the present we should grant no further export permits. Though, on and abetting Italy; for Signor Mussolini has the resources for going forward with his preparations while Ras Tafari has not. Such *de facto* discrimination is only justified if an act of aggression. Meanwhile, Japan's comment on her interests in Abyssinia, which we discuss below, may serve to remind Italy, and indeed all denigrators of the League, that solidarity between aggressors cannot, after all, be

The Storm Breaks in Holland.—The gold *bloc* thunderstorm rumbles first on one side and then on another, and strikes each country in turn. This week, only ten days after France's latest deflationary bout, the storm has broken again in Holland; and it almost seems as if the final crisis may have come. In the spring, when the falling pound intensified the pressure on the gold *bloc*, it seemed as though Holland might easily be the first to devalue. The Government had long been engaged in restricting imports, cutting wages and reducing Budget expenditure in order to maintain the gold parity of the guilder. At the beginning of April the Bank rate was raised to 4½ per cent. to stop the gold losses caused by the repercussion on Holland of Belgium's devaluation. This temporarily relieved the strain and the immediate danger to the Central Bank was averted. But the general deflationary pressure continued; and in May Dr. Colijn, the Prime Minister, and a determined man, announced that further Budget cuts, amounting to 10 per cent. of total expenditure, would be necessary to compensate for falling revenues. By this time, however, the devaluationist movement had gathered further strength. Not only were the Socialists implacably opposed to further deflation; but a great many exporters and industrialists, particularly those representing the shipping interests competitive with the port of Antwerp, became convinced advocates of devaluation. At the end of June the General Union of Catholic Employers issued a manifesto containing the following words:—

It is the conviction of many of us that the deflationary policy hitherto pursued by the Government will, with mathematical certitude, lead to further impoverishment and further deterioration of the buying power of the nation.

In view of this manifesto, it is not surprising that, despite Dr. Colijn's attempt to win support by promising a reduction in mortgages and rents, the Catholic Party decided this week not to support the Government's Retrenchment Bill. The Catholics only appear to be united in negation, however, as our Dutch letter on page 177 clearly indicates. Some object to the Bill on the ground that deflation is in itself a mistake, and others on the ground that it should not be extended to interest rates. This makes the political problem of forming a Government with a constructive policy naturally extremely difficult. And Dr. Colijn seems to have been unable to decide whether to resign and leave the dilemma to the Catholics or alternatively to ask for a dissolution. As long as this uncertainty lasts, the pressure on the exchange and the gold reserve, which is discussed in detail on page 182, is naturally intensifying. As we go to press, the issue is still undecided. But, whatever happens, it is clear that nothing short of heroic deflation *à la Laval* can avert devaluation in Holland.

Judicial Veto.—President Roosevelt is still caught between the Congressional devil and the deep blue sea of the Constitution. As is the way with triangular conflicts, the three parties never seem to be all in agreement together. For a day or two it looked as if the President were recovering a little of his old ascendancy over Congress. In particular, revelations of the methods adopted by some of the utility holding companies in putting pressure upon Congress to delete the "death sentence" clause have greatly strengthened the President's hand in this particular instance. He is also making shrewd use, assisted by the climate of Washington, of the threat to keep Congress in session until it has enacted the new tax programme, and it is not impossible that the weary legislators may grant an easy passage to his other Bills in return for the postponement of this thorny measure and an early adjournment. The inflationary party, now reassembled under the leadership of Senator Borah, threatens to defeat this plan by tacking on the veterans' bonus and other inflationary proposals to every Bill that comes before the Senate. In other words, the Congressional position is in its usual state of unpredictable fluidity. Difficulties from this source are the accustomed lot of Presidents, but Mr Roosevelt has also been subject to a perfect barricade of adverse legal decisions. The Federal Courts are arranged in a hierarchy of three orders, the District Courts, the Circuit Courts of Appeals and the Supreme Court itself at the top. The recent decisions have been taken in one or other of the two lower ranks,

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £19,000,000

and they are all subject to review by the Supreme Court at its next session in September. But they are none the less significant as being symptomatic of the trend of judicial opinion. The most important of these decisions was that of the Boston Circuit Court of Appeals, declaring the processing taxes, by which the Agricultural Adjustment programme is financed, to be unconstitutional, on the same grounds as those on which the Supreme Court found against the N.R.A.—namely excessive delegation of powers by Congress to the Executive, and invasion of the field reserved by the Constitution to the separate States. If this decision is confirmed, its effects will be momentous. Abandonment of the crop restriction programme would hit directly at the farmers, with their immense political power, which might well be mobilised in favour of amending the Constitution. Moreover, the Federal Government would be liable to be sued for repayment of taxes illegally collected, Congress having refused to prohibit such suits entirely. Another Federal Court in Texas has rounded off the judicial attack on the agricultural programme by declaring unconstitutional the Bankhead Act, which imposes quotas on cotton production. In addition, a Court in Ohio has refused the Government power compulsorily to acquire land needed for slum clearance projects. The solitary crumb of comfort for the President has been a decision of the New Orleans Circuit Court of Appeals reversing the ban imposed in a lower court on the sale of electric power by the Tennessee Valley Authority. This is hardly sufficient to nourish him during what looks like being an arduous legal campaign. But it is not impossible that defeat in the courts could be turned to his advantage by an adroit politician in the wider electoral campaign which is now little more than a year off.

Naval Ratios or Naval Race?—The First Lord of the Admiralty took the opportunity, in Monday's debate on the Naval Estimates, to recognise what has been a patent fact for some months. The "naval ratios" system of limiting naval strength, inaugurated by the 1922 Washington Treaty, has been abandoned; for Japan's denunciation of that Treaty, which therefore expires next year, gave the system its quietus. In its place, so Sir Bolton Eyre-Monsell informed the House, H.M. Government are to ask the other naval Powers to inform the Government of their proposed building programmes for the period ending in 1942. On the information furnished, negotiations for a mutual limitation of naval strengths are to take place; and already these negotiations are in hand with "a good many countries." It is understandable that immediate publication of the details of such negotiations might prevent the negotiating Powers from "sacrificing" part of their full construction programmes at a later stage. But it seems a pity that the First Lord was unable to give the House—and therewith the people of this country—an indication of the principles, if any, which would be followed in formulating these programmes. He himself hinted that H.M. Government hoped the negotiating Powers would be able to make it "unlikely that any country could attack another with any chance of ultimate success." If there are no

more naval ratios, how is this to be achieved? Does it mean that the precise degree of Japan's predominance in the China sea in relation to the separate or combined available forces of America and Britain is to be considered? That the problems of the Mediterranean or of the North Sea are to be separately studied? If so, the naval negotiators have set themselves a pretty problem for the sake of "saving face" and avoiding the supposed "stigma" of differing ratios. Little wonder if the sceptics fear that it will end not in a reasonable limitation but in all countries straining themselves to reach the highest figure that the richest can afford.

The New Paroxysm in Germany.—One of the awkward features of a Fascist revolution is that it can never come to an end. After the series of sweeping victories which the Nazis won within the first six months of their tenure of power it might have been supposed that their supremacy was assured. Indeed, before the close of 1933 Herr Hitler himself had officially announced that his revolution was completed. In June, 1934, he had not only to repeat the statement but to drive his words home by putting some of the most notorious radicals in his movement to death. Yet to-day, more than a year after the killings of June 30, 1934, Nazidom is in full cry again after its old quarry. The new Nazi offensive opened on July 18th with the issue of an anti-Catholic edict by General Göring in his rôle as Prime Minister of Prussia. This was followed next day by the appointment of a Reich Minister for Church Affairs in the person of Herr Kerl and by the substitution of Count Helldorf for Admiral von Levetzow as police President of Berlin. Both these two new appointees notoriously belong to "the ginger group" of the Nazi Party (if gradations of militancy can be distinguished in an organisation which is militant to the core); and there is no concealment about what their respective tasks are to be. Count Helldorf is to "clean up" the Jews who have found in Berlin, under his predecessor's more tolerant regime, something like a city of refuge from the more violent persecution to which they have been exposed in such provinces as Franconia and Silesia. Already Berlin has been the scene of fresh anti-Jewish disturbances. Herr Kerl, for his part, is to carry out the policy announced in General Göring's edict, which has now been made applicable to the whole Reich; and it now looks as though there was to be a head-on collision between Nazidom and the Catholic Church. A decree of July 20th has forbidden the wearing of badges or uniforms, and the conducting of open-air exercises, by the confessional youth organisations. And the Vatican note of July 16th, to which General Göring's decree was a retort, has been followed up by a protest from the Papal Nuncio at Berlin. What gadfly is it that thus perpetually stings the Nazis into resuming the offensive? It is certain that the new bout of the conflict has been precipitated from the Nazi side; for the Jews, Protestants and Catholics have all alike shown a remarkable patience, forbearance and self-restraint under almost intolerable provocation. Is it the Nazi's failure to solve the economic problem that is driving them to make a diversion? Is it the rising tide of working-class discontent in Germany, provoked by continuously rising retail prices? Or is it the failure of Nazi foreign policy? Has the victory in the Saar only served Herr Hitler's turn for six months? And is he being driven to assail the Churches in order to cover his failure in Austria? Probably the cause of the new Nazi offensive lies deeper. A movement which claims to be totalitarian cannot afford to leave in existence any spiritual power outside itself; and it is therefore driven by the enormity of its own nature to push its totalitarian pretensions to a point at which they seem likely to meet with an unconquerable resistance. In a war to the death between Nazidom and the Churches we do not believe that Nazidom can be the survivor.

Lahore and Belfast.—The contrast between the present situations in Germany, Ulster and the Punjab is characteristic of the topsy-turvyness of the present age. In Germany, where, for generations past, the members of once mutually hostile religions—Protestants, Catholics and Jews—have been living side by side in amity, a tyrannical totalitarian State is at this moment assailing all three Churches

on the ground that their existence is an impediment to the complete achievement of national unity. On the other hand, in Ulster and the Punjab, where the State makes no totalitarian claim, the rival Churches are engaged in abusing their liberties in a fashion which would almost justify the local civil power in adopting the Nazi policy of "De-confessionalisation." The extraordinary feature about the present inter-confessional riots in Belfast and in Lahore is the uniformity of the symptoms. If one took a typical passage from the daily bulletin from Northern Ireland and substituted "Lahore" for "Belfast," "Sikh" for "Catholic," and "Moslem" for "Protestant," few readers would suspect that this was not a *bona fide* account of the latest phase in the disturbances in Northern India. In both places, the occasion of the disturbances is quite trivial—in fact only a pretext, which no one would have seized upon if he had not been "looking for trouble." At Lahore, the Moslems are on the war-path because the Sikhs are demolishing an old building which is admittedly their property but which is alleged to have been used at one time as a mosque. In preventing Moslem mobs from rushing this building the troops have already had to fire; yet the Lahore casualties, up to date, are not much heavier than the Belfast casualties, in which, so far, all the shooting has been done by the civilians. The most odious feature in Belfast is the eviction, in mixed streets and quarters, of families belonging to the local religious minority—whatever it happens to be in a given locality. Not content with driving their victims into the street, the persecutors usually try to set fire to the furniture which the refugees are trying to take with them and to the houses which they have abandoned. In Lahore, the Moslems and Sikhs have not yet gone to this length. It is to be hoped that, in both cities, the rival religious factions will soon come to their senses and will realise—as the Protestants and Catholics in Germany realised long ago—that their only course is to learn to live and let live, since they cannot escape the necessity of having to live together.

Pot and Kettle.—Students of international affairs will have been much instructed by the exchange of pleasantries in the Italian and Japanese Press this week. The trouble began with the announcement in the Japanese newspapers that Japan did not regard herself as "disinterested" in the question of Abyssinia. In reply, the Italian Press with one accord denounced the Japanese for "cynicism," "imperialism" and "contempt of subject races." Here, indeed, was a Daniel come to judgment. For those who have dared in the past three years to criticise Japan's adventure in Manchuria have often been described as idealists, sentimentalists, Utopian dreamers, etc.; and nobody would apply these epithets to Signor Mussolini. Nevertheless it was somewhat surprising to find so acute an antagonism developing between Japan and Italy. Had not Japan frequently explained that she had a sacred mission to civilise the Manchurians? And has not Italy assured us that she has also felt a similar call in the case of Abyssinia? Apparently, however—and paradoxically perhaps—Signor Mussolini's leader-writers do not accept Japan's interpretation of the noble motives inspiring her. "Why is it," one of them asks, "that Japan does not consider that she can remain disinterested in the case of Abyssinia?" "The chief reason," he replies, "is a commercial one, which is always the decisive reason for an avaricious people who are as sordid as the Japanese." The same writer adds that "all who know the Japanese mentality realise that it is the only one that for hypocrisy, duplicity and bad faith can be compared with the Abyssinians." The casual reader might possibly be drawn to infer that if avarice and greed were the real motives behind Japan's conquest of Manchuria, some faint signs of cupidity might be suspected in Italy's expedition to Abyssinia. This, however, as the above newspaper explains, would be a mistake. For avarice and cupidity, it assures us, are the monopoly of the "black and yellow races." Italy, on the other hand, is "fighting the battle of the civilised white races against the coloured races." Here the question naturally arises which of the coloured races Italy was preparing to civilise when she massed her troops near the Brenner Pass a year ago. This is a point on which Signor Mussolini's Press will doubtless soon enlighten us. Meanwhile the Japanese retort that "the

Italian Press is indulging in a systematic plot to develop the Abyssinian dispute into a general conflict between the coloured and white races," and that in any case "news from a country under a dictator carries little weight." This latter statement is perhaps the truest that has yet emerged from the controversy.

Monarchy versus Republic in Greece.—The feud between Monarchists and Republicans has been distracting Greece ever since the breach between King Constantine and M. Venizelos in 1915, which was the *fons et origo* of the quarrel. This year, twenty years after the original schism and seventeen years after the close of the Great War over which the difference between Constantinians and Venizelists first arose, the feud has cost Greece a serious revolution. Since then, within the last few days, it has produced a Cabinet crisis. The resignation of M. Tsaldaris' Government on July 19th is actually a consequence of the recent passage, by the National Assembly, of an Act for the holding of a plebiscite by which, it was hoped, the vexed question of Republic versus Monarchy in Greece was to be settled once for all. It might have been thought that the late Government was eminently suitable for presiding fairly over the plebiscite, since it included representatives of both factions among its members; while the Prime Minister, M. Tsaldaris, has given ample proof of his statesmanship and his moderation. The Act having been passed, M. Tsaldaris was on the point of going abroad for a holiday when he was rather suddenly assailed by a number of demands—not all of them mutually compatible—for changes in the composition of his Cabinet. Some people demanded that all those Ministers who had already publicly committed themselves, on one side or the other, should withdraw. Others demanded that M. Tsaldaris, who has studiously refrained from committing himself, should divulge what his personal preference is. Thereupon, agitation reappeared in the armed forces, and a number of high naval and military officers have been making unsolicited statements declaring which of the two regimes they favour. In consequence, M. Tsaldaris handed in his resignation to the President of the Republic on July 19th, together with a list of members for a new Cabinet. He seems to have hoped that he would be able to return to office at once at the head of a Ministry which would be proof against criticism; but the crisis has not been resolved so easily. The Popular Party denounces the retention of General Kondylis in the Cabinet, and demands a less acrimonious setting for a plebiscite on the issue: Monarchy versus Republic. Meanwhile, Greek politics seem little more than a welter of conflicting eddies.

A Milk Poll.—Under the terms of the Milk Marketing Scheme, a poll of the registered producers on the question whether the scheme is to continue or not can be demanded at any time by not less than 500 registered producers. But if the demand is made before the second birthday of the scheme (in September next) the Board is entitled to refuse it. It has for long been growing more and more certain that the vociferous opposition to the Board among the farmers would take the very first opportunity of testing its strength in this way. But September would be a peculiarly inconvenient time to have such a poll, for the term of the present price agreement between the Board and the wholesalers expires on September 30th, and the Board would obviously be in an impossible position if it had to negotiate with a threat of imminent extinction hanging over it. The Board has accordingly agreed to the poll being held in August. The question put to the farmers will be the simple one of continuance or immediate discontinuance. Amendments to the scheme are being mooted, but they will not be germane to the issue which is to be decided next month. It is, of course, impossible to predict the result. The scheme, and the Board's administration of it, have both been criticised in these columns and elsewhere. Instead of developing the consumption of milk, the Board has devoted its greatest attention to supporting the price of milk in spite of an enormous increase in production which far outruns the demand for milk at a price remunerative to the producer. But these are not the grounds upon which the Board's opponents among the farmers base their attack; their line of argument is that the Board has failed to raise the price of

milk. If it is a question of choosing between the Board on the one hand and the demands of its opponents on the other, there should not be any hesitation whatever in voting for the Board. When the scheme started the milk market was showing unmistakable signs of cracking. But since then production has enormously increased; even in the last twelve months production has increased by 19 per cent. and the "surplus" has risen from 66 per cent. to 85 per cent. of the demand for milk for liquid consumption. If this greatly increased surplus competes in the liquid market, instead of being held off it by the Board, there will be a fall of prices such as would cause pandemonium in every county of England. The Board is trying to meet the situation by controlling production. As we have remarked before, that is the worse of the two alternative policies, and it would be much better in the long run to allow the price to fall until the supply becomes no more than the liquid demand plus a moderate seasonal surplus. But the Board's proposals do at least constitute a policy, while its opponents are crying for the moon of a constantly increasing price for a constantly rising production. We trust the dairy farmers are not all such economic illiterates as their vocal representatives appear to be.

The Tin Market Scandal.—Last week's developments in the tin market have aroused grave anxieties over, and powerful criticism of, the policy of the International Tin Committee. The cash quotation rose from £232 17s. 6d. per ton on Wednesday last week to £236 5s. on Friday; but the price of three-months' tin remained unchanged at £224 12s. 6d. On Monday the spot price jumped to £245 per ton, but no sellers were forthcoming, and the difference between the quotation for spot and three-months' tin rose to £20 2s. 6d. per ton. By Wednesday, the price of spot tin had fallen to £233 2s. 6d. per ton, and as three-months' tin was then quoted at £237 17s. 6d., the "backwardation" had declined to £9 10s. per ton. This state of affairs has arisen because those in control of the restriction scheme have in the past unduly restricted output, and so allowed stocks to fall to a very low level. Stocks in London and Liverpool now amount to no more than 1,300 tons, compared with an average monthly consumption between January and May of about 1,700 tons. Moreover, the bulk of the reduced stocks in this country is held by the official Buffer Pool, which was apparently unwilling to release supplies last Monday—though it did so later. Yet the unsound position of the tin market seems to be only of academic interest to the restrictionists. At Wednesday's meeting of the Tin Producers' Association, Mr E. J. Byrne prefaced a vigorous plea for the extension of the restriction scheme with the following observations:—

These acrobatic feats are doubtless of much concern to the performers, but they have no interest for either the producer or consumer of tin. In no way do they affect the usual channels of demand and supply as between producer and consumer. The majority of consumers very naturally cover their requirements as and when they sell their manufactured products. That is to say, they buy forward and not spot tin. . . . The purchase of spot tin invariably means that some dealer or speculator is covering a previous sale of tin he did not possess. From the producer's point of view there seems no reason why such a seller should be helped out.

We entirely agree with Mr Byrne's generalisations, but as an explanation of last Monday's squeeze they seem nothing

The British and Polish Trade Bank A.G., Danzig

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig. INQUIRIES SOLICITED.

affairs, in which military and industrialist influence remains predominant.

Private assertions that the Reich debt has been secretly swollen to more than twice the figure officially returned, which were ignored in the home Press as long as they did not circulate abroad, are now being criticised by important journals. The substance of these criticisms is that private estimates of the increase in the debt under the Nazi regime—given correctly by one journal as being between 12,000 million and 20,000 million marks—are exaggerated 100 per cent. or more. One journal gives some data in justification of its claim that the increase has been only Rm. 5,500 millions. The official return of Reich long-term and short-term debt shows an increase from Rm. 11,690 to Rm. 12,783 millions between March 31, 1933, and April 30, 1934. To this must be added an admitted increase in the tax credit circulation of from Rm. 472 to Rm. 1,600 millions. The commentator admits no substantial increase of debt except of an estimated Rm. 3,000 millions of "work-creation" bills in the Reichsbank's discount portfolio, and of "probably Rm. 2,000 millions" of similar bills held by commercial banks, savings banks and insurance companies. By adding something under Rm. 500 millions, the increase in the floating debt in the new financial year, the figure of Rm. 5,500 millions is reached. This authority therefore rejects the story that many thousand million marks of bills, representing new Reich liabilities, are in the hands of various financial and quasi-financial concerns. But as the critics, who are in touch with the Government and concerned to deny rumours to its disadvantage, admit that their own figures are unofficial and are conjectures, no new light has been thrown on the situation.

FOOD PRICES AND UNEMPLOYMENT

The retail prices of foodstuffs continue to rise. The social insurance returns show an increase in June of 119,000 in the number of those employed. The total is now 16,505,000, and has increased by 2,100,000 since January, the time of greatest seasonal depression. The fact that the increase in employed is 1,000,000 greater than the decline in the unemployed is officially declared to prove that the labour market absorbed the exceptionally large number of youths leaving school.

The Hamburg-America and Norddeutsche shipping companies last week announced the transfer of their New York services to operating limited liability companies of nominal capital. The ships are to remain the property of the parent concerns. "The Reich," proceeds the announcement, "will facilitate the maintenance of these services in the way practised in ever-increasing measure by the foreign competing lines in North Atlantic traffic." This, and a reference to losses suffered through foreign "subvention fights," foreshadows an official policy of subsidies. The announcement that a drastic scaling down of capital is necessary led to a fall of nearly 50 per cent. in the Bourse quotations of both companies, after a brief suspension of the official quotation. The last scaling down was in the ratio of 3:1, and reduced the capital of each company from Rm. 160 to Rm. 53 millions.

Under an agreement similar to that concluded between Dr. Schacht and the chief of the German Labour Front in March, the organisations subject to the Reich and Prussian Minister of Communications have been embodied in the Labour Front. The March measure, which brought the Organisation of Business, practically a capitalistic association, into the Labour Front, was regarded as Dr. Schacht's way of checking the Front's alleged semi-Communist tendencies; and as Dr. Schacht is a signatory of the new agreement, the aim of this agreement is probably the same.

Ingot steel production in June was 1,249,100 tons, against 1,314,500 tons in May; in the first half of the year it was 7,286,400 tons, against 5,543,800 tons in the same half of 1934. Steel production has lately been almost stable at nearly the highest figure of the last period of good trade, and sales in the home market have changed little, except in the tube branch, which is active. The engineering industry's report for June speaks of a slight decline in home, and a considerable decline in foreign, orders. The cotton-spinning industry reports an irregular home market and a declining demand from some manufacturers. The demand for finished cotton goods has weakened; but there are signs

of improvement in exports, and existing orders ensure sufficient activity for some months to come.

The demand for money last week increased, and banks reported withdrawals of deposits by industry for various special purposes. The supply, however, was also large, being supplemented by the redemption of Reich Treasury bonds and by temporarily available Reich subsidy payments to the States. The circulation of Gold Discount-Bank promissory notes has reached an estimated Rm. 400 millions. Day loans this week are at 2½-3½ per cent., with lower rates for first-class borrowers. The Reichsbank's status has improved; 68 per cent. of the June-end credits were repaid by mid-July. In consequence of Russian gold payments the currency reserve, which was Rm. 78 millions at this date of 1934, has passed the Rm. 100 millions limit, of which Rm. 94 millions is gold. The Russian gold went to the foreign gold deposits of the Reichsbank, which converted a part of it into foreign exchange. The doubling of the exchange reserve indicates that the Reichsbank expects an immediate demand for foreign payments.

BERLIN, July 24.

ITALY

[This week's monetary crisis is discussed in an article on page 181.]

A STEEP RISE IN PRICES

The course of wholesale prices in Italy in 1935 has been largely different from other countries. As the *Economist* remarked in its issue of July 6th, in the face of stagnation or very moderate rises in Great Britain, the United States and Germany, and deflation in France, prices have risen steeply in Italy. Whether the rise should be called "inflation" is perhaps an insoluble terminological problem. There is, at any rate, no sign of an increase in the quantity of notes issued. From July 31, 1934, which was the point of minimum prices, to June 20, 1935, the circulation decreased from 13,330.2 million to 12,684.9 million lire; Bank of Italy circulating cheques from 366.7 million to 326.4 million lire; and ordinary deposits from 685.9 million to 521.8 million lire. Cheques issued from other banks increased only from 439.2 million lire at the end of June, 1934, to 443.1 million lire at the end of April, 1935; nor is an appreciable growth of bank deposits observable.

More remarkable perhaps than the absolute rise of the index of wholesale prices is the distribution of the rise between different groups in the period from July, 1934, to June, 1935 (1913=100):—

	Absolute rise of the Index	Spread between Group Index and General Average
National agricultural products	+87.28	+35.58
Industrial raw materials	+4.45	-12.85
Half-finished products	+29.18	+12.44
Finished products	+33.22	-9.48
General average	+41.60	

Industrial raw materials, in fact, can be bought now at lower prices, comparatively, than a year ago. The rise in prices has mainly benefited the agricultural classes. If this sort of readjustment of relative prices continues, it may in the long run increase the velocity of circulation of money. Hoarding is not practised extensively in Italy; but such small hoards as do exist are to be found among the peasants. The rise in the prices of cocoons, wines, wheat and rice may therefore be a stimulant to direct investment, cattle breeding, improvements, etc.

Another feature of the Italian price rise is the lessening of the spread between export prices and the general index. In July, 1934, when average prices were at their bottom (272.91) export prices stood at 23.1 per cent. below the average. Now (June, 1935), when the average has risen to 314.51, export prices are only 15.6 per cent. below the average. Conversely, the excess of import prices over average prices has decreased from 7.6 to 3.8 per cent. Italy is now buying abroad at relatively reduced prices and selling at higher prices.

Finally, the cost of living is not rising as fast as wholesale prices: between July, 1934, and the first week of July,

1935, wholesale prices rose by 16.3 per cent. and the cost of living (Milan) by only 3.6 per cent.

THE STATE'S ASSETS AND THE NATIONAL DEBT

A preliminary statement is now available of the result of the Treasury's statistical investigation into the national debt and the State's assets. The following are the figures for June 30, 1934, with the net change (after eliminating double entries, compensating items and revaluations) compared with June 30, 1922 (in million lire):—

LIABILITIES	June 30, 1934	Net Change since June 30, 1922
Current financial liabilities (overdue sums, Treasury debts, State notes and coins)	26,413	-49,620
War indemnities due on June 30, 1922, paid thereafter	...	-2,010
Debt:—		
Consols and redeemable debts	93,617	+37,017
Sundry liabilities	5,831	-2,691
Deferred payments	24,066	+20,009
	149,927	+2,705
ASSETS	June 30, 1934	Net Change since June 30, 1922
(A) Financial assets (cash, Treasury credits and overdue sums receivable)	8,948	-25,653
(B) Disposable assets (credits, securities, real estate, State railways and other industrial State concerns assets)	61,781	+20,946
Total (A) and (B)	70,729	-4,707
(C) Non-disposable assets (land, sea and air war material and other materials for State services)	26,709	+12,464
(D) Non-disposable scientific and artistic material	14,103	+73
(E) Public works carried out by deferred payments or Budget expenditure since June 30, 1922	...	+15,459
Total net change		+23,289

The total liabilities on June 30, 1934, are slightly under 150,000 million lire. The figure of deferred payments includes all payments due for public works already finished or for which a definitive Treasury liability is extant.

The above calculation has not been published before. Sections A and B include such assets as can be described as of an economic nature, and which could be disposed of without impairment of the State's regular services. Sections C and D include assets which are essential to the State's existence. Section E represents the increase of wealth (not necessarily State assets) due to completion of public works.

With the aid of the two tables of liabilities and assets, the changes which have occurred in the last twelve years can easily be calculated. If we only compare the total increase of liabilities (+2,705 millions) with the decrease of sections A and B assets (-4,707 millions), we obtain a decrease of net assets or increase of net liabilities of 7,412 million lire. If we include, on the assets side, the C and D sections we obtain a net increase of assets of 5,125 million lire. Finally, if we include section E, the increase of State and public assets amounts to 20,584 million lire. In the last figure are not included such expenditure as was made for reconstruction of assets destroyed by war, inundations, earthquakes, etc. (4,601 millions), or assistance to aqueducts and other health works (2,097 millions).

TURIN, July 20.

HOLLAND

DR. COLIJN AND THE CATHOLICS

THIS week's debates in Parliament on the Government's Retrenchment Bill have re-awakened the economic crisis in Holland. The Social-Democrats opposed the Bill. The leader of the big Catholic section of the Second Chamber, Professor Aalberse, laid before the Government the dilemma of consistent deflation or devaluation. In his reply the Prime Minister, Dr. H. Colijn, stated that the

NATIONAL BANK OF GREECE

Capital paid up and Reserves Drs. 1,205,000,000

Government desired neither consistent deflation nor devaluation. But he did admit, for the first time, the possibility of devaluation. If it proved imperative, however, he considered it should be carried out when the time was ripe.

This speech of Dr. Colijn's proved the Government to be definitely in conflict with the big Catholic section of the Second Chamber, especially as Dr. Colijn had wanted to make the matter a vote of confidence. It was evident that if this conflict was not resolved, a Cabinet crisis would be inevitable. On the Stock Exchange and the foreign exchange market the anxiety thus created was immediately apparent. The guilder had already been weak on Saturday; and on Monday it became weaker still on the Stock Exchange. However, shares were only slightly higher, and sales on the gilt-edged market were not very heavy.

The debate in the Chamber was resumed on Tuesday. It was at once evident from the speech of Professor Aalberse that the Catholics would not support the Government. The unanimous attitude of the Catholic members was summarised by Dr. Aalberse in the following six points:—

- (1) The State Budget could only be made to balance if, by legislative or administrative measures, trade and industry were restored to a remunerative basis.
- (2) Only by such a rehabilitation of trade and industry could the growing tide of unemployment be stemmed.
- (3) Energetic measures designed to balance the Budget should be supplemented by a plan to bring costs and prices down to a level at which trade and industry, national and international, could be stimulated.
- (4) The Cabinet had failed to encourage such schemes, and in fact rejected them; and was continuing to intervene in the process of readjustment.
- (5) This attitude of the Cabinet was further diminishing the prospects of any relief to the State and the nation, while at the same time the call for monetary measures as a supplementary means of achieving readjustment would become more and more insistent.
- (6) For this reason neither the effort of the Cabinet to balance the Budget by the inevitable reduction of public expenditure nor its intention to achieve further industrial control, however necessary that might be, could be accorded the confidence requested by the Cabinet.

It is clear, therefore, that when the vote of confidence demanded by the Government is put to the House the Catholics will not support it.

PROSPECTS OF DEVALUATION

After the close of markets on Tuesday afternoon, when the course of the Parliamentary proceedings began to be known, sterling was still quoted on the official exchange market at the level of the previous few days, viz. 7.31 to 7.32, while Government securities had not reacted to any extent worth mentioning. But on the publication of the news it was widely felt that if a Cabinet crisis ensued, it would almost inevitably entail the devaluation of the guilder. For the views expressed during the debates in Parliament made it clear that in Parliamentary circles the number of those advocating devaluation is on the increase.

When Professor Dr. Aalberse's speech became known on the curb exchange, the prices of Royal Dutch, Philips, Unilever and Amsterdam Rubber were at once marked up

considerably. The tension was considerable when Dr. Colijn rose to reply to Professor Aalberse.

But Dr. Colijn simply requested the adjournment of the debate on the retrenchment Bill in order to provide the Government with an opportunity to consider the new situation and to submit advice to the Crown. This implied a definite conflict between the Cabinet and the Second Chamber. The Cabinet cannot yet be considered as having resigned, as no resignation has been submitted to the Queen; and dissolution of Parliament is also within the range of possibility.

Meanwhile, the Cabinet is still taking most strenuous measures to protect the guilder. To-day the Netherlands Bank raised the Bank rate from 3 per cent. to 5 per cent., and continued to supply gold for export, as the dollar and the French franc had risen in Amsterdam to above the gold export point. To-day on the Stock Exchange shares have advanced steeply, and Government securities have been decidedly weak.

Dr. Colijn was received by the Queen this afternoon. It is now widely believed that if a new Government comes into power, the economic and monetary policy of the Netherlands will be modified.

AMSTERDAM, July 24.

[The Dutch crisis is further discussed in Notes on pages 171 and 182.]

ARGENTINA

INCREASE IN REVENUE AND EXPENDITURE

The following are the figures of revenue and expenditure for the first six months of 1935, compared with those for the similar period of 1934:—

	1934	1935	Increase or Decline
Revenue:—			
In cash	391,567,006	409,310,700	+17,743,694
From credit operations	90,370,859	79,525,512	-10,845,347
Total	481,937,865	488,836,212	+6,898,347
Expenditure	479,234,795	490,104,969	+10,870,174

The increase in revenue is chiefly in Customs and income tax returns and a very large increase in miscellaneous revenue. This has been partially offset, however, by a reduction of \$23 millions in revenue derived from bonds negotiated. On the expenditure side salaries, various expenses and education all show large increases. Public debt services, due to the conversion operations effected during 1934, are some \$40 millions less than last year.

The following figures show the total liabilities in bankruptcies for the half-year ended June 30, 1935, as compared with those for a similar period of 1934:—

	1934	1935	Increase or Decline
	\$	\$	\$
	93,028,969.76	45,209,105.23	-47,819,864.75

These indicate a reduction of 51.4 per cent. In the city of Buenos Aires alone the decline amounts to over \$35 millions. Such figures may be considered as giving a clear indication of more healthy economic conditions throughout Argentina. The only branch of trade which failed to show an improvement over 1934 was primary production.

The following are the figures of exports in the first six months of 1935, as compared with those for a similar period of 1934:—

	1934	1935	Percentage Increase or Decrease
Pastoral products	594,664	628,261	+5.6
Agricultural products	6,769,769	7,810,129	+15.4
Total	7,665,033	8,691,722	+13.4

The value of exports during the first six months of 1934 and 1935 was as follows:—

	1934	1935	%
Pastoral products	272,965,879	273,447,443	+0.2
Agricultural products	404,852,286	522,145,151	+29.0
Total	717,826,233	832,343,631	+16.0

The percentage of increase or decrease in the average prices of the principal commodities during the first six

months of 1935 as compared with a similar period of 1934 was as follows:—

	%		%
Chilled beef	+3.2	Wheat	+19.2
Frozen beef	+2.2	Maize	+2.9
Frozen mutton	+21.9	Linseed	-2.5
Unwashed sheepskins	-20.0	Oats	+54.7
Unwashed wool	-31.8	Barley	+34.0
Butter	+42.0	Flour	+5.0

These figures also suggest a very satisfactory improvement. The amount shipped has been increased by over 1,000,000 tons and the value by some \$115,000,000. The principal increase is in grain exports, which show an improvement both in volume and value. Meat exports, although showing a falling off in tonnage, have improved in value due to a slight rise in price. Wool exports rose from 76,000 to 97,000 tons. A large decline in value, however, was registered. Cotton fibre exports rose from 8,000 to 12,000 tons, and increased in value by over three million pesos. Average prices of practically all commodities except wool and sheepskins show an increase over those ruling last year. The Ministry of Agriculture announces that they have reasons to be optimistic about the sale of the maize crop, as there is a steady demand from Great Britain and Germany.

INTERNAL AND EXTERNAL DEBT CONVERSION

Chiefly with a view to consolidating the many Provincial loans the Government have authorised the conversion and consolidation of all present issues. These are in fifty-one series, with a total nominal value of \$351,300,000 paper and with interest rates ranging from 2½ per cent. to 7 per cent. per annum. On completion of the Conversion operation there will only be four series, totalling \$338,400,000, with interest rate on one series at 5 per cent. and on the other three at 6 per cent. per annum, and amortisation of 1 per cent. per annum in each case. Conversion is optional, but it is expected that the majority of holders will convert, as the loss of interest is, in most cases, comparatively small.

Representatives of Argentina and Chile are discussing the question of rebuilding that part of the Transandine railway which was destroyed by floods last year. At the same time the question of co-ordinating the transport on both sides of the Andes is being studied both from the point of view of railways and road services.

A similar operation to that effected during November last year, whereby certain external loans were replaced by 4½ per cent. internal bonds, has now been announced by the Ministry of Finance. The loans to be converted are the following:—

Original loan	Nominal value	New bonds
4½% 1911	Fr. 500 or Ar. Gold.	\$250 paper plus bonus \$4 in cash.
4% 1900	Do.	\$230 paper plus bonus 30.5 fr. in cash.
4½% 1910 Prov. of Bs. Aires.	Do.	\$200.
5% 1909 Prov. of Mendoza	Do.	\$200.
5% 1909 Prov. of Tucuman	Do.	\$200.
5% 1910 Prov. of Santa Fe	Do.	\$180 plus bonus of \$5 in cash.
5% 1909 Prov. of San Juan.	Do.	\$140.

There will be certain adjustments for interest, as the first six monthly coupon of the new bonds will not fall due till May 15, 1936. As the Province of San Juan has not paid interest for some years, the National Government undertake to purchase all overdue coupons (the nominal value of which are \$1.25 gold each) at the rate of \$1 paper the saving in the amount required for debt service will be some \$4,400,000 per annum.

The Senate has been fully occupied for some time with debates on the majority and minority reports of the committee appointed to investigate the working of the meat export trade. These reports were unanimous in stating that the export trade was in the hands of a monopoly and that measures must be adopted to assist producers. The minority report went even further and attacked several high authorities, including the Minister of Agriculture and the Minister of Finance. These gentlemen have replied vigorously to the charges levelled against them.

BUENOS AIRES, July 13.

LETTER TO THE EDITOR

THE "GREAT LIGHT" OF ITALY

TO THE EDITOR OF THE ECONOMIST

DEAR ECONOMIST,—

You might not be aware of the fact that you are dying, but the Head of the Italian Government has pronounced you dead. He has buried representative Government, economic liberalism, capitalism, and he has now proclaimed the death of the *Homo economicus*.

When he wants to make his personal opinions known to his happy subjects, he writes short articles, which appear simultaneously in all Italian newspapers in italics. Here is one: *Gold and Light*—(*Popolo d'Italia*, October 18, 1934). After having explained the terrible effects on the English economy of the devaluation of the pound, he sums up as follows:—

This is equivalent to saying that in England it is much easier to arrive at the truth through the costly path of practical experience than by the easy method of intuitive foresight. This is a proof of the supreme justice of the Divine Providence which has given gold to some and to others the Great Light of intuition.

So you see, if England cannot follow in the path which the superior Light of Rome is finding out for the benefit of mankind, poor England will soon be dead too. In fact, when one has so much light, one does not need gold; and that is probably the reason why the gold reserve of the Bank of Italy is dwindling down to nothing, having fallen from about 12,000 million lira in 1927-28 to the present level of less than 6,000 million.

And as the Head of the Italian Government does not need any economist to study facts or figures, he has decreed the death of the *homo economicus* in the following article:—

Homo economicus (May 31, 1935).—The *Homo economicus* is dying. He was the representative of that equivocal frame of mind on which the economic liberalism of the last fifty years was based. He has now received his *coup de grâce* from the Corporative State of Fascism.

BOOKS AND PUBLICATIONS

THE CREDIT PROBLEM

THIS* is one of the few books which every serious inquirer into the monetary problem ought to read. Mr Durbin's first volume, "Purchasing Power and Trade Depression," published in 1933, after criticising the views of Major Douglas, Mr J. A. Hobson and the Austrian school, hinted at a constructive solution. The details of this solution, and the main principles of policy deducible from it, are elaborated in this book.

It is not an easy book. The more difficult and abstract reasoning comes near the beginning, and the part which will be most intelligible to the non-specialist reader near the end. There are also a rather large number of misprints. Nevertheless, the reader who surmounts these obstacles will be brought close to the heart of the problem. For Mr Durbin possesses not only a grasp of his subject, which is most uncommon among writers on money, but a level-headedness which is almost unique. In particular, his new book, like his first, has two shining merits. It recognises, first, that a problem of maintaining the level of general purchasing power exists in the modern economic world; and secondly, that the majority of cost incomes must nowadays be taken as fixed at least in the short period.

Mr Durbin first clears the ground by laying down "three introductory propositions": first, that if all production were conducted by a single trust, total consumers' incomes must be equal to total costs; secondly, that where there is more than one production unit, consumers' incomes can be equal to the cost of final output; and thirdly, that the accumulation of real capital is also compatible with monetary equilibrium in the same sense. It is most useful to have these three axioms clearly established and expressed. Next, Mr Durbin traces out in detail the process by which

* "The Problem of Credit Policy." By E. F. M. Durbin. Chapman and Hall. 262 pages. 10s. 6d.

All this is perfectly logical. When a Government can do without gold, and even embark upon a war on foreign soil some thousands of miles away from home, all on account of that famous Great Light of intuition, it should be able to do without economics. This was a science which the Liberalism of the nineteenth century created; and as the economic liberalism of the last century is dead, so economics is dead too. There is only the Great Light spreading from Rome and showing the way to mankind. Meanwhile the recent 2,000 million lira loan issued to the public to cover the chronic Budget deficit has been a failure.

At the same time the cost of living has risen some 12 per cent. without any corresponding increase in money incomes or money wages. The lira has been strenuously defended on all the markets of the world. But the defence, and the promise of the Great Light that the lira will never fall, do not prevent it being sold in the official market at about 8 per cent. discount and on the outside market at almost any discount.

The result of the new system of barter and quotas is highly interesting too. Imported goods cost much more, but exports are paid for at the old rate of exchange, and there is no compensation. Thus is the Great Roman Light showing mankind how one can get the worst of both worlds.

The new Corporative State is still in its embryonic stage, though it has been talked of for ten years. So far it only amounts to the establishment of a new and costly bureaucracy in which the bodyguard of the Great Light can find numerous sinecures, and in which those industrialists who can spend the necessary amount can obtain almost anything they want, and put into practice the worst kind of monopolistic practices at the expense of the little fellow who is squeezed out in the process. Some of the newly appointed heads of the so-called "corporations" do not yet know, three months after their appointment, whether they are supposed to represent the workers or the industrialists.

You might not understand that, but you do not possess the Great Light of intuition.

Although you are dead, I am sending you my best regards. Believe me, very truly yours,
Italy, July, 1935. GIOVANNI SENZATERRA.

an artificially induced credit expansion and credit contraction work themselves out. His analysis goes beyond the orthodox analysis of inflation and deflation in one important respect: it assumes that the various factors of production are not completely mobile, and it attempts to bring their "velocity" of movement into relation with the velocity of circulation of money. Mr Durbin concludes, from the first part of this analysis, that the demand for capital depends much less on the rate of interest than on the profitability of production in the consumption trades; and consequently that an increase in consumers' expenditure will normally lead to an increase and not a decrease in the demand for capital. His conclusion from the analysis of deflation is as follows:—

The possible causes of deflationary changes are numerous and complex. In face of contract frictions in the markets for commodities and factors of production their results will be cumulative and serious. Any increase in the length of the gap between the receipts and payments of the representative production unit, any increase in uncertainty, any increase in the cost of investment, a rise in the volume of property exchange, an attempt to prevent dividend fluctuation by the sale of securities, a rising population, a growth in the number of firms in any one stage or of the number of stages of production, and, finally, any increase in physical production at fixed prices, will cause a deflationary divergence between saving and investment.

Next comes the really controversial part of the argument: the choice of policy. Three suggested policies, in Mr Durbin's opinion, are worth consideration. First there is Professor Hayek's proposal for a constant effective flow of money. Mr Durbin has little difficulty in showing that if this is interpreted as meaning a constant flow of money against all goods—consumers', capital and intermediate—then, in the event of new stages being inserted in the production process, a deflationary contraction of consumers' expenditure will result.

Secondly, there is the proposal to stabilise the price level of final output. Mr Durbin thinks that this is impossible so long as present banking and financial institutions are preserved. But it is interesting to find that his arguments against price stabilisation are different from those made familiar by Professor Robbins and Professor Hayek. They think that the issue of the new producers' credits necessary to stabilise prices must lead to investment in excessive capital which afterwards has to be liquidated. Mr Durbin argues that the expansion of producers' credits must result in increased profits in the consumption trades, since costs are falling, that this again must increase the demand for producers' credits, that in the end prices must rise, and that if the banks then try to stop them by contracting their new credits, profit expectations will be disappointed and a depression will set in.

This argument raises many questions. In the first place, it assumes that the rate of monetary expansion in these circumstances must exceed the rate of growth of physical output. This seems at least doubtful. Secondly, it assumes that when business men are expecting rising profits, a mere maintenance of profits will lead to business recession. This also seems arguable. Thirdly, and most important, it assumes that the money incomes of the factors of production cannot be raised so as to offset the fall in costs per unit. Mr Durbin makes this assumption explicitly; and it leads him to consider the possibility of stabilising prices by consumers' credits instead of producers' credits. His investigation into the effects of such a policy is one of the most interesting, illuminating and original parts of the book. It leads him to the striking conclusion that the price level can in fact be stabilised by the issue of free consumers' credits, and in no other way; but that the issue of such credits under our present banking system is impossible.

Given existing financial institutions, Mr Durbin's plan is to stabilise "consumers' income per head." This at any rate is what he says. It appears at times from the argument, however, and from his elaborate and interesting discussion of the practical execution of his policy, that what he really wants to stabilise is consumers' (including savers') outlay on final output of consumers' and capital goods. Is not this really what advocates of stable prices, neutral money and constant incomes are all getting at? For, given fixed cost incomes, it is surely this which would ensure monetary equilibrium. Whether Mr Durbin has discovered the ideal way of reaching it, scientifically or practically, economists will not decide in a hurry. But he has certainly done further invaluable service in clearing away some more of the thickets of obscurity that still surround the subject.

SHORTER NOTICES

"The Indian Peasant and His Environment." By N. Gangulee. Oxford University Press, 1935. 10s. 6d. 229 pages.

Professor Gangulee's latest work on Indian agricultural problems consists of selections from letters to European, American and Indian friends and colleagues, together with extracts from his journal compiled during the inquiries of the Royal Commission on Indian Agriculture, of which he was a member.

The volume is somewhat scrappy, and lacks logical sequence. But it contains vivid descriptions of rural life in India, and shrewd comments on the fundamental problems involved. Professor Gangulee has studied agriculture in the West, acted as Professor of Agriculture and Rural Economics at Calcutta, and himself taken part in attempted rural reconstructions, and notably at Behala (Bengal). He is never tired of urging the necessity for improving the conditions of life of the rural masses, before constitutional reforms—however wisely conceived—can hope to introduce anything even remotely resembling constitutional democracy. In his opinion present-day political agitations and proposals for constitutional reform, have tended to conceal the vital interests of the bulk of the population, and he is not afraid to criticise the activities of Congress and other political parties on this score. "Only by a persistent attack," he says "upon our social and economic systems may we succeed in evolving a situation that would lead to our political goal." He also emphasises the supreme need for a political goal. He also emphasises the supreme need for a political goal. He also emphasises the supreme need for a political goal.

The work consists of five parts, of which the first two are mainly descriptive of the economic aspects of Indian village life, and contain little that is not already well known. Parts III and IV deal with broader social questions, and with rural reconstruction; and these form the most interesting portion of the book, particularly where the author is concerned with the practical efforts of groups of social reformers—such as the Y.M.C.A., and the Behala "Karmi Sangha"—at village reconstruction. Part V deals with political and administrative questions, and includes a persuasive plea for indirect election.

In criticism, one may perhaps suggest that it is misleading to quote without qualification the census figures showing changes in dependence upon agriculture, and to describe India's land systems in such a way as to give the impression that all zamindari settlements were made on a permanent basis. On the whole, however, Professor Gangulee's new book provides interesting and instructive reading, and is inspired throughout by a potent commonsense.

"The United States as a Financial Centre, 1919-1933." By M. F. Jolliffe, M.A. (Cardiff) University of Wales Press Board. 142 pages. No price stated.

This little book hardly lives up to its title. In essence it is an analysis of the balance of payments of the United States between 1919 and 1933, with a few notes appended on the course of interest rates, capital issues, etc., in the New York market. The author sticks rather too closely to his statistics, with the result that the reader has difficulty in discerning the wood for the trees. It would have been more interesting to discuss at rather greater length than is possible in the brief concluding chapter some of the many interesting questions which emerge from America's post-war record. The proof-reading is not above reproach: for example, there is a quotation from the *Economist* on page 27 in which the misplacement of two words makes nonsense of the statement quoted. The many tables in the book will form a most useful source for reference.

MONEY AND BANKING

ITALY FEELS THE STRAIN

ITALY's financial and economic position shows signs of becoming acute. In recent years her economy has suffered the successive strains of a stabilisation of the currency at too high a level in 1927, a resulting prolonged deflation, a further intense deflation following the departure of the pound from gold, an attempt to reflate without devaluation by means of rigid exchange restriction, and finally the prospect of an expensive and protracted war fought on foreign soil. In an article on the lira on December 8th last we made the following observation:—

If the slow but persistent drain on the Bank's gold reserve were to continue, without a proportionate reduction taking place in the sight liabilities of the central institution, the Italian Government would obviously have to choose between the alternatives of formally denying any connection with the gold standard or reducing the statutory ratio of the gold reserve to notes and deposits.

On Monday this week it was announced that the statutory requirement of a 40 per cent. metallic cover for the note issue and sight liabilities had been temporarily suspended.

Italy's balance of trade and balance of payments, thanks no doubt to the overvaluation of the lira, have been persistently passive for some years.* In 1932 and 1933 the import surplus was about 1,500 million lire. In 1934 it rose to nearly 2,500 million lire, owing to a simultaneous increase in imports and a decline in exports; and for the first six months of 1935 it was 1,381 million lire. A simultaneous and steady decline in emigrants' remittances has exerted a further adverse influence, though it is believed that tourists' expenditure has recently to some extent recovered.

The passive balance of payments on current account, however, as our Italian correspondent has often insisted, is by no means the only factor tending to reduce the Bank of Italy's gold reserve. The chronic Budget deficit, and the resulting persistent rise in the public debt, has also played an important part in diminishing confidence in the currency and consequently provoking a flight of capital. From 1927 to 1933, according to the last report of the Bank of Italy, the loss of the Bank's gold was "mainly due to capital investments by Italians in foreign countries, and to purchases, also by Italians, of foreign securities and of Italian securities issued in foreign countries. . . ."

This flight of capital was no doubt partly due to the overvaluation of the lira and, as the Bank suggests, to Italy's cheap-money policy. But the Budget deficit has also been an important factor in undermining confidence. In the two financial years ending June 30, 1933, the deficit averaged 3,500 million to 3,800 million lire. In 1933-34 it was considerably over 6,000 million lire. Drastic cuts in wages and salaries managed to reduce the deficit in the first six months of the 1934-35 financial year to 1,074.7 million lire; and the deficit for 1935-36 was officially estimated at 1,657 million lire. Nevertheless, 2,000 million lire in 4 per cent. nine-year Treasury bonds had to be raised internally in November. Moreover, since January Italy's military expenditure must have risen enormously; and, as in the case of Germany, the official figures of expenditure should probably be accepted with some reserve.

As a result of the chronic deficit and of Signor Mussolini's public works policy the national debt has been growing ever since the Fascist regime began. A series of hitherto unpublished official figures, showing the total of the national debt and the "national assets," are given in our Italian letter on page 176. Last February our Italian correspondent estimated the total of State liabilities at about 150,000 million lire, compared with about 100,000 million lire in 1922. In May the Italian Finance Minister gave the figure of 128,000 million lire for the public debt proper on June 30, 1934, and the increase since 1922 at 32,000 millions. In the new figures now issued by the Treasury

* See the detailed Memorandum: *The Economic and Financial Position of Italy*; London, Royal Institute of International Affairs, S.W. 1. 2s. net.

the total of State liabilities on June 30, 1934, is put at 149,927 million lire and the increase since 1922 at 2,700 millions. At the same time the total of State assets is put at 111,541 millions and the increase since 1922 at 23,289 millions. But by no means all the assets are realisable, in any sense of the word. They include "land, sea and air war material, and other material for State services," and "non-disposable scientific and artistic material." Moreover, the increase in the public debt since 1922 is partly offset by a "reduction in liabilities," which turns out on examination to consist largely of the contraction in the note circulation due to ten years of deflation!

The combined effect of the flight of capital and the tendency to a passive balance of payments has been to reduce the gold reserve by 838 million lire in 1932, 367 million lire in 1933 and 1,540 million lire in 1934. In 1934 the import surplus became more important than the flight of capital; for by this time rigid exchange restrictions had made capital exports practically impossible. At the beginning of 1934 Italy abandoned the orthodox policy of deflating in order to remain on the gold standard; and adopted Germany's policy of reflating within a wall of import and exchange restrictions. The symptoms of this change of policy are the facts, among others, that since December, 1933, unemployment has been falling, that the import surplus is growing, and that prices are tending to rise. By December, 1934, the Bank's reserve had fallen to 5,760 million lire, compared with 7,092 millions at the end of December, 1933, and a combined gold and foreign exchange reserve of 10,331 millions in December, 1929. On December 10th last a decree came into force making it compulsory for all Italian individuals or institutions to declare their foreign assets to the Bank of Italy and to sell them if required to do so. As a result, the gold reserve recovered slightly throughout December and January; but it subsequently began to fall once more. Further drastic import restrictions were imposed in February.

The remarkable rise in wholesale prices apparent since January suggests very strongly that some form of disguised credit inflation designed to finance military expenditure has been proceeding throughout the year. At any rate, prices, production, employment, rates of interest, the cost of living, and the import surplus have been rising rapidly; while the gold reserve has been falling. On May 21st a decree was published obliging all Italian banks, firms, companies and individuals in Italy to deposit within 20 days at the Bank of Italy their holdings of foreign stocks and bonds and of Italian bonds issued abroad. From June 10th the gold stock began to fall rapidly, and by July 10th it was as low as 5,524 millions. Between June 10 and June 30 the Bank's holdings of foreign bills and balances rose by about as much as its gold losses. It appears therefore that the Bank had been relinquishing gold to pay for imports and at the same time acquiring the foreign balances accruing to Italian exporters. Simultaneously with the fall in the gold reserve, Italian wholesale prices had risen from 85.2 on January 2nd to 96.9 on July 3rd; while French prices had been about stable. And, despite the import and exchange restrictions, the spot exchange rate has for some time past stood in Paris at a substantial discount.

The announcement of the suspension of the 40 per cent. gold ratio completely upset the London foreign exchange market, where dealings in lire had for a long time been attended with difficulty. On Tuesday spot lire, after opening at lire 60½ to the pound, rapidly depreciated to lire 66. This last rate was purely nominal, as there were no buyers. The Italian Control at once intervened and brought the rate back first to lire 60 and finally to lire 61½. The Control has since continued to operate, and the spot rate was held at between lire 60 and 61. Dealings in forward lire have been practically impossible, and the three months' rate is nominally lire 5½ discount, equivalent to about 37 per cent. per annum.

On Tuesday a semi-official statement was issued, which pointed out that this suspension of the 40 per cent. gold ratio did not imply that the lira was being devalued. It admitted that the foreign liabilities of the Italian Government had increased to 500 million lire, but promised payment "within the next few days." The control exercised over foreign exchange and foreign trade, it was stated, together with the strict application of quotas, made it possible for the Italian Government to ensure the prompt protection of the lira.

Tuesday's official statement has not carried much conviction in the City of London. It is pointed out that Italy is light-heartedly envisaging a war on foreign soil, and that apart from any actual expenditure abroad, the major munitions of war such as steel, non-ferrous metal, coal and oil all have to be imported. It is impracticable for Italy to expand her exports in proportion, and thus she will be forced back upon her reserves of gold and foreign exchange and upon her ability to borrow in foreign centres. This raises the question of Italy's credit in every sense of the word, and the trend of Italian sterling and dollar bonds in London and New York is very ominous. Only a fortnight ago we pointed out that Italian credit stood at a low ebb. Since then there has been a further collapse. The sterling *tranche* of the 7 per cent. Italian Credit Consortium bonds has kept nominally steady in London at about 96 for the 1937 issue, but has fallen sharply from 86-89 to 79-80½ for the 1947 issue. The corresponding dollar *tranches* have fallen in New York from 87-88 to 80½-84 for the 1937 issue, and from 71 to 67½ for the 1947 issue. The price of 67½ is nominal, with no buyers.

The Great War taught the world that once patriotic enthusiasm has been aroused, most nations will endure far greater economic and financial *internal* strain than had generally been supposed. Italy may be able to endure such a strain again to-day. Fortitude of this kind, however, will not solve Italy's real problem, which is how to obtain and pay for essential munitions and materials *from abroad*. Already British coal exporters are refusing to make further shipments while their outstanding debts are in arrears; and it is significant that the real motive behind the suspension of the gold cover is to release gold with which to discharge external debts. Italy is also trying to expand her export trade by means of fresh credits. But all these shifts can only be palliatives. The plain fact is that Italy can only finance a prolonged campaign by borrowing in foreign centres. And it is more than doubtful if she will be able to do so.

FINANCIAL NOTES

The Weakness of the Guilder.—On Wednesday it became known that the Dutch Government's economy proposals no longer commanded the assent of all the Government's supporters, with the result that Dr. Colijn might have to resign almost immediately. This at once called in question the future of the guilder; for while Holland's technical, financial and monetary position remains strong, it increased the possibility that escape from her social and economic difficulties might be found through an early devaluation. As explained in a subsequent Note, the guilder at once began to depreciate, and the Netherlands Bank's gold losses on Wednesday alone are estimated at about Fl. 50 millions. At midday the Bank raised its rediscount rate from 3 to 5 per cent., while on Thursday it became known that the decision about the future of the Government was being postponed. These developments, including the orthodox measure of defence against a drain of gold, were regarded in London as implying that some compromise solution of the political difficulties might be found, and that it might be possible for Holland to remain on gold. Other wise they would mean that the Dutch authorities were knowingly fighting a lost battle. The strain upon the guilder therefore eased during Thursday, and the Netherlands Bank's gold losses for that day were estimated at only Fl. 25 millions. There is no doubt that there has been a considerable flight of funds from Holland. It must also be

remembered that the regulations against speculative forward sales are only partially effective, as it is still permissible to marry a speculative forward deal against a genuine commercial hedge. Still, the Netherlands Bank's gold reserves are probably still well over Fl. 610 millions, equivalent to a gold cover of about 70 per cent., while the Dutch Treasury is not pressed for funds and has further short-term borrowing powers. On Thursday afternoon a London opinion was that Holland would maintain the *status quo* for the time being and watch the results of devaluation in Belgium and deflation in France. She might then base her final choice on the result of her observations.

The Foreign Exchanges.—The London Market has this week been overshadowed by the rapid developments in Amsterdam which have affected all the gold *bloc* currencies. Spot guilders weakened rapidly from Fl. 7.34 on Tuesday to Fl. 7.43 on Wednesday, but returned to Fl. 7.35½ the following day. Three-months' guilders simultaneously moved out from 12 to 22-27 cents discount, and remained at 25-28 cents on Thursday. Spot French francs began to weaken, but so soon as the rate touched Frs. 75 the British Control intervened and held the rate. Three-months' francs have weakened from Frs. 1½ to Frs. 1½ centimes discount. Swiss francs moved on parallel lines, the three-months' rate depreciating from 30 to 48 centimes discount, while spot dollars have been steady to strong around \$4.96 and \$4.95. In Paris, the dollar strengthened on Wednesday to Frs. 15.14½, but remained within the export gold point. The rate came back on Thursday to Frs. 15.12½. The Dutch rate fell in Paris to Frs. 1.018.50 per 100 guilders, against parity of Frs. 1.025. Dealings in London were fairly active on Wednesday, but became quieter on Thursday when the Dutch outlook was regarded with a little more confidence. Still the continued weakness of the Dutch forward rates shows that the outlook was considered to be most uncertain.

Austria's Financial Recovery.—Our Vienna correspondent writes that since the beginning of this year the gold and foreign exchange holdings of the Austrian National Bank have risen from Sch. 279 to Sch. 330 millions, with the result that the ratio of gold to notes in circulation has improved from 32.5 to 36 per cent. The influx of funds from abroad is continuing, and it appears likely that the National Bank will have acquired a further Sch. 5 millions of foreign exchange by the end of July. Repatriation of funds, sales of foreign credits by the Credit Anstalt, an improvement in the trade balance and increased tourist receipts have all contributed towards this improvement, but the one point which stands out is the restoration of confidence in the Austrian currency. Last month the whole of the transfer protection for Austria was abolished, and the service of her foreign indebtedness has since been carried on normally and without any restriction. This obviously increases the potential pressure upon the schilling, but so far it has probably helped to restore confidence and to stimulate the repatriation of funds. Our correspondent points out that the return of funds to Austria began two years ago, but until recently the tendency has been for Austrian nationals to hold foreign bank-notes or securities at home. The weaknesses of the gold *bloc* currencies, however, have lately led to the widespread conversion of these returned funds into schillings, and the total amount is estimated at Sch. 200 millions. Simultaneously the cash holdings of the Credit Anstalt have increased since the New Year by more than Sch. 100 millions through sales of foreign credits, and one-third of this sum has probably been repatriated. The passive trade balance for the first five months of 1935 was Sch. 113 millions, against Sch. 137 millions in 1934, and allowance must also be made for the export of electric power valued at over Sch. 10 millions. Net tourist income for the year ended October 31, 1934, is estimated at Sch. 53 millions, and recent indications point to a net income of as much as Sch. 115 millions for the current year. There are, unfortunately, signs of a deterioration in the trade balance, as exports are falling and imports are increasing, but even so Austria's position is greatly im-

proved. Moreover, the schilling is now regarded as one of the safest of the Continental currencies, and this may prove the deciding factor.

The Money Market.—Conditions are very little changed. Plenty of money is available at the clearing banks at ½ and 1 per cent., and only one of the clearing banks now calls once a week for making-up purposes. The banks have been buying Treasury bills at ½ per cent. for dates up to the end of September and at ¾ per cent. for maturities in the first week of October. They are not buying later dates, and hot Treasuries are only quoted nominally at 1½ per cent., with few buyers. Three months' bank bills are quoted at ¾ per cent.

	July 4, 1935	July 11, 1935	July 18, 1935	July 25, 1935
Bank rate.....	2	2	2	2

Others.....	1-1	1-1	1-1	1-1
Discount rates :—				
Treasury bills	½	½	½	½
Three months' bank bills ...	¾	¾	¾	¾

This week's tender issues of Treasury bills exceeded maturities by £5.0 millions, and so the average tender rate was held at 12s. 2.84d. per cent., against 12s. 1.60d. per cent. the week before. By the end of this week the total volume of Treasury Bills issued by tender and still outstanding had risen to £500 millions. This represents an increase from £360.4 millions during the current financial year, and the figure has not touched £500 millions since February, 1934. The Exchange Equalisation Account is once more having to buy gold and reduce its holdings of Treasury bills, and so it looks as if tender issues will continue to expand.

The Bank Return.—The approach of the holiday is increasing the demand for currency, and as a result the note circulation has risen by £1.2 millions. In the absence of gold movements the Reserve has fallen by the same amount.

	BANK OF ENGLAND				
	July 25, 1934	July 3, 1935	July 10, 1935	July 17, 1935	July 24, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	191.6	192.7	192.7	192.7	192.7
Note circulation	383.9	401.4	400.7	399.6	400.8
Banking Department :—

Proportion 44.9% 32.8% 34.3% 35.7% 35.8%
In the banking department Government securities are reduced by £3.2 millions, and the total reduction since July 3rd has been as much as £9.5 millions. Other deposits have returned practically to their level of a fortnight ago, while bankers' deposits have fallen by £2.8 millions.

New York Money and Banking.—Money rates remain easy. During the week ended July 17th, New York member banks' loans to brokers increased from \$883 to \$900 millions. Other loans against securities rose from \$745 to \$750 millions. The offer of \$100 millions of 2½ per cent. 1935-60 Treasury bonds has resulted in the acceptance of tenders for \$101 millions at an average price of 101½. Some interest has been roused in Wall Street by the New York Federal Court's judgment enjoining the St. Louis South-Western Railway Company to pay the gold equivalent of the coupons on bonds held by the Anglo-Continental Treuhand A.G. The holder had sought payments in guilders. Notice of appeal is being given, and the case will presumably come before the Supreme Court. The House of Representatives has passed the Bill, giving the Administration power to bar suits against it arising out of the gold clause, and the Bill is now before the Senate.

President Roosevelt has expressed himself warmly in favour of the Bill, and has pointed out that every other Government possesses similar powers. Gold imports during the week ended July 12th were only \$2.3 millions. Silver imports amounted to \$8.3 millions, of which \$5.0 millions came from England, and \$2.2 millions from Mexico.

Standard Bank of South Africa.—When at the end of 1932 South Africa suspended the gold standard, the immediate consequence was an enormous influx of funds into the Union. This added greatly to the cash resources of the banks, so much so that during the two years ended March 31st the Standard Bank's cash rose from £5.9 to £17.1 millions. During the past year the bank has been able to put some of this cash to good use, and as a result it only held £12.1 millions in cash on March 31, 1935. Liquidity, however, has been fully maintained, for the cash ratio has only dropped from 31 to 22 per cent. The salient features in the accounts are summarised below:—

	Year ended March 31		
	1933	1934	1935
Liabilities :	£'000	£'000	£'000
Capital.....	2,500	2,500	2,500
Reserve fund	2,500	2,500	2,500
Deposits	52,960	55,163	55,463
Bills for collection	7,381	7,282	8,336
Assets :			
Cash	11,842	17,081	12,055
Call money	3,600	2,600	1,871
Investments.....	8,880	9,826	12,726
Bills purchased.....	3,352	3,971	4,361
Discounts and advances	28,371	25,249	27,738
Net profits	429	433	503
Dividend	10%	10%	12%*

* Includes a bonus of 2 per cent.
The balance sheet shows that part of the bank's spare cash has gone into investments, but the expansion of trade in South Africa has enabled the bank to add to its discounts and advances. Further evidence of the marked revival in trade is to be found in the increase in bills for collection, but the chairman was careful to point out at the general meeting that the revival was largely due to the prosperity of the gold-mining industry. The improvement in net profits from £433,000 to £503,000 is undoubtedly connected with the increase in the bank's earning assets.

The National Bank of Australasia.—The latest balance sheet of this bank presents some interesting points. On the liabilities side, deposits, both interest- and non-interest-bearing, show increases over the previous year, this being in accordance with the general trend of Australian banking as shown in the *Economist* of June 15th. Among assets, cash is substantially higher. This suggests that the strain on the Australian credit position, due to last year's collapse in wool prices and the value of wool exports, may not have been so serious as at one time seemed likely. The principal items in the accounts are given below:—

	March 31,		
	1933	1934	1935
Liabilities :	£'000	£'000	£'000
Capital.....	5,000	5,000	5,000
Reserve fund	3,000	3,000	3,000
Exchange reserve.....	300	300	300
Note circulation	48	48	48
Deposits :			
(a) Government	227	155	194
(b) Other, not bearing interest	10,096	11,891	12,270
(c) Other, bearing interest ...	23,339	24,167	24,586
Assets :			
Cash and call money	4,201	4,262	5,437
Commonwealth Treasury bills	4,750	2,835	3,225
Investments.....	1,479	2,943	3,096
Bills in transit	1,888	3,710	2,565
Discounts and advances	29,561	30,671	31,183
Gross profits	1,120	1,067	1,087
Expenses	735	742	752
Taxation	93	72	59
Net profit	292	274	276
Dividend	5%	5%	5%

The decrease in bank holdings of Treasury bills has apparently been reversed. Bills in transit, however, are substantially lower than in 1934, and this presumably is due to the lower value of wool shipments. There has been a further expansion in discounts and advances. Profits are practically unchanged.

THE STOCK EXCHANGE

CANADIAN BOND OUTLOOK

AN impending general election is invariably the cue for caution in the bond market. The prorogation of the Canadian Parliament, however, is less important in itself than the political and economic developments which preceded it. The first six months of this year have certainly provided much anxious thought for Canadian bondholders. The attempts made by the Mayor of Vancouver to enforce a cut in bond interest rates were disturbing, but the repudiation of the power contracts by the Ontario Government, under cover of a cynical Bill legalising the Province's breach of contract, was even more serious. Investors were quick to appreciate the fact that, whatever equitable claims might be made on behalf of the Ontario Government in the dispute, no real effort had been made to reach an agreed settlement with the companies. Such high-handed action on the part of the most prosperous of Canadian provinces inevitably damaged Federal credit. In the political field, the quarrel between Mr Bennett and Mr Stevens, who resigned from the Ministry of Trade after publicly denouncing "big business" in connection with the Price Spreads Commission's inquiry, has been followed by the latter's emergence as the leader of a new "reform" party which is likely to weaken the Government in the autumn election.

Recent economic developments in Canada have been encouraging, though, in some respects, not exciting. After several years of drought, rainfall has restored the 1935 wheat crop to 96 per cent. of the long-period average. This, in itself, may not prove a "bull point," for the movement of the previous year's crop has been sluggish, and problems of storage and marketing are demanding serious consideration. Industrial activity has also shown a somewhat improved trend. Construction work, indeed, is running some 20 per cent. higher than a year ago. Steel output has recovered rapidly, and nickel and copper outputs have further increased. The automobile and footwear trades, and even the depressed newsprint industry, report better business. These developments are reflected in the index of the physical volume of business, compiled by the Dominion Bureau of Statistics. After falling from 125.5 in 1929 (average 1926 = 100) to a low level of 78.7 in 1932, the index rose to 94.2 in 1934, and has averaged 98.7 for the first five months of this year. Recovery in the construction trades, however, has considerable leeway to overtake before pre-depression levels are restored.

More important, however, is the uneven nature of the "recovery" in the Dominion. The following table shows the course of employment in Canada and the five principal Canadian economic regions during the last three years, compared with the prosperous level of 1929:—

INDEX OF EMPLOYMENT, AVERAGE 1926=100

	1929		1932		1933		1934		April	
	June	Dec.	June	Dec.	June	Dec.	June	Dec.	1934	1935
Canada	122.2	119.1	88.7	78.5	84.5	88.6	101.0	94.4	92.0	95.2
Maritime	112.5	113.3	98.4	80.1	89.9	97.0	100.4	99.0	98.3	97.4
Provinces†	115.9	118.4	88.6	77.8	83.0	86.3	94.1	91.3	85.5	89.7
Quebec	126.2	123.1	89.2	78.8	85.0	91.2	109.9	98.0	98.5	101.7
Ontario	132.4	119.0	90.5	84.4	85.0	86.4	94.1	91.2	85.4	87.9
Prairie	117.5	108.3	83.7	69.7	81.8	80.4	94.1	88.8	88.4	92.6
Provinces†										
British Columbia										

† Nova Scotia, New Brunswick, and Prince Edward Island.
‡ Manitoba, Alberta and Saskatchewan.

Recovery in employment has been most rapid in Ontario and the Maritime Provinces, and much less vigorous in the Prairie Provinces, British Columbia and Quebec. Behind the shelter of the high tariff the industrial areas in the East are faring relatively better than the wheat lands. Low interest rates have stimulated new construction work, but the increase in agricultural spending power has not been so important. Field crops in 1934 were valued at nearly

\$545 millions, an increase of over \$91 millions on 1933. A slightly larger wheat crop, in 1934, was sold at a considerably higher price, increasing the total value from \$122.9 millions in 1933 to \$164 millions in 1934. But the improvement in farming revenues has merely enabled replacement arrears to be covered without leaving an appreciable profit surplus. Indirectly, moreover, the recovery in agriculture has been financed by the Federal Government, which until recently has purchased domestic wheat substantially above world prices and has pegged its selling price. In consequence, stocks have accumulated, in contrast to the trend in other wheat-growing countries; and they now amount to nearly 200 million bushels. It is expected that the new Wheat Board will offer lower prices to farmers than those hitherto quoted. A price of 67 cents per bushel has been mentioned in this connection, against 80 cents previously paid. This would bring Winnipeg and Liverpool quotations broadly into line.

In view of the political position, it would be rash to speculate on the policy of the new Wheat Board, and it remains to be seen whether any reduction in the "pool" price will more than offset the expected increase in this year's crop. The moral for investors, however, is still this: without the restoration of adequate purchasing power to the prairies, Canada as a whole cannot achieve more than a partial recovery.

Moreover, there are two important industrial sources of weakness in the Dominion. The position of the two railway systems, in the first place, is a cause of recurrent anxiety. It has been estimated that the Canadian National Railway has cost the Dominion over \$3,000 millions since the war. Nor is the Canadian Pacific system, which has received Government guarantees for bank loans, showing any net improvement on 1934. A real solution of the railway problem, indeed, seems essential if a source of cumulative strain upon Canadian public finance is to be eliminated. The second depressed industry—newsprint—has become since pre-war days the most important export trade. Production fell from 145.1 in 1929 (1926 = 100) to 101.5 in 1932, and has since recovered to about 135. Depression, however, has been accompanied by vicious price-cutting, owing to the peculiar form of contract employed in the industry, and to the endeavours of the principal manufacturers to cover their greatly expanded prior charges. Recovery in the United States has led to increased consumption of Canadian newsprint, but the problem of surplus capacity is still clamant.

Broadly interpreted, economic conditions, although still in the recovery phase, appear to have lost something of the impetus which marked the rapid revival from 1933 to mid-1934. Export trade has increased during the first five months of 1935 by some 7½ per cent. During 1934 exports were 22.7 per cent. higher than in 1933 at \$659.9 millions, while imports advanced by 28 per cent. to \$513.5 millions. The active trade balance was nearly \$10 millions higher at \$146.4 millions. Estimates compiled by the Dominion Bureau of Statistics show that Canada had a surplus of \$20 millions on international payments account in 1934, compared with a deficit of \$62 millions in the previous year.

Improvement is also reflected in the public revenue returns set out in the following table. Taxation receipts have increased by over \$50 millions during the last two years, while the latest year, to March last, provided the first surplus in the ordinary account since 1929-30.

The significant items in the public accounts, however, are to be found, not under ordinary expenditure, which has remained very steady in recent years, but among the uncovered special items. Included in this category are expenditure on unemployment relief, deficits on the National Railway, and advances to Provinces. As a result, the total Budget deficit has been covered by an increase

FISCAL YEARS ENDED MARCH 31ST.
(\$ millions)

	1929	1933	1934	1935 (est.)

Grand total	388.8	523.0	457.9	480.0

in the Federal debt of \$120 millions during the year. During the last five years the net increase in debt has totalled as much as \$670 millions, of which the National Railway has absorbed \$224 millions, unemployment relief and wheat loans \$188.5 millions and ordinary deficits \$135.4 millions. Extraordinary expenditure, undertaken by the Federal Government, has saved the Provinces from open financial crisis and the Dominion from deflationary pressure; and it has increased the yield of taxation. As a temporary expedient it has something to recommend it, but unless strict limits can be observed, the prospects of redeeming the increase in the public debt, once general prosperity has been restored, will undoubtedly be faint.

There has, however, been a tendency to assume that the Dominion, already assisting the Provinces on a generous scale, would underwrite their debt service in case of open default. The provincial budgetary position shows little improvement, and the widely-canvassed refunding of provincial debts under Dominion guarantee has not been effected. Such guarantees would imply more stringent control of provincial finance, which would probably be unpalatable to the provincial autonomists. The establishment of a Loan Council, as in Australia, would undoubtedly afford much-needed control over provincial and Dominion finances, and, under its guidance, an improvement in provincial credit status might gradually be effected. Already, however, the Dominion has given guarantees for borrowing in excess of \$1,000 millions. Under present conditions further conversion opportunities, to which the Finance Minister referred in his recent Budget speech, may be limited.

The following table illustrates the course of London quotations for representative federal and provincial loans, with redemption yields at present prices:—

	1929-33		1934		1935	Yield to redemption (%)

* Year 1933. † Years 1932 and 1933. ‡ Official quotations suspended. § Flat yield.

The outstanding feature in the table is the discrimination shown by the market in valuing provincial obligations. Redemption yields on direct loans vary from £3 10s. 3d.

per cent. to £4 12s. 3d. per cent., the Prairie and Western Provinces and their guarantee issues being given an appreciably lower credit rating. Municipalities in the wheat areas are similarly valued. It is possible that such caution is justified, for until farming incomes rise appreciably, general prosperity and Budget stability cannot be achieved. The prospects of a rise in grain prices sufficient to alleviate the burden of public debt seem, as yet, too remote to promise an early recovery in Canadian bond quotations. If present political tendencies presage a return to economic orthodoxy, the Dominion may, at last, be able to effect some reduction in the increasing and vicarious debt burdens which it has rather freely assumed in recent years.

INVESTMENT NOTES

The Commonwealth Conversion.—The long-expected Commonwealth of Australia loan, which has made its appearance this week, may well prove to be the last big conversion operation of the present season. The issue replaces the New South Wales 3 per cent. stock, of which some £12,420,113 matures on October 1st; but in addition to this "compulsory" conversion, the Commonwealth Government has exercised its option to refund the Victoria 5 per cent. inscribed stock, 1935-45, of which the £1,049,868 outstanding has been called for repayment on November 1st. The total amount of new stock offered this week was therefore £13,469,981. The distinguishing feature of this latest Australian operation is that the 3 per cent. conversion stock offered is of the uncompromisingly short-dated type. Its maximum currency is six years, and its primary appeal, therefore, unlike that of all the previous important conversions, is to the money market proper, which has responded in no uncertain fashion, and applications are likely to exceed, many times over, the share of the new loan which will be available to cash subscribers. From the borrower's point of view, however, the terms of the loan are perhaps open to criticism. Certainly no borrower free to choose the date for a large debt conversion operation would select the period 1939-41, when interest rates, if the trade cycle runs true to form, may be at an unfavourable phase. The explanation of the Commonwealth's choice doubtless lies rather in the political than in the financial field. Australian public opinion is sensitive on the subject of its public debt charge, and the terms of the new loan have doubtless been governed rather by the desire not to pay more in current interest than by considerations of long-term expediency. For an issue of the twenty-year type Australia would have had to pay, not only appreciably more than the 3 per cent. on the maturing New South Wales stock, but also more than the rate for the £22 millions issue of 3½ per cent. stock, 1956-61, offered in January at par. As events have proved, that issue was made when gilt-edged prices were at their zenith. The stock now stands at nearly 1½ per cent. discount on the issue price, so that a new issue of the same class could hardly have been offered now at more than 98 per cent. Australia's record of achieving a saving of interest by every one of her conversion operations has thus been maintained. It is certainly impressive, whatever slight misgivings may be aroused by the latest operation of the series. In less than three years the Australian Government, with the generous co-operation of the London market, has converted as much as £160,300,000 of debt at a total annual interest saving of nearly £2,500,000. The Commonwealth has still outstanding three loans which are now in the conversion zone. These carry interest at 4½ per cent. and 5 per cent., so that she can look to a further substantial saving of interest.

L.M.S. and Southern Interims.—The railway interim dividend season has opened in somewhat odd style. The actual distributions exceed the best market expectations, but the accompanying statements nevertheless prove somewhat

inauspicious. The London Midland and Scottish 4 per cent. first preference and 5 per cent. redeemable preference stockholders receive a full half-year's dividend, whereas last year only $1\frac{1}{2}$ per cent. and $1\frac{1}{8}$ per cent. respectively was paid. The holders of the Southern 5 per cent. preferred ordinary stock receive a quite unexpected 1 per cent. The Southern distribution, however, is only the jam which coats the somewhat bitter pill that "the directors have no reason to think that the results for the whole year 1935 will be better than those of 1934." This announcement is the clearest indication that the directors do not intend, this year, to make an allowance for the reduced rating assessment. It is, in any case, doubtful whether a final decision can be reached this year, even in the Southern appeal case. The usual half-year revenue figures are also a little disappointing. Both for the London Midland and Scottish and for the Southern, the half-year's increase in gross receipts has been less than was indicated in the weekly traffic figures. The explanation lies in the fact that the 1935 calendar half-year contained one more Sunday than that of 1934. The London Midland and Scottish railway gross receipts have increased by £200,000. Of this, £170,000 has been absorbed by extra wages and salaries. The cost of last January's wage concessions in a full year was officially estimated at £360,000, so that the increase accords with expectations. Other railway expenses, however, have been reduced by £70,000, which must be regarded as a very creditable achievement. The total railway net gain is thus £100,000, but this, unfortunately, is entirely offset by a somewhat inexplicable reduction of £100,000 in ancillary receipts. Since net revenue is unchanged, the first preference dividends are covered in full, with something to spare for the 4 per cent. preference of 1923. The Southern statement is less pleasing. Gross railway receipts have fallen by £30,000, and expenditure has increased by £45,000. This extra cost, however, includes a proportion of the annual charge of £120,000 attributable to wage-cut restorations. Net revenue is reduced by £75,000, for the ancillary services have broken even on the half-year. The half-year's earnings would accordingly provide the equivalent of 0.27 per cent. on the preferred ordinary stock. It would appear, therefore, that the directors expect this difference to be picked up in the second half-year. The London and North-Eastern and Great Western declarations are not available as we go to press.

Millars' Timber Scheme.—The market expressed its disappointment with the long-expected capital reorganisation scheme proposed by Millars' Timber and Trading Company by marking down the ordinary shares from 5s. 4½d. to 3s. 6d. The scheme had been postponed until the assets of the group could be justly valued on their earnings prospects. After re-valuation on what appears to be a satisfactory going-concern basis, the net value of the assets amounts to £1,076,667, leaving £623,333 of the share capital uncovered. It is proposed to write off 14s. 8d. on each £1 ordinary share, and to transfer 1s. 4d. of each share so reduced to preference shareholders. The latter are asked to forego arrears of dividend amounting to 6s. per share, and to surrender cumulative rights on one-half of their holding. As compensation they are to obtain one-fourth of the equity, and, by a division of the existing shares, an additional preferential one-half per cent. on their preference holding. They will thus receive one 10s. 7 per cent. cumulative preference share and one 10s. 6 per cent. preferred ordinary share for each existing preference share and one 4s. ordinary share for every three shares held. The accounts for 1934, which were issued with the scheme, show that purchase account, which stood at £1,543,930 at the end of 1933, has been reduced to £415,531, by transfers from reserves and to suspense account, while interests in subsidiary companies have been similarly reduced from £797,427 to £362,961. General turnover in overseas markets was some 46 per cent. higher in 1934, and a further increase is reported for the first six months of the current year. After providing for losses of subsidiary companies, the net profit amounted to £18,684, of

which £9,472 represented income tax recovered. If the plan is approved the way will be cleared for a resumption of preference dividends, granted further recovery in profits. Presumably the board is satisfied as to trading prospects, for, on the latest year's results alone, the scheme might appear somewhat premature. Its provisions, which have been drafted by an eminent firm of accountants and approved by the Association of Investment Trusts, appear equitable in the circumstances, and the helpful manner in which they are presented deserves commendation.

Actuaries' Investment Index.—The opening of the summer three-week account has been responsible for a further general decline in the share markets. The Actuaries' Index of 158 industrial equities has eased to 77.2 this week, against 77.5 a week ago and the same figure a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.86, 3.83 and 3.80 per cent. respectively. The selection of component indices given below illustrates the general character of the week's decline:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month Ago (June 25)	Week Ago (July 16)	This Week (July 23)	Month Ago (June 25)	Week Ago (July 16)	This Week (July 23)
Lower this Week:						
Insurance Co.'s (24).....	120.4	123.3	122.2	3.49	3.41	3.45
Coal (6).....	92.9	88.3	88.2	3.74	4.00	4.13
Oil (5).....	69.6	67.9	66.8	4.11	4.57	4.67
Shipping (9).....	15.1	14.6	13.7	3.97	3.95	3.98
Miscellaneous (52).....	69.8	70.3	70.0	3.97	3.95	3.98
Higher this Week:						
Electric Supplies.....	117.3	116.1	116.7	4.37	4.44	4.42
Home Rails.....	69.5	70.9	71.3	1.55	1.51	1.51

Coal shares have experienced a further fall. Oil and shipping shares, after a tentative awakening of speculative interest recently, have failed to hold their ground. The important group of miscellaneous industrials, however, is still fractionally higher than a month ago.

COMPANY NOTES

Jute Manufacturers' Shares.—Jute differs from other textile fibres, since it is not employed mainly for the manufacture of consumers' goods. Though substantial weights of jute yarn are used in carpets, linoleum, furnishings and clothes foundations, the main demand for jute tissues is for packing or protective materials, and particularly for raw materials and bulk consignments entering into international trade. The jute industry has consequently suffered severely in the depression, which brought not only losses as a result of falling prices for raw jute. As the Victoria group of companies shows, the most efficient manufacturers have been able to make substantial economies in conversion costs—quite apart from the saving on cheaper fibre—to offset some of the fall in prices for finished tissues. In Scotland, too, the Jute Industries group has considerably improved its efficiency. This factor, combined with trade, offers jute manufacturers the possibility of a late-maturing recovery. It would, however, be imprudent to rate this prospect too highly. The Census of Production for 1930 strongly suggested that in the six years since 1924 and the manufacturers' margin falling. Ever since 1925 though the profits of the Indian mills remained satisfactory until the depression, the margins of even the best Indian concerns are greatly diminished now. Governmental

efforts to improve raw jute prices by crop restriction, which have had considerable success in recent months, are not making it easier for manufacturers to improve their margin, since higher prices for jute goods weaken their position against competitive wrapping materials. Already paper has virtually replaced jute as a packing for cement, while bulk carriage is being employed for an increasing number of products. In addition to competition from substitutes,

the Indian and Scottish manufacturers must face the risk that contemporary nationalist policies will encourage the establishment of jute factories in consuming countries behind a tariff wall. Both the Indian and Scottish trades depend on exports for an important part of their sales. It seems reasonable, therefore, to conclude that while the recovery possibilities of the jute trade are not yet exhausted, it would be unwise to count on margins being re-established on a scale to yield the profits of the better pre-depression years.

Armstrong Whitworth Developments.—Important changes affecting the organisation of Armstrong Whitworth Securities were announced by Major-General Guy Dawnay at the general meeting on Wednesday. After referring to the improvement in the engineering sections, which, together with the realisation of the shipbuilding company, had permitted the recent balance-sheet revision, the chairman referred to the repayment of the £921,431 4 per cent. debenture stock at £102½ per cent. in December. The Securities company, it was stated, has nearly £900,000 available for liabilities, working capital for the operating companies, and debenture repayment. It is proposed to transfer the assets of the Securities company, other than the shares of the Engineers and Ironfounders subsidiaries, to a new company. This company, in turn, will obtain a loan, against the assets which it acquires, sufficient to enable the Securities company to repay its debentures and to provide ample working capital to finance the recent improvement in the business of the two major operating concerns. The chairman stated that the Bank of England had made this financial arrangement possible in recognition of the importance of the undertaking as a labour unit to the North-East coast. As a result of the transfer, the functions of the Securities company will be reduced to those of a holding concern, with consequent economies in management, while the new company will gradually realise the assets transferred to it. Any surplus realised, after repayment of the loan, will accrue to the Securities company. Progress has already been made this year in realising certain assets, and the new company, which may be compared, in essentials, with the R.M. and E.D. Realisation Companies, may obtain satisfactory terms for such assets as the Craven works, whose position improved considerably during 1934. The scheme will bring considerable benefit to the operating companies, for the group will be clear of debenture debt and well provided with working

Trustees for Certificate Holders

THE CLYDESDALE BANK LTD.

THE Trustees hold the securities and collect and distribute Dividends, together with the proceeds of the sale of any bonuses and rights, half yearly on 1st December and 1st June to the certificate holders free of charge.

THE expenses of maintaining the Trust, including the cost of dividend distributions to the Certificate Holders, for the trust period of 20 years, are specially provided for.

THE yield per cent. on the above securities for the year ended 31st May, 1935, was as follows:—

	£	s.	d.
DIVIDENDS	5	0	4
BONUSES AND RIGHTS	1	8	11
TOTAL	6	9	3

Sums of approximately £20 and upwards may be invested.

Current price quoted in daily papers.

UNDER the terms of the Trust Deed, the Managers, National Fixed Investment Trust Ltd., undertake to repurchase from certificate-holders any Sub-units offered at not less than the selling price on the London Stock Exchange of the Constituent Securities, less charges at the usual Stock Exchange Rates.

Full particulars may be obtained from any branch of the following Banks

capital. If the recent recovery at the Scotswood and Gateshead works is maintained, the work of the board during six years of adversity may eventually be justified. Some time must elapse, however, before the development of Diesel traction which it has undertaken proves adequately remunerative, and the depressed condition of railway finances the world over has so far prevented any substantial recovery in locomotive construction. The operating companies, nevertheless, have a greater volume of work in hand, and their prospects are undoubtedly more favourable than at any time since the board of the Securities company assumed office in 1929.

* * *

Furness Withy Accounts.—It is always difficult from the Furness Withy profit statements to obtain any true indication of the way in which business is moving. For the third year in succession, the profit balance has been struck "after a transfer from reserves." The figure does show a slight increase, however, at £395,083, against £378,165, and it may, therefore, be assumed that the previous year's profit level was maintained in 1934-35, and probably increased to a small extent. The directors, indeed, admit that "in some respects an improvement is noticeable," although "there has been no material increase in the volume of international trade." It was, of course, a foregone conclusion that the ordinary dividend would again be passed, and shareholders have still a long time to wait before any resumption of payments can reasonably be expected. The following table analyses the profit and loss accounts for the past three years:—

	Years to April 30		
	1933	1934	1935
Profit*	379,674	378,165	395,083
Depreciation.....	200,000	300,000	300,000
Earned for dividends	179,674	78,165	95,083
Preference dividend.....	56,250	57,187	58,125
Ordinary shares:			
Earned	123,424	20,978	36,958
Paid	135,000	Nil	Nil
Earned (%)	2.7	0.5	0.8
Paid (%)	3	Nil	Nil
Carried forward	145,197	166,175	203,133

* After unspecified transfers from reserves in each year.

The balance sheet is hardly more informative than the profit-and-loss account. The depreciation allowance is rather less than 1 per cent. on the book value of the shipping property, which is by no means an unsatisfactory rate in times of depression. Much, however, depends upon the valuation of the investments in subsidiary companies. In order to reduce this item, the board has transferred £500,000 from general reserve. At the same time, both the current credit and debit accounts with the subsidiaries have been reduced. The ordinary £1 shares, now quoted at 14s. 6d., carry deferred recovery prospects, but they cannot be rated highly under present conditions of world trade.

* * *

Distillers' Meeting.—Mr William Ross's speech at the annual meeting of the Distillers Company was in the nature of a valediction. Few chairmen, indeed, can boast of his record of fifty-seven years' service, of which thirty-five years have been occupied in active direction of the company. His survey of the trade outlook, on the whole, confirmed the inferences which were made from the accounts in these columns on July 13th, page 83. He pointed out that the total quantity of spirits entered for home consumption had shown an increase during the first nine months of the trading year. In the first quarter of 1935, however, this surplus had been converted into a deficiency for the year. He was inclined to attribute this movement to the withholding of purchases in the hope that the Budget might bring a reduction of duty. The industry, he

declared, had pledged itself to pass on any remission to consumers, leaving the companies to derive indirect benefit through increased consumption. He explained that the moderate improvement in exports during the past year could be attributed to the large increase which followed the repeal of prohibition in the previous year. The regular shipment of standard brands might accordingly be encouraged when these shipments were consumed. The speech disclosed that a "considerable margin" for increased production of industrial spirits was available at the company's works, and that, in view of the low profit margin which had been fixed on this business, there would be little to fear from new competition. It is a fair inference from these remarks that stability of earning power, rather than rapid upswing in profits, is indicated for some time to come. A further pointer in the same direction is suggested by the increase in creditors and contingencies, amounting to £266,976. Provision has been made under this heading for suspended profit on inter-company transactions, which is brought back into the parent company's revenue when the associated companies dispose of their stocks. A very substantial increase in the amount set aside has been necessitated by the greater maturity of the whiskies now sold, since a longer period naturally elapses before profit is taken back from reserve.

* * *

Anglo-Oriental and London Tin.—Although it is impossible to compare the latest accounts of Anglo-Oriental Mining Corporation and London Tin Corporation to April 30th last with those of previous periods, owing to changes in accounting dates, the position disclosed is not impressive. The reconstituted boards have commendably given shareholders ample information as to the position of the two companies. The balance sheet of Anglo-Oriental reveals that the company's holding in London Tin Corporation was valued, at the date of the balance sheet, at £393,881, against a book value of £1,212,731. From the accounts of the Anglo-Oriental and General Investment Trust, however, it appears that other investment holdings are intact. The revenue account discloses a net loss for the 10 months' period, after provision against a loan, of £17,961, compared with net earnings of £50,139 for the previous sixteen months. The position of London Tin has been greatly weakened by the payment of the 7½ per cent. preference dividend for the five years to March 31st last. After special reserve provisions, a deficit of £80,010 is carried forward and replaces a credit balance of £248,272 brought in. The total due on bank and other loans has been reduced from £743,511 at September, 1933, to £366,734 at April 30th last, from the proceeds of ordinary shares issues during the period. If the stock of tin, which appears for the first time at an estimated value of £166,985 is regarded as offset by secured loans, the current position shows an appreciable weakening during the nineteen months. Investments are shown at £2,912,132, and are covered by a valuation at April 30th in which £1,914,811 is represented by quoted securities, and £998,518 is taken at the directors' valuation. An important change is revealed in the valuation of subsidiary companies and other investments. The former have fallen from £2,074,713 to £752,242, while investments in other companies have increased from £1,163,282 to £2,159,890. Since earnings for the nineteen months amounted to £179,971 (apart from year to September, 1933, the outlook holds some promise. Apart from special items, and allowing for nineteen months' preference payment, earnings for ordinary shares were at the rate of 2 per cent. per annum. It may be pre-cash position before resuming ordinary dividend payments. The 7½ per cent. £1 preference shares of Anglo-Oriental are quoted at 12s. 9d., including dividend arrears since August, 1931, while the 7½ per cent. preference 10s. shares of London Tin, participating up to 10 per cent., which are now equity issues standing at 3s. 3d. (5s. nominal) and 7s. 9d. (10s. nominal), respectively, do not appear to warrant immediate speculative interest.

Gold Fields Rhodesian Development.—The maintenance of the dividend of the Gold Fields Rhodesian Development Company at 12½ per cent. for the year to May 31st last is less impressive when considered in the light of the report and accounts, which have subsequently come to hand. While the improved position of the gold mining industry reacted beneficially on the company's underlying position, there is no indication that it contributed any material increase to dividend revenue. Certain other interests of the company were less remunerative. Its extensive land holdings, in particular, were not in active demand, owing to the prevailing difficulties in primary commodity markets. The gross income for the year declined by £67,000 to £240,496, and the net profit of £229,823 compares with £297,663 for the previous year. The amount transferred to reserve is halved at £25,000, and £43,739 has been appropriated to write off investments, compared with a transfer of £6,006 a year ago. After meeting the total dividend of 1s. 3d. per share, absorbing £94,283, the forward balance of £23,704 compares with £25,861 brought in. During the year a number of mining holdings were changed and certain new interests acquired, particularly in Rand and West African properties. There is no indication, however, as to the extent of any liquidation in the holdings of "heavy" dividend-paying shares, and whether the former holdings in such shares as Sub Nigel and New Modderfontein are still retained. If, as seems probable, the industrial holdings have been largely, if not wholly, liquidated, there can be little doubt that an appreciable slice of the net profit accrued from this direction and, possibly, from the sale of highly-priced gold shares. These inferences suggest that the company is prepared to bank on the potentialities of gold mines which are now in the development stage at the possible expense of current revenue. Shareholders, however, will recognise that the board has always shown sound judgment, and has generally been successful in its earlier operations. The 10s. shares are now a slightly easier market at around 12s. 9d. ex dividend.

* * *

Tanganyika Concessions Group.—Following the issue of the annual reports of these three companies this week's meeting of Tanganyika Concessions provided little further material information. Apart from a non-recurring gain of £79,067 on its East African gold flotation, the "Tanks" report showed a net revenue of £21,600 for 1934 on investments totalling £11,600,000. This amount, however, was converted into a net loss of £15,942 after guarantee payments to the African Railway Finance Company. The quoted securities at December last showed the heavy depreciation of £2,500,000, compared with £296,000 for 1933. The report states that the figure has since been reduced to £1,860,000. The Benguela investment is still entered at £6,571,620, thus valuing the ordinary shares at par and the debentures at 40 per cent. In view of this valuation, the reserve fund can only be regarded as having a nominal existence. A debit at profit and loss of £176,690 is carried forward. In the current year the company will bear a liability of over £100,000 in respect of the African Railway Finance Company, together with £230,000 cumulative dividend on the "B" preference shares and some £35,000 for administrative expenses. A distribution equivalent to £3 per share on the Union Minière holding will be necessary to cover these prior charges. The Benguela Railway is primarily dependent on the Union Minière Mines copper traffic; but under international agreements output during the next two years is to be restricted by some 30 per cent. Present indications suggest that some modification of the capital structure may eventually be undertaken. The Zambesia Exploring Company's investments are valued in relation with current market quotations. Following the Kentan flotation, a debit at profit and loss account was changed to a credit of £10,458 at the end of the year. If future developments in the East African gold area are favourable they may prove of material benefit to this company in view of its large interest in the Kentan properties. The Rhodesia-Katanga Company report shows that some 25 per cent. of its capital is comprised of liquid

assets, but after taking credit for £100,000 profit on its East African gold interests it carries forward a debit of £174,000 on profit and loss account.

* * *

Other Company Results.—Our usual table on page 211 summarises the results of 52 other companies. Further brewery results make a good showing. The net profit of Threlfall's has improved from £237,470 to £255,679, and the dividend has been increased from 15 to 16 per cent. Increased profits and dividends are also reported by Colchester and Associated Breweries. In the Finance group, McDougalls Trust, for the first full year of operations, reports a net profit of £178,344, and pays 5 per cent. upon the ordinary capital. The preference shareholders' reserve now covers two years' dividends, as required by the Articles. This week's heavy industry reports are again cheerless. The directors of North's Navigation Collieries have adopted the unusual procedure of writing up the value of the assets, and have applied a surplus of £323,871 over book value, together with reserves not required, towards reduction of the larger debit carried forward from 1933. Among further company improvements, Bertam Consolidated reports net profits of £42,472, against £21,061, and pays 11 per cent. against 7 per cent., while East Asiatic has earned £45,223, against £23,951, and has declared an increased dividend of 5 per cent. The trend of further tea companies' reports continues inauspicious. The general recovery in investment trust revenue proceeds steadily. Among this week's reports British Steamship shows an advance in net revenue from £78,416 to £84,099. A number of smaller industrial companies' accounts have appeared this week, but they show few spectacular advances. Tilbury Contracting has enjoyed a somewhat better year, and the dividend is raised by 2½ per cent. to 17½ per cent. The report of Oxford and Berkshire Cinemas for the first trading period of six

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

months reveals that the 16 per cent dividend paid has left a relatively small amount to go forward. The first public report of Hollychrome Bricks, whose shares were recently "introduced," discloses a profit of £19,124. This week's interim dividend announcements, other than those of the L.M.S. and Southern Railways discussed in a Note on page 185, have provided no surprises. The Imperial Tobacco distribution is maintained at 7½ per cent., tax free, and the gas and electric light companies' declarations, which are set out in our usual table, are all unchanged.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Standard Bank of South Africa, Provincial Bank of Ireland, Brazilian Warrant Agency and Finance, United Dominions Trust, Zinc Corporation, Anglo-Dutch Plantations of Java, Armstrong Whitworth Securities, Distillers Company, Estates Control, Griffiths Hughes Proprietaries (Kruschen), Duff Development, and Tanganyika Concessions. The chairman of the Standard Bank of South Africa, after reviewing the improved profit-earning capacity of the Bank, stressed the importance to the Union of prolonging the life of the Rand goldfields. Mr Richard Trotter, addressing shareholders of Provincial Bank of Ireland, declared that the ultimate prospects of advances made on land were sound. Mr J. Gibson Jarvie, at the United Dominion Trust meeting, disclosed that the new subsidiary, Credit for Industry, had approved loans totalling £1,272,421 to smaller industrial concerns. Mr W. H. Ross' speech at the Distillers meeting is discussed on page 188. Important changes announced at the Armstrong Whitworth Securities meeting are outlined on page 187. At the Zinc Corporation meeting, Sir Robert Horne declared that, if current metal prices were maintained, both profits and dividends for the current year would show a very satisfactory increase. He declared that, without making definite estimates of the potentialities of the mine, a life of not less than 25 years might be expected at present production rates. Addressing shareholders of Anglo-Dutch Plantations of Java, Col. Sir Robert Williams declared that improving conditions for both tea and rubber might be expected during the next twelve months. Mr Arthur Whitworth reviewed the benefits of the Brazilian Warrant Agency and Finance Company's reconstruction in November last, but he stressed the effect upon profits caused by the management of surplus coffee stocks in Brazil. At the Griffiths Hughes meeting the chairman declared that business had shown satisfactory increase during the current year. At the Tanganyika Concessions meeting, Sir Robert Williams advocated further railway development in Africa. The chairman of Duff Development declared that the company's large proportion of young rubber was now fulfilling its promise.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET AUGUST 13 | ACCOUNT AUGUST 15

MARKET activity was inevitably at a low level this week, at the beginning of the three-week holiday account. The plentiful supply of new issues is still meeting practically the whole of the new investment demand, and prices both in the gilt-edged and in the investment industrial markets were a shade easier. The market generally, however, stood up to the uneasy situation created by the guilder crisis in encouraging style. From guilder devaluation, a number of the leading shares—Unilever and Royal Dutch in particular—would necessarily benefit, but any deflationary effect upon sterling commodity prices might easily induce short-term reaction in industrial share prices.

At the beginning of the week the prices of British Government securities tended to sag. Later on, however, the tone became steadier; the rapid subscription of the new Aus-

tralian conversion issue and the good revenue return imbued the market with more confidence. The new Transport Finance stock, however, slipped back to ½ discount, and the new India issue, by the same token, weakened slightly to ¼ premium. India issues generally were somewhat weaker, and Dominion and home corporation stocks were no better. The only forward movement, indeed, was that of New South Wales 3 per cent., which was bought for its conversion attractions. In the foreign bond market, Brazilians once more provided the chief interest. On Monday, there were heavy sales from Portugal, and the funding issues, in particular, fell sharply. Recovery did not occur until the middle of the week, and even then was due rather to speculative purchases at the new low levels than to any return of confidence in the situation. European issues could hardly be other than flat in face of the currency uncertainties. Both Japanese and Chinese bonds were very dull, although there was some improvement towards the middle of the week. The home railway traffic figures disappointed the market, and on the eve of the interim dividend statements the market was dull. The market turned better after the dividends, although the revenue statements were, in themselves, hardly encouraging. The Argentine railway traffic was again indifferent, and the stocks once more weakened.

The industrial share market was dull and irregular. Dealings began in a number of new issues and this diverted the market's attention from favourite investment counters. The steadiest showing was made by the international section, in sympathy with the healthy activity in Wall Street. U.S. Steels took the lead, with an advance of three points. Elsewhere buying was selective and prices were uncertain. Brewery shares were the main centre of interest, Guinness being keenly bought on final dividend hopes, while Watney deferred and Charringtons were in demand. Iron and steel shares, on the other hand, were easier, although a somewhat steadier tone developed towards the end of the week. Electrical equipments staged something of a recovery, led by Associated Electricals, and motor shares found support. Aviation shares, however, were entirely dull. In textile shares there was no improvement, and the rayon share market was not strengthened by the June output figures. In the stores group, a somewhat surprising advance in Harrods at the beginning of the week was not maintained, and a gain in Tate and Lyle, similarly, was not fully held. The two Unilever issues were in strong demand as the guilder weakened. Elsewhere there was little of interest. Millars Timber shares were inevitably marked down on the reconstruction scheme (outlined on page 186), from which the market had expected too much. Brick and cement shares were easier, and the Furness Withy results effectively dispersed the optimism which had begun to percolate in the shipping share market.

The oil share market was quiet. A firm tendency became apparent on Tuesday, but interest dwindled. The threat to the guilder, of course, strengthened Shell and Royal Dutch, which were bought both on Amsterdam and on home account, but for the rest of the market it was a signal for caution. In the rubber share market, too, the only activity was in Anglo-Dutch and Allied. Since any devaluation of the guilder might involve a reaction in the price of the commodity, investors are naturally awaiting events. There was some liquidation of tea shares—for the most part, profit-taking after the advance of the last account—but the undertone remains satisfactory.

Business in the gold share market came almost to a standstill. Towards the middle of the week, however, a few buyers of Kaffir shares appeared and the tone became steadier. The selling from the Cape appears to have exhausted itself, but there is nothing in the current news to encourage purchasers. The quarterly reports are making only a mixed showing. In West Africans, there was again nothing to attract the market. East Africans, after their steady advance, were somewhat irregular. The demand for Kenya Consolidated, however, was very well maintained, and the price continued to go ahead. Australians were dull, with Commonwealth once more definitely weak. Rhodesians, however, after a poor start to the week, firmed up in good style. Among copper shares there were small mid-week gains, but tin shares remained quite idle, despite the scurry in the market for the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

THE boomlet in Wall Street goes merrily on. Every day this week the share turnover topped the 1,300,000 mark, and despite recurrent profit-taking, prices have steadily advanced. This week's impetus was provided by the encouraging steel and electric power output figures, together with another batch of quarterly earnings statements. Motor stocks were again the leaders in the advance—General Motors touched a new high level at 37½—and mail order and farm equipment stocks were also in the forefront. Rails and utilities, however, have hardly participated at all in this week's upward movement. The June railroad earnings were not particularly stimulating, and the market was irregular. The utility companies are not yet out of the legislative wood, although political developments now appear to be adequately discounted. The bond market was less active. Treasury issues, after an irregular start due to inflation fears inspired by the activities of Senator Borah, improved later. Industrial bonds, however, were subjected to profit-taking. There is always a danger of a break in the market, for political reasons, but apart from that possibility, the outlook is not unpromising.

* Two-Hour Session.

PARIS

The repercussions of M. Laval's emergency decrees have not been as great as might have been expected. This week the market was very quiet. After last week's improvement in rentes, there was some profit-taking, and on balance the week's dealings represent a definite decline. Bank shares, after their gains at the end of last week, also slipped back again. Industrials ruled quiet, but prices were fairly maintained. Some, at least, of the decline in Suez Canal shares was successfully recouped. Mining shares were quietly irregular, and there was strong buying of Royal Dutch, on the fears of guilder devaluation.

	July 17, 1935	July 22, 1935	July 24, 1935	July 17, 1935	July 22, 1935	July 24, 1935

BERLIN

The volume of business declined heavily last week. Prices, however, were not markedly affected until the announcement on Wednesday of an impending capital reconstruction scheme for Hamburg-Amerika and Norddeutsche Lloyd. This led to a slight temporary reaction. Official dealings in these two shares were temporarily suspended. When they were resumed, the former closed the week at 18, the latter at 18½. Reichsbank was steady, and Farbenindustrie and Siemens gained slightly, but steels were mostly somewhat weaker. This week opened with the market in undecided frame of mind, but Tuesday's market was firm, particularly in the potash groups. On Wednesday, too, apart from the banking and shipping groups, the tone was better. Electricals were very firm.

Linoleum issues, however, were heavily sold. The bond market remained inactive and dollar securities were irregular.

	July 17, 1935	July 22, 1935	July 24, 1935		July 17, 1935	July 22, 1935	July 24, 1935

AMSTERDAM

The Bourse did not show any real signs of nervousness until Wednesday, when the fall of the Government was feared and the bank rate was raised. The immediate reaction was twofold. On the one hand, there was a sharp fall in Government bonds, and on the other a sharp advance in industrials, oils and rubber shares. Royal Dutch was in particularly strong demand, and Unilever N.V., Philips' Lamps and Amsterdam Rubber also advanced. Tea and sugar shares were very firm.

	July 17, 1935	July 22, 1935	July 24, 1935		July 17, 1935	July 22, 1935	July 24, 1935

CANADA

The Canadian stock markets have been experiencing their usual midsummer dullness and trading has been at a very low ebb. During the latter half of June and the early days of July, markets were very sluggish and most stocks lost some ground. More recently, however, some improvement has occurred, in sympathy with the upward movement in New York. Liquor stocks have staged a small independent boom, on unofficial reports of good earnings, but most of the buying has apparently come from the United States. Power stocks remain weak in view of the recent reaffirmation by the Ontario Government of the cancellation of power contracts with Quebec companies, and the newsprint stocks are still out of favour. Brokers expect no real improvement in the stock market until the general election is over, but they look upon the good crops which are now promised as a hopeful bull factor in the autumn. The bond market has been comparatively steady but dull. In the mining market gold stocks have been slipping downward, but silver issues moved higher when the United States Government began to buy silver again. The Bureau of Statistics' "Investors'" index for the week ending July 11th was 95.7, as compared with 94.8, 95.5 and 97.2 for the weeks ending July 4th, June 27th and June 20th respectively.

CAPITAL ISSUES

THE approaching holiday season has been responsible for a certain falling-off in new issues this week. The *Commonwealth of Australia*, for this reason, may be the last trustee borrower to come to the market for a spell. We comment on some interesting features of her latest conversion operation in a Note on page 185. The largest industrial offer of the week comes from *Earls Court, Ltd.*, which intends to revive the 18½-acre site in that district for large-scale exhibitions. Buildings and works are to be completed by the end of next year at a cost of £1,230,750. About one-third of the estimated total profit is anticipated from letting agreements already signed. The Prudential Assurance Com-

pany will subscribe £650,000 on first mortgage. The 5½ per cent. second mortgage debenture stock carries a rate which recognises the speculative nature of the enterprise at this stage, for although satisfactory profits have hitherto been earned in the exhibition business, the new company must face competition with established concerns. The balance of earnings estimated as available for the equity, however, may offer, if success is realised, fair long-term possibilities. The debenture and preference issue of *John Lewis Properties* primarily finances an important West-End Store property acquisition. The properties are securely let to John Lewis and Company, and the service of the issues constitutes, in fact, a prior charge on the profits of the parent concern. The issues therefore rank appreciably higher than those of a general property company. The offer for sale of *Westland Aircraft* 5s. shares at 40 per cent. premium gives the public a 50 per cent. participation in an aircraft business formerly owned by Petters, Ltd. The business has experienced unfavourable conditions during the last three years, although large profits were earned between 1929 and 1932, and current business has improved. Out of total assets amounting to £175,000, one-fifth is represented by goodwill. The vendors have acquired shares, for cash and consideration, at par. In view of the issue premium, the goodwill element in the public capitalisation of the business must accordingly be placed at £85,000. On the basis of recent results, the shares must be classed as speculative. The business of *Roberts Brewery* is seasonal and rather localised, and the assets are acquired substantially under current valuation. Although recent changes in policy are expected to increase profits, the latest results, after providing for leasehold amortisation and depreciation, and without allowance for directors' fees and management expenses, cover the preference shares with little to spare. The prospects for the ordinary shares, therefore, entirely depend upon the realisation of increased revenue. The shares of *Rest Hotels* will be dealt in only on the Edinburgh Stock Exchange. The business is a new venture, which has yet to prove its profit-earning capacity, and speculative interest in the shares may be left to local investors. Statements "for information" have been published by *Eburite Corrugated Containers*, an established business with a rising profits trend, whose preference shares have satisfactory cover, and *Westpool Investment Trust*, which has issued 3½ per cent. debenture stock at par. Dealings in *West Spaarwater* commenced this week, but at quotations which somewhat disappointed the market.

ESTABD 1795

THE BRANDY WITH A PEDIGREE

Average, 1925-35, £48,252. Vendors subscribe 300,000 5s. shares at par. Capacity, 250 machines per annum. Full production ensured until end 1936. List closed 9.10 a.m. July 22nd. Oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Eburite Corrugated Containers, Ltd.—Issued share capital, 240,000 5s. ordinary and £200,000 5 per cent. cumulative participatory 10s. preference shares. Charterhouse Investment Trust purchase 160,000 preference shares at par. Business founded 1895 to manufacture packing paper, etc. Profits, after depreciation, before income tax and interest: 1932, £15,724; 1933, £21,587; 1934, £25,480. Bank overdraft £8,517 and debentures and redemption premium £36,750 to be repaid out of proceeds of issue. Total net assets, including proceeds, £132,551.

Westpool Investment Trust, Ltd.—Particulars of issue of £150,000 3½ per cent. debenture stock at par. Repayable at par August 1, 1968, or after August 1, 1963, on three months' notice. Profits, before charging debenture, bank and loan interest and income tax, years ended April 30th: 1933, £15,989; 1934, £16,408; 1935, £26,628. Total net assets, including proceeds of present issue, £977,476, secured with existing 4 per cent. debentures by first floating charge.

ISSUES TO SHAREHOLDERS ONLY

South Midland Gas Corporation.—Issue of 2,500 £1 redeemable 4½ per cent. cumulative preference (1974-84) at £1 1s., to rank for dividend from October 1, 1935.

Hector Whaling.—Issue of £71,250 8 per cent. participating redeemable unsecured debenture stock at par in proportion £1 of stock for every six shares held. The issue is to provide funds to acquire an interest in a new whaling company.

Meadows (Henry).—Issue of 11,000 shares to existing shareholders in proportion of one share for every nine held, to rank for dividend from September 1, 1935.

Williams and Williams.—An issue of £100,000 5 per cent. first mortgage debenture stock at £99½ per cent. Payment in full may be made at any time before August 1st, but no discount will be allowed.

British Oxygen.—Issue to shareholders of £278,186 £1 ordinary of British Oxygen at £3 10s. per share.

West Spaarwater, Ltd.—Offer of 2,889,000 5s. shares at par to members of East Rand Consolidated, H. E. Proprietary, and Klip Nigel Estate and Gold Mining. Acquires rights underlying Klippoortje North and Western part of Spaarwater No. 154. Consideration £150,000 cash and right to subscribe 600,000 shares at par. Proposed to sink shaft 4,000 feet. £716,250 available for working capital.

Lancashire Electric Light and Power.—The directors are issuing approximately 369,000 ordinary shares of £1 each at 30s. per share to holders of the ordinary and 7 per cent. participating preference shares, in the proportion of one new ordinary share for every seven existing shares held, to rank for dividend from January 1, 1936.

CONVERSIONS AND REPAYMENTS

Consolidated Gas, Electric Light and Power of Baltimore.—This company will on September 10, 1935, redeem at £105 and accrued interest all of its outstanding Series H, 4½ per cent. first refunding mortgage sinking fund bonds.

Gillette Safety Razor Company.—The board has called £2,689,000 of the company's debentures due in 1940, being the entire amount outstanding, for payment on October 1, 1935, at £102 and interest. It has not been decided whether the entire amount will be paid out of the company's treasury or whether a short-term loan will be made for part or all of the redemption price.

FIXED TRUSTS

Fixed Trusts.—A new fixed Trust, Security First Trust, will be launched shortly by interests associated with Dawnay, Day and Company, who sponsored the "Investors" group of fixed trusts. The new trust will include shares of 23 British companies.

(a) Private placements.

North Metropolitan Electric Power Supply.—Debenture holders are to meet on August 1st to consider an extraordinary resolution affecting their stock. The purpose is to enable the company to issue further debenture stock ranking *pari passu* with the original stock and carrying interest of not more than 4 per cent. per annum, to authorise the company to redeem the stock of one or more issues without being required to redeem the whole of the stock then in issue, and to make the necessary alterations in the trust deed.

OTHER RESULTS OF ISSUES

Severn Valley Gas Corporation.—Recent offer to Dawley Gas Company has been accepted by holders of a substantial majority of the shares.

Taylor (C. F.) and Company.—Lists closed 9.10 a.m. July 19th. Oversubscribed.

Leeds and Wakefield Breweries.—List closed 11 a.m. July 19th. Heavily oversubscribed.

Hills (R. H. O.) Blackpool.—List closed 9.5 a.m. July 19th. Heavily oversubscribed.

OIL OUTPUTS

ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of June amounted to 600,000 tons, making a total of 3,659,000 tons for the first six months of 1935.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended July 13: Venezuela, 15,873 barrels; Trinidad, 36,276 barrels; total, 52,149 barrels. Production for the week ended July 20th: Venezuela, 15,252 barrels; Trinidad, 37,037 barrels; total, 52,289 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during June amounted to 105,643 barrels, or approximately 15,092 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended July 6, 1935, was 431,000 barrels. Production for the week ended July 13, 1935, was 431,000 barrels.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during June was 12,610 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 946 barrels.

STEAUA ROMANA (BRITISH), LTD.—Production of the Steaua Romana Company, Bucharest, for the month of June was 104,309 metric tons.

THE VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended July 6, 1935, was:—Bolívar District, 704,599 barrels; Maracaibo District, 30,167 barrels; total, 734,766 barrels. Production for the week ended July 13, 1935, was:—Bolívar District, 695,227 barrels; Maracaibo District, 30,620 barrels; total, 725,847 barrels. Production for the week ended July 20, 1935, was: Bolívar district, 705,845 barrels; Maracaibo district, 30,966 barrels; total, 736,811 barrels.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

COMPANY MEETINGS, &c.

THE DISTILLERS COMPANY, LIMITED

DIVIDEND OF 20 PER CENT.

DEMAND FOR INDUSTRIAL ALCOHOL MAINTAINED

BURDEN OF THE WHISKY DUTY

The fifty-eighth annual general meeting of the Distillers Company, Limited, was held in the North British Station Hotel, Edinburgh, on Friday, July 19, 1935, when Mr William H. Ross, chairman of the company, presided.

The Chairman said: Ladies and Gentlemen,—In accordance with our usual practice, I propose, with your permission, to hold the directors' report as read.

"You will have heard with regret, from the apologies read by the secretary, that we are not to have our managing director with us to-day. For some time past his health has been giving us some concern, and on the advice of his doctors we have given him an extended leave of absence in the hope that his health will thereby be restored to normal.

Now, Ladies and Gentlemen, I shall endeavour to give you a bird's-eye view of the main points concerned with the business of the company during the past year. First, I take the total quantity of British spirit on which duty was paid for consumption within Great Britain and Northern Ireland for the twelve months ending March 31, 1935. This was 8,357,683 proof gallons, or a reduction of 243,540 proof gallons from that recorded in the previous year. For the nine months ending December 31, 1934, the total quantity had exceeded that of the corresponding period of 1933, but in the first three months of 1935 this surplus was converted into the deficiency already mentioned. Doubtless this was due in part to the climatic conditions, and, in part, to the fact that orders were withheld by buyers in the hope that a reduction in duty would be intimated in this year's Budget. This last-mentioned reason is confirmed by the figure of consumption for April, 1935, which exceeds that for the same month of the previous year by about 133,000 proof gallons. Those interruptions to the natural flow of trade are sure to occur year by year until the injustice to our industry, which is the cause thereof, has been remedied.

A GRIEVOUS DISAPPOINTMENT

It was indeed a grievous disappointment when the Chancellor made it known that he could not afford any reduction in the spirit duty this year, although he repeated his declaration of the previous year that he was convinced that the duty was too high and should receive consideration at the earliest date. While we were thankful for such an admission, it left us pretty much in the same mood as the love-sick maiden found herself in when her swain kept putting off naming the happy day. Having exhausted her patience, she at last exclaimed, "Jock, it's kind o' wearyin' wark aye being told to bide a wee." In our case we have waited for 15 years, and are getting a bit tired, seeing that other interests, who have suffered for a much shorter period, have in nearly every case received relief. It will be recalled that before the war the duty on spirit was at the rate of 14s. 9d. per proof gallon. In 1918 this was increased to 30s., in 1919 to 50s., and in 1920 to 72s. 6d., all per proof gallon.

CONSUMERS THE FIRST CONSIDERATION

It is the last increase of 22s. 6d. which we have been endeavouring to get removed, and we have given the Chancellor of the Exchequer a pledge that any such reduction would be passed on to our customers, and by them to the consumers, who would thus benefit to the extent of 2s. 6d. on the present price of 12s. 6d. per bottle. It is true to say, therefore, that the consumer is the only party who would benefit directly and immediately by the suggested reduction in duty. The distillers and other sections of the trade, together with the barley growers and those other allied traders such as coopers, case makers, bottle manufacturers, printers and carriers, would be in the position of a deferred shareholder, and only benefit by the increased trade which the said reduction in price might bring about.

SUGGESTED TAX ON FOREIGN BARLEY

It was in these circumstances that the Scottish Chamber of Agriculture has seen fit to petition the Import Duties Advisory Committee to recommend that a duty of ten shillings per quarter be placed on all foreign barley imported into this country in place of the 10 per cent. *ad valorem* duty already imposed.

Your company, along with other distillers, was asked for its views on the proposal, and has entered objection to same.

The grounds for such objection are:—

(1) That the proposal, if adopted, would place an additional burden on an already overtaxed industry.

(2) That it would be creating an example of double taxation on a single commodity which the House of Commons has already opposed in principle.

(3) That the distillers have already pledged themselves to use and have, in fact, for the past two seasons been using, as much home barley in their malt distilleries as they have found it possible to do.

(4) That in order to encourage the Scottish farmer they have paid higher prices for home-grown barley than those at which they could have bought foreign barley of equal or better quality.

(5) That the addition of the duty proposed would add to the cost, not only of spirits used in this country, but also of spirits exported, which have to compete with spirits made in other countries not subject to such a tax.

For these and other reasons which might be given I hope we have heard the last of such a proposal.

EXPORT TURNOVER STILL RISING

When we come to the export figures of British spirits the position is a little more cheerful, as the quantity exported for the year ending March 31, 1935, was 5,767,309 proof gallons, compared with 5,292,985 proof gallons for the previous year, a net increase for the past year of 474,324 proof gallons. The increase would have been greater but for the fact that in the first year was included the initial large shipments which followed the repeal of Prohibition in America. It is to be expected that when these large initial shipments get used up the field will be clear for more regular shipments of the standard brands such as those supplied by this company.

As mentioned in the body of the report, your company has taken a financial interest in two gin plants which they have erected in the State of New Jersey, U.S.A., which are now being operated and giving fairly satisfactory results.

INDUSTRIAL SPIRITS STEADY

A year ago I reported a very large increase in the use of industrial spirit in this country. This increase has been fully maintained during the past year, but no material further increase has taken place. We have considerable margin for increased production at our existing works, the values of which have been written down in our books to low figures. This fact, coupled with the statement I made last year, that the margin of profit on this class of business has been kept down to a minimum in order to encourage new and existing industries having alcohol as their basis of production, makes your directors feel confident that they can withstand any new competition which may arise.

Our yeast trade for the past year has been maintained, but there are indications that since the beginning of 1935 a slight falling off has taken place. So far as one can gather, this is not due to increased imports which, indeed, have declined in a similar manner, but the explanation is rather to be found in a decreased demand which seems to find confirmation in the fact that flour millers are apparently having the same experience and are counselling the public to eat more bread.

Other subsidiary manufactures such as malt extract and "Gyproc" plaster board, which were referred to at last annual meeting, continue in a healthy condition.

BALANCE SHEET REVIEWED

I shall now deal with those items in the accounts that require further explanation than that already provided in the report to the stockholders.

Beginning with the assets side of the balance sheet, you will see that land and buildings have been reduced by £91,500, and plant and utensils by £16,412. The total of these items per the print makes the buildings and plant account £861,304, which is £107,912 less than last year, notwithstanding that £42,468 had been spent in additions during the year to buildings and plant.

Taking the sundry investments, including British Government securities, and also investments in subsidiary companies, these together show an increase of £997,992, which is principally accounted for by our additional holdings of British Government securities and the investment in the American gin plants before referred to. Incidentally, I might mention that the present-day market price of our holdings of British Government securities show a very satisfactory surplus as against their cost appearing in the books of the company.

Subsidiary companies' current and loan accounts.—These show an increase of £90,695 on last year's figure, which does not call for any special comment, being the ordinary fluctuations in our dealings.

The other items on the assets side do not call for any special remark beyond that of cash in bank and on hand, which, at £4,157,398, is down by £118,266, and is more than accounted for by the increase in investments already referred to.

Before leaving the assets I would like to say that, in dealing with the investments as a whole, it is worthy of note that after estimating these on our usual conservative basis they show a considerable appreciation on last year's valuation.

INCREASED RESERVE

Turning to the liabilities side of the balance sheet, it will first be noted that there is no change either in the capital of the company or in the debenture debt. The reserve fund on this occasion has received £350,000, being £100,000 more than last year, and we have repeated the allocation of £100,000 to the superannuation and provident fund.

Subsidiary companies' current and loan accounts show an increase of £210,385, which represents the surplus cash of these companies.

Sundry creditors, reserve for taxation and contingencies, etc., have increased by £266,976. Under this head provision has been made for suspended profit on all sales of spirit to subsidiary and associated companies, and also for suspended profit on all inter-company sales within our group. These reserves are automatically reduced and the amounts taken into profit when the relative goods involved are brought into use by the respective companies. A very substantial increase in the amount set aside has been necessary in the case of the first-named reserve, as our group blending companies are sending out to their customers a whisky with greater age than formerly, with the result that a longer period requires to elapse before the profit is earned and so taken out of this reserve. For a similar reason the directors have set aside an additional sum as reserve for inter-company suspended profits.

PROFIT AND LOSS ACCOUNT

Regarding the profit and loss account, the gross revenue, including registration fees, is £2,293,032, and after deducting therefrom the debits for charges, debenture interest and directors' fees, there is a net profit of £2,212,133, which, compared with last year's figure of £2,140,622, shows an increase for the year of £71,511. I have no doubt you will consider such a result very satisfactory.

STAFFS' ENTHUSIASM COMMENDED

This now completes my review of the accounts for the year, so I would take this opportunity on behalf of the directors of recording their appreciation of the zeal and ability shown by the various members of the staffs, both at home and abroad, which has materially helped to bring about the successful trading results, and I am quite sure the stockholders will join in this expression of gratitude.

I have now very great pleasure in moving the adoption of the report, which recommends a final dividend on the preference stock of 3 per cent., less tax, making, with the interim dividend of 3 per cent. already paid, a dividend of 6 per cent., less tax, for the year, also a final dividend on the ordinary stock of 12½ per cent., less tax, making, with the interim dividend of 7½ per cent. already paid, a dividend for the year of 20 per cent., less tax, and carrying forward to next year a balance of £319,073 os. 4d.

Sir Alexander Walker seconded the motion, and no questions being asked, the Chairman declared the motion carried unanimously.

Mr William Harrison, in moving the re-election of the following directors, viz.:—Mr R. W. Preston, Mr Thomas Wilkinson, Sir James C. Calder, Mr W. H. Ross and Lord Forteviot, said he was sure they would agree with him that there was no necessity for him to recommend, in any special terms, the re-election of his colleagues. As all were aware, they had been long and honourably associated with The Distillers Company in its progressive and conservative activity, and he accordingly had great pleasure in moving this resolution.

Mr J. A. Ramage Dawson seconded, and the motion was carried unanimously.

Sir James C. Calder, in returning thanks on behalf of his colleagues and himself, said he had to thank them for their renewal of confidence. He could assure them that they would give their best services in looking after the interests of the stockholders and the company.

Mr E. L. Roura moved the re-election of Messrs. Moores, Carson and Watson, C.A., as auditors for another year at a fee of one thousand guineas, and this was seconded by Mr James Black and carried unanimously.

CHAIRMAN FORESHADOWS HIS RETIREMENT

The usual formalities having been completed, the Chairman then intimated his desire to resign from the chairmanship of the company and from the board as soon as it was possible for the vacancy to be filled. Mr Ross said he was taking this step in view of his complete loss of eyesight, and solely on the recommendation of his medical adviser. He concluded by saying that the question had already been fully discussed with his colleagues on the board and he had left himself in their hands as to the date of his retirement. Mr Ross, in the course of his remarks, stated that in October of this year he would have completed 57 years' service with the company.

ESTATES CONTROL, LIMITED

BOARD'S INVESTMENT POLICY.

The thirty-first annual general meeting of Estates Control, Limited, was held, on the 24th instant, in London. Lord Luke, who presided, in the course of his speech said that the company had had throughout the year over £100,000 lying on deposit at the prevailing low rates of interest. Originally the company's trading provided the whole of the profits, but in recent years their investments had grown until now the interest and dividend therefrom, at £26,577, not only covered the preference dividend, but a portion of the preferred ordinary dividend, and it was the board's intention to continue with this policy and rather increase investments as suitable opportunities occurred.

They would see from the profit and loss account that the profit for the year under review was £46,329, against £48,021 in the previous year, the reduction being attributable to the lower charges made by the company to Bovril, Limited, for business done for them.

During the year, they had paid the usual preference and preferred ordinary dividends, amounting in all to £33,722 10s. They had also paid an interim dividend of 60 per cent. on the ordinary shares, which amounted to £12,300, and they recommended a further and final dividend of 40 per cent. which would bring the total payment on the ordinary shares up to £20,500 for the year.

Of the companies in which they had important holdings he must on this occasion mention one. He alluded to Bovril Australian Estates. He feared that owing to a minor drought a loss would have been made during the last year.

Though the area of Bovril Australian Estates might seem large, it was none too large for their stock of cattle. The main block, Victoria River Downs Station, was 10,400 square miles in extent. They had been improving the carrying capacity of this station for over a quarter of a century, and had got the station so fully developed that the average carrying capacity was about 39 acres per beast, which was high for the Northern Territory, but the irregularity of the rainfall during 1933-34 seemed to have caught the Estate overstocked. In consequence of this there had been a heavy mortality on this, Bovril's principal station, and the stock-sheet showed a drop as at January 31, 1935, by about 10,000 head in spite of heavy calvings during 1933 and 1934, when the calf markings were over 50,000.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

ZINC CORPORATION, LIMITED

INCREASED PROFIT—IMPROVED POSITION SIR ROBERT HORNE'S REVIEW

The twenty-fourth ordinary general meeting of the Zinc Corporation, Limited, was held, on the 23rd instant, at The Chartered Insurance Institute, 20 Aldermanbury, London, the Rt. Hon. Sir Robert Horne, M.P. (the chairman), presiding.

The Chairman said:—Before I deal with the business of the meeting I desire to refer to the death, a few days ago, of our esteemed colleague, Mr George C. Klug. In him we have lost a wise counsellor and skilled administrator, whose personal qualities commanded the confidence of all who worked with him, and inspired the affection of a great circle of friends. He played a notable part in the executive work of our corporation and all his colleagues will greatly miss his sagacious judgment.

The net result of the year's operations was a profit of £131,226, an increase of £11,000 compared with the previous year. (Applause.)

In the appropriation account you will note that the amount expended on new plant, etc., was £38,209, compared with £12,615, and we have this year appropriated for expenditure on new plant a sum of £40,000, as against £70,000 at December 31, 1933.

The full preference dividends amounting to £49,138 were paid and in addition the participating dividends on both preference and ordinary shares were raised from £56,177 to £67,412. The total amount paid in dividends for the year was £116,550, against £105,315 in the year previous. Part of this, viz., £45,000, has been disbursed since the accounts were made up, in the form of a participating dividend on both classes of shares, and you will be asked to confirm this payment in the resolution for the adoption of the report and accounts. The balance carried forward has been increased from £45,024 to £51,491.

We have set out our investments in the balance sheet in greater detail than before. The total book value of our investments is about £48,000 less than a year ago. We regard this valuation as very conservative. We have used the surplus from realisations where we considered it desirable to write down the value of remaining securities, and have carried the net balance to an investment reserve account, which is stated separately among the liabilities at over £74,000.

The total value of our mining property, machinery, plant and equipment at mine and works, less depreciation previously written off, now stands at £281,626. Against this total our general reserve (including depreciation) amounts to £208,418.

Let some may think that the profits earned represent a liberal return on the cost of our enterprise, I think I should point out that the £280,000 odd which stands on our books as the leading asset represents the remainder of more than £2,500,000 sterling invested in the purchase, development, and equipment of your property.

We have, in addition to the general reserve, a reserve of £17,000 for interest and dividends equalisation and a contingencies reserve of £30,000. I feel confident that you will regard these figures as very satisfactory. (Hear, hear.)

STRONG POSITION

Our balance sheet to-day is one of great, but not undue, strength. Our present position is in marked contrast to what it was only a short time ago, when the world crisis and the crash in the price of our products, combined with an inability to sell our production, had an effect on our affairs which caused us very grave concern. For a long time our ability to maintain employment was in danger; in fact we were able to continue our operations only by realising investments and drawing very heavily on previously accumulated resources. We have to find on working expenditure alone between £50,000 and £60,000 sterling a month, and it will be easy for you to understand that unless all our production is sold within a reasonable period the maintenance of our operations might rapidly become impossible. We were able to weather the crisis and maintain a high ratio of employment only as a result of the prudent conservation of resources which resulted from our operations in good years. (Applause.)

In considering the balance sheet of the corporation, and, in particular, its investments, it is necessary for you to remember that apart from any enlargement of operations, our mining and milling equipment calls for replacement practically every 10 years, and in dealing with the type of ore body we have to mine, it is wise to make provision well ahead for special shaft and underground requirements.

We are to-day spending £100,000 on a new mill, and if we are to work economically and efficiently we are faced with the necessity of sinking a new shaft. The latter—and its equipment above ground and below to a depth of, say, 2,000 feet—will probably call for £250,000 over the next four years. Thus we may have a total expenditure of £350,000, and perhaps more, on capital account within a comparatively short time. If we were not able to make provision for a substantial part of this expenditure in advance, our ability to maintain our operations would be endangered.

THE MINE

The report of Messrs Bewick Moreing and Company, the general managers of the mine, sets out in detail the operations of the year. You will notice the reference in the report to the temporary reduction in the ore reserves due to the contraction in development forced on us at a time when the depression was most acute. A bald statement of ore reserves calculated on conventional lines, i.e., ore completely blocked out on three sides, might at this stage convey a totally wrong impression of the resources of your property. An attempt on my part to make any definite estimate of potentialities would scarcely be justified, but I believe we are entitled to expect, on the geological evidence before us, a life of not less than 25 years at the present rate of production.

Last year we commenced a geological survey of our leases, which it has since been arranged shall be merged in a joint enterprise with our friends, North Broken Hill, Limited, and Broken Hill South, Limited. This is a long job, the commencement of which has been already far too long delayed. We are more than hopeful that it will at least fully support all our expectations regarding the extent and value of the ore deposits within our leases.

THE MILL

As will be noted from the report of Messrs. Bewick Moreing and Company, the results of the work carried out during the year in the pilot unit have led to a very satisfactory system, whereby improved recoveries of lead and silver can be obtained at a somewhat reduced cost compared with the returns from our existing mill. Following on the recommendation of the general managers the conversion of the mill to the new system is well advanced and should be operating by the end of this year.

COMMERCIAL

On the selling side of our business I am glad to be able to record a wide expansion in lead sales. The average price actually realised in 1934 was only £11 os. 9d., against £12 os. 3d. in 1933 and £11 13s. 9d. in 1932, but our realisations more than absorbed our output and stocks were substantially reduced. Since the opening of the current financial year the demand has continued active and prices for lead have improved substantially with corresponding benefit to our revenue.

THE OUTLOOK

Metals have been and are still selling well, and stocks of lead in particular have been considerably reduced. Present lead prices are substantially above the average of last year on which to-day's accounts are based. Expressed in gold the prices of lead and zinc are still painfully low, but the discount on sterling on Australian exchange—without which I may say we not only could not in recent years have made a profit, but would have been unable to operate at all—gives us a substantial price advantage. If the current level of metal values is maintained, our profits and our dividends for the current year will show a very satisfactory increase. (Cheers.) On the basis of our profits up to date, if nothing untoward happens, our next dividend will certainly be substantially better than the corresponding distribution a year ago. (Hear, hear.)

The demand for lead has been greatly helped by the building boom and the increased demand for electric light and power and for telephone extensions in connection therewith. So long as this situation is maintained we are entitled to expect a continuance of satisfactory prices. If and when the reported American shortage of houses begins to be attacked, this movement should be accelerated.

The world is drawing very heavily on its lead and zinc supplies. Probably nearly 200,000,000 tons of ore have been mined and treated in the last 15 years to meet the world's demand for these metals. If consumption be maintained at its present level for the next 10 years and 150,000,000 tons of ore are thus consumed,

many of the major deposits geographically well placed and now being worked will be seriously depleted. Fortunately for us there is no reason to fear any shortage of ore in our own property. (Applause.)

Silver is being raised in value by the purchasing policy of the United States Government, just as it was reduced in value in the past by the selling policy of the Government of India and other Governments. There is no ground for anticipating any alteration in the action of the United States. It is strictly in accordance with the mandatory legislation on the statute book, and while the administration is free to vary the price and speed of its purchases, the acquisition of silver by the United States must go on until that law is altered by Congress. Apart from any attempts to check speculation or to punish speculators, it appears reasonable to expect that silver prices will over a period show further improvement.

FAVOURABLE OUTLOOK

On the whole the outlook is more favourable for our products than for some time past. One of the chief factors on our revenue side, viz., the exchange value of the Australian currency, may be regarded as governed for the time being by the volume and value of the primary products of the Commonwealth. Taken collectively, these are still very low, and unless there is a further substantial recovery in wool prices and a corresponding rise in wheat prices to a level profitable to the majority of farmers, any material improvement in the Australian currency is improbable. It has to be remembered that Australia is still selling to the United Kingdom many of its primary products at unprofitable prices and paying full interest and amortisation on its external debt, factors which contribute materially to our recovery here.

In summing up the situation one may reasonably assert that, subject to the maintenance of industrial peace and any dislocations that might arise from international disturbance, we have good reasons for being optimistic regarding the future, and I am hopeful that the accounts which we shall present to you a year hence, as well as the distribution which we may make in the interim, will be satisfactory to you. For the past six or seven years we have had to fight against a world-wide depression. You have been called upon to make considerable sacrifices during that period and you have borne your lot with patience. I am glad to think that there is now a reasonable prospect of better fortune in the future. I cannot conclude without thanking our general managers, Messrs Bewick Moreing and Company, our superintendent, Mr C. C. Freeman, and all the staff, for their efficient and enthusiastic efforts on the corporation's behalf. We have had the advantage of a visit from Sir Colin Fraser, one of our local directors, and take this opportunity of expressing through him to the local board the deep appreciation of their efforts on behalf of the corporation.

The Chairman concluded by moving the adoption of the report and accounts and the confirmation of the payment of the participating dividends totalling 1s. 6d. per share.

Mr Wm. S. Robinson (managing director) seconded the resolution.

SHAREHOLDERS' APPRECIATION

Mr Hipwell said that in 1932 he attended a general meeting of the corporation and congratulated the directors on their foresight in becoming associated with the gold-mining industry of Australia and it must be very gratifying, he was sure, to them to-day to review the results of their work. There was no doubt that Australia had benefited immensely by their efforts and the shareholders had also had their small share—he said small because he would not like any words of his to stop the efforts of the directors. (Laughter and hear, hear.)

He had also come to the meeting to hear if the Chairman had anything cheering to say on the prices of lead and zinc, and he was sure that the Chairman's words of comfort were very welcome. On behalf of the shareholders he wished to express their gratitude to the directors for their work in the past, to compliment them on the strength and solidity of the balance sheet and to hope that their future path might be a little smoother.

The resolution was carried unanimously. The retiring directors, the Rt. Hon. Sir Robert Horne, M.P., and Capt. Oliver Lyttelton, D.S.O., M.C., were re-elected, and the auditors, Messrs Monkhouse, Stoneham and Company were reappointed.

Mr Warren said that they were very much indebted to Sir Robert Horne for presiding at the meeting, and he was sure the shareholders would not like to disperse without according a very hearty vote of thanks to him for doing so. (Hear, hear.)

Mr Hipwell seconded the proposal and it was carried unanimously.

The Chairman having thanked the shareholders, the proceedings

ARMSTRONG WHITWORTH SECURITIES COMPANY, LIMITED

IMPROVED POSITION OF OPERATING COMPANIES

The forty-first ordinary general meeting of Armstrong Whitworth Securities Company, Limited, was held, on the 24th instant, at Winchester House, London.

Major-Gen. Guy P. Dawnay, C.B. (the chairman), said that the company had incurred a loss for the year 1934 of £40,372, as compared with £36,694. The reason was the decrease in interest from investments caused by the necessity for making advances to subsidiary and associated companies for the purposes of their operation. The improvement in the operating companies' business on the engineering side, together with the elimination of the Shipbuilders Company by sale to the National Shipbuilders Security, Limited, had decided the board to make a complete revision of the balance sheet.

Dealing with the operating companies on the Tyne, the chairman, reviewing the position of the Engineers Company at Scotswood, said that towards the end of the year prospects had begun to improve and they had obtained their full share of the business then offering, the net result being that a very radical improvement in the position at Scotswood, so far as locomotive building was concerned, had been effected. In the marine engineering department the volume of inquiries they received from shipbuilders was greater than when they were in the shipbuilding business.

Their pneumatic tool department and their manufacturing arrangements for heavy engineering products and machines were developing in a satisfactory manner.

Their development of the Diesel traction department had gone steadily forward, and he thought that their reputation in that business stood higher than ever. Two 1,300-b.h.p. Diesel electric locomotives ordered for India had been shipped, and they hoped would lead to further and increasing orders from India. Six rail cars on the Madras and Southern Mahratta Railway had now been in service for some months, and they were receiving very favourable reports of their performance. They had built a 250-b.h.p. shunting locomotive to the order of the London Midland and Scottish Railway and, after a full year's service, they had received a further order for 10 more powerful units of the same class. They had also on order a similar unit for the Bombay, Baroda and Central India Railway, and also on order nine 300-b.h.p. power equipments for rail cars for the Central Argentine Railway. So far as the Ironfounders Company was concerned, the general improvement at Scotswood had had a better effect for the better, more work being available at slightly better prices. For the first six months of 1935 their order book was practically double that for the corresponding period of last year.

Regarding the general reorganisation of the balance sheet, the plan which they had adopted involved the elimination of their debentures through the intermediary of a new company which would take over the company's chief assets and obtain such redemption. That arrangement had been made with the help and co-operation of the Bank of England.

All this was the result of years of hard work in exceedingly difficult conditions caused by the collapse of 1931 having taken place so shortly after the reconstituted board of the company had taken office to carry out its policy. Within seven months of their assumption of office, shipbuilding of the kind to which their yards were restricted by agreement had practically come to a total standstill. Almost simultaneously their steam locomotive business had suffered an identical eclipse. He and his colleagues Engineers Company; hence their turning to the development of heavy oil engines for rail and road. Within two years of their assumption of office had come the general collapse, which had resulted in a huge fall, both in volume of business and in prices. The turnover of the Engineers Company in its mile-long works at Scotswood had fallen from more than £1,000,000 to £200,000 a year, at which fantastically low level it had remained for over two years.

Perhaps they might hope that the turn of the tide might have come in the year covered by the accounts. Steam locomotive business showed encouraging signs of revival and the Ironfounders Company had a very satisfactory volume of work. In those altered circumstances it was now the moment to put the new arrangements into effect. The services of those of them, including himself, not actively concerned in the conduct of the operating companies would be no longer required.

The report and accounts were adopted.

BRAZILIAN WARRANT AGENCY AND FINANCE COMPANY, LIMITED

RESULTS JUSTIFY ORDINARY DIVIDEND

The annual general meeting of the Brazilian Warrant Agency and Finance Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, E.C.

Mr Arthur Whitworth (chairman of the company) presided. The Chairman, in the course of his speech, said:—As the report states, the accounts we present to you to-day reflect the result of the capital reconstruction scheme carried through in November last. At the end of the year, after our scheme had received the sanction of the Court, we sent to all shareholders a statement showing the reconstruction figures as compared with the figures of the December, 1933, balance sheet, so I do not propose to detain you to-day by going over ground which is known to those of you who cared to make a close and comparative study of the balance sheet of 1933 with the current position of the company. I do, however, say with some pride and gratitude to the shareholders for sanctioning our proposals of November last, that this is the first balance sheet that has been presented to you for some years without any unsatisfactory and qualifying comments, either in the accounts themselves or in the auditors' certificate.

BENEFITS OF RECONSTRUCTION

In November last you sanctioned proposals of a very drastic character, but I would remind you that though the ordinary shareholders have seen the capital value of their shares reduced, from 10s. to 2s., the intrinsic value of the equity of the company, which is represented by the ordinary shares, is precisely the same, whether the nominal value of the shares stands at 2s., as they do to-day, or at 10s., as they did a year ago. The resultant benefit to the ordinary shares is that the profits of the company, if sufficient, are now available for distribution instead of being required for writing down assets which, before the reconstruction, were carried at a much inflated figure.

The trading results of last year were, I am glad to say, just sufficiently good to enable your directors, after paying the preference dividend, to recommend the payment of a small dividend of 4 per cent. on the ordinary shares.

If you turn for a moment to the balance sheet, there are a few comments which I should like to make. The paid-up capital of £725,000 is backed by a general reserve of £200,000 free and unhyponothecated to any particular purpose. The contingency reserve of £29,812, compared with £10,356 in 1933, is the surplus over the valuation of our investments of the previous year, and fluctuates with the weekly valuation, which is always taken out.

On the assets side our advances against coffee, cotton, etc., at £58,457, as against £89,693 a year ago, reflect the repayment of old advances and new advances at lower prices. Our Stock Exchange investments are shown in the balance sheet at £514,160, the increase, as stated in the report, being due to the investment of the surplus cash balances which we were able to have remitted from Brazil last autumn. There was, however, an amount of £70,000, part of our cash in London, which was waiting for payment of investments at the end of the year, so that the real figure of our investments was about £584,000, a very large figure when taken as part of the company's total assets of £1,263,813.

PROFIT AND LOSS ACCOUNT

If you turn to the profit and loss account, our London expenses show little change. The operating profits at £47,754 were some £12,000 less than in the year 1933, due in the main to lower earnings in our coffee business, and also to the disappointing outcome of the 1934 coffee crop on the Tibirica estate.

Some of you may have noticed that the interest and dividends on our investments are rather less than they were a year ago, in spite of the fact that our investments, as I have already told you, stand at a substantially higher figure, but I have said that the increase of the total only arose towards the end of the year, so that the dividends will not accrue in full until 1935. At the same time our investments were affected by cheaper money and, in some cases, by lower yields on certain stocks which we have held for many years.

When your board came to consider the disposal of the available profits, we were faced with a difficult decision. The profit on the accounts was there and the earnings were sufficient in the year to

pay a dividend at a somewhat higher rate than we eventually decided to pay. The reconstruction scheme was put through based on an exchange rate of \$73 to the £. At the end of the year the rate taken for the accounts was \$74 to the £, whereas the rate of exchange is now \$90 to the £. It is obvious, therefore, to-day that further provision for the lower exchange requires to be made, though we cannot say what the position will be at the end of the year. We naturally hope that exchange may improve, but I must admit that there is nothing in the financial situation of Brazil upon which such hopes can justifiably be based. We, however, fully realised the long suffering of our ordinary shareholders, and came to the conclusion that what we had for the time being was theirs, so we decided to recommend the small payment, which you will receive on August 8.

As regards the general business of the company, we are, as you know, a trading concern, buying and merchanting coffee and cotton, lending money to coffee planters and controlling or owning subsidiary companies, which either grow coffee and cotton or depend upon the marketing and warehousing of coffee for their activities. We have no contractual relation, either with the Government of Brazil or with any of the States, so we are not directly concerned with the general financial obligations of Brazil nor with the service in any way of their foreign debts. It does not therefore, fall to me to-day to address you on any of those matters, which are of such intimate concern to other public companies who are connected with the railway and municipal affairs of Brazil. The only point at which the financial difficulties of the country impinge upon our affairs is in the matter of exchange, and you know from the past what a serious effect this has had upon your fortunes and how it affects them to-day and must do to-morrow.

PROBLEM OF SURPLUS COFFEE

When, in addition to this, we have to contend with the exchange troubles of the Continent of Europe, you will appreciate that it is not easy to conduct a steady and profitable business in the main export commodities of Brazil. There is also the continual uncertainty as to the methods which the Government will adopt as to the disposal of surplus coffee production, and whether the export tax, which is in part levied for the purpose of the service of foreign loans, will be continued at the same rate. Our profits in the year under review were, and in the current year are likely to be, affected by these conditions, though the uncertainty is to some extent removed by the promulgation last week of the proposals made by the Coffee Convention in Rio recently held under the auspices of the Federal Government.

The chief of these is that there will be no sacrifice quota in respect of the present crop, but the National Coffee Department will purchase in the interior 4,000,000 bags of it, which it is estimated should absorb the surplus of the crop.

With regard to the past crop—i.e. that of 1934-35—the position is somewhat obscure, but we understand that the surplus, now estimated to be 5,000,000 bags, will enter into Santos concurrently with the present crop in the ratio of 60 per cent. old crop and 40 per cent. new crop. The Government also propose to continue the restrictions on the planting of new trees, although they do not propose to prohibit the replacement of old trees by new plantings. We must hope that these proposals, if adopted, will achieve their object, but unless regular consumers in the markets of the world consume more coffee, or new consumers can be found, I do not see how the coffee trade of Brazil can be free from some sort of Government control for many years to come.

During the past year it was hoped that the export surplus of Brazil would be materially increased by the harvesting and sale abroad of a largely increased cotton crop, and we strengthened our staff in Sao Paulo to enable this company to take its full share of the trade. The crop, however, has not turned out anything like as large as was expected, owing to damage by pests, and I believe that several concerns that sold cotton somewhat heavily forward are finding difficulty in completing their contracts. This company adopted a more cautious attitude, and, though our share of the trade has been negligible, I think we have avoided losses which otherwise would have been almost certain.

A NEW INTEREST

Just about a year ago we took over the business of a small concern in Mincing Lane which dealt in mild coffees and from our experience of that new connection during the past year we believe we have found a small but quite useful ancillary to our main business.

The report and accounts were unanimously adopted; the retiring directors were re-elected; the auditors were reappointed, and the proceedings terminated with a hearty vote of thanks to the chairman, directors, and staff at home and abroad.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

REVIEW OF TEA AND RUBBER

INCREASE OF CAPITAL APPROVED

The twenty-fifth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 19th instant, in the Council Room of the Rubber Growers' Association (Inc.), 19 Fenchurch Street, London, Col. Sir Robert Williams, Bt. (chairman of the company), presiding.

The Chairman, in the course of his speech, said:—The profit of the local Java Company amounted to F. 1,659,157, which, at the average rate of exchange for the year—namely, F. 7.44½ to the pound—is equivalent to £222,855. From this amount the directors decided to deduct for depreciations and writings-off £77,396, leaving £145,459 to be taken over to the London balance sheet. To this has to be added the interest received from the local company in respect of debenture redemption account, totalling £16,755, and after adding receipts in London and deducting London expenditure and the interest on the Plantation Company's debenture stock, the year shows a profit of £105,420. The directors declared an interim dividend of 2 per cent. in February last, and they now recommend a final dividend of 2 per cent., leaving £91,459 to be carried forward, subject to staff bonuses in the East.

INCREASE OF CAPITAL PROPOSED

Later in the meeting we shall submit a resolution to increase the capital of the company by £500,000. At the present time the average cost per acre of the company's estates, after allowing for cash in hand, represents £23 ordinary capital and between £10 and £11 debenture capital, a total of less than £34 per acre. This is a very low figure, especially in view of the fact that it includes heavy initial expenditure in connection with Blocks 26 and 28, which at present scarcely figure in the planted acreage, the cost of the rice mills, and also seeing that no valuation has been placed on the reserve land, although the greater part of this is freehold.

By the operation of the debenture sinking fund, this already low capitalisation is being annually decreased, and in the course of just over ten years' time, on the present system, the average cost of the properties would be approximately £25 per acre, notwithstanding the improvements which should result from ten years' capital expenditure.

This is the result of the conservative attitude adopted by the board in the past, and they feel that the provision now suggested should be made for increasing the authorised share capital, without which, and assuming no large increase in prices for the company's commodities, a cash position might arise when it would be difficult to do justice to the ordinary shareholder with regard to dividend. It is not proposed to pursue any new development policy.

TEA

The present area under tea is 26,667 acres, of which all are in bearing with the exception of some 198 acres; of these latter 154 acres were opened up and planted during the year on our Waspada estate by permission of the local Regulation Committee. Our tea stands in the books at a net capital cost of £31 1s. per acre. The condition of the tea is almost everywhere satisfactory.

For the regulation year 1934-35, which covers three-quarters of our year now under review, our standard production of estate leaf was fixed at slightly over 17,500,000 lbs., with bought leaf included 18,000,000. Our estimated standard for the current year 1935-36 is 18,500,000 lbs., and it is anticipated that the local restriction percentage will be slightly over 41 per cent. The production for both estate and bought leaf for 1934 was 12,250,119 lbs., the yield per acre of estate leaf being 441 lbs. over the whole of our mature tea. The effect of restriction is, therefore, very obvious when it is remembered that in the year 1932, the last year of full production, our yield reached a figure of 656 lbs. per acre.

In view of the heavy decrease in crop, and also the adverse exchange, the cost price, excluding depreciation, of 7.54d. per pound cannot be regarded as unsatisfactory, but with selling prices at their present level it is essential to bring down costs to the lowest figure possible.

The gross profit received from tea amounted to F. 543,017.

Last year was undoubtedly a disappointing one for the tea-growing industry. The year started on high hopes which unfortunately failed to materialise, and the market was a sagging one throughout most of the period. This year let us hope that the

position may be reversed. It certainly is not beyond reasonable hope and expectation that when stocks begin to show definite improvement compared with last year the improvement will be reflected in tea prices.

RUBBER

Our rubber area consists of 35,806 acres, of which 29,886 are in bearing, and the net capital cost stands in the company's books at the very satisfactory figure of £21 9s. 10d. per acre. At the beginning of 1934 an area of 2,905 acres was planted up with material from our selected seed gardens at Wangoenredja, bringing the total area planted with up-to-date, high-yielding material to 7,600 acres.

For the year 1934 our standard production was fixed at 15,500,000 lbs., and for the seven months during which control was in force the production quota in the Dutch East Indies was 46.47 per cent. of standard. During the current year our standard has been raised to 15,750,000 lbs., which we hope, with various claims we have put forward, will be increased to over 16,000,000 lbs. As far as we know at present, the restriction for 1935 will be 41 per cent.

SATISFACTORY YIELD

Our total crop last year amounted to 15,028,793 lbs.—a yield of 503 lbs. per producing acre—which is a satisfactory figure in view of the fact that restriction was already in force for seven months of the period. The cost price, exclusive of depreciation, was 2.72d. per pound, a slight advance of cost compared with the previous year, which is entirely accounted for by the further fall in the value of sterling. On the other hand, the selling price showed a strong recovery compared with the last few years, the figure at 5.74d. per pound being the highest since 1929. This recovery in price enabled us to show a gross profit from rubber of F. 1,380,297.

With regard to the future of rubber it is most difficult to be prophetic. The price will naturally be governed by the size of stocks, which in turn depends on the degree of restriction, but here the attitude of the representatives of the different Governments on the Restriction Committee must necessarily be the deciding factor. Owing to the large amount of native rubber, the regulation of rubber, unlike tea, is to a much greater extent a political question, especially in the Dutch East Indies, where the native output looms largely when a decision has to be taken with regard to the restriction percentage. Perhaps one can only say that by introducing a tax on the export of rubber on a graduated upward scale there arises a definite inducement to the Netherlands Indies Government to welcome a higher price, though further than this I do not feel justified in going in making any forecast of the future.

THE OUTLOOK

As to the prospects for the current year, I have already endeavoured to show you that in almost all of our various interests the production side is in first-rate condition. Unfortunately in tea, rubber, and quinine our productivity is not given full play, as in all three cases schemes for controlling exports are in operation. It is no good pretending that anyone likes such schemes, but unfortunately there seems no other alternative between them and chaos. On the other hand, if the control is worked firmly and intelligently a better position must arise. Tea is now in its third year of control, and I consider that an improving tendency has improved, although not to the extent that most of us wish to see, and I hope and believe that within the next twelve months a further improvement here will also be evident. Kina has always paid us fairly well, and I do not see that this is likely to show much alteration in the near future. Sisal, after an extremely lean period, is at the moment giving distinct signs of an early set in some months ago, still maintained, there are hopes that Soekamandi results will at last take a turn for the better.

With regard to the increase in capital which we are asking you to authorise, we are not contemplating any immediate issue. When we decided to bring the issued capital up to the present authorised capital, the board considered that it was not feasible to offer those shares *pro rata* to existing shareholders owing to the small number, but, if and when any further issue is made, the board hopes to issue them as rights to shareholders.

The report and accounts were unanimously adopted, and resolutions were passed increasing the capital to £3,000,000 and converting the shares into stock.

The proceedings concluded with a vote of thanks to the staff in the East.

PROVINCIAL BANK OF IRELAND, LIMITED

SOUND POSITION MAINTAINED

The half-yearly general meeting of the Provincial Bank of Ireland was held, on the 24th instant, at the chief Irish office of the bank, College Green, Dublin.

Mr Richard Trotter (the chairman) presided, and, in the course of his speech, said that the figures in the report and statement of accounts did not appreciably differ from those of recent periods, and it was satisfactory that despite continued difficulties the bank had been able to maintain its sound position.

The Banking Commission were continuing their inquiries into the whole position of banking and currency, and their findings would be awaited with much interest.

"In regard to the balance sheet," he said, "we are able to deal with the sum of £68,697, which includes £33,224 brought forward from last account. Out of this, the usual dividend at the rate of 12½ per cent. will be paid to you on the 1st proximo. We have added £5,000 to reserve fund, bringing this up to £495,000, as against our paid-up capital of £540,000. We place £4,000 to bank premises account, and carry forward the slightly increased amount of £33,541.

"As against the position at December last, notes in circulation at £942,000 show an increase of £26,000. The total deposits placed with the bank stand at £15,100,000 as compared with £15,070,000 six months ago. On the other side of the sheet, you will see that the total of our cash, money at call, and investments is £10,150,000 as compared with £9,691,000 at December, 1934, and is equal to 63 per cent. of the bank's liability to the public.

"The value of the investments, as shown in the balance sheet, is considerably under market prices. Our advances to customers and bills discounted at £6,782,000 show a decrease on previous figures, due mainly to repayment of a large special and temporary advance. We believe that full provision has been made for all bad and doubtful debts, and subject to this, we consider our advances are in a sound position.

"In regard particularly to those depending on land, we are of opinion that, despite the depreciation in value which has been an unfortunate feature of recent years, and in respect of which the bank must and does exercise every forbearance and allowance, the board has no reason to doubt the ultimate safety of them, and meanwhile, we have ample resources available to meet the legitimate requirements of our customers.

"In regard to our premises, now standing at £207,800, we consider that at this figure they are very much under value. We have, however, some outlay in view during this half-year to a moderate extent, but I may say that your board does not enter on such outlay until they are satisfied that this is necessary for the convenience of customers and the profitable expansion of the bank's business.

"Last year I referred to the difficulty experienced in obtaining a satisfactory return on the loose funds of the bank, due to the low rates ruling in the money market, where banks must of necessity place them. This position continues and so far there is really no definite indication of any upward tendency in these rates, or when the cheap money period is to end.

"Turning to affairs in the Free State, the flotation of industrial enterprises is still proceeding, and these should benefit trade generally and ease the unemployment position. In regard to the harvest prospects, despite adverse conditions in the early spring, these are regarded by the Department of Agriculture as very promising. It is hoped that such may prove to be the case, and that in due time satisfactory prices will be forthcoming.

"The Government must be gratified by the success which had attended the expansion, fostered by them, of the sugar production, while the increase seen in the export of live stock is also to be noted with interest.

"I am glad to report that the linen trade in Northern Ireland has experienced a fair measure of good trade, the spinning and weaving sections having been well occupied with work for the greater part of the period under review.

"Flax has maintained its higher level of price, and it is generally thought that it may continue around this level during the coming season.

"The past half-year has been marked by much activity in the shipbuilding industry in Belfast, and no less than five high-class motor vessels of the cargo-carrying type have been completed and delivered during the period, as well as a fine twin-screw cross-Channel steamer for the L.M. and S. Railway Company."

The report and accounts were adopted.

STANDARD BANK OF SOUTH AFRICA, LIMITED

PROSPERITY IN THE UNION

The one hundred and twenty-second ordinary meeting of the Standard Bank of South Africa, Limited, was held, on the 24th instant, at Southern House, E.C.

Mr Stanley Christopherson presided.

The Chairman, in the course of his speech, said: In recent years my predecessors in this chair had occasion to refer to rapidly increasing resources and to the difficulties experienced in finding employment for these funds in the ordinary channels of commerce. I have the happier task of recording a more satisfactory state of affairs as reflected in the figures before you. Deposits, current and other accounts show a slight increase of £300,000, while customers' bills for collection show an advance of over £1,000,000, an indication of improved trading conditions. Cash in hand and at call and short notice reflects a reduction of £5,755,000, accounted for to the extent of £3,000,000 by an increase in investments, which now stand at £12,726,000, while the balance has been absorbed in bills discounted and advances to customers and bills of exchange, which in the aggregate show an increase of approximately £3,000,000.

The welcome improvement in our profit-earning capacity is reflected in the profit and loss account. After making an appropriation to contingencies account we have a balance of profit of £502,590, as against £433,179 last year, and the directors recommend the addition of £125,000 to the officers' pension fund and the payment of a final dividend of 5s. per share, together with a bonus of 2s. per share, making a total distribution of 12½ per cent. for the year, carrying forward £165,169.

The year 1934 was marked by great progress in various trades and industries within the Union, and the forward movement in general business which set in during the previous year was well maintained. Due almost entirely to the high currency value of gold and the consequent activity in mining, I think we can say that South Africa is, relatively speaking, to-day both commercially and industrially one of the most prosperous countries in the world.

IMPORTANCE OF GOLD MINING

It is difficult to envisage what would have been the economic position of the Union were it not for the support of its gold-mining industry and the great stimulus it has given to industrial expansion during the past two years. The remarkable recovery achieved by the Union from the stagnation of 1932 is mainly attributable to the increased revenue from the Transvaal gold output.

We have already seen the marked effect that the industry has on the prosperity of the Union and therefore on the prosperity of this bank. All of you have read of the taxation which, anyhow for the present, the Government have felt compelled to place on the gold mines. One has read at times rather severe comments on the methods adopted by which the individual mines are taxed to a varying degree, and one is forced to the conclusion that, speaking generally, the public both here and in the Union have not quite appreciated the extremely difficult and complicated technicalities involved in any scheme of taxation of profits, due largely to the different conditions in individual mines.

This is not the time nor place to enumerate those intricacies of taxation, but it has been a difficult proposition for the Government and their advisers. As one closely connected with that industry and also with banking in the Union, I feel strongly that there are certain factors in connection with taxation of the mines which should be borne in mind, namely, the vast capital expenditure involved before any return can be possible, the supreme importance of prolonging the life of this wonderful goldfield to its full extent, and the necessity of attracting many millions of new capital.

Under existing world conditions, the welfare of the Union depends very largely upon the value of its gold output, and it is gratifying to know that whereas formerly official estimates had foreshadowed the end of payable production within comparatively few years, the outlook has now been completely transformed and the potential life of the industry greatly extended. Its future is regarded with increasing confidence.

I must not omit to mention one important decision by the Union Government—the policy of maintaining a close association of Union currency with British sterling, which policy has recently been reaffirmed. This stability of exchange rates with South Africa's most important customer gives us good grounds for confidence for the continuance of the general improvement of trade between the two countries.

The report was unanimously adopted.

UNITED DOMINIONS TRUST, LIMITED

RECORD FIGURES

The thirteenth annual general meeting of the United Dominions Trust, Limited, was held, on the 22nd instant, at Regis House, London.

Mr J. Gibson Jarvie (chairman and managing director), in the course of his speech, said that the figures for the year under review were again a record. The profits were substantially higher than in any previous year, and in recommending, in spite of the increased profits, that dividends should be paid at the same rate as last year the directors believed they were acting in the best interests of the shareholders. Trading losses were still a mere fraction of 1 per cent., proving that, while turnover continued to grow, proper care was exercised in the conduct of the business and the efficiency of the organisation was being maintained. Referring to Credit for Industry, Limited, the Chairman said that company was formed last year in response to the public demand for the establishment of a financial organisation which would minister to the needs of the smaller industrial and trading concerns. Since the company was started they had received some thousands of applications for loans, but in only a relatively small number of cases could the application be regarded as legitimate or justifiable. On the applications received the acceptable cases in which they had agreed to grant loans amounted in the aggregate to £622,521. In addition, they had approved in principle further loans to an aggregate value of £649,900, making a grand total of £1,272,421. Of that amount they had paid out £228,349, of which £17,826 had been repaid during the year. Cases involving a further £142,996 were awaiting settlement at the end of the financial year.

A NEW FINANCIAL SERVICE

The whole of the capital in credit for Industry, Limited, amounting to £250,000, belonged to the United Dominions Trust. It was their money, and it was lent out on long-term loans and much of it to small or relatively small deserving concerns which were unable to procure money elsewhere. It was a new financial service which had been rendered by their subsidiary. That their reward could only be described as trifling was shown by the balance sheet, where it would be seen that for their investment of £250,000 and for all the mass of work which had been done the profit for a period of some fifteen months was only £2,607, a fraction over 1 per cent. of the capital. Even the most vindictive critic of our banking system could hardly describe that return as excessive. It would have to be conceded that the company had rendered a specific service to industry in the establishment of that subsidiary, a service on which they had made no profit and a service which apparently they alone were prepared to offer. They intended to continue that service, and they set no limit to the amount of money which they were prepared to find. They only asked that the prospective borrowers should be able to show that a loan was justified.

AN ENVIABLE POSITION

Referring to the capital reorganisation recently sanctioned, the Chairman said that under the new arrangement the capital structure of the company would be very strong. In preference shares there would be £500,000, in ordinary shares £425,000, in general reserve £400,000, in premium reserve £612,500, which, with the previous profit and loss account balances, would bring the total up to £1,979,543, not including the insurance fund and other reserve accounts, amounting to £224,578. That was an enviable position, and, with so much money at a fixed rate and so much free money, they could pursue their considered policy of offering financial facilities to British trade and industry at the lowest possible rates. In that connection he desired to make it clear beyond any question that through all the history of the company it had never at any time been their policy to lend at long date and to borrow at call or short date. They had always matched their outgoings with their incomings with such a substantial margin of safety that in no possible set of circumstances could the company ever be caught short. Their borrowed money and the money they received from depositors was practically all at fixed maturity dates definitely related to the money which they had lent to their clients. They had no intention of departing from that policy, which made it impossible for any call to be made to which the company was not in a position immediately to respond.

The report and accounts were unanimously adopted.

DUFF DEVELOPMENT COMPANY, LIMITED

A YEAR OF MARKED PROGRESS

The fourth ordinary general meeting of Duff Development Company, Limited, was held, on the 25th instant, at Winchester House, London.

Mr R. W. Duff (chairman and managing director) said that the crop harvested in the year ended March 31st was 1,457,772 lbs. and realised £33,407, equivalent to an average price, landed London, of 6½d. per lb. These figures showed a substantial improvement over those of the previous year. Reduced to costs per lb., the working expenses were 3.32d. compared with 2.63d. in the previous year.

Out of the credit balance available the directors had decided to recommend the payment of a dividend of 5 per cent., which, after deduction of tax at 4s. 6d., would absorb £7,045, leaving a balance to be carried forward of £3,664. He did not want shareholders to think that this comparatively small dividend represented the measure of the company's success during the year. It had throughout been a year of marked progress. Not till June were they allowed to take the initial steps to recruit additional labour, since when the manager had been so successful in augmenting their depleted labour force that in the last six months of the financial year they were turning out nearly 40 per cent. more rubber than at the beginning of the year.

The whole of the area which had been resting had again been brought under the knife, with very good results, while a little more than 200 acres of young rubber had been opened for the first time, also with satisfactory results. At the close of the year 3,950 acres were being tapped, as against 2,620 at the beginning. The crop assessment for the current calendar year had been raised from 1,985,873 lbs. to 2,297,888 lbs., and they might expect some addition to this when the assessment for 1936 was made. In short, they had now reached the point when they were beginning to reap the advantages for which they had been waiting so long, and which were to be got from their large proportion of young rubber. They had 4,350 acres budded. They could anticipate eventually annual crops in the neighbourhood of 5,000,000 lbs.

The report and accounts were adopted.

TANGANYIKA CONCESSIONS, LIMITED
IMPROVING COPPER OUTLOOK

Sir Robert Williams, Bart. (the managing director), speaking at the annual meeting of the Tanganyika Concessions, Limited, held on the 25th instant, in London, at which General Sir F. Reginald Wingate, Bart., G.C.B. (the chairman), presided, said that the profit for the year amounted to £100,616. In spite of a decline in the average price of copper, the results of improvement, brought about by a substantial reduction in imposts. The gross working profits for the year amounted to over 76 million francs, as against 36 million francs for the previous year, showing a net profit of 49 million francs. The conservative policy which they had adopted would greatly facilitate the resumption of dividend payments.

For 1934 the Benguela Railway Company had earned a small profit before charging depreciation. With regard to the Kentan Gold Areas, the most interesting developments had been those in Tanganyika territory. The staff had been increased considerably so as to obtain more rapid development, and the work, although not yet completed, had yielded excellent results.

Referring to his tour in Africa last year, Sir Robert said that his reception was really a recognition of the work accomplished by themselves throughout Africa. It had been the privilege of at their last gasp. Recent developments all showed that there never was a time when the necessity to complete Rhodes's far-seeing scheme of the Cape to Cairo Railway was so apparent as the present. Their great gold, diamond and copper industries could not have been developed without the 2,600 miles of railway already built, and it would be the same story further north until it joined the Sudan system. These developments had not only enriched every Colony they had been connected with by discoveries of great wealth and by the millions spent on railways, but they had benefited their company and British workshops and those of other countries to the extent of many millions sterling, and in the developments they were now carrying out in Kenya, Uganda and Tanganyika territory he believed the same story would be repeated.

The report was adopted.

GRIFFITHS HUGHES PROPRIETARIES, LIMITED
(KRUSCHEN)

INCREASED PROFITS

The first ordinary general meeting of Griffiths Hughes Proprietaries, Limited, was held, on the 23rd instant, at the registered office, Peru Street, Salford, Manchester.

Sir Bertram Hyde Jones, K.B.E. (the chairman), in the course of his speech, said:—At this, our first general meeting, I am sure that you will be as gratified as are your directors that the results of the first year's trading since the incorporation of the company show an increase in profits not only over the average for the last five years, as shown in the prospectus, but also over those for the year previous to the formation of the company.

The operating company's profit is £462,143, which compares with an average for the five preceding years, as given in the prospectus, of £382,460, and with profits of the preceding year of £451,370. This result has been achieved in the face of world conditions certainly not favourable to trade, and, I am sure you will agree, reflects great credit on the management. Of this sum interim and final dividends to the amount of £253,354 have been paid to the proprietary company, £90,000 allocated to general reserve, £102,597 to provision for income tax, and the balance of £16,192 carried forward.

With reference to future prospects, I may say that during the last three months our business has shown a satisfactory increase over that for the corresponding period of last year. I wish to take this opportunity of acknowledging the loyal and efficient services rendered by the whole of the employees of the operating company.

The accounts and the directors' report were adopted unanimously, and the payment of the final dividend of 10 per cent. and 2½ per cent. bonus, both less tax, was approved.

The retiring directors, Sir Bertram Hyde Jones, K.B.E., and Mr Harry Marland, J.P., were re-elected; and Messrs. Deloitte, Plender, Griffiths and Company, and Messrs. J. B. Boyd Wrigley and Company, were reappointed auditors.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 20, 1935, amounted to £13,982,000, against ordinary expenditure of £10,122,500. After allowing for a decrease in Exchequer Balances of £32,119, the operations for the week, as shown below, decreased the gross National Debt by £3,892,000 to approximately £8,111 million.*

(a) Two years to end of 1928.

BRITISH CELANESE.—The directors have decided to pay on July 31st to holders registered at the close of business on July 16, 1935, a half-year's dividend on the 7 per cent. first cumulative preference shares. The first preference dividend is paid to October 31, 1932, one year's payment on account of arrears having been made on April 30th.

IMPERIAL BANK OF INDIA.—Net profits for the half-year ended June 30, 1935, Rs. 43,76,700; brought forward from previous half-year, Rs. 30,85,200. Dividend 12 per cent. per annum, free of income tax, amounts to Rs. 5,25,204. Dividend fund, Rs. 7,50,000; transferred to pension fund, Rs. 89,300; carried forward, Rs. 32,27,800.

MANCHESTER SHIP CANAL COMPANY.—The traffic receipts for the month of June, 1935, amounted to £101,865, against £108,808 in June last year, a decrease of £6,943. The traffic receipts for the half-year ended June 30, 1935, amounted to £614,444, as compared with £602,925 for the corresponding period of last year, an increase of £11,519. The net revenue of the whole undertaking for the half-year (after providing for interest and other charges) was £11,334 less than the corresponding half-year in 1934.

RUSTON & PROSEY, LTD.—Balance on trading account for year ended March 31, 1935, after making provision for losses on exchange, and other contingencies, was £88,278; dividend (less tax) from associated company (Ruston-Bucyrus, Ltd.), £16,000. Deduct: Directors' fees for year to date, £1,561; interest on debentures and debenture

stocks for year to date, £25,050; leaving credit balance £80,265. The stocks of materials and finished stock of machinery have been taken at cost price or under. Buildings, plant and machinery have been maintained out of revenue, and ample provision has been made for doubtful debts. The trading balance, £38,276, is after charging depreciation, and compared with £53,224 for the previous year before charging depreciation. The directors recommend payment of uncancelled balance of arrears of preference dividends on 5 per cent. preference stock for one year to June 30, 1935, on 6 per cent. "B" preference stock for six months to June 30, 1935. Dividend to be paid on September 30th (less tax) to stockholders on the register on September 14, 1935. This will absorb £20,500. Balance of £59,765 to carry forward.

PLATT BROTHERS (HOLDINGS).—This company proposes to pay arrears of dividend on the 4½ per cent. preference in respect of the six months to September 30, 1933. Payment is on July 31st.

COMPANIA SANEINEMA S.A. (CARNES Y DERIVADOS).—A dividend for 1934 will be paid on ordinary shares of 1934 issue of \$4 Argentine gold per share less 5 per cent. deduction for Argentine income tax, payable in sterling at the free rate of exchange ruling on August 1, 1935, at the offices of the company, 17/20 West Smithfield, E.C.1, on and after August 2, 1935, on presentation of share warrants for endorsement of

the dividend. Messrs Glyn, Mills and Company will remit dividend as usual to all shareholders on their register.

GILLETTE SAFETY RAZOR COMPANY.—Net profit prior to charges for interest on debentures, depreciation, and income and U.S.A. capital stock taxes for half year ended June

REPORTS AND NOTICES

The directors of Seager, Evans and Company, Ltd., have pleasure in announcing that Major Gerald Lauderdale Thompson, late of John Haig and Company, Ltd., has joined their board.

Mr R. Wilson Bartlett, a director of Newport (Mon.) Gas Co., has joined the board of Severn Valley Gas Corporation, Ltd.

Lt.-Col. the Hon. G. K. M. Mason has been elected a director of the Midland Bank Limited.

GOVERNMENT, &c.

CITY OF ROSARIO 4 PER CENT. STERLING CONVERSION LOAN, 1908.—The Municipality of Rosario as borrowers and the Province of Santa Fe as guarantors have given notice that owing to the continued decrease in their revenues they have been obliged to default in the payment of interest and sinking fund in respect of the above loan since November 1, 1932, and will be unable to resume payment unless the terms and provisions of the bonds are modified. Proposals which have been agreed between the Government of the Province of Santa Fe, the Municipality of Rosario, and Hambros Bank, Ltd., are now submitted to the bondholders. These proposals, which will become effective for all bondholders who assent thereto and deposit their bonds as provided, are as follows:—(1) That sinking fund be suspended until November 1, 1939, from which date it should recommence with first repayment on May 1, 1940. (2) That a sum equal to 1 per cent. be paid to the bondholders who assent in part payment of the coupon due on November 1, 1934. (3) That the payment of the balance of arrears of interest and sinking fund accrued due on and from November 1, 1932, to November 1, 1934, inclusive be waived. (4) That in lieu of the arrears of interest amounting to 9 per cent. the interest payments from November 1, 1944, to May 1, 1962, inclusive, be increased from 4 per cent. to 4½ per cent. (5) That the Government of the Province of Santa Fe continue its guarantee of the payment of the capital and interest of the bonds as varied by the agreement. (6) Holders of the bonds accepting the proposals contained in the agreement should deliver their bonds, with coupons Nos. 50 to 60 inclusive attached, to Hambros Bank, Ltd., 41 Bishopsgate, in the City of London, for endorsement.

RAILWAYS

THE OTTOMAN RAILWAY FROM SMYRNA TO AIDIN.—The scheme of arrangement has been approved by shareholders and stockholders and sanctioned by the court, but will not become operative until the £1,825,840 7½ per cent. Turkish Debt Bonds, 1935, forming the consideration for the sale are deposited with the Ottoman Bank in London. The date fixed by the sale agreement for such deposit is September 30, 1935. The company will give notice to its stockholders and shareholders regarding the surrender of their certificates against payment and delivery to them of the cash, securities and shares which under the scheme they are to receive in full satisfaction of the principal of their holdings, and in the case of the stockholders, of all interest accrued thereon subsequent to December 31, 1934. Interest on the Turkish Bonds and the new Income Debenture Stock will accrue as from June 1, 1935.

MISCELLANEOUS

WINNIPEG ELECTRIC COMPANY.—A plan recommended by the Toronto Committee, the London Committee and The British Empire Trust Company, Ltd., provides for the consolidation of the Winnipeg Electric Company and its subsidiaries. The holder of each £100 of Winnipeg Electric 5 per cent. debenture stock will receive:—(a) \$486, general mortgage debenture stock, series A, maturing on January 2, 1965, carrying interest at 4 per cent. for the first seven years and 5 per cent. thereafter; (b) \$34.07, contingent certificates; (c) 3,407 common shares, Class A, represented by

certificates of interest evidencing the holder's interest: (d) £1 7s. 11d. cash (gross) representing fractions and interest. A meeting will be held in Toronto, August 22nd, and holders of the debenture stock in this country are asked to send in their proxies to The British Empire Trust Company, Ltd., Stafford House, 14-20 King William Street, London, E.C.4, as soon as possible.

S.T.D. MOTORS LIMITED.—The result of the poll taken to remove the present directors, Mr H. K. Newcombe, Lord Brecknock and Mr Alfred Hacking from office was as follows:—Against the Resolution, 647,992 votes; for the Resolution, 517,561 votes; majority against the Resolution, 130,431 votes. The second resolution for appointing other directors in place of the present directors was rejected by the same majority.

CRITTALL MANUFACTURING COMPANY.—Holders of 6 per cent. registered notes are to consider a resolution at a meeting on July 31st authorising the extension of date for repayment from August 31, 1935, to not later than August 31, 1936. A scheme of reorganisation will be submitted as soon as possible after August 31, 1935. It is anticipated that the scheme will be submitted in the autumn, and will, *inter alia*, provide for the conversion of the notes or for their redemption in cash at the option of the noteholder.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY.—The directors announce that, pending the outcome of negotiations for a new drainage rent, they have received a payment by the Brazilian Government in Rio de Janeiro of the half-yearly revenue to June 30, 1935, on the basis of 218 milreis per house per annum, which is equivalent at the present free rate of exchange to £2 8s. 3d. per annum.

CABLE AND WIRELESS, LTD.—(Index Numbers).—Working-day average of comparable receipts. Basis 1929=100. Month of June, 1935, 70.2, compared with 72.5 for May, 1935, and 70.1 for June, 1934. Highest index number 96.0 for January, 1930. Lowest, 61.8 for August, 1931.

FIXED TRUSTS.—A new fixed trust under Northern auspices will appear shortly. An unusual feature is that provision will be made by a single premium sinking fund policy to provide a capital bonus at the expiration of the trust period of 20 years. The trust will probably be restricted to 500 units, divided into sub-units, which will be offered at about 19s. 6d., to yield approximately 4½ per cent. Mr A. E. Kavanagh, F.C.A., of Messrs Ashworth, Mosley and Company, chartered accountants, of Manchester, is the prime mover in the formation of this trust, the headquarters of which will be in Manchester, with offices in London, Liverpool, Edinburgh and Glasgow.

HARRODS, LTD.—The directors of Harrods, Ltd., have agreed to sell the eastern block of D. H. Evans and Company to John Lewis Properties, Ltd., for £848,500. It is anticipated that the eastern block will then be completed by March, 1937; Properties, Ltd., but up to that time D. H. Evans and Company will continue to trade in both buildings.

WORKING PROFIT, TRANSVAAL.—Total estimated working profit of the gold mines of the Transvaal for June, 1935, amounted to: Witwatersrand, £2,676,832; outside districts, £10,732; total, £2,687,564. The estimated working profit in May, 1935, was: Witwatersrand, £2,762,951; outside districts, £12,017; total, £2,774,968.

PENRIKYBER NAVIGATION COLLIERY (OFFER TO PURCHASE, SHARE CAPITAL).—The Penrikyber Navigation Colliery Company has received an offer from Sir Clifford J. Cory, one of the directors to purchase the whole of the shares of the company. The price offered is £5 10s. for each £10 preference share and £2 19s. 4d. for each 6 per cent. cumulative £10 ordinary share. In addition, the purchaser will pay the company's solicitors' cost of the transaction. The other directors are stated to recommend acceptance of the offer.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE trend of commodity prices during the week ended last Wednesday was upwards. There has so far been little evidence of the usual seasonal decline in the volume of transactions in iron and steel. Business in the iron and steel markets is considerably larger than usual at this time of the year. Moreover, the official report of the London Iron and Steel Exchange suggests that consumers are showing greater disposition to buy ahead in view of reports of impending advances in quotations. As our correspondents point out, prices for certain materials have already been advanced. The majority of non-ferrous metals rose in price. The wide fluctuations in the prices are discussed in a Note of the Week. Lead rose sharply on the news of the conclusion of an international agreement on production policy. The quotation for spelter was marked up in view of attempts to reconstitute an international zinc cartel. Copper was also slightly dearer than a week ago. Linseed and linseed oil were marked up because of persistent drought in Argentina.

With the exception of a rise in hemp prices, textile raw materials are scarcely changed in price on the week. The market in rubber was dull and quotations tended to sag because of fears of currency devaluation in Holland. The probable effect of the devaluation of the guilder on the prices of rubber, tea and tin has exercised the minds of the dealers during the past few days. In the absence of restriction schemes, devaluation would bring about an increase in output. But as exports of all three commodities are strictly controlled by international restriction schemes, it cannot be assumed that devaluation would be followed by a fall in sterling prices. On the other hand, it might well be that the Dutch members of the tin restriction scheme would be more amenable to an increase in production quotas, which, unless accompanied by a corresponding increase in demand, might lead to a reduction in the price of tin. The market in foodstuffs was uneventful. There was a slight improvement in wheat prices, but quotations for raw sugar were marked down a little. Beef, butter and eggs were all dearer, but prices of new crop potatoes continued

to decline as a result of an increase in supplies of English varieties.

In the United States prices were slightly firmer than a week ago. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 160.6 on Wednesday, compared with 159.4 a week earlier, 156.5 a month earlier and 141.8 on the corresponding day last year.

COAL

SHEFFIELD.—Best large steam coals continue in short supply and are firm at 17s. to 18s. f.o.b. Singles and trebles, on the contrary, are plentiful. Very little export business is passing, either on prompt or forward account. The progress of the holiday season is responsible for some reduction of inland specifications for industrial fuels. Coke continues in abundant supply, with prices less weak than of late. This is the dead season for house coal.

WORKINGTON.—Free State demand that was lacking this time last year is helping the coal trade, and there are collieries still raising and selling a production which is at winter level. The Ulster trade is steady, though it is concerned more with steam than with house coal. Cross-Channel shipments last week from the West Cumberland ports totalled over 8,000 tons. Landsale is dull, but industrial fuel is in lively request, all the supplies of smalls being reserved for the coking plants, which are sending their entire make to the furnaces on hematite pig iron in Cumberland and North Lancashire. Prices are lower. Nominally, best round is 20s. 6d.; washed doubles, 19s.; washed singles, 17s.; all f.o.b. Small, 14s. 6d. per ton. Best house coal, 30s. 8d.; and house nuts, 29s. at station. Gas coal, 27s. per ton. Local coke, 15s. 6d. to 16s. 6d. per ton.

GLASGOW.—With holidays still in progress business remains quiet, but the reduced production is readily taken up. Home industrial consumption is expanding again, and preparations for the holidays in the south have meant a speeding-up of shipments, while Finland and Denmark are improving export markets. Tenders, have been submitted for the supply of 57,450 tons of large coal and washed nuts to Riga City Council, delivery to be September to January.

Shipment prices f.o.b. district ports: LANARKSHIRE—Ell best, 14s. 6d.—15s.; splint best, 17s.; splint second, 14s. 14s. 6d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.—13s. 9d. Hartley, 16s.; steam, screened, 13s.—13s. 6d.; trebles, 13s.; doubles, 12s. 6d.—12s. 9d.; singles, 12s. 6d.—12s. 9d.; pearls, 10s. 6d.—10s. 9d.; dross, 10s. FIFE—Best unscreened navigation, 13s. 3d.—13s. 6d.; unscreened navigation, 12s. 9d.—13s.; first-class steam, 13s. 6d.—14s.; third-class steam, 12s.—13s.; trebles 13s. 6d.—16s. 6d.; doubles, 13s.—14s. 6d.; singles, 12s. 9d.—13s.; pearls, 10s. 3d.—10s. 6d. LOTHIAN—Prime steam, 12s. 6d.—13s. 6d.; secondary steam, 12s.; unscreened navigation, 12s. 6d.—12s. 9d.; trebles, 13s. 6d.—14s.; doubles, 12s. 9d.—13s.; singles, 12s. 6d.; pearls, 10s. 3d. Ayrshire—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 11s. 6d.

CARDIFF.—The volume of coal exports at the South Wales ports is still being fairly well maintained. According to the returns of the Great Western Railway Company, shipments in the foreign and coastwise trades totalled 406,900 tons compared with 426,300 tons in the previous week, and 329,009 tons in the corresponding week last year; while for the current year to date exports amounted to 10,853,200 tons compared with 10,939,679 tons in the same period last year. On the Cardiff coal market this week business has been practically featureless. Current inquiries are very scarce and in the case of Italy, shippers are more reluctant than ever to do business except for cash against documents. Quotations for sized coals are ruling from 2s. to 2s. 6d. per ton above the minimum prices, but all other classes are in abundant supply at minimum figures. Colliery companies are dependent almost entirely on their contract commitments and the Egyptian State Railways have increased their current requirements by 31,500 tons. An order for 45,000 tons has also been placed by the M.Z.A. Railways. Coke and patent fuel prices are unaltered.

Current quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; second steams, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 48s. 6d.; stove nuts, 34s. to 45s.; rubby culm, 11s. to 11s. 6d.; special foundry coke, 35s. to 37s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 6d.; Portuguese, 19s. 6d.

IRON AND STEEL

MIDDLESBROUGH.—The pig-iron market is much more active than is usual at this season. Users of Cleveland foundry pig iron have been covering their requirements to the end of the year. Whilst there has so far been no increase in price, buyers are covering in view of such a possibility. It appears that one furnace recently producing basic iron has been switched over to the production of foundry pig iron, so that there are now three furnaces producing this grade. The minimum quotation for Cleveland No. 3 foundry iron delivered locally is maintained at 67s. 6d. per ton.

The chief item of interest this week has been a further adjustment of prices in the East Coast hematite iron trade. For No. 1 grade, makers are now quoting 71s. per ton, including delivery in the Middlesbrough area, which means an advance of 2s. per ton, whilst

for delivery in Northumberland and Durham the price is 73s. 6d. per ton. The number of furnaces producing hematite pig iron in the North-East area will be increased from seven to nine at the end of this week. Demand for hematite for home use continues strong, but export business is poor. Shipments of all classes of pig iron from the Tees between July 1st and 23rd amounted to 6,865 tons, against 5,736 tons to June 22nd.

Blast-furnace coke is easily obtainable at 19s. per ton delivered at the works here, but foreign ore for forward delivery is firmer, sellers indicating higher prices for shipment during next year.

Steel makers are busy on the production of semi-finished and finished steel, a fair quantity of the latter being for bridge and constructional purposes. During the past week orders for seven new vessels have been placed with the Furness Shipbuilding Company, Ltd., and it is understood that the plates and sections will all be supplied by local steel manufacturers. The order for three new vessels placed with Sunderland builders, and one vessel with Tyne builders, will have a beneficial effect on the North-East coast area generally. Heavy mild steel scrap is firm at 52s. 6d. per ton delivered works.

SHEFFIELD.—The August holiday is usually the longest of all in the Sheffield industries, but it will be shorter than usual this year owing to the pressure for deliveries on a number of important branches. For this reason a good deal of overtime is being worked. Inland demand for numerous types of steel material still shows an expanding tendency. Ordinary lines are not quite so busy as they have been. Business with Russia is disappointing so far as steel is concerned, but that country is buying large quantities of ferro-alloys for steel making as well as non-ferrous materials. Russia has lately sold several parcels of foundry pig iron in foreign markets, including the United States of America. Large quantities of high-class American engineers' small tools are coming to this country, but demand here is so heavy that the Sheffield makers of such goods find no difficulty in keeping their factories on full time. Inquiries show that there is no competition of Japanese cutlery in the British market. Makers of silver- and electro-plate are experiencing lean times. The interest of the public in such goods has been waning for several years past. The cutlery trade is described as moderately active. The manufacture of engineers' files is being taken up in Poland; the necessary machinery is being obtained from the United Kingdom.

WORKINGTON.—A rise in the price of North-West Coast hematite pig iron by 2s. 6d. per ton betokens the increasing Midland and South Walian demand at a time when the make of the seven furnaces in blast between Workington and Barrow is none too adequate to satisfy needs. The market is strong, and active forward buying has been stimulated by the knowledge of a likelihood of a further increase of prices. Steelmakers' prospects of remaining briskly employed throughout the autumn assure smelters of the local absorption of half of their output. The greater part of the production of a merchant plant and of the spill-over of the furnaces associated with the steelworks here goes to the Midlands and South Wales, the requirements of Scotland and the Continent representing but an inconsiderable tonnage. Prices are firm, with Bessemer fixed numbers now quoted at £3 15s. per ton at Glasgow; £4 1s. at Manchester; £4 6s. at Sheffield; and £4 7s. at Birmingham; and low-phosphorus iron an additional 2s. 6d. to 5s. per ton. Malleable iron is a steady trade at £5 15s. per ton delivered at Birmingham; and ferro-manganese, at from £10 15s. to £11 5s. per ton home, is an increasing trade. The steel trade exhibits a good deal of movement and Workington, on rails, billets, bars and slabs, and Barrow, on rails, hoops and strip-steel, are to roll steadily for months to come. Native ore is chiefly in local request at from 13s. 6d. to 14s. 6d. per ton. Sales to East Coast and Scotland are of only small parcels. Imports of North African and Indian ore at Workington during the month have totalled 23,000 tons.

GLASGOW.—Practically all works in the Clyde area have now resumed operations after the annual holidays and in many branches workers and employers are looking forward to a lengthy spell of steady work. At the steel plants there are large tonnages of unexecuted orders on books covering almost every branch of industry with the exception of shipbuilding material, for which the demand

DER OESTERREICHISCHE VOLKSWIRT

Is the most important and influential economic and financial weekly in

CENTRAL EUROPE

Editor: - Maria L. KLAUSBERGER

VIENNA : IX. PORZELLANGASSE 27

is still poor. The increasing demand for structural material which has been in evidence is well maintained and the tendency is towards even further expansion. Sheet makers have booked large tonnages during the holiday period, largely on home account, but there is also a gratifying increase in the tonnage booked for export. Last week black sheets for home trade were advanced by 10s. per ton, making the basis price £11, but this now includes certain finishing processes which were formerly treated as extras and charged as such. Tube makers have meantime a fair amount of work on hand.

CARDIFF.—The scheme of Richard Thomas and Company for the erection of sheet and tinplate mills at Redbourn continues to absorb attention in South Wales. The Joint Industrial Council in the tinplate trade has appointed a joint committee to investigate the issues raised by the action of the company, and another committee of tinplate manufacturers has been appointed to consider further the question of greater integration. Local public authorities have also intervened and are making representations to the Government. Hopes are entertained that the project may be modified, at any rate in so far as it relates to the manufacture of tinplates, if effective steps are taken to improve the structure of the local industry, and if assurances are obtained from large iron and steel undertakings in England and Scotland not to extend their interests to the manufacture of tinplates.

Trading conditions show no change. Export inquiries have been rather scarce and prices are stationary on the basis of 18s. 2d. per basis box for exported tinplates, steel bars at £5 5s. per ton and galvanised sheets at from £11 5s. to £11 15s. Shipments of tinplates at Swansea last week totalled 31,364 boxes, compared with 109,074 boxes in the previous week and 92,230 boxes in the corresponding week of 1934; while stocks amounted to 99,117, compared with 53,821 and 130,643 boxes respectively.

OTHER METALS

COPPER.—Prices have remained almost unchanged throughout the week. British warehouse stocks have risen by a further 1,461 tons to 83,598 tons. Following the heavy purchases recorded during the first half of this month, consumer demand in the United States has fallen off considerably. In Germany further prohibitions on the use of copper have been imposed, but are of only minor importance. It now seems probable that the copper market will continue rather quiet, and without any wide price fluctuations, until the seasonal increase in demand makes itself felt towards the end of September.

Sales on the London Metal Exchange: 800 tons on Monday, against 3,500 tons last week; 1,250 tons on Tuesday, against 2,050 tons last week; 1,100 tons on Wednesday, against 2,250 tons last week. Domestic spot was quoted at 7-62½ cents per lb. in New York on Wednesday, against 7-62½ cents a week ago and 7-07½ cents a month ago. Wednesday's official closing price for standard cash in London was £31 16s. 3d. to £31 17s. 6d., compared with £31 13s. 9d. to £31 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 72,414 tons, show an increase of 1,486 tons, while stocks of rough copper, at 11,184 tons, show a reduction of 25 tons on the week.

LEAD AND SELLER.—Both markets experienced a steady improvement in price during the period under review, with lead occupying the first position, as is indicated by the relative price movements of the two metals. The reasons for the firmness of lead are discussed below. As regards seller, interest centres on the decision concerning the British import duties, which is expected to be announced before long, and on the endeavours which are being made to renew the Zinc Cartel.

Sales of lead on the London Metal Exchange: 2,100 tons on Monday, against 400 tons last week; 1,150 tons on Tuesday, against 550 tons last week; 900 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 4-15 cents per lb., against 4-15 cents a week ago and 4-00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 6s. 3d. per ton, compared with £14 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 450 tons on Monday, against 250 tons last week; 500 tons on Tuesday, against 175 tons last week; 250 tons on Wednesday, against 350 tons last week. Wednesday's quotation in East St. Louis was 4-35 cents per lb., against 4-30 cents the week before and 4-30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 15s. per ton, against £13 16s. 3d. last week.

CO-OPERATION OF LEAD PRODUCERS.—On Monday night a statement was published in London which pointed out that "as a result of conferences beginning in New York in June and continued in London a close association between producers of lead exporting to the European market has been arranged. An agreement not to increase production without due notice was also reached." Although these arrangements contain many gaps and seem therefore not very effective at the first glimpse, they are of importance for the maintenance of the stability of the lead market. The lead market is one of the few commodity markets which regained their equilibrium of the few commodity markets which regained their equilibrium without the help of any restriction scheme. For three years past lead prices have been very depressed, but since the beginning of this year the market has recovered considerably. At the end of last week the London lead quotation surpassed for the first time the £15 level, thus reaching the highest price since 1932. Since the beginning of this year the price of lead has risen by not much less than 50 per cent. The activity of the building industry, the strong demand of the armament industry (mainly from Germany and Italy), the scarcity of supply and the hopes for an early revision of the harmful British duty on non-Empire lead were the reasons for

this rise. For a time it was thought that the sharp increase in quotations might be followed by an expansion of production. The agreement between the principal lead producers does not render impossible an increase of production, but render it more difficult.

TIN.—This has been the most interesting of the metal markets during the past week for, although prices have changed little on balance, wide fluctuations have been recorded. Monday's events are considered in a Note of the Week. As is usual, the rapid price oscillations of the past few days have given rise to various discussions as to the cause of the movements; two theories have been current. One view is that the cause is to be found in the presence of a heavy speculative demand; the other traces the movement to technical difficulties which caused the buffer pool to hold up supplies and so to cause a sharp rise in price. Colour is lent to the latter theory by the fact that there were actually only two buyers on Monday morning—both of whom demanded quite small quantities of cash metal. Moreover, the sharp fall on Tuesday clearly demonstrates that there cannot be a large speculative account in the market. Little change in market conditions is likely in the near future, but it is to be hoped that production quotas will be increased before the end of the current quarter, especially since the activity of American consuming industries continues on a fairly high level. The output of the American automobile industry is about 25 per cent. in excess of last year's level, while the tinplate mills are now working at around 80 per cent. of capacity.

Sales of tin on the London Metal Exchange: 295 tons on Monday, against 90 tons a week ago; 305 tons on Tuesday, against 250 tons last week; 205 tons on Wednesday, against 175 tons last week. The New York quotation on Wednesday was 52-50 cents per lb., against 52-50 cents a week ago and 51-62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £233 5s. to £233 10s. per ton, compared with £232 15s. to £233 last week. Stocks of tin in London and Liverpool at the end of last week totalled 1,318 tons, a decrease of 399 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was held at £11 12s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, the same as last week. Chinese wolfram for July–August shipment was quoted at 31s. 6d. to 32s. 6d. per unit c.i.f., as against 30s. 6d. to 31s. 6d. per unit c.i.f. last week. Platinum remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester. — Quiet conditions have prevailed in the raw cotton markets. The adverse ruling of the Boston Court of Appeal on the legality of the processing taxes has caused some nervousness. Prices, however, as compared with a week ago show very little change. The present high premium for current month delivery does not encourage merchants to import American cotton on a free scale.

Although cloth manufacturers have been well supplied with inquiry and plenty of quotations have been given out, business has again consisted of retail lots. Very few buyers are prepared to purchase far ahead. Trading has been irregular and, failing a speedy revival in demand, it is probable that more looms will be standing idle at an early date. Less demand has been about for India. A disturbing feature is that merchants are receiving reports of more intensive competition from India-made fabrics. Steady support has been received from the Continent and a useful trade has been done with West Africa. The home trade has given Egypt or the Continent. American and Egyptian yarns have been purchased in limited lots. There have been more complaints from the fine spinning section regarding prices, and an important move has now been made to revive a price-fixing scheme.

TEXTILE WAGES.—The wages dispute in the bleaching, dyeing and finishing section of the textile industry has been settled and varying rates of increases have been granted by the employers to will take place within the next few days when the two sides have settled a few outstanding points, regarding wages for juvenile labour. With regard to the question of wage rates for overlookers, who are the "key" men in the weaving section of the cotton industry, the employers have ratified the provisional settlement and the trade unions are expected to adopt a similar course of action at a meeting this week-end when the terms of the agreement will be made known. It is understood that the employers now

contemplate seeking wage reductions for ancillary labour in the weaving branch, who number around 30,000. Weaving operatives have had their wages reduced and the employers' case is that ancillary labour should be prepared to come into line with the other workers.

COTTON SPINDLES BILL.—The announcement that the second reading of the Surplus Spindles Bill to deal with redundant plant in the spinning section of the cotton industry will not be taken until the autumn session of Parliament naturally caused a good deal of disappointment amongst the leaders of the Lancashire trade, but the view generally held is that although it is rather unfortunate for the second reading to be deferred, it will in no way interfere with the actual date of operation of the scheme. Even should the second reading have taken place before the summer recess the Bill could not have been passed by the House until the autumn. The delay in the second reading, therefore, is not considered to be a matter of great importance.

RE-ORGANISATION OF THE DYEING TRADE.—The next section of the textile industry to attempt reorganisation is the piece-goods dyeing trade. At a meeting in Manchester on Tuesday, representatives of this trade considered important and far-reaching proposals. The scheme is intended to apply to dyers of both cotton and rayon fabrics and has two main features—a redundancy plan and a compensatory pooling and quota system designed to secure the better regulation of the available volume of business. The dyers have decided that the first essential was to adjust plant capacity to the probable future requirements of customers and have therefore suggested a redundancy scheme, similar to that in the spinning trade. It differs, however, from the spinning scheme in that it contains provision for the allocation of a percentage of the purchase price for redundant plant to be administered as a fund to deal with cases of hardship amongst displaced employees of a closed works. The plant to be acquired under the scheme may be either immediately broken up or placed in reserve and dyers who may desire to replace their machinery may purchase the plant from the Board. No plant will be sold for export. With regard to the financial side of the scheme no difficulty is anticipated in making arrangements for a loan to be repaid by means of levies on the trade and spread over a period not exceeding fifteen years.

The second part of the scheme deals with the regulation of output by means of quotas. The Drafting Committee state that unless provision is made to regulate new entrants into the trade, a fresh condition of redundancy might quickly be created by the emergence of new firms keen to take advantage of the improved conditions which the redundancy scheme is intended to ensure. Therefore a plan has been prepared under which, on the basis of individual output in recent years, each firm's relation to the aggregate output of the trade can be ascertained and expressed as a percentage of the whole.

If any firm desires to work in excess of the given quota they will pay a proportion of the excess turnover into a pool. Similarly, if a firm falls below its quota it will receive compensation. Quotas will be saleable and may be acquired by purchase. This provides scope for enterprise and the necessary elasticity is given to meet possible extensions of the aggregate volume of trade. The importance and necessity of introducing a quota system with the redundancy scheme is to provide a means whereby the firms remaining in the trade and therefore contributing a levy towards the cost of buying out redundant plant may receive their due proportion of the business which has been released by the closing and scrapping of machinery. In brief, the benefits claimed for the scheme are that the firms remaining in the trade will operate at something more closely approximating to normal capacity, with a corresponding reduction in production costs. Copies of the scheme have been circulated to all firms in the trade, which number about 220.

GRAIN MARKETS

WHEAT.—The market appears to be recovering from its recent set-back and a general advance in quotations was recorded this week. The situation in Canada remains rather bearish, but world shipments are on rather a small scale at the present time, whilst drought in Argentina and black rust in the United States threaten to reduce supplies. In Australia the crop position has undergone a definite improvement, while in most European countries yields are turning out as well as expected.

According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 958,000 quarters, against 931,000 quarters in the preceding week. On Wednesday last, "July" futures were quoted in Chicago at 85½ cents per bushel, against 85½ cents the week before and 80½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 31s. 3d. per 496 lbs., against 30s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 29s. 9d., against 29s. a week ago.

FLOUR.—Home-milled flour has been in better request this week, while imported is still a quiet market. Quotations have been advanced. Shipments from North America in the past week totalled 84,000 sacks, compared with 77,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 26s. per 280 lbs., against 25s. a week ago; delivered London, 25s., as compared with 24s. a week ago. Manitoba patents, ex store, 23s. 9d. to 25s. 3d., against 23s. 9d. to 25s. 3d. a week ago. Australian, ex store, 19s. 6d. to 20s., against 19s. 6d. to 20s. a week ago.

BARLEY.—The futures market in Russian and Danubian barley has been active this week, quotations being firm. Trade in home-grown barley is small and quotations are mainly nominal. "July" futures were quoted at 35½ cents per bushel in Winnipeg on Wednesday, against 35½ cents last week and 37½ cents a month ago.

Quotations per 448 lbs. in London on Wednesday were: "English malting," at farm, 27s. to 30s. (nominal) and "English feed" at farm, 23s., against 27s. to 30s. (nominal) and 23s., respectively, a week ago.

OATS.—On Wednesday, "July" futures were quoted at 34½ cents per bushel in Chicago, against 34½ cents a week ago and 36½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 22s. to 24s. per 336 lbs., against 22s. to 24s. a week ago; "English White," at farm, 22s. to 24s., against 22s. to 24s. last week; "Chilean White," landed, 26s., against 26s. a week earlier.

MAIZE.—On balance, quotations have shown little alteration this week. "July" futures were quoted on Wednesday at 84½ cents per bushel in Chicago, against 84½ cents a week ago and 82 cents last month. Quotations in London, Wednesday: "Plate," landed, 16s. 9d. per 480 lbs., compared with 16s. 9d. a week ago; "Plate," ex ship (new), 15s. 9d., as against 15s. 9d. a week ago; "Plate," "July," 16s., against 15s. 10½d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. per ton, against £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931–32 to 1934–35:—

	1931–1932	1932–1933	1933–1934	1934–1935
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 20	28,451	27,471	77,712	43,615
47 weeks to July 20	3,755,261	3,511,119	6,275,217	13,718,163
Average price of English wheat per cwt.	s. d. 6 6	s. d. 6 8	s. d. 5 4	s. d. 5 5

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	June 25, 1934	Jan. 2, 1935	July 17, 1935	July 24, 1935
Winnipeg (No. 1, Manitoba) — Cents per 60 lb.	48½	65½	94½	82½	90½	81½
Chicago (No. 2, Winter) — Cents per 60 lb.	46½	84½	98	98½	85½	85½

OTHER FOODS

BACON.—No change was made in the official prices last Friday and the market has been rather quiet this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 91s. to 95s.; Canadian, 82s.; Danish, 93s., the same as last week. Arrivals in London last week included Danish, 18,031 bales; Canadian, 3,709; Dutch, 2,335; Lithuanian, 2,000; Polish, 2,809, against 17,459, 3,887, 2,310, 1,955 and 2,728 bales, respectively, in the previous week.

BUTTER.—The market has been firm and the upward movement of prices was resumed this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 91s.; Australian, choicest salted, 89s.; Danish, 102s., compared with 89s. to 90s., 89s. to 87s., and 99s. to 100s., respectively, last week.

CHEESE.—The market has been steady during the past few days. Quotations (per cwt.) on the London Provision Exchange

Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1.

on Wednesday were as follows: Canadian, finest coloured (old), 63s. to 64s., against 62s. to 64s. a week ago; New Zealand, finest coloured, 43s. 6d. to 44s., compared with 43s. 6d. last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., against 5½ cents per lb. last week. On the London market, Accras were steady on Wednesday last. Good fermented old crop, July-August, was quoted 22s. per 50 kilos, c.i.f. Continent, against 22s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,188 bags; delivered, for home consumption, 6,525 bags; exported, 175 bags; stocks, 175,807 bags, against 256,855 bags a year ago.

COFFEE.—The markets have had a quiet undertone and quotations show no change on the week. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 70 cwt.; exported, 147 cwt.; stocks, 16,677 cwt., against 8,166 cwt. a year ago. Central American, landed, 1,311 cwt.; delivered, for home consumption, 2,391 cwt.; exported, 8,166 cwt.; stocks, 165,815 cwt., against 110,836 cwt. last year. Other kinds, landed, 829 cwt.; delivered, for home consumption, 2,654 cwt.; exported, 3,650 cwt.; stocks, 177,932 cwt., against 106,875 last year.

EGGS.—With rather smaller supplies, quotations—especially for English—have ruled firmer this week. At Smithfield Market on Wednesday English (ordinary packing, Grade I, about 15½ lb.) realised 13s. to 14s. per 120, against 11s. 9d. to 12s. 6d. a week earlier, while Danish (15½ lb.) made 9s. 3d. to 9s. 9d. per 120, against 9s. to 9s. 6d. last week.

FRUIT.—Supplies at Covent Garden, states *The Fruit Grower*, have been below normal and prices have been maintained at a satisfactory level for all regular seasonal lines, with not quite so good a demand for the choicer items. Only moderate supplies of strawberries are now arriving and really good samples are short and dear. Raspberries encounter a good demand, but loganberries are not doing quite so well. Ripe gooseberries are a little easier, but sell steadily; green berries are in shorter supply and firmer in price. Moderate supplies of black currants are in firm request, but red currants are rather more plentiful. Cherries are of excellent quality and encounter a steady trade at the lower level of prices now ruling. Hothouse grapes, peaches and nectarines are in not quite so active demand and are inclined easier, but English and Guernsey melons continue to sell well. Lemons remain exceptionally dear, and grape fruit are doing rather better. Oranges have eased in price on heavier arrivals from South Africa.

MEAT.—At Smithfield market this week, beef encountered a rather better demand, with Argentine higher in price, but trade for other descriptions was again slow. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 2s. 10d. to 3s. 4d. last week. New Zealand frozen mutton was 2s. 6d. to 3s. 4d. per 8 lbs., against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,305 tons, an increase of 282 tons on the corresponding week last year. Beef and veal accounted for 4,480 tons, mutton and lamb 2,947 tons, and pork and bacon 457 tons, as compared with 4,218, 2,910 and 475 tons, respectively, in the same week of 1934.

PEPPER.—Black pepper has been quietly steady during the past few days. Wednesday's spot price for Lampung was 2½d. per lb., against 2½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 4 tons; delivered, 58 tons; stocks, 1,827 tons, against 216 tons a year ago. White, landed, nil; delivered, 104 tons; stocks, 18,602 tons, against 6,259 tons a year ago.

RICE.—The market has been rather quiet, with prices generally unchanged. The "spot" price of Burma No. 2, cleaned, new crop, was 8s. 7½d. per cwt. on Wednesday, as compared with 8s. 7½d. per cwt. a week ago, while the forward quotation, at 7s. 10½d. per cwt., remains unchanged. Movements in London during the past week were as follows: Landed, 6 tons; delivered, 296 tons; stocks, 9,715 tons, against 964 tons a year ago.

SUGAR.—Following a drop at the end of last week, the New York spot price has been steady. Futures advanced on active buying. The London market in raw sugar has been steady this week. The spot price in New York on Wednesday was 3.20 cents per lb., as compared with 3.28 cents per lb. last week and 3.29 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 2d. to 4s. 2½d., against 4s. 3½d. to 4s. 3½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 13,178 tons, against 14,442 in the previous week; exports, 15,089 and 15,946 respectively; stocks, 127,281 tons, against 129,235 and 174,634 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
July 19, 1934	12-80	12-31	12-76	10-47	10-41	11-84	12-38
June 20, 1935	11-59	11-82	11-82	10-05	8-82	10-15	11-84
June 27, "	11-41	11-58	12-95	10-05	8-82	10-15	11-86
July 5, "	11-49	11-54	13-00	9-94	9-38	10-20	11-74
July 11, "	11-58	11-84	13-39	10-41	8-87	10-30	11-96
July 18, "	11-61	11-89	13-69	10-00	9-22	10-51	12-09

The quantities catalogued for this week's auctions comprised 44,569 packages of Indian and 28,829 packages of Ceylon tea. At Monday's Indian auctions competition was strong and prices tended to be slightly dearer. But the improvement was not fully held on Wednesday. Quotations at the Ceylon sales were irregular, but better teas were rather dearer and common sorts firm.

VEGETABLES.—*The Fruit Grower's* Covent Garden correspondent states that tomatoes have continued in strong demand this week, with prices firm at 5s. to 5s. 6d. per dozen lb. for both English and Guernsey. Cucumbers, however, are in larger supply and prices have eased off. Lettuce, too, have been more plentiful and cheaper, with imported varieties difficult to clear. Runner beans have started at 3d. to 4d. per lb. Green peas recovered in price at the end of last week and have since been fairly steady. Cabbage are selling fairly well, but marrows have fallen in price owing to increasing supplies. New beetroot and bunched carrots have encountered a moderate demand, but broad beans have been offered at a low figure. English new potatoes are steadily increasing in supply and prices are gradually falling. At the London Borough Market on Tuesday last, Jersey sold at 7s. per cwt., against 9s. last week, while English made 7s. to 9s., compared with 10s. to 12s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Business continues on quiet lines. The notable feature, however, is an advance in linseed in consequence of rather alarming reports of the lack of moisture in Argentina, which should not have serious effects unless it is prolonged into next month. The current quotation for Plate for shipment is around £9 7s. 6d., but crushers both here and on the Continent, are slow to respond. Moreover, their present requirements are limited by the oil and cake demand. Indian linseed is still too dear in comparison with duty paid Plate, and is neglected. Shipments from Argentina are at a moderate level. The quantity now afloat for Europe is 108,000 tons (including 6,600 tons from Canada 11,000 tons, against 32,500 tons a year ago. Demand for cottonseed is small, but shippers at Alexandria continue to hold out for £8 10s. for old crop, while for new crop October loading £8 is required.

Demand for vegetable oils is less than normal. Linseed oil, however, is firm and dearer in anticipation of a higher duty on that is now quoted £21 10s., and for September-December, £21 7s. 6d. Egyptian crude, at Hull, is available at £23 10s., and refined at £26 10s. prompt. Oilcakes are in normal demand for the time of year and are steady.

TIMBER.—Imports of sawn softwoods in June were lighter than in the corresponding month last year, and for the half year totalled 1,555,358 loads (of 50 cubic feet) against the exceptionally heavy receipts of 2,003,660 loads for January-June last year. With these decreases the heavy spring stocks must be wearing down; the most-used sizes, battens and scantlings, already show decreased stocks in docks in London, compared with this time last year, although holdings of other sawn classes are still up. Deliveries of from London docks in June were, however, lower than in the corresponding month last year, but that may be ascribed to the heavy rain during the first half of last month, and probably more deliveries from ships into lighters, which would not be included in the docks' statistics.

The lower receipts indicate the policy of importers not to purchase too much because of a slackness of buying on the Continent, which might find its way here on very cheap terms. Russian shipments forward business, Finland has been a persistent seller to this much to England as her trade with the United States may be more remunerative.

Hardwoods of the popular varieties continue in steady demand, with fairly large holdings, yet not too plentiful. Mahogany is in up to receipts of last year to date, and Poland, another oak country, is not sending so much, but other mid-European countries and her exports of birch, maple and other sorts. Teak is in growing demand at firm prices, but available supplies are of limited quantity fact that so much has come forward this year suggests that demand is expanding.

FURS.—As had been anticipated, the ninth series of fur auctions at Leningrad was quite successful. The sales were well attended by over 100 representatives from all the chief buying centres, and easier, most other furs being fully firm to 10 per cent. higher in price, compared with the spring series. Ninety-five per cent. of the excess of those realised at the spring auctions in Leningrad. The demand for skins dyed and dressed in Russia was very good, the

bulk of the supplies being sold, and the improvement in the quality of these was remarked upon by London dealers. On Monday last, the Hudsons Bay Company held a sale of beaver, musquash and mink. This was an innovation by the company, and some doubts had been entertained regarding its success. Nevertheless, the sale was satisfactory. As compared with the London spring series, beaver and musquash were unchanged in price, or a shade dearer, while mink appreciated in value by a full 10 per cent., on a strong French demand. The firmer tendency of these two sales will probably have favourable repercussions upon the prices of the winter collections, now in course of preparation.

RUBBER.—The market has again had a dull tone, and prices have shown a sagging tendency. Holland's financial difficulties have

caused nervousness, and prices for forward positions have declined in sympathy with the spot quotation. Nevertheless, the situation in America is more hopeful, and some expansion in demand from that quarter is possible in the fairly near future. In New York the spot price on Wednesday was 11½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5½d. for October-December, 1935, as against 6d. a week ago. Stocks in London and Liverpool at the end of last week totalled 172,184 tons, against 173,311 tons a week earlier. A year ago stocks amounted to 105,403 tons.

Reviews. Recent Commissions—Terms of Reference. Official Publications of the Union of South Africa. Proposed Economic Conference in Johannesburg during 1936. Tabulated Official Union and Foreign Statistics. Recent Periodicals and New Books.

Subscriptions to the Journal £1 1s. per annum, and enquiries re advertisement tariffs should be addressed to the Chairman, Board of Management, P.O. Box 5316, Johannesburg.

Overseas Agents for Subscriptions (£1 1s. per annum) and Single Copies (at 6s. per copy):

MESSRS P. S. KING & SON, LTD.
14 Great Smith St., Westminster, London, S.W.1

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription 8s. 2d.

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

JOSHUA B. POWERS LTD.

Exclusive Advertising Representations for Great Britain and U.S.A.

14 Cockspur St., London, S.W.1. 220 East 42nd St., New York City.

"LE ROY LE VEULT"

THIS week the King's consent has been given to one of the great historic Acts of the British Parliament. The Government of India Act (1935) is great not merely in the physical sense—it consists of 455 pages containing 478 clauses and 16 schedules—but also because it inaugurates a new system of government for one-fifth of the human race. It is safe to say that so wide, so far-reaching and so ambitious a piece of constitution building has never before been attempted in the world's history.

The Act itself follows very closely the recommendations of the Parliamentary Joint Select Committee published last October. In the House of Commons certain changes were made, notably in the direction of safeguarding the "untransferred" rights of the Indian Princes when they join the Federation. This and a number of minor emendations were summarised in the *Economist* of June 8th. The House of Lords has been even more moderate in its changes, for the only substantial amendment is that which introduces an electorate with a very select franchise instead of the system of indirect election for the selection of the members of the Federal Upper House who are to represent British India. The fact that the House of Lords, which contains a large number of former Indian administrators and in a case of this kind is little influenced by electoral opinion, has passed the Bill without either substantial amendment or undue delay is a further proof—if proof were needed—that the new Act represents the overwhelming majority of informed opinion in Great Britain.

But though the Bill has had a comparatively smooth passage through both Houses of Parliament, it certainly cannot be said that it is an example of hasty or rash legislation. On the contrary, it is the slow outcome of no less than eight years' continuous argument and consultation. It was towards the end of 1927 that the late Lord Birkenhead, then Secretary of State for India, moved Parliament to appoint the Simon Commission to inquire into the working of the post-war constitutional reforms and to propose what further steps, if any, should be taken in the direction of self-government. But, unfortunately, India took umbrage because no Indian was placed on the Commission. It was boycotted by the Congress Party throughout India,

and it only avoided shipwreck by the device of appointing a separate committee of moderate Indians who travelled through India with the Commission and made their own independent report. After the Commission returned home and was preparing its report, civil disobedience broke out, and Sir John Simon, impressed with the hopelessness of trying to force a solution upon an unwilling India, himself suggested to the Prime Minister the calling of a Round Table Conference at which the Indian States as well as the Provinces of British India should be represented. The first of these conferences was held in London in the winter of 1930; and it is a matter of history how the Princes brought about a notable change in the situation by declaring at the outset their approval of the idea of an all-India Federation; how Gandhi came to London in the following winter, and how the Hindus and Mahomedans failed to compose their communal differences, and in the end threw upon Mr MacDonald the task of making an arbitral award on this vexed question. In the spring of 1933 the Government summed up the results of the three Round Table Conferences in the famous White Paper, and in the summer of that year the Joint Committee of Parliament was set up, which called a body of Indian representatives once more into conference and went carefully all over the ground again. It was not until the autumn of 1934 that this committee—whose main function in fact, though not in name, was to educate leading members of the three British political parties in the intricacies of the Indian problem—presented its report.

Eight years is a long time to discuss even so complex a problem as India's constitution, and it is disappointing that at the end of so great an effort of conciliation we cannot even now claim that we have reached an agreed scheme acceptable to all parties. It can, however, justly be said that Great Britain has taken the greatest pains to hear and consider the views of Indians of every grade and caste, and that the present Act is the result of their representations even if it does not meet all their wishes.

What are the prospects that this new constitution will function well and produce an orderly and contented India? There are cynics who say that we are making a profound

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

mistake in trying to transplant Western Democracy into the Orient, which by temperament and tradition needs quite a different form of government. Others, again, suggest that it is sheer folly to legislate for a great extension of democracy at a moment when parliamentary government is discredited in its native habitats and is being superseded by authoritarian government in one form or another even in Western Europe. The British Parliament has, however, staked everything on its conviction that this challenge to democracy is a passing phase, that it is the product of abnormal conditions, and that, with the spread of knowledge, government in all countries of the world must rest on the consent of the governed expressed in an organised and orderly way. Signs are not lacking that the passion for dictatorship has spent its force and that failure to achieve the promised advantages of material prosperity is bringing about disillusionment. The comparative social and political stability of the British Empire in a world of confusion is Parliament's justification for going steadily forward on its traditional lines.

So far as the immediate situation is concerned, Britain's gift to India comes at a time which is not unfavourable from the economic point of view. The great economic crisis has passed into history without leaving behind any disastrous results so far as India is concerned. After a couple of bad Budgets, the finances of the Central Government are once more balanced; India's trade is slowly recovering and her exchange position has been greatly strengthened by the outflow of gold from her vast hoards. A Central Bank has been established, while the burden of her debt has been lightened by reductions in the rate of interest; and, though many of the Provinces will have a difficult financial situation to face under the new regime, it is not unduly optimistic to anticipate that the new constitution will be launched in a period of gradual economic development and of expanding revenue.

Politically, India is relatively quiet. The outbreak of terrorism which called for such exceptional measures two or three years ago has now subsided, and though in the present hot season communal riots of a very regrettable kind have again broken out, these incidents are not likely to have very wide repercussions. Congress still declares that the Bill is unacceptable; but it is universally expected that in fact it will not boycott the new Parliaments but will seek to capture them with the idea of ultimately securing yet greater powers.

This brings us to what is really the heart of the problem. The new constitution, while granting a very wide measure of self-government, gives to the Governor-General and to the Governors important powers for safeguarding the country against the misuse of its new responsibilities. Their powers will fall into abeyance if the Congress Party—who will undoubtedly get control of most, if not all, of the new Parliaments—will act with discretion and with a genuine desire to undertake the many urgent tasks that India alone can perform. On the other hand, if they resort to wrecking tactics, it would throw back upon the Governors the responsibility for maintaining peaceful and orderly administration. The idea of democracy in India would be discredited and her progress towards full Dominion status would suffer a disastrous set-back. It is in the hands of the people of India themselves to guide her evolution during the next decade.

There is, however, one vital matter in regard to which the British Government has yet to play an important role. The new constitution will remain a half-fledged affair until the Federal structure at the centre is set up and is in working order. Without a Federal Parliament and Cabinet there will not only be serious gaps in the organisation devised for the Provinces, but also Indians will rightly feel that the symbol of Britain's good intentions is lacking. Much remains to be done before a Federal body can be brought into existence; and in particular the adherence of a sufficient number of Princes has to be secured. The individual negotiations that this involves cannot be completed in a day; but it is evident that it would put considerable strain on Indian goodwill if, after eight years of discussion, this final stage were further protracted for several years. By 1940 the economic wheel may have turned once again a full circle and, with it, that political phenomenon which in India seems also to go in cycles—discontent and

disorder—may have brought us to another peak of terrorist activity. India is to-day quiescent. The course of wise statesmanship for this country is to press on as fast as possible and bring into being the whole programme of the new Government of India Act while the omens are favourable.

The King has given his assent and his approval carries with it the good wishes of the people of this country. In spite of the dust of party wrangling and the openly expressed doubts of many sections of British Commerce, Britain has wished to do its duty and to play fair with India. It sends this new constitution to India in the hope that the words of Lord Lothian are justified when he said at the close of the debate:—"Does this Bill meet what I believe is the fundamental spiritual feeling in India? Does it transfer real responsibility for their own affairs on to Indian shoulders? Does it make possible the ending of that barren strife between Britain and India as to where responsibility should lie? Does it make possible steady movement towards full self-government in proportion as the Legislatures show their capacity to discharge that responsibility? I believe it does these things."

A PROGRAMME FOR BRITAIN

THE years of depression are having one consequence which may be productive of great good. Rarely, if ever before, has there been so much organised thinking, coupled with a refusal to take the world's economic ills as irremediable or political dogmas as sacrosanct. There is slowly evolving a large body of progressive thought which looks to the future and insists that the affairs of the nation should not be allowed to drift or stagnate. It is neither Individualist nor Socialist, neither Conservative, Liberal nor Labour in the doctrinaire or Party sense, but draws in varying degree upon all these schools of thought.

The latest manifestation of this attitude of mind appeared late last week with the publication of "The Next Five Years."* This book is called "an essay in political agreement" and covers two main fields—peace abroad and reconstruction at home. It is supported by a remarkable list of over 150 signatories, including members of all political parties (with the exception of the official Labour Party), employers and trade unionists, a number of persons distinguished in the fields of science, literature, education, finance and journalism, as well as some outstanding representatives of the Church and Nonconformity. Naturally, every member of so catholic a body is not committed to every detail of proposals covering very wide fields; but the fact that they have subscribed their names in general support is something of a portent. It shows how widespread is the desire for a considered policy to guide our evolution in the critical years which lie ahead.

This document has been prepared quite independently of Mr Lloyd George's programme, and it has been made clear that the signatories have as yet devised no plans for giving political effect to their proposals. There are, moreover, quite clear internal evidences of the fact that these two movements were independently conceived—notably the greater emphasis which Mr Lloyd George lays upon the possibilities of assisting the unemployment problem by means of agricultural development, and the much greater space devoted in the present book to the evolution of our commercial policy and to what may be called long-range reforms of the social and industrial system. Mr Lloyd George's plans are more in the nature of *ad hoc* devices for dealing with our immediate problem of unemployment, whereas "The Next Five Years" is more concerned with shaping the course of our future development. Nevertheless, these two movements spring from a similar diagnosis and, like Mr Lloyd George, the signatories of this book believe "that the present situation offers a new opportunity and a new challenge: a challenge to give leadership in organising a world order freed from the menace of war, a challenge to develop an economic system which is freed from poverty and makes full use of the growing material resources of the age for the general advantage, and a

* "The Next Five Years: An Essay in Political Agreement," Macmillan, 320 pages, 5s. net.

challenge to safeguard political liberty and to revitalise democratic government."

The book is closely reasoned and makes a number of proposals, some of them in great detail. A complete summary is impossible, even of the proposals themselves and still more of the supporting arguments. But many of them are fairly familiar to those who are acquainted with British political thought. The section of the book on International Problems, for instance, is an able and convincing restatement of the familiar arguments for the "collective system" based upon the League of Nations. It will well repay reading, for it is expert and cogent, but it states no new line of policy. The chapter on Foreign Trade is another which will contain no surprises, at least for readers of the *Economist*, for it advocates the encouragement of international trade by the method of multilateral "Low Tariff Club" agreements, which has often been expounded in these columns. Again, the chapter on National Development proposes just such an expansive policy of capital development as has been advocated from many quarters in recent months, not least by Mr Lloyd George. All these problems are clearly analysed in "The Next Five Years," and the remedies are pointed out.

The opening chapters make much of the word "planning." But it is made clear that the word is used to mean not a much greater degree of interference by the Government with private enterprise but the conscious co-ordination of such Governmental interference as exists. Interpreted in this way the word "Planning" loses many of its terrors. To effect the planned co-ordination, the book endorses the proposal for an Economic General Staff, to be composed partly of whole-time Civil Servants and partly of those with special experience. Lest this body should share the fate of the existing Economic Advisory Council, cold-shouldered by the Departments and ignored by the Cabinet, it is proposed to make it directly responsible to a special Planning Committee of the Cabinet "composed of Cabinet Ministers of the highest rank, free from daily departmental responsibility."

The chapter on the Organisation of Industry forms the centre of the authors' attempt to reconcile in practice differences of principle. It is pointed out that the system of private enterprise has failed in certain particulars; it has failed to revive the depressed industries, and it has failed to prevent the emergence of monopoly. But these are exceptions: "there are many industries, perhaps the majority, where even to-day the natural competition of independent individuals results in an equilibrium between demand and supply." Accordingly, in prescribing for industry we should beware of any comprehensive remedy which makes no allowance for individual peculiarities. The book itself suggests five possible lines of action. First, industries should be allowed to acquire powers to compel their recalcitrant minorities to come into line on such matters as wages, hours, standards, research, etc. But monopoly powers should not be conferred in this way save as an exception, and then only if the industry submits to public control. Secondly, for the depressed industries, where central control without nationalisation appears to be the remedy, the book suggests that schemes should be drafted by impartial commissions and presented to the industries for acceptance. Thirdly, all large or monopolistic companies should be placed under much greater obligations of publicity than at present. Fourthly, certain industries peculiarly "affected with the public interest" should be given the status of Public Utilities, with the obligation to limit their profits and submit their charges to approval. And finally, there is a list of industries which are considered "ripe" for socialisation—transport, electricity, some forms of insurance and of food distribution, mining royalties and the manufacture of armaments. This eclectic and discriminating approach to a subject which is all too frequently the battle-ground of rival, and equally abstract, generalisations is one of the most valuable things in the book.

The proposals on Banking and Finance will perhaps stir more controversy. But they are by no means extreme. The Bank of England is to be subjected to a greater degree of public control than at present, including Government approval of the appointment of Governor and the creation of a representative Council for consultation, but not for management. Nationalisation of the joint-stock banks is rejected, but they are to be given the status of Public Utilities (as defined above) and supervised by a somewhat shadowy Banking Commission. But it is made clear that there is to be no interference with the day-to-day freedom and responsibility either of the Central Bank or of the commercial banks. This chapter also includes a most suggestive section on the Mobilisation of Capital which makes the valuable,

and too frequently forgotten point, that the capital market, particularly in its "home industrial" section, needs encouragement even more than regulation.

The chapter on Agriculture is another interesting attempt at synthesis. The principle is firmly laid down that assistance to agriculture must not involve either dear food or a restriction of imports. But there are many methods of assistance open to the State and the industry. Increased efficiency both of production and distribution is an obvious prescription. The stimulation of increased demand, especially for the "protective" foodstuffs, assisted by a national nutrition policy, is another. But the book does not rule out financial assistance by the State. It is suggested that the total of that assistance should be stabilised at about the present figure and that the method of granting it which is likely to be most efficient and most equitable is the direct cash subsidy. Tariffs, levies and quotas should therefore be regarded as temporary expedients only.

The book also deals with problems of taxation and with the future evolution of the social services.

This brief summary will suffice to show that the authors of this survey are thinking in terms of the future evolution of the nation in both its internal and external relations. This does not mean that in the antithesis between Recovery and Reform, which is so much discussed in these days in the United States, they have subordinated the solution of immediate difficulties to the evolution of a theoretical world of the future; on the contrary, they have fully expressed their views on the urgent steps to be taken about unemployment. The value of this contribution is rather that while dealing with the tasks of the urgent present, the authors are conscious that the remedy of to-day must fit in with the social and economic framework of the near future. And in focussing attention on this aspect of public affairs they have made a real contribution to clear thinking and—it may be hoped—to our political evolution.

BRITISH COAL

THE coal industry of this country, on which British prosperity last century was established, has been faced with gloomy prospects ever since the war. The debate in the House of Commons last week, on the Mines Department's estimates, did nothing to lighten the gloom. That was not so much the fault of the Secretary for Mines as of an obstinate combination of circumstances: the falling away of the industry's overseas markets and the almost complete absence of reorganisation under the various forms of legislation passed by successive Governments, ostensibly for the industry's benefit.

The coal-mining industry has now experienced a form of statutory regulation for four and a-half years. Two facts have to be remembered in any attempt to measure the value of the Coal Mines Act of 1930 as an instrument for the improvement of the organisation of the coal trade. These are, first, that the rights of private ownership and direction were not to any appreciable extent restricted by it;

and, secondly, that the provisions of the Act have been administered on a falling market. Moreover, when the late Mr William Graham, the President of the Board of Trade in the MacDonald Labour Government, introduced his Bill in the House of Commons in December, 1929, he explained that "the whole object of the Government was to frame a scheme for the recovery of the industry at least on its marketing side." He also expressed the hope that under the contemplated arrangement for central and district control the industry would be able not only to prevent the recurrence of the devastating losses of 1927-28, but also to meet the cost of the reduction in the hours of labour underground, from eight to seven and a half, without any interference with the prevailing wages.

The two chief methods by which it was hoped to achieve these objects were the systematic adjustment of the supply to the demand, and co-operative action in the regulation of prices. The formidable character of this task may be gathered from the fact that, although the industry was estimated to have a potential capacity of 330 million tons per annum, the output in 1928 was only 237 million tons, and that in 1927 and 1928 the ascertained losses had shown for the industry as a whole a loss of over £15 millions. If the improvement in the condition of the coal trade which took place in 1929 had been maintained, regulation would undoubtedly have been greatly facilitated. But coal mining, like other basic industries, was overwhelmed by the world depression of recent years, and in circumstances which no one had foreseen the wonder is not that the Act of 1930 has done so little, but that it has accomplished what it has. In the regulation of output, the original plan followed by the Central Council was that of applying uniformly a flat-rate percentage to output in a past period. But in 1933 this method was abandoned in favour of a system under which the Council made initial quarterly allocations closely approximating to the current output, leaving each district during the course of the quarter to apply for, and at the same time justify, such increase in its allocation as it might consider necessary to meet the demands for its coal.

Neither of these systems has given general satisfaction to the districts. But although in every year under the Act the authorised national production has been in excess of the actual output, the margin of excess last year was only 2.5 per cent. compared with 9.60 per cent. in 1932. It is true that the activities of the industry have contracted during the period of regulation. In the four years 1931-34 the quantity produced was 856½ million tons compared with 990½ million tons in the preceding four years; which represents a decline at an average rate of 13.5 per cent. per annum. But there has been a diminished demand for coal in other countries as well, and the world output for the four years 1931-34 was 20 per cent. less than that in the four preceding years. A comparison of the export returns for the principal coal producing countries is apparently less favourable to the United Kingdom, and on this ground it has been argued that the system of regulation created by the Act of 1930 has been detrimental in its influence on the overseas trade of the British coal mining industry.

In the administration of the price-regulating provisions of the Act domestic friction has been incessant and frequently bitter. "It has been alleged," the Mines Department reported in 1933, "that price regulation has been ineffective; that it has operated harshly against individual districts; and that it has led to such widespread evasions as to render it virtually inoperative." It would be idle to pretend that there has not been a good deal of ground for these criticisms. To what extent these evils will be eliminated under the statutory authority given this year to the Central Council to co-ordinate the minimum price schedules of the various districts, remains to be seen. But in spite of the notorious defectiveness of the old system in the regulation of prices the fact remains that both pit-head and export coal prices have shown during the past four years a far greater measure of stability than most other prices. The average pit-head proceeds per ton for the industry as a whole in 1934 were only 5 per cent. lower than in 1930 and the average f.o.b. value 3.5 per cent., whereas in the same period the Board of Trade index of wholesale prices showed a fall of 12.8 per cent., and the Ministry of Labour cost of living index of 10.8 per cent.

Perhaps the outstanding achievement of the industry under the 1930 Coal Mines Act has been a steady reduction in working costs, notwithstanding an annual average decrease in output of over 30 million tons. The control of the Central Council and the pressure of economic necessity have tended more and more towards the concentration of work in the more efficient units and more productive seams. There has also been a considerable improvement in the technical equipment of the mines; with the result that the average pit-head cost, calculated on the commercially disposable coal, was only 13s. 0½d. per ton last year compared with 13s. 9½d. in 1930. It must be admitted, of course, that the mining industry, in so far as it is the consumer of materials, has benefited from the fall in the level of wholesale prices since 1930, but the earnings of the miners have actually increased in purchasing power during the period of regulation. Over the past four and a half years the cash earnings per person employed have averaged £110 10s. per annum as against £113 18s. in 1930—a decrease of only about 3 per cent. notwithstanding the reduction in the working hours underground from eight to seven and a half. And this slight decrease compares with a fall of 10.8 per cent. in the cost of living index number. Capital, however, has been comparatively less fortunate than Labour during this period. It is true that the trading balances of the industry as a whole have improved. For the four years 1931-34 they show a profit of £10.6 millions compared with a loss of £7.1 millions during 1927-30; but the credit balances during the period of regulation have been claimed almost exclusively by those coalfields producing either wholly or mainly for the inland market. In Durham the ascertained profits for 1931-34 show an aggregate debit balance of nearly £1.4 millions, in Northumberland £360,000, in South Wales £260,000, and in Scotland about £49,000.

Thus the Act has failed to restore the industry to a sound economic condition. The average credit balance of about 3d. per ton shown by the ascertained profits for the past four years is exclusive of capital and other charges which are not allowed to enter the audits for the determination of wage rates, and it compares with an average pre-war profit of about 1s. per ton after such charges had been defrayed. Moreover, Part II of the Act, aiming at the improvement of the organisation of the industry by the promotion of amalgamation schemes, has been virtually a dead letter. The Gowers Commission has been actively engaged in the investigation of conditions in areas geographically and commercially suitable for centralised control. But the only scheme which it has submitted to the Railway and Canal Commission Court has been one for the partial amalgamation of the mines in West Yorkshire, and although that scheme was supported by the owners of fifty-seven collieries and objected to by only four it was rejected by the Court as "unbusinesslike" and "utterly unworkable" and "not in the national interest."

Thus, the reorganisation of the industry, in any real sense, has not taken place; and the fundamental problems remain. On the other hand, voluntary amalgamations are going ahead—notably in South Wales, Lancashire, Yorkshire and Scotland—and central selling agencies have been set up in the Lothians, and Lancashire and Cheshire. On these alone, at present, the limited hopes of the industry as a whole seem to rest.

IMPRISONMENT FOR DEBT

SINCE Charles Dickens exposed the horrors of the debtors' prison and stirred the conscience of complacent Victorian society, we have been accustomed in this country to conclude that no debtor of good faith need find himself in prison. This impression is far from the truth; and the report of the 1934 Inter-departmental Committee on Imprisonment in Default of Payment of Fines and Other Sums of Money revealed a disturbing state of affairs in the administration of justice in this country. The Government has therefore done well to introduce in the House of Lords, and pass through its second reading in the Commons without opposition last week, the Money Payments

(Justices Procedure) Bill, which is based on the 1934 Committee's report.

That report surveys all payments ordered by Courts of Summary Jurisdiction, that is to say fines as well as sums of money owing for rates or under wife maintenance and affiliation orders. There was a total of 53,000 imprisonments in 1932, and well over a third were for non-payments of sums ordered by the Courts of Summary Jurisdiction.

As far as fines are concerned, it is true that only in a very small proportion of all cases is the money not forthcoming. Only 2.6 per cent. of all fines imposed lead to imprisonment. But this very small percentage is actually the equivalent of over 11,000 cases per annum. Among these are probably a large number of habitual drunkards and vagrants guilty of persistent minor offences. But there remains a considerable residue of debtors for whom imprisonment is not a suitable penalty, and who might be kept out of prison were the machinery of the Courts directed to that end. At present the magistrates impose a fine to be paid within a stated period and at the same time fix a term of imprisonment in default. But they know that in the vast majority of cases the money will be produced and the imposition of an alternative sentence of imprisonment is largely a formality. No serious consideration therefore is given to the question whether imprisonment is desirable or necessary, and no adequate opportunity is provided for its consideration at a later stage. The Committee insists more than once in its report that if the number of imprisonments in default of payment of fines is to be reduced "it is essential to secure that the mind of the Court should be specifically directed to the question of imprisonment at the time when there is a serious probability that the offender will be sent to prison." It is suggested that except when it be expedient for special reasons to fix the term of imprisonment at the time of conviction, the defendant, if he fails to pay the fine within the allotted period, should be brought before the Court again before a sentence of imprisonment is passed. At present if a defendant cannot pay the fine within the time allowed the onus lies on him to apply for an extension, but many of the poorer and least educated offenders are unaware of this. Consequently, as the report says, "persons may be sent to prison who, if all the circumstances were known to the Court, would not have been committed."

The question is perhaps even more important when it comes to determining the amount of payments to be made under wife maintenance or affiliation orders. The Courts may have to come to a decision that will determine the financial situation of a man and woman for the whole of their lives. Yet it is at present impossible for them to obtain sufficient knowledge to ensure that their decisions will be equitable. Hardships generally arise over the revision of orders and in the treatment of debtors in arrears. Although a man against whom an affiliation or maintenance order has been made can apply for revision, frequently he is unaware of this. Orders, reasonable enough at the time they were made, are not changed to meet changing financial circumstances. The right of either party to apply for a change should be made clear to them when the order is first made. The position would be less serious if action were taken as soon as the man failed to pay. Generally the woman takes no steps for some weeks, by which time arrears have accumulated; and unfortunately many Courts take the view that an order cannot be varied as long as there are unextinguished arrears, though there is no legal basis for this view. The prison population mounts as a result. Such results could be avoided if the responsibilities and powers of the Collecting Officers were extended. At present they can take proceedings under an affiliation order on behalf of a woman, but not under a maintenance order for a wife.

There has always been, however, a need for a clear principle to be laid down by law as to the circumstances that would justify a sentence of imprisonment. There should be a definite obligation on the Court to investigate how far failure to pay is due to circumstances beyond the defendant's control, and to secure that imprisonment should

only be ordered when the Court is satisfied that default is due to wilful refusal or culpable neglect. Comparison of the situations in England and in Scotland in this connection is suggestive. In England in 1932 there were 3,648 committals to prison for non-compliance with wife maintenance orders; in Scotland there were 15. Even allowing for the fact that the number of orders made in England is estimated at seven times the number for Scotland, the disparity is startling. The disparity on the number of cases of imprisonment for non-payment of affiliation orders is less, but still considerable; the figures being 2,345 for England and 184 for Scotland. The chief differences between the two countries are first that in Scotland the Court satisfies itself that the man's failure to pay is wilful, and secondly that there exists the right of attachment of the man's wages in so far as they exceed a sum necessary for his subsistence.

There is also an extraordinary difference in the number of commitments for non-payment of rates between England and Scotland, the figures being 3,000 in England in 1932 and only 8 in Scotland. Here the difference is primarily due to the extent to which rates are compounded in the two countries. The people who are committed for non-payment of rates belong with few exceptions to the class that receives its income in weekly payments, while rent and living expenses are also paid on a weekly basis. Rates, however, if they are not compounded, are on a quarterly or six-monthly basis. If compounding were made mandatory and included all working-class property, it would help materially to reduce the number of imprisonments on account of rates.

There seems, however, little doubt, to quote the words of the Report, that "there is not, on the part of some rating authorities, a right attitude to the question of invoking a sanction of the drastic nature of imprisonment." According to the law, no warrant of commitment on account of rates should be issued against any person whose failure to pay is due to circumstances beyond his control; but at some Courts "failure to pay the rates demanded is often in fact allowed to be in and by itself a sufficient justification for imprisonment." Actually, in a large proportion of the cases of imprisonment, warrants are issued and executed without any examination of the defaulter by the Court and without any inquiry into his circumstances.

The Government's Bill removes two of the more glaring injustices noted above. It provides for revision of a defaulter's circumstances by a magistrate before imprisonment can be ordered, and for supervision by the Court of the circumstances of a person who is permitted to pay by instalments. Secondly, in cases of wife's maintenance, affiliation orders or rates, it provides that imprisonment shall not be ordered unless the Court has been satisfied, after reviewing the case, that default was due to the defaulter's wilful refusal or culpable neglect. Thus, defaulters as an "automatic" sequel to default will largely disappear. Further, fines imposed in one summary jurisdiction district can now be paid in another, under a

"transfer of fine order"; and clerks of courts, who are often solicitors in private practice, will, if the Bill becomes law, be compelled to inform persons in writing, who are convicted to pay any sums, of their liability and the method of its discharge. The Bill does not give the right to "attach" a defaulter's wages; and one member of the Inter-departmental Committee opposed such attachment. The Government's Bill is a courageous attempt to remedy a scandalous defect in our social system. It has so far enjoyed a speedy and non-contentious passage through the Lords and an unopposed second reading in the Commons. We wish it as speedy and as non-contentious a voyage to the Statute Book.

AMERICAN COMMERCIAL POLICY

(BY A CORRESPONDENT)

THE trade agreement between the United States and Sweden which was recently signed in Washington is the fifth to be concluded by the United States under the authority of the Trade Agreements Act of June 12, 1934. All these agreements have provided for reciprocal reductions in duties. The United States is thus one of the few countries which is successfully pursuing a policy of tariff reduction.

The Democratic Party has traditionally been opposed to excessive protection. Until the Civil War, under the leadership of the agricultural Southern States, this attitude carried great weight. But the conquest of the West by the Republicans after the Civil War divided the agricultural sections of the country. Furthermore, the spread of industrialisation tended to weaken free-trade sentiment within the Democratic Party, while the increasing tendency of legislators to respond to local interests made the reduction of tariffs increasingly difficult. Nevertheless, the Democrats in 1913 succeeded in reducing the tariff, and the Democratic platform of 1932 advocated a "competitive tariff for revenue" and "reciprocal tariff agreements with other nations." This platform pledge, adopted in the exigencies of the time, might have remained a dead letter had not President Roosevelt chosen as his Secretary of State Mr Cordell Hull, Senator from Tennessee, who, throughout his entire career, first as Representative in Congress and later as Senator, had fought for liberal trade principles.

With agriculture and industry severely depressed and an unprecedented volume of unemployment, a general downward revision of the tariff by Congress in the traditional method was out of the question. Local interests and powerful lobbies would have turned any such proposal into a measure for raising duties. Furthermore, the urgent need of reducing trade restrictions in foreign countries that were hampering the export of American goods made some bargaining method preferable to unilateral action. It was in these circumstances that the Administration, at the insistence of Mr Hull, proposed, and the Democratic majority in Congress secured the passage of, the Act authorising the President to modify rates of duty in connection with agreements not requiring subsequent ratification by Congress.

The first agreement to be made under the authority of the Act was with Cuba. Cuba is the only country with which the commercial relations of the United States are on a preferential basis, and the agreement does not contain the most-favoured-nation clause. This agreement has already proved most beneficial in increasing the trade of both countries.

An agreement with Belgium came into force on May 1, 1935, including substantial reductions of duty by both parties. The possibility of considerable fluctuations in the exchange rate between the American and Belgian currencies was taken into account during the negotiation of the agreement, and it was provided that either Government could propose modification of, or terminate, the agreement in the event of a wide variation of exchange, if it considers this variation so substantial as to prejudice its industries or commerce. By a coincidence the belga was devalued by

28 per cent. on the day on which the agreement was proclaimed; but the American Government has declared that it will not, for the present at least, have recourse to this safeguard, particularly in view of the voluntary assurances given by the Belgian Government that it would closely supervise export prices.

An agreement with Haiti came into effect on June 3rd, while an agreement with Brazil is awaiting ratification by the Brazilian Congress. Negotiations are at present being carried on with thirteen other countries. Six of these are in Europe: Finland, France, Italy, the Netherlands, Spain and Switzerland; and five are in Central America: Costa Rica, Guatemala, Honduras, Nicaragua and Salvador. Among South American countries negotiations are in progress with Colombia, and it is hoped shortly to announce negotiations with the Argentine. More important than any of these are the negotiations between Canada and the United States which are now in progress, and which it is hoped will result in an agreement, despite the difficulties created by the system of Empire preferences so greatly extended by the Ottawa Agreements.

In the pursuit of his policy Mr Hull has been confronted by a number of difficulties. Mr Roosevelt's outlook and views are perhaps more nationalistic than those of any President in recent times (though this may be the case more through the influence of his intimate advisers than because of his own inclinations), and it is generally known that he has, since the outset, been somewhat sceptical of his Secretary of State's liberal trade ideas. Moreover, the basic conflict of policy between the N.R.A., which tended to increase the costs of production, and the A.A.A., designed to raise agricultural prices, on the one hand, and the trade agreements programme on the other, has made it necessary to proceed slowly in the matter of tariff reform.

In the United States at large there is undoubtedly a better understanding of the relation of the tariff to America's international position than existed before the depression. The fact that under the most excessive tariff in the country's history prices and wages dropped to unprecedented levels has robbed the arguments of the high protectionists of much of their forcefulness. The Press, with the exception of the Hearst papers, which never desist from their ultra-nationalist, isolationist propaganda, almost unanimously approves the trade agreements programme. Big business has been won over, as is witnessed by the approval of the programme expressed by the United States Chamber of Commerce at its annual general assembly in May, when practically all other Administration policies met with severe criticism. The attitudes of labour and of agriculture are still uncertain. The farmers more than any other class stand to gain from the modification of the existing American tariff, but decades of Republican domination have rooted protectionist sentiment deep in the prairie country and in the Far West, and farmers have never distinguished themselves for understanding. Moreover, owing to the short supply of some domestic crops, the agricultural schedules of the tariff are for the first time effective and are of material assistance in maintaining farm prices. The extremely depressed condition of agriculture, combined with the fact that the President depends on the agricultural sections for an important part of his political support, makes bargaining with these rates a hazardous affair.

The trade agreements are entered into on a basis of reciprocity. It is the hope of the Administration that the example which it is setting may prove a powerful inducement to other nations, not only to join it in reducing the many barriers which are throttling trade, but also gradually to abandon discriminatory practices as instruments of commercial policy. Mr Hull is convinced that only if a regime of equality of opportunity and treatment can be re-established in international commercial intercourse can trade between nations be rebuilt on a stable and mutually profitable basis. Bargaining quotas, the arbitrary allocation of exchange, clearing and compensation agreements, bilateral trade balancing and the many other devices currently employed by nations to restrict imports and force exports, whose essence is discrimination against third countries, can no permanent substitute for a commercial system based upon the principles of freedom of enterprise and equality of treatment.

The Trade Agreements Act provides that the duties and other import restrictions proclaimed in connection with any trade agreement shall apply to the like articles of all foreign countries unless a country is discriminating against American commerce. On April 1, 1935, the day on which the Belgian agreement was proclaimed, the President issued instructions regarding the extension to other countries of the concessions granted by the United States. The nations of the world have been divided into three groups. Those in the first two groups have been found to be discriminating substantially against the commerce of the United States. Negotiations looking to the conclusion of trade agreements are being carried on with the countries of the first group, Canada, the Netherlands, Spain and Switzerland. If, in any such case, the trade agreement negotiations are not successfully concluded before the expiration of six months (i.e. October 1, 1935) and the country has not ceased to discriminate against American trade, it will cease to enjoy the United States minimum tariff rates. To the countries of the second group, Denmark, Germany, Italy and Portugal, the United States is bound by existing treaties and

agreements to extend its minimum rates. It is expected that notice of termination of these treaties and agreements will be given in order to clear the way for the conclusion of agreements covering explicitly both modern and old trade control measures. All other countries are included in the third group, to which the minimum tariff will be extended for the present.

By means of this policy the United States Government hopes to induce other nations to cease discrimination and return to more liberal trade practices, at least in so far as their commerce with the United States is concerned. The United States is making considerable reductions in its tariff rates and is negotiating agreements with a number of countries, so that the inducement it is offering is considerable. If Mr Hull, through his liberal ideas and his tireless persistence, can bring about an appreciable reduction in trade barriers throughout the world and can contribute to the restoration of orderly commercial processes in the place of the practices which are now ruining all nations, he will have done much to make amends for the tariff policy of his country during the 'twenties.

NOTES OF THE WEEK

Crisis at Geneva.—At the moment of going to press the Abyssinian problem, and with it possibly the fate of Italy and of the League of Nations, still hangs in the balance. On Wednesday afternoon the Council met in private and immediately encountered a supreme difficulty. Italy was only prepared at the present meeting to discuss the resumption of work by the Conciliation Commission—and that, only on the basis of the Walwal incident itself and not on the question whether that ill-fated spot is in Italian territory or not. If the Council went beyond this into the general matters in dispute the Italian delegate would walk out. Mr Eden hotly contested this view with the claim that the Council must be free, if it thought fit, to discuss the whole question. With this vital issue still unsettled, the diplomats went to ground and a feverish night was spent in trying to thrash out a compromise solution. The result appears to be a plan arranging that Italy and Abyssinia will renew their "conciliation" efforts with the help of a fifth arbitrator, who is to be appointed; that in the meantime, Britain, France and Italy will endeavour to reach a general settlement in accordance with the procedure provided in the Treaty of 1906; and that, if no agreement under either method is reached by September 4th, the Council will then discuss the matter in all its aspects. It is implicit that, since negotiations will be in progress both under a special and under a general Treaty, no military operations will take place until after this second meeting of the Council. It would seem that under this arrangement, which appears to have been accepted by Abyssinia, Italy gains all essential points; for she avoids stating her case against Abyssinia; and as the matter is still *sub judice*, presumably the rest of the world will still hold up the despatch of arms to Abyssinia. There is, however, no suggestion of a promise by Signor Mussolini that he will hold up any fresh movements of his troops. Yet Il Duce is not satisfied, and at the time of writing, there is every indication that he will refuse these very far reaching concessions to Italian susceptibilities. He has, moreover, chosen this moment to write an article in the *Popolo d'Italia* in which—after denying that Italy's action is based on considerations of slavery, race or civilisation, and frankly admitting that the essential arguments are the vital needs of Italy for expansion and security in East Africa—he concludes, with great frankness, that the solution of the problem can be only "totalitarian." "Any action of expansion or any protectorate must be accompanied by military measures. Italy is the only judge of her security in East Africa. Put in military terms the Italo-Abyssinian problem is simple and logical. It admits with Geneva, without Geneva, against Geneva, but one solution." Yet it is barely ten years since Signor Mussolini pressed Great

Britain and other countries somewhat unwillingly to admit Abyssinia into the League of Nations, and thereby to undertake with him "to respect her territorial integrity." Further, we and he undertook, in the event of dispute, to refrain from any military action until at least three months had elapsed after a report had been made on the subject by the Council of the League. If he means what his words appear to mean, Signor Mussolini evidently regards his signature as a mere scrap of paper, and seems to be offended because the rest of us are unwilling to tear up our signatures in the same light-hearted way.

* * *

The Lords and the Special Areas.—The attention of the peers was called by the Bishop of Winchester on Wednesday to the Reports of the Commissioners for the Special Areas. The Bishop asked the Government what action they proposed to take on these Reports; and gave the Government the opportunity to clear up "a good deal of doubt and uncertainty left by the debate in the House of Commons last week." The Government had failed to outline any plan, and had left behind them "an impression, not of determination, but of hesitancy and uncertainty." Lord Portal, who was sent by the Government as Special Commissioner to report on the situation in South Wales in April of 1934, said that all members of the House must have felt "depression" at the speech of the Minister of Labour last week. He reminded his hearers that the Commissioners themselves had virtually no powers to cope with the problem of the Special Areas as a whole, and called for the appointment of a Minister specially responsible for these Areas. Lord Mottistone also called for the appointment of a Minister of Reconstruction "with plenary powers." After the Archbishop of Canterbury had expressed his hope that the Government would give a fuller, more hopeful and more decisive reply than in the House of Commons, the Lord Privy Seal, Lord Londonderry, confessed to finding himself in "a very difficult and embarrassing position." "There was a note of censure in practically every speech. . . . He was not a magician . . . ; these things could not be done in a moment of time. . . . Lord Londonderry fell back on the Government's defence in the Commons, namely, that the Government's actions in the last four years had "created a totally different atmosphere." A special Minister would seem like a dictator; the Commissioners were not hampered, nor was their work finished; trade and unemployment were improving; the Government would not be backward in implementing the Commissioners' suggestions; and so on. But the reception of the Government's *apologia* in the Lords was no better

than its reception in "another place"; and both Lord Ponsonby and the Bishop of Winchester made their dissatisfaction with the reply abundantly plain. The "note of censure" in the speeches of noble Lords, drawn from all parties and shades of opinion, is cogent proof of public discontent with the Government's attitude over the Special Areas. Perhaps the Government will heed dissatisfaction expressed in the Second Chamber more than that expressed in the Lower House. Whenever the General Election comes, it is certain that the Government's policy for the Special Areas, or the lack of it, will be taken by the electorate as a test of their credentials.

* * *

Naval Negotiations.—On Monday, Lord Cecil asked the Government's representatives in the House of Lords "what is meant by the abandonment of ratios and the substitution of a policy of programmes in reference to Naval Limitations." Replying for the Government, Lord Londonderry stated that His Majesty's Government decided, as a result of the negotiations with American and Japanese representatives last October, arising from Japan's denunciation of the 1922 Washington Naval Treaty, that no substitute agreement embodying fixed ratios of different countries' naval strength was possible. Instead, each power must make "a voluntary and unilateral declaration of its construction programme for, say, the period 1937-42." These declarations would not have any contractual force, but the construction figures of the Powers could be concerted beforehand, and each Power might undertake, *vis-à-vis* other participating Powers, not to vary its programme without one year's notice. Lord Londonderry informed their Lordships that these propositions had been made to the American and Japanese representatives before they went back home. If the prospects of a renewal of the Washington Agreement have diminished to vanishing point, this stabilisation of programmes is better than nothing and may, in fact, be a step of real importance if the "concerting beforehand" implied a real determination to reduce naval armaments. Unfortunately, there is only too much reason to fear that this exchange between the various Admiralties will start from the "necessity" of allowing something to bargain with, and then when once figures are put on paper the experts will be unwilling to give anything away. Little wonder that the state of naval negotiations gives rise to serious misgivings.

* * *

The Beet Sugar Subsidy Continues.—Mr Elliot announced the Government's beet sugar policy in the House of Commons on Tuesday afternoon. The original subsidy, which was granted for ten years, expired in 1934. The Government had promised before then to appoint a Committee of Inquiry, but the Committee, under the chairmanship of Mr Wilfrid Greene, was not actually appointed until April, 1934; and it did not report until this spring. The majority report was uncompromising in its recommendation that the subsidy should be discontinued as soon as possible. The Government have thus had plenty of time to screw up their courage to defy this small but noisy vested interest, and plenty of moral support for so doing. But their policy, now that it is announced after long delay, turns out to be the continuance of the subsidy "on agricultural grounds" and "without any specific limitation of the period during which assistance may be given." This fortunate industry is thus to be dole-fed until the crack of doom. There are, it is true, some welcome items in the White Paper. It speaks of a diminishing rate of assistance (on grounds, however, which are not entirely innocent of optimism), and the rate between the production for which assistance will be given into account. Moreover, an independent Sugar Corporation, or a single corporation, is to be created, and the existing companies are to be merged into it. This latter proposal is a variation of the one from the Greene Committee; but its application is to be very different from that proposed by the Committee. The Committee envisaged a scheme which in the last resort could be imposed

upon the companies; in assessing the capital of the new corporation no allowance whatever was to be made for goodwill (the "goodwill" being nothing but the claim to be permanent pensioners of the State); the physical assets should be calculated at "substantially written-down values"; and the subsidy should be fixed at such a figure as would allow only "a relatively low rate of interest" on the capital thus determined. The Government's proposals are only the mere shadow of this drastic scheme. The plan of amalgamation is to be drafted by the companies themselves, watched over by an "informal tribunal" whose functions are limited to examination and advice. The only reference to the permitted rate of profit (all of it derived from public money) is that the subsidy "shall be sufficient to provide for normal amortisation of plant and factories and a reasonable return on approved capital." The last crumb of comfort in the White Paper is the statement that the Government intend to initiate new international negotiations in the hope of reviving, and improving upon, the Chadbourne Plan. But these matters of detail cannot obscure the vital, shameful fact that this incredibly expensive and economically indefensible subvention is to be continued. The White Paper does not contain one word of argument on the advisability of its perpetuation. The forceful arguments of the majority of the Greene Committee, backed by the overwhelming mass of independent expert testimony, are swept aside with the bare statement that the Government "have reached the conclusion that it is desirable, on agricultural grounds, to continue to assist the beet sugar industry." The upshot of the whole sordid story is to point the familiar moral: no form of financial assistance by the State to particular interests, however expensive and however indefensible, will ever be withdrawn by a politically susceptible Government.

* * *

Future Agricultural Policy.—The beet sugar subsidy is not the only department of agricultural policy which has come under review in the last few days. On Thursday of last week Mr Elliot made a statement on the Government's attitude to imports of milk products after the expiry of the relevant Ottawa Agreements in August and of the present subsidy in aid of the price of milk used for manufacture in March next. The chosen policy, as regards butter and cheese, is that of the levy—that is, tariff-cum-subsidy—possibly coupled with some "regulation of the market" (i.e. quotas). As for powdered and condensed milk, an application for additional duties was already before the Import Duties Advisory Committee. It seems highly likely, therefore, that these imported milk products are going to be made artificially scarce by some means or other, so that they can be replaced by expensive home supplies. That any such arrangement is uneconomic goes almost without saying. But it would also be most inequitable, in view of the part that condensed milk, in particular, plays in the dietary of the poor. But considerations of economics and equity seem to be the last that are taken into account in the formation of our agricultural policy. On Friday the House of Commons approved some minor amendments to the Bacon Marketing Scheme and also the Bacon Development Scheme, which sets up a new super-Board over the existing Pigs and Bacon Boards. So far as sheer efficiency is concerned it is doubtless better to have one co-ordinating body rather than two antagonistic boards and it is possible that the presence of three "neutral" members, appointed by the Minister, will also be of advantage. But the Development Board will carry further a scheme which has not been the least monopolistic or the most satisfactory of Mr Elliot's children. Finally, on Wednesday of this week there was a general debate on the progress of agricultural policy. The discussion was not very satisfactory, mainly for the reason that most of the defenders of the Government (with the welcome exception of the Minister himself) argued as if the profits of the farmer were the only factor to be considered, and entirely failed to establish contact with the Opposition, who were concerned with the expense to the Exchequer and the burden to the consumer of the various schemes of agricultural protection. The speeches of the Conservative back-

benchers were in themselves sufficient justification for Sir Francis Acland's statement that the attitude of the farmers had changed in the last two years—

Then there were among the harder, closer-thinking farmers many who were genuinely anxious to work out, and to co-operate in improving and developing, better marketing schemes. Quite definitely that tendency has been fading into the background. The feeling is becoming stronger every week that it is much simpler not to bother about improved methods at all, but just to go strongly forward for more protection and more subsidy. The industry is, in fact, getting almost every month more and more deeply on the dole and to get it there and keep it there . . . is getting more and more a popular and successful cry.

Sir Francis meant, of course, popular and successful with farmers. Mr Elliot showed by his speech that the Government are increasingly aware of a wider constituency. "Any Minister of Agriculture," he said, "or President of the Board of Trade standing in my place would be bound to take the line that we had to help our own people and also had to allow good and cheap food supplies to reach the consuming millions of our town dwellers." That is a very welcome change from the dear and nasty food of which he was talking only a few months ago. The approach of a General Election is proving to be a great force for sanity in this sphere if not always in others.

* * *

The New Steel Agreement.—Happy days are here again for the British iron and steel industry. On July 31st the five-year agreement between the British iron and steel industry and the International Crude Steel Cartel, announced on June 12th, was formally ratified. The new agreement, which supersedes the provisional arrangement concluded on May 8th, is for a period of five years, with an optional termination at the end of three years, and will come into force on August 8th. The agreement provides for co-operation between the British iron and steel industry and the International Steel Cartel in respect of the regulation and development of the export markets and the protection of their respective home markets. It is understood that exports from the Cartel countries to the United Kingdom during the year ended August 7, 1936, have been fixed at 670,000 tons, and at 525,000 tons per annum during the following four years. As a compensation for the higher level of imports during the first year of the agreement it has been agreed that, should the total exports of the Cartel countries during that year exceed the total reached in 1934, two-thirds of the excess up to a maximum of 145,000 tons shall be allocated to the United Kingdom. Agreement has also been reached concerning the distribution of the Cartel's exports to this country between the various products. British import duties, which were raised above 33½ per cent. on March 26th and reduced again to their former level during the operation of the provisional agreement, are to be reduced further to a level not exceeding 20 per cent. *ad valorem*. But while the negotiations concerning the British import quota have thus been successfully concluded, final agreement has apparently not yet been reached on the division of foreign markets. If a mutually satisfactory agreement on exports is not reached by the end of the present year, the main agreement and any subsidiary agreements may be terminated by either party giving three months' notice in writing. Although the division of foreign markets is not an easy task and involves a measure of goodwill and "give and take" as well as consideration of the views of importing countries, serious difficulties are not expected to arise. But as the administrative machinery has not yet been completed, some time may elapse before all the details are finally settled. Meanwhile the parties to the agreement have set up a co-ordinating committee to be responsible for the proper carrying out of the agreement and for the general supervision of the sectional agreements. Provision is also made in the agreement for arbitration. The position of the British iron and steel industry has been considerably strengthened by the agreement with the Cartel. It is to be hoped that the British industry will utilise the improvement in its position for speedy reorganisation in an effort to increase efficiency and lower prices. Unfortun-

Cabinet-making in Holland.—The political storm in Holland seems to be quietening down again. Professor Aalberse, the leader of the Catholic Party in the Second Chamber, whose defection from allegiance to Dr. Colijn's economic policy had caused all the trouble, was charged by the Queen on Friday of last week to form a comprehensive Cabinet. As he could not co-operate with the Socialists alone, and as unanimity between all Parliamentary groups on an economic policy for the Netherlands was unobtainable, Professor Aalberse's efforts were unavailing. On Monday morning Dr. Colijn was re-commissioned by the Queen to form a new Cabinet, and accepted. A token of the confidence he inspires was evident in the immediate rally on the foreign exchange and stock markets and the diminution in the gold efflux from Holland. But it was hardly to be anticipated that the Catholic members would abandon their former opposition to a negative deflation without public works; and the Social Democrats remained irreconcilably opposed to Dr. Colijn's return. Our Amsterdam correspondent reports this week that the Ministerial crisis had shown a very large percentage of the Chamber, in fact the majority, to be in favour of a change from the deflationary policy hitherto pursued, which had resulted in a further decline in the financial and economic position of the Netherlands. If no drastic change of policy were announced, and Dr. Colijn were to adhere to his former methods, the present crisis would almost certainly recur and devaluation of the guilder could scarcely be prevented. In many influential quarters, indeed, devaluation is now deemed preferable to consistent deflation. Thus, Dr. Colijn's task was difficult. On Wednesday night, however, he was able to announce the composition of his new Cabinet. All of the former Ministers remain in office; but there has been a shuffle of portfolios, and a new department of Agriculture is created, separately from the Ministry of Economic Affairs. Three out of eleven members of the Cabinet are members of the Catholic Party; and it is announced that the Catholic Minister of Defence will be transferred to the Ministry of Agriculture, so that the Catholics will hold the important portfolios of Justice, Economic Affairs and Agriculture. This, and the failure of Professor Aalberse, may temper their zeal for opposing Dr. Colijn. Dr. Oud remains Finance Minister, and, moreover, Dr. Colijn has allowed it to be understood that the new Government will support any serious effort to convoke a conference with the object of achieving international monetary stabilisation. The vicissitudes which Holland has undergone in the last week are described in detail by our Amsterdam correspondent on page 231. Dr. Colijn's new Government has certainly substituted for them a general feeling of confidence. But confidence will hardly prove enough. Like that of his French colleague, M. Laval, when France was recently in a similar situation, Dr. Colijn's

new Government must stand or fall by its plans for carrying through a comprehensive deflation. And no one yet knows what those plans are.

* * *

The Nazi "Drive" in Germany.—Once again, the Nazi Radicals have got the bit between their teeth. The "drive" which was started last week against the Catholic Church has now spread all along the line until it has become a campaign against everything that is not stamped with the mark of National-Socialism—from the Catholics, Protestants, Jews and Stahlhelm to champion tennis players, who have now been declared to have lost a match, after having publicly won it, when they proved, under examination, to be rather weak on Nazi ideology. Even the West Indian banana has been the victim of intimidating threats for having ventured to usurp the home market of Aryan rhubarb! And there is reported to be a renewal of the old Nazi claim to put a political spoke in the professional wheel of the Reichswehr. Is Herr Hitler leading, or approving, or acquiescing? Does he realise that he cannot afford to let his followers attack everybody at once? For the moment, there is certainly a concentration of fire upon two targets: the Stahlhelm and the Catholic Church. On July 25th, the Stahlhelm organisation was dissolved, and its property provisionally confiscated, in West Mecklenburg; and on the 26th the same drastic action was taken in East Prussia. Simultaneously, the Reich League of Catholic Front Fighters has been dissolved by General Göring; the Catholic *German Youth Force* has been dissolved, and its funds confiscated, in Baden; the activities of all religious youth organisations have been barred by Herr Himmler, the head of the Secret Police; in Bavaria a number of Catholic newspapers have been suppressed; and the Burgomasters of Duisburg and Bochum in Westphalia have gone the length of ordering all municipal employees to resign from confessional associations and to withdraw their children from confessional youth organisations. All this is nothing but the Bolshevik policy of preventing the Churches from carrying on any activities beyond the bare performance of the liturgy within church walls. The answer to this challenge has been given by the Westphalians: a stubborn people who are resisting the Nazis' attempt to force them out of Christianity into Neo-paganism as stoutly as their ancestors (beatified by the Nazis on this account!) once resisted Charlemagne's attempt to force them out of paganism into Christianity. At Münster, a few days ago, the Neo-pagan hierophant, Professor Hauer, was effectively silenced by the pacific manoeuvres of the combined Catholic and Protestant population of the city, and the police flinched from arresting the Catholic Bishop when he presented himself to them in his bishop's robes. If Herr Hitler ignores these warnings, he may find that he has taken a turning which leads a Nordic Berserker, not up to Valhalla, but up to Canossa.

* * *

Awakening Mongolia.—The kites flown from time to time by "the Foreign Office Spokesman" at Tokyo are always worth watching. Though they are usually allowed to fall quickly to earth again, they show which way the wind of Japanese policy is blowing; and they sometimes give warning of an approaching hurricane. On July 23rd, the spokesman made three points in speaking about the relations between Manchukuo (the Chinese dominion which has been pocketed by Japan) and Outer Mongolia (an adjoining Chinese dominion which has been pocketed by the Soviet Union). He mentioned that there were 2,000,000 Mongols in the population of Manchukuo, as against only 760,000 in Outer Mongolia. He declared that Outer Mongolia could not expect to remain secluded and that Manchukuo was knocking at her door "as, eighty years ago, Commodore Perry knocked at the door of Japan." He expressed disbelief in the story that an ultimatum had been delivered to the Outer Mongolian Government of Urga by the Kwantung Army—the Japanese army on the Asiatic Continent, with its headquarters at Port Arthur. But he admitted that this army

was backing the so-called Manchukuo Government's demands on Outer Mongolia, and he declared that, since the Japanese army was under the command of the Emperor, the Japanese Government "could not direct it, especially when the army was on foreign service." These statements were made *à propos* the news that a deadlock had been reached in the negotiations at Manchuli, between Manchukuo and Outer Mongolia, over the Manchukuo Government's demand to station "agents" in Outer Mongolia. This deadlock is not surprising; for though the Outer Mongols may be restive under the present Russian ascendancy, they can have no wish to fall out of a Russian frying-pan into a Japanese fire. The Inner Mongols, who have successfully made use of the Japanese aggression in Manchuria as a lever to extort the grant of autonomy from the Chinese Government, are also now showing themselves suspicious of Japanese advances. This is even more significant, since Inner Mongolia had not only remained under effective Chinese control, but had been exposed to a systematic movement of Chinese peasant colonisation which threatened to squeeze the Inner Mongols out of their ancestral pasture-lands. No doubt the Kwantung Army Command is disappointed to find the Western Mongols so shy of walking, in the Manchurian Mongols' tracks, into the Japanese spider's parlour. But this disappointment will not be shared by the rest of the world; for we do not at all want the Japanese to do to the Mongols what Commodore Perry has done to the Japanese. Commodore Perry's knock has conjured up the demon of Japanese militarism. A Japanese knock on the door of Mongolia might perhaps evoke the spirit of Jenghis Khan.

* * *

The F.B.I. on Commercial Policy.—The Federation of British Industries has issued a "Survey of Britain's Recent Commercial Policy" which makes interesting reading even for those who cannot agree with all of its conclusions. The Survey points out the considerable improvement which has been effected in our foreign trade since 1931. But it jumps rather too quickly to the conclusion that this improvement has been the direct result of the British Government's policy. As the Survey itself points out, "too great a proportion of our revival in industrial activity has been due to the demands of the home market; too little has been due to a real development of the export trade which is vital to the future prosperity of the country." This lesson is re-emphasised in another publication of the F.B.I., the quarterly Business Barometer, where it is pointed out that, even if domestic activity continues at its present level, it will take ten years to drain the pools of unemployment in the export industries. Nor can we join with the F.B.I. in blessing the policy of industrial protection on the naïve ground that it has only been applied to industries which are economic and efficient. It is understandable that the F.B.I. is not in a position to be impolite to its constituent organisations, but the public is under no similar obligation. We cannot believe, for example, that the frequent admonitions to the steel industry, one of the most heavily protected, to reorganise itself—admonitions which have gone almost unheeded—were not necessary. It is when it turns to the future that the Survey becomes of more particular interest. In dealing with inter-Imperial trade, for example, it points out that the benefits of Ottawa have hitherto accrued much more to the Dominions than to the United Kingdom and asks whether British policy towards the Dominions "is to be based on the principle of reciprocity, or whether Great Britain is prepared to continue the general principle of free entry irrespective of the treatment which British exports receive in the various Dominion countries." It is, indeed, a portent that the F.B.I. should at last be asking that the Dominions should be invited to make an adequate return for British preferences. As regards foreign countries, the Survey points out that a considerable increase of trade portance "to foreign countries of the British market and by regarding the most-favoured-nation clause not as an automatic part of all treaties but "as a most valuable concession by this country, requiring an adequate and substantial *quid pro quo*." The support of the em-

battled industrialists is thus given to the general lines of policy which have long been urged by the *Economist*. If the mind of the Government is moving in the same direction it should be possible before long to secure a considerable relaxation of trade restrictions not only in foreign countries but within the Empire itself.

* * *

Sterling and International Prices.—The past fortnight has witnessed a moderate recovery in British and American wholesale prices. The *Economist's* complete British index number has risen by 1.0 per cent., while the primary products index number has risen by 1.9 per cent. In the United States the Irving Fisher general index number has advanced by 1.1 per cent., while the *Economist's* primary products index number has advanced by 1.8 per cent. In England the recovery in prices was fairly widespread, but in the United States it has been confined to certain farm products, such as wheat, lard, oats, bacon and linseed. On the Continent, French wholesale prices continue to fall, while the advance in Italian prices has for the moment been arrested. German prices are also slightly lower.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX (1927 = 100)

	Sept. 18, 1931	July 3, 1935	July 17, 1935	July 31, 1935
	1931	1935	1935	1935
Cereals and meat	64.5	68.4	66.3	68.3
Other foods	62.2	59.1	59.0	60.1
Textiles	43.7	55.5	56.4	56.6
Minerals	67.4	78.7	79.7	80.3
Miscellaneous	65.8	75.0	75.0	75.0
Complete index....	60.4	67.5	67.4	68.1
1913 = 100	83.1	92.9	92.7	93.7
1924 = 100	52.2	58.3	58.2	58.8

In the cereals and meat group there were sharp advances in wheat, flour and Argentine beef. Barley, maize, rice and English beef all became cheaper. Among other foods there were appreciable increases in butter and coco-oil. Textile prices were inclined to weaken, with the exception of hemp, which was subject to a big increase. In the minerals group there was a rise in lead. In the miscellaneous group increases in hides and linseed oil were neutralised by declines in leather, tallow and rubber, but none of these movements was very large.

The New Insurance Bill.—In the House of Commons on Friday of last week Mr Runciman introduced the Government's Assurance Companies (Winding-Up) Bill, which was read a second time. The chairman of the Phoenix Assurance Company gave the Bill a tepid welcome, but pleaded for the Insurance Undertakings Bill, which was drafted in 1924, and has never since then seen the light of day. In view of the anachronisms in that Bill and the points in which its authors have been proved wrong, this attachment to it is surprising. Members who represent interests other than insurance were more hostile and raised criticisms which Mr Runciman did not meet, though they go to the root of the matter. Both Mr Graham White and Sir A. M. Samuel spoke of the absurdity of a system of deposits which makes £15,000 or £20,000 of hypothecated funds the foundation of millions of pounds of liability. Sir A. M. Samuel attacked the Board of Trade and the Bill very effectively, and some of his criticisms will be very difficult to answer. Apart from the absurdity of deposits, he pointed out how unwilling a Government Department will be to use the powers given it by this Bill and so risk the danger of driving by the force of publicity a solvent company into bankruptcy. The problem, as we have pointed out, can be settled only by throwing on to all insurers the onus of regularly proving their solvency. We ought, said Sir A. M. Samuel, to have a standard laid down to which insurance companies ought to conform. It is very satisfactory to find this thoroughly sound doctrine preached in the House of Commons and we hope it will in due season bear fruit.

* * *

The Volume of Overseas Trade.—The quarterly returns of the volume of British overseas trade, published in last week's *Board of Trade Journal*, show an increase of 8.2 per cent. in the volume of our exports between the second quarters of 1934 and 1935. The increase over the figure for the corresponding period a year ago was, however, less marked than in January-March, 1935, when it was 11.9 per cent. The volume of retained imports last quarter was the same as in the second quarter a year ago. The average prices of both imports and exports have shown little variation in the past two years, the tendency being slightly downwards in April-June:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values £ Million	Index of Average Values 1930 = 100	Values in terms of 1930 Values £ Million	Index of Volume 1930 = 100	Declared Values £ Million	Index of Average Values 1930 = 100	Values in terms of 1930 Values £ Million	Index of Volume 1930 = 100

As compared with the corresponding quarter a year ago, the volume of retained imports of raw materials and "articles mainly unmanufactured" in April-June remained unchanged, but average prices were slightly lower than a year ago. On the other hand, imports of food, drink and tobacco rose by 4.4 per cent. in price and fell by 4.2 per cent. in volume. This is a very considerable rise. The average import price of "articles wholly or mainly

manufactured" showed a decline of 1.8 per cent., but the volume of these imports rose by 8.8 per cent. This increase is mainly due to larger purchases of non-ferrous metals and manufactures, machinery, manufactures of wood and timber, chemicals, oils and motor vehicles. During the same period the quantity of British manufactures exported rose by 8.7 per cent., but average prices showed a reduction of 1.6 per cent. The improvement in exports was most marked in the case of iron and steel, non-ferrous metals, cutlery (including hardware and implements), elec-

trical goods, machinery, silk yarns and manufactures, leather manufactures and motor vehicles. Apparel and rubber manufactures are the only categories of merchandise which were exported in smaller quantities than a year ago. But while the increase in exports as compared with a year ago was substantial and fairly general, the decline between the first and second quarters of 1935 suggests that the improvement is not going ahead so rapidly. Moreover, in these days of "blocked currencies," exports are one thing and payment for them quite another.

OVERSEAS CORRESPONDENCE

FRANCE

THE GOVERNMENT'S POLICY AND ITS CRITICS

The Government is anxious to emphasise the importance of the sacrifices which a cut of 10 per cent. in State expenditure entails for the purchasing power of the middle class (civil servants and rentiers) and ex-Service men. New decree-laws have therefore been prepared to reduce the cost of living. Public opinion, on the whole, has accepted all decree-laws remarkably well. Protests by ex-Service men and civil servants were never aggressive. Now the Government hopes to outflank the protesters by reducing certain retail prices, the decline in which since 1929 seems to have been much less than that of wholesale prices. The first batch of decree-laws was successful in impressing opinion by cuts in house rents and in the prices of necessities, e.g., bread, electricity, gas, coal, manure, etc. The Government now aims at reducing prices of meat and sugar. The movement has met with a favourable reception among middle-class shopkeepers; the retailers of the Rue Saint-Honoré in Paris, for example, are placarding a decline of 10 per cent. in all marketed prices. To extend the movement, the Government intends to ask for new sacrifices from certain of the larger business and financial, e.g. insurance and armaments industry, concerns. This policy has had its counterpart abroad, though it will be carried out in France by mutual consent.

This does not mean, however, that the Government's policy does not provoke criticism. Many observers attack the estimates of economies as optimistic, and point out that the Frs. 42,000 millions Budget ignores the so-called "Treasury Budget," which reached nearly Frs. 20,000 millions in 1935 and contains a good deal of recurrent expenditure. They urge that a "cut" of Frs. 1,650 millions on life annuities of Frs. 10,000 millions is not sufficient; nor is the "cut" of Frs. 1,400 millions on public debt arrears, which now reach an annual total of Frs. 15,000 millions. These critics observe that life annuities and public debt together constitute, at Frs. 25,000 millions, an excessive proportion for a Budget of (ostensibly) Frs. 42,000 millions. Other critics assert that the new deflation launched by the Government will have as its first consequence new declines in State and municipal revenues, hence a new financial disequilibrium. Others, again, point out that these decree-laws represent a first step on the road to "planned economy," which has been so often condemned in France. In reply, the Government's supporters declare, first, that these economies were ineluctable (with or without devaluation); secondly, that these ordered "breaches of contract" are preferable to a revolutionary rupture of all monetary contracts and to socialisation of the entire French economy—events which would in all probability have been preceded by political disturbance and, perhaps, by the fall of the Republic.

One thing is clear. A real political lull has followed the publication of the decree-laws. The Government's experiment is launched, and it will be vigorously carried out. New decree-laws are already in preparation for improving home and foreign trade. The Government is studying the feasibility of a 20 per cent. increase in import quotas, with a view to the gradual abandonment of the quota system.

PARIS, July 30.

GERMANY

FOREIGN TRADE AND EXCHANGE POLICY

THE "New Plan" of Dr. Schacht, which came into force on September 24th last, has been radically amended by introducing direct State control of imports for very many commodities. The original Plan, which was ostensibly designed to ration foreign exchange, prescribed that the importer and his foreign client could count upon foreign-exchange for prompt payment only if an "exchange certificate" for that particular transaction had been issued by the competent Supervision Board. This measure involved determination by the State both of the nature and the quantity of imports only in so far as the foreign exporter required prompt payment. The Boards could entirely prevent individual importing firms from concluding such exchange-certificate transactions. Concerning the nature and quantity of "certified" imports, the Boards were to be guided by Reichsbank instructions, which were based on the quantity of exchange currently available. But certification was not a condition of import. If not forbidden or restricted by former regulations (independent of the New Plan) imports remained free even after rejection of an application for a certificate. As, in the absence of a certificate, the foreign exporter could not expect prompt payment, this provision meant that he would deliver only if he were willing to grant credit. It was officially emphasised that import itself was not restricted, and officially implied that in view of the threatened shortage of raw materials, foreign credits would be welcome.

This unqualified freedom to import has now been abolished on the ground that it has led to an undesirable increase in Germany's foreign debt. The value of uncertified imports has not been declared. It is officially stated that the cause of its increase beyond the bounds of expectation was the unsatisfactory working of the clearing agreements, which involved an insufficient receipt of foreign exchange, and therefore enforced restriction of certified imports. The trade revival in Germany, however, increased the demand for foreign materials, and foreign competition in overseas markets continued. In consequence, "foreign exporters often accepted the risk of the freezing of their claims upon Germans, and delivered goods without troubling about the question whether an exchange certificate had been granted." Actually the initiative for the restriction of uncertified German imports came from outside Germany. Czechoslovakia, France, and Italy suggested "in the interest of the smooth functioning of mutual commodity and payments transactions" that Germany should admit their exports only where payment was guaranteed (by granting of exchange certificates). Agreements on these lines were concluded, and also, for certain commodities (mainly flowers and bulbs), with Holland.

The Ministry of Economy's new ordinance goes much farther than these agreements, by forbidding uncertified imports, from any country, of 186 categories of goods in the statistical schedule. Many of these goods come under the scope of the Supervision Boards for technical articles and for miscellaneous commodities. Among them are optical glass articles, glass, porcelain, ironware, machines and machine parts, electro-technical articles, vehicles, and certain kinds of jewellery. In future, none of these is to

be cleared through the Customs unless an exchange-certificate or equivalent document is presented. The prohibition does not apply to goods in transit, or to imports contracted for as part of "raw-material credit-deals" under which payment is ensured by re-export of finished goods.

This measure constitutes an extension of the system of State-control of imports which already existed *de facto*, if not *de jure*. The New Plan was already being administered for much wider purposes than were originally announced. As the primary aim was to ensure the advantageous expenditure of the limited supply of foreign exchange, the Plan necessarily involved official discrimination between the different kinds of proposed imports, and official control of the quantity of imports of each kind (this, however, as explained above, only so long as the foreign exporter did not, by selling without a certificate, expressly postpone his claim for immediate payment). But it was not implied that the Plan would be used for discrimination in matters of commercial policy between foreign exporting countries. Nevertheless, the Plan was administered for such discrimination. The Supervision Board's discretion in granting or refusing certificates was employed to realise the Ministry of Economy's aim of abolishing the large passive, and necessarily also the large active, balances with individual countries. Of late, this aim has often been officially expressed; and the fact that its realisation in practice limits freedom of choice for varieties of goods, and probably involves price-sacrifices, has been ignored. Owing to clearing and payment agreements, quotas, and other commercial treaty obligations, and to the fact that the direction of exports cannot be State-determined, the aim of balancing individual foreign trade accounts has not yet been realised. Great progress, however, has been made. Subject to the obstacles mentioned, imports are now almost as much Government-determined as under a State monopoly of the Russian kind. Official utterances boast of the success with which buying has been diverted from one country to another, and of the consequent reduction in passive and active balances. They point out, for instance, that Germany's once great export-surplus in Europe dwindled in the first quarter of this year to a mere Rm. 30 millions, and her once great import-surplus in trade with the United States to Rm. 6 millions. (U.S.A. figures sometimes even show a German export surplus.)

These developments have a direct bearing on the problem of Germany's debt. While in some official utterances the redistribution of Germany's trade balances is ascribed with satisfaction to German policy, in others it is ascribed with dissatisfaction to the clearing agreements. Thus, the outlook for foreign creditors remains unfavourable. A Germany that, despite passivity in the total trade-balance, had large active balances with European creditor countries could be compelled by these to pay at least part of her debts. If Germany's substantial active balances in Europe disappear, the total balance remaining passive, conditions precedent for new default will appear.

EXPORTS MAINTAINED

The official analyses of exports in the first half of 1935 are fairly favourable, but developments were irregular. Chemicals, with the minor exception of varnishes, show substantial increases as compared with the first half of 1934, heavy chemicals having risen (in quantity) 14, artificial fertilisers 23, explosives 17, and the group classed with ether and alcohol 26 per cent. Exports of dyes rose 2.6 per cent.; exports of aniline dyes to Asia have much increased, are now 45 per cent. of all dyestuffs exports, and exceed exports of dyes to Europe. Cement exports have doubled, compared with the first half of 1934, South America being the best market. The monthly average export of manufactured goods was 2½ per cent. lower in the first half of this year than in the first half of 1934, at Rm. 260,700,000, as against Rm. 267,500,000. Exports of iron and steel increased 19 per cent., of ironware 10 per cent., of motor-cars 44 per cent., of fine mechanical articles 12 per cent., of glass and pottery 8 per cent., of paper 5 per cent., and of electro-technical products 2 per cent. Exports of finished textiles declined 21 per cent., of

machinery 10 per cent., and of leather goods 5 per cent. In general, the export figures are not so favourable in branches which are relatively well occupied in consequence of the keen home demand. Thus, exports of machine tools, a branch occupied to 80 per cent. of capacity, fell 35 per cent.; whereas the locomotive manufacturing branch, which is only occupied to 38 per cent. of capacity, increased its exports. The increase in exports of ships by nearly 400 per cent. is, in part, attributed to mobilisation of blocked marks.

BERLIN, July 31.

ITALY

A ROYAL DECREE in the *Gazzetta Ufficiale* of July 22 provisionally suspended the duty of the Bank of Italy to keep a gold reserve not less than 40 per cent. of its note circulation and other sight liabilities. The last complete statement (that for June 30th) gives the percentage of gold reserve to total notes and sight liabilities as 41.55 per cent., and the percentage of gold proper to notes as 42.90 per cent. The Press emphasises that the suspension is due to the Treasury's decision to pay in cash all sums falling due in foreign countries; and that to keep faith and pay debts is vastly better than a formal homage to the 40 per cent. idol. True; but it could have been added that the 40 per cent. rule is bogus, discarded in theory and unworkable in practice; and that the function of a gold reserve is not to be frozen, but to be used, and even exported, when necessity arises. The vital points for the future of the lira are not the little more or the little less of the gold reserve, but the quantity of notes issued; and further, as has repeatedly been remarked in this correspondence, the composition of the "discounts" and "advances" items. So long as the note circulation is about 13,000 million lire and other sight liabilities do not exceed the present 1,000 million mark; so long as discounts and advances and "other debtors" are subject to the usual ebb and flow around normal levels, the lira is safe. In the past Italy has experienced monetary troubles almost only as a result of the inordinate rise in "discounts and advances," which means the issue of new notes against frozen assets. That way came the disorder of 1893, and also that of 1916 and the following years. There is no trace now of such expansion. The figure of advances to the I.R.I. (Institute of Industrial Reconstruction) is even decreasing; and the severe tradition inherited from Stringher's days makes it reasonably certain that "discounts and advances" will be kept within due limits.

TURIN, July 27.

HOLLAND

THE GOLD EFFLUX

THE course of affairs at the Netherlands Bank in the last few days is evident from the weekly return just published. The stock of gold declined by no less than 131 million guilders, from 688.4 million to 557.6 million guilders. The note circulation rose from 811.7 millions to 818.7 millions. As the bank's stock of gold had been augmented by the addition of gold ten-guilder coins to a value of 9 million guilders, the actual export of gold amounted to 140 millions. The bank's return disclosed the disappointing feature that "credits outstanding" had increased by no less than 113.2 million guilders, despite the rise in the bank

BRITANNIC

Chief Office: BROAD STREET CORNER, BIRMINGHAM

rate to 6 per cent. As a result, the gold cover for the bank's total liabilities declined from 77 per cent. to 64 per cent.

Considering the pace at which developments have taken place last week, it is evident that the hour had struck for more rigorous measures. But Dr. Colijn's action on Monday last induced a complete change in exchange market sentiment, with the result that the bank has not needed to ship any gold since that day. The total losses of gold since the beginning of this year have been 285 million guilders.

What the future has in store, in view of the approaching end-of-month settlements, is not certain; but it is evident that there is little prospect of a reduction in the very high rate of discount for the time being.

EXCITEMENT IN THE MARKETS

The Amsterdam Bourse and exchange markets have had an exciting week. Superficially, the foreign exchange market was quieter than the state of affairs really warranted. The reason is that support was accorded to the market by the Netherlands Bank, not only by making gold freely available for export, but also by intervening in the market to supply French francs at the rate of 9.82. As the machinery for issuing gold is often too cumbersome in operation to be of rapid influence on the foreign exchange market, a further fall of the guilder was averted by these means.

The efforts of the Dutch Central Bank to maintain the guilder at par were supplemented by action abroad. England supported the franc with the aid of the Equalisation Fund, while America also took steps to prevent the franc from dropping in terms of dollars by the operation of its Exchange Fund. In consequence, the Netherlands Bank was only called upon to act in regard to the French franc. Indirectly this kept sterling and dollars also in line, for the English Equalisation Fund was maintaining the sterling-franc rate. Thanks to this, the drain on the Netherlands Bank's stock of gold (131 million guilders, as given in the weekly return) was on a limited scale. But though the rates for spot currencies seemed stable, trading was on a very large scale, the flight from the guilder manifesting itself largely in purchases of dollars and sterling. As guilders were offered in such large quantities futures trading was completely dislocated and transactions were practically impossible; but no obstacles were raised against spot trading. Speculative transactions only partly covered by guilders were prohibited, and foreigners were not allowed to raise money on securities in Holland with the object of operating on the foreign exchange market.

The capital flight was also evident on the Amsterdam securities market, in the shape of a keen demand for sterling and dollar securities, and especially British War and Funding loans, large amounts of which are now held by Netherlands. Purchases of the leading local securities, such as Royal Dutch, Unilever and Philips, were also considerable. Within a few days, therefore, a steep advance was recorded up to July 26th, as will be seen from the following table:—

	July 12	July 18	July 26	July 29
Colonial Bank	37	36	39½	37½
Ned. Ind. Handelsbank ..	78½	76	80	77½
Neth. Trading Co.	114½	114	120½	118
Philips	257	259½	263½	257½
Unilever	99½	100	107½	103
Royal Dutch	182½	186	196½	190
Amsterdam Rubber	107½	106	112½	108½
Tr. Co. Amsterdam	169	167½	178	172½
Deli Batavia Co.	137	138½	144½	140
Deli Co.	141	149	155½	152
Senembah	147	152	156½	154

The turnover in American shares was on a big scale, especially as the New York market was strong. But purchases were not of a panic order, since for the past three months the possibility of devaluation has not been ignored, and many people have already adjusted their security holdings accordingly. Big companies, like Unilever, Royal Dutch, Philips, etc., took steps months ago to protect themselves against depreciation of the guilder. This accounts for the fact that the gold stocks of the Netherlands Bank have been more or less continuously on the decline since the beginning of the year. Since the previous big efflux of gold in June, when Minister Steenberghe resigned from the Cabinet because he was in favour of devaluation, gold has only returned to the country on a

very limited scale. Last week's big shipments of gold are accordingly attributed solely to flight from the guilder in Holland. This is clearly demonstrated by the big drop in quotations on the Dutch gilt-edged market. Offerings were on a liberal scale, and the disposal of guilder bonds by private investors has assumed big proportions.

None of the measures adopted by the Netherlands Bank—not even the rise in the bank rate to 6 per cent.—are of the slightest avail in arresting a movement of this nature. Forcing up the discount rate can keep speculative transactions within bounds; but it cannot have any deterrent effect on a purely internal flight of capital induced by fears of approaching devaluation. The collapse of the Netherlands gilt-edged market is distinctly evident in the following table:—

	July 12	July 18	July 26	July 29
4 per cent. Netherland	99½	99	94½	86½
3 per cent. Netherland	83½	81½	78½	79½
2½ per cent. Netherland	74½	73	69½	70½
4 per cent. Indies	97½	96½	92½	94
4 per cent. Amsterdam	94½	93½	88½	90½
4 per cent. Hague	99½	99	93½	94½
4 per cent. Rotterdam	93½	91½	84	88

On Monday, July 29th, when Dr. Colijn was charged with the formation of a Cabinet, the market suddenly presented quite a different aspect, as is apparent from the table. Trading, however, was within very narrow compass, and apprehension and suspense still prevail. Such a recovery of prices in a totally one-sided market should not therefore be overstressed. On the foreign exchange market, sterling and dollars dropped below the gold export point, but the tendency was uncertain and transactions were on a small scale. Very little would be needed to reverse the whole situation once more.

AMSTERDAM, July 31.

HUNGARY

FOREIGN CREDITORS AND TRANSFER PROSPECTS

DURING his recent visit to London, Dr. Fabinyi, the Finance Minister, assured the League Loans Committee that the Hungarian Government will transfer to the Trustees, in foreign exchange, 50 per cent. of the interest service during the period from August 2, 1935, to August 1, 1936. Furthermore it will continue to provide in its Budget the equivalent, in pengő, of the full service of the loan, including interest and sinking fund, and to deposit these amounts as at present in an account at the National Bank of Hungary. It will be remembered that the 1924 State Loan of Hungary, issued under the auspices of the League at 7½ per cent., has enjoyed special provisions ever since the transfer moratorium on foreign debts came into operation in 1931.

A new Standstill Agreement was initiated on June 25th with the British and American short-term banking creditors, providing for a reduction of interest payable by Hungarian debtors: (a) by ½ per cent. if interest is paid in pengő, (b) "a reasonable reduction" (recommended by the Committee of British and American creditors) if interest is paid in foreign exchange. The agreement also provides for a further compulsory capital repayment in pengő amounting to 3 per cent., as against 5 per cent. in the previous agreement. Instead of the stipulations in the previous agreement about voluntary capital repayments, the new agreement provides for constructive arrangements between the creditors and debtors, either by the use of certain assets of the debtor for payment, or in other ways.

Pengő amounts deposited with the National Bank under the previous Standstill Agreements, in respect of interest and commission on short-term banking debts not satisfied in foreign exchange, totalled at June 30 last, 54.3 million pengő, of which 48.6 million pengő had been accepted by creditors in satisfaction. The balance held by the National Bank thus amounted to 5.7 million pengő. Total capital repayments under the same agreements amounted at June 30th last to 22.6 million pengő, of which 21.1 million pengő had been disposed of by creditors, leaving a balance of 1.47 million pengő with the National Bank. In less than three years Hungary has thus paid out about 60 million

pengő to her British and American short-term creditors, which they were able (by additional exports and tourist traffic) to convert into foreign exchange. Even if we take into consideration the losses suffered by them on account of the difference between the external and internal valuation of the pengő, they have received on the average an interest rate of 2-3 per cent. plus something in the form of capital repayment.

Short-term banking creditors fared somewhat better than foreign long-term bondholders (other than the League loan-holders) because the so-called coupon pengő rate is considerably below the so-called standstill pengő. The position of the Cash Office for Foreign Credits, into which the pengő equivalent of the untransferred service of long-term loans is paid, was as follows at June 30, 1935:—

Balance held by the office	in million pengő
(a) in cash	99.7
(b) in Treasury Bills	62.4
Total	162.1

Out of the 99.7 million pengő in cash, 46 million pengő is loaned to the State (secured by Treasury Bills of the same amount) and 31.5 millions is lent as call money; so that the net amount at present held in cash is 22.2 million pengő. Payments by the Office on account of coupons and bonds redeemed totalled 139.9 million pengő, a considerable portion of which went to Hungarian holders of repatriated foreign bonds, and the rest to foreign bondholders. The latter receive in most cases 5 per cent. interest in pengő, but, owing to the extremely low quotation of coupon pengő, do not receive more than about half of that amount in foreign exchange.

BUDAPEST, July 22.

CANADA

MR STEVENS AND THE GENERAL ELECTION

THE Federal Parliament ended its final session on July 5th, but it has not been dissolved, and the date of the General Election is still uncertain. The campaign, however, is now for all practical purposes in full swing; and two days after prorogation the situation was complicated by the announcement from Mr H. H. Stevens that he had accepted the leadership of a new reform party organised by those sharing his view about the necessity for drastic reforms in the industrial, financial and commercial system of Canada. Mr Stevens has disclosed in an interview that one of his leading proposals will be a drastic reduction of tariffs on imports from Great Britain, especially those which are purchased by the farmers. Stevens Clubs are being formed in different cities, and Mr Stevens is shortly to embark upon a speech-making tour of the Dominion. Mr Bennett has decided to retain the leadership of the Conservative Party during the election.

In the end, the Government decided that its best course would be to get rid of Parliament and not risk a prolonged controversy over the Grain Marketing Bill. So it agreed to drastic amendments which went far to meet the Liberal objections. A Federal Wheat Board is to be created, but it will only extend its activities to coarse grains by special authority from the Government. The provisions for a compulsory 100 per cent. pool are not deleted, as the Liberals wanted; but their operation is suspended until it is shown that the new marketing system has failed. A minimum price is to be established for wheat. But the Board will only buy wheat when the price falls below that minimum, and it must buy from producers direct and not on the Exchange. It is also forbidden to conduct stabilisation operations. The private grain houses will continue in business, and the producers will be at liberty to sell either to them or the Board as they desire. The Board is to take over all the holdings of Mr McFarland, the Government wheat agent, which in June had reached a total of 228 million bushels, and dispose of them to the best possible advantage. The Senate, however, has struck out the words "as speedily as possible" inserted in the clause passed by

the Commons; and Mr Bennett has explicitly stated that there are to be no bargain counter sales of Canadian wheat.

It has been agreed that the chartered banks should be allowed a share of the premium profit on gold, namely on the amount of their gold stocks, now transferred to the Bank of Canada, which they claimed were held against foreign liabilities. They have been allowed 10,500,000 dollars as their share of the profit, leaving some 63½ millions for the Government on account of stocks now held by the Bank of Canada.

ENCOURAGING CROP REPORTS

The latest crop reports are very encouraging. Canada has been experiencing the wettest summer for many years, and the prairie country, which has suffered so terribly from drought since 1931, has actually had too much rain in various districts. On June 30th the condition of field crops, expressed numerically in percentages of the long-time average yields per acre, was reported by the Bureau of Statistics as follows, with the figures for May 31, 1935, and June 30, 1934, in brackets in the order mentioned:—

Spring wheat, 96 (97, 82); all wheat, 96 (97, 82); oats, 96 (94, 87); barley, 98 (95, 84); fall rye, 96 (99, 57); spring rye, 94 (97, 80); all rye, 96 (99, 63); peas, 98 (90, 95); beans, 97 (—, 82); buckwheat, 96 (—, 94); mixed grains, 101 (92, 89); flaxseed, 95 (—, 78); corn for husking, 95 (—, 76); potatoes, 96 (—, 96); turnips, etc., 95 (—, 89); hay and clover, 98 (88, 82); alfalfa, 103 (88, 72); fodder corn, 94 (—, 87); sugar beets, 100 (—, 74); pasture, 103 (85, 86).

Business is experiencing the usual midsummer dullness. For the week ending June 29th the general economic index of the Bureau of Statistics was 98.9, compared with 99.7 for the previous week and 91.7 for the corresponding week of 1934:—

Week ended—	Car-loadings	Wholesale Prices	Bank Clearings
June 29, 1935	68.9	71.3	95.4
June 22, 1935	72.9	71.5	96.2
June 30, 1934	70.3	71.9	82.9

Export clearances of wheat in June were the smallest for many years, amounting only to 6,494,622 bushels, compared with 18,425,933 bushels in June, 1934. The total exports for the first 49 weeks of the present crop year have only been 112,705,722 bushels, compared with 145,298,897. In 1934 stocks of wheat on July 5th amounted to 196,046,604 bushels, compared with 188,435,985 a year ago.

The pace of industrial activity has slackened considerably partly because orders are being held in suspense until political, weather and labour conditions are more favourable, and partly because a temporary saturation point has been reached in the demand for certain kinds of goods. The textile mills, except the rayon factories, are less busy than they have been for some time. Motor manufacturers, however, although their peak season of production has passed, are encountering a better demand than they had expected. One encouraging sign is the expansion of new building construction, and new contracts awarded in June had a value of 18½ million dollars, the highest figure for any single month since November, 1931; it is estimated that the volume of new construction work now in progress is about 20 per cent. higher than a year ago.

OTTAWA, July 20.

LETTER TO THE EDITOR

CONDITIONAL STABILISATION

TO THE EDITOR OF THE ECONOMIST

SIR,—The possibility of currency stabilisation is exercising the minds of many at the present time; the publication a few days ago in the *Manchester Guardian Commercial* of articles by, among others, Prof. L. Robbins and Prof. G. W. Daniels is symptomatic. In view of this wide interest, it is surprising that no comment has yet appeared in the *Economist* on the two articles by Sir Arthur Salter. Perhaps this is because

readers of the *Economist* have agreed with the proposals without qualification. Sir Arthur notes, however, that "there are obvious technical difficulties" in the scheme he puts forward, and I venture to call attention to one difficulty which I should like to see explored.

Towards the end of his first article Sir Arthur makes some remarks on the subject of price adjustment in our Home Market. Speaking of past experience on this point, he says "Gold and the Bank Rate exercised an absolute and, in the past, a beneficent tyranny over economic activity. The crisis of 1931 was fundamentally a successful resistance to the tyranny. . . . The rule then ended will not be resumed until it can be resumed as a constitutional, limited, and democratic monarchy."

The problems that such a reconstituted democratic monarchy would have to face, particularly in adjusting the internal price-level, are far reaching. How, for instance, are wages and salaries to be adjusted? In the past, with the help of our Free Trade system, Gold and the Bank Rate exercised a tyranny (on the whole successful, but not always claimed as beneficent) over our internal price level. That inevitably involved a control over wages. Free Trade has gone, and it is unlikely that the other two elements of the tyranny will ever resume their previous power. In these circumstances, is it not desirable that the future mechanism of wage adjustments should be seriously discussed?

The arguments against a deflationary policy are extremely strong, particularly in this country. But if we are going to throw so much responsibility on the exchange value of our currency for keeping our price level in conformity with world prices and maintaining a suitable balance of exports and imports, ought we not to examine the checks, such as they are, on undue inflation? As internal trade improves and unemployment becomes increasingly segregated in the depressed areas, it is extremely probable that general advances in wages

will take place, particularly in the sheltered industries. That in due course there should be wage advances, few will deny. Many of us, however, remember the immediate post-war years when wages and prices soared. The position was very well put by an Underground poster, which showed figures alternately labelled "Wages" and "Prices" chasing each other round a symbolical mulberry bush. It had the caption:—

Here we go round the Underground Tree
I chase you and you chase me
And nobody gets any further.

The inflationary period was followed by one of severe deflation, the years of wage increases by years of wage decreases, the latter a most distasteful job for those of us who had to implement them. It is true we were not on the Gold Standard at the time, nevertheless, the following questions should, I think, be considered.

(1) Is the excessive wage advance enthusiasm of 1920 likely to be repeated, perhaps not so precipitately, in the next few years?

(2) Is it desirable to ventilate the danger of such action in view of the currency policy it seems probable we shall adopt?

(3) Should we not examine rather more seriously what checks on our internal price level are possible before we encourage other nations to enter with us into a system in which "no country would be expected to make the ratio right by deflation?"

I suggest these are all points which should be discussed before we adopt, as a permanent or even semi-permanent policy, one which virtually scraps the old tyranny of Gold and the Bank Rate.

Yours truly,

L. J. CADBURY.

Northfield, Birmingham.

BOOKS AND PUBLICATIONS

THIS EUROPE

M. ANDRÉ SIEGFRIED is an indefatigable diagnostician of crises. When America's hey-day of prosperity was just deepening into the twilight of depression, M. André Siegfried wrote an excellent analysis of American prosperity-psychology, in which he pointed out many and great dangers. Then it was our turn. In *England's Crisis* we were told that our only hope lay in our genius for "muddling through," as typified, strangely enough, by our handling of the Dominions; and in our ability to economise in national expenditure. Now M. Siegfried extends his canvas, and in his latest book* he diagnoses another crisis; this time in "the entire form" of European civilisation. M. Siegfried then proceeds to write *Mene, Mene tehel upharsin* in bold characters on the European wall.

M. Siegfried reminds us at the outset that European domination of world forces and world history is a recent event; that it has been forged out of economic leadership in exploitation of new resources and new inventions; and that, as this exploitation has spread and permeated the most backward countries, the old European domination has become gently eclipsed. More and more Europe has come to export services and the highest of "quality" goods; more and more the less advanced Continents and countries have turned every one unto his own way, delving, forging, and manufacturing his own products. Upon this long-term trend was suddenly superimposed the intensification of all these tendencies through the Great War. The outcome has been rabid economic nationalism, both in Europe and overseas. But technical progress has not stood still; rather has it streaked ahead. And so much so that mechanisation, cheap labour, organisation, and economic nationalism acting all together in the less advanced countries face Europe with an almost invincible combination of forces. Nor can Europe, with its old culture and tradition of "quality," combine with America in defence; for the United States itself is the leader of a new, hard,

materialistic civilisation, whose dogma is efficiency, whose priests are the instalment-seller and the advertising expert, and whose Valhalla is populated only by millionaires. M. Siegfried calls attention to the redistribution in the volume of trade between the world's Continents, which is now taking place. America, Oceania, Asia are now expanding their mutual trade; Europe's share has been declining down to 1930 (he does not give later figures, though they show an opposite trend). Since, therefore, Europe has to depend more and more on her services, her invisible exports and her "quality" goods to retain her already overshadowed world leadership, she requires world trade. That means a renunciation, slight at the outset but growing more extensive as time goes on, of economic nationalism. And it may well mean that Europe must close the ranks of her component countries, must seek and achieve an internal unity comparable with that of America or Russia.

It will be seen that M. Siegfried's quasi-spiritual thesis rests almost entirely on his interpretation of European economic developments. He is, however, inclined to lay down sweeping assertions (e.g. that "European" economic methods are completely out-of-date) and then to draw the conclusions he wishes to prove from those assertions. In the economic sphere—for example, the question of Europe's share in inter-Continental trade—such methods are dangerous; and M. Siegfried might have founded his diagnosis in Europe. On these he has scarcely a word to say: difference of Democracy in Europe by brute force and propaganda, the return to the gospel of might, the vastly increased influence of women in Europe as compared with their position in other Continents, the abnegation of Reason by the European middle-classes—these are the divinities which now shape European ends; economic developments merely rough-hew them. But M. Siegfried pays them little heed. In consequence he is led to this remarkable concluding paragraph:—

Let us not be crushed by the American masses or the Asiatic masses. Let us remain true to the spirit of the

* "Europe's Crisis." By André Siegfried. Cape. 128 pages. 5s. net.

Caucasian host, for even the most punctilious racialists cannot pretend that it was not Aryan.

After the lengths to which M. Siegfried goes to prove Europe's economic dependence on world trade, this racial *cri de cœur* rings strangely in our ears. If M. Siegfried looks at the various European racialisms and nationalisms to-day, he must surely conclude that Europe is still what she has been for half a millennium—the field upon which all the contending forces of human progress work out their destinies. That is no mean service to humanity; and there seems little evidence that the field of that struggle is yet shifting.

SHORTER NOTICES

"Social Administration, including the Poor Laws." By John J. Clarke. Second (revised) Edition. Pitman and Sons, Ltd. 776 pages. 15s. net.

This is the second edition of Mr Clarke's deservedly well-known textbook. During the six years of its preparation we have experienced in this country a complicated refashioning of our social services, of local government administration of those services, and of their finances. The unemployment relief system has also been altered and reorganised, and then left in an anomalous state. All those concerned about our social welfare will endorse the Rt. Hon. Arthur Greenwood's cogent words in the Introduction: "The social services, as I conceive them in their developing form, are less concerned with relieving individuals from the consequences of social and economic evils, than with the positive, constructive task of creating a worthy background to life." The new edition of Mr Clarke's book will give students of social conditions an excellent panorama of the whole field in which these essential services are administered. In the second edition of his standard work, Mr Clarke has expanded the already exhaustive section on the Poor Laws; and he incorporates all the changes since 1929 in the social services and sets out their effects in the new framework of organisation. There are many useful appendices on the growth of expenditure on various social services, a comparison of the English and Scottish Poor Laws, etc. Mr Clarke, very rightly, links poor relief with unemployment relief and lays bare the interconnections. His belief that the book is unique in being "probably the first attempt to bring together within the pages of a single volume the whole of the Social Administration for which this nation has become famous" seems well founded.

"Die Reorganisation des englischen Kohlenbergbaus." By Dr. Albert Hunold. Buchdruckerei A. and W. Markwalder, Zürich. 136 pages. No price given.

This book is a useful study of the British Coal Mines Act of 1930. It gives the German-speaking student an admirable introduction to the British coal problem, particularly as it deals with the international position of the British coal industry before and after the war. Its only disadvantage is the fact that the statistics are not brought up to date. Nevertheless, Dr. Hunold's book is one of the best studies of the British coal industry which has been published in German during the last five years. It is a new link in the chain of valuable publications on British industries, prepared by students of the "Rechts- und Staatswissenschaftliche Fakultät of the University of Zürich."

"A Socialist Budget." By Colin Clark. The New Fabian Research Bureau and Gollancz. 36 pages. 6d.

In this ingenious statistical pamphlet Mr Clark takes the declared policy of the official Labour Party, calculates what it would cost, and suggests methods of raising the necessary money. He estimates that the increased social services proposed by the Labour Party would cost £65,000,000 a year, and that reduction of indirect taxation on articles of staple consumption would cost £10,000,000. He advocates the institution of a capital Budget to provide for the proposed public works programme; and £72,000,000 would be paid from the Revenue Budget for this purpose.

Mr Clark has therefore to raise £147,000,000 over and above what is at present available. He is remarkably nervous, for a Socialist, of the effect of high taxation in discouraging enterprise; and he does not propose to increase income tax, surtax, or death duties on the largest fortunes, but on the middle ranges only. He would supplement this, however, by a

Controlling Depressions

By PAUL H. DOUGLAS. 10s. 6d.

This book contains good epitomes of the theories of Wicksteed, Mises, Keynes, Hayek, Haberler, and Machlup as well as Professor Douglas's own theories on the generation and cure of business depression, which are illustrated from both American and European conditions.

Commodity Control in the Pacific Area

Compiled and Edited by
W. L. HOLLAND. 25s.

Issued under the auspices of the Institute of Pacific Relations, this book contains a number of contributions by acknowledged authorities. Subjects dealt with are The Canadian Wheat Pool, Co-operation in the Hawaiian Pineapple Business, The Japanese Rice Control Scheme, The Silk Control Scheme in Japan, Export Control Boards in New Zealand, etc., etc.

MONEY AND BANKING

BRAZIL'S EXCHANGE PROBLEMS

THE present position and prospects of Brazil's exchange regulation are becoming more and more clouded and complicated. In the main, the recent aggravation of Brazil's exchange problems is due to the difficulties of the coffee industry. The fall in coffee prices, accompanied by increasing competition in cultivation abroad and a decline in world consumption, as well as the import quotas imposed in Germany and elsewhere, have created problems for the Brazilian authorities which well-nigh defy solution. And many of these problems are, in essence, legacies of the abortive valorisation schemes initiated in the past. Persistent efforts to support the coffee industry by artificial measures place a heavy burden on the national accounts, which have been characterised by deficits for many years past; while Brazil's reliance upon one industry as the basis of her export trade has inevitably provoked wide repercussions in the foreign exchange market. The national currency is on a fiduciary basis; the tendency is towards inflation; and the inevitable fall in the exchange value of the milreis has been stemmed only by means of frequent and improvised changes in the control regulations, which, however, have not prevented accumulation of overdue commercial debts and drastic curtailment of the foreign debt service.

Probably the most vulnerable points in the present situation are the unbalanced national finances, and the extent to which uncovered Government borrowing at the Bank of Brazil takes place. Against this precarious financial background, the coffee industry has gone from bad to worse and the shortage of foreign exchange has rendered the remittance of funds from Brazil increasingly difficult in the past few years. The accumulation of unremitted commercial debts was first handled in June, 1933, when agreements were reached with United States and European creditors. Small amounts were settled in cash, and the bulk of the liabilities were funded for payment in monthly instalments over six years. It is estimated that these payments represent an annual prior charge on Brazil's exchange resources amounting to some £1,350,000 sterling. In the middle of last year, coffee prices showed a considerable recovery, and it was then hoped that equilibrium in Brazil's balance of international payments would be attained, but the restriction of European coffee purchases and the fall in prices towards the end of the year caused renewed exchange difficulties. The experiment of restricting the allocation of exchange for the payment of imports to a proportional basis, in accordance with the quantities of Brazilian coffees purchased by individual countries, was then tried. This scheme proved unworkable and was abandoned in February last, when an attempt was made to institute complete freedom for the sale of all export bills after delivery of 35 per cent. of total exchange proceeds to the Banco do Brazil at the "official" rate, to meet Government requirements. Exchange to pay for imported goods cleared through the Customs after February 11, 1935, has therefore to be obtained in the "free" market; but a fresh accumulation of frozen credits—or frozen debits, as far as Brazil was concerned—had taken place by that date, and these were the subject of fresh negotiations by the special Financial Mission which visited New York and the European capitals. As a result, a second Payments Agreement was signed with Great Britain by which the Brazilian Government undertook to set aside, from the percentage of foreign exchange reserved for Government requirements, an annual amount of £1,200,000 sterling to meet arrears of commercial debts; and to add to this sum on the termination of the arrangement of June, 1933, a further annual amount of £853,000. The Brazilian Government further undertook to provide within 30 days of the signature of the Agreement the sum of £1,000,000 sterling to be used without delay for the payment in cash of small arrears. This payment has not so far been forthcoming, so that the Agreement has already proved impracticable in at least one particular.

Unfortunately, the foreign trade figures for the first four months of 1935 reveal a sharp contraction in the export surplus to £1.7 millions (gold), against £4 millions (gold) in the corresponding period of 1934. Moreover, a proportion of coffee sales continues to be made against payment in "blocked" currencies. Coffee shipments in January-April, 1935, were worth only £5.5 millions (gold), against £8.3 millions (gold) last year, while cotton shipments, although greatly increased in value, only amounted to some £1.8 millions (gold), compared with £660,000 (gold). The quantity of cotton available for export this year will probably be reduced, owing to the unseasonable drought.

The first scheme for the funding of the Brazilian foreign debt services, which was imposed in unilateral fashion in February, 1934, was based upon an assumed annual export surplus of £8,000,000 sterling; and, as Brazil has no gold reserves, she is dependent solely upon her exports for the supply of foreign exchange to meet her obligations abroad. The shortage of exchange naturally tends to prejudice the claims both of commercial interests and of foreign bondholders. Already it is feared that, unless the coffee situation improves, a third accumulation of unpaid commercial bills is inevitable and that a point may be reached where choice will have to be made between default on the debt scheme or failure to provide adequate exchange cover for the present volume of imports. Indeed, the Brazilian authorities, on June 28th last, again imposed restriction on the supply of exchange-cover for imports. The exchange situation at the moment is more than usually uncertain; but apparently the proportions of 35 per cent. of export proceeds for official requirements and 65 per cent. for the "free" market are still maintained. The position in regard to remittances abroad, however, has apparently reverted to that existing prior to May, 1934. For instance, the authority of the Exchange Control is again necessary before remittances abroad can be made. In brief, the disposal of the 65 per cent. proportion of so-called "free" exchange is, in fact, no longer free, but is controlled by the Fiscalisation Department.

Efforts have been made for some time—and are still being made with some degree of success—to develop the export of other products than coffee—the increase in cotton exports has been particularly remarkable during the last twelve months—but Brazil and coffee remain virtually synonymous terms. The primary cause of the deterioration of the coffee situation since the autumn of last year has been the falling off in overseas consumption, but the problem has been to some extent intensified by official procrastination. A Commission representing coffee planters was appointed by the Agricultural Congress held in Rio de Janeiro last April. It was then stated that the probable surplus from the 1934-35 coffee crop at the end of last June would be 4,500,000 bags; that the following the assumption that exports during the 1935-36 crop year would be 16 million bags, there would be a further potential surplus of 5 million bags. The Commission advocated numerous measures, but the anxiously awaited regulations for marketing the new crop were not issued until June 11th, and the main question whether there should be a "sacrifice" quota, as well as other problems, was even then left to a Convention of coffee-growing States, which was held on July 11th. The Convention was fully representative and quickly reached agreement on the chief points in the terms of reference. Although the decisions are still open to modification, it was apparently agreed that there should be no "sacrifice" quota for the 1935-36 coffee crop, and that 4 million bags of the present crop should be purchased by the National Coffee Department to maintain a statistical equilibrium. It was also recognised that new State taxes must be imposed to

provide for these purchases—to be offset by a reduction in export taxes—so that, in the end, the dead-weight burden of taxation on coffee is merely being redistributed. It is clear that the purchase of 4 million bags of coffee by the National Coffee Department will be quite inadequate to ensure rectification of the statistical position, and much must depend on deliveries during the current crop year. The world deliveries of coffee to the consuming markets in the 1934-35 crop year were 22.6 million bags, compared with 24.4 million bags in 1933-34; and the share of Brazilian coffee was 14.8 million bags in 1934-35 and 16.0 million bags in 1933-34. The surplus stocks destroyed in Brazil amounted to 35,121,293 bags up to June 30th last, for which the necessary finance has had to be arranged.

Should the contraction in Brazilian coffee exports continue, it is obvious that the present degree of taxation and exchange allocation will be inadequate. The main hope of Brazil appears to lie in the diversification and increase in the production of commodities other than coffee; but this is a process which will take time, while there is urgent need for basic reforms in the entire national financial structure. The Brazilian Financial Mission was unsuccessful in obtaining fresh loan accommodation in New York or Europe. Thus, not only does the outlook remain obscure, but economies and sacrifices on the part of the Brazilians themselves would appear essential if Brazil is to escape from the difficulties and dangers which loom ahead.

FINANCIAL NOTES

The Foreign Exchanges.—The return to power of Dr. Colijn has been accompanied by a rally in the guilder and in most of the remaining gold *bloc* currencies. At their worst spot guilders were quoted last week at Fl. 7.42 to the pound, but by Wednesday the rate had improved to Fl. 7.27. Simultaneously the discount on three months' guilders narrowed from 42 to 13 cents. This recovery proved a little too rapid, and on Thursday the spot rate eased to Fl. 7.31 and the three months' rate to 20 cents discount. The rate is now well within the gold export, so that the gold outflow has now ceased. The total losses of the Netherlands Bank are estimated at Fl. 130 millions. While confidence is being regained there is no sign yet of any substantial return of capital to Holland. The French and Swiss francs have moved broadly in sympathy with the guilder. Up to Monday last the British Control was buying francs at rates of Frs. 75½ and Frs. 75¾, but by Wednesday the rate had improved to Frs. 74¾, and the Control at once became a seller. On Thursday spot francs were steady at Frs. 74½ with no official intervention. Three months' francs improved early in the week from Frs. 1½ to Frs. 1 discount, but widened on Thursday to Frs. 1½. Spot belgas moved in the opposite direction to the guilder, appreciating during the crisis from Bel. 29.40 to Bel. 29.20, and subsequently returning to Bel. 29.35. The main influence was the flight of funds from Holland to Belgium and the subsequent relaxation of the pressure. The lira has been held at Lire 60½, but as the Italian authorities operate mainly through Paris any sterling or dollar purchases by them tend to weaken the franc. Spot dollars remained steady at \$4.97½ during the whole week. Towards the end of the week three months' dollars came on offer. This was due to the revival in Wall Street, which is beginning to attract funds from London to New York, involving purchases of spot and sales of forward dollars.

The Money Market.—While money remains very easy, the clearing banks have experienced a fair demand for loans all the week. It is thought that the market had applied fairly heavily for Treasury bills to be paid for last Wednesday and maturing on October 31st, this being a convenient date. The clearing banks have been buyers at ½ per cent. of Treasury bills maturing during the first fortnight of October, but are not taking later dates. They also bought a few September bills, but there are not many now on offer.

	July 11, 1935	July 18, 1935	July 25, 1935	Aug. 2, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1	1	1	1
Discount rates:—				
Treasury bills	11-1	11	11	11
Three months' bank bills	11	11	11	11-1

It is suggested that one or two brokers are beginning to ask higher rates for Italian bank acceptances. It is impossible to quote a precise rate, for these bills are always classed as "agency bills," and so do not command the finest rates. The exact rate depends upon how many agency bills a parcel of bills contains. The City is agreed that any Italian attempt to obtain a credit in London—or in New York, for that matter—is doomed to failure, nor is it thought likely that Italy would have better success in Paris.

The Bank Return.—Currency requirements at the end of the month and the approach of the holidays are responsible for an expansion of £7.5 millions in the note circulation. The Reserve has fallen by £7.3 millions.

	Aug. 1, 1934	July 10, 1935	July 17, 1935	July 24, 1935	July 31, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	191.6	192.7	192.7	192.7	192.8
Note circulation	389.3	400.7	399.6	400.8	408.3
Banking Department:—					
Reserve	62.8	52.6	53.7	52.4	45.1
Public deposits.....	11.9	8.4	7.9	8.9	24.4
Bankers' deposits	96.5	108.6	103.6	100.8	75.7
Other deposits	36.9	36.4	38.8	36.6	38.5
Government securities.....	81.2	95.8	91.9	88.7	87.4
Discounts and advances	8.9	10.4	9.3	10.3	10.8
Other securities	10.5	12.6	13.5	12.9	13.4

Proportion 43.2% 34.3% 35.7% 35.8% 32.5%

The main movement in the Banking department is an increase of £15.5 millions in public deposits, which probably represents Wednesday's payments for Treasury bills. As a result of this transfer of funds and currency withdrawals by the public, bankers' deposits are reduced by £25.3 millions.

New York Money and Banking.—Money remains easy, and New York rates are unchanged. During the week ended July 24th New York member banks' loans to brokers were reduced from \$900 to \$880 millions. Other loans against securities fell from \$750 to \$748 millions. At the end of last week bank shares advanced sharply on Wall Street, through hopes that a provision in the new Banking Bill would allow banks to underwrite new issues. The Senate has passed the first section of the Bill providing for permanent deposit insurance up to a maximum of \$5,000 for individual accounts at a cost to the banks of one-twelfth per cent. of the sum insured. Senator Nye's proposal to found a Government-owned central bank was heavily defeated. Engagements for shipments of gold from Holland reported over the week-end amounted to about \$15 millions. Gold imports during June are returned at \$230.5 millions. Imports for the first half of 1935 amounted to \$805.4 millions, against \$852.4 millions in the first half of 1934. Thus the recent weakness of the gold *bloc* currencies has already resulted in gold shipments to New York commensurate with those which followed the revaluation of the dollar. Silver imports during June amounted to \$10.4 millions, against \$5.4 millions in June, 1934. Silver imports for the half-year were \$91.2 millions in 1935, against only \$19.4 millions in 1934. These statistics provide some indication of the consequences of American silver policy. In reply to representations from the silver interests, President Roosevelt has just claimed that the Treasury is discharging its duties under the Silver Purchase Act "in the manner most advantageous to the public interest." He added that the Act entrusts the Secretary to the Treasury with full responsibility for and control over day-to-day operations. This statement is very non-committal.

THE STOCK EXCHANGE

THE WESTERN AUSTRALIAN GOLDFIELD

THE development of gold-bearing areas the world over has been so rapid since Great Britain's departure from the gold standard that the lay investor may well have abandoned the task of keeping abreast of events. It is, for instance, less than a year since we last sketched the history and prospects of the Western Australian goldfield, but in the light of subsequent events it already seems curious that on that occasion (see the *Economist*, August 18, 1934, page 316) no mention was made of the discoveries at Yellowdine, which have since become the focus of interest in that field.

In fact, however, it was not until November of last year that Commonwealth Mining and Finance, Ltd., acquired from the Australian Machinery and Investment Company, Ltd., the whole of the latter's interests in the Yellowdine field. The area was thus brought, for the first time, to the notice of the public. Since then, the development of the properties has proceeded apace, and with sensational results. Technical work, moreover, has not outstripped financial development, and already the various participations in the field have become interlocked and somewhat complicated.

At an early stage, Commonwealth Mining invited other important interests to become associated with it in the development of the field and offered them one-half of its own interest. On this basis both Anglo-Australian Gold Development and Gold Fields Australian Development acquired a 20 per cent., and Great Boulder Proprietary a 10 per cent., participation in the Commonwealth interests in Yellowdine. These interests have subsequently been handed over to Yellowdine Investments, Ltd., a company with a capital of £100,000, in 5s. shares, which is held in the above proportions by the four participants. In addition, the Yellowdine shares originally taken over by Great Boulder Proprietary (together with other shares and interests) have recently been acquired by a new finance company, Great Boulder Mining and Finance, Ltd. The latter company, in addition, has subscribed at a premium for 60,000 £1 shares in Yellowdine Gold Development, Ltd., a company which has an authorised capital of £1,200,000 (£733,000 issued), and which will undertake the actual development of the field. Some 650,000 shares, or approximately 89 per cent. of its capital, is held by Yellowdine Investments, Ltd., which, in addition, is to have the right to provide any further capital which may be required in the future. The position may be seen more clearly from the following table:—

Holding of	In Yellowdine Investments		Equivalent in Yellowdine Gold Development	In Yellowdine Gold Development direct		Total Interest in Yellowdine
	No. of Shares	Per cent. of Total		No. of Shares	Per cent. of Total	
Yellowdine Investments, Ltd.	...	...	(%)	650,000	89	(%)
Commonwealth Mining and Finance	200,000	50	44	...	...	44
Anglo-Australian Gold Development	80,000	20	18	...	...	18
Gold Fields Australian Development	80,000	20	18	...	...	18
Great Boulder Mining and Finance	40,000	10	9	60,000	8	17
Other interests	...	...	...	23,000	3	3
	400,000	100	89	733,000	100	100

In future, as more capital for Yellowdine Gold Development is provided by Yellowdine Investments, the proportionate interest of the latter will increase. In any case, the preponderating interest in the field continues to be held by Commonwealth Mining and Finance.

In the meantime shareholders in the various companies interested have been well informed as to technical developments at the mine. Since November, some thirty cables have been published, many of them containing almost sensational news of high ore values. Broadly summarised, they have reported developments proving a lode some 3,000

feet in length, with an average width of 17 feet and average values of 1 oz. 15 dwt. per ton. The tonnage of ore actually proved amounts to 130,000, with a gold content of 195,000 ozs., worth, at 140s. per oz., some £1,365,000 sterling.

Unfortunately, development so far has scarcely extended below a depth of 100 feet. Boreholes put down earlier this year failed to intersect the reef at depth, but this does not afford conclusive proof that the lode fails to persist at depth. With a reef as wide as that at Yellowdine, it is extremely difficult to determine its dip, and the boreholes, therefore, may easily have missed it at depth. The reports published at the beginning of July of the development of sulphide ore are at least encouraging, for they suggest that the formation persists below the water level. Early last month Mr S. W. Munsie, Minister of Mines for Western Australia (who calls himself a "working miner" and does not claim to be a mining engineer or a geologist), declared, from his long experience, that the presence of evenly distributed gold throughout a quartz reef or a lode formation in the West was almost a sure sign of permanence. "I have never seen one case yet in Western Australia," he added, "where it is so thoroughly distributed throughout the lode formation as it is at Yellowdine."

Nevertheless the persistence of the Yellowdine formation at depth remains to be proved and, until it is, the shares of companies interested in it must contain a substantial speculative element. The main shaft is at present being sunk from the 100 ft. to the 200 ft. level, and investors should not, therefore, have to wait unduly long for knowledge of their fate, whether for better or worse, in this important respect.

In the meantime, it is difficult to gauge the market valuation of the property, since the shares of the operating company are not publicly held, and the holding companies concerned all have other interests. As previously mentioned, Great Boulder Mining and Finance recently acquired 60,000 shares in Yellowdine Gold Development for £107,500, a figure which gives a total valuation for the 733,000 shares in issue of £1,313,000. This figure is approximately equal to the gross value of the gold at present proved, without allowing anything for extraction costs.

On the other hand, if the 44 per cent. interest held by Commonwealth Mining and Finance is valued on this basis, it would amount to £577,720, equivalent to only some 3s. per Commonwealth share, leaving the remainder of the market price to represent the company's other assets. Actually the market would be far more likely to assess these other holdings of Commonwealth Mining as equivalent to the par value of its shares, leaving the premium of, say, 7s. per share, to represent the valuation of Yellowdine. On this basis, which suggests that Great Boulder Mining and Finance acquired its interest in Yellowdine Gold Development, Ltd., on exceptionally favourable terms, the Commonweath Mining 44 per cent. interest in the Yellowdine field would be valued at, say, £1,250,000, and the market valuation of the property as a whole would be £2,840,000. If Yellowdine fulfils all the hopes of its sponsors, this valuation need not prove excessive. It suggests, however, that a considerable discounting of the future is reflected in the present price of the shares, in view of the fact that the gross value of the gold actually proved is only £1,365,000.

Although overshadowed by the riches of the Yellowdine, the other interests of Commonwealth Mining must not be overlooked. The company is reopening several old mines, including the Sandqueen Gladsome, north of Kalgoorlie, where the production stage has just been reached; the Phoenix at Coolgardie; the Aladdin, a rather low-grade property away to the north-west; and the Atlas to the west of Coolgardie. Production from these properties should not be unduly delayed, in view of the advantages which are presented by the use of old workings. The same con-

siderations apply to the many interests of the Anglo-Australian Gold Development, of which the Beryl property, in the south of the State, is the most advanced, and is already owned by a separate company. Still further development of mining properties in Western Australia is foreshadowed by the formation of Great Boulder Mining and Finance, which, in addition to taking over the investments of the Great Boulder Proprietary and Associated Northern Blocks companies, is acquiring various interests in new properties from the Australian Machinery and Investment Company, Ltd. The latter also transferred to a separate company its holding in North Kalgurli United Mines early in 1934.

GOLDFIELDS OF WESTERN AUSTRALIA

Next to Yellowdine, however, much interest is centred on the properties exclusively owned by the Gold Fields Australian Development Company. By far the most important of these are some eighteen gold-mining leases lying immediately to the north of the highly successful Wiluna mine. Although the company was registered in 1932, it was not until the early part of this year, when development had made considerable progress, that the public was asked to take a hand in the venture. By that time it was already possible for the chairman to estimate that working profits should exceed 20s. per ton in Australian currency, and in all probability they will approximate to those of the mine's southern neighbour, the Wiluna. By an agreement with the Wiluna company, which also belongs to the Gold Fields group, the ore from both properties is to be treated at the one plant, thus saving the Development Company a considerable capital outlay. The latter's capital is still small, less than £500,000 being in issue, compared with £1½ millions for Wiluna. If the fortunes of Wiluna are to be repeated, the premium at which the Development Company's shares are already quoted should be fully justified in time.

It is just a year since the issue of shares at par made by the Gold Exploration and Finance Company of Australia was some 15 times oversubscribed. In the light of this event it is a little surprising that the shares are now quoted little over par. The company was formed under very strong auspices including the Imperial Smelting-Zinc Corporation group and Consolidated Gold Fields, Central Mining, Union Corporation and American interests. It would appear to have made steady progress during its first year's working, although results so far have not been spectacular, and have been overshadowed by events at Yellowdine and elsewhere. Its interests in Western Australia are concentrated in the hands of the Western Mining Corporation and Gold Mines of Kalgoorlie, Ltd., which has taken over part of its interests on the Golden Mile. Results at Kalgoorlie so far have been satisfactory and production is expected to start shortly. A few weeks ago, moreover, the Corporation added to its holdings in various other Western Australian mines, many of which have been producers in the past, a 75 per cent. interest in an option at Eristoun. This property is being explored by two shafts, in one of which the company has just reported values of 101 dwt., or 5 ozs. per ton, over a true width of 14 feet at a depth of 90 feet.

The following table gives particulars of issued capital, current share quotations and latest results (where available) of the principal established and developing concerns on the West Australian Goldfield:—

Company	Issued Capital	Denomination of Ordinary Shares	Quotation, July 31	Latest Report

† Including profits from flotation of companies.

The established producers have paid satisfactory dividends in recent years, and there are indications that some, at least, of the newcomers may achieve a similar degree of success. The speculative investor, however, may be advised to entrust his money to the more important interests which are developing the field, for they provide the expert technical resources and adequate financial strength without which an inherently speculative industry is converted into a pure gamble.

INVESTMENT NOTES

Course of Share Values.—Traditional holiday conditions and the competing attractions of a substantial number of new issues have induced only a moderate net reaction in the level of share values. A spell of profit-taking, which was no more than due after the uninterrupted rise of the previous three months, led to a two-point recession in the early days of July, but the commencement of the three-week holiday account brought moderate support for shares of contemporary interest, such as brewery and steel issues. Wall Street is now wondering if the long-heralded boom is awakening. The upswing in common stocks since the beginning of March has recently broken through the "high" of February last year. So far, recurrent profit-taking has tempered the rise, but the impressive mid-summer trade reports, coupled with the sound technical position, have encouraged greater speculative interest than for many months past. The slightly chequered course of the London market results, in part, from the rather specialised character of business recently. Over the past month both the Actuaries' Index of 158 industrial equities

and the Index of $2\frac{1}{2}$ per cent. Consols have declined only fractionally from 77.5 to 77.4 and from 151.9 to 151.7 respectively (December 31, 1928=100). The decline in the former series, however, masks a rise in iron and steel and

American: "Standard Statistics" Index of 50 Common Stocks

brewery shares, which has been offset by falling quotations for coal shares and home railway stocks. A selection of component indices is given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	6 Months Ago (Jan. 29, 1935)	Month Ago (June 25, 1935)	This Week (July 30, 1935)	6 Months Ago (Jan. 29, 1935)	Month Ago (June 25, 1935)	This Week (July 30, 1935)
Fixed Interest Stocks:						
2½% Consols.....	162.8	151.9	151.7	2.74	2.94	2.94
Misc. Indus. Debs. (13)...	126.3	125.3	125.9	3.85	3.88	3.86
Misc. Indus. Pref. (44)...	122.8	121.1	120.6	4.18	4.24	4.26
Ordinary Shares:						
Investment Trusts (14)...	57.1	54.0	56.8	3.54	3.68	3.59
Building Materials (4)...	85.3	92.9	90.9	4.20	4.34	4.45
Coal (6).....	98.9	92.9	87.0	3.73	3.74	4.08
Iron and Steel (8).....	54.6	59.9	62.3	2.81	3.33	3.22
Oil (5).....	63.4	68.6	66.3	4.07	4.11	4.72
Home Rails (4).....	70.9	69.5	66.6	1.45	1.55	1.54
Breweries and Distill. (19)	128.6	132.2	133.2	4.00	4.00	4.09

Although the level of $2\frac{1}{2}$ per cent. Consols has fallen by ten points since the end of January, there is little evidence of a general equity boom in counterpart. The course of share quotations and yields suggests, indeed, that the market has been fairly discreet in discounting recent increases in dividends.

Corporation Borrowing Resumed.—The fears which were expressed in the market when municipal refunding operations were resumed early in June have proved groundless. This week has seen a resumption of corporation issues, after a judicious interval of a month in which such large-scale operations as the London Electric Transport, India, and Australia issues had been safely launched. The present issues, however, differ in one important respect from those of six and eight weeks ago. At that time, Manchester, Cardiff and Birkenhead could obtain no better terms than a twenty-year 3 per cent. stock at 99. In view of the statement issued by the Government broker that the Bank of England might express an "opinion" regarding the terms of issue of Corporation loans, these rates were widely interpreted as evidence of Treasury abandonment of Local Loans conversion preparations, and as part of a "safety-first" policy to ensure the success of trustee operations, even at the expense of some slight deterioration in gilt-edged prices. The London Electric issue tended to confirm this view, for its terms suggested

that the authorities might be contemplating the possibility of higher interest rates in the future. This week's trustee issues for Dundee and West Bromwich, however, have taken the form of 3 per cent. stocks at par, with maximum lives of 23 and 21 years respectively, and optional redemption 2 years earlier. For the time being, it would appear that the official attitude has been somewhat modified. The steadier tendency in the gilt-edged market during the past month does not necessarily refute the suggestions which were recently current that gilt-edged prices may have passed their cyclical peak. There is, however, too slender a basis as yet for reaching either conclusion.

Argentine Transport Developments.—Last Saturday the details of important proposed changes in the Co-ordination of Transport Bill, now before the Chamber, were published. The problem of "road v. rail" has engaged the attention of the Government for a considerable time. On September 26, 1934, the Committee of Communications and Transport of the Argentine Chamber of Deputies published a majority and a minority report. The majority report recommended that the entire question of road and rail transport should be placed under the jurisdiction of the National Railway Department. The minority report proposed that the matter should be handled by the Minister of Public Works, assisted by a National Transport Board composed of the Director General of Railways, the President of the National Road Department, the General Director of National Navigation and Ports, a representative of the railway companies, and a representative each of road transport and navigation companies—that is, by a President and six members. The majority of the Committee has now decided to substitute for its previous report a series of recommendations far more closely resembling the proposals of the minority. The original Bill cannot be withdrawn without the authority of the Chamber of Deputies, which will therefore be sought at the first opportunity. Meanwhile, to save time, the majority of the Committee has drafted a substitute Bill. The chief provisions of the new Bill are as follows. A Transport Co-ordination Board is to be created, composed of nine members. These comprise:—

- (1) A President (of Argentine nationality) appointed by the Executive, in agreement with the Senate, for a period of four years and eligible for re-election.
- (2) The President of the National Road Board.
- (3) The General Manager of the State Railways.
- (4) The Director-General of Navigation and Ports.
- (5) The Director-General of Railways.
- (6), (7), (8) and (9) A representative each for large coast-wise shipping companies, small coastwise shipping companies, railway companies, and motor transport concerns.

With the exception of the President, the members of the Board are to be honorary. The Board will issue permits to concerns engaged in transport activities in the National territories (as distinct from autonomous Provinces); between these and the Provinces; between Provinces; or between the Provinces and the federal capital. The permits are to have a maximum duration of ten years, and will only be renewed or transferred by special permission of the Board. The Board is to co-ordinate transport services by land, water and air in a manner best calculated to serve the public interest and the national economy. When issuing permits the Board will take into consideration the relative desirability of the new service, and the possibility that the requirements of the zone may be met by existing concerns. Companies to which permits are issued will be exempt from all taxes, except those imposed for the preservation of the roads. The first Bill stated more precisely how co-ordination was to be effected. In the new Bill, however, details of execution are to be left to the Board. It will be seen that whereas the National Railway Department was originally to have been the controlling authority, in the new draft railway interests are only represented by three out of nine members. The former Transport Co-ordination Bill was due to come before the Chamber on July 17th; but political developments delayed its discussion. In certain political quarters it is believed that the Bill will not pass through Congress during the current year. In its original form, the Bill

aroused considerable opposition, despite the full publicity given in Argentina to the transport co-ordination schemes of other countries. It was denounced as bound to establish a monopoly for one form of transport; and was attacked not only by the motor interests, but also by the Socialist Party (excluding, of course, the 120,000 railway workers) and by many other bodies. The fact that great sums of public money have been spent on road-building in recent years has provided ammunition for the opponents of the measure. The new Bill seems more calculated to placate this cogent opposition.

The Railway Interims.—The "Berwick" and Great Western interim statements were, in general, very similar to those of the London Midland and Scottish and the Southern, which were discussed on page 185 of last week's *Economist*. The actual dividends—a repetition of last year's $\frac{1}{2}$ per cent. on Great Western ordinary, and a full payment on the London and North Eastern guaranteed stocks, but nothing on the first preferences—were in accordance with general expectation. The revenue statements, however, again showed heavy, though not unexpected, increases in wage costs, and brought home very clearly the significance of last year's concessions. A decline of £74,500 in the gross takings of the London and North Eastern was coupled with an increase of £252,400 in expenditure, of which £227,800 was attributed to salaries and wages. The Great Western, however, was the only one of the four companies to show an increase in net revenue. Gross receipts advanced by £35,000 and expenditure by only £18,000, despite an extra charge of £120,000 for wage and salary cut restorations and for the Jubilee celebrations. Taken as a whole, the interim statements are not unsatisfactory, although they provide no encouragement for the market. It must not be forgotten that the earnings position is a little distorted by the fact that the first half of this year contained one more Sunday than that of 1934. The effect of this calendar factor upon gross receipts is evidently greater than its effect upon expenditure. The gains in net revenue, therefore, appear smaller, and the losses larger, than if the periods had been precisely comparable. This factor will be made good during the current half-year, which includes one Sunday less. The expenditure record, moreover, was at least no worse than had been expected. The expenses of the four lines increased by £515,000, including a somewhat mystifying increase of £100,000 in the ancillary expenses of the London Midland and Scottish. The increase in costs for the whole year, resulting from the wage and salary cut restorations alone, was originally estimated at £960,000, and more than one-half of this amount should have accrued in the first half of the year, since some of the restorations took effect from last October. With the exception of the London and North Eastern, therefore, each of the four lines appears to have reduced its non-wage costs, which cannot be regarded as a bearish factor. On the results of the half-year, without allowing for any further gains in net revenue which may be achieved in the second six months, earnings for Southern preferred may be estimated at $3\frac{1}{2}$ per cent.; for London Midland and Scottish 4 per cent. 1923 preference, $1\frac{1}{2}$ per cent.; for London and North Eastern 4 per cent. first preference, $2\frac{1}{2}$ per cent.; and for Great Western ordinary, 1 per cent. Even assuming these distributions, which leave out of account the satisfactory traffic increases which have been recorded since the end of the half-year, the stocks would not be grossly over-valued. There is always the prospect, eventually, of reductions in rating assessments should the House of Lords decision in the Southern case prove favourable.

Steel Shares and the Cartel Agreement.—Steel shares have finished the week strongly, under the stimulus of the agreement between the British and Continental steel manufacturers. In this agreement, however, there is nothing to justify more than a moderate advance in share prices. The possible benefits which may accrue from the quantitative limitations of imports and the stabilisation of

The Distinctive System

of

The Scottish Provident Institution

Under the Distinctive System the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to bonuses.

exports were adequately discounted in the middle of June, when the agreement was reached in principle. The only significance of the new agreement, from the point of view of profit prospects, is the indication which it gives that the necessary complex of sectional agreements will be built up successfully and will be operated with goodwill on each side. Its structure, however, is not yet complete, although the bulk of the work appears to have been done. By the agreement, of course, the centralisation of the industry's foreign trade is brought one step nearer. The effect upon individual shares is still a little difficult to assess. The following table shows the advances which have already been achieved by the leading shares:—

Company (and Share Denomination)	Jan. 2, 1935	Mar. 27, 1935	May 8, 1935	June 12, 1935	July 31, 1935	Div. %	Yield %

* Imposition of 50 per cent. tariff on steel. † Temporary agreement with Cartel, and duty reduced again to 33½ per cent. ‡ Long-term agreement in principle. § Long-term agreement signed.

The leading shares in the market (whose prospects were discussed in the *Economist* dated July 13th, on page 79) will, in general, benefit, for most of them produce semi-finished steel. The main danger is the old one of an over-expansion of capacity. Already plans have been made public showing the intentions of Dorman Long and South Durham to enter into the production of steel strip and sheets. As a result of export regulation, an improvement in the world price structure is clearly in prospect. This will benefit particularly the producers of galvanised sheets, of which John Lysaght (Guest, Keen group) and John Summers are the chief. If there is a general price increase—and it is not unlikely—the brunt of the loss will fall upon the consumers of steel and particularly upon the independent re-rollers. The organisation of the latter, however, does not usually extend to public share capitalisation. Whitehead, which is of public interest, obtains raw material by long-term agreement from Richard Thomas. Thus, on a medium-term view, the profit increase may be substantial even if the agreement has no effect upon the current year's accounts. The market, however, still has fair justification for cautious estimation of earnings in the immediate future.

Beet Sugar Companies and the Subsidy.—The Government's long-awaited statement on beet sugar policy which is discussed on page 226, is regarded as a mild bull point for the companies. From the beginning, the

market has been confident that the first choice of the Greene Committee would not be adopted. In the event, the beet sugar industry is to be continued indefinitely. To reduce the liabilities of the Exchequer, however, the total output is to be limited at the 1935-36 level of 560,000 tons of white sugar. Further economies are to be sought in a diminishing scale of "assistance" and, more particularly, in an amalgamation scheme to cover all the beet sugar companies more or less in accordance with the Greene Committee's second choice proposals. The amalgamation itself is expected to yield substantial savings. But it seems probable, though by no means certain, that the Government will look to the factories' profits for an important part of the economies in view. According to the Greene Committee recommendations, the profit allowable to the factories would be calculated on a strictly written down valuation for fixed assets plus working capital, with no allowance for goodwill. Moreover, the more powerful concerns would bear part of the expenses of the less efficient. Until full details are published of the amalgamation scheme itself it is impossible to assess the effect on individual concerns. Its terms, however, are likely to prove more generous than those envisaged by the Greene Committee. It is still not certain that profits will be substantially lower than in past years when, as was shown in a Note on the subject in our issue of June 8th (page 1313), the leading concerns have not only been able to pay very substantial dividends on their capital, but have been able to accumulate impressive liquid reserves as well. The new scheme will come into operation on April 1, 1936, at latest. Thus, in compensation for any reduction in earnings, the companies are given an indefinitely extended life together with something amounting almost to an assurance of modest profits. While final comment must await publication of detailed proposals, it would seem that beet sugar company shares would in future occupy a position somewhat analogous to that of a well-established public utility concern, characterised by stability of earning power, rather than by high-gear possibilities.

* * *

Revival on Wall Street.—Political doubts do not deter Wall Street. The market is certainly in confident mood, and despite the usual waves of profit-taking, prices are firm. At intervals during the last two years, there have been advances both in business activity and in stock prices, but each boomlet has collapsed ignominiously. The present forward movement, however, appears more soundly based than were its predecessors. Previous advances were largely founded upon activity in the consumers-goods industries, and, in particular, upon the motor trade. The present revival centres round a very definite improvement in the privately-owned construction industries in general, and in house building in particular. Steel production is going ahead at a rate quite unique at this time of the year, and the output is, moreover, being consumed in current construction work. These encouraging factors, together with the favourable earnings statements issued by many concerns for the second quarter of the year, are the root of the market's optimism. Although there are still very many unknown factors in the immediate future—A.A.A. and the effects of the official spending programme are only two of them—the improved temper appears more persistent than on former occasions. Further advance, however, may be rather less rapid. Railroads and utilities normally account for much the greatest part of new construction work, but they are both unlikely, in the near future, to undertake new development, the first for economic and the second for political reasons. The fact, too, that the banking and industrial structure is still somewhat illiquid may act as a restraining factor, for as prices rise, there will be a renewed tendency for frozen bank advances to be repaid. The market is much encouraged, on the other hand, by the extent of sound investment demand. Much of the interest is inevitably essentially speculative—and that accounts for the irregularity of some sections of the market—but there is a solid core of investment buying. The return of market confidence in recent weeks is a surprising but reassuring fact.

Further Fixed Trusts.—Whatever verdict is eventually passed upon the fixed-trust movement, posterity will not complain that its managers were failing in ingenuity. The announcements issued this week on behalf of two new fixed trusts, under established managements, present a further illustration of the search for novel and, in the majority of cases, useful features. Both the Security First Trust (sponsored by interests associated with Dawney Day and Company) and the British Empire Cumulative Fixed Trust (in the Fixed Trust Investments group) adopt provisions for an "escrow fund," from which regular instalments can be made available for management expenses. Both managements also undertake to repurchase sub-units upon request, at prevailing "break-up" prices. The most novel feature, however, announced by Security First Trust, relates to the optional conversion of sub-units into shares in a managed investment trust. The managers are empowered to convene a meeting of certificate holders at any time during the last quarter of the trust period of twenty years, which may authorise, by majority vote, the exchange of the underlying securities in the Trust for shares in a managed investment trust company formed to take over the Trust property. This provision, it should be noted, would not affect the right of any sub-unit holder, who "contracted out," to receive his proportionate share in cash. The British Empire Cumulative, without offering specific alternatives when the time for liquidation approaches, entitles certificate holders or managers to call a meeting to decide how the Trust shall be liquidated. Both provisions offer an alternative to the automatic liquidation, at the end of the trust period, of a portfolio which might then have highly favourable prospects. Any widespread adoption of these or similar provisions, however, would inevitably bring the problem of management capacity into the forefront. The qualities required in the original choice and supervision of, say, 25 industrial securities may differ appreciably from those which are called for in the direction of a managed investment trust. The two portfolios include a number of industrial "leaders" which have already been generally included in fixed trust portfolios, and greater prominence is given to steel, building and newspaper issues in selecting the remainder of the units. The increasing tendency towards the duplication of leading shares inevitably results from the formation of new trusts, and, if the movement were to outgrow its strength, this factor might involve difficulties of marketing which would certainly not be compensated by ingenious points of constitution-building.

COMPANY NOTES

Linen Companies.—In addition to the general difficulties of textile industries during the post-war period of falling prices, the linen industry has been faced with special problems of its own. Though containing several large industrial units, such as Linen Thread and York Street Flax Spinning, the greater part of the industry, especially that producing damask and fine linen, was organised on a traditional rather than on a modern basis. After the war the fashion of polished tables displaced the tablecloth in many homes, while for underwear, rayon was becoming an increasingly strong competitor. The industry had to adjust itself to conditions in which some of its more important branches could no longer prosper on a luxury demand. That it has made some progress in this adjustment is evident from the fact that, for 1934, exports of linen piece-goods have already exceeded the 1929 level, with 77,596,000 square yards, against 71,539,600 in 1929. The proportion of the total market represented by export consumption was already falling before the depression, and has fallen still more since. This improvement in exports is, therefore, exceeded by the advance in total output. Higher turnover, however, has only been purchased at the cost of sweeping reduction in prices. Other factors, such as improved designs and changes of fashion, have also contributed. Profits, however, remain low or moderate, and the rise in flax prices has no doubt presented difficulties. There would, however, appear to be room for a fur-

ther improvement in efficiency and reduction of costs, so that, if the present level of prices can be maintained, higher profits should not be impossible in the future. The adjustment which the industry is making, however, must be a slow process, and a rapid turnover cannot be counted on.

* Retailers of general drapery, specialising in linen largely manufactured by themselves.
† Tax free.

The investment interest in linen is limited to a few concerns, the principal of which are shown in the accompanying table of profits. As in the cotton industry, the manufacturers and specialists have fared very much better than the spinners.

* * *

Guinness Accounts.—The results of Arthur Guinness, Son and Company fully maintain the improving trend which has been established in the brewing trade in the last two years. Total gross profits, exclusive of investment revenue, have risen from £1,701,131 to £1,966,132. The returns of beer and stout exported from the Irish Free State suggest that this improvement is due to a slightly better turnover at a slightly lower average value per barrel. Neither turnover nor profits have yet recovered the levels normal before the depression, when gross profits were known to exceed the £3 millions mark, and normally fluctuated between £2½ millions and £2½ millions. The comparison with more recent years is shown in the following table:—

	Years to June 30,		
	1933	1934	1935
	£	£	£
Gross profit and investment income	1,633,606	1,912,144	2,173,114
Maintenance and depreciation ...	146,985	147,449	146,086
Other expenses and fees	17,718	19,512	13,819
Preference dividend (net)	90,000	91,500	93,000
Ordinary stock:—			
Earned	1,378,903	1,653,674	1,920,210
Paid	1,518,750	1,548,750	1,685,625
Earned (%)	24.5	28.8	33.0
Paid (%)	27	27	29
To reserve	Nil	Nil	200,000
Carried forward	706,800	811,724	846,309

Reviving earning power is backed by extremely strong finances. Cash and short-term Treasury bills have risen from some £1,895,229 to £2,215,413. No large capital expenditure has been directly undertaken during the year. An increase in advances to subsidiaries from £97,352 to £616,226, however, may be taken to reflect the cost of the new brewery now under construction at Park Royal. There has been some reduction in stock during the year which, combined with a reduction of gilt-edged and other investments from £4,643,569 to £4,450,527, accounts for the larger cash holding. At about 148s. (cum 17 per cent. final dividend and bonus) the £1 units yield approximately 44 per cent., a return which appears to discount the prospect of further improvements for some period ahead.

* * *

London Associated Electricity.—The announcement this week, that this new merger company will be able to acquire 99½ per cent. of the total share capital of the six supply companies, by assent and under Section 155 of the Companies Act, has been well received. The market, at one

THE NATIONAL CITY BANK OF NEW YORK

Incorporated with limited liability under the National Bank Act of the U.S.A.

Founded 1812

Head Office: 55 Wall Street, New York

London Offices:
36 BISHOPSGATE, E.C.2. 11 WATERLOO PLACE, S.W.1

stage in the proposals, was sceptical of their benefit, but an amendment in the articles of the merger company removed all fear that the policy of the new board would affect the security enjoyed by shareholders in the associated undertakings. It would appear from the announcement that a valuable piece of co-ordinating machinery has already been provided at little cost, for the preliminary expenses of the associated company amount to only £9,000. The new concern has announced that, as from the Michaelmas reading, a two-part tariff will be available for domestic consumers, consisting of a primary charge based on floor-space and a running charge, not exceeding ¾d. per unit, while for commercial premises the primary charge will be based on connected load, and the running charge will not exceed 1d. per unit. This was the first objective of the merger, for the anomalous systems of charges among the constituent companies had prompted considerable criticism. A common form for assisted wiring and hire of apparatus is now being drafted, and should yield satisfactory economies. There is, therefore, a reasonable promise of a moderate rise in revenue over the long period, which will be enhanced if a standard voltage and frequency can be introduced.

* * *

Watney, Combe, Reid Accounts.—The announcement of a total distribution of 16 per cent. on Watney ordinary stock came as a gratifying surprise to the market which for once had been guilty of too modest expectations. Increased costs, which prompted a warning from the chairman last year concerning the probability of reduced gross profit margins, have not prevented trading profit from making a further advance towards pre-depression levels. The increase, it is true, is more modest than in the previous year but owing to reductions in trade expenses and interest payments, earnings for the deferred stock have advanced from £788,203 to £832,460. The increased distribution is covered by earnings equivalent to over 29 per cent., as shown in the following table:—

	Years to June 30th,		
	1933	1934	1935
	£	£	£
Trading profit	1,680,404	1,901,071	1,928,138
Rents and dividend receipts	544,419	519,600	518,512
Total profits	2,224,823	2,420,671	2,446,650
Trade expenses	751,174	764,812	752,684
Directors' fees	13,600	15,000	15,000
Repairs and depreciation	277,219	294,207	300,808
Compensation and licences	55,007	44,862	40,421
Deposit and debenture interest ...	302,448	301,924	293,610
Preference and preferred dividends	211,663	211,663	211,663
Deferred stock:—			
Earned	613,712	788,203	832,460
Paid	318,541	414,103	509,664
Earned (%)	22.4	28.2	29.1
Paid (%)	10	13	11
Property improvement reserve ...	300,000	350,000	300,000
Carried forward	277,551	301,651	324,444

The balance sheet discloses few changes of importance, apart from increased items for Government securities and cash, and shows its unusual impressive strength. The company, in common with other leading brewers, has fought the secular decline in beer consumption by internal economies and improved properties. The June brewing figures do not afford conclusive evidence as to summer trade, for some decline was probably inevitable after the expansion in the two previous months. Taken broadly, however, recent figures suggest that the decline has not yet been arrested, and the long-term prospect of brewing shares therefore hangs on the reaping of further improvement in efficiency. In this matter, Watney, Combe, Reid are amply provided with technical and financial resources. The £1 deferred stock units at 76s. 6d. cum 11 per cent. offer a yield of £4 4s. per cent. and appear reasonably valued.

* * *

Prices Tailors Results.—The preliminary figures which have been announced by the proprietors of "Fifty Shilling Tailors" reveal a further remarkable increase in earnings during the year to June 30th. The profit for the year, which is only approximate and is subject to final audit, amounts to some £344,000, compared with £255,313 for the previous year, and £141,933 for 1932-33. The acquisition, towards the end of 1932, of Stewarts Clothiers has evidently proved very advantageous. The increase in earnings has far outweighed the preferred ordinary dividend requirements, resulting from the 1932 issue, and the earnings rate on the highly geared equity has shown a five-fold increase over three years. The course of recent profits is set out below:—

	Years to June 30,		
	1933	1934	1935†
Profit	141,933	255,313	344,000
Income tax and reserve	30,000	32,500	41,000
Depreciation	47,746	78,641	75,000
Directors' fees	600	1,500	1,500
Preference dividend	15,000	15,250	15,500
Preferred ordinary dividend	15,031	26,688	27,125
Ordinary shares—			
<i>Earned</i>	33,556	100,734	183,875
<i>Paid</i>	19,668	40,687	88,156
<i>Earned (%)</i>	25.6	74.3	135.6
<i>Paid (%)</i>	15	30	65
To Reserve	...	50,000	50,000
Carried forward	35,248	45,295	91,014

† Approximate results for latest year.

The company is now controlled by Prices Trust Company, which acquired over 99½ per cent. of the 3,500,000 1s. ordinary shares in November last, at the rate of 3s. 6d. in cash and 3.265 new 5s. shares of the Trust for every seven shares in the Tailors Company. The Trust Company has paid 15 per cent. for its first year, after meeting dividend requirements on its £500,000 5½ per cent. preference issue. The public participation in the equity of the business is therefore doubly geared. The yield of £3 18s. per cent. on the 5s. shares of the Trust which are now quoted at 19s. 9d. appears to discount a more liberal dividend policy in the future. Hitherto, a substantial proportion of the operating company's equity earnings has been ploughed back into the business. The proposed allocation of £50,000 to reserve, however, will increase the fund to £175,000, equal to the ordinary capital in issue. The method of capitalisation adopted enhances the speculative attraction of the shares while the geometric increase in profits continues, but it would involve, conversely, the possibility of corresponding reduction in equity earnings during a period of adverse trading.

* * *

Rhokana Corporation.—The recently published preliminary statement of Rhokana Corporation for the past year to June 30th allows little scope for anticipation as to the full report and accounts, which should be forthcoming in September. The fact that the estimated net profit for the year, after providing for debenture interest, depreciation and development, amounts to £325,000, against £389,045, expresses the kernel of the situation. The extent

of the fall, which has occurred despite an increase in production from 62,180 to 69,301 long tons, suggests that, while the reduced scale of production under the Copper Restriction Scheme, from the beginning of May, has presumably involved some increase in the level of costs during the latter part of the Corporation's year, the main cause may be attributed to a slightly lower average price for the metal. The statement adds that the first shipment of wire bars from the electrolytic refinery was made in March, and that tests have proved them to be entirely satisfactory. Up to June 30th, 9,989 tons of electrolytic copper were produced. The reduction in the profit has had no adverse effect on the price of the shares, which, indeed, have tended to strengthen to a current price of around 96s. 3d. While market opinion regards the ordinary shares as being fully valued for the moment, it is inclined to suggest that the 5½ per cent. redeemable cumulative £1 preference shares, which were issued last December, may be somewhat undervalued by comparison at their present price of 22s. 9d.

* * *

Other Company Results.—Our usual summary of profit and loss accounts, on page 261, includes the results of 24 additional companies. In the banking group, the Bank of New Zealand reports slightly higher net profits of £529,529, and has maintained the 10 per cent. dividend. Considerable market interest has been aroused by the results of John Lysaght, which is controlled by Guest, Keen and Nettlefolds. Profits have jumped from £279,892 to £489,230, and the dividend is doubled at 16 per cent., tax free. The increase is, in fact, equivalent to some 2½ per cent. for the ordinary shares of the parent company, which have consequently been in active demand this week. In the textile list Tootal Broadhurst, who manufacture proprietary branded textiles, report a further expansion in earnings. Net profit has advanced from £66,831 to £84,682, and a substantially higher amount is carried forward, after payment of the 10 per cent. dividend. This week's miscellaneous reports are largely from smaller industrial concerns. Among them, Gabriel Wade and English, the timber dealers, report net profits of £56,157, against £75,832, and have been able to pay an increased ordinary dividend following the repayment of preference arrears in the previous year. Increased earnings are reported by Geo. Bassett and Company, the confectioners (£53,717, against £40,460), and Hutchinson and Company (Publishers), which has resumed ordinary dividends, after two years' break, with a payment of 2½ per cent. The results of North Central Wagon are not so encouraging, for although available revenue amounts to £42,037, compared with £41,642, a considerable fall in trading profits has been offset by profits from sales of investments. The only investment trust report of the week, from Edinburgh and Dundee, is very satisfactory, for net revenue has advanced from £43,239 to £56,009, and the dividend is increased from 6 to 6½ per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Furness, Withy and Company, Perak River Hydro-Electric Power, Gold Fields Rhodesian Development, Anglo-Australian Gold Development, Eaglehurst Rubber Estates, Bukit Mertajam Rubber, and Threlfall's Brewery. Lord Essendon, at the Furness, Withy meeting, put three alternatives to the shipping industry in alleviation of its present troubles, and declared that rationalisation by voluntary agreement still appealed most to him. Mr D. Christopherson, at the Gold Fields Rhodesian Development meeting, devoted much attention to the new gold interests of the company, and referred hopefully to the prospects of British Celanese second preference shares. At the meeting of Anglo-Australian Gold Development meeting the discussion was centred on the Yellowdine and Beryl prospects, which are reviewed in a leading article on page 238. At class meetings of Perak River Hydro-Electric to approve the scheme of arrangement, the chairman disclosed that additional preference shares would only be issued for remunerative capital expenditure. The chair-

man of Threlfall's Brewery discussed the satisfactory expansion of trade in the company's area. Mr Stanlake Lee, at the Eaglehurst Rubber meeting, expressed confident expectation of an improvement in rubber prices. The spokesman at the Bukit Mertajam meeting described the satisfactory condition of the estate.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
AUGUST 13

ACCOUNT
AUGUST 15

THERE was a real and somewhat surprising revival in market interest this week. After a lull lasting some weeks, private investment demand revived and industrial share prices were firm. The activity was not communicated to the gilt-edged and mining markets, however, and the rail market was definitely easier. The buying, indeed, was confined to selected industrial groups, and particular industrial shares. The better tone on Wall Street was the chief stimulus to the advance, and the conclusion of the Steel Agreement and the good Guinness and Watney dividends directed the new buying largely to steel and brewing shares.

The gilt-edged market opened the week in good style, with rises of ½, but activity was at a very low level. Prices, however, were well maintained later. The chief feature throughout the week was the demand for the new London Electric Transport scrip, which advanced to ½ premium and monopolised the whole of the interest in shorter-dated stocks. India loans improved towards the middle of the week, and Dominion issues were quietly firm, led by the Australian 5 per cent. issues. Home corporation stocks followed the funds, and were firmer after the success of the West Bromwich issue. Foreign bonds were again depressed, and especially Chinese and Brazilians. The home rail market was still disappointed with the interim statements, which are discussed on page 241. A little buying appeared on Tuesday, in hopes of good traffic returns, but on publication of the figures the harder tone was at once nullified. Southern stocks provided the only exception to the general easiness, and in the middle of the week recovered much of Monday's loss. The Argentine railway traffic was again disappointing, and the prior charges, in particular, sagged.

Industrial shares began well and gathered momentum towards the middle of the week. The international section, of course, led the way and, despite profit-taking both here and in Wall Street, continued firm. United States Steel advanced another three points to 44. Iron and steel shares began to advance once more, after three weeks' inactivity. At first, the main spur was the John Lysaght result, which encouraged a demand for Guest, Keen, under the mistaken impression that the latter company's 1935-36 results would benefit from the big increase in its subsidiary's profits. Later the demand became general, as a result of the conclusion of the agreement between the British industry and the Cartel, discussed on pages 227 and 241. Electrical equipments were firm, although profit-taking began to develop in mid-week. Motor and aviation shares were in demand, led by Austin and Bristol Aeroplane respectively. The other main strength of the market lay in brewery and tobacco shares. The Watney dividend stimulated general buying, supported from the provinces. At the end of the week, however, there was some quietening down, on the publication of the June beer production figures. Tobacco shares were consistently good, but the food share group was inclined to weaken. Unilever, on the recovery of the guilder, lost some of last week's gain, and Tate and Lyle lost ground at the beginning of the week, but recovered on a closer examination of the Government's beet sugar scheme. Textile shares were very quiet, and prices, where changed, were easier, but the rayon market continued to recover from the disappointment caused by the Courtaulds' interim. For the rest, British Oxygen advanced strongly, brick and cement shares were a trifle better, and sudden support

appeared for Turner and Newall, but Imperial Chemicals lost ground after Sir Harry McGowan's pessimistic forecast of profit prospects.

The oil share market was in good fettle. The latest American statistics pleased the market, and there was strong investment buying of Shell and Anglo-Iranian. The only weakness, indeed, was in Royal Dutch, which had been much in demand in the previous week, as a hedge against guilder devaluation, and was naturally sold as the guilder recovered. The same factor brought about a slight reaction in Dutch rubber shares. The rest of the rubber share market, however, was steady. While the price of the commodity remains just below sixpence, there is no reason for buying, but holders showed little inclination to sell. Tea shares were in similar case. Profit-taking after the recent rise came to an end, and there were no features either to attract purchases or to induce sales.

There was still very little interest in gold shares this week. The Kaffir tone, however, became definitely better as the week proceeded, but this was the result of professional operations rather than indication of any public support. There was some selling of recent issues from the Cape, and particularly of Rietfontein, but the market was able to absorb the shares without a substantial recession of prices. In the Rhodesian section, there was no improvement, but East African shares again moved forward, headed by Kenya Consolidated. The better tone in the Kaffir market did not spread to the "Jungle." Gold Coast Selection registered a small gain early in the week, but it was at once lost on profit-taking. In Australian gold shares, however, a better tendency showed itself, although here again there was little public support. The whole mining market, indeed, was idle. Rhodesian copper shares were hardly changed on the week, and the only bright spot was the tin share market, which stirred from its slumber, and recorded a handful of small gains in the middle of the week.

FOREIGN STOCK EXCHANGES

NEW YORK

THE advance of Wall Street went ahead further this week, and new post-1931 records were again established. The turnover exceeded 1,650,000 shares every day, and on Wednesday was little short of the two million mark. A wave of profit-taking, on Tuesday, was successfully resisted, and prices swept forward again to new high levels. Steel and motor shares, of course, were in the van: the "Iron Age" mid-week estimates of steel output showed another rise of 2½ points, and a steady increase for the next few months is forecast. The principal feature this week was the participation, for the first time, of rails and utilities in the advance. The car-loading reports from the industrial centres are improving. Consolidated Gas of New York, on the other hand, showed a reduction in profits over the first six months of the year. The market in second-grade bonds followed the lead of industrial common stocks. Second-grade rail bonds went ahead once more, although profit-taking caused some irregularity. The yields on all bonds save the very best are still unnaturally high.

* Two-Hour Session.

PARIS

After a quiet start to the week, the Bourse improved, under the lead of rentes, which advanced by one and a-half to two points. There was not, however, any large volume of new buying in the industrial market, so that the price movements were for the most part small. Bank-

ing shares were steadily maintained, after a weak opening, except for Credit Foncier de France, which suffered a severe decline. Royal Dutch fell sharply on the recovery of the guilder. As in London, mining shares were again neglected by the public, and prices, on the whole, tended to sag.

	July 24, 1935	July 29, 1935	July 31, 1935	July 24, 1935	July 29, 1935	July 31, 1935

BERLIN

The feature of last week's dull but steady share-market was the increase in the foreign buying of internationally traded shares with blocked marks. Farbenindustrie, Siemens, and the potash issues—of which some reached new high prices for the year—were in prominence. The decline in Hapag and Norddeutscher Lloyd came to an end, but linoleums were again weaker on account of the uncertain dividend prospects. The new week opened uncertainly, and on Tuesday the tone was slightly weaker, with an exceptional firm market in rayon and potash shares. Home bonds changed little; but Dutch, Italian and Swiss bonds were lower, and dollar bonds irregular.

	July 24, 1935	July 29, 1935	July 31, 1935	July 24, 1935	July 29, 1935	July 31, 1935

AMSTERDAM

The principal effect of the recovery of the guilder and the success of Dr. Colijn in forming a new Government was a strong improvement in Dutch Government bonds and a corresponding decline in industrials, plantations and oils. Royal Dutch lost 8 points, and Philips' Lamps 7½ points. The whole market, apart from Government and municipal bonds, received no support, and in every direction prices were weaker.

	July 24, 1935	July 29, 1935	July 31, 1935	July 24, 1935	July 29, 1935	July 31, 1935

CAPITAL ISSUES

THIS week has seen a resumption of corporation borrowing on a fair scale. *West Bromwich* and *Dundee* have issued 3 per cent. stocks at par. These terms make favourable contrast with those available to borrowers in June, and page 240. The *Lowestoft* issue, in 3 per cent. stock at 98½, population of the borough is only 46,599. For investors who are not affected by this disability, therefore, the stock offers an attractive yield. The major industrial issue of the week, on behalf of *Briggs Motor Bodies*, consists of 4½ per cent. debenture stock, which made a limited appeal to the ordinary shares at 25 per cent. premium. The company acquires an established motor body manufacturing business with important trade connections in this country and abroad. After a period of rising earnings, extensions of plant have been effected, involving a temporary reduction of profits during the current year. The tangible assets acquired are valued at £1,164,734, while goodwill amounts to £600,266. The stock is reasonably secured on recent earnings, and the ordinary shares would appear to possess good prospects, although an increase in earnings would no doubt encourage the board to make generous provision for writing down goodwill. The issue of 4 per cent. debenture stock of *Ribblesdale Cement* is guaranteed by two established concerns and, although small, is of satisfactory industrial investment merit. The undertaking of *Southern Swimming Pools* must be described, at this stage, as definitely speculative, and the ordinary shares do not form a suitable

medium for the non-specialist investor. A private placing of 3½ per cent. 15-year notes by *Lewis's Investment Trust* appears somewhat finely shaded at £99 net to the market, although the security for the issue is, of course, substantial. Particulars "for information only" have been advertised by three concerns in the *South Eastern Gas* group in respect of debenture issues by *London Scottish Investment Trust* and by the *Lanarkshire Steel Company*, whose profits have now entered the recovery phase. The introduction of *Metal Industries* preference shares affords participation in a ship-breaking concern with substantial interests in British Oxygen Company. The 6 per cent. preference share capital of *John Kay*, of which particulars have been published, is of limited size, and the earnings cover in recent periods is not generous. Among the offers abroad, the *India* rupee loan has been announced on terms which are of good augury for its success.

Proceeds for repayment of mortgages, temporary loans and prospective capital expenditure. List closed at 9.1 a.m. August 1st.

County Borough of West Bromwich.—Issue of £600,000 3 per cent. redeemable stock, 1954-56, at par. Redeemable, January 1, 1956, at par, or from 1954 on three months' notice. Rateable value, £336,204; present rates 15s. in the £. Net debt, £3,092,644, of which £232,233 productive, and £2,051,561 housing. £270,067 of present issue for short loan repayments, balance for housing and other purposes. List closed at 9.5 a.m. July 30th.

Borough of Lowestoft.—Issue of £250,000 3 per cent. redeemable stock at 98½ per cent. Holders of mortgages amounting to £250,000, to be repaid, are offered conversion at above rate. Population, 46,599. Receipts from general rate, 1934, £152,971. Rateable value, £242,942. Total present rate, 14s. in the £. Net debt, £655,838, of which £170,573 is revenue producing, and £259,129 housing. Repayable at par October 1, 1955.

Briggs Motor Bodies, Ltd.—Issue of £1,000,000 4½ per cent. first mortgage debenture stock at £103 per cent., and 400,000 £1 ordinary shares at 25s. each. Acquires auto-mobile body manufacturing undertaking of similar name, together with rights in Great Britain of patents controlled by Briggs Manufacturing Company of Detroit. British business founded 1930, and supplies Ford and other car companies. Net assets, £1,164,734, acquired for £840,000 (599,993 £1 shares and £240,007 cash) and discharge of £925,000 bank loan. Profits, after depreciation: 1932, £32,043; 1933, £154,332; 1934, £217,376; 24 weeks to June 15, 1935, £76,932. List closed 10.30 a.m. July 30th.

Ribblesdale Cement, Ltd.—Issue of £150,000 4 per cent. guaranteed debenture stock at £101 per cent. Formed May, 1935, to erect cement works in Lancashire. Tunnel cement and Ketton Portland Cement each subscribe £50,000 in ordinary shares, provide joint marketing organisation, and guarantee jointly and severally interest and sinking fund on the stock. Net assets of guarantors, £2,600,000, and aggregate profits, years ending in: 1932, £173,555; 1933, £180,115; 1934, £216,641.

Southern Swimming Pools, Ltd.—Issue of 200,000 5s. ordinary shares at par. Formed to develop swimming pools on sites adjacent to Southern Railway. Estimated cost, £34,000. Estimated net profits, after depreciation, fees and expenses, £7,968. Preliminary expenses and commissions, £7,000.

BY STOCK EXCHANGE INTRODUCTION

Metal Industries, Ltd.—Issued capital, 500,000 5 per cent. cumulative £1 preference, 110,000 £1 "A" ordinary, and 770,000 £1 "B" ordinary shares. No loan capital outstanding. Preference shares have been purchased by Guinness, Mahon and Company at 21s. 6d. Profits before depreciation and income tax and excluding revenue from Oxygen Industries after October 31, 1932 (the date of sale of business to British Oxygen Company), years ended March 31: 1933, £19,290; 1934, £76,68

Sheppey Gas Company.—Issue of £31,100 3½ per cent. debenture stock to be repaid at par July 1, 1955. Existing permanent loan capital £10,000 5 per cent. debenture stock. Outstanding £13,920 5 per cent. mortgages will be redeemed by present issue. Sold to Messrs Cohen, Laming, Hoare, for £97 per cent. net.

Chertsey Gas Consumers' Company, Ltd.—Issue of £23,770 3½ per cent. debenture stock to be repaid at par July 1, 1955. Existing loan capital £1,500 on 5 per cent. redeemable debentures and £15,500 6 per cent. redeemable debentures, which will be redeemed by present issue. Sold to Messrs Cohen, Laming, Hoare for £97 per cent. net.

Gravesend and Milton Gas Light Company.—Issue of £30,000 3½ per cent. debenture stock to be repaid at par, July 1, 1955. Loan capital £25,000 5 per cent. irredeemable debentures and £11,700 5 per cent. mortgages, to be redeemed by present issue. Sold to Messrs Cohen, Laming, Hoare for £97 per cent. net.

John Kay, Ltd.—Particulars of issue of 100,000 6 per cent. redeemable cumulative £1 preference shares. Redeemable at or below 22s. from July 31, 1940, on three months' notice, and finally on July 31, 1985. Acquires retail grocers' businesses of similar name. Total net assets, excluding goodwill, £82,713. Profits after depreciation, years ended October 31st, 1932, £12,674; 1933, £12,843; 1934, £12,708; three months ended January 31, 1935, £5,130. Purchase price, £160,000, payable £60,000 in cash and £100,000 in 5s. ordinary shares. Goodwill, £71,287. Mr Herbert Rothbarth and the Federated Trust and Finance Corporation subscribe for the present issue at par in consideration of 2s. per share commission.

ISSUES TO SHAREHOLDERS ONLY

Stewarts and Lloyds of South Africa, Ltd.—Issue to shareholders of £350,000 3½ per cent. sterling debenture stock at 98 per cent., to be repaid in London in sterling by a cumulative sinking fund of 1½ per cent. per annum, commencing 1936. Any stock not previously redeemed will be paid off on December 31, 1973, at par. Issue substantially oversubscribed.

The Union Steel Corporation (of South Africa), Ltd.—Issue of 725,000 new ordinary shares of 5s. at par to redeem 7 per cent. debentures.

Lupa Exploration.—The directors have decided to issue a further 50,000 shares of 5s. at par in the first instance to shareholders now on the register in the proportion of one new share for every two shares held.

Hector Whaling.—This company invited applications from shareholders and noteholders until the close of business on August 1st for £71,250 participating redeemable unsecured debenture stock at par. Shareholders have the right to subscribe for the new stock in the proportion of £1 stock for every six shares held. Secured noteholders will be entitled to apply for such of the stock as shall not be applied for by shareholders in exercise of their rights.

Nipah Distilleries of Malaya.—The directors have decided to issue at par 157,000 5s. 6 per cent. cumulative participating preference. The shares, which will be offered to shareholders, carry option rights over an equal number of ordinary up to December 31, 1938.

ISSUES ABROAD

Government of India.—Issue of 3 per cent. rupee loan, 1951-54, at 96½ per cent. Lists open August 5, 1935, and will be closed when total subscriptions amount to Rs. 15 crores, or not later than August 10, 1935. Repayable at par, September 15, 1954, or from September 15, 1951, on three months' notice. Five per cent. bonds, 1935, and 6½ per cent. Treasury bonds will be accepted for conversion, at rate of Rs. 100 As. 7 and Rs. 100 As. 11, respectively, per Rs. 100 nominal of bonds tendered. Conversion applications will be received in London at the Office of the Imperial Bank of India.

PRIVATE PLACING

Lewis's Investment Trust, Ltd.—£400,000 3½ per cent. 15-year notes of £100 each have been placed privately through Cazenove, Akroyds and Greenwood and Company at 99½ per cent., less a brokerage of ½ per cent. The notes are repayable from August 1, 1945, at £101, on three months' notice and finally on August 1, 1950, at par.

FIXED TRUSTS

Security First Trust.—Sponsored by interests associated with Dawney, Day and Company. Duration, 20 years, but certificate holders during last five years of the Trust may, at Managers' initiative, be allowed to exchange sub-units for shares in managed investment trust company formed to

take over the Trust's investments. Trustees, Lloyds Bank, Ltd. Portfolio includes shares in 23 companies. Service charge less than ½ per cent. per annum over 20 years. Provision made for trustees to release part service charge from escrow to meet management expenses over life of trust. Managers undertake to repurchase sub-units on request and may instruct trustees to sell or reduce in amount any security when desirable, and distribute or reinvest proceeds. Bonus shares retained in excess of 10 per cent. Managers have voting power in respect of underlying shares.

British Empire Cumulative Fixed Trust.—Sponsored by Fixed Trust Investments, Ltd. Bonus shares retained. Percentage of service charge retained in escrow fund to ensure continuity of management. Trust period 20 years; certificate holders or managers will have right to call meeting to decide how trust shall be liquidated. Portfolio includes 25 securities.

FORTHCOMING ISSUES

British Salmson (1935), Ltd.—An issue of 1,400,000 shares 5s. at par is expected next week.

Multiple Libraries, Ltd.—It is understood that this concern will shortly become a public company.

OTHER RESULTS OF ISSUES

Roberts Brewery.—Lists closed 9.15 a.m., July 26th. Fully subscribed.

John Lewis Properties.—Lists for debenture issue closed July 26th.

Mid-Wessex Water Company.—In connection with offer for sale by tender of 3,000 ordinary shares, tenders were received for 18,936 shares. The prices ranged from £17 5s. to £20 per share. Allotments were made in respect of tenders at £18 upwards, the average price being £18 2s. 1½d. per share.

CALLS DUE AUGUST 5, 1935, TO AUGUST 10, 1935
The grand total of calls falling due in August, 1935, is £16,443,401, which compares with £36,367,141 which fell due in August, 1934.

COMPANY MEETINGS, &c.

FURNESS, WITHY AND COMPANY, LIMITED

SHIPPING POSITION AND OUTLOOK

The forty-fourth annual general meeting of Furness, Withy and Company, Limited, was held, on the 31st ultimo, at Furness House, London, the Lord Essendon presiding.

The Chairman, in the course of his speech, said that it was a matter of great disappointment to the directors, although he believed of little surprise to shareholders, that they were unable to recommend the declaration of a dividend. Those who followed at all closely the trend of shipping business would not have expected any dividend on the ordinary capital, and therefore for the second year in succession they had had to break their previous forty-year record of continuous dividend payments. The usual half-yearly dividends on the £1,500,000 preference capital had, of course, been paid in the ordinary way. The balance of profit and loss account was £395,000, compared with £378,000 a year ago, and after paying the preference dividend and transferring £300,000 to depreciation, there was an increased balance of £203,132 to carry forward to the current year.

With few exceptions their subsidiary shipowning companies had paid no dividends, but, on the other hand, the majority of their ancillary undertakings had continued to make satisfactory profits having regard to existing conditions.

BERMUDA INTERESTS

With regard to their Bermuda interests, the number of passengers carried in the year 1934-35 was in excess of the previous year, but there were periods during which the travel was not sufficient to justify the continuous employment of both the "Monarch of Bermuda" and the "Queen of Bermuda." As the result of discussion with their Bermudian friends, a mutually acceptable agreement was arrived at, which had worked smoothly, and had enabled them this summer to make some special cruise voyages. The conditions governing the South American refrigerated trade to the United Kingdom had not undergone any improvement.

The loss of freight earnings to the companies engaged in the carriage of chilled meat from the Argentine, which he referred to in the previous year and which then amounted to about £500,000 sterling in the first two years of restricted imports, had continued on the same scale. Neither the beef subsidy nor the restrictive quotas on imports had brought about any improvement in the prices realised by home producers of meat, while the shipping companies engaged in the South American business had suffered a severe loss of revenue and a large amount of capital expended in the development of that trade had been lying idle. Much as the shipping industry disliked tariffs, he believed that they were much less objectionable, and less hindrance to trade than restrictive quotas, and it was therefore sincerely hoped that the policy of a levy, without any other restrictive regulations, would prevail. On the basis of 1934 imports, a levy of 1d. per lb. on all foreign meat and ½d. per lb. on imports from the Dominions would yield over £6,500,000, which would be sufficient to pay the British livestock producers a subsidy considerably greater than 5s. per cwt.

THE OUTLOOK—ENCOURAGING FEATURES

In regard to the current year, there were many features which gave the directors encouragement and which should yield the company increased revenue, not the least of which was a very gratifying increase in the summer travel to Bermuda. In other directions they had been able to effect economies in operating, all of which were having cumulative effect. The splendid fleet with which their various companies were at present equipped would quickly respond to any real and sustained revival in international trade, which was the chief thing that was lacking and which they had no power to remedy.

They hoped therefore the forward swing of the pendulum would not be long delayed, and as illustrating the fact that some improvement was discernible, he might say that they had recently set up what he believed was a record for any one shipping group out of New York by despatching on one day no less than five passenger and cargo vessels.

TWO OUTSTANDING FEATURES

Referring to conditions affecting the shipping industry generally, the Chairman said he thought the two outstanding features of the past year had been the coming into force of the temporary subsidy of £2,000,000 for the assistance of British tramp shipping, and the successful efforts made by tramp shipowners to establish

minimum rates of freight in some of the most important tramp trades, notably from the River Plate, from the St. Lawrence and from Australia. These minimum freight schemes had established beyond question the practicability of co-operation of an international character within the shipping industry. The schemes primarily affected tramp ships, but necessarily concerned liners as well, and in fact could not be completely successful without the co-operation of liners. Those were the two outstanding accomplishments of the past year, but a certain amount of progress had also been made in the much larger and more difficult problem of international rationalisation. At their annual meeting in 1932 he said that the only solution having any prospect of success would be a voluntary agreement to lay up surplus tonnage, but at that time it was not thought that an international scheme of that character would be practicable. The need for international rationalisation in some form or other was even greater to-day than it was three years ago.

ALTERNATIVE SUGGESTIONS

He would suggest that the shipping industry had three alternatives pending a strong revival in the volume of international trade. There was available to-day about 50 per cent. more tonnage than in 1913, and because of that fact freight rates were considerably lower, whereas working costs were higher. On the other hand, the volume of traffic to be carried overseas was much less. The fact that there was at least 6,000,000 tons of merchant vessels laid up was bad enough, but of the remainder that was in employment a great deal of it was liner tonnage which was trading with a large amount of empty space. To his mind, the first and most obvious solution was to rationalise by laying up or scrapping surplus tonnage.

The second alternative was to reserve all inter-Empire trade for Empire ships, and to let the rest of our shipping in foreign trades take care of itself. It was extremely doubtful whether such a policy would be of any real benefit to the shipping industry. British ships already carried a preponderating proportion of Empire trade, and it seemed quite obvious that we had far more British ships in foreign trade than there were foreign ships in Empire trade.

The third alternative was to allow matters to continue as they were, each individual owner, or group of owners, doing what they could to rationalise within their own narrow sphere, expanding wherever possible, and continually fighting against circumstances over which shipowners had no control, i.e. subsidies, quotas, tariffs, currency restrictions, and so on. He thought it was probably correct to say that every single owner in Great Britain had already done his utmost to rationalise so far as circumstances permitted, but obviously circumstances had not permitted sufficient to be done to bring about a profitable state of affairs. For the industry to continue as it was in the long run meant the survival of the fittest, and there was no rule by which one could judge which flag or which shipowner would survive the longest, having regard to the fact that subsidies and trade restrictions would be the weapons used in the fight.

RATIONALISATION THE BEST POLICY

He had studiously avoided any remarks which could be misinterpreted as being critical of any particular line of thought, and he must readily admit that the difficulties of the problem were great, and that the result of any particular scheme of rationalisation could only be proved by experience, but it was significant that the seventeen maritime nations which were represented at the Preliminary International Conference were all agreed that some system of rationalisation was desirable, and, moreover, our own Government had chosen to recommend a course of rationalisation and had put upon the industry the task of finding the best and most practicable basis.

He would infinitely prefer the shipping industry to have some definite and constructive policy rather than blindly and patiently wait for an improvement in trade which might be long deferred. He acknowledged without repentance and without apology that rationalisation by voluntary agreement was the policy which most appealed to him now as it did in 1932.

Mr E. H. Murrant seconded the adoption of the report and accounts, which was carried unanimously, and a cordial vote of thanks to the chairman, the directors and the staff and officials in various parts of the world terminated the proceedings.

ANGLO-AUSTRALIAN GOLD DEVELOPMENT, LIMITED

BERYL GOLD POSSIBILITIES

IMPORTANCE OF YELLOWDINE INTEREST

The second ordinary general meeting of Anglo-Australian Gold Development, Limited, was held, on the 26th ultimo, at Winchester House, London, Colonel Sir William R. Campion, K.C.M.G., D.S.O. (the chairman), presiding.

The Chairman, in the course of his speech, said:—Ladies and gentlemen,—The company's cash balance, both at the bank and in hand, is in a very healthy position: £90,754 is standing to the company's credit at the London banks, £80,000—equivalent to £100,000 Australian currency—is on fixed deposit in Australia, and £2,730 is on current account in Australia, making in all £173,484 sterling.

With regard to the work done during the past year, I had hoped that progress on some of your properties would have been more rapid. A great deal of the delay has been due to unforeseen circumstances such as miners' and foundry strikes, and also bush fires, which were truly most exceptional. Mr de Bernales and I intend to visit your properties towards the end of this year and to thoroughly explore the position.

YELLOWDINE MINE

By far the most important event since we last met is the acquisition by this company of a 20 per cent. interest in Yellowdine Investments, Limited, at a price which represented the actual cost of acquiring the now famous Yellowdine Mine.

The following statements have been published by the management of the mine in Western Australia:—

The engineers calculate they have 135,000 tons of ore in sight of an average value of 1½ oz. per ton. This is equal at current gold prices to a value of approximately £1,365,000 sterling or £1,706,250 Australian money. The lode has been proved to extend over a length of 3,000 ft.

It has been decided to erect a 20-head battery capable of treating 5,000 tons a month. Calculated to obtain an extraction of 90 per cent. and with ore giving an average value of 1½ oz. per ton, this will work out at a profit of £51,000 a month or, say, £600,000 per annum Australian currency.

In the case of No. 4 borehole the lode was met, showing values averaging 15 dwt. over a true width of 19 ft., the drill passing out of ore at a vertical depth of 83 ft. 6 in. The developments in the northern workings have been particularly gratifying.

Up to the present 14 prospecting shafts have been sunk and in most cases wide and rich orebodies have been met. The crosscut between shafts Nos. 2 and 3 disclosed an orebody 57 ft. wide carrying values of 2 oz. 12 dwt. over its full width. No. 11 shaft was sunk in a wide orebody carrying values of 1 oz. 10 dwt., and the North drive off No. 5 shaft proved the existence of a wide and rich formation which had been passed over by various boreholes, and which was proved by an East crosscut to carry values of 1 oz. 10 dwt. over a full width of 30 ft. While, of course, it is unwise to prophesy, it is reasonable to point out that the gold is very evenly distributed and that conditions in the opinion of experts point to the probability of continuance at depth.

A cable published from the Yellowdine management yesterday advises that from 71 ft. to 85 ft., a distance of 14 ft., the East crosscut from the main shaft at the 100 ft. level had been continued in Greenstone, the quartz lode only showing in the roof and laying in flat, but a continuation of the crosscut to a total distance of 150 ft. was necessary before any definite conclusion could be arrived at in connection with the orebody.

The Yellowdine orebody has shown itself to have been considerably thrown about with numerous breaks in the lode, and it has been, and is still, difficult to state definitely the direction in which the lode is underlaying.

The Chairman concluded by moving the adoption of the report and accounts.

MANAGING DIRECTOR'S SPEECH

Mr Claude de Bernales (managing director), in seconding the motion, said:—Ladies and gentlemen,—In October the Beryl Gold Mines, Limited, was acquired by the Beryl Gold Corporation, Limited, for a cash consideration of £20,000 and 400,000 ss. fully-paid shares. Our company holds an important interest in this new organisation and information respecting the development of this mine must therefore be of major interest to you. Diamond

drilling results have been satisfactory. During the past year a total footage of 6,852 has been completed by the diamond drills, disclosing ore varying in value from 4 dwt. to 7 oz.

By this means of investigation a considerable tonnage of ore has been proved to exist at various depths in the Flag Gem Consolidated and Harbour View sections. Values over considerable widths have been met with, and in one case, where the ore body has proved small, assay results exceeded 7 oz. fine gold per ton; 40,000 tons of untreated ore and tailings estimated to contain 6 dwt. fine gold per ton are lying on the surface of the property. The additional ground held under option on the Kundip Reservation, consisting of seven 24-acre leases, covering the whole of the Mt. Catlin group, has been acquired. In past years this property has produced a considerable amount of gold and we look upon its inclusion in the Beryl property as a valuable addition. We purchased from the State Government and other interests a considerable quantity of machinery on the Kundip Ravensthorpe field which should prove of great value to the Beryl Gold Corporation, Limited, and affect a considerable saving in expenditure. The general prospects of this mine can only be held to be exceedingly good. We anticipate six months' more development work should bring the mine to the stage of ordering the treatment plant.

APEX, WHEEL OF FORTUNE, AND DAYDAWN

With regard to Apex Gold Mines, recent excellent developments on the western lode series have stimulated confidence in the potentialities of the field as a whole and lent added interest to the operations now being carried out. Work is proceeding, and we hope the present favourable indications will lead to the disclosure of a consistent and important orebody.

As to the Wheel of Fortune Gold Mines, a series of boreholes will be drilled with the object of intercepting the Wheel of Fortune and the Long Reef lodes at approximately 600 ft. It appears probable that the drills have a reasonable expectation of revealing the existence of parallel reefs.

At the Daydawn Gold Mines trial boreholes are being put down, but as drilling has only been in operation for a few weeks no definite results can be placed before you, but the mine is particularly well placed in regard to other important gold producers of the Cue district, and, as the whole of the area is practically in a virgin state, the hope that our operations will meet with considerable success is a justifiable one.

MARS AND LEONORA

It has now been decided to test the Mars Gold Mine by unwatering it, reconditioning the old main shaft, levels and drives, and sampling the bottom (500 ft.) level, and driving and sinking at selected points on the orebody. The mine has a high reputation, and those who knew it in former days express confidence that the present operations will confirm their estimate of the payable nature of the ore.

At the Leonora Gold Mines the "Grey Lode" area controlled by the company contains lodes which are apparently on the same shear plane, and are of the same general character as the lodes of the Sons of Gwalia Mine, which has been cited as the greatest mine of the Mount Margaret goldfield. There is every justification for the belief that diamond drilling, which has just commenced on our property, has reasonable expectations of proving the existence of orebodies which should be payable.

I need say nothing in respect of the developments at Yellowdine, so fully has the chairman dealt with them, except to add that to date Yellowdine has proved itself to be the richest and most important mine ever discovered in Australia to the depth to which it has been opened up.

The year's work as a whole has been satisfactory when one considers that it has been tempered with numerous unexpected difficulties outside the management's control. The cash position of the company is ample to carry out the required development work on the properties to permit of a decision being come to warranting or otherwise their formation into subsidiary companies with the necessary capital to equip them with treatment plants.

Our first subsidiary, the Beryl Gold Corporation, Limited, has been successfully formed with ample capital to carry out the further development and equipment of the mine. Our interest in Yellowdine Investments, Limited, shows a profit to date on the basis of recent sales of shares in that company of over £200,000, with the possibilities of great expansion of those profits as further development work takes place on the Yellowdine Areas.

The resolution was carried unanimously.

EAGLEHURST RUBBER ESTATES, LIMITED

RESUMPTION OF DIVIDEND PAYMENTS

OUTPUT REGULATION AND PRICES

MR STANLAKE LEE'S SPEECH

The ninth annual general meeting of the members of Eaglehurst Rubber Estates, Limited, was held at the registered offices of the company, 411-419 Salisbury House, London Wall, London, E.C., on Wednesday, July 31, 1935. Mr Stanlake Lee (chairman of the company) presiding.

The representative of the secretaries and agents (Messrs E. B. Ridsdel and Company, Limited) having read the notice convening the meeting, and the report of the auditors,

The Chairman said:—Gentlemen, the report and accounts having been in your hands for the requisite period, I presume you will allow me to take them as read. The directors have a special pleasure in presenting these accounts to you this year because with them they are able to break the long drawn out period during which dividends have been conspicuous by their absence, and, even if the distribution which is recommended to you to-day is a small one, it marks nevertheless the emergence of the company from the long period of slump conditions when our chief anxiety has been to pull through without having to come to shareholders for more capital.

INCREASED RUBBER RECEIPTS

Turning to the profit and loss account and comparing it with that for the previous year, the principal feature is the increase in the receipts from rubber at £9,180 as against £6,131 for the period ended March 31, 1934. This increase is entirely due to the better price obtained as the crop sold is 10 per cent. less. On the other hand, the crop expenses and total estate expenditure are higher, due to the increases in wages, charges and administration, which have inevitably followed the improvement in the conditions of the industry.

The balance sheet is on exactly the same lines as in former years, and does not need any very special comment. The customary depreciation at 10 per cent. has been charged up, rubber in hand has been credited with prices since realised or at cost, and the cash position is, we believe, sufficiently strong to allow us to recommend the proposed dividend distribution.

SATISFACTORY CONDITION OF ESTATE

The conditions on the estate in Malaya are satisfactory and as good as could be anticipated, having regard to the slump conditions through which we have passed, when expenditure has had to be cut to the bone. Special attention is being paid to the improvement of the soil by establishment of green covers and prevention of wash, and it is hoped that by these means the vigour of the plantations will be maintained. The limitation of output consequent upon the international control of rubber production has in our case allowed us to rest a full third of the acreage, doubtless to the permanent advantage of the trees.

A trial of replanting some of the older rubber was sanctioned and commenced by the replanting of an area of 50 acres in 1934, which it is proposed to bud eventually, and I would draw your attention to the area already developed of 136 acres of budded rubber, from which we expect considerably higher yields than are possible from the older planted trees.

Although new planting is prohibited on new areas in all countries which are under international control, there is permitted planting of 10 per cent. of the acreage a year with a maximum of 20 per cent. in all, and how far it is advisable to take advantage of this for Eaglehurst with our limited cash resources is a matter which is still under consideration.

THE PRESENT PRICE OF RUBBER

Turning to more general matters, we cannot profess to be satisfied with the present price of rubber, which shows little if any profit after allowing for the increased costs which have inevitably followed up the rise in rubber values. It is clear that 6d. per lb. is not an economic figure for rubber under present conditions, which involve a fair wage for labour, full rents for land and necessary care of trees with provision for obsolescence.

The international control scheme to be successful must aim at a figure distinctly in advance of the present price, and, with the general reduction of the world's stock of rubber which is now apparent in the statistics, combined with the increase in the consumption of rubber, particularly in countries other than the United States of America, I have confident expectation of seeing an improvement in rubber prices, and all the more so as the push for development of new and extended uses for rubber is gaining force with the financial resources which are promised under the machinery of the control of production.

TRIBUTE TO EASTERN STAFF

In conclusion, I wish to refer to the good services we receive from our agents in Malaya and from our estate manager. I am confident that the shareholders appreciate the essential nature of the unremitting attention which has to be paid to your affairs on the spot during these still difficult times, and will wish to give expression to this appreciation at the termination of the proceedings.

I now move:—"That the directors' report and statement of accounts for the year ended March 31, 1935, and the report of the auditors thereon, be and they are hereby adopted."

Mr P. J. Burgess seconded the resolution, and, after a few questions had been answered, it was carried unanimously.

The dividend as recommended was approved; the retiring director Mr Stanlake Lee, was re-elected; the auditors, Messrs Lindsay, Jamieson and Haldane, were reappointed; and the proceedings terminated with a vote of thanks to the chairman and directors and also to the staff in the East.

THE GOLD FIELDS RHODESIAN DEVELOPMENT COMPANY, LIMITED

DIVIDEND AGAIN 12½ PER CENT.

The twenty-third ordinary general meeting of the Gold Fields Rhodesian Development Company, Limited, was held, on the 30th ultimo, in London.

Mr D. Christopherson, C.B.E. (the chairman), in the course of his speech said: Although the accounts show a reduced profit as compared with the previous year, in that year there were exceptional opportunities for this company to make good profits from sales of investments. With that in mind a profit of £229,823 can be considered satisfactory. Dividends, interest, net profit by sales of investments, and sundry receipts are shown at £240,496, of which dividends received accounted for £58,424. Profits on sales of investments at £173,314 are down by £40,533. The balance carried down is £229,823, to which must be added £25,861 brought forward from last year; £43,739 has been used for writing down certain investments. The reserve account has been strengthened by adding thereto £25,000, bringing that account up to £75,000, the interim dividend of 5 per cent. paid absorbed £52,855, and directors' extra remuneration amounts to £1,571, leaving £117,987 to be carried to the balance sheet.

Investments at cost, less amounts written off, stand at a value of £1,197,437, which is £18,598 less than the previous year, against which the liquid position shows an increase of £38,877, an improvement of approximately £20,000 on the combined figures of investments and cash position. There was a substantial appreciation in the value of the company's investments at May 31st last as compared with the book value.

DIVIDEND

The final result is that the balance sheet shows a credit to profit and loss account of £117,987, from which, subject to your confirmation, it is proposed to pay a final dividend of 7½ per cent., making a 12½ per cent. distribution for the year, which will absorb £94,283, leaving £23,704 to be carried forward.

COMPANY'S IMPORTANT INTERESTS

At the date of the balance sheet the following percentages show how our various interests are represented in value of the total assets of the company's holding: Gold mines, 55.47 per cent.; mines, other than gold, 15.23 per cent.; industrials, 9.90 per cent.; land and land companies, 8.74 per cent.; holding companies, 4.07 per cent.; oil, 0.75 per cent.; cash and debtors, less creditors, 5.84 per cent. As compared with last year, our interest in gold-mining concerns has increased by approximately 10 per cent. If you have the same confidence as your directors have as to the present value of gold being fully maintained for many years to come, you will not be sorry to see our holdings in that class of investment increased.

We still have a large shareholding in the Wanderer Consolidated Gold Mines, Limited. It is satisfactory to be able to say that the prospects for this mine have considerably improved since we last met. In fact, it can be said that the general outlook for this company is sounder than it has ever been.

GOOD NEWS FROM WANDERER

A cable has been recently received by the Wanderer Consolidated Gold Mines, Limited, stating that in the Ashton Section of the mine, which hitherto has given very satisfactory results, the the mine, which hitherto has given very satisfactory results, the 11th drive north has averaged 6.7 dwt. for 35 ft., the last section showing 8.4 dwt., which the technical advisers of the company consider may represent a new ore lens forming at depth. A

further cable received yesterday states that this drive has averaged 6.1 dwt. for 45 ft., beyond which no values were found. Work is now proceeding to prove extent of pay area. Apart from the past year's development having more than maintained the underground position, the general outlook has been much improved owing to the success met with in the introduction of the flotation process in the treatment of the ore. When this plant has been fully installed it is hoped to be able to treat a monthly tonnage of 23,000, as compared with an average monthly tonnage of 17,066 for the past year, by being able to treat profitably, lower grade ore. The profits during the last three months have increased by just on £2,000 per month, the average being for that period £9,942, as compared with an average of £8,000 for the previous nine months. It is expected that the monthly profits from now and until the full flotation plant is in operation early next year will average £10,000, and thereafter be somewhat further enhanced. In the meanwhile, we are receiving a useful regular 10 per cent. dividend on our shareholding, which, we can expect, will be increased when larger profits are realised.

Our investments in both the Ashanti Goldfields Corporation, Limited, and the Sub Nigel, Limited, not only give us a very fine return by way of dividends, but also show a good appreciation of the capital invested therein. Among other shares in gold mining companies in which we have an interest are the Ariston Gold Mines (1929), Limited, East Rand Consolidated, Limited, Gold Coast Selection Trust, Limited, Lake View and Star, Limited, Marlu Gold Mining Areas, Limited, Oroville Dredging Company, Limited, South African Land and Exploration Company, Limited, Simmer and Jack Mines, Limited, Spaarwater Gold Mining Company, Limited, Venterspost Gold Mining, Limited, Vlaktefontein Gold Mining Company, Limited, and West Witwatersrand Areas, Limited, all of which hold out promise of eventually proving to be profitable investments. In addition to the above, we have taken, during the year under review, a considerable further interest in Goldfields Australian Development Company, Limited. This company is developing the Moonlight property, with very satisfactory results, and has a 20 per cent. interest in the Yellowdine property, on which, as you are aware, very high values have been found over a considerable area.

Two further gold investments which we have acquired during last year are in the Tano Gold Dredging Company, Limited, whose property is situated in West Africa, and the Golden Queen Company, which holds the Silver Queen and Sailor Boy claims in the Mojave district of California.

Now, referring to other mines, outside of gold, in which we have an interest. These investments are mostly in the copper mines of Northern Rhodesia. With an agreement among the producers of copper as regards production and marketing, it is reasonable to hope that the better price which copper has just recently been realising will be maintained, if not improved on. This, coupled with the low cost at which these mines can produce, leads us to think our investments in these will prove to be remunerative.

We have a smaller interest in tin, our holdings being confined to Associated Tin Mines of Nigeria, Limited, Toyo Tin, and Southern Kinta Consolidated, all of which are dividend-paying companies.

The tin restriction scheme has, I think you will agree, been of undoubted benefit both to the producer and the consumer.

Turning to our industrial investments, we still retain an interest in the British Celanese, Limited, our holding being in the 7½ per cent. second preference shares and 5½ per cent. bonds. As the accumulated dividends of the first preference shares have now been declared to April, 1933, with continued prosperity of the rayon industry, we should be well within sight of the accumulated dividends of the second preference shares being paid, no dividends thereon having been paid since April, 1930.

Our interest remains in the Celanese Corporation of America, principally in the form of common shares. This company, according to the information we have, continues to make good profits.

During the year we realised certain of our industrial investments at satisfactory profits.

As regards the prospects for the current year, your directors would very much like to see the company less dependent for its profits on sales of investments, but rather look more to an increased revenue from dividends.

The report and accounts were unanimously adopted, and a cordial vote of thanks to the chairman and directors terminated the proceedings.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowverie Street, Fleet Street, London, E.C.4.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED

SCHEME OF ARRANGEMENT APPROVED

MR. GEORGE BALFOUR'S REVIEW

Meetings of the holders of the 7 per cent. participating debenture stock, the 7 per cent. participating debenture interest warrants and the ordinary shares in the Perak River Hydro-Electric Power Company, Limited, under an Order of the Court, and an extraordinary general meeting of the company, were held, on the 31st ultimo, at Winchester House, London, to consider the scheme of arrangement proposed by the board, details of which have already been made public.

Mr George Balfour, J.P., M.P., the chairman of the company, who presided, explained to the meeting of the 7 per cent. participating debenture stockholders that, as indicated at the last annual general meeting, it had become necessary to reorganise the capital by writing off £1,633,116. So far as the 7 per cent. participating debenture stockholders were concerned, the scheme provided for the conversion of their 7 per cent. participating debenture stock, and the deferred interest warrants thereon, into ordinary shares, but the proposals all depended upon the arrangement with the Federated Malay States Government for the settlement of the loan by them of £850,000, by the allotment of 850,000 cumulative preference shares of £1 each and also upon the F.M.S. Government waiving the £212,000 of accrued interest on their loan.

ATTITUDE OF F.M.S. GOVERNMENT

It was also contingent upon the F.M.S. Government agreeing to accept for their 500,000 preference shares, 75,000 new ordinary shares ranking *pari passu* with the new ordinary shares to be issued to debenture and shareholders in the terms of the scheme. The F.M.S. Government also held 75,000 ordinary shares, for which they would receive, on the scheme becoming effective, 7,500 new ordinary shares. The company had received from the F.M.S. Government their acceptance of the above proposal. He wished to express on behalf of the board their full appreciation of the action of the F.M.S. Government. By their fair and businesslike attitude, they had made a substantial contribution to a sound reorganisation scheme, and had made possible a clean capital structure and had provided for a reasonable settlement with the 7 per cent. participating debenture stockholders, all which, he trusted, would contribute to the prosperity of the Malay States, and thereby to the company's progress.

In so far as the scheme affected the 7 per cent. participating debenture stockholders, they would receive 66½ of the face value of their stock, namely, 900,000 ordinary shares, in satisfaction of their debentures, and the warrant holders as a body, in consideration of the surrender of their interests, would receive 315,000 ordinary shares, equal to 66½ of the face value of the warrants. The total new ordinary shares to be allotted to debenture stockholders and for the surrender of the warrants was, therefore, 1,215,000, which equalled 90 per cent. of the face value of the £1,350,000 7 per cent. debentures, and would constitute the debenture stock and warrant holders, the holders of over 90 per cent. of the equity of the company.

REPLIES TO QUESTIONS

To answer questions asked in writing by debenture stockholders he would say additional preference shares would only be issued for the ordinary requirements of the business; at present, £100,000 would be required for extensions in hand and so forth, and, apart from that, shares would only be issued to provide capital for connecting up remunerative business. In the circumstances it would not have been possible to issue a debenture at a lower rate of interest, or even to convert the debentures into preference shares instead of ordinary shares, and in reply to a question why the 7 per cent. participating debenture stockholders should not be given the whole of the equity to the exclusion of the existing ordinary shareholders, he would point out that if the Federated Malay States Government had not settled their claims in the manner he had explained, the participating debenture stockholders would have received a smaller equity value, as the State's Government's claim for £212,000 of interest would have ranked for both capital and interest before them.

At all meetings the proposals were approved by overwhelming majorities, and at the meetings held under the Order of the Court card votes were taken.

BUKIT MERTAJAM RUBBER COMPANY, LIMITED

IMPROVED CONDITION OF THE ESTATES

The twenty-sixth ordinary general meeting of the Bukit Mertajam Rubber Company, Limited, was held, on the 31st ultimo, at Winchester House, London.

Mr A. F. Goodrich (the chairman), in moving the adoption of the report and accounts, said that the net result of the year's working was a profit of £32,244, as against £15,983 for the previous year. That was, he thought, satisfactory, especially when they considered that the price of rubber during January to March of this year fell smartly and only averaged 6½d. per lb. for three months. It was proposed to pay a final dividend of 7½ per cent., which, with the interim of 2½ per cent., distributed in July last, made a total of 10 per cent. for the financial year ended March 31, 1935, and would leave a sum of £25,134 to be carried forward, which was larger by £2,094 than the amount brought in from last year. Mr Swaine, who had visited the estates in May of this year, wished to lay special stress on the very strong bark position throughout the property.

MR J. K. SWAINE ON HIS RECENT VISIT

Mr J. K. Swaine said that he had never seen the rubber looking healthier than during his recent visit, and the standard of upkeep was fast approaching pre-slump standards. Some of the immature areas on which work had to be severely curtailed when prices were falling rapidly were now in first-rate order, and the 137 acres of young budded trees on Sera were now coming away well. He considered that the buddings would go ahead steadily now that they were well established. He anticipated yields of at least 1,100 lbs. to 1,200 lbs. an acre from that area. With regard to the mature rubber, there was no doubt that the tapping policy allowing for long periods of rest was strengthening still further the bark position, and he expected to see a gradual increase in the yield per coolie which would enable them to retain a low tapping cost.

The report and accounts were unanimously adopted, and at the subsequent extraordinary general meeting a resolution was passed increasing the capital from £300,000 to £500,000 by the creation of 2,000,000 shares of 2s. each.

The ANGLO-SOUTH AMERICAN BANK Ltd.
117, OLD BROAD ST. LONDON. E.C.2

THE Bank is represented by Branches and Affiliated Institutions throughout Latin America and Spain, and affords complete facilities for the transaction of every description of modern banking business.

THRELFALL'S BREWERY COMPANY, LIMITED

A VERY SATISFACTORY YEAR'S TRADING

The forty-eighth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 31st ultimo, in London.

Major C. M. Threlfall, J.P. (the chairman), said that it was a pleasure to be in a position to present once again accounts which reflected a very satisfactory year's trading. Twelve months ago he had expressed the view that the outlook was more encouraging, and he was sure it would be agreed that the figures now before them justified and confirmed that opinion. A consistent and steady increase in the consumption of beer had taken place, the reason for which was primarily and unquestionably the general improvement in the country's trade and the happier conditions which had prevailed during the year.

The decrease in unemployment, the increased wages, the restoration of cuts and the reduction in personal taxation had created an all-round feeling of confidence; the public undoubtedly had more to spend and were spending more freely than for some years past. Those circumstances naturally benefited their trade, but the improvement shown did not necessarily mean a return to the position enjoyed by the company prior to the extraordinary and heavy taxation levied in 1931.

The official figures disclosed that the output of beer throughout the country was considerably below the level of that year, but, on a comparison of those figures with their own, the directors were convinced that the company was deriving its proportionate share of the trade which had been regained during the financial year under review, particularly when they took into account the fact that Liverpool, Salford and Manchester, in which cities they had large interests, remained recognised by the Government as distressed areas.

He was pleased to inform the shareholders that they were now brewing an Extra Stout, which had been exceptionally well received by their customers. With regard to their well-known "Blue Label" beer, the demand for it was greater than ever.

The gross trading profit for the year was £376,551 and the net profit was £255,679. It was proposed to pay a dividend for the year of 16 per cent. on the ordinary shares, less income tax.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 27, 1935, amounted to £11,275,000, against ordinary expenditure of £12,892,000. After allowing for a decrease in Exchequer Balances of £43,058, the operations for the week, as shown below, increased the gross National Debt by £1,789,000 to approximately £8,113 million.*

on the previous Wednesday. During the week the Bank announced the purchase of £57,606 in bar gold.

In the open market about 1,750,000 of bar gold was dealt with at the daily fixing. Price movements were again narrow, but there was more fluctuation in the premium over gold exchange parties.

The gold holding of the Bank of the Netherlands declined by about £17,500,000 during last week, but the movement was arrested by the success of Dr Colijn in forming a new Government. The guilders as a consequence improved in terms of sterling and the gold price here tended to harden slightly.

Quotations during the week :—

	Per fine ounce	Equivalent value of £ sterling
July 25	140s. 9d.	12s. 0.86d.
" 26	140s. 6½d.	12s. 1.07d.
" 27	140s. 5½d.	12s. 1.16d.
" 29	140s. 7d.	12s. 1.03d.
" 30	140s. 5d.	12s. 1.20d.
" 31	140s. 8d.	12s. 0.95d.
Average	140s. 6.83d.	12s. 1.05d.
Aug. 1	140s. 9½d.	

An exceptionally large shipment was made from India last week, the s.s. "Carthage," which sailed from Bombay on the 27th instant, carrying gold to the value of about £2,475,000 consigned to London.

SILVER MARKET

A steady tone has been maintained and, except for one day, the cash price ruled at 30½d.

Selling on China account has again been a feature and there have been further liquidations by the Indian Bazaars and speculators, but the American Treasury readily absorbed offerings.

Some nervousness in the Bombay market was apparent on the 28th instant when the Bazaars made substantial re-sales here; this, however, proved only a temporary phase, as the same quarter sent buying orders the following day, prices rising to 30½d. for cash and 30½d. for two months' delivery in consequence. The American Treasury did not follow the advance, which was lost on the 29th instant—the next working day.

American support continues to give the market a steady appearance at the present level and holders appear to have a little more confidence.

Quotations during the week :—

	IN LONDON	IN NEW YORK
	Bar silver per oz. std.	Cents per Ounce
	Cash	Two Months' delivery
July 25	30½d.	30½d.
" 26	30½d.	30½d.
" 27	30½d.	30½d.
" 29	30½d.	30½d.
" 30	30½d.	30½d.
" 31	30½d.	30½d.
Average	30.218d.	30.312d.
Aug. 1	30½d.	30½d.

The highest rate of exchange on New York recorded during the period from the 25th instant to the 31st instant was \$4.96½ and the lowest \$4.95½.

Stocks in Shanghai on the 27th instant consisted of about 277,000,000 dollars and 44,600,000 ounces in bar silver, as compared with 278,000,000 dollars and 44,600,000 ounces in bar silver on the 20th instant.

REPORTS AND NOTICES

GOVERNMENT, &c.

GOVERNMENT OF THE FRENCH REPUBLIC—4% RENTES 1917. 4% RENTES 1918, 4½% RENTES 1932, BRITISH ISSUES.—A Decree of the French Government, dated July 16, 1935, instituting a deduction of 10 per cent. upon the payment of coupons of bonds of the above issues, *inter alia*, provides for the exemption of those bonds which are shown to the satisfaction of the French Government to have been on July 17, 1935, in the beneficial ownership of a holder other than a French citizen or corporation. Bonds which on July 17, 1935, were in such beneficial ownership should be presented on and after Tuesday, August 6, 1935, accompanied by the appropriate form of declaration, at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, London, E.C.2, or at the Ministry of Finance, Paris, for the necessary endorsement. Bonds should be presented for certification before October 1, 1935. Declaration forms may be obtained from Thursday, August 1, 1935, at the Bank of England, or at the Ministry of Finance, Paris. Holders may be required to furnish additional proof of their beneficial ownership.

VANCOUVER BONDS.—Arrangements have been made to meet the interest, which amounts to \$821,940, now due on the City of Vancouver bonds. Mr Wardhaugh, the city comptroller, in making this announcement, stated that of the total, \$484,840 was due on bonds sold in London.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE upward trend in commodity prices continued during the week ended last Wednesday. Although the volume of transactions in iron and steel materials has declined, turn-over was by no means negligible. The event of the week in the iron and steel markets was the ratification of the five-year agreement between the British industry and the International Crude Steel Cartel. The terms of the agreement are discussed in a Note of the Week. Among non-ferrous metals, spot tin was slightly dearer than a week ago; the quotation for "three months" tin was nearly £15 per ton less than the price of spot tin. Copper and spelter were slightly cheaper, and lead a little dearer, than a week ago. Linseed and linseed oil continued to rise in price owing to persistent drought in Argentina and unfavourable crop reports from the United States. Rubber prices showed a slight recovery.

Among textile raw materials, prices of cotton tended to decline owing to favourable crop reports and the uncertainty concerning the United States Government's loan policy. The market in raw jute showed some improvement on the news that the Government of Bengal had decided to continue the voluntary crop restriction scheme initiated last year. Hemp was slightly dearer, but flax and wool are scarcely changed in price on the week.

Wheat prices tended to rise on reports of crop deterioration in North America. The quotation for raw sugar was also marked up. It is understood that the future of the international sugar agreement, which is due to expire at the end of September, will be discussed at a meeting of the International Committee in Brussels on August 5th. The market in tea was irregular. At Smithfield market beef was marked down a little. Prices of new potatoes continued their seasonal downward movement, but quotations for butter registered a sharp rise.

The trend of commodity prices in the United States continued upwards. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 161.9 on Wednesday, compared with 160.6 a week earlier, 158.3 a month earlier and 143.2 on the corresponding day last year.

COAL

SHEFFIELD.—The quota for the export trade in South Yorkshire has been increased from 60 per cent. to 62½ per cent. It remains as before at 52½ per cent. for inland trade. Only very limited inquiries are being received for fresh supplies for export. Collieries have a little or nothing to spare on export account of best steams, cobbles, singles and smalls, which have hardened in consequence. There is a surplus of washed doubles which have not been absorbed by the inland market and are being offered for shipment at easier rates. Large steams are quoted up to 18s. 6d. f.o.b. Gas coal is plentiful. Industrial coal and coke are moving freely and prices are firm.

NEWCASTLE-ON-TYNE.—Whilst there is little inquiry for Northumberland steam coals, collieries are working regularly, most of the trade being against old contracts. As Italian trade is almost

BANKS

BANK OF NEW ZEALAND.—Report of Bank of New Zealand for year to March 31, 1935, shows that profits amounted to £585,224 against £594,231. Deducting interest on guaranteed stock £8,476 leaves net balance £578,747. Dividend on preference "A" shares absorbs £50,000. The dividend on the ordinary shares of 10 per cent absorbs £375,000. The dividend will be paid in New Zealand currency. The carry forward is increased from £343,609 to £348,138. The total assets are £49,440,170, against £54,356,787 on March 31, 1934. Deposits stand at £33,198,614, against £34,328,000 on March 31, 1934. Reserve fund stands at £3,575,000.

MISCELLANEOUS

UNITED STATES STEEL CORPORATION.—The United States Steel Corporation has declared a 50 cent dividend on the 7 per cent. preferred stock, the same as in recent quarters. The second quarter report shows earnings, after deducting all expenses, including repairs and maintenance of plants and payment of taxes, of \$14,117,000, less charges and allowance for depreciation, \$11,350,000, leaving net income of \$2,767,000. Interest charges on bonds of subsidiary companies cost \$1,250,000, leaving net income from operations of \$1,517,000. The proportion of overhead expenses of Lake Superior Iron Ore Properties and Great Lakes Transportation Service was \$2,280,000, and the dividend on the preferred stock required \$1,801,000, making a total deficit for the quarter of \$2,564,000.

IMPERIAL CHEMICAL INDUSTRIES.—The hearing, in the Chancery Division, of the petition of Imperial Chemical Industries for confirmation of its capital reorganisation scheme has been adjourned until next term, which begins on October 7th.

at a standstill owing to financial difficulties, business in Durham is very quiet. Gas and coking coals are particularly weak, and there seems little prospect of regular working in this section until the winter. The prompt coke position is quiet, but for shipment over the winter months contracting is taking place.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B., screened, 13s. 9d.; smalls, 11s.; Howards, Bentinck, Newbiggin, screened, 13s. 6d.; smalls, 10s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 6d.; smalls, 11s. **DURHAM.**—Lambton/South Hetton, screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special, gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 18s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—New export business is rather slow, but collieries are well supplied with contract work, and, in the West, home demand opened up again following the resumption of work in industry after the holidays. First steams and washed smalls in Fife are well placed, but business in Dysart main coal would be welcome. The Lothian collieries could also take on additional orders. Round coal is plentiful in Lanarkshire, but washed nuts are in short supply, and well taken up.

Shipment prices, f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 14s. 6d.-15s.; splint best, 17s.; splint second, 15s.-15s. 6d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.-13s. 9d.; Hartley, 16s.; steam, 13s.-13s. 6d.; trebles, 13s.-13s. 3d.; doubles, 12s. 6d.-12s. 9d.; singles, 12s. 6d.-12s. 9d.; pearls, 10s. 6d.-10s. 9d.; dross, 10s. **FIFE.**—Best unscreened navigation, 13s. 6d.; unscreened navigation, 12s. 9d.-13s. 3d.; first-class steam, 10s. 6d.-14s.; third-class steam, 12s.-13s.; trebles, 14s.-16s. 6d.; doubles, 13s. 6d.-14s. 6d.; singles, 12s. 9d.-13s.; pearls, 10s. 6d.-10s. 9d. **LOTHIANS.**—Best splint, 14s. 6d.-prime steam, 12s.-13s.; secondary steam, 12s.; unscreened navigation, 12s. 6d.-12s. 9d.; trebles, 13s. 6d.-14s.; doubles, 12s. 9d.-13s.; singles, 12s. 6d.-12s. 9d.; pearls, 10s. 3d. **AYRKSHIRE.**—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 11s. 6d.

CARDIFF.—There has been little change during the week in the position on the Cardiff coal market. The volume of contract and coastwise trades last week totalled 396,000 tons, compared with 406,900 tons in the previous week, and 396,870 tons in the corresponding week last year. Two disturbing factors have been the unsatisfactory operation of the arrangements made last March for the settlement of Anglo-Italian trade debts. Some French coal view to a reduction in the f.o.b. prices of South Wales coals shipped in the prices of French coals; while in the case of Italy there is the possibility of a partial cessation of deliveries owing to the enormous debts already incurred for coal supplied in the past. A deputation waited upon Mr Runciman on Tuesday with regard to these debts, but apparently the President of the Board of Trade was opposed to the establishment of a clearing agreement between the two countries.

Current market prices are nominally unchanged, and the following are the prevailing quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best steams (washed), 13s. to 13s. 6d.; second best large, 36s. to 40s.; Rea Vein, large, 22s. to 27s.; machine made cobbles, 35s. to 48s. 6d.; French nuts, 35s. to 48s. 6d.; stove nuts, 34s. to 45s.; rubbly culm, 11s. to 11s. 9d.; special foundry coke, 35s. to 37s. 6d.; patent fuel (Crown), 21s.; pitwood, French 24s. 6d.; Portuguese 19s. 6d.

IRON AND STEEL

SHEFFIELD.—The holiday next week will cause some disturbance of the local steel industry, but producers of stainless armament and aeroplane steel intend to confine the stoppage within the narrowest possible limits, as these and several other branches are being pressed for deliveries. Comparative quietude has developed in railway steel, and shipbuilding and tramway steel are slack. Brisk business is reported for steel sheets and strip. The building trade keeps busy and is a heavy buyer of fireplaces, rainwater goods and tools. Makers of machine knives have been well supplied with orders for a long period. The basic steel furnaces continue on full time. Tool makers are also busy in spite of increasing imports of engineers' small tools and precision tools from the United States. Germany has recovered a good share of its trade in this country for scissors and pocket knives. Sheffield firms are tendering for machines for making files in Poland and table knives in Russia. Business in cutlery and silver plate is abnormally quiet. The export position for steel products remains unsatisfactory.

GLASGOW.—Work has now been resumed at all the iron and steel works in this district and in almost every branch of the industry there are well-filled order books. Prospects of steady working are brighter than they have been at this season for a good many years past. The notable exception here is of course at the shipbuilding yards, where no new work of importance has been placed within the past two months. Shipbuilders, however, are hopeful of receiving further contracts at an early date. Steel-makers are fully employed and there is a steady demand for many classes of material. Demand for both black and galvanised sheets has improved and there are more mills operating. Engineers, machinery builders and sheet metal workers are all very busy at the moment and meantime there is an unusually large number of large inquiries on the market.

CARDIFF.—On the Swansea Metal Exchange on Tuesday there was a better inquiry for tinplates and shipments during the past week totalled 78,653 boxes compared with only 31,364 boxes the previous week. Quotations for tinplates, galvanised sheets, and bars are unaltered. A strong agitation continues to be waged against the project of Messrs Richard Thomas and Company, Ltd., to establish tinplate works at Redbourn, and the facts are being investigated by the President of the Board of Trade.

OTHER METALS

COPPER.—Holiday influences have begun to make themselves felt and the market in copper has been uninteresting during the past week. British warehouse stocks rose to the record level of 83,939 tons last week-end. The first result of the restriction scheme appears in the statistics of the output of Northern Rhodesia, which declined to 9,356 tons in June, against 10,595 tons in May and 11,879 tons in June, 1934.

Sales on the London Metal Exchange: 1,150 tons on Monday, against 800 tons last week; 1,000 tons on Tuesday, against 1,250 tons last week; 1,200 tons on Wednesday, against 1,100 tons last week. Domestic spot was quoted at 7.50 cents per lb. in New York on Wednesday, against 7.62½ cents a week ago and 7.22½ cents a month ago. Wednesday's official closing price for standard cash in London was £31 8s. 9d. to £31 11s. 3d., compared with £31 16s. 3d. to £31 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 72,705 tons, show an increase of 291 tons, while stocks of rough copper, at 11,234 tons, show an increase of 50 tons on the week.

LEAD AND SPELTER.—Prices on both these markets moved within narrow limits during the past week and the undertone showed no change. According to the American Bureau of Metal Statistics, world output of lead fell from 135,100 short tons in May to 122,200 short tons in June. Reports from the Continent state that the Belgian Vieille Montagne group, which issued invitations for a meeting of zinc producers some weeks ago, received mainly positive replies. It is now almost certain that a conference to arrange for the resuscitation of the International Zinc Cartel will be held soon after the publication of the decision regarding the future of the British duties.

Sales of lead on the London Metal Exchange: 350 tons on Monday, against 2,100 tons last week; 550 tons on Tuesday, against 1,150 tons last week; 1,200 tons on Wednesday, against 900 tons last week. The New York quotation on Wednesday was 4.15 cents per lb., against 4.15 cents a week ago and 4.00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 7s. 6d. per ton, compared with £15 6s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 300 tons on Monday, against 450 tons last week; 525 tons on Tuesday, against 500 tons last week; 25 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 4.40 cents per lb., against 4.35 cents the week before and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 3s. 9d. per ton, against £14 15s. last week.

TIN.—This commodity has again been in the limelight during the past week. The statement made in the House by the Colonial Secretary, to the effect that the buffer pool had at its disposal sufficient metal to meet demand, and that the unfortunate impressions of last week were unlikely to be repeated, gave the impression that the tin market would shortly show an improvement. This that the tin market was reinforced by the shipment over the week-end of 1,200 tons of tin by the buffer pool from New York to this country. Originally the bulk of the buffer pool supplies had been warehoused in New York, in order that the American market might be supplied, as perfectly as possible. This practice was quite understandable, for the restrictionists did not want to strengthen the hands of those in the United States who (as reported in the *Economist* of May 25, 1935, p. 1190) are anxious to develop independent sources of supply.

But as the American tinplate industry is working at 80 per cent. of its capacity, supplies of tin in the United States are scarce at the moment. The fact that shipments have been made to the United Kingdom, in spite of this scarcity, must be due to the intervention of the Colonial Office. Meanwhile, the buffer pool committee held a meeting on Friday of last week to discuss future policy. No details regarding these discussions have become public but, since the pool sold some metal during the past few days, it appears probable that demand will in future be met in a more satisfactory way than has been the case in the past. The next meeting of the International Tin Committee, originally fixed for September, is to be held on August 9th, when a considerable increase in production quotas is likely to be approved. At the moment, the market position is very quiet, the principal feature this week having been a fresh decline in the three months' quotation, which widened the backwardation on Wednesday to almost £15 per ton. If proof is needed of the distrust in the present position, abundant evidence is forthcoming in that, despite the very large backwardation and the smallness of consumers' stocks, scarcely anyone is prepared to purchase forward tin at the present time.

Sales of tin on the London Metal Exchange: 260 tons on Monday, against 295 tons a week ago; 225 tons on Tuesday, against 305 tons last week; 240 tons on Wednesday, against 205 tons last week. The New York quotation on Wednesday was 52.65 cents per lb., against 52.50 cents a week ago and 51.90 cents a month ago. Wednesday's official closing quotation in London for standard cash was £233 12s. 6d. to £233 15s. per ton, compared with £233 5s. to £233 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 978 tons, a decrease of 340 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., as against £11 12s. 6d. last week. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, the same as last week. Chinese wolfram for July-August shipment was quoted at 32s. to 34s. per unit c.i.f., as against 31s. 6d. to 32s. 6d. per unit c.i.f. last week. Platinum (refined) remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester. — Following a period of extreme slackness there has been rather more activity in the market. Price testing of yarn and cloth has been on a slightly freer scale, but at the same time it is not possible to record any general improvement in turnover. Many of the larger shippers and merchants have reported a distinct falling off in demand. Markets are badly in need of some stimulating influence. In the meantime most buyers appear to be content to mark time and are placing only small orders for immediate requirements. The raw cotton position remains confused. The relatively high price for current month American futures, as compared with distant positions, remains a feature of interest, and these conditions look like remaining in operation for some time. The United States Government has not yet made any official announcement regarding the loan plans to farmers. Markets have been inundated with rumours that the advances will range from 8 to 13 cents, and an official statement would be welcomed. In the meantime the outlook remains extremely uncertain, and any influences of a bullish character have only been sufficient to counteract a distinctly easier tendency in prices. Improved weather reports have been received from the belt, and private crop estimates have increased.

Cloth demand has been rather featureless. Inquiry for many outlets has been on a smaller scale than recently, but some markets have provided a little more business. Sales have been recorded for India in light bleaching styles, prints and fancies, but business has not been important. Small sales have taken place for Hong Kong and the Straits Settlements. A little more inquiry has been about for Egypt and the Near East, while price testing has been in evidence for Central and South America. The Empire markets and the home trade have provided a steady business. Rayon goods are moving into consumption on a free scale, and this section remains relatively busy. American and Egyptian yarns have been in quiet request. Spinners still complain that prices are very unremunerative.

July 27, 1935.....	47,458	5,206	8,056	5 6	6 5	7 10

MEAT.—At Smithfield Market trade has been poor for all descriptions of meat, with prices showing a tendency to sag. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 10d. per 8 lbs., as compared with 3s. 8d. to 4s. last week. New Zealand per 8 lbs. was 2s. 6d. to 3s. 4d. per 8 lbs., against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,263 tons, an increase of 227 tons on the corresponding week last year. Beef accounted for 4,512 tons, mutton and lamb 2,671 tons, and veal accounted for 4,476, 2,671 and 480 tons, respectively, in the same week of 1934.

VEGETABLE OILS AND OILSEEDS.—The possibility of a change in the currency policy of the Netherlands led to a sudden demand for linseed. Prices advanced sharply, £9 12s. 6d. being paid for shipment to Hull. This, however, passed, but the market is still firm owing to continued drought in Argentina and the United States. The current price of Plate for shipment to September is around 9 7s. 6d. Indian linseed is in very poor request, shippers' ideas of prices being too high to encourage buyers. Generally, demand is low, and crushers' immediate requirements fully covered. The

quantity on passage to Europe is 101,400 tons (including 5,700 tons from India), 6,600 tons less than last week; and that for the United States and Canada 7,800 tons, against 26,000 tons a year ago. Shipments from Argentina continue at a fair level, but the new Indian crop moves off very slowly indeed. Cottonseed is in poor demand, and spot prices have eased. Old crop Egyptian alfalfa to Hull, however, is held for £6 7s. 6d., while new crop October-November is around £5 17s. 6d.

Linseed oil is dearer in sympathy with seed, but consumers are indifferent. Raw oil ex Hull for August delivery is quoted at £22, and September-December at £21 15s. per ton naked. Only a small trade is reported in cotton oil, and prices are unchanged. Egyptian crude is offered readily at £23 and refined at £26 per ton prompt. Oilcakes are in about normal demand for the time of year.

RUBBER.—With the improvement in the political situation in Holland and the removal of fears regarding the immediate devaluation of the guilder, the market in rubber has had a better tone this week. Quotations, both in London and New York, have risen above the week's lowest, the tendency being steady at the close on Wednesday. In New York the spot price on Wednesday was 12½ cents per lb., compared with 11½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5¾d. for October-December, 1935, as against 5½d. to 5½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 173,108 tons, against 172,184 tons a week earlier. A year ago stocks amounted to 105,390 tons.

SIGNOR MUSSOLINI'S CHOICE

THE statesmen who met at Geneva last week for the special League Council on the Italo-Abyssinian dispute have contrived to secure a little breathing-space. But unfortunately we cannot with confidence anticipate that the respite will lead to a relaxation of tension, either for the League or for the disputants. The Herculean efforts of M. Laval and Mr Eden to devise a procedure which would enable Signor Mussolini to give arbitration a chance have hardly done more than postpone consideration of the vital issues by the League to September 4th.

In the first of two resolutions passed by the Council on Saturday, the hitherto abortive Italo-Abyssinian Conciliation Commission of Four, set up under the terms of the Italo-Abyssinian Treaty of 1928, is charged with the task of agreeing on the fifth arbitrator and of allocating responsibility merely for the affray at Walwal. Signor Mussolini's contentions that the Council should not nominate the fifth arbitrator, should not extend the Commission's scope so as to bring the Italo-Abyssinian boundary into question, and should not now be seized of the Italo-Abyssinian dispute in its entirety, have all been respected. He has not even been required to give a specific undertaking that he will not resort to force of arms against Abyssinia in the interim. On the other hand, the first Council resolution does recognise that "it is always open to the Commission to take into consideration without entering upon any discussion on the matter, the conviction that was held by the local authorities on either side as to the sovereignty over the place of the incident." And, moreover, the resolution explicitly states that the Council "takes note that the representatives of the two parties have declared that they intend to pursue the procedure of conciliation and arbitration under the conditions laid down in Article 5 of the Treaty of 1928." This reference to Italy's and Abyssinia's undertaking not to have recourse to force of arms against each other in the case of a dispute will therefore make it difficult for Signor Mussolini so to strain the sense of his 1928 Treaty with Ethiopia as to commit flagrant aggression—at least, not without flying flatly in the face of all covenants Italy has ever put her hand to. Thus, on the terms of the first resolution, Signor Mussolini has gained his points. He can temporise

in the sittings of the Conciliation Commission; he can dispute the scope of the fifth arbitrator; and he can block all progress along that line.

But he cannot easily circumvent the very blunt and succinct provisions of the second resolution passed by the Council last week. The whole resolution contains 27 words only; but they are susceptible of potent interpretation. They are as follows: "The Council decides to meet in any event on September 4th to undertake the general examination in its various aspects of the relations between Italy and Ethiopia." This is the product of the close collaboration between the representatives of France and Britain at Geneva. It sets a time-limit of one month, during which negotiations for a peaceful issue out of the Walwal imbroglio have their last chance.

But, while Signor Mussolini has gained on the first Council resolution and lost on the second, there is yet a third result of the deliberations at Geneva, the outcome of which is even more questionable than that of the other two measures. The representatives of France, Italy and Britain have agreed to meet as soon as possible in France to seek a solution of the Italo-Abyssinian dispute under the terms of the 1906 Treaty. This decision involves certain significant consequences. First, Signor Mussolini's contention that the dispute is no matter for the Council is once again respected; for the Three-Power discussions, which are expected to begin next Monday or Tuesday near Paris, will take place entirely outside the scope of the League. Secondly, another of Signor Mussolini's oft-reiterated contentions is implicitly recognised; for Ethiopia is not to be represented. Thus—unlike proceedings at Geneva—the dispute is to be discussed between what the Duce calls "the leaders of civilisation" alone. It is, however, to be noted that two of the parties to the imminent Three-Power deliberations in France, namely France herself and this country, are pledged to collaboration at Geneva on September 4th in the inescapable task of examining the relations between Italy and Abyssinia in their various aspects. Thus, the result of last week's discussions at Geneva has been to provide a threefold approach to the problem of preventing the imminent

outbreak of hostilities in East Africa. What are the omens and what the auspices?

In the first place, Signor Mussolini has made it yet more plain this week that he is not going to abate by one man or one gun his warlike preparations in East Africa; for he has called up 38,000 more troops, which now raises the total under arms to very nearly 1,000,000—a prodigious and threatening phalanx. At the same time, the Italian Press, which is entirely controlled by the Duce, has been stimulated to what can only be described as an orgy of Anglophobia, apparently by no more than the declarations made by Sir Samuel Hoare in the House of Commons last Thursday and by Mr Eden in a broadcast address from Geneva on Saturday night that this country would honour her obligations under the League Covenant. This outburst has not hesitated to threaten Italian action against Malta and Gibraltar in the event of any form of "constraint" being placed, by agreed League action, upon Italy's "mission" in East Africa. Signor Mussolini, indeed, may forge ahead with preparations for war; but he can hardly ignore the manifest concentration of world sympathy on the side of Abyssinia. The Swiss—hardly a bellicose folk—have expressed this week in no uncertain terms their natural concern for the safety of the small Powers if once the League Covenant becomes "a scrap of paper." Other small Powers have begun to give more practical proof of sympathy with Abyssinia. It is reported that Turkey, whose representative in Rome protested last year against Signor Mussolini's public declaration that Italy's "mission" lay in Asia and Africa, has already offered Abyssinia material help and advice. And the many influential warnings of Japan's concern for Abyssinia can hardly be lost on the Duce. This writing upon the walls of the world—*flammaria moenia mundi*—is, with the memories of twenty-one years ago fresh in our minds, ominous in the extreme.

No one would doubt that Signor Mussolini can make war on Abyssinia. It may well be that Italy could, at some great expense of lives and money, wipe out the memory of Adowa and annex Abyssinia—in time. But, in so doing, Signor Mussolini would involve all of us in paying the cost. If his policy is to paralyse the Conciliation Commission, the Three-Power conference next week, and the Council of the League on September 4th, the League itself, as we have known it and conceived of it since 1919, must act or perish. If, in default of a fearless lead from Britain and France, who, after all, should be its "leading" members, it is found wanting, then with it would vanish the world's hope of peace by mutual agreement between the nations. Can it be that the Duce has really weighed all the issues and carefully deliberated every contingency? Can he view with equanimity either the utter disintegration of the League, with its attendant panicky fermentation of alliances among the Great Powers and their distraught client-States, or else the inauguration of League sanctions against an aggressing Italy, with the incalculable consequences which such action in the cause of international right might entail?

The time has come for plain speaking; and Signor Mussolini has spoken too plainly for too long to grudge others that right. The truculent mood of Italy to-day, as also her apparent readiness to tear up her undertakings and to set herself in opposition to the world's sense of justice and right, is ominously reminiscent of the Germany of 1914. Japan has shown that the opinion of the rest of the world can be successfully defied in the Far East; and it would seem that Italy is determined to put the same question to the test nearer home. We trust Signor Mussolini will ponder the issues yet once more before he commits Italy to persistent intransigence during the next four weeks, and, by so doing, plunges two League members into war and drives the rest of them to courses which can, by no conceivable stretch of imagination, be in the interests of Italy. For these are the alternatives before one who, alone, is responsible for Italy's decision. Either the Duce must co-operate for a peaceful settlement on the basis of the system we have laboriously erected for that purpose since the war; or he must destroy that system at the very core, and so unloose forces in Europe which no single Power by itself may ever again be able to hold in check. Even now we are loth to believe he will deliberately choose the latter.

BELOW TWO MILLIONS

THE unemployment figures for July, which were published this week, have, at last, fallen below two millions. This is a notable event, for it is the first time for five years that any breach—even if only a small one—has been made in this "Hindenburg line" of depression. The achievement is the more remarkable for it has occurred in July, a month in which in recent years there has usually been a seasonal setback. The improvement has been spread fairly evenly over most parts of the country; but the figures might have looked rather different if the day of the estimate had been a week later, after the end of the school term, for there was a rather unusually large number of juveniles leaving school at the end of July and entering the labour market for the first time. Is this week's announcement to be regarded as a portent, indicating that we are about to break through, on a wide front, into the promised land? Or is it a more or less accidental, and ephemeral, crossing of the line?

This question is one to which various answers will be given. But it is of some interest that *The Times* has taken occasion to issue a warning against the complacent view that, with a strong tide of recovery flowing, things only need to be left alone. The cause of recovery, says *The Times*, is confidence, and confidence "would not be proof against lethargy." The Government's fiscal policies have, according to this theory, "had an inspiring effect on the home market." The Ottawa agreements have substantially increased inter-Imperial trade, while other agreements have been used as a flexible instrument for achieving "the apparently contradictory objects of raising revenue, affording protection, opening up markets, and maintaining a low level of prices." Similarly beneficial have been the Government's actions in the sphere of housing and the measures taken to sustain many branches of the agricultural industry. And as the economic recovery has not been left to come by itself in the past, so it cannot be left now. The argument applies in the political, as well as in the economic sphere, for, according to *The Times*,

the successes of the Government have given the public an appetite for more. . . . Most of the details of the "programmes of action" which have recently appeared from several different quarters will not bear examination; but, when their details have been properly disregarded, the spirit behind them should nevertheless be taken seriously. . . . the element of good in them is the desire that the present recovery should wax and the fear lest it should wane.

We are not entirely at one with *The Times* in its analysis of the causes of recovery; and we cannot accept the complacent assumption that the Government has done nothing wrong and left nothing necessary undone. Nor do we think it can be quite so blandly taken for granted that the formidable and impressive body of opinion mobilised in support of one perfectly definite set of proposals can be persuaded to transfer its allegiance to a second and entirely different set of proposals on the plea that "details" can be "properly disregarded." But *The Times* is certainly right in stating that the public will insist on further and more vigorous attempts to reduce unemployment in Great Britain to a much more normal level.

Can this be done, and if so by what means? At the meeting of the Liberal Summer School at Cambridge, Mr Dennis Robertson put forward the somewhat gloomy view that we are already nearing the top of the present trade recovery and that the unemployment figures cannot be expected to fall much below 1½ millions. This conclusion was largely based on the view that the alternation of boom and slump is largely a matter of the activity or otherwise of the capital-producing industries, and that these industries are not likely to be called upon to play as large a rôle in the future as they have in the past. Mr Robertson thinks that it will take a long time to adjust the personnel and plant of the country to the new and different ratio between the output of consumption goods and the output of capital goods. Moreover, the adjustment cannot be greatly hastened by agricultural policy, for, in any case, absorption of employment created on the land will not be very great. But Mr Robertson's thesis can be challenged from two points of

view. In the first place, taking the world generally, it may be questioned whether demand for capital goods has suffered as severe a setback as the argument implies. And in the second place, if this theory is correct, it affords a strong argument for the Government's taking a hand at investment in public works. It is the core of Mr Robertson's thesis that savings are available, but that the country does not need them. Yet it is obvious that the scope for investment in public amenities is almost unlimited, and if by a policy of this kind the old balance between capital and consumption industries can be maintained for some time to come, we may prevent a recession of the curve of economic activity in general.

But Mr Robertson is not the only pessimist. Some observers who look at the situation in the country are inclined to argue, on the basis of official figures, that we shall have to face a very serious situation within the next two years when the present housing boom comes to an end. It is true that building plans are still being filed on an unprecedented scale, but the bulk of the enlarged demand is for dwelling-houses. In other forms of building the volume of employment is still far below that of 1929. According to the Registrar-General, the immediate demand for dwelling-houses is almost satisfied. If the activity in demand for residential building ceased abruptly, we should quickly have some hundreds of thousands of men thrown out of the building industry, and this would precipitate a new and serious crisis. In this specific form, applied to the housing industry, the theory of an approaching decline in the demand for capital goods carries very much more conviction than in its general implications. It is, indeed, almost self-evident that the housing boom cannot indefinitely continue at the present rate. The houses which are being built in such numbers are predominantly of one general type, and the number of persons with both the desire and the ability to purchase them is not unlimited. What is virtually unlimited is the potential demand for better housing accommodation on the part of those who are not at present in the market for suburban semi-detached villas. The slum clearance and overcrowding programmes are intended to tap part of this potential demand; and if the present private enterprise building boom collapses, they could be speeded up to fill part of the gap.

But the part they are likely to fill is small, and other expedients will be needed. There is an enormous field for almost indefinite housing activity in demolishing and re-building a very large part of our present houses. For twenty-five years replacement of houses in Great Britain has been at a minimum. Even without this quarter-century of decay, our standard of housing is pitifully far behind that of, say, Germany and the United States, so far as its amenities, conveniences and location are concerned. Demolition and replacement are in any case bound to start within a few years from now. But if events are allowed to take their unplanned course, replacement will begin only after a collapse in the residential market and in the building industry. It would be a wiser course of policy to start planning now for an expansion of replacement building to take the place of the present excessively high rate of new building. The same arguments apply, with very little change, to the need for a programme of public capital development. If the case for public works is, as we believe it to be, strong in the circumstances of to-day, it will be many times stronger when we are faced with a decline in building activity.

That such a decline is approaching, and that it will have serious consequences, are beliefs which are very widely shared. We have indicated three ways in which it could be counteracted—slum clearance and the reduction of overcrowding; the replacement of obsolete houses; and public works—none of which is yet being pursued to the utmost limit. There are doubtless other similar expedients, but none of them will start itself off at the right moment of its own accord. There is an urgent need for a properly co-ordinated policy, thought out in advance, to meet the emergency which can be seen to be approaching. If we are to control the level of employment, we need to constitute reserves which can be thrown in when there is any danger of the unemployment figures being forced to retreat once more across the Hindenburg Line.

BRITISH ENGINEERING—I

THE engineering industries of this country were in the trough of the depression in the year 1932. In the following year the downward trend was arrested, but it was not until 1934 that any marked degree of recovery was achieved. The Board of Trade index of production for Engineering and Shipbuilding (basis 1924=100) fell from 125.5 in the first quarter of 1930 to 84.2 in the third quarter of 1932. Since then there has been a more or less steady rise to 105.9 for the first quarter of 1935.

Thus, recovery in these industries has been rapid and substantial. It has been mainly due to increased home demand, for the value of total exports of machinery in 1934 was not 10 per cent. above that for 1932, and was only 60 per cent. of the value of exports in 1929. The value per ton of exported machinery remained practically constant over the two years. This export situation has had a marked effect on the recovery achieved by the various sections of the industry. Thus the motor industry, in which exports account for less than 17 per cent. of the output, achieved a record level of production in 1934, while the locomotive industry, relying largely on exports, remained very depressed. In this and a succeeding article we review the experience of the constituent industries in this very wide branch of our national economic activity.

The Motor Industry.—There was a record production of 256,866 private cars in the year ended September 30, 1934, an increase of 16.3 per cent. over the previous year and of 41 per cent. over 1929, when the previous record was established. This was chiefly due to concentration on economical types of cars, which enabled manufacturers to take advantage of the revival of purchasing power in 1933 and 1934. Again, the erection of more small houses with garages in the last year or two has reduced one of the heaviest annual charges on the small car owner.

Though the small car—say up to 12 h.p.—still accounts for over 60 per cent. of total production, its popularity is diminishing with the passing of the depression and the reduction in the horse-power tax. This change is welcome to the trade, for the larger car means a larger profit margin. The new demand, coupled with devaluation of the dollar, led to an increase of 160 per cent. in imports (chiefly high-powered American cars), and to suggestions that the existing duty of 33½ per cent. should be raised. In 1934, however, imports still amounted to only 4.4 per cent. of home production, and cannot be said to constitute a serious danger to British manufacturers.

Exports of British private cars and chassis have recently been very good, increasing from 18,832 in 1931 to 40,956 in 1933—a period when the combined exports of the United States, Canada, Great Britain, France and Italy increased only from 153,500 to 155,200. Many British makers have recently undertaken the production of export models, and the depression stimulated the purchase of small cars abroad, where they had not previously been popular. In 1934, however, British exports increased only to 43,937, while United States exports increased by 130 per cent., so that the British figure represented only 10.4 per cent. of

the total of the countries mentioned above against 26.3 per cent. in 1933. When home demand is expanding there is a strong incentive to British manufacturers to concentrate on the home market rather than attempt to increase exports since the latter are less profitable. Production figures for the current year predict that 1935 will establish a new high level of production.

Production of commercial vehicles fell from 67,807 vehicles in 1930 to 61,475 in 1932, but recovered in 1934 to 85,633, part of the increase being due to the necessity for re-equipment in order to ensure economical working of hauliers' fleets under the Road and Rail Traffic Act of 1933. A special article surveying the commercial motor vehicle industry and its prospects appeared in the *Economist* of July 20th.

Aircraft Engineering.—The Aircraft industry is closely associated with the motor industry through engine-makers, e.g. Rolls-Royce and Armstrong Siddeley, and it is rapidly expanding output, quite apart from Government orders in connection with re-armament. The effect of the latter with reference to investment possibilities has already been reviewed in the *Economist* of May 18, 1935. Apart from British military aircraft, the openings are for commercial aviation, private flying and export. The total number of civil aircraft registered has increased from 600 in December, 1929, to 1,209 in March, 1935—a remarkable achievement in view of the limited kind of demand. Exports account for a substantial proportion of total production—22 per cent. of complete machines and 27 per cent. of engines in 1930. The peak was reached in 1929, when the value of exported machines, engines and parts reached £2,183,373, the corresponding figure for 1934 being £1,922,314. The decline is partly due to reductions in price during the two years; but there has also been more construction abroad under licence or by subsidiaries. For example, Hawker licences are granted in Denmark, Sweden and South Africa, and there is a Fairey subsidiary in Belgium. Thus, the decline in exports need not involve a financial loss to British manufacturers.

While a steady expansion in both commercial and private flying is to be looked for in the future, immediate prospects are undoubtedly largely dependent on the distribution of armament orders.

Electrical Engineering.—Owing to continued demand for electrical plant and equipment in the construction of the Electricity Grid, this branch of engineering did not feel the depression to the same extent as others. The worst year was 1933, when demand from this source began to fall off; exports also declined. The year 1934 proved to be one of steady expansion, employment in the industry at July reaching 84,470, compared with 77,582 in the previous year and 82,776 in 1930, the best pre-depression year.

The outstanding event of 1934 for the heavy section of the trade was the announcement in July that the Central Electricity Board proposed to spend £4,000,000 to £5,000,000 in adding roughly 500,000 kw. to the capacity of certain selected stations; the work was expected to last some two years. This brought about an increase in the BEAMA index of production for home orders (twelve-months' moving average of orders on hand, based on horsepower and not on value of orders) from 46 in the second quarter of 1934 to 71 in the third quarter. Activity increased throughout the remainder of the year, and by the first quarter of 1935 the index had risen to 103.

The heavy section of the industry is also dependent to a considerable degree on exports, which consist principally of generators, motors, switch and control gear, converters and transformers. After reaching 41,212 tons, valued at £6,345,621, in 1930, exports declined steadily to 17,667 tons in 1933, valued at £2,635,985. Only a small proportion of the recovery in production in 1934 was due to the rise in exports, which stood at 22,437 tons, valued at £3,277,870. Compared with other countries, however, these figures are very satisfactory, for the value of German exports declined by 16 per cent., and of U.S. exports by 13 per cent., while French exports increased by only 4 per cent. Since Russian purchases began to decline, the principal export market has been South Africa, which took 34 per cent. of total exports in 1934, chiefly in connection with increased mining activity. A serious development in this connection was the barter agreement concluded between

Germany and South Africa, under which wool from the latter country was to be exchanged for electrical machinery and rolling stock from the former.

It appears from the available statistics that activity in the heavy section of the electrical engineering industry at the beginning of 1935 was a high record. A short time ago prospects were uncertain, for it was doubtful whether, on completion of the work on selected stations, a sufficient volume of orders would be forthcoming to maintain production. The £32 millions London Passenger Transport improvement scheme should allay immediate uncertainties, since the extension to the Central London Tube and the electrification of the L.N.E.R. suburban lines are estimated to last about five years. In addition the L.N.E.R. announced plans in August for the electrification of eleven miles of line between Newcastle and South Shields, at a total cost of £500,000, while the S.R. placed substantial orders with the English Electric Company and Asea Electric Limited in connection with a ten years' programme of electrification. In this connection an interesting development last May was the formation of an organisation for the pooling of large orders relating to electrification. This took the form of a new company—Associated Manufacturers of Electric Traction Equipment—of which the shareholders are the British Thomson-Houston Company, English Electric Company, General Electric Company, Metropolitan Vickers Electrical Company, Crompton Parkinson, and Allen West and Company.

The light section of the industry is dominated by the home market, the principal factor being the rate of domestic electrification and of extension in telephone services. The former has been greatly assisted by the high level of activity in building, though electrification of *existing* premises probably still accounts for about half the sales of domestic electric fittings. For this reason, in spite of a possible decline in building, there is likely to be a fairly steady demand for domestic electric fittings for several years. The number of telephone subscribers has been steadily increasing from 1,895,740 in 1930 to 2,225,006 in 1934 as a result of the Post Office policy to extend the telephone service rather than the telegraph. During recent years, however, Post Office expenditure has been considerably curtailed, and a resumption of spending coupled with the low rates recently put into force should bring an accelerated increase in subscribers during the coming years.

Shipbuilding and Marine Engineering.—Shipbuilding has probably been affected by the depression to a greater degree than any other branch of engineering. Although there was some recovery in 1934, vacant berths at the end of the year accounted for about 77 per cent. of the total available, in spite of the activities of National Shipbuilders' Security, Ltd., which has been responsible for the closing of 137 berths since it began operations. The extent of the depression is shown by the fact that the total of vessels under construction fell from 1,560,000 tons at the end of 1929 to 230,000 tons at the end of 1932. In 1933 and 1934 small recoveries took place, to 331,000 and 597,000 tons respectively. This recovery was reflected in marine engineering, which improved at the beginning of 1934 but declined steadily towards the end of that year. Employment in July, however, reached 33,139—a substantial increase on the three preceding years, though considerably below the 1929 figure of 53,239.

In addition to the decline in home demand, exports of marine engines, which normally account for about 20 per cent. of the output, fell from 90,974 tons in 1930 to 4,447 tons in 1934. The decline in value was not quite so great, owing to the increasing proportion of internal combustion engines, which have a value of about £250 per ton, as compared with £60 per ton in the case of steam engines. This redistribution is not confined to exports, for the h.p. of internal combustion engines under construction increased by about 340 per cent. between June, 1933, and June, 1934, while that for steam engines increased by only 94 per cent. These figures must not be taken to indicate that the internal combustion engine is rapidly replacing the steam engine for all purposes, since the bulk of shipbuilding construction during 1934 was confined to special vessels, the depression in the freight market largely preventing the construction of cargo and tramp steamers.

The "scrap and build" policy provides a subsidy of £10 millions for the construction of new vessels; but for every new ton constructed two tons of old tonnage must be scrapped. This may give a stimulus to the shipbuilding and marine engineering industries during 1935. But idle tonnage stood at 878,000 tons on January 1, 1935. No substantial measure of recovery can be achieved until freight rates are once more on a profitable basis and a revival in international trade reduces this deadweight on the industry.

A subsequent article will examine the sections of the industry producing textile machinery, locomotives, agricultural machinery, machine tools and constructional and general engineering.

GERMANY'S ECONOMIC RECOVERY—I

(BY A CORRESPONDENT)

SINCE the National-Socialist Party assumed power in February, 1933, a striking economic recovery in Germany seems to have been achieved. For this, the National-Socialist Government have taken credit—in both senses of the term; and for its cost that Government are responsible. What is the nature of this recovery? How has it been contrived? And at what social and monetary costs?

On the face of it, the extent of the economic recovery in Germany is very great. In the middle of June this year the volume of industrial production was almost back to the 1929-30 level; and if we take the 1928 average as 100, the index for the month of May, 1935, stood at 96.3. But this recovery has been uneven. Production of "investment goods"—e.g. ores, metals, building materials, vehicles, machines, buildings, etc.—has already reached the 1928 figure and stands 30 per cent. above last year's figure at the corresponding date. But production of "consumers' goods"—e.g. textiles, footwear, household requirements, etc.—is still 15 per cent. below the 1928 figure, and even 5 per cent. below the figure at this date last year. This shows that the Government's "work-creation programme," financed by the State, has at least benefited the industries producing investment goods. Yet when this State expenditure was first inaugurated, under the Von Papen Government three years ago, it was expressly for the purpose of "cranking-up" the engine of Germany's entire national economy; and the "kick" so obtained, it was declared, would first function in the sphere of private industry, especially in the consumption goods industries. Thereafter, it was stated, the capital goods industries, indeed the whole economic machine, would be enabled to run without any more "cranking-up." Despite the virtual exhaustion of the Rm. 5,000 millions (excluding the hidden expenditure on re-armament) provided by the State for this programme—according to the latest official figures only Rm. 786 millions are still available, and part of this is earmarked for payment of public works in progress—the consumption goods industries, instead of being the pace-makers, are the laggards. What factors have falsified the

official prophecies, and restricted "recovery" mainly to the industries producing capital goods? What has held back consumption? An analysis of the development of Germany's unemployment figures throws no little light on the problem.

In the trough of the depression, in 1932, unemployment stood at 6 millions; and many experts calculated that there were another 2 millions of "invisible" unemployed at that date. At the end of June this year, when the figure of employment is at its seasonal highest, the official total of the unemployed was 1,877,000—that is, only 617,000 more than at the same date in 1929, when the post-war peak of employment was reached. But to-day the official figures of employment, based on Health and Unemployment Insurance statistics, show a substantial total of "invisible" unemployed:—

(000's omitted)		
End of June—	Employed	Unemployed
1929	18,638	1,260
1930	17,033	2,641
1931	15,253	3,954
1932	12,799	5,476
1933	13,307	4,856
1934	15,530	2,482
1935	16,505	1,877
1935 compared with 1929	- 2,133	+ 617

On this showing alone there were about 1,500,000 of "invisible unemployed" a month ago, in addition to the 1,877,000 of officially "visible" unemployed. But that is not the whole unemployment story. The official employment figures include as "employed" many categories of "occupied" persons introduced since February, 1933. These include: Men working in the compulsory labour camps and services; "farm helpers" of both sexes between 18 and 25 years of age; what are known—and scheduled—as "emergency workers"; and "workers under the Poor Law," these being workers who have in the main been two years or more unemployed. All these are known as "additional employees," and receive a provision for bare subsistence, in contrast with "regular workers" who are paid regular wage rates. In the spring of 1934 such "additional employees" numbered well over one million; at the end of last May they were down to 550,000. Moreover, men drafted into compulsory military service (before and after the publication of this year's conscription decree) and the thousands in concentration camps and prisons are naturally not shown as "unemployed," though they are removed both from industry and from the normal demand for consumption goods.

Thus, between June, 1933, and June, 1935, the real significance both of officially defined employment and of officially recognised unemployment in Germany has been changed. If we make all due allowances for temporarily incapacitated workers and for those voluntarily changing their jobs, the total of able-bodied workers in June, 1933, can be placed at 20,700,000, compared with the official 1933 census figure of 21,684,000. The development of the

employment and unemployment figures then follows on these lines:—

	(000's omitted)		
	June, 1933	June, 1935	Change
Total workers	20,700	20,800	+ 100
Employed (official)	13,307	16,505	+ 3,198
Unemployed (gross)	7,393	4,295	- 3,098
Unemployed (official)	4,856	1,877	- 2,979
"Invisible" unemployed	2,537	2,418	- 119

The small decrease in "invisible unemployment" can easily be explained by the compulsory military service alone.

Thus, although the global figures on the preceding page count short-time workers as full-time workers and do not differentiate qualitatively between regular and "additional" employment, the level of midsummer employment in Germany has not yet reached that of June, 1930, while the total of official and "invisible" unemployment is 1,654,000 higher than at the earlier date. All these factors go far to explain the limitations on the German workers' consumption capacity resulting from the various administrative changes in the last two years.

We turn to the development of retail trade. In the first four months of this year retail turnover was 4.8 per cent. above that for the same period of 1934 and 13.4 per cent. above that of 1933. But most of the increase is accounted for by foodstuffs; and in any case the figures are based on value. By quantity, retail trade has been less this year than last, and this for foodstuffs as well as for clothing, household requirements, etc. With more workers employed and with longer hours, less is being bought than last year; so it would seem that the average worker's real income must be falling as the cost of living and the turnover of retail trade (by value) rises. Moreover, it should be remembered that the average length of the working day has been extended in the two years since March, 1933, by about 6 per cent., to 7.45 hours. And there are further indications that the German workers' standard of living is scarcely on the upgrade. The total of wage and salary incomes in the first quarter of 1935 was Rm. 7,300 millions, against Rm. 6,100 millions in the first quarter of 1933. This 20 per cent. increase, however, compares with a 28 per cent. increase in the average number of occupied workers. As all officials and their salaries are included in both sets of figures, and as it is known that officials' salaries have undergone no reductions, the average worker's income appears to have declined. Moreover, evidence of this development has been forthcoming from many branches of industry itself. For instance, the official *Arbeitsfront* stated that in May, 1934, the average weekly income of the German worker in industry was Rm. 21.30 before any of the official deductions were made. Yet the I.G. Farbenindustrie's 1934 report shows an annual total wage and salary list of Rm. 200 millions for 165,000 workers. This means an average weekly income of only about Rm. 25 in one of Germany's leading technical industries employing a large proportion of highly skilled labour. Deductions from wages and salaries now play a very important rôle. They are: first, the official deductions for Health and Unemployment Insurance, income tax, contribution to aid the unemployed, etc.; and secondly, the various "voluntary" contributions, in practice compulsory, for the Nazi Labour Front, the Air Defence League, the various professional and Party organisations, the "Winter-help," etc. The former (official) contributions reduce a bank clerk's salary this year, for example, from Rm. 290.25 per month to Rm. 241.90; and an iron smelter's weekly wage (with night work) from Rm. 46.15 to Rm. 35.95.

Finally, a sharp rise in the cost of living in Germany has taken place during the last two years. In May of this year the retail cost of foodstuffs had risen by 6.6 per cent. above the figure in May, 1933, and the cost of clothing by 11.4 per cent. This explains the quantitative reduction in retail production has now reached the 1929-30 level, although agricultural production is now much higher than in 1929, and cultural production is now much higher than two years ago although there are now more workers than two years ago working (on the average) longer hours, in 1929 there were certainly 2½ millions more in work than to-day—and, if we

take account of the "invisible" unemployed, probably 4 or 5 millions more. In short, the intensity of work has been greatly increased, at the worker's cost.

Economic recovery in Germany has thus proved uneven in its incidence. In a second article we propose to examine the effects of the National Socialist Government's "cranking-up" operation on the industries producing "investment goods," and the cost of the experiment.

MAUD FOR ENGLAND

Some time ago a schoolgirl wrote in an essay that England was better than any other country in the world. The school inspector ventured to draw the schoolmistress's attention to the sweeping nature of that statement. Last week, on the initiative of Sir Gerald Hurst, the propriety of the inspector's conduct was debated in the House of Commons.

SIR GERALD HURST, K.C., M.P., and Maud have struck a fine blow for England. Maud began it by writing an essay at Chorlton-on-Medlock Church School in which she said that England is better than any other country in the world. Academically the essay was not a great success, for it was only awarded 5 marks out of 10; but because its accuracy was questioned by a school inspector who has done nothing for England except fight for her in war and work for her in peace, it led to such a spontaneous and dignified outburst of patriotism that it ranks to-day with the great historic expressions of England's glory, and is to be placed, we hope, next to Rupert Brooke's poem on England in the British Museum. Apart from Sir Gerald Hurst and Maud, the nation's thanks are due to the Rector of Chorlton-on-Medlock, to the *Daily Express*, and to the House of Commons, which has proved itself, as always, equal to a great occasion.

Sir Gerald Hurst, K.C., M.P., is too good a lawyer and of too keen a brain to take up a case unless he is sure of his facts and satisfied of the accuracy of the statements; and we cannot doubt that before he raised the issue in Parliament he thrashed the matter out with Maud and made clear to her the importance of not going one step beyond the ascertained truth. He questioned her, we may feel sure, on her reasons for declaring that England is better than any other country in the world; checked her arguments; verified her references; explained to her that one of the chief aims of education is to induce precise thinking and accuracy of expression; convinced himself that she was not repeating a parrot cry or dealing in meaningless clichés; and only then was the road clear to the great demonstration of patriotism that was to follow, to Maud's triumphant journey up to London, to her film-star reception at Euston, to her appearance in person at the House of Commons and to the politicians' delicious ecstasy of discharging a painful but unescapable public duty.

Sir Gerald Hurst, K.C., M.P., and Maud must, we like to think, have gone into Committee on England. They found (we hope) a number of reasons which appealed to them both for believing that England is better than any other country in the world; and in particular they must surely have agreed that nowhere, except, probably, in Nazi Germany, is the standard of solemnity so high as it is here. In other countries, France, for instance, there is a levity, a sense of humour, a perception of the ludicrous which makes it regrettably difficult for public men to do some things that in England are well within our scope. Such things, for example, as to get the Mother of Parliaments discussing twice in one week the questions (a) whether England is better than all other countries; and (b) whether, even if she isn't, the elementary school children ought not to be taught that she is. An assembly that was impeded by a sense of humour would find it hard at best to sit down to an angry debate on the extent of our national superiority. But when the occasion for the discussion was a pronouncement in favour of England from a little girl who had probably never been outside Lancashire or seen a foreigner—nay, very likely believed that, as England is better than any other country in the world, so Blackpool is better than any other place in England—then, indeed, it was a job that only the very

pick of the world's Solemnities could hope to tackle. On this point we imagine how Maud may have put her case. "My Country," she must surely have said, "is rich beyond her fellows and her contemporaries in what the Romans called *gravitas*, which I venture to translate as solemnity. It is an invaluable asset and a great adjunct to success. Doubtless you will recall the words of R. L. Stevenson, who said, 'God send me a young man with brains enough to make a fool of himself.' " "I adopt," Maud would say, "with a trifling modification the language of that distinguished author and I say 'God send me an M.P. with brains enough to make a fool of himself.' " "And," Maud could add, with a simple reverence that one looks for in a pupil of the Rector of Chorlton-on-Medlock, "God has sent me such an one."

Sir Gerald Hurst, K.C., M.P., and Maud would doubtless have agreed, too, that England is better than any other country in the quality and the form of her popular Press. Across the Atlantic perhaps there may be here and there a paper to compare in enterprise with our great national organs; but where else is there a Press which can do half the things that our English papers take in their stride? To what other European country could you point in which a paper, sold for a penny, can take a child at the age of 13 from a small provincial town and enthrone her as a national heroine? Snatch her from her home and school; bring her under the glare of intensest limelight to the metropolis; provide her with a welcome no less demonstrative, no less spontaneous than that of Marlene Dietrich when she reaches Waterloo on Hollywood; plant her in the front row of the Strangers' Gallery at the House of Commons for all the House to see and acclaim; splash the front page with a full length photo-

graph of her holding in each arm a vast naked doll, considerably provided by the paper, and perfectly calculated to get right home to the heart of that great nation which is better than all the other nations of the world? In what other country would money be spent so generously on her hotel bills, or would she be told, in some two million copies of the same paper, that the House of Commons had given "a loud murmur of dignified approval of her essay"? And where else than in England shall we look for a Press which, having done all this and having dragged the little school-girl through all the perplexing mazes of this political stunt, can write next day what a great paper wrote on Saturday:—

It is the determination of all parents that school teaching must be kept free of political bias.

In other lesser lands the Press might have been chary of this patriotic activity on personal grounds. It might have felt that the treatment was dangerous for a little girl, bad for her health and likely to turn her into an incurable prig. But with our great English papers first things come first, and the wellbeing of a small girl must not be allowed to hinder the demonstration of our national power. On this topic we conceive of Maud as getting rather muddled. "In my judgment," we hear her say, "our English Press comes nearer than any other to Abraham Lincoln's great ideal of fooling all the people all the time."

Let us now sum up, in Maud's own words, this episode in the unfolding pageant of our Parliamentary history. This time they are not the high-sounding words that so far we have ventured to ascribe to her, but something that she really did say as she watched the House debating her essay. The words were preserved next day in the friendly columns of the *Daily Express*: "I feel sick," said Maud.

NOTES OF THE WEEK

The New Viceroy.—It was announced on Wednesday that when Lord Willingdon's term of office as Viceroy of India expires next April his successor is to be the Marquis of Linlithgow. Lord Linlithgow is still, politically, a young and energetic man; he is only forty-seven. As a "liberal" Conservative he has already inspired confidence among Indians. India's future under the new Constitution, which will be inaugurated in his term of office, will depend more than ever before on the calibre and experience of her Viceroy. His interpretation of his newly-defined powers under the Constitution and his Instrument of Instructions will condition the will and ability of Indian politicians to work the Federal Constitution when it comes into force. Moreover, the Provincial Governors, who may be appointed by 1937, will certainly model their administration on the lines of the Governor-General's own performance of his duties. In this respect India is fortunate at the outset; for Lord Linlithgow will bring to his task a very considerable experience of India's main problems: her agriculture and her political structure. Between 1926 and 1928 the Viceroy-designate was Chairman of the Royal Commission on Agriculture in India, and the report, which he drafted, is recognised as a most authoritative and exhaustive survey of Indian rural economy. Then early in 1933 the Joint Select Committee on Indian Constitutional Reforms chose him as their Chairman. His arduous work in that Committee's deliberations contributed greatly to its eventual success. Further, Lord Linlithgow effected the only substantial amendment of the Government's Bill in the Lords when he secured provisions for direct election to the Council of State. Outside the sphere of Indian affairs Lord Linlithgow has been a Civil Lord of the Admiralty, and has had considerable economic experience in the City, as Chairman of the Departmental Committee on the Distribution and Prices of Agricultural Produce in 1923, and as Chairman of the Market Supplies Committee. The inauguration of India's new Constitution could scarcely be placed in hands more responsible or more sympathetic to India's legitimate aspirations.

France in the Pincers.—The Laval Government committed France to ruthless deflation not quite one month ago. The "cut" then imposed by decree in State expenditure reduced most incomes from *rentes*, most salaries of *fonctionnaires*, and most pensions by about 10 per cent. The Laval Government undertook to temper the wind to the shorn lambs by imposing, in a second set of decrees due this week, "cuts" in the retail prices of meat, bread, and other foodstuffs; in house rents; and in charges for gas and electricity. Moreover, as our Paris Correspondent remarks this week, the Government had recourse to the unprecedented convocation in Paris of all France's Prefects, in order that local execution of these reductions in the cost of living, *pari passu* with cuts in incomes, should be rapidly and adequately enforced. But, even so, the time-lag has proved too long. This week the French workers of both Left-wing groups, *fonctionnaires*, ex-soldiers, landlords, *rentiers*, municipal employees, naval shipyard workers and commercial ships' crews have all of them expressed righteous—and in many cases riotous—antagonism to deflation in practice. The disturbances at the naval dockyard in Brest this week have been prolonged and grave, involving loss of life and much bloodshed. These State workmen have already seen their incomes reduced last spring by 4 per cent., in fulfilment of the postponed Doumergue decrees. This month a further reduction of between 8 and 10 per cent. was too much for their patience. Almost as serious is the protest strike by the crews of the *Compagnie Générale Transatlantique's* ships in Le Havre, which has compelled the cancellations of one sailing. In this case, the Government has re-commended the owners to reduce the cuts. At Toulon dockyard, also, the unrest has been serious. Deflationary "cuts" seem habitually to produce "naval occasions," in France as in this country in 1931. The present unrest in France, however, is of a very widespread social kind. Deflation in France so far seems to have been concentrated on incomes alone. That has made the sense of social inequity the more dangerous. M. Laval's Government

are courageously hewing a path in their efforts to avoid devaluation. But, unless the cost of living is rapidly reduced, their efforts may lead France to de-Lavaluate.

* * *

Poland, Danzig and Germany.—The background to the acute conflict which has broken out between Danzig and Poland will be clear to any reader of the article on "Danzig's Difficulties" in the *Economist* of July 27th. The trouble arises out of the improvidence of the Nazi regime in Danzig in managing the local finances. Public expenditure on a scale which was bound to result—and has resulted—in violent inflation was deliberately incurred in the hope that the Reich would foot the bill and that the economic results would win over the population of the Free City to the new order. Neither hope has been fulfilled. Dr. Schacht has found himself obliged to cut Nazi subsidies to Danzig, and the results of the Danzig elections in April not only defeated the Nazis' intention of Nazifying the Danzig Constitution, but showed that at least 40 per cent. of the population were still hostile to Nazidom. Since then, the Danzig currency has been devalued, and the radical measures of currency control into which Danzig has been plunged by its Nazi governors have brought it into conflict with Poland. The Polish Government has objected to the Danzig currency control, by which a considerable sum held in Danzig to the credit of Polish exporters and importers has been frozen. It has also urged the Danzig Government to adopt the zloty in place of the local gulden. When the Danzig Government refused this offer, the Polish Government brought into force, on July 21st, regulations providing that all goods consigned to Poland must be handled in future by the Polish Customs authorities, and suspending the powers of the Danzig customs authorities to act as the Polish Government's agents. If these regulations remain in force, they will, of course, tilt the balance very heavily against Danzig in the competition between the Free City and the post-war Polish port of Gdynia. The Nazi Government of Danzig have retorted, on August 1st, by declaring a "state of emergency" and permitting certain German foodstuffs and other goods to enter Danzig duty-free. This is certainly a violation of the Versailles Treaty, whatever may be the legality or illegality of the foregoing Polish regulations. Direct conversations between Warsaw and Berlin are now reported to be taking place over a dispute which threatens to disturb the amity established between Poland and "the Third Reich" under the Ten-Year Pact of January, 1934. Meanwhile, the outlook for the Nazi regime in Danzig seems rather desperate if, in addition to being repugnant to at least 40 per cent. of the population for political reasons, it is now threatening to ruin the whole population economically. An added piquancy to the situation is that Poland can hardly invoke the League's aid "with clean hands," for at last autumn's League Council meeting Poland unilaterally repudiated her obligations towards her minorities. At that time it seemed to many observers that Herr Hitler had in effect sacrificed the considerable German minorities in Poland. Now German-Polish relations are being strained over Nazi Danzig, which stands closer to Berlin than Germans in Poland, and Poland has to choose between the League and Germany as a solvent of the situation. Verily, some chickens come early home to roost.

* * *

The Japanese Constitution.—On August 3rd, the Japanese Government published a statement about the Japanese constitution, which looks like a declaration that the sovereign power in the Japanese Empire rests in the Emperor, actually as well as legally. "The supreme power to rule Japan rests with the Emperor," and "any constitutional theory which regards the Emperor as an institution whereby this power is exercised is contrary to the true character of Japan's national policy." This statement characterizes the Government's previous action in suppressing, on April 9th last, two books by Professor Minobe, which had been used for thirty years past as standard text-books of constitutional law in the Japanese universities and which expounded the view that the throne was "an institution of

the nation." But Professor Minobe appears to have been putting on record a simple and indisputable historical fact. Japan, even more than England, has been a country where the sovereign "reigns but does not govern." In English history, we need go back no further than 300 years from the present date in order to find examples of English Kings who were personal autocrats. In Japanese history we have to go back to the twelfth century of the Christian Era or perhaps even to the ninth. It was only from the sixth century to the ninth century that the Emperor effectively exercised, in his own person, the sovereignty of which he has always remained the theoretical fount. Ever since then the *de jure* sovereignty has continued to reside in the Imperial House, while the *de facto* power has been banded to and fro between various kinds of Shoguns, from individual feudal war-lords to the present collectivity of Cabinet, Diet, and Government Departments. What then, is the meaning of the constitutional controversy which has now been officially settled? In spite of the official formula, the real struggle has been to settle which of the Emperor's nominal agents is to exercise authority in the Emperor's name. Is the whole of the sovereign power to be delegated to a Cabinet commanding the support of a majority in an elected Diet? Or is the naval and military part of the Emperor's sovereignty to be exercised direct by the Army and the Navy, independently of what the people's elected representatives wish? This issue became a burning question of practical politics when the London Naval Treaty of 1930 was ratified, at the Cabinet's desire, against the will of the sailors and the soldiers. Since then, we have seen the Japanese Army and Navy each take the bit between its teeth and behave like an independent *imperium in imperio*. Now the constitutionality of this behaviour has been officially conceded. Yet at this very moment the officers who stand for this are being energetically combed out of the key-positions in the Services. Is the Cabinet conceding the shadow of power to the soldiers in compensation for its success in making them disgorge the substance?

* * *

The Outbreak in Crete.—When a political strike broke out, last Sunday, among the dockers at Candia in Crete, it looked for a moment as though Greece might be on the verge of another bout of civil war. The strikers seem, in fact, to have so far gained the upper hand that the local governor was compelled to take refuge on board ship, and the Government at Athens ordered two destroyers to proceed to Candia from Patras. Fortunately, however, the General commanding the troops in Crete has quickly succeeded in restoring order; the warships have been countermanded; and it now looks as though the *émeute* had been nothing more than a spontaneous local disturbance without ramifications in other parts of Greece. Crete is, of course, the stronghold of Venizelism, Republicanism and Anti-Royalism, and it was here, if anywhere, that further trouble was to be expected. Nevertheless it is disquieting to see even a symptom of civil strife in a country which has lacerated itself by civil war so recently, and this Candian affair is certainly not a good augury for the forthcoming plebiscite on the issue between a republican and a monarchical regime. Experience has shown that the almost indispensable condition for the holding of an orderly plebiscite, and for the obtaining of a genuine expression of public opinion, lies in the presence of some disinterested neutral authority, backed by irresistible military force, to preside over the proceedings. It may be questioned, however, whether there is a single neutral citizen—or subject—in Greece, where every child that is born is either a monarchist or a republican from birth. And it would be difficult to settle the issue by the rotationist system of allowing Monarchy and Republic to alternate with one another as Liberal and Conservative Ministries alternated in nineteenth century England! All things considered, we fear that M. Tsaldaris has an uncommonly difficult task ahead of him.

* * *

Immigration into Palestine.—The question of the Government's immigration policy for Palestine was raised in the House of Commons on July 25th in the debate on

the Colonial Office vote. The policy was criticised by several speakers as being unduly restrictive. It is true that there is—and has been for several years—a considerable shortage of labour in Palestine, and that, while Jewish immigration has been kept down a long way below Jewish demands, non-Palestinian Arab labour has been entering the country (though, for the most part, illicitly and not with Government permission) from Transjordan, Syria and Egypt, and has been successfully finding employment, even on public works. It is also true that the Jewish need for a national home in Palestine is more pressing to-day—owing to Nazi anti-Semitism in Germany—than it has been at any time since the Balfour Declaration was made and the mandate drafted and conferred. It is painful for the Jews to feel that their immigration into Palestine is being restricted when their position outside Palestine is so bleak and their prospects inside Palestine so alluring. It is natural that, in the bitterness of their hearts at their present treatment by a Gentile World which shows signs of relapsing into barbarism, they should be inclined to look upon the Palestine immigration policy of H.M. Government as evidence of anti-Semitic bias, and as a breach of the mandate, in the spirit if not in the letter. But there is another side to the question. The chief positive point in the Jewish case is Palestine's present economic prosperity; and this is a patent fact which no one questions. But how is it to be interpreted? While the rest of the world has been in a depression, Palestine has been riding on the crest of an economic wave. Is this a temporary "boom," produced by impermanent causes? Or is it a "secular" movement which gives the measure of Palestine's permanent economic advancement? The Jews naturally argue that we are now beginning to see the enduring effects of the Jewish manpower, money-power, enterprise and energy that have been invested in Palestine since the Armistice. The sceptics argue that we are witnessing a temporary reaction of Palestine to a sudden, and perhaps unhealthy large, injection of capital which has been brought in by wealthy refugee German Jews since January, 1933. The truth probably lies somewhere between these two extremes, but exactly where it lies it is impossible to estimate. In these circumstances the Colonial Office is surely right in taking a cautious line.

* * *

Employment in July.—At last the total of the unemployed, after five years of obduracy, has gone below the 2,000,000 mark. The employment figures for July issued by the Ministry of Labour show that the tendency in recent years to diminished activity in that month was completely reversed this year. The number of insured persons (aged 16-64) in employment increased by 20,000 during the month to approximately 10,381,000. This is another "high" record, and is 234,000 more than in July, 1934, and 73,000 more than at the peak July figure of 1929. The numbers on the registers at 1,972,941 were less than at any time since July, 1930. They fell by 27,169 during the month, as compared with an increase of nearly 30,000 in the same period last year. The improvement, however, was not quite general, as will be seen from the following table of unemployment in different industries:—

	INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN		
	July 23, 1934	June 24, 1935	July 22, 1935
Coal mining	331,742	300,079	293,776
Iron and steel manufacture	45,582	41,384	40,191
Engineering	99,699	88,528	86,406
Shipbuilding and repairing	71,846	63,559	62,962
Motor vehicles, cycles and aircraft...	28,490	28,415	26,158
Cotton	119,873	98,285	99,824
Woolen and worsted	55,483	32,971	30,824
Jute	23,054	7,979	37,488
Hosiery	14,432	13,100	11,533
Tailoring	31,667	21,649	26,880
Boot and shoe manufacture	32,207	20,190	21,614
Building	146,312	127,847	133,805
Public works contracting	119,016	114,716	120,975
Shipping service	40,932	39,972	38,588
Dock and harbour service	47,244	49,656	47,421
Hotel, boarding house, etc.	47,663	52,051	49,193
Distributive trades	196,751	200,380	193,587
All persons registered	2,126,260	2,000,110	1,972,941

In all cases where there has been deterioration during the past month it has been very much less than last year. Increased unemployment in the jute industry is mainly accounted for by local holidays in Scotland, during which some 9,500 employees registered as temporarily stopped. But unemployment in both the jute and woollen and worsted trades is still higher than in the summer of 1933. Coal mining, engineering, iron and steel manufacture and cotton continue to show distinct improvement compared with a year ago, but unemployment in public works contracting and hotel services has increased slightly, although the number insured in the former industry has probably declined. There has been an increase during the month of July of some 5,000 in the number of juveniles unemployed. This may be in some small measure due to school-leaving before the date of the count, and may be only temporary. The increase of only 15,000 during the year, in spite of the very large increase in the number of boys and girls who have entered the labour market, is proof of industry's extraordinary capacity to absorb juvenile labour. It is none the less unfortunate that there should still be over 100,000 boys and girls between the ages of 14 and 18 both out of work and out of school. The July employment and unemployment figures are most encouraging evidence of our continued domestic recovery.

* * *

Additional Import Duties.—As with general business conditions, the activities of the Import Duties Advisory Committee have this year shown no seasonal decline. We have received a batch of no less than five new Orders during the past week. One of these provides for a reduction in iron and steel duties in exchange for quantitative limitation of imports, and is discussed below. Additional Import Duties (No. 24) Order provides for a substantial increase in the duties on the cheaper qualities of iron and steel tubes and pipes, other than cast tubes and pipes. Thus, the duty on tubes and pipes of a dutiable value not exceeding £13 a ton was raised from 20 per cent. *ad valorem* to £5 a ton on August 3rd. The increased duties on iron and

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

steel tubes are a sequel to the collapse of the International Steel Tube Cartel on March 31st and the intensification of competition since then. The Import Duties Advisory Committee decline to "contemplate that the new scale of the tube duties will lead to any increase in the price of tubes in this country or have any adverse effect on consuming industries." The third Order (No. 25) will interest those who, in the present hot weather, spend their evenings watering the garden, for the Committee have discovered that imports of garden hose, "after falling off very materially in 1932 and 1933, have recently recovered so substantially as to render it necessary to reconsider the position." As a result, "tubing and piping manufactured partly of rubber, with or without nozzles or other fittings thereto," are no longer exempted from the additional duty of 10 per cent. *ad valorem* imposed under the Additional Import Duties (No. 1) Order, 1932. The fourth Order (No. 23) claps a heavy specific duty of £4 a ton on a number of important chemicals hitherto subject to duties of 10 per cent. or 20 per cent. *ad valorem*. The commodities covered by the Order are mainly products of the synthetic nitrogen industry, which, owing to its importance not only to agriculture but also as a potential source of supply of munitions of war, is by now established in most of the important industrial countries. The Committee have obtained a promise from manufacturers of these chemicals that "prices will not be raised save after consultation with us and the farmers"! The fifth Order (No. 26) provides for a minimum specific duty of 3d. per thousand on eyelets of metal, with an alternative of a total duty of 20 per cent. *ad valorem*. In the view of the Committee "changes of fashion have reduced the world demand for boot and shoe eyelets and the resulting intensified competition has forced prices of the more popular sizes and types to an uneconomically low level." Thus, four out of the five new Orders from the Import Duties Advisory Committee show that log-rolling, at least, can still gather some protectionist moss!

* * *

Reduction in Iron and Steel Duties.—In the amending Import Duties Order issued by the Treasury on Tuesday, the Government have given effect to the condition in the agreement between the British Iron and Steel Federation and the International Steel Cartel. The condition was that the limitation of imports into this country from Cartel countries to a maximum quantity of 670,000 tons for the next twelve months, and of 525,000 tons per annum in the following four years, should coincide with a reduction to a maximum rate of 20 per cent. *ad valorem* in the British duty on Cartel products included in the agreement. The principal products affected are: blooms, billets and slabs; bars and rods; angles, shapes and sections; girders, beams, joists and pillars; hoop and strip; rails; plates and sheets. Under the Order of March 20th last, the tariff on all these commodities, with the exception of plates and sheets, was substantially increased. In the case of the heavier semi-finished materials, the new (specific) duties then represented a levy of 50 per cent. and more on the declared c.i.f. value, as compared with the previous duty of 33½ per cent. (*ad valorem*). Now, as from August 8th, a uniform rate of 20 per cent. is to apply to all these products, and the reduced duty is also to apply to nails; rods and coils; barbed wire; single strand wire and upholstery and mattress springs; and galvanised hexagonal wire netting. Quite a number of iron and steel products still remain subject to the duty of 33½ per cent. These include pig iron; steel ingots; Spiegeleisen and ferromanganese; forgings and castings. Nuts, bolts, rivets, screws and tubes remain subject to an *ad valorem* duty of 30 per cent. Empire goods are exempt from the tariff, but owing to the most-favoured-nation clause in our commercial treaties, the reductions which have been made this week apply alike to the products of all foreign countries. It is stated in the White Paper that the Continental and the British iron and steel manufacturers agreed that the institution by this country of a licensing system is necessary for the efficient operation of the agreement concluded at the end of July. As a matter of fact, that agreement contains a clause providing for cancellation failing the establishment of such a system. The Import Duties

Advisory Committee express the view that a licensing system will prove of great value to this country as well as to the other participating countries, and that without it there can be no permanence in the new arrangements; but adds that a licensing system is a matter of Government policy and can only be established by legislation. The continuance of the duty of 33½ per cent. on pig iron does not materially affect the present iron and steel import position. The effect of this high duty has been to give India a virtual monopoly of the home market. In 1931 we imported about 284,000 tons of basic, forge and foundry and acid steel, but last year our imports were only about 126,000 tons, of which British India supplied 110,000 tons and foreign countries (principally Sweden, under tariff exemption conditions) about 15,400 tons. With a 33½ per cent. duty still in force, British blast furnaces are fairly secure against a revival of French and Belgian competition. To what extent the amended tariff system will affect the nature of British demand for other foreign iron and steel products remains to be seen, but under the tariff system Canada, as well as India, has expanded its trade with the United Kingdom, and in 1934 nearly 45,000 tons of steel blooms, billets and bars were obtained from British countries compared with practically none four years ago. The immediate gain to the Cartel countries of the reduced duties will be financial. Our Iron and Steel Correspondent reminds us this week that the Continental Cartel manufacturers may well revise their prices in an upward direction so as to secure the whole of the advantage of the present reduction in British duties for themselves. It is only in the light of the experience of the operation of the new agreement that we shall know to what extent the Continental steel manufacturers will exploit the privileged position in which they have been placed, to the possible detriment of the finishing branches of our iron and steel industry; but higher prices to British consumers would appear a certainty. Moreover, the Treasury stands to lose revenue, on account both of the curtailment in the imports of Cartel products and of the reduction in the duties to which they will be liable in future.

* * *

Taxing Incomes from Abroad.—For the purposes of the Inland Revenue, liability to tax on income from abroad depends mainly on what constitutes "receipt in this country." In an article in the *Economist* of April 6th this year we referred to the case of *Hall v. Mariani* in this connection. An English bank had made advances to a client in this country on the security of the bonds and other assets held by their Colombo branch to the credit of the client in Colombo. Arrangements were then made to extinguish the English overdraft by transferring it to the Colombo branch. This branch, a little later, sold sufficient of the customer's securities in Colombo to extinguish the transferred overdraft. Was the Colombo income (i.e. the proceeds of the sale of the securities) "received" here and liable to tax? The Court of first instance said "No." In the first appeal the Revenue argued, but without success, that "receipt" here was constituted by the sale of the Colombo securities and the crediting of the proceeds therefrom in the books of the Colombo branch. Undaunted, the Revenue returned to the attack. Their contentions were, first, that each overdraft granted by the English bank constituted a receipt of an equivalent amount of the Colombo income; and, secondly, that such receipt was constituted in any event by the credit entry in the books of the English bank whereby the English overdraft was extinguished. Now it can hardly be maintained that there is receipt of foreign income if a person lends another money here, well knowing that he will be repaid because the borrower has ample funds abroad. But the second proposition of the Revenue seems convincing. In these days particularly, money or its equivalent passes from one country to another largely by book entries made in bankers' books. But while Mr Justice Finlay saw eye to eye with the Revenue on this point, the Court of Appeal has just disagreed with both him and them. As a result, it appears at the moment open to anyone to enjoy here the benefit of his foreign income without "receiving" it or incurring any liability to tax, merely by arranging with a bank to copy this intriguing precedent.

That is, unless the indefatigable Revenue authorities convince the House of Lords that the Court of Appeal were wrong in law.

* * *

Idle Shipping.—The quarterly return of the Chamber of Shipping discloses a further substantial reduction in the tonnage of laid-up shipping in Great Britain and Ireland between April and July:—

NUMBER AND TONNAGE LAID-UP.							
		No. Net tons of ships (000's)				No. Net tons of ships (000's)	
Jan. 1, 1933	...	760	1,971	April 1, 1934	...	453	1,079
April 1, "	...	760	1,864	July 1, "	...	421	1,042
July 1, "	...	793	1,958	Oct. 1, "	...	330	818
Oct. 1, "	...	612	1,589	Jan. 1, 1935	...	323	878
Jan. 1, 1934	...	482	1,239	April 1, "	...	322	706
				July 1, "	...	250	586

The net tonnage laid-up on July 1st was smaller than at any corresponding date since 1929, when it was 381,158 tons. But the improvement is due mainly to a reduction of the British steam and motor tonnage from 20,046,000 gross tons in June, 1929, to 17,298,000 in June, 1935. Between July, 1934, and July, 1935, the gross tonnage laid-up in British ports declined by 756,000 tons. During the same period the gross tonnage in Lloyds Register Book was reduced by 332,000 tons. It appears, therefore, that the tonnage employed has risen by 424,000 gross tons during the past twelve months. This is a welcome and encouraging feature of the returns.

* * *

Rationalising Shipping.—It was a condition precedent to the British Government's subsidy to tramp shipowners—now being paid—that British shipowners should urge upon their foreign colleagues the framing of proposals for adjusting the supply of world tonnage to demand. There has been delay in working out such a rationalisation scheme, and it now seems doubtful when a scheme will materialise. A draft scheme was prepared by a preliminary international conference in London last January under the chairmanship of Lord Essendon. It was anticipated that a further conference would take place within three or four months, but, in fact, the date of any further conference is still uncertain. An outline of the scheme was given by Lord Essendon at the Congress of the International Chamber of Commerce in Paris during June. Difficulties then mentioned appear more formidable than was indicated. Lord Essendon said that there were 45 million gross tons of effective competing tonnage engaged in international trade. Seven million tons were idle. The object of the scheme was to keep this idle tonnage off the market and to remove some more tonnage. By means of a compulsory tonnage due, a pool was to be formed out of which compensation would be paid to owners for laying up and scrapping nine million tons. This was to be effected by the voluntary efforts of shipowners, but collection of the due would take place through the machinery of Governments. The due was estimated at an annual figure of 1s. 3d. per gross ton. Lord Essendon remarked that possibly an international scheme could only be effectively worked if some *modus vivendi* was reached over subsidies. His scheme took no account of such subsidies, but it will be recalled that the Liverpool Steam Ship Owners' Association has all along maintained that nothing effective can be achieved without facing the subsidies question. Since then a group of leading British liner companies have declared their opposition to the scheme for the reasons (among others) that it would operate to the advantage of subsidised shipping and to the disadvantage of shipping conducted on an economic basis and would be administratively unworkable. A further statement by Lord Essendon at the Furness Withy meeting last week indicates that an alternative scheme on a non-contributory basis, and on lines which he personally has always favoured, may receive more support than hitherto. This would be a voluntary laying-up scheme under which the shipowners of the world would agree to lay up a percentage of their ships for an agreed period. But world schemes take time to materialise, and apparently there may be further delay before the world's shipping industry can introduce the beginnings of order into a chaos of subsidies.

The Deep Sea Fisheries.—In the second quarter of the year the supplies from the deep-sea fisheries were interrupted by a dispute at Hull when the entire fleet of steam trawlers, over 300 in number, were withdrawn and laid up in port for several days pending a settlement. The real effects of this were experienced in June, when there was a marked contraction in the landings of wet fish with, as usual, a compensating increase in the total sum realised. On the whole, however, the landings of British-caught fish at ports in England and Wales were maintained at last year's level, taking the three months together; while in Scotland there was a substantial increase, both in volume and value. The following table is abstracted from the returns of the Ministry of Agriculture and Fisheries:—

	Weight in cwt.		Value	
	1934	1935	1934	1935
British caught:				
England and Wales	3,311,620	3,314,958	2,645,771	2,731,236
Scotland	1,075,320	1,304,778	737,908	901,257
Shellfish	...	...	100,456	86,939
	4,386,940	4,619,736	3,484,135	3,719,432

The average first-hand value of the landings of wet fish in England and Wales was rather less than 16s. 6d. per cwt., as compared with 16s. in the corresponding quarter last year. In Scotland the average was 13s. 10d., as against 13s. 9d., per cwt. The returns for the completed half-year showed some increase of the landings by British-owned fishing vessels in England and Wales, with a somewhat heavy decline in aggregate value. In Scotland both quantity and value were higher. The returns (including those of the Board of Trade) are summarised as under:—

	Weight in cwt.		Value	
	1934	1935	1934	1935
Jan.-June				
British caught:				
England and Wales	6,066,531	6,216,114	5,813,813	5,573,581
Scotland	2,157,292	2,308,763	1,701,849	1,783,729
Shellfish	...	...	177,925	172,879
	8,223,823	8,524,877	7,693,587	7,530,189
Foreign landings	400,464	372,159	264,959	244,275
Imports	728,084	942,518	1,113,822	1,229,084
" Shellfish	69,228	82,184	111,919	114,756

The average for England and Wales was 18s. and for Scotland 15s. 5d., as against 19s. 2d. and 15s. 9d. respectively a year ago. As a set-off against the imports of wet fish from abroad (herrings, etc.) Great Britain exported during the half-year 406,674 cwt. of wet fish, valued at £440,000, as compared with 470,398 cwt. and £508,723 in January-June last year. Great Britain also exported fish "cured or salted" (mainly herrings and cod) to the value of £594,019 as against £720,924, and "canned" fish valued at £113,110 as against £91,492. On the other side of the account there were considerable imports of canned fish (salmon contributing more than 50 per cent. of the total), having a c.i.f. value of no less than £2,172,445, as compared with £1,865,400 in the corresponding half of last year; "cured or salted" £148,087 against £55,902; and "salted (split)" £48,071 against £21,143.

UNITED STATES

A MORE ENCOURAGING OUTLOOK

THE first session of the 74th Congress drags tediously towards adjournment. At the time of its assembly in January it was confidently asserted that, owing to the enormous Democratic majorities, the session would handle its programme expeditiously and adjourn by early spring. Instead of a programme it was presented in rapid succession with numerous highly controversial measures, any one of which required extensive deliberation. To cap it, just as the session was within sight of adjournment, a novel and unexpected tax measure was offered, for which Congress was totally unprepared. This original tax Bill was obviously a hasty improvisation; and in the House it has already assumed a form entirely different from the Administration draft. The latter was of limited scope, and bore most heavily upon individuals of great wealth and corporations of the largest size. In its present (House) form a graduated excess profits tax has replaced the graduated corporation income tax; while the lowering of the exemption limit for the inheritance tax makes its incidence most severe upon what may be termed moderate-sized enterprises, owned by individuals, families or the equivalent of incorporated partnerships. Further, the Banking Bill, which has already passed the Senate, is radically different from the Bill originally introduced; indeed, in many of its principles diametrically opposed to the initial draft. The final disposition of both these Bills is, of course, still unsettled.

The sharp decline in industrial activity which characterised the third quarter of 1934 is completely absent this year. On the contrary, the recent levels of activity are well maintained. Compared with 1934, the year 1935 is distinguished first by a relative absence of labour disturbances, and second (and consequently) by a far more stable level of production. For example, in 1934 the year opened with steel production at 31 per cent. of capacity; by early May the figures had advanced to 57 per cent., by the end of June they had fallen to 23 per cent., and by the end of the third quarter to 18 per cent. In 1935 the year opened at 43 per cent. of capacity; the spring peak (end of January) was 53 per cent.; the end of June, 32 per cent.; and the current figure about 43 per cent. The aggregate output of steel ingots in the first half of 1935 was almost identical with that of 1934 (actually a shade lower); the difference lies in the relative tempo of production. But considering the extremely low steel output for the last six months of 1934, there is a reasonable expectancy that the total for 1935 will exceed that for 1934.

The Federal Reserve Board's indices for June are as follows:—

FEDERAL RESERVE BOARD BUSINESS INDICES
1923-5=100—Adjusted for seasonal variation

	June, 1934	May, 1935	June, 1935
Industrial production.....	84	85	86
Manufactures	83	84	84
Minerals.....	87	89	98
Construction contracts (total)	26	27	29
Residential	12	21	23
Other	38	32	33
Factory employment	81.5	81.2	80
Factory payrolls	64.9	68.5	66.5
Freight car loadings	64	61	63
Department store sales	74	76	80

Except in residential building, which is double the figure of a year ago, and department store sales, which are up almost 10 per cent., the changes from last year are nominal. Residential building is a most important exception. In certain localities a moderate residential building boom is in progress; but a doubling of residential building is a factor

of great local importance. This building is for the most part of single-family dwellings; almost no urban apartment construction is in progress, which accounts for the relatively unfavourable comparison with the basis period, when there was a large amount of costly apartment-house construction. The current activity in urban one-family dwellings may be interpreted as evidence of a decentralising shift of the population—a movement long expected and now by many believed to be in progress.

The low figures of freight car loadings contrast both with the rest of the data and with the prevailing impression of the state of business activity. It is a reflection of the most conspicuous technological change of the past five years, although, of course, it was initiated before 1929. This is the enormous increase in the movement of goods by road transport. No comprehensive figures are available. Formerly, this movement was confined to the transportation of light articles over comparatively short distances; but in the past week, for example, your Correspondent has heard of a movement of lumber by lorry from Idaho to Pacific tidewater. There can be no doubt that the freight-car loadings should not be accepted as a dependable criterion of the movement of goods.

AMERICAN BANKING AFTER THE CRISIS

The Federal Reserve Board has given a summary of the changes in banking data over the last four years. On December 31, 1929, there were 24,630 banks in the United States, with deposits aggregating \$55,289 millions. On June 30, 1933, deposits had fallen to \$37,998 millions; by December 31, 1934, aggregate deposits amounted to \$44,771 millions, with 16,042 banks in operation. It may be added that the restoration of deposits in the city banks is complete, as shown by the following table:—

	REPORTING MEMBER BANKS (\$000,000)		
	Average for Sept., 1929	Dec. 28, 1934	June 26, 1935
Net demand deposits	13,180	13,551	15,423
Time deposits	6,810	4,366	4,427
	19,990	17,917	19,850

The first column is for banks in 101 cities; the last two dates are for banks in 91 cities. The ten absent cities, on June 26th, reported deposits (time, demand and Government) of \$1,493 millions. In September, 1929, Government deposits in the Reporting Member Banks averaged about \$150 millions; on June 26, 1935, for the Reporting Member Banks in 91 cities Government deposits amounted to \$674 millions.

It is questionable if the 9,000 odd banks closed during the depression will ever be replaced. For the most part they were in rural communities; and, the State having taken over the function of agricultural and farm financing, a good part of their reason for existence is gone. When one adds to this the wide distribution of the retail chain store, and the reduction of retail stocks made possible by the motor truck, the scope of small-town banking has been extremely narrowed, and one might plausibly argue that even the present number of banks is more likely to diminish than to increase. In the first six months of 1935, 16 banks with deposits of \$3,299,000 were closed, against 56 banks with deposits of \$36,944,000 closed in the full year 1934.

AGRICULTURAL PROSPECTS

By midsummer the agricultural situation has come into the centre of the picture. Following the dust storms of the spring the weather became generally favourable, though the heat has brought much rust in the wheat belt. Many larger crops the aggregate farm income promises to be about the same or perhaps a little higher. This farm income will, however, be better distributed, for last year the drought left large areas with no harvest to sell and consequently no

benefit whatever from high prices. The whole A.A.A. programme is now in confusion, as the scheme of processing taxes seems to be breaking up. Rather generally the processing taxes were paid under protest, and in many cases suits for recovery were instituted. Already a number of decisions have been made by the lower courts, which are interpreted as forecasts of the decision of the Supreme Court, expected in the autumn. So general is the belief that these taxes will be held unconstitutional that collections have fallen sharply; while, at the other end of the line, purchasers of articles subject to the processing tax are holding commitments to a minimum on the theory that the removal of these taxes, whether by Congressional or Court action, is only a matter of weeks. It will be recalled that these taxes are extremely heavy; and whereas formerly payments were at first made under protest, the introduction into the A.A.A. Bill of a clause prohibiting suits for recovery has induced many process taxpayers to obtain injunctions under which the tax is paid into escrow, and is recoverable without suit if the tax be held *ultra vires*. As a further complication of the textile situation, the cotton loan price has not yet been announced. A few months ago opinion was confident that the Government price would not be less than 12 cents and might be 13 cents, but within a week of the beginning of the new cotton year rumours of an official price of 10 cents have circulated, compared with a current quotation of 12 cents. Until the several governmental agencies involved reach their respective decisions, the cotton industry is marking time.

THE RELIEF PROGRAMME

As usual, the relief programme is a centre of controversy. The effort to double the enrolment of the Civilian Conservation Corps from 300,000 to 600,000 has so far had little success, as the C.C.C. cannot compete with the relief payments. The almost simultaneous attempt to increase the army to its newly authorised peace strength has encountered the same difficulty. Altogether it is seven months since the announcement of the public works programme as a substitute for relief; and the situation is now almost as it was then. The simple fact is that public works are an extremely costly form of relief, and while the appropriation of \$4,800 millions seemed enormous, its division among so many millions of beneficiaries reduced the amount available for material and equipment to a figure which permits only the simplest undertakings, of the type sponsored by the C.W.A. in the winter of 1933-4. Although the relief problem is ignored in Congress—which, indeed, has divested itself of control over, or even responsibility for, it—in common discussion and in the press it quite overshadows the more spectacular subjects with which official Washington concerns itself, such as the public utility and tax questions.

A material decline in the number of families on the relief rolls was reported in June, although the Bureau of Labour Statistics recorded an increase in unemployment. The decline in number of families from May to June was 6.6 per cent., but expenditures of the F.E.R.A. fell almost 10 per cent. It is not clear whether the decline in the relief rolls represented absorption by industry or by the public works programme (now called the Works Progress Administration or W.P.A.). The greatest decline was in South Dakota, of almost 30 per cent., from 53,614 families to 37,779 families. Yet, following this decline from May to June, South Dakota in July suspended all relief, as farmers complained that they were unable to secure labour for their harvest in competition with the Government dole. Some seven other States have followed the example of South Dakota, although probably not so completely—Illinois, Kansas, Nebraska, Iowa, Minnesota, Wisconsin and Virginia; and all for the same reason, namely, a scarcity of farm labour. This action by the State authorities is a reflection of two facts: (a) that the recovery has evoked a demand for labour far beyond what would be inferred either from the relief statistics or from the official unemployment data; and (b) that the public is becoming increasingly hostile towards the lavish and apparently indiscriminate Federal dole.

NEW YORK, July 31.

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

FRANCE

SECOND BATCH OF DECREE-LAWS

THE Decree-laws of July 17th had as their aim the defence of the franc by restoring budgetary equilibrium. This has been realised by Frs. 7,000 millions of economies, which have reduced the Ordinary Budget to a figure of almost Frs. 41,000 millions, which roughly corresponds to the annual revenue receipts. The Government considers that extraordinary expenditure and the railways deficit may be covered by loans, since their total is well within the capacity of the Paris market. The essential thing now is to prevent a new decrease in revenue receipts by maintaining and eventually by reviving trade. This is the aim of the second batch of Decree-laws.

The new measures will chiefly tend to support certain wholesale prices while reducing many retail prices. A new programme of public works should stimulate revival of trade, notably by the numerous local work schemes, for which Frs. 1,000 millions will be made available. On the other hand, the proceeds of economies realised in the Départements and Communes Budgets by the first set of Decree-laws will be diverted to those public works (water-works, sewers, hospitals, silos, etc.) in which local authorities are directly interested. These public works will be entirely reserved to French contractors and workers. Finally, the 90 French Prefects will be summoned to Paris—an entirely new procedure—to receive the instructions of the Government on this matter. All these measures, like their predecessors, are chosen and presented to the public with a remarkable intuition of French needs and aspirations. This now influences public opinion much more than the noisy claims of political cliques and the agitation in the big cities.

DIFFICULTIES BEFORE THE GOVERNMENT

The Minister of Agriculture published recently a *communiqué* in which he expressed his astonishment that the free price of wheat has fallen off in a few days from Frs. 60 to Frs. 50. (a reduction which clearly cannot enable farmers to cover costs). Statistics show that the 1934 stocks do not now exceed 14½ million quintals, and the estimates for 1935 show a maximum of 75 millions. The combined total is not much above a normal year's consumption needs in France. This unexplainable slump in the wheat price is therefore unfortunate. New measures have therefore been announced by the Administration for carrying forward a part of the 1934 crop, thus easing the free market, and financing with the aid of the Bank of France the 1935 crop.

In order to reduce the cost of living and to revive trade an effort towards the gradual abandonment of the quota system, or a diminution in the tariff, seems a first necessity. This solution has recently been advocated by M. Charles

Rist in the *Revue d'Economie Politique*. By this means, the French expert states, "we should have a real economic deflation, and not only a budgetary one. . . . If that step should provoke a new efflux of gold it would not inconvenience the interior, but, on the contrary, it should facilitate international monetary discussions with foreign countries." The recommendations of Professor Rist, indeed, have no general echo in the great French Press; hence one may suppose them to conflict with the interests of the powerful producers' committees, who have not shown themselves ready to follow similar suggestions made by M. Bonnet, M. Laval's Minister of Commerce.

M. Rist goes on to declare that the Laval experiment has no great chances of success without a solution for the problem of national indebtedness. He says the Government is "aiming at budgetary equilibrium without affording a solution for the National Debt problem, and without convincing the French *rentiers* that to carry a debt, the charge of which represents 45 per cent. of the Budget . . . is an absurd attempt which exceeds the nation's powers."

LOWERING THE INTEREST RATE

The Government, however, seems to prefer that the revenue of the Nation should be increased and the rate of interest reduced. The Government of M. Laval hopes to start a rise in gilt-edged, which would facilitate a large-scale conversion. Such an operation is now legally possible, for one Decree-law states that "Any civil or commercial debt, which has been contracted by a public or private person before the publication of this decree, may be redeemed in anticipation, notwithstanding any contrary clause." With such an operation in view, the tactic of the Government is naturally to bring matters rapidly to a head by aid of the Decree-laws, so that business will not be hampered by the fear of new State disturbances. A "falling prices" psychosis is not favourable to a revival of business, in any case.

Supporters of the Government, on the other hand, declare that the State will abstain for a long time from the market, whether the Treasury is abundantly supplied from the short-term market, or enjoys support from the Bank of France.

It is noticeable that the Decree-laws, one of which contains a characteristic breach of contract with the *rentiers* by the State, have nevertheless been welcomed by the Stock Exchange. The market now manifests greater confidence in the *rentes*, as the following table of quotations before, and three weeks after, the Decree-laws shows:—

	July 16th	August 6th
3 per cent. Rentes	77.45	78.90
5 per cent. 1920	107.05	110.30
4 per cent. 1918	78.90	81.75
4 per cent. 1925 (gold-loan)	92.80	91.05
4½ per cent. 1932 "A"	82.65	87.50
Treasury Bonds 5 per cent. 1934	947	971
Treasury Bonds 4½ per cent. 1934	952	970

Thus the 4½ per cent. 1932 was quoted at 83 on the eve of the Decree-laws and at 87 at the end of last week, though it gives an effective yield now of only 4.05 per cent., as a consequence of the 10 per cent. cut in all State payments. Its gross yield is thus 4.65 per cent. against 5.42 per cent. a fortnight ago. The difference represents a decline of 0.75 per cent. in the long-term money rate. But further progress is necessary, and should be possible; for the long-term money rate is 3 per cent. in London and 3½ per cent. in Sweden.

PARIS, August 8.

GERMANY

REICH BORROWING FOR REARMAMENT

UNDER the non-committal heading "Credit and Savings," the Reich Bureau of Statistics has published figures apparently designed to confute current stories of the character and magnitude of rearmament finance. On these points, the Budgets and the monthly summaries of revenue, expenditure and debt movement supply only negative information. No rearmament taxes were imposed; the cost of re-

armament was not covered by the Budget defence estimates to any considerable extent, or by the relatively small supplementary Budget expenditure which, in the two completed Nazi financial years, has caused deficits. Nor was it covered by admitted new borrowing. At the end of the financial year 1934-35 the Reich debt, long and short, home and foreign, was returned at Rm. 12½ milliards, which was Rm. 800 millions higher than two years before. The Rm. 800 millions, however, little more than covered the Budget deficits of the two financial years. Owing mainly to currency depreciations, however, the foreign part of the debt decreased in two years by Rm. 1,400 millions, and this book gain was counterbalanced by new borrowing at home, so that while the total increase of the Reich debt was Rm. 800 millions, the new borrowing was Rm. 2,200 millions. This summary would need some qualifications, which, however, are of no moment in view of the magnitudes involved.

In consequence of official concealment, unofficial experts, bankers and other private authorities have long been in the habit of compiling their own Budget and debt estimates. The expenditure in 1934-35 has been put by these authorities at 50 to 100 per cent. above the figures officially returned; the real debt, it was affirmed, had rapidly increased and reached as much as Rm. 32,000 millions, which estimate or guess meant that Rm. 20,000 millions of Reich debt had been contracted in thirty months. It was alleged that no distinction could be drawn between "work-creation" financing and rearmament financing; that indirect Reich borrowing had reached great dimensions; that credit institutions, and even institutions which had ostensibly nothing to do with credit, had been introduced into the borrowing process in order to obscure the truth, secure endorsements, and hold the bills by which the new debt was carried. In a few Press references to this matter, officially inspired, these stories were described as "originating abroad"; in reality they were what inquirers were told, though with substantial differences in the figures, in every Berlin bank. No flat official denial of the stories, much less an official return of the rearmament expenditure, appeared. While minute accounts of trifling extra-budgetary expenditure on bounties for encouragement of raw material production or on subsidies or for house repairing were conscientiously issued, apparently it could not be officially admitted that rearmament cost anything at all!

OFFICIAL EXPLANATIONS

The report now issued does not clear up the mystery. It contains data which might refute the banks' story that Rm. 15,000-20,000 millions of rearmament and/or work-creation bills, representing direct or indirect Reich debt, are in circulation. But it does not contain a clear statement that no new Reich liabilities, other than those which it admits, exist; and in the last respect it is very ambiguously worded. The report deals with the "advance financing" (*Vorfinanzierung*) of work-creation. "Advance financing" is a euphemism devised during the Papen regime for the Papen tax-credit certificate system; and it should really read "arrear financing," that is, borrowing. "Work-creation" expenditure, it is expressly shown in the new report, includes rearmament expenditure. The Papen and subsequent civil programmes are described as "work-creation in the narrower sense"; but rearmament is treated as work-creation in the wider sense. As the civil programmes have been in great part completed, the financing of rearmament work-creation has become relatively more and more important. To an increasing extent in these last months, those bills with which "Reich expenditure for defence reorganisation has been 'financed in advance' must be added." This agrees in substance with the market stories. The market's account of the indirect bill transactions is confirmed by the statement that a "great part of the work-creation programme was 'financed in advance' by means of introducing independent institutions." In consequence, it is added, the money spent will appear in the Reich Budget only when the "advance-financing" credits have been repaid or consolidated. This is very irregular finance, the more so because, as is admitted in the report, the relatively moderate Reich expenditure on civil work-creation has not, despite an actual substantial

revenue increase, been repaid at all, but has been covered by new borrowing.

The Bureau of Statistics proceeds with a table headed "Figures of Advance Financing of Work-creation: Circulation of Bills," the German wording of which does not exclude the possibility that additional liabilities, not shown in the table, have been incurred:—

	(Millions of Rm.)			
	Reich Treasury Bonds	Tax-credit Certificates	Bank Acceptances	Other Bills
End January, 1933....	1,743.1	325.7	1,852.3	6,720
Do. 1934....	2,254.0	1,276.5	1,448.1	7,720
Do. 1935....	2,758.5	1,182.7	1,233.8	9,550
End May, 1935.....	3,532.4	957.9	1,085.8	11,180

In this table the only important column, and also the only obscure and useless column is that of bill circulation. This column is important because the market story of rearmament "advance-financing" is a story of the rapidly increasing bill circulation; and it is obscure because, although the ostensible aim is to show the Reich's liabilities, the total of "other bills" comprises "commercial bills in the narrower sense, work-creation bills, and special bills for advance-financing of special (rearmament) Reich expenditure." If the bill circulation total is correct, the banks' stories are very greatly exaggerated, the increase for all bills since January, 1933, being less than Rm. 5,000 millions. But it is not stated what part consists of commercial, and what part of work-creation or rearmament bills. Indeed, the figures of the bill circulation do not agree with those of other official authorities. The figure for May, 1935, is elsewhere officially given as Rm. 12,470 millions, which is Rm. 1,300 millions higher than the figure of the Statistical Bureau. The bill circulation, which declined very much during the depression years, is shown to have approximately regained the highest level of the good-trade period, when it stood (end of 1928) at Rm. 12,280 millions. The share in the total which falls to commercial bills, though not given, has certainly fallen enormously. At the end of 1932, immediately before the Nazi government took office, out of a total bill circulation of Rm. 5,678 millions, only Rm. 1,338 millions were public (treasury and municipal) bills. Since then, the admitted total circulation has nearly doubled. It is not possible to say what part consists of commercial bills; and a formal return would be worthless now, owing to the new (undefined) distinction between commercial bills in the "narrower" and in the "wider" sense, which distinction the market understands as connected with the ostensibly "private" financing of Reich armaments undertakings.

The Bureau of Statistics report is characteristic rather than enlightening; and present information about rearmament finance may be described as private surmise complicated by official confusion.

BERLIN, August 7.

HOLLAND

POLITICAL AND ECONOMIC UNCERTAINTY

POLITICAL uncertainty in Holland continues. For the present, Dr. Colijn has taken the reins again, but what policy the new Cabinet will adopt remains still an open question. We shall now have to wait until the third Tuesday in September, when the House of Commons will reassemble after the recess, before any certainty can be gained about the possible co-operation between the Cabinet and the Lower House. Meanwhile, economic conditions in the Netherlands show not the slightest improvement. Difficulties over wage cuts persist. Now it is the Tilburg woollen industry which presses for a further reduction of 10 per cent. in wages. The employers' opinion is based on the conviction that this is the only possibility of their being able to carry on in competition at home and abroad.

During the past week a certain relaxation has occurred in the money market of Amsterdam. Both the private discount rate and the prolongation rate show a decrease after the end of July to 4 per cent. and 3½ per cent. respectively, so that the margin between the official discount rate (6 per

cent.) of the Netherlands Bank amounted to no less than 2 per cent. As anticipated, the Netherlands Bank last Friday lowered the discount rate by 1 per cent. to 5 per cent. This decrease, however, means nothing more than conforming to the rate of interest in the open market.

There is still no question of a return of the gold which drained away in the crisis. Some gold (G. 25 millions) has returned, but the rates of exchange have not developed in such a manner as to enable expectations to be entertained of a large import of gold. There is no talk yet of repatriation of capital. And uncertainty is evident in the tone of the Amsterdam bond and share market. Here, too, there is no sign of an improvement in sentiment.

UNFAVOURABLE BALANCE OF TRADE

The Netherlands balance of trade for the first half of the year is again unfavourable. The shrinkage in our foreign trade, which has long been apparent, has not ended. Both imports and exports during the second quarter of 1935 again decreased in comparison with the same period last year. As in the first quarter, the shrinkage was more marked in imports than exports.

A survey of the imports and exports in the separate quarters of the last few years follows:—

	(In millions of guilders)					
	Imports			Exports		
	1932	1933	1934	1932	1933	1934
1st qr.	356	279	276	218	178	168
2nd qr. ...	320	283	261	200	178	171
3rd qr. ...	293	321	251	207	192	195
4th qr. ...	330	326	250	221	178	177

	(In millions of kg.)					
	1932	1933	1934	1932	1933	1934
1st qr.	5,281	5,536	4,661	3,032	3,212	2,948
2nd qr. ...	5,765	5,622	5,069	3,215	3,369	3,021
3rd qr. ...	6,781	5,995	...	3,423	3,532	...
4th qr.	6,254	5,554	...	3,097	3,211	...

Trade with Great Britain, as with Germany and Belgium, decreased. Imports from Britain were down from 896 million kilos. at 52 million guilders, to 697 million kilos. at 43 million guilders. Exports to Britain diminished from 576 million kilos. at 65 million guilders to 513 million kilos. at 64 million guilders. The export surplus with England, which in the first six months of 1934 amounted to 13 million guilders, rose in 1935 to 21 million guilders. The decrease in imports was occasioned primarily through reduced Dutch imports of coal, etc., of which the imports from England fell from 691.5 million kilos. to 548.0 million kilos. "Lime, trass, cement" also declined sharply (from 25.0 million kilos. to 7.1 million kilos).

In the exports to England, the quantity showed a decrease, which points to the fact that, *inter alia*, relatively low-priced quality goods were concerned in this decrease. Thus the export of iron, steel and manufactures thereof, mostly scrap iron, diminished from 21.1 million kilos. to 11.7 million kilos. Another big falling-off was that in fresh vegetables, from 67.8 million kilos. to 48.6 million kilos. (respective values being 3.7 and 3.4 million guilders). Dutch exports of butter to England rose from 10.1 to 12.1 million kilos., of cheese from 3.3 to 6.3 million kilos., and of eggs from 4.2 to 15.6 million kilos. The export of meal and bran rose from 50.1 to 58.2 million kilos., vegetable oils from 12.1 to 24.5 million kilos., blubber oil from 6.8 to 17.2 million kilos.

AMSTERDAM, August 7.

SWITZERLAND

TRADE LANGUISHING

THE foreign trade returns for the first half-year show no great change since the end of 1934.

	(In million S. Frs.)			
	Imports	Exports	Import surplus	
First half-year				
1934	712.6	405.0	307.6	
1935	622.6	402.2	220.4	
Reduction in year ...	90.0	3.8	87.2	

The decrease in imports was mostly due to import quotas but partly also to a fall in requirements of raw materials,

which indicates that Swiss industry is not very active. The four chief exporting industries do not show very gratifying results. The watchmaking industry is slowly but steadily recovering and reports a rise of roughly Sw. Frs. 6 millions; and the machinery industry shows an increase in exports of Sw. Frs. 2 millions. But silk exports are down by Sw. Frs. 10 millions and cotton exports by Sw. Frs. 8 millions.

Switzerland's foreign trade with the five chief countries was as follows:—

From or to—	(In millions of francs)		Swiss Exports.	
	1934.	1935.	1934.	1935.
Germany	196.3	161.6	79.0	90.1
France	110.6	106.2	63.1	60.4
Italy	59.3	47.0	32.6	38.2
Great Britain ...	45.4	37.7	43.3	35.4
U.S.A.	40.4	32.6	26.1	20.7

At the end of June there were about 59,000 unemployed, as against 65,000 at the end of May and 47,000 at the end of June, 1934. The largest numbers out of work were in the building, metal and watchmaking, textiles and commercial categories.

THE FEDERAL RAILWAY DEBACLE

The languishing economic situation is reflected in the dwindling receipts of the Federal Treasury, and in the smaller earnings of the Federal Railways. The Railways problem may, indeed, be the cause of the Government's failure.

During the first half-year railway receipts totalled Sw. Frs. 147,840,000, compared with Sw. Frs. 160,550,000 in 1934, while expenditure, thanks to drastic retrenchment, reached Sw. Frs. 114,190,000, against Sw. Frs. 118,410,000 last year, thus leaving a surplus of roughly Sw. Frs. 33 millions. Compared with 1934, passenger traffic shows a drop of 3,800,000 persons and Sw. Frs. 5,200,000, and goods traffic a decrease of 651,000 tons and Sw. Frs. 8,200,000. It is estimated that, after paying interest on debt, there will be a deficit of about Sw. Frs. 60 millions at the end of the current year. The Railways' debt stood at Sw. Frs. 3,100 millions at the end of 1934, and the total interest on it is estimated to increase in the next few years at the rate of Sw. Frs. 2 millions a year as, owing to the peculiar statutes of the Railways, the yearly deficits can only be met by means of loans. The situation of the Federal Railways is catastrophic. They are losing £7 per minute; the Government is doing nothing, save issue some statement now and then to emphasise the plight of the Railways, explain the Administration Board is not responsible for it, and exhort the people to be ready for another sacrifice in order to save them.

Truth to tell, petty politics have ruined the Railways, as they have ruined many State undertakings; the Government is unable to impose its will on the political *camarillas* concerned in the Railways, and to inaugurate the re-organisation plan for which the Swiss people have been waiting since last year. Meanwhile the situation grows worse every day and constitutes a grave menace to the Federal Treasury, which, one day or another, is likely to have either to repay or to take over the Sw. Frs. 3,000 millions (£200 million) of Railway Debt.

The reasons for the Federal Railways' failure are legion. For example, there are: The excessive price for the various lines which was paid by the Government about 30 years ago; losses deriving from the war and the economic crisis; road competition; electrification costs; and the excessive cost of palatial new buildings (railway stations, etc.). There is little to say on the first two causes, except that it might have been possible to constitute bigger reserves during the prosperous years in order to redeem a part of the debt. For road competition there is only one possible solution: a reduction of transport taxes, which would not only bring back passengers and goods to the railways but also foster the tourist traffic. The reduction of these taxes is the first measure of reorganisation which ought to be taken, but the Administration Board lacks the necessary courage. As for electrification, much less was spent on it than was forecast, and it was urgently necessary.

GENEVA, July 27.

ARGENTINA

AN AFFRAY IN THE SENATE

DURING a very heated debate on the meat question, the Senator for Santa Fé was mortally wounded and the Minister of Agriculture and a National Deputy injured. The affair does not appear to have any political significance, the author of the crime being, it is understood, an ex-police commissioner who was dismissed from his post some time ago. The motive of the crime is not known. As a result of the heated discussions which took place in the various debates on the meat situation, and which terminated in this tragic affray, the Minister of Finance, Dr. Pinedo, challenged Dr. de la Torre, also Senator for Santa Fé, to a duel. That a serious debate in the Senate should have concluded in such a tragic and undignified manner has shocked opinion at home and abroad.

An extraordinary decree has been published to the effect that all agencies, etc., formed with the object of supplying information to local or foreign periodicals, as also private bodies or persons so engaged, must deposit with the authorities, as a guarantee of good faith, a sum of money not less than \$5,000 or more than \$50,000. This decree is being vigorously opposed by all foreign and local press correspondents, as also by the national press.

IMPROVED FOREIGN TRADING POSITION

Argentina's foreign trade has greatly improved this year. The following table shows Argentina's total imports and exports for the first six months of 1934 and 1935:—

	1934	1935	Difference
	\$	\$	%
Imports	505,120,498	559,403,502	+10.7
Exports	717,626,233	832,343,631	+16.0
Export surplus	+212,505,735	+272,940,129	+28.3

Argentine imports from—	1934	1935	Percentage of Total Imports	
	\$	\$	1934	1935
United Kingdom	104,392,730	114,520,393	22.7	22.1
United States ...	67,679,448	76,218,786	14.7	14.7
Germany	51,605,561	44,518,861	11.2	8.6
Belgium	20,134,001	33,292,368	4.4	6.4
Italy	36,351,975	25,404,861	7.9	4.9
France	24,324,418	23,110,900	5.3	4.6
Japan.....	8,368,429	22,844,804	1.8	4.4

These figures continue to show a very satisfactory improvement in trade, the volume of which has increased by 13.8 per cent. as compared with last year. It is confidently expected that the favourable balance of trade will exceed \$400 millions before the end of the year. Should this be the case, the exchange outlook would be clearer than at present. Even in the event of there being sufficient exchange to supply all requirements, it is, however, doubtful whether the Argentine authorities would discontinue the control. Exchange control in the form employed in the Argentine is very intricate, and its sudden discontinuance would not be feasible or wise. The process will have to be gradual, and it is possible that in the place of the present stringent regulations some system of exchange clearing agreements might with advantage be adopted.

Argentina's imports from Great Britain increased considerably during June, when British goods to the value of over \$20 millions entered the country, as compared with \$18 millions for June last year. The increase in imports from Japan, which has been such a marked feature of the returns during recent months, was checked during June. Of exports, 21 per cent. have been registered as "for orders," so that no accurate comparisons can be made. There is, however, one item worthy of comment: exports to the United States have increased from \$42 millions in the first six months of 1934 to \$86 millions for the corresponding period this year. Practically all classes of imports show substantial increases, the only notable exceptions being foodstuffs, tobacco and rubber. Textiles, machinery and fuel all show very handsome increases as compared with 1934.

BUENOS AIRES, July 27.

JAPAN

TRADE WELL MAINTAINED

THE main features of the June trade returns compared with those of a year ago are a decline in imports and a slight increase in exports. The total trade turnover has only risen by 780,000 yen. For the first six months of the year, however, both imports and exports show fairly large increases. Comparisons of the value figures for June, and of those for the first six months of this year and last, are set out below:—

	Month of June		Increase (+) or Decrease (—)	
	1934	1935	in 1935	%
	Yen	Yen	Yen	%
Imports	201,606	195,040	— 6,566	— 3.2
Exports	183,904	191,252	+ 7,348	+ 4.0
Total	385,510	386,292	+ 782	+ 0.2
Import surplus	17,702	3,778	— 13,924	— 8.6

	First Six Months		Increase (+) or Decrease (—)	
	1934	1935	in 1935	%
	Yen	Yen	Yen	%
Imports	1,220,962	1,415,938	+ 194,976	+ 16.0
Exports	1,041,166	1,221,373	+ 180,207	+ 17.3
Total	2,262,128	2,637,311	+ 375,183	+ 16.5
Import surplus	179,796	194,565	+ 14,769	+ 8.2

The increase in exports is almost entirely accounted for by manufactured goods. If the above two tables are compared, however, it will be seen that the rate of expansion of overseas markets is slowing down, for the increase in exports during the past half-year as compared with 1934 was 17.3 per cent., against only 4 per cent. last month.

The recent trend in home trade statistics continues. Output of cotton yarn in June totalled 121,892,000 lbs. over May, and rayon yarn production during last month amounted to 18,616,000 lbs., or 1,729,000 lbs. more than in the preceding month. The aggregate value of all shares listed at the Tokyo Stock Exchange on July 1st was again down, by 136.7 million yen, or 2.3 per cent., compared with a month ago. The Bank of Japan's wholesale index number for June registered a further fall of 1.2 per cent. on the month.

The Department of Agriculture and Forestry's forecasts of the wheat and allied grain crops for the country, excluding Hokkaido, at June 10th, placed the year's wheat crop at 9,414,000 koku, an increase of 2.7 per cent. over the actual yield of last year. The estimates for the barley and rye crops, at 7,127,000 koku and 6,368,000 koku respectively, are increased by 5.5 per cent. and 6.2 per cent. According to the report of the same Department, the output of spring cocoons for the country, excluding Hokkaido and the north-eastern provinces, is estimated at 37,281,000 kamme, a decrease of 5,785,000 kamme (13.4 per cent.) from last year's figure.

The new Governor of the Bank of Japan recently convoked leading bankers and stated that the immediate monetary outlook can be regarded as moderately favourable owing to an improvement in the balance of international payments, to the continued downward monetary trend, and to good sales of Government securities. According to the report presented to the conference by the Bank of Japan, open-market sales of Government bonds from November, 1932, to June, 1935, totalled 2,146 million yen, excluding Treasury bills of 23.8 million yen and rice notes of 132 million yen. Gold bought by the Bank since the inception of the Gold Purchase Act in April, 1934, amounted to 86.4 million yen at par, besides 34.6 million yen which was taken over from the Government, making a total acquisition of 121 million yen. The bankers' deposit rate was lowered to 3.7 per cent. in big town banks and to 4 per cent. in the majority of lesser banks throughout the country.

POPULATION INCREASE SLOWING DOWN

The natural increase in the Japanese population last year was again considerably smaller, and was nearly 200,000 below the figure for the peak year of 1932, when the annual increase reached the million mark. According to the

recently published report of the Bureau of Statistics, the natural increase in 1934 was 809,224, or 11.87 per 1,000 of the population. The number of births and deaths were 2,043,807, or 29.97 per 1,000, and 1,234,583, or 18.10 per 1,000, respectively. In 1933, the natural increase was 927,209, or 13.79 per 1,000, the birth-rate and death-rate being 31.55 and 17.76. The smaller increase in 1934 is thus accounted for both by a lower birth-rate and a higher death-rate, which, in turn, may be attributable partly to extremely bad harvests in North-Eastern Japan.

TOKYO, July 12.

HONGKONG

HONGKONG'S CURRENCY OVERVALUED

THE recent arrival of one of the principals of H.M. Treasury, Mr N. E. Young, came as a complete surprise. It appears, however, that Sir Frederick Leith-Ross's mission makes it desirable that the financial relationship between Hongkong and China shall be taken into account, and Mr Young's particular task is to collect such information as will have any bearing on that problem. When, in October last, China imposed a special export duty on silver amounting to an embargo, Hongkong did not follow suit, despite the view previously held that any change in China's currency policy would have to be adopted by the Colony. It was, however, felt by foreign bankers here that so drastic a measure could not be maintained. Nine months have now elapsed and China is still pursuing the policy adopted last October. The present state of affairs in Shanghai is no recommendation for that policy so far as Hongkong is concerned. There is no doubt that a portion of our *entrepôt* trade has been affected by the disparity between Hongkong currency and that of China, but to what extent it is impossible to estimate. On the other hand, the linking of our currency with China's system would have done nothing to discourage persistent Japanese competition, particularly in textiles. At the moment the harassed business man is inclined to take a philosophical view of the situation, and he is clinging to the hope that Sir Frederick Leith-Ross will be able to prescribe a sovereign remedy for China's currency ills and persuade the patient to take it.

While the Shanghai dollar is technically enjoying a relatively stable exchange value, the Hongkong dollar fluctuates in a disconcerting manner. In the course of twenty-four hours the Hongkong dollar has ranged from 2s. 2d. to 2s., after a more or less steady decline over two months from 2s. 6d. There is a considerable amount of speculation affecting the exchange market, and although certain interests may benefit, ordinary trade does not. One of the more unfortunate effects of the high level of the Hongkong dollar has been the almost total eclipse of local industries. With exchange at 1s. 6d. or lower a considerable export business was developing with the Crown Colonies and, in rubber shoes, with the United Kingdom. The business with the Crown Colonies was distinctly promising, for the quota on Japanese goods had opened a wide field for the products of Hongkong factories. With the exchange now at double the value of the yen, Hongkong exporters have been unable to compete, and many local industrial concerns have been obliged to close down.

The reduction in the interim dividend of the Hongkong and Shanghai Banking Corporation by 10s. to £2 10s. was as unexpected here as it was in London, where the shares fell from £124½ to £110 in one day. There has since been some recovery in the price of the shares, and it is generally felt that a policy of conserving the Bank's reserves in this time of uncertainty in the Far East is thoroughly justified. The improved trading conditions in some parts of the East have probably benefited the Bank, but the fact remains that the chaotic state of China's finances has directly affected those commercial interests upon which the Bank depends for much of its profits.

HONGKONG, July 20.

LETTER TO THE EDITOR

STABILISATION AND WHOLESALE PRICES

TO THE EDITOR OF THE ECONOMIST

SIR.—In discussing the pros and cons of "Conditional Stabilisation," Sir Arthur Salter draws what we believe to be a false distinction between internal trade and external trade. Though our internal trade improves on unstable exchanges, he suggests that there are limits to internal expansion and, with the solution of our unemployment dependent on recovery in the export trade, he observes:—

It is difficult to imagine any considerable revival of foreign trade while the relation of national currencies to each other is as uncertain as it is at present.

As revival of our trade in the Lancashire cotton industry depends upon increased consumption of our goods in every corner of the earth, and as we have long studied the relation between monetary policy and the purchasing power of our overseas customers, we feel competent to judge whether stabilisation is or is not essential to recovery in our export trade. In our judgment, the first essential is a substantial recovery in the prices received by producers the world over for their foodstuffs and raw materials; and stabilisation is a very secondary consideration.

The main reason for our difficulties is that primary producers throughout the world have had their gross income halved by the disastrous fall in wholesale commodity prices. Their debt payments and public taxes are as they were ten years ago; so that their net income for personal spending is reduced to little or nothing at all. The majority of peasant farmers in India, for instance, are half starved and less than half clothed. If they are again to enjoy even the low standard of life enjoyed by them in the year 1924, the wholesale prices they receive for their own produce must be raised proportionately. This is the only practical means to restore their purchasing power and to revive the trade of our staple export industries.

In our considered judgment, having taken all the aspects of the gold position into account, a universal devaluation of currencies to something like 50 per cent. of existing gold values would be required to raise wholesale commodity prices, if only temporarily, to prosperity levels. This is far from the intention of the authorities who now advocate restabilisa-

tion on gold. The very fact that they argue gold to be now in sufficient supply to prevent further falls in prices on gold currencies (a debatable assumption) shows that they have, in fact, little concern for the masses of the world who, by their previous administration of monetary policy, have been deprived both of purchasing power and property.

Sir Arthur Salter is right when he remarks that gold and the bank rate exercised, in the past, an absolute tyranny over economic activity; but he is mistaken in arguing that, in the past, this was a beneficent tyranny. There was nothing beneficent in the tyranny exercised in the depressed thirties and forties and in the depressed eighties and nineties of the nineteenth century, nor even in the short acute depressions of 1901-1902 and 1908-1909. Gold standard and bank rate then forced prices down; and, in the intervals, they worked satisfactorily only because, with huge gold discoveries, they stimulated rapid advances in prices.

Sir Arthur Salter's new plan of conditional stabilisation is only different in detail from the old stabilisation, which, as shown by the break-away from gold in the year 1914 and since 1931, was in practice only conditional. His plan actually envisages the powerful co-operation of world equalisation funds to keep weakening currencies on gold. Producers and traders would have reason to lament this co-operation; for it is obviously designed to prolong the period of their economic and financial distress, which invariably precedes Government action in departing from fixed parities. With such additional help, from August, 1931, onwards, the Bank of England could have kept Great Britain under the tyranny of the old gold standard for many months longer.

With currencies stabilised, more enlightened Governments would have to subordinate their domestic policy to the views of such reactionary Governments as are now imposing economic deflation and adding to the difficulties of their primary producers and staple industries. With unstabilised currencies, the more enlightened Governments can at least improve the conditions of primary producers and staple industries in all the countries under their own monetary control or influence. Not until all countries will consent to provisions which will guarantee a substantial rise in prices universally should the Governments of the British Commonwealth consider stabilisation.

Yours faithfully,

W. M. WIGGINS,

Chairman, Silver and Monetary Policy Committee.

The Federation of Master Cotton Spinners' Associations, Ltd.,
Fifth Floor, Royal Exchange, Manchester.

BOOKS AND PUBLICATIONS

MUSSOLINI'S ITALY*

THE years which have passed since the March on Rome in October, 1922, have accustomed us to the existence of the Fascist dictatorship in Italy, and Fascism has become a generic concept of politics to be set alongside parliamentary democracy and Communism as one of the three possible types of modern State. We now use as an abstract term in current speech an Italian word which would hardly have been known to a well-informed journalist in 1919; and this is a measure of the degree to which Mussolini's regime is new in kind and not classifiable under the older political terminology.

Fascism affords a contrast to Communism, for the proletarian dictatorship had been familiar in theory, if not in fact, for two generations before Lenin, acting on the theory, seized power in Russia; while the Italian *Fasci di Combattimento* set out to fight in the streets without any coherent doctrine, and only formulated a body of principles after they had actually set up a new kind of political system—a new kind of political system, but not a new system—active and revolutionary, a defence of an existing order and yet a phenomenon belonging wholly to the post-war world. It is the counter-reformation of a Europe shattered by war and threatened by social revolution, a movement which resorts to despotism but rejects dynastic right; which

destroys democracy but takes over its most characteristic products, demagogic propaganda and mass-party organisation; which maintains private ownership of the means of production and yet pours scorn on the "bourgeois spirit" and preaches the "totalitarian" authority of the State.

Dr. Finer, who is author of "The Theory and Practice of Modern Government," has set out to trace the history of the Fascist movement in Italy and to analyse the institutions which it has established. The result is a work of great importance. It is rather diffuse and shows a certain weakness for platitudes, but it covers the ground with a wealth of that kind of detail which is lacking in more superficial accounts of the subject. A great part of the book is taken up with lengthy quotations from Fascist speeches, documents, books and articles, and these are very effective in conveying the mental atmosphere of Fascism, as well as for the light they throw on particular points of policy or doctrine. The author is definitely, and sometimes violently, anti-Fascist in his attitude, but the case he makes against the system is serious criticism, and never descends to mere vituperation. He confesses to a considerable personal admiration for Mussolini, with whom he had an interview, and whose presence he found "exciting, disturbing and, finally, commanding." But just because Mussolini is "so different from the average Italian" he thinks the system is unlikely to survive him.

Dr. Finer says "it is difficult to over-emphasise the part which personal differences, arising out of ambition for power, have played in Mussolini's career." Having been expelled from the Socialist Party in November, 1914, for
