Another test may be based on volume of demand. The Department's premiums are subject to variation from day to day. Once a premium has been fixed it will apply to the whole of the shipments specified, regardless of the date at which they are made during the ensuing three months. But if the same exporter comes back a few weeks later for further cover, or if a competitor approaches the Department the next day, a different premium may be quoted. Each exporter must take his chance of the "market," in the same way as he accepts the spot or forward rate of the moment in the foreign exchange market. A sudden general demand for transfer insurance of exports to one particular country, naturally, will tend to put the Export Credits Guarantee Department on its guard. It may not immediately raise its premium, but it will certainly have every inducement to overhaul its information on that country to discover evidence of any unexpected weakness. Conversely, absence of demand for transfer insurance may suggest that the premium has been fixed too high. The Department has a useful check on demand for its facilities, by way of the quarterly returns giving the total value of British export trade with every country.

The scheme is admittedly experimental. Several months may be necessary for "educating" exporters into its existence and its merits. Ultimately, its results should be desirable in every way. The experience of the past four years has shown how serious a deterrent to our overseas trade both existing exchange restrictions and the fear of further restrictions can be. Existing restrictions, unfortunately, are outside the scope of the scheme, for insurance is concerned with risks not with certainties. It may be found, consequently, that applications relating to trade with certain countries will be turned down out of hand. Insurance may be refused, again, in cases where the Government is negotiating for the recovery of old frozen debts and thinks it inadvisable for the foreign country to run up new debts to British exporters. With all its limitations, however, the scheme, by removing the fear of loss due to the future imposition of restrictions, should be of valuable assistance to British export trade. Like the Department's original scheme, it is intended to be self-supporting. It provides, in short, a new example of the way in which a Government Department may assist commerce without itself actively engaging therein.

FINANCIAL NOTES

Financial Sanctions.—An Order-in-Council under the Treaty of Peace Act, was issued at the week-end which enforces financial sanctions against Italy as from October 30th. The Order applies to loans or credits to or for the benefit of the Government of any Italian territory; any person (not being a body corporate) of any nationality resident in such territory; and any person (wherever resident) being a body corporate incorporated under the law of any such territory. Italians resident outside Italian territory are exempt from the Order, but branches of Italian corporations in other countries are not exempt. The Italian branches of foreign companies are exempt, but foreign residents in Italy are not exempt. As regards loans and banking credits, the order prohibits: (1) Loans, advances and guarantees to or for the benefit of Italians; (2) the acceptance or endorsement of any bill of exchange drawn by or for the benefit of any Italian; (3) the purchase of any bill of exchange (other than a bill payable on demand) from an Italian holder; (4) the issue of or subscription for shares in an Italian corporation. Other banking business which does not involve credit facilities is still permissible. Thus it is still possible to remit funds, to buy or sell currencies, stocks, shares and bonds, or to pay interest, dividends, coupons, etc. The Order also prohibits the giving of credit to or for the benefit of an Italian in connection with a sale of goods, and this prohibition overrides the terms of existing contracts. British exporters may accept payment through the Anglo-Italian clearing scheme instituted last April, provided that the Italian importer deposits his lire in the Italian clearing account on or before the delivery of the goods.

Italian Credits in London.—The issue of an Order-in-Council imposing financial sanctions raises several interesting banking points, especially when it is recalled that several months ago most London banks agreed to close down their Italian credit lines as quickly as they could. The unavailable portions of Italian credits, whether advance, overdraft, or acceptance credits, are cut off immediately by the Order—and, indeed, in most cases had been cut off by the banks themselves. Credits being made use of at the date of the Order are not cut off, but may not be renewed. Thus loans to Italians now outstanding will be continued until they fall due for repayment, and bills drawn against acceptance credits will be met on maturity. The Order states that London acceptors need not take up such bills before maturity. The further execution of any contract made with a non-Italian prior to October 25, 1935, is expressly permitted by the Order. Thus, where a credit

granted to or for an Italian has been confirmed to a non-Italian for some months ahead, the bank may continue to accept under the credit bills presented to it by the non-Italian. This may open a fairly wide door, but it must be remembered that Italians, like many other foreign bankers and traders, open credits in London to finance trade with all other parts of the world. The practice is for the foreign exporter or his bank to be instructed to draw direct against the London credit, and if this facility is to be denied to him, it should be through regulations imposed by his own Government rather than by the British Government. The true comment is that inasmuch as London is the financial centre of the world, further co-ordination of financial sanctions is needed between the various members of the League before the British financial sanctions can be made water-tight. This matter might well receive consideration at Geneva. There are more technical questions, which it is understood were considered on Thursday by a representative meeting of London bankers. For example, at what stage does avilment of a credit take place—on its advice to a third party or on the acceptance of a bill drawn against it? British visitors to Italy, who happen to be over-drawn at their bank at home, may wish to know whether they must slip across the frontier in order to cash a fresh cheque.

The Shanghai Exchange.—During recent months the vicissitudes of the Chinese dollar have been thrust into the background, first by the weakness of the gold bloc currencies and later by the appreciation of the American dollar. Yet throughout the whole of the past year China has been subject to the pressure of American silver buying, and while no exact estimate naturally exists, China's total loss of silver through smuggling must have been considerable. Such losses have further undermined her monetary and economic position, which was none too stable. It is not surprising, therefore, that last week a sudden panic, inspired by fears of impending devaluation, led to such heavy sales of Chinese dollars against sterling and gold currencies that the Chinese authorities were unable to resist them. The open bear position in Hong Kong alone is estimated at between £2,000,000 and £3,000,000 sterling. In consequence, the sterling value of the dollar, which only three weeks ago stood at 18½d., has fallen between October 23rd and 31st from 17½d. to 15½d. At the moment the total export duty, including the variable equalisation charge imposed a year ago to prevent an artificial appreciation of the dollar in sympathy with the rising trend of silver, is as high as 14½ per cent., and it is difficult to see how it can be raised much more without making smuggling even more lucrative than it is to-day. On the other hand, the parity rate for the Chinese dollar, adjusted to the current sterling price of silver but exclusive of export duty, is 24d.; while even after payment of duty it pays to ship silver so long as the rate is below 20½d. According to the latest reports the Chinese Exchange Stabilisation Committee has just adopted 20½d. as its "official" rate, but this is so much above the current market exchange rate of 15½d. as to be tantamount to a confession that the situation is completely out of hand. There are strong rumours that the Government are seriously considering devaluation, possibly with a view to linking-up the Chinese dollar with the yen. This would establish closer co-operation with Japan, and reduce the intensity of Japanese competition against Chinese industries. Whatever the substance of these rumours, the outlook is not hopeful, and it is difficult to hold that the recent slump in the dollar is unjustified.

The Foreign Exchanges.—The London market has been very quiet, and dealers have found it difficult to take a view. Commercial buying of dollars brought the New York spot rate back from \$4.92½ to \$4.91½ on Thursday, but the whole week's movements have been narrow. Three months' dollars were more offered at 1½ cents premium. There has been no intervention by the British Control this week, and the Paris-New York cross-rate has stood at Frs. 15.17½, or just inside the export gold point. Three months' francs are weaker in London at Frs. 1½

discount, and the immediate financial and political outlook in Paris is viewed with some doubt. Spot guilders and Swiss francs have strengthened this week against the French franc. The reason is that the forward sales of these currencies made during the July crisis have had to be covered this week, as they are not being renewed. This operation involves spot purchases of guilders and Swiss francs. The Netherlands Bank has taken the opportunity to replenish its gold stocks, but it is pointed out in London that the guilder has not yet appreciated against the franc to the gold import point, so that there is no scope for arbitrage operations involving a natural flow of gold from Paris to Amsterdam. Three months' guilders are steady at 13½ cents discount. Three months' Swiss francs have improved to 20 centimes discount, which is the best rate touched for some time.

The Money Market.—While the Bank Return reveals a small increase in bankers' deposits, several of the banks have again called on their making-up days, and a fair demand for loans has naturally resulted. The banks have also been fairly good buyers of bills, and this may be another reason why they found it necessary to replenish their cash by calling. The banks are still trying to buy December bills, but these are not easy to obtain, and in most cases they have had to be content with mixed parcels of December and January bills. These have been bought at ½ per cent. Some of the banks are also buying January Treasury bills of dates running up to January 19th. In some cases these bills have been taken at ½ per cent., but one or two banks have held out for ⅞ per cent.

	Oct. 10, 1935	Oct. 17, 1935	Oct. 24, 1935	Oct. 31, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	½	½	½	½
Short Loan rate :—				
Clearing banks.....	½-1	½-1	½-1	½-1
Others.....	½	½	½	½
Discount rates :—				
Treasury bills	½-¾	¾	¾	¾
Three months' bank bills ...	¾	¾-1	¾	¾

Last week's Treasury bills went at an average tender rate of 11s. 9.24d. per cent., against 12s. 10.81d. per cent. the week before. For the second week in succession allotments, at £40 millions, were not in excess of maturities. The total number of tender Treasury bills outstanding is now stationary at £550 millions, against £360 millions at the opening of the current financial year.

The Bank Return.—This week's return records a further increase in the Bank's gold holdings, which have risen by one million during the past fortnight. End of the month currency withdrawals have added £2.9 millions to the note circulation, and the Reserve has fallen by £2.6 millions.

	BANK OF ENGLAND				
	Oct. 31, 1934	Oct. 9, 1935	Oct. 16, 1935	Oct. 23, 1935	Oct. 30, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.0	193.7	193.7	194.3	194.7
Note circulation	378.4	402.1	399.6	397.0	399.9
Banking Department :—					
Reserve	74.3	52.3	54.9	58.2	55.6
Public deposits.....	16.9	36.0	32.1	35.3	26.2
Bankers' deposits	100.4	75.1	78.8	78.7	82.5
Other deposits	39.8	38.6	37.8	37.1	38.6
Government securities.....	80.9	85.5	86.2	86.8	85.9
Discounts and advances..	8.9	17.6	13.7	11.4	11.2
Other securities	10.7	11.8	11.6	12.5	12.3
Proportion	47.2%	34.9%	36.9%	38.4%	37.7%

In the banking department there is a drop of £9.1 millions in public deposits, due no doubt to an excess of Treasury bill maturities over payments. This off-sets the increase of the previous weeks, which had raised public deposits to an abnormally high level. Bankers' deposits, however, have risen only by £3.8 millions, as they have been affected by the public's withdrawals of currency.

Foreign exchange dealers

Messrs. Marmolin, Rydberg, Holmberg, and Markland, of the SKANDINAVISKA KREDITAKTIEBOLAGET, Stockholm, offer you a complete foreign exchange service. Call Stockholm 0101

New York Money and Banking.—On October 30th the New York banks raised their rate for call money from ¼ to ½ per cent. The renewal rate was also fixed at ½ per cent. The time rate, for money up to six months, has also hardened from ¼ to ½ per cent. Discount rates for acceptances are unchanged, with 90-day bills still at ⅞-½ per cent. During the week ended October 3rd New York member banks' loans to brokers increased from \$818 to \$832 millions. Other loans against securities fell from \$736 to \$730 millions. During the week ended October 23rd gold imports included \$24.8 millions from England, \$11.7 millions from France and \$2.3 millions from India. The Department of Commerce, whose statistics cover a different week, give gold imports for the week ended October 18th at \$122.6 millions (\$83.8 millions from France and \$31.1 millions from England). Silver imports for the same week were \$14.8 millions, of which \$12.4 millions came from England. These purchases in London represent one important source of support to sterling. Arrivals and engagements of gold so far reported during the current week suggest that the gold influx is momentarily slackening, for actual imports include only \$10.7 millions from England and \$4.1 millions from France. Engagements for the week are still smaller, but it is now estimated that the total amount of gold which has been engaged for shipment since September 9th is \$449 millions. Most of this gold has actually arrived.

The Commercial Banking Company of Sydney.—The accounts of this bank, dated June 30, 1935, show that it continues to occupy a strong position. Compared with the previous year deposits have risen from £48.6 to £49.2 millions, while cash has increased from £7.7 to £7.9 millions. The main change is in the distribution of the bank's assets. Holdings of Australian Commonwealth Treasury bills have been reduced from £4.3 to £3.9 millions, while the bank's investments have been increased from £5.7 to £6.0 millions. Discounts and advances have also risen from £35.9 to £36.9 millions. These changes suggest that the bank has found more remunerative employment for some of its resources, while the increase in deposits has also added to its earning capacity. Net profits have therefore risen from £257,000 to £264,000. The dividend remains unaltered at 5 per cent., but the allocation to premises account has been raised from £20,000 to £25,000. At this year's annual meeting, Mr James Ashton, the chairman of the bank, discussed a number of important points. Perhaps the most interesting section of his speech was his analysis of Australia's meat problem. He stressed the practical difficulties of competing with Argentina in the supply of beef to England, and concluded that while Queensland beef producers should have a modest percentage of Britain's beef purchases secured for them, Australia's main interest lay in an expansion of the fat lamb trade. His examination of this question, complete and admirably detailed, should be studied carefully in Great Britain as well as in Australia.

THE STOCK EXCHANGE

ARGENTINE RAILWAY PROBLEMS

" Gradual but continued recovery has marked . . . the past twelve months, and . . . prospects for the future can be considered promising."

" Out of £277,000,000 of British capital invested in Argentine railways, £174,000,000 is earning no interest."

THE first of these pronouncements relates to Argentina as a whole, and is culled from the report of the chairman of the Local Committee of the Buenos Aires Great Southern Railway for the twelve months to June 30th last. The second is concerned with the present plight of an industry, overwhelmingly British-owned, which, since 1857, has been the pioneer of Argentina's economic development. The speaker was the chairman of one of the two largest British companies, at its annual stockholders' meeting on October 17th last. The two pronouncements, taken together, suggest the *raison d'être* for a fall in the market capitalisation of the equity stocks of the four leading British lines in Argentina from a maximum of £91,980,000 in 1929 to a present figure of £9,595,000. The Argentine, slowly but surely, is setting its house in order, and emerging from the depression which has overwhelmed all primary producing countries during the last five years. None of the fruits of revival has as yet been passed on to railway stockholders, or is likely to reach them in the near future. This unhappy paradox demands detailed explanation, for investors are anxious to know exactly where they stand.

Perhaps the most striking commentary on their present position is the following table, compiled by the recently inaugurated " Institute for Economic Studies in Transport," in Buenos Aires:—

ARGENTINE RAILWAY RESULTS: LAST SEVEN YEARS
(Thousands of Argentine Pesos)

	Gross Profits	Exchange Losses	Net Profits	Interest on Capital
1928-29	186,589	982	185,607	5.71
1929-30	135,588	8,345	127,243	3.80
1930-31	124,482	37,863	86,618	2.51
1931-32	114,109	32,849	81,260	2.36
1932-33	81,719	15,940	65,779	1.91
1933-34	95,310	32,473	62,837	1.82
1934-35*	105,000	57,000	48,000	1.39

* Provisional figures. Note: The figures relate to all privately owned railways in Argentina, except the Midland and Transandine.

Since 1932-33, when gross profits were less than half those of the peak year 1928-29, they have risen by 28.4 per cent. But the gain, literally, has been "lost in transit," for the depreciation of the peso has multiplied provision for exchange losses, and the net profits available for stockholders have fallen 27 per cent. below those of the "worst" traffic year. In November, 1933, the Argentine Government effectively "devalued" the peso by approximately 20 per cent. The latest exchange loss figures of the "Big Four" railways thus partially reflect the fact that twelve months' remittances were made in 1934-35 at the depreciated rate, against seven months in 1933-34:—

EXCHANGE LOSSES

Year to June 30, 1935	B.A. Gt. Southern	B.A. Western	Central Argentine	B.A. and Pacific
Loss on remittances	£ 1,736,070	£ 438,464	£ 1,225,623	£ 915,881
Corresponding figures for 1933-34	890,589	259,242	1,004,819	604,719
Corresponding figures for 1928-29	27,072	14,404	35,794	Nil
Depreciation of floating assets and other exchange differences	Cr. 183,348	Cr. 127,920	...	112,820
Corresponding figures for 1933-34	Dr. 551,145	Dr. 88,120	...	502,545
Corresponding figures for 1928-29	Nil	Nil	...	Nil
Total exchange losses	1,552,722	310,544	1,225,623	803,061
Corresponding figures for 1933-34	1,447,734	347,362	1,004,819	1,167,264†
Corresponding figures for 1928-29	27,072	14,404	35,794	Nil

(a) In addition, £801,920 loss on conversion of "Roca" bonds and "C" certificates charged direct to general reserve fund.
† Subject to deduction of £317,047 charged to general reserve in respect of earlier years.
* In addition, £308,906 to write down "C" Convention Trust certificates to par.

The credits of £183,348 and £127,920, taken by the B.A. Great Southern and B.A. Western Railways, respectively, from amounts set aside for exchange differences in earlier years, reflect the slight appreciation in the trend of the peso over the last twelve months. The consequent absence of necessity for further provision for floating assets depreciation this year has slightly reduced the net "differences" on the B.A. Western and B.A. Pacific lines. The crushing effect of the burden, however, in all four cases, can be appreciated from the next table:—

GENERAL RESULTS

Year to June 30, 1935	B.A. Gt. Southern	B.A. Western	Central Argentine	B.A. and Pacific
Gross receipts (£)	10,957,684	3,513,204	9,865,160	6,239,964

* After adding other income and deducting other expenses and exchange losses.
† £801,920 loss on conversion of "Roca" and "C" Trust securities charged direct to general reserve.

It will be seen that exchange losses swallowed up 45.8 per cent. of net receipts on the Great Southern, 55.1 per cent. on the Western, 45.4 per cent. on the Central Argentine and 51.2 per cent. on the Pacific. No company earned anything on its equity stock. Two—the Western and the Pacific—earned nothing on their preference capital, though the former paid a year's dividend on its senior preference and half a year's distribution on its junior preference. The Great Southern, which earned just under half its total preference requirements, similarly paid all its "first" and half its "second" preference dividends, at the cost of a draft on the balance brought forward. The Central Argentine earned about a quarter of its preference dividends, but again passed them all, its sole distribution being the outstanding balance of 2½ per cent. on its first preference dividend declared two years ago. All the companies met their debenture charges, except the unfortunate B.A. Pacific, which last August succeeded in making a payment of three half-years' arrears on its second debenture stocks, but has been compelled to secure an extension of the moratorium on these and certain other stocks till June, 1936, with possible extension to June, 1938. Stockholders may be somewhat disturbed to find the B.A. Western, which covered all its preference requirements with a margin in 1931-32 and 1932-33, among the companies which did not quite earn its debenture interest.

The trend of receipts and expenses may be inferred from the table at the head of the next column.

important, are dwarfed by the exchange factor, and last year's experience was not itself of decisive significance as a pointer to future results. The railways suffered from intensified road transport competition, especially in the metropolitan zone, but made a little progress on the longer-distance side, partly as a result of the special excursion arrangements associated with the Eucharistic Congress at Buenos Aires in October, 1934, and with the visit of the President of Brazil last May. Although goods receipts were higher on three lines, and the total tonnage was higher on all four, the year, on the whole, was slightly disappointing. Unfavourable harvesting weather reduced the 1934-35 wheat crop, and the marketing of a "record" maize crop was delayed by the decision of the farmers to hold back supplies for a higher price. From the former factor, the B.A. Western suffered especially, for its total cereal tonnage dropped by 4.65 per cent., and its average haul was reduced from 251 to 222 kilometres. The company has charged its renewals expenditure to renewals fund, but has not supplemented that fund from last year's earnings. The Central Argentine (which drew 27 per cent. of last year's total goods receipts from maize) increased its "normal" gross receipts by approximately £539,000, the apparent decline of some £6,000 being due to lower Government traffic collections, whose total in 1933-34 included substantial payments of arrears.

Altogether, the results of a period of modest but perceptible Argentine "recovery" have been profoundly disappointing to stockholders. The effect is seen in the following table of Stock Exchange prices and yields:—

STOCK EXCHANGE VALUES

INVESTMENT NOTES

Course of Share Values.—The voice whose acid tones once reverberated from the Treasury Bench in the House of Commons retains some of its potency in another "House." Though dealings in "Majorities" are now officially discouraged on the Stock Exchange, the National Government's stock was written down somewhat, in the gilt-edged market and elsewhere, at the beginning of this week, and Lord Snowden's incisive broadcast speech tended to confirm this tendency. That the Government will be returned is not seriously doubted, but every election has a temporarily disturbing effect on Stock Exchange business, and the present is no exception. Meanwhile, our customary monthly chart of the course of equity share values in London and New York suggests that, while the former centre has been fighting a dogged rearguard action since the Abyssinian crisis became acute, the latter is still advancing into new

territory. Both markets, on the whole, were firm last month, for industrial recovery, actual and prospective, is a sound bull point in any political environment. The British index, however, is still five points below the high figure of last August, whereas the American level is the highest since May, 1931. Last month's gains, on this side of the Atlantic, were confined almost entirely to the equity share market, for the Actuaries' Index (December 31, 1928 = 100) showed a change of only a decimal point in "Consols,"

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares (adjusted to 1928 base)

American: "Standard Statistics" Index of 50 Common Stocks

while the ordinary share index registered a net rise of over two points, from 74.2 to 76.5, the corresponding yield figures being 3.95 and 3.83 per cent. Movements in individual share groups are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Year Ago (Oct. 30, 1934)	Month Ago (Sept. 24, 1935)	This Week (Oct. 29, 1935)	Year Ago (Oct. 30, 1934)	Month Ago (Sept. 24, 1935)	This Week (Oct. 29, 1935)
Fixed Interest:						
2½% Consols.....	146.4	147.4	147.3	3.05	3.02	3.03
Miscell. indust. debentures (13)	122.7	125.2	124.5	4.08	3.88	3.90
Do. preference (44)	116.6	117.8	117.7	4.37	4.36	4.37
Ordinary:						
Insurance cos. (24)	112.1	116.4	121.3	4.18	3.61	3.47
Building materials (4)	80.6	87.6	91.3	4.43	4.63	4.47
Cotton (6)	44.1	39.2	43.9	2.35	2.31	2.21
Oil (5)	58.8	62.5	66.3	4.93	3.59	3.38
Electrical supplies (8)	98.5	117.2	121.0	4.34	4.37	4.23
Stores and catering (15)	81.1	77.1	79.6	4.07	4.06	3.94
Breweries and distilleries (19)	115.2	126.7	131.0	3.81	4.36	4.21

During the last twelve months as a whole, British share values have made surprisingly little net headway, except in individual groups like electric supplies and breweries. The rise, in fact, has not kept pace with the growth of dividends, for the 158 industrial shares in the Actuaries' Index, whose value has increased from 72.0 to 76.5, now yield 3.83 per cent., against 3.68 per cent. a year ago.

Fixed Trust Recognition.—It is possible that the Stock Exchange Committee may be within sight of the conclusion of its labours on the problem of fixed trust "recognition" and of cognate questions of permitting dealings in sub-units inside the "House." Some possible matters which the Committee might regard as essential before granting "recognition" were outlined in a Note in the *Economist* of March 23, 1935, on page 671. Since that time, however, the Committee has been in consultation with a number of management representatives, and may have taken the opportunity to revise, in some less important respects, its original intentions. It has been hinted, for

example, that its draft rules have now reached their eleventh edition, which may be taken as illustrative of the careful consideration which is being given to the problem. Among certain points, which may have been retained in their early form, the suggested ban on participation or indirect interest in a trust management company by "House" members may well remain, and the improvement in advertising matter, which, to the trusts' credit, is already in progress, could be further strengthened by the Share and Loan Department's supervision of circulars and advertisements. The Department might require particulars of the calculation of dealing prices on any given day, and it might also be advantageous if actual or prospective holders of sub-units could examine these details at the management offices. In this respect, the suggestion that the "rounding-off" of quotations should be limited to the nearest threepenny multiple is to be welcomed. The importance of this source of extra management profit was emphasised in our Fixed Trust Supplement of April last, and it is eminently desirable to limit its scope. It may, however, be said that managers generally are already working within the suggested limit. It would be commendable, also, if the Committee could impose a limit upon the proportion which the total holding of any one security in each trust, when full, bears to the total amount of the issue. Possibly the Committee may have a low percentage—such as 2½ per cent.—in mind, but the growing duplication of leading shares in recent formations increasingly tends to create a disproportionate interest in such shares by the fixed trust movement as a whole. If all the trusts now in issue were to become fully constituted, the danger of excessive fixed-trust interests in a number of securities might not be avoided even by the small individual percentage which has been suggested. In this connection the Committee may have considered the desirability of receiving, from time to time, particulars of the total number of units which have been issued by each "recognised" trust. Only with such information could steps be taken to avert the danger of an unwieldy market position. The management groups in a number of instances have already taken steps to introduce certain of these provisions. No management, however, is proof against the possibility of error. In this respect, the British General group deserves appreciation for its recent action in setting right an unfortunate mistake in the Trust Deed of its recently issued Series "B" units, whereby £170 5s. ordinary stock units of Ever Ready Company (Great Britain) were inserted instead of the intended 170 units. The requisite additional units have been purchased at the expense of the managers, and to the wholly unexpected profit of the sub-unit holders. The mistake, however, raises important considerations regarding the position of trustees, whose duty it is to receive the requisite number of shares before issuing sub-unit certificates. It would be regrettable if a momentary error of detail, as in this case, were to throw any doubt on the rightly-held view that the protection which the trustee affords is of crucial value to certificate holders.

Cotton Share Outlook.—The revival in cotton shares, which has been stirring this week, marks the news of a specious change of outlook in Lancashire. During the last month or more, business has been running at higher levels than in any similar period during recent years, and compared with the position three months ago, when short time was combined with virtual inability to earn profits per piece, the improvement has been substantial. So far, however, the recovery has been largely restricted to the coarse section of the trade, and it is impossible at this stage to be certain whether it represents anything more than forestalling business, due to the indirect effects of the Italo-Abyssinian war. The Indian demand, for instance, which normally expands at this season, may have come somewhat earlier this year owing to fears of interruption to shipping on Mediterranean routes. In addition, Italian export capacity may well have been deflected to serve home and war requirements. Although the latest improvement is of too short duration to act as the basis for a long-term investment policy, it would be precipitate to regard it solely as a bull point for the spinning section of the trade.

whose capital structure in many directions will require re-organisation before dividend payments are even remotely possible. The following table illustrates the course of profits in this branch and also in the more sheltered finishing section:—

Group and Company (and Date of Accounts)	Total Profits	Earned for Dividends	Debentures and Preference Shares

1934	674,935	164,872					
1935	556,894	42,969					

(a) Arrears since April, 1931. (b) Before depreciation each year. For 1933 and 1934 after charging first debenture interest paid by Guarantor. (c) Without allowance for redemption. (d) Arrears since June, 1933. (e) Arrears since December, 1932. (f) On 5 per cent. dividend.

If a partial recovery is in prospect in Lancashire, its advantages are likely to be more immediate in the finishing branch, which handles rayon and other textiles in addition to cotton, but a greater measure of improvement would be required from the finer sections of the trade before optimism could be justified. The recent profits record clearly indicates, in any case, that the market is of interest only to the more speculatively minded, and to those in close touch with events in the industry.

Capital Issues.—The market's caution during October has considerably reduced the level of activity in the new issue market, and is reflected in the reduction of the total sum raised from £4,729,000 in September to £2,679,000. Recent comparisons are set out below:—

Monthly Average	(000's omitted)			Total
	United Kingdom	Excluding British Possessions	Foreign Countries	
1931	4,542	3,209	761	8,125
1932	13,589	12,129	124	15,742
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093

The principal contribution to the month's figures is provided by issues to shareholders only, both for home and Empire destinations.

A '15 MOORGATE' TRUST

Announcing:

HUNDRED SECURITIES TRUST

through which you can spread your capital over as many as 100 first-class dividend-paying British securities covering the whole range of sound British Investment, including Government funds, banking, insurance, property, commerce and industry. The yield is

5½%

NOTE. This is the approximate Gross Annual Yield at the current price of approximately 20s. 3d. per sub-unit, calculated solely on the cash dividends paid in the past year on the 100 selected securities. Capital bonuses are excluded from the computation of yield and are additional. Such bonuses would, if sold, have added in the past year approximately a further ½ of one per cent. to the gross annual yield.

The Trust Investments are distributed as follows:

Government Funds	6%
Banking & Insurance	2%
Iron, Coal & Steel	11%
Transport & Communication	8%
Light, Power & Electrical Equipment	10%
Property, Building & Allied Trades	10%
Stores, Catering & Foodstuffs	5%
Breweries & Tobacco	10%
Gold Mining	4%
Textiles	4%
Oil	4%
Cinemas	7%
Newspapers & Paper Trades	7%
Miscellaneous	10%

LLOYDS BANK LIMITED

are the Trustees for investors. They issue the certificates representing ownership of sub-units, collect the dividends paid on the securities in the Trust, and distribute the income to investors on June 15th and December 15th each year during the 15-year life of the Trust.

HERE ARE SOME FURTHER IMPORTANT POINTS: The Managers strongly advise you to consult your bank manager or stockbroker for confirmation of the general desirability of the Trust as an investment for large or small sums.

1. Sums of approximately £20 and upwards may be invested through any bank or stockbroker.
2. The Managers have full power to make the Trust cumulative by retaining capital bonuses in the Trust if considered desirable, thereby augmenting the capital value and earning power of the investment.
3. All the securities in the Trust are quoted on the London Stock Exchange and constitute a list which is representative of the soundest elements in British financial, industrial and commercial life.
4. Provision for continuity of management has been made by the creation of a special fund administered by the Trustees. Security Trust Managers, Ltd., the Managers of the Trust, are controlled by interests associated with Dawson Day & Company, Ltd., Merchant Bankers, 15, Moorgate, London, E.C.2.
5. Sub-units are readily marketable since the Managers undertake to repurchase any sub-units offered to them, as explained in the Booklet.

For full particulars apply for Booklet HG to

COMPANY NOTES

Cycle and Motor Cycle Companies.—In recent years the fortunes of the motor cycle industry have been steadily declining while the fortunes of the "push" bicycle industry have equally steadily been rising. It is easy to find reasons for both movements. As a means of transport the motor cycle has suffered from the competition of the "bus and of the light car. Its almost complete lack of "all-weather" protection has increased its relative cost by comparison with the light car. The latter's original cost can be spread over potential journeys in any weather by night or day and in any garb, whereas the motor cycle can only be comfortably used in mild weather by day, with a driver suitably clothed. Finally, it only accommodates one passenger in reasonable safety and comfort. In brief, the motor cycle has been left behind by the development of the modern low-priced car—whose lead has presumably been still further increased by the introduction of the new £100 Ford. Many of the same objections, certainly, might be applied to the "push" bicycle. The latter, however, has a certain virtue as a means of exercise which the motor cycle lacks and has been found particularly well suited to the new housing estate and the new industrial area for transport to and from work or to and from stations. It is

‡ Year ended changed to September 30th from November 3. Profits for period equated to 12 months' basis.

to this, combined with the great improvement in road surfaces and the fall in selling prices, that the great increase in bicycle sales may be attributed. So far as can be judged, the increased use of bicycles is well founded. How long "expansion" demand will continue, however, and how far it will ultimately be maintained by "replacement" demand are points less easy to determine in the case of a product whose useful life may well be seven or ten years. The popularity of the pedal bicycle, however, suggests that if a reliable motor cycle could be produced at a really low price it would encounter a remarkably elastic demand. Tax is not a serious expense, and the increased radius of the motor cycle is a decided attraction. Until a sweeping reduction of price is achieved, however, the motor cycle trade will have only a minor claim on the investor. Some motor cycle companies, like Triumph, have extended their activities into the car industry, but results, in terms of earning power, have not as yet been striking. The leading bicycle manufacturers and dealers, however (e.g. Currys, in the annexed table), appear to offer a sound investment opening. The possibility of price warfare, to which the trade is liable, should not, however, be forgotten.

Mitchells and Butlers.—Although it is impossible to draw a direct comparison between the results of this prosperous Midlands brewery in the two latest reports, it would appear that steady rather than spectacular progress has been achieved during the latest year. It may be noted, however, that while the latest year's total profits of £674,438 compare with an annual rate of £659,610 during the previous fifteen months' period, both figures are struck after income tax, and the comparison may thus be affected by reduction in the standard rate in the 1934 Budget. A more helpful comparison between the earnings rate on the ordinary shares shows that the latest profits are equivalent to 19.1 per cent. free of tax, compared with 18.7 per cent. per annum during the previous period. The 17 per cent. tax-free dividend is thus comfortably covered, and represents an increase of 2 per cent. per annum on the previous rate for 1933-34. An analysis of recent profits follows:—

	Year to June 30, 1933	15 months to Sept. 30, 1934	Year to Sept. 30, 1935
Balance from trading account, after depreciation, tax, etc.	454,580	824,512	674,438
Directors' fees	1,925	2,500	2,411
Interest	28,321	36,965	29,486
Preference and max. ordinary divs.	73,257	93,402	75,699
Ordinary shares (tax free) :			
Earned	351,077	691,645	666,842
Paid	325,634	555,056	503,251
Earned %	11.9	18.7*	19.1
Paid %	11	15*	17

Reserve 25,000 75,000 60,000
Carried forward 479,109 549,775† 553,366
* Equivalent per annum, tax free. † Includes £9,077 surplus on realisation of investments.

It is possible, however, to stress comparison of disclosed profits too far, since the figures are struck after non-specified allocations for depreciation and other charges. The report refers to "increasing output," and the further recovery in industrial conditions in the Midlands has doubtless been of assistance to trading profits. The balance sheet is of customary strength, and of assets totalling £9,176,656 as much as £970,768 is held in cash. The £1 ordinary shares are quoted at 96s. 3d., to yield £3 12s. per cent. tax free, and represent a good brewery investment in an active industrial area.

* * *

Central Uruguay Group.—Unlike the Argentine railways, the Central Uruguay of Montevideo has since 1931 adopted the prevailing exchange value of currency items as the basis of the revenue accounts. The effects of exchange difficulties are equally apparent, however, by either method of treatment. During the latest year to June last, the Central Company has decided to present the figures at the "controlled free" rate equivalent, in place of the "official" rate which has hitherto been used. The sterling figures for this concern are therefore not comparable with those of the previous year, but the fall in operating profits is roughly proportionate to the reduction in net peso receipts. The figures for this company, and the two associated undertakings, are shown in the following table:—

Years to June 30	Central Uruguay of Montevideo		Central Uruguay Eastern Extension		Central Uruguay Northern Extension	
	1934	1935	1934	1935	1934	1935
Gross receipts	£845,537	£893,573	£177,735	£100,556	£102,548	£59,949

GENERAL MANAGERS IN SOUTH AFRICA :

BEWICK, MOREING & CO., 62, London Wall, London, E.C.2.

The Prospectus (WHICH WILL BE ADVERTISED ON MONDAY, NOVEMBER 4th, 1935) will show, *inter alia*, that :—

The mining properties and rights to be acquired by the Company total approximately 5,717 acres, and represent portions of the Dominion Reefs areas held by Klerksdorp Consolidated Goldfields Limited, upon part of which that Company has, over the past year, carried out an intensive programme of opening up and development work, including shaft sinking and driving, installation of surface and underground equipment, construction of buildings, roads, etc., and generally bringing the property to a stage precedent to production.

Messrs. Bewick, Moreing & Co., in their report upon the properties as set out in the Prospectus, state, *inter alia*—

"The development completed to the 30th September, 1935, totals 12,618 feet, the No. 1 level from the Main Shaft now extending over 2,000 feet. The payable ore developed at that date was 125,000 tons of an average value of 6 dwts., and 72,000 tons partly developed. It is estimated that at the present rate of progress the total payable ore developed at the end of December, 1935, will be approximately 250,000 tons.

"Development has already proved a large tonnage of 6 dwt. ore; recent work is adding to this at the rate of from 30,000 to 40,000 tons monthly. This fully justifies the immediate erection of a first unit mill of 20,000 tons monthly capacity.

"The fact that your mines will be worked for many years from the outcrop to relatively shallow depth is of great economic significance, implying low capital expenditure with low operating costs, permitting a high return on the capital invested."

The gross profits of the Company for the first full year's working, based on the facts and figures set out in Messrs. Bewick, Moreing's Report (assuming a crushing programme of 240,000 tons per annum and taking gold at 140s. per fine ounce) should be in excess of £295,000; and after making provision for overhead charges, management expenses (London and Johannesburg), depreciation, Directors' remuneration and South African normal tax, there should be available for reserves and dividends a sum in excess of £200,000.

Prospectuses and Forms of Application are NOW AVAILABLE from WESTMINSTER BANK LIMITED, New Issue Department, 9, Old Broad Street, London, E.C.2, and Branches, from Messrs. IAN ANDERSON & NAIRN, 1, Throgmorton Street, London, E.C.2, and from ANGLO-FRENCH CONSOLIDATED INVESTMENT CORPORATION LIMITED, Anglo-French House, Old Queen Street, Westminster, London, S.W.1.

The disappointing feature of the year's working is the sharp rise in the combined operating ratio of the group from 70.1 to 83.23 per cent., but it is pointed out that much of the expenditure originates in sterling and that the smaller net revenues are a function of exchange and not of falling pesos revenues. The effect of the further fall in the value of the peso has been so disastrous that the company has been compelled to seek a revision of the Scheme of Arrangement completely postponing existing liabilities until September next year. The reorganisation of the group's financial structure is now under study. Technically, the position is of serious import for stockholders. Although renewals have been cut to a minimum, the general renewals reserve is now entirely exhausted, and further expenditure must be provided out of revenue. The extension lines are now presenting a serious problem owing to the condition of their equipment, and the inevitable running restrictions over certain sections of track involve increased current expenditure. It is evident from the general manager's report that the expenditure on the main line cannot be reduced sufficiently to enable the Central company to meet its obligations to the extension companies and to its debenture holders. The latter, clearly, must be prepared for a vigorous cutting out of dead wood in due course, although it is to be doubted whether reorganisation in the absence of exchange stability will eventually prove effective. The 5 per cent. debenture stock of the parent concern is quoted at 25, to yield 10 per cent. on a half-interest basis.

Richard Thomas and Ebbw Vale.—The announcement on Wednesday that negotiations are on the point of completion for the acquisition of the Ebbw Vale Steel, Iron and Coal Company's works and iron-ore properties by Richard Thomas and Co. will be welcomed alike by South Wales and by patient holders of Ebbw Vale issues. It is understood that, if the scheme is completed, the original intention of Richard Thomas to transfer its activities to Redbourne and to erect a strip mill there will be abandoned. So far the agreement is tentative, but discussions between the two chairmen have reached an advanced stage, and a meeting of Ebbw Vale shareholders will shortly be called to confirm the draft agreement. Sir John Beynon, chairman of Ebbw Vale, has declared his conviction that the proposals will be confirmed. Full details of the scheme are not available at this stage, but it is understood that the melting shops, rolling mills and steelworks at Ebbw Vale will be rebuilt, and the blast furnaces erected during the war years retained. It is not definitely known, however, whether the erection of a modern strip mill forms part of the new Richard Thomas plan, although it is certainly intended to produce tinplates and sheets at Ebbw Vale. Although the total cost of remodelling the works may cost as much as £2½ millions, no purchase price has so far been suggested. The fixed assets of the Ebbw Vale group were entered in the last accounts at £4,958,000, but it was expressly stated that no opinion as to their current value was to be implied from the figures. The company has met the halved-interest payments on the 6 per cent. debentures. It is difficult at this stage to contemplate a purchase consideration which would provide a surplus after repayment of bank loans and debentures, totalling £1,539,000, and any payment to the three classes of shareholders which may be decided upon would presumably be of an *ex gratia* nature.

Singer Reconstruction Scheme.—A capital reconstruction scheme was foreshadowed at the annual meeting of this company last February. The scheme, published at the end of last week, follows the precedent set, e.g. by Richard Thomas, and envisages the offer to preference shareholders of part of the equity in satisfaction of dividend arrears. It is proposed to write down by £350,000 the value of plant, jigs, properties and stocks, which at the date of the last balance sheet stood at £1,805,000. Of the sum required, £250,035 is to be provided by a reduction of ordinary capital, and the balance of £99,965 will be found from reserves and profit and loss. After writing off 7s. 6d. from each ordinary share, two-sevenths of the equity will be allocated to preference shareholders in satisfaction of gross dividend arrears. This policy is commendable in principle, but preference shareholders may regret the absence from the

chairman's explanatory circular of any specific reference to future prospects and earning power—on which the real value of any share in the company's equity obviously depends. Something more would seem to be called for than general references to consequential improvement in the trading and financial position of the company.

Roan Antelope.—The development of this company in recent years, writes our mining correspondent, is closely parallel to that of Rhokana Corporation, whose report was discussed last week. It will be recalled that no dividend was paid in the previous year to June, 1934, owing to the low price and uncertain outlook for copper. The price factor continued for the earlier part of the past financial year, until the output restriction scheme was agreed upon. Consequently, although the production totalled 67,320 long tons of blister copper, compared with 65,150 tons in the previous year, and the all-in cost was reduced from £25.7 per ton to £23.2, the net profit was £61,600 lower at £571,770. Debenture interest and premiums required the somewhat reduced sum of £91,550, and again £150,000 was allocated for replacements and obsolescence reserve—previously called "depreciation reserve." During the latest year taxation required only £65,500, against £82,500, but the difference was more than balanced by an appropriation of £28,300 to cover the principal of the stock redeemed during the year. Payment of the initial dividend of 25 per cent., amounting to 1s. per share, absorbs £241,480, leaving the slightly reduced amount of £322,800 to be carried forward. Further capital expenditure has reduced the net current assets at the date of the balance sheet to £1,030,340, compared with £1,274,150 twelve months previously. The general manager's report shows the estimated ore reserves as 98,363,000 tons, a reduction of 9,637,000 tons since crushing commenced in 1931. The bulk of the difference represents tonnage withdrawn by mining; but pillar loss and underbreak account for some part of it. During the current year to date a substantial advance has occurred in the price of copper, and the metal market view is that if peace negotiations caused an initial setback after recent "war" purchasing, they would presently encourage the industrial consumption of copper. On the basis of last year's dividend the yield indicated is the modest one of 3½ per cent.

Other Company Results.—Our usual table of profit and loss accounts is again expanded this week, and includes the results of 43 other companies. The largest group in this week's table consists of rubber concerns, reporting for the year to June 30th last. The same individual irregularity is apparent as in earlier weeks. *Tanjong Malim* and *Sumatra Para* are among those concerns which show increased earnings, while *Lengging* and *Brooklands Selangor* are the largest companies to suffer a reduction in profits. Two reports from concerns operating overseas, which have recently been "in the news," show gradual recovery during the past year. *Perak River Hydro-Electric*, whose Scheme of Arrangement was sanctioned last August, helpfully presents balance sheets as at July 31st last before and after giving effect to the Scheme. The net profits, after interest, have shown satisfactory expansion from £40,669 to £108,482. In the case of *Peruvian Corporation* recovery is still confined to the negative phase of reducing losses. The latest deficit of £168,116 is struck after charging full debenture service and interest on arrears amounting to £290,182, but actual payments have been restricted to a half-year coupon due April, 1933. A number of investment trust reports, mainly to September 30th, indicate a steady flow of rising earnings. Such established trusts as *Realisation and Debenture*, *Second Investors Mortgage* and *Cedar* have been able to increase their ordinary dividends, while *Second Scottish Mortgage* also shows a satisfactory expansion in revenue. Among the industrial concerns, the most remarkable recovery is that of *Burberrys*, whose resumption of preference dividend payments on account of arrears has been well within the scope of the increase of net profits from £2,838 to £70,650. Among the week's interim dividend announcements, those of *Wm. Cory* and *Stanton Iron* have been maintained at the same rate. The raising of the *British Plaster Board* interim to 20 per cent. on an increased capital,

The Lists of Applications will Close not later than Saturday, 23rd November, 1935

IRISH FREE STATE CONVERSION LOAN (4% Registered and Inscribed Stock, 1950-1970)

Offer to holders of £7,000,000 5% National Loan 1935-1945
of conversion into 4% Conversion Loan 1950-1970 at par

Interest payable 1st June and 1st December
Six months' interest payable on 1st June, 1936

The following banks are authorised by the Government of the Irish Free State to offer to the holders of the outstanding £7,000,000 of 5 per cent. National Loan 1935-1945 (hereinafter referred to as the First National Loan) conversion of their holdings in whole or in part into stock of a new issue in terms of this prospectus:—

BANK OF IRELAND.
GUINNESS MAHON & CO.
HIBERNIAN BANK.
MUNSTER AND LEINSTER BANK.
NATIONAL BANK.

NATIONAL CITY BANK.
NORTHERN BANK.
PROVINCIAL BANK OF IRELAND.
ROYAL BANK OF IRELAND.
ULSTER BANK.

Notice of redemption of the First National Loan on 1st December, 1935, was given by the Government of the Irish Free State in the issue of *Iris Oifigiúil* of 30th August, 1935.

Conversion of stock of the First National Loan is offered into an equal nominal amount of stock of 4 per cent. Conversion Loan 1950-1970. The principal of the new stock will be repaid at par on 1st December, 1970, the Government of the Irish Free State having the option to redeem the stock in whole or in part at par on or after 1st December, 1950, on giving three calendar months' notice in *Iris Oifigiúil*. Both the principal and interest of the 4 per cent. Conversion Loan will be a charge on the Central Fund of the Irish Free State.

The half year's interest due 1st December, 1935, on the First National Loan will be paid as usual. Six months' interest on holdings of the new stock resulting from conversions will be paid on 1st June, 1936.

Holders of First National Loan desiring to have their holdings redeemed in whole or in part must apply for redemption on the form provided and lodge their applications with the Bank of Ireland, Dublin, on or before Saturday, 23rd November, 1935. Statutory powers are being sought to provide that where no valid application for redemption or conversion of any holding is in the hands of the Bank of Ireland at the close of business on the said date, conversion of such holding in accordance with the terms of this prospectus shall be deemed to have been applied for on that date.

ISSUE OF STOCK FOR PAYMENT IN CASH

The banks mentioned above are further authorised to offer for cash subscription at par Stock of the 4 per cent. Conversion Loan 1950-1970 to an amount which, when added to that resulting from conversions of First National Loan, will not exceed in the aggregate £7,000,000, but the Minister for Finance may reduce the amount to be allotted in respect of such subscriptions by a sum not exceeding any Sinking Fund available for the redemption of the First National Loan. The amount of such Sinking Fund will be £1,150,000 approximately.

Cash applications must be for sums of £10 or multiples thereof. Cash applications may be either—

- (1) Fully paid applications, when the whole sum payable must be lodged on application; or
- (2) Instalment applications, when instalments will be required as follows:

£10 per cent. on application,
£40 " " " allotment,
£30 " " " 4th February, 1936.
£20 " " " 4th March, 1936.

The first dividend payable on 1st June, 1936, will be as follows:—

On fully paid allotments £2 0 0 per cent.
On instalment allotments £1 12 0 per cent.

Payment of instalment applications may be made in full at any date after allotment, no discount being allowed. In case of default in the payment of any instalment at its due date the amount previously paid will be liable to forfeiture. In the case of a partial allotment, the balance of the amount lodged with a fully paid application will be returned and the balance of the amount lodged with an instalment application will be applied towards the payment of the subsequent instalments. Instalments may be paid without additional charge through any of the offices of the banks mentioned.

The stock of the 4 per cent. Conversion Loan 1950-70 is a trustee investment in the Irish Free State authorised by the Trustee Act, 1893, and trustees may invest therein even though the price at the time of investment exceeds the redemption value of £100 per cent.

Dividends on stock of this issue will be paid without deduction of income tax, but the income derived from such dividends will be assessable to income tax in the hands of recipients at the rates of tax appropriate to their respective incomes. Stock of this issue and the dividends payable thereon will be exempt from all taxation of the Irish Free State, present or future, if it is shown in the manner directed by the Minister for Finance that the stock is in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in the Irish Free State.

The Government of the Irish Free State undertake to set aside on 1st June and 1st December of each year a sum equal to 2½ per cent. of the total nominal amount of the loan issued. After deducting therefrom the amount required for payment of interest, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied to the purchase of the loan for cancellation or otherwise invested for the benefit of the Sinking Fund.

The Books of this issue will be kept as separate Registers at the Offices of the Bank of Ireland, Dublin and Cork. The Stock will be officially quoted on the Dublin and Cork Stock Exchanges.

A Commission of five shillings per cent. will be allowed to Banks, Stockbrokers and Financial Houses on conversion applications bearing their stamp and on allotments made in respect of cash applications bearing their stamp.

Forms for conversion applications or for cash applications may be obtained from any Bank, Post Office or Stockbroker in the Irish Free State; from the Department of Finance, Dublin; from the High Commissioner for the Irish Free State, 33 Regent Street, London; from Messrs. Guinness Mahon & Co., 53 Cornhill, London; from the National Bank, Ltd., 13 Old Broad Street, London; or from the Provincial Bank of Ireland, Ltd., 8 Throgmorton Avenue, London.

DEPARTMENT OF FINANCE,
DUBLIN.

31st October, 1935.

compared with 15 per cent. a year ago, was well received by the market. *Lewis Berger*, which also supplies the building trades, has announced a final dividend of 9 per cent., thus raising the total payment from 12 to 15 per cent. *Wallpaper Manufacturing* announces an increase of £57,778 in profits to £741,557. The deferred dividend is unchanged at 12½ per cent., but is paid on a larger capital. *Johnson and Phillips* have increased the interim dividend from 2½ to 5 per cent. and announce a new issue of 100,000 £1 ordinary shares at £2 to finance the electricity supply subsidiaries.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Buenos Ayres and Pacific Railway, Buenos Ayres Great Southern Railway, Assam Railways and Trading, Rhokana Corporation, Imperial Airways, London Australian and General Exploration, Perak River Hydro-Electric Power, Cam and Motor Gold Mining (1919), Consolidated African Selection Trust, North British Rayon, British Rubber Estates of Java, Broome Rubber Plantations, and Hosco Rubber Estates. The chairman of the Buenos Ayres and Pacific Railway Company spoke of unfair competition from the State and of very bad prospects for fine cereals, but was able to report a year's results which were a considerable improvement over a year ago. Sir Follett Holt, of Buenos Ayres Great Southern Railway Company, said that the railway was carrying almost as much traffic as in 1929, but that rates had been undermined by road competition. Mr C. A. Moreing, chairman of London, Australian and General Exploration Company, described developments of property in the year and the formation of a subsidiary company to Klerksdorp Consolidated Goldfields. The chairman of Assam Railways and Trading Company said that improved earnings of the railway were offset by increases in expenditure, but the outlook was favourable due to the improvement in the tea industry. Mr A. Chester Beatty, at the meeting of Consolidated African Selection Trust, announced results slightly better than last year, and said that the Gold Coast Mines had been supplemented by the new diamond field in Sierra Leone. Sir Auckland C. Geddes, of Rhokana Corporation, said of the copper restriction scheme that so long as consumption figures continued to be satisfactory they could look forward to a still further improvement. Broome Rubber Plantations had exercised an option on a new property in Johore, and new issues would be made to finance the purchase. Mr James Davenport, of British Rubber Estates of Java (1932), thought there were indications of improvement in the rubber and tea markets. Mr L. E. B. Homan said that Cam and Motor Gold Mining Company's property had never looked in a more satisfactory position. Mr Eric Macfadyen, of Hosco Rubber Estates, said the company might replace some of their older areas with new high-yielding trees. The chairman of North British Rayon Company reported a 60 per cent. increase in net trading profit over a year ago, despite lower selling prices. Sir Eric Geddes, at the Imperial Airways meeting, said that the principal features of a long-term agreement had been agreed with the Government, as a result of which the company would look forward to further expansion. The chairman of Perak River Hydro-Electric Power reported a year of considerable expansion, sales of power having increased from 67 to 111 million units.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET NOVEMBER 5 ACCOUNT NOVEMBER 7

THE Stock Exchange does not find the present interregnum both in the domestic and in the international political realms wholly distasteful. It is true that the domestic "lull" offered the occasion for a shiver of mild apprehension early this week, when some quarters in the "House" were inclined further to reduce the majority for the Government in the next House of Commons. On Wednesday, however, the

light political breezes were blowing in the reverse direction, assisted by a speech in the City by the Chancellor of the Exchequer, whose contribution had, possibly, quite as much electoral as economic significance.

The "House," with the 1928 boom in mind, noted with interest, however, his offer of the services of the Government Research Department as "assessors" where technical and scientific claims are made in prospectuses. The gilt-edged market reflected the daily changes in election sentiment fairly accurately, although it was not unaware that their basis in either direction left the balance of probabilities little changed. In mid-week, however, a partial improvement was evident, and even Old Consols and Local Loans found better form. India stocks, which had reflected the earlier dullness, also moved to higher levels, and firmer conditions were reported in the Dominion market, where Commonwealth loans attracted a good deal of attention at the beginning of the week.

Although exceptions were not uncommon, the general tone in the European bond market tended to improve. Roumanian and Bulgarian issues responded to hopes regarding the service, and German loans reflected something of the strength of the American *tranches*. Austrian bonds, however, were a disappointing feature. An early advance in the Japanese group suggested that the recent advance would proceed still further, but later days were largely devoted to profit-taking. Interest in the Brazilian group showed a partial revival, but could not be sustained.

The home rail market opened in rather leaden fashion, owing to continued apprehension regarding the coal position. For this reason the week's batch of satisfactory traffics was substantially discounted, for the rise in coal receipts seemed, in the circumstances, too true to be good. Nevertheless, a partial mid-week recovery was broadly sustained, although business continued on a small scale.

Argentine rail stocks continued in depressed mood, although the market was willing to clutch at such straws as came its way. The possibility of further arrears payments on the Pacific second debentures and the occasional glimpses of cheer in the Great Southern speech, however, were insufficient to stir the market as a whole, although such factors may have been instrumental in preventing a further fall in quotations. The outlook for the companies and the market is discussed in a leading article on page 862.

The industrial markets opened with a bout of profit-taking affecting most of the issues which had been prominent in last week's vigorous rise. Business showed but modest revival as the week progressed. In the electrical equipment group, Crompton Parkinson were active, although the reasons offered for the rise appeared rather inconsistent. The supply group provided little of interest, although Calcutta and Perak River were stronger among the overseas concerns. The week's feature in the iron and steel group was the sharp rise in Ebbw Vale debentures from 67 on Tuesday to 82½ on Thursday afternoon. The news of the Richard Thomas negotiations took the market by surprise, and buying orders could be filled only with difficulty.

In the motor group Standard were again active, and after an initial setback were in active demand following the new issue proposals. Leyland found good support among the commercial motor issues. Aviation issues were rather dull throughout the week.

Brewery shares attracted considerable attention in view of the impending dividend announcements, both Benskins and Charringtons recording a satisfactory improvement. The leading tobacco issues lost much of the confidence which marked last week's dealings. Occasional firmness was evident in the cotton textile group, following recent reports of trade improvement. Some investment aspects of the recovery are outlined on page 864. The leading store and provision issues tended to mark time, although Tate and Lyle after an early relapse staged a good rally. Shipping issues tended to improve on the *Lloyd's Register* annual report, and rumours concerning the marketing of shares of certain Royal Mail operating companies stimulated the Realisation issues. Real life among the miscellaneous leaders was reserved for mid-week, when cement shares received support and the leading chemical and oxygen issues were more active. By contrast, however, motor accessory issues turned somewhat easier.

The oil share market gradually gathered impetus as the week proceeded. The higher prices for California and Pennsylvania crude oil attracted attention, and in some quarters the possibility of an increase in United Kingdom petrol prices was canvassed. Cheerful conditions spread on hopes that interim dividends might shortly be announced by the three leading producers, and "Shell" and Royal Dutch were in prominent demand.

The rubber share market opened actively, but the initial rise was interrupted on Tuesday and not wholly regained. The market, wisely, forsook a somewhat indiscriminate buying policy on the realisation that better things must come from the commodity before present share values are justified in a number of cases. Tea shares ruled rather dull, following the less auspicious trend in Mincing Lane.

The Kaffir market left its revival until well into the week. The two opening days were uncertain, but the tone improved considerably, the valuation of the October output at 141s. acting as a delayed bull point. Central Mining were prominent among the finance shares, on hopes of an increased interim dividend. Both the West and East African markets remained quietly firm, and a mild improvement in the Australian section was not entirely maintained. Copper shares showed little response to the Roan Antelope report or to the Rhokana speech. Tin shares tended to recede owing to the falling price of the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET continued its advance at the end of last week after it had listened to Mr Roosevelt's good news of recovery rather than to the opinion of the Chairman of the Senate Banking Committee that predictions of inflation were quite unjustified at the present time. Motor, machinery and rail equipment issues led the market, and merchandising issues benefited from improved retail trade returns. On the argument that the Federal Government will be forced to "take action" because of the crisis in China, silver issues rose, in convenient disregard of the fact that a further rise in the price of silver will only aggravate the Chinese crisis. This week opened with the Dow Jones' index at a new high of 141.47, but the market has since

Carlisle House, NEWCASTLE-UPON-TYNE

been rather unsettled, with signs of greater firmness in mid-week. Utilities and rails weakened. In the bond market Government issues fell, with an increase in the renewal rate for call money. The Securities Exchange Commission is taking action against a member of the Stock Exchange for alleged manipulative practices, and is discussing separation of broker-dealer functions with representatives of 25 stock exchanges. Mr Ford is entering the large car market with a new 12-cylinder car, to be exhibited this week. Electric power output last week was 13 per cent. higher than a year ago, and the "Iron Age" estimates steel mill activity at 53.5 per cent. of capacity, compared with 52.5 per cent. last week. Steel prospects are encouraging, with pig-iron prices rising, and demand from the automobile industry and the railroads increasing.

PARIS

After a slight recovery from the pessimism of the middle of last week, prices on the Bourse turned down again and continued to fall as this week's business opened. The volume of business is small and price movements are exaggerated. On Monday there were heavy declines as the application of sanctions against Italy became more and

COMPANY MEETINGS, &c.

LONDON, AUSTRALIAN AND GENERAL EXPLORATION COMPANY, LIMITED

PROSPECTS AT ROSTERMAN MINES

The twenty-sixth annual general meeting of the London, Australian and General Exploration Company, Limited, was held, on the 29th ultimo, at 20 Copthall Avenue, London.

Mr C. Algernon Moreing (chairman and managing director), in the course of his speech, said: The operations for the year have resulted in a profit of £26,847 12s. 4d., compared with a loss of £508 8s. in the previous year, and naturally I and my colleagues are extremely gratified that we are now in a position to resume the payments of dividends. The amount of cash has increased from £5,430 to £57,036.

Through our large holding in the Tanami Gold Mining Syndicate, Limited, we are substantially interested in the Rosterman Gold Mine in Kenya. In February this year Rosterman Gold Mines, Limited, was formed to develop and equip this mine and the shares were offered for public subscription. The issue was a great success, being largely over-subscribed. Very good progress has been made with the work in hand, and crushing is expected to start in the early spring. This, I think, must be almost a record.

As a matter of interest you would, I think, like to know that the Rosterman Company acquired from the vendors a small pilot mill, consisting of two stamps only, and to the end of September last 1,874 oz. of gold have been recovered from 1,724 tons of ore treated by it. As there is no cyanide plant installed, a considerable portion of the gold in the ore has not been recovered, and is still left in the accumulated sands for future treatment, but the figures I have quoted give you an idea of the richness of the ore from this mine.

The company is largely interested in the Klerksdorp Consolidated Goldfields, Limited, and shareholders will be interested to hear of the progress made by that company. The Klerksdorp Company owns the mineral rights over about 90 square miles, which is underlaid by the whole of the Witwatersrand series of reefs. Active development work was begun on the Dominion Reef, which had been traced along the outcrop for a distance of about 16 miles, and since these operations were started over 125,000 tons of ore of an average grade of 6 dwt. had been developed by September 30 this year, and 72,000 tons of the same grade had been partly developed, and it is estimated that 250,000 tons of ore will be opened up and ready for stoping by December 31st this year. I think you will agree with me that this is a very remarkable performance, and reflects great credit on all concerned.

PROSPECTS OF THE NEW COMPANY

The directors of Klerksdorp Consolidated Goldfields, Limited, have been advised by their consulting engineers, Messrs Bewick, Moreing and Company, that the development work accomplished justifies the immediate erection of a mill of a capacity of 20,000 tons a month. They have decided on the formation of their first subsidiary, which is called Dominion Reefs (Klerksdorp), Limited. This new company will have a capital of £625,000, of which £375,000 will be issued for cash, and will acquire from the parent company some nine square miles of its territory, with about four miles of the outcrop of the Dominion reef. I have been asked to become chairman of the new company, and I have gladly given my consent. I can with confidence recommend it to your favourable notice. In my opinion it is not a speculation but a safe investment, which will earn very large profits as soon as the mill is at work. The issue will be made early next week.

This subsidiary company is acquiring only a small portion of the property of the Klerksdorp Consolidated Goldfields, which is still left with 80 square miles of mining rights and 12 miles of the Dominion Reef outcrops.

Whilst Captain Moreing was in Johannesburg in November last various business was submitted to him, and in March he flew out to Johannesburg, accompanied by Mr Mallet. Their visit resulted in the formation of a company—the Swaziland and General Gold Mining Company, Limited—sponsored by our friends and ourselves, which has acquired options upon various properties in the Barberton district of the Transvaal, upon which active development work is now in hand, work which is giving the most promising results.

Our company is in a sound position. The investments are valued on a conservative basis, and the enterprises in which it is interested are full of promise, and I look forward with confidence to a prosperous future.

The report and accounts were unanimously adopted.

IMPERIAL AIRWAYS, LIMITED

CONTINUED PROGRESS AND DEVELOPMENT

The eleventh ordinary general meeting of Imperial Airways, Limited, was held, on the 31st ultimo, at the Hotel Victoria, London.

The Rt. Hon. Sir Eric Geddes, G.C.B., G.B.E., K.C.B. (the chairman), in the course of his speech, said: We have been informed officially of the Government's decision that our company is to continue as the Government's chosen instrument for the development of the existing Empire lines.

The principal features of a long-term agreement have been agreed with the Government. Beyond that, I am not in a position to say more to-day except that, with the knowledge and consent of the Government, we have placed orders for new aircraft. The standard of accommodation for passengers will be superior to anything yet seen in aircraft.

The gross profit for the year amounts to £366,446, as compared with £314,661 for the previous year. The board recommends a dividend of 6 per cent., plus a bonus of 1 per cent., both less tax, leaving £64,503 to be carried forward.

The report indicates continued progress in the volume of traffic carried. All classes of traffic have contributed to this improvement on the regular services. Further great developments in the carriage of mails by air may be expected in the future, and I have no doubt that you took due note of the official statements that were made by the Under-Secretary of State for Air and the Postmaster-General at the end of last year to the effect that the Government has decided, as a matter of principle, that in the future letter mails within the Empire will, as far as is practicable, be carried by air.

During the year under review the traffic carried on our European services was not only again maintained, but somewhat improved, and in spite of increased competition at lower fares.

The aircraft that were employed on these services are, of course, approaching their replacement age and are, as regards speed, at a disadvantage compared with new craft, but their comfort and standard of service provided are still, we believe, second to none in the world. The company has ordered new aircraft for the European services, which will be larger and much faster than the existing main line fleet.

During the current year we have extended our activities in Europe by opening a new line between London and Budapest. It is too early to say more as to the results of this enterprise than that up to date they show good promise.

During last year, and taking the Continental routes in and out of London as a whole, our company carried more passengers than all the foreign air companies put together.

IMPERIAL SERVICES

During the year under review the new Australian company, Qantas Empire Airways, in which our company holds an equal interest with that pioneer Australian company, Queensland and Northern Territory Aerial Services, Limited (Qantas), commenced operations on the Singapore-Brisbane route under contract with the Commonwealth Government, thus completing the all-British air service between England and Australia.

The through service from England to Australia has now been in operation for about ten months, and the traffic, particularly mails, has grown to an extent that warrants an increase of frequency from once a week to twice a week.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

The report was unanimously adopted.

BROOME RUBBER PLANTATIONS, LIMITED

A 10 PER CENT. DIVIDEND

The second annual general meeting of Broome Rubber Plantations, Limited, was held, on the 30th ultimo, at 19 Fenchurch Street, London, E.C.

The Chairman, Sir Lionel Smith-Gordon, Bart., who presided, said that the net profit for the year was £7,729 12s. 1d. The directors proposed that a dividend of 10 per cent., less tax, be paid. In distributing the profits up to the hilt they felt that shareholders were entitled to receive available revenue in view of the lean years experienced by the rubber industry, and bearing in mind that the company's finances permitted such a course.

The exportable crop under the rubber regulation enactment was 1,046,403 lbs., and realised a price equivalent to 6.17d. per pound, London landed terms. The f.o.b. cost of production was 3.6d. per pound, which included a ½d. per pound for quit rent and export duty paid to the Government.

The visiting agent's report had been satisfactory. The properties were in good order, tapping continued to be of a high standard and bark reserves adequate. The quality of the rubber manufactured was good, with a high percentage of No. 1 standard sheet.

In accordance with the board's policy of expansion, several properties had been considered during the year, but turned down. Details, however, had been given in the report of a property in Johore on which an option had been exercised. The directors considered that this was a most desirable acquisition and would prove to be a valuable reserve of first-class young rubber for the future. Some 261 acres were budded, and it would be possible to bud-graft still further young trees for that operation. The purchase of the property necessitated an increase in the nominal share capital of the company, and they proposed creating another 1,000,000 2s. shares. To provide the funds necessary for purchasing and developing the new property the directors had decided to create £100,000 of 6 per cent. debenture stock convertible into shares at just over 3s. per share and issuing forthwith £62,500 and 312,500 shares, and arrangements had been made for the necessary underwriting. The whole amount would be offered for subscription to shareholders and option holders.

The report and accounts were unanimously adopted.

NORTH BRITISH RAYON, LIMITED

REMARKABLE GROWTH OF CONSUMPTION

The ordinary general meeting of North British Rayon, Limited, was held, on the 31st ultimo, at the Incorporated Accountants' Hall, London.

Mr Ernest Walls (the chairman) said that the company's accounts showed an increase of 60 per cent. in net trading profit, despite the reduced selling price, as compared with the previous year. The earning on the ordinary capital was 7½ per cent.—a rate not exceeded by any of the rayon companies this year. The remarkable growth of rayon consumption had continued during the year. The company only attained complete output from its original unit as recently as January, 1931, yet in the short period since that date national consumption had increased 75 per cent.

Merely to maintain the company's relative position in the industry had therefore involved continuous expansion, involving constant capital expenditure. The national increase in consumption of rayon in the year ending June 30, 1935, was 16½ million lbs. In the previous year it was 22 million lbs. In his opinion increase in rayon consumption would be continuous and considerable for some years to come, but the increases of the next few years were likely to be at less spectacular rates. The year under review had the benefit of new import duties on rayon products. The excise duty reduction had some influence, but it could not have been great when it was realised that the total increase was one-third less than the previous year's increase and that most of it could be accounted for by the increased output of rayon products formerly imported and by the natural increase of rayon demand in a period of improved prosperity.

In his view it was very doubtful whether the recent reductions in the price of rayon due to several causes had actually contributed in any important way to the increased consumption. This increased consumption commenced before these events and actually slowed down after their occurrence. The natural growth of rayon was due to improvements in its production and to its versatility in use. It might very well be that this growth would actually be thwarted if rayon became too cheap. Many users of rayon considered that it was already in this category.

They were making steady progress in the programme which they had set before them, a programme they were determined to carry through.

The report was unanimously adopted.

HOSCOTE RUBBER ESTATES, LIMITED

2½ PER CENT. MAIDEN DIVIDEND

The third ordinary general meeting of the Hoscote Rubber Estates, Limited, was held, on the 28th ultimo, at 1-4 Great Tower Street, London.

Mr Eric Macfadyen (the chairman), who presided and was supported by Mr John Bruce, Mr P. E. Gourju and Mr John Mitchell, said that their planted area totalled 4,480 acres, of which approximately 3,500 were tappable during the year under review, the balance being clearings wholly or partially bud-grafted, which were now beginning to come into bearing. At the balance-sheet date their issued capital represented £34 5s. 7d. per acre planted, with £7 per acre planted of liquid assets, including working capital. After charging to revenue the year's expenditure on buildings, etc., which amounted to £785, they had a favourable balance of £6,289. At this early stage in the company's history it would be imprudent to pay away profits right up to the hilt, and, against a maximum possible distribution of 4 per cent., they were recommending the payment of a dividend of 2½ per cent., which was the company's maiden dividend. That would enable them to reduce by £1,000 the debit on account of capital reorganisation expenses and to write down to current values their small investment in another rubber company.

Last month he had had the opportunity of visiting their estates and had brought away a very satisfactory impression of their condition. Their standard production had been fixed for the time being at 1,839,550 lbs., and they would be entitled to increases in standard in each year of the control period. Their original estates were high yielding, and those they had lately acquired had improved their potentialities in the way of output. He was not sure that further expansion on equally advantageous lines might not still be possible. Their young areas, planted with improved material, promised such high yields that they might decide to take advantage of a period during which they were not permitted to produce their full crop to replace with similar new material some of their older areas, but he did not think that any large replanting programme would be called for in their case.

The report was unanimously adopted, and the retiring director, Mr P. E. Gourju, was re-elected.

BRITISH RUBBER ESTATES OF JAVA (1932), LIMITED

IMPROVING PROSPECTS

The third ordinary general meeting of this company was held, on the 29th ultimo, at 58 Mark Lane, London, Mr James Davenport, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that there was a working profit for the year of £21,859 19s. 7d., made up of £24,302 16s. 11d. profit on rubber, £2,516 5s. 4d. profit on tea, making a total profit of £26,819 2s. 3d. Deducting the loss on coffee of £4,959 2s. 8d., there remained the profit he had mentioned of £21,859 19s. 7d. The profit on rubber was £8,822 13s. 6d. more than they obtained in the previous period of six months. Unhappily, results from rubber had been adversely affected by an increase in production costs, and in their case the increase in costs at ½d. per pound was rather more than the increase in the net selling price.

Compared with the preceding period, their tea areas had produced a somewhat better result, and prospects from that culture were now more promising. The net price obtained by them last year—namely, 8.145d. per pound—was 0.661 of a penny higher than that of the preceding period, but there again the increase in the selling price was countered by an increase in the cost of production. Fortunately, the increase in cost for tea was not so large as that for rubber, being 0.435 of a penny.

Coffee had again produced a very adverse result—a loss of just under £5,000. He regretted that he was unable to hold out hopes of any change for the better in the coffee market in the immediate future.

With regard to the prospects for the present year, it was always dangerous, he said, to forecast the future, and he did not propose to attempt to do so. However, he thought he could say that there were indications that an improvement in the rubber and tea markets was not far distant. In point of fact, tea had already improved considerably, and at the present level of prices the company's estates were being worked at a profit—even on their heavily restricted crop. And with regard to rubber, they had had in October very welcome and very decided evidence that the Government in the Netherlands Indies intended to work the Rubber Control Agreement to the full extent of their undertaking.

The report and accounts were unanimously adopted.

CONSOLIDATED AFRICAN SELECTION TRUST, LIMITED

SUCCESSFUL RESULTS—GOOD PROSPECTS

The eleventh annual general meeting of the Consolidated African Selection Trust, Limited, was held, on the 30th ultimo, at 20 Aldermanbury, London, Mr A. Chester Beatty (the chairman) presiding.

The Chairman, in the course of his speech, said: The profit and loss account shows a balance of £236,395, which is slightly higher than the corresponding figure for the preceding year. The revenue item of £261,067, representing the balance from diamond production and trading account, dividends, interest and sundry receipts, compares with £268,953 in the year to June, 1934, but this apparent falling-off arises because we have included only that portion of the profits actually distributed by our subsidiary, Sierra Leone Selection Trust, Limited, by way of interim dividend before June 30, 1935.

Turning to the balance sheet, you will see that, in order to present our accounts on a conservative basis, we have included among the "Current Liabilities" a provision of £82,737 for the proposed final ordinary dividend for the year to June 30th last, and after taking that amount into consideration, and making ample reserves, the current assets, totalling £382,838, show an excess of £183,849 over current liabilities. Our general reserve has been augmented by a further appropriation of £25,000, bringing it up to a total of £250,000. The investments, including advances to subsidiary companies, stand at a total of about £198,000, and in our opinion the value of these holdings is greatly in excess of that figure.

To-day we shall have pleasure in submitting for your approval a resolution to pay forthwith a final dividend of 2s. per share for the year ended June 30, 1935, making a total distribution for the year of 3s. 3d. per share, equivalent to 65 per cent. This compares with 3s. per share for the preceding year.

Reviewing the position of our company, I think we have good reason to be satisfied with our past results. Our mines in the Gold Coast Colony, which have constituted our principal source of profit since the inception of the company in 1924, still have before them a long life, and this important asset has now been supplemented by our discovery and development of the new diamond field in Sierra Leone. In addition, we have other valuable investments, and, in my opinion, our company may look forward to continued and increasing prosperity.

The report and accounts were unanimously adopted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED

UNFAIR STATE COMPETITION

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 29th ultimo, at Winchester House, London.

The Viscount St. Davids (the chairman) dealt first with the position of railway competition in the Argentine, saying that the Government had commenced the construction of a line which, except for one small portion, would pass through absolutely barren land. It could develop no traffic and would merely take traffic away from the company's line. Up to now every Argentine Government had treated this company fairly, but was it possible for anyone to deny that in regard to the construction of that line it was being treated very badly indeed? Great Britain and Argentina had done an immense amount of business together, but it did not help business between two countries if the citizens of one country started with a deep sense of grievance and injury against the Government of the other. (Hear, hear.)

With regard to the results of the year under review, their net revenue amounted to £915,000, which showed a considerable improvement over that of a year ago. If they had actually had it to deal with, it would have met the annual interest on the first and second debentures and nearly 90 per cent. of that on the consolidated debenture stock and on the Argentine Great Western 5 per cent. debenture stock, but during the past financial year the remittances had not been sufficient to allow payments to be made for any of their debenture interest arrears. During June and July things had improved; they had obtained greater remittances and had been able to pay three coupons of the arrears on the Pacific and Argentine Great Western second debentures. They had also paid off the Bank loan and considerably reduced the arrears of income tax which they owed.

The prospects for the fine cereals were very bad as the result of the drought in May, June and July. If all went well now, the

OTARD'S

ESTAB^d 1795

THE BRANDY WITH A PEDIGREE

crop of wheat, linseed and oats would be under half that of the previous year. Rain had recently been much more plentiful, so that maize might do much to make up the deficiency in other cereals. In the next half-year there must be a big falling off in the wheat traffic, but maize might help them a good deal. All the same, he did not think that the result of the present year could be quite as good as that of the year under review.

There was one bright spot; money was continuing to come over with more freedom than it had done. He had been able to tell the moratorium meeting in June that there would soon be a payment on account of the arrears of the second debenture interest, and a week later had come the announcement of three coupons, paid on August 1st. He was glad to be able to tell the meeting that in a month from now they ought to pay two more coupons of arrears of interest on the second debenture of the Pacific and Argentine Great Western companies.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 26, 1935 amounted to £9,467,000, against ordinary expenditure of £7,959,000. After allowing for an increase in Exchequer Balances of £99,671, the operations for the week, as shown below, decreased the gross National Debt by £1,408,000 to approximately £7,970 millions.*

TREASURY BILLS BY PUBLIC TENDER

Tenders for £40,000,000 Treasury bills were opened on October 25, 1935, and the total amount applied for was £66,695,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 0d., about 61 per cent., and above in full; Saturday at £99 17s. 1d., and above in full. The average rate per cent. was 11s. 9.24d. The amount allotted was £40,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1933	£	£	£	£ s. d.
January 6	45,000,000	73,830,000	45,000,000	0 16 10-84
July 7	45,000,000	83,890,000	42,000,000	0 10 4-85

The s.s. "Kaiser-i-Hind," which sailed from Bombay on the 26th instant, carries gold to the value of about £1,249,000, of which £1,125,000 is consigned to London and £124,000 to New York.

The Southern Rhodesian gold output for September, 1935, amounted to 57,328 fine ounces, as compared with 61,399 fine ounces for August, 1935, and 58,850 fine ounces for September, 1934.

SILVER MARKET

A rapid decline in the China exchanges, due to operations by speculators in Shanghai following further rumours of devaluation, resulted in heavy sales of silver on China account being made in the London Market; the movement also influenced other operators, and there has been a considerable amount of re-selling by speculators.

The cash price has been maintained at 29½d. as the American Treasury continued to give support at this level, purchases during the week being on a substantial scale.

Except for occasional inquiry from the Indian Bazaars, there has been little support for forward delivery and, as offerings were again mostly for forward dates, the difference between the cash and two months' quotations quickly widened under the pressure, the latter being quoted yesterday at a discount of ½d., narrowing, however, to ¼d. to-day.

Whilst the American support will doubtless keep the cash position steady, the forward position is uncertain, owing to conditions in Shanghai, and will be influenced by the course of events in that quarter.

COMPANY NEWS

REPORTS AND NOTICES

The London committee of Companhia de Mocambique states that the customs receipts of the Port of Beira during August amounted to £27,342, compared with £27,305 for the corresponding period of 1934.

Mr E. A. H. Mosenthal has been elected a director of South African Distilleries and Wines to fill the vacancy caused by the resignation of Mr W. H. Hewertson.

Owing to advancing years the Marquess of Abergavenny has found it necessary to resign from the boards of the Sun Insurance Office and the Sun Life Assurance Society.

BANKS

THE BRITISH OVERSEAS BANK, LTD.—Sir James Caird, Bart., has been appointed deputy chairman of The British Overseas Bank, Ltd., for the ensuing year in succession to Mr Nigel L. Campbell, whose period of office terminated October 31, 1935.

MINES

WILUNA GOLD CORPORATION LTD.—Owing to industrial disputes operations at the Australian company's mines were entirely suspended for 1½ months in January-February, 1935. The profit and loss account for year to March 31, 1935, shows dividends received from the Australian company of £433,333 (Aust.), equal to £345,285 sterling. The net profit is £288,242, to which is added £42,709 brought in, making a total of £330,951, of which the interim dividend absorbed £155,901, leaving £175,050 available. Out of this the board recommends a final dividend of 2s., making a total of 20 per cent. for the year, leaving £19,149 to be carried forward.

WITWATERSRAND NIGEL, LTD.—The report for the quarter ended September 30, 1935, states that the Administrator of the Transvaal has given his consent to the sale to the company by the Municipality of Heidelberg of the mineral rights of an area of 208,361 morgen on the Heidelberg Townlands. The cession has been registered.

INSURANCE

PHOENIX ASSURANCE COMPANY, LTD.—The directors of the Phoenix Assurance Company, Ltd., announce that in succession to the late Sir John Pybus, Bart., they have elected Mr Arthur M. Walters, one of the deputy chairmen, to be the chairman of the company, Sir Thomas Royden, Bart., C.H., retaining his position as deputy chairman. The directors have elected the present general manager of the company, Mr R. Y. Sketch, F.C.I.I., to a seat on the board and have appointed him to fill the position of managing director.

MISCELLANEOUS

WELSH ASSOCIATED COLLIERIES.—A general meeting is to be held on November 15th, when accounts will be submitted for the three months to March 31, 1935; the date as from which the company's assets were sold to, and the liabilities assumed by, Powell Duffryn Associated Collieries. At an extraordinary general meeting to follow new articles of association will be submitted for approval. The board explain that numerous alterations and modifications made since the company's formation have rendered the present articles incapable of easy reference. Alterations to bring the articles up to date are also recommended. It is further proposed to convert the issued share capital into stock.

COMPANIA SALITREIRA ANGLO-CHILENA.—Holders of 7 per cent. first mortgage debenture stock are reminded of proposals, *inter alia*, to waive arrears of service and to reduce the rate of interest from 7 to 4½ per cent., to be non-cumulative and only payable out of profits. Holders in favour of the proposals who are unable to attend are requested to return proxies to Morgan Grenfell and Company, 23 Great Winchester Street, not later than November 5th.

SHELL UNION CORPORATION.—Gross operating earnings for the third quarter of 1935 amounted to \$57,322,783.53, as compared with \$52,452,869.16 for third quarter of 1934. Net profit amounted to \$3,882,914.89, against \$1,488,704.28 for third quarter of 1934. These results include writing off in full intangible development expenditures, which amounted to \$2,388,259.25 in third quarter 1935, as compared with \$1,891,838.69 in corresponding quarter 1934.

LEACH'S ARGENTINE ESTATES, LTD.—The separate general meetings of the preference, ordinary and deferred shareholders and the extraordinary general meeting unanimously passed the resolutions approving the scheme for the settlement of arrears of the preference dividend and the issue of notes and the conversion of shares into stock. It is proposed that the dividend of 8-8 per cent., less tax, on the preference stock be paid on November 9, 1935.

THOMAS W. WARD, LTD.—By order of the Court a contract has been confirmed for the sale of the whole of the assets of Marshall, Sons and Company, of Gainsborough, Lincs, to the Sheffield firm of Thomas W. Ward. At the present time some 930 workmen are engaged. It is understood that the whole position is being reviewed carefully by the present owners, whose first object, if at all possible, is to secure the continuance of the industry at Gainsborough.

THE DECCA RECORD COMPANY, LTD.—The directors announce that they have completed negotiations with Electric and Musical

Industries, Ltd., whereby they have granted the latter company the exclusive rights to its recordings, together with those of its American subsidiary, Decca Records, Inc., of New York, for certain territories in the Far East, including India, Australia and New Zealand, also for Chile, Argentina and Brazil. Decca Records, Inc., has obtained exclusive rights for the United States and Canada to recordings of certain companies in the Electric and Musical Industries group, namely, Carl Lindstrom Company of Berlin, the Parlophone Company of London, and N.V. Transoceanic Trading Company of Amsterdam.

LENNARDS, LTD.—Shareholders are being offered by Greenlees and Sons ("Easiephit" Footwear) 5s. for each £1 ordinary share and 6s. 8d. for each £1 preference share. The result is expected to be known about November 11th.

BAIRD TELEVISION, LTD.—Baird Television, Ltd., has satisfactorily concluded negotiations with the Australian Radio Manufacturers' Patents Association, Ltd., of Sydney, N.S.W., whereby that association has been appointed the exclusive representatives in Australia of the Baird Company, both for the construction and operation of television transmitting stations and the manufacture of television receivers under the Baird patents.

THE WALL PAPER MANUFACTURERS, LTD.—The directors announce that the profit for the year ended 31st last, after providing for income tax, is £741,556 13s. 10d. and the dividend £883,778 14s. 3d. for 1934). After payment of debenture interest and preference dividend, the balance of interest paid under agreements for purchasing preference shares, and the balance of interest paid on the ordinary stock of the new businesses, they recommend a final dividend of 5 per cent. on the ordinary stock, making with the 5 per cent. interim dividend already paid 10 per cent. for the year, a final dividend of 7½ per cent. on the deferred stock, making with the 5 per cent. interim dividend of 12½ per cent. for the year, an allocation to staff and employees' pension funds of £100,000, an allocation of £100,000 in reduction of goodwill, and a reserve of £50,000, carrying forward a balance of £250,000 to the directors' reserve. The general meeting of the company will be called for November 18, 1935. The report and accounts will be sent to the stockholders on November 18, 1935, and it is proposed to post the ordinary dividend warrants on November 30th and the deferred warrants on December 12th.

MEXICAN EAGLE OIL AND CANADIAN EAGLE OIL.—Pending the hearing by the Supreme Court of Mexico of the company's appeal against the decision of the Tribunal Superior de Justicia in Mexico City, in the Amatlan case, the directors consider it wise further to postpone consideration of the payment of the dividend on the first preference shares of the company for the half-year to October 31, 1935, and also consideration of the dividend for the eighteen months to April 30, 1935. In the circumstances the Canadian Eagle Oil Company, Ltd., have similarly postponed consideration of the payment of the dividends on the first preference shares of that company for the same periods.

SHEFFIELD.—Conditions in the export market are without material change. Best hards are in demand for shipment, but only small lots are available, at firm prices. Exporters are anxious to test the efficacy of the export pool scheme which comes into operation

CARDIFF.—The Government's demand for the creation of district central selling schemes absorbs the attention of colliery owners and exporters. It would appear that the industry was told plainly that if it does not take immediate action, it will be compelled to do so by Act of Parliament. In South Wales approval has already been given by the colliery owners both to the principle of centralised selling and to the establishment of a system of fixed percentage allocations for the inland trade. It is understood that most if not all the other areas where local business is still competitive have also

GLASGOW.—In the West of Scotland all the steel plants are working to capacity, and output is being rapidly absorbed by the engineering and other industries. Bookings are heavy and specifications are coming in for practically all sections. Demand for semis is also heavy, and makers are finding it impossible to undertake work for early delivery. Sheet makers have found business improving for some weeks, and plant in operation is taxed to capacity. There is every prospect that makers in this district will soon be able to restart some of the idle mills. There is no change at the tube-making plants, at the majority of which there is still much work

TIN.—Tin prices enjoyed a sharp rise at the end of last week, but part of the gain has subsequently been lost. The early rise

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

was due to a rumoured shortage of ore supplies at Liverpool smelters and to the belief that the considerable quantities of Dutch East Indies' tin shipped to this country would not be sold on the open market, but used as a reserve against violent fluctuations. But British warehouse stocks rose by 216 tons to 578 tons during last week, and the receipt of this news was responsible for the bearish tendency which developed early this week. Meanwhile, the forthcoming October statistics are awaited with considerable interest. Stocks are expected to show a slight increase, although it is not now anticipated that Straits shipments will exceed 5,500 tons; earlier in the month shipments amounting to 7,500 tons had been expected.

Sales of tin on the London Metal Exchange: 240 tons on Monday, against 75 tons last week; 200 tons on Tuesday, against 450 tons last week; 545 tons on Wednesday, against 626 tons last week. The New York quotation on Wednesday was 50.75 cents per lb., against 50.87½ cents a week ago and 49.12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £217 15s. to £218 per ton, compared with £216 10s. to £217 last week. Stocks of tin in London and Liverpool at the end of last week totalled 578 tons, an increase of 216 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 5s. to £12 7s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £71 to £72 per ton ex warehouse, duty paid, as against £75 to £75 per ton last week. Chinese wolfram for October-November shipment was quoted at 34s. to 35s. per unit, c.i.f., as against 36s. 6d. to 37s. 6d. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—**Manchester.**—The recent improvement in the cotton industry has been maintained. An increasing number of spinners and manufacturers have extended their order lists, and this has resulted in producers generally presenting a stiffer front to buyers. It is a long time since sellers were in the position of being able to turn down what they consider to be poor offers. Since the beginning of the week, however, there have been indications of a lull in activity. This has, to some extent, been due to the holidays in India and to the fact that many leading shippers and merchants have bought well ahead, and having satisfied their requirements, are now marking time.

An encouraging feature is the steadiness in American cotton prices. There has been a healthy demand for actual cotton, and merchants have experienced difficulty in supplying their customers with the desired qualities. Hedge selling has been well absorbed

by the trade; this movement will very soon be reduced, and if the present active demand is maintained, prices will be better supported. The United States ginning report, published last Friday, showed 6,590,000 bales up to October 17th as compared with 6,744,000 bales to the same date last year. The statement was about equal to market expectations. Prices for Egyptian Sakel cotton have fluctuated according to the Italo-Abyssinian war and the political situation in Europe.

The large cloth demand has been well maintained, and further encouraging sales have taken place to India, the Straits Settlements, Hong Kong, the Empire markets and the Continent. There has been increased support from Egypt, but it cannot be discovered whether the ultimate destination of the contracts is Abyssinia. There have been further encouraging sales in standard makes and dress goods for the home trade. American yarn quotations have remained firmer, and both coarse and medium counts have been purchased freely. Production in this particular branch is now around 90 per cent. of capacity as against 70 per cent. two months ago. There has been rather more demand for Egyptian numbers.

COTTON WORKERS' WAGES.—The wages problem has not yet been settled. The recently legalised agreement between the Cotton Manufacturers' Association and the Weavers' Amalgamation laid down wage rates for all operatives except those who are classed as ancillary workers, which number about 30,000. At a joint meeting in Manchester on Tuesday with representatives of the trade unions affected, the employers tabled proposals which in effect meant reductions in actual earnings ranging from 5.7 per cent. to as much as 17½ per cent. Included with the ancillary workers are members of the General Association of Loom Overlookers who are the "key" men in the industry. The suggested wage reduction for these operatives is 15 per cent. Only two months ago the overlookers threatened a county strike when the employers attempted to reduce their wages by 5.7 per cent., so it is obvious that there will be the strongest opposition to the present proposals. The employers, however, have stated that the suggested wage cuts are not a definite demand, but are simply put forward as a basis for negotiations. The discussions were adjourned until November 26th, and in the meantime both sides expressed the view that the position should not be used in arguments or statements, either for or against candidates at the General Election.

WOOL.—**Bradford.**—There has been a very good turnover in wool and tops, particularly the former, during the past fortnight; in fact, October has been one of the most active months of the year. This is largely due to export requirements. America has purchased a larger quantity of wool during recent weeks than for several years. The Continent has also bought considerable weights, and Bradford Conditioning House giving evidence of this in the very much larger weight of raw wool which has been passed through for testing purposes. Even selling brokers in London have participated in this increased business, for private sales have been considerable, particularly in slipes, and at the next series of sales, these wools should all be cleared as well as big quantities of old greasy fleece. This has had a stiffening effect on prices, and where private sales have taken place, prices have increased anything from 5 to 10 per cent. The outlook has improved during the past month, and everything points to a very satisfactory series in London commencing on November 19th.

Turning to consuming centres, it is significant that more woollen and worsted machinery is running to-day than for several years, it being estimated that machinery in the West Riding of Yorkshire is working at 90 to 92 per cent. of capacity. There is a real scarcity of piecers and weavers, notwithstanding that new orders for dress goods for next spring are somewhat slow. More mills are running overtime in manufacturing districts than for years, and altogether the state of trade is most encouraging. Prices overseas are well maintained, and it looks as if there is going to be little change in prices until the large existing needs of users are satisfied.

RAYON OUTPUT EXPANSION.—The uninterrupted progress made by rayon the world over is revealed in the estimates of output for the first nine months of 1935. World output totalled 718,000 lbs., compared with 565,710,000 lbs. in the corresponding period of 1934. The United States leads with an output of 478,000 lbs., compared with 150,000,000 lbs. in the first nine months of last year. Japan is easily the second largest producer, with an advance in this important section of her textile trade of 25 per cent. pronounced, the figures for 1935 and 1934 being respectively 156,015,000 and 110,000,000 lbs. Italian production, which was 87,770,000 lbs. in January-September, 1935, against 84,195,000 lbs. in the corresponding period last year. British production, however, has been 84,195,000 lbs., against 64,490,000 lbs.; France, 84,195,000 lbs., against 64,490,000 lbs.; Germany, 81,000,000 lbs., against 71,600,000 lbs.; and Germany, 81,000,000 lbs., against 71,600,000 lbs.

52,700,000 lbs., against 47,500,000 lbs.; and Germany 81,000,000 lbs., compared with 71,600,000 lbs.

Meanwhile, progress in staple fibre production is equally remarkable, though Germany and Italy have been forced to use the short fibre on account of the restrictions placed upon importation of raw materials. The world output during the first nine months of the year is estimated at 56,075,000 lbs., compared with 33,991,000 lbs. in the first nine months of 1934. Germany, with 22,000,000 lbs., against 14,000,000 lbs.; Italy, with 20,000,000 lbs., against 13,500,000 lbs.; and Britain, with 4,085,000 lbs., against 2,250,000 lbs., were the leading producers. British production is likely to show a further notable advance with the stimulus given by the removal of the excise duty in September.

JUTE.—**Dundee.**—It is a long time since the jute trade of this country was in such a healthy state as at present. The volume of business recently done in jute yarns and cloth has been very large and has provided sufficient work for spinners and manufacturers for several months ahead, at the same time placing prices on a more remunerative level. The improvement in trade has immediately brought forth a request from the workers for an increase of 10 per cent. in their wages. Raw jute prices, however, have risen gradually in recent weeks, and, if the advance is maintained, the higher prices obtainable for yarns and cloth will be required to offset the increase in raw material prices. The placing of orders for over four million sand bags in Dundee has considerably strengthened the position of manufacturers, and, according to the volume of inquiry still being made, there are many more orders to be placed.

Arrivals of raw jute in Calcutta this season are considerably smaller than for the same period last season. From July 1st to September 30th this year, imports were 1,728,000 bales, compared with 2,427,000 bales last year, while the Indian Jute Mills have received during this period 1,081,000 bales against 1,567,000 bales. It will be remembered that the forecast for the whole season was 4,648,000 bales.

Daisee-2/3 full group advanced to £18 15s., at which some business has been done, with single marks at £19, and Daisee-4 at £17 15s., November-December. Tossa-2/3 is quoted at £19 10s. and four at from £18 15s., same shipment. Good First Marks rose to £22 12s. 6d. and good lightnings to £20 17s. 6d., with Hearts at from £19 12s. 6d., November-December. A fair number of sales have been reported during the past fortnight.

Jute yarns are strong and spinners are now quoting 2s. 2d. for common 8 lb. cops and 2s. 3d. for 8 lb. spools, after 4d. less having been paid, and a really good business done at 2s. 1d. and 2s. 2d. respectively. Quick delivery is now almost unobtainable. Twist is very firm at 3½d. for 3 ply 8 lb., and sacking yarns are firmer at 2½d. for 24 lb. left and 3½d. for 8 lb. chains. Rove is also dearer at £19 10s. for 48 lb. and £15 10s. for 200 lb., and the finer yarns are notably dearer at 2s. 5d. for fourth grade 8 lb. warp.

Buyers of jute cloth are finding it very difficult to get delivery this year, and they must contract for despatch after the New Year. Higher prices are being obtained and 2½d. is the lowest now for 10 oz. 40 in. hessians and 2½d. for 8 oz. Many inquiries are being made, but buyers are hesitating to pay these higher rates. Linoleum hessians are very firm and also dearer, while heavy goods are in good demand at steadily advancing terms.

Calcutta goods are steadier at the moment, but little change has been noticeable over the past fortnight.

GRAIN MARKETS

WHEAT.—Wheat prices continued to sag during the period under review. Uncertainty concerning the wheat policy of the new Canadian Government has led to heavy liquidation in Winnipeg futures and this factor, coupled with better crop news from Australia and Argentina, has had a depressing influence on Liverpool c.i.f. prices. Demand has been dull, despite the break in quotations.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 885,000 quarters, against 1,186,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 97½ cents per bushel, against 99½ cents the week before and 106½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. 3d. per 496 lbs., against 36s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 33s. 9d., against 35s. 3d. a week ago.

FLOUR.—Demand continues quiet, although prices have been marked down a little this week. Shipments from North America in the past week totalled 76,000 sacks, as against 158,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. 6d. per 280 lbs., against 30s. a week ago; delivered London, 28s. 6d., as compared with 29s. a week ago. Manitoba patents, ex store, 28s. to 30s., against 28s. 6d. to 30s. a week ago. Australian, ex store, 23s. to 23s. 3d., against 23s. 6d. a week ago.

BARLEY.—Imported feeding barley has again been in quiet demand, and quotations have declined in sympathy with maize. Imported and home-grown malting descriptions have been a quiet market, recent rates being maintained. "October" futures were quoted at 31½ cents per bushel in Winnipeg on Wednesday, against 31½ cents last week and 37½ cents a month ago. Quotations per 48 lbs. in London on Wednesday were: "English feed" (new) at 44s. 10s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at 30s. to 56s., against 30s. to 56s. a week ago.

OATS.—Home-grown oats have been in steady demand at United Kingdom markets, quotations being well maintained. On Wednesday, "December" futures were quoted at 26½ cents per bushel in Chicago, against 26½ cents a week ago and 29½ cents last month.

OVER ONE HUNDRED YEARS OF SERVICE
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY
ASSETS - EXCEED - £16,000,000
 FIRE LIFE ACCIDENT MARINE
 Edinburgh: 35 St. Andrew Square
 London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s.; against 22s. last week.

MAIZE.—The decline in maize prices continues. The bearish nature of the statistical position and the improvement in the international political outlook are the factors mainly responsible for the movement. "December" futures were quoted on Wednesday at 58½ cents per bushel in Chicago, against 61½ cents a week ago and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 6d. per 480 lbs., compared with 18s. 3d. a week ago; "Plate," ex ship (new), 16s. 6d., as against 17s. 3d. a week ago; "Plate," "October," 16s. 6d., against 17s. 3d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s. to £5 per ton, against £5 to £5 2s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to October 26	324,418	275,027	368,019	462,156
8 weeks to October 26	2,105,569	2,934,870	4,000,766	3,839,335
Average price of English wheat per cwt.	s. d. 5 7	s. d. 4 9	s. d. 5 0	s. d. 6 2

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT		
	Wheat	Barley	Oats	Wheat	Barley	Oats

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934.

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Oct. 31, 1934	Jan. 2, 1935	Oct. 23, 1935	Oct. 30, 1935
Winnipeg (No. 1, Manitoba) — Cents per 60 lb.	46½	85½	74½	82½	88½	85½
Chicago (No. 2 Winter) — Cents per 60 lb.	46½	84½	95½	98½	96½	97½

The visible supply of wheat in Canada amounts to 147,928,000 bushels, against 147,071,000 bushels last week and 118,408,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—The recent jump in prices caused a substantial reduction in demand, and the official quotations were reduced all round at the end of last week. Business has since been decidedly slow. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 87s. to 90s.; Canadian, 82s.; Danish, 89s., as against 94s. to 96s., 90s. and 95s., respectively, a week ago. Arrivals in London last week included Danish, 13,741 bales; Canadian, 2,825; Dutch, 1,806; Lithuanian, 1,795; Polish, 2,791; against 13,233, 2,457, 1,180, 1,450 and 3,539 bales, respectively, in the previous week.

BUTTER.—Demand for butter at the London Provision Exchange has been very quiet this week, with prices displaying renewed weakness. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 106s.; Australian, choicest salted, 106s.; Danish, 126s. to 128s.; compared with 112s. to 114s., 112s. to 114s., and 134s. to 136s., respectively, last week.

AUSTRALIAN BUTTER SHIPMENTS.—According to the Imperial Economic Committee's *Weekly Dairy Produce Notes*, an arrangement for spreading Australia's butter shipments has been made by the Australian Dairy Produce Board. The regulation commences with butter graded on Monday next, and shipments may be expected to average 60,000 cwts. per week during the three weeks ending November 23rd, and 66,000 cwts. per week in the following four weeks. Supplies from Australia equal almost one-quarter of our total imports of butter, and production in that country is now showing a normal seasonal expansion.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 4—RUBBER AND THE INTERNATIONAL COMMITTEE. Has the International Rubber Committee followed a wise policy? Has it been successful? Is it now getting the position in hand? What will be its future aims? This article, by our Rubber Market Editor, seeks to answer these questions for the benefit of the rubber shareholder.

TUESDAY, NOVEMBER 5—"MINOTAUR," continuing his series on Tin Shares, which has proved so well timed, this week considers the position and prospects of PAHANG CONSOLIDATED.

WEDNESDAY, NOVEMBER 6—The Story of Famous Companies—No. 26. This issue will contain a full account of the rise, growth and present position of THE TRIPLEX SAFETY GLASS COMPANY, LTD.

THURSDAY AND FRIDAY, NOVEMBER 7 AND 8—BRICK SHARES OR CEMENT?—What is going to become of the building boom? Is it about to change its character, with a shift over from private residential building to slum clearance and industrial construction work? On the supply side, also, the building industries present knotty problems. As a reflection of investors' doubts, brick shares have fallen while cement shares have continued to appreciate.

These articles examine the reasons for the contrasting behaviour of bricks and cement. The different factors affecting demand, and the differences in the organisation of the two industries, are surveyed in order to arrive at conclusions regarding the prospects of each.

SATURDAY, NOVEMBER 9—THE COMMERCIAL MOTOR INDUSTRY, by C. T. Brunner. The Commercial Motor Exhibition opens on November 7. This article is an expert survey of current trends in the industry and their effect on the manufacturing companies.

THE FINANCIAL NEWS

(Twopence Daily)

On sale at all railway bookstalls and good newsagents everywhere.

CHEESE.—The market has again been slow this week, with Dutch and Colonial descriptions lower in price. Quotations for English Cheddars were, however, well maintained. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 62s. to 72s.; Canadian, finest coloured (new), 58s.; New Zealand, finest coloured, 53s., as against 60s. to 70s.; 60s. and 59s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., as against 5½ cents per lb. last week. On the London market Accras have been quietly steady. On Wednesday last, good fermented new crop, "October-December," was quoted 22s. per 250 kilos. c.i.f. Continent, against 22s. last week. Last week's movements of cocoa in London were as follows: Landed, 1,139 bags; delivered, for home consumption, 6,292 bags; exported, 341 bags; stocks, 119,823 bags, against 170,875 bags a year ago.

COFFEE.—The New York spot market has been dull, with Rio and Santos both easier on the week. Quotations in London have remained steady. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 64 cwt.; delivered, for home consumption, 20 cwt.; exported, nil; stocks, 13,082 cwt., against 28,131 packages a year ago. Central and other South American, landed, 576 cwt.; delivered, for home consumption, 2,955 cwt.; exported, 3,182 cwt.; stocks, 95,090 cwt., against 83,903 packages last year. Other kinds, landed, 1,940 cwt.; delivered, for home consumption, 3,973 cwt.; exported, 1,358 cwt.; stocks, 119,952 cwt., against 76,456 packages last year.

EGGS.—Although demand has been fairly quiet, prices have further advanced owing to a seasonal reduction in supplies. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 19s. 6d. to 21s. 6d. per 120, against 18s. 6d. to 20s. a week earlier, while Danish (15½ lb.) made 14s. 9d. to 15s. 3d. per 120, against 14s. 9d. to 15s. 3d. last week.

FRUIT.—Home-grown fruit continues rather scarce, good prices being made for best samples. According to *The Fruitgrower*, business at Covent Garden has been fairly good during the past week, supplies generally clearing easily. Demand for apples continues brisk, with home-grown firmer in price. Pears continue an active trade, and prices show little variation; supplies are below normal for the time of year. Demand for hothouse grapes has been only moderate, but prices are generally maintained. Melons are rather scarce, but green figs have made a better showing this week. Blackberries have enjoyed a steady sale, and cobs are a point firmer. Good supplies of oranges (especially South African) meet a steady sale at recent rates, but grape fruit have declined on heavier arrivals. Lemons are also a little cheaper this week.

MEAT.—Supplies at Smithfield this week have been above last year's level, while demand has been rather slow. Prices, however, show little alteration. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. 2d. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,681 tons, an increase of 186 tons on the corresponding week last year. Beef and veal accounted for 4,940 tons, mutton and lamb, 2,596 tons, and pork and bacon 1,301 tons, as compared with 4,709, 2,860 and 1,114 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampung (in bond) was 3½d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 17 tons; stocks, 1,486 tons, against 416 tons a year ago. White, landed, nil; delivered, 293 tons; stocks, 15,363 tons, against 8,536 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 10½d. per cwt. on Wednesday, as compared with 9s. 10½d. per cwt. a week ago, while the forward quotation, at 8s. 9d. per cwt., shows a fall of 1½d. on the week. Movements in London during the past week were as follows: Landed, 6 tons; delivered, 245 tons; stocks, 7,519 tons, against 3,720 tons a year ago.

SUGAR.—The New York spot market has been steady at unchanged prices. Demand for raw sugar in London has been rather quiet, but quotations are generally well maintained. The spot price in New York on Wednesday was 3-60 cents per lb., as compared with 3-60 cents per lb. last week and 3-65 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 11½d. to 5s., against 4s. 10½d. to 4s. 11½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 34,739 tons, against 4,991 in the previous week and 5,701 tons in the same week of last year; deliveries, 17,058 tons, against 15,886 and 13,823 tons respectively; stocks, 161,740 tons, against 144,059 and 101,999 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 25, 1934	12-49	11-35	14-63	9-96	9-29	10-85	12-73
Sept. 25, 1935	16-42	12-37	15-48	11-27	9-90	11-45	15-18
Oct. 3, "	16-20	12-53	15-82	12-60	10-17	11-70	15-20
Oct. 10, "	15-63	12-87	16-98	12-74	10-88	11-80	15-42
Oct. 17, "	15-34	12-79	16-76	13-15	11-05	11-85	15-16
Oct. 24, "	14-75	12-68	16-59	12-56	10-41	10-83	14-75

The quantities catalogued for this week's auctions comprised 54,500 packages of Indian and 20,498 packages of Ceylon tea. At the Indian sales on Monday and Wednesday, the market was irregular, and prices were generally lower than those ruling last week. Quotations for Ceylon grades also registered a decline on Tuesday, the fall in prices being partly traceable to a decline in quality. Leaf grades were, however, in active demand for export purposes, and realised satisfactory rates.

VEGETABLES.—Supplies of tomatoes are now decreasing but, according to *The Fruitgrower*, business at Covent Garden has been only moderate this week. Cucumbers have advanced on shorter supplies, while lettuce and mushrooms hold their price. Good cabbage, cauliflower and best sprouts have been in active demand at higher prices. Celery, although more plentiful, continues to sell well. Parsnips, carrots and turnips are all easy and beetroot is available at moderate prices. The spell of mild weather has reduced the demand for potatoes and, with supplies on a fairly heavy scale, prices have declined in some instances. At the London Borough Market on Tuesday, however, best silt soil King Edward ranged from 6s. to 6s. 6d. per cwt., against 5s. 6d. to 6s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Weakness, not altogether unconnected with the decline in grains, has developed in most classes of oilseeds and prices have taken a decidedly downward turn. Linseed has also been affected by the confirmation of expectations of a larger yield in Argentina consequent on improved weather conditions, and the fact that a good proportion of old crop remains unsold. Plate linseed has fallen 20s. per ton from the highest in October, but Indian has been affected to a much less extent. On a falling market business is very slow indeed and prices nominal. The quantity on passage to Europe is now 103,700 tons (including 10,000 tons from India), 5,700 tons more than last week; and to the United States 39,800 tons, against 32,900 tons a year ago. Argentina is estimated to have over 300,000 tons available for export, as against 220,000 tons shipped in the remainder of last year. India also has a larger surplus. Demand for cottonseed has eased and black Egyptian has declined to 65s. or thereabouts.

Demand for linseed oil is only moderate, despite a fall in prices of 20s. per ton on the week. Raw oil ex Hull for delivery to December is now quoted around £24 15s. per ton naked. Cotton oil is neglected and easier. Egyptian crude is offered at £25 10s. and refined at £28 10s. per ton ex Hull mill. Oilcakes are in good demand and steady.

POTASH.—Although it is now six months since the conclusion of a tentative agreement between Spain and the Franco-German Potash Cartel, nothing has since been heard of the signing of a permanent agreement. But recent events give ground for the view that co-operation between the two parties is in full swing. Competition in the potash market has been considerably reduced and prices are showing a firmer tendency. Exports of potash salts from Spain—which had risen from 25,000 metric tons in 1931 to a peak level of 267,000 metric tons in 1934—suffered a decline of 20 per cent. due to a reduction in shipments to the United States and Belgium. Since the preliminary arrangement with the cartel was only reached in April, it would appear that the reduction was partly due to Spain's increasing difficulty in selling abroad. In the circumstances, it seems likely that a final agreement between Spain and the cartel will be reached sooner or later—especially since Spain's present quota (14 to 15 per cent. of cartel exports) is regarded as satisfactory in that country.

NITRATE.—In our issue of September 14th last we referred to the nitrate agreements, which had just been concluded. Although no further details have since been made public, both the contract and Chile were registered last week in the Czechoslovakian cartel register. The object of the agreement with Chile is there described as "the regulation of sales of nitrogen fertilisers, with special reference to Chilean nitrate." The agreement between the European producers is stated to have as its object "the regulation of sales of domestic nitrogen fertilisers in foreign countries; mutual

guarantee of home markets and regulation of foreign nitrogen fertilisers within the cartel countries." In the past only the following were registered as full members of the cartel: the German Stickstoffsyndikat, the Czechoslovakian Stickstoffsyndikat, Imperial Chemical Industries and the Norsk Hydro of Oslo. At the present time, however, twenty more nitrogen-producing countries, representing the whole Belgian, Dutch, French, Italian, Polish and Swiss nitrogen industries, are registered as full members. It is obvious, therefore, that the European cartel must have been considerably strengthened as a result of the new agreement.

RUBBER.—During the week ended last Wednesday, quotations, both in the United States and in this country, recorded a further advance. Substantial buying on Continental account was one

factor bringing about the rise, while the conviction that United Kingdom stocks have been substantially reduced during October (for the first time since December, 1933) also contributed to a more bullish sentiment. The spot price in New York on Wednesday last was 13½ cents per lb., compared with 13 cents per lb. a week ago and 11½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. for January to March shipment, as against 6½d. to 6½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 170,630 tons, against 173,734 tons a week earlier. A year ago stocks amounted to 120,002 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

LONDON, October 30th				The prices in the following are revised with the assistance of an eminent firm in each department.

THE ELECTOR'S CHOICE

THE election campaign proceeds apace. This week's nominations have revealed 1,347 valid candidatures for 615 seats, including 586 supporters and 761 opponents of the National Government. Some 40 candidates have been returned unopposed. Of the remaining seats, rather less than three-fourths will be contested next Thursday by two candidates, approximately one-fourth by three candidates, and only 1 per cent. by four candidates. In the main, the struggle lies between the Conservative and Labour Parties, whose candidates, numbering 515 and 552 respectively, count for nearly 80 per cent. of the total nominations. For the rest, the Government's supporters include 45 Liberal National and 20 National Labour candidates, while the Opposition musters 155 Liberal and 16 Independent Labour representatives. Thus, the main voting strength of the next Government in the new House of Commons is bound to be drawn either from the Conservative or the Labour Parties. But the predominance in the number of candidates of these two Parties does not correspond to their permanent voting strength in the country; and, in any case, under our electoral system of single-member constituencies, a small body of free votes may turn the scale on one side or the other. The result of the election will therefore largely depend on the way the Liberal and the "unattached" vote is cast.

A brief campaign necessarily makes for intensive electioneering. Before next Thursday the majority of British electors will have enjoyed an opportunity of hearing the voice (and in some cases of seeing the moving likeness) of leaders of all Parties and of no Party. Yet it is already evident that the election has failed to reproduce either the pulsating anxiety or the popular passions of its predecessor. The substance even of a last-minute emotional appeal, like the famous "Red Letter," whose influence at the election of 1924 was notorious and decisive, appears unusually difficult to discover on this occasion. Events bid fair to bear out the presumption that, in the absence of a sense of imminent domestic crisis, the "independent vote" will be cast much less solidly for the Parties of the Right than in 1931, and may well poll a lower proportion of its total

strength. The Government's most powerful opponents, in other words, are apathy and the "swing of the pendulum."

Whether these will be sufficient to deprive it of more than a part of the immense majority of 411 which it enjoyed at the dissolution of the last Parliament is more than doubtful. The Opposition Parties are labouring, not merely under the disadvantage of an election date chosen to suit the Government's own tactical convenience, but under the additional disability of four years' representation in the last Parliament at a mere fraction of their true strength. It is the peculiar evil of a landslide like that of 1931 that it virtually deprives an Opposition of the ability to fulfil its ultimate function in a democratic constitution—that of providing an alternative Government whose members enjoy national confidence. During the past four years the Labour Party has worked, more or less successfully, to close the gaps in its organisation in the constituencies. But the loss of many of its greatest figures, by death or defection, has temporarily weakened its leadership; and the reduction of its representation in the House of Commons to a mere rump has deprived many of its newer men of the opportunity to acquire parliamentary experience and national reputation alike. Excluded from the floor of the House, they have lacked both training ground and sounding board. In the matter of policy also the Party is unfavourably placed. It is fighting on ground not of its own choosing. The lines dividing popular opinion to-day, so far as they are discernible, are not primarily concerned with the "nationalisation" of economic resources. "To-day," declares Lord Snowden, "Socialism is not the issue." In reply to the Government's appeal to its record of improving trade, cheap money and increased employment, the answer of the Opposition is chiefly the negative one of opportunities neglected. The initiative lies with the Government.

What, then, is the Government's case? First and foremost, it asks for a vote of confidence. Its tenure of office has coincided with a revival of business confidence and a rise in national wealth. The country has replenished its empty cupboards. It has begun to lay up much goods, to

pull down its barns and build greater. "Gentlemen, we propose that the retiring directors be re-elected."

That the recovery, however, is attributable, even to a major extent, to Government policy is a claim which will hardly hold water. That its cheap money policy has contributed to the growth of confidence is unquestionable, and its tariffs have certainly helped certain industries and districts. But, on the other hand, it is equally certain that this country's adoption of a policy of trade restriction has helped to maintain similar obstacles in being and to increase them throughout the world, and has thus delayed very seriously the general process of recovery. Again, from the point of view of international politics, the position is obviously much worse than four years ago. If the Government cannot properly claim full credit for recovery, it would be equally improper to make it entirely responsible for the present state of the world. Though, at times, it has striven hard for peace it is equally open to the charge of having missed critical moments and of having done the right thing too late—notably in the spring of 1932.

The vote of confidence must therefore be qualified by the fact that we are facing the greatest international crisis since the war, that the world is rearming, and that we still have two millions unemployed.

But no Party ever places sole reliance on its record as an election-winning asset. Most democratic Governments are returned from a lively sense of favours still to come rather than from gratitude for benefits received. The Government has, therefore, reinforced its appeal by such offers as extended contributory pensions, a higher school-leaving age and expedited housing development. And as faith must be fortified by "works," Mr Neville Chamberlain announced on Saturday that a plan is in being for the expenditure of some £100 millions on roads in the next five years. The Government has also offered to guarantee £30 millions for railway improvement. To these sums may be added an unstated amount for new armaments—which has nowhere been estimated at less than £100 millions, and may be over £200 millions. We examine the road and railway schemes in a later column. One observation appears relevant here; namely, that not all the capital expenditure with which the Government has decked its election window can be regarded as equally "new." The suggested road expenditure, for example, appears to be little, if anything, more than the country was spending a few years ago, when the volume of road traffic was much less than it is to-day. Incidentally, its total is equivalent to little more than one-fourth of the amount which the roads are expected to contribute in taxation in the next five years. The Opposition's answer to all this is, of course, that it does not go nearly far enough to ensure prosperity, and that at best it is a death-bed repentance.

If the Government cannot guarantee prosperity, can it underwrite peace? It is here that it speaks with most divided voice and asks for the blindest of cheques. It declares its fidelity to the League of Nations and in the same breath asks for a mandate for increased armaments. Are electors justified in inferring the existence, in the present Cabinet, of a "League" party and an "armament" party, with Mr Baldwin riding uneasily over both?

The Government's appeal, in the last resort, looks uncommonly like a request for a vote of confidence in the statesmanship of Mr Baldwin himself. In his address to the Peace Society on October 31st, the Prime Minister ruled out "isolation" as far too expensive a policy for Great Britain. But he was less precise, and far less reassuring, in his delimitation of the scope of the Government's projected "defence" measures. Mr Baldwin is a leader whose common sense and liberal instincts are, by general consent, the greatest contemporary assets of his Party. There have been frequent occasions, however, in the last twelve years when Mr Baldwin has appeared to do too much honour to counsels less sound and progressive than his own.

If the Government returns to power for another four or five years, what factors are likely to have most influence on future policy? The answer appears to be twofold, namely, the influences surrounding the Prime Minister and the composition of his majority—Diehard or otherwise—on the one hand, and the strength of the Opposition on the other.

THE APPOINTED DAY

LAST Saturday the League's Committees at Geneva approved for action the five proposals for applying sanctions against Italy, which had been recommended to member-States before the adjournment, and named November 18th as the date for putting them into force.

This step, which was taken as the result of favourable replies from the overwhelming majority of League members, is distinctly encouraging. But the encouragement ought only to stimulate us into redoubling our efforts to make the system effective in bringing the war to an end. That we may legitimately entertain hopes of achieving this, is indicated by the accomplished fact; for the step now taken is one that the most sanguine believers in the League would hardly have ventured to predict with any confidence even as lately as a few months ago. At the same time, there is perhaps a certain latent danger in this measure of success. For we should be worse off than before if we allowed last Saturday's action to be taken as the end, and not as merely the beginning, of the collective effort to bring about a cessation of hostilities and a just peace. Sanctions are merely a means to that end, and not an end in themselves; and if this is true of the whole gamut of the sanctions that are prescribed in Article XVI of the Covenant, it is true *a fortiori* that we cannot salve our consciences with the instalment that is to come into force on the 18th of this month.

We have no quarrel with this date. For even though it is three days later than the day which had been contemplated by the French and British Governments, it is really a remarkable achievement to have secured concerted action on the part of some fifty States so quickly. Indeed, November 18th, as well as the 2nd, may prove to be an historic date. On this day the League is going to give the first turn to the screw of sanctions. But we must bear in mind all the time that we are making a first trial of a new instrument for the vindication of international law and order; that we do not know how effective for our purpose this first act is going to be; and that we must therefore be prepared to find it necessary to give the screw another turn, and perhaps another after that, up to the full measure of the extremely drastic action to which we are pledged by the Covenant.

We most sincerely hope that this necessity may not arise. But the likelihood of our having to resort to more drastic measures will be diminished in proportion to the clearness with which we show our determination not to shrink from taking these further measures if and when the necessity arises. The League should therefore decide forthwith how long it will allow the present measures to run before deciding whether they are likely to be effective or not. A reasonable time limit for this purpose would be the beginning of the New Year, or at any rate some day in January. If, by then, these first measures have not produced a settlement satisfactory to all parties concerned the screw should be given a further turn. This means that the Co-ordination Committee ought now to begin to consider what the next steps ought to be and to prepare its plans for carrying them out. It should, in fact, be setting up a general staff for handling what may be a long campaign. This would make it clear to Italy that November 18th is neither the last nor the blackest of the black days that await her if she persists in the violation of her international undertakings. She ought to know that within a relatively short time further formidable sanctions will come into effect for certain unless, by then, she has either accepted a settlement satisfactory to the League or else is very far advanced in negotiations tending towards that end.

Meanwhile, subject to these considerations, we may take note, with provisional and conditional satisfaction, of what has been already accomplished. The list of acceptances of the Co-ordinating Committee's five proposals is undoubtedly impressive. The arms embargo and financial boycott proposals have been accepted by fifty-one States members, and the proposals to refuse to accept any Italian exports, and to withhold from Italy certain commodities (in addition to arms) which Italy desires to import, have

been accepted by forty-nine States members. The mutual assistance proposal, which does not officially require an answer, has, in fact, received affirmative replies from forty-one States, and this does not exhaust the list of the States that intend to act on this proposal in practice. This means that, as the moment for action has approached, there has only been a negligible number of hesitations or defections beyond the three original lapses on the parts of Austria, Hungary and Albania. The defection of Paraguay, the hesitation displayed by Venezuela and Nicaragua, and the reservations made by Switzerland are offset by the keenness shown by two overseas States members, South Africa and Canada, and by the decision, in principle, to carry out the Co-ordination Committee's proposals which has been taken by one non-member, Egypt.

The Egyptian decision is important because Egypt might have been a near and convenient source for the supply of certain valuable commodities both to the Italian armies in the field in East Africa and to the factories in Italy itself. The Canadian keenness is significant because Canada might have been tempted to take the view that she is so remote from the conflict that she could only be expected to take a platonic interest in it. Her action, moreover, is peculiarly important; in the first place because it keeps the screw turning, and in the second place because Canada is the natural link between the League of Nations and the United States.

Both South Africa and Canada have made proposals which go beyond the five on which the decisions were taken last Saturday. South Africa has urged that the exports of key products should be rationed on a three-years' average to non-members—and also, presumably, to States members which are non-participants—in order to guard against the danger of re-exports to Italy. Canada has proposed that coal, oil, iron and steel shall be added to the embargo list if and when it appears that the principle of the embargo has been accepted widely enough to make its application to these materials reasonably effective. Both these proposals have been referred to the economic sub-committee, and the Canadian proposal has already been adopted by it.

Of the four additional commodities in question, oil is manifestly the most important. For it is becoming daily more evident that the Italian army in East Africa is relying upon its aeroplanes, its tanks, and its motor transport, and that its superiority of force over the Abyssinians might be converted into an actual inferiority if it were reduced to relying, as it had to rely in 1896, upon rifles, horse artillery, mules and camels. This would, however, be the prospect confronting the Italians if oil imports were cut off. Indeed, in order of effectiveness, we may perhaps rank the proposed oil embargo as the next most important sanction to the closure of the Suez Canal. This shows the importance of the Canadian proposal. The possibility of applying it depends, of course, principally upon the attitude of the United States (or of the American oil interests), and, in the second place, upon the action or inaction of Venezuela. As a final encouragement, it is understood that Germany will continue to prohibit the export of arms to either belligerent and will prevent any "extraordinary increase" in trade in certain raw materials and foodstuffs. And in America, though oil has not been added to the list of embargoed goods, public opinion is being mobilised to put pressure on the oil companies to limit their shipments.

This, then, is the background against which, during the next few weeks, the French and British Governments will be continuing to explore the possibility of bringing Signor Mussolini to satisfactory terms. The Co-ordination Committee as a whole did not much relish the "moral mandate" to prepare the ground for negotiations within the framework of the League which the Belgian representative wished the Committee to confer upon the two Powers. But such negotiations need not be dangerous, and may be valuable, if the French and British Governments act up to their assurances that they will look at no proposals which are not satisfactory to Abyssinia and to the League, as well as to Italy. The whole world will be watching to see that Sir Samuel Hoare and M. Laval are now as good as their word. Meanwhile, public opinion must be vigilant to see that "peace talk" is not allowed to serve as an excuse for postponing action, while the war drags on and the situation in Abyssinia itself sinks deeper into confusion.

7, CHANCERY LANE, LONDON

ELECTORAL MATHEMATICS

A small body of electors remained unpooled on the very last day. They were calculating and reflecting persons, who had not yet been convinced by the arguments of either party, although they had had frequent conferences with each. One hour before the close of the poll, Mr Perker solicited the honour of a private interview with these intelligent, these noble, these patriotic men. It was granted. His arguments were brief, but satisfactory. They went in a body to the poll; and when they returned, the Honourable Samuel Slumkey, of Slumkey Hall, was returned also. ("Pickwick Papers," chap. xiii.)

ELECTIONS in the fine old unreformed borough of Eatan-swill were a matter of precise scientific calculation. In the last analysis victory always went to the candidate who was most plentifully supplied with "brief but satisfactory" arguments. But since the unromantic progress of Democracy, by the instrumentality of the Corrupt Practices Acts, has compelled candidates to rely on arguments which are both less brief and considerably less productive of immediate satisfaction to the elector, many things have changed; and a General Election in the United Kingdom is nowadays about as far removed from precise scientific calculation and as closely akin to a game of chance as anything in the world of politics could well be. The system of single-member constituencies, especially when combined with the existence of three parties, very seriously distorts the voice of the people, as that oracle is revealed by individual votes in the constituencies. The distortion has never yet, it is true, converted "The Red Flag" in the constituencies into "Land of Hope and Glory" in the House of Commons. But it has sufficed on several occasions to change the key of the Voice from minor to major. This distortion can be gauged from the following table, which gives the total votes cast for, and the seats gained by, each party at the elections since the war.

VOTES CAST AND SEATS GAINED, 1918-31

	Conservative		Labour		Liberal	
	Votes	Seats	Votes	Seats	Votes	Seats
1918 (b).....	3,882,514(a)	360	2,370,240	63	2,770,985(a)	161
1922	5,565,843	347	4,251,011	142	4,113,012(c)	117
Change	+1,683,329	- 13	+1,880,771	+ 79	+1,342,027	- 44
1923	5,544,540	258	4,508,504	191	4,314,202	158
Change	- 21,303	- 89	+ 257,493	+ 49	+ 201,190	+ 41
1924	7,838,225	415	5,423,589	152	2,925,142	42
Change	+2,293,685	+157	+ 915,085	- 39	-1,389,060	-116
1929	8,664,243	260	8,379,978	298	5,301,127	59
Change	+ 896,018	-155	+2,956,389	+136	+2,375,985	+ 17
1931	11,925,312	471	6,648,023	52	2,320,310	72
Change	+3,261,069	+211	-1,731,955	-236	-2,980,817(d)	+ 13

(a) Coalition and Non-Coalition combined. (b) Great Britain only. (c) National and Independent combined. (d) Liberal and Liberal National combined.

It can be claimed for the existing system that it tends to produce substantial majorities in the House of Commons, and thus makes stable Governments more possible than in other countries. With the exception of 1931, for example, none of the three parties has recently received a majority of the votes. Yet four elections have given the largest party a comfortable majority in the House. But if the

statistician seeks to extract from the figures here presented some scientific principle by which he can determine in advance the effect upon a Government majority of a given prospective shift of the total vote, his labour will be in vain. There is no such principle.

Nevertheless, even with the arbitrary permutations of British electoral statistics, there is some small scope for the calculator. An attempt will be made in this article to delimit more precisely the boundary between the calculable and the incalculable in the impending General Election. Some major hypothesis is necessary before calculation can start. In the absence of any better guide it may reasonably be assumed that the result of the last election in 1931 will not be repeated. That was, in every way, an extraordinary election. The Liberal, and liberal-minded, vote was, for the first time since the war, cast preponderantly on the Conservative side. What is more, the National cause attracted a substantial number of voters who had supported Labour in 1929. Neither of these circumstances is likely to recur. Many Liberals will doubtless vote for National candidates: but many will also vote for Opposition candidates. The evidence of the by-elections suggests that the ranks of Labour have been largely re-formed. On the other hand, it is unlikely that Labour will do as well as in 1929. This, then, is the major hypothesis; that Labour will do better than in 1931 but not so well as in 1929.

A start can be made in certainty. Forty members have been returned unopposed, 26 of them being supporters of the Government, 14 of the Opposition. The next stage is almost equally certain. There are 90 seats (other than those in which there has been an unopposed return) in which the Conservative candidate received an absolute majority of all votes cast both in 1929 and in 1931. These can be counted safe Conservative seats. In the same way there are 36 safe Labour seats, in addition to those where there is no contest. So far the score stands—Government 116; Opposition 50.

The next stage is more conjectural. There are 146 seats which the Conservative Party won both in 1929 and in 1931, although the Conservative candidates did not in the former year poll an absolute majority of the votes cast. To beat the Conservative candidates in these seats this year, Labour would need either to win over some of the Tory voters of 1929, or else to secure more than half of the Liberal votes and of the new electors. Either possibility seems to be ruled out by the major hypothesis with which we started. These 146 seats must, therefore, be tentatively given to the Government. We have now dealt with 312 seats, and the score stands Government 262; Opposition 50.

The result of the election, however, rests with the remaining 303 seats. Of these, 108 were won by Labour with an absolute majority over all-comers in 1929, but lost in 1931; 117 were won by Labour on a minority vote in 1929, and also lost in 1931; 50 were won by Liberals in 1929; 28 are, for one reason or another, unclassifiable.

The great riddle of the election is—how many of these seats will Labour win in 1935? Up to this point we have been dealing either in certainties or in major probabilities. But to distribute these remaining seats between the parties is a matter of pure conjecture. These are the seats where the "small body of electors," the "calculating and reflecting persons," will cast the decisive votes, as they did at Eatanswill. Only in 85 of them will they have more than two candidates to choose from. Taking the whole 615 seats, there are fewer three-cornered fights than usual, though slightly more than in 1931. This is shown by the following table, which shows the total number of candidates, the number of unopposed returns, and the figure of "candidates per contested seat" (an abstraction for which the statistician may pray to be forgiven) at each of the last six elections:—

General Election	No. of Candidates	Unopposed Returns	Candidates per Contested Seat
1923	1,444	50	2.47
1924	1,421	32	2.38
1929	1,729	7	2.83
1931	1,286	67	2.22
1935	1,347	40	2.27

But the elimination of three-cornered fights in three-quarters of the doubtful seats does not make it any easier to forecast the opinions of the "intelligent, noble, patriotic

men" who are not attached to either of the larger parties. The only possible method of procedure is to make two sets of assumptions, one giving the luck of the poll to Labour, one to the Government, and then to apply each set of assumptions, with mathematical rigidity, to the three hundred doubtful constituencies. Any would-be prophet can make his own assumptions, and there is no reason, until the election is over, for preferring any one set to any other.

An example may, however, be given. Suppose it be assumed that, where the same parties are contesting the seat as in 1929, Labour suffers a net loss, as compared with that year, of 2,000 votes to the Conservatives, and that in those constituencies where the Liberal candidate has dropped out, the Liberal vote is divided equally between the two larger parties. In other words, let it be assumed that Labour does nearly, but not quite, as well as in 1929. On that basis—which, be it repeated, is given solely as an illustration—Labour will get about 260 seats and the Government's majority will be as low as 50. If, on the other hand, it be assumed that Labour will suffer an average net loss of 4,000 to the Conservatives, and will get the votes of only a minority of the Liberals, the Labour seats may be as few as 160 and the Government's majority as high as 250. The difference between a net loss of 2,000 and a net loss of 4,000—the turnover of 1,000 voters—means a difference of the all-but-vital hundred seats in the House of Commons. Elections, like prices, are determined at the margin.

These 100,000 voters are the people who will really decide the election. So much the patient calculator can foretell. What he would give his slide-rule to be able to predict, is how those 100,000 men and women will cast their vote on Thursday.

COMMERCIAL MOTOR VEHICLES

THE Commercial Motor Transport Exhibition, which is being held at Olympia, London, from November 7th to 16th this year, affords convincing testimony to the prosperity and technical efficiency of this branch of the motor trade. In reality, there are two commercial vehicle industries, comprising the manufacture of light- and middle-weight and of heavy vehicles respectively. The former includes such firms as Vauxhall, Ford, Morris Commercial and Rootes (and in the very light-weight category, Austin and Singer), who have adapted to commercial vehicle manufacture the mass-production methods which have gained them a dominant position in the private car market. The latter includes, *inter alia*, Leyland, A.E.C., Dennis and Albion, who are interested in omnibuses, motor coaches and heavy-weight lorries, and in the last two years have been turning their attention increasingly to heavy-oil engined vehicles. From their point of view the legislation of the past five years has been disturbing. Although the past year's production, in terms of total units, has been at a record level, prosperity has been unevenly spread. New registrations of goods vehicles of over 2½ tons unladen weight have actually decreased by 16 per cent. New registrations of omnibuses and coaches have risen by 35 per cent., but the year's total of approximately 4,600 is low compared with those of the two years preceding the Road Traffic Act of 1930. The following table shows the position of the industry during the past seven years:—

COMMERCIAL VEHICLES—PRODUCTION AND SALES							
Year Ended Sept.	New Registrations				Net Imports	Exports	Total British Production
	Lorries		Omnibuses				
	Great Britain	Northern Ireland	Great Britain	Northern Ireland			
1929	52,825	945	9,017	88	18,444	8,566	54,995
1930	52,370	961	8,320	107	3,991	6,566	64,333
1931	51,737	1,014	7,287	81	1,416	5,475	64,178
1932	45,944	938	4,915	120	557	7,304	58,664
1933	49,599	925	2,662	41	182	9,898	62,643
1934	66,368	981	3,393	74	1,458	12,236	81,594
1935*	68,300	1,450	4,800	40	1,840	14,889	87,439

* Figures partly estimated.

The 1930 Act caused a reduction of 7,000 in the number of omnibuses in operation and a consequent glut in the second-hand market. Its effects are now being felt less acutely. Omnibus operators are endeavouring, further, to secure reduced costs by increased employment of heavy oil vehicles. In the first eight months of 1935, sales of heavy-oil buses increased from 672 to 1,787, while sales of petrol buses fell from 2,081 to 1,876. The Diesel is making rapid progress on the passenger side, but the full effect of the increase in the heavy oil duty, last August, from 1d. to 8d. per gallon remains an unknown factor, especially in urban passenger transport.

On the goods side, many causes are combining to encourage the use of vehicles of smaller unladen weight. The scale of taxation on heavy-weight vehicles was made steeper in 1934. Stricter enforcement is being practised of speed limits which allow a maximum speed of 30 miles per hour to a vehicle of 2½ tons unladen weight or less, but restrict a vehicle of over 2½ tons to 20 miles per hour. Finally, under the present licensing system for road haulage fleets, the Traffic Commissioners usually pay more attention to the total unladen weight of the fleet than to the number of vehicles comprising it. As the heavy-oil vehicle is mainly confined to the heavy-weight class, the number of new "oilers" sold in the first eight months of this year has fallen from 1,214 to 1,174, although the proportion to total new vehicles of over 2½ tons has increased from 19 per cent. to 21 per cent. A certain tension exists between heavy-weight and other manufacturers, since the former, with their contracting market, are beginning to compete in the lighter classes, with whose production they have not hitherto been largely interested.

As in other branches of the motor industry, the larger concerns—particularly Leyland and the Associated Equipment Company—have increased their share of the market at the expense of the smaller companies. Some of these firms, which were not in a position to turn over to the manufacture of Diesel engines, have continued to build chassis, but have bought their engines from specialised manufacturers. From every point of view this has proved no better than a *pis aller*. Simultaneously, concentration of control among omnibus operators has made orders for new vehicles fewer and larger. Events, in short, have increased the differential advantages of the more important producers.

So much for the home market. On the export side, the industry has secured a larger share of available trade, though its absolute expansion has been limited by the strict control and regulation of commercial road transport in almost all countries in the interests of railway transport. Commercial vehicle exports for the past seven years are shown below:—

COMMERCIAL VEHICLE EXPORTS						
Year Ended Sept.	Exports			Per cent. to Empire	Average Declared Value of Complete Vehicles Exported	British Exports as per Cent. of World Total
	Complete Chassis	Chassis	Total Vehicles and Chassis			
1929	2,684	5,902	8,586	70.5	425	3.3
1930	3,205	3,361	6,566	80.2	442	4.5
1931	2,455	3,020	5,475	74.0	413	7.1
1932	1,981	5,323	7,304	58.5	266	18.0
1933	2,018	7,890	9,898	64.3	241	18.8
1934	2,389	9,847	12,236	72.5	265	10.7
1935	2,204	12,685	14,889	67.5	291	12.5 (Estimated)

The improvement in the average declared value of exports of complete vehicles suggests that heavy-weight manufacturers have met with greater success in the export markets than at home. British vehicles, with their strength and sound workmanship, are popular in many countries whose road development is backward. Recent progress has been made in non-Empire markets like Denmark, Sweden, Egypt and Persia. The outlook remains relatively favourable. A particularly successful section of the industry during the year has been the manufacture of agricultural tractors, demand for which has moved *pari passu* with the mechanisation of agriculture. The largest share of the market is at present held by Fordson vehicles.

The future of the heavy-oil vehicle is the most urgent problem of the commercial motor industry to-day. So far

as passenger vehicles are concerned, there may be a certain loss of ground to the electric trolley-bus. To judge, however, by the renewal programmes of the large omnibus operators, the eventual replacement of the petrol omnibus by the heavy-oil vehicle is by no means improbable. On the goods side, the future may turn on the question whether middle-weight and light-weight "oilers" can be produced at prices competitive with those of the large manufacturers of petrol vehicles. So long as the "oiler" is the more expensive, weight for weight, its progress will tend to be confined to work involving high annual mileages, for which an increased initial outlay can be offset by economy in the fuel bill. There is now little difference in the price per gallon paid by large operators for petrol and heavy oil, but the latter gives a 75 per cent. better mileage. The improvement in the demand for new omnibuses (in which the future of the heavy-oil vehicle is assured) has tended to divert the attention of manufacturers from the lorry market. When this position has been righted, in due course, it will be easier to form an opinion of the lorry market's potentialities.

There are no signs of a revival in demand for steam vehicles, demand for which, after a long decline, was given the *coup de grâce* by last year's tax increase. Sales of electric vehicles, however, have risen during the first eight months of 1935 from 250 to 374. No progress whatever has been made with vehicles using coal gas or producer gas. There were ten of these vehicles in use in September, 1934, and only two new registrations have been effected this year.

"THEY"

(BY A CORRESPONDENT)

A DISTINGUISHED person, who had just received a title, was being congratulated by a friend.

"You ought to have had it long ago," said the friend.

"Well, actually three years ago they told me..."

"Excuse me," interrupted the friend, "but who are 'they'?"

There was no answer.

"I wish you'd tell me," said the friend. "I'm always hearing about 'they' and what 'they' do, and I've come to the conclusion that if only I knew who 'they' are, I should know who governs us."

Who does govern us? When we were very young indeed we used to think it was the King sitting on his throne with a crown perched on his head. Later on we knew that that was a childish fantasy. Really we were governed by the Prime Minister or by the Cabinet or by Parliament. Time passed, and we knew that that was a boyish fantasy. Really we were governed by the Civil Service—those bureaucrats. More time passed, and with the wisdom of age we came to suspect that that was a middle-aged fantasy. We no longer believed that we were governed either by this man or by that, by this one element in the constitution or by the other. The power behind

the Government and behind the Civil Service and behind (very much behind) public opinion is an anonymous, intangible, almost irresistible entity which is almost always referred to by the use of the third person plural and takes its place in the unwritten scheme of the Constitution as "they."

Mr Rudyard Kipling once wrote a short story which he called "They." It was a very mystical story; for they were the souls of dead children who haunted a garden and were very elusive indeed. But their presence could occasionally be detected by a trained sense which knew how to search for them and where. They who govern us are not, perhaps, quite such insubstantial fairies as they in Mr Kipling's garden, but they are scarcely less elusive or less difficult to detect; and although now and again by a miscalculation or mischance they are caught in the light of day, generally the observer has to know a good deal of their methods and movements before he begins to recognise their handiwork. In an age of publicity they do not court the limelight, and they prefer, as a rule, not to appear in person. In the intimacy of a room in Whitehall their arguments will be cogent and convincing; but they do not in the ordinary course make platform speeches, choosing rather to inspire and supervise the eloquence of others than to proffer their views and policy direct to the public. They like to do their business through a middle man, remaining themselves what the lawyers call "undisclosed principals." But for all their reticence and retirement there is no speech or language in which their voice is not heard. It is heard in the precise phrases of an Act of Parliament; in the undulating periods of an elder statesman; in the smooth pleadings of a barrister-politician; in the clarion calls of a great patriot; in the gruff pronouncements of a trades union leader; in the cultured voice of the talkie machine at the local cinema. Not one of these media will they in their catholicity disdain. But not often will you be allowed to catch the voice of Jacob in the speech of Esau.

Now and again some Paul Pry who has gone out hunting for vested interests will make a fuss and cause them a certain amount of embarrassment—will even, when he has had a good day's hunting, drag one of them head, shoulders, trunk, legs and feet into the public gaze. Paul Pry cannot often obtain publicity for his complaints and criticisms, but sometimes he succeeds. Then John Bull realises for a brief moment that they are producing quite an astonishing amount of some commodity that is no good for anything except to produce some other commodity, and that this second commodity is being sold only because John Bull is subscribing £1 out of his own pocket for every £1 that the commodity sells for. He discovers, but is apt to forget rather quickly, that they are doing very nicely and drawing very pleasant dividends at his expense and for their benefit. Or—still more embarrassing—an inquisitive Yankee will launch an inquiry into how they sell their guns and shells and to whom, and how they start their

panics and how they torpedo disarmament conferences, and into the stories they tell to the Press and the influence that they bring to bear in what is known as the Right Quarter. When that happens they must bestir themselves and set up the right smoke screen in the Right Quarter to obscure their past and future movements from sight and thought.

Sometimes even—and this is perhaps most painful of all—they will fall out among themselves and publicly accuse each other of not playing the game in the Right Way. Then you may hear one of them openly complaining that another of them has not done the proper thing by him. It will appear that measures put forward and put over for their mutual benefit are being used too much for the advantage of one of them and to the positive detriment of another of them. But happily, most happily, open disputes among them are not usual. For they are men of common sense, and they appreciate the fact that if one of them has put prices up too quickly for the convenience of another of them, it is much better to talk the little problem over between them in private than to air the grievance in public and so lead to possible misunderstandings in the mind of the public. Between them, after all, there must be give and take, and with mutual forbearance and patience and a decent reticence there is enough for all of them. And anyhow dog does not eat dog. This very sensible line of argument will always appeal to them, and any little burst of irritation from one of them will be forgotten, forgiven and not repeated.

In the last four years they have had a splendid time. What with tariffs and quotas and marketing boards and subsidies, their interests have grown more and more firmly vested, and (what is nicest of all) they have reason to think that they will have the whip hand in future. "It may be," they will murmur into the ear of the Right Person, "that the public is paying a good deal for our products and that our show is, as you say, preposterously uneconomic, but you daren't let us down. It is true that the Committee, which you so unnecessarily appointed to investigate, has reported unfavourably on us, but you daren't take its advice. If you do, we shall shut our factories, and then our workmen and our shareholders will suffer. And you will not forget that both our workmen and our shareholders (we refer, of course, to such of our shareholders as are of British nationality) have votes. Now be sensible. Go and make one of your perfectly splendid speeches showing how tariffs simultaneously raise prices for the producer and lower them for the consumer. And leave the rest to us."

So when we hear, as in time we doubtless shall, that a subsidy has been arranged out of public funds to encourage the growth of pineapples in Aberdeenshire, and that a marketing board has been set up for the better regulation of the sale of yellow trouser buttons in Great Britain and Northern Ireland, then we shall know that they, in the process of governing England, have seen the commercial possibilities of pineapples and yellow trouser buttons; and what they get they will hold.

NOTES OF THE WEEK

Armistice Day.—Seventeen years ago, on November 11, 1918, the last order, "Empty guns," was given. A Great Silence was broken by the sound of cheering men, from the sea to the mountains. The War to end wars was over; the world had been made safe for democracy. Seventeen years. . . . The youngest combatant in the Great War has reached middle-life, and the children of 1918 are on the threshold of manhood. Seventeen years. . . . But the reverberations of the guns have not died down; the drone of the bomb-carrying aeroplane has grown more insistent and oppressive. Do the people imagine a vain thing? Is it for nothing that "peace" is emblazoned on every party banner in this month's election? "Must the differences that arise . . . between nations be left to force . . . or shall we consciously and resolutely attempt to solve them by the ways of discussion and law that we all adopt as a matter of course for our private differences?"

. . . That question will in the end be answered not by Governments, but by peoples. . . . We have a great, an immeasurably great influence to throw in on the side of peace. . . . Our object is to end war, to end wars that may shake the world as we know it beyond all hope of recovery within the life of such as will still be alive at the task. But we accept it." The speaker is Mr Stanley Baldwin, Prime Minister of Great Britain. The voice is the voice of the British nation, conscious alike of its destiny and its responsibilities.

Election Fantasies.—The present General Election is living well up to the reputation of former campaigns for extreme and surprising statements. Perhaps the most remarkable made so far has been Mr Chamberlain's

on Saturday night that of the 348,000 new houses built in the United Kingdom in the year ending March 31st last, "90 per cent. were within the reach of the wage-earning class." How Mr Chamberlain would interpret the phrase "within the reach of the wage-earning class," we do not of course know. But it is merely fantastic to suggest that 90 per cent. of the houses built last year were available to let at a rent within the means of the average working man. The poorer working man cannot buy his house, even with the assistance of the building societies; and houses to let with a rateable value of more than £13 (£20 in Greater London) are beyond the means of all but the better-paid worker. Yet of the 286,050 unsubsidised houses built by private enterprise in England and Wales during the year in question, only 33,103, according to the Ministry of Health report, were houses to let of a rateable value of less than £13. From what source does Mr Chamberlain obtain his 90 per cent.? Another somewhat misleading statement is that of Mr Elliot that 19s. bought as much food in the first nine months of 1935 as 20s. in the first nine months of 1931. Mr Elliot did not say that the index of food prices was falling in 1931 and has been rising this year; or that it is now as high as in the corresponding period of 1931; or that the commodities which have fallen in price since then are in most cases exactly those which have not been affected by his own restrictionist schemes. Indeed, throughout the election so far a markedly hypocritical attitude towards the economic recovery of the last four years has been apparent on both sides. The Opposition scarcely admits that there has been any recovery at all. And the Government ignores the part played by such factors as the abandonment of the gold standard in 1931. Altogether the present election is producing its full quota of complacency, delusion and self-praise.

* * *

Miners and Owners.—There is as yet no sign of any weakening in the determination of the miners to press for an increase in wages. Fuller information was forthcoming this week about the owners' scheme for establishing central selling organisations by next July. An organisation for the complete control of the sale of coal will be set up in each district, with co-ordination between districts through the Coalowners' Central Council. All seventeen districts, including Northumberland, have now signified their assent to the Secretary for Mines. The new selling schemes will follow the model of that established in Lancashire and Cheshire last July. This scheme provides for a single selling agency. The various collieries sell exclusively to the executive board established under Part I of the 1930 Coal Mines Act; and evasions of the minimum price are consequently impossible. There are separate minimum prices, however, for each class of coal. The Board also controls distribution and transport arrangements, and fixes standards of quality in production. Unquestionably the extension of this scheme to the other coalfields will be a valuable and important step forward. The coal industry suffers from surplus capacity; it has been peculiarly unsheltered from the economic blizzards of recent years; it pays a distressingly low wage; and finally it is itself faced with important semi-monopoly buyers. The general adoption of central selling agencies should, therefore, in this instance, lead to a justifiable improvement in the industry's position. Unfortunately, however, the mere hope of such improvement will not satisfy the miners, who have already waited long and patiently for some alleviation of their plight. It is good news that the Mining Association met representatives of the Mineworkers' Federation on Wednesday to explain the new selling plans. But despite this evidence of a slightly more conciliatory attitude, the Association still refuses to discuss the wage issue with the Federation. The Federation have consequently announced that next week's strike ballot will not be cancelled. Is it now beyond the power of the Government to give some tangible and concrete promise of wage concessions, perhaps to be made simultaneously with the institution of selling agencies next July? If such a promise were made, the miners would be well advised to hold their hand till the summer. If it is not, however, nobody can be surprised if they vote next week for a strike.

Road and Rail Development.—Considerable capital expenditure on both roads and railways has been announced by Government spokesmen in the course of the week. Last week Mr Chamberlain informed the nation that the Government were "embarking on a five-year road plan which would involve the expenditure of no less than £100 millions." Mr Chamberlain did not state whether the whole £100 millions was additional to normal road expenditure, nor did he say whether it excluded expenditure by local authorities. If the total were "inclusive" and not "additional," it would scarcely be on a greater scale than that adopted in the last few years, although the volume of road traffic has increased by nearly 50 per cent. since 1931. Mr Hore-Belisha has since stated that the £100 millions is "exclusive of certain large schemes such as the Severn Bridge scheme, which would cost another £3 millions." He also added that he had already approved this year grants for schemes costing £21,500,000. This in itself indicates that the £100 millions five-year plan is nothing revolutionary, but rather a continuation of the somewhat more liberal public works policy that the Government has pursued during the past eighteen months. Meanwhile the railways are to spend £30 millions on reconstruction and improvements; and the Government is to guarantee the principal and interest of a loan. The financial aspects of this scheme are discussed in an Investment Note on page 916. Several of the schemes are of considerable importance. They include the reconstruction of stations and the building of new lines, rolling stock and locomotives. The L.N.E.R. is to electrify the line from Sheffield to Manchester, and the Southern the lines from Surbiton via Guildford to Portsmouth, from Brighton to Portsmouth, from Dorking to Arundel, from Sevenoaks to Hastings, and from Gravesend to Chatham. This in itself is the most ambitious single scheme of main-line electrification that the Southern has yet undertaken. It will leave every main line from Hastings to Portsmouth electrified. Here again, however, it is not to be supposed that *none* of the schemes specified would have been undertaken without Government guarantee, although a Press statement on behalf of the Railway Companies' Association suggests that the present initiative came from the Government's side. The reconstruction of stations, locomotives, etc., probably represents a hastening of inevitable measures; and the Southern has long been known to be proceeding steadily with its electrification plans. Nevertheless, the new road and rail programmes represent at least some advance towards a vigorous policy of national development. Taken together with last summer's London Transport scheme, and with the continuance of the housing boom, they should go some distance to sustain the recovery movement. We welcome the conversion of the Government to the policy of national development so long advocated in these columns—even if it has taken the imminence of a General Election to make that conversion a reality.

Advance and Halt in Abyssinia.—On the northern front in East Africa the long-delayed Italian advance, launched last week-end, was brought to a temporary halt, some miles short of Makalle, in the middle of this week. Though the advance was resumed on Thursday, the occupation of Makalle had not been announced when we went to press. It is clear that the combination of *terrain* with distance is increasing the technical difficulty of the Italian campaign by geometrical progression. It would even appear that General de Bono has decided not to risk an encounter between the Italian infantry and the hitherto elusive Abyssinian forces unless he can move his infantry forward with a screen of tanks in front and a column of lorries in the rear. This involves road construction, and roads mean time—pending the Italian army's arrival, some sixty miles south of Makalle, in country where no amount of time will enable the Italian engineers to make a way for tanks and lorries. Meanwhile, we may ask on whose side time is working. It may help the Italians in so far as it exhausts the rations and the patience of the Abyssinians. The Emperor, however, must have counted on his own ability to continue his Fabian tactics. Provided he can keep his own troops calm and fed, time will eventually tell against an enemy whose results must be achieved before he feels the pinch of sanctions and the downpour of the next spring rains.

* * *

Egypt and Britain.—Incredible as it sounds, there seems to be a real danger that the blunder which British statesmanship committed towards Egypt in 1919 may be on the eve of repetition in 1935. The British occupation of Egypt has now lasted for more than half a century without being converted into a freely negotiated treaty-relationship. The inexorable facts of geography involve Egypt in any crisis affecting the British Empire in the East. To-day, Egypt is threatened with implication in political and military situations which may touch her vital interests, without having a voice in the control of her own destinies. In 1919, the British Government refused to consent to the representation of Egypt at the Peace Conference; and the result was the Egyptian rising of 1919 and a decade of unsuccessful attempts to repair the damage. The wheel has come round full circle to-day. The Egyptians have shown an honourable scrupulousness in refraining from taking advantage of present British difficulties. So far from having responded to Italian blandishments, they have been co-operating sincerely and effectively with the United Kingdom and with the other States members of the League. But they have, quite reasonably, made it clear that they do not at all want to be caught in the same situation for a third time. They desire an Anglo-Egyptian settlement now on a fair basis of give-and-take. At this precise instant comes a press message from London: "The moment is inopportune . . . Egypt must not seek to take advantage . . ." Though Egypt has, not unnaturally, assumed that this message conveys a semi-official snub from Downing Street, for our part we prefer to find its source in another capital—so perfectly does it suit Signor Mussolini's book. We anxiously await Sir Samuel Hoare's *démenti*; but that is not enough in itself. We made a mutually satisfactory treaty with Iraq; can we not do the same with Egypt? Surely, a Minister who forced the India Bill down the Die-hards' throats can make them swallow justice for Egypt!

* * *

Plebiscite in Greece.—The plebiscite in Greece on the issue of Monarchy *versus* Republic was held last Sunday according to plan. The official results show a majority in favour of the Monarchy which is overwhelming. The figures are 1,491,992 for the Monarchy, 32,454 for the Republic, and 3,268 spoilt voting papers out of a total of 1,527,714 votes cast. If these figures are correct, how can the issue have ever been a burning question of Greek domestic politics? On this showing, the Republicans are as minute and exotic a minority in Greece as the Mormons in the United States. How can these *rara aves* have made a formidable rebellion as lately as last March? By what means can they, even momentarily, have captured the best part of the Greek fleet and have made themselves masters

of Crete and Macedonia? And how were they able to poll more than twice as many votes as their Monarchist opponents in 1924, on the last occasion when a plebiscite on this issue was held? Is there a large floating vote which is given alternately to whichever faction happens lately to have been out of power and therefore exempt from unpopularity? On the contrary, the average Greek citizen is apt to be indelibly dyed with either a Republican or a Monarchist colour. Another possible explanation might be that the poll, this time, was very light, and that potential Republican votes were not recorded. But comparison with other polls suggests that the voting, on the contrary, was exceptionally heavy, even allowing for the fact that members of the armed forces were allowed to vote this time. The figures are still more extraordinary in detail than in the aggregate. We are asked to believe, for example, that the vote in favour of the Monarchy has been 124,497 to 2,154 at Salonika and 50,655 to 1,214 in Crete! These figures would have been difficult to swallow even if the polling day had not been anticipated by General Kondylis's Monarchist military *coup d'état*. We should have been sceptical of such results as these, even if the plebiscite had been conducted under the scrupulously neutral regime of M. Tsaldaris. As it is, we can only suggest that King George II, had he been consulted beforehand, would have preferred to see the Republican vote put into six figures instead of five. The transfer of one or two hundred thousands would have made the official results more convincing.

* * *

Japan and Northern China.—In the Far East, the Rising Sun continues to shine. On the 29th of last month, when the League of Nations Co-ordination Committee was on the eve of reassembling at Geneva to grapple with the Italo-Abyssinian crisis, the Japanese consular and military authorities in Eastern Asia were presenting simultaneous protests—against alleged anti-Japanese activities—to the representatives of the Chinese Government in Peiping and Tientsin. This double *démarche* reflects the perpetual struggle for power between the civil and military arms of the Japanese Government. No doubt it will count as a victory for the civilians that they were allowed to take part in the proceedings at all. The Foreign Office spokesman at Tokyo has described the words uttered as having been "warnings" and "not threats." But whatever they are to be called, they represent another step in the extension of Japanese control over Northern China and Eastern Inner Mongolia. The scope of these unthreatening warnings is reported to cover the eradication of anti-Japanese movements, the establishment of economic co-operation between Northern China and Manchukuo, and the prevention of Communism in the regions adjacent to Manchukuo. The situation can scarcely have been improved by the attempt on the life of the Chinese Prime Minister and Foreign Minister, Mr Wang Ching-wei, made at Nanking on November 1st. Happily, the victim of the crime seems likely to recover; but the would-be assassin was an ex-non-commissioned officer of the Nineteenth Route Army, which put up a stubborn defence against Japanese aggression at Shanghai in 1932. Mr Wang Ching-wei's aggression, in the criminal's eyes, was his policy of attempting to place footing. But what other policy can any Chinese Government pursue? The annexation of China piecemeal, nevertheless, is not the right solution for Japan's problems, any more than the conquest of Abyssinia is the right way out for Italy. The urgent task for international statesmanship is to find some equitable way of mitigating inequality as between the "Haves" and the "Have-Nots." It is no solution to throw the weak States to the wolves.

* * *

State Elections in America.—The first Tuesday in November is designated by the United States Constitution as Election Day. Last year there was a Congress to elect; next year there will be all the excitement of a Presidential contest. This year there were only a number of State elections. In the United States, more than in any other country, there is a world of difference between national and local politics, but this week's results, nevertheless,

The MERCANTILE BANK of INDIA LIMITED.

Branches and Agencies throughout the East

EXECUTORSHIPS AND TRUSTEESHIPS
ACCEPTED

have some bearing on the larger contest of next year, for the two large and crucially important States of New York and Pennsylvania were involved. New York State politics are a constant struggle between the Democratic City of New York and the Republican "up-State" districts. The constituencies for the State Assembly are so arranged as to give a definite advantage to the Republicans, and it is only at the peak of a Democratic tide that the Democrats can secure a majority. There was such a tide in 1932, but it is now ebbing, and at this week's election the Republicans resumed their normal majority. But for the election of the Governor of the State it is the total vote throughout the State that counts, and here the Democrats usually have, and have retained this week, a comfortable majority. In the Presidential election, too, New York's 47 votes (out of a total for the Electoral College of 531) are cast *en bloc* for the party with a majority, however small, of the State's total vote. So that, judging by this week's vote, Mr Roosevelt can be fairly sure of those 47 votes next year. The significance of Pennsylvania is that it is the second largest State, with 36 votes, which, with the sole exception of 1934, has a consistent Republican record. In the Congressional election of last year the Democrats captured the State for the first time. The interest of this year's election lay in the Democratic attempt to increase their gains by winning the Mayoralty of Philadelphia. In this they have failed, but it does not necessarily follow that they have also lost the State as a whole. The results of these two, and other State elections, have pleased the Republicans; and Wall Street, which is as Republican as Throgmorton Street is Conservative, has expressed its gratification by a substantial rise. But it is doubtful whether the President is really endangered. He will not do as well in 1936 as in 1932, just as the British Government will not do as well in this year's election as in 1931. But he still has a very much better chance of a majority than anybody else.

* * *

Goods Transport in Britain.—This week's excellent railway traffic has quickened hopes of recovery. The trend of railway freight traffic has long been considered as a fairly accurate guide to business conditions in this country. But the significance of this index has been considerably reduced by the increasing proportion of goods carried by road vehicles. The accompanying chart shows changes in the relationship between railway and road traffic, and general business activity in the United Kingdom during the past ten years. The

ECONOMIST INDICES OF BUSINESS ACTIVITY

general trend of economic activity in this country is represented by the annual figures of our new Index of Business Activity. The scope and method of construction of the new index were explained in the Trade Supplement to the *Economist* of June 29th. The indices of merchandise on railways and of commercial road vehicles in use are two of the fourteen constituents of the Complete Index of

* * *

The Municipal Elections.—The Municipal Elections were held in England and Wales on November 1st, in the shadow of the General Election. The results in the more important towns show small gains by the Conservatives and equally small losses by Labour, Liberals and Independents. The number of changes, however, was very small in comparison with those of other recent years. One-third of the members of borough councils retire each year, and the heavy Labour gains of the last two years were the reflection of their equally heavy losses in 1930 and 1931. This year, however, the seats being contested were those filled in 1929, when Labour made heavy gains, and in 1932, when there was no change on balance. Bearing in mind the gulf that separates municipal from national politics and the very slight changes shown by the results, the municipal elections provide very few "pointers" to the issue of the major conflict next week. Moreover, the Scottish elections, held three days later, showed net Labour gains almost equal to the net losses in England. In some individual municipalities the election brought considerable changes. The most interesting of these was in Leeds, where the Labour Party lost the majority it has had for the past two years. Labour in Leeds has been chiefly notable for its really vigorous and imaginative housing policy, and if the new Conservative majority were to abandon the programme that has been drawn up it would be a matter for regret far beyond the boundaries of the city.

* * *

Employment in October.—The latest returns of the Ministry of Labour reveal an increase of 14,000 in the number of insured persons aged 16 to 64 in employment in Great Britain during October. The total has risen to 10,492,000. The rise, however, is no more than a seasonal movement, due to greater activity in almost all branches of industry, except building and allied industries, and in the trades dependent on holiday activity, such as hotel, boarding-house and distributive services. The following table shows changes in unemployment in different industries.

INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Oct. 22, 1934	Sept. 23, 1935	Oct. 21, 1935
Coal-mining	281,089	243,105	219,043
Iron and steel manufacture	43,428	35,772	35,657
Engineering	97,863	84,750	79,802
Shipbuilding and ship repairing	71,509	63,833	62,187
Motor vehicles, cycles and aircraft	25,517	23,186	21,017
Cotton	109,159	97,501	84,907
Woolen and worsted	32,825	23,453	18,121
Hosiery	11,013	9,019	6,868
Boot and shoe	22,117	18,945	16,437
Building	160,132	138,790	142,315
Shipping service	46,870	38,373	41,816
Hotel and boarding-house service	71,747	59,459	73,627
Distributive trades	220,384	207,843	212,306

All persons on registers 2,119,635 1,958,610 1,916,390

The total number on the registers on October 21st was 42,220 less than on September 23rd and 203,245 less than a year earlier. The number of unemployed juveniles rose by 1,424, while the numbers of men and women fell by 173,707 and 30,962 respectively in the year. During October, there was actually an increase in the number wholly unemployed. Workers in industries which show a seasonal decline in the autumn fall into this category, whereas many unemployed coal and cotton operatives are registered as "temporarily stopped." Increased unemployment was registered, geographically, in London and the Southern divisions, but all other districts—even South Wales with its coal strikes—showed improvement.

Sterling and International Prices.—The sudden rise in world wholesale prices due to fears of war is now at an end, and prices are now returning to a more natural level. During the past fortnight the *Economist's* complete British index number has fallen by 0.6 per cent., while British primary products have fallen by 2.2 per cent. The decline is very marked in the case of food prices. American primary products have fallen by 0.7 per cent., and the complete Irving-Fisher index number has fallen by 0.4 per cent. On the Continent, the French and German index numbers are unchanged, but there is a slight drop in the Italian figure. Since the middle of August, British prices have risen by about 5.5 per cent. for all commodities and by about 4.5 per cent. for primary products. American wholesale prices have risen only by about 1.5 per cent., both for all commodities and for primary products. French wholesale prices have risen by 4.5 per cent., German by 0.5 per cent., and Italian by 7.5 per cent. The Italian advance is exceptional, but the other movements give some indication of how prices have been increased through the autumn revival in trade, apart from war fears.

Details of the group indices comprising the complete

Economist index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Oct. 9, 1935	Oct. 23, 1935	Nov. 6, 1935
Cereals and meat	64.5	72.8	72.7	70.2
Other foods	62.2	61.5	61.9	60.9
Textiles	43.7	59.8	60.8	61.6
Minerals	67.4	83.7	82.4	83.6
Miscellaneous	65.8	77.6	78.5	78.1
Complete index....	60.4	71.2	71.5	71.0
1913 = 100	83.1	98.0	98.4	97.8
1924 = 100	52.2	61.5	61.8	61.3

There has been a sharp and general fall in grain prices. Meat prices are irregular, but grain is cheaper. In the other food group, butter has fallen heavily and tea is also cheaper. Several other items register small declines. Among textiles, Egyptian cotton is again higher and wool is firmer. There was a fairly big rise in flax, but a reaction in hemp and jute. In the minerals group there was a seasonal rise in house coal, and a general advance in non-ferrous metals. Changes in miscellaneous materials include declines in leather and linseed oil, and a small advance in rubber.

The Volume of Overseas Trade.—The quarterly returns of the volume of British overseas trade, published recently in the *Board of Trade Journal*, show that the rate of increase in the volume of our exports continued to decline in the third quarter. The increase in the figure for the corresponding period a year ago fell from 11.9 per cent. in the first quarter to 8.2 per cent. in the second quarter and 6.1 per cent. in July-September, 1935. The volume of retained imports in the last quarter was slightly higher than in July-September, 1934. The average prices of exports have shown little change since 1934, but those of imports were somewhat higher than a year ago:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS									
Period	Retained Imports				Exports of Domestic Produce				
	Declared Values	Index of Average Values	Values in terms of 1930	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930	Index of Volume	
	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100

3rd "	168.4	74.5	226.0	94.5	105.3	82.1	128.3	89.9	

As compared with the corresponding quarter a year ago, both the volume and the average prices of retained imports of raw materials and articles mainly unmanufactured in the third quarter were slightly lower than in 1934. On the other hand, imports of food, drink and tobacco rose by 0.2 per cent. in volume and by 2.8 per cent. in price during this period. The rise in prices was most marked in the case of dairy produce and fresh fruit and vegetables, amounting to 13 per cent. and 7.6 per cent. respectively. As far as retained imports of articles wholly or mainly manufactured are concerned, these showed an increase of 4.5 per cent. in price and one of 4.0 per cent. in volume. Larger purchases abroad of manufactures of wood and

timber, cutlery and hardware, cotton and woollen and worsted yarns and manufactures, chemicals, oils and fats, leather and leather manufactures, paper and cardboard were mainly responsible for this increase. While the average prices of British manufactures exported remained practically unchanged, they registered an increase of 6.0 per cent. in volume over the third quarter in 1934. The expansion in the volume of British exports was shared by most industries. But exports of rubber manufactures, coke and manufactured fuel and cotton yarns and manufactures registered a decline. The recovery of British exports is encouraging, but it must be remembered that the volume of exports in the last quarter was still nearly 23 per cent. below the level of 1924.

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 12.3 per cent. during October, following a rise of 5.4 per cent. during September. The current figure of 97.2 compares with 87.5 in October last year and 84.1 in October, 1933. Details of the index number are as follows:—

	Average, 1913	October, 1934	August, 1935	September, 1935	October, 1935
European waters.....	110.0	87.8	88.5	92.8	106.4
North America	113.1	77.4	78.2	78.7	87.1
South America	123.4	78.1	82.3	82.3	87.7
India	106.3	96.3	83.3	88.9	110.0
Far East and Pacific	117.4	91.8	77.7	90.4	96.6
Australia	127.9	83.7	82.8	86.4	95.3
Total	116.3	87.5	82.1	86.6	97.2

Fears of war have led to a sharp rise in freights, which has spread to all markets. The Welsh coal ports state that there is now a scarcity of tonnage, and at Newport coal freights to Egypt have risen by nearly 50 per cent. Business at Swansea for the Mediterranean and the Bay is very limited, but rates are definitely higher. Liverpool reports a good demand for outward coal freights, and full rates have been obtained for homeward tonnage from the River Plate. North American rates are higher. Rates on the North-East

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Coast are also higher, but Newcastle noticed a slight tendency towards easier markets at the end of the month. Glasgow reports a shortage of tonnage to load coal, coupled with an advance in rates for European waters. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	99.1	+11.4	South America :	68.2	+4.0
Bay—outwards	121.1	+7.3	Outwards.....	107.1	+6.7
Bay—homewards.....	95.2	+8.1	Homewards.....	94.7	+14.7
Mediterranean :			India—outwards.....	125.3	+27.6
Outwards.....	134.7	+34.3	India—homewards.....	96.6	+6.2
Homewards.....	89.2	+9.3	Far East, etc.	95.3	+8.9
North America	87.1	+8.4	Australia		

Expressed as a percentage of the average for 1913, the complete figure of our index number for October is 83.5, compared with 74.4 for September and 75.2 for October, 1934.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

FRANCE

THE EFFECTS OF M. LAVAL'S POLICY

DESPITE the issue in the last five months of no less than 500 decree-laws, the general economic situation of the country has not radically changed. This does not mean that the work done is without importance. Certain administrative measures, such as the reform of municipal finances, and certain commercial legislation, are welcomed as likely to counteract various forms of laxity which have developed recently. Other essential measures, such as the reorganisation of the wheat and wine markets, have increased purchasing power in some districts. A certain, though scarcely perceptible, revival of business exists, in addition to the modest recovery of the tourist industry. Slightly less unfavourable reports are also being received from various trades, including coal mines, textiles, warehouses, etc., and the situation has benefited from the present large public works expenditure and also from Italian orders.

It is nevertheless to be noted that two major objectives of the Laval programme have not been attained: the lowering of the rate of interest and the lowering of Customs duties. French prices remain too high.

This does not necessarily mean that a new crisis is imminent. Delicate as it appears, the Treasury situation is being ensured for a time by State loans which meet with

a ready reception on a market not tapped for many months. The Opposition has no financial plan which the Radical-Socialists could support. Thus when M. Laval goes on Friday before the Finance Committee of the Chamber to emphasise what he regards as the danger of the modifications which the Radical-Socialists intend to introduce into the decree-laws, he will no doubt argue that his policy has been in line with that of his predecessors. He will add, moreover, that he is ready to "humanise" certain decree-laws. M. Herriot has already made a strong protest against the attitude of the Radical-Socialist members of the Committee, and M. Malvy, its president, has declared that the Committee will not be "intransigent." Concessions will thus come from both sides in order to secure a rapid voting of the Budget, and the Cabinet seems consequently to be safe at least until the end of the year.

RUMOURS OF DEVALUATION

As to the future, the situation will be influenced by two main factors: first, the evolution of foreign prices and of economic recovery in England and America; and, secondly, the proximity of the Chamber elections. The decline of *rentes*, which followed the recent motion of the Finance Committee, has reawakened rumours of devaluation, and the market is buying foreign stocks. The Socialists are emphasising the "failure" of deflation, while the Communists declare that industrial leaders, after the Laval deflation, are now in favour of a new amputation of the franc.

Professional opinion, without actually recommending devaluation, is pointing to the intolerable burden of the public debt, at the present value of the franc, with an emphasis which suggests conversion. On the other hand, attention is being directed to the rising trend of American and English prices. It is argued that the Belgian experiment has been far from convincing; and even those favourable to an "alignment" of currencies always emphasise the absolute necessity of carrying out an ordered devaluation in the frame of an international agreement. On the whole it seems that no final decision will be reached just yet, since the professional case for devaluation is being countered by social and political fears.

PARIS, November 7.

GERMANY

HEAVY INDUSTRIES AND ITALY

THE heavy industries are still comparatively well occupied, and the special Christmas branches have done well. The international situation has induced a new reserve among exporters, who surmise that prolonged sanctions may cause permanent changes in the distribution of international trade. The prevailing view is that sanctions, owing to their partial character, will have to be imposed for a long time before they can yield any political consequences; and it is believed that their effect cannot be estimated independently of the military situation in Abyssinia. The postponement or failure of the Italian invasion, it is held, would be a more potent influence than mere economic pressure. German newspapers give prominence to Italian Press attempts to play Germany off against Great Britain and France; but they show in this matter a certain reserve. It is held that whatever the outcome of the war, Italy's military and financial weakness will be so serious that her friendship will have little political value.

The Railway Corporation's return of car-loadings in September shows a seasonal increase, compared with August, of 7.2 per cent. This is larger than the increase in September, 1934. After paying its way, including fixed charges, for some months the Corporation again has a deficit in September. The deficit on the first three quarters of the year is Rm. 117 millions. The engineering industry is reported to be better occupied. Production of private motor cars in January-September inclusive, was 157,000, as against 117,000 in the same months of 1934, of lorries 28,000, as against 19,000, and of bicycles 89,000, against 69,000. Exports of machinery in September declined, and in the first three quarters of the year amounted to only 179,000, or approximately 20,000 tons a month, as against a highest average monthly figure of 58,000 tons in 1930. The state of the international steel market is considered promising. The price advances in England, and those made by the International Wire Syndicate, are also attracting attention.

FOOD POSITION WORSE

The October cost-of-living index number is 122.8, against 123.4 for September. The October index of food prices is 119.6, and shows a decline of $3\frac{1}{2}$ per cent. since August, and a decline of 1 per cent. since August, 1934. These figures are contrary to the private experience of a general rise in food prices. They may be in part explained by the retention in index calculations of certain official maximum prices which are not observed by dealers, and in particular by the retention of official prices for certain food products which can scarcely be bought at all. Former consumers of pork, for instance, complain that they must either go meatless or pay for much more expensive meats whose price is not controlled.

In general the food position has become worse. Butter-cards, ostensibly private but in fact officially tolerated or encouraged, are in increasing use. Butter producers will henceforth be required to restrict their deliveries to the quantities actually delivered in August, and the same rule is to be imposed on wholesalers. The right of both to

despatch butter by post has been restricted. The official price supplements for quality wheat have been amended with the object of encouraging production of the hard wheat demanded by bakers, which was formerly imported.

On November 4th a new commercial agreement with Poland was signed, on the basis of most-favoured-nation treatment, and with provision for increased German-Polish trade. Payment is to be by clearing. Both Governments will establish committees, which will be in touch with one another, for the removal of difficulties in the execution of the agreement. The agreement is for a term of one year with provision for its automatic extension. The recently expired "compensation" agreement of October, 1934, and other special regulations hitherto in force, will disappear. Apparently equilibrium in the trade balance is aimed at.

After the October month-end settlement, the money market became liquid, partly owing to the repayment of a large sum of Gold Discount Bank promissory notes. Money was reinvested in the promissory notes and in the Reich Treasury bills and Treasury bonds, and there was even a shortage in the supply of short-term securities, and therefore a flow of superfluous cash to the Diskont-Kompagnie. This bank has adopted for its short-term deposits a new system of calculating interest which will have the effect of checking withdrawals towards the end of the month, and will tend to moderate fluctuations in supply and demand, and therefore relieve the Reichsbank, which was formerly almost the only source of supply for the month-end market. Day loans this week are nominally $3\frac{3}{4}$ per cent., in practice often lower. The market discount rate, which was raised last week, is again back to 3 per cent.

The Reichsbank's return for October 31st shows an increase of Rm. 434 millions in credits and investments, as against an increase of Rm. 326 millions in the same week of 1934. There was a large rise of Rm. 50 millions in the holding of Reich Treasury bills. An increase of Rm. 60 millions in "other assets" shows that the Reich, for the first time for many months, has been making use of its operating credit.

UNDISCLOSED BUDGET SECRETS

The cash position of the Reich has for months been a secret. As long as the Budget was public, the Finance Ministry appended to its monthly accounts of budgetary revenue and expenditure tabulated statements of the cash position, showing the use of receipts from short-term credit operations covering carried-over and current deficits, and also showing the cash balance. Even before the Budget of 1935-36 had been suppressed, the monthly accounts (for 1934-35), and with them the cash statements, ceased to appear; and there is now no public information whatever about current Reich finance. The latest official account, for August 31st, puts the total Reich debt at Rm. 13,533 millions, which is Rm. 1,800 millions more than in August, 1934. Allowing for a decline of around Rm. 100 millions in the foreign debt, this return admits new borrowings during the year of Rm. 1,900 millions. But the return, as usual, contains only Rm. 400 millions of Reich bills. The continued exclusion of very large bill debts contracted for "work-creation" makes the whole return misleading.

An official analysis of company profits, covering 2,867 companies with 89 per cent. of all company capital, shows that 1,166 companies paid dividends in 1933-34, as against 983 companies in 1932-33. But the ratio of dividends to net profits fell from 83 to 74 per cent.

BERLIN, November 6.

SWITZERLAND

GOVERNMENT LOSSES IN THE ELECTION

THE elections on October 27th did not bring any important changes in the composition of Parliament. The Council of States, or First Chamber, has hardly been modified, and the Socialists only succeeded in conquering two seats in it. The Socialists also failed to increase their representation in the National Council or Second Chamber. They made pro-

gress, however, in the Cantons of Basel Stadt, Basel Land, Thurgau, Berne and Valais, in each of which they won one seat; but they lost an equal number in the Cantons of St. Gallen, Grisons and Geneva. They also lost two seats in Zurich and one in Geneva, which are regarded as Socialist strongholds. The Left Wing—Socialists and Communists—now hold 52 seats out of a total of 189.

The Radicals, Roman Catholic Conservatives and Agrarians—who form the Government Parties—lost altogether 13 seats, but nevertheless retain 111 seats out of 189. The Liberal representation is unchanged.

A success was won at the election by a new group—whose leader is Herr Duttweiler, a Zurich business-man—which secured 7 seats. Herr Duttweiler is the creator of the "Migros," a commercial undertaking which sells all sorts of foodstuffs and goods by units of price instead of units of weight. The "Migros" has very few shops, but its motor lorries distribute in a wide area. Herr Duttweiler is also the creator of the so-called "Hotel Plan," providing for all-inclusive journeys to Switzerland and holidays there. Another striking event was the success of M. Musy, a former chief of the Federal Finance Department, who was returned by the Fribourg Canton. M. Musy resigned last year when he found it impossible to carry out his economy programme.

NEW BUDGET DEFICIT

The real potentialities of the new Parliament will be made clear within a few weeks, when it will be called upon to discuss the Budget for 1936, which has just been published. Revenue for the coming year is estimated at 419,400,000 francs and expenditure at 496,500,000 francs, leaving an estimated deficit of 77,100,000 francs. Revenue shows a drop of about 17 millions and expenditure a rise of 18 millions over the 1935 estimate. The interest on the Public Debt will absorb 90 millions, while the annual charge for the redemption of the Debt remains at 33 millions. The sum devoted to subsidising cereal production—which is controlled and financed by the Government—is to reach 39 millions. Some 7 millions will be spent on insurance for State officials and 8 millions is to be paid into the reserve fund for the financial reorganisation of the Federal Railways. Some 98 millions (69 millions in 1935) is to be devoted to national defence, of which 27 millions will be spent on armaments and equipment and 10 millions on the purchase of horses. Unemployment insurance, extraordinary assistance to the unemployed and the various schemes set up for combating unemployment, are to cost over 42½ millions; 23 millions is to be spent on social insurances and about 30 millions on subsidising agriculture.

The 1936 deficit of 77 millions—to which should be added another 30 millions, representing the deficit on the Federal Railways—is to be mainly met by the imposition of new taxes. Economies of about 21 millions, however, are also proposed. They are to be obtained by means of a cut in the salaries of State officials—which were reduced last year by 7 per cent.—and by general economies amounting to 11 millions on ordinary administration expenses. Some 32 millions is also to be secured from the tax on sugar and petrol; 10 millions from an increase in the rates of the "Crisis Tax"; 5 millions from a tax on bank deposits; 40 millions from a new tax on the receipts of industrial, commercial and banking undertakings; and 3 millions from the suppression of postal exemption granted to the Cantonal Governments. Altogether some 90 of 100 million francs will be raised in these ways.

GENEVA, November 3.

FINLAND

RECORD GOLD RESERVE

IN August and September the Bank of Finland increased its gold reserve, which had in general experienced very slight changes, from 324.8 to 460.7 million marks. The gold reserve has now reached a higher point than ever before. The gold recently purchased is being kept abroad for the present. The increase in the gold reserve was counterbalanced in August by a drop in the reserve of

foreign currency of 110.6 million marks, but in September the latter increased again by 17.2 millions and during the first fortnight in October by 8.5 millions to 1,267.9 million marks. The corresponding amount a year ago was 1,164.5 millions and two years ago 891.3 millions.

Credits granted by the Bank of Finland were reduced in September by 29.2 to 748.1 million marks, compared with 807.1 millions a year ago. The note reserve grew in September by 121.1 to 963.9 million marks. Thus the ordinary cover has increased to 92.0 per cent. of all liabilities payable on demand in comparison with 87.5 per cent. a year ago and 76.3 per cent. two years ago.

INCREASE IN IMPORTS AND EXPORTS

Foreign trade has been very lively. During the completed three quarters of this year the volume of imports was 9 per cent. larger than last year and 79 per cent. larger than during the period of greatest depression. The increase in exports was less, amounting to 3 per cent. and 42 per cent. respectively. The value of foreign trade is shown in the following figures:—

	Million marks					
	Imports 1933	Imports 1934	Imports 1935	Exports 1933	Exports 1934	Exports 1935
August.....	389	409	457	579	748	723
September....	379	426	468	563	620	601
Jan.-Sept....	2,768	3,440	3,819	3,780	4,497	4,412

The considerable increase in the value of imports, combined with a slight reduction of exports, has resulted in a smaller export surplus. At the end of September the exports surplus amounted to 593 million marks, as against 1,057 and 1,012 millions respectively in 1934 and 1933. Such a tendency is natural, seeing that imports have risen, partly owing to increased consumption and purchasing power among large classes of the population, and partly owing to the present investment activity in industry.

Industrial production increased in volume (1926 = 100) from 137 during the second quarter of 1935 to 139 during the third quarter; and was consequently slightly larger than during the corresponding quarter last year, when the index stood at 135. Owing to the downward tendency in prices, however, the index of the value of industrial production was only 114 last quarter, compared with 117 a year ago. In general, home industries, with the exception of the textile industry, record a great improvement, the index of volume for the third quarter being 146, as against 138 during the second quarter and 125 a year ago. Owing to the depressed state of the timber market, however, the sawmills have reduced their output, which has left its mark on the index of production for the exporting industries. Their volume of production was 130 during the third quarter of this year, as against 149 last year; and the value has decreased even more.

HELSINKI, November 1.

JAPAN

FURTHER RISE IN COMMODITY PRICES

MARKED improvement, partly seasonal, is evident in many home trade statistics. The Bank of Japan's index number of wholesale prices for September advanced a further 3.3 per cent. on the month, bringing the total up to 188.9, the highest since June, 1930. Output of cotton yarn during September totalled 115,708,000 lbs., an increase of 2,845,000 lbs. over August. Rayon yarn production during last month, however, amounted to 17,490,000 lbs., or 328,000 lbs. less than in the preceding month, owing to the restriction and the short month. The aggregate value

of all shares listed at the Tokyo Stock Exchange on October 1st was up by 216.6 million yen, or 3.5 per cent. as against a month ago.

The trade returns for September are distinctly encouraging, so far as exports are concerned, but the import figures are far less satisfactory. Exports, at 227,389,000 yen, were 56,286,000 yen, or 32.9 per cent., in advance of those of September, 1934, while imports, at 135,711,000 yen, were down by 20,275,000 yen, or 13 per cent. The active balance of trade for the month amounted to 91,678,000 yen, as against 15,117,000 yen last year. The import surplus for the first nine months of the year has thus been reduced to the negligible amount of 17,584,000 yen, compared with 103,408,000 yen for the corresponding period of a year ago.

The Department of Agriculture and Forestry estimates the rice crop for the country as on September 20th at 60,564,000 koku, or an increase of 8,747,000 koku (16.9 per cent.) upon the actual yield of last year, but 440,000 koku (0.7 per cent.) below the five years' average. Another lean year is anticipated in North-Eastern Japan, where the crop failed last year. The Korean crop is reported to be somewhat better, and is officially placed at 17,815,000 koku, an increase of 1,098,000 koku (6.6 per cent.) upon the last year's actual yield. The wheat, rye and barley crops, however, have again been good this year. The total yield of wheat and allied grains for the country, excluding that of Hokkaido, amounted to 23,182,000 koku, an increase of 1,257,000 koku (5½ per cent.) as against last year, and 2,946,000 koku (14.5 per cent.) above the average for the last five years.

According to the report of the same Department, the output of spring cocoons totalled 44,211,000 kamme, a decrease of 4,178,000 kamme (8.6 per cent.) against last year, but its value was estimated at 162,099,000 yen, disclosing a considerable increase of 44,759,000 yen (38.1 per cent.). The estimated crop of summer and autumn cocoons was placed at 35,042,000 kamme, a heavy decline of 3,707,000 kamme (9.6 per cent.) upon the actual yield of a year ago. But their value is put at 157,689,000 yen, showing the remarkable advance of 71,181,000 yen (82.3 per cent.). The combined cocoon production for the year amounted to 79,253,000 kamme, valued at 319,788,000 yen, compared with 87,138,000 kamme at 203,847,000 yen for 1934.

INCREASED INDUSTRIAL PROFITS

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese joint-stock banks and industrial joint-stock undertakings, aggregate net profits of 250 banks for the first half of this year totalled 80,839,000 yen, a decline of 819,000 yen upon the second half of last year. The total net earnings of 1,000 industrial companies for the June half-year amounted to 385,150,000 yen, representing a substantial increase of 30,301,000 yen over those earned by the same concerns in the December half-year of 1934. The great majority of the trades, particularly breweries, sugar, iron and steel, machinery and tools, mining and electricity supply, show considerable increases in profits, while trusts, textiles, trading companies and stores, rubber and miscellaneous, disclose smaller earnings. The ratio of net profits to capital was 10.8 per cent., and that of amounts put to reserve was 3.15 per cent. of capital. In the preceding half-year the profit percentage was 10.2 per cent., and the reserve percentage was 2.85 per cent. The following table gives a comparison of profits in the last three half-years:—

(000's omitted)				
	No. of companies	First half year 1934	Second half year 1934	First half year 1935
		Yen	Yen	Yen
Banks	250	88,764	81,658	80,839
Industrial companies	1,000	304,188	354,848	385,150
Total	1,250	392,952	436,506	465,989

Out of the total, 62 industrial companies reported deficits for the June half-year, 1935, aggregate net losses amounting to 3,108,000 yen, as compared with 67 companies having the combined loss of 4,236,000 yen in the December half-year of 1934.

TOKYO, October 10.

ARGENTINA

NEW INTERNAL LOAN

A NEW internal loan, known as the "Credito Argentino Internal 4½ per cent., 1935," has recently been underwritten by a banking syndicate. The issue price to the public was 86.70 per cent. The total value of bonds issued was \$50,000,000, and the proceeds are to be used for public works. The Argentine public are becoming increasingly interested in internal bonds as an investment for their savings, and it is reasonable to suppose that, in the not very distant future, Argentina will endeavour to pay off her foreign indebtedness by means of internal loans.

An extremely interesting article has just been published in the *Argentine Economic Review* by the eminent Argentine economist, Dr. Bunge, on measures taken by Argentina to cope with the crisis. Dr. Bunge points out that throughout the last four years unemployment has never been really serious, as cultivation has not been reduced and industrial activity has actually increased owing to the various restrictions on imports. Dr. Bunge also gives some interesting figures of the tonnage and value of exports, comparing the five years from 1925-29 with 1930-34. Although the tonnage exported decreased only slightly during the latter period, the value showed an enormous decline, the figures being approximately \$4,400,000,000 in 1925-29 and \$1,800,000,000 in 1930-34. Statistics are also given showing the remarkable growth of local industries, which now employ 43 per cent. of the labour of the country, as against 22.6 per cent. employed in rural occupations. This increase is chiefly noticeable in the textile trade: there were 200,000 spindles in the textile trade in 1935, as against 60,000 in 1930; and of a total consumption of 15,000,000 kilos of woollen textiles, some 12,000,000 are now produced locally. The total production, importation and consumption per head of textiles in 1910 and 1933 is as follows:—

	Produced Locally	Imported	Total	Per Head
1910	1,400,000,000	862,000,000	2,262,000,000	343
1933	3,262,000,000	897,000,000	4,159,000,000	346

Between 1920 and 1927 consumption averaged over \$500 per head.

INCREASE IN IMPORTS AND EXPORTS

Although the weather has been more favourable recently, prospects are still not very bright, especially for wheat. The cattle situation has improved, however, as there is now ample pasturage owing to the recent rains.

The following figures show the balance of trade for the first nine months of 1934 and 1935.

	1934	1935	%
Imports	801,706,270	882,444,484	+10.1
Exports	1,100,478,313	1,181,932,470	+7.4
Exports Surplus..	+298,772,043	+299,487,986	+8.5

Imports according to country of origin in the same periods were as follows:—

	1934	1935	Percentage of Total
	\$	\$	1934 1935
U.K.	166,832,959	180,227,157	21.8 23.0
U.S.A.	110,980,530	121,649,127	14.7 15.3
Germany ..	74,070,643	72,163,668	8.7 10.2
Belgium	35,170,591	51,326,645	6.2 4.8
Brazil	34,106,627	38,276,293	4.6 4.7
Italy	51,622,943	36,348,066	4.4 7.1
France	38,203,698	36,204,257	4.4 5.3
Japan	15,423,509	35,594,264	4.3 2.1

The export surplus, which is still slightly greater than the 1934 figure, is below expectations, owing to the falling off in exports and the increase in imports during the last two months. Imports for September are the highest registered since 1931 both in value and tonnage. The only items which show a falling off in tonnage are tobacco, metals (excluding iron) and rubber. The values of imported

foodstuffs also show a decline as compared with 1934. The largest percentage increase in imports is in machinery, which is 56 per cent. higher than last year, and the largest actual increase is in the fuel and lubricants section with \$26,000,000 more than 1934.

BUENOS AIRES, November 1.

HONGKONG

THE BUDGET AND THE EXCHANGE RATE

HONGKONG is one of the more fortunate Crown Colonies in not having an unbalanced Budget. In the course of the post-war years surpluses have accumulated, and now amount to over \$12 millions. This is, of course, a very substantial reserve to meet contingencies, but the Secretary of State has ruled that it must not be allowed to fall below \$10 millions, and the Budget for 1936, as recently presented to the Legislative Council, requires the whole of the amount in excess of that limit. The estimates for 1936 with the revised estimate for the current year are as follows:—

	1936	1935
Revenue	26.6 millions	28.3 millions
Expenditure	29.5 "	28.4 "

The original estimate of the expenditure for 1935 was \$32.5 millions, but in view of the alarming falling off in revenue it was drastically reduced so as to avoid ending the year with a deficit. A further diminution in revenue is expected during 1936, and it will be seen from the above figures that a deficit of \$2.9 millions has been budgeted for. Over \$2 millions can be met from the surplus fund, and it is hoped that the remainder of the deficit will be extinguished by higher exchange, thus effecting a reduction in expenditure under the heading of sterling commitments. [Admittedly this amounts to a gamble in exchange, which by November looked like failing; for the Budget has been based on the rate of 1s. 8d., whereas the rate has now fallen to 1s. 5½d.]

The flourishing canvas-rubber shoe industry in Hongkong has been held up recently by what appears to be a policy of passive resistance on the part of the United Kingdom Customs authorities. When preferential rates of duty for Colonial goods were first introduced into the United Kingdom as a result of the Ottawa Conference Agreements, the Hongkong shoe qualified under Imperial Preference Regulations provided that it was certified to contain 25 per cent. Empire material and labour. There was no difficulty in complying with this regulation because the rubber used in manufacture here is imported from the Straits Settlements and the canvas from the United Kingdom.

In 1933 new regulations were introduced requiring a 50 per cent. Empire content in the case of shoes and certain other classes of Colonial goods. Costing certificates prepared by chartered accountants showed that the value of British raw material and labour expended in the Colony was considerably in excess of the required 50 per cent. In January of this year the Customs announced that, as from July 1st, the admission of the Hongkong-made shoe to preference would be subject to the submission of satisfactory costings in respect of each separate type of shoe, and costings prepared in accordance with the new requirements were sent by air mail to the Customs authorities on May 7th. No acknowledgment of these figures was received, and for over four months shippers were unable to ascertain from the Customs in London or from the Hongkong Government whether the costings were considered satisfactory and whether goods covered by them would be admitted to preference.

Hongkong exporters, being unable to book orders with local factories until this question was settled, saw substantial business jeopardised. The Colonial Office have now cabled that it is no longer considered necessary for detailed costings to accompany individual shipments, provided that the certificate of origin given by the manufacturer is suitably endorsed by chartered accountants and that, as from February 1, 1936, certificates of Empire origin in respect of raw materials used are forwarded periodically.

For the moment, therefore, shipments of rubber footwear have been resumed, but the constant changes in the require-

ments of the Customs and the delays in notifying whether new costings comply with these requirements have led to considerable uncertainty about the future of the trade. There seems to be some resentment on the part of home manufacturers against the marketing of Hongkong rubber footwear. No doubt it can be argued that the Ottawa Regulations were not intended to assist goods manufactured by cheap Oriental labour, although Hongkong shoes do not appear to compete with the high-grade shoe of British manufacture. On the other hand, the development of the rubber shoe trade in Hongkong has led, owing to preference, to the importation of British raw material such as canvas for uppers, tags and eyelets, as well as rubber from Malayan plantations. And Hongkong caters for the demand for a cheap shoe made by the Japanese amongst consumers who could not afford to pay for the home-manufactured article.

AIR MAIL COMMUNICATIONS

A liner of the Imperial Airways arrived here last week after a successful flight from Penang via French Indo-China. This flight was experimental, and further flights are to be carried out. It is hoped, however, that within a few months Hongkong will be definitely linked with the Imperial Airways service in Europe. This will mean a saving of at least five days in the transit of air mails between Hongkong and London. The use of the air mail service by commercial firms here is very considerable, but owing to dependence upon steamer connections with Singapore the quickest and most convenient service at present is that by the Dutch air line to Amsterdam.

To-morrow, the twenty-fifth anniversary of the founding of the Republic of China, the new head office of the Hongkong and Shanghai Banking Corporation will be opened by His Excellency the Officer Administering the Government. The new building stands on an area of 56,000 square feet and rises to a height of 220 feet. Chinese labour and British management combined have resulted in the completion of a colossal building within two years of the site being cleared and within one year of the laying of the foundation stone.

HONGKONG, October 7.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

Incorporated by Royal Charter 1853

CAPITAL - £3,000,000
RESERVE FUND - £3,000,000

Drafts issued on the undermentioned Agencies and Branches, Bills of Exchange bought and received for collection, Letters of Credit issued, and every description of Banking business undertaken.

The Bank also undertakes Trusteeships and Executorships.

LETTERS TO THE EDITOR

BRITISH AND DUTCH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—I am quite willing to submit my arguments to the test of facts. But facts, like statistics, may be interpreted in various ways, and in the present case I suggest they should be viewed in the light of one fundamental fact which you apparently overlook, namely the different economic structure of different countries and the resulting incomparability of their troubles. It is just for this reason that I complained of insufficient attention paid by our British critics to Holland's peculiar difficulties, as set out more than once in Dr. Colijn's masterly statements, never adequately reproduced in the British Press. In my first letter, as originally conceived, I have endeavoured to explain what those difficulties are, but unfortunately lack of space forced you to cut out that portion of my letter. If now you say that there is really nothing very peculiar about the conditions in which Holland is placed, I can only conclude that your opinion is based on *some* facts, but not on *all* the facts known to those responsible for Dutch policy.

As regards my statement that the fall of the pound did not save Britain from a very drastic Budgetary deflation afterwards, it is, of course, true that these Budget cuts were initiated just before gold was abandoned; but as they were not repealed and, in fact, only became effective *after* that event, I think I was right in emphasising that devaluation in Holland would not, as you seemed to suggest, automatically obviate the necessity of Budgetary deflation.

The Belgian experiment has not, so far, greatly impressed us in Holland, though, of course, we sympathise with the peculiar difficulties (we *do* recognise their peculiarity) which prompted M. van Zeeland's desperate "New Deal." That it should have had some temporary and spectacular effect is not surprising, but we feel convinced that a disappointing reaction is bound to follow as soon as the "camphor injection" has worked off. And as for the flourishing condition of Belgian Government finance, I wonder why your correspondent in Louvain (a stronghold of the devaluationists) has failed so far to inform your readers of the distressing disclosures made of the true position by M. Sap, a former Minister of Finance?

In conclusion, may I point out that you did not answer the opening questions of my first letter regarding the higher money rates which you expect in England and the further depression of sterling that must inevitably result if your authorities adhere to their cheap money policy *à outrance*?

Yours truly,

J. H. COHEN STUART.

Amsterdam.
October 30.

[We cannot agree that the *relevant* aspects of Holland's troubles are peculiar to her. Her main troubles are precisely similar to those experienced by every country with an overvalued currency

in the last ten years. Moreover, Belgium, like Holland, has a large foreign trade, close relations with Great Britain and Germany, a Colonial Empire, and a considerable dependence on imported raw materials. It is impossible for us to define the exact level at which interest rates in this country should aim. We should say that they should be left as low as possible until no abnormal unemployment remains in industries mainly catering for internal trade. The exchange rate should then be allowed to find the level dictated by the level of costs and prices at home and abroad. —Ed. *Econ.*]

THE CREATION OF CREDIT

TO THE EDITOR OF THE ECONOMIST

SIR,—There are sound arguments against the nationalisation of the Bank of England, against the project that Mr Attlee, in picturesque and flamboyant terms expounds thus: "If the Labour Party secures power, the first thing we will invade will be the Temple of the Golden Calf in Threadneedle Street—The Bank of England." But the argument advanced by a well-known writer in the Press, recently, is not among these sound arguments. He sells the pass at a low rate who uses so untenable an argument. His opponents will tear his argument to tatters and think, quite erroneously, that thereby they establish their own case. "The banks," this writer says, "cannot create credit out of the blue any more than an individual or institution that lends money. An individual lends his own money and the bank lends other people's money, but neither can lend money that does not exist." And again, "Banks must first obtain money from their depositors before they can lend it."

The confusion between credit and money is obvious. The banker cannot create credit. Quite so, he cannot. But then the above quotation slides into the statement that the banker cannot create money. He can; and he does. In the only sense that matters, customer has created purchasing power. The alchemists sought to transmute base metals into gold. The banker does, and without elaborate apparatus, what they only dreamed of: he transmutes credit into money.

The banker cannot lend money that he has not got. Of course he cannot. But the very act of making an advance to a credit-worthy customer in itself makes the money that is advanced. The banker converts a good man's credit into money. The banker would not advance £10,000 to me; but then none of my intimates would; and they would show wisdom by their reluctance. The very essence of a banker's advance, however, is that it is made to one deserving of credit. What the banker is doing is to add his own guarantee to his customer's undertaking to pay.

His customer's credit is already money in a narrow circle, the circle of those who know him to be worthy of trust. The banker's alchemy has turned the money current within a tiny area into money current within a great area—indeed, throughout the commercial world.

London, November 5.

Yours faithfully,

W. J. WESTON.

BOOKS AND PUBLICATIONS

A HISTORY OF ABYSSINIA*

DURING the last six months the Italo-Abyssinian conflict has concentrated world-wide interest on the sole independent survivor of the old native kingdoms of Africa. A compact history of this country from the earliest records of it to the events of 1935 is a need of the hour, and the authors of the book which has just issued from the Clarendon Press have ably provided for it. These pages link the times of Zoscales, king of Aksum in the first century A.D., who was "imbued with Greek education," with the present reign of Haile Selassie, who is a fluent speaker of French, and give us a coherent picture of a history which only too easily leads the historian to lose himself in a maze of obscure detail.

Mr Jones, who carries the story down to 1770, gives prominence to two factors which lend it unity by their permanence: the first, which is the condition of Abyssinian history from the beginning, is the great block of mountains and plateaux making the country a huge natural fortress between low-lying plains to west and east; and the second is the Christian church, which has combined with the legend of the descent of the old royal line from Solomon and the Queen of Sheba to give the Abyssinians their sense of unity and pride of nationality. They were con-

verted to Christianity in the fourth century, and in the fifth they followed Egypt in maintaining the monophysite doctrine against the decision of the Council of Chalcedon. Of this faith they became the only politically independent adherents, and they zealously defended it not only against the Moslems, who overran North Africa from the seventh century onward, but also against Catholicism, which penetrated into the country from the Portuguese empire of the Indies early in the sixteenth.

The Abyssinian Church with its head, the *abuna*, nominated by the Coptic patriarch of Alexandria, has always since its foundation provided a framework of national unity; but politically there have been frequent oscillations between a moderate degree of centralisation and feudal anarchy. The mountain ranges which make the land so hard to invade from without are also conducive of semi-independent fiefs rather than a single State. The (king), and the suzerain "emperor" is *negusa nagast*, or king of kings. In the early nineteenth century the rulers of Tigré, of Amhara, of Gojjam and of Shoa struggled for supremacy. But since Theodore assumed the Imperial crown in 1855 the central power has generally prevailed over the forces of disruption, though there have been several outbreaks of civil strife. The centralising and modernising policy of the present Emperor, who has been reigning since 1930, shows a strong family likeness to the

anti-feudal policies of the Valois and Tudors, and would soon no doubt make an end of feudalism if Italy were not now taking advantage of the persisting feudal discontents to further her own ambitions.

The reader who follows the history of the last fifty years as related by Miss Monroe in Part V of this book will not feel any surprise at the recent desertion of Gugsä to the Italians. He will rather be inclined to wonder at the degree of solidity which the Abyssinian State has so far shown in the present crisis. Tigré, in particular, is disposed by its history to be doubtful in its allegiance to Addis Ababa; it was the original seat of the national monarchy; and Aksum, with its impressive obelisks dating from the earliest period of Abyssinian history, the place where emperors until recently went to be crowned, is an obvious rallying-point for a regional loyalty, hostile to the Shoan "upstarts" and their innovations. The Italians at Geneva denounce Abyssinia for its backwardness and barbarism, but on the spot it is better policy to appeal to conservatism and tradition. In 1868 the British expedition which penetrated to Magdala returned to the coast because northern Abyssinia was considered "commercially valueless and not worth annexing." Subsequently Menelek found the British and French "easier to treat with than the Italians, mainly because both were digesting vast new possessions elsewhere, and so were less acquisitive than Italy." Abyssinia indeed was Italy's reserved share in the partition of Africa, and the Italians did not become less acquisitive in this quarter after they had been excluded from the share-out of the German colonies in 1919.

SHORTER NOTICES

"Central Banking under the Federal Reserve System." By Lawrence E. Clark, Ph.D. Macmillan. 21s. net.

Here is a well-documented account of the great and moderately successful financial expedient called Federal Reserve Banking. He that wants to understand the workings of the American "central" banking system had better read this book.

Some time ago the world awoke to the fact that currency now consists in the main of credit instruments; and that, as a result, currency control had slipped away from the Mint authorities. Since then there has been much cudgelling of brains over the possible and desirable ways of controlling credit. There has resulted what may be called a literature of central banking. (Dr. Clark's excellent bibliography actually covers eight pages.) Monetary authorities everywhere recognise that only by the watchful and intelligent working of a central bank can such control be effective. The Bank of England—empirically, but fairly successfully—evolved the first principles. Dr. Clark's capital treatise shows how the Bank of England's methods have, by way of the Federal Reserve System, been adapted to the peculiar circumstances of the United States. To President Wilson and his advisers, the Bank of England appeared as rationalisation in the region of finance. It could and did take a comprehensive view of financial affairs; it could and did, by its discount rate and its open market policy, exercise control over those affairs. And the Bank did this not for profit but for service. The Federal Reserve Banks were instituted as the scientific application of the solution worked out by the Bank of England.

Dr. Clark's account of the salient differences from our own central bank is lucid. Two such differences in particular are discussed. In the Federal Reserve System the Government exercises unrestricted control. President Wilson despaired of so happy a union between the City and the Treasury as we have in the Bank of England; and he peremptorily asked for and obtained unrestricted Treasury control. The constant and direct recourse of the Member Banks to the Federal Reserve Banks, instead of as with us through the medium of the discount market, is another point clearly described.

"Farming and Money." By Jorian E. F. Jenks and J. Taylor Peddie. Williams and Norgate. 108 pages. 3s. 6d.

The authors, who describe themselves as a farmer and a monetary expert, put forward a well-meant scheme for the restoration of British agricultural prosperity. They found their proposals upon two basic principles, namely, that agriculture cannot flourish so long as many potential consumers

lack purchasing power, and that industrial depression is partly caused by the poverty of agricultural producers. Nobody will deny these basic principles, which are universally recognised to-day.

It is not equally clear, however, that the best method of relieving the present vicious circle of deflationary shrinkage of incomes is by the pursuit of a policy of agricultural protection in Great Britain, which cannot afford still further to depress the condition of agriculturists overseas, who have hitherto been such extensive purchasers of British exports. It is only fair to the authors to state that they do not urge the immediate adoption of their programme of agricultural development, which must await "the creation of a sound and scientific monetary system" if it is to prove effective. Readers of Mr Taylor Peddie's previous works will not be surprised to learn that such a system necessitates the creation of a "Central Reserve Standard," under which "the standard of value would be wealth in general, meaning by wealth the consumable things produced in the course of a year." This definition would appear to involve circular reasoning, inasmuch as some standard of value is necessary to measure the wealth produced. However, it is possible that circular reasoning may be needed to cure a vicious circle. It is a pity that the new monetary system should be so unsatisfactorily defined, since we are told in the preface that its adoption is an essential pre-requisite to our agricultural expansion and our industrial recovery.

MONEY AND BANKING

A MANAGED CURRENCY FOR CHINA

LAST week-end the Government of China announced a series of sweeping monetary changes. The Central Bank of China is to be reorganised as the Central Reserve Bank of China, and is to perform all the functions of a modern central bank. Notes issued by the three Government banks (Central Bank of China, Bank of China and Bank of Communications) are made full legal tender, and the reserves of all three banks are placed under Government control. Notes of other issuing banks will be gradually withdrawn and replaced by those of the new central bank. All debts in terms of silver are to be discharged by payment in legal tender notes of the nominal amount due, and all holders of silver are required to exchange their silver for legal tender currency. The use of silver bullion or dollars for currency purposes is made a penal offence. The Government undertakes to stabilise the Chinese dollar at "the present level," and will buy or sell foreign exchange in unlimited quantities. Measures have been prepared, further, for the strengthening of the commercial banking system, the establishment of a special mortgage institution, the balancing of the Budget within eighteen months, and the checking of speculation and unwarranted rises in commodity prices.

In short, China has abandoned the silver standard and adopted a managed paper currency. The announcement has been followed by a reduction in the official exchange rate for sterling from 20½d. to 14½d., and the raising of the export duty on silver from 14½ to 65 per cent. The decision may well have been inevitable, since the passing of the American Silver Purchase Act and the beginning of the American Treasury's buying policy. A year ago the Nanking Government imposed a variable export duty on silver, with the dual object of preventing a "drain" of the metal and keeping the Chinese dollar steady in terms of sterling and gold. Smuggling of silver out of the country, however, has proceeded on so large a scale as to create an almost intolerable situation. Indeed, in view of the apparent haste with which the latest plans have been promulgated—without the publication of satisfactory information on crucial matters, such as the legal backing of the new paper money and the currency (sterling, gold, or the yen) to which the dollar is to be "pegged"—events may well have forced the Government's hand before its preparations were entirely complete.

The consequences of the change will necessarily be far-reaching. Internally it promises to relieve China from the vicissitudes of a silver market dominated by American policy. At the same time, it mitigates the over-valuation of the Chinese dollar. It has yet to be seen, however, whether inflation can be prevented or the currency can be successfully "pegged" externally. The Chinese Exchange Stabilisation Fund has not received the flying start obtained by the British Exchange Equalisation Account, which was established at a moment when foreign funds were coming to London on a large scale. Its main resources are silver, and the metal is also required as the backing for the note issue. The success of the new policy, in fact, may be governed by the ability or otherwise of the Government to mobilise the silver currency at present in circulation or in hoards throughout China.

The degree of "devaluation" implied by a 14½d. dollar may relieve the deflationary strain of recent months. By the same token, however, it greatly increases the profitability of smuggling and the incentive to hoard silver. The Government should certainly secure some silver, but whether its supplies will be adequate may, perhaps, be doubted. The area of China is vast; its coast-line is long; and the Government's authority is not equally strong throughout its territory.

Another point of danger may arise. In the *Economist* of February 9, 1935, we explained that the real currency

of China consisted, broadly, of the silver dollar used by the rich, a small copper coinage used by the poor, plus a miscellaneous collection of paper currencies issued by various (and occasionally dubious) authorities. There is already an exchange rate between the silver dollar and the small copper coins, which is, in fact, manipulated by landlords, tax-farmers, commercial firms and Provincial Governments, to the detriment of the peasants and the poorer classes. The devaluation of the silver dollar and its effect upon the prices of import and export commodities will, in conjunction with the ignorance of peasants, provide all these different "money-changers" with a new opportunity for enrichment at the expense of the poorer classes. This, in turn, may make for increased social unrest.

Finally, the question of the stability of the new paper currency may be considered. The Chinese authorities have declared that the new notes will have sufficient silver behind them to provide a backing of over 100 per cent. in terms of foreign currency. The old silver backing was 60 per cent. The authorities would appear, therefore, quite legitimately to be revaluing their silver in proportion to the devaluation of the dollar. This should give the new currency an adequate start. The real doubts are whether currency inflation can be avoided and whether sales abroad of smuggled silver and the repatriation of the proceeds will create a new demand for a currency whose backing has, *pro tanto*, been weakened.

As regards the external consequences of the change, the apparent failure of the Chinese Government to "peg" the dollar specifically to gold or a foreign currency may be deliberate. A link with gold is out of the question; for the American dollar is linked with gold and the American price of silver is at the mercy of the American Administration. On general grounds there may be much to be said for a link with sterling. China has many intimate commercial connections with Great Britain. Membership of the sterling area might bring her many advantages. There are, however, arguments of a more local—and, perhaps, of a political—character in favour of a link with the Japanese yen. If the Chinese Government is, in fact, weighing the relative advantages of the two alternatives, it may have no need to make an early decision. The sterling-yen exchange has remained unchanged at 14½d. for some time past, and there is no sign of any impending alteration. So long as this position obtains, the Chinese authorities can, in effect, defer their final choice until the economic and political outlook in the Far East is clearer.

We deal with the position of the British bondholder in a separate Note on page 918. The immediate impact upon British export trade to China is likely to be unfavourable, for the devaluation of the dollar will increase in proportion the cost of goods imported into China. If, however, the devaluation gives China relief from deflation and an over-revival in internal trade and purchasing power should, in due course, react favourably upon British exports.

What, in conclusion, is the outlook for silver, under the new conditions? If the drain through smuggling of silver from China were accelerated, and if, further, the Chinese authorities were compelled to offer silver in the market in order to support the exchange, the world price of silver would be likely to fall. On the other hand, if the new Chinese monetary system is successful, and China gains a favourable trade balance, the Chinese authorities will probably become important buyers of silver.

The outlook for both China and silver is, at the moment, obscure. In the long run, a sound money system depends upon a strong central Government, free from internal dissension and external pressure. The real problem before China depends upon the fulfilment of these conditions.

FINANCIAL NOTES

The Institute of Bankers.—Sir John Caulcutt's Presidential address to members of the Institute comes as a timely reminder that the branch bank manager still possesses all the responsibilities of the man on the spot, even although in many cases he can only recommend to Head Office. In these days a manager must not only be conversant with the individual circumstances of each applicant for a loan, but must also have a general knowledge of current changes in industrial and commercial conditions coupled with an appreciation of the broad economic trends of the day. This lends a new importance to the educational work which the Institute of Bankers have now performed for many years. The new President very properly insisted that a bank manager's knowledge must not be confined to the technicalities of banking.

The Money Market.—Money has become very easy, and there was no calling by the clearing banks on Tuesday or Wednesday. Government and other dividend payments were a leading explanation of this greater ease, but the banks turned heavy purchasers of January bills this week at ½ per cent., and so the market had less bills to carry. Hot Treasury bills are nominally quoted at ½ per cent., but holders are not selling, as they feel certain that in a fortnight or so they will be able to dispose of them to the banks at ½ per cent.

Three months' bank bills	1½-1	1½	1½	1½-1

Last week's Treasury bills were placed at an average tender rate of 11s. 1.32d. per cent., against 11s. 9.24d. per cent. the week before. £40 millions of bills were allotted against maturities of an equal amount, but this week tenders are invited for £45 millions against maturities of £40 millions, so that the tender rate may be higher.

The Bank Return.—Currency requirements over the end of the month have raised the note circulation by £2.3 millions to £402.2 millions, but the Bank has acquired more gold, and the Reserve is only reduced by £1.4 millions.

In the banking department dividend payments at the beginning of November explain the transfer of funds from public and bankers' deposits. This transfer would probably have been greater had it not been for the fact that, owing to August bank holiday, there were no Treasury bill maturities on Monday and Tuesday of this week.

The Foreign Exchanges.—The London market has been very quiet. Early in the week sterling improved to \$4.92½, but bidding from New York has since brought the rate back to \$49.1½. The franc has been weak. The spot rate has been held at between Frs. 74½ and Frs. 74¾, but on Tuesday the British Control had to buy a few francs in order to give support. Three months' francs

widened from Frs. 1.25 to Frs. 1.80 discount on Monday, and although the rate has since come back to Frs. 1.37 discount, operators feel little confidence in the future. It is thought in the market that M. Laval's position is very uncertain, and there are rumours that devaluation is being more freely discussed in Paris. The New York-Paris cross rate is still steady at Frs. 15.17, or just inside the export gold point, but a further exodus of funds from Paris is expected within the next fortnight. The Dutch and Swiss exchanges have been steady to firm. The Netherlands Bank has gained more gold and early this week reduced its rediscount rate from 4½ to 4 per cent. The devaluation of the Chinese dollar is discussed in a leading article, but the Hong Kong rate has fallen in sympathy during the past week from 21½d. to 17½d. The whole position in Hong Kong has been upset by the Chinese devaluation, and there is no news yet of any specific proposals to meet this new emergency.

New York Money and Banking.—Money remains easy and notwithstanding the prevailing activity in Wall Street brokers' loans were reduced during the week ended October 30th from \$832 millions to \$828 millions. There is some evidence that stock is being bought outright for cash, though possibly the purchasers are using their stock as collateral for bank loans. New York member banks' other loans against securities were reduced during the same week from \$730 millions to \$727 millions. The Comptroller of Currency has issued a call for the condition of all national banks on November 1st, this being the third call issued this year. It is known that the size of excess member bank reserves, with their attendant possibilities of future inflation, is causing anxiety at Washington, and it is believed that methods of reducing these reserves are being considered. The New York price of silver is unchanged at 65½ cents an ounce, in spite of the Chinese departure from the silver standard. It is thought at Washington that American official silver purchases may be accelerated as a result of China's move. Gold arrivals so far reported during November include \$14.3 millions from France and \$6.2 millions from England. Engagements for shipment were \$7.3 millions from France and \$1.5 millions from England.

English, Scottish and Australian Bank.—The accounts of this bank provide further evidence of the expansion of banking credit in Australia, commented upon in the *Economist's* Banking Supplement of October 12th. The total of deposits is practically unchanged, but there has been a definite transfer of funds from time to current deposits. On the assets side cash is reduced by over £3,000,000, and there have been increases in investments, bills receivable and advances. All these figures show that the bank is putting a greater proportion of its assets to active use. The ratio of cash to deposits is reduced from 28.8 to 19.1 per cent.:

	Year ended June 30		
	1933	1934	1935
	£ thous.	£ thous.	£ thous.
Liabilities:			
Capital.....	3,000	3,000	3,000
Reserve fund	1,635	1,650	1,665
Special depreciation reserve fund..	1,585	1,585	1,585
Perpetual stocks	1,873	1,873	1,873
Deposits at interest	18,740	20,131	19,377
Current accounts	10,207	11,900	12,832

Taxation	106	79	65
Net profits	219	222	244
Dividend	5%	5%	5%

Both gross and net profits are a little higher than last year, but expansion in earnings due to the greater demand for credit has been largely offset by the reduction in the overdraft interest rate from 4½ to 4¼ per cent. a year ago. Last year's dividend is repeated and £50,000 is allotted to contingencies.

THE STOCK EXCHANGE

LONDON TRANSPORT FINANCE

THE release of the London Passenger Transport Board's accounts for the years to June 30, 1934 and 1935 respectively, has appropriately coincided with the eve of a General Election. The Board's results are a matter of direct concern, not only to holders of its £111,535,454 of issued capital, but to a wider circle of transport-users, statesmen, economists and plain men-in-the-street. The Board was formed, not merely to earn specified rates of interest on its "A," "B" and "C" stocks, but primarily to provide an adequate, convenient, balanced and elastic transport service for the world's largest metropolitan city and its environs. Its structure is the prototype of a "new model" in utility organisation, designed to marry private "capitalist" ownership with the principle of limited returns and unlimited public service.

Although the Board's "appointed day" was July 1, 1933, the publication of its accounts has been delayed by factors outside its control. The first and second annual reports, now issued as statutory documents under Sections 47 and 48 of the London Passenger Transport Act (which are obtainable at 55 Broadway, Westminster, S.W.1, price 1s.), are models of clarity and informativeness. A review of each year's activities (extending to 68 paragraphs in the first report and 101 paragraphs in the second), is followed by accounts with a wealth of detail which leaves no essential fact unknown and no secrets hidden, an excellent series of maps—and a species of art gallery. The Board has been absorbing additional undertakings throughout the two years, and the twin sets of accounts are not, therefore, fully comparable. The process of absorption, however, is now nearly completed, and, for the first time, it is possible to form an idea of the magnitude, scope and financial prospects of London's transport leviathan.

The London Passenger Transport Board is a merger of 5 railway companies, 14 municipally-owned and 3 company-owned tramways, and 61 omnibus undertakings. At June 30th last it owned a total railway track extending to 491 miles, a tramway track mileage of 660 and a trolley-bus mileage of 18 (with a further 90 miles authorised but not open for traffic). Its buses and coaches ran over 2,448 route miles. The Board serves a "Special Area" of 1,550 square miles, in which it enjoys monopoly powers and responsibilities, together with an "outer area," bringing the aggregate total to 1,986 square miles. It owns 3,167 railway passenger vehicles, 5,975 buses and coaches, 2,473 trams and 63 trolley-buses, with 820 ancillary railway vehicles (including 520 goods wagons and 214 service vehicles), and 481 lorries and miscellaneous road vehicles. In the year to June 30th last, its trains ran 159 million car miles, its buses and coaches 276 million car miles and its trams 102 million car miles.

Financially, the Board draws its revenue from a "pool" of its receipts with those of the suburban services of the four main line railways. The Board's share in pooled receipts has been fixed for the year to June 30th last at 62.10364 per cent., the remainder being divided between the main line railways in the following proportions: Southern 25.48506 per cent., London and North-Eastern 5.99922 per cent., London Midland and Scottish 5.08014 per cent., and Great Western 1.33194 per cent. Last year the pool carried 4,129 million passengers, of which 3,582 millions originated on the Board's system. In other words, every member of the 9½ million persons served under the pooling scheme made an average of 435 journeys during the year, compared with 417 in the previous year.

So much for the "service" rendered by the Board and its associates to the inhabitants of its area. The financial results of these operations are summarised in the table at the head of the following column.

The Board, it will be seen, draws its revenue predominantly from its share in the "pool's" passenger receipts. Goods traffic receipts represent a small and rela-

	Years to June 30, 1934	1935

Total	4,956,691	5,126,271

† Less £48,374 proportion of interest charged to capital in respect of construction of new works.

Note.—The figures for the two years are not strictly comparable, owing to the acquisition of undertakings at varying dates during those years.

tively unimportant source of ancillary revenue. From the viewpoint of stockholders, greater significance attaches to an item of £859,881 in last year's "other receipts," derived chiefly from advertising rents. This source of revenue, in whose development the Board has shown conspicuous enterprise, may be regarded as providing interest of no less than 3.4 per cent. for the Board's junior ("C") stockholders.

The result of the Board's operations last year was a net revenue balance of £5,126,271, representing an apparent increase of £169,580 over the total for the previous twelve months, subject to the proviso regarding comparability, mentioned above. The total is well below the estimate of £5,798,602 made by Sir William McLintock on the basis of results for 1928-30. The discrepancy is a matter of moment issue some £62,485,536 of "A," "T.F.A." and "L.A." stocks, £23,670,131 of "B," and £25,379,787 of "C" stock. Under the terms of the Act, the "C" stockholders are entitled to a maximum dividend of 6 per cent., and may 5½ per cent. in one out of three consecutive years from 1935 onwards. We have previously criticised the conception embodied in this provision, which awards to junior stockholders a prerogative usually reserved for senior debenture holders or their prototypes. On the published figures, earnings for the "C" stock were exactly 3½ per cent. in 1933-34 and 4 per cent. in 1934-35, and interest has been declared at these rates. The Board, in effect, has two more "years of grace," but must pay 5½ per cent., at its peril, for 1937-38. Can the gap be closed within the allotted period?

The answer is for time to decide. Two features in the Board's accounts, however, have a direct bearing on the revenue account for 1934-35, entitled "General Interest and Cash Discounts," is stated to be struck after making provision for estimated interest payments on claims on behalf of certain absorbed undertakings which have not yet been settled. The amount of this provision cannot be ascertained, or it has been placed to a suspense account which, in the balance sheet, is submerged in a miscellaneous item. The latter, however, shows a rise of £223,527 during the last twelve months, which suggests at least a possibility that pro-

vision has, in fact, been made with prudent generosity, and that a margin may be found to be available when the claims have been settled.

The second consideration is more fundamental. The net revenue figure is arrived at after making provision for renewals totalling £2,020,500 for 1934 and £2,526,000 for 1935. These amounts were allocated after apparently generous expenditure on maintenance, totalling £3,875,493 for 1934 and £4,013,423 for 1935. They compare with actual expenditure on renewals in the two years of £48,903 and £166,257 respectively. The Board is admittedly faced with a large future renewals programme as part of its policy of "rationalisation." For example, it has decided to replace some 40 different types of bus and coach chassis, taken over from absorbed undertakings, by a limited number of standard types. The accounts afford at least circumstantial evidence for the view that the Board is employing the opportunity presented by its "years of grace" in order to build up as strong a renewals reserve as possible before the necessity for a 5½ per cent. "C" dividend arises. In other words, the present revenue figures underestimate the Board's eventual earning power—apart from future economies of "rationalisation" and the growth of London traffic. Provided that the market price of the "C" stock can be kept at or near par (the present price is 103½), there is a great deal to be said in favour of such a policy.

The extensions, etc., recently arranged in co-operation with the main-line railways and financed under Treasury guarantee, may carry an important future "equity" for "C" stockholders. As the following table shows, railway receipts at present account for 45 per cent. of the total "pool" takings from passenger traffic.

PASSENGER RECEIPTS OF LONDON TRAFFIC POOL

	Years ended June 30, 1934	1935
Originating on :—		
Railways	16,980,180	17,847,495

Total	37,668,565	39,718,187

Average per passenger journey ... 2.305d. 2.308d.

Note.—See note to preceding table as regards comparability.

The rôle of railway, bus and tram services in the Board's traffic and financial economy is indicated in a final table :—

	YEAR 1934-35 (000's omitted)				
	Railways	Buses and Coaches	Trams	Trolley buses	All
Total Passengers within Pooling Scheme	992,981†	2,094,764	1,013,434	28,262	4,129,441
Total Originating on Board's System (No.)	445,888	2,094,764	1,013,434	28,262	3,582,348
Per cent. of Total	12.4	58.5	28.3	0.8	100
Corresponding Percentages previous year ...	12.2	67.5	29.5	0.8	100
Working Expenses*, Amount (d.)	3,211	12,283	4,638	127	20,259
Per cent. of Total	15.8	60.7	22.9	0.6	100
Working Expenses per car mile (d.)	5.809d.	10.734d.	10.959d.	11.076d.	...
Comparison with previous year	+0.139d.	-0.127d.	+0.154d.	+0.831d.	...
Renewals provision (d.)	844	1,055	508	19	2,526
Per cent. of Total Renewals	37.4	41.8	20.1	0.7	100
Total capital expenditure to 30/6/35 (£)	73,491	8,681	10,145	207	113,152†
Per cent. of Total	64.9	7.7	9.0	0.2	100

* Excluding general expenses and renewal provisions. † Including other capital expenditure, totalling £20,628,000 (equivalent to 18.2 per cent. of total) of which £8,206,000 for electric power stations and distribution system. ‡ Includes rail passenger journeys originating on the Board's system and all journeys originating on the four group railways.

More than half the total passengers are carried on the buses and coaches. If those carried by tram are added, the proportion is as high as seven-eighths. The average receipt per journey, however, is much higher on the trains. The railways' share in total working expenses is slightly higher than their percentage contribution to total "originating" passengers, but their expenses per car-mile are little more than half those of the buses and trams. Their capital cost, however, is considerably higher. Nearly two-thirds of the Board's capital expenditure has been incurred under that heading, against less than one-fifth for buses and trams together.

A NEW INVESTMENT

for the large and small investor alike

spread over

150 FIRST-CLASS BRITISH SECURITIES

For the first time in the history of Fixed Trusts there is available to the investor an opportunity to participate in 150 first-class companies, spread throughout the industry of the British Empire. Every British Empire Comprehensive Fixed Trust Certificate provides an interest in each of the companies, which have been carefully selected and whose combined net assets amount to **£1,884,500,000**, with reserves of **£248,600,000**

BRITISH EMPIRE COMPREHENSIVE FIXED TRUST CERTIFICATES

The general conclusion suggested by the Board's initial reports is that its affairs are efficiently conducted and that a reasonably good start has been made under the new regime. Some of the fruits of unification, both for the passenger and the stockholder, have obviously still to be secured, and time alone will show whether the legislature has been wise in holding the sword of receivership over the Board's head in the event of a relatively small drop in earnings below the future "standard" level—or, alternatively, in compelling the payment of eventual earnings up to the hilt, with possible prejudice to a prudent "renewals" policy. By current indications, however, the "C" stock appears adequately but not unreasonably valued at 103½. That the Board will be earning 5½ per cent. within the next three years is neither wholly certain nor wholly improbable.

INVESTMENT NOTES

The "House" Counts its Chickens.—Whatever doubts the Stock Exchange may have had last week about the result of the General Election have been blown away in a resounding blast of optimism in the last few days. While the Dow-Jones Index has been climbing to new heights in New York, the *Financial News* index of British ordinary share values has reached the highest point since August 16th, and is only 1.3 per cent. below the maximum for the year. In both markets there is a dash of politics, but recovery, past, present and to come, is the main ingredient in the speculative pie. Armaments may count for more in London than in New York, but the real market background is almost identical in both centres. Improving railway traffics, better employment figures, building activity, increasing electrical output, a Government imbued with faith in a public works programme—all these factors are common to both countries. But have the London markets, in counting so many chickens, omitted a few black ones? Mr Chamberlain's hope that there will be no increase of taxation appears to put a generous valuation on the equity of the Exchequer in rising national income. Can a policy of increased public works borrowing be financed without an upward tendency in long-term interest rates? Have all the potential effects of British co-operation in League measures against Italy been adequately discounted? And what will be the outcome of next week's strike ballot of the miners? That industrial recovery proceeds is all, at present, that the markets know. But is it all they need to know?

Science and Prospectuses.—The Chancellor of the Exchequer has addressed a letter to the Chairman of the London Stock Exchange outlining a new procedure of great potential value to applicants for new shares which are issued by concerns exploiting scientific processes. Hitherto-investors have lacked any independent judgment by an accredited scientific assessor of claims relating to "methods or substances" which have been put forward from time to time in prospectuses. This omission may now be rectified, for the Chancellor has ascertained that the three Government research organisations (the Department of Scientific and Industrial Research, the Medical Research Council, and the Agricultural Research Council) will be willing, upon request, to suggest the names of scientists of the highest standing who could furnish those city houses responsible for issues of this character with reports on the scientific merits of the processes or substances which might form the basis of a public issue. Mr Chamberlain, of course, recognises the careful scrutiny which is given in the City to new issues, but in conjunction with the Stock Exchange Committee's exacting examination of all applications for permission to deal, the new procedure will carry undoubted advantage. It is possible that in future issues of this sort an extract of the report (or a statement that it is favourable) may become common form, and its absence a feature for comment. Such a procedure might spare the innocent investor from the mortification which in the past has resulted from the Committee's inability to grant permission to

deal in certain cases, and it would provide a certain safeguard against any repetition of the scandals of the 1928 new issue boom.

"Pepper": A Sequel.—It was learned on Thursday that summonses had been issued and served on Mr John Howeson, Mr Garabed Bishirgian and Mr Louis Hardy. The summonses were applied for by the Director of Public Prosecutions, and are understood to relate to a prospectus issued to the public concerning James and Shakspeare, Ltd. The latter's business, it may be recalled, was founded over fifty years ago, and it became a public company in August, 1934, when it acquired the metal and produce dealing firm of G. Bishirgian and Company, and an interest in Williams Henry and Company, Ltd. Early this year a compulsory winding-up order was made against James and Shakspeare, whose holding of ordinary shares in Williams Henry and Company was taken over by the Dean Finance Company, Limited, a sub-subsidiary of the Tobacco Securities Trust group, in order to protect Williams Henry's shellac interests. Subsequently, the Official Receiver's reports showed that James and Shakspeare had been involved in heavy losses arising out of an unsuccessful attempt to raise the price of pepper by "pool" operations. Mr Howeson, who has extensive directorial interests in the tin-mining industry, was described by the Official Receiver as the controlling shareholder in Williams Henry and Company, of which Mr Hardy had been managing director. Mr Bishirgian was the deputy-chairman of James and Shakspeare. The summonses, it is stated, are returnable at the Mansion House in a fortnight.

Fixed Trusts—Market Policy.—A point of some significance has been put to us by a respected firm of brokers. Is it possible that fixed trust managers, owing to their business connections with stock-brokers in all parts of the country, may, in certain circumstances, buy their underlying securities at somewhat higher cost than in direct dealings in the London market? In order to encourage the sale of certificates, it is contended, the managers pay a basic commission of 1½ per cent. to brokers who pass buying orders. In addition, however, the further incentive is sometimes offered that the managers will purchase the required underlying securities from local brokers in proportion to the volume of sub-unit orders which they place with the managers. In certain cases, therefore, it appears that country brokers may receive orders for shares in which there is no local market. These orders will inevitably be passed to a London firm for execution. The London broker charges half-commission, which is usually included in the "net" price, and the country broker customarily charges a further full commission. Subject to any sharing of commissions with the trustees or the managers, our correspondent declares that it is possible for the managers to pay one-and-a-half commissions. The cost of a share quoted at 40s. on the London market may thus be raised to 40s. 3d. if purchased in this way. It is not suggested that this procedure is inevitably followed by all fixed trusts, and even if it were, the quantitative importance to sub-unit purchasers might not be crucial, in our view. It is clear, for example, that the addition of a small "goodwill" cost to the effective dealing price of a share might not raise its price to the "offered" price which is commonly employed in calculating the dealing quotation for the sub-units. On this matter, the managements concerned are most qualified to speak, and our correspondent's suggestion may invite comment from the leading groups.

New Capital for the Railways.—At this stage the effect of the new construction proposals which are to be financed, on the pattern of the London Electric Transport loan, by a Government-guaranteed loan of £30 millions is marised in a Note of the Week on page 901. The plans are summarised in a Note of the Week on page 901. The Stock Exchange gave a favourable reception to the Government's announcement, and equity and junior preference issues immediately responded, with advances of up to 1½ for the London and North-Eastern first preference and 1½ for

Southern preferred. Some commentators, however, have inclined to the view that the direct advantage of the schemes to railway stockholders may be less significant than the indirect benefit which the slowly recovering wagon, locomotive and equipment industries may derive. The truth may lie between the two interpretations. Until the new loan has been approved by the new Parliament, speculation as to its issue terms may be premature. The London Electric Transport Finance guaranteed debentures, which were issued in July at 97, are now standing around the issue price. A 2½ per cent. loan with a twenty-year maximum life would suit the market's taste, and conditions immediately after the election may possibly favour its issue. Its appearance, possibly, may not long be delayed, for eventually the market may require rather more humouring than earlier this year. The margin between the rate on the new loan and the effective earnings on the new works, after due allowance for renewals provision, will clearly determine the benefit which existing stockholders may expect from the scheme. It will, however, require some passage of time before the new works come to full fruition, and they will, in any case, be spread over five years. In part, they represent normal renewals and extensions which would have been financed internally or from new capital in more propitious circumstances. The Southern Railway programme of extended electrification and colour light signalling may yield tangible results more quickly than the re-designing of stations, replacement of permanent way and new rolling stock, which form the basis of the improvements on other lines. It may be presumed, however, that the new works will eventually justify themselves at the lower rate of interest which will be afforded by the Government guarantee, and may yield a surplus for existing stockholders in the course of time. Until fuller particulars are available regarding the terms of the new loan and the participation of the four companies, estimates of direct benefits in the near future for equity stockholders must be regarded with reserve. It is possible that Sir Josiah Stamp's address to the Railway Stockholders' Union, in ten days' time, may offer occasion for an authoritative view.

Industrial Profits in October.—Our latest computation of industrial profits, based on reports received by the *Economist* during October, provides a very satisfactory curtain-raiser for the large number of reports normally published before Christmas. We received 166 reports during October, showing an aggregate rise in profits of no less than 27.19 per cent. by comparison with October last year. Figures for recent months are set out below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—			1935—		
September ...	89	+ 40.63	April	242	+ 16.49
October	165	+ 49.70	May	244	+ 11.07
November ...	143	+ 33.97	June	191	+ 21.72
December ...	159	+ 25.09	July	232	+ 13.44
1935—			August	38	+ 5.93
January	111	+ 14.15	September...	77	+ 9.28
February ...	218	+ 8.43	October.....	166	+ 27.19
March ...	261	+ 22.54			

* After payment of debenture interest.

The reports of the month disclose net profits of £6,482,469, compared with £5,096,466 in the preceding year. Recovery is common to all groups with the exception of tea companies, and a slight reduction in the building materials group (which results from one large loss by a timber concern). Iron, coal and steel concerns record an increase in net profits from £153,391 to £303,612, while textile concerns reflect the British Celanese improvement with an advance from £655,821 to £808,290. Twenty-five concerns in the miscellaneous group record an increase of over 60 per cent. with profits of £1,142,791. The advance is widely spread in this section also, for substantial improvement has been recorded by such diverse undertakings as Murex, Imperial Airways, Burberrys, General Theatre, and British Colonial Furniture. Only in the motor section is there any clear suggestion of profits stability, for the progress of the Rover and Standard companies has been partially off-set by the reduction in Austin and Henlys' net profits, the group total

AN EVER-PRESENT ANXIETY TO PROFESSIONAL MEN

YOU plough a lone furrow. Upon your unaided efforts depend the well-being and comfort of yourself and your family both now and in later life. Few can help you, none can take your place. If ill-health visits you your income ceases until you are back in harness again. Small wonder that such eventualities cause you anxiety.

A practical method of dispelling the anxieties which though "out of sight" can never entirely be "out of mind" is the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT
2. AN INCOME FOR DEPENDANTS
3. AN INCOME DURING DISABLEMENT

The "Triple Income" plan provides the most complete safeguard that any professional man can desire. Protection so comprehensive is worth investigating. Send to-day for full particulars and learn at what moderate cost security may be achieved.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 FLEET STREET, LONDON, E.C.4.
Established 1836. Assets exceed £33,000,000.
General Manager: W. A. WORKMAN, F.I.A.

being only £56,631 higher at £1,258,987. These results, for accounting years mainly to mid-summer dates, suggest good things to come when the spate of reports to September are published during the next few weeks.

Bulgarian Debt Service.—The Bondholders' organisations, which include the League Loans Committee and the Council of Foreign Bondholders in this country, have this week recorded their inability to secure any improvement in the service of the Bulgarian debt. The creditors' representatives have previously recognised the weakness of the Bulgarian foreign exchange position, but they remain of opinion that a higher proportion of the interest could be transferred with safety. The recent discussions, however, proved that the Bulgarian Government, while willing to maintain the *status quo*, were not disposed to make a better offer in existing circumstances. The Government has proposed that full Budget provision shall be maintained, as hitherto, of which 67½ per cent. shall be handed to the League of Nations Commissioner in the form of Treasury bills, while the balance shall be paid into the Bulgarian National Bank in "effective" levies. Of this balance, the Government offers to continue to transfer 15 per cent. in exchange at the appropriate interest dates. Bondholders who accept such terms will be entitled to the return of their coupons endorsed with the amount paid, which will not be taken as complete discharge of liability. The bondholders' organisations have again "taken note" of the proposals, and have announced that they will not object to current releases of the assigned revenues in the normal course, provided that the Bulgarian Government carries out the arrangements proposed. Bondholders may regret, however, that the Bulgarian authorities have been unable to implement the provisions of the 1934 agreements, or at least to offer some increased recognition of the creditors' claims under them. The agreements will expire in six months, and the negotiations for a new settlement will inevitably be complicated by the deficits which have

accumulated as a result of the Government's declared inability to provide more than 15 per cent. out of the 32½ per cent. agreed to be transferred. An increased transfer of, say, 17½ per cent., at an additional sterling cost of £40,000 might have been welcomed as an act of grace—and a not expensive price for creditors' goodwill in view of the coming discussions.

Chinese Bond Committee.—The announcement that the Bank of England has set up a committee under the chairmanship of Lord Alness to protect the interests of holders of Chinese Government, railway and other loans has been very favourably received. The committee is strong and fully representative of banking, Stock Exchange, investment trust and insurance interests. Its constitution has coincided with the demonetisation of silver by China and the visit of Sir Frederick Leith-Ross to China to study the Chinese economic situation. The repercussions of the Chinese currency measures are examined in a leading article on page 912. The Stock Exchange, which has become increasingly convinced of the deflationary burden imposed upon China by the American silver policy, has interpreted the reforms as a bull point for the debt service, although the latter will presumably cost more in terms of currency. At this stage, moreover, it is impossible to determine whether expansion of trade will follow the Chinese Government's attempts to stabilise the dollar. Persistent reports have been in circulation in the Far East that a British credit has been arranged for China. Sir Frederick Leith-Ross, however, has declared that China's policy has been introduced without any assurances of a loan from the Powers. Financial assistance, if eventually forthcoming, would presumably be arranged through an international consortium, as in the past, but with the participation of Japan. In this event, there will be much work for the new committee to transact, since the granting of any new loan would clearly provide the occasion for consideration of existing holders' claims, particularly with respect to the railway loans. There is, of course, no suggestion that the immediate situation imperils the current service which is being paid on the Government bonds, but the present situation clearly warrants the setting up of the committee. This week's advance is shown in the following table:—

Loan	Amount outstanding (a)	1935		Quotations			Flat Yield (%)
		High.	Low.	Oct. 28, 1935	Oct. 31, 1935	Nov. 6, 1935	
4½ per cent. 1898	2,754,550	105½	99½	102	102	102	4 8 6
5 per cent. 1913	6,255,180	100½	84½	92	92	93	5 9 3
5 per cent. 1912	3,666,980	91½	71	76½	76½	79½	6 8 2
5 per cent. Shanghai-Nanking Rly.	2,088,000	87	65	69	69	73	(b)
5 per cent. Tientsin-Pukow	185,000	37	20	22½	22½	30½	(b)
5 per cent. Honan	495,700	35	20	26	26	31½	(c)

(a) Excluding bonds drawn but unpaid. (b) Coupons unpaid since April, 1926. (c) Coupons unpaid since July, 1927. (d) Coupons unpaid since June, 1934.

At present, the railway issues remain in an entirely speculative class, but the new committee will doubtless lend weight to the argument that their improving situation should be reflected in a willingness to pass such proportion

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.," 8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

of the fruits as can be spared to bondholders. The Customs loans were well covered by the 1934 receipts. There are reasonable possibilities that China's trade will not be adversely affected by the present measures, if stabilisation of the currency, both internally and externally, can be maintained.

Chilean Bond Possibilities.—No official announcement has been made concerning any partial interest payments which may be forthcoming on Chilean Government external bonds. It is known that negotiations to this end took place recently in London and New York. The Government's revenue from the nitrate industry is now definitely segregated from the Budget and ear-marked for the debt service, and the Minister of Finance has hinted that, as from January 1, 1936, the Debt Amortisation Office will be able to meet at least those coupons of the direct and indirect loans of the State and municipalities which are most in arrear, and to effect amortisation. It is not believed, however, that such payments can represent much more than nominal recognition of bondholders' claims, but undoubtedly the Chilean national finances are now sounder than for some time past. A small surplus was realised in last year's Budget. The ultimate effect of the recent 25 per cent. increase in the salaries of civil servants, and of the elimination of nitrate revenue from the Budget is not yet clear, but actual revenue receipts this year have shown a marked buoyancy. For the period January-August revenue amounted to 872.3 million pesos and expenditure to 714.9 million pesos. These figures suggest that the Budget was conservatively drawn up, since eight-twelfths of the estimated revenue for 1935 would amount to 675.8 million pesos, and of expenditure to 758.8 million pesos. Government payments in August, however, reflected the increase in civil servants' salaries on a considerable scale. The Chilean foreign trade returns have for some months shown heavy increases in imports of machinery and raw materials required for the rapidly expanding national industries. The aggregate value of imports in the first eight months of 1935 at 193.2 million pesos of 6d. (gold) was 70.5 million pesos greater than in the corresponding period of 1934. The expansion in exports was only 6.7 million pesos, to a total of 340 millions, leaving an export surplus of only 146.8 million pesos, against 210.7 millions. Armed with large resources of foreign exchange from nitrate exports, it is believed that the Government will be able to regulate exchange rates as it deems necessary, and the fluctuations in the export rate of exchange, which recently jumped on two occasions from 119 pesos to 125 and 123 pesos per £ sterling, respectively, may be taken to reflect merely normal variations in supply and demand. The export exchange rate is recognised as the effective rate for commercial transactions and for most remittances, and, as a large part of frozen peso credits has now been liquidated, there would appear to be no reason to anticipate any marked depreciation in the peso which could not be promptly regulated by Government intervention.

Actuaries' Investment Index.—This week's renaissance of investment optimism is duly portrayed by the Actuaries' Index of 158 ordinary shares, which has recovered to 78.3 from a "secondary low" of 73.9 a month ago (December 31, 1928 = 100). The index is now only 1.1 points below the highest level of the year. The following table shows some of the constituent groups in the index which have contributed most to the latest rise:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Oct. 8)	Week Ago (Oct. 29)	This Week (Nov. 5)	Month Ago (Oct. 8)	Week Ago (Oct. 29)	This Week (Nov. 5)
Investment Trusts (14)	54.5	54.5	55.3	3.72	3.72	3.72
Coal (6)	85.6	84.6	89.2	4.47	4.53	4.22
Cotton (6)	38.3	43.9	47.0	2.32	2.21	2.18
Iron and Steel (8)	66.5	64.2	67.3	3.29	3.32	3.20
Oil (5)	63.4	66.3	71.5	3.51	3.38	3.15
Home Rails (4)	59.0	58.9	62.0	1.71	1.71	1.68
Miscellaneous (52)	67.2	69.6	70.8	4.15	4.03	3.98

The extent to which current prices discount the prospects of continued economic revival may be appreciated by a glance at the low yields at present obtainable on favourite counters like cotton, iron and steel, oil and home rail equities. The rise in coal shares, in the week preceding a miners' strike ballot, argues a confidence which those closely concerned with that industry would like to share.

COMPANY NOTES

Air Transport Shares.—The salient investment point in commercial air transport must, for the present, be the extreme difficulty of earning commercial profits. For long-distance systems the experience of Imperial Airways amply proves the point. The annexed table shows the company's earnings side by side with the Government subsidy paid to it for the corresponding year, as given in the Air estimates for that year. In no year has the company's trading profit (before obsolescence, depreciation, insurance, etc.) approached the amount of the subsidy received. Yet, as is shown in a detailed survey of European air transport, issued by the League of Nations this year, Imperial Airways is economically the most efficient of all the European systems. On the operation of internal short-distance air lines on the Continent, the same League survey shows large and consistent losses, while in the last few days our own Director-General of Civil Aviation has declared that "with very few exceptions indeed, [British] internal air lines

are losing money." The evidence of the sub-accounts for air transport, included in last year's home railway accounts, fully confirms that statement; and the prospectus of the Hillman's Airways issue early this year showed consistent losses except for the last period covering only the summer six months, which are the earning period of the year. The commercial difficulties of operation result mainly from the "youth" of air transport as a business. Machines are only now being produced which offer silence and comfort in any way comparable to that of surface travel, and there is room for further improvement still. Nor, owing to the difficulty of landing close to large centres, can full advantage be taken of the service which air transport has to sell, namely, speed. In any case, since saving of time is of interest chiefly to business men, the railway night services will often compete in effective "business-hours-saved" with even the fastest air service. Finally, there is the problem of serious seasonal fluctuations in traffic density. It need not be doubted that experience and invention will solve many of these problems in course of time. Comfort is already being rapidly improved; vertical landings may ultimately allow services to be run to and from the centres of cities; wireless aids to navigation are reducing the seasonal factor and simplifying night flying; the pay load is being raised. On the "consumer" side the public may be expected to grow more accustomed to air travel, and so improve the load factor per flight. The League survey shows that if Imperial Airways could fill the whole of its available space on each flight it would already be making a commercial profit without the subsidy. The conclusion appears to be that some time must elapse before unsubsidised air transport becomes attractive as an investment, particularly on short distances. New invention may make matters easier, but it will involve corresponding substantial obsolescence charges for existing

INVESTMENTS FOR THE PRUDENT

These six fixed trusts, all of which are managed by interests under the same control, cater for most investment needs. Sub-unit holders in any of these Trusts know that their capital is prudently spread over first-class dividend-paying companies in the most stable and secure industries and is thus well protected from the risks and uncertainties of the present time.

enterprises. Finally, conditions are already distinctly competitive, so that economies in operation may only bring cuts in fares. The position of Imperial Airways, with its assured subsidy, its partial monopoly on certain routes, and its long-distance schedules, is strong so long as the subsidy continues. The news that the company is now assured of a new long-term agreement, and will continue to act as the Government's chosen instrument for existing Empire trunk services is an important new factor in view of the approaching termination of existing agreements.

Road Material Shares.—The precise significance of the £100 millions road programme has not been disclosed since Mr Chamberlain's broadcast address. From the market aspect, however, the difference between a net increase of £100 millions on present expenditure, and an assurance that this amount will be spent during the next five years, is one of degree. Investors can at least presume the restoration of Road Fund grants at the rates prevailing before 1931. So far, however, no details of the scheme have been published, although the presumption is widely entertained that new arterial road development will be a

look for the stronger road material companies appears "set fair" and may be "fine" if additional expenditure is in fact contemplated by the latest announcement of Government road policy.

North British and Mercantile Insurance.—The subscribed ordinary capital of this company consists of 550,000 £5 shares, with £1 5s. paid up. These, at a current price of about £50, yield under 2½ per cent., and are the heaviest priced insurance shares in the market. At the annual meeting, last May, the chairman foreshadowed a scheme of share sub-division by which each share would be divided into five £1 shares, of which one would be fully paid and each of the remaining four would have 5s. paid up. The scheme was to involve a transfer from reserve of £412,500. It was felt that, in addition to the primary advantage of increased marketability, there was some convenience in having 20 per cent. of the shares fully paid rather than have all of them paid up to the extent of 8s. Definite proposals have now been submitted, but they do not precisely follow the lines suggested earlier. They involve the division of each share into four shares of £1 5s., of which two are to be fully paid and two to have 6s. 3d. paid up. Thus, as regards each present share, an addition to the amount paid up of no less than £1 17s. 6d. is contemplated. Dividends will be paid on the nominal amount of the shares, fully and partly-paid shares being treated alike. As a natural consequence, holders of fully-paid shares will not be entitled to vote in any future resolution for the reduction of the uncalled liability under the partly-paid shares. The financial position of the company is of great strength. The transfer of £1,031,250 required from reserve does not represent any inconvenient redistribution of liabilities. Nevertheless, the scheme demonstrates very clearly the confidence of the directors in the continued prosperity of their company.

Sudan Plantations Progress.—Although the planted area was hardly changed, the total crop harvested by the Syndicate during the 1934-35 season increased by as much as 86 per cent. This satisfactory yield, for which the Gezira area must be credited, is meeting with a ready sale, and is reflected in the advance in cotton profits from £352,347 to £457,300. After deducting rather higher general expenses, totalling £189,436, and providing £50,000 (against £30,000) towards the Gezira reserve for writing off development and canalisation expenditure, the divisible profits amount to £207,674, showing an increase of 55 per cent. compared with the preceding year. The increased dividend of 8 per cent. is consequently covered with a surplus of ½ per cent., as the following analysis shows:—

	Years to June 30th, 1933	1934	1935
Cotton and other profits	401,720	352,347	457,300
General expenses and charges	175,143	180,014	189,436
Depreciation and other provisions ..	143,687*	8,099	10,190
Gezira reserve	25,000	30,000	50,000
Ordinary shares:—			
Earned	57,890	134,234	207,674
Paid	90,000	135,000	198,000
Earned %	2.6	6.0	8.5
Paid %	4	6	8
General reserve			
Carried forward	217,887†	220,471†	223,851
* Includes £135,109 reserve against advances to tenants. † In addition £13,706 transferred direct from share premiums account. † Includes profits from sales of investments £27,458 and £3,350 for 1932-33 and 1933-34 respectively.			

The report indicates that the Syndicate has agreed to a proposal for the conversion of its holding of preference shares in the Kassala Cotton Company into 5,000,000 rs. buted to existing ordinary shareholders. The operation marks no change of control, since both existing issues rank for one vote per share. This company's recently issued accounts show a substantial profit, and improvement is also recorded by two of the associated companies, Parana

Plantations and Sudan Salt. During the year the Syndicate has repaid £400,000 advanced on a debenture by the Sudan Government, but the liquid position remains strong, with cash and Government securities at £744,000, compared with £832,000. At this stage the report is naturally silent as to prospective crop conditions, but the planted area has been increased. The £1 ordinary shares are quoted at 34s. cum dividend to yield ½ per cent., and carry further recovery possibilities if the Egyptian textile section enjoys increased activity.

Trepca.—The recovery in metal prices is vividly reflected in the results of this company for the year ended September 30th last. The quantity of ore treated—597,200 tons—showed an increase of no more than 8,100 tons, but the revenue rose by £188,600 to £871,180. General as well as operating expenses were somewhat higher than before, and £40,400 was allocated to depreciation, in place of £18,700, leaving an available surplus of £344,100, compared with £170,500. The final dividend of 15 per cent. makes a total of 20 per cent., compared with 12 per cent. for the previous year, and is paid, moreover, free, instead of less, tax. After transfer of £30,000 to reserve, the somewhat reduced amount of £26,030 goes forward. Ore reserves of 3,007,000 tons represent about five years' supply for the mill. In view of the fact that contracts for the sale of lead concentrates which were due to expire at the end of 1937 have been replaced by new contracts extending to the end of 1940, the early future seems fairly well assured, although the market has always stressed the importance of political factors to the company's operations in Jugoslavia. On last year's dividends the indicated yield is 6½ per cent., tax free.

Lake View and Wiluna.—Last year's operations by these two important West Australian companies, writes our mining correspondent, were adversely affected by a new wage award and by the suspension of work for five weeks owing to a labour dispute regarding the "spread" of hours. As a result, Wiluna received from the Australian operating company dividends totalling no more than £345,290 sterling in place of £430,280. The directors have therefore been unable to repeat the previous year's balance distribution of 12½ per cent. Maintenance of the interim rate of 10 per cent., in fact, entails a substantial draft upon the amount carried forward, which has been reduced to £19,150. Although the monthly tonnage expanded, the quantity of ore treated was less than in the preceding period owing to the stoppage, and costs inevitably rose to some extent. The extraction, however, was improved by as much as 5 per cent. Ore reserves show satisfactory expansion, the positive tonnage now figuring at 2,040,000 tons, valued 26s. 3d. per ton on the basis of gold at 84s. per ounce. The quantity represents well over four years' supply for the mill, and the increase is chiefly attributable to the higher gold price, which has allowed the inclusion of material formerly considered unpayable. Developments in the northern leases have been of a particularly encouraging character. It may be noted that arrangements have been made for co-operation with Gold Fields Australian in the exploitation of the adjoining Moonlight leases, owned by that company. On the basis of the 1934-35 dividend, Wiluna yield 7 per cent., and current results should show some improvement. For Lake View and Star the loss due to stoppage of work is estimated at approximately £70,000, equivalent to 12½ per cent. upon the capital. It is consequently not surprising that the directors are unable to repeat the bonus of 7½ per cent. paid in conjunction with the final dividend for 1933-34. Indeed, but for the transfer from share premium account of £50,000 of the amount set aside for British and Australian income tax, the balance distribution of 12½ per cent., making a total of 50 per cent. for the year, could scarcely have been paid. On the present occasion the bulk of the special development has been charged against working costs and not to a separate account. The amount written off under this heading is £23,840, compared with £62,950 previously. Moreover, the depreciation allowance of £47,000 is somewhat more than before. Like Wiluna, Lake

THE NATIONAL CITY BANK OF NEW YORK

Incorporated with limited liability under the National Bank Act
of the U.S.A.

Founded 1812

London Offices:
36 BISHOPSGATE, E.C.2. 11 WATERLOO PLACE, S.W.1

View has brought into reserves a considerable quantity of ore previously unpayable. The total is now 3,038,900 tons, having an average value of 26.86s. per ton with gold at 85s. The figure includes 1,913,100 tons of positive ore, 965,000 tons of probable and 160,800 tons of broken ore, and shows an increase of 572,300 tons. Benefit should accrue during the current year from the operation of the Associated tailings retreatment plant, which started up last June. There is a basis for expectation that the 50 per cent. dividend rate, which affords a current yield of 8 per cent., will at least be maintained.

Other Company Results.—This week's list of profit and loss accounts, which is printed on page 938, includes the results of 42 additional companies. The list is remarkable for a continued improvement in earnings of most groups, and for the consistent recovery in net revenues shown by investment trusts during the year to September last. Two Bristol brewery results show satisfactory improvement. The first, *Bristol United* records an increase of profits from £80,558 to £89,933, and the dividend has been raised from 15 to 17½ per cent. *Bristol Brewery Georges* shows an expansion of net profits from £233,826 to £268,267, and a dividend of 18 per cent., tax free, is paid on the increased capital. In the "heavy" industries group, *Horden Collieries* reports almost unchanged profits of £98,283. The *Welsh Associated Collieries* report for the three months preceding the merger with Powell Duffryn Associated Collieries reveals net profits of £21,874, and intimates that considerable advantages are already being derived from the amalgamation. The *Birmingham Small Arms* report proves somewhat disappointing, for net earnings have fallen from £38,182 to £26,221, and barely cover the contribution to debenture sinking fund. Increased profits and dividends are common to the latest rubber company results, which include such concerns as *Killinghall, Gadjah, and Tebing*. The full report of *O.K. Bazaars* shows very satisfactory results, for the net profits, like the ordinary dividend, are almost exactly doubled at £142,792. Among the investment trust results it seems invidious to choose, for higher net revenues and modest increases in dividends are well distributed throughout the list. Attention may be drawn, however, to *Second Scottish*, whose net revenue has recovered from £75,835 to £98,982, *Scottish National* (£41,571, against £28,125), and *Clydesdale* (£49,864, against £38,354), while *Second Industrial, Second Scottish National* and *Southern Stockholders* record satisfactory improvement. The list of miscellaneous industrial results is rather small this week. It includes the full report of *Electric and Musical Industries*, whose preliminary results were announced at the end of September, and discussed at that time. The consolidated statement of the group's assets has been extended, and shows a strong position. This week's dividends include a first interim payment of 3 per cent. by *Richard Thomas*, and an interim of 12½ per cent. (against 10 per cent.) by *Whitehead Iron*

central feature. On this argument, market interest in cement shares has revived, since they will clearly benefit from the increased demand for a principal material if a generous extension of arterial highways is in prospect. Increased demand should be further assisted by a firmer price structure in the industry. The expectation of rising profits, and greater independence of the course of private housing construction, may therefore promote a swing of interest from brick concerns, which are faced with the gradual maturing of increased capacity, towards the established cement companies and the more vigorous among the new producers. Other road material concerns may also face a more assured future, but there is evident need for investment discrimination in the remainder of the group. Presumably the paving and asphalt companies may derive relatively limited advantage from the scheme, unless a larger proportion than at present seems probable is devoted to Metropolitan road construction. Further, the quarrying concerns may have a somewhat localised market for ballast and granite owing to the incidence of transport costs and to their partial replacement by concrete. The surfacing materials, whose value is higher in proportion to transport costs, are less affected by both considerations, and their producers include a number of smaller concerns with good dividend records during recent years. It will be noted from the accompanying table that certain of these concerns also include contracting departments. The out-

† Prospectus net profits 1931-32 to 1933-34 were £46,874, £35,115 and £42,516 respectively. ‡ Tax free. (a) And capital bonus 200 per cent. (b) "B" ordinary quotation; yield based on 18 per cent. dividend. § Prospectus net profits, 1932-33 and 1933-34, £4,565 and £19,415 respectively. ¶ For nine months to December 31, 1934, £29,890. ** Prospectus profits, 1932 to 1934, £48,671, £90,260, £79,136 respectively. (xx) Ex rights.

and Steel. Guest, Keen and Nettelfolds have declared the first interim dividend since 1930, at the rate of 2½ per cent. free of tax. The final dividend of Consolidated Goldfields amounts to 2s. 9d. per share, making an unchanged total of 4s. per share for the year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Buenos Ayres Western Railway, Central Uruguay Railway of Monte Video, Phoenix Investment Trust, Batu Rata (Sumatra) Rubber Plantations, Sumatra Para Rubber Plantations, Tebing Rubber Estates (1931), United Dairies, Consolidated Tin Mines of Burma, and Obuom Gold Mines. Sir Follett Holt, addressing stockholders of Buenos Ayres Western Railway, made a plea for the passage of an adequate transport co-ordination measure, and referred to the insidious and serious effect of road competition since 1929. The chairman of Central Uruguay Railway, after discussing exchange problems, expressed hope that the company would receive more sterling exchange at the official rate as a result of the new trade agreement. At the United Dairies meeting, Mr. Joseph H. Maggs referred to the vast increase in milk handled by the company's creameries, and declared that the company had co-operated with the Milk Board in taking up embarrassingly large increases of supplies. At the first general meeting of Obuom Gold Mines, shareholders were informed that the mill would probably be ready to start work by the end of the month. The chairman of Sumatra Para Rubber discussed the progress of the estate and the increase in profits which had been achieved despite increased estate costs due to exchange factors. The chairman of Batu Rata anticipated that, given increased consumption, the rubber plantation industry would quickly reach a more healthy position. The chairman of Phoenix Investment Trust referred to the possibility of some future settlement of the Trust's claims regarding its Russian investments. Shareholders of Consolidated Tin Mines of Burma were informed that output had improved since the close of the year. The chairman of Tebing Rubber Estates anticipated consistent reductions in rubber stocks and an improved price.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE SETTLING DAYS

TICKET NOVEMBER 19 | ACCOUNT NOVEMBER 21

THE opening of the new account on Monday coincided with more optimistic estimates of the expected majority for the National Government, with the announcement of lower unemployment figures for October and with the Chancellor's strategic disclosure of large schemes of reconstruction for roads and railways. Without looking these gift horses too closely in their mouths, the Stock Exchange became more confident of a post-election boom and prices rose. This movement was encouraged further by the increasingly persistent rumours of a compromise settlement of the Abyssinian affair. And to complete the market's confidence, the municipal election results, on one interpretation, were favourable to the Conservatives, and the Chancellor said that he could carry out his expansion programme without further taxation.

The gilt-edged market was particularly encouraged by these oracular voices, and although the volume of business was still limited, scarcity of floating stock brought substantial rises in Old Consols and Local Loans. India stocks overcame their weakness at last week's close, and were very firm toward the mid-week, together with colonial issues. There was later a profit-taking movement, but the undertone remained firm.

In the European bond market prices continued to improve, with certain exceptions. Austrian issues were in demand, and Greek loans rose as a result of the pro-monarchy plebiscite. French issues were dull on domestic difficulties. Chinese loans, particularly railway bonds, were apparently higher following the appointment of the Bondholders' Protection Committee, discussed in a Note on page 918. Japanese bonds moved downward under the

same influence. There has been continued interest in Brazilian issues throughout the week.

The home rail market has been strong, mainly as a result of the Government's promised rail expansion scheme, and Southern issues were particularly prominent. The schemes are discussed on pages 901 and 916. Transport "C" stock was a feature of the market following the publication of the Board's accounts for the last two years. These reports are discussed in a leading article on page 914. Argentine rail stocks were the only feature of a quiet foreign rail market, following a slightly more optimistic speech by the chairman of the B.A. Western.

After profit-taking at the end of the last account, industrial markets have been almost consistently strong. Cement issues have been particularly prominent on confident expectations of the road expansion programme announced by the Chancellor in his election broadcast. In the electrical equipment group there was seasonable strength, with a certain amount of profit-taking. The iron and steel group were strong on favourable trade reports. Whitehead were especially prominent, and Richard Thomas improved after the interim dividend announcements.

In the motor section there was a good deal of business in commercial vehicle issues, with Leyland in the lead until profit-taking developed in mid-week. Aviation issues were only fair.

Hopes of encouraging dividend announcements evoked support for brewery issues, and tobacco issues shared in the general rise. Textile issues further improved despite some profit-taking in rayon shares in mid-week. Store and provision issues recovered from last week's quietness and made general advances. P. and O. deferred and the Realisation issues were strong in the shipping section. The industrial market was still active and firm in mid-week, although some irregularity developed on later profit-taking.

The oil share market reflected the improvement in the American oil position. On Wednesday a slight recession occurred although the market remained firm. Shell and Royal Dutch fell as a result of selling from the Continent and from the provinces.

Rubber shares have been dull throughout the week, but although there have been slight set-backs in some issues, the volume of business was very small and there was no indication of general weakness. The market is marking time. Tea issues have been equally dull, and there is no sign of any anticipated rise in auction prices in Mincing Lane. Indians have been the weakest section of the market.

The Kaffir market has been firm throughout the week, with a sustained demand from Paris and the Cape. In mid-week there was some irregularity, but the tone was firm. West Wits. were again active among the developing concerns. There has been more interest this week in the West and East African markets. Increased turnover was recorded in Australian shares, which were, however, unable to maintain their opening buoyancy. Copper issues have been firm, helped by a slight improvement in the metal price, and tin issues were dull in spite of a similar increase.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET, which took an election holiday on Tuesday, is very gratified by the consequences. The news that the Republicans had recaptured the legislative assembly of New York State may not be of crucial political importance, since the Democrats were so insecurely perched in office, but the market interpreted the results as a blow to the President's re-election prospects. The results provided the signal for very active dealings. Wednesday's turnover would not have disgraced the total of two favourable business days, and the Dow Jones industrial index broke through a new post-depression "high." Nor was the bond market disregarded in the stock market's enthusiasm, for industrial issues were particularly firm, and turnover was nearly 5 million dollars higher than on Monday. General Motors led the rise in motors, following the increased dividend, and optimistic forecasts of production emanating from the motor show. Steel issues responded to good winter prospects and ignored a one point drop in

the estimated level of activity to 52.5 per cent. of capacity. Reports are gaining currency that increased prices for steel may be introduced, and an immediate increase of demand is expected. Industrial news continues favourable. Numerous increased dividends have been announced this week, and the National City Bank of New York calculates that the earnings of 220 industrial concerns showed an advance of 26.3 per cent. during the first nine months of the year, to \$427 millions.

(a) Election Day in New York

PARIS

An opening recession in the Government bond market was stemmed by support whose origin, the market suspected, came from high quarters. The rally itself, however, had little promise of permanence. By mid-week recurrent uneasiness regarding the home political situation was again casting its influence over the market, and interest returned to the international counters. A French railway issue of 5½ per cent. bonds at 91½ per cent. has not helped rentes, for a certain amount of arbitrage exchange into the new stock has taken place. Gold mining issues were well supported to the new London parities, and domestic industrial shares, such as electrical and chemical issues became stronger in mid-week.

	Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935		Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935

BERLIN

The share market last week continued dull, and as many as two-thirds of the listed securities were unquoted. The tendency was irregular and slightly weaker, but towards the close there were some signs of recovery. The turnover in steel, electrical and chemical issues was nevertheless considerable. Commercial bank, Reichsbank and shipping securities showed little change. Ufa Films were particularly depressed owing to rumours of a dividend cut. The bond market was steady on the whole, buying being financed with the proceeds of sales of shares. The new week began with a general decline, but at the close on Tuesday a slight recovery occurred, despite early weakness which particularly affected the leading textile issues.

	Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935		Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935

AMSTERDAM

Business this week has pursued an uneven course, although the broad trend has been upward. Opening dealings were marked by a confident interpretation of the immediate political and economic outlook, and the international section was quite active. Later, however, a certain amount of profit-taking caused a reactionary tendency, although shipping shares were still actively supported. Sugar shares, which suffered in Tuesday's reaction, turned firmer in mid-week, but most industrial issues had by this time lost much of their early support. In the oil group, Royal Dutch rose at one time to 209½, but subsequently reacted.

	Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935		Oct. 30, 1935	Nov. 4, 1935	Nov. 6, 1935

CAPITAL ISSUES

AN increased number of new issues has made an appearance this week. The largest, comprising ordinary shares in *Dominion Reefs (Klerksdorp)* at par, is a reasonable mining speculation at this stage, since apparently promising indications will be exploited under economical conditions of capital expenditure. The preference shares of *Caledonian Gas Corporation* are satisfactorily secured on the corporation's share in profits of constituent gas undertakings. *Phoenix Prince Gold Mining* 5s. shares have speculative possibilities, but the technical report states that "long blank stretches are bound to be encountered in developing." The setting out of particulars of the purchase consideration is detailed. *Wade Potteries* adopts a high-gear capitalisation. The shares offered were acquired for £57,500, plus payment of issue and underwriting expenses, and produce £70,000. On this basis, the 350,000 ordinary shares retained by the vendors of the constituent businesses would be valued at £70,000, giving a market valuation of goodwill of £50,427, compared with net assets of £89,573. The offer of *Sun Cycle and Fittings Company* ordinary shares produces £63,750. The issue has been acquired for £55,000, plus payment of issue and underwriting expenses, less a contribution of £4,400 from the vendor company. Both offers for sale are made by London Industrial Finance Trust, which, according to the *Stock Exchange Official Year Book*, owns the ordinary share capital of British General Fixed Trust, Limited. Both issues, ranking in the smaller industrial class, interest the more speculative investor. The only notice "for information" is in respect of *Montague Burton Estates* based on a yearly charge of 5½ per cent. of the cost of properties to the company and by the operating concern's satisfactory profits record.

Shares now offered acquired by London Industrial Finance Trust for £55,000 cash and expenses. List closed at 9.5 a.m. November 6th, heavily oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Montague Burton Estates, Ltd.—Particulars of issue of £210,000 4½ per cent. first mortgage debenture stock at 101½ per cent. Part of issue of £700,000 stock. Repayable by sinking fund at or below 102. Redeemable as a whole between 1939 and 1946 at 105 and thereafter at 104 on three months' notice; final redemption at 102 in 1978. Incorporated October 7, 1935, to acquire properties from M.B. Estates, Ltd., for £177,013 in cash. Company will own some 90 properties at a cost of nearly £1,000,000, with a rent roll due from Montague Burton, Ltd., of about £55,000 when stock is fully issued. Profits of Montague Burton, Ltd., after depreciation but before debenture interest, years ended March 31st: 1933, £556,091; 1934, £692,526; 1935, £699,725.

BY TENDER

Colne Valley Water Company.—Sale by tender of £160,000 3 per cent. debenture stock to be redeemed at par January 1, 1961. Minimum price £95 10s. per £100. Flat yield at that price £3 2s. 10d. per cent. Allowing for redemption at par £3 5s. 3d. per cent. Net revenue 1934 before prior charges, £106,139. Interest on debenture stock, including present issue, will require £23,573, leaving £82,566 available for dividends. Contingency and reserve funds end 1934, £59,876. Present population over 400,000. Water rental 1934, £285,373.

BONUS ISSUES

Stroud Brewery Company, Ltd.—It is proposed to capitalise a portion of the reserve fund and to issue to the ordinary shareholders by way of bonus new fully-paid £1 ordinary shares in the proportion of two new shares for each five held on November 29, 1935, fractions of shares being paid for in cash. The new shares are to rank for dividend as from September 30, 1935.

North British and Mercantile Insurance Company.—A capitalised bonus of £1 17s. 6d. per £5 share (£1 5s. paid up) is proposed, for which purpose £1,031,250 will be transferred from undivided profits. This will increase the paid-up ordinary capital from £687,500 to £1,718,750 out of £2,750,000 authorised. The existing £5 ordinary shares, £1 5s. paid are to be split into four of £1 5s. each with 6s. 3d. called. Two out of the four will be made fully paid, leaving the remaining two paid up to the extent of 6s. 3d. only.

ISSUES TO SHAREHOLDERS ONLY

Johnson and Phillips, Ltd.—Issue of 100,000 ordinary shares £1 at £2 per share to shareholders registered November 1st in proportion of one share for each seven held. These new shares will rank for final dividend for 1935, but will not receive the interim dividend of 5 per cent. just announced. Capital required for financing development of subsidiaries and general business of the company.

Duff Development, Ltd.—Issue of £45,000 6 per cent. first debenture stock at par.

Kirklees, Ltd.—Issue of £25,000 5½ per cent. first mortgage debenture stock at par.

Sungei Buaya (Sumatra) Rubber.—Issue of £25,000 7 per cent. first mortgage debenture stock at 103 per cent. is offered to shareholders and debenture holders for subscription at 103 per cent.

Tamworth District Electric Supply.—Issue of 25,000 participating preference shares of £1 at par. Applications received from the company's consumers will receive preferential treatment. The shares rank *pari passu* with the 6 per cent. cumulative preference shares for a cumulative dividend of 4 per cent. In addition, holders are entitled to receive a further dividend at one-half the rate per cent. by which the dividend on the ordinary shares for any year exceeds 6 per cent.

Swaziland and General Gold Mining Company, Ltd.—The unissued capital of this company is being offered for subscription to the shareholders bringing the amount of issued capital up to £50,000.

CONVERSIONS AND REPAYMENTS

I.C.I. (Fertiliser and Synthetic Products).—The 5 per cent. guaranteed debenture stock, 1930-45, will be repaid at par on December 15, 1935.

Nova Scotia (Province of).—The outstanding amount of the 4½ per cent. consolidated stock, 1934-64, will be paid off at par on December 2, 1935.

Poole Corporation 3 per Cent. Redeemable Stock, 1915-1945.—The principal will be repaid at par, with accrued interest, on and after May 1, 1936.

OFFERS ABROAD

Canadian Government Bonds.—Issue on November 4, 1935, of £75,000,000 (£15,000,000) Dominion of Canada bond issue in two classes. The first consists of four-year 2 per cent. bonds offered at 99.43 and accrued interest yielding 2.15 per cent. per annum. The other class is of 19½-years 3 per cent. bonds, which will be offered at 98½ and accrued interest yielding approximately 3.08 per cent. Nearly three times oversubscribed.

REPORTS AND NOTICES

With reference to statement made in last annual report of Spillers that Mr A. F. Forbes, of Messrs Thomson McLintock and Company, had been invited to join the board, it is announced that Mr Forbes has now been formally elected as from October 1st. Mr Walter Allen will retire from the board at the end of the current financial year, January 31, 1936.

Sir Edward Davson, Bart., K.C.M.G., has been elected a vice-chairman of Barclays Bank (Dominion, Colonial and Overseas).

Mr Christopher Parton Gabriel and Mr George Starkey Wade have been appointed directors of Gabriel, Wade and English, Ltd.

The directors of Eno Proprietaries, Ltd., announce that Mr Bernard H. Drake, C.B.E., has resigned from the board. The Rt. Hon. The Lord Selsdon, P.C., K.B.E., has joined the board of the company, and has been elected chairman.

Chosen Corporation, Ltd., announce that Mr R. Wright has joined the board of the Corporation.

Mr R. W. M. Arbuthnot and Mr D. A. Stirling have been appointed directors of Westminster Bank, Ltd.

The directors of Allied Ironfounders, Ltd., announce that Mr James Shaw (managing director of Planet Foundry Company, Ltd., Guide Bridge, and of British Bath Company, Ltd., Greenford), has been appointed managing director.

BANKS

NATIONAL PROVINCIAL BANK, LTD.—It is officially announced that Sir Samuel Roberts, Bart., has been appointed a director of the National Provincial Bank, Ltd.

THE CANADIAN BANK OF COMMERCE.—After 4½ years' service as London manager of the Canadian Bank of Commerce, Mr Crawford Gordon has been given the important promotion to the managership of the main Toronto branch. Mr R. B. Buckfield will now become manager at 2 Lombard Street. He will have as his assistant manager Mr R. H. McDade, the former Rio de Janeiro manager, who has only recently arrived in London to succeed Mr A. R. Phipps, the latter retiring on pension after 26 years' service as assistant manager here.

THE BRITISH OVERSEAS BANK, LTD.—Mr Thomas Francis Tallents, M.C., has been appointed to a seat on the board of the British Overseas Bank, Ltd.

RAILWAYS

ARGENTINE GREAT WESTERN RAILWAY.—Report to June 30, 1935, states that under working agreement company received from Buenos Ayres and Pacific Railway and distributed interest on first debenture stock £68,000. In consequence of continued heavy losses on exchange Buenos Ayres and Pacific was unable in year to pay any sums on account of arrears of interest and dividend on this company's debenture and guaranteed stocks, payment of which was postponed under scheme of arrangement of July, 1932. As Buenos Ayres and Pacific company has not paid a dividend for year on its first and second preference stocks, this company is not able to pay any dividend on the 5 per cent. preferred stock and ordinary stock.

CORDOBA CENTRAL RAILWAY COMPANY, LTD.—Converting Argentine currency into sterling at par, viz., at the rate of \$11.45 paper to £1, the results of working for year ended June 30, 1935, as compared with those of the previous year, were as under:—

	1934-35		1933-34
Gross traffic receipts	2,199,297 16 4	s. d.	2,163,802 13 10
Working expenses	1,936,030 10 6		1,992,523 9 11
Net receipts	263,267 5 10		171,279 3 11
Less—

Balance	66,625 16 5		65,246 17 6

Percentage of working expenses 88.03% 92.08%
The debit balance at June 30, 1934, was £212,563. At June 30, 1935, it was £554,519.

ENTRE RIOS RAILWAYS COMPANY, LTD.—Results for the year ended June 30, 1935, compare with previous years as below:—

	1933-24	1934-35
Gross receipts	9,230,456.16	805,833
Working expenses	8,272,869.51	722,235
Net receipts	957,586.65	83,598
		2,133,822.11
		186,286

The above results are shown with conversion of Argentine currency to sterling at par rate of exchange. The debit balance brought forward at June 30, 1934, was £17,801. At June 30, 1935, the debit balance carried forward amounted to £132,692.

RUBBER

TEBING RUBBER ESTATES (1931), LTD.—The crop harvested during the year ended March 31, 1935, amounted to 524,529 lbs. of rubber, and the average net sale price obtained, including stocks realised since the end of the year, was 5.640d. per lb. After allowing for the credit balance brought forward the position is as follows: Balance brought forward from last year, £721; add profit for year, £4,659; less interim dividend of 2½ per cent. paid on January 31 1935, £2,247; leaving balance of £3,133. The directors recommend the payment of a final dividend of 2½ per cent., less tax (making 5 per cent., less tax, for the year), which was paid on November 7, 1935, absorbing £2,246, leaving £887 to be carried forward.

MINES

MEXICAN CORPORATION, LTD.—The report for the year to June 30, 1935, shows dividends on investments of £87,397. This includes to June 30, 1934. After paying interest and tax, etc., there remains a net profit of £73,121, against a loss of £9,646. From this has to be deducted a debit balance of £38,684 brought in, leaving an available balance of £34,438. Dividends are to be resumed after a lapse of four years, with a payment of 5 per cent., less tax. This will require £25,000, leaving a credit of £9,438 to go forward.

KIMINGINI GOLD MINING.—The report from July 25, 1934 (date of incorporation), to June 30, 1935, states Kimingini mill commenced test operation on June 15th, and up to September 25th of this bullion. A scheme for dredging alluvial ground covered by Properties account stands at £339,311, by expenditure and equipment at £142,069, mine development at £29,033, cash at £78,218, (debit) £18,959. Estimate of ore reserves at end June was 45,500 tons, averaging 10.25 dwts. gold per ton to 25 ft. below adit level. Meeting at 20 Aldermanbury, E.C., November 27th, at noon.

COMPANY MEETINGS, &c.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED

DIFFICULT EXCHANGE CONDITIONS

The ordinary general meeting of this company was held, on the 4th instant, at River Plate House, London.

Sir Brodie H. Henderson, K.C.M.G., C.B. (the chairman), said that the receipts in Uruguayan pesos indicated that the total trade of the company had remained at much about the same level as it had been in the previous year, but the same measure of comparison could not be applied to the working expenditure, a good deal of which arose in sterling. Consequently, in terms of Uruguayan currency the working expenses had risen considerably, due to converting the sterling items into pesos at some 11 to the £. Owing to the rate of exchange adopted, both the gross receipts and the working expenses showed a large decrease in sterling. The resulting net profit was less by some £127,000, mainly due to the adoption for accounting purposes of the "controlled free" rate of exchange as from November 1st last in place of the "official" rate, which had been the basis since June, 1931. There remained a net revenue debit of £177,074, which was carried forward.

The trade agreement between Uruguay and the United Kingdom had been signed, but still awaited ratification by the Uruguayan Government. Exchange was the question which most vitally affected the well-being of this company, and from that agreement it appeared that they should look forward to receiving more sterling exchange at the official rate than had been the case in the year just closed.

The Chairman, in reply to a question, said that a telegram received from the general manager stated that recently the Government had appointed a Co-ordination of Transport Commission, a step in the right direction to regulate road transport and eliminate cut-throat competition.

The report and accounts were unanimously adopted, as were also those of the Northern Extension and Eastern Extension companies at separate meetings.

PHOENIX INVESTMENT TRUST, LIMITED

IMPROVED SECURITY VALUES

The twenty-first ordinary general meeting of the Phoenix Investment Trust, Limited, was held, on the 7th instant, at the offices, 25-31 Moorgate, London.

Mr Norman Holden (the chairman) said:—Our investments have increased by £22,967 to £614,624, and once again the valuation shows an improvement compared with the previous year. The net revenue is £13,414, and is practically the same as the year ending September, 1934. After deducting the preference dividend, there is available for the ordinary stockholders £3,285, and although this is not quite sufficient to cover a 2 per cent. dividend, your directors hold the same view as expressed in my speech last year, and decided to recommend this rate and encroach on the carry-forward to the extent of £589. Our investments are spread geographically as follows:—The British Empire, 40.70 per cent.; United States of America, 9.41 per cent.; Austria and Hungary, 3.76 per cent.; Germany, 8.51 per cent.; Russia, 3.82 per cent.; other European countries, 11.85 per cent.; South America, 19.71 per cent.; and China and Japan, 2.24 per cent.

Your company is a large holder of Russian Government and City of Moscow securities. The nominal value of these exceeds the sum of £900,000, and, in fact, more than this sum was paid for them by this company in its previous form, the "Russian Corporation." This holding is valued in the balance sheet at £25,000. During the many years since these securities were acquired, approaches to the Soviet authorities have been attempted to obtain some kind of settlement or recognition, but without the slightest response. However, in my opinion, the Russians are now not averse to a settlement, provided it does not cost too much and provided they can get certain advantages they greatly desire.

I consider that this company would be well advised to make a settlement, even if the price was no higher than 25 per cent. without any accrued interest, and I hope that one of these days your board will be in a position to consider this matter as practical politics.

The report was unanimously adopted.

UNITED DAIRIES, LIMITED

A YEAR OF PROGRESS

The twentieth ordinary general meeting of United Dairies, Limited, was held, on the 1st instant, at the Connaught Rooms, London.

Mr Joseph H. Maggs (chairman and managing director), in the course of his speech said:—The accounts show that the net profit brought into the balance sheet is £627,838. It is now proposed to pay a final dividend on the ordinary stock of 7½ per cent., making 12½ per cent. for the year, and to transfer £100,000 to reserve, bringing that fund up to £776,000, which will leave £90,033 to carry forward, an increase of £24,839.

As regards the year's trading, following increases of 4,000,000 gallons in 1933, 5,000,000 in 1934, I have to record a further increase of more than 12,500,000 gallons in our purchases of milk. The cow population continues to increase, and at the present time we are dealing with about 100,000 gallons per week more than at this time last year. These figures show both the attractiveness of the terms offered by the Milk Marketing Board to the producers of milk and our continued efforts to co-operate with the Board in taking up the embarrassingly large increased supply.

The only sign of any limit to production is the fact that in what formerly were regarded principally as stock-rearing districts the lure of the milk market is resulting in less young stock being reared. We have done our utmost to keep pace with the increased supplies, and even I have been amazed at the way in which our creameries and condenseries have responded to the calls made upon them.

Our manufacturing programme is by no means easy to plan. In the past year the quantities to be manufactured varied from 660,000 gallons in one week to over 2,250,000 in the peak week. Taking one item of manufacture alone—cheese—the limits of weekly fluctuation were from 86,000 gallons in the lowest to 700,000 gallons in the highest week. Equipment, of course, must be adequate to the peak week.

In spite of falling prices in many of the commodities handled, our sales in the year increased by upwards of £1,100,000. Butter sales increased by more than 6,000,000 lbs., and eggs by more than 2,000,000. It is pleasing to find that our sales of English eggs increased by over 8,000,000, Empire eggs by over 2,000,000, while our sales of foreign eggs dropped by over 8,000,000. For the purpose of getting the freshest possible eggs to our customers, we have now established five country egg depôts.

As an English company, it is natural that our first aim should be to sell as much home produce as possible, and our second aim to give preference to the products of our Dominions and Colonies. I am happy to say that our sales of Empire products continue to show a gratifying increase, and in butter alone one of our subsidiary companies has handled consignments of nearly 5,000 tons from Australia and New Zealand during the season just ended, as well as a considerable quantity of Empire eggs and other products. These direct consignments, of course, only represent a fraction of our purchases of Empire produce, the remainder being bought through other importing houses.

Looking back even over so short a period as ten years, the developments in our handling of the milk supply in London are simply amazing. It was only in 1925 that our first large modern bottling plant came into use. Now the whole of our retail bottling for Greater London is done from six plants. Much of the apparatus installed with pride in those early stages of the revolution of milk handling ten years ago has since been scrapped and replaced with machinery making for greater and ever greater efficiency and scientific safety.

Following the award of the gold medal in the new inventions class at the London Dairy Show last year, we have this year gained the gold medal for our bottle filling and capping machine, and the silver and bronze medals for the farm steriliser.

Both the quality of our supplies of milk and the efficient operation of our various factories can only be assured by systematic and ceaseless scientific supervision. This is provided for by a chain of twenty-six fully-equipped and efficiently staffed laboratories in the country, where every producer's milk is regularly examined both chemically and bacteriologically, and also by half-a-dozen similar departments at our London bottling and pasteurising depôts. The new central laboratory has evoked the most generous praise from dairy authorities in Europe and America. Your company is responsible for the purity of the supplies drawn day by day from many thousands of farms. These supplies are required not only for the fresh milk business, but also for our enormous home and export business in manufactured milk products.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED DIFFICULT CONDITIONS

The forty-sixth ordinary general meeting of this company was held, on the 6th instant, in London.

Sir Follett Holt, K.B.E., M.Inst.C.E. (the chairman), said that the directors were sorry to present such a disappointing result. Last November the outlook had been distinctly promising, crop prospects being better than at any time since 1928, but shortly afterwards there had been a period of constant and excessive rainfall followed by months of drought. Had it not been for the all-round improvement in trade generally in the Argentine, the loss of traffic, which at the par rate of exchange amounted to £99,000, would have been far more pronounced.

The railway had been economically worked for many years, and, with labour restrictions as they were, it remained difficult to effect further economies in operating expenditure. It was particularly unfortunate, therefore, that the fall in receipts had been accompanied by a rise in expenditure of £110,000 caused mainly by an additional charge thrown upon the company by the Presidential Award on labour questions. Exchange losses on actual remittances had been very much heavier, but the credit on account of the valuation of floating assets brought down the total to £310,543, some £37,000 less than in the previous year.

Much to their regret, the directors found that, after paying the full dividend on the prior preference stock, they could not, with any safety, authorise the payment of more than one-half of the full rate on the 4½ per cent. stock. To have to break in that way a long record was most unfortunate, but, in view of the actual earnings in the past year and an unpromising season before them on account of the drought, they had felt compelled to take that decision.

The effect of road competition during the past few years had been insidious and serious. He estimated that, had they been able to charge for the traffic they carried last year the same average rates as they were able to charge in 1929, the net revenue would have been £338,000 higher.

On account of the drought the prospects for the current year were in some doubt. Wheat production would be less, but it was possible that maize might afford substantial help towards making amends for the shortcomings of wheat.

The report was unanimously adopted.

SUMATRA PARA RUBBER PLANTATIONS, LIMITED RESUMPTION OF DIVIDEND

The twenty-eighth annual general meeting of the Sumatra Para Rubber Plantations, Limited, was held, on the 5th instant, at 30 Mincing Lane, London, E.C.

Mr H. A. Barrett (the chairman) said that it was a great pleasure to be able to show results justifying the payment of a dividend; they had not been in that happy position since 1929. During the intervening years the rubber-producing industry had passed through a crisis, and for three of those years their endeavours were mainly directed to minimising losses. Last year they had shown a profit, but it was too small for any distribution to be made, and they trusted that the industry was now definitely heading for better times.

They still had to contend with an adverse exchange, and, in fact, the position in that respect was rather worse in the past year than at any previous period. The Dutch guilder which, before Great Britain departed from the gold standard, had been worth about 18. 8d., last year cost them 2s. 9d., as against 2s. 6d. in 1933-34. In consequence, they were not able to avoid an increase in their estate expenditure, but that was the only respect in which they did not show an improvement upon 1933-34, their net profit being £9,533, as compared with £2,230. It was proposed to distribute £9,444 in the form of a dividend of 1d. per share, which was equal to 4½ per cent.

The profit and loss account dealt only with their exportable crop of 1,036,140 lbs. They had actually harvested rather more than that quantity, but the balance, being uncoupons stock, had been carried forward to the current season's account at the cost of production. A gross average price of 5.67d. per lb. was realised for the exportable crop, as compared with 4½d. per lb. in 1933-34. Receipts in London, including £1,245 derived from an exchange of investments, rather more than covered administrative and other expenses on this side. In June of this year the estate had been visited by Mr A. P. Hadow, who, to quote his own words, "noted considerable progress and a general improvement since his visit in 1932."

The report and accounts were unanimously adopted, and a resolution was passed converting the shares of the company into stock.

BATU RATA (SUMATRA) RUBBER PLANTATIONS, LIMITED

ADVERSE EXCHANGE AND PRICES

The twenty-fifth annual ordinary general meeting of the Batu Rata (Sumatra) Rubber Plantations, Limited, was held, on the 4th instant, at 30 Mincing Lane, London, Mr M. S. Parry, J.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said the profit amounted to only £1,797, as compared with £3,716. The present balance sheet included the upkeep of Bangoen Poerba, which was acquired on January 1st, while other factors were the drop of ½d. per lb. on the average gross price of 738.220 lbs., accounting for a diminution in receipts of £1,500; and further, there had been a loss on exchange of £1,713. The credit of £6,800 on profit and loss account was being carried forward.

MR HADOW'S VISIT TO ESTATES

The board's reason for acquiring Bangoen Poerba Estate had been fully explained, and the net result was they had now a planted area of 4,628 acres, as compared with their former total of 2,780 acres; the factory on that estate would not be required, as the new sheeting battery installed at Batu Rata enabled them to centralise factory work and so reduce manufacturing expenses. Mr A. P. Hadow, who had joined the board, visited the estates in July last, and, in conjunction with their visiting agent, had drawn up a programme for the economic working of the combined properties, and as a result production costs had been reduced.

In regard to the International Restriction Scheme, since July 1st to the end of September last production had declined by 98,000 tons, while, according to one authority, actual consumption had been only about 2,000 tons less than last year. With the more drastic cuts in supplies now in operation, any increase in consumption would quickly put the industry in a more healthy position. There were several indications that organised international efforts would be made to stabilise both exchange and prices.

The report and accounts were unanimously agreed to.

OBUOM GOLD MINES, LIMITED ALTERATIONS IN ADMINISTRATION

The first ordinary general meeting of Obuom Gold Mines, Limited, was held, on the 1st instant, at River Plate House, London, Mr Howell A. Hopwood (the chairman) presiding.

The Chairman said:—You will observe that we are in a strong financial position, having upwards of £100,000 cash at our bankers, with most of the plant and machinery already purchased and erected.

It has been felt by certain of your directors for some time that the company required better facilities for technical advice and guidance than obtaining, unless the company was housed with one of the bigger mining groups. Most of you will know of the Finsbury Pavement House group of companies, and will appreciate that to join this organisation was a wise and desirable step. Actually, the decision to transfer the registered offices was made so recently as October 9th, and since that date no delay has occurred in taking full advantage of the technical advice at our disposal, and two experts of repute and experience were sent to the Obuom mine within a few days of the changeover, namely, Mr H. E. Allen and Dr. McCann, Ph.D., the geologist.

We are now awaiting the joint report and recommendations of these gentlemen. Mr Allen has, however, sent us two cablegrams, the tenor of which confirms the view of the directorate that the services and advice of experts were necessary. Until we receive a detailed report it would be a mistake to jump to conclusions which might very well be misleading, but I can tell you that the ore reserve position is, according to Mr Allen and Dr. McCann, not sufficiently advanced to justify the immediate starting of crushing operations. Mr Allen estimates the present ore in sight as approximately equal to six months' supply to the mill. Mr Allen further states that the mill will probably be ready to start work by the end of November, but whether it will be advisable to commence the operation of the plant at that date will be further considered when we receive the reports previously referred to, and then only after a consultation with Mr Allen, who is expected to arrive in this country towards the end of this month. In the meantime Mr Allen and Dr. McCann have laid out a preliminary boring programme.

The report and accounts were unanimously adopted.

TEBING RUBBER ESTATES (1931), LIMITED

SATISFACTORY CASH POSITION

The fourth ordinary general meeting of Tebing Rubber Estates (1931), Limited, was held, on the 7th instant, at the Offices of the Company, 411-419 Salisbury House, London, Mr E. B. Ridsdel (the chairman) presiding.

The Chairman, in the course of his speech, said:—It will be observed that during the year we harvested a crop of 524,529 lbs. of rubber and that an average net sale price of 5.64d. per lb. was obtained, which represents a reduction in output compared with last year of 39,363 lbs. and an increase in selling price of approximately 2d. per lb.

Turning to the profit and loss account, the principal difference is the increase in the receipts from rubber at £12,327, as against £8,583 for the period ended March 31, 1934. This increase is entirely due to the better price obtained, as the crop sold is approximately 7 per cent. less.

Our cash position is satisfactory. Cash in hand, War Loan, rubber stocks and sundry debtors, less creditors, total £13,534, and, after deducting £7,489 in respect of the call of 2d. per share made during the year, the net liquid position of the company shows an improvement of £312, compared with the position at March 31, 1934; in addition to which we have spent £1,937 on the replanting of old areas and have paid an interim dividend for the year amounting to £2,246.

As regards the future, the outlook at the moment is brighter than it has been for some time, and, with the steady reduction in United Kingdom stocks as reported during the past few weeks, it would appear that the long period of stock accumulation has ended and that consistent reductions may now be anticipated, which should be reflected in the selling price of the commodity.

On the other hand, one of the first changes to follow the improvement in the selling price of rubber was the return of wages to a more normal level, in addition to which standing Eastern charges—on the basis of the reduced output now permitted under restriction—form a relatively higher proportion of the cost than hitherto, so that profits to-day are not being earned in the same ratio as they were a year ago.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN MINES OF BURMA, LIMITED IMPROVED PROSPECTS

The seventh annual general meeting of the Consolidated Tin Mines of Burma, Limited, was held, on the 7th instant, at Winchester House, London, E.C.

Major-General The Hon. Sir Newton Moore, K.C.M.G., V.D., said that before leaving a week ago on his visit to the properties the chairman of the company, Sir Cyril K. Butler, had handed him his address to deliver on his behalf. The work undertaken at the properties during the past two years had not reached the productive stage until the close of the year under review. In fact, the underground development and work of reconstruction, while of vital importance to their future operations, had, to some extent, adversely affected the output and results of the past year. The net available surplus amounted to £23,933, and after careful consideration the board recommended the payment of a dividend of 6d. per share, less tax, a similar distribution to that made a year ago. The total output of mixed concentrates had been 165 tons lower than in the previous year, due principally to the unsatisfactory and erratic rainfall, damage to plant, shortage of labour—particularly skilled labour—and delay in the commencement of milling operations. There had been an improvement in output since the close of the year, and for the past four months it had been 68 tons more than for the corresponding period of 1934.

The underground development of the Hermyingyi property continued to be attended with satisfactory results. During the past two years the progress achieved had included 25,000 ft. of machine and hand development, which had opened up nearly 60,000 tons of ore reserves of an average assay value of 2.07 per cent. mixed concentrates, and the designing and erection of a mill and power plant and other ancillary equipment for the mining and milling of the ore, all of which had been brought into operation in May of the present year. The value of the concentrates in the proved and partly-proved ore reserves of 60,000 tons at current market prices of tin and wolfram was not less than £140,000.

He considered there was no reason to take other than an encouraging view of the prospects for the current year.

The report was adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 2, 1935, amounted to £13,894,000, against ordinary expenditure of £30,295,000. After allowing for an increase in Exchequer Balances of £44,781, the operations for the week, as shown below, increased the gross National Debt by £16,661,000 to approximately £7,987 millions.*

(000's omitted)

Public Department Advances	+ 14,500	Road Fund Temporary Advances	— 1,501
Treasury Bills	+ 3,451	National Savings Certificates	— 50
Land Settlement Repayments.	+ 13	N. Atlantic Shipping Issues	— 29
		British Shipping Issues	— 23
	+ 18,964		— 1,403

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on September 30, 1935, appeared in the *Economist* for October 5th.

LOBITOS OILFIELDS, LTD.—The production of the Peruvia company for October is cabled at 26,470 tons.

(Continued from page 928)

MISCELLANEOUS

ARGENTINE NAVIGATION COMPANY MIHANOVICH, LTD.—Gross takings and those of the associated concern, Cia Uruguaya de Navegacion, Ltd., together amounted to Arg. Paper \$2,298,029 for the month of September, and following is a comparison with previous figures. Gross takings, both companies: September, 1935, A.P. \$2,298,029; September, 1934, \$2,280,283; increase, \$17,746—0.8 per cent. Aggregate, January–September, 1935, \$22,326,137; aggregate, January–September, 1934, \$19,430,557; increase, \$2,895,580—14.9 per cent.

THE BIRMINGHAM SMALL ARMS COMPANY, LTD.—The profit for the year ended July 31, 1935, amounted to £112,182, as against £127,550. After providing £85,961 for debenture interest and £24,380 for sinking fund, the debit balance to be carried forward has been reduced to £67,872 from £69,714. The turnover of the group has been well maintained and all of the trading subsidiary companies except two have earned profits.

ELECTRIC AND MUSICAL INDUSTRIES, LTD.—Profits for year to September 30, 1935, before providing for tax, amounted to £565,546, against £420,710, this year's figure including a profit of £114,544 on the sale of securities by the operating companies. After paying the

preference dividend, £21,390, and allowing £108,000 for tax, the balance available is £478,774. The ordinary payment is raised by 2½ per cent. to 12½ per cent., leaving £197,558 to go forward, against £42,618 brought in. The combined statement of Gramophone Company and Columbia Graphophone Company and their English subsidiaries, adjusted to show effect of dividends, gives creditors at £1,020,667, against £1,242,467. Investments in foreign subsidiaries have risen from £543,032 to £602,133. Stocks are higher at £1,071,278. Investments in Government securities are down from £1,304,404 to £268,700, but cash has advanced from £359,699 to £1,075,774.

BELFAST OMNIBUS COMPANY, LTD.—Net profit year ended September 30, 1935, £21,631, compared with £16,171 last year. Dividends for the year on ordinary and deferred shares are at double the rate for last year. Carry-forward £3,777, compared with £3,060 last year. The directors state that the undertaking was taken over by the Northern Ireland Road Transport Board on September 30, 1935, and the amount finally agreed as compensation is £119,041 Northern Ireland Transport "A.I." stock and £271,250 Northern Ireland Transport "B" stock. In addition, the company is retaining assets to the value of £50,670, which will be realised in cash. Against this the total liabilities, including outstanding prior lien debenture stock, amount to £110,797.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE tendency of the prices of the principal primary products was irregular during the week ended last Wednesday. The market in wheat was dull and prices barely steady, owing to the expectation of French selling pressure and uncertainty over Canada's future wheat policy. Quotations for raw sugar were marked down, and prices realised at the Mincing Lane tea auctions continued their downward movement. The market in meat was quiet and prices are scarcely changed on the week. The tendency of the quotations for butter, cheese and bacon was downwards, and the seasonal rise in the price of eggs was arrested. In general, fruit remained dearer than a year ago.

Among industrial raw materials, the market in copper, lead, spelter and tin was firm, but quotations for wolfram and antimony were marked down a little. Owing to the expansion of the demand for iron and steel materials, quotations are tending to rise, and the import quota for semi-finished materials had to be increased. Many plants are working to capacity, and some consumers of semi-finished steel appear to be willing to buy ahead as far as manufacturers will accept business.

The market in rubber was less active and prices tended to sag on reports of heavy shipments of native rubber from the Dutch East Indies during the past month. The price of linseed continued its downward movement on better crop reports from Argentina. Among textile raw materials, United States cotton was cheaper, but Egyptian Sakellaridis was dearer than a week ago. Wool remained firm, and quotations for flax and jute continued to rise.

The downward movement of commodity prices in the United States continued during the past week. Thus, Moody's daily index of the dollar prices of staple commodities (December 31, 1931 = 100) suffered a further fall from 168.2 on October 30th to 165.5 on Wednesday last. The

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 11—SILVER AND THE SHANGHAI DOLLAR. A view of the Silver Market and the position of Roosevelt's Silver Policy, following the divorce of the Chinese Currency from the Silver Standard.

TUESDAY, NOVEMBER 12—TIN SHARES. Continuing his series on Tin Shares, our special Mining Correspondent "MINOTAUR" deals this week with two of the highly efficient producers under the chairmanship of Mr. F. E. Mair—PENGKALEN AND PETALING.

WEDNESDAY, NOVEMBER 13—THE ARGENTINE GOVERNMENT AND THE RAILWAY COMPANIES. An expert analysis of the attitude of the Argentine Government towards the huge British-owned railway companies operating in Argentina, the commission reports and proposed legislation concerning the railways, and the relation of the railway position to the general economic relations between the two countries.

THURSDAY, NOVEMBER 14—CHINA'S ECONOMIC AND FINANCIAL POSITION. The position of China, with the new currency and exchange reforms, the visit of Sir Frederick Leith Ross, and the formation of a special Chinese Bondholders' Committee, has been much in the eye of the financial public. This article deals with China's economic position and the background against which these events are taking place.

FRIDAY, NOVEMBER 15—THE R.A.F. EXPANSION PROGRAMME AND THE AIRCRAFT INDUSTRY. Our expert Aircraft Correspondent, Oliver Stewart, analyses the progress being made with the R.A.F. programme, and the disposition of the orders to date.

SATURDAY, NOVEMBER 16—PAINT SHARES. This article discusses the outlook for the companies in that important ancillary to the building and construction boom—the Paint Industry.

A QUIET ELECTION

THE General Election of 1935 is over. The voice of the people has been heard. As we write, the result of the voting is unavailable; but by the time these words are read the nation may have sufficient material to estimate the political complexion, the numerical strength, and even the personnel of the next Government.

The election campaign has generated little fury and less than normal sound. Throughout its course, as a distinguished French observer has noted, rival candidates have been distinguishable chiefly by their varying emphasis on particular items of policy, whose main topics—peace, support of the League of Nations, stimulation of domestic recovery by public works, and improvement in social services—have figured in greater or less degree in the programmes of all parties. For once, the attention of the elector has been diverted neither by "Red Letters" nor by too many red herrings.

These conditions have inevitably made for a quiet election, distinguished by sparsely attended meetings, particularly in the Southern areas, and by a tendency for national issues to be viewed in a localised perspective. The Means Test, for example, has been a popular subject for the heckler in constituencies, particularly in the North of England and South Wales, where the burden of unemployment is most oppressive.

Placid as the campaign has been, as campaigns go, it has disclosed many indications of the way the popular wind is blowing. The country has been spared more than a modicum of "freak" and exotic candidatures. Sir Oswald Mosley's Fascist organisation has been conspicuous by its total absence. The lords of the Press, whose intervention has so frequently disturbed the placidity of by-elections, have, on this occasion, held the pen to be mightier than the stump. The extreme Left, also, has been almost entirely out of the picture; for only 17 Independent Labour and a mere couple of Communist candidates have taken the field.

As the campaign has proceeded, the tendency to con-

verge towards the Centre has continued. During its course two announcements have come from the Government side of schemes involving capital expenditure to help employment. But more remarkable still has been the decreasing insistence of the Government on the necessity for a big programme of "defence" expenditure. Even the most perfervid supporters of re-armament appear to have realised its extreme unpopularity as an election issue, apart altogether from its essential incompatibility with support of the aims of the League.

Doubtless, much deeper divergences exist beneath the surface than the apparent similarity of programmes would suggest at first sight. For their moderation is partly due to the fact that both the Conservative and Labour Parties have been wooing the Centre vote which the Liberal Party in its present divided state is unable to consolidate in a strong and separate political force. Yet the way this vote is cast will decide the election. The very weakness of the Liberal Party has induced both of the other parties to become more liberal.

Is this blurring of the old and crude party divisions a passing phase, due to the tactical situation at the moment, or is it a sign of a more permanent change that may in time react on the whole party system? Is it due to the accident that the election is taking place at a time of relative internal prosperity? Or does it mean that old issues have, in fact, become less important and that no new ones have taken their place?

At the moment it certainly seems as though the latter were the true explanation. The Free Trade issue is a case in point. Thirteen years ago, after the "peace and tranquillity" election of 1922, it appeared for one moment that a similar state of party overlapping was taking place. But the re-emergence of the old Tariff Reform controversy gave a new lease of life to traditional animosities. To-day this country has adopted a tariff that is more or less moderate. But it would be impossible to imagine a more startling object-lesson than that which we have had in the last three

years of the danger—both economic and political—of tariffs and other forms of trade obstruction. Though vested interests still fetter the Government's freedom of action, the Foreign Secretaries of both England and America agree in regarding the removal of trade barriers as the most urgent step needed in order to allay political difficulties, and on economic grounds our protectionist Chancellor of the Exchequer supports them. On the other hand, few if any English Free Traders would think it practicable, in the chaotic condition of the world to-day, to sweep away all our tariffs unilaterally. The problem, though more vital than ever, has lost its harsh outlines for election purposes and become a question of ways and means—of more or less.

In other directions, also, sharp dividing lines are tending to become blurred. "Class warfare," for example, has played little part in the present election. Though Britain still has her poor and workless, recent decades have been marked, not by an ever sharper cleavage between the "haves" and the "have nots," but by the swelling of the artisan and middle classes and by the enlarging of opportunity for educational and economic advancement. All have something to lose from insecurity. Hence, the anxiety of the Labour Party to rebut the sweeping charge that their return to power would endanger the savings of the small investor or the home of the man who is buying his house through a building society.

Again, "nationalisation" is losing such appeal as it ever possessed, whether as a gospel or as a bogey. The State, steadily and unostentatiously, has already extended its control over many essential national services. The last Government has gone further than any of its predecessors in this direction. It has introduced control of road transport, established marketing boards for certain staple foodstuffs, and controlled an important section of the market for new capital. The nation has become accustomed to the idea of the Government's taking a hand in business—through its guarantee of funds for such enterprises as the building of the "Queen Mary," the London electrification scheme and the proposed £30 millions of railway expenditure, and by taking the initiative in forming "public" undertakings like the London Transport Board and the Central Electricity Board. State activity, in short, bids fair also to resolve itself into a matter of more or less, in which opposing protagonists lay differing emphasis on its scope and form, but are agreed in admitting that there is a field in which Governments may properly intervene or control.

Altogether, the lesson of the 1935 election may well be that the common ground between the parties is of more permanent importance than the issues which divide them. And this prompts the question whether the nation is working towards a new political order in which, from a wide and common centre, the balance will shift now to the Right, now to the Left, instead of swinging from one extreme to the other? There is much that is desirable in such a development.

So long, however, as elections are fought under existing party banners, it will necessarily involve anomalies and paradoxes. Some of these are well illustrated by this week's events. If, for example, the general expectation proves correct and the National Government is returned, but with a reduced majority, the acutest of foreign critics will be hard put to it to say who has obtained a mandate, and for what. It needed no election to prove that the nation was united in its support of the collective system in international relations. Nevertheless, Parliament was dissolved nominally on this issue, and Mr Baldwin asked the country to approve the stand taken at Geneva. Yet it would be erroneous for a foreign observer to interpret a reduced Government vote as a sign of weakening in the national determination to back the Covenant. In fact, it might be the very opposite. To some extent there is bound to be a recovery of the Labour poll to more normal dimensions; but any swelling of the Opposition vote beyond this would be symptomatic not of anti-League feeling but of a national desire for greater firmness than the last Government evinced in its handling of League affairs up to a very few months ago. It may also afford welcome evidence that the country is unwilling to dispense with the invaluable services which a strong Opposition alone can render, under a democratic constitution.

SIR SAMUEL HOARE AND EGYPT

LAST Wednesday, in the course of riotous disturbances, eighteen demonstrators and nineteen policemen were injured in Cairo and eight demonstrators and forty-five policemen at Tantah. The date was Egypt's Independence Day, and the anti-British character of the demonstrations was not in doubt. On Thursday further rioting occurred when a mob, advancing on Cairo, were intercepted by a force of police, whose British officer is reported to have opened fire in self-defence.

These occurrences give a new urgency to the question of future Anglo-Egyptian relations. In our issue of Saturday last we urged that a favourable opportunity for placing these relations on a permanent basis of friendship should not be let slip in 1935 as was done by His Majesty's Government, with disastrous results, in 1919. That same night the subject was touched upon by the Foreign Secretary in his speech at the Guildhall. His remarks dealt with three points: the spontaneous and willing co-operation of Egypt with the States Members of the League (of which Egypt is not yet a member herself) in regard to the Italo-Abyssinian conflict; the question of the Egyptian Constitution; and the question of placing Anglo-Egyptian relations "upon a permanent footing satisfactory to both" countries—"when the time comes." Sir Samuel Hoare's pronouncement on the second of these three points has already produced repercussions in Egypt; and still stronger reactions are likely to be evoked by his omission to hold out any prospect of the British Government's being willing to resume negotiations for a permanent Anglo-Egyptian settlement in the near future. In these circumstances, the courtesy and even cordiality of the Foreign Secretary's tone towards Egypt should not blind us to the serious defects and dangers of a policy of procrastination.

On the second (and lesser) point of the Egyptian Constitution, Sir Samuel Hoare mentioned that when the British Government had been consulted they had advised against the re-enactment of the Constitutions of 1923 and 1930, "since the one was proved unworkable and the other universally unpopular."

This terse description of these two Egyptian Constitutions substantially tells the truth about them. The Constitution of 1923, which was drafted and enacted in the first flush of exuberance after the restoration of Egypt's internal independence in February, 1922, was on paper a very advanced democratic Constitution which in practice enabled a single party—the Wafd—to dominate Egyptian domestic politics and reduce other genuine political movements to impotence, much as Turkey has been dominated by President Mustafa Kemal's Popular Party and China by the Kuomintang. This, of course, easily happens when a Constitution of this advanced type is applied to a country in which the mass of the population has little general education or practical political experience. If, however, the 1923 Constitution might be described by unfriendly critics as an instrument for a one-party tyranny, it would be equally fair to describe the 1930 Constitution as an instrument for a "palace government," which is certainly neither more popular in Egypt, nor more desirable in itself, than the Wafd regime. Indeed, King Fu'ad's friends were only able to introduce this Constitution because the Wafd had overreached itself by its combination of high-handedness at home with intransigence in the abortive Anglo-Egyptian negotiations of 1927-28 and 1929-30. This palace Constitution has had to be withdrawn because it is not merely odious to the Wafd, but is also, as Sir Samuel Hoare has said, unpopular in the country.

At the present time, Egypt is living in a constitutional interregnum under the regime of Nessim Pasha, who seems to share Sir Samuel Hoare's dislike for both Constitutions. Hitherto, the Wafd have been supporting Nessim Pasha in the nominal belief that he meant to restore the 1923 Constitution some day. They have withdrawn this support on the news of Sir Samuel Hoare's speech; and if, in consequence, Nessim Pasha falls, he may be succeeded by some realist and opportunist statesman like Mahmud Pasha, who is hostile to the Wafd and friendly to Great Britain without being on that account indifferent to the national interests of Egypt in the Anglo-Egyptian settle-

ment which must come sooner or later—and the sooner the better.

A critic of British policy towards Egypt might on first thoughts be tempted to say that already it is no business of ours what Constitution Egypt lives under or what Egyptian Ministry is in office, inasmuch as we recognised the independence of Egypt in 1922, subject to the reservation of four points which all lie outside the field of Egyptian domestic politics. On second thoughts, it will probably be admitted that we cannot be altogether indifferent to Egypt's internal affairs so long as the four outstanding points remain unsettled. For, if and when we do successfully negotiate a settlement, it is important for both parties that the Egyptian as well as the British Government concerned shall be fully and indisputably representative of the country on whose behalf it is acting. An ostensible settlement would be worse than useless if it could be represented after the event, with any degree of plausibility, that we had obtained terms unduly favourable to ourselves from an Egyptian Government which was more dependent on us than it was representative of the Egyptian people. It is therefore in our interest that an unquestionably representative Government, with a clear mandate to negotiate with us, shall come into power in Egypt at the earliest possible moment.

The four points which have to be settled in order to place Anglo-Egyptian relations on a proper footing are first, the security of the communications of the British Empire in Egypt; secondly, the defence of Egypt against all foreign aggression or interference, direct or indirect; thirdly, the protection of foreign interests in Egypt and the protection of minorities; and fourthly, the Sudan.

Attempts to negotiate a settlement of these four outstanding points have been made on two occasions: first between Sir Austen Chamberlain and Sarwat Pasha in 1927-28, and then between a Labour Ministry and a Wafd Ministry in 1929-30. Both attempts came within measurable distance of success—the second attempt very near indeed. And without recapitulating the history of the negotiations, we can see from the mere headings of the agenda that the task of British and Egyptian statesmanship has been immensely facilitated by Signor Mussolini's recent action.

Italian action has, in fact, brought out, for the dullest and most prejudiced eye to see, the underlying community of British and Egyptian interests. To Egyptian eyes it must now be obvious—with the fate of Tripoli and Abyssinia and Manchuria in full view—that the choice is not between the British connection and independence, but between the British connection and one with some other European Power which would be imposed, as the British connection was imposed in 1882, by force. And the fable of the dog and the ticks would suggest that it is wiser for the Egyptians to help the British than to try the Italians. On the other hand, it must be equally obvious to British eyes that, if a challenge is going to be offered to British power in the Mediterranean, then we cannot afford that the connection of

Egypt with the British Empire should continue to be one of duress. It must be our aim to place Anglo-Egyptian relations on at least as satisfactory a footing as Anglo-Iraqi relations. Politically, and *a fortiori* morally, we need to have the Egyptians as our friends and allies, and not as our unwilling puppets.

In this light, every one of the four points becomes far more tractable than ever before. The first two points—British security in Egypt and the defence of Egypt against aggression—become different sides of a single Anglo-Egyptian shield. The second and third points also merge into one another, for the defence of Egypt against indirect foreign interference is bound up with the liquidation of the capitulations—an anachronism which has now been eliminated in Iraq as well as in Turkey. As for the protection of minorities, the Copts have more and more thrown in their lot with their Muslim co-religionists; and the universal sympathy in Egypt for the Copts' Abyssinian co-religionists is another sign that in Egypt the old religious wound is no longer open. As for the administration of the Anglo-Egyptian condominium in the Sudan, which has proved the most difficult point hitherto, it will evidently be easier for the British authorities to re-admit into practical as well as juridical partnership an Egyptian partner who has no more desire than his British colleague to see both parties alike evicted by some third Power. In fact, on all four points, the moment is singularly favourable for negotiation; and this is eminently a case in which prudence counsels speed and not delay. It will be singularly regrettable if the events of this week result in a postponement of the question on the ground that we cannot yield to violence and intimidation. The Egyptians may counter-retort by outbreaks on a wider scale—and so on, in another repetition of an old and wretched story. This is the vicious circle that we fear. We appeal to the Government most earnestly to prevent it from forming. They, and they alone, hold the initiative.

CRISIS IN THE COAL INDUSTRY

At the beginning of this week, almost simultaneously with the General Election, the miners balloted on a proposal to empower their Federation to enforce their claim for an increase in wages of 2s. a day by strike action if necessary. The result of the ballot will not be known till next Wednesday, and it is not, of course, certain that the necessary two-thirds majority will be secured in every district. But it is more than possible that, in a week or two, unless very careful thought is taken by all parties to the dispute—including the Government—we may find ourselves once more on the fatal road that led to the protracted disaster of 1926.

That the economic pulse of the mines is still running extremely low, despite a considerable advance in mechanisation and output per man-shift, there is no room for doubt.

The following table shows the official figures of wages, royalties, profits, output per man-shift, etc., in certain districts in the quarter ended June 30, 1935:—

District	Wages per ton	Royalties per ton	Total Costs per ton	Profits per ton	Output per Man-shift	Cash Earnings per Man-shift
Scotland	s. d. 7 6-42	s. d. 0 6-04	s. d. 11 4-94	+0 5-15	cwt. 25-33	s. d. 8 9-71
Durban	7 8-62	0 5-94	12 7-78	-0 4-41	22-05	8 0-31
S. Wales	9 10-43	0 8-60	15 4-75	-0 2-63	20-23	9 3-81
Yorkshire	8 5-73	0 4-83	12 8-83	+0 3-80	26-17	10 3-13
N. Derby and Notts	8 2-63	0 4-82	12 5-50	+0 2-69	27-68	10 6-07
S. Derby, etc.	9 4-94	0 3-81	13 8-07	+0 6-34	22-50	9 9-39
Lancs., Cheshire, etc.	10 2-74	0 4-87	15 5-99	-0 0-16	20-04	9 3-70
Great Britain	8 7-42	0 5-80	13 3-03	+0 0-66	23-10	9 2-85

Prima facie, these figures appear to prove that the industry cannot afford any increase of wages at all, at any rate in the exporting areas. The returns, however, are subject to one important qualification. The miners allege that the financial structure of the industry is now such that subsidiary selling organisations make profits, while the colliery companies show paper losses. This contention has been admitted by an impartial committee to have some force in South Wales; but until a similar investigation has been held in other areas, the layman must suspend judgment on it. In any case it is clear that the industry as a whole cannot economically grant an immediate increase in wages of 2s. a day.

We are thus confronted with a great national industry unable to pay a decent living wage, and a large body of organised workers evidently convinced of their right to demand by the strike method what ten years of patience have failed to attain. What is to be done? The arbitration which the miners have offered would in itself be no solution, since it would not affect the ability of the industry to pay higher wages. Ultimately, a solution can only come from an increase in demand, a reduction in costs, or a Government subsidy. Nothing but a far-reaching revival of international trade could bring an increase in demand large enough to have substantial effects; for coal mining is faced throughout the world with the rapid development of substitute fuels. Some slight revival of demand has, of course, resulted from the British internal recovery of the last three years; and some revival of exports to particular countries has followed the conclusion of Mr Runciman's trade agreements, as the following figures of coal exports in the last three years show:—

Country	1932	1933	1934	January to October 1934	1935
Norway	Tons 000's 868	Tons 000's 983	Tons 000's 1,371	Tons 000's 1,168	Tons 000's 1,072
Sweden	1,365	1,894	2,610	2,154	2,069
Denmark	2,090	2,857	3,088	2,597	2,583
Iceland	85	107	107	114	114
Finland	474	473	831	626	626
Germany	2,309	2,360	2,541	2,071	2,398
Argentina	1,846	1,852	1,937	1,648	1,644
Estonia	33	29	24	...	...
Latvia	236	323	402	...	...
Lithuania	72	152	185	...	...
Total	9,378	11,137	13,096	10,445*	10,806*
Total exports (all countries)	38,899	39,068	39,680	33,267	32,351

* Excluding Estonia, Latvia and Lithuania.

While the sterling countries, however, owing to internal recovery, have been increasing their coal imports, the gold countries have been decreasing theirs; and it would be optimistic to look to the export market for a quick improvement in the situation.

How far then is a reduction of costs possible? Such measures as the unification of royalties and the centralisation of selling, now promised by the Government, will be of some assistance. But they cannot substantially reduce costs of production or of marketing in the immediate future. And to the suggestion that internal prices should be substantially raised by some development on cartel lines, with a differential export price, there are two formidable objections: first, that internal demand might be curtailed; and, secondly, that the charge of "dumping" might lead to foreign retaliation against our exports. In short, if the consumer, directly or indirectly, is to be paymaster, a rise in wages

must mean a reduction in employment. For the margin of costs to be reduced, other than wages and royalties, is extremely narrow; and it is generally conceded that the mechanical equipment of many pits (though not all) is reasonably modern and efficient.

We are thus brought back to the fundamental fact that the industry is really suffering from chronic surplus capacity; that many uneconomic pits are running at a loss and on short time; and that if production could be concentrated on the most efficient pits, profits could be restored and wages raised. This is the opinion of the more progressive among the owners themselves; and it has been affirmed by a whole succession of investigating committees and commissions. It found legislative expression in the amalgamation provisions of the Coal Mines Act of 1930 and the Reorganisation Commission set up by this Act. Indeed, it may be taken to be admitted by the present Government. But, unhappily, the progress of amalgamation has been lamentably slow, except in South Wales and Lancashire, owing to the obstructionist attitude of a section of the owners, combined with the "wrecking clause," inserted in the 1930 Act by the House of Lords, which makes it compulsory on the promoters of an amalgamation scheme to prove that it will "not be financially injurious to any of the undertakings proposed to be amalgamated." It was this clause which brought the recent South Yorkshire scheme to grief.

We are driven, therefore, to the inescapable conclusion that it will be the duty of the new Government to decide on the compulsory enforcement of amalgamation in the remaining coalfields. The industry cannot go on pleading to be given "time" for voluntary reorganisation. It has had sixteen years since the Sankey Report, nine years since the Samuel Report and five years since the Coal Mines Act of 1930. The Government, we suggest, should announce that after three months a Bill will be introduced into Parliament providing for compulsory amalgamation on lines whose details would be worked out by the Reorganisation Commission or some statutory body of equivalent knowledge and status. So far any Government should certainly go, whether the miners vote for a strike or not.

Should it go further? There is, of course, little chance that a mere promise of compulsory amalgamation, even at a definite date, will now satisfy the miners. Indeed, nothing short of a concrete guarantee of an increase in wages on a definite date, with or without some prospect of national negotiations, is now likely to satisfy them that they are not suffering from an intolerable injustice. For it must be remembered that they are asking not for a uniform national rate of wages, but for a national agreement taking account of local differences. Should the Government grant a temporary subsidy, or enforce national negotiations, or both? The arguments against any kind of subsidy are many and obvious, and the precedent of 1925 would seem to be conclusive. We suggest, once more, that the most practicable solution may be for the Government to undertake to introduce a Bill at a definite date providing for compulsory amalgamation, a committee of arbitration on wages similar to last year's Bridgeman Committee, and compulsory national negotiations in the future. Such an offer seems to be the minimum that the miners could well accept. But it should certainly be offered. For nobody can doubt that a mere policy of drift may involve us in another catastrophe from which all will suffer, and the miners most of all.

THE ENGLISHMAN'S FRUIT

CONSUMPTION of fruit in Great Britain has progressively expanded during the past decade. Various factors have contributed to this desirable result, including improved technique of storage and transportation and a change in popular taste, which may have drawn some impetus from the wider "cult of the vitamin" in a balanced dietary. According to the estimates of the Imperial Economic Committee, the apparent consumption of fresh fruit per head rose from 70 lbs. in 1924 to the record level of 96 lbs. last year.

From what sources has the Englishman satisfied this growing appetite? Roughly three-fourths of the fresh fruit consumed in the United Kingdom is imported from overseas, but domestic production has lately been increasing. The output of the principal orchard fruits is estimated as follows by the Ministry of Agriculture:—

PRODUCTION OF ORCHARD FRUITS IN ENGLAND AND WALES ('000 cwt.)

	1929	1930	1931	1932	1933	1934	1934 compared 1929-34 Average
Apples	7,560	4,917	2,321	3,206	4,270	10,532	+93
Pears	612	419	260	286	842	585	+40
Plums	1,215	2,581	646	687	2,928	3,177	+70
Cherries	296	466	267	266	446	380	+8

The figures show wide annual fluctuation. Of all branches of British agricultural activity, fruit production is one of the most uncertain. The grower is entirely at the mercy of the weather; late frosts may destroy the blossom, or autumnal gales blow the ripe fruit from the trees and render it unmarketable. The coincidence of both factors has made the 1935 season most unsatisfactory from the growers' point of view. The yield of small fruit—strawberries, raspberries, currants and gooseberries—is subject to less violent oscillations, but these crops are of relatively small importance to the British grower.

Until quite recently fluctuations in home production were reflected directly in consumption. Supplies varied widely from year to year, and consumption was concentrated in comparatively short seasons. When the crop was ripe it had, perforce, to be picked and consumed immediately, and prices frequently fell to low levels in the resulting period of glut. This condition still holds to some extent in the small fruit trade, but much has been done to smooth out supplies by canning, bottling and other methods of preservation. Recently, moreover, remarkable progress has been made in the "gas" storage of home-grown orchard fruit—i.e. storage in an atmosphere whose carbon dioxide content has been appreciably increased. Experience has shown that supplies of Bramley's Seedling—the most important English cooking apple—can be kept in good condition for twelve months in this way. Though the method is still in an early development stage, experiments along similar lines are being made with other kinds of fruit, and its utilisation on an increasing scale is confidently predicted. Already as much as 16 per cent. of the home apple crop is marketed each season after the end of December.

Importation remains, however, the principal means of evening out the supply of raw fruit and of making good deficiencies in home production. The invention of refrigeration introduced the Englishman to hitherto unknown fruits and brought supplies of certain old favourites to his table throughout the winter months. Since the war the growth of British imports of raw fruit has been remarkable. The official figures have risen from an average of 713,000 tons in the quinquennium 1909-13 to 1,463,000 tons in 1933 and 1,354,000 tons in 1934. The United Kingdom, in fact, has become the world's largest importer of fresh fruit. Empire sources of supply have received an increasing share in this expanding trade, their proportion of the total having risen from 15 per cent. in 1909-13 to 46 per cent. last year. To this result the British Government's tariff policy, under the Ottawa Agreements, has directly contributed. Like most other commodities, fruit imports from foreign countries have been subject, since March 1, 1932, to a duty of 100 per cent. *ad valorem*. At present non-Empire apples and pears pay additional specific duties of 4s. 6d. per cwt., and bananas and grape fruit similar duties of 2s. 6d. and 5s. per cwt. respectively throughout the year. The duty on oranges is 3s. 6d. per cwt. for imports in any month from April to November. Hothouse grapes pay 3d. per lb. during the whole year, while other grapes escape with a duty of 1½d. per lb. from February to June. The Empire at present is hardly interested in the production of lemons, which are subject merely to the *ad valorem* duty of 10 per cent. The next

table relates to imports of the principal kinds of raw fruit in the last few years:—

IMPORTS OF RAW FRUIT INTO THE UNITED KINGDOM

Year	Apples	Pears	Bananas	Grapes	Grape Fruit	Lemons	Oranges
	('000 cwt.)	('000 cwt.)	('000 bunches)	('000 cwt.)	('000 cwt.)	('000 cwt.)	('000 cwt.)
1924	7,233	1,324	11,308	820	81	1,208	7,520
1929	5,758	1,078	14,937	864	543	1,361	9,264
1930	6,172	1,029	14,990	695	556	1,477	10,207
1931	7,599	1,237	16,162	944	896	1,409	10,391
1932	8,091	1,112	17,108	903	773	1,447	9,343
1933	7,450	1,134	15,908	781	776	1,816	11,555
1934	5,900	1,009	17,068	1,060	974	1,528	10,399

These seven varieties account for over 90 per cent. of British imports of fruit. Their recent trend has been steadily upwards. Apples come chiefly from Australasia, Canada and the United States, and pears from Australia, South Africa, the United States and Belgium. The decline in imports last year, in both cases, was due mainly to the abnormal size of the home crop. Bananas are now obtained chiefly from the British West Indies, and grapes come from South Africa and various European countries. In terms of value the orange now heads the list of imports; consumption of citrous fruits generally, indeed, has notably increased in the last ten years. Palestine has replaced Spain as the principal supplier of oranges, but South Africa is still second to the United States as a source of grapefruit. The bulk of our lemons comes from Italy, and the trade may be appreciably affected by the application of "sanctions" on November 18th. British countries overseas have lately begun to export to the United Kingdom, but their contribution is not yet on a large scale.

To obtain accurate information on price movements is a matter of some difficulty. Fruit prices are quoted in terms of different "packs," the size and quality of which are subject to wide variations. A fair idea of the trend of quotations, however, may be gathered from the series of average import prices which we show below:—

AVERAGE IMPORT PRICE OF CERTAIN FRUITS (Shillings per cwt.)

Year	Apples	Pears	Bananas (b)	Grapes	Grape Fruit	Lemons	Oranges
1924	23-2	28-2	9-8	41-0	34-6	15-8	19-0
1929	24-6	31-0	7-6	46-8	33-4	21-0	21-2
1932	19-4	26-6	5-2	33-8	26-6	17-8	16-2
1934	19-0	28-0	5-4	29-0	23-8	12-4	14-8
1935 (a)	21-5	26-3	4-8	49-6	23-3	18-1	15-7

(a) Based on nine months' figures. (b) Shillings per bunch.

In most cases prices rose between 1924 and 1929, but declined substantially during the ensuing depression. Recovery has been slow and uneven, but some improvement has recently occurred, partly owing to increased demand, and partly to reduced supplies brought about by adverse weather and slightly diminished imports.

The present year has seen an abortive attempt to establish a fruit marketing scheme under the Agricultural Marketing Acts. Its failure was due to opposition from the growers themselves—influenced, possibly, by the apparent difficulties of other marketing schemes in recent months. It is to be hoped, nevertheless, that the growers will not overlook the deficiencies of their present marketing methods. Despite the Ministry of Agriculture's continuous efforts to extend the use of the National Mark and to educate the grower in other ways, a substantial proportion of home-produced fruit still reaches the market in an unsatisfactory condition. Packing is frequently inadequate and grading non-existent. The results are unfortunate, both as regards reputation and prices. There are some in the industry who would seek to guarantee its prosperity by restriction of imports and the creation of an artificial scarcity. The present survey, however, affords the best of all possible commentaries on such a suggestion. Great Britain is dependent upon overseas sources for the bulk of her consumption of fresh fruit. The nature of our climate makes difficulties and disappointments inevitable. The grower will best secure a higher return for his produce not by creating scarcity, but by improving his grading, packing and marketing technique in general.

THE "NECESSITY" FOR COLONIES

In the *Economist* of October 26th (page 794) two tables were printed which showed the percentages of the world's area and population and of the production of 31 important raw materials falling within the British, French and Dutch Empires, the United States and the U.S.S.R. It was pointed out in the accompanying article that these five countries, even in combination, have a monopoly of the production of only a few materials, while it is only in very rare cases that one empire produces the whole of the world's supply. Nevertheless it is an undeniable fact that these five countries have more than their "fair share" of the good things of the earth. To many people—to most people of the "Have Not" countries—the mere fact that these five empires embrace 61 per cent. of the surface of the globe is sufficient argument for a redistribution of colonies. But that is to leap rather prematurely to a conclusion. It is not enough for the "Have Nots" merely to demonstrate that the "Haves" possess the greater part of the world's colonial territories. They must also establish that they are damaged thereby and that their own standard of living is perceptibly lower as a result of colonial inequality. Are the "Have Nots" really poorer for having no colonies? Does the possession of colonies really increase the standard of living of the mother country? Setting aside for the moment all questions of prestige and national *amour propre*, what validity is there in the economic case of the malcontents?

There are four economic arguments put forward in favour of colonies. It is said in the first place that it is necessary to possess colonies in order to ensure access to essential raw materials. Secondly, colonies are said to be needed as markets for the industrial output of the mother country; or, thirdly, as fields for the investment of the mother country's surplus savings. And, fourthly, colonies are demanded as outlets for the "surplus populations" of the large industrial States.

The first of these arguments, the need for access to raw materials, has been officially recognised by Sir Samuel Hoare, speaking at Geneva on behalf of the British Government. Indeed, the terms of his speech, in which he promised British co-operation in an inquiry into the subject, suggest that Sir Samuel regarded access to raw materials as the end, as well as the beginning, of the colonial problem. In point of fact, it is only a part, and probably the most easily soluble part, of the whole complex. It is safe to say that no industrial country has ever, in time of peace, found itself discriminated against, in the matter of access to raw materials, by the colonial possessor of the raw materials. No colonial raw material producer has ever refused, on orders from the mother country, to sell on equal terms to all would-be purchasers. The rubber consumers of the world had some legitimate cause for complaint against Great Britain because of the Stevenson scheme for restricting the supply of rubber, and one or two of the existing restriction schemes may also work against the consumer. But none of them have imposed higher prices on the consumers of "Have Not" countries than on the consumers of the mother countries themselves. In this sense they have not been discriminatory. Moreover, it should not be an impossible task to negotiate an international treaty by which the colonial powers bind themselves not to discriminate. Countries with exchange restrictions would, it is true, find it easier to buy materials from colonies within their own currency circle, and the German Finance Minister has recently made this a reason for demanding colonies for Germany. But must we really assume that currency restrictions will be with us indefinitely? And even if they are, it is by no means certain that the possession of colonies would reduce, and not add to, the currency difficulties of the home country. The pre-war German colonies always had a substantial debit balance of trade, and they would *pro tanto* have constituted a drain on the exchange resources of the Reichsbank. Apart from the special difficulty of exchange restrictions, a treaty against discrimination should be sufficient to meet any just apprehensions on the part of the "Have-Nots" about their supplies of raw materials.

The second argument—that colonies provide a market for the industries of the mother country—is rather more

substantial and more difficult to meet. Trade does, to a certain extent, follow the flag, even without compulsion, and a colony which is administered and educated by Englishmen will have a definite preference for British products. In addition, contracts for the public services of the colonies will naturally go to the mother country. But on neither score are the advantages gained by the mother country—and the corresponding disadvantages suffered by the "Have-Nots"—likely to be more than very small. The bulk of trade depends upon tariff policy. Up to the present the Have-Nots have had very little to complain of. But this is because of the accident that the two greatest colonial empires, the British and the Dutch, have scrupulously observed the principle of the Open Door. Yet there have already been infractions of the principle, notably in the shape of discriminatory quotas against Japanese textile goods, and if the "Empire Free Trade" party in Great Britain had its way the Open Door would soon be tight shut. Here again, as in the case of access to raw materials, the "Have-Nots" case rests more upon apprehensions for the future than upon grievances in the present. A treaty to guarantee the Open Door, as it is guaranteed in the case of mandated territories by the League Covenant, should suffice to dispose of all legitimate apprehensions. It is worth remarking *en passant* that the potentialities of tropical countries as markets for the products of industry can be vastly exaggerated. The attention that is paid to them is very largely due to the stubborn, but fallacious, belief that industrial countries can export only to undeveloped regions of the earth. In point of fact, the examination of any industrial country's export statistics would reveal the fact that industrial countries are much better customers for industrial goods than undeveloped (i.e. poverty-stricken) colonies.

The argument that colonies are needed as a field for the investment of surplus savings can be dismissed in very few words. In the first place it would be difficult to find instances of a colony refusing to accept, or discriminating against, foreign capital. And in the second place, none of the "Have-Nots" has, or is likely to have, for some time to come any savings to spare.

Finally, there is the "excess population" argument, which is important if only because of the importance attached to it in the allegedly crowded countries. But if there is an excess of population in Germany and Italy, it exists only in relation to the restricted trading opportunities of those countries. If there were substantial freedom of trade (which Germany and Italy have not been backward in suppressing) both countries could undoubtedly support much more than their present populations. Italy's population could double, and Germany's almost double, before the density of population in either country was as great as in Belgium. Moreover, it is a little difficult to believe in the sincerity of this cry of suffocation while the governments of these countries do everything possible to stimulate an increase in the birth-rate. But let us assume that all these objections are waived and that there is a real surplus of population which could be relieved by emigration. Even then, is there anything that the colonial empires can do? Kenya is the only tropical country where white settlement has been successful on anything more than the tiniest scale, and there are only some 17,000 European inhabitants of Kenya even now, after decades of effort. If tropical colonies were to be handed over to the "Have-Nots," the only Europeans who could expect to make their living there would be a handful of administrators. A steady supply of administrative jobs is not an entirely negligible factor, but it would do nothing to relieve the pressure of population at home. Is not this a matter for the fully self-governing Dominions, for the United States and for the South American countries, rather than for the colonial empires?

We have now examined the four economic arguments for colonies. We have found a little, but a very little, in them so far as the past and the present are concerned. The *Economist* examined the relations between Germany and her former colonies as long ago as November 9, 1918, and some of the facts from that article may all serve to point the moral. The total German population in all the German colonies in 1911 was only 20,753—fewer than the number of Germans in the City of Paris. The

combined expenditure of the colonies was £4,323,000 in 1912, but revenue was only £2,448,000. Their exports to Germany amounted only to £2,105,000, compared with Germany's total imports of raw materials (excluding food-stuffs) of £270,000,000. Can it possibly be maintained that Germany, with these colonies, was in any tangible sense better off than, say, Sweden, which has never had any colonies? Even in the British case, the trade of Great Britain in 1934 with the Empire, other than the fully or partly self-governing parts, was less than 7 per cent. of our imports and less than 10 per cent. of our exports.

But if we are in for a period of growing discrimination in tariff policies of colonial empires, the position is completely changed. The talk that is current in Imperialist circles in Great Britain provides ample justification for apprehensions on the part of the "Have Nots" that, although they have little to complain of at present, they will have plenty in the

future. The means of quieting all such apprehensions has already been indicated—a guarantee by the colonial powers that the principle of the Open Door—an Open Door for exports of raw materials, for imports of manufactures and for immigration of settlers—shall continue to be applied. Much the easiest way of implementing such a guarantee would be for the colonial powers to accept in respect of all their tropical possessions the obligations of the League mandate which they have already accepted in some.

There are, however, two dangers in an attempt to settle the matter by logic alone. The first is that if the "Have-Nots" have no case for demanding colonies, the "Haves" have equally no case in clinging to them. And the second is that it is not, at bottom, a rational problem at all, but an irrational conflict of prestige and jealousy among the great imperialist States.

NOTES OF THE WEEK

The President's Armistice Day Speech.—The difficulties besetting President Roosevelt in his handling of the international situation are numerous and formidable. Their extent may be gauged by the fact that the star point in the President's Armistice Day speech was the imminent conclusion of a trade agreement between the United States and Canada. We do not wish to minimise the importance of this achievement, which we discuss in a later Note. The President can justly claim that it will "give an example to the world by removing or lowering the barriers which impede friendly intercourse." Yet, when all is said, this agreement pales in importance beside certain other points in the speech. The President has to convince his countrymen that the most effective way to achieve their country's "primary purpose" of "avoiding being drawn into war" is to avoid placing stumbling-blocks in the path of other people who are taking collective action for the maintenance of peace. "While we cannot build walls around ourselves and hide our heads in sand, we must go forward with all our strength to press and strive for international peace." And the practical action which the President commended once again was to take care that the avoidance of warlike activity, and the promotion of peace, should not be obstructed by trade. "Except," he told his hearers, "for those few who have placed, or who place, temporary and selfish gain ahead of national or world peace, the overwhelming mass of American citizens are in hearty accordance with these basic policies of our Government, as they are also entirely sympathetic with the efforts of other nations to end war." We believe that the American people have taken the point. Even a negative American policy may have international effects hardly less valuable to the world than to America herself.

France's Financial Troubles.—Thursday's rise in the French Bank rate, following a further loss of gold, has recalled attention to France's financial troubles. The rise in world commodity prices has for the moment alleviated the pressure of France's monetary crisis on the unfortunate peasant. But the influence of the overvalued franc is becoming apparent in a new Budget deadlock. Not merely have the cuts of last July come home to roost, as most external observers predicted they would, in rapidly shrinking revenues; but the Finance Committee of the Chamber is refusing to ratify the most oppressive of the cuts. Already in September fiscal receipts were 22 per cent. below the estimates, compared with 18 per cent. in August and 15.4 per cent. in July. Both imports and exports are still falling; and unemployment is rising. The indices of industrial production show stagnation at a low level rather than further decline; but it is difficult to resist the conclusion that decline has only been prevented by the Government's considerable loan expenditure on public works and armaments—as our Paris correspondent suggests this week. But this expenditure has in its turn raised the rate of interest, and the *rentes* are again

falling. M. Rénier, the French Finance Minister, has discovered a new non-monetary explanation of France's crisis. He says it is due to the fact that French industry renewed its plant and equipment so effectively just after the war that it now needs no new plant, and heavy industry is consequently depressed. He does not explain why this depression did not start till 1932. In fact, France's experience in the last three months—like Holland's—is yet one more proof that the low interest rates and lower tariffs necessary to stimulate revival are difficult of attainment so long as an overvalued currency maintains its adverse pressure on the exchange rate and the gold reserve. And unless such a revival is stimulated, it is merely a matter of time until falling revenues provoke a new Budget crisis. That time seems to have been brought nearer in France by the decision of the Radical-Socialists in the Chamber Finance Committee to restore £33 millions of last July's cuts in the interests of small *rentiers* and *fonctionnaires*. M. Laval resisted the proposal, and there was further discussion this week. In the course of the debate, however, M. Paul Reynaud challenged M. Laval, without much effect, to state his reasons against devaluation. The next few weeks may well be critical in France.

Italian Protest Against Sanctions.—The Italian protest, handed at the beginning of this week to the Governments imposing sanctions, is unexpectedly truculent in tone. It is no news to Signor Mussolini that sanctions are to be applied, and he has already pledged his countrymen to bear them with stoical resignation. The note is drafted on the principle that a bad excuse is better than none. Ras Gugsu has become Italy's Mr Micawber: she can never desert the Tigreans whom she has liberated from the Shoon tyranny of Addis Ababa; she has invaded Abyssinia to liberate the slaves. Meanwhile, Italy's fellow States Members of the League have been taking "harsh and hasty steps" against a Power which is so reluctantly and so benevolently waging war. The Italian Government threatens to take reprisals, by way of "substantial deviations from the present currents of exchange and trade," against the prohibition of Italian exports—a measure which the note denounces as "a veritable act of hostility." Perhaps the oddest passage in the note is the argument that the action taken by States Members on the recommendation of the Co-ordination Committee is the action, not of the League, but of the individual Governments. The antithesis is unreal. The Covenant obliges the States Members to take action when Article XVI comes into operation. The action in each country is national action in the nature of the case. But it is action taken in pursuance of the obligations of the Covenant in just the same sense as in a speech made, or a vote recorded, at Geneva. By insisting upon the individual responsibility of the Governments concerned, Signor Mussolini is, in fact, placing an invaluable argument in the mouths of those of us who may favour a forward policy when the time comes for giving the next turn to the

sanctions screw. If action in fulfilment of Article XVI is incumbent upon each State Member severally—and we believe that it is—then we are not merely free, but possibly bound, in case of necessity, to go ahead without waiting for complete unanimity.

* * *

This Week's War News.—It is becoming clearer than ever that, so far, the Italian forces have met with virtually no resistance—except, perhaps, in their capture of the Abyssinian stronghold of Gorahai, on the Ogaden front. Moreover, of the admitted Italian casualties up to date, which amount to no more than about a hundred, nearly the whole have been suffered by native troops. That the Abyssinians will turn and fight at some point may be taken for granted, since manifestly the Italians' hope and the Emperor's fear has been that the Amhara warriors would throw themselves upon the Italians prematurely and expose themselves to being massacred. Impetuous, conceited, and above all contemptuous of an enemy whom they defeated in 1896, the Abyssinians have nevertheless surprisingly kept their patience and allowed the Italians to advance deep into their territory, in order that they may feel the full strain of long-drawn-out communications. On the northern front this Abyssinian strategy seems to be going according to plan; for it is virtually admitted, on the Italian side, that the difficulty of creating and maintaining their means of communication is increasing in geometrical progression with the arithmetical progress of their advance. On the other hand, in the open lowland country of the Ogaden, the fall of Gorahai has enabled at any rate small advance parties of Italian tanks and armoured cars to push forward already almost within striking distance of places which the Abyssinians are likely to try to defend at all costs. One of these is the route from the coast—by road from Berbera and by rail from Djibouti—along which the Abyssinian Government is hastily importing the arms that have been so long withheld from it. If the Italian forces get astride this route, the import of arms into Abyssinia will be restricted to the sheltered but roundabout back-door route through the Sudan. Another thing which the Abyssinians are likely to fight for is the possession of the city of Harrar—the finest town in the Ethiopian Empire and the family appanage of the Emperor's house. We may, therefore, perhaps, expect to see the first real battle of the war fought in the near future in the neighbourhood of Harrar and Jijiga. On the other hand, if the war is fought to a finish, we believe that that last act will be played in the highlands. The difficulty of the Italians in Abyssinia, like that of the Greeks in Anatolia in 1919-22, will be, not the winning of victories or the occupying of territory, but the problem of how to compel an elusive enemy to make peace. With the sanctions screw turning, this problem will give the Duce more and more matter for thought.

* * *

Dissolution of the Stahlhelm.—As the Conservative Party's ex-servicemen's organisation, the Stahlhelm, has played a notable and honourable part in the post-war history of Germany, its dissolution by Herr Hitler on the 8th of this month gives the observer a certain shock—even though the fall of this tall tree in the German political jungle has long been prepared and expected. There is assuredly no intentional irony in the Führer's paternal suggestion that the Stahlhelmers should not regret the dissolution of their organisation but should rather regard it as the crowning achievement of their work. They are admonished to sacrifice themselves joyfully on the altar of the Nordic goddess *Gleichschaltung*; but it may be doubted whether the disappearance of a name will mean the disappearance of the political outlook which it has hitherto covered. "The new armed forces," Herr Hitler declares, "take the place of the Stahlhelm as custodians of the old Army's traditions, while political power is exercised by the National-Socialist Party." But can the politics of the Third Reich really be expected to fall accommodately into this cut-and-dried pattern? Will the successive generations of young men, who henceforth are to be put through the reconditioned Prussian Army, really emerge

unstamped with the old Conservative tradition? We cannot believe that the rehabilitated Reichswehr will really prove to be a political seminary for budding Nazis. It seems more likely that the *esprit de corps* of the future mass of German reservists will partake less of the Nazi than of the Stahlhelm spirit. For Nazidom itself may turn out to be no more than the last phase of a regime. To render themselves superfluous may be the destiny of other successful people besides the disbanded Stahlhelmers.

* * *

Lord Nuffield and the Steel Tariff.—Lord Nuffield is becoming a confirmed free trader. A year ago, when he declared his conviction that it was the patriotic duty of an Englishman to buy British cars, we inquired whether he would feel justified in purchasing some of his raw materials from foreign countries if he could not get them so cheaply at home. In August this year he supplied the answer. The price of British steel, he said, was a third higher than that of our foreign competitors outside the tariff; and unless the British steel producers changed their methods he would "buy steel outside this country." In a speech at a meeting on Monday this week Lord Nuffield returned to the attack:—

There is a steel and iron ring (he said) against us in this country. In the motor industry we are paying more than one-third more for steel than are our friends across the water. The steel and iron industry in this country live in the Victorian era, sitting in their chairs, with big cigars, putting that 33½ per cent. tariff in their pockets and charging us with it.

How speedily has a little practical experience disturbed Lord Nuffield's protectionist theories! And how eloquent a commentary was his speech on the view expressed by a leader writer of *The Times*, on the page preceding a report of this meeting, that "British tariffs have been so effective, so constructive, and so free from corrupting consequences that they are really unassailable!"

* * *

Lord Trenchard Resigns.—On Tuesday night Lord Trenchard resigned his position as Commissioner of Police of the Metropolis. He took up his responsibilities four years ago, at a time of widespread demand for the tightening up of the discipline and efficiency of the Force, the modernising of its methods, and the eradication of a tendency to laxity in certain sections. This, by common consent, Lord Trenchard has in the main achieved; and he will find a secure place in the gallery of efficient administrative reformers. If he has also found a secure place on the music-hall stage and in the mind of the Communist propagandist, it is not so much due to the deep "semi-public-school" constables and his Police College. These, however, were evidently his own sincere idea of the nucleus around which any disciplined and incorruptible public service must inevitably be formed. And history may even prove him right.

* * *

Shanghai Shooting Incident.—Unpleasant happenings in the Far East have a habit of occurring at moments when the rest of the world is preoccupied with its own troubles. On the even of the application of economic sanctions against Italy, dark and ominous clouds have been gathering on the Far Eastern horizon. The continuing Sino-Japanese reception of the Chinese currency plan is another. And now comes one of those shooting incidents that are like sparks in a powder magazine. On the evening of November 9th a Japanese sailor was shot in the streets of Greater Shanghai on his return from an outing to barracks in the International Settlement. The murderer has not been identified, and there is no evidence either of his nationality or motives. The event, however, occurred in territory under Chinese administration; the Japanese marines in Shanghai were immediately mobilised, and patrols were sent out beyond the bounds of the Settlement into the district in which the murder was committed. As this was none

other than Chapei, which was devastated in the fighting in 1932, the appearance of the Japanese patrols was followed by a mass exodus of Chinese refugees—carrying with them as much of their worldly goods as they could—into the Settlement area. Fortunately there has not as yet been any dramatic sequel, and the refugees are even beginning to return. Shanghai is, indeed, a less likely scene of possible Japanese activity than Northern China. The Shanghai affair of 1932 brought the Japanese neither profit nor credit; and Japan's interests may be better served by commandeering the golden eggs than by killing the goose that lays them on the banks of the Whangpoo River. Nevertheless, this shooting affair is the last news that we should wish to receive from Shanghai at the present critical juncture in world affairs.

* * *

A Canadian-American Trade Agreement.—The negotiations for a trade agreement between the United States and Canada have at length been brought to a successful conclusion, which President Roosevelt and Mr Mackenzie King were able to announce in their respective Armistice Day speeches. The details of the agreement have not been published and will not be until after the signature, which may take place on Friday of this week. It is impossible, therefore, at the moment to be sure exactly how much the agreement amounts to. But it is believed to be comparatively limited in scope. The American concessions are expected to concern lumber, live cattle, cream, seed potatoes and a few other farm products. Canada will make concessions on a few manufactured goods such as motor cars, but the greatest benefit to the United States will come from the application of the Canadian intermediate tariff to American goods and from the abandonment of the Canadian practice of arbitrary valuations. This agreement is one of peculiar importance for the future of world trade, for the reason that the circumstances were more favourable for a really radical reduction of tariff barriers between Canada and the United States than between almost any other pair of countries. In Canada the Government has just been swept into office with a record majority after a campaign in which Free Trade played a very large part. In the United States the Secretary of State, with the backing of the President, has for two years been preaching and, when opportunity offered, practising a policy of tariff reductions. Moreover, between Canada and the United States there are no red herrings of differing standards of living to draw across the trail of freer trade. If Mr Roosevelt and Mr Mackenzie King cannot agree upon a radical reciprocal reduction of tariffs, then the cause of freer trade, with all that depends on it, is indeed in a bad way. Not that the present agreement has been politically "safe" for both the parties to it. Mr Mackenzie King, with an unprecedented vote of confidence behind him and five years of undisputed rule before him, could afford to take the risks. But President Roosevelt must have hesitated before imposing any "sacrifices," however light, upon the farming community whose votes he will need within twelve months. Already there are murmurs of discontent among the affected parties, and since it is so firmly established a tradition of American politics that considerations of the common good do not avail to answer an injured special interest, Mr Roosevelt cannot afford to ignore even the most partisan objections. To arouse Congress against an agreement which in fact does no more than nibble at the problem of trade barriers would do no service either to the President or to the cause of freer trade. If the American Government's trade agreements policy means anything substantial at all, the agreement with Canada is the opportunity *par excellence* to demonstrate it. It is to be hoped, therefore, that the list of concessions when it is published will be such as to confound the sceptics of both capitals.

* * *

A Shipping Dispute.—A threatened break-up of the North Atlantic Shipping Conference has been averted by the discreet decision of the German lines. The trouble arose from the German practice of using blocked marks in payment of freight, which was equivalent to a discount in favour of the German lines of about 30 per cent. on the

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Write for prospectus to the Manager

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £20,000,000

fixed Conference rates. The effect of this naïve discrimination was, naturally, to divert an appreciable share of the traffic to the German lines, to the growing disadvantage of the other lines in the Conference. The resulting situation which developed became so tense that the American Black Diamond Line tendered its resignation from the Conference, followed quickly by the Canadian, Belgian and Dutch lines. By last Saturday all the non-German members had resigned and were prepared to begin a freight war. Speedy action was imperative, and negotiations were opened, consequently, in Berlin between representatives of the Arnold-Bernstein Shipping Company and the Red Star Line, on the one hand, and a joint committee of the United States lines, the Hamburg-Amerika Line and the Norddeutscher Lloyd, on the other. Fortunately a settlement was reached just in time to prevent the resignations from taking effect. The German lines claimed that, in using blocked marks, they were simply availing themselves of methods authorised by the German Government, and that all foreign shipping lines calling at German ports had the same opportunity to use these marks if they chose. Direct representatives of the Government, incidentally, watched the negotiations. In the end, a decision to renounce the use of blocked marks was reached and cabled to New York in time to secure the withdrawal of the resignations. No British shipping lines were involved, for the Conference includes only American, Canadian and Continental cargo steamer services engaged in the trade between Western Europe and the United States.

* * *

Overseas Trade in October.—The preliminary overseas trade figures for October, published on the eve of the election, bear out the Government's claim that recovery is making rapid progress, without substantiating any further claim to responsibility for this desirable result:—

TRADE IN OCTOBER

	1933	1934	1935	Change between 1934 and 1935	
Total imports	£ 61,766	£ 68,762	£ 73,383	+ 4,621	+ 6.7
British exports	34,131	36,749	39,385	+ 2,636	+ 7.2
Re-exports	4,571	4,001	4,732	+ 731	+ 18.2

Excess of imports over exports ..	205,114	235,862	215,512	- 20,350	- 8.6
Transshipments under bond	19,903	19,858	20,461	+ 603	+ 3.0

An increase of £12.5 millions in October imports, compared with those of September, is partly due to seasonal

actors, especially in foodstuffs. The increase of nearly 7 per cent. as compared with a year ago, however, is more substantial, and covers all classes of imports. Exports have risen by nearly 10 per cent. as against October, 1934, and are now higher than they have been since 1930. Even on a daily basis they are 13 per cent. greater than in September. The large increase of £27 millions in total exports for the ten months, as compared with last year, and the comparatively small change in imports, have reduced the unfavourable balance of trade by over £20 millions.

* * *

Record Output of Steel.—The latest returns issued by the British Iron and Steel Federation reveal a further expansion of activity in this branch of industry. Production of steel ingots and castings rose from 812,000 tons in October, 1934, to 855,900 tons last September, and 907,300 tons in the past month. It is interesting to note that output of crude steel in October was higher than in any month since March, 1927. Total production of crude steel since January amounts to 8,127,600 tons, compared with 7,439,200 tons during the corresponding period in 1934. The increase in the output of pig iron, from 527,100 tons in October, 1934, to 529,600 tons and 544,300 tons respectively, during the past two months, was less marked than in the case of steel. We shall comment on the position of the iron and steel industry in a forthcoming issue of the *Economist*.

* * *

The Gold Clause.—Of varying legal interpretations of the "gold clause" there is no end. After Feist's case in Great Britain, came the judgment of the Supreme Court of the United States, and after the Supreme Court comes a new judgment in the English King's Bench Division. On Friday of last week, Mr Justice Branson found for the Crown on a petition of right in respect of bonds of the 1917 Twenty-year Five and a-Half per Cent. Coupon Gold Loan issued in the United States by the Government of the United Kingdom. The bond provided that principal and interest would be paid at the option of the holder either in New York "in gold coin of the United States of America of the standard of the weight and fineness existing on February 1st, 1917," or in London in sterling at the fixed rate of \$4.86½. His Lordship refused to accept the Crown's contention that payment was determined by the United States law. The presumption that a Sovereign State like the United Kingdom would submit to any Court but that of its own country was so strong, he declared, that only an express stipulation to the contrary (absent in the present instance) could displace it. Construed according to English law, did the expression in the bond fix the mode of payment or the measure of obligation? The gold clause, His Lordship found, was inserted as a customary clause, without any special reference to the possibility of the United States going off the gold standard. It was not now possible for the Government's agents to make payment in the United States according to the terms of the bond. The requisite gold coins were not in existence, and even if the British Government possessed them, American recipients would be doing an illegal act in accepting them. So much of the bond as related to payment in gold coin in New York had therefore become void, while the obligation to pay in London at the fixed rate of exchange calculated on the nominal amount of the bond remained. The judgment will be welcome to the British Treasury and taxpayer, who have become involuntary beneficiaries from President Roosevelt's devaluationist legislation. Unfortunately, its general effect is to leave the question of the gold clause, under British law, very much in the air. It is clear that no element of finality attaches to the result in Feist's case, for differences in circumstances and wording, in any given instance, may, apparently, be sufficient to justify a diametrically opposite finding.

* * *

The Resources of the Empire.—The Colonial Office has issued "An Economic Survey of the Colonial Empire (1933)." This compilation was first issued last year, and it is intended to make it an annual publication.

The survey* is a volume of 573 closely-printed foolscap pages, containing a mass of information about each of the Colonies. It compels admiration, but defies review. Towards the end of the volume, however, there is a statistical table entitled "A Summary of Some Significant Figures," from which we have abstracted the following table, adding comparable figures for the United Kingdom:—

Colony	Population	Density per sq. mile	Public Debt	Revenue per head	Imports per head 1933	Domestic Exports per head 1933
Kenya	3,084,721	14.0	£'000	£ s. d.	£ s. d.	£ s. d.
Uganda	3,620,193	44.9	16,163	0 12 11½	1 3 2½	0 15 4
Tanganyika	5,038,590	14.9	2,236	0 7 24	0 7 3	0 19 6½
Total East Africa (a)	15,319,400	14.8	33,036	0 8 2½	0 8 2½	0 10 1
Nigeria	19,814,542	53.2	24,101	0 4 2½	0 6 8½	0 8 7½
Gold Coast	3,357,950	36.5	10,711	0 13 9½	1 13 0	2 6 5½
Total West Africa (b)	25,219,056	50.7	36,991	0 5 9	0 10 9½	0 14 0
Ceylon	5,463,200	216.5	8,988	1 4 1	2 8 8½	2 9 5½
Malaya (c)	5,961,969	38.0	27,426	2 3 8	13 1 11	2 9 5½
Hong Kong	922,642	2,359.7	902	2 6 5½	39 11 2	(d)
Total Asia (c)	11,877,530	74.2	38,863	1 15 2½	9 19 3	(d)
Mediterranean (f)	1,745,163	126.5	4,953	2 18 2	9 3 5	2 0 8
Jamaica	1,101,859	229.2	3,109	1 15 0½	0 7 8	2 3 11
Total America (g)	3,937,803	32.4	14,574	1 10 6	3 1 1	2 19 6½
Western Pacific (h)	404,100	16.4	1,139	1 11 7½	3 6 7	4 16 5
GRAND TOTAL	59,400,000	27.7	129,594	0 15 8½	2 18 3	1 12 4
UNITED KINGDOM	46,538,000	468	7,821,100	17 5 6	15 14 5	8 10 1

(a) Including also Nyasaland, Northern Rhodesia, Zanzibar and Somaliland. (b) Including also Sierra Leone, Gambia, St. Helena and Ascension. (c) Including Straits Settlements, Federated Malay States, Unfederated Malay States, Brunei, North Borneo and Sarawak. (d) Not available. (e) Including also Mauritius and Seychelles. (f) In Bermuda, Guiana, Honduras, Leeward and Windward Islands, Trinidad and Falkland Islands. (g) Including Fiji, Gilbert, Ellice and Solomon Islands, Tonga and New Hebrides. (h) In most cases, estimates for 1933 or 1934.

Some of these figures shed light on the problems discussed in the leading article on page 950 of this week's *Economist*. Their most striking characteristic is their diversity. The Colonial Empire, as a whole, has a net excess of imports. But many individual Colonies have a striking net excess of exports, Jamaica, for example, selling six times as much as she buys.

* * *

British Agriculture in 1934.—The latest volume of Agricultural Statistics,† published by the Ministry of Agriculture, contains the first estimate of the value of agricultural and horticultural produce sold off farms in England and Wales in 1933-34. The estimates for recent years, given in the following table, do not include glasshouse produce, flowers grown in the open and nursery stock, the combined output of which was valued at £7,120,000 in the census year 1930-31:—

Item	1930-1	1931-2	1932-3	1933-4	Percentage of Total in 1934
Livestock	65.0	58.2	56.4	60.7	31.2
Milk and dairy produce	55.0	49.5	52.3	55.4	28.5
Poultry and eggs	21.0	20.0	20.8	21.5	11.0
Wool	1.3	1.2	1.8	1.8	0.9
Total	142.3	128.9	131.3	139.2	71.6
Corn	9.8	9.8	8.9	9.8	6.0
Potatoes	11.7	15.9	9.1	8.5	4.4
Sugar beet	6.8	3.1	4.2	5.7	2.9
Hops	0.9	0.9	1.6	3.1	1.6
Hay, straw and miscellaneous	4.0	3.3	2.6	3.3	1.7
Total	33.2	33.0	26.4	30.4	15.6
Fruit	7.8	5.6	7.1	8.2	4.2
Vegetables	12.3	15.1	12.9	16.8	8.6
Total	20.1	20.7	20.0	25.0	12.8
Grand total	195.6	182.6	177.7	194.6	100.0

The rise of 9 per cent. in the value of the total output last year was due partly to increased production in certain directions, and partly to a rise in prices. The increased value of livestock, the largest single item in the table, was accounted for by sheep and pigs, the return from sales

* "An Economic Survey of the Colonial Empire (1933)." Colonial No. 109. H.M. Stationery Office. £1 5s. net.
† "Agricultural Statistics, 1934." Part I. H.M. Stationery Office. 1s. 6d.

of cattle being rather smaller than in the previous year. The stimulus afforded by the Milk Marketing Scheme is reflected in the increased value of milk and dairy produce. In the case of poultry and eggs, a greater output in 1933-34 was partly offset by slightly lower prices. With the exception of potatoes, the value of which declined by a further 6 per cent. last year, each item in the farm crops group showed an increase. The figures in the table take no account of the deficiency payments made under the Wheat Act; nevertheless, the value of the wheat output rose by 23 per cent., to well above the level of 1930-31, while the value of the barley crop registered a modest improvement. Producers of sugar-beet and hops benefited from the Government's generous intervention. Growers of fruit and vegetables enjoyed a return higher than that obtained for many years past.

* * *

Customs Receipts and Imports.—In contrast to the expansion of world industrial activity since 1932, international trade remains hamstrung by quotas, currency restrictions and tariffs. Even that which remains is handicapped by higher and more diversified duties and takes place despite these higher levels. This is illustrated by the following table showing customs receipts of various countries since 1928 as a percentage of the value of imports. Revenue from duties on cocoa, coffee, tea, sugar, beer, wine, spirits and tobacco is excluded from these calculations, as being of the nature of "revenue" rather than "tariff" receipts:—

	France	Germany	United Kingdom	United States
	%	%	%	%
1928	5.7	6.3	2.3	11.3
1929	6.8	6.3	2.7	11.3
1930	7.9	8.8	3.2	11.5
1931	13.7	10.4	4.9	14.0
1932	18.6	18.6	10.6	15.7
1933	15.8	16.4	13.6	16.6
1934	16.6	16.9	13.7	†

† Not yet available.

In 1928 protective duties provided almost a negligible proportion of total customs revenue in France, Germany and in the United Kingdom. Since then, however, the tariff walls have been raised considerably. The slight decline since 1932 in the ratio of customs receipts to imports in France and Germany is probably due to the reduction in imports of finished goods subject to a high rate of duty. This, indeed, may be the result universally. For in the end duties if they are high enough will cease to yield a revenue by stopping all importation except of such goods as happen to remain on the free list.

* * *

Juvenile Unemployment.—The absorption of juvenile labour by British industry has continued during the past year. Despite the large influx of school-leavers on to the labour market, the average number of children on the registers of Employment Exchanges in 1934 was about 1,000 less than in 1933. The position deteriorated, however, as the year went on. According to an estimate made by the Ministry of Labour in a recent publication*, there were 80,000 more boys and girls between the ages of 14 and 18 available for employment in December, 1934, than there were in December, 1933. The approximate numbers registered as unemployed in December, 1932, 1933 and 1934 respectively were 108,000, 72,000 and 100,000; and by September, 1935, the figure had risen to 125,000. This large mass of unemployed juveniles, however, is not spread evenly over the country. Nearly a fifth of the total is concentrated in six large towns—Glasgow, Liverpool, Manchester, Sunderland, Newcastle and Bristol. On the other hand, at the three Central London Exchanges there were more than 1,400 unfilled vacancies in September, 1934. The percentage of insured unemployed boys and girls aged 16-17 in the Southern and Midland divisions in December, 1934, was 2.4; the corresponding percentage for the Northern divisions, Scotland and Wales was 6.7. Moreover, the intensity of unemployment varies very considerably. Of those wholly unemployed, just over 7 per cent.

* "Report on Juvenile Employment for the Year 1934." H.M. Stationery Office. 4d. net.

in the South-Eastern division had been on the registers for over three months; in the Northern divisions, on the other hand, the proportion was between 15 and 20 per cent.; while in Scotland and Wales it was over a quarter of the total. Attempts have been made on a small scale since 1928 to transfer juveniles from the distressed areas to those in which there is an expanding and often unsatisfied demand for cheap, unskilled labour. The Government gave their blessing to these efforts last autumn as a result of the Reports of the Commissioners for the Special Areas; and 5,173 children were transferred in 1934 under the scheme. The Government have since reaffirmed this policy in their Election Manifesto. Few will question the advisability of transferring the younger workers from these areas, where already the older workers are redundant.

* * *

Great Britain's Fish Supply.—Britain's fishing industry received some encouragement in the quarter ended September 30th last. The first-hand value of the wet fish landed at the ports of Great Britain from British and foreign-owned fishing vessels, together with imports, during the third quarter of the year exceeded £5,000,000—£346,000 more than in the corresponding three months of 1934. The details, compiled from the returns of the Ministry of Agriculture and Fisheries and the Board of Trade, are as follows:—

	Weight in cwts.	Value	1934	1935
July-September	1934	1935	1934	1935
British caught:—				
England and Wales	3,041,417	3,056,118	2,841,389	3,045,694
Scotland	2,061,558	2,273,304	1,057,805	1,246,232
Shellfish	...	...	113,805	107,479
Total	5,102,975	5,329,422	4,012,999	4,399,405
Foreign caught	114,990	81,924	164,103	137,369
Imported	216,508	206,650	548,175	534,445

It will be noted that for England and Wales the weight of British-caught fish was practically the same as a year ago and that the amount realised was £200,000 more. The average works out at 19s. 11d. per cwt. as against 18s. 8d. Scottish landings were much heavier, with a corresponding increase in the aggregate value, while the average was 10s. 11d. per cwt., as against 10s. 3½d. There was some slight diminution in the weight and value of the wet fish landed from foreign-owned fishing vessels and also of imports. On the whole the quarter's working may be regarded as satisfactory for both England and Wales and Scotland. Owing to the suspension of fishing in the White Sea and Bear Island areas during the summer months, there was occasionally, at Hull in particular, a shortage of the cheaper kinds of fish required by fish friers, and the wisdom of thus restricting supplies in the interests of more remunerative prices has again been questioned. Exports of wet fish in the three months showed a value of £139,819, against £126,276; and of "cured or salted" (not canned) £934,092, against £720,328. On the other hand, imports of canned fish at £725,255 were £233,300 below the total value for the corresponding three months of last year. In order to show the progress of the industry so far this year we give below the figures of landings and imports for the nine months to date:—

	Weight in cwts.	Value	1934	1935
January-September	1934	1935	1934	1935
British caught:—				
England and Wales	9,108,008	9,272,927	8,655,202	8,615,901
Scotland	4,218,850	4,581,587	2,750,654	3,029,878
Shellfish	...	...	291,732	282,091
Total	13,326,858	13,854,514	11,697,588	11,927,870
Foreign caught	517,436	454,010	430,132	381,558
Imported	951,298	1,147,382	1,629,844	1,739,137

From the above table it will be seen that rather larger landings of British-caught wet fish at the ports of England and Wales were accompanied by some decrease in aggregate value, while at Scottish ports there were both increased landings and increased financial returns. Foreign landings were smaller; but imports, including herrings, were larger. The exports of British-caught wet fish in the nine months had an f.o.b. value of £597,769 compared with £634,999, and of cured or salted fish (not canned) £1,527,326, compared with £1,440,393, the increase being attributable to larger exports to Germany and Poland and the resump-

tion of exports to Russia. So far this year our imports of canned fish have reached £2,907,823—an increase of £84,670; and of cured or salted £200,548—an increase of £106,480. On the whole, the prospects of one of our most important coastal industries now look distinctly better.

* * *

Transvaal Output in October.—The Transvaal Chamber of Mines Report for October shows output of gold at 931,724 fine ounces, compared with 902,333 fine ounces in September and 885,627 fine ounces in October, 1934. The gold produced in October, 1935, was valued at £7 is. per fine ounce. The following table shows the monthly production since the beginning of 1929:—

Month of	1929	1930	1931	1932	1933	1934	1935
January ...	876,452	882,801	914,576	936,784	967,457	907,641	890,875
February ...	815,284	818,188	839,937	914,012	883,145	826,363	821,246
March ...	866,529	869,370	910,998	960,035	946,863	874,112	882,309
April ...	872,123	868,606	882,337	949,796	895,087	865,822	869,956
May ...	897,598	916,213	910,279	965,644	944,604	898,418	916,035
June ...	856,029	887,867	897,750	959,011	918,633	868,129	889,026
July ...	889,480	912,652	916,943	981,160	923,671	876,094	927,803
August ...	889,601	921,081	916,425	991,322	934,714	881,861	929,331
September ...	849,553	903,176	916,024	961,501	901,799	857,442	902,333
October ...	888,690	926,561	945,113	974,965	908,888	885,627	931,724
November ...	861,593	884,753	900,510	978,716	898,468	878,847	...
December ...	851,134	906,492	923,353	980,618	894,156	866,037	...
Total ...	10,414,966	10,719,760	10,874,145	11,553,594	11,017,485	10,486,393	10,960,638

The following table shows the number of natives employed at the mines during the past nine months:—

	Feb., 1935	Mar., 1935	April, 1935	May, 1935	June, 1935	July, 1935	Aug., 1935	Sept., 1935	Oct., 1935
Gold mines	257,953	259,417	262,678	264,067	267,209	268,409	269,905	269,775	271,416
Coal mines	13,355	13,476	13,385	13,677	13,945	14,097	14,150	14,247	14,131
Total...	271,308	272,893	276,063	277,744	281,154	282,506	284,055	284,022	285,547

The number of natives employed again increased in October.

UNITED STATES

EUROPE BUYS IN WALL STREET

EUROPEAN buying of American equities continues to be the feature of Wall Street, but in the absence of statistical records one would hesitate to say that it is unparalleled. The average volume of trading is currently running near 2,000,000 shares, which is a low volume compared to that of 1929. An unusually large proportion of the transactions represent European buying; and this buying has become increasingly conspicuous since early summer. Whether it represents European confidence in the American recovery, or a flight of European capital from the alarms of war, or is an "equilibrating" international movement of capital in a world which simultaneously forbids the free movement of goods and permits the free movement of securities, are matters of opinion.

There can be little doubt that when in January, 1934, the United States entered upon *de facto* stabilisation of the dollar at one thirty-fifth of an ounce of gold, the American security market was cheaper than certain European security markets. And at the two periods when the United States security markets were at their lowest points—in July, 1932, and in February 1933—the pound was at a considerable discount on the dollar. In spite of the great rise in American securities, their price in pounds to a British investor shows no comparable advance. Finally, the American economy, which for 1935 is on a level 10 per cent. or more above 1934, appears to have been rising more vigorously in the past months than most other national economies. In comparison with 1932 the United States recovery probably equals that of any nation; in

Rayon Production in India.—An Indian correspondent writes:—The question of developing a rayon industry in India has begun to exercise the mind of the people and the Government in recent months. There was once a general impression in the country that, due to climatic and other conditions, it was not possible for India to develop a rayon industry. It is now understood on reliable authority, however, that the Indian Central Cotton Committee has undertaken an investigation into the possibility of the manufacture of rayon from cheap short, staple Indian cotton. The Government of India have approved of the scheme, and are also stated to have sanctioned an expenditure of Rs. 30,000 for this purpose in the initial stage. Dr. I. L. Thoria, an Indian chemist who has had considerable training in chemical engineering, etc., in various foreign countries, has been engaged to investigate the tensile strength and the elasticity of the acetate material prepared from the various short staple Indian cotton. It is still very doubtful if cotton is likely to be successful as a source of the manufacture of rayon in face of its two formidable rivals, viz. wood-pulp and flax. These are cheaper than cotton and are even capable of giving equal or better results in respect of elasticity. India consumes a very large quantity of rayon piece goods. The quantity and value of imports of rayon piece goods into India during the year 1932-33 and 1933-34 were as follows:—

	Quantity Yards	Value Rs.
1932-33	125,000,000	31,000,000
1933-34	58,000,000	17,300,000

During the year 1934-35 the duty realised on imports of artificial silk piece goods by the Government exceeded Rs. 10 millions. The loss both to British exporters and to the Government of India would clearly be considerable if these imports were displaced by home products.

terms of the late '20's it would probably still rank as among the most depressed.

The acute weakness of the Hongkong and Shanghai dollar, in terms of silver pegged at 65½ cents in New York, has emphasised the international aspects of silver. It is interesting to draw a distinction between America's silver policy and her silver programme; although no such distinction was ever made formally or perhaps clearly recognised officially. The policy was stated, at the London Conference of 1933, to be the extension of the monetary use of silver in the direction of its remonetisation. The programme was the series of executive and legislative acts, supposititiously in furtherance of this policy. This series of manoeuvres to raise the price of silver. The two exceptions are (a) the legislative Act prescribing that the metallic reserve of the American currency shall consist of both silver and gold at a ratio of 1 to 3; and (b) direct aid extended to Cuba to acquire silver for monetary purposes. Beyond that, the programme may be said to have been in conflict with the policy, for it has long been clear that an indefinite campaign for raising the price of silver, over an uncertain period to an unspecified maximum, made it impossible for any nation employing silver as a monetary metal to formulate a monetary policy.

Still, a change in our silver programme is not very probable, and such a change would require an Act of Congress. Moreover, the Treasury profit on silver, to be secured by its ultimate revaluation, is of no small concern. Administrative spokesmen invariably set the gold profit against the cumulated deficit; and the silver profit, to be obtained by a formal revaluation of that metal, also mounts to substantial figures, even at the "statutory

price." Furthermore, since neither the gold profit nor the silver profit can be realised except by the issue of currency, the silver programme has provided the Treasury with a supplementary and potentially effective monetary mechanism entirely beyond the control of the Federal Reserve System.

The opening of the Automobile Show two months in advance of its usual timing has found the motor industry in a most optimistic state and looking forward to activity during two months which have usually been marked by receding operations and, in December, partial or complete inactivity. The transition to the new models was made in September and October, and it is of significance that this could be done without causing any recession in general business and productive activity, even in steel output. With the resumption of motor production steel output has risen, and is at present slightly above 50 per cent. of capacity, or near the year's peak output of last January.

THE RECOVERY IN PRODUCTION

The Federal Reserve Board's index of production was 88 in September, one point above August, and 19 points above September, 1934. The following table shows the course of industrial production over the past two years:—

	1933	1934	1935
(1923-25 = 100. Adjusted for seasonal)			
January	65	78	91
February	63	81	89
March	59	84	88
April	66	86	86
May	78	86	85
June	91	84	86
July	100	76	86
August	91	73	86
September	84	71	88
October	76	74	...
November	72	75	...
December	75	86	...
Average	76	79	87 (9 mos.)

Two facts are illustrated by this table:—(1) That the average for the year to date is higher than that for 1934 by far more than 1934 was above 1933; and (2) that the change derives largely from the continuance into the autumn of the spring level in 1935, compared with the violent decline in 1934.

The following table shows the Federal Reserve indices:—

	Sept., 1934	March, 1935	August, 1935	Sept., 1935
(1923-25 = 100. Adjusted for seasonal)				
Industrial production (total)	71	88	87	88
Manufactures	69	86	87	88
Minerals	82	97	81	86
Construction contracts (total)	29	26	38	42
Residential	11	16	24	26
All others	44	35	50	55
Factory employment	74	82.4	81.7	81.9
Factory payrolls	58.0	70.7	69.6	72.1
Freight-car loadings	59	65	60	62
Department store sales	75	82	79	82

Except in building, the September figures are almost identical with those of March. In building, there is a great increase, and this is one of the conspicuous developments of the year. While the figure of "all other" building contracts is subject to erratic fluctuations owing to the incidence of public undertakings, the persistent climb of residential building has probably exercised a great influence upon employment. The index of "factory employment," for example, was a bit lower in September than in March, but one would hardly infer that there was more unemployment after referring to the building data.

The application of the New York, New Haven and Hartford Railroad for reorganisation recalls the remarkable failure of railway traffic to keep up with the increase in general production. As yet the railways have not participated perceptibly in the general recovery as far as their volume of business is concerned; while at the same time they have restored their wage scale and added certain social charges. With the addition of the New Haven, about one-third of the railroad mileage is now under reorganisation, and much of it has come into this category in a year when a good proportion (a major proportion in point of numbers) of industrial enterprises have been doing very well.

NEW YORK, November 4.

FRANCE

"NO PANIC DEVALUATION"

ON Armistice Day, both in Paris and the other big cities, the members of the Fascist "leagues" went with tricolour flags to the War Memorial monuments, where they were followed by the "Popular Front" adherents with tricolours and red flags. But there were no violent demonstrations.

Six months before the Chamber elections, the position of the political parties is very puzzling. The civil servants are against deflation, whilst the rentiers are against devaluation. The Conservatives are against the *rapprochement* with Russia, while the Communists declare their attachment to the "defence of the franc" and wish long life to the "Republican Army." The Popular Front is for sanctions against Italy, but the country is unanimously in favour of the maintenance of peace. All these negative policies favour the Laval Cabinet, as is illustrated by the recent conflict between M. Laval and the Finance Committee of the Chamber.

M. Régnier, the Finance Minister, argued before the Committee that its proposals for "humanising" certain decree-laws would create a new deficit of 2,575 million francs, while the methods proposed to cover this deficit would bring in 85 millions of supplementary receipts only, and 885 millions of supplementary loans. M. Laval reiterated his determination to "defend the franc"; he emphasised the necessity of balancing the Budget and the impossibility of reconciling new reductions in taxes with the suppression of the cuts.

M. Reynaud, the leader of the devaluationists, declared against "a devaluation in panic"; and M. Laval retorted that an "ordered devaluation" was unthinkable so long as the pound was not ready for stabilisation. The controversy is not yet likely to become acute, since M. Herriot and the other Radical-Socialists in the Cabinet have declared their fidelity to M. Laval. A compromise will probably be reached before the Chamber resumes its session on November 26th.

M. RÉGNIER ON THE CRISIS

Before speaking to the Finance Committee, the Minister of Finance discussed the causes of the French crisis at a meeting of the American Club of Paris. He declared that since 1930 the consumption of most articles of necessity (such as meat, sugar, coffee), and often of luxury products (telephones, motor cars and wireless sets) had not suffered a great fall, whereas the index of industrial production has declined steadily to its present level, which is the lowest since September, 1934—though it was 94 in September, 1935, against 93 in August. The explanation of this contradiction seems to be that a 20 or 30 per cent. fall of prices has compensated for the fall in wages, so that purchasing power in goods remained the same as in 1931 or 1932. The French crisis, according to M. Régnier, is due to the fact that half the country lives by producing agricultural goods, the prices of which have fallen below the costs, so that the farmer is living on his savings. Both industry and agriculture extensively renewed their equipment after the war (through Reparations indemnities) and during the prosperous years which followed, so that industry is now sufficiently equipped, while agriculture is prevented by the disappearance of profits from purchasing new equipment. This injures the heavy industries. Such a situation, M. Régnier said, justified the Government's policy of economies and the safeguarding of credit. M. Régnier also expressed the opinion that potentialities of renewed activities existed in France. He might have added that the purchasing power of the country has been supported by the 75,000 millions of loans, which the State has issued for the payment of considerable subventions, pensions, etc., to the creditors of the State.

The peak of official unemployment was reached in February, 1935, at 503,502 persons. It then seasonally declined to 373,446 in September (against 323,365 in September, 1934); while the percentage of workers working less than 48 hours in the week was 41.90 per cent. in October, against 49.50 per cent. in February. The percentage of those unemployed one day a week was 29.57

per cent. in October, 1935 (29.39 per cent. in October, 1934), and of those unemployed two days, 3.61 per cent., against 5.71 per cent. Total official unemployment rose to 380,719 units in October; a rise which is partly seasonal.

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	Sept., 1934	July, 1935	Aug., 1935	Sept., 1935
General index	95	93	93	94
Engineering	99	95	96	96
Iron and steel	79	80	79	80
Textiles	54	67	66	68
Mines	102	98	98	99
Building (adjusted figures).....	80	65	66	68
Leather (" ").....	90	93	93	92
Paper (" ").....	141	129	127	121
Rubber (" ").....	852	760	761	773
Motors. (" ").....	466	412	402	380

In the motor industry 6,393 automobiles and 1,435 lorries have been put on the road, compared with 8,760 and 1,507 in August. The figures for the cotton industry are as follows:—

	June, 1935	July, 1935	Aug., 1935	Sept., 1935
<i>Spinning</i> (average per spindle in kilograms):				
Production.....	1-408	1-536	1-520	1-521
Deliveries.....	1-443	1-533	1-563	1-561
Stocks.....	2-145	2-117	2-041	2-997
Unfulfilled orders	4-477	4-353	4-160	4-196
<i>Weaving</i> (average per loom in pieces of 100 metres):				
Production.....	4-26	4-69	4-58	4-94
Deliveries.....	4-44	4-75	5-17	4-85
Stocks.....	8-32	9-89	9-25	9-31
Unfulfilled orders	16-96	16-41	13-59	15-97

Bankruptcies and judicial liquidations amounted to 1,100 in October, compared with 662 in September and 1,027 in August.

PARIS, November 14.

GERMANY

AN EMBARGO ON EXPORTS

THE Government this week declared an embargo on exports of certain foodstuffs and raw materials. Politically this measure, which is an outcome of the League sanctions against Italy, has considerable importance. It will, in effect, operate in the direction of League policy, assuring Germany against the reproach of deliberately impeding sanctions; but inasmuch as it is justified by valid economic motives it cannot be regarded by Italy as hostile. Germany's shortage of food and raw materials and her foreign exchange difficulties have, in fact, happily coincided with her political desire to maintain a more than merely formal neutrality. The unrestricted delivery of vital goods to Italy, which might have been possible with the help of transit imports, would, though in accord with formal neutrality, have certainly been regarded as directed against the League. But as Germany is obviously waiting to see how the conflict develops, a later pro-League or pro-Italian policy is not precluded; and either could easily be pursued within the limits of the declared neutrality.

The export embargo embraces all edible oils and fats (including butter); potatoes (on the ground that this year's crop was unsatisfactory); the industrial raw materials, iron and steel, non-ferrous metals, except copper, exports of which are already regulated; textile materials; and non-edible oils of all sorts. Coal is not on the list, on the official ground that exports are already regulated; but it seems that here a free hand is desired. It is officially stated that goods on the new embargo list have been of late increasingly bought up by "countries neighbouring on Germany." This in particular was true of margarine, the home supply of which is very small.

For almost all the industrial materials on the list Germany is an importing country; the sole exception is iron and steel, in which there is a substantial export surplus. It is officially observed that the embargo imposed on the

export of steel semi-products and rolling-mill materials is designed to secure the execution of the existing international quota agreements. In reality Germany could not rapidly increase her steel exports without going short of material for "work creation" and re-armament. Although home steel production is now around 300 per cent. of that of 1932, the net exports have in the meantime risen only about 10 per cent.

It seems certain that in these conditions any considerable increase of German deliveries to Italy would not be profitable; so that here again financial and political considerations coincide. The export embargoes come into force on November 16, with the exception of that on iron, which comes into force on November 25th.

PRICES AND THE FOOD SCARCITY

There was a further rise on November 6 in the index numbers of the prices of all the food and fodder groups and of textile raw materials and hides and leather. Pork and margarine were more generally obtainable last week; but the butter shortage continues and the qualities marketed are inferior. New measures have been taken for the regulation of slaughtering. There are complaints of the bad quality of potatoes on sale in industrial centres. At the Reich Farmers' Congress it was officially stated that food cards would not be introduced. Cards, however, are increasingly being issued by retailers. Sowing of winter cereals has been delayed by rain. But the "condition index" for wheat is the same as a year ago, while that for rye is a little lower.

The number of unemployed increased in October by 114,000 to 1,828,000, as against a decline of 14,000 in October, 1934. The official Konjunkturinstitut criticises the official figures as being too pessimistic. Its grounds are that more than half a million of the registered unemployed are incapable of work, and that the permanently unemployed labour reserve has about the same dimensions. Even if a third class, the invisible unemployed, is counted, the real number of unemployed, defined by the Institute as "those for whom employment must be found," is below one million. The Institute's estimate of coming winter unemployment is less optimistic. A seasonal increase of more than one million may be expected. This high estimate is based on the fact that in the present trade recovery (largely building and road-making) the share of "outdoor" labour is very large. Increasing unrest is reported in the factories, and there are stories of attempted local strikes and anti-Nazi demonstrations.

Owing to the increase in the share of coal sales to "contested" districts, the Ruhr Coal Syndicate has sharply increased its monthly tonnage assessment. The activity of the coal trade is becoming more dependent on the demands of the iron and steel industry. Chamber of Commerce reports from South Germany speak of a shortage of raw textile materials so acute that complete cessation of production within the next few weeks is possible.

Speaking last week at Frankfurt am Main, the Finance Minister, Count Schwerin von Krosigk, strongly defended the official policy of financing work-creation and rearmament with credit. He declared that the short-term debts contracted for rearmament would ultimately be consolidated; but implied that there is no prospect of a reduction of taxation. He dismissed the food shortage as due to the "nervousness of old women of both sexes."

Money during the past week was very plentiful; day-discount-rate at 3-3½ per cent., sometimes lower, and market of short-term investments, and after Reich Treasury bills in large quantities into Gold Discount Bank promissory notes. Offers of money are, however, confined to the markets for short-term and rediscountable securities. There is a visible desire for increased liquidity, which is partly due to the approach of the year end, partly, it seems, to anxiety about home and international development factors.

The Reichsbank's return on November 7th shows the repayment of 51 per cent. of the October-end credits, as against 41 per cent. in the corresponding week of 1934.

The improvement was due to the taking over by the Gold Discount Bank of Reichsbank discounts, payment being made with the proceeds of sales of the former's promissory notes. The Reich also repaid a great part of its operating credit.

BERLIN, November 13.

ITALY

PUBLIC OPINION AND SANCTIONS

THE newspapers are more and more given up to stories of sanctions and counter-measures. The outstanding fact is the almost total disappearance of the sentiment of "traditional friendship" between Italy and England. It is to-day impossible to meet an Italian who dares to confess pro-League feelings. It has been said that the intervention of the League of Nations (which is taken here to mean in effect Great Britain) had worked the miracle of transforming the few remaining "anti-Africanists" here into fervent Colonialists. Sanctions have now accentuated this change of sentiment. Wholly apart from newspaper propaganda, sanctions are simply not understood by the man in the street. This may explain the extraordinary success of the anti-sanctions propaganda. "Why should they starve us?" the common people ask, and they are at a loss to find a reply.

To-day, concluding a series of articles on counter-measures against sanctions, *Il Sole*, the leading daily commercial newspaper, publishes a complete list of goods traded between Great Britain and Italy. The list is given in order that its readers may boycott anything coming from British sources. If goods are indispensable, people are urged to buy from non-complying League States: Austria, Hungary or Albania, or from U.S.A., Germany, Brazil, Paraguay and Japan. Sanctions are, of course, bound to do harm to Italy economically. But they will not prove unbearable, it is said, if consumers reduce their consumption or use substitutes. In the long run, according to protectionist writers, sanctions may even be beneficial. For instance, the meat consumed in Italy amounts to 700,000 tons per year, of which only 70,000 tons are foreign. The sale of meat is now limited to four days and four hours weekly. If consumption decreased proportionately the country would save 200,000 tons; therefore even if the decree has only a partial effect, it seems certain that a saving of 70,000 tons can be achieved. Imports of coal and coke in 1934 reached 11,781,354 tons, of which 7,451,352 tons came from "sanctionist" countries. Imports from other countries can now be increased, as well as internal production, which in 1934 amounted to 373,593 tons. Existing electrical plants can also be worked to the fullest capacity, and, at a price, the production of lignite could be increased. Italy produced only 408,616 tons in 1934, but 1,656,963 tons were produced in 1917.

THE PROBLEM OF OIL IMPORTS

A thorny problem is that of mineral oils, of which imports in 1934 were:—

	Raw oil Tons	Lubricants Tons	Petrol Tons	Benzine Tons
Roumania	47,898	3,689	5,860	5,694
U.S.S.R.	7,277	6,433	3,936	9,132
U.S.A.	24,061	51,710	23,223	22,701
Persia	...	...	16,448	117,265
Columbia	63,688	...	...	...
Dutch E. Indies ...	...	...	5,569	3,282
Dutch W. Indies ...	...	...	3,908	18,936
Venezuela	...	...	2,093	5,440

The proposed counter-measures are threefold: first to increase imports from the U.S.A.; secondly to accelerate the transformation of engines from oil to other fuels; thirdly, to reduce consumption. Within limits, and informally, oil is rationed; but the simplest method is taxation. On benzine, for instance, the tax has been increased from 2,100 to 3,600 lire per ton.

The stocks of certain important commodities are as follow (in the ports and for goods marked * also in principal private warehouses).

	August, 1934 Tons	August, 1935 Tons	Index No. in August, 1935 (1930 = 100)
Wheat	390,613	327,643	157.2
Rice	5,718	10,525	126.2
Other cereals, vegetables, etc.	24,192	42,954	200.6
*Sugar	279,206	269,989	67.7
Coffee	14,743	7,873	94.6
Cheese and milk products	6,543	7,166	212.7
Cocoons	1,211	330	3.8
*Cotton	71,851	60,884	109.2
Wool	1,204	1,547	214.0
Fertilisers	3,498	9,921	40.7
*Wood	13,744	39,640	694.2
Sulphur	224,224	208,243	208.1

This list, compiled from data which are not fully representative, gives the impression that, except for a few commodities such as cocoons and fertilisers, Italy's warehouses are well stocked.

Building activity, which until August was rising, has now fallen off. Between January and August, 1935, the number of new rooms authorised in the seventeen most important cities was 144,983, against 116,153 in the corresponding period of 1934. For the whole year 1934 the figure was 174,866 rooms, against 102,621 in 1933 and 81,568 in 1932. In September, 1935, however, the number of new rooms declined to 7,906, against 11,409 in September, 1934. The October and November figures will probably sink to zero, because the municipal committees, which authorise new buildings, were instructed in September by the Government to suspend new building schemes. Building materials will thus be economised.

The Official Gazette of October 31 publishes a decree (dated October 28) which authorises the Prime Minister to order, in case of exceptional circumstances of national necessity, that documents relating to the economic and financial situation of the State shall be kept secret and their publication suspended, even if provided by law. Obviously, only documents and data whose publicity would be dangerous to the State will be withheld from publication. The nation and the Government have always reaped great benefits from the full publicity given hitherto to monetary and financial statistics and data. From 1922 onwards the official statistics, and especially the Monthly Statistical Bulletin of the Central Statistical Institute and the Treasury and Bank of Italy balance sheets and monthly accounts, have stood very high in the eyes of the scientific world.

TURIN, November 8.

HOLLAND

UNEMPLOYMENT INCREASING

ALTHOUGH the recovery in the prices of colonial produce is assisting the Netherlands Indies, there is little sign of recovery in Holland. Indeed, the decline seems to be continuing. This is evident from the port traffic returns, from the balance of trade and from the constantly growing number of unemployed, etc. The number of registered unemployed was 367,074 on October 12th, compared with 360,743 on September 28th. The average percentage unemployment for the period April to September inclusive has been as follows for the years 1929 to 1935:—

	1929	1930	1931	1932	1933	1934	1935
	2.7	5.7	11.3	25.3	24.8	25.4	29.4

The deterioration in the situation is also being demonstrated by the constant rise in the railway deficits and by the continual increase in the State Budget deficits. The latter have increased as follows:—

	45.6 million guilders in 1931	
76.0	" " " 1932	
55.9	" " " 1933	
37.2	" " " 1934	
71.7	" " " 1935 (estimated)	
119.0	" " " 1936 (estimated)	

The returns of the Post Office Savings Bank are also unsatisfactory. Deposits used regularly to exceed withdrawals.

But in 1934 withdrawals exceeded deposits by 2.4 million guilders, and in 1935 the position has been worse still. It is evident that savings amassed in more prosperous times are now being drawn on to supplement diminished incomes. The withdrawals of savings this year are also a sign of uncertainty about the currency.

SANCTIONS AGAINST ITALY

Despite the serious economic situation in Holland, the Government are resolved to uphold their commitments to the League of Nations in respect of Italy. They have accordingly taken steps to ensure that they have the necessary statutory powers to enforce economic sanctions. As far as the prohibition of exports is concerned, powers have been provided by legislation which has just been passed by the Upper Chamber, investing the Government with authority to enforce prohibition of exports for the purpose of fostering international co-operation in the interest of peace, or for the protection of the realm in times of exceptional international tension. On the strength of this legislation, not only the export to Italy of arms, but also of all other merchandise, can be prohibited. The prohibition can be made applicable to the Netherlands Indies; and these measures are also applicable to transit traffic. The prohibition of the exportation to Italy of arms and munitions has already been put into effect. In addition, on October 17th, a new Bill was introduced into Parliament providing authority to take various further measures for the fostering of international co-operation with a view to averting or terminating hostilities. The stoppage or restriction of commercial intercourse with Italy will be a considerable loss to Holland and the Netherlands Indies.

INDUSTRIAL REORGANISATION

The Government is now engaged in carrying through its programme of industrialisation. A Bill has been introduced into Parliament providing for the founding of a "Company for Industrial Financing," which is to be established for the provision of long-term credits to and the participation in the capital of new or existing industrial enterprises, if employment in Dutch industries can thereby be fostered. In addition, the company aims at the provision of long-term credits to and participation in the capital of approved regional industrial banks, as well as the taking over of the credits of these banks. The company is also authorised to co-operate in the carrying out of relief schemes on behalf of industries prescribed by the Government. The State is to participate up to nine-tenths of the capital in this company. The Board of Control will consist of the Minister of Commerce, Industry and Shipping and the Minister of Finance.

The Social-Democrats have come forward with a "Labour Plan." It contemplates the reduction of permanent burdens, rentals, mortgage interest and farm leases, to be effected by means of a Rent Act, a Mortgage Act and a General Lease Act. A sum of 200 million guilders annually for three years would be available for employment schemes; and all proposed measures together would provide employment for 200,000 persons.

BETTER FOREIGN TRADE RETURNS

In October an improvement in Holland's foreign trade was at last recorded. The returns compiled by the Central Statistical Bureau show:—

	(In million guilders)				
	Oct., 1934	Oct., 1935	Jan.- Oct., 1934	Jan.- Oct., 1935	Sept., 1935
Imports	87	94	875	777	76
Exports	62	70	596	563	59
Percentage of imports covered by exports	70.8	74.0	68.1	72.4	78.2

Imports of gold and silver in the month of October amounted to 5,352,393 guilders and exports to 24,652,930 guilders.

The financial position in Amsterdam has eased considerably. Comparing September 30th and November 11th, the return of the Netherlands Bank shows the following changes.

	Sept. 30 Pl. millions	Nov. 11
Gold	536	633
Silver	21	
Discounts	65	36
Advances	213	135
Note circulation	819	795
Deposits	42	38

During the past six weeks there has been a definite increase in the Bank's holdings of bullion coupled with a contraction in the amount of accommodation it has had to extend. In consequence of these developments its reserve ratio has risen from 62.2 to over 70 per cent. This easing of the credit situation is reflected in a reduction in short interest rates. Prolongation rates have fallen from 6 to 3½ per cent., and the private discount rate from 5½ to 3½ per cent., while the Netherlands Bank's rediscount rate has been reduced from 6 to 3½ per cent. The October rise in the world prices of primary products has also eased the general economic strain, but Holland's situation still gives rise to considerable anxiety. To judge from a recent speech by the President of the Amsterdam Chamber of Commerce, the real need is for a relief in the burdens upon trade and industry, so that when an improvement sets in in neighbouring countries Dutch traders will be free to take advantage of it. This explanation does not answer the real question of how long Dutch industry will be able to bear the burden of an over-valued currency.

AMSTERDAM, November 13.

POLAND

SANCTIONS

POLAND consented to support the League in the application of financial and economic sanctions against Italy, but not, apparently, with any profound convictions that the sanctions envisaged have anything more than a nuisance value, or even that Italy is fundamentally culpable in her Ethiopian adventure. It was probably the adamant stand taken by Great Britain which finally persuaded the Polish Government that there was more to be gained at this juncture—or, perhaps, less danger of losing—by espousing the cause of collective action. Certain reservations have been made in respect of contracts which have been in force for several years with the Monfalcone shipyards and the Fiat Company on which the plans of the Polish mercantile marine and the State-owned motor industry are to some extent based, and which in turn require extensive shipments of coal to Italy.

The Cabinet reconstruction last month, when M. Kosciolkowski replaced Colonel Slawek as Prime Minister and M. Kwiatkowski took the Finance portfolio from Colonel Zawadzki, assuming at the same time the Vice-Premiership, went deeper than had been expected. It may even have gone much deeper than is yet realised. There are many who think that the "Old Guard Colonels" (those who were closest in a political sense to the late Marshal Pilsudski, and with whom they served as legionnaires) have had their innings. The new Cabinet was chosen by President Moscicki, whose position has become one of very great importance since the enactment of the new Constitution in April and the death of Marshal Pilsudski in May. General Rydz-Smigly, who succeeded the Marshal as Inspector-General, controls the Army, however, and the President consults him on all matters of national importance. Colonel Beck, the Foreign Minister, who belongs to the "old guard," is credibly reported to be dissatisfied with the recent course of events, and the reported desire of the President, the Inspector-General and the Cabinet to make foreign affairs more of a collective responsibility. Even if prudent to assume that vital changes in foreign policy were imminent.

The first act of the new Cabinet has been to obtain from Parliament emergency powers—valid until January 15 1936—for dealing with the "financial and economic crisis." These powers, however, do not permit any change to be made in the gold value of the zloty, and it is clearly

CANADA

ONTARIO POWER CONTRACTS

THERE now seems a reasonable prospect of a settlement by compromise of the controversy over power contracts concluded between the Hydro-Electric Commission of Ontario and four Quebec power companies, the Beauharnois, Gatineau, MacLaren-Quebec and Ottawa Valley Corporations. The provincial Government of Ontario has been holding as a club over the heads of the companies the legislation which it passed last session to authorise cancellation of the contracts, and it lately announced that the "Hydro" Commission had recommended the early proclamation of the act. But last week a conference took place in Toronto between members of the Ontario Government and representatives of the power companies, and after it Mr Hepburn, the Provincial Premier, announced that his Ministry was giving sympathetic consideration to proposals for a settlement, but that before any further progress could be made with the negotiations the executive of the power companies must call meetings of their bondholders and arm themselves with full authority to negotiate a settlement. He has since added that they must act speedily. It is being suggested that the original contracts will be replaced by new ones in which the "Hydro" will only be obliged to take one-third of the volume of power originally contracted for. But in the case of some of the companies such a reduction would leave them with a large volume of power which could not be easily disposed of elsewhere and involve them in difficulties about their bond interest. The new Liberal Ministry at Ottawa will almost certainly exert its influence to secure a reasonably equitable settlement, because it wants above all things to rehabilitate Canadian credit in London and New York and knows that nothing has recently impaired it so much as Mr Hepburn's threat to cancel the power contracts.

The decisive Liberal victory in the General Election, inasmuch as it has cleared the political atmosphere at Ottawa and ensured a stable Ministry with a commanding majority for at least four years, is very satisfactory to most of the business community; and although manufacturers would like to have some inkling of the tariff policy of the new Government, they are not seriously afraid of immediate drastic reductions.

BUSINESS BETTER

Recessions which were visible in many of the business indices in the last half of September and the first week of October, and which brought the general economic index of the Bureau of Statistics for the week ending October 5 down to 92.1, were attributed to the confusion and uncertainty produced by the General Election; and now that it is over the indices have begun to mount. For the week ended October 12 the Bureau's general index was 95.2, and for the week ended October 19, 96.9.

Week ended	Car Loadings	Wholesale Prices	Bank Clearings	General Index
October 19, 1935.....	76.7	73.0	82.0	96.9
October 12, 1935.....	75.9	73.2	90.0	95.2
October 20, 1934.....	74.3	71.4	94.2	95.9

While the yield of the Western grain crops is unsatisfactory, and threshing returns reveal that a lamentably large proportion of the wheat is of low grade, the crops in Eastern Canada are well up to the average and in some cases considerably above it. Since the prices of both grain and livestock have risen substantially, rural purchasing power should be decidedly greater during the coming winter than it was last year. The wide gulf between the price levels of farm and manufactured products is disappearing. At the bottom of the depression in 1933 the disparity was as much as 56 per cent. (1926 = 100) in favour of the latter; but it has now been brought down to 12 per cent., with the result that the farmers are now getting a much better return for their labours.

The export movement of wheat is improving, but is not yet wholly satisfactory. Visible stocks of Canadian wheat on October 18 were placed at 261,509,251 bushels, or roughly 16 million bushels more than the stocks on the

the Cabinet's intention to continue to maintain "sound money." The first point of attack will be the Budget deficit of approximately 300 million zlotys a year. "The Colonels" during the past five years have added about 1,500 million zlotys to the internal debt, of which a substantial amount, it is believed, still remains to be consolidated. Leaving the Services, which take more than 40 per cent. of the entire Budget revenue, virtually untouched, the Government proposes to increase the yield from income taxes by 60 million zlotys (partly by lowering the minimum taxed to salaries of £4 a month) and to obtain 160 million zlotys by a special tax on the salaries of State employees.

Other economies will be effected in State monopolies and in the numerous industrial enterprises owned or controlled by the State. The immediate result of the Government's programme will be further deflation. Nevertheless, at present the new Cabinet enjoys a much wider measure of popular support than did its "B.B." (Pilsudski party) predecessors.

The Bank of Poland during September and October, when foreign debt payments are at their heaviest, lost 60 million zlotys in gold. The reserve on October 31st stood at 454 million zlotys, bank-note circulation at 1,047 millions, with a "cover" of 42 per cent., which is 12 per cent. above the legal minimum. This is the first time since the depression began that the Bank has been forced to sell gold in order to meet the foreign debt service.

POLISH-GERMAN TRADE TREATY

The commercial treaty signed on November 4th, which becomes effective, pending ratification, on November 20th, voluntarily recognises for the first time in Polish-German trade the most-favoured-nation principle. It also provides for the establishment of "clearing" facilities henceforth to cover all commercial exchanges between the two countries. It is estimated that Polish-German trade under the new treaty will amount to about 180 million zlotys per annum on both sides. This would indicate an increase of about 50 per cent. in the present volume, and would place Germany in a predominant position in Poland's foreign trade. The treaty, therefore, has an important political significance.

The import quotas reciprocally granted under the treaty will not be made public, but it is understood that Poland will export to Germany timber to a value of 40 million zlotys, pigs to a value of 25-30 million zlotys, and geese, eggs, butter and alcohol for a very substantial sum per annum. Germany, on the other hand, is granted import quotas for motor vehicles and parts (estimated at 7 million zlotys), machinery of all kinds, chemicals, motion pictures and many other lines of manufactured goods. It is difficult to see under existing conditions, and in the face of Jewish hostility (the Jews are a very important element in Polish trade) how Germany will be able to dispose of merchandise to a value of 180 million zlotys a year—an amount which would even have to be increased if Poland must accept in merchandise the repayment of all or part of the credits now "frozen" in Germany.

The visit to Warsaw this week of the trade mission representing the Federation of British Industries was somewhat overshadowed by the announcement of the Polish-German treaty, and it is interesting in this connection to compare the present position of Germany, Great Britain and the United States in Poland's foreign trade—the following figures being for the first 9 months:—

	1934		1935	
	Imports from	Exports to	Imports from	Exports to
Great Britain	61	148	84	132
Germany	80	121	92	102
United States	89	17	90	34

Total imports increased from 593 million zlotys in 1934 to 625 millions in 1935, while exports decreased from 714 to 673 millions.

Great Britain has many things, intangible as well as tangible, in her favour in trade with Poland, and the members of the F.B.I. mission left Warsaw feeling rather confident that the gains made this year can be further extended. It is realised, however, that German competition will henceforth be keener.

WARSAW, November 8.

corresponding date in 1934. A change in the personnel of the Canadian Wheat Board is expected, and the new Government is likely to aim at selling the Government's stocks as soon as possible in order that the carry-over at the end of the present crop year may be reduced to normal dimensions.

Industrial activity has not been uniform in recent months, and a recession in the industries producing consumers' goods has been balanced by a higher scale of output for the heavy industries. There is evidence, however, of increased employment, and the Bureau's employment index for October 1 stood at 106.1 as compared with 102.7 for September 1, and 106.1 and 100.0 for October 1, 1935 and 1934 respectively. The mining industry continues to prosper, and the producers of copper, zinc and lead have been encouraged by the rise in prices. The newsprint industry is keeping its output at a good level, but some recent developments have virtually obliterated hopes that the price of newsprint could be raised above its present basic figure of \$41 per ton, which is too low to be profitable.

Total foreign trade for September was down by roughly 10 million dollars, compared with August; but imports, valued at \$44,689,000, and exports, valued at \$64,565,000, showed gains of 5.9 per cent. and 11.1 per cent. respectively over the figures for September, 1934. For the twelve-month period ending September 30, Canada's total foreign trade was valued at \$1,235,789,000, a gain of 8.8 per cent. over the figure for the previous parallel period.

Federal revenues for September, estimated at \$26,031,000, showed a slight decline from the \$26,663,000 collected in September, 1934, while expenditures (ordinary, special and capital), at \$32,803,000, showed an increase of \$6,852,000.

There has been a much-needed improvement in railway earnings. For September the net earnings of the C.P.R. at \$3,290,218 showed a gain of \$256,638 over the figure for September, 1934, and those of the C.N.R. a gain of \$282,429.

OTTAWA, October 26.

BOOKS AND PUBLICATIONS

THE DEFEAT OF PEACE

THE three authors of this book,* under the pseudonym of "Vigilantes," published a pamphlet two years ago called "The Dying Peace," in which they told the tale of the Government's sins, both of omission and commission, in foreign affairs. The same authors now produce enough evidence to show that when the historian comes to analyse the consequences of that lamentable catalogue of hesitations and quibblings which embodies Sir John Simon's tenure of the Foreign Secretaryship in the last crucial four years, he will describe them as calamitous, for Europe and for Britain alike. It is a bitter chronicle of four wasted years in British foreign policy; and if the *saeva indignatio* of the three authors leads them to ascribe Machiavellian astuteness to a Government which was, in Mr Garvin's phrase, only "half-hearted and half-headed," their emotions are comprehensible, though their accusations may flatter too much.

The authors have a firm foundation. It is their belief that a catastrophic *volte face* in British foreign policy occurred after October 24, 1931, when "the Japanese were given three weeks to get out" of Manchuria by the League Council. Thereafter the British Government failed to support the very firm American lead of November 5, 1931; and Anglo-American co-operation—which had been facilitated by American collaboration at Geneva—accordingly became impossible. "Vigilantes" give an excellent and faithful record of the deplorable delaying tactics employed by the British Government; the pro-Japanese speeches of Sir John Simon in Parliament and at Geneva; the defeat of the South African candidature to the Council in 1932 by the British vote, because the South African attitude—strengthened by General Smuts' views—was strongly anti-Japanese; the putting of the Lytton Report into cold storage; and the paralysis of League action as a result of the British Government's Janus-like stance.

From this fateful beginning in 1931-32, which lamed the League, a whole swarm of errors and evils arose. The authors show how right was General Smuts when he predicted that the cloud in the Far East would soon overshadow all Europe. China's integrity could not be saved by the League; therefore the discontented Powers, mostly dictatorships like Japan, concluded that resolute buccaneering was still the best policy. France prayed for collective security at the Disarmament Conference; the French offered even to scrap military air forces in 1932-33; but the British Government turned down flatly every proposal for making collective security effective. It was the British Government's half-heartedness which gave Japan what she wanted in China; it was the British Government's half-headed-

ness which ruined the Disarmament Conference. Time and again, the Government were in a position to play their full part in a European collective security system, and so to accord Germany her just claims by according France her passionately desired security from the alleged German menace. But the French, cold-shouldered in London, turned to M. Barthou, turned away from Geneva, turned to Russia and the *pis aller* of alliances. Thus a chronic insecurity swept over Europe, which wrecked the Disarmament Conference, led to the Franco-Italian accord of last January, to the Stresa Conference in May (at which Abyssinia "was not mentioned"), and so to Signor Mussolini's profound conviction that the British Government did not care a rap for Europe or for the League, and would not lift a finger for either.

What followed from the Walwal incident, according to "Vigilantes," was to prove the nadir of the National Government's foreign policy in the hands of Sir John Simon. For again faithful to Manchurian precedent, and thus confirming Signor Mussolini in his beliefs, the Government delayed the League's activities and pressed Ethiopia to all manner of dilatory proceedings. For six months these only enabled Italy to ship troops and war materials to East Africa for a loudly heralded war with Abyssinia. Then, as the last straw, the Government put on an "equitable" arms embargo against both Italy and Ethiopia—which, under cover of "not annoying Italy," in effect crippled the Ethiopian defences.

The tale is sorry in the extreme. It only changes for the better when Sir John Simon is dropped, and when, according to "Vigilantes," the Right Wing of the Conservative Party realise both the electorally dangerous pressure of public opinion against the "Simon" procedure, and the Italian threat to British imperial communications. Then, in the authors' view, the Right Wing of the Conservative Party agreed to the firm "League" line taken at Geneva by Sir Samuel Hoare on September 11th last, with all that it implied, on condition that the public approbation of that lead should be capitalised for a "snap" General Election, followed by a regretful jettisoning of the League and the inauguration of an enormous rearmament programme. Of the truth of this allegation time alone can convince us.

The book has been hastily prepared for the press, and bears the marks of that haste, both in style and in printing. The Treaty of Ucciali (not Ucciali) was in 1889, not in 1899, as on page 156. The Anglo-Italian Pact which, in Signor Mussolini's words, "practically carved up Abyssinia," was signed in Rome in 1925, not in 1905, as on page 165; and there are many misprints. Again, the authors have written much of the book with one eye on the General Election and the other on the maintenance of Left-wing doctrine. The result is, in many places, that their

rhetoric savours more of the hustings than a profound study of the real influences behind the "Tory" Party's foreign policy. But these criticisms apart, "Vigilantes" have performed a public service by so ably cataloguing the Dead Sea fruits of four years' half-heartedness and half-headedness in British foreign policy.

SHORTER NOTICES

"Economic Thought and its Institutional Background." By Harvey W. Peck. Allen and Unwin. 12s. 6d.

Professor Peck's chief purpose in this book, which would be classed as sociology in England, is to investigate why particular economic theories were held at particular times. This is not a new subject. For more than 50 years the relativity of much classical economic doctrine has been emphasised. Not only the historical economists, but theorists like Marshall, Dr. Bonar and Dr. Myrdahl have willingly admitted the influence of environment on the character of economic theory. This influence is to be seen in the choice of problem singled out for treatment, in the premises assumed in deductive reasoning, in the proportionate weight assigned to particular forces, and sometimes in a complete state of confusion, from which only a later generation is able to emerge.

Much sociological work remains to be done in this field. But success is only likely to be achieved by an investigator who knows intimately both the historical background and the economic writings which have to be correlated with it. It cannot be said that Professor Peck possesses these necessary qualifications. His knowledge of economic history appears to be mainly derived from a few textbooks written 40 years ago—in particular, Cunningham and Toynbee. Nor does it appear that his experience of classical or modern economics is particularly wide. For example, although he has a chapter on "Marginism," not one of the three founders of modern economics—Jevons, Menger or Walras, appear in the bibliography. With such a poor equipment, it is not surprising that the result should be unsatisfactory. The book is at its best stimulating—at its worst facile, superficial and muddled.

The general thesis is that economic doctrines reflect the rise and fall of particular classes and groups, that these groups owe their rise or fall to their association with some factor of production, the demand for which is increasing or diminishing, and that the doctrines may be regarded as scientific or not, according as the success of the group tends "to promote progress and the permanent trend of economic events." "The economic factors of the economist are identified with the classes and class conflicts of the historian. And there is an attempt to explain history by reference to the economic laws of values, primarily the law of supply and demand, and the law of proportion of factors," etc., etc.

Some of Professor Peck's ideas are not uninteresting, and some of his generalisations would probably be accepted. But there is an appalling lack of precision in his terminology, a constant tendency to treat as similar phenomena which are essentially different, and a remarkable misunderstanding of modern economic theory.

In the second half of his book he abandons almost completely his original thesis, and is content merely to describe and criticise certain modern schools. In effect, the book becomes more a statement of his own social philosophy than anything else.

"Jews in Palestine." By A. Revusky. P. S. King and Son, Ltd. 390 pages. 15s.

The absence of a comprehensive account in English dealing with modern Palestine or even with Jewish Palestine predisposes the reader in favour of Mr A. Revusky's "Jews in Palestine." It presents a history of the country since the beginning of the revived Jewish interest which began in 1880 and gives an account of the development of its agriculture, the growth of its industries and commerce, and the building of its towns. It lays special emphasis on the co-operative movement, probably the most vigorous for its size in the whole world. An account is given of the Zionist organisation and its instruments; and the book concludes with a series of unconnected chapters dealing with both the internal and external politics of the country.

This volume undoubtedly contains much of the raw material necessary for a very good book on the history of the Jewish National Home up to 1933. But it suffers from being too comprehensive and not sufficiently selective; and it is already out of date. The reader finds little evidence of the large recent immigration of labour and capital and of the increased

colonisation activities. The healthy condition of the Zionist funds, the withdrawal of the small Revisionist rump from the Zionist movement, the election of Dr. Weizmann to the official leadership and the appointment of an executive representing all parties are not mentioned. And the English reader will miss an account of the growth of the large Governmental budgetary surplus and the newly awakened interest of the City of London.

The book is particularly weak in its references to the nature of the Government, its constitution and policy. It gives no account of the activities of the various departments. There is no reference to the recently organised Department of Statistics without which the departments were working in the umbra of vague estimates, whilst the new banking law which is still on paper is discussed as if it were already in operation. The amount of local autonomy the Jews possess which incidentally is less in the field of taxation than the Jews have in Poland and Germany, is discussed, whilst there is no mention even of the important problems of local government.

Despite these deficiencies in Mr Revusky's book, however, it is impossible to point for the time being to any better volume covering the same field. To anyone eager to study modern conditions in Palestine it will consequently be of considerable assistance.

MONEY AND BANKING

GERMAN CREDIT EXPANSION

(BY A CORRESPONDENT)

WHEN the present German Government assumed power, two and a-half years ago, it set itself two main objectives: the re-armament of the country and the re-employment of the workless. Both required the provision of finance on a large scale, and their energetic pursuit, since 1933, has mainly determined the course of credit and banking developments. It is true that the process of contraction enforced upon Germany during and after 1931—partly by the withdrawal of foreign credits and partly by the decision to uphold the gold standard—had virtually been abandoned in the summer of 1932. Germany had secured her much-desired surplus of exports, at the cost of a rise in unemployment to the alarming figure of 6,000,000. The Nazi Government, therefore, on its advent to power, abandoned a policy of contraction for one of expansion of domestic trade and industry, supported by an expansion of credit.

As a consequence of this reversal of policy, during the last two years the principal items in the weekly statements of the Reichsbank have risen considerably. The note circulation, for example, has increased from Rm. 5,569 millions to Rm. 6,147 millions. But if allowance is made for the punitive contraction of the preceding period, there has been virtually no net expansion, since 1929, of the German currency and credit structure by the central institution. What has happened is relatively simple. The gold reserve of the Reichsbank was lost virtually in its entirety. Credit was contracted to a point below the minimum required for a tolerable level of domestic activity, unless prices could be depressed much further. The gap left by the depletion of the gold reserve has now been filled, in the manner adopted by all central banks, through the purchase of Government securities. Yet the re-expansion of the credit structure by the Reichsbank is not excessive, if measured by the ordinary requirements of the country. What renders it inflationary is the fact that creation of credit has been superimposed at a time when the German mark was already conspicuously overvalued in relation to the pound and the dollar. The result is that Germany has had to work to secure control of external trade and exchange in order to maintain some measure of equilibrium.

It is not easy to measure the effect of this creation of credit upon the banking system. One reason is that the five large commercial banks do not occupy a position in any way comparable to that of the big clearing banks in the virtually "closed" British system. They are merely an important section of the banking structure, which consists of five different classes of banks, to the number of 198 in all. The total deposits of all German banks, taken together, are given as Rm. 19,200 millions, of which only some Rm. 7,000 millions are accounted for by the German "Big Five." The latter's resources, however, have tended to contract rather than rise ever since 1931, for while their cash has increased by some Rm. 20 millions since 1933, their deposits have fallen. The developments of the last two years are reflected, in their case, principally in the repayment of frozen industrial advances as the process of domestic recovery acquired momentum, and in the substitution of Treasury bills or other forms of Government paper for these commercial assets. Thus the big banks are actually in a more liquid position than they have been for some time past.

In addition, however, to the five large commercial banks, there are twenty-one State and provincial banks, whose sight liabilities have risen from Rm. 1,760 millions to Rm. 2,436 millions since September, 1933; and twenty Girozentralen institutions, whose deposits were Rm. 4,213 millions in September, 1935, against Rm. 2,826 millions in September, 1933. Then come the "Special" banks, sixty-nine in all, established to meet the particular needs of railway financing, the financing of public works, agriculture,

etc. The total liabilities of these institutions, after rising steeply, have declined in the last three months from Rm. 3,979 millions to Rm. 3,169 millions. Lastly, there are the "Other Credit Banks," consisting mainly of small provincial institutions engaged in commercial banking, whose total sight liabilities of less than Rm. 2,000 millions show little indication of any conspicuous movement.

Some of these banks are of comparatively recent origin, and it is difficult to compare their present position with that of two years ago. The present figure of Rm. 19,200 millions of deposits and sight liabilities, however, appears to indicate an increase of between Rm. 1,500 millions and Rm. 2,000 millions over that period. Computation is rendered unreliable by the fact that the banks' deposits do not move in any direct ratio either to cash holdings or to their balances with the Reichsbank. The reason is that the German banking system, unlike our own, is not based upon a ratio of cash and central bank balances to deposits, but upon the liquid reserve held in the form of paper rediscountable at any time at the Reichsbank. The effective cash held by the various classes of banks is, on the average, no more than 1.7 per cent. of their sight liabilities. It varies from 0.6 per cent. in the case of the State and provincial banks to 2.6 per cent. in that of the "Big Five" commercial banks. Rediscountable bills, on the other hand, vary between the extremes of 21 and 53 per cent. and are stated to average 41.5 per cent. In absolute figures, all the banks taken together hold only Rm. 300 millions in legal tender cash out of a total circulation of approximately Rm. 6,000 millions. It is this fact which makes the German banks pivot so directly on the Reichsbank; for they rely on the Reichsbank to rediscount for them in order to meet their daily needs.

The most striking feature in the German credit situation is not, however, the extent to which the total volume of credit has been increased but the degree to which this increase has been placed, directly and indirectly, at the disposal of the Government. If direct Government borrowing from the Central Bank may be regarded as inflation, the purchase of Government paper or re-employment bills by the Reichsbank has certainly been inflationary in tendency and effect. The Reichsbank is commonly understood to hold Rm. 3,000 millions of the Government's liabilities in this form. In one sense its gold losses since 1931 compelled it to adopt this policy in order to acquire sufficient backing to support the minimum currency supplies required by the nation. Beyond this factor, however, it is appropriate, in explaining the *raison d'être* for the present situation, to stress the expansion of Government borrowing rather than the expansion of Government credit. Recently, nevertheless, revival in trade has begun partly for the Government without further resort to inflation. Employment has improved and savings deposits have risen sharply—according to some estimates by as much as Rm. 3,500 millions since January, 1933. The insurance companies during the same period have added Rm. 1,750 millions to their funds available for investment. Meanwhile, the repayment of part of the mass of frozen advances Government paper. The result is that during the current millions of ten-year 4½ per cent. Treasury bills, and thus originally used to finance its schemes. Revival has simultaneously increased the national revenue, for the current year's Budget receipts show an estimated improvement of Rm. 2,000 millions, which covers the service of the new bonds with a margin.

In spite of this general improvement, however, two points of weakness deserve careful observation. On

the one hand, there can be no doubt that the present economic policy of Germany is tending to increase rather than diminish her maladjustments in relation to the outside world. These, of course, could be substantially removed by devaluation. On the other hand, the pace of Government borrowing, continually stimulated by aggressive political pressure, may become too rapid to allow cyclic processes to work smoothly, and even the skilful credit control of Dr. Schacht and the scrupulous fiscal management of Count Schwerin von Krosigk may be insufficient to check inflationary tendencies. Altogether, it may not be unfair to say that the process of financing re-armament and public works has given internal trade and production an initial impact at the cost of failure to secure improvement in a depressed standard of living. In the absence of any revival in general consumption it is doubtful how long revival by the stimulation of special forms of production can continue successfully to function.

FINANCIAL NOTES

October Clearing Bank Averages.—Reference to recent Bank returns shows that during October an unusually large amount of money was immobilised in public deposits at the Bank of England, while there was a corresponding depletion of bankers' deposits. It is not therefore surprising that the October returns of the nine English clearing banks record a further reduction in bank cash. The clearing banks, however, have rightly regarded this as a temporary movement, for they have continued to add to their earning assets, with the result that deposits have risen to a new high record. The ratio of cash to deposits for all the nine banks is now only 10.06 per cent.

Loans and advances	740.4	759.6	749.7	747.9	758.7
Investments in affiliated banks	24.9	25.1	25.1	25.1	25.1
Cover for acceptances, premises, etc.	162.1	141.2	137.4	134.4	137.7
Total assets	2,094.2	2,204.8	2,195.2	2,202.7	2,217.9

Among assets, both call and short loans and discounts are slightly lower than in September. The seasonal increase in tender issues of Treasury bills was checked early in October, and this may be the explanation. The banks apparently took advantage of the temporary setback in the gilt-edged market to add further to their investments. Finally the further progress of the trade revival finds expression both in the month's growth in advances and also in the increase in balances, cheques in course of collection and items in transit, the latter movement indicating that money is circulating more freely.

Further Sanctions Orders.—The announcement that certain exports to Italy, and all imports from Italy, will be prohibited as from November 18th has entailed certain modifications of the previous Order-in-Council which imposed financial sanctions. It is provided that goods may be imported from Italy under licence after November 18th, if they had been wholly paid for on or before October 19th last. On the other hand, after November 18th the exportation of non-prohibited goods will only be permitted if they are paid for in cash on or before delivery. A further order makes a basic alteration in the Anglo-Italian Payments Agreement of last April. Henceforward British exporters may not deliver goods to be paid for in this way unless either the lira in payment for

the goods have been lodged in the special lira clearing account prior to November 18th or the goods themselves are actually in transit on that date. Moreover, all debts due for Italian imports must in future be settled by payment to the Bank of England for the account of the Controller of Anglo-Italian Debts—a new official appointed for this purpose. If the debt is due in sterling or in lira, payment must be made in sterling, lira being converted at a special rate of exchange to be published each day, but debts due in any other currency must be paid in a sight draft in that currency. The net result is that for all debts now outstanding in respect of imports full exchange clearing is in force. The effect of this change in procedure is modified by the impending prohibition upon Italian imports, while exports, even if not specifically prohibited, may only be made against cash on or before delivery. On November 6th the Anglo-Italian clearing account showed outstandings of £1,919,000 due to British exporters and £1,051,000 due to Italian exporters. The question is how far these arrears can be cleared up before full economic sanctions take effect, or whether Italy will impose a moratorium upon debts now outstanding.

The Hongkong Dollar.—On November 9th the Hongkong Government announced an embargo on the export of silver, thus practically divorcing the dollar from its link with silver. This step was finally precipitated by the devaluation of the Chinese dollar a week before, but Hongkong, like China, had for some time been suffering all the difficulties occasioned by the rise in silver and the consequent over-valuation of her currency. This is illustrated by the Hongkong trade returns of the past few years:—

	Imports	Exports	Excess of Imports	Net Ex-Change of Treasury	Average Rate of Exchange (value of £)
1933	500.9	403.1	97.8	96.0	1s. 4½d.
1934	415.9	325.1	90.8	50.3	1s. 6½d.
1935 (8 months)	244.1	179.9	64.2	82.9	2s. 0½d.

The rise in the value of the exchange, while reducing visible exports, has also had the effect of discouraging remittances from Chinese emigrants which in normal times form a large invisible item. The growing adverse trade balance has been met largely by the shipment of silver, a development which in the absence of any equalisation charge such as was imposed by China as far back as October, 1934, has latterly allowed handsome profits to be made. With silver at 29d. per standard oz., the silver content of the Hongkong dollar, 416 grains (900 fine), is worth approximately 1s. 11½d., while on November 8th the Hongkong dollar was quoted at only 1s. 6d. The Government therefore had no option but to accept the devaluation of the local dollar. At the moment no new parity has been fixed, but it is expected that a sterling rate of 1s. 2½d. will be adopted. This would coincide with the rate at which the Chinese dollar is apparently to be "pegged," but the unfavourable Japanese attitude towards the recent Chinese devaluation, coupled with the more definite statement by the Foreign Office in Tokyo that Japan is opposed to China's obtaining a foreign loan, adds to the obscurity of the Far East currency position. The increase in the Hongkong Government's sterling commitments for 1936, entailed by this devaluation of the dollar, should be largely compensated by the fact that devaluation should be the prelude to an improvement in trade generally and in Budget revenue. In this connection the importance of Hongkong as an *entrepôt* for the trade of other countries, and particularly of South China, should be noted. Simultaneously with the official order of an embargo on silver exports it was announced that \$1 Treasury notes would be issued and new pewter coins would be put into circulation to make up for the shortage of silver dollars and small silver coins which have largely disappeared from circulation. There is also the existing note issue which at present is the prerogative of three banks, the Mercantile Bank of India, Limited, the Chartered Bank of India, Australia and China, and the Hongkong Shanghai Banking Corporation. It amounted on January 31st last to \$158.6 millions, and is backed by silver and sterling assets, but in future it may also be guaranteed by the Government.

The Money Market.—During the past week there has been a further increase in bankers' deposits at the Bank of England, and the clearing banks have also been heavy buyers of Treasury bills of all dates up to the first week of February. This has made money very easy, because the market has had to carry less bills. There was no clearing bank calling except on Thursday, and while outside lenders refuse to take less than $\frac{1}{2}$ per cent. they are not always able to find borrowers.

	Oct. 24, 1935	Oct. 31, 1935	Nov. 7, 1935	Nov. 14, 1935
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate :—				
Clearing banks	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{1}{2}$ – $\frac{1}{2}$
Three months' bank bills	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$

The banks are still buying bills at $\frac{1}{2}$ per cent., but they are very ready to purchase, and there is a feeling in the market that one or two of the banks might take hot Treasury bills if they were pressed to do so. In consequence hot bills have been very nominal at $\frac{1}{2}$ – $\frac{1}{2}$ per cent., but $\frac{1}{2}$ per cent. is believed to be the effective rate for the little business which has been passing. Although the allotment of Treasury bills was increased last week from £40.0 to £45.0 millions, the average tender rate fell from 11s. 1.32d. to 10s. 9.91d. per cent., and discount rates have since been weak.

* * *

The Bank Return.—The slow expansion in the Bank's gold stocks is continuing and is now giving rise to some comment on the Continent. The note circulation, however, is to-day £22.5 millions greater than a year ago, and the Christmas increase of about £20 to £25 millions is due within a few weeks. Without any addition to the Bank's gold stocks, the Reserve might fall during Christmas to below £30 millions and the Proportion possibly to 20 per cent. While these low figures would be purely temporary and would not indicate any real weakness in the Bank's position, they might create misunderstandings abroad. Hence it is a fair inference that the Bank is now taking the opportunity to add to its gold stocks.

BANK OF ENGLAND					
	Nov. 14, 1934	Oct. 23, 1935	Oct. 30, 1935	Nov. 6, 1935	Nov. 13, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.0	194.3	194.7	195.5	196.5
Note circulation	378.9	397.0	399.9	402.2	401.4
Banking Department :—					
Reserve	73.8	58.2	55.6	54.2	55.9
Public deposits	20.9	35.3	26.2	21.0	15.8
Bankers' deposits	97.9	78.7	82.5	89.6	92.9
Other deposits	36.8	37.1	38.6	36.6	36.7
Government securities ...	79.1	86.8	85.9	87.2	83.5
Discounts and advances ...	9.6	11.4	11.2	11.0	11.1
Other securities	10.9	12.5	12.3	12.5	12.6
Proportion	47.4%	38.4%	37.7%	36.8%	38.4%

The banking department records a further decrease in public deposits, which have now returned to a normal level. Bankers' deposits have in consequence increased. The explanation of both movements is that last week Treasury bill maturities were in excess of payments.

* * *

The Foreign Exchanges.—The political situation in France is now causing some anxiety. The Banque de France has suffered heavy gold losses, which for the week ended November 8th amounted to Frs. 667 millions. There was a simultaneous reduction of Frs. 860 millions in the note circulation, so that the technical position of the Banque de France is slightly improved, but even so the French authorities have thought it necessary to take precautions. Early this week the French commercial banks were requested not to ship gold if the New York exchange rate was under Frs. 15.18, the motive behind this request being the fact that the banks were securing cut freight rates which allowed them to ship at an exchange of Frs. 15.17 $\frac{1}{2}$. On Thursday afternoon the French Bank rate was raised from 3 to 4 per cent. The London ex-

change market has been very quiet, but three months' French francs remained at Frs. 1 $\frac{1}{8}$ discount in spite of the increase in the French Bank rate. Sterling has varied against the dollar either side of \$4.92, with very little change. The Paris-New York cross-rate has been Frs. 15.18 practically all the week. No intervention by the British Control in the foreign exchange market has been noticed this week. Dealings in Dutch and Swiss currencies have been very limited, but, as is explained on page 959, the Dutch position is stronger and the Netherlands Bank has reduced its rate from 4 to 3 $\frac{1}{2}$ per cent.

* * *

New York Money and Banking.—There is no change in money rates. New York member banks' loans to brokers were increased during the week ended November 6th from \$828 to \$839 millions. Considerable interest is being taken in the new silver position created by the devaluation of the Chinese dollar. Mr Morgenthau, the Secretary to the Treasury, stated at the end of last week that there was no change in the American Administration's silver-purchasing programme, but there is some speculation at Washington as to whether China will ultimately revalue her dollar on the assumption that silver will rise to the maximum price of \$1.29 per ounce envisaged in the American silver programme. The gold influx is definitely slackening. Imports reported this week include \$15.4 millions from France and a negligible amount from England. Engagements for shipment consist of \$27.0 millions from France and a small amount from Holland. Some light on the counterpart to the recent big influx of gold is thrown by the latest weekly returns of member banks. These contain a new item, consisting of deposits on account of foreign banks, and during the year ended November 6th last this item has risen from \$123 to \$372 millions. This increase of \$249 millions accounts for less than half the gold which has been imported during the autumn, but it gives some indication of the extent to which foreign funds have been transferred to the United States.

* * *

A Defence of Canadian Banking.—Mr Jackson Dodds, the President of the Canadian Bankers' Association, delivered, on November 14th, a spirited defence of the Canadian banking system. Mr Dodds prefaced his remarks by calling attention to the fact that in Canada ten commercial banks operated 2,924 branches and 608 sub-agencies, apart from offices abroad. They had accepted \$2,554 millions of deposits from 4,700,000 customers, and carried advances to some 400,000 borrowers on their books. Share capital, including reserves, amounted to nearly 10 per cent. of the bank's total assets of \$3,036 millions. After discussing the recent history of the Canadian banks, and explaining the broad principles of banking practice, Mr Dodds claimed that the commercial banks cannot and do not create credit out of nothing, nor have they restricted the supply of either credit or currency. On the contrary, their chief desire is to find sound borrowers, and the main cause of the recent contraction in bank advances is that many customers who normally would be borrowers to-day have surplus funds on hand. Mr Dodds gave a detailed analysis of the profits of the Canadian banks. About 8.5 per cent. of their deposits were represented by cash, which earned nothing; 21 per cent. by short-term assets, which only yielded from two to three per cent.; 26 per cent. by investments, yielding 3 per cent.; while only 40 per cent. was represented by advances at varying rates. Against this, savings deposits cost the banks 2 per cent., while operating expenses formed the first charge on the remaining gross earnings. Mr Dodds claimed that after the shareholders. Even as matters stood the banks were feeling the pinch of reduced earnings, and might have to charge for services which hitherto had been free. A cut in the rates charged for bank advances could only be met by reducing deposit rates. The banks, Mr Dodds contended, might not be infallible, but in their own interests they were anxious to render all the help they could towards the restoration of Canadian prosperity.

THE STOCK EXCHANGE

GOLD IN EAST AFRICA

It used to be declared that a ten per cent. London Bank rate would bring gold from the moon. More recently, a high sterling price for gold has usurped this magnetic property. In the case of some, at least, of the new discoveries made in the last four years, investors have been prone to ask whether the financier has not beaten the geologist by a long head in the race for their exploitation. In every boom there are many instances where the wish is father to the mine, but on the whole the stimulus given by recent events to genuine discovery has been real and valuable. In particular, East Africa has come into the limelight as a potential producer with dramatic suddenness. Twenty-five years ago the Germans were opening up gold deposits at Senkenke in Tanganyika Territory, but the war cut short these early efforts. Subsequent conditions were unfavourable to an early revival of activity, and it was only on the establishment of a large gold premium that mining on any considerable scale became an economic proposition.

Prospectors in East Africa had certain geological grounds for optimism. Around Barberton, in the Transvaal, is a gold-bearing formation, whence a prehistoric river is believed to have carried the gold deposited in the sedimentary rocks of the Witwatersrand. The Barberton formation reappears at intervals in a line running somewhat east of north across the continent, which includes the gold area of Southern Rhodesia. A continuation of this line embraces the regions which are now being prospected in Tanganyika Territory and Kenya, and runs further into comparatively unexplored Abyssinia. It may be presumed that the discovery of payable gold in Tanganyika Territory will not weaken any possible German yearning for her former colony. The "political risk" involved may be difficult to assess in terms of market values, but shareholders in companies operating in the mandated area should not ignore it completely.

British enterprise and capital, nevertheless, are vigorously proceeding with the opening up of East Africa's gold deposits. The depression of 1930-31 left numerous people in East Africa, as elsewhere, unable to obtain profitable employment. When the establishment of the "gold premium" in 1931 advertised the attractions of the prospector's profession, many turned to the new industry. As in other goldfields, the preliminary discovery of alluvial gold encouraged a systematic search for the quartz reefs whence the alluvial deposits had been derived. Although the work of the early pioneers was quickly supplemented by that of larger companies, there still appear to be numerous minor reefs capable of being profitably worked by the small man. The future of East Africa as a serious producer, however, depends on the success of a limited number of larger organisations, whose interests are already fairly closely defined, and whose financial backing is influential.

One of the earliest groups in the field was that of Sir Robert Williams, prominent in the opening up of the resources of Africa since the days of Rhodes. This group's interests have been concentrated in the hands of Kentan Gold Areas, Limited. An exclusive prospecting licence over 1,450 square miles in the Northern Kavirondo district of Kenya having been abandoned, the group's centre of interest is now at Kakamega. In this area, East African Concessions, Limited (some 97 per cent. of whose capital is held by Kentan Gold Areas), has a 51 per cent. interest in a prospecting licence over about 35 square miles, and various other claims. The remaining 49 per cent. interest is held by the Eldoret Mining Syndicate, Limited, which, in addition, holds licences over areas in the Ikoria and Mara River districts. Part of the jointly-owned Kakamega property was handed over in 1934 to the Kimingini Gold Mining Company, to which Kentan subscribed the bulk

of the working capital. Kimingini reached the production stage last June, but operations have not so far gone beyond preliminary testing. When normal production has been attained it is expected that the ore milled will average 15 dwt., worth 105s. with gold at £7 per ounce; and that costs will come out at 30s. per ton. Further work, meanwhile, is being done on the remainder of the Kakamega property, which has two advantages. It enjoys an ample water supply from the Yala River, and it is situated at only a moderate distance from the railway.

The group's efforts have extended to other areas. Although it abandoned an option over a small territory in Uganda early this year, it has been more fortunate in Tanganyika. Last August it exercised an option to purchase properties covering about 220 square miles in the Mwanza district, known as the Sanza Concession. The property, being on the southern shore of Lake Victoria, has its communications well assured. A year ago it was suggested that the area embraced not a single mine or two, but a considerable gold field. Subsequent developments have gone some way to confirm this optimistic view. The area has now been handed over to a private company, known as the Saragura Development Company, whose capital is held as to one-sixth by the vendor, and as to the balance by Kentan, which has undertaken to secure the necessary working capital—probably by the offer of shares in a public company to existing shareholders in Kentan. Production is expected to start on one section of the property in about two years' time.

Elsewhere in Tanganyika territory, East African Gold Fields, Ltd., has secured encouraging results at the Saza mine, which falls within the company's 92 square-mile concession on the Lupa goldfield. The latter suffers from the disadvantage of distance from the nearest railway, though a new road is in process of construction which will be shorter and less hilly than the route used hitherto. The company, on the other hand, has extensive local coal deposits at its disposal, which will render it independent of outside fuel supplies. Diamond drilling at the Saza mine has so far proved the persistence of the gold-bearing formation to a depth of over 700 feet. Indicated ore reserves have been put at 425,000 tons for each 100 feet of vertical depth, averaging 7 $\frac{1}{2}$ dwt. over 71 inches. An operating subsidiary will be floated shortly in order to bring this property to the production stage. Thus the Lupa field, which since 1922 has produced some 100,000 ozs. of gold from alluvials, appears likely to provide at least one important quartz mine.

In addition to its Lupa property, East African Gold Fields has lately acquired concessions in the Kakamega district of Kenya where—apart from Kimingini—another company, Rosterman Gold Mines, Ltd., has begun preliminary production on a property which has been acquired from the Tanami Gold Mining Syndicate. Development is still in a comparatively early stage, but the ore disclosed so far carries high values, ranging to over 1 oz. per ton. At present only a pilot mill is at work, but crushing on a more substantial scale may be in progress by the end of the year.

Although Kentan has abandoned its large Kavirondo area, two other large areas, aggregating over 1,000 square miles, in the same district are being prospected by Kenya Consolidated Goldfields, Ltd. Indications are encouraging, but the finance required for an undertaking on this scale is considerable. It is fortunate, in this respect, that the company owns a property in the Lolgorien district, near the Tanganyika border, where development is already sufficiently advanced to permit of plans for the erection of a mill within the next few months. In the same Lolgorien district a mining lease of over 2,000 acres is owned by Watende Mines (Kenya), Ltd., which has a small mill in operation at Kihancha. This company, in addition, is the

holder of an exclusive prospecting licence over eight square miles in the Musoma district, across the border in the Tanganyika territory. The area is thirty miles from the company's Kenya property, and development so far has given fair results.

This survey shows, quite clearly, that the goldfields of East Africa are still in an early stage of development. Work done so far suggests that, geologically, the country can definitely be regarded as a gold-bearing region, but the scale on which the precious metal can be profitably exploited remains to be proved. The moral for investors is precisely the same as in the case of every other goldfield which has reached, and passed, its primary stage of development. Success in overcoming inevitable difficulties and disappointments is likely to wait upon the companies and groups whose financial resources are most considerable and whose "backing" is most influential.

INVESTMENT NOTES

Post-Election Prospects.—Although the result of the General Election is unknown as we go to press, the Stock Exchange maintains its view that the National Government will be returned with a reduced but still relatively comfortable majority. There has been a tendency this week to "shade the quotation"—possibly as a result of wider realisation of the fact that a turnover of a mere 100,000 or so in marginal votes may change the representation of a century of seats. Dealings in "majorities" would probably have attracted little interest this time, even in the absence of official discountenance—very properly given, in our view, for the publicity accorded to this form of gambling certainly does the "House" no good. In some quarters a considerable "boomlet" is prophesied in the event of any result except the defeat of the National Government. This view may be received with some caution. Experience suggests that the rôle of a General Election as a generator of market optimism is usually much exaggerated. The National Government's resounding victory in 1931 was followed by a downward, and not an upward, movement in quotations, which lasted for some weeks in the gilt-edged market and for six or seven months in the market for equity shares. In 1929 the failure of a Conservative Government to secure a majority may have slightly, but only slightly, accentuated the downward trend of ordinary share quotations, which started when the Bank rate was raised in the preceding February. The continuance of industrial recovery may be a far bigger bull point for the Stock Exchange than a dozen General Elections.

China and Japan.—The improvement in the Chinese bond market, which followed the formation of a strong Protection Committee last week, has now been succeeded by a reaction. The "word" has gone forth from the Japanese war office that Japan, "as a stabilising influence in the Far East, cannot overlook any attempt on the part of Great Britain to place semi-colonial China under the domination of British capital." This statement is apparently based upon "a rumour" of negotiations between China and Great Britain for a loan of £50,000,000. The figure is fantastic, and Sir Frederick Leith-Ross has denied the fact. British interests would doubtless be prepared to co-operate with the Powers, including Japan, in joint financial assistance to China, but a loan from London alone would carry too high a "political risk." But if the way to co-operative rehabilitation of China is to be blocked by America's silver senators on the one hand, and by Japan's generals on the other, the position of existing British bondholders will be unenviable. The market's inevitable repercussions, this week, have included a reduction in Japanese bond quotations on fears of the effect of a possible new military "drive" on Japan's already supercharged budget.

Rubber and the Native.—This week's news is of serious import for rubber company shareholders. Dutch native rubber exports showed a large increase from 9,696,932 kilos. for September to 17,763,628 kilos. in October. The export duty has been successively raised from 20 guilders per 100 kilos. at the end of September to a present level of 29 guilders, the last three guilders having been imposed at one fell swoop this week. These increases have exceeded the rise in the commodity, but the reduction of the native grower's margin appears to have produced a reverse effect from that intended. The policy of an export cess, in fact, has little but expediency in its favour, and has been excessively applied. In consequence, the native producer, whose "costs" are reckoned in terms of effort and not cash, has striven to maintain his absolute money return by increasing his output. The criticism that the native problem was not solved but "papered over" when the Restriction Scheme was first started has thus been completely vindicated. As the latest increase in duty reduces the net return to the native grower from about 3½ cents to 2¼ cents per half-kilogramme, there is no assurance that the producers near the coast will not further increase their sales. Meanwhile, the registration of native areas is proceeding, but a considerable "speeding-up" of the survey is being demanded both in London and Amsterdam, so that individual restriction may be introduced at the earliest opportunity. Neither the commodity nor the share market has taken strong action on the news, but business has been very restricted. The course of quotations and present valuation of some leading rubber shares suggests that prices are moving uneasily between this year's extremes:—

Company (And Ord. Share denomination)	Ord. Divs., two latest years ending		Ordinary Share Quotations						Yield (%)
	1933-34	1934-35	End Jan., 1934	1935					
				High	Low	Present			
Allied Sumatra (£1)	Nil	2 3/4	s. d. 16 0	s. d. 17 1 1/2	s. d. 11 3	s. d. 13 4	f	s. d. 3 9	
Anglo-Dutch (£1)	Nil	4	s. d. 21 9	s. d. 27 3	s. d. 11 10	s. d. 14 0	2	s. d. 6 0	
East Asiatic (2s.)	3	5	s. d. 2 4 1/2	s. d. 2 9 1/2	s. d. 18 3	s. d. 25 0	3	s. d. 4 0	
Grand Kadumpong (£1)	Nil	4	s. d. 15 0	s. d. 19 6	s. d. 14 0	s. d. 22 6	4	s. d. 0 0	
Gula Kalumpang (£1)	Nil	5	s. d. 20 0	s. d. 25 0	s. d. 18 6	s. d. 23 9	4	s. d. 11 0	
Linggi Plantations (£1)	Nil	Nil	s. d. 18 9	s. d. 20 7 1/2	s. d. 15 16	s. d. 18 9	Nil		
Merlinau Pegoh (2s.)	5	7 1/2	s. d. 1 9	s. d. 3 6	s. d. 1 9	s. d. 3 0	5	s. d. 0 0	
United Serdang (2s.)	3	6 1/2	s. d. 3 4 1/2	s. d. 3 10 1/2	s. d. 2 6	s. d. 3 4 1/2	3	s. d. 11 0	

Until the native situation has been brought definitely under control, the market is likely to be unstable. The outlook suggests the prospect of quietness at best, and of greatly increased uncertainty if individual native restriction is not speedily introduced.

America Sells in London.—The Treasury has given its sanction to the repatriation of a large block of American-held shares in Electric and Musical Industries. The announcement follows hard upon similar developments in the case of General Electric and Associated Electrical Industries. The E.M.I. shares are being acquired from the Radio Corporation of America, which formerly held a large interest in the Gramophone Company, which was merged with the Columbia business on the formation of E.M.I. in 1931. The report of the Radio Corporation showed that on December 31st last it held 29.2 per cent. of the ordinary and 0.2 per cent. of the preference capital of E.M.I. The maximum sum involved, at present market prices, may accordingly be put at a tentative figure of £2,350,000. This sum compares with suggested figures of £300,000 for the Associated Electrical and £2,250,000 for the General Electric transactions. The Boots Pure Drug deal in 1933 (see the *Economist*, May 13, 1933, page 1029) evidently set a precedent in repatriation. In some quarters the latest transactions are interpreted as a bull point for the shares concerned although, unlike the Boots operation, they do not affect controlling interests, which have remained in British hands throughout. Whether the boards concerned will pursue a more generous dividend policy is a matter of guesswork. There is no particular reason why they should. From the broader investment aspect, unequivocal conclusions are more difficult. American participation in the British market from 1925 to 1929 may be regarded as part

November 16, 1935

of the price of Britain's support of the gold standard, which involved, *inter alia*, a drain of realisable assets to the United States. The homing tendency of capital to-day may conceivably suggest an expert American view that the London market is now a more attractive market to sell than to buy in. From a broader viewpoint, wide international capital distribution is eminently desirable, and it would be regrettable if recent developments were to be given an "insular" interpretation.

American Utilities Position.—The decision of Judge Coleman in the Federal Court at Baltimore last week that the American Public Utility Holding Company Act was "unconstitutional in its entirety" was received with something akin to enthusiasm in Wall Street. This is merely round one of the legal battle, but operators have interpreted the decision as confirmation of their hopes that the Supreme Court, in turn, will also pronounce against the measure, although the possibility that hearings may be delayed by other business is not overlooked by the cautious. Meanwhile, it appears that some holding concerns, despite the conviction that the Act will be invalidated by the Supreme Court, are taking action to bring their financial structure into conformity with it. The majority, however, are expected to bring injunctions against various Government agencies in order to rob them of powers for enforcing the provisions of the Act. Of these, the most immediate, and not least important, is the registration with the Securities and Exchange Commission before December 1st next. If the wide powers which the Commission has been given under this heading can be successfully resisted, some New York operators may be justified in already declaring the Act a dead letter. The following table indicates the course of quotations for certain leading utility stocks most of which are close to the year's "high":—

	High, 1935	Low, 1935	March 30, 1935	Aug. 26, 1935	Present
<i>Standard Statistics</i> <i>Index of 37 utility stocks ...</i>	<i>90·1</i>				<i>90·1</i>
American Power and Light	9½	1½	2½	6½	8½
Columbia Gas and Electric.	15½	3½	5½	11½	14½
Cons. Gas of N.Y.	33½	15½	20½	29½	32½
Electric Bond and Share ..	20	3½	15	12½	16½
N. American ..	27½	9	11½	20½	26½
Pacific Gas and Electric....	30½	13½	16½	27	29½
Public Service N.J.	44½	20½	24½	40½	44½
	§ March 27th.		‡ August 28th.		

Between the end of March and the President's signature of the Act on August 26th last, quotations showed an overall advance of about 50 per cent., and further progress has since been made. The concerns, however, vary widely in their vulnerability under the Public Utility Act. Among those which operate in one State or in contiguous areas are Public Service Corporation of New Jersey, Columbia Gas and Electric, and Consolidated Gas of New York. The "vulnerable" concerns include American Power and Light, and North American Company, whose properties are in each case widely scattered, while the latter has holding company subsidiaries. Electric Bond and Share Company would be faced with possible reduction of service charges to subsidiaries, and with reorganisation of its "vulnerable" subsidiary holding companies such as Electric Power and Light, American Power and Light, and National Power and Light. At the moment, however, these possibilities are again in the melting pot.

Investors and the Argentine Exchange.—We drew attention a fortnight ago to the severe exchange losses which have been inflicted on the British-owned Argentine railway systems during recent years. A slightly less depressed interpretation of the outlook, however, has been fostered by recent developments. Although the principal object of the present visit to London of Argentine Government representatives is to negotiate for the renewal of the Trade Agreement which expires next year, *pourparlers* have also commenced with the representatives of the British-owned railway companies for concessions regarding exchange remittances. It will be recalled that the Advisory

By investing in
HUNDRED
SECURITIES TRUST

you spread your capital over as many as 100 first-class dividend-paying British securities covering the whole range of sound British Investment, including Government funds, banking, insurance, property, commerce and industry. The yield is approximately

5%

NOTE. This is the approximate Gross Annual Yield at the current price of approximately 218. per sub-unit, calculated solely on the cash dividends paid in the past year on the 100 selected securities. Capital bonuses are excluded from the computation of yield and are additional. Such bonuses would, if sold, have added in the past year approximately a further $\frac{1}{2}$ of one per cent. to the gross annual yield.

The Trust Investments are distributed as follows:

Government Funds	6%
Banking & Insurance	2%
Iron, Coal & Steel	11%
Transport & Communication	8%
Light, Power & Electrical	10%
Equipment	8%
Property, Building & Allied Trades	10%
Stores, Catering & Foodstuffs	5%
Breweries & Tobacco... ..	10%
Gold Mining	4%
Textiles	4%
Oil	5%
Cinemas	7%
Newspapers & Paper Trades	10%
Miscellaneous	

LLOYDS BANK LIMITED

are the Trustees for investors. They issue the certificates representing ownership of sub-units, collect the dividends paid on the securities in the Trust, and distribute the income to investors on June 15th and December 15th each year during the 15-year life of the Trust.

STUDY THESE IMPORTANT POINTS:

The Managers strongly advise you to consult your bank manager or stockbroker for confirmation of the general desirability of the Trust as an investment for large or small sums.

1. Sums of approximately £21 and upwards may be invested through any bank or stockbroker.
2. The Managers have full power to make the Trust cumulative by retaining capital bonuses in the Trust if considered desirable, thereby augmenting the capital value and earning power of the investment.
3. All the securities in the Trust are quoted on the London Stock Exchange and constitute a list which is representative of the soundest elements in British financial, industrial and commercial life.
4. Provision for continuity of management has been made by the creation of a special fund administered by the Trustees.
5. Security Trust Managers Ltd., the Managers of the Trust, are controlled by interests associated with Dawson Day & Company, Ltd., Merchant Bankers, 15, Moorgate, London, E.C.2.
6. Sub-units are readily marketable since the Managers undertake to repurchase any sub-units offered to them, as explained in the Booklet.

Board, appointed by the Argentine Government to investigate the situation of the railway companies, recommended in April last that exchange losses should be reduced by allowing railway remittances to be effected at rates between those ruling for the general public and those for Government remittances. The Government is able to remit at 15 pesos to the £—at which level it buys nearly all export bills—whereas even when the railway companies can obtain a permit to remit as importers the rate is no better than 17 pesos per £. If they remit without a permit through the "free" market the rate is over 18 pesos. The interdependence of Anglo-Argentine trade and the importance of English markets for Argentine produce suggest that every effort will be made to continue the Roca Agreement on present lines. Trade statistics indicate that this country is in a strong position to insist upon the prompt provision of exchange to pay for imports from Britain and also upon further exchange concessions, assisting the transfer of earnings, on British capital. In the year 1934, as compared with 1933, exports from Argentina to Great Britain rose by 142.1 million pesos to 553.1 million pesos (say, £37,000,000 sterling), whereas imports of British goods showed a relatively smaller expansion of some 22 million pesos to a total of 230.3 million pesos (£15.5 millions). The balance of Anglo-Argentine trade favourable to Argentina thus rose from 202.7 million pesos to 322.8 million pesos, or from, say, £13½ to £21½ millions sterling. Since the huge profits which have accumulated in the Argentine Exchange Profits Fund are used only to a small extent for the intended assistance to the agricultural and pastoral industries, and are instead largely diverted to public debt service and public works, it is clear that importers, railway companies and other remitters—to whom the Exchange Profits Fund represents the proceeds of heavy indirect taxation—have the strongest case for more favourable consideration.

The Price of Gold.—For the long-sighted gold investor the accompanying chart may provide food for speculation. It traces the price of gold per fine ounce, in shillings, from the thirteenth century to the twentieth. Up to 1717 a number of fixed points have been plotted from figures given in Mr A. E. Feavearyear's work on "The Pound Sterling," and the same source has been employed for prices during the bank restriction period. The "steps" before 1717 are based on available data, and

may not be historically accurate. From 1919 to 1934 the graph shows the yearly average rate, and it is brought to a present record level of over 140s. The approximate trend line is indicated, but it is based on a visual impression and not upon calculation. The graph shows that, up to 1700, gold approximately doubled in value every two hundred years. From 1717 the price was stabilised—but for the disturbance during the Napoleonic Wars—until the outbreak of the Great War. With sterling again

divorced from gold the price has risen to over 140s., compared with 85s. in 1717. Will history repeat itself? The answer depends upon the level at which stabilisation is assumed, and also upon the position of the remaining gold currencies at the time of its occurrence. An entirely hypothetical example may be put. If President Roosevelt were to reduce the gold content of the dollar to the limit of 50 per cent. of the old standard, and sterling were maintained at the old parity against the dollar, the price of gold in London would rise to nearly 170s. per ounce. It would, of course, be dangerous to infer too much from the trend line, but its upward course throughout nearly seven centuries suggests that the normal state of mankind is "inflationary." It is an ill wind that blows no good to gold-mining shares.

Copper Policy and the Investor.—The suggestion made in a leading article on copper prospects, in our issue of November 2nd, that copper producers seemed intent on stimulating consumption at a reasonably profitable level of prices, has been confirmed by the chairmen of Rhokana Corporation and Roan Antelope. It will be recalled that Sir Auckland C. Geddes emphasised the continuous observation of the copper market and the scope for prompt increase of production if needed. Similar emphasis was expressed by Mr A. Chester Beatty at the Roan meeting on Monday last. He declared that the mine is ready to supply additional output when needed, and that the company requires only a continuation of the recent improvement in the world's demand for copper to bring a considerable measure of prosperity. It may be concluded that any sustained rise in prices would be offset by increasing supplies. Since the potential world production of copper has been doubled during the last 15 years, and costs substantially reduced, encouragement of consumption therefore combines logic with advantage. The leaders of the Rhodesian industry, in their speeches and in their support of the Copper Development Association, suggest their willingness to pursue such a long-term policy. For copper investors record copper prices may have less relevance to profits than increasing consumption at reasonable price levels. The experience of International Nickel proves that a reasonable price level not only benefits consumers, but also—and in no less proportion—the producers and their shareholders.

Investment Trusts: An American View.—British investors, to whom the question of fixed or managed trusts still invites a final answer, will find interest in an American survey recently published by Mr Donald J. Smith of Mackubin, Legg and Company. The writer comments favourably upon the experience of the leading managed trusts in this country, and suggests that, after emerging from a period of severe trial, the American trusts will enjoy a similar period of average prosperity. The increase in investment funds in the United States since 1924 has been prodigious. At the end of that year, some twenty-seven investment companies were in existence with an estimated invested capital of \$75 millions. By 1929 the total had risen to 500 companies, with invested resources, including those of the fixed trusts, of \$4,500 millions. A sample analysis establishes the managements' ability in conserving and improving asset values during 1933 and 1934. This feature has always received greater emphasis across the Atlantic, but the writer declares that, after several abnormal years, in which capital factors were of greater importance, the managements were seeking dividend-paying stocks in 1934. The survey concludes that investors have shown greatest interest in the "mutual fund" during recent years, apart from the fixed trust, "which is now out-moded." The former, as distinct from the "non-leverage" (sc. "non-gear") management company, enables its stockholders to sell back their holdings at a price based on net liquidating value. As many investment trust issues have narrow markets, and have usually sold below asset values since 1929, this is a valuable provision for the general investor. This "open-end" type, with funds in

limited amounts of easily marketable securities will attract increasing public favour, in the writer's view, while the "closed-end" company should assume greater importance in capital underwriting, and corporation reorganisation and finance. On this showing, the investment trust movement in America has been relatively successful in grafting its specific developments to the original British stock. Emphasis is still centred upon capital values and upon freedom from imposed management policy. Someday, perhaps, the relation of policy with income potentialities will receive greater attention.

Actuaries' Investment Index.—A quieter and less decided market mood on the eve of polling day is reflected in the Actuaries' Index of quotations for 158 industrial shares (December 31, 1928 = 100), which on Tuesday last stood at 78.7, against 78.3 a week earlier and 75.2 a month earlier. The corresponding yield figures were 3.75, 3.77 and 3.91 per cent. Some recently active groups, like coal, iron and steel, actually suffered a slight recession, as the following table shows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Oct. 15)	Week Ago (Nov. 5)	This Week (Nov. 12)	Month Ago (Oct. 15)	Week Ago (Nov. 5)	This Week (Nov. 12)
<i>Higher this Week.</i>						
Banks and Discount Co.'s (12)	111.8	113.9	115.7	4.19	4.11	4.05
Elec. Light & Power (16)	127.4	129.5	130.5	4.00	3.94	3.91
Food Supplies (8)	118.2	124.4	126.6	4.35	4.13	4.06
Breweries & Distill. (19)	127.2	132.9	134.6	4.34	4.17	4.13
<i>Lower this Week.</i>						
Coal (6)	84.9	89.2	88.2	4.52	4.22	4.30
Iron and Steel (8)	65.9	67.3	66.8	3.29	3.22	3.23
Oil (5)	64.5	71.5	70.3	3.50	3.15	3.18

The probability, or otherwise, of a post-election "boomlet" in equity shares is discussed in an earlier Note.

COMPANY NOTES

Provision Companies.—Summarising the position of grocery chain companies earlier this year (in our issue of April 20th, page 915), we concluded that, with the exception of the Unilever group, which is at present being reorganised, provision stores' profits should be able to resume in some degree the rising pre-depression trend. Experience since April has tended to confirm that view. While the Unilever stores have passed their interim dividends and their directors state that profits are lower, other stores, either by their published earnings or by the more up-to-date evidence of their chairman's speech, have recorded improving profits. It is an accepted fact that retailing profits lag behind general economic movements both at the beginning of depression and at the beginning of recovery. The accompanying sample of food retailers' profits suggests that the lag is greater in that section than in most remaining branches of the trade. This inference is confirmed by the Bank of England retail trade returns, which illustrate the relative timing of decline and recovery in food sales or in general sales. It would thus seem that the recent recovery in food sales and in food prices may indicate that the lag period is now at an end and that better profits may be expected by the retailers. If this view is correct, the much-needed reorganisation of the Unilever group of stores will have been undertaken at a favourable moment, and might yield surprisingly good results when the initial disturbance and costs are past. In general, however, spectacular improvements in profits should not be expected. Conditions remain keenly competitive; the free services now expected of the retailer are a burden on costs; and competition from the co-operatives is undiminished. There may, therefore, be only limited scope for wider profit margins, and improvement will have to come mainly through more economical working or through multiplication of branches,

Certificates of a new Unit under the management of the National Group of Fixed Trusts are now available to Investors and are known as

CENTURY FIXED TRUST CERTIFICATES

covering a holding in one-hundred first-class securities distributed over the following industries:

Insurance	Stores and Catering
Transport and Communications	Mining and Finance
Tobacco and Breweries	Gold Mines
Oil	Commodities
Property, Building and Allied Trades	Textiles and Artificial Silks
Iron, Coal and Steel	Newspapers and Paper Manufacturers
Gas and Electricity	Miscellaneous

On the basis of dividends paid on the constituent securities for the last year, the yield at the price of 20/- per sub-unit is ... **£4.15.2** PER CENT

with an additional yield derived from the sale of Bonuses and Rights, which in the same period amounted to ... **£1.7.0** PER CENT

CENTURY FIXED TRUST CERTIFICATES

are issued by the Trustees

**MIDLAND BANK
EXECUTOR & TRUSTEE CO. LTD.,**

who collect all dividends, etc., and distribute the proceeds by warrant on 1st May and 1st November to Certificate Holders.

Sums of approximately £20 upwards may be invested.

A fund of such an amount as the appointed Auditors consider necessary, will be created and deposited with the Trustees for maintaining the Trust, including the cost of dividend distributions to Certificate Holders, for the full period of the Trust.

Full particulars may be obtained from any Branch of the MIDLAND BANK, from any STOCKBROKER, or by writing direct for Booklet "C44" to the

Charles Barker

financed internally. The chairman of Thrift Stores recently said that 100 more branches could be handled by the company with little increase in costs except in direct wages. For the provision wholesalers the initial recovery may be more rapid than for the retailers, since their business compels them to carry considerable stocks which must yield an adventurous profit as prices rise. The sudden and substantial increase in profits which most food wholesalers

showed in 1931-32 reflected the brief buying movement and recovery in prices which followed our abandonment of the gold standard. Such effects, on a smaller scale, should follow from the current rising trend of food prices. In the long run, however, the retailer is a safer investment than the wholesaler owing to the greater inherent stability of retailing profits and the general tendency for larger units in the retail trade to obtain their supplies direct from the source.

Pastoral Company Shares.—The continued strong tone in the current Australian wool sales has been widely interpreted as a favourable factor for the Australian economy as a whole. For a variety of reasons, however, investors have only limited opportunities at the source of the recovery, among the pastoral companies themselves. At best there are few active shares in the market whose

"freedom" is further limited by the tradition of high denominational stocks in this group. A more weighty reason, however, has been the recent course of profits. In common with most primary commodity producers, wool growers have had bitter experience of depression, and the pastoral concerns have been compelled to adopt a lenient policy towards their mortgage and trade debtors. The following table shows the total profits of a number of companies in the best year of the last decade, together with those of the last two years, and the resultant earnings for the equity issues:—

Company (and Date of Accounts)	Total Profits	Earned for Ordinary	Ordinary Stock or Shares

† Free of income tax. (a) No dividend is to be paid for year ended March 31, 1935, on the ordinary stock. ‡ Subject to British Income Tax estimated at £25,000 for 1933-34 and £10,000 for 1934-35. Earned percentages after such provision would be 3.9 and 1.8 respectively. Note.—The position of Dalgety & Co. is discussed on page 973.

In many cases high capital gearing has produced serious reduction of equity earnings compared with the peak year. Where recent figures are available, they show a setback compared with the preceding year. In estimating the recovery possibilities for the current season, caution may prove wise, owing to the reduction in the total clip. Increased provision may also be required for drought expenses in certain cases. It is not yet known to what extent the Goldsbrough, Mort fire will affect profits, although, of course, the stock was covered by insurance. The current improvement in pastoral conditions, however, should tend to ease the mortgage situation. The majority of these concerns, further, show a strong liquid position, and a return of capital—already suggested by Australian Agricultural Company—may rank among future possibilities. Broadly, the investor may be advised to concentrate upon concerns with a good depression record, taking due note of the unpaid liability which exists on certain shares.

I.C.I. Scheme Sanctioned.—Last Wednesday, Mr. Justice Eve sanctioned the petition of Imperial Chemical Industries for the confirmation of its scheme involving a reduction of its total authorised capital of £95,000,000 to £89,565,859 and a consolidation of its 5s. deferred shares (reduced from 10s.) into £1 ordinary shares. The petition was opposed by a committee representing 13,296 holders of 4,435,521 deferred shares, who alleged that the scheme was "unnecessary and uncalled for, as not a single penny had been lost, and that it was unfair to them." As Mr. Justice Eve has postponed his detailed judgment until next week, comment on the far-reaching issues of accounting principle raised by the case must be reserved for a later issue. It may be pointed out, however, that the result confirms the opinion on the merits of the scheme itself which we ventured to express at the time of its publication. The original deferred shares, created at the company's

inception in 1925, represented, for the most part, a capitalisation of economy chickens before the breaking of the eggshell. As "high-gear" counters, entitled to rank for dividend with the ordinary only after the latter had received 7 per cent., they undoubtedly appealed to a number of investors who looked for substantial eventual capital appreciation. Many of these investors, having held them through relatively lean times, were dismayed by the suggestion that, when the company appeared soundly set upon a prosperous course, the shares should lose their "gearing" potentialities. To the contention that the arrangement would produce an immediate doubling of their dividend, the dissentient holders replied, in effect, that a future increase in divisible profits might be worth much more if the *status quo* were maintained. The case thus turned, not primarily on the purely nominal reduction in the value of the shares—for few investors are willing to incur heavy legal charges for the shadow of a shade—but rather upon the implicit argument that the company's divisible profits, after obsolescence and reserves, had been computed with undue conservatism. It may be concluded, therefore, that the Court has confirmed the company's view as to the delimitation of the frontier between prudence and generosity in the matter of "reserves." For the company's stockholders as a whole, the implication would seem to be that a spectacular future increase in earnings and dividends can be ruled out, and that the ordinary capital should be regarded primarily as a "stable equity."

Dalgety and Company.—This pastoral company's profits suffered a setback of nearly £50,000 last year. Conditions have been difficult in Australia; Queensland suffered from abnormal drought and more recently from extremely cold weather, while conditions in Western Australia and New South Wales are described as "patchy." The 1934-35 wool season opened unfavourably, and despite an increased clip the total Commonwealth wool cheque fell by £13.6 millions. In New Zealand, the season was generally favourable, but proceeds from the auctions were further lowered by the reduced clip. So far as the company is concerned, reduced provision for exchange has approximately offset the increased cost of taxation and terminable debenture interest. The fall in available earnings for the ordinary shares from £72,575 to £21,789 thus corresponds closely with the reduction in total profits. Some 3½ per cent., out of the 5 per cent., tax free, paid on the ordinary, has once again been drawn from accumulated profits of earlier years:—

	Years to June 30th		
	1933	1934	1935
Profits, after provision for bad debts and depreciation	694,520	837,049	787,413

Carried forward

† From contingency reserve in 1932-33 to cover cost of exchange.

The current season has opened under more auspicious price conditions, but some fall in the clip is expected. The wheat outlook has also improved. The strength of the company's balance sheet has been scarcely affected by the lean years since 1930. The depreciation of Australian and New Zealand assets is covered without encroaching upon the £1,000,000 reserve fund. The ordinary shares of £20 carry an unpaid liability of £15, which limits their appeal for the general investor. The yield of £3 18s. 6d., tax free, at £6½, however, affords some compensation, conjointly with the recovery prospects which the shares enjoy.

Imperial Smelting.—The statement of consolidated earnings of the Imperial Smelting group, which the directors again present with the report, is most useful to shareholders. The formal profit and loss account of the parent concern shows a fall in net profit of little over £9,500 to £145,428, the only revenue item consisting of dividend and other receipts. The consolidated statement, however, reveals that group profits fell by as much as £65,488 to £205,841, and that group earnings during the year failed to cover the Imperial Smelting 6½ per cent. preference dividend. The fall is attributed to abnormally low prices for zinc during the period of the accounts, the average price being £12 10s. 6d. per ton, against £15 12s. for the previous year. Production, in fact, showed a material increase, despite the adverse price position. The following analysis shows that the preference dividend has involved a draft of £11,446 on the group balances carried forward:—

	Years to June 30th	
	1934	1935
Consolidated trading profit	271,329	205,841
Dividends and other income	72,354	68,339
Total income	343,683	274,180
Depreciation reserves	71,147	75,399
Administrative expenses	79,126	75,689
Available for dividends	193,410	123,092
Imperial Smelting preference dividend	134,538	134,538
Carried forward { Imperial Smelting	33,126	44,016
{ Subsidiary companies*	56,026	33,690

* Excluding amounts due to minority interests.

Since the close of the financial year there has been a substantial advance in the price of base metals, including zinc, and at present prices material benefits will accrue to the Corporation. The balance sheet shows considerable changes in the values of investments. The principal subsidiary interest, National Smelting, now stands at £3,566,681, against £3,980,801, following the transfer of

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

its minority investments to the parent concern. These have since been sold, the surplus providing for writing down book values and the creation of an investment reserve of £40,000. The capital reorganisation of Non-Ferrous Metal Products, which represents the Corporation's interests in the pigment trade, has also been effected, while a new item for "other investments," presumably reflecting the reinvestment of the National Smelting interests transferred, stands at £302,834. The detailed reports on the group's activities leave no doubt that it is well placed to participate in a recovery of zinc prices. The ordinary shares, which have gone dividendless since 1930, after the Corporation's first year, are now quoted at 14s. 6d. and appear to carry fair, though somewhat deferred, prospects of coming within the dividend zone if zinc is maintained at present levels.

* * *

Two Motor Results.—In their respective spheres the results of Humber Ltd. and S. Smith and Sons (Motor Accessories) are very satisfactory. The former concern, which is now controlled by Rootes Ltd., announces that profits for the year ended July 31st last amounted to £231,927. The corresponding figure for the previous year, after allocating £17,580 to staff pensions, was £224,595. During the year £600,000 of new 5 per cent. preference capital was issued to replace the existing debenture issue and to finance additions to plant. The dividend on the highly-gearred deferred shares, all of which are privately held, is maintained at 10 per cent., and has evidently been covered with a handsome margin. The 15 per cent. preferred ordinary dividend, which is non-cumulative, may be regarded as secure while earnings run at present levels. These 10s. shares yield £7 12s. per cent. at the current quotation of 21s. 3d. The results afford convincing testimony to the efficiency of the interests in control. S. Smith and Sons (Motor Accessories) show further progress to new record profits. Total income has advanced from £162,214 to £187,586, while profits available for dividends, after charging increased depreciation and taxation, show an increase from £125,355 to £137,383. The highly-gearred 1s. deferred ordinary shares again receive 25 per cent., and yield only £3 3s. 6d. per cent. at a price of 8s. 1½d. The increased preferred ordinary capital again ranks for 14 per cent. After providing £5,000 against patents and £30,000 to general reserve, as before, the balance forward is slightly increased at £66,278. The figures suggest that very satisfactory returns will be obtained from the capital raised last February when it fructifies. Interests in domestic clocks and aircraft instruments have been extended during the year. It may, however, be necessary to work on distinctly narrow profit margins, particularly in the motor and aircraft instrument business. These results, following such reports as Rover and Triplex, indicate that some of the smaller units in the motor industry and the leading accessory concerns are still in the profit recovery phase. They do not, in themselves, rebut the presumption that increased output has offset rather lower returns per unit.

* * *

Rhodesian Selection Trust.—Chief contemporary interest in this company's assets attaches to its 64 per cent. interest in Mufulira Copper Mines. During the year ended June, 1934, the capital of the latter was increased by an issue of £1,000,000 5½ per cent. debenture stock and of 284,000 2s. shares at 12s. 6d. each. These funds were required to provide for the erection of a smelter, enlargement of the existing treatment plant, and necessary development work. Production commenced during the period; but since the ore treated came mainly from development, a small loss resulted. This factor continued to operate for the first half of 1934-35, when the price of copper ruled low. The output expanded until restriction came into operation at the beginning of May. Thanks to the recovery in price which followed, operations since that date—the directors announce—have shown a profit after providing for debenture interest and depreciation reserve. A working surplus of £28,800 resulted, but after charging administration expenses and debenture service it was converted into a loss of £102,600. The debit balance is there-

fore increased to £226,230. During the latest year a further £500,000 of debenture stock was issued, and at the date of the accounts current assets showed a surplus of £779,000 over current liabilities. This should prove ample for completion of the capital expenditure programme expected during the current year. Meanwhile, the entire production of concentrates is being treated at the Roan Antelope smelter. When the company treats its ore entirely by its own plant and when the Selkirk main haulage shaft is available, costs may confidently be expected to average less than £27 5s. per ton recorded last year. Since ore reserves are estimated at 161,200,000 short tons, the question of "life" does not at present arise. The average copper content is calculated at 4.13 per cent., but the ore treated last year was well above the average grade at 6.34 per cent. There is at present no market in Mufulira shares, but the 5s. shares of Rhodesian Selection Trust are quoted at about 9s., suggesting confidence in the future of Mufulira.

* * *

Pahang Consolidated.—The recent spurt in the shares of this company, writes our Mining correspondent, was attributed in some quarters to the doubling of the interim dividend—a complete misapprehension. Actually, the ordinary dividend of 10 per cent. declared on October 8th represented the final payment for the year to July 31st last, and made a total of 15 per cent., as previously. The balance of 8½ per cent. on the preference shares similarly brought the aggregate to 12 per cent. Consideration of the output statistics alone would suggest a large increase in profits, for the ore treated rose from 72,700 tons to 88,800 tons; while tin production amounted to 1,650 tons against 1,260 tons. The percentage recovery of black tin per ton of ore rose from 1.71 to 1.85, and the average net price realised £156 12s. 6d., compared with £151 2s. 7d. The mining profit, however, shows an increase of only £5,700 at £85,100 owing to the fact that over 450 tons were produced for the Buffer Pool stock, instead of only 110 tons in July, 1934. This tonnage was brought into account at \$733 per ton, whereas the net realisations averaged \$1,175. Owing partly to the additional repair work, and partly to increased royalty and realisation charges, costs rose from 29s. 10d. to 30s. 8d. per ton. After payment of the dividends already mentioned, the slightly reduced balance of £27,350 is carried forward. The additional development footage brought a small increase in the ore reserves—all in Willinks mine. The general manager reports that the prospects for extension of the ore bodies remain favourable. At the current quotation of 14s. for the 5s. shares, the yield is only just over 5 per cent.

* * *

Other Company Results.—Our usual table of profit and loss accounts on page 991 includes the results of 37 additional companies. Home industrial concerns have a greater representation this week. Among them, *Lewis Berger and Sons* report net profits of £141,391, compared with £102,460, and the increased dividend of 15 per cent. is covered with an ample surplus. The *Hay's Wharf* figures maintain the reputation of the concern for high and stable earnings. Net profits have shown a small advance from £231,623 to £235,598, and the usual 10 per cent. dividend is earned with comfort. The remaining industrial reports *British Cyanides* and *S. and W. Berisford*, the merchanting house, show improved results, but *Morland and Impey* and *Yarrow* for the year to June last show a fall from £37,033 to £30,680, at which they are slightly in excess of the 10 per cent. dividend and the "ploughing back" of £15,000. The report states that the shipyard was only moderately well occupied. In the property group, *Town Investments* have experienced a satisfactory year, and profits have advanced from £63,384 to £70,002. Additional capital powers are being sought, and conditions in the West-End property market are stated to be satisfactory. The week's rubber reports again show uneven results. Concerns such

as *Kuala Reman* and *Bukit Kasang* have done better, but reduced earnings are common among the smaller concerns. The week's dividend announcements have again been generally favourable. Among the brewery declarations, *Benskins'* final distribution has been raised to 11½ per cent., making 17½ per cent. for the latest year, against 15 per cent., while *Bentleys Yorkshire* final payment is doubled at 7 per cent., the total of 10 per cent. comparing with 6 per cent. in the previous year. The interim dividend of 7 per cent. declared by *British Oxygen* is not comparable with the 4 per cent. payment last year, since the directors have decided to reduce the disparity between the interim and final payments. *Dennis* shares fluctuated after the announcement of an increased dividend of 150 per cent. and a special tax-free bonus of 50 per cent. payable out of a surplus on assets realised. The directors of *P. and O. Steam Navigation* are again unable to recommend a dividend on the deferred stock. The *Unilever* group interim dividends are again based on Fl. 20 for the Fl. 1,000 shares. Taking the English £1 stock at the rate of Fl. 12, and calculating the value of 24 cents at the current exchange rate, the dividend is equivalent to 8d. (3½ per cent.) on *Unilever, Limited* shares. The *Harrods (Buenos Ayres)* profits have recovered from £95,950 to £156,388, and a 4 per cent. dividend is recommended on the preference shares for the half-year to February, 1932.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following meetings:—*Argentine Great Western Railway*, *Bengal-Nagpur Railway*, *London Maritime Investment*, *Sudan Plantations Syndicate*, *Kassala Cotton*, *Birmingham Small Arms*, *Lake View and Star*, *Roan Antelope Copper Mines*, and *Wiluna Gold Corporation*. Viscount St. Davids, addressing the *Argentine Great Western Railway* meeting, strongly criticised the building of a competitive line by the *Argentine Government* parallel with the company's line. Sir F. Vernon Thomson, addressing stockholders of *London Maritime Investment Company*, reviewed the working of Government assistance to tramp shipping, and declared that the outlook was more encouraging, although prosperity had not fully returned. Sir Alexander Roger, chairman of *Birmingham Small Arms Company*, reviewed the progress of the *Daimler* and *Lanchester* Car sections, and declared that the new pedal cycles should obtain an increased share of the market. At the *Lake View and Star* meeting, Mr John A. Agnew disclosed that the loss in production caused by the strike last February amounted to £A.150,000. At the *Wiluna* meeting, Mr Agnew referred to the potential advantages to *Wiluna* of smelting ore from the adjoining *Moonlight* property. Mr A. Chester Beatty, at the *Roan Antelope* meeting, disclosed that net profits for October were estimated at £45,000, against £99,000 for the previous quarter. At the *Sudan Plantations* meeting, the chairman had much of interest to report. The company has extended its area of cultivation, which should tend to reduce overhead charges. *Kassala Cotton* Company has also extended its area and has been able to pay its maiden dividend. The chairman of the *Bengal-Nagpur Railway* reported a gratifying increase in revenue, due mainly to the heavier traffic of the steel industry.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
NOVEMBER 19	NOVEMBER 21

MARKETS on the eve of the election were cheerful but quiet. There were day-to-day fluctuations in the estimates of the National Government's expected majority; but the Stock Exchange remained confident that its anticipated period of expansion under a National Government would eventuate. The volume of business has been smaller than of late, mainly because the market has been awaiting the election results, but partly because of closed markets in New York and Paris on Armistice Day. Tension

REDUCE PRODUCTION COSTS

—USE ELECTRICAL POWER FOR ALL INDUSTRIAL PURPOSES

Apply to above address for particulars of Sites for Works

in the Far East exerted further restraint, but on Thursday the stage was all set for a renewed upward movement so soon as evidence appeared of the National Government's safety.

The tone of the gilt-edged market has been determined largely by these election anticipations. The market was firm at the end of last week, with Local Loans the principal feature. At the opening of this week election apathy caused a slight sag, and the market continued rather quiet until mid-week, but without the usual pre-election anxiety. The offerings remain small, and there have been fairly large forward purchases. India stocks have moved upward, and the 3 per cent. scrip is at a premium; colonial issues have been well supported, but there have been no changes of significance.

European bond prices have continued to improve, with slight dullness at mid-week. Austrian issues were the feature at the end of last week, and Danzig City bonds rose on expectations of benefits from the trade agreement between Poland and Germany. This week French rentes have been easier, and Italian issues have fallen in anticipation of the effect of sanctions. Russian issues were supported on hopes of a settlement of the pre-war debt by the Soviet Government. Chinese and Japanese loans have been adversely affected by the prospect of renewed trouble in Shanghai and by the anticipation of difficulties for the Japanese Budget if military operations are renewed. The Chinese group were steadier after Sir Frederick Maze's statement that the Customs revenue was not unsatisfactory. There was both support and profit-taking in Brazilian issues, and hopes that Chile would be able to resume partial debt payments in January led to a rise in Chilean bond prices.

Home railway issues have been somewhat irregular; there has been some profit-taking and a little uncertainty about the miners' strike ballot. The traffic results were not as good as had been anticipated, and there was some selling in mid-week. Transport "C" stock has been consistently strong. The foreign rail market has been quiet, with support for Argentine rail stocks encouraged by Mr Runciman's remarks on the Argentine trade agreement.

Industrial markets were irregular at the end of last week, but a firmer tone developed toward the middle of this week. In the electrical equipment group there were wide movements in Crompton-Parkinson, but General Electric were firm on anticipations of a favourable dividend announcement. Electric supply shares have been satisfactory, with profit-taking in Calcutta. R. A. Lister were the feature of the iron and steel market at the end of last week, on hopes of good dividends and a capital bonus, but there was some profit-taking this week. The market displayed renewed firmness at mid-week on the stimulus of the output figures for October, which are the highest for over eight years. There was a similar change of tone in the motor section at mid-week. *Dennis* shares were particularly strong, and the aviation market overcame its recent quietness with a burst of interest in Rolls-Royce and most aviation companies. Brewery issues were more irregular than last week, and Charrington attracted particular interest. Tobacco issues were stronger in mid-week after earlier weakness in certain stocks due to the Far Eastern troubles. The textile market has been irregular, with slightly improved tone at mid-week. The stores section has been fairly active this week, and Harrods have attracted support on hopes of resumed preference dividends.

The oil market was quiet at the end of last week, but this week it has been decidedly cheerful, buoyed up by interim dividend hopes and canvassing of higher petrol prices. The market is experiencing a general bullish movement, with Trinidad Leaseholds one of the strongest features. Rubber shares have continued to be dull and prices have fallen slightly with a small volume of business; tea issues have been equally uninteresting.

At the end of last week there was a reactionary movement in the Kaffir market, but the tendency was reversed this week, led by strong demand from the Cape. East Africans were equally strong, but there was little activity in the West African market. Australian issues have been rather uncertain throughout the week. Tin shares have remained indifferent to improvements in tin prices, and copper issues have been quiet.

FOREIGN STOCK EXCHANGES

NEW YORK

THIS week's movements have shown nothing of last week's exuberance over the election results and the Baltimore Utilities judgment. Markets have been simmering, but no more. Since the volume of business has been running over the two million share mark, the irregular reaction in prices must be attributed in part to profit-taking. The result was reflected in trendless markets, and a handful of features. At the opening on Tuesday, for example, entertainment shares were slightly firmer, and rails closed a little higher. Where industrials were changed, however, a small number of advances almost equally matched the falls. The mid-week rally was also a rather fractional affair for most stocks. Building material and utility issues were slightly higher, but the feature of the day was the advance in Radio and International Nickel, the quarterly statement of the latter being

received with marked favour. Changes in the bond market have been adverse on balance, both Treasury and second-grade rail issues moving lower on Wednesday. Business news remains good. Steel activity shows a good rise from 52.5 to 54 per cent. of capacity, according to the *Iron Age*, and demand is reflecting prospects of higher prices. Building contracts in the Eastern States rose from \$167.38 millions in September to \$200.86 millions for October.

(a) Armistice Day.

PARIS

The Bourse was closed on Monday in commemoration of Armistice Day. Tuesday's opening was rather irregular. Rentes showed a modest recovery and "Young" bonds again improved. The market showed distinct uneasiness in mid-week on the proposal to issue identity cards to investors for taxation purposes. This latest proposal of the Finance Committee is condemned by the Bourse, but the appreciable falls in rentes, bank shares and industrials showed that the market's response was not limited to denunciation. Royal Dutch was firm against the trend, while other international counters and gold shares provided the inevitable refuge from local disturbance.

BERLIN

Share prices declined slowly throughout last week. Lignite issues, however, still maintained their firm course, and Reichsbank gained a couple of points. Commercial banks and the leading issues in all other groups were sold, and many fell several points. The new week began in active style, but selling continued, and Reichsbank alone made a further gain before reacting on profit-taking in mid-week. Reichsmark bonds were a little lower where changed. The official Bourse index number for October for shares was 90.98, against 92.68 for September, and for domestic loans 94.92 against 95.14.

	Nov. 6, 1935	Nov. 11, 1935	Nov. 13, 1935		Nov. 6, 1935	Nov. 11, 1935	Nov. 13, 1935

AMSTERDAM

The market opened cautiously on Monday, owing to the closing of the New York and Paris exchanges. Paris support assisted the stronger tone on Tuesday, although activity was rather restricted to the international list. Royal Dutch, however, were in keen demand at new high levels, owing to interim dividend expectations. Rubber shares responded temporarily to the further raising of the native export duty. Industrial shares found early support, but they subsequently became little less than steady. Government bonds were strong in mid-week trading.

THE BRANDY WITH A PEDIGREE

PUBLIC OFFER

Derby Gas Light and Coke Company.—Issue at par of £100,000 4 per cent. redeemable debenture stock, 1956-66. Paid-up share capital £646,257. Authorised loan capital £354,616.

ISSUES TO SHAREHOLDERS ONLY

Broome Rubber Plantations, Ltd.—In order to provide the necessary funds for financing the purchase and development of new property the board has decided to issue £62,500 6 per cent. convertible first mortgage debenture stock at par, and 312,500 shares of 2s. at 2s. 6d. per share to the shareholders and option holders on the registers on November 6, 1935.

Colonial Gas.—Issue to preference and ordinary shareholders of 115,066 ordinary shares of £1 at 20s. per share (English currency) and 25s. per share (Australian currency).

CONVERSIONS AND REPAYMENTS

Blackwell Colliery Company.—This company proposes to return £100,000 of its capital to shareholders, making the capital £900,000 in 18s. fully-paid shares.

Herrburger, Brooks, Ltd.—At an extraordinary general meeting to be held December 2nd a special resolution will be proposed for repaying £69,375 of the company's paid-up share capital, being 5s. per share on all the issued and fully-paid shares of the company (other than 2,500 shares) which are being cancelled.

The Waste Heat and Gas Electrical Generating Stations, Ltd.—An extraordinary general meeting will be held at Newcastle-upon-Tyne on November 29, 1935, at 12.15 p.m., to consider a return of capital of 10s. per share.

FORTHCOMING ISSUES

Moss Gear Company.—An offer by this company will consist of 130,000 6 per cent. cumulative £1 preferences at 20s. 6d. and 560,000 ordinary 5s. shares at 6s. 6d. each. The public issue is expected to be made about November 25th.

Somerses Collieries.—An offer of about £450,000 of 4½ per cent. debenture stock may be made at some two or three points under par, and will be redeemable at 103.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed income stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

REPORTS AND NOTICES

BURNS AND LAIRD LINES, LTD., of Glasgow, announce that they have placed an order with Harland and Wolff, Ltd., for three twin-screw motor vessels for their cargo/cattle trades. The vessels and their machinery will be built in Belfast.

Sir James Caird, Bart., in order to have more time at his disposal to attend to his other engagements, has retired from the board of the Latin American Investment Trust, Ltd.

BANKS

THE DOMINION BANK.—Mr Joseph M. Pigott, president of the Pigott Construction Company, Ltd., Hamilton, Ontario, has been elected a member of the board of directors.

RUBBER

CASTLEFIELD (KLANG) RUBBER ESTATES, LTD.—Net profit for year ended June 30, 1935, was £8,764, after payment of £1,096 for export duty to F.M.S. Government, against £387, and crediting £2,405 for interest, dividends on investments and sundry receipts during the year, against £875. The net profit for the preceding year was £6,415. The ordinary shareholders receive a 7½ per cent. dividend, against a 5 per cent. dividend for the preceding year and

£1,000 is put to reserve, against no allocation for this purpose in the previous year. The carry-forward is increased from £2,420 to £2,468. The crop harvested for the year was 952,640 lbs., as compared with 963,585 lbs. during the previous year. The average net price realised for all grades of the crop was 6·04d. per lb.

KILLINGHALL (RUBBER) DEVELOPMENT SYNDICATE, LTD.—After paying £559 in export duty to F.M.S. Government and crediting £302 for interest and sundry receipts, the production of rubber resulted in a profit for year ended June 30, 1935, of £3,778. Add tribute received on tin ore recovered from a portion of the area sub-leased to Killinghall Tin, £6,622; dividends on shares held in Hongkong Tin and Killinghall Tin, £1,322, making £11,722. The ordinary dividend is raised from 12½ per cent. to 20 per cent. for the year. Transfer to income tax reserve £500; to special cultivation reserve, £500; to be carried forward, £6,381. The crop for the year amounted to 485,500 lbs., as compared with 455,578 lbs. during the previous year. The average net price realised for all grades was 6·10d. per lb.

MINES

GOLD EXPLORATION AND FINANCE COMPANY OF AUSTRALIA, LTD.—Mr Carl R. Davis, a director of the Anglo-American Corporation of South Africa, has joined board. Option on Eristoun property has been exercised and further option acquired on property adjoining main lease. A ten-head stamp battery is to be installed immediately, and production stage on this and on Central Norseman property should be reached about April. Mills of gold mines of Kalgoorlie and Triton Gold Mines both operating satisfactorily, and good profits being earned by Morning Star.

WANKIE COLLIERY COMPANY.—Larger sales and profits are shown in the annual report to August 31, 1935, of this company. Sales of coal rose by 100,358 tons to 610,891 tons. Total receipts from sales, including those from coke, bricks and other products, amounted to £401,365, an advance of £59,349 over the previous year's figure. The dividend on the ordinary shares has risen from 12 per cent. to 15 per cent. for the year. The profit has risen from £128,730 to £165,466. Meeting Abercorn Rooms, Liverpool Street Hotel, November 19th, at noon.

MISCELLANEOUS

ROCHDALE CORPORATION 3½ PER CENT. REDEEMABLE STOCK, 1955-1960.—Williams Deacon's Bank Ltd. give notice that in order to prepare the warrants for the interest payable on January 1, 1936, on Rochdale Corporation 3½ per cent. redeemable stock, the balances of the various accounts will be struck on the night of December 2, 1935. The persons who on that date are registered as stockholders will be entitled to receive the dividend next payable.

TELEPHONE AND GENERAL TRUST LTD. (ACQUISITION OF TRINIDAD CONSOLIDATED TELEPHONES, LTD.)—The Telephone and General Trust, Ltd. has acquired 80 per cent. of the shares of the Trinidad Consolidated Telephones, Ltd., a Company registered in Trinidad which owns 3,600 telephones. This follows the acquisition on behalf of itself and its associates of the ordinary share capital of the Barbadoes Telephone Company.

COMPANY MEETINGS, &c.

LONDON MARITIME INVESTMENT COMPANY,
LIMITED

CAPITAL AND RESERVE INTACT

MORE ENCOURAGING PROSPECTS

SIR VERNON THOMSON ON THE SUBSIDY

The thirty-eighth annual ordinary general meeting of the London Maritime Investment Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad Street, London, E.C.

Sir F. Vernon Thomson, K.B.E. (chairman and managing director), presided.

The secretary (Mr O. A. Hall) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, the directors' report and statement of accounts for the year ended September 30, 1935, having been circulated to the stockholders some days ago, they will, I hope, be taken as read. (Agreed.)

The net profit for the year was £36,368. With the £9,135 brought forward there was thus available £45,504. After applying £1,489 to depreciation of investments and the payment of the dividend upon the £500,000 5 per cent. cumulative preference stock, the directors recommend the payment of a dividend upon the £500,000 ordinary stock of 4 per cent., less income tax, for the year, carrying forward the slightly increased balance of £9,140.

The company has no debts, debenture or otherwise, and has ample cash resources. The accounts show in the clearest possible form the position of the company, and, read in conjunction with the report, will, I imagine, be regarded as satisfactory. The investments are set out in categories in the balance sheet at or under cost.

A valuation of the company's assets as at September 30, 1935, shows that the capital and reserve fund are intact. When presiding at previous general meetings of this company I have frequently alluded to the large depreciation it has on its investments in the Royal Mail group, which was balanced only by a larger appreciation on another very large investment, a circumstance which has proved very fortunate for the company as it enabled its capital and reserve fund to be pronounced intact. The winding up of the Royal Mail group is now rapidly approaching completion, and the depreciation will be turned into an ascertained loss and will then have to be dealt with. A careful watch is being kept on the position by the board.

TEMPORARY SUBSIDY TO CARGO SHIPPING

This company is largely interested in shipping. I need hardly remind you that a sufficient number of suitable food-carrying vessels under the British flag is a vital necessity in case of national emergency, and that the mercantile marine serves also as a reserve for the Royal Navy, as was exemplified in the Great War. Speaking with first-hand experience, as I happen to be chairman of the two main committees in connection with the tramp shipping subsidy, I have no hesitation in stating that the Government are to be congratulated upon the success of the British Shipping (Assistance) Act, 1935, which is definitely fulfilling the objects for which it was designed.

As a result of world trade depression British tramp shipping had at the beginning of 1935 experienced five successive years of the worst trading conditions in the history of modern shipping. Tonnage being in excess of demand, competition for the reduced maritime trade, accentuated by foreign subsidies, had resulted in unremunerative freight rates, with the consequent depletion or exhaustion of reserves. On the top of this, further depression set in, largely due to the absence of demand in consuming countries and to the lateness of the Argentine wheat crop and the accumulation in the Plate of tonnage normally engaged in its transport. Freight homewards from the Argentine, the principal tramp trade, fell to 12s. per ton, and still further falls seemed almost inevitable. This was the position when the Act came into force.

The Act enabled the industry to organise itself and to co-operate in a manner hitherto impossible in the absence of minimum compulsory power of the Act, and by the creation of minimum freight rate schemes to arrest the decline and to stabilise freight rates in the principal maritime trades at levels which would, at any rate, cover the expenses of voyages. It has undoubtedly helped to

restore confidence in tramp shipping and to put new life into the industry.

A very important consequence to the industry of the Act and of these minimum freight schemes is that the selling value of tramp ships has increased considerably, as they now find a ready market at increased prices, thus strengthening the financial position of shipowning companies, quite apart from any direct participation in the subsidy. The Act has, I am glad to say, largely reduced unemployment among British seamen. Moreover, improved business and employment in ancillary trades such as shipbuilding, ship repairing, stores, insurance, bunkering, etc., in this country have also followed as a matter of course.

So far so good; it is necessary, however, not merely to cover running costs but to earn sufficient to enable shipowners to provide for the depreciation required to replace vessels as they wear out and so at least to maintain the present efficiency of the British mercantile marine. It is common knowledge that few tramp shipping companies have been able to make provision for depreciation for years past.

THE OUTLOOK

A substantial improvement in the world's freight markets occurred in September. Probably this was partly due to an increase in the volume of overseas trade of the world. It was doubtless accentuated by the Abyssinian crisis and the withdrawal of Italian tonnage from general trading. The demolition of obsolete tonnage during the last three years or so was also an important factor.

Freights, however, will have to be much higher before the tramp shipping industry is again upon a satisfactory basis. The outlook is more encouraging, but prosperity has not yet fully returned to tramp shipping. The position to-day is better in contrast with the depression from which it is hoped the industry is now emerging. Any concrete improvement depends upon a lasting increase in the volume of overseas trade of the world. The removal of exchange restrictions and reduction of trade barriers would best promote this, and soon render unnecessary the temporary subsidy to cargo shipping.

If there are any questions, I shall be glad to answer them as far as I can. I now beg to propose: "That the report and accounts for the year ended September 30, 1935, as submitted, be received and adopted, and that the dividends, as recommended therein, be declared and paid."

Mr George M. Dodd seconded the resolution and it was carried unanimously, no questions being asked.

The retiring director (Mr George M. Dodd) was re-elected; the auditors (Messrs Fookes, Wyatt Williams and Hickman) were re-appointed, and the proceedings terminated with a vote of thanks to the board.

ROAN ANTELOPE COPPER MINES LIMITED

MAIDEN DIVIDEND

IMPROVING CURRENT PROFITS

The eighth ordinary general meeting of the Roan Antelope Copper Mines, Limited, was held, on the 11th instant, in London, Mr A. Chester Beatty presiding.

The Chairman, in moving the adoption of the report and accounts, said that the current assets, totalling £1,600,000, showed an excess over current liabilities of more than £1,000,000. During the year they had produced a total of 67,316 long tons of blister copper, and their average revenue from copper sales account was £27 18s. 6d. per long ton, as compared with £32 13s. in the preceding year; they were able to effect a reduction in their total costs from £25 14s. 5d. to £23 3s. 6d.

The surplus shown by the operating account for the year was £590,522, while the net profit for the year was £330,220; the board recommended the payment forthwith of a maiden dividend of 1s. per share, leaving £322,824 to be carried forward.

PRODUCTION STATISTICS

With regard to production, there had been a great change in the world copper position during the past six years, brought about largely by the developments in Canada and Northern Rhodesia. In 1929, out of a total world production of 1,890,000 tons, the United States produced about 49 per cent., Canada 4 per cent., and Rhodesia less than 1 per cent. In 1934, out of a total world production of about 1,250,000 tons, the United States produced only 17 per cent., while Canada and Rhodesia each produced 12 per cent.

During the period 1929 to 1931, when consumption was falling rapidly, the United States and Chile produced tonnages considerably in excess of requirements, with the result that world stocks of copper were increased to 680,000 tons. In 1932 and 1933 a measure of voluntary restriction was carried out by producers, and, helped by the increasing consumption in Europe, the stocks began to fall, and by the beginning of 1934 were reduced to around 640,000 tons. Early in that year producers outside the United States started to increase production in order to meet the growing European demand, but this resulted in production outstripping consumption, and during the last part of 1934 stocks again began to accumulate.

It was not until March of the present year that, at a conference in New York, representative of more than 75 per cent. of the world copper production outside the United States, a complete agreement was reached. Under that agreement current production as from June 1st last was being curtailed at the rate of 240,000 short tons per annum. Total world stocks were now reported to be down to about 540,000 tons, which on the present basis of estimated consumption represented roughly four and a half months' supply, and was not, therefore, an excessive figure.

INCREASED PROFITS

The further subject for consideration was consumption, which during the depression reached its lowest point in 1932, with a world total for that year of about 980,000 tons, comparing with the high point of about 1,880,000 tons in 1929. During 1933 the tide turned, and for 1934 the total consumption was reported at about 1,350,000 tons. During 1935 there had been a further improvement, and, based on the figures available to date, it looked as though the consumption for this year might exceed 1,400,000 tons.

During the current financial year they were producing at the restricted rate of 50,400 long tons of blister copper per annum. During the first quarter ended September 30th last their estimated net profit was £99,000, while for October the estimated results showed a net profit of about £45,000, the improvement being due to the increased price for copper.

The report was unanimously agreed to.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED

UNFAIR GOVERNMENT RAILWAY COMPETITION

The ordinary general meeting of this company was held, on the 12th instant, at Winchester House, London, the Rt. Hon. Viscount St. Davids (the chairman) presiding.

The Chairman, in the course of his speech, said:—I am sorry to say that our passenger traffic has continued to decrease. Competition on the road is very severe, and in the Argentine Great Western district it is easier to make roads than in most other parts of Argentina, because there is plenty of stone in the district to make them with. I can only say that we are doing our very best to recover some of this lost passenger traffic.

On our system the goods traffic has increased; wine traffic increased by 62,000 tons. The authorities are taking measures to prevent the over-production of wine and to ensure better quality.

The export of fruit abroad continues to increase. During last year about 10,000 tons of fresh fruit from our district were exported. Unfortunately the export of fruit to Great Britain has been badly hit by the British Colonial agreements. By those agreements tariffs are put on in this country to favour British Colonies, and those tariffs greatly favour South African fruit. In our district there has been a great increase in the production of dried fruit. We had an increase of 4,500 tons, or 50 per cent., in the amount we carried.

I must allude again to the Government competition with this company's line. The Argentine Great Western Railway was built by the Argentine Government, it was sold by the Argentine Government to this company, and now the Argentine Government are building a line from San Juan to Mendoza to parallel the railway they themselves built and they themselves sold.

This line of theirs is not being built to develop traffic. This line is being built through a waterless desert in order to compete with us and for no other possible purpose. No other Argentine Government—and I have known many Argentine Governments in my lifetime—would ever have done such a thing. It is an entirely new policy on the part of this particular Government. There is one thing they are undoubtedly doing—they are creating a very bad atmosphere in Great Britain for Argentine affairs.

The report and accounts were unanimously adopted.

SUDAN PLANTATIONS SYNDICATE, LIMITED

ENCOURAGING PROSPECTS

The twenty-eighth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 14th instant, at Winchester House, Old Broad Street, London.

Mr Alexander MacIntyre (the chairman and managing director), who presided, said that the gross profit for the year amounted to £456,928, and after deducting all expenses and appropriations to reserves, there remained a net profit of £201,379. The directors recommended a dividend at the rate of 8 per cent., absorbing £198,000 and leaving £3,379 to be added to the carry-forward from the previous year.

The extension of 20,000 feddans, referred to last year, and a further area of about 7,000 feddans had been developed, and were now under crop on a four-year rotation. The Government had agreed to an extension of about 10,500 feddans at the extreme southern end of the concession area, and that should be ready in time for the planting of 2,600 feddans of cotton next August. The total extent of the Gezira concession was now about 656,000 feddans, representing over 1,000 square miles, to visualise which shareholders would have to imagine an area of land 10 miles wide extending from London to Grantham, or one of 20 miles wide from London to Brighton.

With regard to sales, all cotton seed had been disposed of at prices substantially above those of the previous year. Stocks of cotton were still large; last year's crop had given 80,000 bales more, but they had sold 40,000 bales more than in the corresponding period, and sales lately had been exceptionally good, 33,000 bales having been sold during the past three weeks. Every effort was being made to effect sales at home, on the Continent, in India, America and other parts of the world. In these competitive days it must be their policy to produce the company's high-grade cotton at the lowest possible price.

Shareholders would realise in that respect that such extensions as they were carrying out had the effect of reducing their transport, ginning and overhead charges to a considerable extent, and with the same object in view, many other costs had been reduced. It might interest shareholders to know that their pumping plants, ginning factories, locomotives, electric plant and over 90 per cent. of their ploughing machinery were run by Diesel engines, which meant, situated as they were, 700 miles from the sea, that the most economical form of power available had been adopted. The Sudan Government was co-operating in measures which would reduce the tenants' production and marketing costs.

With regard to this year's prospects, the area planted in cotton in the Gezira was about 164,000 feddans, against 156,000 feddans last year. Rains had been heavy, but not abnormal in their incidence, and although it was still far too early to determine what the crop would be, reports were very encouraging. A cable from their manager received on November 11th stated that black-arm except in the North, where it was heavier, and that leafcurl was practically non-existent, except in three places where it had appeared in the last few days. That meant that if there should be any great increase in leafcurl later on no great damage should result to the crop from that pest. The crop at Zeidab promised to be better than last year; a yield of 4 kantars was expected on the syndicate's land which, with the cotton grown on native land, indicated an average yield of 3.6 kantars per feddan.

In regard to the activities of Italy in Abyssinia and the possibility of the water of Lake Tsana, from which the Blue Nile flowed, being held up or diverted for other purposes, Lake Tsana contributed only a small proportion of the immense flow of the Blue Nile in flood, and it would appear from the topography of the surrounding country that nothing very serious could be done to cut off the Lake Tsana supply, and, to sum up, so far as the company were concerned, the Gezira was irrigated by water con- served from the flood, which should arrive in sufficient quantity whatever happened to Lake Tsana.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

LAKE VIEW AND STAR LIMITED

DIVIDEND OF 50 PER CENT. DESPITE STRIKE

The annual general meeting of Lake View and Star, Limited, was held, on the 13th instant, at 20 Aldermanbury, London, E.C., Mr John A. Agnew (the chairman) presiding.

The Chairman, in the course of his speech, said that this year marked their Silver Jubilee, and, looking back over the past 25 years, he thought they could congratulate themselves that the company was to-day in such a sound position, financially and technically.

The net profit for the year amounted to £380,934, compared with £460,238 for the previous period. In comparing these figures, however, account must be taken of the additional amount charged to revenue for development instead of, as in previous years, charging the greater proportion to a special development account. That alteration in the method accounted for approximately £40,000 of the apparent reduction in the net profit. He used the word "apparent" because the reduction was not real, as they had only had to provide £23,850 to write off special development as compared with £62,946 in the previous year, or a reduction of £39,000.

The remainder of the difference in profit, £40,000, was more than accounted for by the loss of £70,000, due to the strike which had taken place in the early part of the current year, and to the increased wages awarded by the Arbitration Court, which had been in operation since February of this year.

THE DIVIDEND

After writing off the whole of the expenditure on special development and depreciation of plant and machinery, there remained a balance of £329,115, out of which three dividends of 12½ per cent. had been paid and a final dividend of 12½ per cent. was recommended, making a total distribution of 50 per cent. for the year. From the remaining balance £20,000 had been transferred to taxation reserve, leaving £19,115 to be carried forward.

The quantity of ore treated during the year showed an increase of 25,815 tons, compared with 1934. A further drop in tributaries' ore from 21,037 tons to 14,728 tons showed that the actual net increase in company ore was 32,124 tons. The strike in January and February, which had lasted for six weeks, had caused a total cessation of all work at the mine. The effect was a loss in tonnage treated of approximately 75,000 tons, so that without the strike they would undoubtedly have shown an increase of over 100,000 tons for the year. The actual loss in production to the company by the strike amounted to £150,000 Australian, and a further £17,000 was spent in necessary maintenance.

ORE RESERVES

Having dealt in considerable detail with the development work carried out during the year under review, the Chairman said that the reserves as at July 1, 1935, showed a total of 3,035,900 tons of an average value of 26.86s. That was a net increase of 572,300 tons, after allowing for the 501,103 tons extracted during the year, and a decrease in value of 3.14s. per ton as compared with last year's estimate.

Last year shareholders had been informed that a plant for the re-treatment of the tailings dump at the Associated had been ordered and was to be erected as soon as possible. The first two filter units of that plant were put into operation in June and the third in July. The fourth and final unit had been held up owing to delays in delivery of some plant, but would be in commission this month. During June they had treated 22,480 tons of tailings, and since then, with the third filter installed, had averaged 40,000 tons per month. With the full plant they hoped to treat some 50,000 tons per month. No difficulties of any kind had been experienced in starting up the plant, the whole treatment running smoothly from the commencement. Working costs were higher by 2s. 1d. per ton. That was largely due to the decision of the Arbitration Court, which had prescribed shorter hours of work and higher wages to surface workers and an increase in wages to underground men. That decision, which had come into operation in February, had had the effect of increasing the mining costs by approximately 1s. 8d. per ton. Another contributory cause to the higher working cost shown was the charging of a larger proportion of the mine development to revenue instead of special development account.

The report was unanimously adopted, and a cordial vote of thanks to the Chairman, directors, management and staff, terminated the proceedings.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED

INCREASED GROSS EARNINGS

The seventy-seventh ordinary general meeting of this company was held, on the 14th instant, in London, E.C.

Sir Trevredyn Wynne, K.C.S.I., K.C.I.E., who presided, said that the gross earnings for the year 1934-35 were 56 lakhs more than the receipts for the preceding year, and he felt justified in thinking that their receipts for the year 1935-36 would be higher than for 1934-35, as up to date there was an increase of 35 lakhs compared with the same period last year. About two-thirds of their traffic consisted of coal, minerals and raw products required by the Tata Iron and Steel Company, the Indian Iron and Steel Company, and the Bengal Iron Company. The total tonnage carried for those companies for 1934-35 was 10,000,000 tons, an increase over the tonnage carried in 1933-34. Apart from mineral traffic, there was an increase in general goods traffic, due to the activities of their commercial department and in part to the extension recently constructed from Raipur to the South East, which connected their main system and Central India with the port of Vizagapatam.

At the present time the Financial Member of the Viceroy's Council was having a searching investigation made to ascertain why the railways of India were unable to earn sufficient to pay the interest on their capital as well as working expenses. He (the chairman) had received from India a long list of subjects to be examined and considered which would no doubt eventually result in reducing working expenses and so increase net revenue. The rates charged for the carriage of goods on Indian railways were governed by the classification of every kind of goods traffic. A committee appointed a year ago had now advised that the number of classifications should be increased to 16 classes, an increase of six, but the maximum and minimum of each class were still maintained. It seemed to him that classification and maximum and minimum rates on each Indian railway for all traffic on its own system should be abandoned, and rates that would induce increased traffic and help to develop new trade should be allowed to be quoted. In other words, Indian railways should work on the same principle as English railways for goods traffic.

The report was unanimously adopted.

KASSALA COTTON COMPANY, LIMITED

A FIRST DIVIDEND

The twelfth ordinary general meeting of Kassala Cotton Company, Limited, was held, on the 14th instant, at Winchester House, London.

The Hon. Arthur M. Asquith, D.S.O. (the chairman), in the course of his speech, said:—The balance of the 1933-34 crop has now been disposed of, and fair progress has been made towards the realisation of the large 1935 crop. I told you last year that we had approached the Sudan Government in the spring of 1934 with a view to obtaining an extension of area. Mr MacIntyre and I renewed our application to the Government in the Sudan last February, and the Government has now agreed to an extension of our concession area by about 45,000 feddans.

It has, in addition, entrusted the company with the administration of 10,000 feddans to be cultivated as an experimental area. The terms for the experimental area are such as to safeguard the company against any extra expense or less favourable results on it than on the average of its main concession area.

I was glad to find in the Sudan a spirit of cordial co-operation between the Government's officials and the company's staff, and it is gratifying that the Government should have shown their confidence in the company's administration by granting us these extensions of area and by entrusting to us the supervision of this experimental work. We shall, of course, do our best to justify their confidence.

You will have been glad to see that we had a record crop and that for the first time we are able to recommend the payment of a dividend. The profit for the year is £19,733, of which we recommend that £18,750 should be distributed in dividend on December 7th to shareholders on the register on November 30th.

With regard to the new season, it is too early to make any positive predictions, but granted a continuance of favourable conditions, there is no reason why we should not have a good crop.

The report was unanimously adopted.

At a separate meeting of the ordinary shareholders and at an extraordinary general meeting the conversion of the £250,000 6 per cent. non-cumulative preference shares into 5,000,000 ordinary shares of 1s. each was approved.

WILUNA GOLD CORPORATION, LIMITED GOOD DEVELOPMENTS AT DEPTH

The ordinary general meeting of the Wiluna Gold Corporation, Limited, was held, on the 8th instant, in London, Mr John A. Agnew (the chairman) presiding.

The Chairman, moving the adoption of the report and accounts, said that the year's net profit was £288,242, which, with the carry-forward, was increased to £330,951. After allowing for interim dividend paid in June the balance available was £175,050, out of which they recommended the payment of a final dividend of 10 per cent., making a total of 20 per cent. for the year. They considered the distribution satisfactory in view of the six weeks' stoppage at the mines owing to industrial disputes. During the year the mines had treated 439,395 tons of ore averaging 27s. 4d. per ton. The throughput had been steadily increased, and for the six months since the close of the accounts had been maintained at a rate of over 540,000 tons per annum.

After dealing in detail with the developments on the three main lodes he referred to the very encouraging ore exposures at the deepest (1,400 ft.) level on the No. 2 west lode, where the ore-body averaged 32s. per ton (with gold at 85s.) over a width of 54 ft. The work carried out on the Bulletin lode, 1½ miles to the north of the main shaft, indicated a substantial increase in strength and width of this orebody at depth. Diamond drilling had also disclosed the existence of a large and valuable orebody in the Happy Jack area. The positive ore reserves were 2,040,000 tons averaging 26s. 3d. per ton (with gold at 85s.), not including a large tonnage of "probable" ore.

Having referred to important experiments proceeding in conjunction with the treatment of ore from the adjoining Moonlight property which indicated considerably increased profits by the adoption of smelting, he stated that the Wiluna Gold Mines had agreed to erect a smelter for the Moonlight ore in order to prove by actual practice the full advantages of this method before making a final decision to change over. As a result of discussions in London with the visiting Minister for Mines for Western Australia they felt that a better understanding had been reached between the Government, the unions and the mining companies, which he hoped would ensure closer and more sympathetic co-operation in the future.

The accounts and report were unanimously adopted.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED SUCCESS OF DAIMLER 15-H.P. CAR

The ordinary general meeting of this company was held, on the 12th instant, at Coventry, Sir Alexander Roger (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts showed a profit of £112,182, as compared with £127,550 in the previous year. With regard to the production of motor cars, the Daimler 15 was the most notable and successful car of its class, and the response from dealers and the public to the new Daimler 20 was encouraging. Shortly there would also be available a still more powerful owner-driven car of that class. The smaller Lanchester cars had been much improved and had sold well. Although the Daimler transmission system was now in its fifth year, no technical developments had arisen which challenged its claim to be regarded as the finest in the world not only for private cars, but also for motor-buses. During 1934 their Daimler 'bus business had more than doubled, while in 1935 it was three times that of the previous year.

B.S.A. had further consolidated its position in the motor-cycle trade as the largest producer, and had commenced 1935-36 with a programme which should ensure an increased share of the market, centring round the new line of machines known as the Empire Star. Although their home market sales in pedal-cycles had been very substantial, they had not reached the anticipated figures, largely owing to weather conditions. As regarded exports, their orders had increased by no less than 49 per cent. For 1936 their range of machines would compare favourably in price and specification with any others in their class. The reception of the small car known as the B.S.A. Scout had been favourable, and sales prospects were good.

The tool group, which was concerned with the manufacture and sale of machine tools and small tools, had had a successful year. The machine tool industry was a key industry, and should receive sympathetic consideration from his Majesty's Government. The fine steel interests of the B.S.A. group, in which a large amount of capital was locked up, had made definite progress at home and in certain countries abroad.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 9, 1935 amounted to £12,695,000, against ordinary expenditure of £10,347,000. After allowing for an increase in Exchequer Balances of £192,679, the operations for the week, as shown below, decreased the gross National Debt by £2,155,000 to approximately £7,985 millions.*

Public Department Advances	£
Treasury Bills	1,050
National Savings Certificates	870
Road Fund Temporary Advances	100
North Atlantic Shipping Issues	72
British Shipping Issues	29
	34

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on September 30, 1935, appeared in the *Economist* for October 5th.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on November 8, 1935, and the total amount applied for was £63,955,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 3d., about 82 per cent., and above in full; Saturday at £99 17s. 4d., and above in full. The average rate per cent. was 10s. 9-91d. The amount allotted was £45,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1933				
January 6	45,000,000	73,830,000	45,000,000	0 16 10-84
July 7	45,000,000	83,890,000	42,000,000	0 10 4-85
October 6	45,000,000	100,450,000	45,000,000	0 12 9-98

LONDON TRANSPORT

		Compared with corre-		sponding period of	
		*Takings		last year	
Week ending November 9, 1935		£580,500		+ 38,200	
Aggregate 19 weeks ending November 9, 1935		£10,337,500		+ 178,700	

* For an explanation of the manner in which the figures are made up, see the *Economist*, March 17, 1934, page 610.

Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted on the basis of the best information available.

THE INTERNATIONAL NICKEL COMPANY OF CANADA, LTD.—A net profit of \$7,742,584.64—equivalent to 50 cents per share on the common stock after allowing for preferred dividend—is reported for the third quarter of 1935 in the quarterly statement of the International Nickel Company of Canada, Ltd. This compares

WORKING PROFIT, TRANSVAAL.—Total estimated working profit of the gold mines of the Transvaal for the month of September, 1935, amounted to :—Witwatersrand, £2,650,017; Outside Districts, £10,670; total, £2,660,687. The estimated working profit in August, 1935, was :—Witwatersrand, £2,728,388; Outside Districts, £10,636; total, £2,739,024.

SHEFFIELD.—There has been a considerable expansion during the last two weeks in all sections of the South Yorkshire coalfield. The improvement is largely confined to the domestic market, and it has

CARDIFF.—Foreign and coastwise shipments last week were above the average of recent weeks, and totalled 417,700 tons, compared with 389,400 tons the previous week and 362,283 tons in the corresponding week last year. The docks have been relatively well supplied with tonnage, and loadings are expected to be quite good again this week. A number of small contracts placed recently include 12,000 tons for the Norte Railways of Spain, 12,000 tons for the Palestine Government Railways, and 5,000 tons for the Norwegian State Railways; while the adjudication is expected at

GLASGOW.—Business in the West of Scotland continues satisfactory. Steel makers are very busy. Demand for shipbuilding material is improving, and that for other sections is very good.

compared with £18 a week ago.

Sales of spelter on the London Metal Exchange: 25 tons on Monday, against 125 tons last week; 400 tons on Tuesday, against 125 tons last week; 350 tons on Wednesday, against 650 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 5s. per ton, against £16 6s. 3d. last week.

ESTABLISHED 1835

TIN.—The cash price rose substantially during the past week, while the three-months' quotation showed only a modest advance; the "backwardation" therefore widened to well over £20 per ton. That relief from the "squeeze" will be forthcoming before the end of the year may be judged from the fact that reports from Bolivia and Nigeria record a considerable increase in shipments of concentrates. At the moment, however, the cash position is as stringent as ever. Moreover, although considerable arrivals from the Dutch East Indies are due during the next fortnight, it is anticipated that the bulk of these will be absorbed by the Continent. The position is further complicated by the development of an unhealthy "spot" position in New York, owing to inadequate supplies. Judging from past experience, heavier shipments may possibly be directed to the United States in the near future, in order that the position of those who desire to render that country independent of the restriction scheme may not be strengthened. Such an expedient would, of course, postpone the possibility of easing the London position. The situation on the London market is becoming almost intolerable. Not only is it impossible to obtain adequate supplies of cash tin in the United Kingdom, which controls about 50 per cent. of the world's potential output; it is also impossible to obtain relief from the "squeeze" in this country until other consuming areas are adequately supplied with British tin.

Sales of tin on the London Metal Exchange: 110 tons on Monday, against 260 tons last week; 200 tons on Tuesday, against 225 tons last week; 200 tons on Wednesday, against 375 tons last week. The New York quotation on Wednesday was 53.00 cents per lb., against 52.50 cents a week ago and 51.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £237 10s. to £238 per ton, compared with £225 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 493 tons, a decrease of 56 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 10s. to £12 12s. 6d. per flask of 76 lb., as against £12 5s. to £12 7s. 6d. per flask last week. Chinese antimony was quoted at £69 to £70 per ton ex warehouse, duty paid, as against £70 to £71 per ton last week. Chinese wolfram for November-December shipment was quoted at 33s. 6d. to 34s. 6d. per unit, c.i.f., as against 33s. 6d. to 34s. 6d. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester.—Although the tone of the market has continued rather quieter, there has been more activity during the last few days. This development has been partly due to the hardening tendency in raw material prices and the realisation by buyers of yarn and cloth that there is little probability of lower prices in the near future.

The feature of interest in connection with the raw cotton situation has been the bullish crop report published by the United States Government at the end of last week. The estimated yield, at 11,141,000 bales, was lower than expected, and the ginning figures were disappointing. Demand continues active. Wide fluctuations have occurred in quotations for Egyptian Sakel cotton, speculative operations being on a considerable scale. Cloth business has been irregular. Some sellers have had a fair week, whilst others have reported a continuance of the reduced demand. Inquiry from India has kept up fairly well, and miscellaneous sales have been arranged for the several outlets in a variety of goods, chiefly in printed and dyed styles. The news from China has not been of a nature to encourage trade. Fancies have attracted some attention for the minor outlets of the Far East. Steady buying has taken place from Egypt, West Africa, South America and the Dominions. A few more orders have been booked in sheetings and dress materials for the home trade.

Yarn prices have hardened in sympathy with the rise in cotton. More business has been done in American qualities, and there continues an active demand for quick delivery of coarse and medium counts. Trade in Egyptian descriptions has been patchy.

EGYPTIAN SPINNERS' BALLOT FAILURE.—There was considerable surprise in Lancashire trade circles at the end of last week, when it was announced that the ballot of spinners of Egyptian cotton on the pool and quota scheme for adjusting production to demand had

failed to secure more than very limited support. It was stated that the votes in favour were only 57.58 per cent., with 21.68 per cent. against, there being no replies from 20.74 per cent. It was previously arranged that the scheme would not be put into operation unless supported by the owners of 85 per cent. of the spindles in this section. It was decided that the Committee appointed to deal with this matter by the Master Spinners' Federation should remain in existence for the purpose of reviewing the position and ascertaining the nature of the objections to the proposed agreement. The Committee was unanimous in recommending the continuance of the "Gentleman's Agreement" which has been in operation for some months. In connection with this ballot, it is significant that the big combines own about 50 per cent. of the spindles on Egyptian cotton. Thus the figures show that very few private concerns voted in favour. In the meantime, the Manufacturers' Association is considering the question of better organisation in that branch. The district associations have approved the suggestion that a committee should be set up for the purpose of considering methods whereby better selling prices for piece goods can be secured. In this connection it has been rumoured that the Manufacturers' Association may evolve a scheme for dealing with redundant looms.

WOOL.—Bradford.—Business in both wool and wool products has been well maintained during the past fortnight. The demand for raw wool in Coleman Street on United States account has slackened considerably, but other sections have continued to buy moderately, and the entire industry is awaiting the opening of the forthcoming series next Tuesday with more than ordinary interest. The quantity available, declared at 124,600 bales, will include a particularly good selection of Australian new clip merinos. The demand for these is likely to be keen and well sustained, with all sections operating. A reasonable rise in prices is anticipated, but whether it will be as much as some of the more optimistic importers expect remains to be seen. However, some advance in prices for all descriptions seems imminent, with a good demand from all sections. The vacation must be regarded as one of the best of the year. A firm finish in Coleman Street always leads to the establishment of confidence, and paves the way for a good turnover in tops and yarns. Good average 64's tops were standing at 29½d. when the September-October series finished, and to-day are around 31-31½d., in fashion still favouring these wools. A big business has been done in crossbreds, but prices do not advance very quickly. Taking 50's as being representative of crossbreds, good tops of this quality can be bought to-day at 15d. per lb., a price that is altogether out of harmony with the cost of 64's. However, a big business has been done in both low and fine crossbreds with the United States during the interval, and there is every prospect of renewed buying on American account at the forthcoming London sales. The best feature is the continued large consumption in the West Riding, where practically all mills are busy.

GRAIN MARKETS

WHEAT.—Wheat prices in international centres suffered an appreciable decline during the past week. This movement is merely a corrective to the excessive optimism which drove up prices too high some weeks ago. Actually, the international wheat situation has undergone little change during the past week. Supplies are ample and there has been some selling pressure from certain quarters.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 1,022,000 quarters, against 826,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 93½ cents per bushel, against 97½ cents the week before and 100½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 34s. 3d. per 496 lbs., against 34s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 33s., against 33s. 6d. a week ago.

FLOUR.—The market in both home-milled and imported flour was quiet and prices declined. Shipments from North America in the past week totalled 91,000 sacks, as against 91,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. per 280 lbs., 28s. a week ago; delivered London, 28s., as compared with against 27s. 3d. to 29s. 3d. a week ago. Australian, ex store, 22s. 9d., against 23s. a week ago.

BARLEY.—Business in imported feeding barley has been small, but as holders are not pressing sales, quotations have been maintained. "December" futures were quoted at 33 cents per bushel in Winnipeg on Wednesday, against 33½ cents last week and 34½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 34s., against 30s. to 36s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 26½ cents per bushel in Chicago, against 26½ cents a week ago and 27½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

MAIZE.—Quotations for maize in this country continued to decline during the past week, for arrivals remain on a large scale and the new crop in Argentina has made an excellent start. "December" futures were quoted on Wednesday at 59½ cents per bushel in Chicago, against 59½ cents a week ago and 60½ cents

last month. Quotations in London, Wednesday: "Plate," landed, 16s. 6d. per 480 lbs., compared with 16s. 9d. a week ago; "Plate," ex ship (new), 15s. 6d., as against 16s. a week ago; "Plate," November, 16s. 3d., against 16s. 3d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. to £4 17s. 6d. per ton, against £4 15s. to £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to November 9	317,953	256,735	352,853	452,258
10 weeks to November 9	2,758,003	3,478,813	4,752,042	4,745,526
Average price of English wheat per cwt.	s. d. 5 6	s. d. 4 8	s. d. 4 11	s. d. 6 1

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Nov. 7, 1931	79,191	469,893	46,513	6 7	9 2	6 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934.

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Nov. 14, 1934	Jan. 2, 1935	Nov. 6, 1935	Nov. 13, 1935
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	46½	65½	78	82½	85	82½
Chicago (No. 2 Winter) —Cents per 60 lb.	46½	84½	99½	98½	97½	93½

The visible supply of wheat in Canada amounts to 145,868,000 bushels, against 146,526,000 bushels last week and 122,258,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—Demand has again been slow this week, despite a further slight reduction in prices last Friday. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 80s. to 89s.; Canadian, 77s.; Danish, 89s., as against 84s. to 90s., 79s. and 89s., respectively, a week ago. Arrivals in London last week included Danish, 13,337 bales; Canadian, 4,938; Dutch, 2,231; Lithuanian, 1,926; Polish, 2,327; against 14,184, 3,555, 1,857, 2,089 and 3,076 bales, respectively, in the previous week.

BUTTER.—While most descriptions of butter remained in quiet demand this week, Colonial descriptions recorded a modest advance on the London market. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 104s. to 105s.; Australian, choicest salted, 104s.; Danish, 124s.; compared with 100s. to 102s., 100s., and 124s., respectively, last week.

CHEESE.—After a moderately firm opening on Monday, demand fell away and the London Market was dull on Wednesday. But prices show little change on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 62s. to 74s.; Canadian, finest coloured (new), 58s. to 60s.; New Zealand, finest coloured, 53s., as against 62s. to 74s., 58s. to 60s. and 50s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., as against 5 cents per lb. last week. On the London Market, Accras have been in quiet demand. On Wednesday last, good fermented new crop, November-January, was quoted 21s. 10½d. per 250 kilos. c.i.f. Continent, against 21s. 9d. last week. Last week's movements of cocoa in London were as follows: Landed, 1,764 bags; delivered, for home consumption, 4,430 bags; exported, 258 bags; stocks, 114,334 bags, against 150,828 bags a year ago.

COFFEE.—Spot coffee has again been a quiet market in New York, quotations being unchanged on the week. The London market was quietly steady. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 30 cwt.; delivered, for home consumption, 9 cwt.; exported, nil; stocks, 12,643 cwt., against 27,442 packages a year ago. Central and other South American, landed, 6 cwt.; delivered, for home consumption, 2,400 cwt.; exported, 2,118 cwt.; stocks, 85,688 cwt., against 80,445 packages last year. Other kinds, landed, 1,201 cwt.; delivered, for home consumption, 3,795 cwt.; exported, 2,039 cwt.; stocks, 112,565 cwt., against 74,487 packages last year.

Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

EGGS.—At Tooley Street on Monday the market was quiet and quotations irregular. Danish have scored an advance on the week, but English are generally rather easier. At Smithfield Market on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 19s. to 20s. 6d. per 120, against 19s. 6d. to 21s. 6d. a week earlier, while Danish (15½ lb.) made 16s. to 16s. 3d. per 120, against 14s. 9d. to 15s. 3d. last week.

FRUIT.—Business at Covent Garden has been adversely affected by bad weather during the past few days, but continues above the average for the time of year. According to *The Fruitgrower*, the trade in apples is not so brisk and home-grown have eased somewhat. Nova Scotian barrels are slightly firmer, but British Columbian box apples barely steady. Supplies of pears are short, and with demand well maintained, prices are steady. Although not a very active market, hothouse grapes are inclined firmer for English, especially for Muscat. Melons are slow and cheaper. Cobnuts are a moderate trade, while English walnuts are in fair demand; all imported nuts are easier. Bananas have been selling more freely, while oranges are also in demand. Grapefruit is a rather slow trade, despite a reduction in prices. Lemons continue dear, and are likely to rise in price still further, as a result of the application of "sanctions" against Italy on Monday next.

MEAT.—Supplies at Smithfield Market have been on a heavier scale than at this time last year. Fresh mutton was in fair demand this week, but the majority of descriptions have been a dull trade. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 10d. per 8 lbs., against 3s. 2d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,456 tons, a decrease of 753 tons on the corresponding week last year. Beef and veal accounted for 4,894 tons, mutton and lamb, 2,453 tons, and pork and bacon 1,376 tons, as compared with 5,406, 2,630 and 1,284 tons, respectively, in the same week of 1934.

MILK.—Information relative to the operation of the Milk Marketing Scheme during October, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Oct., 1934	July, 1935	August, 1935	Sept., 1935	Oct., 1935
	d.	d.	d.	d.	d.

* On account to the nearest farthing.

PEPPER.—Wednesday's spot price for Lampong (in bond) was 3½d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 24 tons; stocks, 1,453 tons, against 591 tons a year ago. White, landed, nil; delivered, 194 tons; stocks, 14,987 tons, against 9,287 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 10½d. per cwt. ex-warehouse on Wednesday, as compared with 9s. 10½d. per cwt. a week ago. New crop, January-February, in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 7½d. per cwt. last week. Movements in London during the past week were as follows: Landed, 14 tons; delivered, 330 tons; stocks, 6,948 tons, against 3,367 tons a year ago.

SUGAR.—The New York spot market has been steady at unchanged prices during the past week, while futures have been generally featureless. The market shows a tendency to await developments at Washington. In London, trading has also been quiet and quotations barely steady. The spot price in New York on Wednesday was 3.50 cents per lb., as compared with 3.50 cents per lb. last week and 3.60 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 9d. to 4s. 10½d., against 4s. 10d. to 4s. 10½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 17,974 tons, against 20,878 in the previous week and 4,722 tons in the same week of last year; deliveries, 15,284 tons, against 17,884 and 14,704 tons respectively; stocks, 167,432 tons, against 164,742 and 95,671 tons respectively.

Oct. 24, ".....	14-75	12-68	16-59	12-56	10-41	10-83	14-75
Oct. 31, ".....	14-00	12-42	15-69	11-89	10-12	11-16	14-07
Nov. 7, 1935	13-33	12-31	15-03	12-18	9-42	11-63	13-53

The quantities catalogued for this week's auctions comprised 54,422 packages of Indian and 20,196 packages of Ceylon tea. For Indian grades the market was rather irregular on Monday, and prices were again easier. An improvement occurred on Wednesday, however, and prices were well maintained for all descriptions. At the Ceylon auctions on Tuesday there was a good demand for common sorts and fannings, at steady rates. Low mediums declined in price, while better teas were irregular and generally easier in price.

VEGETABLES.—English and Guernsey tomatoes are in limited supply, states *The Fruitgrower*, and, although demand is slack, are worth from 3s. 6d. to 6s. per dozen lbs. Jersey outdoor have almost finished. Supplies of cucumbers have fallen off, and have consequently risen in price. Forced asparagus is in moderate

supply, and house-grown beans are firmer. An abundance of green-stuff has been on offer, and considerable quantities remained uncleared last week-end. Carrots, turnips and parsnips are all easy, but celery continues to sell well at moderate rates. The potato trade shows no new features. Supplies at the various London markets have been fairly heavy, and demand only moderate, on account of the mild weather. At the Borough Market on Tuesday best siltland King Edward again realised from 6s. to 6s. 6d. per cwt. Meanwhile, the Potato Marketing Board is taking a census of stocks of ware potatoes in producers' hands at the end of last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions prevail all round. Linseed is still declining and neglected by crushers and no business is recorded despite the lower level of prices. Reports of the progress of the growing plants in Argentina are favourable and seem to confirm the optimistic estimates of a yield of not less than 1,500,000 tons. Moreover, the official estimate of the unsold balance of the old crop, at 345,000 tons, is considerably higher than the market had understood. This compares with 175,000 tons actually shipped in the remainder of last year, so that it appears likely that there will be a substantial balance to be carried forward. Argentine shipments are rather heavier. The quantity now afloat for Europe is 108,500 tons (including 9,500 tons from India), which is 12,000 tons less than the week before. Cottonseed is in poor demand and business in black Egyptian has been done at £6 2s. 6d., December loading.

Linseed oil is attracting little interest from consumers and professional operators. Prices are again lower and irregular. Raw oil ex Hull is quoted at £24 5s., November-December, and at £24 7s. 6d., January-April, per ton naked. A small demand for refined cotton oil is reported, but prices are unchanged. Egyptian crude ex Hull is available at £25 and refined at £28 per ton, prompt. Demand for oilseeds is not so good and linseeds are easier.

RUBBER.—Rubber prices showed a sagging tendency during the week ending last Wednesday, due largely to the heavy shipments of native rubber from the Dutch East Indies during October. Native shipments in excess of the quota during January-October amounted to 34,444 tons. Although these over-shipments have been practically offset by under-shipments of estate rubber of 13,406 tons and by the Government's purchase of estate rubber export licences of 20,000 tons, they nevertheless indicate that the method of

limiting native exports by means of an export duty have so far not been very successful. Nevertheless, a further increase of 3 cents per kilogramme in the export duty was announced this week. This carries the duty to 29 cents per kilogram, the highest ever recorded, and indicates the desire of the Dutch authorities to make restriction effective.

The spot price in New York on Wednesday last was 13½ cents per lb., compared with 13¼ cents per lb. a week ago and 12½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6¼d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for January to March shipment, as against 6¼d. a week ago. Stocks in London and Liverpool at the end of last week totalled 167,007 tons, against 170,541 tons a week earlier. A year ago stocks amounted to 125,344 tons.

WHOLESALE COMMODITY PRICES
UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

BØRSEN

Denmark's Commercial and Shipping Daily.
Founded in 1896.

"Børsen" is the only daily paper in Denmark for Trade, Shipping and Finance. It is the Danish newspaper to which traders are especially allied, as, at the instance of the Committee of the Merchants' Guild (Grosserer-Societetets Komite), a century-old institution constituting the official representation of the Copenhagen wholesale trade, it has for many years published the reports of the Committee's meetings and the matters dealt with there, and also, as the Committee's official organ, contains notices and communications of every kind that may be of interest and importance, not merely to the members of the Guild, but to the business world in general.

"Børsen" is the proprietor of various publications, notably the well known Danish Stock-Exchange handbooks, and Green's *Danske Fonds & Aktier*, containing complete details concerning all Danish securities—bonds and shares—of any standing.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

COMMERCE AND TRADE

Mr BALDWIN'S VICTORY

THE National Government's appeal to Caesar has been decided in a manner gratifying to the appellant. For the first time since the war, an Administration formed after one election has been confirmed in office for a second term. As we show on a later page, the Government's supporters will number 431 against 184 for the Opposition all told—a majority of 247. Government candidates, however, secured under 54 per cent. of the votes cast, against 70 per cent. of the total representation in the House of Commons. The difference between these figures is a measure of the anomaly resulting from the perpetuation of a system of "straight majority" voting in predominantly single-member constituencies, which almost invariably tends to exaggerate the parliamentary superiority of successful parties.

The fact remains, however, that a majority of those British electors who went to the poll last week endorsed the Government's claim to direct the nation's affairs for another four or five years. And both victors and vanquished may be well advised seriously to consider its implications.

Though the Government's majority has been reduced from 411 to 247, it is widely admitted that the Opposition's gains are well below the general expectation. It is clear that Labour, in particular, failed to secure a decisive share of the Liberal vote in a contest in which about one-fourth of the electorate, whose total has increased since 1931 by nearly one and a-half million, failed to go to the poll. The returns suggest, in fact, that a large proportion of the independent vote was unexercised, and that the rest was divided between Labour and National Government candidates with a slight bias in the latter's favour. The Labour Party actually obtained a higher percentage of the total vote in contested constituencies than in 1929. Its failure, however, to secure a larger share of a Liberal vote which represented nearly 24 per cent. of the total cast for all parties in the 1929 election, deprived it of many expected victories in Lancashire and in depressed areas like South Wales and Tyneside. Its most striking gains were made in London and in the coal districts of the Midlands, Yorkshire, North-

Eastern England and Central Scotland, where many electors, only a few hours earlier, had cast their vote in a grimmer ballot, in favour of a national stoppage. In the light of these results, responsible Labour Party organisers may ask whether their repeated failure to secure much more than eight million votes (exclusive of their strength in uncontested constituencies), in an electorate numbering under 29 millions in 1929 and over 31 millions to-day, is not a fundamental reflection on the electoral merits of a programme which includes the taking over of "finance, the land, trade and transport."

From the Government's point of view, the national verdict, after every qualification, may rightly be regarded as a vote of confidence. But in whom, and in what policy, has this vote of confidence been expressed? The answer is not in doubt. A majority of the electors who went to the poll last week has recorded its approval, first and foremost, of the Prime Minister, Mr Stanley Baldwin; and, secondly, of his programme of active support of the League, furtherance of domestic industrial recovery and extension of housing, education and pensions services. *Prima facie*, this is a Centre Party programme. The result of the election cannot be interpreted, in any sense, as a condonation of the errors and omissions of the Government's foreign policy up to the middle of this year, or an endorsement of its restrictive economic measures. Indeed, some of its members most closely associated with these policies in the last Cabinet lost more than the average proportion of votes in their constituencies, and in one or two cases narrowly escaped with their political lives. Still less can the result be regarded as having conferred a mandate on the Government to prosecute an active, costly and provocative policy of re-armament on the grand scale. Throughout the campaign, Conservative spokesmen, taking their cue from Mr Baldwin, laid progressively increasing emphasis not on the scope but on the limitations of their desire to increase Britain's defensive strength.

The nation, in brief, has expressed an unmistakable

corporate desire for a policy of peace, stability and moderation. Is the constitution of the new Parliament likely to be helpful, or the reverse, for this purpose? The immediate omens, at least, are not unfavourable. The size of the Government's majority should be more than ample for all legislative purposes without leaving the Cabinet, in critical divisions, at the mercy of its more extreme "Diehard" supporters. The debating strength of the Opposition has increased much more than in proportion to its total parliamentary representation; for many of its members who have returned from exile are "front bench men" of considerable ability and experience. The constructive tenets of the Council of Action for Peace and Reconstruction, again, will be represented in the House by 67 members drawn from every Party. It is through membership of such a group that the 21 Liberals who remain in the new House are likely to secure their maximum parliamentary influence.

When all is said and done, however, the history of the next four years will be determined mainly by the extent to which the Government itself succeeds in combining vigorous initiative with statesmanlike moderation in its conduct of affairs. No British statesman—not even Mr Gladstone at the height of his reputation—has ever enjoyed a greater moral ascendancy, at home and abroad, than Mr Baldwin at the present moment. So long as the Prime Minister follows his own liberal instincts, he will continue to attract support from many moderate men and women who associate his name with a sincere desire for an unambiguous policy abroad and a more vigorous attack on unemployment at home. The success of the new Government, in short, may turn on the ability of Mr Baldwin to stay the course, and on the support he receives from the members of his Cabinet.

SANCTIONS BEGIN

MONDAY, November 18, 1935, which has seen the coming into force of the Sanctions taken against Italy by the States members of the League, is a historic day. And Signor Mussolini himself has acknowledged the fact. For of the steps decided upon by the Fascist Grand Council, at the session which it held, rather melodramatically, in the depth of the previous night, was to order the inscription, upon the walls of all the municipal buildings of Italy, of a record of the world's "ignominy and iniquity" in laying economic siege to a country which is simply defending its sacred right to violate its international engagements and to knock its neighbour on the head.

The world's action is, of course, no more than a partial implementation of an obligation which was voluntarily undertaken, long ago, by all States members of the League; yet, all the same, the extent of the common action that has already been achieved is most impressive. Fifty-two States have undertaken to apply the financial measures; fifty-two to apply the arms embargo to Italy (though two of these, namely, Switzerland and Luxembourg, are applying it to Abyssinia as well); fifty have undertaken to prohibit the import of Italian goods and the export of certain goods to Italy; and forty-seven have accepted the proposals for measures of mutual support. It seems probable that these undertakings, which come into force this week, will be carried out effectively; for an ability to control the subjects' activities is one of the distinctive marks of the modern State. And the retention of this control is so vital to the modern State's existence, and so much in accord (for good or for evil) with the spirit of the age, that even those Governments that are the least enthusiastic about the action which they are now taking in fulfilment of their international obligations can hardly afford to connive at a flagrant violation of the regulations which they are laying down.

Some Governments seem to have been taken unawares by the necessity for passing special legislation in order to put their undertakings into execution, and in these countries the necessary laws have been rushed through in the last few days. The British Government, with its war-time experience of the blockade, has known in advance what practical measures would be necessary. And it is not surprising that one of its decisions has been to request certificates of origin in respect of all goods of non-Italian origin (with a few minor exceptions) consigned to the United

Kingdom from certain countries contiguous to, or readily accessible from, Italy which have not undertaken, for their own part, to impose a similar prohibition on the import of Italian goods. To this request the German Government's first move has been to reply that, in its opinion, the British demand is not covered by the existing Anglo-German commercial treaty. This, however, is perhaps unlikely to be Germany's last word on the subject; for the Germans certainly would not care to retain a free hand for trading with Italy at the price of jeopardising their trade with the United Kingdom—especially in view of their own declaration of intention not to attempt to profiteer at the sanction-taking States' expense. Moreover, apart from these strictly economic considerations, there is the question whether political friendship with the United Kingdom and the other States members of the League is not more valuable to Germany than the political goodwill of Italy. In the circumstances, it seems likely that the problem of preventing a leakage through Germany can be settled satisfactorily by discussions between Berlin and London.

The Italian counter-sanctions almost amount to an Italian co-operation with the sanction-taking countries—as though Signor Mussolini were saying to us: "In case you might falter in going through with this 'ignominy and iniquity' of refusing to trade with us, I warn you herewith that in any event I am not going to trade with you." Sanctions, in fact, differ in this point from military measures. For while it may be an effective step to meet unwelcome force by force (as the Abyssinians are meeting the Italian act of military aggression), it cannot be effective to meet an unwelcome boycott by a boycott. In threatening this, Signor Mussolini is in effect announcing his intention to join forces with his opponents. It would be as reasonable for the Emperor of Abyssinia to threaten that he will reply to the Italian invasion of his country by placing his own forces under the command of Marshal Badoglio and sharing in a triumphal march into Addis Ababa.

In fact, all Italian declarations of intention to retort in kind to our economic sanctions are to be received as good news. And it is even better news that all trade returns and bank returns and other customary economic and financial information are to be suppressed in Italy forthwith. This is a still more flagrant example of the ineptitude of the military mind in dealing with economic matters. No doubt Signor Mussolini imagines that he is baffling "the economic enemy" by leaving him in doubt about the extent of his economic reserves, whereas in reality he is simply denying the use of these reserves to himself. By drawing a veil over the state of the reserve from now onwards, Signor Mussolini is virtually wiping out the remnant of that reserve here and now. For what foreign exporter will shoulder the risk of doing business with Italy if he has no assurance that the necessary modicum of cash will still be there to pay him? This Italian financial and economic "black-out" is rather as though a cinema, which had been boycotted for displaying unauthorised films, were to retaliate upon the public by switching off all its lights and making itself look like a disused warehouse. Nor will Signor Mussolini's decision to take over the gold ornaments, wedding rings, etc., of private Italian citizens inspire much additional confidence in the breast of the foreign trader. We can only suppose that, reluctant though he may be to forgo the imports which the last remains of the gold reserve might still have purchased for him, Signor Mussolini simply cannot face the effect upon Italian moral of those dwindling figures which he would have to publish in order to make it safe for the outer world to do a little more business with him.

Signor Mussolini's co-operation, whether it be blind or unavoidable, may be of distinct assistance in making sanctions a success. But this pleasing thought must not lull us into self-complacency or betray us into the vastly mistaken belief that we ourselves have already "done our bit." The purpose of sanctions—we cannot repeat it too often—is neither to make a formal gesture nor to save our consciences, but to stop the war in East Africa at the earliest possible moment on terms that make it unmistakably clear that this Italian act of aggression has been a failure, and that the policy of aggression does not pay. The very fact that the war now has to be stopped, instead of having been averted, gives the measure of the League's

failure, so far, to function up to the full performance that we ought to be able to obtain from it. So long as the war goes on, our consciences cannot be at rest; and they will be acutely distressed so long as we ourselves are actually contributing to make the continuance of the war possible by selling to Italy some of the indispensable commodities for her military operations.

One of the main sinews of war in East Africa is the petrol which drives the Italian ships, aeroplanes and tanks and, above all, the lorries on the lines of communication. It is intolerable that any of this petrol should be supplied any longer by British companies; and it is no answer to suggest that, if we stop supplying, the Americans will step in. That is a matter for American consciences. But the Americans will never be confronted with their moral problem unless and until we have solved ours independently. British supplies of oil can be cut off; for the Iraq Petroleum Company and the Anglo-Iranian Oil Company are British concerns, and both Iran and Iraq are States-Members of the League who, like ourselves, are participating in sanctions.

We feel sure that these two fellow States-Members, as well as the Soviet Union and Roumania, would co-operate with us. And supposing that it then became evident that the American supply of oil was the life-line of the Italian army, and that, if this last supply were cut off, the campaign would come to an end in a few weeks, we cannot believe that, in these circumstances, the American Government and people would avert their minds and allow the American oil interests to reap a monopolist's profits. We believe that, in those circumstances, Congress would take legislative action in January, even if the President did not prove to possess the powers necessary for earlier executive action. It is the British Government's urgent moral duty to take the decisive steps which it can take, here and now, for bringing this vital oil situation to a head.

BRITAIN'S OVERSEAS MARKETS

THERE is much argument at the moment whether recovery is likely to continue at its present rate. In supplying an answer the importance of the rôle played by foreign trade is naturally great. In recent months both imports and exports have risen. But are there limits to expansion of trade along its present lines? Valuable light is thrown on this question by the figures of geographical distribution published quarterly by the Board of Trade.

Details of the distribution of trade in the first nine months of the year will be found on page 1035. The main feature of the figures is the continued tendency towards increased trade with the Empire. Exports to British countries showed an expansion of over £14 millions. This expansion was not confined to any one part of the Empire, although it was most marked in the case of South and West Africa, Australia and New Zealand. On the other hand, exports to all foreign countries rose by less than £9 millions, of which sales to Germany accounted for an increase of nearly £4 millions. The same tendency is noticeable in imports. With the notable exception of India and Ceylon, we bought more from almost all British countries than in 1934, but our imports from non-European foreign countries fell by £4.7 millions.

The following tables show that this tendency continued in the third quarter of the year, but to a less marked extent. British markets for our goods again expanded more rapidly than foreign markets, but we substantially increased our purchases from European countries:—

Imports from	IMPORTS (£000,000)

Total	124,087	98,499	67,225	70,774	58,917	33,979	32,434	33,661

* Including dependencies.

On the import side, the increase of £3.5 millions is mainly due to an increase of £1.4 millions in the value of wheat bought from Russia and France and to a large increase in motor spirit from the Dutch West Indies, which are included with the Netherlands. Both Holland and Denmark have sold us more dairy produce, but less bacon than a year ago; while the Northern Scandinavian countries and Russia have suffered from our reduced imports of timber. Germany is the only European country to show any considerably increased demand for our goods, and that only to the 1933 level. The expansion is chiefly in wool and woollen manufactures, cotton yarns and herrings, imports of which were drastically curtailed in 1934.

Our trade with Italy had not shown much contraction by September. Exchange difficulties explain a reduction in exports of coal and wool, but this has been partly counteracted by increased exports of non-ferrous metals. Trade with other gold standard countries shows but slight

improvement, and even in the case of Baltic and Scandinavian countries, expansion is erratic.

The next table, which shows our trade with non-European foreign countries, reveals a tendency towards stability in trading conditions, apart from our increased trade with the United States:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE

* Including dependencies.

The Argentine has suffered from European competition in our wheat market. She has sold us £1.6 million less grain than in 1934, and her sales of beef have fallen. She has shared with Uruguay and Australia, however, in the increase in our imports of wool, due in part to anticipations of higher prices. Increased imports from Bolivia consisted mainly of tin, while decreased imports from Persia and Egypt are accounted for by petroleum and cotton, respectively. Cotton imports from the United States have also fallen, but these have been more than counterbalanced by increases of £1 million in imports of oranges, and £900,000 in imports of tobacco and by some increase in machinery. On the export side the United States and Japan have also bought more machinery from us than a year ago, but other changes on the export side have been small. The United States have increased their purchases of tin and spirits. On the other hand, all the South American countries have reduced their purchases of iron and steel manufactures; Brazil has also taken less vehicles and the Argentine considerably less cotton piece-goods.

In a final table, we set out figures of our trade with Empire countries:—

TRADE WITH BRITISH COUNTRIES

With the exception of the Irish Free State, exports to all countries are well above the 1931 level, while imports are in many cases approaching pre-crisis dimensions. This year, however, there has been some improvement in trade with Ireland; imports of meat and exports of coal particularly showed an increase in the third quarter. The contraction of imports from British Malaya was due to large reductions in imports of rubber and of refined tin. We greatly increased our imports of other non-ferrous metals from other parts of the Empire (copper and aluminium from Canada and manganese from India). Australia enjoyed

an increase of £1 million in sales of wool, which more than offset a reduction in wheat, hides and lamb. The large increase in imports from the West Indies consists entirely of bananas, a far larger proportion of which were formerly bought from other West Indian islands and South American countries. Exports to Africa and Australasia have continued to expand, but trade with India, the Malay States and Hongkong has declined. In the case of exports to India, the decline affected iron and steel goods, non-ferrous metals, woollen manufactures, and, in particular, cotton piece-goods. The market for machinery and motor vehicles in South Africa, Australia and New Zealand continues to expand. There have also been increased sales of electrical goods to Australia and iron and steel manufactures to South Africa. In West Africa, on the other hand, the item which increased most in the third quarter was cotton piece-goods (£500,000).

In studying these figures, it must be remembered that, apart from any effect that Ottawa may have had, British countries were among the first to enjoy any measure of recovery, and already last year had very greatly increased their purchases abroad. It is not altogether surprising, therefore, that the expansion of these markets is beginning to slacken, together with that of countries in the sterling bloc. But trade with the United States, Germany, Holland, France and the Argentine—to take only our most important customers—is still only half that of 1929. It is devoutly to be hoped that the helpful sentiments recently broadcast to America by our Foreign Secretary will turn out to be more than pious platitudes, and that the new Government's thoughts will be directed to ways and means of loosening the bonds of trade.

THE NEW TEXTILE

WHILE American warehouses bulge with unsold cotton, the chemist has perfected yet another synthetic textile. The new fibre, technically known as staple fibre and popularised as "fibro," bids fair, with rayon, to oust the older materials from a wide range of uses. Technically, fibro is an offspring of the rayon industry. Like rayon, it is produced from wood-pulp, the processes of production being identical up to the point where viscose is forced through minute holes to form filaments. These are automatically joined to form threads in the rayon process. In the production of "fibro" they are cut into short lengths, or "staples," not unlike raw cotton in appearance, which can be spun by either cotton or woollen machinery. The new fibre was first introduced in Germany during the Great War, but it showed a tendency to crease and to shrink in water. It is only recently that progress has been made in overcoming these deficiencies, and bringing large-scale production to the commercial stage. The strength and resilience of the new fibre have now been increased, and its scope has been improved by progress in the methods of processing synthetic textile fibres.

World production of staple fibre, as estimated by the *Textile Organon*, rose from 7.2 million lbs. in 1930 to over 50 million lbs. last year. Subsequently, production has leaped ahead, and current world output is equivalent to as much as 10 per cent. of rayon production. The output of various countries in the first nine months of 1934 and 1935 is shown below:—

WORLD PRODUCTION OF STAPLE FIBRE AND RAYON
(In thousands of lbs.)

	Staple Fibre		Rayon	
	1934	1935	1934	1935
Germany	14,000	22,000	71,600	81,000
Italy	13,500	20,000	62,000	87,770
United Kingdom	2,250	4,085	64,490	82,290
Japan	1,600	4,000	110,500	154,000
France	1,175	3,250	47,500	52,700
United States	1,200	2,500	150,000	195,450
Poland	266	240	7,350	8,550
Total	33,991	56,075	513,440	661,760

Expansion has been most marked in Germany and Italy. The former country, however, in an attempt to render

herself independent of foreign textile fibres appears to have forced staple fibre into a number of uses for which it is still unsuitable. In Great Britain, the leading rayon manufacturing concern, Courtaulds, Limited, has sold small quantities of staple fibre for some years past, but mainly as a "speciality." Last year, however, the company decided to set up a demonstration spinning mill to educate Lancashire and Yorkshire spinners in the suitability of the fibre for spinning on ordinary Egyptian cotton machines with only minor alterations. In a pre-war mill, fitted with pre-war machinery, Courtaulds succeeded in commercially using staple fibre on ordinary mules and ring frames.

Despite technical improvements, however, the new material was long hampered by a high excise duty of 6d. per lb. The reduction of the duty to 3d. at the end of June, 1934, produced an immediate increase in demand, though the fibre was still 3d. per lb. dearer than best quality Egyptian raw cotton. Considerable progress, nevertheless, was made with the development of spun yarns for the dress goods trade, for pyjama cloths and for underwear fabric manufactured on circular interlock knitting machines. Some headway was also made in the spinning of long staple fibre on worsted frames, and in mixing the resulting yarn with wool in the combing stage to achieve a novelty effect in the finished yarn. Last September, the duty was abolished altogether. At once, staple fibre became a serious competitor of cotton and wool. Its competitive effect was enhanced by the price policy enforced by leading manufacturers. Quotations for spun rayon yarn from staple fibre were substantially reduced, apart from reductions in the price of the fibre itself amounting to 4½d. per lb. for the cotton length staple and 7½d. per lb. for the long wool length staple, bringing the price for all lengths down to 11d. per lb. At this level staple fibre is on a par with medium to good quality Egyptian cotton and is materially cheaper than merino and fine crossbred tops.

Demand has quickly and extensively responded to the reduction in prices. The dress goods trade is concentrating its attention on various lines of spun viscose fabric, which may give a lead to fashion for the spring. Shirting materials are being introduced for sports-wear, while the hosiery trade is sampling cotton and staple fibre mixture yarns for the manufacture of interlock underwear. The main problem confronting the British trade to-day is one of supply, but a plant capable of producing staple fibre at the rate of 20,000,000 lbs. per annum is, at present, approaching completion, and deliveries are expected to begin next February. By that time, anxiety concerning the excise duty of 6d. per lb. on filament rayon will probably have reached its height, and there is no doubt that duty-free staple fibre may to some extent displace filament rayon, at least temporarily. Output is expected to reach the rate of 20,000,000 lbs. per annum within the next eighteen months. It was rumoured recently that a further large-scale unit was to be built by Courtaulds. Although this was denied, there is reason to believe that arrangements will shortly be made to increase the output capacity of staple fibre above 20,000,000 lbs. per annum in the near future.

Spun viscose fabrics, whether woven or knitted, have the same charm of appearance which filament rayon possesses, and, in addition, have a warmth and fullness not normally obtainable with filament yarns. Fashion will doubtless have its say in balancing the consumption between filament and short staple rayon, though the new fibre is bound to retard the development of filament rayon to some extent. The new fibre, unlike filament rayon, helps the spinning trade and not merely the weaving and knitting trades. There is little doubt that a growing proportion of the consumption of Egyptian and other long staple cotton will be displaced by staple fibre within the next few years. In the woollen trade the position is rather different. There the fibre is still mainly used for blending, and the novelty effects obtainable by its use may broaden the field for fancy worsted costume materials, dress materials and suitings. The whole textile world, however, is watching the staple fibre position very closely, and the day when synthetic textiles will tend to oust the natural fibres from many uses may be much nearer than is generally believed.

THE ELECTORAL VOTE

THE General Election held on Thursday of last week is not quite finished as we go to press. One result, that for the three seats of the Scottish Universities, is still to be declared, and a petition for a second poll is being presented to the Scottish courts in respect of the Kelvingrove division of Glasgow. Assuming, however, that the Kelvingrove result stands and that the Scottish Universities return members of the same political complexion as before, the new Parliament will be constituted as follows:—

<i>Government:</i>	
Conservative	387
Liberal National	33
National Labour	8
National	3
	—431
<i>Opposition:</i>	
Labour	154
Liberal	21
I.L.P.	4
Independent	4
Communist	1
	—184

Government majority

Figures such as these might be taken by anybody unfamiliar with the British electoral system as evidence of overwhelming popular support for the Government. In fact, the Government secured only a little more than half the votes cast, as is shown by the following tabulation (which omits the Scottish Universities):—

	1929		1931		1935	
	No.	%	No.	%	No.	%
Conservative or Natl.	8,664,243	38.2	12,946,862	59.8	11,772,072	53.8
Labour	8,362,594	36.8	6,648,023	30.7	8,325,260	38.9
Liberal	5,300,947	23.7	1,641,240	7.6	1,443,112	6.6
Others	311,333	1.3	421,181	1.9	537,268	2.6
Total	22,639,117	100.0	21,657,306	100.0	21,877,712	100.0

Judged by total votes, the Government has the support of only 53.8 per cent. of the electorate, and if seats in the House of Commons were distributed in proportion to votes cast, the Government would have a majority of only 47—exactly 200 less than the actual figure. The total number of votes cast was slightly less than in 1929, though larger than in 1931. These variations are mainly due to the number of unopposed returns; the average number of votes per contested seat was 37,235 in 1929, 39,520 in 1931 and 38,248 in 1935. The Labour Party's vote fell short by some 35,000 of the record figure of 1929. But its proportion to the total vote actually increased.

The distortion to which the electoral system gives rise is demonstrated by the following table, which shows for each party the number of votes cast per seat won by it in the last three elections:—

	1929	1931	1935
Conservative or National	33,987	28,277	27,505
Labour	29,029	144,525	54,060
Liberal	91,084	52,980	68,720

On this occasion, however, there is no warrant for ascribing this result to the prevalence of three-cornered contests. Only 55 members (31 National, 15 Labour, 7 Liberal and 2 Independents) hold their seats by a minority of the total votes cast.

The returns are further analysed in the large table printed on the next page. In this table the votes cast for the three large parties are shown by geographical divisions, England being divided into nine separate economic regions. In this table, Independent candidates are ignored, and the University constituencies are not included. An examination of this table will reveal several interesting facts. The first is the comparative uniformity of the result. The Conservative-National Party is the largest of the three in nine out of the ten regions. In almost every region Labour has regained its 1929 percentage, the exceptions being the Midlands, East Anglia, and Scotland. But the divergences are no less interesting than the similarities. In the Midlands, for example, the Government has managed to retain more than three-quarters of the added support it received in 1931, whereas in Mid-East England (the West Riding, Notts and Derby) it has retained only half. The shrinkage of the Liberal vote has helped the Conservatives

almost everywhere. The chief exception appears to be South-East England, where large numbers of Liberals seem to have abstained at the last two elections, and the Labour vote, though only increasing moderately in the absolute figures, has increased very considerably its proportion of the total vote. In Wales, Labour appears to have attracted slightly more ex-Liberal votes than the Government. Elsewhere the Labour proportion of the total poll has risen, in comparison with 1929, only by very small fractions.

ELECTORAL VOTE BY REGIONS

Region		Conservative or National		Labour		Liberal	
		Votes	%	Votes	%	Votes	%
London	1929	754,242	39.9	784,646	41.5	353,737	18.6
	1931	1,147,244	63.7	581,032	32.3	77,554	4.0
	1935	922,978	53.0	750,380	43.1	66,664	3.9
S.E. England	1929	1,888,979	46.5	1,125,472	27.6	1,058,216	25.9
	1931	1,972,680	65.3	927,755	30.7	119,990	4.0
	1935	1,714,825	52.1	1,380,022	41.9	192,812	6.0
S.W. England	1929	603,424	40.2	376,888	25.1	510,601	34.7
	1931	876,770	62.2	303,344	21.5	229,710	16.3
	1935	775,314	55.8	381,056	27.4	234,512	16.8
E. Anglia	1929	273,978	38.1	220,810	30.6	227,651	31.3
	1931	429,712	63.9	190,364	29.2	31,771	4.9
	1935	400,009	59.7	232,676	34.7	36,656	5.6
Midlands	1929	887,231	39.3	900,511	39.9	467,188	20.8
	1931	1,343,441	62.5	678,420	31.5	132,731	6.0
	1935	1,202,458	57.3	810,914	38.6	82,113	4.1
Mid-East England	1929	980,473	32.7	1,392,491	46.4	625,559	20.9
	1931	1,719,593	63.7	834,190	30.9	153,065	5.4
	1935	1,426,097	48.0	1,392,442	46.9	154,147	5.1
N.E. England	1929	424,901	31.4	595,989	44.0	332,291	24.6
	1931	680,734	52.4	519,849	40.0	100,794	7.6
	1935	672,674	48.0	642,458	45.9	96,386	6.1
N.W. England	1929	1,458,235	39.7	1,450,632	39.5	764,569	20.8
	1931	2,201,683	62.9	1,136,026	32.5	209,475	4.6
	1935	1,936,403	54.1	1,439,336	40.2	206,941	5.7
Scotland	1929	790,691	37.1	834,267	43.6	402,605	19.3
	1931	1,206,965	58.0	696,248	33.5	178,511	8.5
	1935	1,136,280	52.4	862,911	39.8	174,235	7.8
Wales	1929	285,055	22.2*	573,544	44.1*	436,901	33.7*
	1931	307,297	28.7*	479,527	44.7*	284,125	26.6*
	1935	295,527	34.8*	395,828	46.6*	157,091	18.6*

* The comparability of the Welsh figures is affected by the large number of unopposed returns in 1935. Taking only the figures for those seats which were contested at each election, the percentages would be: National, 1929, 26.5; 1931, 34.4; 1935, 34.8. Labour, 1929, 27.5; 1931, 38.0; 1935, 46.6. Liberal, 1929, 36.0; 1931, 27.6; 1935, 18.6.

Composition of the Regions: S.E. England—Beds, Berks, Bucks, Essex, Hants, Herts, Kent, Middlesex, Oxon, Surrey, Sussex. S.W. England—Cornwall, Devon, Dorset, Gloucs., Somerset, Wilts. Midlands—Hereford, Leicester, Northants, Salop, Staffs, Warwick, Worcester. E. Anglia—Cambs, Hunts, Norfolk, Suffolk, Lincs (Holland-with-Boston and Rutland-with-Stamford only). Mid-East England—Derby, Lincs (except Holland-with-Boston and Rutland-with-Stamford), Notts, East Riding, West Riding. N.E. England—Durham, Northumberland, North Riding. N.W. England—Cheshire, Cumberland, Lancashire, Westmorland.

The general conclusion to be drawn from the figures would seem to be that Labour has largely regained its voting strength of 1929. But it is faced with a consolidation of the Right, whose political basis is broader and strength much greater than that of the Conservative Party alone in 1929. Labour cannot regain its Parliamentary position of 1929 merely by winning back the voters it had in that year. To get a majority it must convert many hundreds of thousands of voters who have never voted Labour before.

WHAT PRICE COLONIES?

Our recent articles on the weakness of the economic, as distinct from the strategic, case for colonial expansion have inspired a reader to peruse the "Economist's" file of future issues. The following article is the result of his research in the fourth dimension:—

THE Great War of 1914 (wrote the *Economist* of February 29, 1961) was a direct outcome of the World Pact of 1945, which abolished war and redistributed territory. This Pact, everywhere hailed with enthusiasm, had already brought bitter disillusionment by the end of the 'forties. For the first time it was universally realised that coveted areas of the world had derived their value solely from considerations of strategy and as sources of man power. With these credit items eliminated from the balance sheet the debit accounts for administration, maintenance, grants, direct and indirect subsidies began to loom large and, with more refined accounting, to take on a formidable aspect.

Public mutterings first found official vent in a speech by

the Italian leader demanding that Austria should take over the Trentino. What, he asked, had Italy gained from her ten-year campaign in Abyssinia? The right to establish and maintain universities at Adowa, Gondar, Harrar, Makalle and Direddawa. The Sicilian peasant sweated in the fields while the Ethiopian undergraduate played football. For the moment, Italy would carry the burden which civilisation had placed upon her, but she expected and demanded to be relieved elsewhere. It was not the duty of the men from the warm South to clear desolate mountain passes in mid-winter while other people lounged in cafés. Let the men from the North with the ice-blue eyes clear away their own snow. Moreover, they (the Italians) could no longer endure the affliction of training guttural voices to utter the musical Italian tongue: the result was painful to the Latin ear. Italy demanded the sacred right to withdraw within her own boundaries.

The Austrian Premier sharply retorted that this was the beginning of a conspiracy to restore the old Habsburg Empire. Austria would not assume this polyglot task. Vienna could not, and would not, subsidise the production of films in ten languages. The controversy quickly became general. The venerable German statesman, Baron Hitler, intervened with a challenging speech. For fourteen years the German nation had poured out its treasure on desert African wastes and impenetrable jungle. This intolerable burden had turned a proud people into a race of helots. It was enough. *Los mit den Kolonien*. The reply of Paris was swift and uncompromising. Relinquishing its task of saving the franc, the Government proclaimed with one voice that any attempt to dump territory on France would be regarded as a hostile act. France was the torch-bearer of civilisation, but there was a limit to the cost of illumination. The French taxpayer had just spent half a milliard francs on the restoration of Strasbourg Cathedral, and the Reich had not offered to contribute a sou. Let the gentlemen beyond the Rhine look to it; otherwise they would find themselves with Alsace-Lorraine on their hands again.

In the British House of Commons the matter was raised by the member for Bournemouth. Public opinion was stirred to its depths by the disclosure that, owing to excessive demands on the national hospitality by representatives from overseas, Englishmen could no longer secure access to the Eton and Harrow match. The City Fathers were being eaten out of house, home and hall. The Scots, the honourable member supposed, we should always have with us—(laughter)—but we could not stand treat to a quarter of the world. (Cheers.) Mr R. Churchill, Leader of the Opposition, declared that the trouble was due entirely to the crazy Imperialist ambitions of the Labour Government. Five years ago they could still have obtained a price for the West Indian and Central American possessions; now they could not dispose of them as a gift. With all geography and history on their side, they could not induce the Irish Free State to take over Northern Ireland and bring sorely needed relief to the Consolidated Fund. They had failed to reduce the Dominions and Colonial Office votes by more than 25 per cent. during the past quinquennium. Here was further proof, if it were needed, that Labour was not fit to govern.

In the growing exacerbation of world opinion a crisis was precipitated by the Roumanian authorities, who tore up the frontier posts in Bessarabia overnight and carried them back several hundred miles. The marooned inhabitants were informed that they could look to Russia in the future. The Soviet appealed to the League on the ground that the Dniester bridges alone would necessitate a new Five Year Plan.

This incident was the start of what *The Times* (in disregard of the lexicographic wishes of the veteran member for Oxford University) described as a mad competitive race for deterritorialisation. All over the world boundary disputes occurred and the map became littered with patches of no-man's land. In one unpleasant incident an attempt was made almost by physical force to thrust the deeds of a tropical empire into the hands of the Swedish ambassador. The Government of the United States, appalled by the unemployment which had spread from the derelict Hollywood film industry, abandoned to Mexico the whole stretch of Pacific coast up to Monterey Bay, alleging that by tradition the tract was half savage and was merely reverting to its natural and spiritual home. The Japanese

demanding that the British, along with others, should take their legitimate share in loans to China. In a communiqué the Japanese War Office roundly asserted that recent British policy had been actuated solely by the desire to render the Council of Foreign Bondholders superfluous. By the end of 1959 war was inevitable. And with the derisory offer by the Finnish Government of 1,000 marks

as a contribution to a school of tropical medicine, hostilities began.

With the resort to arms, areas again acquired a strategic value. There was a last-minute scramble to withdraw deterritorialisation claims. . . . But by that time it was too late.

NOTES OF THE WEEK

The New Cabinet.—Though no official announcement of the composition of the new Cabinet has yet been made, expectations of drastic changes in the Cabinet seem likely to be unfulfilled. It is indeed most unlikely that Mr Baldwin will be personally anxious to shift the centre of gravity of his Administration markedly to the Right. Mr Eden, therefore, may remain Minister for League Affairs, at any rate for the time, whatever his own feelings in the matter may be. Mr MacDonald and his son, provided that safe seats can be found for them, will also be able to retain their present places as Lord President of the Council and Colonial Secretary respectively. The defence Ministries present a special difficulty. Sir Philip Cunliffe-Lister, now Air Minister, and Sir Bolton Eyres Monsell, First Lord of the Admiralty, are to be promoted to the House of Lords. The former, however, will probably, and the latter will possibly, retain his present office; and in that case, since Lord Halifax is Minister for War, all three Defence Ministers would be in the Lords. The number of Secretaries of State in the Lords would also exceed the traditional two. It is believed, however, that Lord Halifax is anxious to leave the War Office, though an effort will certainly be made to keep him within the Cabinet. This leaves the War Office vacant; and, until it is filled, rumour may continue to play with the name of Mr Winston Churchill. The probabilities seem, however, to be against Mr Churchill's joining the Cabinet at this stage. Indeed, his inclusion would, rightly or wrongly, without doubt be regarded both at home and abroad as an indication that the Government was likely to be more concerned with rearmament than with the League. Generally speaking, the British electorate is less interested in the personal musical chairs than in the preservation of the Right-Centre character of the Government. A Diehard invasion would certainly leave the complexion of the Cabinet seriously at variance with the character of last week's vote.

Election Casualties and Come-backs.—The personal hazard of the election has belied much confident prophecy. Some are gone, and some are returned. The most dramatic casualties are Mr Ramsay MacDonald at Seaham and his son at Bassetlaw. Their failure was not surprising. Feeling in the Labour Party naturally ran most bitterly against the "National Labour" wing of the Government; and Mr Ramsay MacDonald's decision, whether we call it courage or bravado, to stand in his old mining constituency, almost inevitably invited defeat. Among the more unexpected failures, the loss to Parliament of Sir Herbert Samuel, Mr Isaac Foot and Dr. Addison will be widely regretted by men of all parties. In particular, debates in the House of Commons will suffer notably from the absence of Sir Herbert Samuel's knowledge, agility and wit. The defeat of Mr John Wilmot in East Fulham will also be a marked loss to the Labour Party. Of those who have returned, Sir John Simon and Mr Elliot, on the Government side, only came home by the skin of their teeth. Indeed, the unusual incidents which accompanied the count in the latter's constituency are still under investigation. Mr J. H. Thomas, on the other hand, has shown that, whatsoever Party may win, he will be a Member for Derby. The most important personal change in the new House is, of course, the return of a fair proportion of Labour's 1929-31 front bench. Mr Herbert Morrison, the organiser of victory in London, is back with enhanced prestige; as well as Mr Clynes of the

old guard; Mr Alexander, of the Co-operatives; Dr. Hugh Dalton, who should shine in debates on foreign affairs; Mr Lees-Smith, Mr Pethick Lawrence and several others. The return of these experienced parliamentarians will restore life and reality to the House. Lastly we may mention Mr A. P. Herbert, whose election as an independent member for Oxford University was accompanied by the portentous loss of an official Conservative candidate's deposit.

The Miners' Vote.—The miners' vote was announced this week as showing an enormous majority in favour of taking strike action, if necessary, in support of their wage claim. The figures were: 409,311 for a strike, and 29,215 against; a 93 per cent. majority, the biggest in a vote of this kind known in the union's history. The National Executive of the Mineworkers' Federation subsequently decided to inform the Prime Minister and request an interview with him. There is no doubt that the men's leaders, though resolute, are most anxious to avoid a strike, if something can be gained without it. This should be the Government's opportunity. Indeed a strong Conservative Government, recently elected, is in a peculiarly fortunate position to carry through those long overdue reforms in the coal industry, of whose necessity neither Mr Baldwin nor Mr Runciman can possibly now have any doubt. If the unification of royalties, the organisation of centralised selling, the enforcement of compulsory amalgamation and the restoration of national negotiations could be promised by a specific date, it should not be impossible—as the Lancashire owners' offer of concessions shows—somehow to capitalise in advance the benefits that should flow from these measures. And if this should prove possible, the miners would almost certainly be willing to hold their hand, even though their whole wage claim were not conceded. For the Government in these circumstances to permit a national strike to impede the whole recovery movement would indeed be national folly.

Rumblings in France.—The difficulty of keeping the Budget balanced in face of falling revenues and public discontent with the July "cuts" has been for some time tending to weaken the exchange position of the franc. This week signs of disagreement between M. Herriot and M. Laval over the Fascist "leagues" have further disturbed a delicate situation. M. Herriot, having persuaded his restive Radical-Socialists not to press for a restoration of the cuts, naturally wants something in return. He would like a much more vigorous effort to curb the dubious activities of the Fascist "leagues." But M. Laval seems a little shy of accepting the task. Meanwhile, public feeling has been influenced by a street brawl at Limoges on Saturday, in which Fascists are alleged to have opened fire on their opponents. Next Thursday the Chamber meets; and the Socialists are likely to propose a motion condemning the "criminal plots of seditious leagues." Radical-Socialist support of such a motion might precipitate acute political crisis. Fears of this have evidently been at work this week; for the franc has weakened on the exchange market and the rentes have been falling. The intermittent outward trickle of gold became a flood in the last few days and led to the second rise in Bank rate in a fortnight. It is not generally realised that if the "Extraordinary" loan Budget and the ordinary Budget deficit

are added together, total French Government expenditure financed out of loans is now running at the rate of 12,000 million francs, or about £160,000,000 a year. No wonder the decline in production has ceased in the last two months! A recovery in production, however, financed by loan expenditure on this scale, must inevitably make the present gold parity of the franc even more untenable. Yet the political parties are still nominally opposed to devaluation. The situation accordingly has some ominous features. All who regard the preservation of French democracy as of the utmost importance for Europe will consequently join in the hope that a solution of her fundamental economic crisis may soon be found.

* * *

Events in North China.—The Japanese scheme of fathoming unwillingly autonomous offspring upon an indignant China continues more or less according to plan. Last week tension was high in Shanghai, after the shooting of a Japanese sailor. This week, Shanghai has receded into the background and Northern China is again in the limelight. On November 18th it was reported by correspondents in Tokyo that an ultimatum had been delivered to the authorities of Northern China. It was expected that this week would see the formation of the North China Anti-Communist Self-governing Council to embrace the provinces of Hopei, Shantung, Shansi, Chahar and Suiyan, and the towns of Peiping and Tientsin. According to precedent the Japanese Foreign Office denied any Japanese activity in support of a purely Chinese revolt against an oppressive Government, and viewed the movement benignly. According to precedent the Japanese army assisted the Chinese to make up their minds by massing troops at Shanhaikwan and along the Great Wall, by protesting against movements of the Central Government's troops as a breach of that elastic document the Tangku Truce, and by sending Major-General Doihara to exert pressure on General Sung Cheh-yuan, former Governor of Chahar. And according to precedent Nanking expected that a formula could be devised. The first official admission of the transactions came from the Governor of Chahar, General Hsiao Cheng-ying, who explained that, according to General Doihara, the Japanese would not interfere in the internal affairs of North China, but that all Chinese organs in North China were to have Japanese advisers. For the moment these contradictory proposals seem to be hanging fire. The negotiations have been taken out of Doihara's hands and are being conducted at Nanking by General Chiang Kai-Shek and the Japanese Ambassador, Mr Ariyoshi. But though the Central Government has been consolidating its position since the Manchurian affair set the standard for Japan's conduct in China, it is too much to hope for a more favourable outcome to the Nanking negotiations than some arrangement which will save the face of the Central Government, and at the same time give Japan what she demands.

* * *

Japan's Intentions.—What construction can be placed on Japan's policy in North China in the light of this week's events? If her "autonomous" plans have been merely postponed, and not relinquished, China is to be eventually deprived of three provinces inside the Great Wall, as well as two more provinces in Inner Mongolia. The intra-mural provinces in question include Hopei (formerly Chihli), which contains the cities of Peiping (Peking) and Tientsin, and the equally populous and strategically important peninsular province of Shantung, as well as the highland province of Shansi, which links the other two with Inner Mongolia. The two inner Mongolian provinces are Chahar and Suiyan; and if these fall under Japanese control, the Japanese wedge between China and the Soviet Union will have been driven home almost completely. In the light of this week's events, it would appear that the Japanese scheme is to establish an "autonomous" state of North China which will still nominally remain under the political sovereignty of the Nanking Government, but which will be independent economically and financially. The professedly "face-saving" political link will, of course, be a sham if the new state is guided by Japanese advisers. Thus the

"political autonomy" of North China will be of the same order as the "political independence" of "Manchukuo." Both states alike will be managed by Japanese authorities, according to Japanese interests, on the strength of the Japanese armed forces on the Continent. Meanwhile, the immediate task on which the Nanking Government is concentrating all its energies is the effective establishment of its own authority in the Yangtse Valley. And in this great undertaking President Chiang has lately scored two notable successes: he has dispersed the Communists, and he has extended his administration into Szechuan—the great secluded province of fifty or seventy million inhabitants in the upper basin of the Yangtse. If the Japanese were to attempt to evict the President's Government from any part of the Yangtse Valley, then no doubt he would fight, since the alternative would be the complete extinction of all future hope, as well as all present reality, of an independent Chinese national state. But the Japanese are not yet on the Yangtse, and the huge inland fastness of Szechuan is far beyond the reach of even their long arm. In these circumstances, President Chiang may conceivably decide neither to resist nor to accept any new Japanese *fait accompli* in the North. He will calculate that in North China, as well as in Manchuria, the Japanese domination will do for the local Chinese populations what they have failed to do for themselves. By its grinding pressure, it will weld them together into a political unity. Sooner or later, Chinese history will assuredly repeat itself; and probably the Japanese, in their heart of hearts, are no less convinced of this than are their present Chinese victims.

* * *

Britain and Egypt.—The regrettable clashes between Egyptian students and the police, which continued, with their toll of casualties, up to the end of last week, have a direct bearing on the question of Anglo-Egyptian relations. It now appears that the British High Commissioner's "advice" against the re-establishment of the Egyptian Constitution of 1923 was in effect a veto, and was interpreted as such by all parties concerned, including both the Wafd and Nessim Pasha. If this version is really correct, the British Government's action is difficult to defend. It is one thing to give advice when asked, and to give it with an eye to obtaining a genuinely representative Egyptian Government with which to negotiate. It is quite another thing to impose a veto in a sphere in which we deliberately recognised Egypt's independence as far back as 1922. If, in addition to the four reserved points, we now also reserve the question of the Egyptian constitution, what does this so-called Egyptian independence amount to? Why one measure for Egypt and another for Iraq? Since we sponsored Iraq's application for admission to membership in the League of Nations, why have we persistently deprecated an Egyptian candidature? The Wafd are now proposing to appeal to the League; and it will profit us nothing that, as a group of private citizens of a non-member State, they may have no juridical *locus standi*. The appeal will be more, rather than less, effective if it proves impossible for it to be officially received. Today the whole world is watching to see whether the British Government's new orientation in international affairs is sincere. We ourselves know that the British Government's present policy towards the League is a response to the demands of an overwhelming majority of the British people which is profoundly sincere in its support of the new international order. The same majority which insists that the League principles shall be upheld in the Italo-Abyssinian dispute will also insist that we shall deal by Egypt on the same principles that we ask Italy to observe in dealing with Abyssinia. Hard pressed though Sir Samuel Hoare may be, the election is over and he still has Mr Eden as a partner. He cannot plead lack of time to give to this urgent Egyptian problem.

* * *

Italy Swaps Horses.—The recall of Marshal de Bono is assuredly good news, whichever way we interpret it. We feel no scruple of unkindness in rejoicing over it; for if it is good for the League and Abyssinia it must be even better for the Marshal himself, who has gained his baton and

escaped the crash. There are, of course, two possible interpretations. Either de Bono has not done so well as the Italian communiqués have made out. Or else Signor Mussolini could not afford to let him do too well, in view of the general situation of which the Duce has to take account. On the first of the two hypotheses, we have to infer that the Italians have been suffering reverses, or have reason to expect them, as a consequence of mistakes which de Bono has already committed—the mistake, for instance, of allowing a gap to appear in his front, on the Tembien sector, by extending his left wing to Makalle. On the whole, it seems more likely that the Italian communiqués have substantially told the truth, and that de Bono's advance has been as safe, and as bloodless, as it appears to have been on the face of it. In fact, it looks as though de Bono had determined to use to the full his one great point of superiority over the Abyssinians—his command of the modern mechanical aids to warfare. It is also possible that he might have a fair prospect of eventually conquering the whole of Abyssinia if he could call to an unlimited extent upon the economic resources that he is using—above all, upon the time which is money and upon the petrol which only money can buy. How he is to be kept supplied with these essential commodities is not a problem for the commander on the spot. It is Signor Mussolini's problem in Rome. And if de Bono has told him that, without unlimited time and petrol, he cannot carry out his orders with reasonable safety, that would be enough to explain why de Bono has had to go. But why has Badoglio—a gifted soldier who is reputed to take a pessimistic view of Italy's East African military prospects—allowed his own head to be thrust into the noose? Did he report, after his recent visit of inspection to the Tigre front, that de Bono's strategy could not finish the war before next spring's rains? Did he hope that this report would induce Signor Mussolini to make peace? And has the Duce taken his revenge by commanding the critic to do the job himself?

* * *

Canadian-American Trade Treaty.—The text of the reciprocal trade agreement between Canada and the United States was issued at the week-end, and was found to contain few surprises. The concessions which Canada makes to the United States are, in brief, those of the most-favoured-nation clause. American goods are to pay the "intermediate" rates of duty—i.e. the lowest other than the British preferential rate—and they are to enjoy the benefit of any lower rates which Canada has granted, or may grant in the future, to non-British nations. In return, the American tariff on 15 manufactured products is lowered, the most important being leather, acetic acid and whisky. But concessions on manufactures are of comparatively little use to Canada, though the reduction in the whisky duty will be of assistance in clearing off the heavy stocks of "American-type" whisky remaining in Canada since Prohibition days. Agricultural concessions are what Mr Mackenzie King wanted and Mr Roosevelt found it hardest to give. A compromise was reached by lowering the American duties on cattle, cream, seed potatoes, and lumber and sawed timber of the Douglas fir and western hemlock. But the reduced duties are to apply only to specified quotas of these commodities, and in the case of cattle and cream at least, the quotas are insignificant compared with the total American consumption. Both the Prime Minister and the President are to be congratulated upon this agreement, but there seems to be little occasion for converting congratulation into loud hosannas. The *New York Times* is doubtless correct when it says that the treaty is "the greatest single step toward the reduction of tariff barriers and away from economic nationalism that has been taken anywhere since the onset of the depression." That, however, is more a reflection on the puny results of other efforts than praise for the present agreement. A few of the supererogatory economic armaments of the last few years are dismantled. But the concessions affect only a fraction of Canadian-American trade. If this is all that can be done in a case where the circumstances are almost uniquely favourable to freer trade, the signature of the agreement in itself affords slight ground for renewed hope of progress in the rest of the world.

Philippine Independence.—In pursuance of the Tydings-McDuffie Independence Act, which was passed by the Congress at Washington last year, President Roosevelt signed, on November 14th, a proclamation providing for the independence of the Philippines Commonwealth, and the new constitution came into force next day. This is the culmination of a long course of political agitation in the Philippines and legislative activity in the United States. On the American side of the Pacific, however, the historic event passed off with little notice; while in the minds of the Filipinos this official realisation of their dreams must have been received with mixed feelings. True, the islanders immediately acquire a large measure of autonomy. But this autonomy, during the first ten years, falls short of that complete command of their own affairs which is exercised by the self-governing dominions of the British Crown. On the other side, the Filipinos have to pay the economic price of political independence forthwith; for exports to the United States of sugar, copra and hemp are henceforward to be subject to quotas and export taxes. A more formidable prospect awaits the Filipinos at the close of the ten-year period. For when the completion of this decennium brings them their full political enfranchisement they may find themselves saddled with the entire burden of national defence. The opening of this period coincides with the threat of a fresh Japanese forward movement in Northern China. How much nearer to the Philippines may the Japanese front line in Eastern Asia be in November, 1945? Situated, as they are, midway between Japan and Singapore and between Hongkong and Australia, the Philippines lie at the very storm-centre of the Pacific. Can they escape political shipwreck if they are really left quite to their own resources ten years from now? That is a question which can only be answered in Tokyo.

* * *

The N.F.U. and Agricultural Policy.—When framing his policy during the next few years, the Minister of Agriculture will have the advantage of knowing exactly what is expected of him by the National Farmers' Union. For that influential body has chosen the present month to publish a statement of its views on current agricultural problems.* Although disapproving of the Ottawa Agreements, which allowed the importation of agricultural produce from the Dominions free of duty, the Union is of opinion that the Government's policy during the past few years, as expressed in the Horticultural Products Act, the Wheat Act and the Agricultural Marketing Schemes, has been on sound lines. But its intention is to urge the Government to more vigorous restrictionism during the lifetime of the present Parliament. A chart in the appendix to the pamphlet illustrates the fantastic growth of the milk "surplus" from 16 per cent. of the total contract sales in October, 1933, to 46 per cent. in June, 1935. The suggested solution is the imposition of a levy on imported milk products, to maintain "reasonable price levels for milk which goes into manufacture"—in other words, to encourage a further extension of production by raising the price. Since the production of sugar beet has "proved of inestimable value to agriculture," the Union considers that provision should be made for its continued expansion—though at what cost to the Exchequer we do not know. For poultry and eggs "a more vigorous and effective policy" is called for, although this branch of agriculture has been making steady progress, without Government assistance, ever since the war. But the N.F.U.'s crowning achievement is its policy for the livestock industry. Here the Government is merely asked to guarantee a standard price for all livestock intended for the meat market, and to raise the necessary subsidy by a levy on all imported meat and livestock.

* "Agriculture—the Home Market and National Security." The National Farmers' Union. 40 pages. 1s.

B R I T A N N I C
ASSURANCE COMPANY LIMITED
(Established 1866)

Annual Income : : : : £5,900,000
Funds : : : : £25,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

And lest this policy should have "some repercussion on retail prices," the Government is further invited to restrict importation quantitatively, in order "to keep a bottom in the market and so avoid the necessity of too high a levy"! This, we venture to suggest with all due respect, is precisely the type of policy calculated to drive the Minister of Agriculture to Bedlam and the Exchequer to bankruptcy.

British Industrial Production.—There has been little evidence of the usual seasonal decline in industrial activity last summer. The official index of industrial production in July-September, published in this week's *Board of Trade Journal*, shows a decline of only 0.6 per cent. as compared with the first quarter, and a rise of 7.4 per cent. on the corresponding period a year ago:—

INDEX OF PRODUCTION. (1930=100)					
Group	1934		1935		
	Sept. Quarter	Dec. Quarter	March Quarter	June Quarter	Sept. Quarter
1. Mines and quarries	84.4	94.7	95.5	87.4	85.8
2. Iron and steel	110.6	114.4	121.9	123.2	124.1
3. Non-ferrous metals	127.5	145.4	142.2	138.4	136.6
4. Engineering and shipbuilding	92.5	102.4	105.7	103.6	102.4
5. Building materials and building	143.6	138.1	138.0	151.4	155.6
6. Textiles	107.1	116.7	116.0	116.8	113.6
7. Chemicals, oils, etc.	102.4	105.0	109.3	108.8	109.0
8. Leather and boots and shoes	96.2	107.1	116.8	115.2	109.7
9. Food, drink and tobacco	101.3	107.2	98.2	107.3	108.4
10. Gas and electricity	(a)	(a)	(a)	(a)	(a)
Total of manufacturing industries (2-10)†	106.3	114.7	115.9	115.4	114.9
Total of all groups (1-10)†	103.2	111.9	113.1	111.5	110.8

† Includes also various industries not specified above. (a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

Each of the group indices for the third quarter of 1935 shows an improvement compared with the corresponding quarter a year ago. Expansion was most marked in the case of leather and boots and shoes (+ 14 per cent.), iron and steel (+ 12 per cent.), engineering and shipbuilding (+ 11 per cent.) and building materials and building (8½ per cent.). The indices for iron and steel, building materials and building, chemicals, oils, etc., and food, drink and tobacco rose further between the second and third quarters of 1935, but the other component series showed a slight decline. The latest evidence of the state of trade indicates that recovery has made further progress since September.

Unemployment in France.—Comparisons of France's economic fortunes with those of other countries should not be based on the official French figures of unemployment. According to these official figures (Statistique Générale de France) unemployment has moved as follows:

Monthly average :—	Index of	
	Unemployed receiving benefit (1930 = 100)	Employment (1930 = 100)
1931	55,000	92.5
1932	273,000	80.7
1933	276,000	79.1
1934	342,000	76.9
September, 1934	323,000	76.2
September, 1935	374,000	74.6

But these figures, a correspondent points out, give a most incomplete picture of the real unemployment position. They only cover those unemployed who receive benefit. Many unemployed do not apply for this benefit on account of the social stigma attached to it; while another large section, particularly of foreign workers, are excluded from benefit. Moreover, no account is taken in the statistics of short-time work. A nearer approximation to the truth is probably given by the calculations put forward by M. Fouquet-Lapage in a speech to the Paris Chamber of Commerce, which put the number of wholly unemployed in March, 1935, at 650,000, and of those on short-time (working less than 40 hours a week) at about 1,200,000. The official figure for that period was only 484,000 unemployed. In 1932 there were still 1,500,000 foreign workmen employed in France; now there are probably only about 850,000. If the number of those who have been repatriated is added to the unemployment figures, it follows that the depression in France has deprived over 1,000,000

persons of work. Two distinct types of measures are being adopted to combat unemployment. First, negative measures are being taken to "spread" the available work. Foreign workers have been repatriated; attempts have been made to prevent "double earnings"; and the Government has attempted to promote reductions in hours of work. As a result of the opposition of the employers, however, no legislation has as yet been passed regulating hours of work. More important are the positive measures taken to increase the total amount of employment available. For some months the Government has been elaborating a large programme of "work creation," including big schemes of public works. According to the latest announcements the following are the types of work schemes suggested: development of the road system, in particular the building of large, modern motor roads; construction of harbours, dykes and dams; afforestation; and preparation for the world exhibition of 1937. According to the Minister of Labour's estimates, from 50,000 to 60,000 additional workers are now employed on these schemes. It has also been found that, despite serious unemployment among unskilled industrial workers, there is a shortage of agricultural workers and of skilled industrial workers. Attempts are consequently being made to train skilled and agricultural workers.

Overseas Trade in October.—Although imports and exports of many leading commodities showed an increase in October as compared with a year earlier, the following tables show certain important exceptions, more especially on the import side:—

RETAINED IMPORTS Month of October				
	1933	1934	1935	
Wheat	10,117	8,132	9,840	'000 cwt.
Beef and veal	926	953	966	'000 cwt.
Mutton and lamb	923	148	88	'000 cwt.
Sugar (unrefined)*	2,924	1,931	3,914	'000 cwt.
Wood and timber, sawn soft-wood	259	388	384	'000 tons
Planned or dressed*	98	100	100	'000 loads
Other than planned or dressed*	714	700	733	'000 cwt.
Raw cotton	1,017	910	1,320	'000 cwt.
Sheep's and lambs' wool	176	151	169	'000 cwt.
Flax, hemp and jute*	506	758	202	'000 lbs.
Crude petroleum	23,143	25,513	14,203	'000 tons
Hides, wet and dry	28,509	29,373	45,127	'000 galls.
Wood pulp	197	98	189	'000 tons
Rubber	170	96	232	'000 tons
Unwrought copper*	80	427	74	'000 tons
Pig lead	13,159	26,137	27,405	tons
Tin	21,953	26,477	13,830	tons
Ore and concentrates	2,493	5,116	3,553	tons
Blocks, ingots, slabs and bars	386	684	1,000	tons
Iron and steel manufactures	88,706	120,161	100,446	tons
Machinery	4,100	5,657	7,169	tons

* Total imports.

Sharp reductions are recorded in imports of rubber (from Malaya), jute (from India), silk (from China and Italy), lead (accompanied by a rise in value) and tin ore (mainly from Bolivia). The welcome increase in imports of both cotton and wool is not yet large enough to counteract the fall in the earlier months of the year. In the case of wool, indeed, retained imports exceed those for 1933 only because of a considerable reduction in re-exports. The increase in imports of machinery occurred mostly in the agricultural category and in internal-combustion engines from the United States and Germany. Our next table gives figures of exports:—

BRITISH EXPORTS Month of October				
	1933	1934	1935	
Coal	3,555	3,630	3,286	'000 tons
Iron and steel scrap	33,372	17,551	13,533	tons
Pig-iron and ferro-alloys	8,250	12,955	14,715	tons
Railway materials	9,161	18,013	20,253	tons
Total iron and steel manufactures	194	221	224	'000 tons
Textile machinery	5,139	6,436	6,342	tons
Total machinery	25,170	32,311	35,980	tons
Cotton yarns	12,276	10,852	12,579	'000 lbs.
Wool tops	156	176	161	'000 lbs.
Worsted yarns	4,579	3,536	5,945	'000 lbs.
Woolen tissues	3,835	3,172	2,954	'000 sq. yds.
Worsted tissues	5,152	5,548	6,271	'000 sq. yds.
Linen piece-goods	2,469	2,167	3,250	'000 sq. yds.
Leather boots and shoes	7,409	5,417	5,675	doz. pairs
Leather	54,226	43,824	44,564	cwt.
Paper and cardboard	21,791	18,425	23,721	'000 cwt.
Locomotives (complete and parts)	367	298	345	tons
Motor vehicles and chassis	78*	897	1,589	number
	4,747	6,095	7,807	

* Complete only.

The reduction in exports of coal is almost entirely due to a fall of 300,000 tons in exports to Italy. The other main declines were in exports of steel goods, cotton piece goods, artificial silk manufactures and worsted yarns. Canada, South Africa and the Argentine continued to increase their purchases of woollen goods. Exports of railway materials to British India and all African countries increased further, together with sales of motor vehicles and locomotives to all British countries except the Irish Free State. Altogether, the returns are indicative of improvement in general conditions and increased purchasing power both within and without the Empire.

Iron and Steel Production.—Demand for steel continues to expand with the upward trend of activity in the building, motor car, shipbuilding, engineering and armament industries. Last month the output of steel was higher than in any month since March, 1927. In contrast to the steady increase in home consumption, exports of iron and steel materials have as yet made little headway:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " " "	632.4	803.0	235.2	364.9
1932 " " "	297.8	438.5	132.7	157.4
1933 " " "	344.7	585.3	80.9	160.2
1934 " " "	498.2	738.3	113.9	187.8
1934—September	500.3	734.7	89.5	198.0
October	527.1	812.0	120.2	220.9
November	507.6	766.0	104.1	219.9
December	513.5	654.5	114.5	186.8
1935—January	521.2	757.8	130.5	181.2
February	483.1	769.5	103.3	172.9
March	554.2	841.9	128.0	175.8
April	526.3	808.7	62.7	219.9
May	558.9	853.3	86.4	219.9
June	529.3	770.0	88.2	195.1
July	547.3	803.3	90.2	205.7
August	543.4	759.9	74.3	202.5
September	529.6	855.9	89.3	187.2
October	544.3	907.3	101.2	224.0

The failure of exports to expand is causing little anxiety at the moment, for the industry appears to be unable to satisfy even the requirements of domestic consumers. All sections are well employed; according to the official report of the London Iron and Steel Exchange a number of concerns have been obliged to withdraw from the market, as their output has been sold for many weeks to come. The stringency appears to be acute in the semi-finished steel section, and a hurried increase in imports in excess of the quotas fixed under the international steel agreement has been found necessary. Moreover, prices of a number of materials have recently been advanced. It is reported that the Austin Motor Company, a large consumer, has decided to erect a plant for the production of its own steel requirements. Whether a necessarily small unit can manufacture steel at a really economic price, however, remains to be demonstrated.

Sterling and International Prices.—The past fortnight has witnessed a slight recovery in wholesale prices. The *Economist's* complete British index number has risen by 0.3 per cent., while British prices of primary products have risen by 0.5 per cent. In the United States, primary products have advanced by 0.4 per cent., but the Irving Fisher complete index number is unchanged. On the Continent, French wholesale prices have risen by 0.5 per cent., but German wholesale prices are unchanged. No Italian index number has yet been received. French wholesale prices have been increasing fairly steadily since the middle of August, and the total advance since that date is now 5.4 per cent. This is slightly less than the corresponding British increase of 5.9 per cent., and considerably greater than the American increase of 1.5 per cent. So far it looks as if the rise in French prices has not outstripped the general world rise, but whereas British wholesale prices have fallen slightly during the past four weeks, the French index number has continued to advance.

* These figures relate to Nov. 13th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Oct. 23, 1935	Nov. 6, 1935	Nov. 20, 1935
Cereals and meat	64.5	72.7	70.2	69.7
Other foods	62.2	61.9	60.9	61.2
Textiles	43.7	60.8	61.6	63.2
Minerals	67.4	82.4	83.6	83.4
Miscellaneous	65.8	78.5	78.1	78.0
Complete index ..	60.4	71.5	71.0	71.3
1913 = 100	83.1	98.4	97.8	98.1
1924 = 100	52.2	61.8	61.3	61.6

With the exception of maize, grain prices have fallen during the past fortnight. Meat prices are mainly unaltered, but bacon is cheaper. Among other foods, while tea fell by 3.0 per cent., there was a sharp rise in coco-oil. In the textile group, raw wool and silk are unchanged, but cotton, flax, hemp, jute and wool tops have all risen. Non-ferrous metals are all slightly lower than a fortnight ago, but the price of pig iron has been raised. Miscellaneous materials were mostly unchanged; linseed oil, however, is a little dearer, and rubber a little cheaper.

Palestine's Economic Policy.—An informed correspondent, discussing the economic progress of Palestine (see the *Economist*, September 7th, page 459, and September 14th, page 522), describes some of the anomalies which are inseparable from rapid, and largely unplanned, development. In many of the "newer" places, for example, there is a deficiency of drainage systems, roads, schools, hospitals and parks. Road construction has been unscientific and inadequate. In towns like Tel-Aviv and Jaffa traffic problems are already acute. Even to-day, there is no direct road between Tel-Aviv and Haifa. Long queues are frequent in a number of post offices, and the installation of a telephone is a matter of months of waiting. While these and other shortcomings may be, in part, inevitable in a country which has rapidly outgrown its clothes, our correspondent contends that many of their more serious implications might be arrested by a wider conception of the Government's responsibilities. At present, even the statistical basis for a planned economic policy is lacking. There are no official figures of national capital and income, banking, wage-rates, etc. The relationship of local authorities to the Government is ill-defined and primitive. Towns like Tel-Aviv—Jaffa (with 200,000 inhabitants), Jerusalem (110,000) and Haifa (90,000), have none of the powers possessed by similar

towns in Great Britain. Their development demands some system of grants-in-aid, and power to borrow for approved capital expenditure from a Local Loans Fund. On the other hand, a *laissez faire* official attitude in so vital a matter, for example, as the regulation of the banking system, may have undesirable consequences. The larger foreign institutions operating in Palestine are few in number, and are under no obligation to employ all their Palestine deposits entirely within the country. The native banks are numerous and, for the most part, small. According to the latest return, there are in Palestine, in addition to the 12 foreign banks, some 101 institutions, 80 per cent. of which are described as "commercial" banks. Many are localised institutions with no considerable re-

sources behind them. Nominal capitalisations of £P.1,000 to £P.10,000, with much smaller paid-up amounts, are frequent. In such a system, there is inevitably a tendency towards duplication of credits, a blurring of commercial functions and investment activities, and the absence of any recognised percentage relationship between capital (or cash) and deposits. Perhaps the most serious feature of all, however, is the disposition of many small institutions to sink an undue proportion of their clients' funds in land and buildings—to borrow short, in fact, and lend long. In view of the soundness of Palestine's underlying economic structure, and the vigour of its pioneers, it would be regrettable if out-of-date conceptions of "colonial" administration were seriously to retard its development.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

OBJECTIVES OF MONETARY POLICY

In early 1932 the Hoover Administration adopted a programme described as "inflationary" or "reflationary," and this programme was continued and amplified by the present Administration. But there has never been any clear definition of the objective of credit expansion. Reference has often been made to the 1926 price level as an objective; less frequently there has been talk of replacing the volume of deposits, shrunk by the deflation from 1929 to 1933. But, while the United States has adopted more or less formally a managed currency, no criteria of management have ever been formulated beyond the two mentioned above. As for these, it may be said that the second has been more than realised; for net demand deposits in the Reporting Member Banks have long been at new high levels, and in all probability the demand deposits of the entire country are at their highest. The price level, as measured by the Bureau of Labour Statistics index, has advanced from 60 to 80, but is still 20 points below the unofficially stated objective.

As distinguished from the general policy of credit expansion, the programme or method may be readily summarised. In 1932, and again in 1933, there were major "open-market operations" by the Reserve Banks, the second of which was terminated just two years ago. Since that time the expansion has depended (a) upon gold imports, which have expanded the accounts both of the Reserve Banks and of the Commercial Banks, and (b) the financing of the Treasury deficit, which has expanded the accounts of the commercial banks only. Minor, but still substantial, influences have included, for example, the use of the "gold profit" in the retirement of the National Bank currency and possibly some utilisation by the Stabilisation Fund, and also the monetisation of silver purchases.

The net consequence is that (a) commercial bank deposits have been lifted roughly 50 per cent. from their lowest figure and (b) in spite of this increase in deposits member bank reserves have been so augmented that the "excess reserves" are about \$3,000 millions, or 100 per cent above the required reserves. If utilised, this would imply a doubling of present bank deposits, even assuming that they were not further augmented by the use of the "gold profit" (most of which is untouched) or by the continuation of the silver programme or by gold imports. On the other hand, these excess reserves could be contracted by gold exports, by open-market sales by the Reserve Board, or by raising the reserve requirements (up to 100 per cent., as permitted by the Banking Act of 1935). As for the first, the tendency is certainly not at present in that direction; and as for the other two possibilities which involve action by the Reserve Board, they could largely be offset by the Treasury, (a) by taking

the "gold profit," (b) by raising the monetary value of silver, (c) by issuing the greenbacks provided by the Thomas Amendment to the Agricultural Adjustment Act of 1933. Meanwhile, the expansion continues at a rather regular pace, chiefly under the combined influence of gold imports and of deficit financing; and this expansion seems likely to continue unless (a) the Budget is balanced, and (b) the Treasury and the Reserve Board agree to take positive action to the contrary. In considering this last statement, it is quite clear that (b) is largely contingent upon (a).

WALL STREET AND "INFLATION"

The outline above is presented because the question of inflation is more under discussion in New York financial circles at the present time than at any period for months, but it cannot be said that these discussions have reached any degree of crystallisation. If the price-level or the index of production or the state of employment is used as the criterion, no restrictive measures justify a moment's consideration. If one is concerned about the boiling stock market, and the evidence of a tendency in security prices to discount an anticipated future, one may argue the other way. Some four years ago, however, the Government adopted a policy and programme of credit expansion; this programme has now been carried to certain quantitative lengths, and has been accompanied by certain qualitative sequences or consequences. We have reached a point at which what has been a matter of academic animadversion is becoming a matter of wider (although still limited) discussion; and may in the coming year become a matter of practical controversy.

The local elections of last Tuesday provided no real surprises and added nothing to the impressions provided by the Rhode Island election of last summer. While disorganised nationally, the Republican Party is still effective locally in many areas; and to some extent the regular Party membership is reinforced by others who are discontented for a variety of reasons.

The sweeping decision of a minor Federal Court that the entire Public Utility Act passed last summer is unconstitutional has created a confusing situation. Under this Act the utility holding companies are required to register formally with the Securities Exchange Commission by December 1st. As yet, many have failed to do so, and all are reluctant to make formal acknowledgment of the Act. The case now goes to the Supreme Court, but weeks must elapse before a final decision can be rendered; and in that period the utilities will be in a sort of limbo.

The success of the Automobile Show has increased optimism about the business outlook for next year. The current year's production will be practically 4,000,000 cars; and predictions of 4,500,000 or 5,000,000 cars for 1936 are now freely made.

NEW YORK, November 9.

FRANCE

THE BANK'S GOLD LOSSES

[The further rise in the Bank rate on Thursday is discussed in Notes on pages 1005 and 1019.]

DURING October the Bank of France lost nearly 700 million francs of gold; and the amount would have been larger but for a payment of gold from Italy in the third week of the month. After a further withdrawal of 667 millions last week the Bank advanced its discount rate by 1 per cent. to 4 per cent., a technical measure which came as a surprise to most people. The pressure on the franc is certainly in part due to internal political dissensions, but also in part to the rising trend in Wall Street. The raising of the rate is intended as another advertisement of the Government's determination to maintain the present gold parity.

The Socialists believe that the financial issue is not a propitious one on which to defeat the Cabinet. A compromise between the Government and the Finance Committee of the Chamber may consequently be reached before the return of Parliament from the recess next week. But the question of the Fascist leagues will then be brought before the Chamber by the Left; and following the recent clash in Limoges between the "Croix de Feu" and the "Popular Front," in which 30 persons were wounded, the question could be embarrassing for the Cabinet. Further, though M. Herriot, leader of the Socialist-Radicals, has told his supporters that they must not count on him to form a new Government, this does not necessarily mean that M. Herriot could not enter a Cabinet presided over by another personality, such as M. Mandel.

Foreign problems are complicating the situation. The South East Departments, which border on Italy, and include important interests such as Lyons, of which M. Herriot is the mayor, and the Port of Marseilles, are issuing strong protests against economic sanctions. The Stock Exchange is also nervous. New low levels for the year have been registered by the Rentes, which are already depressed by successive Government loans.

SIGNS OF BUSINESS RECOVERY?

As to the "possibilities of renewed activity," on which M. Régnier, the Finance Minister, insisted recently, the latest statistical material is still uncertain, though it does not suggest further decline. The index of industrial production showed a slight advance in September from 93 to 94. Electricity output is showing steadily improved figures, with 893,888,000 Kwh. in September, 1935, against 848,329,000 in September, 1934. The decline in fiscal receipts, also, seems to have paused:—

	(francs)	In comparison with
	October, 1935	October, 1934
Direct taxes	665,123,000	— 300,000,000
Indirect taxes	2,701,065,000	+ 14,000,000
Special receipts	57,783,100	— 13,000,000

Total revenue in October was 3,424 millions, or 527,334,100 francs less than the estimates. This is the lowest of the year. It is to be noticed, however, that if much lower than the estimates, these receipts are often nearly equal or higher than those of October, 1934; as the tax on Stock Exchange operations, the turnover tax and the stamp receipts show. The figures thus suggest that the estimates were exaggerated, but they do not necessarily reflect any deepening of the depression.

The foreign trade returns show a recovery of both imports and exports, the total of which had declined steadily since June, 1935. Exports last month were the best since January; but they show a fall in comparison with October, 1934, of 206 millions. The fall in imports is 77 millions.

	(thousand francs)	October, 1934	September, 1935	October, 1935
Imports:—				
Foodstuffs	658,442	446,634	530,211	
Raw materials	800,969	796,678	902,695	
Manufactured goods.....	335,517	264,730	290,453	
Totals	1,794,928	1,508,042	1,723,359	
Exports:—				
Foodstuffs	264,110	167,619	222,091	
Raw materials	424,826	345,156	372,511	
Manufactured goods.....	875,672	667,668	758,382	
Totals	1,564,608	1,180,443	1,352,984	
Import Surplus.....	230,320	327,599	370,375	

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:

CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:

**HELLENIC BANK TRUST COMPANY,
51 Maiden Lane, NEW YORK**

Capital paid up and Reserves Drs. 1,205,000,000

The present trend of business activity seems also to be in accordance with the movement of prices. Wholesale prices continue their rise. The index was 350 in October, against 346 in September, 343 in August, and an average of 366 in 1934; while the cost of living declined to 469 in the third quarter, against 490 in the second, and an average of 526 in 1934.

The decline of deposits in the big banks, which had lasted for many months, was interrupted in September:

	(francs)	September 30, 1934	August 31, 1935	September 30, 1935
Société Générale ...	10,201,105,676	9,182,324,771	9,222,486,088	
Crédit Lyonnais ...	12,677,821,847	11,016,173,245	11,093,799,602	
Comptoir d'Escompte	8,108,439,331	7,061,368,009	7,029,137,151	
Crédit Industriel et Commercial ...	1,472,903,579	1,329,214,645	1,338,806,188	
Totals	32,460,270,433	28,589,080,670	28,684,229,029	

The inference naturally suggests itself that heavy Government borrowing to finance the ordinary Budget deficit and the loan Budget has resulted in incipient credit expansion.

PARIS, November 21.

GERMANY

NEW ANTI-JEWISH LAWS

ILLEGALITIES and disorders of official and Party origin have diminished in number. The new Jewish legislation (the Reichstag anti-Jewish laws passed during the Nürnberg Congress having been merely a programme) has aroused little public interest. In general, and even among Nazi partisans other than the leaders, there is practically no anti-Jewish feeling. A great many "Aryan" Germans are suffering economically from the impoverishment of the Jews. For the Jewish population the new deprivation of political rights has little practical importance. Jews, indeed, lose their right to vote for Herr Hitler; but as in practice they could hardly vote against him, that is the full extent of their loss.

The marriage legislation affects a very small number of Jews and "Aryans," and it has long been official practice, though not law. In general, the latest laws may be regarded as mere anti-Jewish demonstrations. The economic status of the Jews, which has so far been regulated by the State only in the cultural and professional domains, is a much more serious problem. For should it develop along the present lines the German-Jewish question will be settled by starvation. In economic matters (as indeed until recently in the marriage question) law and practice conflict. It has been many times declared by officials that Jewish business activity would not be suppressed. This promise in particular applied to trade, which is the German Jew's chief business sphere. Simultaneously, the Government condemned "individual

measures" (so-called *Einzelaktionen*) against Jewish business men or concerns. The reason given for this was that in anti-Jewish activity the private citizen, including the Party member, must not go farther than the law prescribes.

These Governmental utterances quite properly made legality the test of permissible repression and oppression; and even if the law itself is open to objection it would, if observed, afford some protection to Jews. Unfortunately it is not observed. Nor are the law-breakers, with occasional exceptions, individual citizens; they are the public authorities or the Party collectively. The Party, though it has no competence at all in criminal matters, has formally announced that it will punish members who deal with Jews. The municipalities display, or allow others to display, on public land notices requiring the boycott of the Jews, usually in the form of the denunciation as traitors of "Aryans" who buy from Jews. These notices may be seen everywhere, in all cities and in obscure villages. In law, however, "Aryans" and Jews are free to trade with one another; and in law boycotting in restraint of trade is a punishable offence. The measures now being taken to compel Jews to liquidate their businesses fall into the same category of illegality. They are particularly obnoxious to many "Aryan" Germans. It is very often impossible for landlords to find tenants for premises vacated by Jews (all the more so because new shops may not be opened even by "Aryans"). In consequence, first the house owner and next the mortgage creditor suffer.

EXPORTS AND SANCTIONS

The new restrictions on exports are considered to preclude the possibility of Germany assisting Italy to any considerable extent against sanctions. This week a new list has appeared of munitions whose export is prohibited. It includes "chemical fighting-materials," though not chemicals which might be used therefor. Other new measures for the control of foreign trade, not in connection with the war, are announced. The direct control of imports has also been extended. Such direct control was first introduced by an ordinance of July 25th, which prohibited all imports without "exchange certificate" from certain countries, and imposed a similar condition for imports of certain goods, mainly manufactured, from all countries. Before July, imports without "exchange certificate" were free. Poland and Danzig are now added to the list of countries from which all imports without exchange certificate are forbidden; and the list of imports requiring exchange certificates regardless of country will henceforth include wood and certain other products. The sphere of "compensation trade" with countries with which there is no payment or clearing agreement has been restricted.

AN EXPORT SURPLUS

There was an export surplus in October of Rm. 55 millions, the largest since October, 1933. The food shortage reflected itself in a considerable increase in imports. The increase in exports was in part seasonal. The trade balance, which was passive during the first nine months, is now active by Rm. 24 millions, as against a passive balance of Rm. 250 millions in the first ten months of 1934. The improvement is therefore very considerable. The October trade returns are as follows:—

	Sept.	Oct.	Jan.-Oct.
Millions of marks			
Imports:			
Livestock	2.6	3.9	31.1
Foodstuffs.....	69.8	87.0	790.7
Raw and half-manufactured materials.....	205.5	205.2	2,130.1
Manufactured goods.....	40.0	39.9	477.1
Totals	317.9	336.0	3,429.0
Exports:			
Livestock	0.2	0.2	2.1
Foodstuffs.....	6.4	7.1	59.3
Raw and half-manufactured materials.....	66.8	75.3	627.3
Manufactured goods.....	299.6	307.9	2,763.8
Totals	373.0	390.5	3,452.5

The Reichsbank's return for November 15th shows repayment of nearly 88 per cent. of the October month-end

credits. This is much more than in the same week of 1934, and it reflects the liquidity of the money market, which has been replenished by large repayments of Gold Discount Bank promissory notes. In consequence more notes were marketed. This week the day-loan rate fell to below 3 per cent. The Court of Appeal has, not for the first time, condemned the Reich to valorise to the former 4.2 marks exchange its gold Treasury notes of 1923, which were secured against depreciation with a dollar basis. These decisions have some interest, because the "real intention" of the parties is taken to be the deciding circumstance.

The Konjunkturinstitut now estimates the unscheduled public debt, including Rm. 913 millions tax-credit certificates, at, "roundly," Rm. 5,000 millions; and it repudiates the story of a secret debt. In fact nobody merely that there was a secret debt. The story was existence of which could not be hidden, was a secret. The Rm. 5,000 millions of undisputed debt now admitted consists (in addition to the tax-credit certificates) of work-creation and re-armament bills; and it is affirmed that this is the whole total.

Pig iron output in October was 1,197,800 tons, against 1,112,700 tons in September. The index of industrial production in September (1928 = 100) was 102.8, against 96.5 in August.

BERLIN, November 20.

AUSTRIA

SANCTIONS AND TRADE WITH ITALY

AUSTRIA'S attitude to sanctions, and various recent discussions of the question of economic *rapprochement* in the Danube basin, make it interesting to examine recent tendencies in Austrian foreign trade:—

Austrian imports (millions of schillings)

	Monthly Average
1933	1935
Germany	19.5
Italy	17.4
Czechoslovakia	4.2
Hungary	5.1
Yugoslavia	13.1
Roumania	14.1
Poland	11.3
Great Britain	11.2
Switzerland	8.8
United States	7.9
	6.8
	6.6
	4.4
	3.1
	4.7
	3.6
	3.7

	5.6

Austrian exports (millions of schillings)

	Monthly Average
1933	1935
Germany	10.7
Italy	13.4
Hungary	7.2
Czechoslovakia	13.2
Roumania	6.8
Yugoslavia	9.2
Poland	5.3
Great Britain	5.7
Switzerland	3.8
United States	4.5
	4.8
	4.8
	5.2
	4.9
	2.9
	3.6
	4.4
	3.2
	1.6
	1.3

The figures for 1935 give the monthly average only up to September, inclusive, so that the rise in exports to Italy, as here shown, has hardly been affected by purchases made in anticipation of sanctions. The increase of exports to Italy in the first three quarters of 1935, compared to the corresponding period of 1933, amounts to 51.2 per cent., which is the highest percentage increase that has been achieved to any country, and is all the more significant because the surplus of deliveries is well to the credit of Austria. The surplus of exports amounted in the first nine months of this year to 46.7 million schillings and was 92.4 per cent. higher than in 1933. The improvement in Austria's trade balance is largely due to the change in trade with Hungary and Italy as a consequence of the Rome Commercial Pact of 1934.

The great commotion on the various markets resulting from the impending sanctions has affected Austria sur-

prisingly little. Whereas, according to information from reliable sources, the Swiss Gotthard line has been practically blocked, and had to carry as many as 70 to 80 goods trains in several days, the augmentation of traffic on the Brenner line, which has a similar position in the north-south direction, has been very slight. This is attributed to the fact that the Swiss Federal Railways accord extraordinarily favourable rates on transit consignments, while the Austrian Federal Railways could not see their way to any such concessions. In Austrian industrial circles the view is held that exports to Italy during the past few weeks have been lower than at the beginning of the autumn. Not long ago the Italian Government decreed that the limit of uncontrolled remittances for merchandise deliveries on foreigners' special accounts should be reduced from 10,000 to 1,000 lire. Even before that Austrian exporters to Italy had had to wait a long time for their money, and in view of the Italian currency situation there is a certain reluctance to supply goods.

INCREASE IN REVENUE AND EXPENDITURE

The Budget for the year 1936, recently submitted by the new Minister of Finance to the Federal Assembly, embraced only the ordinary Budget, while the extraordinary Budget, which consists chiefly of the State programme of investment, will be presented in several months' time. The following net figures appear in the Budget:—

	1935	1936
Millions of schillings		
Revenue	1,244	1,281
Expenditure	1,297	1,305
Deficit	53	23

The Minister of Finance estimated the actual deficit for 1935 at 80 to 90 million schillings, and stated that the deficit of 23 million schillings anticipated for next year will in no circumstances be exceeded. The deficit for the year 1935 will be covered to about 50 per cent. by the released guarantees for the service of the League of Nations loan in several foreign States, while the rest will be covered by an issue of short-term Treasury bonds. The deficit is not to be reduced through diminution of expenditure, but by increases in revenue. Taxes, however, are not to be increased; for it is assumed that a number of taxes will, in view of the improved economic situation, yield larger sums at the same rate. Direct taxes are expected to yield 288.5 millions, an increase of 19.5 million schillings, although the motor-car tax was abolished last year. Customs revenue is estimated at 198 millions, against 173.7 millions, an increase of about 15 per cent.

The extra expenditure of recent years has been chiefly due to domestic political disturbances. The cost of the Defence Corps has now been reduced from 11 to 5 million schillings, but the figure for the police and gendarmerie has been increased from 105.5 to 106.7 million schillings. The most important increases in expenditure are on the national debt. This figure has risen, chiefly on account of the recent employment loan, by 13.5 millions to 189.3 millions; National Defence expenditure has risen by 13 millions to 129 millions. For the first time for many years expenditure on agriculture has been reduced. Expenditure for social purposes has also been reduced. The State contribution for unemployment and old-age pensions has fallen by 3.5 millions to 98.5 millions.

Officially, the average number of unemployed in benefit is estimated for 1936 at 260,000, which is 5,000 lower than the actual average this year and 15,000 lower than the figure on which the Budget for 1935 was based. The State contribution also covers 93,900 old-age pensioners, 2,500 miners and 9,400 old servants, which makes 105,800 old-age pensioners, against 104,200 in the year 1935. Add to these 167,000 regular pensioners and 166,000 active civil servants and State Railway employees, and one has an idea how large a percentage of the population of 6,500,000 has to be directly provided for in the Budget.

Exports in September were 76.7 million schillings, or 1.9 millions lower than last year. In the first three quarters of the year exports rose from 625 to 639 millions, but imports rose at an approximately similar rate.

VIENNA, November 20.

AUSTRALIA

A NEW INTERNAL LOAN?

THE question of a fresh internal loan for the Commonwealth and States is engaging much attention, as the prospects are less favourable than on the last two occasions as a result of the hardening of interest rates. Owing to the more active demand for money for business purposes, as shown by the increase in bank advances, it is evident that the surplus of money which existed some little time ago has greatly declined, and further loans would mean that Governments are entering into active competition with private enterprise for available funds.

The results of recent loans have not been encouraging. The 3 per cent. loan 1948, issued last November at 99½, is now quoted at 98½, and the 3½ per cent. loan 1949, issued last June at 99½, is quoted at 96½-96¼. Assuming that money were available for a new loan it would be necessary to offer better terms to the investor, since current Stock Exchange prices of Commonwealth stocks show yields, including redemption, of approximately 3½ per cent.

The quarterly average returns to September 30 of the trading banks (exclusive of the Commonwealth Bank) show deposits at £283,979,086, or a decrease of £6,154,556 as compared with a year ago, and advances at £258,027,362, or an increase of £15,690,435. There has been a reduction of £17,290,125 in the local cash holdings of the trading banks. The items of coin, bullion, Australian notes and cash with Commonwealth Bank now amounts to £34,258,376, against £51,748,501 a year ago. Against this movement, however, the Treasury Bills held by the banks are a liquid asset, in addition to their Government securities, while the banks' London funds can be used to enlarge the cash held in Australia owing to the arrangements with the Commonwealth Bank.

MELBOURNE, November 1.

NEW ZEALAND

FAVOURABLE BUDGET FIGURES

IN view of the improvement in the public finances in the last financial year, and the fact that a General Election is due in November, the Budget proposals, presented on September 17th last, have been regarded as decidedly moderate and singularly free from electioneering. Without any increase in taxation rates, fiscal receipts for the year yielded £N.Z.20.2 millions in 1935, compared with £N.Z.17.1 millions in 1934; and total revenue was £N.Z.26.1 millions, against £N.Z.21.5 millions (excluding £N.Z.2 millions reserves brought into revenue) in the preceding year. Expenditure at £N.Z.24.5 millions was £N.Z.0.3 million higher. In 1934 a deficit of £N.Z.0.7 million was recorded, after using reserves of £N.Z.2 millions, while in 1935, when no reserves were used, a surplus of £N.Z.1.6 millions was shown. The net improvement is thus £N.Z.4.3 millions. In addition the floating debt has been wiped out; and the total debt, £N.Z.280.6 millions, is slightly lower than in 1932, though since then £N.Z.4½ millions of reserve have been used as revenue, and the cost of the debt service has been reduced by conversions.

Estimates of revenue for the current year are £N.Z.¼ million less than receipts for last year, when non-recurring windfalls amounted to about £N.Z.2 millions. Expenditure is estimated at £N.Z.0.7 million higher than last year, the increases being chiefly £N.Z.454,000 restored to the highways fund and £N.Z.200,000 for a subsidy to superannuation funds. These estimates leave £N.Z.650,000 excess revenue, of which £N.Z.200,000 is reserved for supplementary estimates, and £N.Z.13,500 for contingencies or surplus. The remainder is to be used in increased pensions and public servants' salaries.

A plan of public works has also been introduced, on which £N.Z.5.6 millions is to be spent this year, about one-third more than last year. Nearly £N.Z.3 millions of this will be borrowed from departmental accounts, so

that no public issue will be necessary. The Budget contained few surprises and was generally well received. The only change made in taxation was the reduction from 8d. to 8d. in the pound of the unemployment tax, which is paid into the unemployment fund and is outside the Budget. This will leave ample funds available for unemployment relief, the necessity for which is likely to be reduced both by the general improvement in conditions and by the expansion of public works.

THE COMING GENERAL ELECTION

Though the date for the General Election has not yet been settled, electioneering has begun, and a new party, styling itself Democrat, is in the field with a programme which consists mainly of promises to increase expenditure on social services and public works, while reducing taxation and restoring the exchange rate to parity with sterling. The new party is offering candidates in almost all constituencies and is endeavouring to organise support from different sections who have opposed various Government measures during the last four years. Its programme has been received critically, and some of its early leaders, disagreeing with both the programme and the policy, have withdrawn.

The Labour Party, now the Opposition Party in Parliament, is angling for the support of distressed farmers with the promise of guaranteed prices for exported farm produce, and for that of monetary reformers as well. Its real intentions appear just as vague as those of the monetary reformers, who include a Douglas Credit group which claims to be well supported in dairy districts in the north, and others who are just plain inflationists. There is a good deal of confused inflationist propaganda in the correspondence columns of the daily Press, but there is little evidence of any considerable body of opinion to support it. The majority of people appear to agree that though the Government has made mistakes, the last four years have brought unprecedented difficulties, and on the whole it has done about as well as could reasonably be expected of any party.

The Dairy Board has recently adopted a plan to revise the marketing of New Zealand dairy produce abroad. From August 1, 1936, the producing factories are to be grouped in seven districts. Each group will form a single marketing association, will possess statutory powers, and will market the pooled produce of its members under the general supervision of the Board. Group brands are provided for and premiums are to be allowed for quality of both butter and cheese. The present agreement with the Board and the importers will be terminated from July 31, 1936, and f.o.b. sales will be controlled in order to secure better seasonal regulation of supplies. Representatives of the Board are at present in Australia conferring with the Australian dairy industry, and it is reported that agreement has been reached between the dairy control authorities in both countries about the seasonal regulation of produce marketed abroad. A comprehensive plan to control the local marketing of butter and cheese has also been adopted under which local distributors will act as agents for the Board, and the grades of butter offered will be reduced to two, finest creamery and whey butter.

CHRISTCHURCH, October 14.

LETTERS TO THE EDITOR

THE MILK PROBLEM

TO THE EDITOR OF THE ECONOMIST

SIR,—It is possible that the fact that I am a commercial milk producer and a reader of the *Economist* may justify your attention to the following comments:—

Your notes on the operation of the Milk Marketing Board have as their main theme the elementary truth that unlimited production and a fixed profitable price can exist together only in cloud-cuckoo land. While this is a truth, I suggest that it is not the whole truth. There is, in fact, a real shortage of clean milk, and so far as there is a surplus, it is of milk which requires processing before consumption in the liquid state. With an article like milk where the purchaser cannot readily discriminate between what is

clean and what is dirty, price alone does not work satisfactorily. The situation calls for an adequate combination of label and price. This has been recognised by the Milk Marketing Board in the creation of a roll of accredited producers who receive a slightly differential price.

I suggest that this should be used ruthlessly, recognising the general shortage of clean milk and the surplus of dirty milk. The suggestion is open to the obvious criticism that producers of graded milk are urging this in their own interests only. To this there are two answers:—

(1) We have for some time been compelled to subsidise distant and dirty milk, and

(2) Such gain to the graded producer can only be temporary, since enterprise will respond to price, and the number of graded producers will increase rapidly, and the ungraded producers will decrease as rapidly by transfer to graded producers or by elimination. Competition will then re-assert itself amongst the graded producers for the benefit of the consumer as soon as the supply of clean milk has adjusted itself to demand.

Milk for manufacture will then either disappear or be produced at a price and in quantity to satisfy the makers of condensed milk and milk powders with or without the aid of a tariff. That way lies health, both economic for the industry and physical for the consumer. I trust that in some future article, perhaps when the present committee publishes its findings, you may find the opportunity to round off your previous valuable comments.

Yours faithfully,

J. H. GUY.

The Grange,
Beaconsfield, Bucks.
November 18th.

CRISIS IN THE COAL INDUSTRY

TO THE EDITOR OF THE ECONOMIST

SIR,—I have read with interest your article on the Crisis in the Coal Industry, but it seems to me that you beg the question in several important directions, particularly:—

(1) That the coal industry is "unable to pay a decent living-wage";

(2) That a substantial rise in internal prices by some development on cartel lines, with a differential export price, might lead to a curtailment in internal demand and to a charge of "dumping" by foreign countries resulting in foreign retaliation against our exports, and that, in short, a rise in wages must mean a reduction in employment;

(3) That the fundamental fact is that the industry is really suffering from chronic surplus capacity, that many uneconomic pits are running at a loss and on short time and that if production could be concentrated on the most efficient pits profits could be restored and wages raised.

Opinions vary on what constitutes a "decent living wage," a term which cannot claim to possess any scientific meaning. Much propaganda has been disseminated recently by the Miners' Federation on the subject, but the examples quoted have been extreme types and not characteristic of wages as a whole.

The average cash earnings per man per annum (excluding free houses and coal where these are customary) throughout the districts in 1934 varied from £105 in Durham to £133 in Scotland; so that on the average it may be stated that the worker in the industry receives £2 to £2 10s. per week, winter and summer, for an average working time throughout the year of probably not more than 40 hours per week. The weekly average wage mentioned covers all hands, viz. men, boys and women (where the latter class of worker is still found), and it is to be remembered also that it is not unusual to find several workers in one household.

You express the opinion that a substantial rise in prices might lead to a curtailment in internal demand. To give the miners an increase of 2s. per day on an average output per manshift of 20 cwt. is equivalent to a rise of 2s. per ton in costs; at 25 cwt. per manshift, of 1s. 7d. per ton; and of 27½ cwt., 1s. 5d. per ton; so that, as output per man per shift in the principal districts may be said not to fall below 20 cwt., a flat rate increase in wages of 2s. per day, whilst varying from district to district in tonnage cost, would not exceed 2s. per ton.

It is well recognised that the internal demand for coal is inelastic, and the quantity consumed will probably vary very little in response to an increase in price of 2s. per ton, although the industry would no doubt endeavour to adjust its price changes according to the capacity of the industries concerned. One has in mind in particular the iron and steel industries, in which the price of coal is an important factor. In other industries it is substantially correct to say that the cost of fuel enters to an almost negligible extent into the price of the final product.

It is recognised that there has since the war been a movement towards substitution of fuels in some directions. But in the major industries coal still remains the paramount source of power and heat.

As far as foreign retaliation for alleged dumping is concerned it is probably true to say that there is not much that remains to be done in this direction by the North Sea markets, e.g. Holland, Belgium, Germany and France, who control British imports by quotas, etc., very severely at the present time.

Recently a German authority expressed the opinion that surplus capacity in the British coal industry is 33½ per cent. of the total

capacity; but no statistical evidence has ever been produced. It is therefore permissible to question the conclusion, which seems to be derived from this statement, that many uneconomic pits are running at a loss and short time. The definition of "uneconomic" in this connection raises many difficulties, but a pit which in one year is, for various reasons, sustaining losses, may in a subsequent year recover its profitability. Profitability and productive efficiency are not merely questions of size; and under the quota system short working time does not fall on any one class of undertaking but on all more or less equally.

Amalgamations would not necessarily result in elimination of short time. For the closing of pits which at the immediate moment are redundant ignores the possibility of some revival in demand, the loss of mineral resources and opposition of royalty owners, the destruction of fixed capital, displacement of population and so on; and it follows that if under any amalgamation scheme redundant pits were maintained, further reductions in cost under this head would not be great or at any rate sufficient to cover an increase of 2s. per day in wages.

It would seem inevitable, therefore, if the miners are to receive any increase in wages, that it must result in an increase in prices with possibly a reduction in exports and employment in the exporting areas. Amalgamations as a long-term policy have much to recommend them. But it is questionable whether the advantages would lie so much in the direction of lower costs of production as of greater financial stability and closer control over marketing.

The present idea of statutory selling companies may prove to possess the advantages of centralised selling without destroying the elasticity of the present system on the side of production, and in any event should be given a trial before further steps are taken along the path of forced amalgamations.

THE HOUSING BOOM

TO THE EDITOR OF THE ECONOMIST

SIR,—The articles on this subject in your recent issues reach the interesting conclusion that the dominant factor causing the housing boom, which has played so great a part in such measure of recovery as we have so far attained, is not to be found in cheap money, nor in falling building costs, nor indeed in "any of the factors entering into the supply of houses." You point out that, while supply factors played their parts, the dominant factor was the revival of demand—the "great increase in purchasing power of the mass of the population."

Your articles were not directly concerned with the analysis of the sources or distribution of this increased purchasing power; but stated that it was "due on the one hand to the comparative stability of wages and salaries and on the other to the great reduction in the cost of food and clothes."

But is it not possible to argue that the increase in the effective demand for houses directly due to the release of part of people's stable money-incomes, which was formerly being spent at higher prices on food and clothes, must have been comparatively small—a contributory factor on the demand side (like cheap money and falling costs on the supply side), but hardly the dominating factor?

BOOKS AND PUBLICATIONS

BELGIUM'S RECOVERY*

PROFESSOR BAUDHUIN'S book is extremely welcome. It is at once vigorous, comprehensive and readable. As adviser to several Governments and especially Finance Ministers in Belgium, the author had an exceedingly good opportunity to watch the sad sequence of events which preceded the devaluation of the belga. It is a deplorable tale of self-inflicted distress. For months politicians clamoured noisily about the evils and wickedness of devaluation, and thereby increased the unreasoning fears of the population and the chances that a devaluation would, in fact, lead to a panic. Yet the deflationists were unwilling to face the issue squarely and make deflation effective. So the disparity between costs and prices increased and depressed business activity in both domestic and exporting industries.

Professor Baudhuin was not an advocate of devaluation in the early part of the crisis. Belgium had stabilised at a very low gold parity, and the world price level did not fall below her cost level for a considerable time.

* "La Dévaluation du Franc Belge. Une Operation Délicate Parfaitement Réussie." By Professor Fernand Baudhuin. Bruxelles—Paris, 1935. 235 pages. 15 francs.

For:—

(1) As pointed out in your issue of November 9th, the housing boom is mainly in middle-class houses built for sale—not working-class houses for lease to "the mass of the population."

(2) The cost of food and clothes is a relatively small item in the budgets of the middle-income people who have been buying the houses.

(3) Most of the new houses were paid for by mortgage instalments of the order from 25s. to 50s. a week.

(4) It is difficult to visualise the budget of a middle-class family in which the expenditure on food and clothes was so large that the fall which has taken place in the price of these items of expenditure could itself release enough money to be the deciding factor causing the family to undertake a long-period burden of this order.

It seems to follow that the increased purchasing power behind the housing boom operated in the main through increased middle-class money earnings, (a) on profits and commissions and (b) from the creation of new salaried posts. The former, at least, might be expected to respond quickly to an improvement in business profits, however caused.

If this is correct, the boom in middle-class housing, while doubtless the main factor in securing the present degree of trade recovery, could not have started the process. There must have been some independently caused source of increased profits, bringing about an initial increase of middle-class incomes and expectations, which in turn justified increased middle-class expenditure on housing. Could the initial stimulus perhaps have been increased spending (that is, diminished saving or holding of unspent balances) by the wealthier classes, as the psychology of the 1931 economy campaign became converted into the outlook behind the 1932 slogan "Spend more and employ more"? Or perhaps even the release of cash by some of those holders of War Loan who opted for repayment of their holdings and may have been tempted to "dis-save" by spending some of the proceeds? The comparatively sudden onset of these two factors seems to correspond to the suddenness which, as you point out, characterised the outbreak of middle-class housing construction.

I am, Sir, etc.,

HUGH TOWNSEND.

[The terms "working class" and "middle class" are very elastic. It is true that the demand for houses has not come from the very poorest classes, who will spend any additional real income on increasing their consumption of food and clothes. But it is, in our opinion, going much too far to the other extreme to find the source for this demand in salaried and commission-earning persons. The bulk of the house purchasers of the last few years would seem, by general observation, to be persons with an income range of, say, £200 to £500 a year, and they must be nearer the lower end of that range, as there are less than three million persons in all who have incomes of over £250 a year. In the budgets of families of this class, food and clothes are by no means "a relatively small item" but a very large one. The alternative source which Mr. Townsend suggests—namely, increased spending by the wealthier classes—is quantitatively far too small. The total income of surtax-payers was only £414 millions before tax in 1932-33, and there is no evidence of such a sudden increase in the expenditure out of this income as would stimulate an increased expenditure of something like £100 millions a year on houses and cars alone.—Ed., *Econ.*]

In 1934, however, the position became critical. Successive Governments, formed with the central aim of "defending the belga," and headed by M. Jaspar, M. de Broqueville and finally M. Théunis, were unable (and unwilling) to adopt a constructive policy. Professor Baudhuin now saw the necessity of devaluation, but his warnings fell on deaf ears. The beginning of the breakdown of the banking structure and continuous losses of gold did not convince the politicians of the imminence of the final crash. M. Théunis believed in the possibility of the maintenance of the gold parity, even after a far-reaching restriction of foreign exchange dealings had been instituted. Considering the atmosphere in Belgium at this juncture, the courage of Professor Baudhuin in publicly demanding devaluation was most highly commendable. He had already strongly urged that the effects of devaluation should not be painted in alarmist colours. Finally, after almost interminable wrangling and face-saving, the van Zeeland Ministry took the inevitable step.

The greater part of Professor Baudhuin's book consists of an analysis of the effects of devaluation. Nobody can now seriously question his view that it was, in fact, completely successful. He produces statistical material fully sufficient

to prove his contention. Prices, especially retail prices, have not risen seriously—the cost of living is even now only 8 per cent. up. Production and railroad traffic soon increased well above the level of 1934; the Budget revenue improved immediately and markedly; and the rate of interest has been forced down, despite the intensification of the international political tension. The flight of capital not only ceased, but was suddenly reversed. The profits derived from the revaluation of the gold reserve were used to establish an exchange equalisation account and a fund to control the gilt-edged market. Finally, the banking structure was thoroughly reorganised, at a time when there was an automatic increase both in its liquidity and the soundness of its assets as a result of devaluation.

Professor Baudhuin makes short shrift with those who impute the revival to the Brussels World Fair and at the same time prevaricatingly insist that no revival whatever has taken place. He may be somewhat optimistic about the possible effects on Belgium of a general devaluation by the gold countries, but he is right in insisting that such a policy would not only restore internal equilibrium in those countries, but that the improvement in their economies would eventually offset any initial depressing effects abroad.

Professor Baudhuin and M. Van Zeeland have both deserved well of their country. And in this book Professor Baudhuin has presented us with a highly interesting record, and a complete vindication, of the policy adopted last March.

SHORTER NOTICES

"Modern Production Among Backward Peoples." By I. C. Greaves. London School of Economics Series of Studies in Economics and Commerce. Allen and Unwin. 10s. 6d.

The "backward peoples" studied in this book are those of the tropics, and the main theme is that of peasant versus plantation production in tropical agriculture. Mining and industrial production are excluded from the survey, so that the title of the work is somewhat misleading; within its limits, however, it provides a very clear and systematic account of contemporary economic conditions in tropical lands.

The author shows how the economic system of modern Europe with its demand for tropical products has impinged, with the aid of armed power, on the indigenous modes of economic life in these countries. His study of the indigenous economies is marked by a sympathy and insight which could hardly have been found in an economist thirty years ago; he realises that the satisfactions of a tribal subsistence economy cannot be measured in terms of a moneyed world-market system, and that any economic evolution which is to obtain the free assent of the "natives" must proceed from premises which appeal to them. He rejects the notion that natives cannot be induced to expand production except by some form of coercion, and declares, truly enough, that "what is condemned as laziness or dislike of work on the part of the native has often been in essentials a reluctance to expend a large amount of effort upon inefficient and poorly remunerated forms of labour."

European planters in the tropics have always demanded cheap labour, but this is not a commodity which is easily forthcoming from a sparse population with plenty of tribal land. For this reason colonial governments have constantly been called in to increase the supply by direct or indirect compulsion. Dr. Greaves gives an account of the various forced-labour devices still employed in Africa, and it does not make pleasant reading.

On the issue of peasant versus plantation the general conclusion is that peasant production with technical assistance from governments is bound to play a part of increasing importance; and that the plantation system, though it has a future in certain fields, is by no means indispensable for the development of tropical lands. A survey of the sources of supply of particular crops reveals that plantations still have a virtual monopoly of the export production of tea, coffee, sugar-cane and sisal, that peasant production has an equal preponderance for rice, jute, groundnuts and sesamum, and that cotton, rubber, cacao, tobacco, bananas, coconuts and oil palms have been successfully raised for the foreign market under both types of economy.

"Marxism and Modern Thought." By N. I. Bukharin, A. M. Debarin, Y. M. Uranovsky, S. I. Vanilov, V. L. Komarov and A. I. Timmenev. Translated by Ralph Fox. Routledge. 342 pages. 10s. 6d.

The six essays in this book have been translated from the Soviet Academy of Science's Memorial Volume on the fiftieth anniversary of the death of Karl Marx. The book, says the preface, "is the first attempt to give a complete survey of modern thought in terms of Marxism." The survey is a ferocious polemic, delivered with almost religious fervour: but it is a fervour which claims to be based on an all-embracing and rational philosophy. Indeed, this claim to unite optimism and fervour with a thorough-going rationalism is in itself, whether justified or not, remarkable.

The chief points of attack upon modern science are that: (1) it has taken refuge from scientific explanation in teleology and idealism; (2) it is unable to organise its knowledge on consistent and unitary principles; (3) hence science is divided into an empirical search for facts and an attempt to force the facts into moulds borrowed from religion, metaphysics or even mysticism of an aggressively anti-rationalist type. It is claimed further that this "crisis" or "collapse" in science is a reflection of a "crisis" or "collapse" in capitalism.

The historical sciences, especially, are attacked for adopting obscurantist and mystical methods of interpretation. In the late eighteenth and nineteenth centuries, it is said, the historians of the rising middle class had approached an understanding of the historical process; but, after their political victories, abandoned that understanding because it was incompatible with a belief in, or justification of, the continuance of capital. This thesis is put forward by A. I. Timmenev in a review of historical science from Barnave and St. Simon through Guizot, Thierny, Ranke to the pseudo-history of Spengler, Croce and Gentile.

The reviews of the Marxist attitude to modern physics and natural science are equally interesting: and N. I. Bukharin's restatement of Marx's teaching is a good introduction to the critical essays. Whether their savage criticisms are justified or not, they certainly offer some explanation of the collapse of Western culture before the attacks of Fascism in Germany and Italy. The following remark of Stalin's is quoted on the relations of pre-Nazi German science to Fascism: "they are not antipodes: they are twins."

"The Agricultural Crisis." By Joseph M. Goldstein. (New York) The John Day Company. 257 pages. 4s.

Dr. Goldstein is able to claim that in the year 1913, when English opinion on the future of agricultural prices was largely influenced by Sir William Crookes's fallacious prophecy of a coming wheat shortage, he foretold the fall in agricultural prices, especially in the price of wheat, which is the principal theme of his new book. The events of the last eighteen years have amply justified Dr. Goldstein's forecast. The increase in the acreage under cereals, the increased yield per acre, the cheapening of transport, the slowing down of the rate of population growth, the reduced consumption of breadstuffs, and the growing agricultural protectionism in Europe have combined to bring about the present depressed condition of agricultural producers, especially the producers of wheat.

Dr. Goldstein ably describes the importance of the agricultural crisis and the hopelessness of trying to remedy it so long as the forces of economic nationalism retain their present strength. Restriction of output is demonstrated to be worse than useless: it is extremely difficult to enforce on recalcitrant nations or individual farmers, would cause migration to the already overcrowded towns, would injure the railways and other secondary industries, and would lead to overproduction of the unrestricted crops. In a world where every country is attempting to raise the price level, the restriction of output is an illogical and impossible ideal. Dr. Goldstein does not suggest any remedy that would cure the depression, except the relaxation of protectionism, which he regards as "hardly possible at the present time," and his book is therefore rather pessimistic, or perhaps we should say fatalistic, in tone.

"An Account of the Finances of the College of St. John the Evangelist in the University of Cambridge, 1511-1926." By H. F. Howard. Cambridge University Press. 398 pages. 21s. net.

An institution which has kept detailed financial records of income and expenditure for over 400 years is sufficient of a rarity to merit special attention, so that Sir Henry Howard must be congratulated on the research which is incorporated in this book. He presents his facts clearly and his narrative is admirably documented and annotated.

The original endowments of St. John's were in land. The income grew from £47 14s. 2½d. in 1511 to £625 1s. 4½d. in 1525. Nevertheless, the college did not raise rents to offset the rise in general prices caused by the flow of metals from the New World, and the debasement of the coinage in the latter years of Henry VIII and during the reign of Edward VI. The college seemed unwilling to raise money rents even in later centuries, but by the application of Statutes restraining the granting of leases for more than 21 years or three lives and by the adoption of the corn rent system, the college avoided the disadvantages of long term fixed money rents and was enabled to participate in the benefits of the rise in agricultural prices. The surplus derived from the corn rents over and above the charges debited against them was distributed periodically to the Fellows, and thus gave rise to the Fellows' dividend.

The first investment in stocks (15 East India bonds and £1,000 South Sea annuities) makes its appearance in 1749, but it was a very long time before the college considered that such investments might form a useful means of employing its capital. A London banking account (with Sir Francis Gosling and Company) appears as early as 1765.

Under Dr. Powell's reforms after 1770, increased attention was devoted to the college estates, and new property was acquired for the future extension of the college. Moreover, a reserve was constituted for the same purpose. A reserve for renovations and repairs was not set up until 1888, while a general reserve fund was not started until 1917.

A period of grave financial stringency marked the period 1826-1856, for the sums borrowed for the construction of the draughty vastness of New Court had to be repaid with interest. As the college relied largely on agricultural rents for its income, the depressions of the 'seventies and 'nineties again severely curtailed the revenues, so that the Fellows' dividends fell from £240 in 1882 to £80 in 1894 and 1895. To prevent a recurrence of such troubles, it was essential to develop new sources of income. Thus, land leased for building and the investment of the proceeds of various sales in securities provided an additional safeguard against fluctuations. Whereas in 1882 nearly four-fifths of an income of £37,500 was derived from farm rents and tithes combined, by 1925 farm rents and tithes represented less than one-half of a total income of £50,000, while houses on building lease and income from securities accounted for nearly two-fifths of the total.

"India's New Constitution." By J. P. Eddy and F. H. Lawton. Macmillan and Company, Ltd. 190+42 pages. 6s.

The sub-title "A Survey of the Government of India Act, 1935," gives, perhaps, a more accurate description of this useful handbook. It summarises the provisions of the new India Act in detailed and thorough fashion and, on the subject of the Judicature and Prerogative Rights of the Crown, contains useful references to a number of precedent-establishing cases from other parts of the Empire. It is, indeed, primarily a book for the student of either constitutional law in general or Indian constitutional development in particular. For the ordinary reader, the main outlines of the scheme must necessarily, in such a book, be swamped by the mass of detail. One could wish, therefore, that the principles of the scheme had been examined and elucidated in a separate chapter instead of being merely summarised in a scant three pages in the "Introductory" chapter.

In the same way, if a proper understanding of the changes is to be obtained, some description of the existing constitution is essential, and a fuller account of the historical background of the last twenty years would be desirable. It seems to be a pity to dismiss the Round Table Conference in two lines, when the Government's statement of June 19, 1931, contained all the principles on which the new Act is based. The danger of any detailed examination of the Act as such, without explanations and some historical background, is that the very great advance which is being made is obscured in the reader's mind by the mass of reservations and reserved powers. To say this, however, is not to detract from the value of a book which gives the provisions of the Act in ordinary, rather than legal, English.

"Family Expenditure: A Study of its Variations." By R. G. D. Allen, and A. L. Bowley. P. S. King and Son. 145 pages. 9s. net.

This detailed and scholarly investigation is based upon twenty-two groups of family budgets, including that obtained from the Enquiry into Family Life organised in 1932 by Sir William Beveridge in co-operation with the B.B.C. The names of the authors are a sufficient guarantee of the high quality of the work.

To men in the fifties and sixties

It is not generally realised that for an annual premium of £47 : 12 : 6 a man aged 55 next birthday can effect a Whole Life Assurance of £1,000 with right to Bonuses under the Distinctive System of

HEAD OFFICE 6 St. Andrew Square, EDINBURGH
FUNDS EXCEED £23,500,000

The opening chapter is devoted to an examination of average expenditures on the various items in the family budget, and it is shown that these may be related to average income by simple formulae, applying over a wide field. Engel's Law of the relation of expenditure to income is precisely formulated, and it is shown that goods may be classified according to a scale of urgency. The more difficult task of examining the changes which occur in the distribution of family expenditure as income changes is next attempted. The data show that there is a considerable variation of expenditure about the average for the group, but that, when the effect of variation of needs and income has been allowed for, the variation can be described, at least approximately, by the normal law.

Finally, the results of the inquiry are related to the mathematical theory of economics. To this end, the authors develop a theoretical analysis of the distribution of expenditure, following a method which will be familiar to readers of Wicksteed, Walras and Pareto. The way in which the equilibrium distribution is determined in the general case of n goods is given mathematical expression in an appendix. Devotees of the mathematical school will doubtless welcome this latest "econometrical" study with open arms; those unskilled in the mathematical technique had better leave it severely alone.

MONEY AND BANKING

RISING NOTE CIRCULATION

THE progress of Britain's trade recovery, since 1932, has coincided with a persistent increase in the size of the note circulation. Though this movement has been frequently obscured by short-term seasonal fluctuations, its essential continuity is revealed by the graph which we publish on this page. To what factors may it be attributed? What is its significance?

The seasonal changes, shown in the chart, are readily explainable. From a low point in February each year the circulation normally expands to an Easter holiday peak, falls again, rises from Whitsun to an August peak, and, after a considerable autumnal contraction lasting till mid-November, reaches its maximum for the year at Christmas. Minor increases occur at the beginning of every month.

The most striking feature revealed by our chart is less the regularity, year after year, of these movements, but the fact that every year's fluctuations have been around a higher mean level than their predecessors. The trend of the note circulation, in fact, has been steadily upwards, its gradient being moderate in 1932 and 1934, and appreciably steeper in the early part of 1933 and—more particularly—in the present year. The 1935 Easter and Whitsun peaks, indeed, were almost submerged in the rising trend, and the autumn contraction has been less well marked than in earlier years.

That the note circulation has considerably and consistently expanded is beyond question. As soon, however, as we attempt to explain this most significant phenomenon, we encounter difficulty and disagreement. It has been suggested in some countries abroad that the increase is due

demand from the banks, from other institutions and from the public. What, then, has been the destination of the additional currency issued in recent months?

We may begin by ascertaining how far the requirements of the commercial banks for till-money have expanded with the recent rise in their deposits. The following table, abstracted from the Bank of England's Statistical Summary, throws some light on this question. It shows the extent of movements between January and October (omitting Christmas peak demand), in each of the last four years, in the Bank's note circulation, the estimated till-money holdings of the commercial banks, and the estimated total of notes and coin held outside the banks:—

	(In Million £'s)	Bank of England Note Circulation	Banks' Till-money	Active Circulation of Notes & Coin
1932—January		346	110	359
October		358	114	354
Change	+ 3.5%		+ 4.1%	- 1.4%
1933—January		353	110	354
October		369	120	358
Change	+ 4.5%		+ 9.1%	+ 1.3%
1934—January		367	119	358
October		378	120	369
Change	+ 3.0%		+ 0.7%	+ 3.2%
1935—January		375	125	367
October		400	126	386
Change	+ 6.7%		+ 1.0%	+ 5.1%

In 1933 the commercial banks were building up their currency reserves, and most of the extra notes placed in circulation would seem to have been retained in their tills. During the last two years, however, the expansion in the clearing banks' reserves has been moderate, and practically the whole of the extra note circulation has passed into the hands of the public. If this additional currency has not been hoarded, in what way has it been used? Normally, currency is required for the payment of wages and their subsequent transformation into current consumption. The wealthier sections of the community usually receive and make their payments largely by cheque. It may be relevant, therefore, to compare the active note circulation, first, with the trend of wage-rates; secondly, with the volume of employment; and, finally, with the trend of retail trade. The comparison is given below:—

	Active Circulation of Notes and Coin £ mill.	Index of Wage Rates* (1924 = 100)	Insured Workers in Employment† (Millions)	Retail Trade‡ (1933 = 100)
1932—January ...	359	96	9.36	104
October	354	95	9.40	101
Change	- 1.4%	- 1.0%	+ 0.4%	- 2.9%
1933—January ...	354	94.5	9.28	97
October	358	94	9.92	102
Change	+ 1.3%	- 0.5%	+ 6.9%	+ 5.2%
1934—January ...	358	94	9.87	101
October	369	94.25	10.21	105
Change	+ 3.2%	+ 0.3%	+ 3.4%	+ 4.0%
1935—January ...	367	94.25	10.05	105
October	386	94.75	10.49	105
Change	+ 5.1%	- 0.5%	+ 4.4%	+ 8.1%

* Dr. Bowley's Index.

† Bank of England estimates.

‡ Increase between September, 1934, and September, 1935; the October index being unavailable.

The table offers strong—though not, perhaps, entirely conclusive—*prima facie* evidence that in the last two years additional notes have been required for the wages of extra workers in employment and for retail expenditure. That any large margin has been available for hoarding is difficult to reconcile with the figures given above. In short, there is a fair case for the perfectly reasonable and logical

either to inflationary tobacco, to hoarding. It is the practice of the Bank of fully raised however, to put notes into circulation, not on its own initiative, but in response to

assumption that increased note circulation has been a function of trade recovery.

So far, we have devoted our attention mainly to the trend of the circulation figures. Under current conditions, however, the probable extent of the forthcoming Christmas seasonal rise is a matter of considerable importance. If the increase is of the same order as last year's there is every prospect that the Bank's note circulation may rise to as much as £425 or £430 millions. If other factors were unchanged, this would reduce the Bank's Reserve temporarily to just under £30 millions. To look a little further ahead, if the upward trend of trade and the note circulation were maintained next year, Christmas of 1936 might see the Reserve down to £15 millions. On this argument, it would be prudent policy on the Bank's part, during the next twelve months, to endeavour to build up its Reserve. The latter, representing the cash held against its deposits, might be a source of misgiving at home and, more especially, abroad, if it fell, even temporarily, to an unduly low level.

The Bank, in theory, might attain its end in one of three alternative ways. The first is the writing-up of its gold stocks from 84s. 10d. per fine ounce to the market price of gold, which at present is 141s. 5d. This, however, would require legislation, and there is much to be said for deferring this until it can be incorporated in the many changes which will be necessitated by the eventual stabilisation of sterling. A second method would be to acquire fresh gold—as the Bank has, in fact, been doing, quietly and unostentatiously, during the past few weeks. If it were necessary, say, at Christmas, 1936, the Exchange Equalisation Account might be able to lend a helping hand by temporarily transferring, perhaps, some £25 millions of gold to the Bank to tide it over the seasonal peak. This, however, is looking some way ahead. In the meantime there seems much to be said for the third alternative, which is a temporary increase in the fiduciary note issue.

It would be well if the general public, at home and abroad, were able and willing to view such a potential expedient in a just perspective. At the time of the unification of the note issue exactly seven years ago, it was clearly stated that the fiduciary note issue was not normally intended to be immutable. The only time when an actual increase was made, however, was in the crisis month of August, 1931. If it were decided—quite reasonably, in our opinion—that the figure could and should be varied to meet passing needs, particularly seasonal needs, the outside world should realise that the resulting change had no sort of "crisis" significance. In short, the Bank may be well advised to continue quietly to accumulate gold before Christmas (provided that this does not occasion any new strain elsewhere). There might be no valid objection to a future policy of offsetting a seasonal expansion in the note circulation by a temporary increase in the fiduciary issue.

FINANCIAL NOTES

The New Deputy-Governor.—It was announced at last week's meeting of the Bank Court that Sir Ernest Harvey was retiring from the Deputy-Governorship and that the proprietors would be recommended to elect Mr B. G. Catterns in his place. Sir Ernest Harvey entered the service of the Bank of England in 1885, and after acting as auditor, chief cashier and comptroller, was elected Deputy-Governor in 1929. Mr Catterns is also a former officer of the Bank. He was appointed deputy chief cashier in 1925 and chief cashier in 1929. A year ago he relinquished the post of chief cashier in order to become a full-time director of the Bank. On personal grounds alone Mr Catterns' election will meet with a wide measure of approval, but it is also of importance because it marks the continuance of the new tradition that the post of Deputy-Governor should be filled from within the Bank. This suggestion was first made by Bagehot fifty years ago, on the ground that the Deputy-Governor should be akin to the permanent head of a Government Department, so that he could ensure some continuity of administration. It will be recalled that, before Mr Norman's election, a new Governor was normally elected every two years, and Bagehot's recommendation was based upon this practice. Even though Mr Norman is

about to enter upon his seventeenth year of office, the principle that the Deputy-Governor should come from within the Bank has much to recommend it, and its adoption represents one of the many useful administrative reforms which Mr Norman has quietly introduced. Sir Ernest Harvey's retirement will be greatly regretted, for both in his daily work and also by his evidence before the Macmillan Committee he won for himself a high reputation; but all will agree that Mr Catterns is a worthy successor to carry on the new tradition.

The Foreign Exchanges.—The franc continues to excite considerable nervousness, and this week's increase in the French Bank rate from 4 to 5 per cent. caused no surprise. Spot francs have been on offer at Frs. 74½, and the British Control is believed to have been giving support to the franc in Paris. The discount on three months' francs has widened to Frs. 2½-3, or over 14 per cent. per annum. Evidence of the strain on the franc is accumulating every day. The Paris-New York cross-rate has risen to Frs. 15.19, or beyond the export gold point. Engagements of gold for shipment reported during the week in New York are nearly \$30 millions, and they would probably have been greater if the French banks had not thought it advisable to exercise a policy of restraint. The Paris-Amsterdam cross-rate has fallen to Frs. 10.31 per guilder. This, again, represents the export gold point, and it is the first time that this rate has been touched for a very long time. Gold imports into England from France for this week total £1,083,000. Finally, this week's Bank of France return records a further gold loss of Frs. 933 millions, coupled with increases of Frs. 278 millions in discounts of commercial bills and Frs. 40 millions in 30-day advances against public securities. London, however, reports a smaller volume of business and less excitement than has been noticeable during previous periods of anxiety. The Dutch and Swiss exchanges have been strong against the franc, but there was some Dutch offering of guilders on Thursday against gold imports from France. It became known late on Wednesday that lira balances held in Italy by British banks were subject to new restrictions. Their transfer to Italian institutions and residents in Italy remains free, but official permission is now needed for their transfer to a foreigner or a foreign bank. One object of this new restriction may be to control illicit Italian sales of foreign currency, but it has also put an end to all dealings in lire in foreign centres, as the selling bank can no longer guarantee delivery. This may help the Italian authorities to secure any foreign currencies which may be on offer in exchange for lire. The real test is whether or not permission will be granted for the transfer of lira balances between foreign banks, and, if so, under what conditions.

Sanctions in Practice.—The various problems arising out of economic sanctions are slowly being dealt with. During the past week an order was issued relieving British

importers from the need of paying into the clearing in cases where a bill of exchange had been given and accepted on or before November 14, 1935. A more important order provided that certificates of origin had to accompany imports of goods from countries "accessible from Italy," including Germany, Austria, Hungary, Switzerland and Albania. This order was intended to prevent circumvention of the embargo on imports from Italy, but it has been challenged by the German Government on the ground that it contravenes the Anglo-German Trade Agreement. Discussions between the two Governments are now taking place, and the operation of the order has temporarily been suspended. Meanwhile, Mr S. D. Waley, a Treasury official, has been appointed Controller of Anglo-Italian Debts, and he has issued a full explanation of the operation of the new payments regulations. Even so, numerous knotty points have presented themselves to bankers, and the regulations seem already to demand a certain amount of revision and co-ordination, in which the Treasury and representative bankers might well co-operate.

Italian Reticence.—The return of the Bank of Italy for October 30th has not so far been issued, and it is understood that its publication, together with that of the trade returns and the return of Government revenue and expenditure, has been suspended indefinitely. Now that economic sanctions are in force, it is easy to understand that the Italian authorities will be reluctant to reveal their growing financial nakedness, but the decision to conceal the true facts may well prove a boomerang. Prospective foreign sellers of goods to Italy will henceforward be in complete ignorance of Italy's power to effect payment, and this will make them all the more eager to insist upon immediate payment in gold or foreign exchange. This will accelerate the drain upon Italy's limited gold stocks, and so will help to carry out the real idea behind the League Powers' embargo upon Italian exports, namely, to render it impossible for Italy to buy goods from abroad. Italy has clearly overlooked the old Roman proverb, *omne ignotum pro magnifico est*. Meanwhile it is announced that Italian nationals are requested to surrender all gold ornaments and other gold in their possession, while the importation of gold bullion by private persons is prohibited. This may be a precautionary measure, but it is equally evidence of increasing strain. The pressure of economic sanctions may be slow, but it is becoming clear that Italy fears that in the long run it may be certain.

Argentine Exchange.—Recent cables from Buenos Aires suggest that a movement is pending in the control of foreign exchange operations. It appears that the Argentine Government has decided to issue a Decree in the near future terminating the sale of official exchange by auction. It is quite likely that the task of fixing official selling rates for foreign currencies will be transferred to the new central bank, and it is now confirmed that the accumulated balances of the Exchange Fund are sufficient to enable exchange rates to be controlled within fairly narrow limits. The Fund is also stated to be in a position to meet the demands of advance exchange permit holders independently of the daily supply of exchange. The new Decree, terminating the auction system, will probably only affect the official exchange market. The system of prior exchange import permits will presumably continue, and such permits will be liquidated at rates fixed by the central bank. Thus both the official and free markets will continue to exist, and the 20 per cent. surcharge over official exchange rates imposed last April on imports paid for through the free exchange market will also remain in force. The official rates at which foreign currencies are sold will be fixed by the central bank, but there may be a narrowing of the authorities' margin of profit between the official buying and selling rates, which will operate to the advantage of authorised remitters. It remains to be seen how far these impending changes will meet the needs and objections of the railways, importers and other remitters of funds to foreign countries, but at least they are a move in the right direction.

Financing Small Business.—The Charterhouse Investment Trust announces an important extension of its subsidiary, the Charterhouse Industrial Development Company, which was formed in June, 1934, for the purpose of financing small businesses. Originally the whole of the capital was held by the parent company, and consisted of £200,000 in £1 shares, issued at a premium of one shilling, with five shillings paid up on each share. During the past year the balance of fifteen shillings per share has been called up, and it is now announced that the capital has been increased to £500,000 and that shares have been taken up by Lloyds Bank, the Midland Bank and the Prudential Assurance Company. The total capital is still on the small side, and, in comparison with their total resources, both the two banks and the Prudential have hardly more than a token investment in the new undertaking. Still, they have made it clear that they are associating themselves with this new idea, and provided that it continues to operate on sound principles, there is undoubtedly room for further expansion. The whole problem was discussed in the *Economist* of August 24th, when we said that finance of this kind ought only to be granted to concerns which were already established but were capable of further expansion. These are the lines along which this company is working.

The Money Market.—Money remains very easy, but there has been a slightly keener demand for loans in the afternoon. There was also some clearing bank calling on Monday and Thursday. The banks have been keen buyers of Treasury bills at $\frac{1}{2}$ per cent. for all dates up to the middle of February, and according to some reports they would have been ready to take more bills than were actually available.

	Oct. 31, 1935	Nov. 7, 1935	Nov. 14, 1935	Nov. 21, 1935
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

Last week's Treasury bills went at an average rate of ros. 9.95d. per cent., against ros. 9.9rd. per cent. the week before. Some £45 millions of bills were allotted, against maturities of £40 millions. The tender issue now stands at £560 millions, against £360 millions on March 31st last and £424 millions a year ago. Hot Treasury bills were quoted this week nominally at $\frac{1}{2}$ per cent., but there was practically no business.

The Bank Return.—This week the note circulation fell by £2.5 millions, but it should now be at its lowest point immediately before the Christmas expansion. The Bank's gold stocks are again higher, and so the reserve has increased by £3.3 millions.

BANK OF ENGLAND					
	Nov. 21, 1934	Oct. 30, 1935	Nov. 6, 1935	Nov. 13, 1935	Nov. 20, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.1	194.7	195.5	196.5	197.2
Note circulation	376.9	399.9	402.2	401.4	398.9
Banking Department:—					
Reserve	75.8	55.6	54.2	55.9	59.2
Public deposits	25.3	26.2	21.0	15.8	21.6
Bankers' deposits	95.9	82.5	89.6	92.9	90.9
Other deposits	37.7	38.6	36.6	36.7	36.5
Government securities ...	80.1	85.9	87.2	83.5	83.6
Discounts and advances...	8.6	11.2	11.0	11.1	9.7
Other securities	12.2	12.3	12.5	12.6	14.4
Proportion	47.6%	37.7%	36.8%	38.4%	39.6%

Excise duty payments help to explain the week's increase of £5.8 millions in public deposits, but funds are probably being accumulated in readiness for the December War Loan dividend. The transfer of funds to public deposit explains the small drop in bankers' deposits.

THE STOCK EXCHANGE

BRITISH FILM SHARES

FIFTY years ago, a studio was set up in Paris "to investigate the motion of animals by photographic methods." From its early researches has sprung the premier entertainment industry of modern times, whose closely integrated organisation has threatened, if not destroyed, the prosperity of the provincial theatre. Its methods, though sometimes grandiose, in the showman's tradition, have invariably been vigorous. But the investor may well feel that, so far, his share in the industry's phenomenal progress has been disproportionately limited. Its prospects have always been viewed in a speculative context, and the yields at present obtainable on leading film equities do not suggest any disposition to change the market's long-standing view.

Reasons for caution, assuredly, are not far to seek. The expansion of the American industry in prosperous years has been paralleled by spectacular crashes in depression. By comparison, the boom in British cinema prospects, a few years ago, was a tame affair, but the succeeding reaction brought losses put at £2 millions. Encouraged by the rising ten-year quota for British films, new money flowed into the industry from 1927 onwards. Extensions of producing and exhibiting capacity came to fruition precisely at the moment when the advent of the sound film involved an expensive change-over, with considerable losses on "silent" films already produced.

In addition to the ever-present dangers of excessive capitalisation, the industry has, in the past, been exposed to the adverse effects of rapid technical change. The first factor is revealed most clearly by the "tied-house" system adopted by the leading groups for exhibition purposes. British producers have always stressed the value of the "shop-window," although it represents a limited independent market for their films. During the year to September, 1934, for example, some 36,256 million feet of film were exhibited in this country, of which the British proportion amounted to 9,460 million feet, or 26.1 per cent. This proportion, though well over the minimum quota requirement of 15 per cent., emphasises the importance of American bookings. The British producers, however, are endeavouring to obtain increased returns by penetrating the American market, not without success, though expectations in this direction should not be over-stressed. Meanwhile, new cinema construction, as this week's news suggests, is still active, and strategic purchasing of established houses continues apace. A pamphlet published some months ago by the Cinematograph Exhibitors' Association referred to the financing of cinemas "doomed to failure," and stressed the need for checking existing seating accommodation with the total population of each district, to avoid the addition of new cinemas where existing accommodation was already sufficient.

Spokesmen for the industry have frequently condemned the notion that cinema construction offers a modern Klondyke to investors. Similar warnings have recently been made, apparently for internal consumption, on behalf of the leading producing concerns. Mr John Maxwell, for example, at the Associated British Picture Corporation meeting in August, declared that film production was far from being a "land flowing with easy money," for in fact costs had mounted and gross receipts had failed to increase in due proportion. Almost identical views were expressed at the Gaumont-British meeting a month later.

Recent trends suggest, on the whole, that exhibition and renting have provided the mainstay for film profits. What are the current prospects of the exhibition branch? The remission of the entertainments tax on cheap seats from July last, coupled with improved trade and employment, may be a factor of great importance. Mr Simon Rowson, the industry's leading statistician, has computed that of an average weekly attendance of 18½ millions, as many as 8 million persons pay 6d. or under in admission. In terms of cash takings his estimates show that, out of net receipts

(excluding tax) amounting to £33,500,000, as much as £7,945,000 net was paid for seats up to 6d. Excluding the West-End and suburban audiences, the remission of the tax on these seats affects a considerably larger proportion of cinema-goers. It may be presumed that demand will show an elastic response to the reduction, which should help to fill the halls at "off-peak" hours.

On the production side, investors might be easier in mind if producers were less pre-occupied with the more lavish aspect of their art. Three major producing groups, however, have crystallised out of depression, whose recent profits and current share prices are shown in the following table:—

(a) Gaumont-British has voting control. (b) Subsidiary company of Gaumont-British. (c) Subsidiary company of Provincial Cinematograph Theatres. (d) For reference to formed September, 1934. (e) Six months to April 29, 1933. (f) Eighteen months period, after reconstruction scheme. (g) And capital bonus 20 per cent. (h) Includes unstated proceeds from liquidation of a subsidiary company. * Earned for preference shares. † Earned for first dividend on ordinary shares. ‡ Covering period from September 29, 1934, to March 31, 1935. Percentage figures shown per annum. †† Not comparable with previous years, owing to inclusion of Associated British Cinemas figures. ‡‡ Earned for dividends. § Earned for ordinary shares. Percentages shown per annum.

The Gaumont-British concern is directly a producer, controlling its cinema undertakings through a network of subsidiary companies. It maintains close co-operation with Gainsborough Pictures, over which voting control is exercised. Joint distribution of the output of the two concerns

is effected through a renting subsidiary. The connections shown in the accompanying table between Gaumont-British and its associates illustrate only the broad outlines of the group. Full analysis would necessarily include a complex of sub-subsidiary concerns, linked to Provincial Cinematograph Theatres (of which only one is given) and to General Theatre Corporation, with which Gaumont-British holds a ten-year management contract. The statement, this week, that Gaumont-British is not interested in the Union Cinema Company presumably implies that the interest secured in February last has since been disposed of. This concern, with its subsidiaries, including Oxford and Berkshire Cinemas, is now actively acquiring and erecting additional new cinemas. Its circuit already numbers over 100 cinemas; present building plans will increase the total to 130; and negotiations are in progress for the acquisition of three new circuits controlling 60 cinemas.

These outlines of the largest film concern in Europe—which, incidentally, include no reference to the substantial interest in Baird Television—indicate the difficulty of unravelling its financial position without the assistance of a consolidated balance sheet. The last accounts to March 31st showed that advances to, and shares and debentures in, subsidiary companies amounted to £10,372,068 out of total assets of £13,745,513. In these circumstances, the fact that the corporation held only £6,555 in cash (including a "special" bank account) may have limited relevance. The increase in the bank overdraft, however, from £133,172 to £667,537, coupled with the chairman's explanation of the increase in film productions and debtors, suggest that, at the date of the last balance sheet, the Corporation was somewhat heavily committed in film productions awaiting exhibition.

The valuation of these assets is a matter of some difficulty, and recent chairmen's speeches have been at pains to discuss the basis employed. The Gaumont-British practice is to charge the renting subsidiary with the full studio cost; the renters then credit receipts in reduction of this amount and value the film for stock purposes at less than the value of the contracted business for the ensuing year, unreleased films being taken at cost. The eventual results of the production business, therefore, are not shown in the parent company's accounts directly, but are reflected in practice in dividend receipts from (or, contingently, in provision for losses of) the renting concerns. The Corporation shows only one omnibus revenue item in its accounts, and the financial results of productions are not readily ascertainable, but since the production and exhibition branches of the circuit concerns must be regarded integrally, this may not be of major concern to investors. The consolidation of its complex interests, which is making slower progress than anticipated, still appears necessary before any long-term basis of share valuation can be established.

The second large producer, Associated British Picture Corporation, on the chairman's own statement, derives the largest contribution to profits from its 225 cinemas. Of these, the majority have lately been transferred from subsidiary concerns to the parent company, the reorganisation being reflected in the latest profit statement. Its remaining subsidiary companies consist chiefly of renting and smaller producing concerns. The re-grouping, assisted by the consolidated balance sheet, enables a more comprehensive view to be taken of the Corporation's position. The issue, a year ago, of £2,500,000 debenture stock, although primarily a funding operation, reflects the general practice in the industry of securing an increased volume of prior charges on cinema properties. This practice is not without certain disadvantages, if carried too far, and inevitably the resultant gearing factor throws increased speculative emphasis on the ordinary shares. In this specific case, however, the latest results indicate a marked improvement in group profits, of which under half has been distributed in increased ordinary dividends.

The third concern, British and Dominions Film Corporation, was formerly linked to Gaumont-British through rental arrangements. New contracts have since been entered into, however, and the concern is now an independent producer and does not operate cinemas. A severe writing-down of capital in 1933, involving nearly £225,000, has been followed by somewhat improved results, although earnings

during the latest period were equivalent to no more than 8.2 per cent. per annum on the reduced ordinary capital. Recent interest has been aroused by the announcement that Mr C. M. Woolf, formerly a joint managing director of Gaumont-British, has been appointed managing director of the Corporation. In assessing the prospects of the concern, which set aside £100,000 out of new issue proceeds for producing films in 1934, investors may inquire whether the finance of productions by way of new capital issues is altogether appropriate. Doubtless, the lack of financial facilities for current film production has been felt in the past, but advances against completed film are now less difficult to obtain.

It is difficult to avoid the conclusion that even the semi-speculative investor may be well advised to limit his interest in the producing branch—the more so in view of future technical possibilities such as the advent of the colour film and, ultimately, of television. To the exhibitors these possibilities are of less immediate concern, although they may well increase their costs. Since the principal groups combine cinema and studio interests, a straight investment choice is hardly possible between the two sections, and the investor must leave the intricacies of cinema circuit economics to the experts, without unduly concerning himself with questions of relative profitability. As between the principal concerns, the further difficulty is introduced that merger "feelers" have apparently been abandoned.

INVESTMENT NOTES

Markets After the Election.—The course of this week's events has borne out the cautious prognostication we ventured to make last week. Despite the return of the National Government with a majority after the "House's" own heart, which made the most optimistic bulls of "majorities" look like incorrigible pessimists, the expected "boomlet" has been conspicuously absent. Markets were active and strong on Friday, for the Government's victory had been clear—in kind, though not in degree—from the early hours of that day. On Monday, however, once the first batch of what are sometimes termed "Sunday paper orders" had been cleared, quietude began to give place to moderate but perceptible profit-taking. It became clear that many operators had correctly anticipated the result of the election, and regarded its announcement, like the declaration of an expectedly favourable dividend, as a signal for closing. On the whole, however, the markets have remained reasonably firm in the face of current news which has not been altogether favourable. The unexpectedly large strike majority in the miners' ballot has caused some misgiving, for a national stoppage would demand revision of many investment estimates based on the uninterrupted progress of trade recovery. On the whole, the markets, while retaining the dogged optimism which has survived the buffeting of the last four months, may be likely, for the present, to maintain an attitude of watchfulness—and prayer.

Far Eastern Uncertainties.—The recently established Protection Committee for Chinese bondholders may be faced sooner, rather than later, with serious work. Although the creation of an autonomous Government in North China has been "indefinitely postponed," the week's news from that region (discussed on page 1006) is of serious long-term import for investors. A declaration of independent status by the five Northern Provinces would have involved a small but relatively prosperous proportion of the vast territory of the Republic. Investors who appeal to recent history may conclude that the latest Japanese move betokens delay rather than abandonment of her ambition. The potential effects of any renewal of her forward policy in this area can be measured by the Customs receipts from the Northern ports. The long coast line of Hopei and Shantung includes the important Customs ports of Tientsin and Kiaochow; and the total receipts from six ports in these provinces amounted to little over 70 million standard dollars during 1933, out of total receipts of \$339.5 millions. The total for

1934 has been estimated at \$334.6 millions, equivalent in sterling to approximately £22½ millions. If the proportions relating to 1933 were again valid during 1934, the amount of dues collected from the Northern Ports would be equivalent to about £4.6 millions, or little over 20.6 per cent. Their contribution is, therefore, substantial; but it does not compare with that of Shanghai alone, which regularly provides around 50 per cent. of the total. After making certain special appropriations, the Customs revenues are applied to the service of the 4½ per cent. Gold Loan of 1898 (which requires £822,579 during the current year), the Boxer Indemnity Obligations (£4,337,096), and the 5 per cent. Reorganisation Loan of 1913 (£1,495,941). The total of some £6.7 millions for service, therefore, would not have been imperilled had the new Government been set up and the railway, Customs and salt revenues retained by it. On the 1934 Customs figures, and without assessing the effect of the recent currency decrees, holders of these prior Chinese obligations would still have enjoyed a reduced but adequate cover. The real danger may be more remote. The Japanese "Monroe Doctrine for the Far East," to judge from this week's declarations from Tokyo, rules out any prospect of international co-operation to assist China, for, without Japanese goodwill, a new loan would involve too high a political risk. Despite the mid-week recovery, this week's price movements have suggested that the market is concerned as much for Japan as for China. The effect of militant ambition on Budget revenues is now apparent, and further costly expansion may be projected. It is, therefore, not surprising at this juncture to find more concern over the Budget position than emphasis upon Japan's past exemplary record.

Protecting the Investor.—The address of Mr T. J. Carlyle Gifford, at the general meeting of the Association of Investment Trusts last Monday, was a landmark in the history of the movement towards collective security for the British investor. The Association, originally formed to represent a limited though important group of security holders, has in the last twelve months perceptibly enhanced both its prestige and scope by its success in securing the abandonment of the scheme originally put forward by the directors of De Beers for a permanent diminution of preferential share rights. When Mr Carlyle Gifford's remarks on the status of preference shareholders are interpreted in the light of the Association's recent action, they appear to be nothing less than a declaration of policy which may be directly applied to any and every scheme involving changes in preferential status which may be disclosed in future. The chairman put his finger unhesitatingly on two fallacies which are responsible for almost every inequitable proposal in this category. The first is that the preference shareholder, who is entitled to a relatively high rate of dividend, is a "burden," holding a species of junior fixed charge, on a company. In fact, he is merely a partner with the ordinary shareholder, under a contract for the division of profits. His existence does not alter the profit-earning capacity of a company by one iota, for his rights have no relevance until profits have been earned. Secondly, there is no force in the contention that, when the value of certain of a company's fixed assets has diminished or disappeared, the consequential reduction in capital should necessarily apply to preference as well as to ordinary shareholders. A loss of fixed capital does not render a company unable to pay dividends if they are earned and the profit-and-loss account is in credit. The original shareholders' contract provides for the payment of a fixed sum to preference shareholders out of profits, when these are available. So long as sufficient profits are being earned to cover the payment of this sum, preference shareholders may insist that the terms of the contract can and should be honoured. The argument for diminution of rights as a consequence of depreciation of fixed assets is a *non sequitur*. Any change to which preference holders may agree, purely as a matter of expediency, should be accompanied by equivalent compensation. Mr Carlyle Gifford's address also contained a refutation of the thesis, not unpopular in high places, that foreign investment by British citizens is unwise and inexpedient, if not exactly anti-social. It is well that authorita-

A '15 MOORGATE' TRUST

VIEWED from the standpoints of integrity of capital and high income yields

Gold Mines

have over a long period proved to be among the most successful of all investments. Those who chose the best mines for their investment have not only conserved their capital but have seen it appreciate substantially in value. In addition they have received regular dividends showing a higher yield than that obtained on most other investments.

Investors Gold Share Trust

is planned for investors who wish to invest in a selection of the best dividend-paying British gold mines. The capital invested in the Trust is spread over 14 picked companies, all of which are well-established and proved, and are good dividend-payers. The ore reserves of each company are conservatively estimated to be sufficient to last for at least twice the 10-year duration of the Trust.

The Gross Annual Yield calculated on the cash dividends paid by the companies in the past year, exclusive of all capital bonuses and at a price of 21s. per sub-unit, is approximately

7½%

Russian Bonds.—The Stock Exchange is showing practical evidence of the change in the City view as to the stability of Communist Russia and the prospects for Czarist bonds. The diminution of political aversion and the trend towards economic normality in the U.S.S.R. during recent years have brought important psychological changes. The City is disposed to take a more lenient view of the Russian contention that in the special circumstances a distinction between the validity of Czarist and post-Czarist obligations is appropriate, while Moscow seems more inclined to make the appropriate gestures to placate Ceresus. The mutual advantages of a resumption of fuller financial and economic co-operation provide powerful incentives to both sides. Mr Norman Holden, chairman of the Phoenix Investment Trust, formerly "Russian Corporation," recently expressed the view that "during the last twelve months a settlement of the debt question of some kind has passed through the stage of possibility to that of probability," and suggested that Russia wanted at least £40 millions of machinery on a ten-year payment basis as a *quid pro quo*. The Government bonds, whose nominal value in the Stock Exchange list amounts to £300 millions, have lately been changing hands around 2, against a quotation of $\frac{1}{2}$ earlier this year. Market sources have reported a quietly persistent demand for some time past. The circumstantial evidence that some deal is pending is quite strong. However, consideration of the aggregate funded debt outstanding should limit severely the anticipations of bondholders. Many, for example, might regard Mr Holden's statement that the matter will become practical politics "even if the price is no higher than 25 per cent. without any accrued interest" as optimistic in the circumstances. Regarding "ways and means," the interesting suggestion has been made that the difference between the credit ranking of the two countries might be mobilised through the medium of a finance company, somewhat on the lines of the Argentine Convention Trust, or alternatively that Czarist loans might be accepted on a percentage basis in subscription to a new loan. It is not clear what provision, if any, would be made for Czarist commercial creditors, but it would seem hardly equitable to favour the bondholder creditor alone. The Lena Goldfields claim is in process of settlement by a partial offer in satisfaction of the arbitration award. An amended scheme is now to be submitted to an extraordinary general meeting, which goes some way to meet the claims of the note-holders. Their readiness to accept less than their full due upon a liquidation of the company may be expedient in the circumstances of the case, without providing any necessary precedent.

* * *

Actuaries' Investment Index.—The latter part of last week was a period of advancing Stock Exchange prices. Though activity has not been fully maintained this week, the Actuaries' Index of 158 industrial ordinary shares has reached its highest point since recovery began, at 80.0, against 78.7 a week ago and 75.6 a month ago (December 31, 1928 = 100). The corresponding figures of average yield are 3.73, 3.75 and 3.89 per cent. respectively. Significant movements in constituent groups in the index are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month Ago	Week Ago	This Week	Month Ago	Week Ago	This Week
	(Oct. 22)	(Nov. 12)	(Nov. 19)	(Oct. 22)	(Nov. 12)	(Nov. 19)
Insurance Co.'s (24)	118.4	122.4	125.0	3.55	3.44	3.37
Investment trusts (14)	54.3	56.0	57.7	3.73	3.68	3.58
Building materials (4)	89.7	93.8	96.8	4.54	4.38	4.23
Cotton (6)	41.9	46.5	48.6	2.29	2.15	2.09
Electric supplies (8)	119.0	126.6	128.6	4.31	4.06	3.99
Stores and catering (15)	79.4	81.0	82.6	3.95	3.88	3.81
Breweries and distilleries (19)	128.2	134.6	137.3	4.30	4.13	4.09

The latest increase is widely distributed over groups which are likely to benefit most by continued industrial recovery. By the same token, uncertainty over a possible coal stoppage would be calculated to exert a restraining influence on many sections of the market.

COMPANY NOTES

Cement Companies.—In a recent Note on cement shares we pointed out how a rapid improvement in cement making plant had upset the equilibrium of the industry, enabling new enterprises to be started in favourable localities where prices could be cut and a local business carved out from the markets of the older concerns. In a speech which fully confirmed this analysis of the situation, the chairman of Associated Portland Cement Manufacturers recorded, last March, that the costs of his group had fallen by 42 per cent. in the last ten years, while the selling price had fallen by 46 per cent. By 1934, however, price cutting had over-reached itself, and the long-continued efforts of the Associated group, and certain others, at last achieved an agreement on prices covering the whole trade, together with a scheme for centralised propaganda and research. The registration of the association to carry out this work

was announced in the Press a few days ago. Owing to the fulfilment of pre-agreement contracts, profits for 1934 did not (except in the Associated/British group) show much improvement. But companies whose financial year has ended more recently (such as Eastwoods and Ketton) have published greatly improved earnings. It would seem reasonable to accept these earnings as fair samples of what is to come. Despite serious price-cutting during the depression, cost reduction apparently kept pace with it until the final scramble of 1933-34. That, at any rate, is suggested by the steady yearly rise in the Moodys-Economist sample profits (based on seven companies) during the depression period. It is unlikely that reduction of costs should have stopped short in 1934 simply because a price agreement was concluded that year—indeed, the chairman of the Associated company specifically referred to further reductions

during last year. Thus the manufacturers may expect to benefit not only from somewhat higher prices, but also from some further economies. They have, besides, a useful equity in the revival of public works which has now become part of the Government's policy. The unemployment returns show that public works activity is still very low. A rapid revival would almost certainly coincide with the continuing effects of the still vigorous building boom to produce a peak in demand; while, at the worst, a slow revival in public works might offset a slow decline in general building. In the long run, cement can still count on an expanding market. The prospect for cement shares would thus appear to be sound, with room for further rises in profits. Boom conditions, however, should not be expected. They are unacceptable to the leaders of the industry and would only undo the laborious work of organisation achieved last year. In the event of a curtailment of demand, the recent and current rapid expansion of output capacity would put the new agreements to a severe test. But a curtailment of demand does not seem likely at present.

(s) 6 per cent. cumulative preference £10 shares. † Tax free. (a) On increased ordinary capital. (b) And capital bonus of 20 per cent. Yield worked on 17 $\frac{1}{2}$ per cent. basis. (c) Ex-dividend and bonus.

The **Bass, Ratcliff and Gretton** figures show record net profits, despite an increased provision for depreciation, and the increased dividend of 22 per cent., tax free, is covered with a very satisfactory margin. The most interesting balance sheet change is the reduction of gilt-edged holdings from £243,000 to £83,000. **Worthington and Company**, with whom Bass is closely associated, report an increase in total profits from £366,877 to £385,214. These improved earnings by concerns with a national sale, are closely paralleled by the widely-spread concerns illustrated above. Both **Stroud** and **Morgans** supply an agricultural market, and **Fremlins**, despite its rather wider interests, falls mainly in the same category. In each case the expected increase in cash distributions is to be made. Further, **Morgans** and **Stroud** intend to make issues of bonus shares, at the respective rates of 20 and 40 per cent. In the Birmingham area, **W. Butler and Company** also shows further recovery, although it does not compare with the handsome rise secured in the previous year. The increase in the total dividend of **Ansells Brewery**, from 15 per cent. to 22 $\frac{1}{2}$ per cent., may be more representative of the prosperity of "the trade" in the Midlands. In the Northampton area, **P. Phipps and Company** have increased the tax free dividend from 12 $\frac{1}{2}$ to 13 $\frac{1}{2}$ per cent. tax free. Its competitor, **Northampton Brewery**, shows rather slight expansion of total profits, and higher depreciation charges have reduced the ordinary earnings from 16.2 to 12.8 per cent., thus affording only minimal cover for the 12 $\frac{1}{2}$ per cent. dividend. The net profits of **Hull Brewery** show an advance from £89,492 to £97,128, and the dividend has been raised from 12 $\frac{1}{2}$ to 15 per cent. Broadly, the market has viewed the week's

Another New Fixed Trust — with a notable DIFFERENCE

results with mild satisfaction rather than with elation, and is inclined, if anything, to moderate its estimates of further recovery. At best, the industry can expect merely the maintenance of the present level of the beer duty in the next Budget, when the effect of increased armament expenditure will, for the first time, be apparent.

* * *

Steel Share Outlook.—The Government's return with a re-armament programme has made for steadiness in the iron and steel share market this week. Developments are taking place in the industry, however, which, while encouraging enough in the short run, may in the long term prove detrimental to shareholders' interests. Current demand is probably greater than ever before. Unquestionably, the construction and motor industries are more active than at any time since the war, and two major depressed markets, railway material and shipbuilding steel, are showing some recovery. Production in October established a new post-depression record and represented between 85 and 90 per cent. of capacity. This scale of activity suggests that production, and consequently profits, are now at their maximum level consistent with present prices. There are only two ways, in fact, by which profits can be substantially increased in 1936. The first involves an increase in capacity, and, as the Stewarts and Lloyds experience at Corby has shown, it must be a lengthy business. The second method, by increased prices, is opposed to the industry's irrevocable pledges. It is difficult, however, to see how increased prices can be avoided, and already the South Wales producers have advanced the price of sheet bars. The present position, therefore, contains the seeds of over-extension of capacity and the concomitants of an inflationary boom. At the same time, the motor industry is becoming restive. Lord Nuffield again denounced the protection of an essential raw material last week, and now the Austin Motor Company has definitely decided to make its own sheets and forgings at the Tunstall works. The Richard Thomas acquisition of the Ebbw Vale iron and steel works also illustrates the growing zeal of consumers of steel to control their raw material supplies. These signs of instability in the industry, with a heavy naval re-armament programme and without the normal safety-valve of imports, may become chronic. From the market's point of view, chief interest centres on the producers of semi-finished steel. The recent profits of certain representative concerns are given in the table below:—

Company (and Date of Accounts)	Gross Profit	Ordinary Shares†			
		Earned	Paid	Quotation	Yield %
Baldwins (Dec. 31)—	£'000	%	%	s. d.	£ s. d.

* Allowing for only one year's second preference dividend. † All of £1 denomination, except Baldwins, 4s. (a) Interim of 2½ per cent. tax free paid in respect of current year.

It will be seen that profits even in 1934 were up to the 1929 level, although the level of production was lower. The coming accounts for 1935 should show further improvement, but thereafter the advance may be a function of price rather than output. Whitehead is the only re-roller of market importance, and its profits have not yet reached the top, for the new mill has only recently begun three-shift working. The possibility of higher prices should definitely be taken into account in the valuation of motor and light engineering shares.

J. S. Fry Reorganisation.—The news that the old established company of J. S. Fry and Sons, Limited (a subsidiary of British Cocoa and Chocolate Company, Limited), is to be liquidated, as a prelude to reorganisation, has come as an unpleasant surprise to preference and preferred ordinary shareholders. The company has four classes of preference and preferred ordinary shares in issue, to a total of £1,250,000, against an issued total of £900,000 in "A" and "B" deferred ordinary shares, which are held by the controlling company. The preference and preferred ordinary are regularly dealt in and quoted on the Bristol Stock Exchange, where their status, among an extensive clientèle of conservative investors, has always been of the highest. The company has never made public its complete accounts, but from available information it would seem that the profit-and-loss balance, in the balance sheet, dropped from £125,000 in 1932 to £81,000 in 1934, and that the latter amount was arrived at after crediting "reserves no longer required" and certain other non-recurring items, and debiting, *inter alia*, a trading loss. This information may have suggested that the company, recently, had been less prosperous than heretofore, and the Bristol quotations for the preference and preferred ordinary shares have, in fact, fallen by approximately 2s. 6d., all round, during the last few months. That so extreme a remedy as liquidation was in prospect, however, was not imagined. According to the articles of association, the various classes of fixed-dividend shares are repayable at par—namely at £1 in each case. The directors, however, have recognised that such a course might holders. They therefore propose to repay the shares at various premiums ranging from 2½ per cent. to 27½ per cent. The principle will be applauded as honouring the principles of equitable treatment of preference shareholders, which have been frequently enunciated in our columns, and have been forcibly restated by the chairman of the Association of Investment Trusts this week. The amounts offered, incidentally, are somewhat below the market quotations prevailing recently, before the issue of the scheme:—

Class of Share	Amount Issued	Prices, May, 1935	Prices, Nov., 1935	Amounts offered by Company
6% cum. pref.	400,000	s. d. s. d.	s. d. s. d.	
5% cum. pref.	250,000	28 6-29 6	26 0-27 0	25s. 6d. per share
6% non-cum. pfd. ord.	200,000	23 0-24 0	21 6-22 6	20s. 6d. "
8% non-cum. "B" pfd. ord.	400,000	25 0-26 0	22 6-23 6	21s. 6d. "
		28 6-29 6	26 6-27 6	22s. 6d. "

The preference shareholders, while appreciating that, in the words of the directors' circular, they are receiving "an uncovenanted benefit," may ask for a full statement of the position, in order that their decision may be given in the light of all available facts.

* * *

Oil Dividends and Sanctions.—The oil share market has been disappointed to learn that interim dividends from "Shell" Transport and Royal Dutch have been deferred. The "Shell" announcement came initially as something of a shock, but closer reading of its terms suggested that possibility that present deferment of an interim declaration did not necessarily preclude a distribution at a later date. A rally promptly ensued in the shares. The Royal Dutch directors have also declined to make a statement regarding an interim dividend, but in this case also there remains some prospect of an announcement during the second half of December. In both cases interim payments in the past have been made in January, and time is not, therefore, pressing. In view of the present position regarding sanctions and exchange difficulties, the hesitancy of the two of essential war materials does not include oil, since a successful embargo would require the co-operation of non-member States, and in particular America. The President's powers to act under the Neutrality Act may be a circumscribed. Assisted by public opinion and by indirect "harassing" action by various departments of the

Administration, however, it is possible that the President might be able to lend at least partial assistance to an oil sanction. Doubtless these considerations have been weighed in this week's decisions, for the improvement in the world oil situation, politics apart, has been sustained. Investors will watch with close attention the moves which are now in progress to establish some form of embargo on Italy's oil supplies. Apart from the United States, which is a large supplier of all forms of oil, including lubricants, the principal sources include Roumania, which exports raw oil, and Persia, whose supplies consist chiefly of benzine. The Iranian exports of this fuel to Italy during 1934 amounted to 117,265 tons, and they comprise a substantial proportion of Italy's total supplies. The interest of the British Government in Anglo-Iranian has suggested in some quarters the possibility of a certain revulsion of public feeling against the continuation of these supplies. We discuss this matter at some length in a leading article on page 1,000. The possibility of independent action, however, may be unlikely until the League's endeavours have been carried to a further stage, but the implications of the official participation in Anglo-Iranian, primarily intended for defence purposes, may not be lost upon investors.

* * *

Tate and Lyle Progress.—Under the legislation of 1928, which placed a duty on foreign refined sugar, Tate and Lyle was one of the first concerns to benefit from the new tariff policy of this country. As the subsequent profit record demonstrates, the business has since developed on a much larger scale than before. The preliminary statement for the year to September 30, 1935, published this week, shows that the expansion of earnings has been well maintained. The figures so far available compare as follows with those of earlier years:—

	Years to September 30,		
	1933	1934	1935
Earnings preference dividend	£683,361	£980,868	£1,264,792
Preference dividend.....	71,500	71,500	71,500
Ordinary shares—			
Earned	611,861	909,368	1,193,292
Paid	578,000	765,000	870,399
Earned %	18-3	28-0*	27-2†
Paid %	17	22½	18-29†
To free reserves.....	50,000	150,000	310,000
Carried forward.....	48,973	43,341	56,233

* Or 33-7 per cent. before charging £150,000 placed to tax equalisation account. † Earnings and dividends on capital after 40 per cent. capital bonus distributed in May. Actual dividends declared were 6 per cent. interim and 14½ per cent. final.

The rate of earnings and dividend for 1935 are calculated on the average capital outstanding and including the 40 per cent capital bonus declared in May, which ranked only for the final dividend. On last year's capital the 1935 dividend is equivalent to 25-6 per cent., and the earnings to 38 per cent. The table above somewhat exaggerates the improvement in the company's profits, since the profits for 1932-33 were lower than for either of the two preceding years or for 1928-29. A very real improvement, however, has taken place, firmly based on rising turnover and reorganised works. In normal conditions there is no reason to doubt the maintenance of the present level of earnings, with the possibility of a further advance. But, as the chairman has often reminded his shareholders in earlier years, the company is compelled to carry considerable stocks at market risk in the normal course of its business, and, as happened in 1929-30, can suffer big stock losses in times of rapidly falling prices. As a serious fall from the low prices now prevailing seems unlikely, the stock risk is not an immediate factor, more especially as the company is believed to have improved its methods of covering the risk since the losses of 1929-30. The generous allocations which the directors have made to reserve this year suggest that they now aim at stability rather than rapidly advancing dividends.

* * *

Wall Paper Manufacturers.—Comparison of the latest profits of this concern with those of the preceding year is difficult owing to the acquisition of a number of

ELECTRICAL ENERGY AT ECONOMIC RATES IN NORTH-EAST COAST AREA
NORTH-EASTERN ELECTRIC SUPPLY Co. Ltd.
Carlisle House, NEWCASTLE-UPON-TYNE
SITES FOR WORKS. Apply to the above Address for details

paper-making concerns in that year, and the inclusion, in the 1933-34 results, of only four to five months' profits of the new undertakings. The full accounts, published this week, show total income, after charging £18,085 interest under purchase agreements, of £801,783. In terms of earnings for the increased deferred capital, the improvement is equivalent to little over 1 per cent. For the first occasion the directors present consolidated earnings and assets statements. The earnings figures are less revealing than the balance sheet, but they indicate that the parent concern has taken into account its full share of the total net profits of the group. The directors' report refers to the continuation of trading conditions "on normal lines," and a sentence referring to a competitive price policy suggests, without clearly stating, that price cutting may be less acute in the trade. A three-year profit statement follows, which must be interpreted with reference to the recent extension of the group:—

	Years to August 31st		
	1933	1934	1935
Trading profits and income from	£	£	£
Subsidiary companies	572,884	641,790†	783,736†
Other investment income.....	62,172	70,417	18,047
Total income	635,056	712,207	801,783
Income tax	58,246	58,690	78,312
Staff funds	10,000	10,000	10,000
Debt interest.....	40,569	40,569	48,217
Preference dividend	60,000	60,000	71,991
Ordinary dividend.....	140,000	152,741	165,482
Deferred shares :			
Earned.....	326,241	390,207	427,781
Paid	230,000	268,799	281,331
Earned %	17-9	19-8	20-9
Paid %	11½	12½	12½
Reserve provision	98,815†	100,000	150,000†
Carried forward.....	261,417	282,825	279,275

† After charging £30,262 and £18,085 interest under purchase agreements in 1933-34 and 1934-35 respectively.

† Whole amount in 1933 and £100,000 in 1935 allocated to reduction of goodwill, patents, etc.

Changes in the balance sheet principally reflect these acquisitions. Issued capital has increased, while investments and cash show a fall due to the satisfaction of purchase considerations shown in the last balance sheet. Stocks, however, show little change at £847,649. Whether this is due to "normal trade" or to a reduction of the stock ratio to turnover is not clear. The group stocks, shown in the consolidated balance sheet at £1,356,020, seem high in relation to total assets of £8,749,006. The liquid position, however, is enviable, and the concern could bring up heavy guns if attacked by outside competition. Until price cutting is definitely disposed of, however, the £1 deferred stock units, quoted at 56s. 3d. xd. to yield £4 9s. per cent., may appeal to the investor who seeks stability rather than rapid recovery.

* * *

Dennis and Associated Equipment.—The publication of the report of Dennis and the dividend of the Associated Equipment Company has induced a partial reaction in the shares. Dennis's profits, nevertheless, have expanded to cover an increased ordinary dividend with an adequate margin. The modest capitalisation of the concern, after two repayments of capital, magnifies relatively small absolute changes in earnings into relatively high earnings percentages for the shares. In addition to the 150 per cent. dividend, a tax-free distribution of 50 per cent. has been declared out of the surplus realised from

the White and Poppe liquidation, which now shows a balance of £97,772. The profits of the past three years are analysed below:—

	Years to September 30th	1933	1934	1935
Total profits	£	89,979	121,541	137,918
Depreciation	£	10,517	12,611	14,119
Fees	£	4,132	3,973	3,917
Staff fund	£	1,000	1,000	2,000
Ordinary shares :				
Earned	£	74,330	103,957	117,882
Paid	£	75,124	100,165	112,886†
Earned %		98.9	139.8	158.9
Paid %		100	133½	150†
Carried forward.....	£	106,827	110,619	115,815
Issued capital.....	£	75,124	75,124	75,124

† In addition, distribution of 50 per cent., free of tax, out of surplus on White and Poppe realisation account, requiring £37,562.

The balance sheet shows the usual position of extraordinary liquidity. Gilt-edged investments amount to £140,959, and cash holdings are over £30,000 higher at £140,959, and cash holdings are over £30,000 higher at £267,784. Stocks, however, are so much lower at £321,742. The profits figures were received in reserved fashion, for the increase in registrations during the year might have suggested a more vigorous recovery in earnings. Results, however, may have been affected by the conditions common to all "heavy" commercial vehicle producers, which we discussed in the *Economist* of November 9 last (page 898). The market suspects that the same factors have been largely responsible for the mere maintenance of the ordinary dividend of the Associated Equipment Company at rs. 3d. (8½ per cent. approximately) per £1 stock. The announcement was received with disappointment, and the units have fallen to 45s. (against a high level of 49s. on Monday), at which they yield £3 11s. 9d. per cent. Dennis rs. shares were sympathetically affected on Tuesday, and now stand at 37s. 3d. xd., yielding £4 16s. per cent. on the 150 per cent. dividend.

Burma Corporation.—The recent advance in base metal prices has placed a different complexion upon the outlook for this big producer, writes our mining correspondent. Nevertheless, the fresh shrinkage in both the quantity and value of the ore reserves indicates sufficient foundation for the warning as to the expectation of life given at the last annual general meeting. The return of capital then mentioned is expected to be made in January next, the amount being one rupee, or approximately rs. 6d. per share. In preparation for this payment, opportunities were taken during the past year to realise securities, the holdings being reduced from £690,300 to £314,500, while the cash rose from £466,070 to £1,127,850. Work during the past financial year was attended with unexpectedly good results at the junction of two lodes on the No. 8 level, the disclosure of copper ore on Nos. 7, 8 and 9 levels and the opening of pay material on various other lodes down to the No. 9 level. Drilling and other work at greater depth, however, continued to be fruitless. According to a market rumour, a discovery of importance has just been made at depth, but confirmation of this must be awaited. We summarise below the results of the last three years:—

	1932-33	1933-34	1934-35
Ore mined	tons 426,696	449,550	445,290
Yield refined lead	tons 70,560	70,560	70,560
Yield fine silver	ozs. 6,050,190	5,892,050	5,775,913
Working profit	£ 488,170	522,760	710,590
Sundry revenue.....	£ 62,030	42,230	46,740
Depreciation, etc.	£ 133,120	114,510	89,370
Taxes and duty.....	£ 104,250	117,700	155,740
Net profit	£ 312,830	332,780	512,220
Per cent. earned	3.0	3.3	5.0
Per cent. paid (free of Indian and British tax)	3.4	3.1	4.7
Reserve Funds	£ 179,390	149,390	179,390
Carried forward.....	£ 28,430	16,970	23,110

* Debit balance.

The substantial improvement shown in last year's earnings is attributable to the increased revenue derived from silver throughout the period and the advance in all metals during the final quarter—when, moreover, the opportunity arose to dispose of a considerable quantity of lead in stock. In addition, operating expenditure was lower than before, the charge for depreciation further declined, and there was no repetition of the 1934-35 expenditure in connection with the examination of the Wa States. An allocation of £30,000, however, has been made to reserve. The future outlook depends upon the course of silver and non-ferrous metal prices. Irrespective of the uncertain factor of war requirements, the outlook for consuming industries remains favourable. Allowing for the rs. 6d. returned capital included in current price, the yield on the basis of last year's dividends is about 6½ per cent., free of both British and Indian income tax.

Other Company Results.—Excluding the reports of the brewery and other industrial concerns, which are discussed in preceding Notes, the results of 31 further concerns are set out in our usual table on page 1050. In the Finance group, a good result is reported by *Bowmaker*, which finances hire purchase business. Profits have advanced to £48,480 and cover the increased dividend of 9 per cent. with an adequate margin. In the motor group the full report of *Humber* confirms the satisfactory profits figures announced last week, and the directors state that sales exceeded those of the previous year in both home and domestic markets. The *Enfield Cycle* net profits have fallen from £24,604 to £18,922, and the dividend is reduced from 8½ to 7½ per cent. Rubber company profits are again irregular, the best recovery coming from *United Temiang*, whose profits have improved to £10,102, at which level the 4 per cent. dividend is satisfactorily covered. In the iron and steel group, the *Weardale Steel* and *Fairfield Shipbuilding* results should satisfy recovery expectations. The net profits of the former concern amount to £72,502, against £51,780, the dividend being maintained at 6 per cent., while the latter has transformed a loss of £44,978 into a profit of £37,415. Among the miscellaneous industrial results, the *Frederick Sage* recovery has permitted the payment of three years' preference dividends, while *Vactric* in its first report shows net profits of £30,730 and pays 22½ per cent. Among the week's dividends, the 7½ per cent. interim payment of *Bristol Aeroplane* induced a partial reaction in the shares. *South Durham Steel* is to pay 11 per cent. on the ordinary and 5 per cent. on the "B" ordinary shares, against 9 and 3 per cent. respectively. The interim dividend of *Marks and Spencer* has been raised from 10 to 15 per cent., and that of *Allied Ironfounders* reduced from 7½ to 4 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Dalgety and Company, Imperial Smelting, Mitchells and Butlers, Pahang Consolidated, Electric and Musical Industries, Raphael Tuck and Sons, S. Smith and Sons (Motor Accessories), Bukit Kajang Rubber Estates, Wankie Colliery, Kenya Consolidated Goldfields, and Witwatersrand Nigel. At the Electric and Musical Industries meeting, the chairman reported that although sales outside the Empire had decreased, sales within the Empire had increased much more. The chairman of Witwatersrand Nigel spoke of the satisfactory development progress that had been made in the past year, and of the encouraging results obtained by neighbouring companies. Mr. H. Frisby, of Pahang Consolidated, described satisfactory work in developing the company's property. He declared that the tin "corner" was still in existence and was unlikely to be broken for a very long time if the Italo-Abyssinian war continued. The chairman of Wankie Colliery Company reported an increase of coal sales of over 100,000 tons, an increase of 20 per cent. over the previous year. Mr. Gustave Tuck was eulogistic of the firm's work in all departments, and rated the firm's reputation higher than ever. The Hon. A. C. Hoey, chairman of Kenya Consolidated Goldfields, discussed the year's exploration and development of the

200 sq. miles of the company's concession, and reported excellent progress. He stated that a separate company is to be formed to operate a special area of the Kiteri-Kuja Section and 18 sq. miles of adjoining territory. The chairman of Mitchells and Butlers discussed the improvement in trade which followed the reduction in the beer duty in 1934. Sir Robert Horne at the Imperial Smelting meeting declared that unless regulation of zinc supplies were not effected by outside producers, an application for an increased tariff must be filed by the British zinc producers. The chairman of Dalgety referred to hopeful prospects for Australian and New Zealand wool growers. Shareholders of S. Smith and Sons were informed that operations were running at full capacity. The chairman of Bukit Kajang discussed the prospect of reduced rubber stocks.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
DECEMBER 3

ACCOUNT
DECEMBER 5

The prophets of a post-election boom may be a little disappointed by this week's market movements. A Government majority exceeding the common estimate by a hundred seats has acted as a temporary stimulus, but the professional operator who saw his chance at the end of the last account has been quick to take his profits at the beginning of this. The early public enthusiasm was soon checked at home by the results of the coal ballot, and abroad by the serious events in the Far East. The effect of the former was particularly apparent on Thursday, when a long list of industrial, steel shares and rail stocks weakened.

The gilt-edged market opened in reactionary mood, for selling soon dispersed the early display of firmness. Further uncertainty resulted from the Far Eastern troubles, and conditions showed little improvement until mid-week. A moderate rally was then induced by fair investment support, in which War Loan was prominent. The corporation stocks were quiet owing to the resumption of municipal borrowing this week.

In the foreign bond market, Sino-Japanese issues have been most prominent, on circumstantial reports, and later abandonment of proposals for an "independent" Government in North China. Some political and investment implications of these postponed manoeuvres are discussed on pages 1006 and 1022. Chinese bonds were particularly nervous throughout the list, secured Customs loans and unpaid railway issues suffering a common fall. The news of the withdrawal of the plan prompted an immediate recovery and by Thursday the earlier losses had been substantially regained. Brazilian bonds opened in good form, but tottered a little on Tuesday before finding renewed support.

Home rails began well, but without real assurance. Profit-taking soon found its mark, particularly among the preference stocks. After a partial recovery, the result of the coal ballot and the week's traffic were received with disappointment, and quotations fell steadily. London Transport "C" stock failed to regain last week's high level, despite a satisfactory traffic return.

The Argentine rail market opened in good style, the new exchange decree being regarded as presaging improved exchange facilities for the companies. The opening rises were the largest, but the market maintained a consistently firm tone throughout the week.

Industrial markets began the new account in active style, but the public did not get the bit between its teeth as some forecasts suggested, and the professional profit-taker was soon in evidence. A "switchback" tendency developed later when fears of trouble in the coal industry damped the slightly more cheerful mid-week tendency. Iron and steel and coal issues became easier on the result of the ballot. The suggestion that optimum long-term earnings capacity has been achieved by the recent expansion of steel production is examined on page 1026. Motor shares ruled irregular. Associated Equipment recovered part of the earlier fall which followed the maintenance of the ordinary

Stout Men are Poor Insurance Risks!

TO many men, the first realisation that there is anything disquieting in ungainly girth, comes when they attempt to insure their lives, or increase their existing insurance "cover".

Then the all probing company's doctor has been known to spring a bombshell when he frowns at that tell-tale bulge beneath the waistcoat, and "goes over" our heart again.

It is something of a shock, but it is founded on incontestable statistics.

When a man's waist measurement equals or exceeds that of his chest look out for danger.

Because every inch round the waist puts a 2½ lb. burden on the frame. Every inch round the waist means extra strain on the heart, lungs, bowels and other vital organs. That is why insurance companies demand a larger premium from those whose "expectation of life" is shortened by their corpulence.

E.1.

dividend, and other commercial motor issues (including Dennis, whose report is analysed on page 1027) ruled dull. Aviation shares ruled uncertain, and the anticipated Bristol Aeroplane dividend was followed by profit-taking. The electrical equipment section provided a number of features, including the continued rise of Crompton Parkinson to above the £5 mark, and a recovery in General Electric. Brewery shares opened cheerfully, but the week's results (set out on page 1025) found the profit-takers busy. Leading tobacco issues showed rather undecided movements. The store and textile groups opened with confidence, but suffered a reaction later in the week. Building issues resumed their initial firmness in mid-week, as did a number of miscellaneous industrials, such as Murex, British Oxygen, and Imperial Chemical. Bank shares made a mixed mid-week showing, and the insurance group was irregular.

The oil share market promptly recovered from its disappointment on the deferring of the "Shell" interim decision, discussed on page 1026. Prospects of higher petrol prices and Continental support for the leading international counters caused an immediate recovery to higher levels, and the suggestion that the Royal Dutch might make an interim decision during December induced a net gain in the shares.

Rubber shares have been consistently dull throughout the week, owing to the waning tendency of the commodity in Mincing Lane, nervousness regarding the control of Dutch native production and fears of demands for an increased Dutch quota next year. A mild selling movement occurred in the tea share market, but there was a fair response of professional support in mid-week. Indian shares were fairly active, but the Ceylon section was quiet.

Kaffir shares have enjoyed a very fair week, after a somewhat tentative opening. Late on Tuesday a buying movement set in, and encouraged by the return of excess profits and December dividend estimates, the market broadened further on Wednesday. A number of features, including East Rand Proprietary and West Witwatersrand, helped the general recovery. The West African market, except Bibiani, became easier, and in a quiet Australian market only Willuna maintained their early gains. The Rhodesian copper leaders gave a good account of themselves, and Selection Trust were in active demand. Tin share movements were limited and the market ruled quiet.

FOREIGN STOCK EXCHANGES

NEW YORK

VARIOUS factors have combined to encourage a strong upward price movement on Wall Street during the past week. There has been talk, if not of balanced budgets, at least of a lesser degree of unbalance; business indices are excellent; and foreign buying has spurred on a market which needed no urging. Stock turnover has been within sight of the three million mark, with steel and mail order issues prominent in an all-round movement, shared by rails and utilities. At the opening of this week there was a slight setback, partly technical, partly due to continued warnings from the authorities against inflation psychology, and partly to a short-sighted interpretation of the effects of the new Canadian Trade treaty. Liquor stocks fell in sympathy with the proposed duty cut on Canadian whisky. The advance was resumed on Tuesday, only to give way again to profit-taking at mid-week, with biggest losses in industrial and rails. Driven downward by Mr J. P. Morgan's attack on Roosevelt's taxation programme, the Dow Jones index fell from 148.44 to 146.65. The bond market has been firm and steadier than the stock market. Electricity output last week was 14.6 per cent. over the corresponding figure for last year, and *Iron Age* estimates steel mill activity at 54.5 per cent. of capacity, with demand from the motor industry still increasing.

* Two hour Session.

PARIS

Markets at the end of last week were almost completely dominated by the rise in the French Bank rate and by the opposition of the Parliamentary Finance Committee to

M. Laval's economic measures. There was a slight improvement in rentes on Friday, as that opposition weakened, but on Saturday rentes were neglected and more attention was paid to mining and electricity shares. On Monday, M. Laval's continued difficulties combined with the application of sanctions against Italy to induce unloading of speculative commitments, and later the fighting at Limoges between Fascists and Socialists caused further losses in rentes and banking and industrial issues. At mid-week there was a slight recovery induced by hopes that M. Laval would be able to prevail against the divided councils of the Left, but Thursday's increase in bank rate renewed the depressed tendency.

BERLIN

AFTER a decline early last week the share-market recovered, and on Friday was strong, many leaders gaining by between 2 and 4 points. The heaviest demand was for public utilities, electric-cables, and paper-pulps. The week closed undecided. The new week started with a renewed decline, but there were slight recoveries late on Tuesday. The chief feature of last week and this was heavy buying of Reichsbank, which advanced in ten days from 176 to 186. Russian securities were bought on reports of negotiations for a British loan to the Soviet Government. Home bonds were firm. In the dollar bonds list, certificated State and Bank issues were mostly a little lower. On Wednesday the Bourse was closed for Repentance Day.

	Nov. 13, 1935	Nov. 18, 1935	Nov. 19, 1935		Nov. 13, 1935	Nov. 18, 1935	Nov. 19, 1935

AMSTERDAM

The markets were listless throughout the past week, except in the American section, and only began to show signs of life on Wednesday, when there was quite a strong upward movement under the influence of Wall Street. Royal Dutch had been fairly active, but fell 3 points on the postponement of the decision regarding an interim dividend. They recovered on Wednesday. Tobacco issues made substantial gains in the hope of a lower American tariff. Shipping and rubber shares were firm. Over the week, industrials were slightly lower. Shipping and bank issues, oil and plantation shares all slightly higher.

	Nov. 13, 1935	Nov. 18, 1935	Nov. 20, 1935		Nov. 13, 1935	Nov. 18, 1935	Nov. 20, 1935

CAPITAL ISSUES

UNLESS the Ethiopian War again resumes its pre-election importance, the return of the National Government appears to release the queue of supplicants for investors' savings. This week's issues, however, have been somewhat dwarfed by preparations for next week. *Sunderland* heads the long list of corporation borrowers who seek to refund mortgage obligations. The medium chosen is a 3 per cent. stock, with a maximum life of 23 years. Issued at a half point discount, it is cheaper, by that margin, than the comparable West Bromwich and Dundee issues made last July. The terms are more favourable to the borrower, however, than those "suggested" when corporation issues were resumed in June after several months of market indigestion. If they can be maintained, succeeding borrowers will have no cause to regret their delay. The other public issue, of *Tindals Gold Mines*, relates to a West Australian gold-mining proposition. A certain amount of work has been done in the past, but a considerable amount of development is in prospect. At this stage the shares must be placed in the speculative mining category. Particulars "for information only"

have been published by *Ottoman Railway Holding Company*, which has acquired the remaining assets of the railway after the sale to the Turkish Government, and *Victors Stores*, whose small capitalisation is based on low denomination shares. Among the week's fixed trusts, *First Protected Fixed Trust*, provides a further example of ingenuity, which appears to be of somewhat limited value to certificate holders. A sum of 2s., included in the price of each sub-unit, is to be set aside with London Assurance to accumulate during the trust period of twenty years. The eventual repayment of 3s., it is stated, will provide cover against the possibility of capital depreciation of that extent. Since 2s. of the sum, however, must be regarded as return of capital, the protection appears to be limited to the interest earned during the period. The capital redemption policy and the fixed trust, as such, have no necessary relationship. Although the accrued interest might be applied in offsetting any possible depreciation of the portfolio, it is evident that such losses are "underwritten" by the investor himself.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

National Omnibus and Transport.—The board propose to issue 200,000 ordinary £1 shares at £1 7s. 6d.

The Anglo-Portuguese Telephone Company, Ltd.—Offer to the ordinary and "A" ordinary shareholders of 123,750 ordinary shares of £1 at 25s. per share, in the proportion of one new share for every eight shares held on November 2, 1935.

Charterhouse Industrial Development Company, Ltd.—The issued capital of this company has been increased to £500,000 by the issue of 300,000 ordinary shares £1 at 21s., subscribed by the Prudential Assurance Company, Lloyds Bank, Midland Bank, and The Charterhouse Investment Trust. Charterhouse Industrial Development Company, Ltd., was formed in June, 1934, to provide capital for smaller industrial companies and the new money will be utilised for this purpose.

Thrill Stores, Ltd.—Issue of 625,000 1s. deferred ordinary shares at 2s. 3d., ranking *pari passu* with existing shares and carrying the final dividend for the year ending March 31, 1936.

CONVERSIONS AND REPAYMENTS

Argentine Eastern Land Company.—This company proposes to reduce its share capital of £87,500 to £6,250. Meeting, December 11th, to consider the cancellation of 50,000 unissued shares, and that the issued capital be paid off to the extent of 13s. per share in respect of each of the 125,000 issued shares.

Oslo Gas and Electric Company.—All outstanding 6 per cent. bonds, 1924, are to be repaid at par on December 1, 1935, at the exchange of the day.

Tasmania 4 per cent. Stock, 1920-40.—The whole of this stock will be repaid on December 2, 1935.

Cook (Thomas) and Son.—This company proposes to redeem £740,000 6 per cent. debenture stock at 109.

Southern Rhodesia.—The Government of Southern Rhodesia has given notice of its intention to introduce a Bill at the next session of the Rhodesian Parliament to double the rate of repayment of the loan raised for the purchase of the mineral rights, or royalties, in the Colony from the British South Africa Company for two million pounds, to £1 per cent., or £22,500 a year, which brings it into line with other loans.

Japanese Government.—The whole of the outstanding balance of the 5 per cent. Special Loan of 1906 (Internal) Marks "O" and "Wa" will be redeemed in Japan at par on November 30, 1935.

Kuala Muda Rubber Estates.—The company will pay off all the 7 per cent. notes dated December 31, 1931, on January 1, 1936.

New Columbia Rubber.—At a meeting held November 13th a resolution was passed inviting holders of 7 per cent. convertible notes to agree to an extension of the date of repayment to December 31, 1936.

Fry (J. S.) and Sons, Ltd.—Repayment is proposed at the following rates: 6 per cent. preference shares, 25s. 6d. per share; 5 per cent. preference shares, 20s. 6d. per share; 6 per cent. preferred shares, 21s. 6d. per share; and 8 per cent. preferred shares, 22s. 6d. per share.

FIXED TRUSTS

British Industries Fixed Trusts.—Allied Investors Fixed Trust, Ltd. The managers announce the formation of the Third and Fourth portfolios of British Industries Fixed Trusts. Each portfolio contains 25 securities and alternative panels of 10 securities are available for replacement, if elimination (with consent of Midland Bank Executor and Trustee Company, Ltd.) is considered in interests of certificate holders. Duration of trusts, 20 years. Service charge equivalent to approximately one quarter of one per cent. per annum included in "offered" price of sub-units. Managers undertake to repurchase sub-units at not less than selling price of constituent shares, less Stock Exchange charges.

First Protected Fixed Trust.—The formation of this trust is announced by the Management Company of Manchester. Trustees, Midland Bank Executor and Trustee Company. Portfolio 29 securities, including three mining issues, representing 13 per cent. of total value. Managers undertake to repurchase sub-units. Price of sub-units includes 2s. to be invested in capital redemption policies, providing 3s. at end of 20 years trust life. Service charge, not more than 7½ per cent. Bonus shares to be retained or distributed at managers' discretion.

OFFER ABROAD

Nova Scotia 3 per Cent., 1947.—\$4,000,000 Nova Scotia 3 per cent., due 1947, have been offered at 98. Also \$3,000,000 2½ per cent., due 1940, at 100½. The latter issue has already been over-subscribed.

FORTHCOMING ISSUES

Alliance and Dublin Gas.—The Alliance and Dublin Consumers Gas Company will offer for sale by tender ordinary stock sufficient to produce, including premium, the sum of £300,000. The prospectus will be published on November 29th and the last day for accepting tenders is December 4th.

Colvilles Limited.—A public issue of 2,000,000 £1 ordinary shares in Colvilles Limited is expected to be made under the auspices of Morgan Grenfell and Company. Colvilles Limited is controlled by David Colville and Sons, in which Harland and Wolff have a substantial interest.

National Provincial Cinemas.—An issue of shares is expected to be made shortly by this company.

United Kingdom Gas Corporation.—Subscription lists will open and close on November 26th for an issue of 600,000 4½ per cent. cumulative preference shares and 250,000 ordinary £1 shares. The preference shares will be offered at 21s. and the ordinaries at 22s. each.

Vogelstruisbult Gold Mining Areas, Ltd.—The directors have increased the capital by the creation of 1,000,000 new shares of the nominal value of 10s., the total capital now being £2,200,000 in 4,400,000 shares. The new shares will be subscribed for in terms of the agreement adopted by the company on formation.

Wake and Dean, Ltd.—Wake and Dean, of Yatton, Somerset, requires additional capital in order to increase its business and to redeem the £75,000 of 7 per cent. debentures. Meetings will be held at Yatton on December 2nd to consider proposals.

Mentmore Manufacturing.—Underwriting arrangements are now being made by the London Industrial Finance Trust, Ltd., for an issue of 147,000 6 per cent. cumulative preference shares 10s. at par, and 147,000 ordinary shares of 5s. at 6s. in Mentmore Manufacturing Company, Ltd.

Usher's Wiltshire Brewery.—It is reported that this company is redeeming its £323,708 6 per cent. first mortgage debenture stock, and replacing it with an issue of 3½ per cent. stock.

Gascon Trust, Ltd.—Arrangements are being considered for the private placing of 175,000 6 per cent. cumulative preference shares £1 each.

Northern Ireland Transport Board.—The Northern Ireland Transport Board is expected to raise a loan in the London market in the course of the next few weeks.

OTHER RESULTS OF ISSUES

Irish Free State Conversion Loan.—The Minister for Finance is able to entertain few cash applications for the 4 per cent. conversion loan. It will be necessary to return all the moneys in respect of such applications for amounts over £200.

Johnson and Phillips, Ltd.—Recent issue of ordinary shares has been heavily over-subscribed.

CALLS DUE NOVEMBER 25 TO NOVEMBER 30, 1935

The grand total of calls in November, 1935, is £9,759,149, which compares with £8,049,212 in November, 1934.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED

LORD SNOWDEN AND THE BEER DUTY

COMPETITION FROM CLUBS

SIR WILLIAM WATERS BUTLER'S INTERESTING REVIEW

The forty-eighth annual general meeting of the shareholders of this company was held, on the 21st instant, at the White Horse Hotel, Birmingham, under the presidency of Sir William Waters Butler, Bart.

The deputy chairman, Mr Arthur Mitchell, referred to the great loss the company had sustained by the death of Mr W. Owen Butler, son of the chairman and a managing director.

The Chairman, in moving the adoption of the report and accounts, said:—Ladies and Gentlemen,—Mr Arthur Mitchell has communicated to me your kind message of sympathy to Lady Butler and myself in our very sad bereavement. We have been much consoled by many similar messages we have received from our friends and we deeply appreciate that you should join in the expression of sympathy with us.

I can only say that the blow has been a heavy one to his parents, and the company also has sustained a great loss, as he had become fully qualified in every direction to adequately fill his office as a managing director.

I think we should feel satisfied with the results of our last year's trading, and all are thankful to know the general prosperity of the country has been gradually increasing during the past few years. It is to be hoped, however, that the international political situation may soon become more settled, and that the Government, therefore, will not be involved in such expenditure as to bring about an increase in taxation, which in all probability would retard the continuance of our present prosperity.

The company is still expending large sums of money in bringing its licensed properties up to modern standards, which evoke the admiration not only of the public, but also of visitors from afar, and it will continue this policy so long as trading results permit.

UNFAIR CRITICISMS

Now that there is no ground for holding up to criticism the adult population as a crowd of inebriates, the so-called Temperance Party have turned their antagonism in new directions by condemning the "Improved Public House" based on the brainless declaration that "Drink taken in good surroundings did just as much harm as drink taken in sordid surroundings," and that the brewers erected them as a trap for the young—a declaration, no doubt, I may be told is based upon a remark of mine of a few years ago, when I expressed the view that the patrons of the licensed house of the future would expect more modern houses than at that time existed. These opponents of the "Improved Public House" do not seem to be agreed as to how they can justify their objections to it, for I notice that Mr R. Wilson Black, J.P., the President of the United Kingdom Alliance, takes the view that "as long as there are public-houses they ought to be clean, well-ventilated, light and sanitary," but apparently nothing must be provided to bring about the consumption of the goods the trader provides for those who patronise the house. The fact is all these specious temperance reformers desire that the licensed house should not be able to provide that for which it has always been set up, namely, a place where a person may go alone, or meet his friends and enjoy their company, and consume what he may want in the way of good food and drink. To-day, the owner and occupier of the licensed house are anxious that it should fulfil its original purpose, but under modern conditions which appeal to the generation of the present time, and to trade accordingly.

MR NEVILLE CHAMBERLAIN'S SOUND POLICY

I would remind the shareholders that as stated in the annual report, we are this year dealing with the results of twelve months against the results of fifteen months in the previous year's report, and in comparing the two balance sheets it must be recalled that in the trading of the fifteen months we had the benefit of two very fine summers, which conduced to a greater consumption of beer,

and also the increase in output which followed the reduction of the beer duty and the supply to our customers of a cheaper and stronger beer than that supplied before the crushing additions of 34s. per standard barrel to the beer duty inflicted by Mr Snowden in 1930 and 1931. No doubt his real purpose in increasing the beer duty was to diminish the consumption of beer by making it too costly for the consumer to buy and its production unprofitable to the brewer, or in other words to bring about the desire he expressed of diverting what he described as this mis-applied expenditure in alcoholic liquors to more useful purposes. His object was being rapidly achieved amid the vehement protests of all those affected. Fortunately, a wiser and more far-seeing statesman than he in Mr Neville Chamberlain, who took his place as Chancellor, declared that it was his intention to devote any improved revenue first to the restoration of cuts and then to the relief of taxation. When the revenue showed an improvement Mr Chamberlain was able to decrease the beer duty to the figure at which it stood before Mr Snowden made his punitive increases, but in doing so the Chancellor, anticipating a greater consumption would consequently result, made it a condition that the brewers would not only lower the price, but also increase the strength of the beer offered to the public. In this connection many will recall that Lord Snowden in a broadcast message on the eve of the General Election declared that Mr Chamberlain by granting this decrease in the beer duty had made a present to the brewers of £14,000,000. I do not know how Lord Snowden arrived at this figure, but it would have been much better of him if he had in fairness stated the fact that Mr Chamberlain only restored the beer duty to the figure at which it stood before Mr Snowden made his unjust and vindictive additions. In this way Mr Chamberlain evidently hoped that the losses would be made good which Mr Snowden had inflicted upon all connected with the production and distribution of beer, and agriculture. These losses also included cuts of wages of employees—which I may say were fully restored to the employees of your company at the earliest moment after the reduction of the beer duty. It must be remembered also that others who benefited from this reduction were that great body of firms and their employees who are engaged in the numerous trades closely allied to the brewing industry.

A greater restoration was made to the consumer, namely, a sum estimated at £21,000,000, but which nevertheless left him to continue to bear the heavy and unjust burden of a beer duty which is still ten times greater than it was before the war. Surely a reduction of this duty is called for immediately the national finances permit.

Of course, we are all aware that while Lord Snowden deliberately brought about a reduction in the consumption of beer by his heavy increase of the duty and thus inflicted the losses I have referred to, he apparently did not regard it as a serious blow to the Revenue of the country. In fact one can infer that he would have been ready to make good this loss to the Exchequer by imposing other forms of taxation.

INCREASED PURCHASES OF ENGLISH MALTING BARLEY

Referring to agriculture Mr Chamberlain intimated that he was prepared to reduce the Beer Duty subject to the conditions I have already mentioned, but in addition to the lowering of price and the increasing of the strength of the beer supplied to the consumer, he expressed the hope that the brewing trade would as far as possible make use of more malt made from British barley, and the representatives of the Brewers' Society promised to do their utmost to bring this about. Agriculturists from time to time refer to this "Gentleman's Agreement" and more than once have most unjustifiably declared that in their opinion it was not being carried out by brewers, notwithstanding that the Brewers' Society has forwarded to the Chancellor figures which conclusively prove that since the agreement was entered into brewers have made much larger purchases of English malting barley than before the reduction of the Beer Duty took place.

This, however, has only been possible because the two crops following the Budget of 1933 were unusually favourable to the production of suitable malting barley. This year, however, in consequence of the unfavourable season, supplies have not been sufficient for requirements, in proof of which the Market Report from the "Farmer and Stockbreeder" of October 28th last stated that fine lots of English malting barley have been short of requirements and that inferior sorts are hardly saleable.

I have on more than one occasion told you how much of a crop brewers may buy depends upon the quantity of fine malting barley the crop has produced. This will vary with the climatic conditions during the growth. I can well remember not so many years ago that the late Mr Henry Mitchell, probably one of the best judges of English malting barley, owing to the unfavourable weather prevailing during the growing of the English crop in that season, decided that in order to maintain the quality of the ales, it was necessary that no English barley of that season's growth should be used. It was fortunate that he was able to take this course, in consequence of foreign barleys being available which had been grown under the right climatic conditions, rendering the grain more suitable for brewing than the harvests of English barley of that year which were so badly weathered.

INCREASED COST OF BARLEY AND HOPS

It cannot be said that the farmer has not been getting better prices for good quality malting barley during the past few years. Our malt in the year ended September 30th is costing us 50 per cent. more than for the year ended July, 1914, while hops now cost over 200 per cent. more than they did in the same year.

Your company has always done its utmost to make use of the best English barley it was possible to obtain, and when English barley has been grown under the right conditions a brewer could not wish for any better from which to produce the finest quality ales, but our records show that we have often paid a higher price for foreign barley than the best English, when sufficient English barley was not available owing to having been grown in a bad season. Unfortunately the Colonial barleys which pass into this country duty-free are not suitable for the brewing of English beers. I hope the Colonies will endeavour to produce barleys which are suitable for the English brewer, as English brewers would prefer to use such Colonial barleys when short of good quality English.

I have no hesitancy in saying that English barley growers who are charging brewers with being defaulters in connection with what is known as the "Gentleman's Agreement," are damaging their own interests in calling upon the Government to increase the present tariff on foreign malting barley, as this would increase the brewer's costs of production and force him to supply a poorer quality of beer, to the consumer, which would be the brewer's only possible course under such conditions, in consequence of the high Beer Duty now charged. The decrease in output which, of course, would follow, would certainly be greatly detrimental to the interests of agriculture.

UNFOUNDED STATEMENTS RESENTED

Farmers have always had the goodwill of the brewing industry, but brewers resent this repeated impugning of their honour, and it is straining the friendly relations which have hitherto existed between them.

No doubt the outcry of the barley growers is mainly due to their difficulty in getting rid of their low-grade barleys which are unfit for brewing, and their disinclination to use at least a portion of these poorer quality barleys for their own feeding purposes. Farmers prefer to buy foreign barley for feeding purposes, and it is well known that by far the greater portion of the huge and increasing imports of foreign barley is used by the farmers themselves for feeding purposes.

The General Election has resulted in the return to power of the National Party, and the great majority of its members have supported just treatment to the Brewing and Licensed Trades. We also have many friends in the Labour Party forming the Opposition, who have often testified their appreciation that the owners and occupiers of licensed houses provide facilities and meeting-places for carrying on the work of trade unions, friendly societies, and for social intercourse. The licensed house is the meeting-place of supporters of all political parties and is rightly described as the club of the working-man, no matter to what political party he may belong or what beverage he prefers to consume.

MATTERS NEEDING EARLY ATTENTION

There are matters to which the trade feels the Government should give its earliest attention, as soon as urgent national and

international matters permit. I have good reason for saying that the industry with which I have been connected all my life, over fifty years of which I have spent in labouring for its prosperity and in helping to fight its enemies, would not claim to have its just grievances remedied before those urgent matters which demand the first attention of the Government. By this it must not be assumed that the redress of our grievances is not overdue or should be unduly delayed.

The customers of the licensed house continue to press for the "permitted hours" of trading to be extended to a later hour, as among other reasons a later time is more convenient at which to end their business meetings and social gatherings.

UNFAIR COMPETITION FROM CLUBS

Licence holders rightly demand that no club should be permitted to supply alcoholic liquors during any other time than the permitted hours of trading of a licensed house. The licensed trader also claims that he should be allowed to provide in his supervised premises facilities for entertainment such as are permitted in clubs. While not opposing the formation of a club in which alcoholic liquors are to be supplied to its members, licensed traders feel that the opening of a club should not automatically follow the registration of a small body of proposed members on the payment of a very small fee, nor should the club be permitted to meet in unsuitable premises. It is also inequitable that the club should be called upon to pay much less in duty than the licensed trader, for, thereby the club is assisted in its competition with the licensed trader who has to pay a heavy licence duty as well as a compensation levy for abolishing licensed houses considered to be redundant, upon the closing of which near-by licensees should gain the betterment. Not only do they lose this betterment on the inevitable opening of a club, but they then have to meet a new competitor who has many advantages the closed licensed house did not possess. Excessive competition is an evil, and it is more than a farce that the law at present governing clubs should bring about more and keener competition.

The diminution of the number of redundant licensed houses by means of the compensation fund, which is provided solely by the owners and occupiers of existing licensed houses in return for the betterment it is expected they will eventually gain from the closing of other houses; also the distribution of the licences from congested areas, into districts in which licensed houses are proved to be needed, undoubtedly is bringing about the advantage of trading under less competition which certainly is conducive to the sale of alcoholic beverages under conditions favouring moderate consumption. But such results will continue to be nullified so long as there is this freedom to create clubs without limit under the present easy method of registration, and for these clubs to be able to distribute alcoholic liquors under much less costly conditions and to enjoy privileges and latitude denied to the licensed trader.

ADVANTAGES OF THE "FEWER AND BETTER" POLICY

"Fewer and Better," which has been so successful a policy of Birmingham brewers (who formed the Birmingham Property Company) during more than the past thirty years, the carrying out of which has resulted in the number of licensed premises being reduced at no cost to the community, has been an immense public gain from many points of view. The splendid results attained in carrying out this policy at great cost of money, time and trouble, however, are in great danger of being rendered of no value through the Government not affording the local authorities power to enable them to bring into operation regulations which would inconvenience no one who means well, and which would preserve the improvement which has already been accomplished.

I am sorry that the Birmingham Property Company has been compelled to close down and cease its operations owing to amalgamations bringing about such a great reduction in the original number of trading companies that they became insufficient for the carrying out of this unique scheme of "Fewer and Better." Since its inception in 1897, 744 licences were voluntarily closed in the city, of which number your company contributed over 400, and when the Birmingham Property Company closed down, there was a cash surplus in hand and the surviving members were left in the position of having no liability against them. Thus a fine work came to an end, to the great regret of those who had carried out the original object of the company. During the 38 years of its existence I had the honour of being its chairman for the last 32 years, succeeding the only other chairman, and while it was onerous work I much enjoyed it and shall always be proud of the results achieved.

I now beg to move that the report of the directors and the accounts annexed thereto be and the same are hereby adopted and that the dividends recommended by the directors in their report be and the same are hereby declared payable on November 26, 1935.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

RAPHAEL TUCK AND SONS, LIMITED

REPUTATION FOR ARTISTIC EXCELLENCE

The thirty-fourth annual general meeting of Raphael Tuck & Sons, Limited, was held, on the 19th instant, at Raphael House, London.

Mr Gustave Tuck (chairman and managing director) said that after 69 years the reputation of the company stood higher than ever, and they had never deviated from their original aim—to produce publications of the highest quality and to combine art with utility. He thought it would be agreed that it was a wise and far-sighted policy to affix the name of Tuck only to productions of the highest quality. They meant to continue pursuing this policy of not only producing things of beauty and novelty but of giving the great public the best value for the best article.

Tuck's Christmas and New Year cards still reigned supreme in the markets of the world. Throughout the long history of the firm they had succeeded year by year in maintaining their reputation for originality and artistic excellence.

In the book department, foremost among their publications during the year was "The King's Book." They had had the honour of royal permission to dedicate this book to his Majesty the King on his Silver Jubilee.

The ever-changing taste of the juvenile reading world kept them alive to their responsibility as producers of books for young people. The purpose of the company was to satisfy the demands of the rising generation and to cater for the smallest infant as well as for the child of more mature years. The following three books, just published, were especially worthy of note. They formed the first three volumes of the Treasure Trove Library, entitled "Seeing the Empire," "Brave Deeds by Brave Men," and "Travel Ways." These three volumes, which sold for 2s. 6d., were veritable mines of information for young people.

The eagerly looked for and beautiful calendars, with the world-wide reputation of the company behind them, would be assured of a more than hearty welcome this year. They were to be found everywhere, and they faithfully carried out their twofold function of telling the dates and of brightening and beautifying the room.

Tuck's picture postcards continued to maintain their reputation as the standard picture postcards everywhere. The extension of the local view section, which was being assisted by the acquisition of many thousands of photographs of famous beauty spots throughout Great Britain, was making an important contribution to the success of this department.

In the picture department they had recently published a splendid new portrait of the King, painted by John A. A. Berrie. Many thousands of copies of this picture were sent out to Australia by air mail to be in time for the Silver Jubilee. They had also published a wonderful new portrait of the Queen. The taste for blank walls was rapidly changing, and he hoped that the general public would come back to gracing the walls of their homes with beautiful pictures by famous artists.

The pictorial advertising department continued to cater with success for the discriminating advertiser. It was a tribute to the originality of their ideas, the attractive nature of their designs, and the excellence of their production, that so many of the great manufacturing firms of this country availed themselves of the company's services in assisting them to sell their products with the showcards, illustrated brochures, and pictorial advertising of every description they were able to offer them.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

DALGETY AND COMPANY, LIMITED

BETTER WOOL PRICES

The fifty-first annual general meeting of Dalgety and Company, Limited, was held, on the 21st instant, at 65/68 Leadenhall Street, London.

The Hon. Edmund W. Parker (the chairman) said that the situation in Australia continued to be generally satisfactory and, notwithstanding the drop in wool prices, the gradual return to prosperity had continued. Trade figures, as compared with the financial year ending 1933-34, had not been so satisfactory, as exports had exceeded imports by only £16,000,000, against a surplus of £39,000,000 for the previous year. The drop in the price of wool and wheat had been mainly responsible for that, but the high wool prices of the previous year, and the consequent increase in buying power, had led to a much larger figure for imports being shown. As the Commonwealth had large accumulated balances in London, out of which the difference between the amount required for interest purposes—some £26,000,000—and the favourable trade balance could easily be supplied, no anxiety regarding the position need be felt.

When he last addressed them the fall in the 1934-35 wool season's prices had already commenced. It had continued until towards the close, when a steady rise had taken place, which he was glad to say was maintained. It was only to be expected, therefore, that their results for the year under review should show a decline. The present accounts, however, he thought would be considered satisfactory as, eliminating last year, which they might take as having been exceptional, there had been a steady improvement in their figures since the height of the depression, and he was looking forward to a continuance of that movement. A settlement of the political situation in Europe would be a great help towards normal trading.

With regard to wool, the low level of prices at which the selling season opened had come as a great shock to growers after the results of 1933-34, and there had been a more or less general disposition to hold off the market in the hope of an early improvement. The trend of values had remained disappointing through the major portion of the main selling season, and it was not until towards the close that a steady succession of rises had taken place to the highest point of the season. Unfortunately the recovery had come too late to afford direct benefit to more than a small proportion of growers as the bulk of the clip had passed into buyers' hands during the period of unremunerative prices. In New Zealand the contrast between the two seasons, as far as wool prices were concerned, was even more marked than in Australia.

The unsatisfactory experience of growers was to a large measure brought about by the fact that the recovery of the previous season had gone too far and too fast. One of the principal contributing factors to the lack of confidence which had characterised the trade during the major part of the season was the German embargo on wool. In March, 1935, the market had begun to recover and, when the new selling season started in Sydney on September 2nd of this year, there was every anticipation of a rise in prices. That had taken place and, as a matter of fact, the advance had been considerably sharper than anticipated. At the July sales in London prices for nearly all descriptions had been higher than in the May auctions, and the consumption of wool in Yorkshire particularly had been very large. The trade outlook had improved and altogether the prospects for growers were looking distinctly hopeful. Although the advance this year in sale prices could not be said to represent a sudden boom, as during the previous four or five months an enormous quantity of wool had been absorbed, yet it had been realised that the rise was a very sharp one, due largely to keen demand from Japan. The extreme prices had not lasted long, but the market seemed to have settled down again now and the catalogues were being well cleared at all centres.

The New Zealand selling season opened at Auckland on November 26th. It was to be hoped that they would see a substantial rise in crossbreds. What they wanted was a steady market, and, if that could be secured at somewhere about the present level of prices, most growers would be able to carry on, but they badly needed a rise in medium and low crossbreds.

Summing up the result of their operations for the year under review, the net profit amounted to £96,789, and, after making the necessary adjustments, there remained to the credit of the general profit and loss account £163,767, out of which the directors recommended a final dividend on the ordinary shares of 2s. 6d. per share making 5 per cent. for the year, free of British income tax.

The report and accounts were unanimously adopted.

IMPERIAL SMELTING CORPORATION, LIMITED

WIDE RANGE OF ACTIVITIES

POSITION OF THE BRITISH ZINC INDUSTRY

NEED FOR ADEQUATE PROTECTION

The sixth annual ordinary general meeting of the Imperial Smelting Corporation, Limited, was held, on the 21st instant, at 20 Aldermanbury, London.

The Rt. Hon. Sir Robert Horne, G.B.E., K.C. (the chairman), in the course of his speech, said: Our operations in the zinc, acid and fertiliser trades are centred in the National Smelting Company and in the works of that company at Avonmouth and Swansea Vale, as well as those which it controls at Bloxwich and Seaton Carew. Substantial progress has been made towards the completion of our extensive programme of development at Avonmouth. I think it safe to say that early in the New Year our equipment programme at this site will be complete, and that our zinc and acid production and the fertiliser trade, with which the latter is associated, will then be in proper balance. Swansea Vale has been fully engaged in the production of spelter and acid production throughout the year.

THE PROBLEM

The main purpose of our policy in recent years, as I have already indicated, has been to widen the base of our operations so that we might not be dependent on any single product for the maintenance of our activities. For this reason our interests now cover not only metal but alloys, acid, fertilisers, pigments, etc., and the wide range and extent of the Corporation's activities make it one of the most important industrial undertakings in this country. We are giving direct employment at this moment to over 3,000 workers. Indirectly, through our purchases of raw material, we employ thousands more in the mining and metallurgical and transport industries of Australia and Newfoundland. To bring our raw materials into the United Kingdom we carry over 200,000 tons per year in British ships.

We use over 210,000 tons of British coal annually, and our inland transport, i.e. the aggregate of the rail, road, coast and canal traffic in and out of our works, attains a figure of over 750,000 tons per annum. Against these impressive figures you have the right to set our very unimpressive net revenue for which the situation in the zinc industry, as distinct from our other interests—has alone been responsible. You may well ask why it is that the zinc industry has not attained the level of reviving prosperity reached by other heavy industries in the United Kingdom. This is a question which deserves a full answer.

THE TARIFF ON ZINC

The explanation of the determined effort to establish and extend the zinc industry in the Empire, and particularly in the United Kingdom, is the bitter necessity for its existence, disclosed by the war.

On the initiation of the tariff system an import duty of 10 per cent. *ad valorem* was imposed upon importations of zinc from foreign countries. This was the basic figure in the scale of duties, and we were in hopes that so soon as consideration was given to a scientific adjustment of the scale, the rate in the case of zinc would be raised to a level more adequately representing the handicap which British producers suffered as against the lower costs of production on the Continent.

You are aware that the standard of living and of wages, transport, taxation and other costs is generally considerably higher in this than in foreign countries. This is definitely the fact in the zinc-producing industry, and the difference of costs in our case is not due to out-of-date equipment or inefficient operation. Your plants, in fact, are as well equipped and are operated as efficiently as any others in the world. The difference in British costs is solely due to the much higher level of wages prevalent in this country and the greater expense of fuel and transport charges.

NEED FOR INCREASED DUTY

As regards zinc, an import duty of 10 per cent. *ad valorem* was for these reasons quite insufficient in our view to put the British manufacturer in a position to meet foreign competition. We accordingly lost no time in preparing a case for submission to the Import Duties Advisory Committee requesting an increase in the import duty.

Our petition, however, was set aside by the holding of the Ottawa Conference, where certain things occurred to which we

were not parties, and arrangements were made between our Government and the Dominions which vitally affected our fortunes. Incidentally, the duty on foreign zinc entering this country was continued at 10 per cent. *ad valorem*, but stipulations were attached to this agreement whose reactions upon our position had the effect of making it impossible to produce and sell zinc in Great Britain except at a loss. It is unnecessary here to explain the intricacies of this problem. Some technical journals discussed it at length, and the injurious consequences of what was done at Ottawa have been demonstrated, in the discussions which took place some months ago before the Import Duties Advisory Committee. I think it is clear that those who took part in these arrangements at Ottawa did not foresee the full results of what then was done.

A FRESH APPLICATION

The untoward course of events in which we had been involved made it necessary for us to raise again and prosecute our claim for an appropriate duty on our zinc production. We accordingly made a fresh application to the Import Duties Advisory Committee in November of last year. We did not ask for any increase in the rate of duty of 10 per cent., but we proposed that there should be a minimum, viz. £2 per ton, and that the duty should be free from the Ottawa stipulations. Moreover, for the benefit of the export trade in manufactured zinc we urged the Committee to recommend the adoption of a "drawback" system under which, on all-British manufactures of zinc exported from this country, there would be a full rebate of the duty to British manufacturers.

This request was well within the requirements of our industry and was modest compared with what had already been granted to the iron, steel and other industries. The iron and steel duties are well known to you, but those granted to other industries may not be so familiar. For example, in the case of rolled zinc an *ad valorem* duty of 15 per cent., with a minimum of £5 per ton, fully operative, had been recommended by the Import Duties Advisory Committee and accepted by the Government, although the work involved in rolling a ton of zinc sheets is but a tithe of that absorbed in the production of a ton of the metal itself.

THE OTTAWA PROVISIONS

I shall not weary you with the details of our discussions with the authorities in regard to our application. The Committee was unfortunately placed in the position of having to give a joint decision governing both our application and a dispute between Empire producers and British manufacturers over the operation of the Ottawa Agreements.

It was impossible to get rid of the Ottawa provisions, during the term provided for their operation, except by agreement amongst the parties, and this could only be achieved, as it proved, by a reduction of the already inadequate duty which was supposed to protect our industry—an industry necessary to the employment of our workpeople, most of whom are within the ambit of two of the most distressed areas in the country and authoritatively declared to be essential to the country's defence. In this impasse the Committee adopted the solution of freeing the producers from the Ottawa stipulations and reducing the duty on foreign metal from 10 per cent.—which to-day would be equal to approximately 35s. a ton—to 12s. 6d. per ton.

COMMITTEE'S DECISION

In order to make clear the point of view from which the Committee took this action, I will quote the actual words of the note which they appended to their decision:—

"The need of such an industry (zinc) was seriously felt during the war and direct steps were taken at that time by the Government to promote its development. It has since been established at heavy cost, and now constitutes an asset of great value whether considered from the aspect of employment, direct and subsidiary, or from that of national security. We recognise that the rate of duty proposed is low, and that in the absence of agreements with overseas producers to control production and sales, it may prove inadequate to safeguard the home industry.

"The Imperial Smelting Corporation, while convinced that the present proposals are insufficient to defend the industry against the competition of producers of zinc in other countries which are more favourably situated in regard to the cost of wages, transport, etc., nevertheless agrees to give them a fair trial. Provided the industry in this country maintains the present high level of efficiency, and there is no other material change in relevant circumstances, we should not hesitate, notwithstanding that this might involve some further steps to assist the consuming interests, to

recommend such measures as might prove to be necessary to protect the home industry against any external competition."

THE BOARD'S VIEW

You will see from the foregoing quotation that while we have made it plain that the action of the Committee will in our view be insufficient adequately to defend the industry against the competition of producers of zinc in other countries which are more favourably situated in regard to the cost of wages, transport, etc., we have agreed to give their proposals a fair trial. We did so, relying on the assurance of the Committee that if we gave their suggestions a fair trial and the result was unsatisfactory, they would not hesitate to recommend such measures as might be necessary to protect the British industry against "any external competition."

It implies no criticism of the Committee—whose representatives throughout our discussions exhibited in the highest degree every quality of courtesy and patience—if I take the liberty of expressing my regret that the circumstances in which the Government handed over to them the problem of clearing up the confusion created by the Ottawa Agreements to which we were not parties, prevented our application being dealt with by them on its own merits.

You may ask what is involved in our promise to give the Committee's proposals a fair trial. In reply to that question it is necessary for me to emphasise the Committee's declaration that they recognised the new rate of duty as "low" and that "in the absence of agreement with overseas producers to control production and sales, it may prove inadequate to safeguard the home industry."

FUTURE POSSIBILITIES

I might venture to put this statement in plainer language by interpreting it to mean that unless producers outside the United Kingdom are prepared to agree to the regulation of supplies and sales within a reasonable time, we must again make an application for an increased and effective duty. In the light of the experience of the Great War and the report of the Balfour Committee combined with the assurance of the Import Duties Advisory Committee, a Government which has just declared a main plank in its policy to be

"filling the gaps in the Nation's defences,"

would not, I am confident, be likely to allow our application to remain unanswered.

In any event, I am certain that the Committee will firmly adhere to the spirit as well as the letter of the definite assurance given to us. There should, therefore, be no difficulty in bringing into operation a scheme ensuring fair play for the British industry. We do not enter into competition in any foreign market. We desire only a definite proportion of our own domestic consumption subject to an irreducible minimum.

While we are ourselves of opinion that a higher tariff—comparable with that of other industries whose products we are compelled to purchase at increased prices—is the best ultimate solution, we will loyally co-operate in seeking an acceptable International agreement.

POSITION ABROAD

In the foregoing review I have directed public attention to the position of the zinc industry in the United Kingdom. I may be permitted also to direct attention to what is going on elsewhere. Last year I told you of the wholesale assistance by tariffs, subsidies and price guarantees which is being given by other Governments to their zinc producers. In no country has this assistance been more bountiful than in Germany, where the Government's efforts have resulted in a very substantial increase in local production and an equivalent reduction in imports. There is no lack of recognition in Germany of the necessity of possessing a domestic supply of zinc.

As the result of determined action Germany is now approaching a point when she may be regarded as reasonably self-supporting in zinc supply, and, apparently in order to hasten her accomplishment of this purpose, the Government is now giving support to the erection of a large new plant operating the latest vertical retort process. A year ago I stated that it cannot be wise or safe for Britain to ignore what is taking place elsewhere. I repeat that advice to-day with emphasis.

Fortunately for us there has been an almost world-wide increase in the consumption of zinc during the past year, and prospects at present favour the continuance of this movement for some time.

The report and accounts were unanimously adopted.

WANKIE COLLIERY COMPANY, LIMITED

DIVIDENDS OF 15 PER CENT.

The twelfth ordinary general meeting of the Wankie Colliery Company, Limited, was held, on the 19th instant, at Abercorn Rooms, Liverpool Street, London, Sir Edmund Davis, chairman and managing director of the company, presiding.

The secretary (Mr H. W. Lampard) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—Turning to the profit and loss account, on the credit side, sales of coal and coke and other products amounted to £401,365. This figure compares with £342,016 for the previous year, an increase of £59,349.

On the debit side we have cost of mining coal and of the manufacture of coke products, etc., £176,566, as compared with £155,967 in 1934, an increase of £20,599.

The amount written off this year for depreciation is £53,905, compared with £50,054 in our previous accounts.

African general expenses, at £5,491, compare with £5,430 in our previous accounts, and London expenses, at £6,934, compare with £8,586 last year.

Directors' fees and additional remuneration, £4,992, compares with £4,600 last year, an increase of £392.

The only other items remaining in the profit and loss account are rents and sundry receipts in Africa, £11,851, and registration fees, £139, both of which are practically the same as last year and therefore call for no comment.

DIVIDEND PAYMENTS

If you will turn again to the balance sheet you will see that on the debit side we have brought in under the heading "Profit and loss account" the balance at August 31st, £29,060, and deducted the final dividend of 2 per cent. paid on November 2, 1934, amounting to £19,950, leaving a carry-forward of £9,110. To this sum we have added the profit for the year, amounting to £165,466, bringing the total up to £174,576, from which we have deducted taxation reserve, £13,429, leaving a net total of £161,147.

After deducting the two interim dividends of 5 per cent. each, paid on February 26 and June 13, 1935, respectively, which amounted to £90,750, there remains a balance of £61,397, out of which we propose to recommend the payment of a further dividend of 5 per cent., less income tax, for the year. This payment will absorb £49,875, and we propose to carry the balance of £11,522 forward to next year, comparing with £9,110 brought in.

There has been an increase of coal sales of 100,358 tons, of which the Southern Rhodesia industries took 17,753 tons, the Northern Rhodesia mines 51,633 tons, the railways 28,961 tons, the Belgian Congo 3,485 tons, while 1,474 tons less were sold outside those territories.

This additional tonnage of coal represents a satisfactory increase of 19.66 per cent. over the previous year, and 60 per cent. over the year ended August 31, 1933.

COAL RESERVES

There is one item in the report which I think I might amplify, and that is the figure which represents the coal reserve remaining under a radius of two miles from the Bell Station—that is, the bottom of the main dip, a distance of 600 ft. from the surface. The estimated coal reserves within that area are given as 44,510,000 tons. I should like to point out that this two-mile radius does not, by any means, constitute the economic limit for working from the No. 1 colliery shafts, but it has proved sufficient reserves for such a long period that there is no occasion to lock up large amounts of additional capital to prove reserves which may not have to be drawn upon for 20 to 30 years.

The water purification plant to which I alluded last year is now almost completed and is expected to be in operation within the next few months.

In conclusion, the Chairman said that the company had at August 31st last 114 European employees, most of whom were married, and during the year health conditions had continued to be quite satisfactory. At the same date the number of natives employed had been 2,327, against 2,363 at the end of the previous year. The natives, being well treated and intelligently fed, remained generally very contented. The married strength was 41.17 per cent. of native employees, comparing with 35.6 per cent. at the end of the previous year, which was a very satisfactory increase. The board desired to record appreciation of the excellent work carried out during the year by the general manager, Mr Darby, and his staff, and their thanks were due also to the railways, who had provided an unfailing supply of trucks.

The report and accounts were unanimously adopted.

KENYA CONSOLIDATED GOLDFIELDS, LIMITED

SUCCESSFUL WORK OF DEVELOPMENT

The second annual general meeting of this company was held, on the 23rd ultimo, at Eldoret, Kenya Colony.

The Hon. A. C. Hoey, M.L.C. (chairman), in the course of his speech, said:—The preliminary work performed in the neighbourhood of Kitere revealed a widespread system of gold-bearing veins and an area of 110 acres was examined geophysically during the months of April to July, 1935. This revealed not only a number of veins which did not outcrop, but helped to determine a well-defined shear zone into which fell the discoveries known as Owago, Lloyd, Curwen and North Konga. The discoveries made in what is now known as the Wilburn section were made by ordinary field methods owing to the three most important veins—the Wilburn West, Wilburn East and the so-called Convergent vein—presenting strong outcrops.

Up to date, over 10,300 ft. of reef outcrop has been stripped, and of this 3,000 yielded payable values. Stripping has been followed by 1,444 ft. of sinking on reef and 2,613 ft. of driving on reef. In addition, 768 ft. has been sunk in country-rock and 945 ft. in cross-cut.

Every effort is now being made to establish levels on each occurrence that will be well below the zone of oxidation and in primary ore such as may be expected to continue in depth. In the cases of the Lloyd and Curwen, the primary ore has already been entered by winzes sunk from the first shallow level, and the latest—and so deepest—exposure of heavily pyritic reef 14 ins. wide yields 53 dwts.

At the Wilburn section, the primary ore-zone is being aimed at by means of an adit from a point above the Kuja River, and still deeper levels will be tested by the campaign of diamond drilling recently started.

Although the major efforts of the company have been concentrated on the Kitere-Kuja section, it has been shown that proceeding north-westwards from the northern boundary of the Kitere-Kuja area and working round the periphery of the young granite, no less than 200 square miles demands intensive work, which would keep our staff occupied for a considerable period, quite apart from the general prospection of the remaining 800 square miles.

Work has continued on the Magor claims and a first level was established early this year. Of the 1,011 ft. driven on reef on this completed level, 450 ft. was payable with high values as the progress reports have disclosed.

Since then the establishment of a second level at an average depth of 150 ft. is approaching completion. The ore occurs in well-defined shoots, and until the entire work is connected it is not possible to arrive at a figure for payable footage on this second level. Where the shoots have been intersected, their high grade has been discovered to be maintained.

Underground work was started on the Blue Ray and gave satisfactory results, but owing to the slow progress made by hand labour it was stopped pending the erection of plant and diamond drilling was resorted to. As a result, three holes have already intersected the reef at a common level of 230 ft., and six more remain to be drilled at that level before the deeper one of 400 ft. is also tested.

The consulting engineer has advised, us that work should be confined to these two properties at the moment, as there is an excellent prospect of them reaching the producing stage at an early date.

A total of 5,082 ft. of underground development has been completed on the Lolgorien properties to date, and of this total 2,689 ft. have been driven on reef plane and 1,246 sunk on reef plane.

It is not the policy of the company, nor would it be possible for one company to bring to production the numerous payable areas which may well be found in the 200 square miles of mineralised ground in the Concession, and it is therefore proposed to transfer to a separate company the special area of three square miles of the Kitere-Kuja Section within which the Lloyd, Curwen, Wilburn and other occurrences are found, together with an additional 18 square miles of mineralised ground adjoining.

It being the policy of your directors to keep the company's capital as low as possible so as to ensure to the shareholders the fullest benefits that may accrue from their properties, they obtained from Mr. Haskel an advance of £50,000 to enable the company to carry out its programme of development without having to increase the capital. Mr Haskel's action in making this money available, and his services in general to the company, will, I am sure, be appreciated.

The report and accounts were unanimously adopted.

WITWATERSRAND NIGEL, LIMITED

PROGRESS OF DEVELOPMENT WORK

The second annual general meeting of Witwatersrand Nigel, Limited, was held at Johannesburg on Friday, November 15, 1935, Lieut.-Col. T. J. M. Macfarlane, C.M.G. (the chairman of the company), presiding.

The Chairman, in the course of his speech, said:—Turning to the balance sheet, you will see that the cash funds of your company as at June 30, 1935, were £189,737. At the same date last year they were £284,288. Additional working capital acquired during the year amounted to £38,125, which, added to the cash in hand as at June 30, 1934, amounts to £322,413. Deducting from this the cash in hand at June 30, 1934, reveals that the sum of £132,676 has been spent during the year under review, and I shall refer later on to the results achieved by the expenditure of this sum. Since the close of the financial year a further sum of £27,500 has been obtained by the issue of reserve capital.

The items which make up the total of £127,412 15s. 4d. appearing in the balance sheet under the heading of "Mine development, equipment and borehole drilling" are sinking of Nos. 1 and 2 shafts, £32,027, electric hoists for both shafts, £11,563, pumping equipment, £1,766, power plant, compressors, etc., £17,721, buildings, £20,867, development at Nos. 1 and 2 shafts, £1,116, sinking and development of No. 4 incline shaft, £14,054, borehole drilling, £15,311, general expenditure at the mine, which includes staff salaries, £12,362, and surface development and afforestation, £623.

You will be interested to learn that a certain well-known mining group have expressed the desire to interest themselves in your company; certain negotiations are pending which, if brought to a satisfactory conclusion, will in due course be communicated to shareholders.

At the end of June, 1934, your company's mining area was 3,974 claims, which has now been increased to 4,274 claims by the purchase from the Municipality of Heidelberg of the mineral rights of an area on the Heidelberg Townlands equivalent to 300 claims. Of the total of 4,274 claims, no share of profits is payable to the Government beyond current taxation on 3,138 claims. Representations have also been made in connection with undermining rights of the three township areas which are shown on the plan issued with your directors' report. These matters are under consideration by the Mining Leases Board.

GOOD DEVELOPMENT

The development results on the Upper Leader in the No. 4 incline shaft workings have been consistently good. Up to September 30, 1935, 1,597 feet were advanced, and out of 1,249 feet sampled, 863 feet (equal to 69 per cent.) were payable, averaging 11.32 dwts. over 28.57 inches, or 323 inch-dwts. Development is proceeding steadily to ascertain the continuation of this ore-body. Upper leaders, that is, reefs lying above the horizon of the Nigel Reef, have been found in all the boreholes and vertical shafts, in some cases carrying values, and in view of the encouraging results in the No. 4 incline shaft, systematic exploration of these leaders is being carried out from the vertical shafts in addition to the main development work on the Nigel Reef.

The main reef leader, or Nigel Reef, as it is locally termed, was intersected in the No. 1 shaft in May. The No. 2 shaft reached its final depth in June, and during the succeeding two months shaft stations, pump chambers and sumps were cut in both shafts and pumping and ventilation equipment installed. The main cross-cut from No. 2 shaft intersected the Nigel Reef at the end of September. Members will have read in the September quarterly report the results of the initial driving on the Nigel Reef from No. 1 shaft. It is still too early to pass any opinion on these results. The reef exposed is the normal conglomerate of the Nigel Reef and payable values—in some cases high values—have occurred at intervals. Lateral development is being extended rapidly and exploratory winzes and raises on reef are being advanced at intervals. Main haulage raises are being advanced from both shafts to establish a second level. The footage cost of this development work is satisfactory.

It will not be out of place here to mention that encouraging results have been obtained on the properties of your company's neighbours who are opening up on the strike of your company's Houtpoort and Heidelberg Townlands properties. The Spaarwater Gold Mining Company has disclosed highly payable shoots in the haulages from the Sub Nigel Mine, and on Poortje, which adjoins Houtpoort, the East Rand Consolidated shafts have struck payable values.

The report and accounts were adopted.

ELECTRIC AND MUSICAL INDUSTRIES, LIMITED**INCREASED SALES AND PROFITS**

The fourth ordinary general meeting of Electric and Musical Industries, Limited, was held, on the 15th instant, at Winchester House, London.

Mr Alfred Clark (chairman of the company), who presided, said that again this year the directors were happy to submit for the shareholders' approval a report that sales had exceeded those of the previous period, that trading had prospered, and that profits had increased, and to recommend the payment of a bonus in addition to a dividend at the same rate as last year.

They had had greater sales at home in Great Britain and Ireland, and greater sales in each of the other countries of the Empire than in the previous year, while their sales outside the Empire had decreased. Taking the whole territory in which they carried on their business—Empire and foreign—the total net sales had been greater, which meant that the increase within the Empire had been more than enough to offset the decrease in foreign countries.

As had been the case last year, radio receiving sets and radio-gramophones had formed the largest part of the sales in the home markets.

In the field of household appliances they had continued to make steady progress. Their sales of refrigerators were increasing. Their factories at Hayes were working full time with overtime in many departments and the output of receiving sets and radiograms again surpassed by a very large number the output of any other concern in Great Britain. The goods continued to be of high quality and up to the standard upon which the firm's reputation had been built.

TELEVISION

They would recall that Marconi-E.M.I. Television Company had been formed by them jointly with Marconi's Wireless Telegraph Company, Limited, with a capital of £1,000 for the purpose of supplying television apparatus for transmission and that a Committee set up by the Postmaster-General had been considering the whole question of television.

On the last day of January of this year the report had been issued. It recommended the erection of a broadcasting station from which experimental broadcasts of television with sound would be carried on for a period of approximately a year, using two systems. One of those was the system of the Marconi-E.M.I. Television Company, Limited, which company had since received an order from the British Broadcasting Corporation, and was busily engaged in the construction of transmitting apparatus for the new station at Alexandra Palace. They expected that the completion next spring of the new station at Alexandra Palace would be followed by a period of great interest.

Preparations were well ahead in their factories and they expected to be able to supply the demands of the public when television broadcasting was begun next year. He was glad to be able to assure shareholders that the development of their television to its present high stage was a British achievement carried out at Hayes. The position which their company had earned in television was due to the work of its research engineers.

THE OUTLOOK

During the last four months the sales of radio sets, which in Great Britain formed the principal part of the company's business, had again increased over the same months last year, and, similarly, they had sold more gramophone records, although, unlike radio sets, the value of those records was not as much as last year, due to the lower prices at which they were being sold.

While he could give shareholders the facts about the actual sales that had taken place since the beginning of the new trading year, his difficulty always arose on the attempt to predict the result of the trading during the balance of the year.

They would be faced, quite naturally, with the international situation. An outstanding improvement in foreign trade could not be expected as long as restrictions remained as they were, but in some countries trading had been better in the first months of the new year. At home the radio industry was, perhaps, over-expanded and competition was likely to be keen, but they believed that they were in a stronger position than ever to meet eventualities and, in consequence, the directors viewed the result of the year's work with confidence.

Their managing director, Mr Louis Sterling, was at present absent in America on important business in the interest of the company. When he returned, as he would very shortly, he would like to be able to tell him on behalf of the shareholders how much his efforts, as well as those of his loyal staff, were appreciated. Their company was indeed fortunate in having such devoted and efficient service.

The report was adopted.

PAHANG CONSOLIDATED COMPANY, LIMITED**SATISFACTORY MINE DEVELOPMENTS**

The twenty-ninth ordinary general meeting of the shareholders of the Pahang Consolidated Company, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Mr H. Frisby, chairman and managing director, presiding.

The Chairman, in the course of his speech, said the mines profit for the year amounted to £85,123, compared with £79,380 last year.

We now propose to write off the usual 10 per cent. depreciation on plant, machinery, etc., and to allocate £1,000 to staff welfare from shop profit. We propose to transfer to reserve for development £10,000, and we recommend the following dividends: On the preference shares 3½ per cent., making 7 per cent. for the year; on the ordinary shares 10 per cent., making, with the 5 per cent. interim, 15 per cent. for the year; and an extra 5 per cent. on the preference shares, making 12 per cent. for the year, leaving our carry-forward £27,354, which is some £3,000 less than we brought in.

INCREASED ORE RESERVES

Development on the property, although of limited extent owing to restriction, has been quite satisfactory. In spite of crushing 88,800 tons of ore and producing 1,651 tons of black tin during the year, we estimate there has been an increase in the ore reserves and an increase of 1,000 tons in the black tin blocked out, bringing the black tin in sight up to 16,000 tons.

We decided to start cross-cutting north-east from the 1,100 ft. level to get under the Kabang lodes, and at the same time explore the country there and see if the Willinks lode would remake in that vicinity. They have driven 1,000 ft. on it and have got to go another 1,000 ft., and then they may, if successful, go on a further 1,000 ft. to the lode called Simon's Lode, a great producer in the old Pahang Corporation days. They never carried it down to any depth, and the same thing applies to two other mines, which I hope may soon be reopened. They were both very rich producers, but very shallow in depth, as they could not afford to do any dead work. One of them, particularly, I think, will turn out to be a good mine.

You will have noted the enormous amount of water we have had to pump—600,000,000 gallons for the year, and it was felt that we had not quite enough reserve of pumping power; so two new 750 h.p. Diesel engines have been ordered, and I think they will be on the property early in the New Year, and probably erected by next June.

THE RESTRICTION SCHEME

During the last year or two I have expressed my views very freely on the Tin Restriction Scheme. This year I cannot tell you whether it is going to be continued or not. I do know that negotiations are going on, but I think there are very serious difficulties in the way, owing to the attitude taken up by the producers outside the scheme. Siam, I hear, is asking for a 100 per cent. increase, and the Belgian Congo is sure to want a greater output, because there is no doubt that their deposits are very large and can be easily and cheaply worked. So far as China is concerned, all we know is that a new up-to-date smelting plant has been, or is being, erected in China, and with that up it will be very difficult to discover what her output will be, as they ship the whole of their output straight to America.

Last year I stated there was a corner in tin, and, if you remember, that was contradicted by the Secretary of State for the Colonies at the time as untrue. I think now everyone will admit that my statement was a correct one. A back of £20 per ton for cash tin, and the price moving up from £220 to £250 in two or three days is, in my opinion, proof of it, even if the 30 per cent. increase in the quota is not. In my own opinion, the corner is still there; there is no sign of it having been broken. As to increasing the supply, you cannot turn on tin as you would water from a tap. It takes many months to start working, and it will be many months before this extreme corner will stop. If this war goes on between Italy and Abyssinia, the corner may go on for a very long time, for I do not believe for a moment that Sanctions are going to stop the Italians getting tin—they can get it from Bolivia, I think.

I am quite sanguine about the future of our industry, and I am also sanguine about the future of this company. You have a great tin mine, probably one of the greatest. It is upon solid foundations as regards finance, and you have a first-rate staff in the East managing your property. All that we ask is that we should be left alone to work the property in the way it should be worked by miners.

The report and accounts were unanimously adopted.

BUKIT KAJANG RUBBER ESTATES, LIMITED**SUCCESSFUL RESULTS**

The twenty-sixth annual general meeting of Bukit Kajang Rubber Estates, Limited, was held, on the 21st inst., at 7 Martin's Lane, London.

Mr W. Arthur Addinsell, the chairman, proposed the adoption of the report and accounts and the declaration of a dividend of 6 per cent. for the year. He said: The profit earned during the period covered by the accounts under review, showed an increase of about 50 per cent., as compared with the previous year. There were two factors responsible for this gratifying result. The first was the improved average net price realised for our rubber—from 4.36d. to 5.96d. per lb. Secondly—as I foreshadowed at last meeting—our shareholding in Holyrood Rubber, Limited, contributed £1,565 by way of a dividend, as compared with £391 in the previous year.

STRONG POSITION—INCREASED DIVIDEND

The position of the balance sheet is a strong one, and practically the whole of the area at present planted is of mature age. It is deemed prudent to continue the policy of recent years in writing down the book value of buildings and machinery, etc., and this item will stand in the balance sheet at a nominal value.

In the circumstances your directors felt justified in recommending the payment of a dividend of 6 per cent., as compared with 4 per cent., and a carry forward of £3,027 against £1,341 brought in.

I have already mentioned our shareholding in Holyrood Rubber, Limited. In addition, investments include £2,266 held in the Edensor Rubber Estate, Limited. The planted area of Edensor is 1,007 acres, and although 638 acres are ready for tapping, it was decided to postpone this for the time being, and to dispose of the "rights" to which the Company was entitled under the Restriction Scheme, for the purpose of meeting estate expenses.

The Bukit Kajang Company's interest in proportion to the total subscribed amounts to the equivalent of approximately 60 acres. That, I think completes a survey of the accounts so far as is necessary.

The directors' report mentions the reduction in the planted area of 21 acres, which is fully explained; but I would add that negotiations are proceeding with the authorities in Malaya with a view to this area being planted up with budded material under the auspices of the Rubber Research Institute.

FUTURE OF RUBBER

With regard to the future of rubber, we have now had some experience of the benefits to be gained from restriction. The majority of companies have resumed the payment of dividends; but I do not think anyone will disagree with me that the profits earned do not yet give an adequate return, having regard to the lean years and the risks incidental to tropical agriculture.

What is claimed as the slow progress made towards the successful issue of the Restriction Scheme has caused some disappointment. The crux of the situation lies in the statistical position, and although comparatively huge stocks have accumulated in the United Kingdom, the figures for the world as a whole provide evidence that within a reasonable time stocks will be reduced to a normal quantity.

With its financial and agricultural affairs in a sound state, and its moderate capitalisation per acre, this company is favourably placed to receive the full share of the benefits which, in my opinion, must accrue to the industry in the not distant future.

The resolution was unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To The Publisher, "The Economist Newspaper Ltd.," 8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED**RECORD SALES**

The twenty-first ordinary general meeting of S. Smith and Sons (Motor Accessories), Limited, was held, on the 21st instant, at Cricklewood Works, London.

Mr Walter Henderson-Cleland, M.C. (the chairman), said that this year again he was in a position to say that their business has increased. They had beaten all previous records in the numbers of instruments supplied and had added further products to their established lines. That applied also to the aircraft section. The majority of British machines were fitted with their instruments as standard equipment, and besides supplying the bulk of the instruments used in these machines, they supplied a large number to users and manufacturers of aircraft abroad. The K.L.G. Sparking Plug Company had maintained its position during the year.

The All-British Escapement Company had increased their business and were gradually adding to their range of high-class domestic clocks. The latest small eight-day Calotte, or travelling clock, had proved a great success. As to Smith's English Clocks, the sales of the products of that company had increased by 40 per cent. during the year, in spite of intense foreign competition. The company manufactured the synchronous electric clock and domestic clocks of various descriptions. It also owned controlling interests in a company manufacturing striking and chiming clocks, 30-hour clocks, and would shortly market an English alarm clock at a competitive price.

The turnover of the Smith group of subsidiaries was now approaching that of the parent company, and was making valuable contribution to the profits of S. Smith and Sons. Notable additions to their lines had been made, including the new jacking system, which was a development of their old Jackall product. The turnover of the parent company and its subsidiaries for the first three months of the current year was again greater than in any corresponding period, and again constituted a record in the history of the company. The company's factories were operating to the fullest capacity, and there was every indication that the turnover of the current year would be considerably in excess of that of last year.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.**NATIONAL ACCOUNTS**

The total ordinary revenue for the week ended November 16, 1935, amounted to £9,063,000, against ordinary expenditure of £9,199,000. After allowing for a decrease in Exchequer Balances of £423,904, the operations for the week, as shown below, decreased the gross National Debt by £73,000 to approximately £7,985 millions.*

* Includes £1,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on November 15, 1935, and the total amount applied for was £61,155,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 3d., about 74 per cent., and above in full; Saturday at £99 17s. 4d., and above in full. The average rate per cent. was 10s. 9-95d. The amount allotted was £45,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
January 6, 1933	45,000,000	73,830,000	45,000,000	0 16 10-84

Movement September 21, 1931 (gold standard suspended), to November 21, 1935 (inclusive) (£61,136,525 in movement)

GOLD MARKET

Messrs. Samuel Montagu and Company write on November 20, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £196,457,659 on the 13th inst., as compared with £195,482,528 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £731,405. About £1,500,000 of bar gold was dealt with at the daily fixing; there was a fair general demand for the moderate amounts offered and, as a consequence, prices were maintained at a premium over New York parity.

Quotations during the week:—

	Per fine ounce	Equivalent value
November 14	141s. 4½d.	12s. 0.22d.
" 15	141s. 5d.	12s. 0.18d.
" 16	141s. 5d.	12s. 0.18d.
" 18	141s. 5d.	12s. 0.18d.
" 19	141s. 6½d.	12s. 0.05d.
" 20	141s. 4½d.	12s. 0.22d.
Average	141s. 5.08d.	12s. 0.17d.
November 21	141s. 5d.	12s. 0.18d.

The s.s. "Cathay," which sailed from Bombay on the 16th inst., carries gold to the value of about £780,000 consigned to London.

SILVER MARKET

The price for cash silver remained unchanged during the week at 29½d., whilst that for two months' delivery was 29½d. until to-day, when it declined ½d. to 29d.

The American Treasury continued their purchases of cash silver at a limit of 29½d., acquiring a moderate amount, and there has been further selling by China although on a rather reduced scale.

The present situation in China seems to have occasioned some nervousness in the Indian Bazaars and this has been reflected by re-selling from this quarter—particularly in evidence yesterday and to-day.

The Indian Bazaars made some forward purchases in the earlier part of the week and also carried forward bull contracts falling due. On the whole the market has been rather quiet and in view of the American purchases the cash position is likely to remain steady, whilst that for forward may be somewhat uncertain.

Quotations during the week:—

	IN LONDON		IN NEW YORK

CABLE AND WIRELESS (TRAFFIC INDEX).—Cable and Wireless traffic index for October, 1935, at 78.8 per cent. is the best for that month since October, 1930, when it was 82.5 per cent. It shows a jump of 5.2 per cent. on a year ago and of 3.3 per cent. on September, 1935. Monthly figures reduced to working day average. Year 1929 = 100.

SINGAPORE TRACTION COMPANY, LTD., SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LTD.—The agreements under which the business of the Singapore Traction Company, Ltd., in Singapore, has hitherto been managed by the Shanghai Electric Construction Company were terminated on October 17th on payment of £100,000 to the latter company. From that date the Shanghai company's participation of one-half in the divisible profits of the Singapore company ceases.

RUSTON AND HORNSEY, LTD.—Ruston and Hornsey, Ltd., and R. A. Lister and Company, Ltd., have announced that the rationalisation agreement of 1930 is being terminated by mutual consent on March 31st next. It is understood that the termination is due to the gradual change in basic factors affecting the businesses which could not have been envisaged in 1930, and it is felt by the boards of both companies that their individual and joint interests will be best served by the termination.

ELECTRIC AND MUSICAL INDUSTRIES, LTD.—Messrs Morgan Grenfell and Company, Ltd., and Edward de Stein and Company have arranged to acquire the Radio Corporation of America's holding in Electric and Musical Industries, Ltd.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of October, 1935, amounted to: Witwatersrand, £2,759,528; outside districts, £10,743; total, £2,770,271. The estimated working profit in September, 1935, was: Witwatersrand, £2,650,017; outside districts, £10,670; total, £2,660,687.

ANGLO-IRANIAN OIL COMPANY.—The Anglo-Iranian Oil Company has been granted 30 oil prospecting licences through its development subsidiary, the D'Arcy Exploration Company. It is to begin drilling operations in the South of England. The work is to be expedited as much as possible.

TOKYO ELECTRIC LIGHT COMPANY, LTD.—(Return for August, 1935).—K. W. hours sold: 397,594,934. Gross revenue: Yen 10,415,992.87. Sterling equivalent at par of exchange: £1,066,771. Increase over corresponding period last year £93,000. Return for September, 1935: K. W. hours sold: 409,879,475; gross revenue, Yen 10,537,405. Sterling equivalent at par of exchange: £1,079,205. Increase over corresponding period last year £117,155.

MOLLOY'S STORES (HANLEY), LTD.—(Sale of undertaking to Lewis's, Ltd.).—A meeting of the shareholders of Molloy's Stores (Hanley), Ltd., of Hanley, has confirmed the agreement made by their directors to sell their undertaking to Lewis's, Ltd.

SINGER AND COMPANY, LTD.—At separate meetings of the holders of the 7 per cent. cumulative preference shares and ordinary shares resolutions reducing the capital of the company from £1,500,000 to £1,249,965, were agreed to and passed.

* For half-year. † Free of income tax. (a) Preferred ordinary shares. (b) Deferred ordinary shares. (c) Ordinary share (d) Carried to balance sheet. The ordinary dividend (not stated) for year 1934-35 will be paid out of this sum. (e) Also 50 per cent making 200 per cent. for year, absorbing £37,562, which has been taken out of surplus realisation account. (f) Absorbed £289,44 (g) From May 23, 1934, to September 30, 1935. (h) Three years. (i) Not stated. (j) Also 5 per cent. absorbing £9,032 paid out of surplus on realisation of assets amounting to £9,674, the remaining £642 being put to reserve making reserve fund £22,000. (k) Absorbed £88,00

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THERE were no events of major importance to depress the commodity markets during the past week. Although the tendency of prices was again somewhat irregular, there are indications that the forces which produced a sharp reaction some four weeks ago have now spent themselves. The application of economic sanctions against Italy has had no noticeable effect on quotations this week, but the uncertainties of the international situation remain as a potential cause of disturbance in the future.

The miners' ballot in this country has already borne fruit in the shape of a scramble for coal on the part of certain consumers, who fear an interruption of supplies, but the movement has not yet had any appreciable effect upon prices. Other industrial raw materials have shown an irregular tendency. Thus, vegetable oils and oilseeds were rather dearer, while rubber declined further on the news that the Dutch are seeking an increase in their basic quotas under the international restriction scheme. The rise in cotton prices continued, in response to an active demand, and wool and jute were also firm; other textile raw materials showed little change on the week. Among non-ferrous metals, copper rose slightly in price as a result of favourable unofficial statistics for October, but consumers showed little disposition to resume purchasing on a substantial scale. Lead and spelter were rather easier, owing to a restricted demand, and cash tin slumped heavily, despite a further fall in British stocks. The movement is attributed to the expectation that supplies of Dutch tin will be offered on the London market next week.

The decline in wheat prices was arrested at the end of last week by the publication of a "bullish" official estimate of the Canadian crop. The yield this season is expected to be a little below last year's total, while much of the wheat will not be of millable quality. Tea prices also showed a firmer tendency this week, but sugar declined in price. On the London Provision Exchange, bacon and butter were again slightly easier, but cheese showed a firmer tendency. Eggs were dearer, while meat was unchanged in price.

Prices in America turned upwards this week. Moody's daily index of the dollar prices of staple commodities (December 31, 1931 = 100) rose from 165.4 on November 13th to 167.7 on Wednesday last. The index stood at 173.4 a month ago and 145.7 on the corresponding day last year.

COAL

SHEFFIELD.—Fear of wage troubles in the coal industry stimulated buying of every kind of fuel on the inland market. Many manufacturers have taken in extra supplies so as to provide against eventualities; some merchants have done the same in respect of house coal. Consumption of industrial fuel has also broadened since the beginning of the month. There is now no excess production of coke and the overs price of blast furnace coke has gone up to 16s. Best harders are in demand for export, but the heavy inland demand is causing scarcity.

Quotations: Association harders, 18s. 3d. to 18s. 6d.; gas coal, 17s. 9d. to 18s. 3d.; slacks, 12s. 3d. to 12s. 9d.; Derbyshire harders, 17s. 3d. to 17s. 9d.; Notts do., 17s. 3d. to 17s. 9d. (all f.o.b.); best Yorkshire house, 21s. to 23s.; best Derbyshire house, 17s. 6d. to 19s. (all at pits); blast furnace coke, 16s. at ovens, 19s. 6d. to 20s. f.o.b.

NEWCASTLE-ON-TYNE.—The market in coal remains firm. Northumberland steam collieries have been booked up for some time, and Durham collieries are now in a firm position. The fear of a stoppage of work in the coalfields is making consumers buy additional coal; this has given such a fillip to all classes of steam coals that prices are mostly nominal. Gas fuels are in strong demand and bunkers of all descriptions are firm. Patent oven coke is also a firm market, there being a brisk demand for prompt furnace coke for home use.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 16s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin screened, 15s.; smalls, 11s.; Tyne prime large, 14s.; smalls, 11s. 6d.; Hartley Main large, 14s. 6d.; smalls, 12s. DURHAM—Lambton/South Hetton screened steam, 16s.; smalls, 12s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or gas, 14s. 6d.; prime unscreened bunkers, 14s. 6d.; second-class smalls, 13s. 2d.; prime foundry coke, 21s. 6d.; unscreened bunkers, 13s. 6d.; prime foundry coke, 21s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Owing to the lack of free supplies, business continues quiet, and prices are largely nominal. The collieries are fully booked for shipment until about the end of the year, while in the home market long delays are entailed in securing supplies. A large proportion of production is of course being absorbed within the country, an active industrial and domestic demand being accentuated by precautionary buying in case of labour troubles.

Shipment prices f.o.b. district ports: LANARKSHIRE—Ell best, 16s.; splint best, 17s. 6d.; splint second, 16s.; navigation, screened, 15s. 6d.; navigation, unscreened, 14s.; steam, 13s.-13s. 6d.; trebles, 16s.; doubles, 14s. 6d.; singles, 13s. 3d.; pearls, 12s. 6d.; dross, 12s. FIFE—Best unscreened navigation, 13s. 9d.-14s.; unscreened navigation, 13s. 6d.; first-class steam, 15s.; third-class steam, 14s.-14s. 6d.; trebles, 17s.-18s.; Doubles, 14s. 6d.-16s.; singles, 14s.; pearls, 12s. 6d. LOTHIANS—Best splint, 15s.-15s. 3d.; prime steam, 15s. 6d.; secondary steam, 15s.; unscreened navigation, 14s.; trebles, 17s.; doubles, 14s. 6d.; singles, 14s.; pearls, 12s. 6d., Ayrshire—Best unscreened navigation, 15s.-15s. 3d.; steam, 14s. 6d.; trebles, 17s.; doubles, 15s.-15s. 6d.; singles, 14s. 6d.; pearls, 13s. 6d.; dross, 13s.

CARDIFF.—Foreign shipments at the South Wales ports are showing their normal seasonal expansion, totalling 323,897 tons last week, compared with 294,753 tons in the previous week and 282,000 tons in the corresponding week last year. Foreign and coastwise shipments totalled 408,000 tons, compared with 417,700 tons and 350,616 tons respectively. Demand is quite active for bituminous large coal and for the drier classes of smalls, and for some grades collieries are obtaining from 6d. to 9d. per ton above the scheduled figures. Best Admiralty large is not quite so strong a market, and bituminous nuts and beans are unsteady. The Greek State Railways have placed an order for 17,000 tons of steam coals with a German firm. Progress is being made in the preliminary discussions concerning the new central control selling schemes. For the export districts it is hoped to devise a system under which the existing channels of trade will be conserved, but with effective deterrent sanctions against inter-competition and possible evasions.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; second steams, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; machine-made cobbles, 35s. to 51s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 22s. to 22s. 6d.

IRON AND STEEL

LONDON.—Business in iron and steel remains active, and the official report of the London Iron and Steel Exchange indicates that there is no relaxation in the pressure from consumers to secure deliveries. All departments of the industry are well employed, and in some cases works have been obliged to withdraw from the market, as their output has been sold for many weeks to come. Business in pig iron has declined since the advance in prices; this was not unexpected, as there was heavy buying immediately before the movement. The majority of consumers have covered their needs ahead, and specifications against these contracts are reaching the producers on a scale which taxes their resources. In the semi-finished steel department an acute stringency exists, and consumers find difficulty in placing fresh business. Many of the producing works are unable to accept orders as their output has been sold in some cases well into next year, whilst others are only able to give far forward delivery, and for the most part are reluctant to commit themselves. The increase in imports of Continental semi-finished steel, however, should help to relieve the position. Works in practically all sections of the finished materials department are busy, and in some instances deliveries are falling behind. The recently announced shipbuilding and railway orders will provide a heavy tonnage of additional orders for the steelworks and will ensure active employment for some time.

MIDDLESBROUGH.—The pig iron market continues strong, with makers of Cleveland foundry iron well sold ahead and not inclined to increase their commitments, although buyers are quite ready to enter into further purchases on the basis of the recently advanced prices. Fixed minimum delivery prices are governed by No. 3 prices. Foundry quality at 70s. per ton delivered Middlesbrough, with the usual differences to the other areas. East Coast hematite continues in good demand, and an increase in price would not occasion any surprise. Meantime, however, the minimum price remains based on 71s. per ton for No. 1 quality delivered locally. Total shipments of all classes of pig iron from the Tees from November 1st to 19th amounted to 5,378 tons, against 7,101 tons to October 19th.

Steel makers are very busy. Re-rollers are experiencing difficulty in obtaining their requirements of semi-manufactured material from local producers, but it is expected that the increased quantities to be imported will alleviate the position. Structural steel is in good demand, and it is expected that further orders will be placed shortly by the railway companies. Home demand for sheets continues good, but export business is small.

The foreign ore position is no easier and is dependent upon freight. Blast furnace coke has become much stronger, being now quoted at 19s. to 20s. per ton delivered at the furnaces here. Heavy steel melting scrap is becoming more difficult to obtain. Although buyers are willing to pay only 52s. 6d. per ton delivered, merchants are not offering too freely in anticipation of a rise in price.

SHEFFIELD.—Exports of general qualities of iron and steel materials are somewhat disappointing, for shipments in October were only 4,000 tons more than in October last year. But exports of hand tools, notably engineers' tools, are still advancing, and there was an improvement last month in railway material and special alloy steels. Steel firms are handicapped in their engineering branches by an inadequate supply of skilled operatives. For this reason overtime working is necessary in many cases. The authorities of Sheffield University report that all the students who qualified in engineering and metallurgy last year obtained appointments, and that there are more vacancies in the steel and engineering industry than candidates to fill them. Home demand for Sheffield's leading steel products is still broadening. Armament branches are working to full capacity, and here prospects of work throughout the coming year.

The dispute with Italy is not likely to affect Sheffield very seriously. As regards exports to Russia, Sheffield has had a poor year, and the floating of a Russian loan would be welcomed by a number of firms. It is true, however, that Russia is producing certain kinds of steel which, until recently, she bought from abroad, Sheffield obtaining a good share. The credit problem has undoubtedly deprived Sheffield of a good deal of Russian trade in hand and engineers' small tools. The open-hearth furnace plants are unable to cope with the home demand for semi-manufactured basic steel. Quality steels are going out in increased quantity, and the same may be said of tools. There is a fairly good seasonal demand for cutlery and plate. The building trade is furnishing Sheffield with a great amount of business in iron castings and tools.

GLASGOW.—In Glasgow and neighbourhood all branches of the iron and steel industry are busy, particularly the heavy trades. Steel makers are meeting with an increasing demand for all materials. A decided improvement is discernible in the requirements of ship-builders and structural engineers. Makers are hard pressed by consumers of semis, and re-rollers are finding themselves short of supplies, the lock-out of Clyde dockers having added to their difficulties as regards deliveries of foreign material. Business is steady at the sheet mills and galvanising plants, export business continuing to expand somewhat. Tube makers also are well employed, as are also practically all the manufacturing engineers and machinery makers in the West of Scotland.

CARDIFF.—On the Swansea Metal Exchange on Tuesday a slight improvement was reported in the volume of business in tinplates, but it was mainly in respect of deliveries over 1936. Shipments however, last week were about 41,000 boxes less than in the previous week, and 19,000 boxes less than in the corresponding period last year; but warehouse stocks were only 3,000 boxes more than a week ago when they fell to the relatively low total of 58,141 boxes. Prices both for inland and export are unchanged. There was little demand for galvanised sheets, but minimum prices were firmly maintained. Steel bars were unaltered at £5 10s. delivered.

OTHER METALS

COPPER.—Prices rose during the period under review, although the market closed on Wednesday below the week's best. The early rise was attributed to the extremely favourable unofficial statistics for October. Stocks were reported to have declined by no less than 35,101 short tons to 496,500 short tons, while the world's apparent consumption rose to 164,500 short tons during October—the highest level reached since October, 1929. These figures appear to err on the side of optimism and their publication had little effect upon consumers, who continued to draw on their stocks. It would seem likely, however, that consumers will be compelled to resume buying within the next month, for a considerably increased activity is probable in copper-consuming industries after the end of this year. Amongst the "counter-sanctions," introduced by Italy this week, is the prohibition on imports of copper from the "sanctioning" countries. This measure is unlikely to have any significant effect on the London market, since Italian purchases of copper here have been very small in recent weeks.

Sales on the London Metal Exchange: 1,400 tons on Monday, against 1,600 tons last week; 2,150 tons on Tuesday, against 2,950 tons last week; 1,050 tons on Wednesday, against 1,900 tons last week. Domestic spot was quoted at 8-60 cents per lb. in New York on Wednesday, against 8-47½ cents a week ago and 8-52½ cents a month ago. Wednesday's official closing price for standard cash in London was £35 6s. 3d. to £35 7s. 6d., compared with £35 to £35 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 78,964 tons, show a decrease of 622 tons, while stocks of rough copper, at 10,883 tons, show a decrease of 26 tons on the week.

LEAD AND SELLER.—Although moderate fluctuations occurred on both markets, no change in the undertone took place this week. The slackness of trading is primarily due, as in the case of copper, to reserve on the part of consumers. Stocks which were accumulated in September and October (especially in the case of lead) cannot be large. Increased interest was, however, prevented by the relatively high level of spelter production and the resumption of lead smelting in Mexico. While consumers continue to show reserve, no change in the trend on these two markets is to be expected.

Sales of lead on the London Metal Exchange: 1,250 tons on Monday, against 1,500 tons last week; 1,000 tons on Tuesday, against 900 tons last week; 800 tons on Wednesday, against 2,500 tons last week. The New York quotation on Wednesday was 4-50 cents per lb., against 4-50 cents a week ago and 4-50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 17s. 6d. per ton, compared with £17 18s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 500 tons on Monday, against 25 tons last week; 300 tons on Tuesday, against 400 tons last week; 25 tons on Wednesday, against 350 tons last week. Wednesday's quotation in East St. Louis was 4-85 cents per lb., against 4-85 cents the week before and 4-85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 3s. 9d. per ton, against £16 5s. last week.

TIN.—During the week ended last Wednesday the cash price fell heavily by over £13 per ton. Since the three-months' quotation declined by only £3 during the same period, the "backwardation" narrowed to £11 15s.—little more than half the previous week's figure. The drop in the cash price occurred notwithstanding a further fall in British warehouse stocks to the record low level of 340 tons. Operations are at present shrouded in mystery, but the decline was probably attributable to the fact that various shipments from the Dutch East Indies are due to reach this country during the next few days. Whether these supplies will be offered on the London market no one knows, but it is certain that the Dutch producers, whose calculations are still made in terms of gold, will try to secure as high a price as possible. Hence it would not be surprising if quotations again exhibited an upward tendency in the immediate future.

Sales of tin on the London Metal Exchange: 340 tons on Monday, against 110 tons last week; 125 tons on Tuesday, against 200 tons last week; 250 tons on Wednesday, against 200 tons last week. The New York quotation on Wednesday was 51-00 cents per lb., against 53-00 cents a week ago and 51-50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £224 to £224 10s. per ton, compared with £237 10s. to £238 last week. Stocks of tin in London and Liverpool at the end of last week totalled 340 tons, a decrease of 153 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 12s. 6d. per flask of 76 lbs., as against £12 10s. to £12 12s. 6d. per flask last week. Chinese antimony was quoted at £68 per ton ex warehouse, duty paid, as against £69 to £70 per ton last week. Chinese wolfram for November-December shipment was quoted at 34s. to 35s. per unit, c.i.f., as against 33s. 6d. to 34s. 6d. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester. The market has been well supplied with inquiry, and a fair amount of business has been done. Turnover, however, has been rather smaller than in those active weeks in October. Sufficient contracts have, however, been secured to maintain the improved position of spinners and manufacturers. There has been further evidence of bullish sentiment with regard to raw cotton prices. During the last day or two rates in Liverpool have eased slightly, this development being due to profit-taking. Consumption of American cotton is steadily increasing. Deliveries to world spinners during the last five weeks were 50 per cent. higher than in the same period of last year. Speculative operations have again been prominent in the Egyptian Sakel market.

Although there has not been any general activity in the cloth market, a fair amount of business has been done for several outlets. Numerous offers for India have been disappointing. A rather smaller turnover has occurred in bleaching styles, but demand has been active in printed and dyed descriptions, especially for Bombay and the up-country markets. There is no hope of increased trade for China in the near future. The better demand for Egypt has been maintained and useful orders have been secured for West Africa. News from South America, especially the Argentine, has improved and more business has been done in dyed fabrics. Sheetings have been sold for South Africa and Australia. A varied business has been put through in home trade goods. The yarn market has continued firm, with a healthy demand in coarse and medium American qualities for quick delivery. Buying in Egyptian descriptions has been patchy.

COTTON TRADE REORGANISATION.—A further move was made in Manchester on Tuesday regarding the reorganisation of the spinning branch of the cotton industry. A special committee set up by the Master Cotton Spinners' Federation met to consider the question of redundant spindles in the doubling section. A questionnaire is being sent out to all firms, asking for information regarding their particular mill capacity and whether they are prepared to accept proposals. Mills controlling between 2,500,000 and 3,000,000 spindles are affected. The bulk of these are situated in the Yorkshire area. It is expected that a Bill will eventually be evolved on similar lines to that for the spinning section.

JUTE.—Dundee. The Indian Jute Mills' Association some weeks ago intimated that unless all the non-member mills could agree to work in conjunction with the Association in regard to hours of labour by November 12th, all the mills in the Association would increase their working hours from 40 to 54 per week as from April 1st next. On November 12th, however, the Association, evidently loth to take such drastic steps, decided to postpone the time-limit to December 31st, to give the non-member mills further time to consider the matter. Meantime, every avenue is being explored to effect an amicable settlement, and there are hopes that the non-member mills will fall into line with the Associated mills and reduce their working hours from 108 per week which they are running at present. Undoubtedly any such step as increasing production on the part of the Associated mills will seriously affect the jute industry, which is gradually recovering from the depression through which it has passed. Signs of improvement have not been wanting during this year, and in all countries where jute goods are produced an increased demand has been experienced, with prices for jute yarns and cloth obtainable on an economic basis compared with the raw material.

Raw jute prices have shown a tendency to advance, due to restricted imports into Calcutta; this gave rise to the assumption that supply is not so great as has been anticipated this season. Truly, the Indian jute mills are holding very large stocks of raw jute, but it is their natural desire to maintain these at a high level in order to counteract any undue raising of prices to a prohibitive height, such as occurred in 1925, when these stocks were allowed to decline to a low point. The price of First Marks has advanced to £24 10s. and good Lightnings to £22 5s., with Hearts at £20 15s., and Daisee-2/3 offered at £20 10s. and Tossa-2/3 at £21 5s., November-December.

Jute yarns have been in fair request at 2s. 2d. paid for common 8 lb. cops and 2s. 3d. for 8 lb. spools. Now spinners have raised their quoted limits to 2s. 3d. and 2s. 4d. respectively, and buyers are reluctant to concede the advance, which is, however, necessary to spinners owing to the rise in raw material prices. Twist is firm at 3½d. for 3 ply 8 lb., and sacking yarns are in request at 2½d. paid for 24 lb. web and 3½d. for 8 lb. chains. Rove is very firm at £20 lowest for 48 lb. and £16 for 200 lb., while the Rio yarns and carpet qualities are tending dearer.

The cloth market is firm, manufacturers being busy and unable to give quick delivery. Anything wanted this year is quoted at 3½d. for 10½ oz. 40 in. and 2½d. for 8 oz. Inquiries show that further fair quantities are required. Linoleum hessians and heavy goods are very firm all round.

Calcutta goods are inclining dearer, but buyers are acting cautiously in view of the uncertainty surrounding the future position of the trade in Calcutta.

GRAIN MARKETS

WHEAT.—At the end of last week a revised estimate of this year's Canadian crop was published, showing a decline of 16 million bushels compared with that published a month ago. The latest statement estimates the output at 274 million bushels, against a final estimate of 276 million bushels last year. The reduction in the estimate, coupled with the knowledge that a substantial part of the crop will not be of millable quality, led to an advance on North American markets. Although the rise was not fully held, Wednesday's quotations, both in America and in this country, were above those ruling a week ago.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 822,000 quarters, against 1,022,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 96½ cents per bushel, against 93½ cents the week before and 99½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 34s. 9d. per 496 lbs., against 34s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 33s. 6d. against 33s. a week ago.

FLOUR.—The market in both home-milled and imported flour was quiet and prices declined. Shipments from North America in the past week totalled 99,000 sacks, as against 75,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 28s. per 280 lbs. against 29s. a week ago; delivered London, 27s., as compared with 28s. a week ago. Manitoba patents, ex store, 27s. 6d. to 29s. 6d., against 27s. to 29s. 3d. a week ago. Australian, ex store, 22s. to 22s. 6d., against 22s. 9d. a week ago.

BARLEY.—Imported feeding barley has been in better demand this week. Bad weather has interfered with threshing operations in this country, and malting barley has consequently been in rather short supply; but prices have failed to improve. "December" futures were quoted at 33½ cents per bushel in Winnipeg on Wednesday,

against 33 cents last week and 34½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 54s., against 30s. to 54s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 27 cents per bushel in Chicago, against 26½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

MAIZE.—The decline in quotations was checked during the past week, trading being on a moderate scale. There has been no significant change in the statistical position. "December" futures were quoted on Wednesday at 60½ cents per bushel in Chicago, against 59½ cents a week ago and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 3d. per 480 lbs., compared with 16s. 6d. a week ago; "Plate," ex ship (new), 16s. 3d., as against 15s. 6d. a week ago; "Plate," November, 16s. 4½d., against 16s. 3d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. to £4 15s. per ton, against £4 12s. 6d. to £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to November 16	313,073	257,789	322,498	401,649
11 weeks to November 16.....	3,071,076	3,796,802	5,074,540	5,147,175
Average price of English wheat per cwt.	s. d. 5 5	s. d. 4 7	s. d. 4 11	s. d. 5 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER WT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Nov. 14 1931.....	89,271	456,512	63,526	6 10	9 0	6 10
Nov. 19 1932.....	313,073	408,724	57,531	5 5	7 3	5 11
Nov. 18 1933.....	257,789	450,315	45,960	4 7	9 4	5 5
Nov. 17, 1934.....	322,498	357,681	48,540	4 11	8 9	6 8
Nov. 9, 1935.....	452,258	498,034	45,927	6 1	8 10	6 3
Nov. 16, 1935.....	401,649	380,680	44,962	5 11	8 5	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934.

NEAREST FUTURE	Jan. 4, 1935	Jan. 8, 1934	Nov. 21, 1934	Jan. 2, 1935	Nov. 13, 1935	Nov. 20, 1935
Winnipeg (No. 1, Manitoba).....	46½	65½	77½	82½	82½	85
Chicago (No. 2 Winter).....	48½	84½	98½	98½	98½	96½

The visible supply of wheat in Canada amounts to 145,103,000 bushels, against 145,868,000 bushels last week and 123,743,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—The official prices were reduced last week end. Nevertheless, demand has again been very quiet this week, with quotations showing an easier tendency. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 80s. to 87s.; Canadian, 75s.; Danish, 86s., as against 80s. to 89s., 77s. and 89s., respectively, a week ago. Arrivals in London last week included Danish, 14,251 bales; Canadian, 4,302; Dutch, 2,276; Lithuanian, 1,568; Polish, 2,639; against 13,337, 4,938, 2,231, 1,926 and 2,327 bales, respectively, in the previous week.

BUTTER.—Last week's advance in Colonial descriptions has not been held, and an easier tendency has again been in evidence during the past few days. Supplies of Danish have been rather below last year's level, and prices have been firm. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 102s. to 103s.; Australian, choicest salted, 101s. to 102s.; Danish, 124s. to 125s.; compared with 104s. to 105s., 104s. and 124s., respectively, last week.

CHEESE.—English cheese has encountered a firmer market this week. Other descriptions have been in rather quiet request, but prices are steadier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 70s. to 80s.; Canadian, finest coloured (new), 58s. to 62s.; New Zealand, finest coloured, 53s. 6d. to 54s., as against 62s. to 74s., 58s. to 60s. and 53s., respectively, last week.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total

Nov. 14, "	13-33	12-31	15-03	12-18	9-42	11-63	13-53
Nov. 21, "	12-37	12-04	14-27	11-76	9-66	11-33	13-02

The spot price in New York on Wednesday last was 12 $\frac{1}{8}$ cents per lb., compared with 13 $\frac{1}{8}$ cents per lb. a week ago and 12 $\frac{1}{2}$ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6 $\frac{1}{2}$ d. per lb., as against 6 $\frac{3}{4}$ d. on the corresponding day last week. In forward positions, business has been done at 6 $\frac{1}{2}$ d. to 6 $\frac{3}{4}$ d. for January to March shipment, as against 6 $\frac{1}{2}$ d. to 6 $\frac{3}{4}$ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 166,299 tons, against 167,007 tons a week earlier. A year ago stocks amounted to 127,390 tons.

† These prices are for fuel oil for inland consumption—other than for use in Diesel engine road vehicles—and do not include the Government tax.

PROFIT BY AMERICAN INFLATION

For three years THE FINANCIAL WORLD OF AMERICA has been emphasizing in its own columns and in its newspaper advertising that the basis was being laid for a great inflationary movement. The latest leading authority to point out the potentialities of a huge credit inflation is Mr. Charles R. Gay, President of the New York Stock Exchange. In the meantime, many successful European investors have been buying heavily of American Shares.

BRITISH INVESTORS—PREPARE NOW

You owe it to yourselves to study and prepare to profit by the American inflation boom that appears to be getting under way. To keep financially posted on American business and investments is now all important. For this purpose you can find nothing to surpass America's 33-year-old Investment Weekly in saving you time, effort and money. Post four shillings for our four weeks' trial offer and get in addition these aids to profitable investing.

Our latest share ratings and data book covering 1,300 listed shares, reprints of analyses appraising the value of thirteen American Public Utility Holding Companies, "Fifteen Shares for the Coming Prosperity," "An Important Market Signal," "Rail Shares in Best Position," "Sixty-four Share Factographs," and "An Analytical Basis for Selecting Shares."

Post only, Cheque or Postal Order for 4/- for our four weeks' trial offer or £2 8s. for one year to:

THOMSON MASON, London Representative

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 25.—ITALY AND HER OIL SUPPLIES. This question is of the first importance at the present time as oil supplies are the most vulnerable point in Italy's whole armour, and supplying countries who are League Members have virtually agreed to stop supplies if the U.S.A. will undertake to refrain from increasing her supplies to Italy.

TUESDAY, NOVEMBER 26.—EMBRYONIC MINES OF THE RAND—II. WEST WITS AND VENTERSPOST. Following his general survey of the New Rand Areas in process of development, our Special Mining Correspondent "MINOTAUR" begins his series on the individual enterprises with the biggest concern of all, West Wits and its first subsidiary Venterspost.

WEDNESDAY, NOVEMBER 27.—The Story of Famous Companies—No. 27. This issue will contain the full account of the rise and growth and present position of UNITED DAIRIES.

THURSDAY, NOVEMBER 28.—WOOL AND THE WOOL PRODUCING COUNTRIES. An analysis of conditions and prospects in the raw wool market, and the consequent outlook for the "wool cheques" of Australia, New Zealand and South Africa.

FRIDAY, NOVEMBER 29.—THE OUTLOOK FOR THE PROVISION STORE COMPANIES.

SATURDAY, NOVEMBER 30.—THE CYCLE AND MOTOR CYCLE INDUSTRY. The Cycle and Motor-Cycle Exhibition opens at Olympia on November 30. This article is an expert survey of current trends in the industry and their effect on the manufacturing companies.

COMMERCE AND TRADE

THE VITAL SANCTION

THE experiment of economic sanctions is rapidly approaching its crisis. Should the vital commodity of oil be included in the embargo list? Should Great Britain give other nations a firm lead in pressing for its inclusion?

The indispensability of oil for the conduct of the Italian war of aggression in East Africa is not in doubt. This point, which we have repeatedly emphasised, has been driven home with force and authority in a letter from Sir Arthur Salter, published in *The Times* of last Wednesday. Petrol drives the Italian aeroplanes, the Italian tanks, the Italian lorries; and Italy has no supplies of her own. If foreign supplies are cut off, and his stocks become exhausted, Marshal Badoglio will be reduced to dependence upon riflemen and upon mule-borne or camel-borne light artillery. He will be unable to maintain more men at the front than can be fed and munitioned by a mule- and camel-borne commissariat. Deprived of its robot aeroplane eyes, the Italian army will be matched against the Ethiopian *levée en masse* on more equal terms. The prospect may be sufficient to compel even so determined a dictator as Signor Mussolini to reflect on the possible consequences of continuing the campaign. Man to man, the Abyssinian warrior would be a formidable antagonist for the Italian soldier; for he is defending a country which is his own and with which he is familiar; whereas the Italian is fighting in a strange land. In a war of tactics and *moral*, in which petrol has been abstracted from the Italian scale, the Italian project of East African conquest is almost certainly doomed to fail.

Granting that this is so, to those who either avowedly fear Signor Mussolini or secretly favour him it merely shows that the oil sanction is one which the sanction-taking States cannot safely venture to apply. For if the Duce is threatened with any sanction, even in the economic category, which promises to be really effective, he will show his teeth. If we refuse to sell him oil, he will treat our refusal as a *casus belli*. Indeed, at the moment of writing, reports

are arriving from Rome that men who were due for leave are being retained with the colours; and there have been hints and denials of troop movements in Libya and on Italy's northern frontier. It is difficult to believe that such reports are more than a device to make M. Laval's flesh creep. For if the cutting-off of oil supplies will have so serious an effect upon Italy's military strength as to make it virtually impossible for her to carry on her war against Abyssinia, she will hardly choose the occasion to cap her East African war with a general war against the British Empire and the other sanction-taking States Members of the League. Even if Signor Mussolini were mad enough openly to challenge the members of the League, it would be suicidal for them, and particularly for France, to run away at the moment when collective security was being put to the test. If Italy could thus shatter all sense of solidarity, then nothing but chaos would be ahead. But, in fact, the oil embargo is one against which Signor Mussolini can take very little, if any, effective military action.

The oil sanction appeared above the horizon in the Canadian resolution, which has been adopted by the Committee of Eighteen. This proposed the addition, not only of oil but also of coal, iron and steel, to the list of commodities that the sanction-taking States Members of the League were to deny to Italy. The decision, however, was to be postponed until non-member countries which commanded alternative sources of supply were ready to take corresponding action. Subsequently, on November 21st, Mr Ickes, the United States Secretary of the Interior and Federal Oil Administrator, called on the oil industry of the United States voluntarily to hold up shipments to Italy. Mr Ickes announced that while he had no "authority," he thought that the oil companies "ought to comply in the letter and in the spirit with the United States Government's efforts to prevent the furnishing of war materials to either of the belligerents."

It still remains to be seen how far the private interests concerned will respond to this striking Governmental move. There is no doubt, however, that the Washington Administration's authority in this matter is strong, although it has no legal backing. For the Administration is faithfully reflecting the trend of American public opinion. Apart from any pressure which the Washington Government may bring to bear upon American tanker owners, there is little doubt that refusal by the oil companies to fall in with the Government's wishes would find Congress favourably disposed, next January, towards the passing of legislation to enforce the general will.

If, however, any American oil embargo is to come into force, the oil-exporting League countries must go at least as far for their part. Nominally, the United States policy would be unrelated to any action, or inaction, of the League and its members. Actually, we do not need to assume any unavowed desire at Washington to facilitate the League sanctions in order to account for the line which the Administration has been taking. Though an American oil embargo, if imposed, would in fact be an invaluable aid to League sanctions, it would also be exactly what it is officially alleged to be. It would rank as an essay in the new American policy of absolute economic non-intercourse with both belligerents in any war, as a way of ensuring that the United States shall not become involved in belligerency. Theoretically, America might "try out" this policy in the present East African war, even if the League were taking no sanctions at all. In practice, however, it would be altogether too much to expect the Americans to forgo their neutral trading profits if these were to be snatched up by other countries; particularly by countries pledged to obligations of non-intercourse with a Covenant-breaker.

This question had not yet arisen at the moment when Mr Ickes made his appeal to the American oil companies. At that moment the Committee of Eighteen was still due to reassemble on the 29th of this month at Geneva in order to address itself to the implementation of the Canadian resolution. Last Sunday night, however, M. Laval prevailed upon the Portuguese chairman, with the British Government's reluctant assent, to postpone the meeting without fixing a future date. This sudden and unforeseen postponement of an urgent piece of business has made an unfavourable impression not only at Geneva but in America. This impression can only be removed by naming an early date next week and then promptly putting the Canadian resolution into effect. With the United States taking parallel action, and with Iraq, India, Russia and Roumania already explicitly prepared to put the oil-embargo into operation for their part, no obstacle now remains except a political objection on the part of France.

We appreciate M. Laval's inability to be present at Geneva, in view of this week's critical deliberations in the French Parliament. If M. Laval had been as prominent as some other League statesmen in his determination to make the Covenant work effectively, we should merely feel a certain chagrin at an unlucky coincidence. As it is, however, the French domestic crisis, genuine though it be, has favoured the policy, popularly associated with M. Laval, of preventing the screw from being turned upon Italy. In these circumstances, the British Government should be courteous but firm in its insistence that more than a very few days' delay cannot be tolerated. In the last resort, we may be compelled to consider the expediency of putting on the oil embargo individually if it cannot be applied collectively with the necessary rapidity. As it happens, France is not an oil-exporting Power; and a large part of the supplies which she controls are derived from Iraq. If Iraq, Iran, Russia, Roumania and the United Kingdom agree, they can impose the oil embargo, between them, before the end of next week. As we go to press, M. Laval is reported to have informed Signor Mussolini that France would stand firm with other League members in resistance to any extreme Italian measures which might follow the imposition of the oil sanction. This, if correct, is good news, and it underlines our own responsibility in the matter. It is not consonant either with the letter of the Covenant, or with the spirit of the Kellogg Pact, that a British company should supply an aggressor State with the essentials of war.

FRANCE'S DILEMMA

THE gold bloc volcano is again in eruption. Spasmodically during the past year, the underlying crisis of over-valuation, or, as M. Rist has called it, the "maladjustment between the internal and external purchasing power" of the gold currencies, has broken out first through one crater and then another. This time the disturbance has taken the form of renewed crisis in France, and gold is once more flowing freely down the mountain side. The present crisis is more confused, however, than that of last June, whose political aspect, the fall of M. Flandin's Government, was simply the consequence of a flight from the franc due in its turn to the fall in Budget revenues. But this week the flight from the franc has been in itself largely caused by political anxieties about the meeting of the Chamber and the future of the Fascist Leagues. Nevertheless, it is the economic crisis which really remains fundamental. For the threat of extremist political pressure only becomes menacing, as the last five years in Europe have repeatedly shown, when public opinion is itself driven to extremity by depression, unemployment and insoluble Budget problems.

There are signs that a far-reaching change has taken place in France's economic situation during the last few months. Up to the early autumn of this year, the crisis was of an easily recognisable nature. Deflation and persistently high interest rates, caused by over-valuation of the currency, inevitably resulted in lower production and falling Budget revenues. Successive instalments of Budget economies merely deepened the depression and curtailed the revenue still further. The Budget was "balanced" by cuts in the summer of 1932, in May, 1933, in February, 1934, in December, 1934, and finally by M. Laval's drastic surgery of last July. Meanwhile, the Bank rate was being periodically raised—apart from an interlude of "cheap money" policy under M. Flandin—to stem gold losses; and the industrial production index (1928 = 100) fell from 88.2 in July, 1933, to 73.2 in July, 1935. The official figure of unemployment rose in the same period from 239,692 to 380,559.

Despite the high Bank rate and Budget cuts of June and July, however, a change seems to have come over the situation in the early autumn. The index of industrial production, which had fallen uninterruptedly for two years, remained stagnant after July and actually rose a point in October. The figures of unemployment and prices also began to suggest stagnation rather than further decline. Were these developments purely fortuitous, or was there some reflationary factor strong enough to offset the deflationary measures of July? This question at once directs attention to the volume of loan expenditure in which the French Government has been indulging in the last few months. An "Extraordinary Loan Budget," providing for an annual expenditure of 6,000 million francs, to finance public works and re-armament, was passed in the summer, almost simultaneously with the cuts. Meanwhile, owing to the persistent fall in revenues, the Ordinary Budget continued to show a deficit amounting in October to over 500 millions. Total Government expenditure out of loans, therefore, not including the railway deficit, the Algeria deficit and the Post Office, is at the moment running at the rate of 12,000 million francs, or well over £150 millions a year.

Since the recoveries now proceeding in the United States, Japan, Germany and Italy are largely the effect of Government expenditure financed by credit inflation, it is not surprising to find that the fall in industrial production and employment in France has at last been arrested by loan expenditure on this scale. Incidentally, the total deposits in the French big four banks, which had long been declining, began to rise in September. There has also been a marked increase in Government borrowings from the Bank of France since the spring. Indeed, the figure of "bills discounted" in the Bank of France returns, which as recently as May 10th stood at only 3,949 million francs, rose at the end of June to over 8,000 millions and stood on November 15th at 8,304 millions. Nobody would claim that this increase is wholly composed of commercial bills resulting from a sudden and spectacular recovery in French trade. M. Régnier recently stated that only 2,500 millions of these bills were Government or Railway debts; but he did not say how many of the remaining 5,500

millions of "commercial bills" were indirectly Government obligations. The fact is that the Government and the Bank of France, despite their orthodox canons, have been driven by the exigencies of the situation in the direction of credit expansion.

Unfortunately, however, this expansion cannot of itself bring recovery, for two reasons. In the first place, public expenditure out of loans, if it is large enough to avert industrial decline but not to reverse it and so increase revenues, merely alleviates the pain without curing the disease. In the second place, precisely as credit expansion arrests or reverses the fall in prices and production, the gold parity becomes more untenable and devaluation the more inevitable.

Such is the inescapable dilemma facing the French Government and Opposition alike; and such is the underlying crisis which has dissipated the fragile "confidence" inspired by the deflation of July, inflamed public feeling, swollen the strength of the extremist factions, and invested this week's meeting of the Chamber with a sense of painful insecurity. In this embittered atmosphere an "incident" between the Front Populaire and the Fascist Leagues was almost inevitable. And it duly happened at Limoges ten days ago, when several persons were killed in an inter-factional riot. As a result, the Front Populaire, with the reluctant support of the Radical-Socialists, are to call upon the Government to take strong repressive measures against the Fascist Leagues. The intentions of M. Laval, whose incessant manoeuvres on the national and international stage have sorely perplexed foreign opinion during the last six months, are still extremely obscure. His anonymous friends and advisers of the Right, popularly associated with the Comité des Forges and the Bank of France, are understood to be averse to any determined repression of the Leagues; while M. Herriot on his Left is demanding measures of at least reasonable vigour. In this political tangle, however, M. Laval's remarkable talent for eloquent inactivity may stand him in good stead. He has already, as we write, obtained a preliminary vote of confidence; and the meeting of the Chamber, now proceeding, may very possibly result in a compromise which will ensure the survival of the Government and the consequent temporary cessation of the outflow of gold. A compromise by which finance is discussed first, and the Leagues afterwards, and the Leagues are curbed but not suppressed, as at the moment appears likely, may secure M. Laval a majority on both crucial issues.

In such an event, however, the fundamental problem of devaluation will remain unsolved. The attitude of the Bank of France, which originally helped M. Laval to office, is still, whatever the Bank return may reveal, "No devaluation without stabilisation." And even the parties of the Front Populaire, including the Daladier Radical-Socialists and the Blum Socialists, are themselves in part afraid and in part sincerely opposed to any devaluation. They still believe, despite the evidence of the Belgian experiment, and despite the growing support which M. Reynaud has won since June, that a 25 per cent. devalua-

tion would mean a considerable rise in the cost of living, a continued Budget deficit, a flight of capital, and a multitude of nameless disasters. Here, in the view of many sincere friends of France, is the real tragedy of her situation. For there is little chance of establishing a strong Left-Centre Government on the Belgian model which would at once carry through an ordered devaluation and pursue at Geneva a policy of willing and active co-operation with the League Powers.

In the circumstances the Front Populaire may be unwilling to force M. Laval's resignation. They may calculate instead that the gold outflow will sooner or later necessitate an embargo, and that devaluation will in this way become an accomplished fact before the elections of next spring. And this now seems by no means an improbable outcome. Already some anti-devaluationist organs in the Paris Press are arguing that an embargo on gold exports would not amount to devaluation. Responsibility for such an embargo, reluctantly imposed, could be laid at the foreigner's door; but it would be none the less effective in removing the present over-valuation of the franc. In that case we most fervently hope that when the final choice can no longer be evaded, its difficulties will be overcome without any violence being done to the democratic institutions of France.

CYCLES AND MOTOR CYCLES

THE cycle and motor-cycle exhibition which opens in London on Saturday, November 30th, forms an effective "shop window" for an industry of striking contrasts. It is estimated—perhaps somewhat generously—that since 1929 the number of pedal cycles used in Great Britain has increased by 4,000,000, from 6,000,000 to a present total of 10,000,000. This so-called "boom" has been due to a number of causes, some of which are of a permanent rather than an ephemeral character. The renaissance of cycling as a sport, practised by devotees of the outdoor cult who find walking an intolerably slow means of leaving built-up areas behind, is only one of them. Of greater economic importance, probably, is the effect of rehousing many people on estates, outside urban boundaries, at some distance from their work. This, however, is not the whole story. Wider dispersion of the population has not resulted in increased use of all transport facilities; for the number of passenger journeys has actually fallen in the case of road transport and railway companies. Public transport, in fact, has lost ground to private transport; and from this development the pedal cycle, with its low capital costs and almost negligible running expenses, has greatly benefited. The increasing complexity of motor vehicle regulations has increased the popularity of pedal cycles for trade purposes.

The motor bicycle, unfortunately, has failed to share in this movement. It has continued to make headway in foreign countries, especially in France and Germany, where half a million and a million motor cycles, respectively, are estimated to be in use. In Great Britain, however, it has never recovered from the coincidence, four years ago, of

trade depression, the inauguration of compulsory third-party insurance, and the vogue of the "baby" car. The number of motor cycles in use has fallen from a peak figure of 731,000 in 1929 to 548,000 in 1934, and an estimated 500,000 this year. Production figures have improved recently, but in the main the industry's clientèle tends to be restricted to workers living at a greater distance than the average from their employment. Week-end pleasure users, though numerous, tend to become proselytes to small-car ownership, and youthful lovers of speed find light sports cars more to their taste. The organisation of the pedal-cycle industry may be briefly described. In the first place, two firms of mass producers, Hercules and Raleigh, turn out, respectively, slightly over 600,000 and (probably) 300,000 machines a year, and are together responsible for about half the total sales. In the second place, a union of many of the older established concerns (which includes Raleigh but not Hercules) manufactures about one-third (or, excluding Raleigh, one-sixth) of the total. Finally, there are as many as a thousand small manufacturers, the majority of whom merely assemble parts purchased at home or, in a few cases, abroad. After Hercules and Raleigh, the larger manufacturers include B.S.A., Enfield, Elswick Hopper, New Hudson and Rudge-Whitworth. Many companies are interested both in cycle and motor-cycle manufacture, but this rule is by no means universal. Raleigh, for example, is entrenched in both fields, and such firms as B.S.A. and Enfield have heavy motor-cycle interests. Hercules, however, is concerned only with the pedal cycle.

In recent months the motor-cycle position has shown some improvement, but sales of pedal cycles have slightly fallen off, except in the case of Raleigh, who have benefited from a reorganisation of their distributive system. There has been a sharp contrast between the price policies adopted in the two branches of the industry. Since 1929, according to the statistics of the British Cycle and Motor Cycle Manufacturers' and Traders' Union, the average retail price of first-grade pedal cycles has fallen by 9 per cent., from £11 11s. to £10 10s., though during the last two years there has been a slight upward tendency. Second-grade cycles have declined by 19 per cent., from an average of £7 19s. 6d. to £6 10s. The average fall for third-grade cycles has been as much as 24 per cent., from £5 5s. to £3 19s. 6d. The extent of the reduction has thus been greatest in the cheapest and most popular category, where increased output has most favourably affected costs of production. During the same period, according to the index of the Society of Motor Manufacturers and Traders, the price of private cars fell by 31 per cent. Motor-cycle prices, however, have tended to harden, as reduced demand has increased the relative burden of overhead charges. According to the Manufacturers' and Traders' Union, the average retail price for 150 cubic centimetre motor cycles has been constant at £25, while 250 c.c. models have risen from £37 10s. to £40, and the 500 c.c. class from £45 to £54. The 750 c.c., exceptionally, has fallen from £66 to £59 10s., although the price has been a little firmer in the last two or three years. The highest class of all, the 1,000 c.c. class, dropped from £72 in 1929 to £62 10s. in 1931, but has subsequently regained its former level.

Exports play an important rôle in the economy of the motor-cycle and cycle industries. Their total value, including spare parts and accessories, was over £4,000,000 during the last year. The trend of production and exports during the last seven years is shown in the following table:—

Year ended September	Motor Cycles					Pedal Cycles	
	New Registrations			Exports	Total British Production	Exports	Total British Production (Estimate)
	Great Britain	Northern Ireland	Total				
1929	84,806	750	85,556	63,776	149,332	354,616	...
1930	77,521	664	78,185	45,952	124,137	305,821	...
1931	54,644	440	55,084	25,487	80,571	175,538	...
1932	49,017	459	49,476	19,523	68,999	157,985	...
1933	40,116	287	40,403	17,133	57,536	140,000	1,400,000
1934	44,734	313	45,047	16,032	61,079	281,975	1,860,000
1935	46,036	358	46,392	17,680	64,072	370,974	1,800,000

The declared value of the average motor-cycle exported has fallen since 1929 from £42 to £39, and that of a pedal

cycle from £3 16s. 9d. to £2 16s. Six years ago Great Britain exported 368,000 pedal-cycle units out of a world total of 790,000. Germany came second in the list of exporters and France third. By 1932 British exports fell to a low-water mark of 164,000, but have now recovered to 371,000. French and German exports, which today are substantially more expensive than British, have dwindled to a mere 10,000 each. Japan, on the other hand, has raised her exports from 10,000 machines in 1929 to 56,000 in 1931 and 353,000 in 1934, with a further increase this year. Japanese exports are competitive with British in price rather than in quality. In India and South Africa, which together absorb about half the total British exports, British manufacturers are holding their ground; but in the important Dutch East Indian market the lion's share has fallen to the Japanese maker, whose average price per machine last year was £1 13s. against the British price of £3 16s. In the same market Great Britain held in 1930 roughly one-quarter and Japan one-eighth of the trade in cycle parts. Last year, however, Great Britain's share had dwindled to some 2 per cent and Japan's had risen to 87 per cent.

On the motor-cycle side, Great Britain in 1929 provided 62,000 units out of total world exports of 107,000. In 1934 her share was 16,500 out of a world total of 25,000. These figures are eloquent of the complete slump which has occurred in the export trade, which so far has shown no sign whatever of regaining its former volume. The average declared export value of a motor cycle, nearly £40, is high in relation to the export values of the cheaper cars for the principal motor-cycle markets, Australia, South Africa and Holland. The pedal cycle, is, however, in a different and non-competitive category as far as the car is concerned. There is still an enormous potential demand among the millions of Asia and Africa, and this demand will be intensified as roads are built. There is also room for a good deal of further expansion on the Continent, where the chief cycle purchasers are relatively small countries like Switzerland and Holland; and the Irish Free State has provided a rapidly expanding market of recent years. The most important competitor in the export field is, and will remain, Japan, and the struggle is largely one of price versus quality. However, in Asia and Africa, price is often all-important. Fortunately there is no sign that the British industry is neglecting the production of cheap competitive machines, and it should be able to retain for itself a large share of the export trade. At home the housing boom will prevent any serious decline in cycle sales so long as it lasts. Since it is unlikely, however, that the absorptive capacity of the home market is unlimited, forecasts of a further spectacular increase in total demand may be received with caution.

THE STATE OF IRELAND—I

THE General Election in the Irish Free State which placed Mr De Valera in power took place in the spring of 1932. His Government is therefore nearly as old as the National Government in Great Britain. Throughout the greater part of their lives, both Administrations have been engaged in bitter economic warfare with each other. Mr De Valera's mandate has been renewed in the meantime, and his domestic prestige has perceptibly increased. But the character of Irish politics is such that rising prestige has led to a hardening rather than to a softening of the resolve with which the "war" was started. If there is to be an issue from the present deplorable deadlock, the initiative must come from the British side. It may be that the departure of Mr Thomas from the Dominions Office will synchronise with a change in the British attitude. But such a change will not be concerned only with the extent to which the constitutional elasticity of the British Commonwealth of Nations can be stretched; it will also have to deal with the rapidly changing facts of the economic life of the Free State. The moment may be opportune for an inquiry into the state of Ireland.

In the spring of 1932 it was undoubtedly the expectation in Whitehall that the imposition of penal duties on Irish agricultural produce would suffice not only to collect the

withheld annuities, but also to bring Mr de Valera to terms. In the former object the duties have achieved a certain measure of success. In the second, there is not the slightest sign, after three and a-half years, of any success whatever. Their effect on the economic life of Ireland has undoubtedly been considerable, and ruinous to certain individual interests. But on the general standard of living of the Irish elector there has certainly not been any such clearly perceptible effect as would lead him to put irresistible pressure on his Government. Moreover, it would be erroneous to ascribe to the economic "war" all of the economic change that has been going on in the Free State in the last three years. At least three other causes can be clearly discerned. In the first place, the world agricultural depression caused a catastrophic fall in the price of foodstuffs which necessitated special measures of artificial price manipulation to keep farmers in production. The world depression in itself would have explained, for example, the scheme for stabilising the price of dairy products, which was, in fact, inaugurated under the Cosgrave regime. Secondly, the stoppage of emigration to the United States intensified the Irish unemployment problem and called urgently for the provision of additional agricultural and industrial employment. The population of Ireland ceased to decline in 1931, and began to increase; a change which is of great significance. Thirdly, the desertion by Great Britain of her policy of free trade in food would have created, apart from the economic "war," the problem of a surplus agricultural population in Ireland.

It would thus be dangerous to assume that Mr De Valera's economic policy was forced upon him by the economic "war," or that it would be reversed if a settlement of the "war" could be effected. The decline in the export trade would in any case have led to a movement towards self-sufficiency. This period of inevitable transition was complicated by the regrettable dispute with the British Government. The adoption by Great Britain of agricultural protection was the time above all others when it was important for every agricultural exporting country to exercise its bargaining and diplomatic finesse with the utmost skill, in order to secure the most favourable position possible in the newly protected market. The Free State would have been in a singularly strong position to profit by the Ottawa negotiations; but, unfortunately, she was at that moment engaged upon the campaign over the land annuities which reduced her to the position of the least-favoured-nation in the British market. The dispute did not initiate the movement towards self-sufficiency. But it expedited it to such a point that even the most extreme economic nationalists would have preferred to approach their goal at a more comfortable and more dignified pace. As it was, the pace was set, not by the Irish Government but by Mr Elliot and Mr Thomas.

The effect of the recent changes can be seen most clearly in the figures of foreign trade, since the decline in exports has been the chief disturbing factor. The following table shows the course of Irish Free State exports in recent years:—

EXPORTS OF IRISH FREE STATE PRODUCE						
	1929	1931	1933	1934	1934 (9 mos.)	1935 (9 mos.)
Live animals (£000)	19,695	18,328	7,512	6,115	4,111	4,882
Cattle (No.)	774,733	765,952	589,862	511,103	314,100	439,020
" (£000)	13,549	12,670	6,055	4,258	2,651	3,489
Food, drink and tobacco (£000)	20,552	14,416	9,492	10,112	7,542	7,971
Bacon, hams & pork (cwt.)	768,763	684,404	425,679	542,950	339,118	425,481
" (£000)	4,019	2,404	1,180	1,908	1,033	1,250
Butter (cwt.)	560,482	377,742	403,858	507,912	432,875	469,669
" (£000)	4,555	2,086	1,193	1,330	1,128	1,409
Eggs in shell (000 gt. hund.)	4,811	4,610	3,469	3,468	3,326	2,943
" (£000)	3,219	2,227	1,078	1,040	969	935
Drink (£000)	4,960	4,808	4,155	4,456	3,284	3,234
Other articles (£000)	6,557	3,532	2,065	2,027	1,494	1,558
Total exports (£000)	46,804	36,276	19,069	18,254	13,147	14,411
To United Kingdom (£000)	43,466	34,944	17,940	17,101	12,305	13,267
To other countries (£000)	3,338	1,332	1,129	1,153	842	1,144

It will be seen that Irish exports had already suffered considerable contraction by the end of 1931, although the comparative stability of the British market for foodstuffs (so far, at least, as its quantitative demands were con-

With next week's issue of
THE ECONOMIST
 will appear a Special Survey of
THE BRITISH MOTOR INDUSTRY
 examining various aspects of its
 phenomenal progress, its organisation
 and methods, and its relation to the
 problem of modern road transport

cerned) had protected the Free State from quite such a disastrous fall in exports as some other agricultural producers suffered. The cattle trade, in particular, held up well, while butter made the worst showing. The penal duties were imposed in the middle of 1932 and the figures for 1933 show a further violent contraction. Drink is almost the only category which does not show a sharp fall, either in volume or value, or in both. The value of agricultural products exported (live animals and food) fell from £35,285,000 in 1929 to £12,843,000 in 1933, and has since shown only the slightest improvement. The decline in the total exports of the Free State between 1929 and 1933 amounted to 59.3 per cent.; in the same years the decline in total exports of the United Kingdom amounted to 49.6 per cent. Considering the different nature of the two countries' chief exports, the discrepancy is not large—another factor which tends to show that the effect of the economic "war" has been exaggerated.

So large a reduction in exports, however caused, could not fail to have a profound effect upon Irish agriculture, which combined inelasticity of structure with extensive dependence upon the British market. In fact, two distinct groups of measures of adjustment have been taken. The first group consists of measures designed to substitute home-grown products for imports. These took the form of subsidies for home-grown wheat and sugar beet, and of the compulsory mixture of home-grown cereals with imported feeding-stuffs. Attempts are also being made to find a market for potatoes in the manufacture of alcohol.

The second group of expedients tried to maintain the volume of exports, at least temporarily. For butter there is a scheme which subsidises exports out of the proceeds of a levy on domestic consumption. Straight cash bounties are given for the export of livestock and livestock products. But export bounties cannot solve the problem of surplus cattle in the face of the British quota. So other expedients have been adopted, including the opening of meat factories, the slaughter of old stock and the provision of free or cheap beef for the poor. The free beef scheme can, in fact, claim to be one of the earliest progeny in any country of the fashionable marriage of nutrition and agriculture. There has also been an attempt to meet the problem of rural unemployment by the creation of many small holdings and the provision of relief works. These various devices have been expensive and have imposed a considerable burden on the consumer (e.g. in the case of butter) or on the Budget. But that they have not succeeded in maintaining the level of agricultural prices can be shown by the agricultural price index number (1911-13 = 100):—

1929	1930	1931	1932	1933	1934
139.3	124.8	110.1	98.2	83.5	83.6

It will be noticed, however, that the fall is considerably less steep in the second three years than in the first.

Agricultural measures alone, however, could not in any case have solved the problem. The pursuit of self-sufficiency in the Irish Free State imposes a stimulation of industry relative to agriculture, just as in Great Britain it would necessitate a considerable expansion of agriculture. The agricultural policies of the De Valera Government must be looked upon as relief measures, or as stop-gaps. They are the negative side of the effort of adaptation to the new

conditions. The positive side is represented by the policy of encouraging industrial development. A subsequent article will, accordingly, sketch this policy before assessing the effect of the last three years upon the economic and financial structure of the Free State and suggesting conclusions for the future.

EUROPE FROM THE AIR

(BY A CORRESPONDENT)

NOTHING demonstrates more clearly the unity and disunity of Europe than flying above it. And nothing has rendered that demonstration more startling than the progress in commercial aviation during the last five years or so. In 1929, for example, it was difficult, if not impossible, to fly, even in summer, in regular commercial aeroplanes from London to Vienna in daylight; or from Warsaw to Paris; or from Paris to Madrid; or from Budapest to Athens. In the summer which has just ended, however, it was possible to leave London early in the morning and to dine, still by daylight, in Budapest, Majorca, Rome, Madrid, Helsinki, or Warsaw. For shorter journeys the acceleration of passenger services is even more remarkable. The Swissair Company purchased some American Douglas ("flying hotel") machines, replicas of that which, with Dutch pilots, acquitted itself so well in the London-Melbourne race, and proceeded to run a service from Zürich to Basle, and thence direct to London without—as till then—stopping in Paris. The result was that Zürich became only 2½ hours' flying time from London. Imperial Airways speeded up their services and introduced a new London-Budapest direct service, via Cologne, Nuremberg and Vienna. Travel by air in the summer of 1935 was already hours, and even days, ahead of any continuous rail journey.

Nor have this year's improvements stopped short at the end of September; for this winter there are many more regular European air services than ever before. For example, it is still possible to fly from London to Budapest by Imperial Airways; but now one leaves London at night (an experience in itself), spends the night in Cologne, and arrives in Budapest the following afternoon. It is still possible to fly from Amsterdam to Athens; but the journey is, similarly, broken; and one cannot reach Istanbul at all by air. The services between the chief centres, however—London, Paris, Brussels, Amsterdam, Stockholm, Berlin, Vienna, Budapest, Prague, Warsaw—are all maintained at the same speeds as in summer.

How have these improvements been achieved? First, the aeroplanes and motors in the commercial air fleets of the principal European countries are to-day capable of infinitely better performances than in 1929; and this, in itself, increases the factor of safety. For example, most commercial machines in the air to-day, such as Junkers, Fokker, Penhøet, have three motors, the Handley-Page, Avro and De Havilland "86" machines used by Imperial Airways have four motors. Where there are only two motors, as in the Swiss and Dutch "Douglas" machines, or only one—as in the Lufthansa "Heinkel" and Swissair Express "Lockheed" monoplanes—the machines are originally of American design; and in every case they depend on the American radial motor. Indeed, anyone making an aerial tour of Europe must be struck by the number of American motors. The reason is, presumably, that only across the great tracts of the American continent are such engines tried and tested continuously.

Secondly—and this is of great importance to passengers—the machines of 1935 are much more roomy and comfortable, both inside and in aerial travelling, than five years ago. They are cool in summer and are now heated in winter; and although in most of the Continental machines with American engines the noise of the radial motors is still a trial, in many of the newest machines it is possible to travel all day and alight at the end of the journey without any discomfort in the ears. No aeroplanes are more comfortable or quieter in travel, and certainly none provides more room per passenger, than the Imperial

Airways machines, though their average speed is slower than that of the chief Continental lines. Moreover, Imperial Airways have remained faithful, on their European lines, to the biplane, which is much more comfortable in "bumpy" weather than the large monoplanes which are almost universal on the Continent.

Again, aerial navigation has made great forward strides in the last five years. Very few and far between are the major European services which carry no wireless operator. Indeed, aerial navigation without wireless is to-day almost unthinkable. Night flying has only been made feasible by directional wireless; and to-day it is possible to leave an aerodrome in thick mist and fly through fog and rain, provided only that the machine has enough petrol to reach good weather—always making allowance for that supreme bugbear of the pilot, a head-wind, which can increase petrol consumption for the same overland distance by as much as one-third and one-half. Caught short of petrol in fine sunny weather at 6,000 ft., but above a cotton-wool cloud-bank with mist beneath it, the wireless operator gets busy, calling the nearest aerodrome in the international code, receiving the whereabouts of the machine and the distance from the aerodrome. He is told more: for example, that there is ground-mist there and that other 'planes are waiting to alight. Our operator will then be instructed to keep at 6,000 ft. for another quarter of an hour and to call up again. This the pilot will do until he is told to come below the clouds and land. Perhaps, if the ground-mist is very thick, he will literally be "taken" round the aerodrome at 1,000 ft., and even "steered in," by wireless.

Another device, just now coming to the fore, is "automatic steering," which the American "Douglas" machines, employed by the Dutch and Swiss, possess. The machine can steer itself by correcting all movements out of the lateral and horizontal level which are caused by the varying pressure of wind and air-currents. There are now in existence automatic stabilisers, "flaps" in the wing which are let down for slow landing; and there is gyroscopic steering for the pilot. With the latter device the pilot sets his course and plugs in a switch. Thereafter any deviation—either to left or right, and also fore and aft or against the level of the horizon—is at once recorded on separate instruments for each kind of deviation, and the pilot can then correct it.

Thus much of the hazard which depends on the personal equation of the pilot has already gone out of commercial flying. And with increasing safety, the cost in money to the passenger has been steadily reduced. What, then, still hinders the sweeping popularity of air travel? First, ignorance. The air is a strange and fearful medium; few indeed are those who, curious enough to search beyond the pilot's responsibility, ever try to find out for themselves how carefully the aeroplanes are constructed and commercial flying is organised in most countries.

But there are other hindrances to the popularity of flying. The greatest to-day, perhaps, is the chronic waste of time involved in actually reaching one's aeroplane from the centre of any European city. Airports like Croydon, Le Bourget, Tempelhof, Aspern, Dübendorf, Mátyásföld are all between half-an-hour's and an hour's car-ride from the centre of their cities. It is little short of absurd that one of the fastest commercial aeroplanes in the world—the little four-seater "Lockheed" single-engine monoplane with the retractable undercarriage which the Swissair Company uses in summer—should make the journey between the Vienna and Zürich aerodromes, with a twenty-minute halt at Munich, in two hours, and that these two hours should become three and a-half if one counts from the centre of each city. The obvious development here, in future, is towards central aerodromes in all capital cities.

Finally, of course, there are still inevitable accidents, though some may yet prove avoidable. An unseen telegraph wire is loose; a cable-railway, also unseen, spans the valley where a forced landing must be made; or one of the motors cuts out just as the aeroplane is 200 ft. up and banking to one side—all these are avoidable accidents. Avoidable because, once motors and instruments are perfect, and once air maps are as carefully devised for air pilots as Admiralty charts are for marine pilots, with every

telegraph post shown, as every rock is shown on an Admiralty chart, not even a forced landing need hold hidden terrors, *provided* the machine has height enough to permit pilot and wireless operator time to discover their whereabouts and act accordingly. But until our machines are altered for stratosphere flying we must pin our hopes for the future of commercial flying on two lines of development: first, great (and necessary) improvements in aerial-

cartography; and secondly, great progress in wireless-directional aerial navigation.

Europe to-day stands to gain all or lose all from the use to which the greatest of all mankind's inventions is ultimately put. The way in which it is used should be the way of peace, and along that way peace has still many victories to win before all Europeans eventually become "civil" air-minded.

NOTES OF THE WEEK

The New Cabinet.—Mr Baldwin is to be warmly congratulated on his choice of a new Cabinet. It is more notable for its omissions than for its inclusions. Lord Londonderry is dropped; and neither Mr Churchill nor Mr Amery is included. These three were particularly associated in the public mind with active policies of imperialism and re-armament. Mr Eden, on the other hand, remains as Minister for League Affairs; and his continued tenure of this office, in company with Sir Samuel Hoare as Foreign Secretary, should be the best guarantee of the Government's intention to give the League its sincere and enduring support. The most spectacular change in the Cabinet is the "swapping" of Mr J. H. Thomas and Mr Malcolm MacDonald, which brings the former to the Colonial and the latter to the Dominions Office. Mr Thomas has signally failed to settle the lamentable dispute with Ireland, and it may be hoped that some real progress will now be made. The settlement of this dispute would be a real popular success for the new Government. Finally, Lord Halifax has left the War Office and becomes Lord Privy Seal; Mr Duff Cooper has succeeded him; and Mr W. S. Morrison, K.C., has taken Mr Duff Cooper's place as Financial Secretary to the Treasury. Lord Halifax's continued presence in the Cabinet is a further earnest of Mr Baldwin's desire to preserve its "liberal" character. The remarkable enhancement of the Government's popularity that followed the re-shuffle of last June has evidently not been lost on Mr Baldwin.

* * *

Mr Attlee and Sir A. Sinclair.—Both the Opposition Parliamentary Parties elected a leader on Tuesday. For the Labour leadership three candidates were nominated: Mr C. R. Attlee, Mr Herbert Morrison and Mr Arthur Greenwood. Mr Morrison was known to have much strong support in the London area, but the North of England and the trade union element were preponderantly behind Mr Greenwood. In the first vote Mr Attlee received 58 votes, Mr Morrison 44 and Mr Greenwood 33. And in the second vote Mr Attlee was given a clear majority. It will be no discourtesy to Mr Attlee to say that he owed his election to negative rather than positive reasons. There was determined opposition both to Mr Greenwood and Mr Morrison—to the latter on the ground of his alleged "Right-Wing" proclivities. To many outside the Labour Party it will seem that Mr Morrison has shown more of the qualities of personality, constructiveness and moderation that a leader requires; and it is of course as much in the interests of a Left Party to have a Right Wing leader as of a Right Party to have a Left Wing leader. It should be remembered, however, that the Labour Party elects a leader at the beginning of every session. And Mr Attlee, if he lacks the conspicuous attributes of a leader, has undeniable ability, judgment and integrity. At the Liberal Party meeting the choice naturally fell on Sir Archibald Sinclair, who will prove a steadfast successor to Sir Herbert Samuel. Mr Lloyd George presided at the meeting, and it was on his motion that Sir Archibald Sinclair was elected. During the present Parliament, however, Mr Lloyd George himself prefers to sit on the Front Opposition Bench and devote his energies to the direction of the Council of Action Group. This group, as well as the trebled Labour forces, should give the House some much-needed new vitality.

Replies to the Italian Note.—When Signor Mussolini addressed his note of protest against sanctions to each of the fifty sanction-taking states singly, he may conceivably have hoped for a declaration from France which would at least advertise the existence of a partial gap in the international police-cordon. The terms of the French and British replies, published last Saturday, suggest that M. Laval's tenderness differs only by a fine shade from the passionlessly platonic assurances of Sir Samuel Hoare. For the rest, the French and British notes—and the Russian note also—are so impressively similar in substance as well as in tone that their separateness serves only to give emphasis to their unanimity. In answer to the Italian allegation that the League has acted improperly, both the French and British Governments reply that nothing was left undone in the League's efforts to exercise impartiality and to show consideration. The French Government, in its anxiety to explain why it could not have done otherwise, makes the vital point that "to have repudiated the obligation of the Covenant would have been to compromise seriously for the future the possibilities of applying provisions which constitute an essential element of the collective security assured to the members of the League." The same point is made by the Russians. And the rather threatening Italian reminder that the States Members have acted in the exercise of their "free and sovereign judgment" has drawn a crushing rejoinder from Sir Samuel Hoare. "His Majesty's Government," he replies, "in subscribing to the Covenant, did not indeed abandon their free and sovereign judgment, but undertook to exercise it thenceforth in accordance with the obligations of that instrument. No other attitude is open to them, and they would naturally desire to see the Italian Government place a similar

construction on their own adhesion to the Covenant." The Russians demur to being asked to give individual explanations of a collective act—the more so since it is open to Italy to put her questions direct to an organisation of which she is still a member. And they point out, with a fine irony, that the action of the Co-ordination Committee has restricted and not increased "the sanctions which are obligatory on all members of the League in accordance with the exact sense of Article XVI." The Italian Government, on the whole, has reason to regret its anxiety to draw individual fire from sanction-imposing states. It might have suffered less damage from a single volley.

* * *

Strategy in Abyssinia.—Whatever the truth of the somewhat conflicting reports received this week of Italian withdrawals on the northern and southern fronts in Abyssinia, the news can scarcely be regarded as a favourable overture to Marshal Badoglio's enterprise of conquering Abyssinia against time. In particular, any sign of retreat from Makalle would be a matter of high strategic significance. Makalle is on the direct line of the only route on which an Italian advance from the North, in the Abyssinian higher lands, is practicable. It lies athwart the narrow passage between the eastern escarpment of the plateau and the cañons by which its surface is seamed and furrowed further west. If the Italians were to fall back from a place which they had occupied with such a flourish, it would be assumed that a long-drawn-out line of communications had proved impossible to protect against Abyssinian guerilla attacks. If this were really the situation, how could Marshal Badoglio hope to protect a line which he had succeeded in pushing up to Dessie, or to Addis Ababa itself? The heaviness of the Italian commitment evidently increases, in geometrical progression, with every kilometre of advance. At Makalle, the Italians may well have been already as far from their base as motor transport could carry them. Heavy traffic over long distances imposes a considerable strain on new military roads, which tend to wear out faster than they can be kept in repair. Will Signor Mussolini's insistence upon speedy results, combined with a possible oil embargo, force Marshal Badoglio to leave his mechanical aids behind and to send his forces out, in parties, to occupy, and live off, the country, without wheeled transport? If so, he may be delivering himself into the hands of an enemy enjoying substantial advantages in warfare under these primitive conditions.

* * *

America's New Deal in the Courts.—It has long been obvious that the crucial test of the constitutionality of the New Deal would come in the present session of the Supreme Court, and the moment seems to be almost at hand. The Supreme Court itself, it is true, has not yet spoken except by inference, but some of the inferior Federal Courts have been very busy. The Acts most frequently called in question are the Agricultural Adjustment Act and the Public Utility Act, although other Acts such as the Guffey Act (which set up a "pocket N.R.A." for the coal industry) have not entirely escaped. The Public Utility Act is of great importance to the utility industry and to Wall Street, and its veto by the courts would be a distinct blow to the prestige of the Administration. But it does not compare in economic and political importance with the Agricultural Adjustment Act, which is pouring millions of dollars into the farmers' pockets, consequently reaping millions of votes for Mr Roosevelt. The Utility Act imposes on all holding companies the obligation to register with the Securities and Exchange Commission by December 1st. But there is grave doubt about the Act's constitutionality, and one Federal Court, in an advisory rather than a legally operative decision, has already declared it unconstitutional in its entirety. In these circumstances many of the utility companies are refusing to register on the ground that to do so would be a tacit acceptance of the Act and might prejudice their position in later developments. The S.E.C. has declared that, for its own part, registration will not be taken as a renunciation of any rights, but it can hardly commit the courts, and the utilities are playing for safety. The battle of injunctions is developing, the com-

panies seeking to restrain the S.E.C. from operating the Act, and the S.E.C. asking the courts to compel the companies to register. In short, the whole legal position of the utilities is becoming a complicated tangle which only the Supreme Court will be able to unravel. The Agricultural Adjustment Act is in almost equally hot judicial water. Several inferior Federal Courts have already granted injunctions against the collection of processing taxes. This week the Supreme Court itself was asked to grant a similar injunction pending its decision on the constitutionality of these taxes, and the injunction was granted by a 6-to-3 decision. The injunction automatically vetoes the amending Act passed by Congress last summer in an attempt to stop up the legal loopholes in the original Act. This amending measure attempted to prohibit all injunctions against the collection of processing taxes. The Agricultural Adjustment Act has two sides: the collection of funds by means of processing taxes, and their distribution to farmers in payment for restriction of crops. It is only the former that is under attack, and the latter could, in theory, continue even if the processing taxes disappeared. But it is doubtful whether the President would be willing to put so large a burden on the general Budget. With the judicial attack being so strongly pressed there is a noticeable tendency on the part of the Administration to seek political salvation by business recovery rather than by "recovery legislation." This tendency lends point to the declaration made at the week-end by Mr Eccles, the chairman of the Board of Governors of the Federal Reserve System, which was generally regarded as an official welcome to the nascent inflation of credit. We comment on this declaration in an Investment Note on page 1078.

* * *

Greece's King and Kingmaker.—The popular feeling which inspired the scenes of enthusiasm on the return to Greece of King George II last Monday no doubt came from the heart. In the main, it expressed a hope for a new era of peace and concord after twenty years of dissension at home and discord abroad. The restored monarch has lived, for the past twelve years, in an atmosphere remote from the hectic faction politics of his country. Personally, he would probably be only too happy to bring about the national harmony, of which he is expected to be the harbinger, by genuinely forgiving and forgetting. But will that be allowed to him? Behind the King stands the Kingmaker. When the white-kilted sentries challenged the triumphal procession at Hadrian's Arch, and the hero of the hour replied to "Who goes there?" with "The King of the Hellenes," "General Kondylis" was the name which echoed back from the scarp of the Acropolis. The General most correctly handed to "his royal master" the resignation of himself and his Cabinet. But he simultaneously presented a memorandum explaining why the Kingmaker ought not to be succeeded in the prime ministership by his predecessor, M. Tsaldaris, whom he removed from office a few weeks ago. The General also held the view that a coalition of all the anti-Venizelist parties—and *a fortiori* a coalition including the Republicans—was not feasible. According to reports received as we go to press, the King has announced his determination to grant a general amnesty to political offenders, including those involved in the March rebellion. He is also reported to have passed over General Kondylis and asked M. Demerdjis, leader of the Unionist and Progressive Party, to form a non-party Cabinet. It remains to be seen whether such a broad and courageous policy will find approval in those army quarters which played so important a part in events preceding the King's restoration.

Labour wins in New Zealand.—The New Zealand Labour Party has won a remarkable and quite unexpected victory. It now has a clear majority. For it has increased its representation from 24 seats to 52, while that of the National Government party has fallen from 46 to 20. New Zealand has thus conspicuously declined to follow the political evolution exhibited by Great Britain and Australia during the last few years. Four years ago a "National" coalition of Conservatives and Liberals was formed in New

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Total New Business in 1934 in Great Britain and Ireland

Total Assurances in force at November 15th, 1934, in Great Britain and Ireland

£67,000,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

Conference of 1921-22 and the London Conference of 1930. Those conferences succeeded in producing, as between the three Oceanic naval Powers, a comprehensive agreement for the limitation of naval armaments of all categories on agreed ratios. In 1930 it looked as though this apparently definitive settlement had created a solid framework which could gradually be filled in, first by a naval agreement between Italy and France, and finally by an agreed limitation of land and air armaments in Europe. These hopes have been dashed by the failure of the Disarmament Conference. Is the re-armament of Europe, on land and in the air, to be accompanied by a collapse of the edifice of naval limitation? The crux of the matter is the Japanese repudiation of the Washington and London ratios, both in principle and in practice. This attitude is one of many expressions of the militant temper that has governed Japanese policy since the outbreak of September, 1931. The preliminary conversations, *à deux*, between the Powers concerned, which took place during last autumn and winter, brought out two hard facts. Nothing will induce the Japanese to acquiesce in the present ratios after the existing treaties have run out; and nothing will induce the Americans to surrender their 5 to 3 ratio, as against Japan, *de facto*. In the circumstances, it is hard to see how a Japanese-American armaments race in the Pacific can be avoided. In the Pacific arena itself, the opening of the Conference has been heralded by two significant events. On the Japanese side there has been an attempt (for the moment unsuccessful, yet almost certain to be repeated) to turn North China into virtually a Japanese protectorate. On the American side, the trans-Pacific air route from California to the Philippines has been opened. Meanwhile, in the Mediterranean area, France is as restive under her ratio as Japan under hers; and at the same time Franco-Italian naval rivalry shows signs of giving place to a rivalry between Italy and Great Britain. In this connection, much may yet depend upon the success of the League in vindicating its authority in the Italo-Abyssinian quarrel.

* * *

A Brazilian Outbreak.—The revolt which broke out in Brazil last Sunday has followed the usual course of South American revolutions. The rebels, mainly from the army, were successful at first in seizing Natal, the capital of the State of Rio Grande do Norte. They were repulsed, however, in an attack on Recife, the capital of Pernambuco, and were driven back to the suburb of Olinda. Simultaneous outbreaks were reported in the adjoining States of Alagoas and Parahyba, and in Paraíba in the south. On Monday, by vote of the Federal Legislature, the whole of Brazil was placed under martial law. The revolt subsequently spread to army cadets in the Aviation School and the Vermelha barracks in Rio de Janeiro. The Government forces, however, were apparently successful in suppressing agitation in all quarters, and the rebel leaders who escaped by sea from Natal are being pursued by two cruisers. The Government claims that the whole movement was the result of Communist agitation directed by Luis

Zealand, just as it had been in Great Britain and Australia to cope with the effects of the world crisis which had upset the previous Labour Governments. This year, after a fair period of recovery in the sterling area, Australia and Great Britain have re-elected their "national" coalitions. New Zealand, on the other hand, has joined the non-British sterling countries, Denmark, Sweden and Norway, in signalling the progress of recovery by returning a new Labour Government. What is the cause of the difference? Probably that New Zealand has experienced a less substantial recovery than Great Britain or even Australia. This in its turn may be attributed mainly to the fact that New Zealand is even more completely dependent on export prices than Australia, and partly to the failure of her Government to treat the depression with quite the same skill as their Australian colleagues. New Zealand's first Labour Cabinet is lucky in the time of its arrival. For world forces are now running strongly in New Zealand's favour. Commodity prices are rising, and recovery is progressing more markedly than ever in the sterling area. The Labour Party fought the election mainly on the monetary issue; and it is significant that the new Democratic Party, which stood for orthodox "sound money" doctrines and little else, has not won a single seat. Though committed in its election propaganda to some measure of inflationary credit creation and the guarantee of fixed prices to farmers, the Labour Party may very well follow precedent by showing itself less bold in performance than in promise. Extended financial help for farmers, and a mild credit expansion, may be expected; and a possible further drop in the exchange should not be ruled out. But New Zealand offers poor opportunities for independent monetary expansion, since so much of her production is for export. And all that can be done by adjusting the exchange rate has probably been done already. Realising this, the new Prime Minister, who has a reputation for sense and moderation, may well prefer the fruits that seem likely to fall into his hands to any which he might feel tempted to summon out of the vasty deep.

* * *

Manceuvres in N. China.—The political barometer in North China during the past week has been registering a succession of violent fluctuations. At the moment when General Doihara's puppet autonomous federation of five Northern Chinese provinces was due to come into existence, the scheme mysteriously evaporated. The General was left lamenting, while President Chiang Kai-shek negotiated with the Japanese State-maker's less exuberant colleagues in Tokyo. Last Sunday, nevertheless, a new State was born, but on a miniature scale. The demilitarised zone in the north-eastern corner of the Province of Kopei declared itself an autonomous entity, with its capital at Tungchow. But though Tungchow is little more than a dozen miles distant from Peking, both Peking and Tientsin lie outside the seceding area. A simultaneous attempt at a separatist *putsch* in Tientsin itself ended ignominiously in the arrest of the would-be revolutionaries by the police, and their eventual release at the instance of the local Japanese authorities. The Nanking Government has adopted a fairly strong line—refusing to countenance the so-called autonomous regime in the demilitarised zone, and taking steps to strengthen its own hold in Kopei. On the other side, the Japanese legation guard at Peking has been increased from 300 to 800 men, and Japanese reinforcements have also arrived at Tientsin. We do not know what negotiations are going on between the Japanese Government and Marshal Chiang Kai-shek behind the scenes. In opposition to General Doihara, the authorities at Tokyo apparently prefer to extort moderate concessions from Nanking rather than to detach the North of China at the price of irrevocably alienating the Central Government. But at the moment of going to press the situation remains obscure.

* * *

The Forthcoming Naval Conference.—The five-Power naval conference will meet in London next week under auspices which even the hardest optimists can scarcely describe as favourable. The naval situation has changed decidedly for the worse, since the Washington

Carlos Prestes, once a captain in the Brazilian Army, who has been living recently in exile in Russia, Argentina and Uruguay. Although the revolution has had so short a life, it can claim at least one distinction among its peers: it prevented the Graf Zeppelin from landing after one of its routine Transatlantic flights, and provided a new "record" for that airship of 119 hours in the air.

* * *

Milk Consumption.—The organisation known as P.E.P. has published a valuable broadsheet devoted to the subject of milk. The present milk situation may be explained in terms of history, but it is difficult to understand in terms of common sense. An enormous "surplus" is combined with a *per capita* consumption less than half that of other countries, such as the United States and Sweden, with comparable standards of living, and less even than that of countries such as France and Germany whose standard of living is distinctly lower. More and more emphasis is being placed upon the nutritional and health value of milk, but at the same time the standard of cleanliness is deplorably low ("milk showed more frequent adulteration or other deficiencies than any other food analysed by public analysts, with the sole exception of vinegar"). The medical standard of consumption is a pint per person per day, but even if consumption rose to the modest level of four pints per person per week (a standard almost reached in France and vastly exceeded in America), the existing surplus would be wiped out and there would be an actual shortage of more than 100 million gallons. The crux of the whole matter, as the broadsheet points out, is price. The price of liquid milk was higher last summer than at any time since 1914, and milk is dearer in England at present than anywhere else in the world. The remedy, however, does not lie in an all-round reduction of price, since any reduction small enough to avoid ruin for producers would merely "assure rather cheaper supplies to well-to-do families who can afford the present price, without substantially benefiting poorer families who cannot nearly afford it, and very likely without leading to any commensurate increase in milk consumption." The broadsheet makes two suggestions for getting over this difficulty. The first is that the Milk Marketing Board should conduct extensive experiments, in selected localities, into the effect on consumption of various forms of price reduction, such as an all-round reduction of 25 per cent., an increase in the amount supplied to poor families for a given price, cheap supplies for given classes of the community, or reductions in price by cutting out bottling and delivery. The second suggestion is for a great extension of the milk-in-schools scheme, to supply milk (a) on the 145 days of the year which are not school-days; (b) to the half of the school population not now getting it; (c) to children between one and five; and (d) to expectant mothers. Provided this milk were paid for at anything over the manufacturing price it would involve no loss to the producer. The necessary subsidy from the State would be very much smaller than might at first sight be imagined—the broadsheet puts the net cost at less than £2,000,000 a year. These suggestions appear to draw a logical conclusion from the new status of the milk industry. The supply of milk is now a legal monopoly, and the industry should be given the obligations, as well as the privileges, of public utility status.

* * *

Growth of Working Population.—The annual analysis of changes in Britain's working population, published in the *Ministry of Labour Gazette*, reveals an increase of 98,000 in the number of persons aged 16-64 insured against unemployment during the twelve months ended July, 1935. Since 1929 the substantial increase of 964,000 persons is shown—a total which reflects, in part, the virtual absence of emigration. The number of boys and girls aged 14 and 15 insured last July was 944,500. Since boys and girls under the age of 16 are insurable only since September 3, 1934, corresponding figures for this age group are not available for earlier years. The total number of insured persons in the United Kingdom in July aged 14 to 64 was 14,002,500. Changes in the occupational distribution of insured persons, aged 16 to 64, are shown as follows.

Group	Estimated Number insured at July, 1935	Percentage increase (+) or decrease (—) since 1923		
		July, 1933	July, 1934	July, 1935
Fishing†.....	32,830	+34.4	+34.4	+37.0
Mining and quarrying.....	1,040,210	-13.8	-17.0	-20.4
Manufacturing.....	6,038,620	+5.3	+5.5	+5.7

* The figures are exclusive of persons excepted from unemployment insurance under certificates of exemption.
† The figures for the fishing industry do not include share fishermen, who are outside the scope of the insurance scheme.

The proportion of the total insured working population, aged 16 to 64, in manufacturing industries has declined to less than one-half. As compared with an increase of 17.0 per cent. in the total number of insured persons, between 1923 and 1935, the number in manufacturing occupations showed an increase of only 5.7 per cent. On the other hand, an increasing number of persons have found employment in transport, distribution, banking and commerce, entertainment and building. There has been a marked exodus from the mining industries, and the number of insured persons in these branches of activity last July was 20 per cent. smaller than twelve years ago. We propose, in a subsequent issue of the *Economist*, to examine occupational changes in greater detail.

* * *

Retail Sales in October.—Like all other indices of trade and business activity the value of retail sales, as shown in the following table published by the *Board of Trade Journal*, increased considerably in October. The rise of 19 points from the low level of August is mainly seasonal, but is more pronounced than in either of the past two years:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932.....	102	99	101
1933.....	100	100	100

June.....	110	108	109
July.....	105	113	109
August.....	107	81	94
September.....	110	99	104
October.....	112	114	113

Compared with a year ago, the value of sales throughout the country rose by 7.4 per cent., an expansion which was shared fairly generally by all districts, except West London, where the increase was only 2.0 per cent. The increase of 10.2 per cent. in sales of food and perishables (for which again the increase in West London was only 2.0 per cent.) was to some extent due to a rise in prices. The Ministry of Labour cost-of-living index for food has risen by 2.4 per cent. in the last twelve months from 127 (July, 1914=100) on November 1, 1934, to 128 on October 1st and 131 on November 1st last. The increase in October was mainly in the price of eggs, butter and bread, with a smaller rise in the case of bacon and cheese. Of non-perishable goods, piece-goods and furnishings alone showed a decline in sales, especially in Northern districts and in Suburban London. There were substantial increases in all districts in women's wear, except in Scotland, in men's wear, in boots and shoes

and "in miscellaneous articles. This continued increase in the consumption of clothing is a significant reflection of increased purchasing power, and is not apparently due to any increase in average prices. During the nine months February to October, London, in spite of the Jubilee, has shown a surprisingly lower ratio of expansion in sales than

that of the rest of Great Britain—particularly as regards boots and shoes, women's wear and piece-goods. Employment in establishments making returns throughout the country was 2.9 per cent. higher at the end of October than a year ago. The immediate outlook for retail trade remains encouraging.

UNITED STATES

THE TRADE AGREEMENT WITH CANADA

THE rapid negotiation of the trade agreement with Canada, following the election in that country, contrasted with the usual slow course of such transactions. As for the specific influences on any given one of the six or seven hundred items of manufacture enumerated, it is impossible to generalise. Substantial reductions in the United States tariff have been made on certain agricultural commodities, such as cattle, cream, potatoes, but these are subject to a quota limitation; and this is true of lumber. On the other side, the widening of the Canadian market to United States grapefruit and oranges has offset some disadvantage to American producers caused by the importation of fruit from Cuba, under the agreement with that country. The 50 per cent. reduction on whisky (from \$5.00 to \$2.50 a gallon) is also noteworthy; under the "most-favoured-nation" clause this is of wider application.

One may doubt if the agreement will be followed by sensational changes in the trade figures; but such doubts should not belittle its importance. It represents more than a gesture in the direction of increased freedom of international trade; and taken in conjunction with the other agreements in force or in preparation, represents a programme, not so much publicised as many others, but thoughtfully conceived, persistently pursued, and technically well handled. The expected protests were instantly forthcoming, but on the whole less vociferous than was anticipated.

The final inauguration of the Philippine Commonwealth, like the passage of the act which authorised it, attracted little comment from the Press. To those who recall the bitterness of the old controversy between "manifest destiny" and "anti-imperialism," this apathy is surprising. It is, perhaps, to be taken as an indication of economic nationalism, and so set in contrast to the Canadian trade agreement. The Islands have increasingly come to be regarded as an alien competitor rather than as a part of the American system. Politically, the status of the Islands becomes virtually that of a protectorate; economically, their status is that of a foreign country. For five years limited quotas of sugar, coconut oil and hard fibres are free of duty; other commodities come under the regular tariff. After five years, tariffs on a rising scale are to be applied to the three commodities enumerated. In this development, materialistic considerations played a stronger rôle than ideological; and perhaps, for that very reason, the act of separation, tentative though some regard it, is more likely to become final.

SUSTAINED BUSINESS RECOVERY

Broadly speaking, business is good this autumn. The third quarter of 1935 was in pleasing contrast to the severe recessions that occurred in the third quarter of 1934, and also of 1933. The early weeks of the fourth quarter have shown an upturn resembling that of the fourth quarter of 1934, but starting from a very much higher level. The upturn in the fourth quarter of 1934 proved to be a harbinger of a higher general level of business in 1935, and occurred although the motor industry was in its usual year-end recession. It was essentially a recovery from a six months' recession caused by labour troubles and culminating in the great textile strike. The upturn in the fourth

quarter of 1935 is largely a consequence of the displacement of the seasonal trend in the motor industry. The motor industry made its transition to new models (which usually occurs in November-December) in September-October without depressing the general level of business; and this would suggest that the United States economy has broadened its base to an extent that makes it less sensitive to minor fluctuations of automobile output. On the other hand, some argue that the motor and the steel industries are "borrowing production" from 1936 and that the fact of rather high motor production in November and December is reason to anticipate that output in the first quarter of 1936 will be smaller than otherwise.

Against such an argument is opposed the opinion of those who believe that a revival in building has come to occupy or is beginning to occupy a position in the American economy comparable to that of the motor industry. Total building contracts for the first ten months of 1935 were almost even with those of 1934, residential building showing a strong increase but only compensating for the decline in other types of construction. Indeed, residential building contracts were almost double those of the first ten months of 1934. But in October all types of building contracts showed a marked increase, whether compared with September or with October, 1934. As the approach of winter months is not favourable for building in many parts of the United States, the data suggest that these contracts will become active mostly after the turn of the year. Uncertain in their implications as these data are, they are of the utmost significance to anyone attempting to envisage the general trend of the American economy. While total building so far in 1935 has not been greater than in 1934, the proportion representing private undertakings is probably substantially greater. Comparatively little of the residential building of 1935, for example, has represented public undertakings, such as slum clearance projects. Since there has been for several years almost a complete suspension of private building, whether residential or industrial, there is reason to attach significance to the recent trend; and optimistic anticipation about next year derives less from the hope of further gains in automobile output than from expectation of a major increase in residential and industrial building.

FOREIGN BUYING IN WALL STREET

In recent days the Press has devoted an increasing amount of attention to the foreign buying in our security markets. Mr Kennedy, the retired head of the Securities and Exchange Commission, is said to have discussed it with the President. As a background, attention may be called to three features of the market which are of recent

BRITAIN IN DEPRESSION

A Record of the Trade Depression Since 1929

This book is issued under the auspices of the British Association. It is a complete chronicle of the depression years, and gives an authoritative picture of the effects of the crisis on British industries. All business men and students of Economics should read it. 473 pp.

"...should fulfil a very useful purpose."—*Colliery Guardian*.

net

origin, and whose technical consequences are hard to appraise. First, realised capital gains are more heavily taxed than ever, which discourages profit-taking by large investors fortunate enough to have purchased at substantially lower prices. Second, while capital gains are taxed, capital losses are deductible for tax purposes from total income only to the amount of \$2,000. Third, capital profits realised within six months of purchase by officers or directors of a corporation may, under uncertain circumstances, be forfeited entirely to the treasury of the corporation.

The net effect of these three factors seems to prevent or defer frequent tests of the market position—a factor noted in 1928 and 1929, but in a different form. At that time investors, wishing to avoid taxation on realised capital gains, capitalised their profits by borrowing against them. This is recognised to have been a major factor both in the bull market of 1928-29 and of the ensuing débâcle. At the present time, while the taxation on capital profits is more severe, the limitations on collateral loans effectively restrain the pyramiding of speculative commitments, though at the same time they narrow the market.

NEW YORK, November 19.

FRANCE

THE BUDGET AND THE FRANC

M. LAVAL, in his broadcast speech this week on the eve of the reopening of Parliament, claimed to have safeguarded the franc, for which task he obtained a mandate from the Chamber. Four months only had been given to the Government to solve the economic crisis, and they would have been successful, he said, if there had not been external complications. His new task, M. Laval added, was to safeguard peace with the collaboration of Great Britain.

The most unorthodox proposals of the Finance Committee of the Chamber, for instance, the suggestion of a "Caisse des Pensions," have been virtually abandoned; and an agreement has been reached between the Government and the Committee. The fundamental outlook for the Budget and the franc, consequently, seems the same as before. More favourable reports about the economic situation are coming from various centres, and railway receipts have been better in the last two weeks. If the slightly better trend shown in the foreign trade figures for October is taken into account, and the small improvement in fiscal receipts, there is no statistical evidence to explain the new financial crisis. The yield of turnover tax was 76 million francs below the 1934 figure in July, 47.5 millions in August, 13 millions in September and 11½ millions in October.

Politics are thus regarded by many as responsible for the present crisis. The proposals of the Finance Committee have impaired rentier confidence on the eve of the return of a Parliament, which must be re-elected in six months' time. Capitalists have been anticipating the worst.

The rentes are falling every day, and are now standing at or below their lowest point since the bad days of February, 1934:—

	Lowest, 1934	Highest, 1935	Nov. 26, 1935
3 per cent.	63.75	84.97½	73.10
4 per cent. 1917	71.95	90.30	76.40
4 per cent. 1918	71.60	89.75	75.15
5 per cent. 1920	103	120	101.70
4½ per cent. 1932 "A"	78.60	95.85	81.65
Treasury Bonds:			
5 per cent. 1934	971	1,035	931
4½ per cent. 1934	986.50	1,025	925

At the same time gold continues to flow out by ship and plane. There was 82,000 millions of gold at the Bank of France at the beginning of the year. Some 10,000 millions was lost during the political crisis of May, and this has never returned. The coming weekly return of the Bank will show a gold reserve of about 68,000 millions, implying a loss of 14,000 millions in the year. The Bank, to stem this outflow, has three times raised its rediscount rate, which now stands at 6 per cent., against 3 per cent. a fortnight ago. The rate for advances is 7 per cent. But everyone knows that the gold rush will not be stemmed by high interest rates alone.

TALK OF GOLD EXPORT EMBARGO

The crisis and the withdrawals of gold have reawakened talk of devaluation; and certain newspapers, which were till recently among the staunchest advocates of the maintenance of the gold parity, have begun to say that the Bank's gold must be safeguarded at all costs—even by an export embargo. Others are engaged in proving that an embargo would not mean devaluation, though nobody is taken in by these equivocations.

Rentiers in general, however, are not so much frightened now by devaluation as by the fear of long and fierce conflicts between the "Front Populaire" and the "Fascist Leagues." An ordered devaluation combined with administrative reform could only be made possible by the presence of a stable Government. But even if devaluation is now conceivable, nobody sees any likelihood of a stable Government, since the politicians are violently divided into Left and Right and into numbers of smaller groups. And this is at a time when the country is hard hit by the crisis and also by the sanctions against Italy. Some protest that France is being manoeuvred by Moscow and other international interests, and this kind of propaganda in the past has often exasperated the French people. Whatever the cause, in fact, the elements of an outburst of discontent are developing rapidly. Possibly, however, this in itself may restrain the Chamber from any extreme decisions.

M. Laval said in his broadcast speech that "the fate of the franc will be decided in the Chamber debate." Very likely he will secure a majority for the maintenance of the *status quo* until the elections. A newly elected Chamber, safely installed for four years, should be perhaps more able to solve the current difficulties. But, after Thursday's vote no less than before, it is the economic crisis which will finally decide the issue.

PARIS, November 27.

GERMANY

RAW MATERIAL DIFFICULTIES

EMPLOYMENT fell off slightly in October. Some 66.0 per cent. of possible working places in industry were occupied, against 66.3 per cent. in September. Activity in the consumption trades, including textiles, slightly increased in preparation for Christmas; while the capital goods trades, including heavy iron and metals, reacted slightly. There was the usual seasonal decline in building and in the motor industry. In November increased business in pig-iron, including export, is reported. The tinplate branch is also well occupied, and between 60 and 65 per cent. of output is being exported. Ingot-steel output in October was 1,551,200 tons, against 1,378,200 tons in September; and

in the first ten months 13,165,700 tons, against 9,760,400 tons in the same period of 1934. Hamburg and Bremen report foreign orders for freight and tank motor-ships totalling some 100,000 tons, to be paid for largely out of foreign holdings of reichsmarks. New foreign orders for locomotives have also been booked. Locomotive exports in the first three quarters of the year were 7,660 tons, against 2,000 tons in the same months of 1934. The export of glass, rayon, and linoleum has increased.

The raw material position is not reassuring, and there are numerous reports about the resulting difficulties in textile manufacturing. At the same time, satisfactory production is reported of the new fibre staple yarns. The stock of raw cotton at Bremen is 162,000 bales, against 361,000 bales a year ago, although the net cotton import this year has been little below that of the same period of 1934. The stock of wool, in particular of merinoes, has fallen heavily and a scarcity of hemp in the spring is predicted. The activity in the iron and steel trade has compelled an increase in ore imports in the first three quarters of the year of 70 per cent. as compared with the same period of 1934. Measures for furthering economy in the use of imported raw materials have made considerable progress, in particular in the non-ferrous metals. On the one hand, certain less scarce materials are being substituted for the more scarce. This sometimes involves alterations of constructional processes. On the other hand, entirely new materials are being found; and the saving of lead, tin and copper has been considerable. Though the new materials are not always themselves highly priced, their use often requires expensive adaptations of plant.

Reich revenue from taxation in October was Rm. 884 millions, against Rm. 714 millions in October, 1934. Taxation revenue in the first seven months of the financial year was Rm. 5,421 millions, against Rm. 4,671 millions in the same months of the financial year 1934-35. It is officially estimated that if the tax system is taken into account there was a real increase of Rm. 645 millions.

CAUSES OF THE FOOD SCARCITY

The food scarcity has not in general abated. Last week there was a shortage of beef, except for expensive cuts costing around 3s. 6d. a metric lb. The butter scarcity continues. Present butter production is stated to be higher than that of this season last year, owing to the regulation of the whole dairy industry. There are numerous new official references to the food scarcity, which is attributed variously to the mistaken agricultural policy of the last eighty years, to work-creation and re-armament, to exchange balance troubles, to increased consumption, to the foreign desire to starve Germans, and to the weather of 1934. Fundamentally, the food shortage seems to be the outward and visible sign of the employment for capital investment (including re-armament) of an unreasonably high proportion of the national income. The foreign exchange shortage, which in a country normally dependent upon imported foodstuffs, may be regarded as the immediate cause of the food scarcity, is due to current methods of State finance. Indeed, official utterances which attribute the food shortage to work-creation and re-armament are really an admission of this.

Fluidity in the money market prevailed all last week, and it has this week been little affected by the month-end demand. The Reichsbank's October month-end credits were more than repaid, to 105.8 per cent., by November 23rd, as against repayments of 86.4 per cent. in the same week of last year. The influences affecting the Reichsbank's position have changed somewhat since the selling of promissory notes by the Gold Discount Bank was initiated in May. The Gold Discount Bank is now often in a position to take over, with cash acquired by the note sales, very large quantities of Reichsbank bills.

Rumours last week circulated that offers would be made to exchange the dollar bonds of Prussia and of the German Giro-Centrale into Reichsmark bonds, as was done last year with certain industrial dollar bonds. These rumours, and the new threat to the European gold currencies led to sharp rises in the two issues mentioned and to buying of certificated dollar bonds generally. The rumour has not been confirmed. The Bourse Committee for the Admission to quotation of new securities has issued a warning against

the growing practice of converting shares into bonds, the effect of which is to create new company debts and to weaken the interests of unsecured creditors and of the remaining shareholders. The foreign exchange situation has of late changed little, and the Reichsbank has not recovered its gold losses of October.

BERLIN, November 27.

GREECE

[The restoration of the King this week is discussed in a Note on page 1064.]

ACCORDING to final figures given by the Ministry of Agriculture, wheat production this year amounted to 832,000 metric tons, against 793,600 tons in 1934. Ever since the War, the aim of the authorities has been to render Greece self-supporting in cereals, although the price of home-grown wheat is much higher than the international price. Sowing for next year's harvest began under favourable weather conditions this month. It is estimated that 8,500,000 stremmata (1 stremma equals 0.247 acre) will be sown, against 8,039,000 stremmata in 1934. This year's crop of tobacco is also considered very satisfactory both in quality and quantity. Considering that the output in Bulgaria and Turkey was relatively small, and that almost the whole of the 1934 crop has been disposed of, a good demand is expected and has already appeared. Accordingly, prices are rising and are already 30 per cent. higher than those for last year's crop. The following table illustrates the improvement since last year shown by the tobacco industry, which constitutes the principal Greek export:—

Period	Quantity Exported, in Okes (781 okes = 1 metric ton)	Value (Millions of Drachmæ)	Average Price (Drachmæ)
1934-1935	48,320,000	2,868	59.35
1933-1934	31,007,000	1,677	54.07
1932-1933	37,181,000	1,732	46.60
1931-1932	37,949,000	1,976	52.07

Exports of currants, however, between September 1st and October 20th were 84,821,803 venetian pounds, compared with 98,302,244 for the corresponding period of 1934. But anxiety about the trend of prices and the disposal of the present year's crop has been partly removed as a result of the lack of demand for Smyrna currants, whose quality seems to be inferior this year to that of Greek currants. Prices accordingly recovered appreciably towards the end

of October, while transactions were reported to be livelier in the London market.

FOREIGN TRADE INCREASING

Foreign trade has been steadily increasing for several months past. This is partly due to the compensation agreements, which create large blocked creditor balances with certain foreign countries, and render necessary the issue of import permits from such countries in excess of the quotas fixed for each article. Consequently, the import surplus is also tending to increase.

GREEK FOREIGN TRADE

Period	Imports		Exports		Import Surplus
	Weight (Thou. of tons)	Value (Mill. of drachmæ)	Weight (Thou. of tons)	Value (Mill. of drachmæ)	
Jan. to Sept. —					
1935	1,774	7,707	577	4,201	3,506
1934	1,432	6,332	549	3,464	2,868
Increase in 1935	342	1,375	28	737	638

Imports of the following articles increased in weight between the two periods under comparison: wheat, corn, beans, timber, coal, naphtha, benzine, sugar, iron and iron sheets, and newsprint paper. Exports of tobacco, olives and olive oil, and mineral ores also considerably increased.

Gross receipts from revenues assigned for the service of the foreign debt of Greece amounted for the months of January-September to Drs. 3,107 millions, against Drs. 2,833 millions for the same months of 1934, an increase of Drs. 274 millions. The following table shows public revenue and expenditure for the first five months of the financial year 1935-36, as compared with the figures for the corresponding period of 1934-1935:—

(In millions of drachmæ)

	Revenue	
	1934-1935	1935-1936
Estimated (for the whole year)	10,392	11,173
Assessed	4,121	6,136
Collected	3,405	3,925
<i>Expenditure</i>		
Authorised (for the whole year)	10,733	11,165
Undertaken	9,653	10,220
Paid	2,646	3,637

Thus far receipts are larger this year by some 500 millions, but expenditure has risen by nearly 1,000 millions.

Concurrently with this increase in public outlays, the foreign exchange position of the country has been steadily weakening again this year. The gold and exchange reserves of the Bank of Greece shrank from Drs. 4,013 millions on December 31, 1934, to Drs. 3,345 millions on November 15. The gradual adjustment of the internal price level to the lower external value of the currency appears from the following comparative table of wholesale prices and the cost of living:—

	Index of Wholesale Prices (1913-1914=100)	Index of the Cost of Living (1914=100)
September, 1931	1,420	1,632.5
December, 1932	1,983	1,878.7
December, 1933	1,963	1,950.3
December, 1934	1,994	1,965.4
October, 1935	2,040	1,983.7

This twin movement implies a gradual mutual adjustment between wholesale prices and the cost of living.

ATHENS, November 21.

ROUMANIA

THE GOVERNMENT'S ECONOMIC POLICY

THE new Parliamentary session was opened on November 15th. Party feeling became very bitter when the Government prohibited a meeting of the National Peasant Party arranged for the day before the opening of Parliament. After an interview with the King, however, the Party's leader countermanded the meeting. It appears that the original policy of collaboration with the Opposition will be adopted again by the Prime Minister, after having been discarded in the early autumn when he made his sudden attack on the Opposition parties.

The Royal message contains no surprises. The measures in preparation include laws for the assistance of agriculture and viticulture, the organisation of a superior economic council, the modification of the mining law, which has been the subject of discussion in petroleum and other interested circles for some time, a new press law, and new taxation to obtain funds for armaments, etc. The most interesting passage alludes to the international situation, which is described as serious. The message makes clear the Government's intention of respecting the peace treaties, of keeping faith with Roumania's allies and maintaining friendly relations with all countries. But it also emphasises the adherence of the Government to the policy of collective security in accordance with the Covenant of the League.

The regime of import and export premiums inaugurated in June last has had very disappointing results. Foreign exchange has accumulated in countries where it remains blocked, such as Germany and Italy; and none is available in the free countries where the State requires a substantial surplus for the foreign debt. Thus the foreign exchange received by the National Bank during the first three months of the new regime amounts to 3,090 million lei, of which 471 million is free and the remainder is under clearing arrangements. This represents a decrease in free exchange of 18 per cent. and an increase of 15 per cent. in exchange obtained under clearing arrangements.

The stock of foreign exchange held by the National Bank under these headings according to the weekly statements has shown the following changes since the beginning of the year:—

	(‘000,000 lei)	Foreign Exchange reserved for the Payment of Imports	Foreign Exchange available in Clearing Accounts
January 31, 1935	221	758	
March 31, 1935	49	1,020	
June 30, 1935	133	1,255	
August 10, 1935	47	1,662	
October 19, 1935	115	2,036	

In October alone the foreign exchange reserved for the payment of imports showed an appreciable increase, owing to the autumn exports; but it is still almost 50 per cent. below the January figures. Foreign exchange in clearing accounts has almost trebled.

BIG RISE IN EXPORT SURPLUS

The foreign trade returns for the nine months ended September 31st, during the years 1934 and 1935, are as follows:—

	(‘000 lei)	Jan. to Sept., 1934	Jan. to Sept., 1935
Exports	9,592,672	11,008,243	
Imports	9,384,085	7,454,841	
Export surplus	207,987	3,553,402	

Imports and exports from and to Germany and Italy during this period were as follows:—

GERMANY			
(‘000 lei)			
	Jan. to Sept., 1934	Jan. to Sept., 1935	
Roumanian exports ..	1,234,877	1,627,244	
Roumanian imports ..	1,364,850	1,692,269	
Roumanian import surplus	129,973	65,025	
ITALY			
(‘000 lei)			
	Jan. to Sept., 1934	Jan. to Sept., 1935	
Roumanian exports ..	788,898	1,917,797	
Roumanian imports ..	765,091	557,693	
Roumanian export surplus	23,807	1,360,104	

Exports to Italy in 1935 have thus been nearly three times as great as in 1934. The National Bank now refuses to buy further Italian lire, as most of the proceeds of exports are immobilised in Italy.

There has been a falling off in Roumanian imports from the United Kingdom of over 50 per cent. This may be attributed to the working of the Anglo-Roumanian payment agreement which is causing a considerable reduction in the trade between the two countries.

The mass of foreign trade restrictions which is almost daily increased by fresh regulations of the National Bank or the Government has rendered conditions very chaotic. Violent objections continue to be raised against the imposition of the 44 per cent. premium on foreign exchange which is collected not only on current business but also on old debts. The National Bank has requested the Director of the Regulation of Foreign Trade to suspend for the time being the permits for imports from the following 15 countries: Great Britain, France, Belgium, Denmark, Holland, Portugal, Poland, Egypt, Syria, Hungary, Palestine, Sweden, Norway, Canada, Japan, as no foreign exchange is available in these countries. Trade with Italy will now be stopped to a large extent on account of the application of sanctions.

The extremely dry weather during the autumn caused great anxiety among farmers, as it delayed and prejudiced the autumn sowings. Lack of rain, lasting several years, has produced great distress in the South of Bessarabia, and relief measures on a large scale have become necessary.

BUCHAREST, November 20.

INDIA

PUBLIC HEALTH AND INFANT MORTALITY

THOUGH politics always occupy the centre of interest in this country, there are documents and reports issued from time to time which bring one up with a jerk against the more fundamental problems of India. Of such is the annual report of the Public Health Commissioner with the Government of India, which points out that the country can have no cause for satisfaction about the state of the public health so long as there is an annual death roll of nearly 1,750,000 infants below one year of age. More detailed analysis of the figures of infantile mortality in India emphasises the necessity for wider and more effective efforts, not only in ante-natal care, midwifery work and infant welfare, but in general public health service. Of the 6,096,787 registered deaths among those of ten years and under, 27 per cent. occurred among infants under one year of age, 18 per cent. amongst children between one and five years, and only 5 per cent. among those between five and ten years.

The Public Health Commissioner discusses the great possibilities of attacking child mortality by devoting more attention and a larger proportion of the available funds to the general improvement of environment. Pure water supply, better conservancy, and more effective removal of sewage would all have a far-reaching effect. While having every sympathy with child welfare and maternity relief schemes, the Public Health Commissioner feels that in recent years there has been a tendency to lay the greater stress on these activities and to forget that the hygiene of the home and the village has an all-important effect on the health of the individual.

Of the three main epidemic diseases, cholera is only a minor problem; it seems unlikely that India will in the future suffer from the devastating pandemics which were a feature of the later years of the last century. Plague once more shows a reduced incidence, and the disease appears to be gradually dying out. Small-pox deaths increased in a disconcerting manner in 1933; which indicates how far the country still has to go before this disease is satisfactorily controlled. Malaria exacted a toll of at least one million lives also in 1933—a terrible rate of mortality, which is often forgotten owing to the defective and misleading nature of statistical records. An attempt is made in the report to estimate the amount of quinine distributed in the different Provinces, and the figures show how ludicrously inadequate these quantities are. The hope is expressed that the Government of India will be able to accept the suggestion that reserve stocks of quinine should be gifted to the Provinces.

Another document relative to the social conditions of the people is the report just issued on family budgets of the working classes in Bombay City. Over 62 per cent. of the families fall within the income groups Rs. 30 to Rs. 60. The average monthly income of the family comes to slightly over Rs. 50 (about 75s.). An analysis of the monthly income

shows that, of the income of Rs. 50-1-7, Rs. 39-13-6 is the contribution of men, Rs. 4-13-7 the contribution of women, Rs. 0-0-2 of children, and Rs. 5-6-4 come from other sources. Of the additional income, over 90 per cent. is from boarders and lodgers.

MILL WORKERS' INCOMES

The average monthly expenditure of the family is Rs. 45-15-9 (about 68s.). Except in income groups "below Rs. 30" and "Rs. 30 to Rs. 40," the income is in excess of the expenditure, and in the income group "Rs. 90 and over," the surplus left at the end of the month is about 22.5 per cent. of the monthly income. It is important to remember that this was the position at the time of the inquiry (1933), and the wage cuts which have taken place since then, especially in the cotton mill industry, may have tended either to affect the monthly surplus or lower the standard of living. The average monthly income of the family of a cotton mill worker is slightly higher than the average monthly income of all workers, being Rs. 52-8-11. The average monthly expenditure of a cotton mill worker's family is also slightly higher than that of all workers, being Rs. 47-4-11.

Of the 1,469 families whose budgets were collected, 1,085, or nearly 74 per cent., were found to be living in one-room tenements, and 373, or 25 per cent., in two-room tenements. Of those living in one-room tenements, in no fewer than 145 cases the tenement was shared between two families. More than half of the tenements belong to private landlords. Over 50 per cent. of the families are required to pay a rent of between Rs. 5 and Rs. 8 per month. Taking all incomes, the percentage expenditure on house rent per month comes to 12.81 of the total expenditure.

Of the total number of families, 74.74 are indebted, the average indebtedness per indebted family being about Rs. 175, and the average for all families being about Rs. 130. Considered in relation to the monthly income, the average family owes 2.6 times its monthly income and the indebted family 3½ times as much. In nearly 27 per cent. of the cases the main cause of the indebtedness of the family was unemployment. The high percentage was no doubt due to the fact that, during the period covered by the inquiry, there was considerable dislocation of trade and industry owing to communal riots, trade depression and industrial unrest. The total indebtedness of the families (1,469) considered was nearly two lakhs of rupees. The rate of interest charged varied from 18½ per cent. to 150 per cent., the most common rate reported being 75 per cent. per annum. The security furnished for loans was "personal security" in the majority of cases.

THE JUTE INDUSTRY AND THE GOVERNMENT

The controversy between the jute industry and the Government of India has been carried a stage further by the reply of the Indian Jute Mills Association to the official statement of policy. That statement made it clear that the Government were not prepared to give legislative sanction to the existing scheme of restrictions drawn up by the mills unless and until the industry undertook to put its house in order. The reason for seeking legislative action is that certain mills, non-members of the Association, intend to

A novel with banking interest

Constable

London W.C.2

depart from the voluntary restriction agreement. In consequence, the Association has been obliged to give notice of the termination of the agreement, and after the expiry of the notice period in March next all looms will be unsealed and mills will be working to full capacity. Undoubtedly this will result in over-production, leading to a considerable decline in the price of jute manufactures and also of profits. It is accepted by all parties that the number of mills and their potential output are in excess of world demand. The Government holds that two-thirds of the mills are redundant, while the Association argues that, if working hours were reduced to 40 a week and the single-shift system retained, the resultant output of the industry, 290 crores of yards per year, would be absorbed by an improved world demand. The Association states that it is at present evolving a scheme which, it is hoped, will be acceptable to the Government. It also requests the Government to receive a deputation from the industry.

The increasing demands of air traffic on the Indian Meteorological Department are made clear in the latest report for the year 1934-35. The Department has had to extend its scope to deal with requests for weather forecasts from aviators; the number of these forecasts issued last year was 5,670. Besides these individual forecasts, the meteorological authorities have organised a regular daily service of aviation weather reports covering the trans-Indian route from Bahrain on the Persian Gulf down to Victoria Point in Malaya, a distance of 4,000 miles.

The meteorological organisation in India, so far as aviation is concerned, falls far short of the standard recommended by the International Air Convention. This country has hitherto not been able to serve the several air lines—

British, French and Dutch—which regularly traverse it with adequate information. Under the scheme for aviation development adopted by the Government of India the omission will be made good. The Meteorological Department, which was in the past handicapped by lack of funds, is to have its share of the crore of rupees provided in the last Budget for aviation purposes.

BOMBAY, November 16.

LETTER TO THE EDITOR

HOUSE PURCHASE FINANCE

TO THE EDITOR OF THE ECONOMIST

SIR,—Judging, not from theory, but from advertisements and actual instances within one's experience, one would surmise that a large number of the occupants of the new small houses have "purchased" them in the expectation that their weekly outlay will be no more than the prevailing rent of a flat or rooms. It is not a question of an available surplus due to reduction in expenditure on clothing or other items. Such reduction may be ultimately an effect, but it is not the cause!

Also, as the initial cash payment has in many instances been reduced to nil (viz., on the strength of insurance policies, etc.), a large number of the houses "sold" probably represent no increase in capacity to pay—either immediate or in anticipation.

The majority of these purchasers have, in effect, merely undertaken to rent their houses for 20 years, with ownership if they are able to continue till the end of that period. According to the statistics published in the Ministry of Labour Gazette, the average cost of dwelling-houses, for which plans were passed in 146 towns, was £508 in the third quarter of 1935.

BOOKS AND PUBLICATIONS

AGRICULTURAL POLICY

MR WILLIAMS'S contribution* to the useful "Labour Shows the Way" series contains a trenchant criticism of Mr Elliot's agricultural policy, which is described as a thing of shreds and patches, together with a short statement of the Labour Party's own programme. Mr Williams is fully aware of the complexity of the subject. "With such a multiplicity of vested interests," he explains, "interwoven in every branch of production and distribution, the complex problem of imports from all corners of the globe, Empire relations forcing themselves to the forefront, foreign investments calling for consideration, and, above all, 400,000 farmers to appease, it requires the courage of a lion, the foresight of a prophet, and the wisdom of ten Solomons to reconcile all these interests and plan for a successful future."

The realisation of the difficulty of the problem does not prevent Mr Williams from being fairly dogmatic in proposing a solution, which is based, with the usual Socialist belief in the efficacy of public officials, on an elaborate plan for the erection of several boards to control the use of land, the marketing of agricultural products, and the quantity and price of imports. It is indisputable that the setting up of such a massive bureaucratic machine would help to solve the unemployment problem by providing numerous administrative posts, but no suggestion is offered for the absorption of the middlemen and other distributors, the reduction in whose numbers is envisaged as part of the "plan." Needless to say, the nationalisation of land is placed in the forefront of the programme as the indispensable *sine qua non* of all successful progress. Labour still puts the emphasis on "planning" in one form or another rather than on direct consumers' subsidies as a means to the solution of the agricultural problem.

Such a policy would not have satisfied the late Dr. Muirhead, who, as an enthusiastic follower of Henry George,

disapproved of all forms of Socialism, to which he regarded the taxation of land values as the most hopeful line of resistance. Dr. Muirhead's posthumous essay†—which coincides with quite an outburst of new Henry George literature—will amply repay the reader who studies it with attention. There can be no denial of his request that the proposal to tax land values should be calmly and dispassionately considered by our "political and philosophical leaders." While Henry George's analysis of the effect of rent on the other shares in distribution will not find support among economists to-day, his proposal for taxing the public value of land continues to attract the attention and to secure the sympathy of liberal thinkers in many countries. One of the most valuable chapters in Dr. Muirhead's essay is that in which he describes the taxation of land values in different countries.

It is a pity that the economic as distinguished from the financial advantages of the proposed scheme of taxation are not more fully explained, as the reader is left unconvinced that the introduction of the single tax will in itself increase the incomes of agricultural producers, except, perhaps, indirectly by the remission of other taxes. Nor is it anywhere made clear in what manner the single tax would provide additional employment. One is also puzzled at the title chosen for the volume. The foreword by Sir Arnold Wilson and the introductory note by the editor, Mr Garnet Smith, will be of interest to students of the life and work of Henry George.

SHORTER NOTICES

"Bankers, Statesmen and Economists." By Paul Einzig. 252 pages. 8s. 6d.

Dr. Einzig's latest book is a collection of essays, partly new, and partly reprints of articles published in various journals. Of the new chapters, the most substantial is that entitled "The Case Against Stabilisation," in which Dr. Einzig argues against any sort of return to gold by Great Britain in present international conditions. He thinks that even Sir Arthur Salter, Mr J. M. Keynes and Mr Hubert Henderson

have gone too far in making concessions to the extreme stabilisationist school.

The general theme inspiring Dr. Einzig's book is the contention that something more intelligent and courageous than the old orthodoxy of fixed gold parities and balanced Budgets is necessary to the management of modern economic systems.

Under the influence of the events of the last few years (Dr. Einzig writes in his preface) the author, together with many others, has become converted to the necessity of pursuing a more radical monetary policy than was followed before the crisis. He arrived at this conclusion under the weight of unmistakable facts showing that the countries which have to some degree departed from orthodoxy have to a large extent recovered from the depression, while the countries whose monetary policy has continued to be ruled by orthodox doctrinaireism have been drifting from bad to worse.

As representatives of the old and the new in monetary policy, Dr. Einzig takes respectively the present Governor of the Bank of England, and M. Van Zeeland, the Belgian Prime Minister. About the former he confesses to having changed his mind since he wrote "Montagu Norman: a Study in Financial Statesmanship." To the latter he pays a well-deserved tribute as one who showed vision in a national emergency, and by the devaluation of the belga laid the foundations of his country's remarkable economic recovery.

"Studies in Practical Banking." By R. W. Jones. Pitman. 333 pages. 7s. 6d.

MR R. W. Jones's admirable lectures on practical banking problems are reprinted in this book. The book appears at an opportune time. It will be a much-needed corrective of the quite fantastic accounts given by our political orators of the essence of a banker's work. Mr Jones's book shows, conclusively and effectively, that the earning of profits by a bank is as precarious a business as any. The difficulties and doubts that assail the banker are clearly set forth, and the most rational method of overcoming them is indicated. Equipped with this book, the young banker will make no great mistakes. Nor does it entail any diminution from the practical value of the book that Mr Jones freely interspersed his lectures with pointed *obiter dicta*.

MONEY AND BANKING

THE CHINESE CURRENCY SCHEME

We have received the following account of recent Chinese monetary developments from a well-informed correspondent in Shanghai. The article contains an appreciation of the background to the recent devaluation of the Chinese dollar, which we discussed in the Economist of November 9th, page 912. Our correspondent, writing early in November, does not allude to the possible consequences of Japanese intervention in North China. His views are subject, therefore, to the proviso that if the stocks of monetary silver held in that area cease to be available to the Chinese authorities, estimates of the possible success of China's currency reform may call for revision.

THE Chinese currency reform of November 3rd is in a sense the culminating point of a series of changes. The first step was an overhauling of China's banking system. There are dozens of note-issuing banks in the whole of China, most of which keep a silver reserve amounting to 60 per cent. of the notes outstanding, and a securities reserve of 40 per cent., the latter being mostly in the form of Chinese Government Domestic Bonds. The total amount of bank-notes in circulation may be estimated at around \$650 millions, of which more than 60 per cent. are issued by Shanghai banks. Of the total of roughly 400 million Chinese dollars emanating from Shanghai, about two-thirds are issued by the Central Bank of China, the Bank of China and the Bank of Communications. During the early spring the Government acquired a controlling interest in the latter two banks. Simultaneously, Dr. T. V. Soong was appointed chairman of the board of directors of the Bank of China.

Very shortly after Dr. T. V. Soong had taken over his new duties, two difficult tasks arose. In April the London price of silver soared, and precluded any possibility of controlling the position by means of the variable export duty on silver. In that situation Dr. Soong arranged for an agreement between the foreign and the Chinese banks, under which all export of silver was to be stopped; while both foreign and Chinese banks supported the exchange rates, so as to prevent a flight from the dollar. This stop-gap agreement temporarily stabilised the Chinese dollar.

In April, however, it became evident that the old-style Chinese banks had granted excessive accommodation to their customers during the period of the Shanghai boom, and were largely unable to meet their creditors' demands. Simultaneously, at least three of the more important Chinese banks of issue in Shanghai found themselves in serious difficulties. The native banks were granted loans by the three Government-controlled banks, so that there were only relatively few failures, while these three banks of issue were taken over by the Government. This gave the Government power over the institutions responsible for roughly 50 per cent. of the total Chinese note issue.

The inevitable consequence of the agreed embargo upon silver exports was the development of large-scale smuggling of silver. In North China, especially, many smugglers took advantage of the extra-territorial rights enjoyed by them as Japanese subjects to redeem notes in silver and carry the silver dollars across the boundary into Manchukuo or Korea. The profit on this smuggling sometimes amounted to as much as 40 per cent. of the exchange value of the Chinese dollar. In reply, the Chinese authorities redeemed notes in silver only after searching inquiry as to the purposes for which the silver was required. This procedure had its disadvantages, but it succeeded in preventing a further loss of currency reserves by the Chinese banks of issue.

Thus, by the end of May, China was actually "off silver," although not only the public at large, but also bankers and authoritative economists did not realise what had happened at that time. One difficulty, however, remained, namely, that the country's silver reserves were largely required to provide the statutory 60 per cent. back-

ing to the note issue. There were only two solutions to this difficulty, namely, devaluation or the basing of China's currency upon another standard of value. The latter alternative was preferred, and China's currency was put on a gold-exchange standard; for the first two days of the new currency regime suggest that at present the authorities look for parity more with the American dollar, i.e. with gold, than with sterling. This new system may not, necessarily, prove impracticable. The available and revalued silver reserves are sufficient, Chinese exports are rising, imports are declining, and devaluation should further encourage exports. The devaluation of the dollar and the removal of exchange uncertainty should also encourage the overseas Chinese to resume investing their savings in China, and this will strengthen the external balance of payments. Internal confidence is also returning. On the other hand, there are serious dangers inherent in the new scheme. The two weeks immediately preceding the proclamation of the new currency scheme witnessed a huge speculative move on the part of well-informed financiers, who reaped immense profits from the lowering of the exchange value of the dollar from roughly rs. 6d. to rs. 2½d. This certainly suggests that a leakage may have occurred. Again, the Nanking Government have promised to balance China's budget within the next 1½ years. This promise will be very difficult to keep, for the budgetary history of the National Government in China is a history of recurrent deficits. It is true that, after the great crisis brought about by the Japanese aggression in 1931-32, Dr. T. V. Soong was able to balance the national accounts for the fiscal year 1932-33 (July-June), at least in so far as debt redemption and new borrowings were equal. But even this precarious equilibrium was lost again by his successor, Dr. H. H. Kung, largely because Dr. Soong refused to accede to the demands made on the National Treasury for military expenditure by General Chiang Kai-shek, while Dr. Kung was willing to return to a policy of cumulative deficits.

In actual practice, the balancing of the Budget depends upon sufficient moral resistance to the incessant pressure for military expenditure. China, must also prevent the squandering of funds by the numerous departments of the National Government. There has been much improvement lately, but China's government is still very far from having reached a level of adequate integrity, economy and efficiency. At this point again, the Chinese Minister of Finance has to face serious difficulties arising out of the frequent demands of China's virtual dictator, General Chiang Kai-shek.

The banking situation in China is also in urgent need of reform. Most of the so-called modern Chinese banks have been ill-prepared to meet the conditions of an economic crisis. The hot-house development of modern industries in the treaty ports and the ensuing real estate boom, during the period of falling silver prices, proved too strong for the native conservatism of the average Chinese banker. There are indications that this need is understood; for the establishment of the Central Bank of China as the Central Reserve Bank of China is to be accompanied by the transfer of its management from the Government to the commercial and banking community. Still, if the new Central Bank is to operate successfully, it is also necessary to sever the present personal union between the governorship of the Central Bank and the head of the Ministry of Finance. The Governor must enjoy a fixed tenure of office, independent from political interference, and he must be able to exercise his influence in order to bring about the necessary changes in Chinese budgetary practice.

The proclamation also announces the impending establishment of a mortgage bank. For administrative reasons, the bank's activities will probably be restricted to Shanghai,

and there is a danger that it may be considered as merely a means of taking over frozen assets from the banks, which have largely invested their funds in real estate. This might quickly involve the new bank in considerable difficulty. Instead, the Government should realise that Shanghai's abundance of banking facilities could usefully be reduced, even at the cost of failures and liquidations. The new banking policy could scarcely be very efficient, if its first step were to save the ill-advised real estate speculators of Shanghai. The truth is that neither in banking nor in Government finance will the Chinese Government succeed, unless it can rid itself of the idea that every friend or relative must be provided for out of public funds.

FINANCIAL NOTES

The Foreign Exchanges.—The London market has been overshadowed by the weakness of the franc, but the general impression is that offerings of francs against sterling have been less than during previous crises. For that reason the British control has given comparatively little direct support in London, though it intervened fairly frequently early in the week. There is a rumour that, for the first time since 1933, the British Control has bought a few dollars, its object being to give support to the franc. Spot francs were quoted in London on Thursday at Frs. 75, and three months' francs at Frs. 2½ discount, after having been over Frs. 3 earlier in the week. The Paris-New York cross-rate remains at Frs. 15.19, and heavy gold shipments to New York continue. It is believed that the technical arrangements for shipping gold from Paris have lately been made more expeditious, and this helps to explain the very large withdrawals of the past fortnight. The Paris-Brussels rate is also at Frs. 256.90-257.00 per 100 belgas, or at the point where it begins to pay to send gold to Brussels. On the other hand, France is receiving an unknown quantity of gold from Italy, while the Swiss franc has depreciated against the French franc practically to the export gold point. There is no news of any gold having been sold by the Swiss National Bank. The weakness of the Swiss franc may be due to Swiss purchases of American securities. London banks have had no further news of fresh difficulties regarding the transfer of lire balances from one foreigner to another. Dealings in lire were already so limited, that occasion has hardly yet arisen to test the operation of this restriction, or to see under what circumstances a transfer will be authorised by the Italian authorities. The London price of gold stood at 140s. 11d. an ounce on Thursday, or at a premium of 10d. over the franc parity price. This is just enough to begin to yield a profit on sales of French gold, and the week's Customs returns show that £3,414,000 of gold have been imported from France. It does not follow that this gold has been sold in the London market.

The Franc's Peril.—The pressure upon the franc continues unabated, and even M. Laval's broadcast address on Thursday evening only afforded a temporary relief. The franc is only held up against the pound by the British Control, while against the dollar it stands at Frs. 15.19, or nearly a centime beyond the gold point. At the week-end the Banque de France raised its rediscount rate to 6 per cent. It is estimated that Frs. 980 millions of gold were shipped on Saturday, and Frs. 675 millions on Monday, while very heavy withdrawals from the Banque de France were made on Tuesday and Thursday of this week. The Bank's gold reserves have now dropped to below Frs. 70,000 millions, against Frs. 82,000 millions at the beginning of the year, and so long as the fate of both the Government and the Budget remains in doubt no relaxation of the pressure can be anticipated. The Banque de France's gold reserves are still so enormous that even its present stupendous losses would cause no anxiety were it not for the top-heavy character of the French banking structure. Broadly speaking, the Banque de France's gold

reserves of, say, Frs. 70,000 millions, are used to support a note issue of Frs. 82,000 millions, whereas deposits at the four leading commercial banks are less than Frs. 30,000 millions. This means that France is scarcely making the most economical use of her gold; while the commercial banking structure is so narrow that continued withdrawals of deposits, either for hoarding or transfer abroad, may before long create stringency. For the moment, the commercial banks are well supplied both with cash and also with Treasury bills which can be rediscounted at the Banque de France, but neither cash nor bills are inexhaustible. Further, the perennial doubt remains as to how long the Government will be able to cover its immediate cash needs. These are admittedly financial danger points. They may not be very pressing, but at least they show that the enormous French gold reserves are no more than a façade.

Changes in the Rouble.—In 1922 the Soviet Government created a new State Bank, with issuing power, very much on orthodox lines, and instituted the new monetary unit, the *tchervonetz* (10 roubles). This was defined as representing a weight of gold of 7.74 grammes, and was therefore equivalent to Frs. 131.337. During the next few years the increase in the note issue by the State Bank and the printing of currency notes by the Finance Commissariat, especially from 1928, when, at a tremendous cost, the U.S.S.R. began to equip itself with a modern and extremely powerful heavy industry, ruined the new currency. Its collapse necessitated the adoption, in 1929, of a complicated system of rationing and multiple prices. In point of fact the rouble was given very different purchasing power according to the class of the population which was spending it. Since the end of 1933, however, the economic progress achieved under the second Five Years Plan has made it possible to do away with ration cards, and to develop considerably the State-owned commercial shops, while slowly closing down all the other types of shops and co-operatives, thus gradually coming back to unified prices. There remained, however, the *Torgsins*, shops where goods were priced in gold roubles, more or less at world prices, and where purchases could only be made against gold, silver or foreign currencies. The ratio between these *Torgsin* prices and the commercial shops' prices gave, of course, an index of the depreciation of the paper rouble; it had reached 1/50th in 1932 and 1933; last July it stood between 1/30th and 1/25th. Since then prices have again substantially fallen in U.S.S.R., and this index probably stands to-day in the neighbourhood of 1/20th, which would give to the rouble a buying power of approximately Frs. 0.75 for the goods sold in commercial shops.

The Soviet Government's Decree.—The gradual improvement in the purchasing power of the rouble has now reached the point where a further currency reform can be attempted. The Soviet Government have issued a decree sanctioning a devaluation of 77 per cent. in the value of their monetary unit by linking their monetary system to the French franc and fixing the new value of the *tchervonetz* at Frs. 30 and the rouble at Frs. 3. At the same time, it has been decided to close the last *Torgsins* on February 1, 1936. The implications of this reform are far-reaching. First, unless there is a substantial fall in Russian prices, the U.S.S.R. will be one of the most expensive countries to live in. Next, the tourist will enjoy complete freedom as to where he spends his money. Again, should the Soviet Government revalue the gold in the State Bank on the new basis, the Bank should be able to absorb the currency notes issued by the Finance Commissariat and to give to the whole issue a backing of about 55 per cent. Finally, the unification of prices and currency inside the Soviet Union will greatly strengthen the Socialist economic system, by increasing considerably the efficiency of the planning and that of the Control. Simultaneously, by enhancing the rôle of money wages, it should give more flexibility to the system and be beneficial to the individual.

The Money Market.—There has been a fair demand for money this week, accompanied by applications for loans into January. One bank is believed to have lent some January money at $\frac{3}{4}$ per cent., but most banks are not anxious to commit themselves so far ahead, especially as they have still to see how much cash will be withdrawn by the public during Christmas.

	Nov. 7, 1935	Nov. 14, 1935	Nov. 21, 1935	Nov. 28, 1935
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$
Three months' bank bills	$\frac{1}{16}$ – $\frac{1}{8}$	$\frac{1}{16}$	$\frac{1}{16}$	$\frac{1}{16}$

The banks are now buying Treasury bills of all dates up to February 15th at their minimum rate of $\frac{1}{2}$ per cent., but as the Christmas currency goes into circulation they may cease to be such ready buyers. Hot Treasury bills are nominally $\frac{1}{2}$ per cent., and three months' bank bills are weak at $\frac{1}{16}$ per cent.

The Bank Return.—The Christmas increase in the note circulation has begun, for although the notes which have gone out this week are at present mainly required for payments at the end of the month, they are not likely to return next week.

BANK OF ENGLAND					
	Nov. 28, 1934	Nov. 6, 1935	Nov. 13, 1935	Nov. 20, 1935	Nov. 27, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.1	195.5	196.5	197.2	197.6
Note circulation	379.7	402.2	401.4	398.9	401.3
Banking Department:—					
Reserve	73.0	54.2	55.9	59.2	57.1
Public deposits	27.7	21.0	15.8	21.6	19.7
Bankers' deposits	89.1	89.6	92.9	90.9	90.9
Other deposits	38.1	36.6	36.7	36.5	36.5
Government securities ...	80.4	87.2	83.5	83.6	85.5
Discounts and advances ...	9.2	11.0	11.1	9.7	9.5
Other securities	10.3	12.5	12.6	14.4	12.8
Proportion	47.1%	36.8%	38.4%	39.6%	38.8%

In the banking department the reserve is reduced by £2.1 millions, as a result of the increase in the note circulation. Other movements are very small and bankers' deposits are unchanged.

New York Money and Banking.—During the week ended November 20th, New York member banks' loans to brokers rose from \$855 to \$856 millions. Other loans against securities rose from \$723 to \$731 millions. The failure of brokers' loans to expand in sympathy with the present boom on the stock markets is interpreted as indicating that the boom is mainly being financed out of cash. Mr Eccles, the Governor of the Federal Reserve Board, stated this week that the Board was not concerned with the present bull stock market, because it was based on cash and not bank credit, and was, therefore, a safe and healthy movement. Many observers feel, however, that one leading cause of the boom lies in the recent heavy gold influx and the resulting inflation of member bank cash and deposits. It is generally recognised that the present banking situation is conducive to a big inflationary expansion of credit, but any action regarding member banks' excess reserves is expected to be left to the new Federal Reserve Board, which was created by the 1935 Banking Act, but will not be appointed until February. Meanwhile, both foreign funds and gold continue to pour into the country. The latest weekly member bank statements show that on November 20th deposits lodged by foreign banks stood at \$380 millions. This represents an increase of \$13 millions during the week preceding this return, and compares with a return of \$372 millions for November 6th. Gold arrivals from France so far declared during the current week amount to \$39.1 millions, and a further \$74.2 millions are reported as engaged for shipment. The Treasury now estimates the nation's monetary gold stocks at \$9,800 millions. Acquisitions since September are esti-

mated at \$627 millions, of which \$360 millions came from France, \$150 millions from England, and \$58 millions from Holland. This last estimate is probably very much on the low side. Silver imports for the week ended November 15th are returned at \$22.1 millions, of which \$20.9 millions came from England.

Scottish Banking Results.—The current report of both the Commercial Bank of Scotland and the Royal Bank of Scotland show that banking in Scotland continues to make progress. The deposits of both banks are higher than a year ago, and this expansion in the banks' resources is reflected in a rise in net profits. Both banks are paying the same dividend as a year ago, but the Commercial Bank is paying a 2 per cent. bonus on its "A" shares, as this is the 125th anniversary of the bank's foundation. Both banks have also set an important example in the treatment of profits and reserves. The Royal Bank is this year carrying the balance of its profit and loss to its "rest," or the disclosed reserve fund, whereas during the past few years it was carried to inner reserves. The Commercial Bank is appropriating £50,000 from the year's profits to the general reserve fund, and is also allocating £100,000 from the profit realised as a result of investment changes during the year. This last is a precedent which other banks might follow, while the reserve policy of both banks indicates that conditions generally are now considered to be more stable:—

	Commercial Bank of Scotland October 31,			Royal Bank of Scotland October 12,		
	1933	1934	1935	1933	1934	1935
Liabilities:—						
Capital	£'000 2,250	£'000 2,250	£'000 2,250	£'000 3,780	£'000 3,780	£'000 3,780
Reserve fund ...	2,850	2,850	3,000	3,781	3,781	3,857
Notes in circula- tion	3,244	3,223	3,351	2,859	2,793	2,813
Deposits	37,725	38,932	40,783	59,257	58,944	64,009
Acceptances, etc.	221	1,731	2,208	1,599	3,895	3,732
Assets:—						
Cash, etc.	6,246	5,104	6,662	5,988	6,206	6,833
Call money	2,695	2,786	3,241	7,412	8,133	7,762
Discounts	1,159	874	1,132	4,362	3,874	3,784
Investments ...	20,725	21,963	24,609	27,537	26,386	30,045
Advances	14,627	14,529	13,248	20,249	20,921	21,787
Net profits	387	379	397	612	621	629

Changes in the assets of the two banks call for little comment. The item "cash, etc." includes balances with other banks and notes and cheques in course of collection. The discounts of the Commercial Bank consist solely of commercial bills, but those of the Royal Bank include £1,850,000 of Treasury bills. Neither bank discloses under which heading it includes the Treasury certificates held against the bulk of its note circulation. The Royal Bank announces that the present Duke of Buccleuch has succeeded the late Duke as Governor of the Bank, thereby carrying on a very old tradition.

British Overseas Bank.—The accounts of this bank for October 31, 1935, show that during the preceding year deposits fell from £2,964,000 to £2,638,000. A year ago, however, the bank's deposits had been swollen by temporary lodgments of foreign panic money, and the bank therefore may not be sorry to see its deposits reduced this year to more stable proportions. The cash position is slightly stronger, as cash has risen from £229,000 to £247,000. Call and short money is reduced from £946,000 to £869,000, while there are moderate increases in the bank's discounts and foreign balances. Advances have fallen from £2,025,000 to £1,783,000 and acceptances from £3,121,000 to £2,989,000. These contractions are the inevitable consequence of the general inactivity of world trade and of the plethora of funds now existing in many of the centres served by the bank. Net profits are reduced from £62,333 to £60,131. The 6 per cent. dividend on the "A" ordinary shares is repeated, but very little margin is left in hand. The general impression left by the accounts is that the bank is doing a steady business, but that world trade has not yet revived sufficiently to bring about either an expansion in the demand for credit or a recovery in the bank's earnings.

THE STOCK EXCHANGE

THE INVESTOR LOOKS AHEAD

WITH the resumption of activity in the new issue market, after a period of virtual suspension since the end of last July, the phase of uncertainty in the investment outlook, which started with the development of a crisis in international political relations and was prolonged by the British general election, may be regarded as at an end. Within the next few weeks many public and private investors will be endeavouring to take major decisions which would normally have been made at the end of the summer. At no time since "recovery" began has the outlook been dominated by so many "risks"; but the clarification of some of the major issues has at least enabled the markets to assess, within reasonable limits, their number, nature, extent and inter-relationship.

Broadly, the Stock Exchange can look forward to the continuance in office—probably for at least four years—of a Government pledged to a "Centre" policy of stability and continued industrial recovery, buttressed by the employment of Government credit to facilitate the financing of approved capital schemes. In the international sphere, the maintenance of sanctions against Italy appears unlikely, in its present form at least, substantially to affect the volume and direction of British trade as a whole. Of more immediate significance to the investor are such questions as the fate of the gold bloc countries and the apparent determination of the American authorities not to intervene in any expansive movement in commodity or security dealings. Finally, it may be assumed that increased expenditure on armaments—whose economic consequences are already apparent in certain Continental countries, particularly Germany—will stimulate activity in select British "munitions industries." How far re-armament will proceed in this country is as yet a matter on which not even the Government appears to have made up its mind. The evident unpopularity, however, of this plank in the Government's platform at the last election may suggest the advisability of placing a limit on the writing-up of "armament equities."

Altogether, there is ample fuel to keep the Stock Exchange pot boiling. For the last three and a half years the markets, with sound instinct, have based their policy mainly on the prospective continuance of low interest rates and industrial recovery at home, and have regarded international complications as significant but ephemeral distractions. This attitude may now require to be modified. At present some fifty States Members of the League of Nations are imposing specific measures against another Member whose forthright methods argue as little willingness to kiss the chastening rod as to count the ultimate cost. So long as this position obtains, the markets will always have, at the back of their mind, the possibility that some unforeseen and tragic accident may convert a "state of sanctions" into something more serious. If political factors were eliminated, however, the purely economic omens would favour a slow but perceptible broadening, rather than a further contraction, of the volume of international trade. In more than one quarter there are signs of reaction against excessive tariffs, prohibitions and exchange restrictions. Even the devaluation of the franc and the guilder, once its initially disturbing effects had been overcome, would probably be regarded mainly as a development bringing the re-stabilisation of sterling appreciably nearer. Few investors, again, believe that the American situation is likely to get out of hand in the next twelve months. In the meantime, a strong upward movement in American business would be favourably viewed both by investment trusts and other British institutions anxious to recoup some of their earlier heavy losses on American holdings, and by other investors who believe, rightly or wrongly, that the process of discounting expected benefits has reached a less advanced stage in Wall Street than in Throgmorton Street. Indirectly, a sustained rise in American quotations might exert a supporting influence on British equity share values

in general, and on the prices of raw materials and other commodities with an international market.

What course are events likely to take at home? Industrial revival, as we show in our latest *Monthly Supplement*, is unchecked, but industrial profits appear to have passed beyond the phase of rapid increase associated with the first flush of recovery, and to be registering a broader but slower rise symptomatic of a period of normal progress. In other words, a yield of $3\frac{1}{2}$ per cent. to-day on a seasoned industrial ordinary share is in a different category from a yield of the same figure a year ago, for the expectation of increased dividends is by no means as great. This applies to popular shares in prosperous consuming trades, like tobacco, brewing and retail business. It applies still more to equities in industries like iron and steel, which, starting from below scratch, achieved a more than proportionate increase in earnings while they were bringing idle plant progressively into production. These industries may shortly be faced with the problem, in some instances, of an actual insufficiency of available productive resources to meet any further increase in demand.

No less important for the investor is the probable effect of the Government's decision to afford tangible support, as a matter of national policy, to approved schemes for road making, electrical and railway development, etc. For the direct recipients of the Government's beneficence, its impact on earning power is a matter rather of the more distant than of the immediate future. The new developments, however sound their conception, are unlikely in most cases to be completed in less than five years; and their ultimate consequences, expressed in terms of dividends, cannot, in any event, be spectacular. The real importance of the Government's decision lies in its probable effect, first, on the course of industrial activity generally, and, secondly, on the level of interest rates.

Until the early part of this year, the Treasury pursued a definitely Pinchbeck policy in the capital market, designed to facilitate "conversion by starvation." The reversal of this policy, first by the issue of a Treasury-guaranteed London electrification loan, and subsequently by the promise of a similar guarantee of £30 millions for the main-line railways, at least removes the reproach that cheap money which really big borrowers cannot obtain might as well be non-existent. The Treasury has never clearly defined its criteria for "eligible schemes," nor has it stated whether municipal corporations, who can raise capital for new works at gilt-edged rates on their own credit status, will be allowed to do so. If conversion operations are given precedence over applications involving new money, in the home corporation market, the embargo on locally organised development works may be indefinitely prolonged—in fact if not in name.

We may presume, however, that it is the Government's broad intention to throw open to certain large borrowers—whose requirements may be measured, not in millions but in tens of millions—facilities for raising money at 3 per cent., instead of 4 per cent. or more. The question therefore arises whether the gilt-edged market can long continue to eat its cake and have it. Investors may be correct in ruling out the possibility of a return to the interest levels of the post-war decade. Historical experience suggests, however, that a firmer tendency in rates has been characteristic of the secondary stage of recovery after every severe economic depression. That gilt-edged prices had reached their peak was being freely suggested before the Government announced its change of policy. Investors may thus find it necessary to consider whether the Treasury's attitude is not likely to accelerate the operation of forces which are already tending to shift the market's centre of gravity from fixed-interest to equity stocks. The conjuncture of public works borrowing with even a moderate policy of re-armament is calculated to provide an additional stimulus (albeit

a partial and somewhat arbitrary one) to industrial recovery, which as yet shows no signs of flagging. The most conservative forecasts give trade activity at least another year's duration, and some augurs put eventual recession no earlier than 1937-38. However this may be, it is probably safe to assume that a major setback in ordinary share prices, in the immediate future, is unlikely—subject always to the maintenance of peace in Europe and the avoidance of a tragic coal stoppage in Great Britain.

The prospects of gilt-edged stocks, however, are decidedly more difficult to assess. The return of the National Government with a handsome majority has eliminated all fear of a "confiscation" scare, but the market will have a good many hurdles to surmount in the next few months. The next Budget, for example, will scarcely make cheerful reading for the *rentier*, if a considerable increase in the nation's taxable income is more than swallowed up by swollen defence estimates. A re-armament loan might comfort the immediate taxpayer, but would be the reverse of helpful for the gilt-edged market. Altogether, while no large-scale transfers of funds from gilt-edged securities appear to be in prospect at the moment, there is a certain amount of evidence to support the view that the first phase of a period of slightly "harder" money may be at hand.

INVESTMENT NOTES

Buying for Inflation in Wall Street.—The recent upward movement in American security prices appeared last week to have lost some of its force. This tendency was sharply reversed on Saturday morning, however, as the result of a speech by Mr Marriner Eccles, the chairman of the Board of Governors of the Federal Reserve System. The Advisory Council of the System, in session earlier in the week, had issued a statement which referred to the risk of inflation and proposed that the system should put itself into a better position to control any undue expansion by gradually reducing its holdings of securities. The Advisory Council has never exercised any influence on Federal Reserve policy and its statement was generally regarded merely as a protest by the more conservative section of the big banks of the country. Mr Eccles, however, chose to make it the text for a vigorous rejoinder, and suggestions have not been lacking that the coincidence of a sinking Stock Exchange had something to do with his decision. At any rate, he concerned himself with the level of security prices in a way unknown since the Republican era. Mr Eccles referred to the "elements of strength and safety" in the present level of prices owing to the low proportion of borrowed funds being used to finance purchases. He doubted whether rising security prices were having any harmful effect upon the general credit situation and went out of his way to emphasise that the Federal Reserve System has no power to limit the buying of securities by individuals or corporations, domestic or foreign. In other words, the authorities did not think prices were too high, would do nothing to prevent them rising still further, and would be quite pleased to see a bull market develop. Wall Street, in its present mood, does not need any repetition of an invitation of that sort. Last Saturday's rises, however, have since been hardly maintained, which suggests that the market is, for the moment, "tired." But Mr Eccles' statement has a very definite bearing on the longer-term outlook. Opinion, both in America and elsewhere, has been increasingly exercised about the possibility of an excessively rapid utilisation of the enormous potential supply of credit already in existence. That the head of the Federal Reserve System has chosen to intensify rather than to allay these fears is more than a straw in the wind. But Wall Street approaches the question of inflation with hopes rather than fears. The market will undoubtedly have setbacks; it is difficult, for example, to foresee what the market effect of a judicial veto on the Agricultural Adjustment Act would be. So long, however, as there is a major possibility of unrestrained credit expansion, the long-term odds are with the bulls.

Government Guarantees for the Railways.—Sir Josiah Stamp's address to the British Railway Stockholders' Union on Monday last defined, in the clearest fashion, the attitude of the railway companies towards the Government's backing of a £30 millions loan for new capital development. The railways, he declared, were not to be regarded as philanthropic institutions or political agencies in this matter. It was their duty, to stockholders and to the Railway Rates Tribunal alike, to justify new expenditure by its improvement or maintenance of net revenue. This criterion was carefully analysed by Sir Josiah, who showed that, on his system at least, the notion that the schemes amounted to "putting new prior charges in front of the ordinary stockholders" was fallacious. Since all capital expenditure was judged by *net* results, after estimating the probable change in gross revenue and charging a notional rate of interest, amortisation of the displaced assets and operating costs, the fruits would clearly be available for the junior stockholders. If schemes which already show a "profit" on this basis could be financed fully one per cent. cheaper than by the railways' unaided credit, the return would be even greater. Sir Josiah claimed that the officials of the London Midland and Scottish system, with the assistance of an independent audit of the schemes already put into operation, had achieved a considerable degree of accuracy in estimating their financial results. Linking established practice with the offer of Treasury backing, the railways had to consider three questions. Would money remain indefinitely cheap? Would the Government offer remain open indefinitely? Would future price trends be advantageous? Sir Josiah left the answers to his audience, but the presumptions are clear enough. Junior stockholders will regard this authoritative review as a long-term reassurance, for it confirms the suggestion made here three weeks ago that some eventual surplus of earnings might be expected from the schemes. Some part of them, such as rebuilding of stations, carries only deferred equity prospects. Such schemes, however, which are essential if facilities are to be kept up-to-date, are precisely those which require the cheapest finance.

James and Shakspeare Allegations.—On Tuesday last, at the Mansion House, Mr Garabed Bishirgian, Mr John Howeson and Mr Louis Hardy appeared to answer summonses relating to the James and Shakspeare prospectus. The first-named defendant—a director of the company—was charged under Section 84 of the Larceny Act, 1861, with making or publishing a prospectus known to be false in a material particular, and the other two defendants—who were not directors—with aiding and abetting. The Court was occupied by the opening speech of Mr Fulton, for the Director of Public Prosecutions, and no evidence was heard. It was contended, for the prosecution, that towards the end of 1933 Williams, Henry and Company began to buy shellac for forward delivery, with Bishirgian and Company (of which the first defendant was partner) acting as brokers. At the end of August, 1934, it was alleged that sums in partial settlement for Williams, Henry shellac contracts, due on September 7, 1934, were provided by Dean Finance Company, Ltd., and by Jayandee, Ltd., leaving £276,000 to be found on that date. On August 27, 1934, it was agreed to increase the capital of James and Shakspeare (controlled by Jayandee, Ltd.) from £17,000 to £500,000, and to apply the proceeds, according to the prosecution, to acquire substantial interests in Williams, Henry and Company and the produce side of the Bishirgian business. The prospectus, it was stated, did not mention that £200,000 would be required on September 7, 1934, in order to finance the shellac position of Williams, Henry and Company. Several weeks after the issue, a member of the underwriting firm learned of the application of part of the funds, and, during November, of Williams, Henry and Company's pepper commitments. Shellac for December delivery involved some £364,000, for which a loan was arranged as to two-thirds by Dean Finance, and as to one-third by Mr John Howeson. It was stated for the prosecution that pepper commitments at that time amounted to £1,600,000, on the discovery of which the parties to the shellac loan refused to proceed.

Williams, Henry and Company was declared a defaulter, and in February this year a compulsory winding-up order was made. The further hearing of the summonses was adjourned to December 11th.

Actuaries' Investment Index.—The markets have stayed their hand this week, and the Actuaries' Index of 158 industrial ordinary shares (December 31, 1928 = 100) is almost unchanged at 80.1, against 80.0 a week ago, and 76.5 a month ago. The net rise over the last four weeks is common both to fixed interest stocks and equities, as the following table suggests:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month Ago (Oct. 29)	Week Ago (Nov. 19)	This Week (Nov. 26)	Month Ago (Oct. 29)	Week Ago (Nov. 19)	This Week (Nov. 26)
Fixed Interest:						
2½% Consols	147.3	...	151.4	3.03	...	2.94
Miscellaneous industrial debentures (13)	124.5	...	124.8	3.90	...	3.89
Do., preference (44)	117.7	...	119.3	4.37	...	4.31
Ordinary:						
Investments Trusts (14)	54.5	57.7	58.8	3.72	3.58	3.51
Cotton (6)	43.9	48.6	47.3	2.21	2.09	2.09
Iron and Steel (8)	64.2	67.9	65.8	3.32	3.42	3.55
Motors (5)	53.3	54.3	52.8	3.91	4.37	4.50
Oil (9)	66.3	71.7	74.4	3.39	3.15	3.10
Electric Supplies (8)	121.0	128.6	129.4	4.23	3.99	3.97
Miscellaneous (52)	69.6	72.7	73.5	4.03	3.90	3.86

The past month's industrial and home political news has been eminently pleasing to investors, but the international cloud remains. For the most part, solid investment stocks have gained most, during the last week or two, while certain groups which have attracted more, perhaps, than their due share of speculative attention, like steel and "munitions" shares, have been slightly reactionary.

COMPANY NOTES

Brick Companies.—The great improvement in brick-making practice and costs which has been made possible by the development of the Fletton and of modern production processes has allowed the London and South

* Initial period of 15½ months.

Midland supply to be centralised to some extent in the Peterborough and Bedfordshire areas, and has enabled the London Brick and Forders Company to build up an

organisation of considerable size even by modern standards. But it has not essentially altered the nature of the industry. Bricks remain a material of capital construction, liable to the fluctuations usual in capital construction trades; and they remain a heavy but brittle commodity, expensive to transport and requiring great care of handling in the process. Consequently, though the annual value of output of the average brickworks in this country will have risen somewhat from the meagre £8,820 shown in the 1930 Census of Production, the industry remains essentially one of small local units. Against this background, the development of modern economical production methods was already making room for new enterprise and re-equipment in the trade before the building boom began, and has subsequently produced a rush of issues by new and existing concerns, which lasted from 1933 well into this year. Such conditions as these do not usually offer stability to the investor. Though the expanded output capacity does not appear to be excessive during the current "boom" in building, and though some authorities consider that the "boom" may last a long time, the results of a contraction in demand could be serious for the trade. Where modern methods of production and transport allow several companies to compete in a single area (as, for instance, in the highly important Greater London area), price-cutting could become acute. Or, alternatively, in remote areas where competition is relatively slight, the local "spread" of the risk would be small to a fault. Even a maintenance of the current level of demand would only postpone the period of excessive supply if output continued to expand at the recent rate. Efforts have been made to check new entrants to the industry by such moves as the cut in London Brick and Forders' prices by 3s. per 1,000 some time ago and by their wage increase of 2s. per week. But experience in other trades which have passed through a phase of rapidly falling costs suggests that a price cut which still leaves profits at an attractive level is not always enough to turn a tide which is setting towards over-supply. The conclusion would seem to be that, though current profits are on a highly satisfactory level and may be maintained there for some

time, the industry contains elements of instability which justify the generally high level of yields returned by brick shares. In the annexed table of profits the violent fluctuations in many companies' earnings during the depression and recovery are clearly illustrated.

Turner and Newall.—The profits of this major asbestos concern announced this week show the anticipated moderate advance in profits, and the not unexpected raising of the total dividend to 12½ per cent. The figures, which are struck before meeting preference dividends, show an increase of £66,397 from £714,228 for 1933-34 to £780,625 in the latest year. The results are compared with those of earlier years in the following table:—

	Years to September 30th		
	1933	1934	1935
Net profit, after depreciation, fees, and taxation	406,656	714,228	780,625
Staff pensions	10,000	10,000	10,000
Preference dividends	101,098	101,098	101,098
Ordinary shares—			
Earned	295,557	603,130	669,527

Carried forward	106,126	130,513	94,548

† Special appropriation (instead of transferring £100,000 to general reserve) to write down assets of Asbestos Cement subsidiaries. ‡ General Reserve.

Progress during the latest year seems moderate in comparison with the spectacular jump in profits between 1933-34, and the high figures of 1929 and 1930 have yet to be achieved. Such a result, however, was to be expected, in view of the tenor of the directors' statement when declaring the interim dividend in May. Doubtless the export side of the business still remains difficult, but the company is pursuing a wise policy of group reorganisation, financed from its very adequate internal resources. The prospects for active building construction during the current year, coupled with progress in the engineering industries, promise further expansion of business during the current year. The £1 ordinary stock units are quoted at 62s. 1½d. to yield £4 3s. per cent., and carry a sound industrial rating.

Tube Investments.—The progress and development in every branch of this undertaking, to which the directors refer in their report, is amply reflected in the profit figures. Total profits have jumped from £371,370 to £502,784, and earnings for dividends, at £493,863, are well over twice those of 1932-33. Such geometric expansion of profits forms the happiest context for share bonuses, and the previous year's distribution of ten per cent. is repeated, in due proportion to the ordinary and liaison ordinary rights. The latest results show that the substantial increase of turnover to which the chairman referred last year has been more than maintained and, after an interval of some years, each of the constituent companies has made profits. The growth of earnings is illustrated in the table below:—

	Years to October 31		
	1933	1934	1935
Dividends from subsidiary and associated co.'s	220,883	359,985	483,320
Other revenue	10,450	11,385	19,464
Total revenue	231,333	371,370	502,784
Directors' fees	2,150	2,150	2,004
Interest	4,896	5,406	6,917†
Preference dividends	43,495	44,945	44,946
Ordinary and liaison ordinary shares—			
Earned	180,792	318,869	448,917
Paid	150,549	194,459	217,215
Earned %	9.6	16.4	20.6
Paid %	8	10½	10½
Reserve	28,583	102,757	230,545
Carried forward	84,466	106,119	107,276

† And 10 per cent. ordinary share bonus. ‡ Includes £2,143 expenses of increase of capital.

The reorganisation of the group wisely left room for rapid expansion, and the reserves of capacity which existed last year have evidently been required during the latest year. Expansion is evident in the consolidated balance sheet, for all the current items are higher, and the increase in taxation and contingency reserves from £520,000 to £820,000 suggests a cautious distribution of group earnings. The share bonus will require £280,545, thus involving a net draft of £50,000 from reserve accounts and leaving a balance of £150,000. Favoured by construction and general trade activity, and by new fashions in furniture and golf clubs, the company has evident prospects of further increasing its business during the current year. The £1 ordinary shares are quoted at 69s. ex dividend and yield £3 3s. 9d. per cent. after allowing for rights. They rank among the soundest industrial issues.

Further Brewery Results.—The brewery results published this week have been good, without verging on the exciting, except for *Ansell's*, whose first complete year's working with *Holt Brewery* has been clearly reflected in improved profits. Some reports of the week are analysed below:—

Company (Years to September 30th)	Total Profits	Earned for Ord.	Ordinary Shares			
			Earned	Paid	Quota-tion	Yield
<i>Ansell's Brewery</i> —						
1933	205,394	124,608	17.4	10	s. d.	£ s. d.

1935	161,983	104,003	125.5	30		
<i>Wolverhampton and Dudley Breweries</i> —						
1933	204,728	177,680	41.5	20*	s. d.	£ s. d.
1934	225,923	199,035	44.1	2 ½	82 0	3 10 0
1935	252,989	225,237	25.04	144		

† Includes increased dividend receipts from Samuel Allsopp interest. * 6 per cent. interim on original capital and 16½ per cent. final on increased capital after amalgamation with Samuel Allsopp and Sons, Ltd. * Of which 2½ per cent. tax free. ‡ And 100 per cent. capital bonus. (a) On new capital (b) 5 per cent. cum. preference shares £10. (c) 4½ per cent. (d) "B" debenture stock.

The *Ansell's* figures show an advance from £346,240 to £537,776 and earnings to 46.8 per cent. for the bumper dividend at 22½ per cent. announced last week. The advance may be attributed to co-ordinated working with *Holt Brewery* and to widespread industrial recovery in the Birmingham industrial area. The *Cheltenham Original* figures have the sedateness characteristic of their locale, for total profits have increased by under £4,000, but there is ample cover for the increased 13 per cent. dividend. As to the *Ind. Coope and Allsopp* results, a calculation based on the preliminary statement suggests that earnings for the ordinary shares expanded from £338,831 to £417,470 during the first complete year of absorption of the Samuel Allsopp undertaking. On a percentage basis, the earnings on the new capital amount to some 36.5 per cent. and there is ample margin for the increased 25 per cent. dividend. The *Mann, Crossman and Paulin* results are also computed from the preliminary announcement, and show a modest advance from £391,101 to £400,717, the 20 per cent. dividend being covered by earnings of nearly 34 per cent. The private equity holders of *Strong and Co. of Romsey* are now coming into their own, for earnings and dividends record an impressive advance for the third consecutive year. Another prosperous Midlands concern, *Wolverhampton and Dudley*, which distributed a 100 per cent. share bonus last year, reports a satisfactory advance in profits from £225,923 to £252,989, the dividend being increased from 25 per cent. on the old to 14 per cent. on the new capital. Further good

reports in store are suggested by the increased total dividend of *H. and G. Simonds* of 18 per cent., against 16 per cent. for the previous year and by *Ashby's Staines Brewery's* 20 per cent. dividend, compared with 19½ per cent. for the previous year, of which 7 per cent. represented a special tax-free bonus of 7 per cent. paid from accumulated profits.

Baird Television Scheme.—The revised scheme for the reorganisation of the capital of Baird Television is as satisfactory as its predecessor was inequitable. It is unlikely, indeed, to arouse any violent opposition. The board has renounced its original idea to consolidate the whole of the capital into one class and proposes to eliminate the 200,000 "A" ordinary shares, slightly to modify the relation between the preferred and deferred shares, and to provide more capital by an issue of preferred shares. The 2,100,000 5s. preferred shares and the 1,200,000 5s. deferred shares will be split into 2s. 6d. shares, and one-half of each given to the "A" ordinary shareholders in exchange for their present holdings. The latter, therefore, continue to receive one-half of the total profits. The 10 per cent. dividend on the 5s. preferred shares will be increased to 20 per cent. on the 2s. 6d. shares, so that existing preferred shareholders' dividend rights will be unchanged. The balance of profits, originally to be divided between the preferred and deferred shareholders in the ratio of forty to sixty, will now be equally divided. The board proposes to offer 2,100,000 preferred shares, on terms unspecified, to the preferred and deferred shareholders in the proportion of one in five and one in two respectively. If these shares are all taken up, each "A" shareholder will have 15½ preferred and 6 deferred shares, each present preferred shareholder 1½ preferred shares, and each present deferred shareholder ½ preferred and one deferred. There will, moreover, be 60,000 new preferred shares in the hands of the general public. The following table shows how the different classes will fare, excluding the "A" shareholders, who receive one-half of the profit as before:—

Profits (£'000)	Old Preferred Shareholders		Old Deferred Shareholders	
	Old Scheme	New Scheme	Old Scheme	New Scheme
50	25	20	Nil	4.8
75	37.5	30	Nil	7.1
100	50	40	Nil	9.5
150	61.5	60	13.5	14.3
200	71.5	71.5	28.5	27.6
250	81.5	81.5	43.5	42.5
300	91.5	91.5	58.5	57.4

If profits exceed £157,500, the participation of the preferred shareholders is unchanged. If they are less, the deferred shareholders fare rather better—not unreasonably, in view of the lower gearing of their total holding resulting from their subscription for the new preferred shares. The deferred shares themselves, however, are somewhat more highly geared under the new than under the present dispensation. Until the scheme is passed, holders may work out the relative valuation of the shares on the basis of 10½ preferred and 6 deferred shares to every "A" ordinary. The calculation suggests that the preferred are under- and the deferred shares over-valued at current levels.

Pass and Joyce Scheme.—It may be regretted that the directors of Pass and Joyce, in drawing up the reorganisation scheme submitted to shareholders this week, have not altogether avoided certain features which have been the subject of criticism, in other instances, in these columns. The company's 7½ per cent. preference shares are to be cut by 50 per cent. and the ordinary by 80 per cent. In addition, arrears of preference dividend from September, 1930, are to be cancelled, and the new 10s. preference shares are to rank for their original value of £1 in a liquidation. Participating rights are to be changed to an apparently unlimited participation in one-third of surplus profits, as compared with the existing moiety up to 10 per cent. To assess the value of the latter provision requires the fullest information regarding prospective earnings. The

suggested rights do not appear to compensate preference holders for the halving of their fixed dividend and the wiping out of their arrears. The scheme, in short, may be criticised on the ground that it leaves preference shareholders with a disproportionate burden of sacrifice and does not offer them adequate compensation for the rights they are called upon to relinquish.

Crompton Parkinson Progress.—The recent spectacular rise in Crompton Parkinson ordinary shares has accurately anticipated the latest excellent trading profits. The total, after provision for contingencies, has jumped from £149,326 to £272,244. The equity earnings, thanks partly to the "gearing," are two and a-quarter times higher at £200,152 compared with the 1933-34 results, and after adjustment for income tax the ordinary capital has been comfortably exceeded by the year's net profits. Three years' spectacular progress is illustrated below:—

	Years to September 30th		
	1933	1934	1935
Trading profit and dividends from subsidiaries, after provision for tax and contingencies	119,004	149,326	272,244
Depreciation.....	14,000	14,475	25,184
Fees	2,816	3,042	3,250
Preference dividends	43,658	43,658	43,658
Ordinary shares:			
Earned	58,530	88,151	200,152
Paid	24,971	26,224	29,656
Earned (%)	34.9	50.6	105.2
Paid (%)	12½†	12½†	12½†
General reserve	34,989	55,234	154,377
Benevolent fund	...	...	10,000
Carried forward	50,618	57,311	63,430

† Regular capital bonuses paid as follows: 1932-33, 5 per cent.; 1933-34, 7 per cent.; 1934-35, 7 per cent.; and 100 per cent. to "broaden base of company's equity capital."

Shareholders will congratulate the board, both on the excellence of the results and on their presentation. The accompanying chairman's speech is an informative supplement to the figures, and all that is lacking for the time being is a consolidated balance sheet. The remarkable growth in net current assets from £270,109 two years ago to £699,539 illustrates the advantage of prudent distribution of rapidly expanding profits. The expansion is attributed to the benefits of group reorganisation in earlier years, to full employment of capacity and to improved co-operation within the electrical manufacturing industry. Lamp sales have increased by over 20 per cent., and the erection of a new works is under consideration. The speech describes the litigation instituted by the "Lamp Ring" now *sub judice*. Substantial internal reserves, it is stated, have been created for contingencies. The electric traction department has been awarded an important Tyneside contract, and overseas demand for cables may necessitate extension of plant. The market's best expectations have been realised, for the board proposes to issue a one for one capital bonus, after taking into consideration future earnings requirements to enable the same cash and regular bonus distributions to be made in the future. At 108s. (equivalent to 50s. ex all rights) the 5s. ordinary shares offer the exiguous dividend yield of £1 5s. per cent., which recognises the chairman's dictum that the end of the company's expansion is not yet in sight.

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital and Reserves: D. Gulden 5,378,542

Chairman: Dr. Roman Górecki.

Vice-Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.

Joint Managers: Stanislaw Pawlowicz and Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig.

INQUIRIES SOLICITED

Consolidated Gold Fields.—Our mining correspondent writes:—Although those who hoped for an increased final dividend from "Gold Fields" were disappointed, the accounts show that their expectations had a measure of foundation, for the profit of the operating company amounted to £1,465,190, against £1,327,080 for the previous year. Once again an allowance of £100,000 was made to depreciation and £300,000 to reserve; but provision for United Kingdom income tax was £30,000 higher at £240,000. New Consolidated Gold Fields paid 20 per cent., as before, carrying forward the substantially increased balance of £320,550, and the holding company was therefore unable to raise its distribution. The outstanding feature in the accounts of the operating company is the expansion in investments—entailing a diminution in loans and other items. We give below a table of salient figures for the past three years:—

	Year ended June,		
	1933	1934	1935
<i>New Consolidated Gold Fields</i>			
Investments.....	3,538,572	4,882,140	6,068,470
Shares in subsidiaries.....	1,147,590	1,157,590	1,217,670
Properties and ventures.....	473,090	169,260	122,970
Loans at short call.....	164,440	731,540	529,840
Debtors.....	207,160	263,680	214,830
Cash advances, etc.....	1,555,900	354,720	397,070
Cash.....	688,340	660,040	561,380
Creditors and dividends.....	741,000	797,590	1,211,980
<i>Consolidated Gold Fields</i>			
Net profit.....	467,280	659,570	662,630
Preference dividends.....	136,880	140,240	143,170
Ordinary dividends.....	327,990	517,160	516,250
Ordinary dividend per cent.....	15%	20%	20%
Carried forward.....	17,380	19,540	22,750

The summary of results of the company's gold mining subsidiaries on the Rand shows an increase of 9.1 per cent. in the tonnage milled, of 13.7 per cent. in the dividends declared, of 6.9 per cent. in the average price for gold, and a decline of 10.2 per cent. in the recovery as measured in dwts. Aggregate ore reserves of 171,750,690 tons are 16.4 per cent. higher. Among the details of other undertakings, considerable attention is devoted to development on the West Witwatersrand Areas. Among the trans-Atlantic undertakings in which Gold Fields is interested through Gold Fields American Development Company, satisfactory progress is recorded by American Potash and the Bulolo, but the Botanamo Mining Corporation appears to be within sight of the end of its career. On the basis of the dividend of the past two years (allowing for the amount included in the price of the shares) the return on Gold Fields ordinary shares is slightly under 6 per cent.

Other Company Results.—This week's table of company results, on page 1105, shows the net profit of some 38 additional concerns. They carry, in the majority of cases, good news for investors. Among the "heavy" industrial concerns, *Stewarts and Lloyds of South Africa*, report a jump in net profits from £85,319 to £123,257, and dividends are resumed with a 5 per cent. payment. The *R. & A. Lister* results disappointed the market, whose dividend estimates proved too optimistic. The rise in profits from £52,134 to £75,827, however, is clearly satisfactory, and the increased dividend of 10 per cent. should satisfy long-term holders. The *Orient Steam Navigation* profits, which show a rise from £410,152 to £633,978, include £191,755 from the sale of investments. Profits of the *Anglo-Ecuadorian Oilfields* show that the increased 7½ per cent. ordinary dividend has been well within earnings possibilities. In the Trust group *Daily Mail and General* reports substantially increased net revenue of £301,387, but the dividend has been maintained at 11½ per cent. tax free, and the credit balance raised by over £97,000 to £254,238. Among the week's industrial issues the *Tate & Lyle* full report confirms the satisfactory profits figures discussed last week. The balance sheet shows a substantial rise in property, plant and stocks. The *Bowater* group of paper concerns report improved profits, *Bowater's Paper Mills* standing out with a rise of £40,059 to £131,768. *Foster Clark* have made satisfactory progress, although the dividend is maintained at 20 per cent. In the Hotels group, *Slaters & Bodega* reveal a modest recovery, while *Strand Hotels*, striking profits after "contingencies," shows its net profits

at the round sum of £120,000. *Crittall Manufacturing* profits have reached a new high record of £280,504; the preference arrears are to be paid off, and a reorganisation scheme is submitted. *Tobacco Securities Trust* announce a serious fall in net revenue from £758,409 to £527,103, and an ordinary dividend of 15 per cent. for the year. The consolidated net profits of the *United Molasses* group amount to £718,200, against £651,531, and 8 per cent. is paid on the ordinary capital, against 6 per cent. Among the week's dividends, the *Montague Burton* interim has been raised from 3 per cent. to 3½ per cent. and the *Raleigh Cycle* final from 8 to 11 per cent., making 15 per cent. for the year. The directors of the *London Midland and Scottish Railway* have decided to pay the 5 per cent. redeemable preference dividend without awaiting the year's results. *Anglo-Iranian Oil* have resumed interim dividends with a 5 per cent. payment.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following Company Meetings:—Royal Bank of Scotland, English, Scottish and Australian Bank, Johannesburg Consolidated Investment, Australian, Mercantile, Land and Finance, Charterhouse Investment Trust, Bekoh Consolidated Rubber Estates, Wall Paper Manufacturers, Klerksdorp Consolidated Goldfields, Jantar Nigeria, New Goldfields of Venezuela, Bushtick Mines (1934), New Modderfontein Gold Mines, and Trepeca Mines. Mr Alexander Maitland, addressing the shareholders of the Royal Bank of Scotland, reviewed the improvements in Scottish trade and industry and urged the removal of political barriers to world trade. The chairman of Johannesburg Consolidated Investment Co. discussed the importance of marginal ore to the industry and attacked the complexity of the taxation system. At the meeting of Wall Paper Manufacturers, the chairman presented a consolidated balance sheet for the company and its subsidiaries. Mr C. A. Moreing, of Klerksdorp Consolidated Goldfields, reviewed the year's progress in development and prospecting, and referred to the successful public issue by the new operating subsidiary company. The chairman of Trepeca Mines described arrangements for deeper mining at Stantrg mine. Mr John A. Agnew reviewed development work of New Goldfields of Venezuela and anticipated very satisfactory results. Mr R. W. Harrison, of Bekoh Consolidated Rubber Estates, reported payments greater than actual earnings, but considered the outlook better than for a long time. Bushtick Mines had increased both ore reserves and milling capacity during the year, according to the chairman's report. The chairman of Jantar Nigeria Company reported a considerable increase in the company's tin quota. At the Charterhouse Investment Trust meeting, Captain H. N. Hume reported on the first year of the Trust's Industrial subsidiary. The chairman of Australian, Mercantile, Land and Finance Company commented adversely on the burden of taxation the company had to bear in three countries, which amounts to double the dividends. The chairman of Wall Paper Manufacturers reported that competition in the industry is increasing, but expressed his confidence in the company's ability to meet it. Mr John Martin gave the New Modderfontein meeting an exhaustive review of the company's continued progress.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET DECEMBER 3 | ACCOUNT DECEMBER 5

THE markets this week have again lacked real driving power, and appear to be experiencing the pause for stock-taking which inevitably follows the discounting of all available bull points. Company news has been good, and in some cases extremely good. General indications of the demand for consumers' goods, such as the retail trade figures and the record rayon output, suggest no lack of

general purchasing power to sustain recovery. The flies in the amber have been mainly of foreign origin. Certain sections of the market were naturally affected by the dangers facing M. Laval and the franc, though the former survived his crucial test on Thursday. Farther afield, rioting in Brazil and the first stages of the Japanese military campaign for assisting "autonomy" in North China led to uneasy foreign bond dealings, and the wholly unexpected return of a Labour Government in New Zealand, with its aim of "national control of public credit" was adversely received in London.

Gilt-edged stocks opened the week in steady fashion, and French purchasing, on franc fears, brought later support. The tone continued satisfactory on Tuesday, but the mid-week trend gradually became easier, and business was rather quiet, apart from professional interest. In the Dominion list, New Zealand issues were very flat owing to the return of a Labour Government, and dealers took refuge in wide quotations until some more definite statement of policy came to hand. Home Corporation ruled quiet owing to the resumption of municipal borrowing.

The foreign bond market had a very chequered week. Chinese issues opened more confidently on Monday under the lead of the 1913 issues, but the later news that the Japanese military authorities had taken control of Tientsin led to an all-round fall in Chinese and Japanese issues. Rioting in Rio de Janeiro and in other centres depressed the Brazilian Funding issues, but the reported suppression of the insurgents by the Government brought a partial recovery on Thursday.

Home rail stocks commenced the week in firmer fashion, and held their modest gains satisfactorily. Business tended to broaden as the week progressed, some operators finding their justification for buying Southern deferred in the course of the Rating Appeal, while others regarded the week's traffics, the immediate decision to pay the L.M.S. redeemable preference dividend, and the hope of Government action in the coal dispute with favour. London Passenger Transport "C" stock reflected the excellent traffic return.

Although the Argentine rail stocks opened quite firmly, they were becalmed later in the week. Prior charge stocks were largely unchanged, but the equity issues wilted owing to the lack of support. Brazilian stocks were affected by the political disturbances, and American stocks, despite a brisk opening, soon gave way under profit-taking.

The industrial share markets lacked sparkle this week. Wall Street's distractions were responsible at the opening, but later it was evident that the professional operators were enjoying a breathing space, in view of the political and currency situations abroad, and of the lack of new bull points at home, before extending their commitments. Quotations therefore tended to drift slightly, although there was no lack of features resulting from the large number of results published this week. In the electrical equipment group, Crompton Parkinson were active following the announcement of record profits (discussed on page 1081), and after the profit-takers had been busy, an active demand took the shares as high as 108s. 3d. General Electric and other shares were also prominent in this group. In the motor section, Austin showed little change in a rather dull market, and early buying of Thomas Tilling on prospects was soon followed by profit-taking. Iron and steel shares became firmer after an irregular opening, Tube Investments responding to the report (analysed on page 1080). Coal shares remained unaffected by the labour situation. Electricity supply shares seemed dull, and losses of 6d. were common in mid-week. Textile shares lost much of their recent impetus, although rayon issues responded to the record output figures on Thursday. Despite the issue of further favourable brewery results (of which a selection is given on page 1080), the shares were subjected to a fair amount of profit-taking, and the narrow movements among the leading tobacco issues frequently resulted in fractional losses. The miscellaneous industrial leaders lacked real drive, although a partial mid-week recovery occurred in certain issues. Crittall Manufacturing responded to the record profits and to the fairly devised reorganisation scheme, while other shares affected favourably by their published results included Tate and Lyle, and Turner and Newall (whose preliminary figures will be found on page 1080). Brick and cement shares tended to ease. New Zealand bank issues were depressed by the election results.

Initially, prices in the oil share market were marked down, for the week-end orders were soon cleared and conditions became quiet. The Anglo-Iranian interim dividend declaration, however, put the market in better humour, for it kindled renewed hopes that the "Shell" and Royal Dutch boards would follow this example in due course. Burmah also received attention, owing to its holding of Anglo-Iranian. Initial advances in mid-week, however, were not held and the leaders became reactionary.

The rubber share market remained in dismal mood this week, owing to uncertainty whether next Tuesday's meeting of the International Committee might bring an increase in the N.E.I. quota. Tea shares opened dully, but the revival of demand in Mincing Lane brought a certain amount of support later, and the scattered selling ceased. Most interest was directed to Indian issues, but improvements were always modest.

Gold shares tended to fade from the picture this week. Paris, troubled by the further increase in Bank rate and by the political crisis, sold some of its favourite counters, and the Johannesburg market seemed to be awaiting some sign from the taxation enquiry. Mid-week movements were almost without exception downward, and the Gold Fields report (discussed on page 1082) brought little support earlier in the week. Rhodesian copper shares were in active demand throughout the week, and recorded appreciable net gains, but tin shares lacked life.

FOREIGN STOCK EXCHANGES

NEW YORK

For the past week Wall Street has been unable to choose between the encouraging signs of continued business recovery and the warnings of various prophets of woe. On Thursday of last week there was a sharp upward movement with rails in the lead, followed by industrials, utilities and mining shares. On Friday the market reacted, with rails holding their ground, and on Saturday recovered

again. The rise was attributed this time to the statement of Governor Eccles that there was no fear of inflation since the market was being supported by cash buying, not by purchases on margin. Railroad stocks were again in the lead, with industrials ahead of relatively sticky utility obligations. This week opened with renewed weakness, which was overcome with a slight recovery on Wednesday. Government bonds have been soft and the market is now awaiting the Treasury's December financing plans, but there was considerable support for industrial bonds at the end of last week. Gold continues to move to America, and one cause of the weaker tone in the markets has been fear of a market set-back if and when France devalues and gold moves back again. Business reports are good, particularly from the railways; power output for last week was 14.5 per cent. higher than for a year ago, and steel mill activity in the current week is estimated by *Iron Age* at 56 per cent. of capacity. On Thursday all markets were closed for Thanksgiving Day.

PARIS

Paris's measure of political uncertainty has been filled almost to overflowing. Rentes and banking shares fell most in the reaction of last week's increase in the bank rate, and although there was a slight recovery on Friday, Saturday saw renewed depression as M. Laval's political difficulties increased. The opening of this week's trading was celebrated by a further rise in the bank rate, which the Bourse, with obstinate optimism, interpreted as a bull point for rentes. For the rest of this week business has been irregular and the market seems to fear the worst, but is

unwilling to anticipate it. At mid-week there was a slight rise in rentes on the pretext of a firmer exchange rate for the franc. Industrial markets are stagnant.

BERLIN

Last week's share market was irregular, with declines predominating. Reichsbank and the commercial bank issues were weaker, lignites mostly firm, and the standard industrials rather lower. Russian securities were temporarily bought in connection with British loan rumours; and distrust of the European gold bloc currencies led to exchanges from franc and gulden securities into certificated dollar bonds. The home loans market was quiet. Shares in the new week were dull, and in general reactionary, but Tuesday's market closed steady. On Wednesday the volume of business was small and prices irregular.

AMSTERDAM

Encouraged by Wall Street and by the renewed attack on the gold bloc currencies, there was active trading on the Bourse towards the end of last week, and tobacco shares led in all-round price increases. There was a setback on Saturday with the exception of tea shares, which were encouraged by the higher London auction prices. This week opened with a renewed burst of activity, particularly in the American market; tobacco shares rose to new peak prices, there was strong demand for sugar shares, and rubber issues were firm. In mid-week there was a general setback, Wall Street still setting the pace, but there was firm resistance at the lower prices reached.

CANADA

Late in October the Canadian stock markets showed greater buoyancy than in any previous period this year, and seasoned stocks moved steadily upward under the lead of industrial and distillery issues. Public utilities also gained ground, and even the depressed newsprint stocks rose a little. The rise was chiefly due to the commanding majority and moderate policy of the new Government, and it was aided by the rise in Wall Street. The most popular speculative counter was International Nickel, in which dealings were heavy and substantial gains were recorded. Genuine investment buying seems as important as speculation, for brokers' loans have shown no great increase.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"
8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

Within the last few days fresh momentum has come from the trade agreement with the United States on the argument that it will promote increased prosperity. Distillery stocks have improved in expectation of better business in matured whisky, and mining and power stocks have also moved higher. Conversely, it is a bear point for motor, radio and other industries, which will be exposed to keener American competition. The bond market has been firm, and offerings have been light and quickly absorbed. For the week ending November 9th the yield of the six leading Dominion issues averaged 3.50 per cent., compared with 3.53 per cent. for the previous week. The Bureau of Statistics "Investors' Index" for all common stocks for the week ending November 7th was 106.7, as compared with 103.5 and 101.5 for the weeks ending October 31st and 24th and 87.1 for the week ending November 8, 1934.

CAPITAL ISSUES

THIS week has seen real activity in the new issue market. As many as seven public offers, including those of a Colony, a municipality and a leading electric supply concern, have appeared, and the week's "new money" total of £5,060,750 is the highest since the third week of July. The *Southern Rhodesia* loan, in 3 per cent. 29-year stock at one point discount, is of the type most sought after by trustees. *Brighton*, which is always assured of favourable credit terms in the City of London, has chosen an identical medium as last week's *Sunderland* issue, at once point premium. Both issues were promptly oversubscribed—the latter handsomely; but the weight of "stag" applications was reflected in the ½ point discounts at which dealings settled. High market esteem for *Edmundsons Electricity Corporation* is reflected in the terms of its large debenture stock offer for sale. The stock is well secured by earnings and assets, and ranks in the highest class of utility debentures. *United Kingdom Gas Corporation*, following its recent acquisitions, has made a dual issue of preference and ordinary shares, at 5 and 10 per cent. premium respectively. The Corporation was incorporated last January, and no accounts have been made up. On the estimates of net revenue, including that accruing from surplus funds resulting from the issue, the preference shares appear reasonably covered. The ordinary shares will appeal primarily to the investor who seeks relative stability rather than rapidly expanding earnings. The *Associated London Properties* 5 per cent. debenture stock issue is a conversion operation, the high nominal rate reflecting its "second charge" character. The prospectus computes the "cover" on the "prior deductions" method. The more consistent "cumulative requirements" principle would reduce the "cover" from over 5 times, as shown, to under twice on the latest figures. London Industrial Finance Trust have offered a mixed issue of *Moss Gear* shares, the £1 preference at 2½ per cent. and the 5s. ordinary at 30 per cent. premium. The profits record shows wide swings between boom and depression, and the high disclosed earnings for ordinary shown for the latest year should be judged with due reference to the level of profits in 1931-32. The prospectus of *Silver and Steelcrafts* states that "certain assets" are being taken over from the vendor concerns. Profits are struck after depreciation and all other charges and repairs "on the basis applicable to the future." It appears that out of total assets of £102,000 (acquired for £99,500 in cash) stock amounts to as much as £53,000,

which is guaranteed by vendors to realise not less than £69,500. This transaction alone would give a higher profit to the company than the average annual figure for the last 4½ years. The shares appear to rank in the speculative class. Among the week's "introductions" pride of place goes to *North Metropolitan Electric* 3½ per cent. debenture stock. Particulars have also been published of *Aire Wool*, a Francis Willey concern; *William Briggs and Sons*, who have placed a line of preference shares through Charterhouse Investment Trust; and *J. H. Vavasour*, an established East India merchanting concern.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the yield is calculated by reference to the latest figures when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Profits of vendor, after depreciation and adjustments, years to August 31st: 1933, £11,788; 1934, £32,339; 1935, £39,554. Shares acquired by London Industrial Finance Trust at par, paying issue expenses, £5,000 liquidation expenses, and 3 per cent. commissions. Lists closed at 9.5 a.m. November 27th owing to heavy over-subscription.

BY STOCK EXCHANGE INTRODUCTION

Aire Wool Company, Ltd.—Share capital 300,000 10s. ordinary and 100,000 6 per cent. cumulative £1 preference shares. Acquires, at par, 150,000 £1 ordinary shares (entire share capital) of Airedale Combing Company, Ltd., incorporated 1916, woolcombers, whose total net assets December 31st last were £210,718. Profits, after depreciation before tax: 1932, £28,585; 1933, £41,025; 1934, £26,977. Dawnay, Day and Company, Ltd., and Robert Benson and Company, Ltd., subscribe for 100,000 preference at 21s. each and 200,000 ordinary shares at 10s. 6d.

Briggs (William) and Sons, Ltd.—Share capital 100,000 £1 ordinary, 130,000 5½ per cent. "A" cumulative £1 preference shares (of which the Charterhouse Investment Trust, Ltd., has agreed to subscribe for 100,000 shares at par, free of commission) and 25,000 6 per cent. "B" cumulative £1 preference shares. Both preference shares entitled to repayment of 21s. per £1 share in winding up. Acquires assets of William Briggs and Sons, Ltd., chemical manufacturers, founded in 1865, valued £235,532 for £255,000 payable £155,100 cash and £99,900 in ordinary shares, £19,468 for goodwill. Profits, after depreciation, years to September 30th: 1933, £32,086; 1934, £40,997; 1935, £44,671.

North Metropolitan Electric Power Supply Company.—Particulars of issue of £625,000 3½ per cent. debenture stock redeemable on or after January 1, 1951, at par at six months' notice and finally at par in 1976. The company supplies an area of about 660 square miles in Middlesex, Hertfordshire and Essex, providing bulk as well as direct supply. Electricity sold in 1934, 423.1 million units, an increase of 71 million units compared with 1933. Average annual increase during past five years has been 16.2 per cent.

J. H. Vavasseur and Company, Ltd.—Share capital, 600,000 10s. ordinary shares and 100,000 5 per cent. cumulative £1 preference shares. Incorporated 1903 to manufacture and trade in coconut palm products. Messrs Levy, Langner and Company have agreed to subscribe for 60,000 5 per cent. cumulative £1 preference shares at 20s. net and 100,000 10s. ordinary shares at 14s. 6d. net. Profits of company and subsidiaries, after depreciation, before income tax: 1932, £29,169; 1933, £53,968; 1934, £48,272. Total assets December 31, 1934, £873,038; net assets, £489,906.

BY TENDER

Alliance and Dublin Consumers' Gas Company.—This company is offering for sale by tender an amount of consolidated ordinary stock which with premiums obtained will realise £300,000. The capital is required for the purpose of liquidating this balance and extinguishing the company's overdraft.

Tendring Hundred Waterworks Company.—The Tendring Hundred Waterworks Company is offering for sale by tender £50,000 4 per cent. debenture stock. The minimum price of issue is £103 per £100, yielding at that price £3 17d. 8d. per cent. The net revenue for 1934 was £24,661. The interest on the loan capital, including the present issue, will amount to £4,448, leaving on last year's figures a surplus available for dividend on the preference, preferred ordinary and ordinary shares of £20,213.

BONUS ISSUES

Crompton Parkinson, Ltd.—It is proposed to capitalise a further sum of £241,294 of the reserves so as to provide for the distribution among the ordinary and "A" ordinary shareholders of 965,176 new fully paid "A" ordinary 5s. shares, representing a 100 per cent. capital bonus. This step is being taken in order to adjust the position of the equity capital in relation to the value of the assets and the company's greatly increased earning capacity.

British Tyre and Rubber Company.—The directors announce an issue of 100,000 ordinary of £1 at 36s. per share. These will be offered to ordinary shareholders on the register on November 23rd in the proportion of one for each eight shares already held.

ISSUES TO SHAREHOLDERS ONLY

Lister (R. A.) and Company, Ltd.—In order to raise additional capital to finance the expanding business of the company, the directors have decided to offer to the ordinary shareholders 37,500 new ordinary shares of £1 each at a price of 35s. per share payable in full on allotment. Each ordinary shareholder will have the right to subscribe for one new ordinary share for every ten ordinary shares held on that date.

Takau F.M.S. Rubber Estates.—Issue of £10,000 6 per cent. first mortgage convertible and redeemable debenture stock at par, registered and transferable in multiples of £1.

CONVERSIONS AND REPAYMENTS

British Government 3 per Cent. Treasury Bonds.—The fourth and final drawing of 3 per cent. Treasury Bonds will take place on December 3rd and succeeding days. The nominal amount of the bonds to be drawn will be 40 per cent., being the whole amount outstanding, of the total nominal amount of the bonds originally created. The original issue was £110,000,000 and was made in 1932. The prospectus provided for drawings of not less than 10 per cent. or £11,000,000 yearly. There is £44,000,000 outstanding.

Twynfords 6 per Cent. Debentures.—The 6 per cent. debentures will be paid off at the National Provincial Bank, 15 Bishopsgate, E.C., on January 2, 1935.

Dick (R. and J.), Ltd.—As liquid resources are considerably in excess of requirements, it is proposed to repay in cash 5s. in respect of each £1 cumulative preference share. Holders will then possess 6 per cent. cumulative preference shares of 15s. fully paid, repayable in case of liquidation at 22s. per share.

North British Rayon.—The directors have decided that the 235,000 unissued 10s. shares created in 1932 shall be called 6 per cent. cumulative convertible preference shares. Holders will have the right before July 1, 1939, to convert each preference into an ordinary 10s. share. The directors propose as soon as possible to put forward a scheme for funding the company's notes.

The Austrian Government Guaranteed Loan, 1923-1943.—The trustees of this loan announce that arrangements have been made for the repayment of the Spanish tranche on December 1, 1935, thus completing the arrangements for the repayment of all tranches of the loan.

London County 3½ per Cent. Consolidated Stock.—This stock will be paid off at par on and after January 6, 1936.

Porkellis Property and General Investment Trust, Ltd.—At the annual meeting on December 3rd resolutions will be submitted sanctioning the payment of dividends and doubling the company's capital.

FORTHCOMING ISSUES

Dancer and Hearne, Ltd.—A public issue of 320,000 5s. ordinary shares is expected shortly.

Essex County Council.—This body is seeking to issue about £1,250,000 of 3 per cent. stock. Funds are required to repay mortgages bearing a high rate of interest and for new works.

Maidstone and District Motor Services.—Issue of 83,380 ordinary shares of £1 in order to provide the necessary funds to meet developments in the business. According to present arrangements, it is anticipated that the offer to subscribe for these shares will be made to the ordinary shareholders early in January at par in the proportion of one new share to every five held.

E. K. Cole, Ltd.—The directors are expected shortly to decide upon the terms of the issue of 250,000 new 5½ per cent. preference shares of £1 which will be offered to the holders of the existing preferred ordinary and ordinary shares.

County Cinemas.—This company is expected shortly to make a £3,000,000 issue.

Australian Loan.—It is understood that the Commonwealth of Australia is likely to raise a loan shortly for the purpose of converting £21,657,000 of New South Wales 5 per cent. stock.

Crittall Manufacturing.—Two new issues are expected early in the New Year by this company. It is proposed to create and issue 750,000 5½ per cent. first cumulative preference shares at 21s. per share to provide funds for the repayment of the company's £750,000 6½ per cent. registered notes. It is proposed to create £1,000,000 4½ per cent. debenture stock, and to issue £850,000 of this stock in the first instance. £500,000 of the money thus raised will be devoted to the conversion or redemption of the existing £500,000 6 per cent. debenture stock.

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

Atlas Cement of South Africa.—£350,000 5 per cent. debenture stock is expected to be issued in the middle of next week.

Other Forthcoming Issues.—Other forthcoming issues expected are as follows: Fife, Inverness, Newcastle, Luton and Sheffield.

OTHER RESULTS OF ISSUES

Ascot District Gas and Electricity.—The offer for sale by tender of £24,000 4 per cent. perpetual debenture stock was substantially over-subscribed. The average price of allotment was £104 12s. 2d. per cent., and the lowest accepted tender was at £104 1s. per cent.

Irish Free State Conversion Loan.—Applications for redemption of only £180,000 of the Free State £7,000,000 First National Loan were received. Only a limited amount of the new Conversion Loan is available for allotment, and this is to be distributed among small investors. Applications for conversion exceeded £6,370,000.

Sunderland 3 per cent. Loan.—Owing to heavy over-subscription, allotments have been drastically scaled down. Subscriptions exceeded £14,000,000.

Thrift Stores.—The recent offer of 625,000 1s. deferred ordinary shares to shareholders at 2s. 3d. per share, has been substantially over-subscribed.

CALLS DUE DECEMBER 2 TO DECEMBER 7, 1935

The grand total of calls in November 1935, is £9,759,149, which compares with £8,049,212 in November, 1934.

CONTINUED ECONOMIC RECOVERY IN AUSTRIA

FAVOURABLE DEVELOPMENT IN THE FOREIGN EXCHANGE POSITION

THE first ten months of 1935 marked another period of the upward movement in Austria's financial and economic position. Thus the slow but steady recovery which was noticeable in 1934 was further strengthened. Though the budgetary equilibrium is not yet fully restored, the fact should be emphasised that the only State loan which was floated in 1935 was for the greater part utilised to fund short-term liabilities of the Treasury, the remaining balance of 66 millions of schillings being devoted to finance the extraordinary budget of 1935, which contained the expenditure for public works.

This 5½ per cent. Internal Loan, 1935-1960, was issued for a nominal amount of S.175,000,000. Public subscriptions, including those of the banks for their own purposes, apart from any obligations as syndicate members, amounted to 136.9 millions of schillings, so that the issuing syndicate only had to take up 38.1 millions of schillings, which was less than they had expected.

Stable Exchange

For the third consecutive year the schilling rate remained absolutely stable during the period under review.

The amelioration in the tourist traffic on the one hand and the decrease in the passivity of Austria's trade balance as well as the reduced foreign exchange requirements of the Treasury due to the conversion of the League Loan on the other hand, enabled the Austrian National Bank to increase its holdings of foreign exchange to a considerable extent. The favourable development in the foreign exchange position, therefore, made it possible to lift, as far as the exchange of goods is concerned, practically all payment restrictions towards such countries as have not established foreign exchange regulations, and to allow the resumption of the transfer for the service of private foreign debts. Applications regarding foreign exchange transactions of another kind are, in general, treated in a favourable way by the National Bank. The foreign exchange restrictions as established in 1931 are, therefore, chiefly confined to a general control of the transactions by the National Bank.

Decrease in Unemployment

Unemployment decreased, according to expectation, during 1935; under the Government's slogan "Arbeitsschlacht" (i.e. battle for employment), a large-scale scheme was elaborated early in the spring, and for its greater part realised before the end of October. Some 400 millions of schillings have been made available by the Federal Government and the local authorities for the purpose of creating fresh employment. The construction of roads forms a very important item of this employment scheme.

The Grossglockner Alpine Road, the construction of which was commenced in 1930, was completed in the summer of 1935, and opened for traffic. This is one of the finest alpine roads in Europe, constructed at the level of some 7,000 ft., and the most modern alpine road on the Continent. The Grossglockner Alpine Road is, for the time being, doubtless the most attractive item Austria may offer to foreign tourists.

In connection with the "battle for employment," the Viennese Municipality has started a big rebuilding programme.

This year is the first since the birth of the new Austria in 1918 in which no change in the banking structure was made. This means that the banks are now definitely adjusted to the economic needs and potentialities of the Austrian State as created after the dismemberment of the old Empire.

Fortunately, no political troubles disturbed the peaceful reconstruction work carried through in 1935.

The foregoing remarks are substantiated by the actual figures.

Federal Revenues

During the first six months of 1935 the federal revenues (of the ordinary budget) amounted to 688.3 millions of schillings, while expenditure was 643.0 millions, thus leaving a comparatively small deficit of 45 millions, which was met by means of short-term Treasury Bonds. Extraordinary expenditure during the first half year amounted to 51.7 millions; as was mentioned above, the latter item was completely covered out of the proceeds of loans.

Position of the National Bank of Austria

The position of the National Bank of Austria may be summarised in the appended table (in millions of schillings):—

	Dec. 31, 1934	Mar. 31, 1935	June 30, 1935	Oct. 15, 1935
Notes and deposits ..	1,117.9	1,113.4	1,173.9	1,219.4
Gold and foreign exchange	277.4	274.5	324.3	378.5
Bills discounted and advances	238.6	235.2	233.6	231.0

The most interesting item is the increase in the foreign exchange reserve by some 100 millions of schillings during the last six months of the current year. The gold reserve remained practically stationary at the level of 242 millions.

The bank rate was reduced from 4½ to 4 per cent. on February 23rd, and from 4 to 3½ per cent. on July 10, 1935.

The general improvement in Austria's economic and financial condition is evidenced by the fact that the index number of Austrian shares quoted on the Vienna Stock Exchange (1930=100) rose from 100.3 in July, 1935, to 105.3 in September. The savings deposits of the Austrian banking institutions rose from 2,173 millions at the end of 1934 to 2,256 millions in September, 1935.

Statistics of Production

Turning to output of production, the following figures reflect the improvement in general business conditions:—

	Production (in tons)			1934
	Sept.	Aug.	July	Monthly Average
Iron ore	84,970	79,820	71,450	38,667
Pig iron	21,089	21,578	18,347	10,965
Crude steel	16,500	21,423	22,620	15,325
Rolled goods	14,093	16,793	16,193	12,513
Brown coal ... }	Not yet published	243,674	234,471	237,945
Coal		24,056	23,195	20,902

It is an interesting fact that the index numbers of prices remained practically unchanged during 1935: the average annual index of wholesale prices of 1934 was 110.0; the corresponding figures for July, August, and September, 1935, were 111.9, 111.3, and 109.9.

The results hitherto secured in Austria's economic and financial recovery are the more interesting as they have been achieved under a new constitutional system. The foregoing remarks would not be complete without taking account of the working of Austria's new constitution proclaimed on May 1, 1934. As a matter of fact, Austria's political, social, and economic structure is now being completely overhauled in order to bring it into line with the new constitutional principles. Austria's new constitution has been placed on the corporative basis; a similar constitutional reform was carried through in Portugal some years ago.

Restoration of Historic Functions

Austria is now engaged in restoring the historic functions which the professional corporations have performed in the past in Austria's economic and social life. A great amount of self-government and autonomy has been granted to the professional corporations; the constitution, however, does not prescribe hard-and-fast limits for the new organisation of professional corporations. Thus there is plenty of room for the free evolution and the organic growth of the professional corporations from within.

The decisive factor in the constitutional changes with reference to the professional corporations is that the latter embrace both employers and employees, thus helping to eliminate all kind of class war. So far as agriculture is concerned, the new organisation may be considered as completed, while good progress has been secured in most of the other sections of the economic activity of Austria.

ENCOURAGING TRADE CONDITIONS

MR ALEXANDER MAITLAND'S REVIEW

The Annual General Court of Proprietors of The Royal Bank of Scotland was held, on the 27th instant, at Edinburgh, Mr Alexander Maitland, K.C., presiding.

Mr Maitland said:—Before presenting the Directors' Report and the Accounts for the year, I wish to refer to the great loss the Bank recently sustained in the death of His Grace the Duke of Buccleuch and Queensberry, K.T., G.C.V.O., who held the office of Governor of the Bank for the long period of twenty years, and, during that time, placed his wide experience and sound judgment unreservedly at its service. Until some six months ago he presided regularly at the weekly Meetings of the Court, where his intimate knowledge of the affairs of the Bank, his great abilities and business acumen were of the utmost value.

His personal qualities endeared him to all alike, whether Directors, Officials or Staff, and, in the long association of the Dukes of Buccleuch with the Bank, there can be none who rendered more distinguished services or whose loss could be more sincerely regretted.

It is also with deep regret that the Directors record the death of Mr T. M. Murray, W.S., who had been a Director since 1927. Mr Murray took a keen and active interest in the Bank and the loss of his advice and experience is greatly felt by his colleagues.

To fill the vacancy in the Governorship the Directors have elected His Grace the new Duke of Buccleuch and Queensberry, and are confident that he will prove a worthy successor to his father. His election preserves a tradition of great value to the Bank and one of which it is justly proud.

In moving the adoption of the Report, Mr Maitland said:—I presume it will be your pleasure that the Annual Report and Balance Sheet, with the Auditors' Report, which have been in your hands for some days, shall be taken as read.

The Directors are pleased again to submit what in their opinion is a satisfactory Statement.

INCREASED DEPOSITS

The Deposits show an increase on last year's figures of over £5,000,000, the amount appearing in the Balance Sheet being £64,009,174—which is a record figure for the Bank. Under present conditions and taking into consideration that the General Election was pending at the time we closed our Books, it is not surprising that there should be an increase in the figures in this side of our business.

We have also to report a small increase in the total of the Small Savings Accounts, which are included in the above total.

Notes in Circulation at £2,812,642 are slightly up on last year, but Acceptances and Indorsements of Foreign Bills and other obligations show a decrease of £163,000.

This decrease in the latter heading is wholly accounted for by a smaller volume of Forward Exchange Operations, which we would again mention are on account of clients and have all been covered with first-class Banks or institutions.

LIQUID RESOURCES AND INVESTMENTS

On the Assets side of the Balance Sheet the figures under the various headings provide ample evidence of the highly liquid position of the Bank.

Cash on Hand and with the Bank of England and other London Bankers, and Money in London at Call and Short Notice, at approximately £14,600,000, exceeds last year's figure by more than a quarter of a Million.

The marked increase in Deposits accounts for our larger holdings in British Government, Indian and Colonial and other Securities.

As usual, our Investments are valued at or under the Market prices ruling on the date of our Balance.

Bills discounted, including British Government Treasury Bills, are well maintained at practically last year's figures.

We regard it as a gratifying feature that we are able to report an increase in Advances on Cash Accounts and Current Accounts of over £800,000. Last year we reported an increase of nearly £700,000, under this heading, so that in a period of two years of difficult trading conditions, we have increased our Advances by over One and a half Million pounds.

PROFITS

Turning to the Profit and Loss Account, we are able to show an increase in Profits of about £8,000, which we regard as highly satisfactory.

Following our usual practice, all Bad and Doubtful Debts have been fully provided for.

APPROPRIATIONS

The Directors recommend that a Dividend for the Half-Year, payable at Christmas, at the same rate as formerly—17 per cent. per annum—be declared, and that the same appropriations as last year be made to Pension Reserve Fund and to Bank Buildings and Heritable Property.

After these appropriations there remains the sum of £76,217 7s. 10d., which it is proposed to carry to Rest or Reserve, now standing at the substantial figure of £3,857,143.

For the four years from 1931 to 1934 we carried undivided profits to our Inner Reserves which, as you have been told on previous occasions, are strong. This year we have reverted to the established practice of placing our undistributed profits to the published Rest or Reserve.

BUSINESS OF THE BANK

I am pleased to be able to report that the general business of the Bank throughout Scotland and at its London Offices continues to prosper.

Recently, Mr Smith, Manager of Drummonds' Branch, London, and Mr Howe, Agent of Western Branch, Burlington Gardens, London, were appointed Local Directors of their respective Branches. These gentlemen have rendered excellent services to the Bank, and we hope to retain for some years the benefit of their ripe experience.

Our associate Bank, Williams Deacon's Bank, Ltd., has benefited from the improved conditions in the area in which it operates.

TRADE REVIVAL

In his Speech from this Chair last year the Governor, in dealing with Scottish Trade and Industry, reported an improvement in a number of industries, and I am glad to say that the reports which we have recently received from various centres are again on the whole encouraging.

In Shipbuilding there has been a decided improvement since last year, and lately a number of orders for new ships has been placed.

The Clyde is confidently expecting to share in the Admiralty new building programme.

At the present time only about 40 per cent. of the slips in the Clyde Yards are occupied, and, while a considerable amount of leeway has to be made up before the industry is back to normal, the outlook is brighter than at any time during the past six years.

The Iron and Steel and Engineering Industries have shown a marked revival, and with good orders in hand these industries promise to keep busy for some time to come.

Uncertain life needs certain protection

May we send you a quotation?

Head Office: 1 Dale Street, Liverpool, 2 | London: (Chief Office): 1 Cornhill, E.C.3

In Coal there has been an improvement, both in the home and export trade. It is to be hoped that a settlement between the employers and the men will soon be reached and the threat of a Strike removed.

The Jute industry is experiencing better times and some of the mills and factories have not been so busy for a number of years.

As regards Agriculture, which is passing through a very lean period, we are encouraged to believe that prospects are also brighter in this industry which is so vitally important to the country.

WORLD TRADE

The economic depression has now lasted for nearly six years, and, although the Export Trade of this country shows a relatively good recovery from the lowest point of the depression in 1932, the vast unemployment existing in practically all countries portrays the heavy dislocation and disequilibrium in international trade relations, and I would again repeat what has been said on previous occasions from this Chair—that the removal of the many politically imposed barriers, which prevent the normal purchase and sale of goods and services between the nations, is essential if the unemployment problem is to be solved and other grave difficulties avoided.

DIRECTORATE

To fill vacancies on the Board Mr John T. Tulloch, C.A., Glasgow, and Mr Kenneth Murray, W.S., Edinburgh, were elected Directors of the Bank. From the experience we have had of these gentlemen at our meetings, we regard ourselves as fortunate in securing them for the Board.

THANKS TO OFFICIALS AND STAFF

I desire to record the sincere thanks of the Directors to the Officials and Staff of the Bank at the Head Office, London, Glasgow and Dundee Offices and Branches for the ungrudging services they have rendered during the past year. Mr Whyte, the General Manager, had, some two years ago, a difficult task imposed upon him in succeeding so distinguished a Banker as the late Sir Alexander Wright. Our confidence in him has been amply justified, and under his Management the best traditions of the Bank have been maintained, and I am sure he would be the first to admit that this result could not have been achieved without the loyal co-operation he has received from all those working with him.

APPROVAL OF ACCOUNTS—DIVIDEND

I now beg to propose that the Report, containing a Statement of the Accounts and Balance Sheet, be approved, and that out of the Profits of the year a Dividend at the rate of 17 per cent. per annum for the Half-Year, under deduction of Tax, be declared in conformity therewith.

The Report was approved, and the Governor, Deputy-Governor, Extraordinary Directors, and the retiring Ordinary Directors, were re-elected, and Auditors were re-appointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

KLERKSDORP CONSOLIDATED GOLDFIELDS, LIMITED

GRATIFYING RESULTS OF DEVELOPMENT

The annual general meeting of the Klerksdorp Consolidated Goldfields, Limited, was held, on the 22nd instant, at Caxton Hall, Westminster, London, Mr C. A. Moreing, M.Inst.C.E., presiding.

The Chairman, in the course of his speech, said:—*Dealing with the large areas which your company controls in the Klerksdorp district of the Transvaal Province, our objectives were twofold: first, the development and bringing to a state of production of a portion of the areas covering the Dominion group of reefs, the outcrop of which had been traced for many miles prior to the inception of the company, and upon which a certain amount of exploratory work had already been done; and, second, the further investigation of those areas which were stated by highly qualified geologists, after long and careful studies, to contain the Main and Government Reef horizons.*

By the end of the period covered by the accounts—namely, June 30th—certain portions of your areas were fully equipped for mining, the ore developed being 51,790 tons, and the general managers of your company advised that the developed portions of the Dominion Reefs were ready for production and capable of maintaining an initial unit mill of 20,000 tons per month. In consultation with your general managers, your directors decided to form a first producing company to take over these areas and to erect and work a mill of that capacity.

Since June 30th the rate of development of these areas, owing to the additional equipment available, was speeded up very greatly, and at September 30th the engineers' report stated that the ore fully developed was 125,000 tons of an average value of 6 dwt., with, in addition, a partly developed tonnage of 72,000 of the same value, and that it was confidently expected that by the end of this year the total ore in sight would be 250,000 tons, or one year's supply ahead of the mill. They further stated that the rate of development was between 30,000 and 40,000 tons per month, thus foreshadowing not only greatly increased ore reserves but the possibility of milling larger tonnage than that contemplated.

I draw your particular attention to the value of the ore developed, and to the width of the reefs, reported in the monthly progress reports which are regularly issued to the Press to keep the shareholders and the general public informed of the progress of the work. When you remember that the average yield of the ore from the great mines of the "Central Rand" at Johannesburg is only 5 dwt. or less, and is being raised from depths of many thousands of feet at an average cost of 19s. per ton, you can easily imagine how great will be the profit to be derived from ore of an average value of 6 dwt., raised from a depth of a few hundred feet only at a working cost of less than 15s. per ton, leaving with 6 dwt. ore a profit margin approaching 4 dwt., or nearly 26s. per ton.

A public issue of part of the capital of the new operating subsidiary company, Dominion Reefs (Klerksdorp), Limited, to take over these areas was made on the 5th instant, and was immediately over-subscribed, this subsidiary company having purchased a portion of our Dominion Reefs areas with the plant and equipment thereon, paying as consideration the actual sum expended on plant and development as at September 30th—namely, £104,281, plus one million 5s. shares fully paid.

You will remember that in the prospectus of this company it was stated that if one or both of these reefs are proved in the company's areas the potentialities of your property must far exceed the scope of the present issue. Your company is concentrating upon this work and, should the drilling results confirm the sanguine anticipations based upon the data collected during the past year, it is no exaggeration to say that a further important new goldfield of great extent will be opened up.

Summarising the results, the first subsidiary company has been launched and will make an early appearance in the ranks of dividend payers. Our investigation and surveys of the Main and Government Reefs areas confirm our engineers' opinion of the high potential value of these holdings, and we are now starting an intensive drilling campaign to locate definitely the value and depth of these reef horizons, which, as you have already been told, are expected to be in some places as shallow as 1,000 ft. We are also developing vigorously the remaining areas of the Dominion Reef. I am sure you will agree with me, from this brief review, that what has been accomplished in the thirteen months of this company's existence is a remarkable achievement. The report was unanimously adopted.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED

IMPROVED CONDITIONS IN THE COMMONWEALTH

MR ANDREW WILLIAMSON'S INTERESTING REVIEW

The forty-third annual general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 27th instant, at 5 Gracechurch Street, London, Mr Andrew Williamson, the chairman, presiding.

Mr A. A. Shipston, London manager and secretary, read the notice convening the meeting and the auditors' report.

The Chairman said the year 1934-35 was disappointing in the unsatisfactory prices for Australia's principal exports, but there was a marked improvement in internal trade. The remarkable rise in wool which occurred during the previous year resulted in a greatly increased national wool cheque, totalling over £57,000,000, as compared with £36,500,000 in the year before. This caused last year an increase in imports and a quickening of demand for Australian manufactures, with increased factory activity and the demand for factory labour. There had been during the past year more business activity, with more inquiry for financial accommodation from the banks, as would be seen from their own accounts. Indeed, throughout Australia there was evidence on all hands of greater confidence and a definitely more hopeful outlook.

Primary industries in the past year, pastoral and agricultural, were adversely affected throughout most of the States by the lateness of the rains, and subsequently in some by plagues of grasshoppers. Over large areas in Queensland there prevailed the worst drought experienced for very many years, which resulted in very heavy losses of sheep and livestock, running into millions. While wheat prices last year were still unsatisfactory, they showed a slight improvement, and the wheat cheque was larger by over £4,000,000.

OVERSEAS TRADE

During the financial year there was a shrinkage in the value of total exports of over £8,500,000 and an increase in the value of total imports of approximately £13,500,000, an adverse movement of about £22,000,000. Taking the total imports from the total exports the balance of overseas trade in favour of Australia last year was £16,000,000 against rather under £38,000,000 in the previous year. The interest payable in London on Commonwealth and local authorities' debts last year was approximately £24,000,000 sterling, so that the surplus of exports over imports disclosed a deficiency for this purpose of £8,000,000. As, however, in the three preceding years the surplus of exports over imports was not only sufficient to meet the annual payment of interest on the Commonwealth Government debt and the debt of all local authorities, but sufficient to leave a surplus after these payments of about £40,000,000—ample sterling funds to meet these obligations, and affording no reason to disturb the rate of exchange, which had remained constant at £125 Australian for £100 sterling.

PROGRESSIVE IMPROVEMENT

In presenting the Commonwealth Budget for 1935-36, Mr R. G. Casey, then Assistant Treasurer, gave many interesting figures showing the progressive improvement of the Commonwealth. The increase in the number of workers employed in factories showed a steady upward movement, from 337,000 in 1931-32, the lowest in recent years, to 451,000 for 1934-35. Further evidence of the general improvement was seen in the totals of the deposits of savings banks, including the Commonwealth Savings Bank, which now amounted to £217,972,000, and in the upward movement in the bank clearings in the six capital cities of Australia. Another sure sign of returning confidence was the increase in building activity, residential, industrial and commercial. This had been in evidence in all the States.

During the year two further debt conversions had taken place, one in January last of £22,384,000, and another in July of £13,470,000, which brought the total of London conversions to date to £160,305,000, with an annual saving in interest, including exchange, of £2,935,000. The old rate of interest averaged 5s. 2s. 7d. per cent.; the new rate £3 13s. 5d. per cent.

The short-term debt amounted altogether to £78,749,000, or some £4,000,000 less than at June 30, 1932. Of that amount £33,600,000 was held by the Commonwealth Bank in London in Treasury bills, and the balance in Australia by the Common-

wealth bank and the trading banks. He assumed that the whole policy with regard to the question of funding floating debt would receive from time to time very careful consideration.

INTERNAL DEBT

The internal debt, which had been contracted by Mr Lyons's first Government, stood in June of last year at £54,012,000. Just before the close of the Government's financial year a further loan of £12,506,000 was issued, bringing up the total addition to the internal funded debt created by Mr Lyons's two Governments to £66,564,000, from the proceeds of which £16,496,000 had been devoted to funding a similar amount of Treasury bills, and cabled advices informed them that a new internal loan of £7,500,000 3½ per cent. stock would shortly be issued at 99½. The last financial year of the Government had closed with a surplus of £711,205, against an estimated surplus of only £13,810, and the combined result of all the States for the last year, without Tasmania, showed a combined deficit of £3,164,787, against an estimated deficit of £5,300,000. It was to be specially noted that before the result of the financial year of both the Commonwealth and State Governments was arrived at provision was made for payments due to the national debt sinking fund. Last year those payments had amounted to a total of about £9,100,000.

THE ACCOUNTS

With regard to the accounts, the reserve fund had been increased to £1,665,000, while the special reserve was unchanged at £1,585,000 and amply covered the depreciation in Australian currency for which purpose it was set aside. Deposits at interest had decreased by £554,565, which was more than offset by an increase in current accounts of £932,570. This movement was symptomatic of the changes which had been at work since they last met. The low rates of interest had no doubt induced some of their depositors to seek more remunerative forms of employment for their money, while at the same time the increase in current accounts was indicative of the improved conditions of trade, which demanded a larger store of ready cash to carry an increased turnover. The two items together, at £32,409,352, showed an increase of £378,000 over last year's figures. There was a diminution of £3,064,358 in the cash item, which now stood at £6,167,832. Last year the exceptional cash position reflected the need for outlet in the form of sound advances, and he was glad to say that a definite return of confidence had led to a more active employment of their funds, as evidenced by the fact that their advances, at £28,813,047, had increased by £2,595,300, while bills receivable and remittances in transit, £4,878,250, showed an increase of nearly £500,000; the two items together more than accounted for the decrease in cash referred to. Even so, the ratio of cash to each £1 of current account deposits was 9s. 7½d. Taking into account the Treasury bills which they carried, the ratio would be 13s. 9½d. to the £. At the same time investments had been increased by £333,137 to £2,200,526, and if that amount was added to the total cash and Treasury bills, the aggregate represented a ratio of liquid resources of 17s. 3d. to the £. Thus, while they had taken advantage of the increased opportunities of employment for their funds, the liquid position showed a strength consistent with sound and prudent banking.

PROFIT AND DIVIDEND

After making a transfer to the credit of contingencies reserves, out of which reserves provision for all bad and doubtful debts had been made, the gross profit stood at £1,025,858, an increase of £25,095 over last year's figures. After deducting the total expenses, there was a net profit for the year of £243,579, from which £15,000 had been carried to reserve fund, and it was now proposed to allocate £5,000 to officers' provident fund, £50,000 to contingencies reserves, and to pay a further dividend of 2½ per cent., making 5 per cent. for the year, free of income tax, and leaving £299,326 to be carried forward.

The business of the bank during the past year had naturally benefited by the revived general feeling of confidence and increased business activity in all the States. Their connections had been well maintained and extended in various directions. The

prosperity of the bank was bound up with that of the various States of Australia, in all of which they were well represented. They entered on the current year with a generally brighter outlook, and that outlook had further improved in the months that had elapsed since then. The prices of primary products had improved in practically all departments, and so far showed no signs of reacting.

ROYAL COMMISSION ON BANKING

Prior to the last general election, which took place in September, 1934, the Labour Party then in Opposition, after continual attacks on the banking system of the Commonwealth, put forward as the main plank in their policy the nationalisation of banking and carried on a vigorous campaign in support. This revolutionary move had received no support from the Prime Minister, who had, on the contrary, himself paid unstinted tribute to the service rendered by both the Commonwealth Bank and the trading banks to the national interests, and to the manner in which they had helped forward recovery. In view, however, of the anti-bank propaganda and the declared policy of the Opposition, he undertook, if his party were returned at the approaching election, to appoint a Royal Commission to inquire into the matter. At the election the Labour Party were effectively defeated and their policy was rejected. The Jubilee of the King entailed the absence of the Prime Minister in England for a number of months, but since his return he had appointed a Royal Commission, in fulfilment of the undertaking he had given.

When addressing the shareholders last year he dealt at some length with the question of nationalisation of banking, and referred to the fallacies and misstatements of the political propaganda carried on in its favour, and it was unnecessary to go over the same ground to-day.

The burden of taxation still pressed very heavily and very seriously impeded recovery, but exceptional taxation had to be accepted in times of exceptional difficulty, when they wanted to see every effort made to balance Budgets, and so long as the various Governments did not move into extravagant courses, and also so long as the taxation itself was equitable and did not discriminate unfairly. He was particularly glad to inform shareholders that the Queensland Government had recently announced that they would shortly bring in a Bill to provide that all business losses might be carried forward for income-tax purposes, which had not hitherto been the case. Several conferences between the Commonwealth and the States had been held during the year, and he expected that most, if not all, of the States would bring in similar legislation.

TAXATION OF ABSENTEE SHAREHOLDERS

There was one form of taxation which it seemed to him should in the best interests of Australia herself receive very serious reconsideration by Australian Governments, and that was the taxation of absentee shareholders and debenture-holders. This more than anything tended to deter people in this country from investing in Australian enterprises, and that at a time when Australia more than usually wanted the assistance of private capital to help on recovery. Sometimes these assessments were made retrospectively for several years. It was the wisdom, not the equity, of such taxation that was in question. The hurtful effect in deterring the flow of private money to Australia far more than offset any financial benefit from tax collected. He respectfully submitted that this whole question of absentee taxation was worthy of very serious reconsideration; that it restricted the inflow of private capital was unquestionable.

In conclusion, the chairman read the following telegram recently received from the joint general managers in Australia:—"We are approaching our export season under more favourable auspices than any time since 1931. The seasonal outlook in the Commonwealth is satisfactory, and all our primary products have enhanced in value. It is pleasing to be able to report that there is distinctly more vitality all round in the bank's operations."

The Chairman concluded by moving the adoption of the report and accounts.

Sir Frederick W. Young, seconding the motion, referred to his recent visit to Australia and described the impressions he had formed as a result. He could only emphasise, as the result of personal contact, their good fortune in having a loyal and able staff throughout their widespread service in the Dominion. He was also impressed with the fact that in Australia progress was still the order of the day, and that the Commonwealth must become more and more important as a contributor to the world's wealth and progress.

The report and accounts were unanimously adopted, and the proposed alterations to the company's articles of association were approved.

NEW GOLDFIELDS OF VENEZUELA, LIMITED

VERY SATISFACTORY RESULTS

The meeting of the New Goldfields of Venezuela, Limited, of 49 Moorgate, London, E.C., was held, on the 25th instant, in London.

Mr John A. Agnew (the chairman), in the course of his speech, said the results of operations had been very satisfactory, and the net result was a profit of £46,414, reducing the debit balance to £19,739. To give an idea of the important part the rate at which the company purchased their Bolivar remittances played, he desired to point out that the profits for the year would have been increased by something between £90,000 and £100,000 if the bolivar were linked to sterling at the parity between the two currencies—namely Bs. 25 to the £—before this country departed from the gold standard.

Dealing generally with the results of operations at the property during the year, it might be said that these had been very satisfactory. A total of 160,135 tons of ore were treated, averaging 7.1 dwts. per ton; the indicated recovery was 87.5 per cent., compared with 89.5 per cent. for the previous year. Since the end of the financial year an improvement in recovery had been shown, that for July being 91.1 per cent. and for August 91.2 per cent. The total value of the bullion produced was £351,094. Since the end of June last 50,923 tons of ore had been crushed, this averaging 8.29 dwts. in value and yielding bullion to the estimated value of £136,763.

After deducting working costs, an estimated working profit of £44,613 was shown for the four months. From this had to be deducted £13,155, being the amount spent on development work at the rate calculated to replace the tonnage of ore milled, leaving a net mine profit of £31,458 for the period indicated. In view of the smaller tonnage treated recently, he thought these figures might be regarded as very satisfactory indeed.

The satisfactory increase in the ore reserves had, he felt sure, been noted by shareholders. It had to be realised that development work in several instances had been retarded for lack of proper hoisting facilities, but despite that fact the reserves had now been increased to over half a million tons, averaging 8.1 dwts. gold per ton. These figures indicated that just over 240,000 tons of ore had been opened up for the year.

PROFIT OUTLOOK

Regarding the outlook for the future, he felt confident that within the next two or three months they would have the treatment plant in such condition as to enable them to deal with the maximum efficiency with even the worst types of ore that might have to be contended with. It ought to be said here that the ore was in no instance of a refractory character, it being merely a matter of efficiently recovering the whole of the gold which readily went into solution and of providing in the mill a settling plant of a capacity sufficient to take care of their maximum crushing capacity. Therefore, they looked forward in the very near future to treatment on a basis of 15,000 tons of ore monthly.

Mr C. O. Lindberg, in a report prepared on his visit to the property in July of this year, estimated on this basis earning a profit of not less than £100,000 per annum. In this estimate he allowed for a charge against revenue of a sum of £20,000, which in the directors' opinion was not properly thus chargeable, increasing his figures to a rate equivalent to £120,000 per annum. If for the financial year 1936-37 the tonnage was confined to 15,000 monthly, the relative figures were £140,000 and £160,000. The difference of £20,000 arose through Mr Lindberg allowing for charging out the whole of the development expenditure incurred in the respective years, whereas they did not consider that a proper charge against revenue should exceed the amount spent on development at a rate sufficient to replace the ore milled in each year.

In view of the numerous fluctuating factors, shareholders would appreciate how difficult it was to prepare anything like accurate forecasts, but the figures which he had just given could be taken as reasonable expectations of what the outcome should be, provided none of the factors on which the estimates were based undergoes any violent change.

He struck a note of optimism in addressing the shareholders last year, when he stated that if they were afforded relief in the matter of exchange they should very quickly forge ahead. Well, the exchange had certainly improved to some extent, and the results he had already given for the first four months of the present financial year, satisfactory as they might be, were, he hoped, indicative of something better to come. This was, at any rate, the view the directors took, and he trusted it would be found to have been justified.

The report and accounts were unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

GROWTH OF GOLD MINING INDUSTRY TAXATION BURDENS AND ANOMALIES

The Johannesburg Consolidated Investment Company, Limited, announces the receipt from Johannesburg of the following summary of the chairman's speech at the annual meeting of shareholders held on the 26th instant, at which Dr. J. G. Lawn presided.

The Chairman said: The Permanent Chairman, Mr J. B. Joel, has asked me to convey to you his hearty greetings. Mr Joel continues to take the keenest interest in the welfare of the company and its affairs receive his unremitting attention. The report and accounts were unanimously adopted.

Attention was specially directed to the strong financial position disclosed in the balance sheet. Liabilities to the public, including dividend, amounted to £1,636,371, while the book value of assets totalled £8,057,045, a surplus of assets over liabilities of £6,420,674. The net profit for the year was £1,142,031. £350,000 had been transferred to reserve, making the total of the reserve fund £2,300,000. The dividend and bonus of 3s. and 1s. per share respectively distributed to shareholders on September 19th absorbed £790,000 and left a balance of £170,673 to be carried forward.

Continuing, the Chairman said: The growth of the industry since 1932 has been remarkable.

At present it is operating on a basis approximately 30 per cent. greater than when the Union was on the gold standard and, in addition, several new mines are in process of vigorous development and equipment. The result has been manifested throughout the country in increased employment and spending power.

GOLD MINING TAXATION

Gold mining taxation has again been altered, but not in the direction of simplification. The two taxes which were in force in 1934—namely, normal tax and excess profits duty—have been retained for 1935, and a third tax, known as gold profits surtax, has been added. The new tax is levied in the form of a 10 per cent. tax on gross profits and was added because the amount collected in 1934 was short of the Treasury's estimate.

Taxation has now reached a level unheard of for a primary industry. The Government insists on taking 50 per cent. of excess profits, which it has defined in its own peculiar way, and the reasons given for the proportion being fixed at this arbitrary figure are, to say the least, unconvincing. How long this view will last I cannot say, but meanwhile, as you are perhaps aware, the industry as a whole continues to be taxed on one definition of excess profit and the individual mines on quite a different definition.

In order to relieve themselves of excessive taxation, individual mines are encouraged, or it may be said forced, to increase tonnage and lower grade, but as the grade of ore crushed by the industry as a whole falls, the amount to which the Government considers itself entitled rises. This is the major anomaly of the present scheme. If the Government succeeds in obtaining a reduction of grade then it cannot get the amount which it considers to be its due, and if it obtains the sum it is asking for it fails to encourage the mining of low-grade ore. Now the new tax of 10 per cent. on gross profit would, if it stood alone, tend gradually to cause an increase in grade of ore crushed and a fall in tonnage because it taxes all ore, however small its profit may be, at the same rate, but as the excess profits duty was retained for 1935 the impulse towards lowering grade and increasing tonnage on individual mines was accentuated.

It is not suggested that taxation which results in mining of marginal ore and in consequence increases tonnage crushed, is undesirable; on the contrary, the principle is admirable. The complaint is that the method adopted is unnecessarily complicated, and encourages malpractices while it contains factors which pull in opposite directions, and varies the burden of taxation as between mine and mine in a fortuitous and unreasonable manner.

The outstanding feature of the Witwatersrand as a whole, in contradistinction to other gold fields, is the huge quantity of marginal ore—that is, ore which shows only a small margin of profit—which it contains. Whatever be the price of gold or the level of working costs, this marginal ore is always present. The augmented price of gold has made payable hundreds of millions

of tons of additional ore. This additional tonnage consists almost entirely of ore in the marginal category and a great proportion of it, being in undeveloped areas, will require capital expenditure for its exploitation.

Had there been no such thing as marginal ore—that is to say, if all the ore of the Witwatersrand had been either payable at 85s. per oz., or else unpayable at even 140s. per oz.—that is to say, had the Witwatersrand not possessed any ores of intermediate values—then the increased price of gold would have been only of minor benefit to the country. The profits of the existing mines would have increased by about £18,000,000 per annum.

Of this sum presumably the State would have taken one-half and shareholders would have been better off by some £9,000,000 per annum, rather under one-half of this figure being distributed in this country. Few new mines would have been started, and there would have been no extension to the lives of existing mines—in fact, by this time several mines which were operating in 1932 would have shut down. There would have been a reduction instead of an increase in employment; the general expenditure of the industry would have been less and the ordinary citizen would hardly have detected any change in the condition of the country.

POSITION TRANSFORMED BY MARGINAL ORE

Note the difference between this picture and what has actually happened. The starting up of the 14 new mines and the extension of employment in existing ones; the wonderful prosperity and spirit of optimism which has descended upon the Witwatersrand and, through it, upon the whole of South Africa; the great buildings and new factories; the restoration of wage cuts; electrification of railways and swelling State and provincial Budgets, all of which have been almost entirely due to one thing and one thing only, and that is marginal ore.

It is the existence of huge quantities of marginal ore which, unattractive at the old price of gold, are attractive at the new, which has transformed what might have been regarded simply as a substantial addition to shareholders' dividends and a very useful relief for the tax-payer into a condition of prosperity for the whole of South Africa.

It has recently been authoritatively, and in my opinion conservatively, stated that the increased value of gold has, from the point of view of extension of the life of the mining industry, been equivalent to what would have happened under the 1932 conditions if working costs had fallen by 6s. 6d. per ton. This means that if under those conditions it had been possible to reduce working costs by 6s. 6d. per ton, there would have occurred the same increase in the life of the industry as has since been brought about by the rise in value of gold. Thus the truth of the thesis preached by the leaders of the mining industry for many years past—namely, that of the immense importance to the country of lowering the limit of payability of its gold ores—has, through the rise in value of gold, been proved in a manner which must be convincing to everyone.

IMPORTANCE OF LOW-GRADE ORE

It is of the utmost importance to the future of the country that the position is fully understood, that is, that the explanation of the recent expansion of the mining industry and the general prosperity of the Union does not lie in the extra profits made by the industry but rather in the vast quantity of low-grade ore which the lowering of the pay limit brought into the payable category.

The mines are now operating on a scale 30 per cent. greater than in 1932. The extra tonnage is made up entirely of previously unpayable ore, and the working of it will result this year in an additional £8,500,000 being distributed as working costs.

It is to be hoped that the value of the country's low-grade ore has been so conclusively demonstrated over the past three years that in future no effort will be spared to encourage its exploitation, and above all, that no artificial discouragement shall be placed in the way of those who are prepared to provide capital to develop and work it. While to this end the lowering of working costs by the use of improved methods has always been and is still the permanent concern of the technical staffs and workpeople associated with the industry, the reduction of the effect of

indirect taxation upon working costs should be the constant aim of the State. Important as are these considerations upon the question of rendering available the marginal ton, I only wish now to discuss briefly another factor, namely, the effect upon it of certain forms of direct taxation.

EFFECT OF HIGH TAX ON MARGINAL ORE

When we get away from the purely speculative market which has flourished during the past three years and return to ordinary investment conditions—for all booms must come to an end sooner or later—capital will not be used in any enterprise unless, bearing in mind the risk, the expected return is adequate.

It is often loosely stated that, provided taxation is levied only on profits, it does not prevent the mining of low grade ore. This statement is a half truth and a dangerous one. Taxation of small profits does not necessarily prevent the mining of low grade ore which is already fully developed, but taxation, when imposed at a high rate, will reduce the company's share of such profits to a figure insufficient to provide for current capital expenditure. Furthermore, taxation on such ore removes the incentive to search for and develop it. A high rate of tax on marginal ore is a certain way of shortening the lives of existing mines and discouraging the opening up of new ones.

It has been calculated that in a modern deep level mine a net profit of about 5s. per ton represents the minimum justification for the investment of capital, and it is obvious that any tax levied upon profits of this magnitude by reducing the net return renders them unattractive. The average tax rate to-day is over 40 per cent., and such a tax if levied on all profits, however small, would reduce those of 5s. per ton to 3s. per ton, a figure which is inadequate to provide for current capital expenditure and which is insufficient to keep the business in a healthy condition. The result of the imposition of a rate such as this on marginal ore would have, in short, the effect of increasing the required profit to justify exploration from 5s. to 8s. 4d. per ton, which is equivalent to an artificial raising of working costs by 3s. 4d. per ton and of the pay limit, in so far as the justification of the opening up of new ore is concerned, by the same figure.

CASE FOR SPECIAL CONSIDERATION

The new ore which the increased value of gold has made payable, the millions of tons which by extending the life of the industry have been the major cause of the country's prosperity would, it is estimated, under present conditions show on the average about 5s. 6d. profit per ton, a figure which only slightly exceeds that of the minimum profit required for a new deep level mine, and credit is due to the Government in that the principle of safeguarding this ore from high taxation (though it is still subject to the 20 per cent. income-tax) has been maintained even though the method used has been unsound.

Shareholders will no doubt agree with me when I say that one of the most trying features of mine taxation during the past three years has been the violence with which its incidence as between mine and mine has fluctuated. It is essential that some kind of stability be achieved in this important matter, and with the magnificent results which have accompanied the lowering of the pay limit during the past three years before one's eyes, it is sincerely to be hoped that in any future taxation, provision will be made so that profit on low grade ore will be free of tax or, at most, taxed at a low rate.

The direct revenue to the State from low-grade ore is small in total amount, and is trivial compared with the immense indirect benefit which results from its being worked. The well-trying principle of placing taxation where it will do the least harm can nowhere give finer results than in this mining industry of ours and the protection of the small profit ore from direct taxation cannot but present the most forceful appeal to all who have the well-being of the country at heart.

The six operating mines of group during year crushed 10,844,000 tons ore, produced 2,608,913 ozs. gold, spent £10,047,810 in working costs and £304,308 on capital account and made a gross profit of £8,555,205. Dividends totalling £3,691,450 were declared, an increase of £529,248 over dividends distributed previous year. Government's share in profits of Lease Mines £3,547,179.

Large area of ground situated south of Durban Roodepoort Deep recently acquired by lease from Government. Diamond drilling to ascertain depth main reef series proceeding satisfactorily.

The Chairman concluded by giving details of the various mineral interests in South Africa.

BUSHTICK MINES (1934), LIMITED

PROGRESS OF OPERATIONS

The Ordinary General Meeting of the Bushtick Mines (1934) Limited, was held, on the 14th instant, at Bulawayo.

The Hon. H. U. Moffat, C.M.G. (the chairman), in the course of his speech, said that ore reserves amounting to 344,000 tons of an average value of 4.45 dwt. had been opened up. A year ago the figure of available ore was 250,000 tons. The decision to increase the capacity of the plant from 8,000 tons, as suggested in the original prospectus, to 10,000 tons a month had therefore been fully justified. With the increased milling capacity the company still had nearly three years' ore in sight. On the advice of the consulting engineers the policy of the directors would be to build up the ore reserves to 500,000 tons to justify doubling the present plant.

First deliveries of the machinery were received in December last and everything was ready for running by September 1st.

At the Foundation Section the continuation of the ore shoot to the Third Level was established, with no diminution of strike length. Six hundred feet east of the Foundation Shaft a cross-cut on the First Level horizon from Sally Shaft indicated the continuation of the ore body, the section cut averaging 3.1 dwt. over 15ft. The intention was to explore this block of ground and also the unexplored area between it and the Hollins Shaft. At the Hollins Section cross-cutting showed that the width of the ore body was greater than former records indicated.

With regard to the crushing results since the plant started work on September 1st, for the two months September and October 15,600 tons were crushed, which produced 1,650 oz. of gold. During September and October it was necessary to draw ore from the poorer portion of the mine and from accumulations of low-grade ore left in the stopes, etc., by the previous owners, but that was now being remedied. The average grade of ore milled showed a steady improvement from 2.76 dwt. in September to 2.87 dwt. in October and 3.08 dwt. for the first week in November.

In conclusion the chairman said that to have brought the mine to the producing stage in such a short period of time, with all that that entailed in the way of development, erection of plant, etc., was an outstanding achievement.

The report and accounts were adopted.

JANTAR NIGERIA COMPANY, LIMITED

SATISFACTORY RESULTS AND PROSPECTS

The twenty-third ordinary general meeting of The Jantar Nigeria Company, Limited, was held in London.

Mr Percy Tarbutt, who presided, said he thought the shareholders could congratulate themselves on the satisfactory result of the year's operations. From the available balance of £38,018 the directors recommended the payment of a dividend of 20 per cent.

During the year the company had been dealing with two commodities—tin and columbite. Their tin quota amounted to 191 tons, as compared with 171½ tons for the previous year. Since the date of the report of the manager, who took the quota for the current year on the then prevailing basis of 297 tons per annum, the quota had been increased to 80 per cent., which meant that, assuming there was no change between now and the end of the financial year on September 30th next, the tonnage they would be able to produce would be 345 tons. That was a considerable increase on the amount allowed the company during the past year.

With regard to the columbite position, during tin-winning operations several years ago the company accumulated a considerable quantity of columbite concentrates, estimated at between 350 and 400 tons, for which there had been no market, but recently the board were able to make a contract dealing with the whole of their dumped concentrates. The 350 tons or so of these concentrates, which they had stacked and were able to dispose of during the year free of mining costs, were very much in the nature of a "windfall." During the past year they had done a considerable amount of boring, and had already proved some 1,800 tons of columbite concentrates. They had sufficient old stocks in hand, supplemented by daily production, to carry on under their contract—namely 20 tons per month—up to the end of March at a fair profit, after which date the whole columbite position would have to be reviewed.

As far as our prospects are concerned for the current year, we have a considerable increase in our tin quota, and providing this is not materially interfered with, and there is no serious break in the price of tin during the year, we should be able to present quite a satisfactory statement of accounts to you when we meet again next year.

The report and accounts were unanimously adopted.

TREPCA MINES, LIMITED

LARGELY INCREASED PROFIT

The eighth ordinary general meeting was held, on the 25th instant, in London, Mr A. Chester Beatty presiding.

The Chairman, in the course of his speech, said: The profit and loss account shows a gross profit of £395,899, the corresponding figure for the previous year being £224,073. After providing for depreciation and taxation, there is a net profit of £307,517. We recommend the payment of a final dividend of 9d. per share, free of tax, making a total for the year of 1s. per share, free of tax, and leave £26,034 to be carried forward. There has been a striking improvement in our rate of earnings throughout the year, the estimated surpluses for the four quarters being as follows: First quarter £40,059, second quarter £74,844, third quarter £128,439, and fourth quarter £152,557. This improvement is due to the rise which has occurred in the prices of the metals in which we are interested, particularly lead.

The amount of ore which we treated during the year was 597,188 tons, producing 64,874 tons of lead concentrates and 94,146 tons of zinc concentrates, these figures showing a slight increase over the previous year. In addition we were able to sell over 38,000 tons of pyrite concentrates, against less than 10,000 tons in the previous year.

The principal feature of development at the Stantrg mine has been the completion of our arrangements for deeper mining, which were commenced during the previous year. Development at the 545-metre level was started during the latter part of August, and up to November 15 we had blocked out on this level by drifting and cross-cutting an area of 5,277 square metres, assaying 8.96 per cent. lead, 1.64 per cent. zinc, and 3.65 ozs. per ton silver. The ore reserves, as calculated at September 30 last, show an increase of 507,000 tons, and amount to 3,007,000 tons of an average value of 8.7 per cent. lead and 8.0 per cent. zinc. In addition to our operations at the Stantrg mine, work has been continued at Mazic, about a mile away, where encouraging results have been obtained. Given the maintenance of prices now prevailing, we may look forward with confidence to even better results for the current year.

The report was unanimously adopted.

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY, LIMITED

BURDEN OF TAXATION

The seventy-first ordinary general meeting of the Australian, Mercantile, Land and Finance Company, Limited, was held, on the 28th instant, at 20-22 Coleman Street, London.

Mr John Sanderson (the chairman) said that last year he had explained the reasons which had influenced the directors in recommending the postponement of any alteration in the rate of dividend and an increase in the balance carried forward. Their experiences in Australia during the twelve months ended June 30, 1935, had fully justified the shareholders' support of the directors' recommendations, because, in addition to the fall in wool values, reduced interest rates and reductions in commission and warehousing charges, the season had developed most unfavourably. He was glad to say that wool to-day was selling freely at substantially better prices than those realised during the twelve months under review.

They had been for many years greatly concerned at the burden of taxation imposed by Governments and other authorities. That was particularly the case in the Commonwealth of Australia, where the calls upon the company for Federal and State income taxes, Federal and State land taxes, unemployment relief and family endowment taxes and municipal and shire rates had amounted during the twelve months ended June 30, 1934, to £30,931, while during the twelve months ended June 30, 1935, they had reached a total of £40,806. In Great Britain during the same period they had been called upon for £8,668 and £15,373 respectively, and in Argentina for £1,285 and £1,602. During the past five years the total averaged £45,000 per annum, while the dividends to shareholders had averaged £22,400. If their assessments were upheld, the taxation authorities would have received 3.2 per cent. per annum, while the shareholders had had to be content with 1.6 per cent. per annum.

Subject to further good rainfall and to the present level of wool prices being maintained during the current financial year, there should be a decided improvement in the position of their wool-growing clients. It was satisfactory to be able to say that the returns from the Buenos Aires branch had been well maintained. The report and accounts were unanimously adopted.

CHARTERHOUSE INVESTMENT TRUST, LIMITED

INDUSTRIAL DEVELOPMENT

The tenth annual general meeting of the Charterhouse Investment Trust, Limited, was held, on the 28th instant, at Southern House, London.

Sir Arthur H. Marshall, K.B.E., the chairman, in moving the adoption of the report and accounts, said that in comparing the results of the company's operations with those of the previous year the main difference was that the items of gross and net profit showed a contraction. The fact that the net profit showed less contraction than the gross meant that the company's overhead charges had also been reduced. The Trust had carried through or been associated with more individual transactions than in any previous year, but the profit margin had been less. The current financial year had opened with a number of transactions in hand to be completed in the near future on satisfactory terms.

Captain H. N. Hume, M.C., in seconding the resolution, said that the formation of the Charterhouse Industrial Development Company had been a big experiment. It had had to cope with something like 3,000 applications for capital during the past 15 months, but, after investigation, they had found themselves in serious negotiations with the comparatively few applicants whose proposals conformed to the policy the board had laid down, namely that in each case the business should already be established on a commercial basis and should fulfil the following three main conditions: It should have been so founded that it had the power of growth or development into a larger concern; it should be under management capable of bringing about such development, and the capital to be provided must, save in very exceptional circumstances, be employed in the business for the purpose of development.

A few weeks ago the investment of more than the original capital of £200,000 had been agreed upon, and the board had chosen the method of issuing a further £300,000 in the form of ordinary shares. They had been fortunate in finding the Prudential Assurance Company to be in sympathy with them as to the possibilities of such a company, while Lloyds Bank and the Midland Bank had also been invited to participate in the new issue, and had done so.

The report was adopted.

BEKOH CONSOLIDATED RUBBER ESTATES, LIMITED

BRIGHTER OUTLOOK

The fifteenth ordinary general meeting of this company was held, on the 22nd instant, at 19 Fenchurch Street, London.

Mr R. W. Harrison (the chairman) said that though their crop had averaged about 6d. per lb., as against 5d. in the preceding year, and the quantity marketed in the two years was more or less the same, their profit was only £4,989, as against £6,381, a reduction of some £1,500. That was accounted for by an increase of 1d. per pound in the cost of production due to increased cost of labour, to a partial restoration of cuts in estate staff salaries and to increased expenditure on cultivation. After careful consideration the board had decided to recommend the payment of a dividend of 2½ per cent., and, if that was approved, their carry-forward would be reduced from £11,930 to £10,112. Considering the improved outlook at the present time they hoped shareholders would agree that the directors were justified in proposing to pay rather more than they had actually earned during the year.

Their crop was 957,220 lbs., of which they were allowed under the control scheme to export 855,224 lbs. Their standard allowance was 1,117,307 lbs., of which, if restriction was maintained at the rate now in force—namely, 40 per cent. until the end of June next—they would be able to export 670,300 lbs. during their financial year. That was considerably less than they had marketed during the past year and such a reduction must react on cost of production.

There were indications that the aim of the control scheme in effecting a reduction in world stocks, which still amounted to about nine months' supply at the present rate of consumption, was at last being slowly realised. He hoped that he was not unduly optimistic in expecting that during the coming months they might look for an improvement in price, until it reached one that would leave them a reasonable profit on their venture. In fact, the outlook appeared to be much brighter than it had been for a long time.

The report was unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED

EFFICIENCY OF COMPANY'S MILLS

INFLUENCE OF NEW PRICE POLICY

The ordinary general meeting of the Wall Paper Manufacturers, Ltd., was held, on the 28th instant, at the Holborn Restaurant, High Holborn, London, W.C.

Mr Alan V. Sugden (the chairman), after dealing with the accounts, said:—Requests have been made for a consolidated balance sheet. In compliance we append to our report, as a memorandum, a consolidated profit and loss account and balance sheet showing our share of the actual profits earned by and the aggregate amount of each class of asset and liability of the company and its subsidiaries.

GENERAL CONDITIONS

The past year has been fairly normal in character, and its results have to some extent been influenced by a transition policy between that of the old company, where price maintenance was an outstanding feature, and the new principle of seeking turnover and legitimate expansion by the attractive prices and quality of our goods.

The new price policy will have a greater effect in the current year than in the one under review.

During the last twelve months there has been a considerable addition to the number of our competitors. In some cases foreign interests both financial, personal, and material, are behind these ventures.

The market was already very fully provided with the means of production before the appearance of these new developments, and as it is incapable of indefinite expansion, despite the existence of great activity in the building world, it seems inevitable that a struggle of some intensity is about to confront the trade.

I can only say that we provide an absolutely unparalleled service in every department, and our resources are such that we await with confidence whatever is in front of us.

Wallpaper remains as popular and fashionable as ever, and it is doubtful whether any other article possesses the same quality of adaptability to every kind of taste, accompanied by an equal flexibility in the matter of cost. It is, in fact, cheaper in its application than any other form of decoration.

WIDE RANGE OF PRODUCTIONS

Your company's mills are kept up to first-class efficiency both mechanically and technically, and they produce everything that is known as wallpaper, in every style and pattern, from classics to present-day modernism, and in addition, manufacture a great many faithful reproductions of plastics, leathers, marbles, stone and metal surfaces, canvas, silk and texture effects, as well as wood veneers, which in the hands of an expert give an unrivalled scope for the production of decorative schemes all capable of ready application to the walls.

We spend a very large sum each year on our new productions, and whilst buying designs and ideas from every available source, we have in our employ an art staff, comprising designers and colourists, fully the equal of any other industry or of any other period in the history of art applied to manufacture.

We have the best of reasons for believing that our efforts in this direction are fully appreciated by all sections of the trade and public.

WALPAMUR

The Walpamur Company continues to expand and to make satisfactory profits. It has during the past year again considerably extended the scope of its research and chemical side with a corresponding increase in staff.

PENSIONS

The stockholders will be interested to learn that since the inception of the various employee schemes £63,115 has been paid out in benefit, and there are at the present time 332 old employees in receipt of pensions.

ACKNOWLEDGMENTS

I must again testify to the loyal and devoted service rendered during the past year by all the members of our staff.

Each director is personally conscious of his own indebtedness to his staff, and whilst collectively we stand before you, responsible for the trust you have placed in our hands, we take this opportunity of expressing our gratitude to all those unseen, but

not forgotten units who are unobtrusively making their contribution to the common cause.

The report and accounts were unanimously adopted.

At the conclusion of the meeting a film was exhibited, depicting the processes of manufacturing wallpapers, which had been used for educational purposes.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

[Incorporated in the Union of South Africa]

RECORD TONNAGE MILLED

The thirty-eight ordinary general meeting of shareholders was held in Johannesburg, on October 31, 1935.

The chairman (Mr John Martin) said:—The directors' report, balance sheet and accounts for the year ended June 30, 1935, together with reports from the consulting engineer and the general manager, have been in your hands for some time past. You will therefore be conversant with the details of the operations of the company during the period under review. The net profit for the year amounting to £2,272,876, together with the balance of £224,688 brought in at the beginning of the year and a small adjustment on account of forfeited dividends, gave a total of £2,498,669 to be dealt with. This amount was disposed of by the following appropriations: Two dividends of 5½ per cent. and 50 per cent. respectively absorbed £1,505,000; Government and Provincial taxes, including excess profits duty (£213,743) and gold profits surtax for six months (£113,881), accounted for £773,239; a sum of £21,470 was set aside as a further provision towards miners' phthisis outstanding liability, and a balance of £198,960 remained to be carried forward to the current year. This balance comprised £98,947 in stores, sundry debtors and other cash assets and £100,013 net cash after allowing for all current liabilities.

The tonnage milled, at 2,175,000 tons, constituted a further small increase over the record established for the previous year. Grade again showed a decline, falling by 0.480 dwt. to 4.983 dwt. per ton in conformity with the lower value of the ore reserve and the smaller proportion of Main Reef Leader mined. It is very satisfactory to be able to record that working costs were reduced to the remarkably low figure of 14s. 4d. per ton milled. This reduction was effected in spite of the higher proportion of ore mined from the less favourable Upper Leaders and is largely attributable to lower power and development charges. The reduction in yield resulting in a fall of 1s. 1d. per ton in revenue was more than sufficient to counteract the benefit of increased tonnage and lower costs, although in the net result the working profit was only £24,659 less than in the previous year.

DEVELOPMENT AND RESERVES

The total footage developed amounted to 70,651 ft.—a reduction of 14,887 ft. on the figure for the previous year. The total footage sampled on all reefs amounted to 45,175 ft., of which 20,435 ft., or 45 per cent., were classed as payable with an average value of 238 inch-dwt.

The payable ore developed on all reefs amounted to 1,027,100 tons of an average value of 3.4 dwt. per ton. As compared with the previous year, this represents a decrease of 334,800 tons, while the value is 0.1 dwt. per ton lower.

The available ore reserve as re-estimated at June 30, 1935, amounted to 7,872,200 tons of an average value of 5.1 dwt. per ton over an estimated stoping width of 47.1 inches. In addition, 1,433,100 tons averaging 5.9 dwt. per ton are contained in shaft and safety pillars and are not at present available for stoping. Compared with the corresponding figures for the previous year, the available tonnage shows an increase of 112,100 tons, while the average value is 0.4 dwt. less. These changes—an increase in tonnage and a lower value—are due to the additional tonnage of lower grade ore which, under prevailing conditions of costs and the price of gold, can now be included in the ore reserve.

All the figures which I have given you in regard to payable footage and the ore reserves are based on the price of gold and the working costs prevailing at the time the estimates were made.

Considerable use was again made of sandfilling as a means of support and, during the past year, approximately 878,000 tons of sand were lowered into the mine, while the grand total utilised for this purpose has reached 6,245,000 tons. This expedient continues to be of great assistance in the removal of pillars in the old workings and in mining the upper reefs.

CURRENT YEAR'S RESULTS

The results for the first quarter of the current financial year have already been published and circulated to shareholders, but, to bring my survey of the position at the mine up to date, I propose to give you a *résumé* of these operations. The tonnage milled—575,000 tons—showed a further increase of 6,667 tons per month over that of the previous quarter. The yield and revenue were lower by 0.172 dwt. and 1s. 8d. respectively, while working costs, at 13s. 11d. per ton, were below the 14s. mark for the first time in the history of the mine. The working profit was £9,349 less than for the previous quarter, and amounted to £556,078.

Taxation for the quarter was estimated at £193,683, including excess profits duty and the new surtax but not allowing for any rebate which may be received at the end of the calendar year in terms of the Government's undertaking that no more than one-half of the "excess profits" will be taken from the mining industry.

The development footage amounted to 19,343 ft.; 11,265 ft. were sampled, of which 5,000 ft. were classed as payable with an average value of 244 inch-dwt.

The general position and future prospects of the mine remain very much as I indicated to you at the last annual meeting. The continued decrease in ore reserve tonnage which appeared inevitable three years ago has been arrested and postponed owing to the lower pay limit which we have been able to adopt, but this factor, together with the gradual exhaustion of the higher-valued Main Reef Leader ore, entails a decrease in average value and consequently a lower yield. The future prospects are unavoidably subject to well-defined limitations, but, on the other hand, the whole position and outlook have improved compared with what could be anticipated three years ago, as a result of the additional extent to which it has been feasible, under current conditions, to pursue our settled mining policy of conserving the ore reserve, with the object of ensuring the fullest exploitation of the property and the longest prolongation of profitable operations.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 23, 1935, amounted to £12,698,000, against ordinary expenditure of £6,821,000. After allowing for an increase in Exchequer Balances of £191,382, the operations for the week, as shown below, decreased the gross National Debt by £5,885,000 to approximately £7,980 millions.*

Treasury Bills	£ 486
Public Department Advances	£ 5,150
N. Atlantic Shipping Issues	£ 29
British Shipping Issues	£ 20
	£ 5,685

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing or Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on September 30, 1935, appeared in the *Economist* for October 5th.

LONDON TRANSPORT

Week ending November 23, 1935	Tonnage	Compared with corresponding period of last year	
		1935	1934
Week ending November 23, 1935	536,500	+ 28,300	
Aggregate 21 weeks ending November 23, 1935	11,421,900	+ 217,300	

* For an explanation of the manner in which the figures are made up, see the *Economist*, March 17, 1934, page 610.

Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted on the basis of the best information available.

THE BRITISH OVERSEAS BANK, LIMITED

ESTABLISHED 1919

Report by the Board of Directors to the SIXTEENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33 GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on Tuesday, the TENTH day of DECEMBER, 1935, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1935, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1935, amounts to	£	s.	d.
Balance available from last account	60,131	4	0
	66,638	17	6

Making a total of 126,770 1 6 which has been appropriated as follows:—

For payment of a dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the year ended 31st October, 1935, which together with Income Tax thereon amounts to	£	s.	d.
Leaving a Net Balance to be carried forward to next year of	60,000	0	0
	66,770	1	6
	126,770	1	6

It is with the deepest regret that the Directors record the death of the Hon. Bernard Rollo, which occurred in February last. Mr Rollo was an original Director of the Bank, which he served with great distinction. The vacancy thus created in the Board has been filled by the appointment of Mr Thomas Francis Tallents, M.C.

Mr Nigel L. Campbell's term of office as Deputy-Chairman having expired on 31st October, 1935, Sir James Caird, Bart., has been appointed to succeed him for the current financial year.

The Directors retiring by rotation are Mr Arthur C. D. Gairdner and Mr Duncan A. Stirling, who, being eligible, offer themselves for re-election. In accordance with Article 91, Mr Tallents' appointment requires confirmation by the shareholders.

The Auditors, Messrs George A. Touche & Company and Messrs McClelland, Ker & Company, also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board,
A. E. THORNE, Secretary.

London, E.C. 28th November, 1935.

BALANCE SHEET, 31st October, 1935.

AUDITORS' REPORT TO THE MEMBERS.

We have examined the above Balance Sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange, and have verified the Securities. We have obtained all the information and explanations we have required, and are of the opinion that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

concentrating on the local landsale market, in which prices are more remunerative and only 3,000 tons weekly, against 10,000 tons in normal circumstances, can be spared for Ulster and Free State users. Demand is extraordinarily brisk, partly because the fear of the national strike is causing users to lay in stocks in works' bunkers and house cellars. There is hardly enough industrial fuel to go round.

Prices are exceedingly firm. Best round is 22s.; washed doubles, 20s.; washed singles, 19s.; all f.o.b. Small, 15s. 6d. Best house coal, 32s. 4d.; house nuts, 30s. 8d. at station. Gas coal, 27s.; local coke, 15s. 6d. to 16s. 6d. per ton.

NEWCASTLE-ON-TYNE.—Shipments of coal and coke from the Tyne last week were better, the quantity dispatched being 300,155 tons, an increase of 51,585 tons, compared with the corresponding week of last year. The determination to increase stocks in this country in case of a stoppage of work at the mines accounts for the briskness in shipments. Northumberland steam classes are heavily booked, and most Durhams are in a firm position. Coke of all descriptions is firm, inland trade being brisk.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 16s.; smalls, 13s.; Howards, Bentinck, Newbiggin, screened, 15s.; smalls, 12s. 6d.; Tyne Prime, large, 14s.; smalls, 12s.; Hartley Main, large, 14s. 6d.; smalls, 13s. **DURHAM.**—Lambton/South Hetton screened steam, 16s.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 8d.; prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s. 6d.; prime foundry coke, 21s. 6d.; Newcastle and District gas coke, 21s.

GLASGOW.—Scottish collieries are fully booked for export until the end of the year, and are disinclined to engage in further business beyond that time. Prices are therefore largely nominal. Demand continues brisk on home account, the increased consumption resulting from the industrial activity being accentuated by buying for stocking purposes in view of the labour uncertainties.

Shipment prices f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 16s.; splint best, 17s. 6d.; splint second, 16s.; navigation, screened, 16s.; navigation, unscreened, 14s. 6d.; steam, screened, 14s. 6d.; trebles, 16s. 6d.—17s.; doubles, 15s.; singles, 14s.; pearls, 13s.; dross, 12s. **FIFE.**—Best unscreened navigation, 14s. 6d.; unscreened navigation, 14s.; first-class steam, 15s. 6d.; third-class steam, 14s. 6d.; trebles, 17s. to 18s.; doubles, 15s. to 16s.; singles, 14s.; pearls, 13s. **LOTHIANS.**—Best splint, 16s.; prime steam, 16s.; secondary steam, 15s. 6d.; unscreened navigation, 15s.; trebles, 17s.; doubles, 15s.; singles, 14s.; pearls, 13s. **AYRSHIRE.**—Best unscreened navigation, 15s.—15s. 3d.; steam, 14s. 6d.; trebles, 17s.; doubles, 15s.—15s. 6d.; singles, 14s. 6d.; pearls, 13s. 6d.; dross, 13s.

CARDIFF.—Coal shipments at the South Wales ports continue moderately active. Exports in the foreign and coastwise trades last week totalled 387,100 tons, compared with 408,000 tons the previous week and 410,385 tons in the corresponding week last year. The coalfield is suffering severely from the virtual cessation of trade with Italy. In 1913, consignments from the Bristol Channel ports to the Italian market averaged about one million tons per week, and even last year nearly 450,000 tons, but only one cargo has left the South Wales ports on Italian account during the past fortnight. With other Mediterranean markets the course of business is, on the whole, favourable, but with the close of the Canadian season it is feared that aggregate shipments during the next few weeks will fall short of the quantities exported in the corresponding period last year. Prices are generally unchanged, except for pitwood, which is a shade easier. South Wales pitwood importers are in negotiation with Portuguese exporters with a view to the arrangement of an agreement for the purchase by South Wales of 275,000 tons of Portuguese wood at agreed prices against the security of the continued purchases of South Wales coals by Portugal. During the past ten months pitwood imports from France totalled 316,304 loads, compared with 196,951 loads in 1934, but imports from Portugal during the same period amounted to only 200,936 loads, as against 471,733 loads over the whole of the previous year.

A Committee of the South Wales coalowners has been appointed to prepare a scheme for the local central control of sales, but it is not expected that agreement will be reached on its form till well into the second half of next year.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; second steams, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 51s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 3d.; Portuguese, 22s. 6d.

IRON AND STEEL

LONDON.—The official report of the London Iron and Steel Exchange indicates that in some departments the volume of business shows signs of expanding. The many public development schemes which have been announced promise to provide a considerable volume of work for the industry and will probably lead to an increase in production. Demand for pig iron shows no signs of declining, and specifications against contracts continue to reach the works at a satisfactory rate. As many consumers have bought forward for some months, current business consists principally of small parcels, but these are sufficiently numerous to give the markets an appearance of activity. The requirements of the chief consuming industries seem to be gradually broadening, and important

quantities are being absorbed by the foundries and engineering trades. Supplies of semi-finished steel materials seem scarcely sufficient to meet requirements, although lately British production of this class of steel has been increased. Most of the producing works, however, are unable to accept orders except for delivery several weeks ahead, and are reluctant to undertake fresh commitments. In the finished steel section of the market, business appears to be expanding in most departments, although on the export side trade is slow in developing.

MIDDLESBROUGH.—The pig iron market continues strong, there being numerous inquiries, and it is understood that buyers are prepared to enter into further contracts at present prices, but makers have good order books and are not inclined to sell big quantities. There is actually very little pig iron available for sale to British firms, whilst export business is almost non-existent. The price of Cleveland foundry iron is maintained at 70s. per ton delivered in the Middlesbrough area for No. 3 foundry quality. East Coast hematite pig iron makers have received inquiries from purchasers who are desirous of covering further ahead at present prices in view of rumours of an advance. Meanwhile no advance has taken place, and the price remains very firm on the basis of 71s. per ton for No. 1 quality delivered locally. It is announced that Messrs Dorman, Long are putting into blast this week an additional furnace for the production of basic iron at their South Bank works as the material is needed for their steelworks. This will make a total of 27 blast furnaces in operation in this area.

Steel production, both semi-manufactured and manufactured, continues to increase, there being a heavy demand for all classes. Good Durham blast furnace coke is much firmer with producers not prepared to discuss business under 20s. per ton. Heavy steel melting scrap is in good demand but buyers are maintaining their figure of 52s. 6d. per ton delivered at the works.

SHEFFIELD.—The scarcity of basic steel billets for re-rolling is as pronounced as ever. In fixing the import quota for such material the authorities underestimated British mill consumption very considerably. The difficulty has been aggravated by consumers, anticipating an advance in prices, ordering extra supplies. Arrangements have been completed for purchasing foreign material in excess of the quota tonnage, and the scarcity will continue until this can be delivered. Sheffield firms are not greatly perturbed by the threat of a motor car firm to start works for making steel. Such an enterprise could not seriously affect the trade in Sheffield. Many steel firms contribute to the building of motor vehicles, supplying a wide variety of special stampings and forgings as well as tool steel and tools. These could not be produced economically in a single works. The proposed enterprise relates principally to sheets, which are not a Sheffield speciality.

Local conditions continue brisk and there have been further increases of production over the last two months. The year's output of ingots and castings will probably be in the neighbourhood of 1½ million tons. The inflow of orders for mill products and quality steels is not quite so brisk as it has been. As regards very heavy forgings, which were rare a few years ago, these are now quite a common product. A local firm, famous for iron and steel works' plant, has this year executed a fair volume of home and export contracts, and has done better than for many years past. Leading authorities are urging cutlery makers to take steps to remodel the industry on modern lines. This would be an easier task than in the past owing to the fact that in most of the processes manual skill has been superseded by the machine. Business in silver and plated goods is described as moderate for the time of year.

WORKINGTON.—There has been another bout of heavy buying in the North-West Coast hematite pig-iron market, most of it coming from the Midlands and South Wales, and makers now have sold production for more than fifteen months to come. A heavier production is justified, for smelters are hard pressed for deliveries, but it may be another six or seven weeks before the big furnace at Workington, which has been in process of relining is lighted. A rise in prices is anticipated shortly. Foreign ore is dearer, and the iron smelters in Cumberland are having to pay more for their coke, local supplies having to be supplemented by 2,000 tons weekly of East Coast coke, in consequence of the closing of the Whitehaven battery of ovens. Bessemer mixed numbers are quoted at £3 15s. per ton at Glasgow; £4 1s. at Manchester; £4 4s. 6d. at Birmingham, and £4 6s. at Sheffield, with an additional 2s. 6d. to 5s. per ton for special brands. There is a ready market for malleable iron at £5 15s. per ton delivered at Birmingham, and for ferro-manganese, at from £10 15s. to £11 5s. per ton home. Steelmakers are well off for orders, and are assured of the maintenance of activity on the present scale to the middle of next year. Native ore, at from 13s. 6d. to 14s. 6d. per ton, is in steady local request. Very few parcels are being sold to East Coast or Scottish smelters.

GLASGOW.—Steelmakers in the West of Scotland have now sufficient work on books to enable them to look forward with some degree of certainty to regular full-time working for some months to come. There has been no falling off in demand, and in some directions there has been an increase. Makers have been quite unable to fill the requirements of users of semis. The latter, however, have been able to obtain Continental material to meet immediate needs. It is announced that Messrs Colvilles, Ltd., are about to commence a large extension of workshops and plant at their Glengarnock works. These will be mainly employed in the production of semis, for which there is a large outlet in the West of Scotland for the manufacture of sheets and for re-rolled bars, hoops, strips, etc. Other extensions are contemplated by West of Scotland concerns. Constructional engineers in this district are busy and there is a large amount of work under consideration for which contracts have not yet been placed. In the

sheet trade no substantial increase in export business is noticeable, but home trade continues to expand, and output is being rapidly absorbed. Tubemakers are well employed, but export business is unsatisfactory.

CARDIFF.—Conditions in the tinplate trade have shown little or no movement during the past week. Factories are working at just over 50 per cent. of capacity, and little expansion is anticipated till the New Year. Shipments at Swansea last week totalled 48,721 boxes compared with 66,385 boxes the previous week, and 79,895 boxes in the corresponding period last year; and stocks in warehouse at the end of last week totalled 76,153 boxes as against 55,150 boxes the previous week, and 111,690 boxes a year ago. Prices both for the inland and the export trades are stationary at the recently altered schedule basis. Galvanised sheets have been featureless and prices of steel bars are unaltered at £5 10s. per ton.

OTHER METALS

COPPER.—Demand on the London market was again small, and prices showed a slightly easier tendency during the past week. In the United States, however, a rumour that the domestic quotation would be raised from 9.25 to 10 cents per lb. induced consumers to replenish their stocks, with the result that some sizeable turnovers were recorded. On Friday, for example, some 9.7 million lbs. changed hands in New York. Actually, however, the rumour seems to have had little foundation for a rise in the American domestic price is unlikely at present. Formerly, it is true, the larger copper concerns in the United States often raised their prices at the end of the year in order that their stocks might be valued at a higher level in their balance-sheets. But such a policy is not likely to be pursued this year, for the companies concerned are not seeking to raise large funds in the open market, and the burden of taxation is too heavy to make over-valuation of stocks advisable. An early slackening of demand may therefore be looked for on the American market.

Sales on the London Metal Exchange: 1,375 tons on Monday, against 1,400 tons last week; 1,175 tons on Tuesday, against 2,150 tons last week; 1,100 tons on Wednesday, against 1,050 tons last week. Domestic spot was quoted at 8.60 cents per lb. in New York on Wednesday, against 8.60 cents a week ago and 8.50 cents a month ago. Wednesday's official closing price for standard cash in London was £35 2s. 6d. to £35 3s. 9d., compared with £35 6s. 3d. to £35 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 78,404 tons, show a decrease of 560 tons, while stocks of rough copper, at 10,758 tons, show a decrease of 125 tons on the week.

LEAD AND SPelter.—Lead prices hardened during the past week. Some consumer buying, the danger of fresh labour difficulties in Mexico, and a hopeful speech by Mr A. Chester Beatty at the Trepana Mines meeting were the main causes. On the other hand, the market in spelter was dull, with quotations a shade easier. An interesting point was, however, made by Sir Robert Horne, the chairman, at the meeting of the Imperial Smelting Corporation this week. He stated the willingness of his company to "co-operate loyally" "in seeking an acceptable international agreement," and said that preliminary negotiations for the re-establishment of the International Zinc Cartel had already taken place. But he was unable to make a definite statement regarding the prospects of an early settlement. There would seem to be reasons for believing that Sir Robert Horne's remarks were in the nature of an invitation to international producers to resume co-operation, rather than a report of actual developments behind the scenes. Whether or not the resuscitation of the cartel, which broke down at the end of last year, will follow at an early date remains to be seen.

Sales of lead on the London Metal Exchange: 400 tons on Monday, against 1,250 tons last week; 2,900 tons on Tuesday, against 1,000 tons last week; 550 tons on Wednesday, against 800 tons last week. The New York quotation on Wednesday was 4.50 cents per lb., against 4.50 cents a week ago and 4.50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 1s. 3d. per ton, compared with £17 17s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 50 tons on Monday, against 500 tons last week; 50 tons on Tuesday, against 300 tons last week; 200 tons on Wednesday, against 25 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 2s. 6d. per ton, against £16 3s. 9d. last week.

TIN.—The cash price fell by a further £2 10s. per ton during the week ended last Wednesday, but since the three months' quotation declined by only 5s. in the same period, the backwardation narrowed to less than £10 per ton. Nevertheless, this must still be regarded as artificial and excessive. British warehouse stocks again declined last week to 272 tons—the lowest figure ever recorded. In view of the fact that shipments have begun to arrive from the Dutch East Indies, however, a reversal of this tendency may now be expected; for, according to the Dutch Press, this tin will be placed at the disposal of the London market. As pointed out last week, however, Dutch producers are calculating in a gold currency and they will certainly be anxious to obtain a high price for their metal. Until supplies arrive from other sources, therefore, little change in the undertone of the London market is to be expected.

Sales of tin on the London Metal Exchange: 215 tons on Monday, against 340 tons last week; 255 tons on Tuesday, against 125 tons last week; 205 tons on Wednesday, against 250 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 51.00 cents a week ago and 50.75 cents a month ago. Wednesday's official closing quotation in London for standard cash

was £221 10s. to £221 15s. per ton, compared with £224 to £224 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 272 tons, a decrease of 68 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, at £12 12s. 6d. per flask of 76 lbs., remains unchanged. Chinese antimony was quoted at £67 to £68 per ton ex warehouse, duty paid, as against £68 per ton last week. Chinese wolfram for November–December shipment was quoted at 34s. to 35s. per unit, c.i.f., the same as last week. Platinum (refined) was quoted at £7 17s. 6d. per ounce, as against £7 10s. last week.

TEXTILES

COTTON.—**Manchester.**—The general tone of the market has continued quieter. Prices have tended to harden, but very few buyers have been prepared to follow the upward movement, there being much difficulty in arranging terms of fresh contracts. Towards the end of last week there were indications of the rising tendency in raw cotton prices being checked, but bullish sentiment has again appeared and there seems to be less probability of any real decline in prices, especially in Egyptian qualities. Some reports from the United States have been rather unsettling, such as the decision of the Supreme Court in granting a temporary injunction in favour of Louisiana rice growers against the collection of processing taxes. In the meantime there continues an active demand from the trade. A further advance has occurred in prices for Egyptian cotton, both Sakel and Upper, the latest statistics being bullish.

Although the cloth market has been rather slower, business has not been at a standstill and fair miscellaneous transactions have been arranged for several outlets. Bids for India have again been rather poor. Most of the practicable demand has run on printed and dyed cloths. Further buying has occurred for Egypt in bleachers and printers and useful lines have been booked for the Crown Colonies, especially West Africa. A little more activity has shown itself in finishing styles for South America. A mixed business has been done for the Dominions and the home trade. Quotations in the yarn market have continued firm with a tendency to harden. A fairly encouraging turnover has taken place in coarse American counts with rather more demand in medium Egyptian numbers.

demand and the stronger statistical position of the article. A particular factor has been the heavy buying and shipments from Alexandria to Italy during the last few weeks. The crop of Egyptian cotton in 1934-35 was 7,350,000 cantars, whilst exports were 8,091,000 cantars. The growth for this season is estimated at between 7,750,000 cantars and 8,000,000 cantars. There is every probability of consumption exceeding output. The rise in prices has been a rather serious matter for cotton spinners in Lancashire, but the advance has been gradual and some weeks ago certain leading users secured their requirements for several months ahead. According to some authorities the upward movement is likely to continue. It is very difficult for spinners to find any substitute for Sakel cotton, which, of course, is of good quality.

COTTON RING SPINNERS' AGREEMENT.—As far back as November, 1933, a "gentleman's agreement" was adopted amongst cotton ring spinners in Lancashire relating to minimum prices, and this was loyally observed for some months. A little later, owing to a scarcity of orders, the agreement broke down. In the middle of 1934 there was a further attempt to arrange a price agreement on a legal basis, and in reply to a questionnaire 80 per cent. of the spinners concerned consented to a scheme of this kind. In September, 1934, a legal document was adopted and it was agreed that 90 per cent. of the ring spindles offering yarn for sale was sufficient to operate the scheme. At a meeting of the Committee held in Manchester this week it was announced that the seals of companies and signatures had already been attached representing 84.9 per cent. of ring spindles in the industry, with the promise of the addition of 3.4 per cent. at an early date. Mr Frank Platt, the managing director of the Lancashire Cotton Corporation, Ltd., who presided at the meeting, pointed out that the proposal was essentially an agreement to protect spinners on a minimum price basis, its primary object being to prevent margins slipping back to the position of selling prices resulting in a loss. It was agreed, however, that the scheme could not be put into operation at the moment.

WOOL.—Bradford. — The wool textile industry continues to display many signs of strength. Raw wool prices are firm, and employment in the industry is the highest since 1931. In the West Riding of Yorkshire there is less than 10 per cent. unemployment, and if more hands, especially weavers, could be obtained there would be even less standing machinery. Juvenile employment is particularly scarce, there being less disposition to-day among boys and girls leaving school to take up mill work than formerly.

The chief event of interest this week was the opening of a new selling season at Auckland, where the New Zealand clip is being brought to the hammer. The initial sale passed off remarkably well, with prices often 50 per cent. higher than a year ago. There is no doubt that crossbreds have passed the lowest point, and with a gradual liquidation of old accumulated stocks, these wools should assume a stronger position. A larger consumption than has been witnessed for several years may be expected at home, across the Atlantic and on the Continent, and everything points to sustained competition and firm raw wool prices. There was more Continental competition at Auckland than has been the case for the past two years. America may also be expected to be a liberal buyer, with considerable support by Bradford topmakers.

The current series of London sales was interfered with last Monday by fog, but the auctions were resumed on Tuesday with well sustained competition and firm prices. While no spectacular prices have been paid so far, the general level of prices indicates a sound position. The Continent is a much more active competitor this series than at any previous auctions this year, and everything points to an excellent finish.

GRAIN MARKETS

WHEAT.—The upward movement of quotations recorded a week ago has continued during the past few days, and it appears that the forces which produced a reactionary tendency in recent weeks have now spent themselves. Supplies have been rather short this week, while demand has become more brisk. Moreover, the realisation that the exportable surplus of some of the chief exporting areas will be substantially reduced this season has had a steadying effect on the markets.

According to the *Corn Trade News*, total shipments of wheat and flour from exporting countries during the past week were 1,186,000 quarters, against 1,353,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 97½ cents per bushel, against 96½ cents the week before and 97½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. 6d. per 496 lbs., against 34s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 33s. 9d., against 33s. 6d. a week ago.

FLOUR.—Demand has shown some improvement this week, and prices have recovered. Shipments from North America in the past week totalled 84,000 sacks, as against 99,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. per 280 lbs., against 28s. a week ago; delivered London, 28s., as compared with 27s.

a week ago. Manitoba patents, ex store, 27s. 6d. to 29s. 6d., against 27s. 6d. to 29s. 6d. a week ago. Australian, ex store, 22s. to 22s. 6d., against 22s. to 22s. 6d. a week ago.

BARLEY.—Business in imported feeding barley has been reduced in volume this week, but the market has been quietly steady. Canadian quotations show an easier tendency. The relative cheapness of maize is adversely affecting the demand for barley at present. "December" futures were quoted at 33½ cents per bushel in Winnipeg on Wednesday, against 33½ cents last week and 32½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 54s., against 30s. to 54s. a week ago.

OATS.—Demand for domestic oats on provincial markets in this country has been quiet during the past week, with quotations tending to lower levels. On Wednesday, "December" futures were quoted at 26½ cents per bushel in Chicago, against 27 cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

MAIZE.—Demand for Plate maize on world markets has expanded this week and quotations in this country are firmer. But Chicago prices have eased a little. "December" futures were quoted on Wednesday at 59½ cents per bushel in Chicago, against 60½ cents a week ago and 58½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 3d. per 480 lbs., compared with 17s. 3d. a week ago; "Plate," ex ship (new), 16s. 6d., as against 16s. 3d. a week ago; "Plate," November, 16s. 6d., against 16s. 4d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s to £4 17s. 6d. per ton, against £4 12s. 6d. to £4 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table give the estimated sale of home-grown wheat during the harvest year 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to November 23	Cwts. 302,111	Cwts. 283,375	Cwts. 307,279	Cwts. 381,557
12 weeks to November 23	3,373,187	4,019,977	5,381,819	5,528,732
Average price of English wheat per cwt.	s. d. 5 5	s. d. 4 7	s. d. 4 11	s. d. 5 9

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 21, 1931	Cwts. 73,670	Cwts. 501,688	Cwts. 55,803	s. d. 6 1	s. d. 7 0	s. d. 7 0
Nov. 28, 1932	302,111	427,915	47,352	5 5	7 2	5 10
Nov. 25, 1933	283,377	367,848	47,957	4 7	9 2	5 3
Nov. 24, 1934	307,279	367,848	49,953	4 11	8 8	6 8
Nov. 16, 1935	401,649	380,680	44,962	5 11	8 5	6 1
Nov. 23, 1935	381,557	394,130	63,106	5 9	8 5	6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935, with comparative figures for 1934.

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Nov. 28, 1934	Jan. 2, 1935	Nov. 20, 1935	Nov. 27, 1935
Winnipeg (No. 1, Manitoba) Cents per 60 lb.	48½	65½	78½	82½	85	86½
Chicago (No. 2, Winter) Cents per 60 lb.	46½	84½	99½	98½	99½	97½

The visible supply of wheat in Canada amounts to 142,164,000 bushels, against 145,103,000 bushels last week and 125,137,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—Pressure to sell the continued larger supplies of English and Irish descriptions has depressed the market further, but at the lower level of prices a steadier tendency has been in evidence. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 77s. to 83s.; Canadian, 72s.; Danish, 82s., as against 80s. to 87s., 75s. and 86s., respectively, a week ago. Arrivals in London last week included Danish, 13,189 bales; Canadian, 4,563; Dutch, 2,229; Lithuanian, 608; Polish, 2,024; against 14,251, 4,302, 2,276, 1,568 and 2,639 bales, respectively, in the previous week.

BUTTER.—After a firmer tendency last week-end, the demand for Australian and New Zealand butter has slackened this week and prices have eased a little. But Danish holds its price. Quotations (per rwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 100s. to 101s.; Australian, choicest salted, 100s.; Danish, 125s.; compared with 102s. to 103s., 101s. to 102s. and 124s. to 125s., respectively, last week.

CHEESE.—The market has been generally steady during the past week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 74s. to 80s.; Canadian, finest coloured (new), 58s. to 60s.; New Zealand, finest coloured, 55s. to 56s., as against 70s. to 80s., 58s. to 62s. and 53s. 6d. to 54s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., as against 5 cents per lb. last week. On the London market, Accra cocoa has been in steady demand at slightly easier prices. On Wednesday last, good fermented new crop, November-January, was quoted 22s. 3d. per 250 kilos. c.i.f. Continent, against 22s. 4½d. last week. Last week's movements of cocoa in London were as follows: Landed, 7,711 bags; delivered, for home consumption, 5,684 bags; exported, 264 bags; stocks, 122,607 bags, against 141,397 bags a year ago.

COFFEE.—Demand for spot coffee in New York has been steady at unchanged prices. The London market has ruled quiet during the past week. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 27 cwt.; delivered, for home consumption, 25 cwt.; exported, nil; stocks, 12,531 cwt., against 28,459 packages a year ago. Central and other South American, landed, nil; delivered, for home consumption, 1,853 cwt.; exported, 2,217 cwt.; stocks, 78,095 cwt., against 76,523 packages last year. Other kinds, landed, 4,885 cwt.; delivered, for home consumption, 3,719 cwt.; exported, 1,881 cwt.; stocks, 107,400 cwt., against 71,332 packages last year.

EGGS.—The market has been firm during the past week, with prices showing a further seasonal advance. At Smithfield Market on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 20s. to 21s. 6d. per 120, against 19s. 3d. to 20s. 9d. a week earlier, while Danish (15½ lb.) made 17s. to 17s. 9d. per 120, against 16s. 9d. to 17s. 6d. last week.

FRUIT.—After a slow trade last week some improvement in business occurred at Covent Garden this week. According to *The Fruitgrower*, apples are in steady demand, with supplies of all home-grown limited. British Columbian box apples and American barrels have shown a firmer tendency. Pears continue to sell well, but Californian are easier on larger arrivals. Hothouse grapes are receiving more attention and, with supplies shortening, prices have hardened. Oranges have been a steady trade, but the market is well supplied with grapefruit, the price of which has declined. Lemons are again dearer, with the prospect of a cessation of Italian supplies.

MEAT.—At Smithfield Market supplies have again been above last year's level. Fresh beef, mutton and lamb have been in only moderate request, but there has been a steady demand for chilled and frozen descriptions. Prices in these sections show little change on the week, but veal and pork were rather firmer. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 10d. per 8 lbs., against 3s. 2d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,688 tons, an increase of 289 tons on the corresponding week last year. Beef and veal accounted for 4,878 tons, mutton and lamb 2,719 tons. and pork and bacon 1,213 tons, as compared with 4,790, 2,461 and 1,102 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampong (in bond) was 3½d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 9 tons; stocks, 1,450 tons, against 625 tons a year ago. White, landed 5 tons; delivered, 255 tons; stocks, 14,454 tons, against 9,988 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 10½d. per cwt. ex-warehouse on Wednesday, as compared with 9s. 10½d. per cwt. a week ago. New crop, January-February, in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 6d. per cwt. last week. Movements in London during the past week were as follows: Landed, 66 tons; delivered, 292 tons; stocks, 6,490 tons, against 2,762 tons a year ago.

SUGAR.—The New York spot market registered a decline this week, demand being slack. The London market in raw sugar has been slightly firmer. The spot price in New York on Wednesday was 3.25 cents per lb., as compared with 3.40 cents per lb. last week and 3.60 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 11½d., against 4s. 8½d. to 4s. 9½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 31,493 tons, against 34,053 in the previous week and 33,815 tons in the same week of last year; deliveries, 14,796 tons, against 15,649 and 14,687 tons respectively; stocks, 202,533 tons, against 185,836 and 125,900 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Nov. 22, 1934	d. 11-96	d. 11-45	d. 13-73	d. 10-30	d. 9-21	d. 10-83	d. 12-09
Oct. 24, 1935	14-75	12-68	16-59	12-56	10-41	10-88	14-75
Oct. 31, "	14-00	12-42	15-69	11-89	10-12	11-16	14-07
Nov. 7, "	13-33	12-31	15-03	12-18	9-42	11-63	13-53
Nov. 14, "	12-87	12-04	14-27	11-76	9-66	11-33	13-02
Nov. 21, "	12-86	12-21	13-88	12-91	10-49	11-59	13-01

The quantities catalogued for this week's auctions comprised 45,614 packages of Indian and 19,973 packages of Ceylon tea—appreciably less than a week ago. The market in Indian grades was active at firm prices, some advances being recorded amongst the commoner sorts. At Tuesday's Ceylon auctions rather more irregularity was displayed, but prices were generally well maintained at last week's level.

VEGETABLES.—Home-grown tomatoes are in limited supply at Covent Garden, but Canary Island supplies are increasing, states *The Fruitgrower*. Only a few cucumbers are on the market and realise good prices. There is a fair showing of lettuce, but mint is in shorter supply. Good cabbage and cauliflower are fetching satisfactory prices, while sprouts vary considerably according to quality. Celery is plentiful and cheaper. The potato trade has been moderate this week, with best siltland King Edward making 6s. 6d. to 7s. per cwt. at the Borough Market on Tuesday, against 6s. 3d. to 6s. 9d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets are far from active, but have a steady tone. Linseed has been inclined to fluctuate, but is steady on support from the Continent. This has to some extent offset the easier feeling induced by continued favourable prospects for the growing crop in Argentina. A little trade in new crop for shipment early in the New Year to Hull has been done at £9 17s. 6d. and £9 18s. 9d. There are still about 300,000 tons of the old Plate seed available for shipment, or twice as much as was actually shipped in the remainder of 1934. Only a small trade is reported in Indian linseed, for prices are considered too high in relation to other supplies. The quantity of linseed afloat for Europe has increased to 126,100 tons (including 20,000 tons from India), 6,600 tons more than last week. America continues to receive fair quantities and there is now on passage 52,900 tons, against 32,600 tons a year ago. Cottonseed is firm and dearer, and business in black Egyptian to Hull has been done up to £6 11s. 3d. January-February and £6 12s. 6d. March-April.

Linseed oil is in fair demand from consumers and remains steady. The present price of raw oil ex Hull mill for December delivery is £25 5s. and for January-April £25 7s. 6d. per ton, naked. Cotton oil is firmer but export demand is not so active. Egyptian crude ex Hull is offered at £26 and refined at £29 per ton, prompt. Oil-cakes are in fair demand and steady.

RUBBER.—Prices have hardened slightly during the period under review, despite the continuance of uncertainty concerning the Dutch native quota and the future of the gold bloc countries. The slight rise this week is attributed to a steady demand from the trade, largely for American account. Meanwhile, the meeting of the International Rubber Regulation Committee next Tuesday is awaited with interest.

VITAL FACTS ON 64 AMERICAN SHARES

will be found in reprints of *THE FINANCIAL WORLD OF AMERICA'S* famous "Share Factographs." You will receive 64 of these Factographs at first and 32 more in the next 4 issues of *THE FINANCIAL WORLD* if you post four shillings for a four weeks' trial subscription and a copy of our monthly manual "Independent Appraisals of (1,300) Listed Shares." If you return this "ad." and four shillings at once you will also receive: "Fifteen Shares for the Coming Prosperity," "A Rare and Important Market Signal," "Rail Shares in Best Position," "A Stock Market Enigma," and "An Analytical Basis for Selecting Stocks."

There are growing indications of an American inflation boom that should not reach its climax for several years. You owe it to yourself to study and prepare to profit by it through the purchase of sound American shares. To keep financially posted through an unbiased source is now all-important. For this purpose you can find nothing to surpass America's 33-year-old *Investment Weekly* in saving your time, effort and money.

Post only, Cheque or Postal Order for 4/- for our four weeks' trial offer or £2 8s. for one year to:

THOMSON MASON, London Representative
66, Queen Victoria Street, E.C.4

The spot price in New York on Wednesday last was 13½ cents per lb., compared with 12½ cents per lb. a week ago and 13½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for January to March shipment, as against 6½d. to 6¾d. a week ago. Stocks in London and Liverpool at the end of last week totalled 166,492 tons, against 166,299 tons a week earlier. A year ago stocks amounted to 127,631 tons.

TIMBER.—Imports of building and joinery woods during October were above the 1934 level, as a result of heavy shipments from Russia and Finland, and London dock holdings of deals, battens, scantlings and sawn boards registered a sharp decline. European

shippers have shown a firmer tendency recently and quotations have hardened. Weather conditions in recent weeks have, however, impeded building operations in this country and spot demand from consumers has slackened. Little business has yet been negotiated for 1936 first open-water shipments, British importers being disinclined to commit themselves too far ahead. Imports of hardwoods have been well maintained but, with demand moderately active, prices are generally in only moderate supply, although imports of Canadian Douglas fir logs are increasing rapidly. The expansion of activity in home industries is reflected in growing imports of plywood, veneers and panel wood from various sources overseas.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

LONDON, November 27th

THE KING'S SPEECH

THE delivery of a King's Speech at the opening of a new session of Parliament is in two senses a formal occasion. The speech is only in the most literal sense the King's own, for it is one of the most open secrets of the British Constitution that the words are put into his lips by his Ministers; they constitute what in other countries is more exactly described as the Ministerial declaration. In the second place, it is only rarely that any surprises are to be found among the conventional phrases of the Speech. On Tuesday, part even of the ceremonial formality was missing, for the death in the early hours of the same day of the King's sister, the Princess Victoria, had led to a cancellation of the arrangements for a State opening by His Majesty in person, and the Speech was read by the Lord Chancellor.

By its contents, too, the King's Speech broke no precedents; for there was little in it that was not already familiar from the Government's pre-electoral manifesto and from the broadcasts of the Prime Minister and other Ministers. The only surprises were the announcement of a Bill "for promoting the further development of our civil air communications, both in this country and throughout the Empire," and of another Bill "for the provision by local authorities in co-operation with voluntary associations of an organised service of salaried midwives." Both of these are proposals to which exception cannot be taken, but neither of them is calculated to set the Thames on fire. The Prime Minister's speech in the ensuing debate was vague much beyond his wont, and little more of a definite nature emerged from it, except for the promise to introduce into the second session of the new Parliament a Bill to revise and consolidate the law relating to the safety, health and welfare of factory workers.

In these circumstances, interest attaches not so much to the content of the Speech as to the precise words in which it was expressed. The general objects of the Government's policy are familiar to, and on the whole approved by, the

electorate. The preservation of peace abroad by implementing the League Covenant; the pursuit of recovery at home by the same devices as have been employed in the past four years, with perhaps a slightly greater admixture of public works; an increase in the defence forces, but with no slackening of progress in the Social Services—these are the planks of the platform on which the Government won the General Election. But on every point the public is anxious to know how quickly the Government's policy is to be carried into effect, how far it will proceed towards its goal, and what means will be employed to forward it. Does defence of the Covenant mean a "deal" with Signor Mussolini or the progressive application of effective sanctions? How costly will re-armament prove to be and how is it to be financed? What is to be the future of the unemployment regulations, and in particular of the means test?

These are questions of the sort the King's Speech might have answered—but did not. On the international situation, for example, the general sentiments are unexceptionable; the Government "will remain prepared to fulfil, in co-operation with other members of the League, the obligations of the Covenant." But there is the further statement that "they will continue to exert their influence in favour of a peace acceptable to the three parties in the dispute, namely Italy, Ethiopia, and the League of Nations." Mr Attlee compared this to an attempt by the Home Secretary to deal with a charge of housebreaking by reaching a settlement "which would be equally agreeable to the housebreaker, to the victim, and to the Home Secretary." The Prime Minister, for his part, emphasised the desirability of bringing the war in Abyssinia to an end, without mentioning the necessity for establishing beyond question the authority of the Covenant. In view of the persistent rumours from Paris, this week, of an approaching Anglo-Italian "accommodation," the greater precision of the Foreign Secretary, on Thursday, was reassuring. Although France and Britain,

he declared, would redouble their "intensive effort" to secure a "peaceful settlement," there was no likelihood that the League would weaken. The task of the Committee, when they met on December 12th, would be to discuss "the actual application of a form of pressure that had already been accepted in principle."

There is a lack of precision, also, about the economic part of the Government's programme. Three paragraphs of the Speech are devoted to the coal-mining industry, as is only fitting in view of the impending crisis in the coal-fields. That elusive phrase, the "unification" of mining royalties, appears again, this time with the qualification "under national control," but there is still no way of telling what it means. Nor, surprisingly enough, is there any mention of the depressed areas, except for the statement that the Government, in their policy for the general recovery of trade, industry and agriculture, "will pay special regard to those areas in which the burden of unemployment is greatest and to the development of any measures likely to be advantageous to them." The only amplification to which Mr Baldwin committed himself was to refer "with some hope" to the establishment of one or more trading estates in the depressed areas, and to repeat his appeal to those industries which had profited from Protection to settle in the depressed areas. If these tit-bits constitute the whole of the Government's policy for the depressed areas, neither public opinion nor the Government's own supporters will be content.

There are many other items on the Government's programme to which exactly the same criticism applies. No party questions the policy of raising the school-leaving age; but the Government will lose the credit for introducing it unless they push forward with it quickly. The reformation of the Means Test in such a way as to ensure the integrity of the family is another proposal to which exception cannot possibly be taken in principle; but everything will depend upon the method of its execution. Again, it is reassuring to know that expenditure for re-armament will be limited to the minimum required for the fulfilment of our international obligations and the adequate safeguarding of the Empire. But there is room for very wide differences of opinion in the definition of that minimum, and the public has a right to know what Mr Baldwin's estimate of the cost is and how he proposes to meet it.

In short, the Government should by now have got beyond the stage of enumerating its objectives. There can rarely have been a King's Speech at the beginning of a new Parliament which was, in principle, less controversial. All the controversy, and, accordingly, all the political interest, attach to the details of the forthcoming measures. The sooner the Government can supply these missing particulars, the sooner will the electorate be able to form an opinion on the manner in which the Government is executing the mandate entrusted to it.

THE NAVAL CONFERENCE

THE third of the Five-Power naval conferences held since the Great War, opened officially in London on Friday. Its primary business is to reconcile the naval policies of the three oceanic naval Powers, who were the protagonists in the London Conference of 1930 and the Washington Conference of 1921-22. The task has become a most formidable one by reason of Japan's demand for parity and by her actions in China.

This statement does not minimise the importance of the naval problem in European waters, which has been brought into the limelight by the present conflict between Italy and the League of Nations, or of the naval problem in the North Sea, on which the recent Anglo-German naval agreement has a vital bearing. The re-armament of Germany has raised the number of post-war European naval Powers from the original three—the United Kingdom, France and Italy—to four. We cannot flatter ourselves that this European naval question is negligible; and, indeed, it is complicated by the problems of European land and air armaments. But, unless the three-power problem is solved, there is no firm basis for a European agreement. In the present

article, therefore, we propose briefly to survey the political background of the major issue.

For fourteen years the naval relations between the three Pacific naval Powers—the United States, the British Empire and Japan—have remained set in the political framework given to them at the Washington Conference. This arrangement has been strong enough to resist even the successive blows dealt to it during the past four years by Japanese hands. But it cannot continue to be proof against the sustained assaults of Japanese militancy on the one side and Western technical progress on the other. Between them, Japan and Applied Science have at last succeeded in breaking up the well-laid foundations on which naval agreement in the Pacific has hitherto rested. This work of destruction will make itself felt in London during these coming days and weeks. Officially, political questions may possibly be excluded from the agenda; in practice, all three Powers concerned will find themselves forced to take new and momentous decisions, and to arrive at new political bases for new policies in the technical naval sphere. What, then, were the political materials out of which the framework of the Washington treaties was compacted? We may reduce them to two fundamental hypotheses: first, that the navies of the three Pacific Powers could be kept insulated from one another; second, that Japan could be relied upon to keep her promise of non-intervention in China. Both these hypotheses have been falsified by the events of the last few years. Yet it is necessary that not merely one or the other but both should hold good if the Washington arrangement is to work.

Naval "insulation" and Japanese good faith were essential to the Washington arrangement for several reasons. On the one hand, Japan's assurance of immunity from naval attack by the United States or the British Empire, or both combined, was a necessary condition of her consent to a 3:5:5 naval ratio. On the other hand, it was a geographical impossibility to secure naval immunity for Japan in the Pacific without conferring on her a potential naval and military predominance in the Far East. For that reason the British Empire and the United States required an assurance, for themselves, that Japan would not abuse her immunity by translating her local supremacy into aggressive action. Hence, the political basis of the Washington naval limitation agreement rested on two postulates. The first was the article in the Washington Five-Power treaty under which the contracting parties undertook not to add to their existing fortifications and naval bases in the Pacific region within a specified area. This ruled out the construction of any British naval base nearer to Japan than Singapore, and of any American naval base nearer to Japan than Hawaii. The second was the Nine-Power Washington treaty on principles and policies relating to China. In this treaty, the three principal naval Powers, together with six other interested parties, including China herself, agreed to respect the sovereignty, independence and territorial and administrative integrity of China. They also undertook to provide the fullest opportunity to China to develop an effective and stable Government.

That this Washington Nine-Power treaty has, in effect, been torn up by the Japanese, is a proposition which may be taken for granted, to-day, without the necessity for lengthy demonstration. On the subject of naval "insulation" in the Pacific, however, there remains something to be said. In the first place, even in 1921 the insulation was not automatic. The intrinsic physical difficulties of conducting naval operations—at any rate with capital ships—across the vast open waters of the Pacific Ocean are admittedly great. The self-denying clause in the matter of additional naval bases, nevertheless, was necessary, even at that date, in order to make sure that the insulation would be effective. The United States and the British Empire could—and still can—bring their naval forces within striking distance of Japan by constructing new naval bases in places under their control in Far Eastern waters: e.g. at Hongkong, or in Guam, or in the Philippines. Now that Japan has violated her own undertakings under the Washington arrangement, she can hardly expect the agreement relating to the additional naval bases to be renewed by the other parties. There is thus a prospect of the three navies coming within striking distance of one another. This

political change for the worse coincides in date with a terrifyingly rapid shrinkage of human distances in the Pacific, owing to the conquest of the air. Air communications have been opened up between America and the Philippines as well as between Europe and Australia. The Soviet Union has also come on the scene as a Far Eastern air-Power with an air-base at Vladivostok which is within striking distance of Japan's metropolitan territories, including all her great cities.

In this situation, each of the three Pacific naval Powers must needs make up its mind on certain crucial questions. The Japanese must decide whether they really mean to compete with the United States for the naval command of the Pacific, while they are proceeding with their present policy of conquering China. The history of the last few years has borne out the expectation, implicit in the Washington Nine-Power treaty, that the 3:5:5 ratio already enables Japan to impose her will in Far Eastern waters. Prudence might, therefore, have counselled the Japanese to leave the existing ratio alone so long as the United States and the British Empire allowed aggression against China to continue unchecked. However, the Japanese seem determined to insist upon naval parity too—a resolve which may turn out to have been a fatal error. In this situation, the Americans must decide whether they will concede naval parity to Japan. If they mean to maintain their present naval superiority *de facto*, they will be bound to consider whether they ought not to reverse their recent policy in the Far East, by strengthening their position there (especially in the air) instead of ridding themselves of their Far Eastern commitments.

Finally we ourselves shall have to make grave decisions on our future policy. Do we really wish to maintain parity with the United States in a Japanese-American naval armaments race? Or are we content not to let ourselves be out-built by Japan? Or can we perhaps even afford to let our naval strength fall below the Japanese, on the calculation that the United States can be counted upon to keep Japan in order? These are serious questions indeed.

BRITAIN'S VEGETABLE SUPPLIES

ALTHOUGH the value of the British vegetable output is small by comparison with some other branches of agriculture, it satisfies the larger part of the national demand for a very valuable element in human dieting. In the following article we propose to survey the available information relating to supplies and prices of the chief vegetables produced commercially in this country. No estimate, unfortunately, is possible of the significant proportion of the total supply which is grown, non-commercially, in gardens and allotments.

Our analysis may appropriately begin with those products in which the home grower has to meet most competition from overseas—potatoes, tomatoes and onions. Available details are shown below:—

UNITED KINGDOM—SUPPLIES OF TOMATOES, POTATOES AND ONIONS
('000 cwt.)

	1924	1929	1931	1932	1933	1934	1935 (a)

Total Imports	4,755	5,343	5,085	5,020	5,102	5,133	4,198
Home Production (c)	244	172	84	108	130	116	...

(a) Imports for ten months. Home production figures not available. (b) Estimated production in England and Wales only. Figures for 1924 and 1931 supplied by the Ministry of Agriculture; those for other years by the British Glasshouse Produce Marketing Association. (c) England and Wales only. Estimate by Ministry of Agriculture.

The largest share of the potato market falls to the domestic producer, imports being mainly used to even

7, CHANCERY LANE, LONDON

out the irregularities of the home crop. The position was radically modified last year by the inauguration of the Potato Marketing Scheme, under which "foreign" imports (which had been subject to a variable tariff from the beginning of 1932 and had been regulated by "gentlemen's agreement" from September 1, 1933) became subject to a licensing system, applied to early and main-crop potatoes from November 1, 1934. Under this scheme regulation was carried out by the Board of Trade, in consultation with the Ministry of Agriculture, the Market Supply Committee and the Potato Marketing Board. Imports, which had been abnormally heavy in 1931 and 1932, fell sharply in 1933, and by 1934 reached the lowest level since 1921. Some recovery has occurred this year, partly owing to the damage suffered by the home crop during the May frosts, but shipments are still below the 1933 figure. The bulk of our imports comes from the Channel Islands (especially Jersey) and Spain, the third and fourth places being filled respectively by Holland and the Canary Islands. The home crop has been fairly stable in the last few years, and sales of English potatoes for human consumption are unlikely to expand materially in the future. Imports will probably be increasingly confined to early potatoes, received mainly in May and June each year.

Imported supplies of tomatoes are smaller in volume, but considerably more valuable than those of potatoes. Aggregate shipments vary little from year to year, but the distribution of supplies has recently shown significant changes. Holland is becoming progressively less important as a supplier of the British market, and the bulk of our imports is now obtained from the Canary and the Channel Islands. Imports of the Jersey "outdoor" varieties, moreover, have been growing more rapidly than the "hothouse" products of Guernsey. Imports from the Channel Islands are duty free, but entries from foreign sources bear a levy of 2d. per lb. in June, July and August and 1d. in September and October, with a general duty of 10 per cent. *ad valorem* during the remainder of the year. Commercial production of tomatoes in the United Kingdom is largely a post-war industry, and supplies are almost exclusively grown under glass. Although the industry has obtained less than it expected from the imposition of tariffs, largely owing to increased shipments from Jersey and Guernsey, home production is increasing, and accounts for almost 40 per cent. of consumption. A marketing scheme for tomatoes is being drafted by the National Farmers' Union.

The greater part of British demand for onions is satisfied from overseas sources. The decline in home production may be traced largely to the fact that the crop is a long time "in the ground" and involves high expenditure on hand labour. Imports are subject only to the general duty of 10 per cent. *ad valorem*. They are derived almost exclusively from non-British countries and have recently fluctuated little. During 1934, Spain was ousted from her traditional position as the leading supplier by the

Netherlands. She is likely, however, to regain her lead this year—with Egypt filling the third place. Onions head the list of vegetable imports by weight, but are less valuable than either tomatoes or potatoes.

Imports of other vegetables have been drastically curtailed since tariffs were first imposed in December, 1931. Although the British trade returns do not give separate statistics for different categories, the volume of imports in 1934 was estimated by the Ministry of Agriculture* as follows:—Lettuce, 8,000 tons; cauliflower and broccoli, 7,000 tons; carrots, 8,500 tons; green beans and peas, 1,300 tons. The bulk of these supplies comes from France and Holland, with the Channel Islands a poor third. It is both unfortunate and anomalous, in these conditions, that no statistics of the volume or value of the home crop are available. The published data of the Ministry of Agriculture relate only to acreages, and may be summarised as follows:—

ACREAGE UNDER CERTAIN VEGETABLE CROPS IN ENGLAND AND WALES (a)

	June	Cabbage (b)	Brussels Sprouts	Cauliflower and Broccoli	Carrots	Peas picked green (c)	Beans picked green (c)	Celery and Rhubarb
		Acres	Acres	Acres	Acres	Acres	Acres	Acres
1924		25,848	20,511	12,358	10,746	62,861	14,087	12,279
1929		32,352	26,715	13,863	10,289	53,860	12,811	12,806
1930		30,632	26,331	14,557	9,040	56,431	14,404	13,747
1931		35,702	35,589	15,783	9,430	57,445	13,218	15,153
1932		33,863	33,043	17,671	12,489	60,551	15,559	15,963
1933		33,101	35,890	20,695	12,868	63,671	14,281	15,523
1934		36,981	34,048	20,107	16,432	74,363	16,833	15,743
1935		37,500	34,100	19,500	15,800	63,600	20,700	(d)

(a) As returned on agricultural holdings above one acre in extent. (b) Excluding cabbage used for fodder. (c) Including a proportion cut green for fodder. (d) Not yet available.

The acreage under fresh vegetables has been continuously extended in the last ten years, especially since the first tariffs were imposed in 1931. The figures are but a rough-and-ready guide to supplies, for yields per acre vary widely according to weather, the incidence of diseases and pests, and other fortuitous matters. The annual commercial output of vegetables in England and Wales (excluding potatoes and tomatoes) was put by the Ministry of Agriculture at 1,500,000 tons (valued at £12,000,000) in 1930-32, and non-commercial production at a further 470,000 tons (valued at £3,760,000). Allowing for wastage, annual consumption may be tentatively estimated at a little over 100 lbs. for every member of the population, of which the home market provides about 88 per cent.

The vegetable market has a highly complex price structure. Both demand and supply are liable to be extensively affected by weather conditions, and the absence of standard grades and containers for a wide range of qualities is another complicating factor. As a result, prices vary widely from one week and from one season to another, and the market is highly speculative. The best guide to the trend of recent prices is the series of index numbers of the Ministry of Agriculture (published annually in "Agricultural Statistics, Part II"):

INDEX NUMBERS OF PRICES OF HOME-GROWN PRODUCE (1911-1913 = 100)

Item	1924	1929	1930	1931	1932	1933	1934
Potatoes	257	117	96	188	197	104	119
Onions	159	151	87	110	100	115	104
Cabbage	136	145	136	127	102	118	118
Brussels Sprouts	175	173	160	145	125	119	135
Cauliflower	168	163	153	142	142	153	158
Carrots	186	178	131	150	225	217	208
Beans and Peas	145	135	100	74	76	72	77
Celery	164	173	164	164	136	127	136
All Agricultural Produce	161	144	134	120	112	107	114

Despite the irregularities of vegetable prices, it is clear that the British grower has derived considerable benefit from protection. The return from vegetable growing has been fairly satisfactory, by comparison with that of many other branches of agriculture, in the past three years.

* "Vegetable Marketing in England and Wales." Ministry of Agriculture and Fisheries, Economic Series, No. 25. Price 1s. net.

Efforts have been made, with some success, to achieve increased profitability by the extension of the marketing season, the increased use of glass, the development of special varieties of produce, and the canning and bottling of home supplies. In its recent admirable Report on Vegetable Marketing, the Ministry of Agriculture has gone further and has suggested certain improvements in marketing methods, with two main objectives in view. "One of them is the standardisation of product, pack and package, in order to secure better presentation, to stimulate demand and to facilitate distribution. The other is the standardisation of trade practices." Few would disagree with these moderate and farsighted recommendations. The industry cannot expect further favours from the Government, but it can and should be willing to set its own house in order along the lines suggested by the Ministry.

THE STATE OF IRELAND—II

THE rapid change in the national economics of the Irish Free State, which has been occupying the energies of Mr De Valera's Government during the past three years, was made necessary by the drastic decline in the agricultural export trade since 1929. This decline has been accelerated, but was not initiated, by the economic "war" with Great Britain. The effort of adaptation to these changed external circumstances has had two aspects: the first a negative policy of defence for agriculture, the second a more positive attempt to stimulate industry to take the place of agriculture. The former policy was briefly described in an article in last week's *Economist*. We may now turn to the industrial side of Mr De Valera's economic policy.

The Free State Government has shown conspicuous energy and ingenuity in promoting urban employment, although all its devices have had a strong protectionist family likeness. The tariff, the quota, prohibitions, and monopolist concessions have all been utilised to stimulate industrial production. The sentiment of economic nationalism has been appeased by strict control of the ownership of the capital invested in the new ventures, while the provision of capital for Irish industries has been facilitated by the foundation of the Industrial Credit Corporation, the shares of which are mostly held by the Government. The degree of success which the experiment in protection has had is not beyond dispute. Undoubtedly imports have declined, as the following table suggests:—

IMPORTS INTO IRISH FREE STATE (£000)

	1929	1931	1933	1934	1934 (9 mos.)	1935 (9 mos.)
Food, Drink and Tobacco	22,891	17,458	10,659	11,565	8,072	7,091
Foodstuffs of animal origin	3,178	2,498	1,415	1,436	317	278
Cereals and feeding-stuffs	11,281	7,696	4,871	4,993	3,787	3,284
Raw Materials and Manufactures	35,841	30,499	21,428	26,658	19,775	19,611
Coal	3,145	3,073	2,461	2,388	1,735	1,749
Iron and steel	2,277	1,902	1,527	2,114	1,674	1,466
Machinery	2,779	1,977	1,423	1,686	1,244	1,341
Vehicles	3,158	2,232	1,834	2,514	1,907	1,909
Textiles	4,746	3,880	3,795	3,795	1,886	1,244
Apparel	6,062	5,336	2,983	4,355	3,185	3,252
Other goods	2,674	2,104	702	2,361	1,961	1,420
Total Imports	67,316	50,461	35,789	39,066	29,139	27,369
From United Kingdom	47,984	40,772	25,032	26,073	19,881	18,607
From Other Countries	19,332	9,689	10,757	12,993	9,258	8,762

* Figures not comparable owing to change in basis of classification.

The most striking reductions, it will be noticed, are in commodities which the Free State can make from its own raw materials, such as "Foodstuffs of Animal Origin," and in the simpler finished products, such as "Apparel." Raw materials and semi-manufactured articles which the Free State cannot itself provide, such as coal and textiles, have continued to be imported in considerable quantities.

The effect of intensified protection upon employment in the Free State, however, is more doubtful. A number of small factories have sprung up and many old undertakings have extended their operations. The Department of Industry and Commerce has compiled a variety of indices of employment based upon the volume of contributions to

health and unemployment insurance, and upon the annual census of production. Of these, the figures based upon health insurance include agriculture and domestic service, while the census of production is restricted to productive industry. For what they are worth, the indices are given below (1926 = 100):—

	Based on Unemployment Insurance*	Based on Health Insurance	Based on Census of Production†
1931	117	120	112
1932	...	...	115
1933	129	124	131
1934	134	130	154‡

* Financial years. † October in each year. ‡ Provisional.

The only conclusion that can be legitimately drawn from these figures is that employment has undoubtedly increased, particularly in manufacture. But the exact extent of the increase must remain a matter of conjecture. In particular, it is doubtful whether the increase in employment has kept pace with the increase in the population. The unemployment figures are, unfortunately, unreliable, since administrative changes have entirely upset their basis. In May, 1932, for example, it was laid down that all recruitment for relief works or for State-subsidised enterprises, such as beet sugar factories, must be effected through the local employment offices. The result was that nearly 100,000 persons who were ineligible for unemployment insurance (e.g. small farmers and farmers' sons) and had never found it worth while to register before, appeared on the official unemployment roll. In April, 1934, again, the Unemployment Assistance Act attracted to the register a good many people who were not in any strict sense industrial unemployed. The fact that the total on the register had risen from 24,000 in April, 1931, to 135,000 in April, 1935, is thus almost meaningless. A truer guide is perhaps to be found in the number of claimants to unemployment insurance benefit, although even this series of figures is not entirely immune from the effects of administrative changes. It is difficult to trace any tendency, upwards or downwards, from the average figures, by quarters, since the middle of 1932, which appear in the table below:—

	1932	1933	1934	1935
First quarter	...	24,981	22,653	23,281
Second quarter	...	17,632	19,366	16,530
Third quarter	19,375	16,294	18,572	...
Fourth quarter	22,891	20,679	21,641	...

In one group of industries—the building and allied trades—there has without doubt been both an increase in employment and a reduction in unemployment. Building activity has been stimulated by generous public assistance, but that fact itself casts doubts upon the wisdom of regarding it as a source of lasting employment. The intensive building activity of the Government, together with increased social services and relief works, is responsible for a degree of business activity which gives the impression of unusual prosperity in the cities and towns. Such prosperity, however, may well be transient, since it depends upon the continuance of public borrowing. Thoughtful observers are perturbed by the growth of national and municipal debt, much of which must be regarded as dead weight in any realistic calculation. It is felt, in particular, that the facility with which money can be obtained for the erection and purchase of houses may lead to a future condition of over-indebtedness in the towns, similar to that complained of by the farmers to-day. The recent hardening of interest rates is a significant omen of the sentiment of the money market on this question. It is doubtful if the market will be prepared to supply, except at a rather heavy price, the requirements of the grandiose programme of capital outlay which is in contemplation.

By every indication, the condition of the public finances of the Free State has deteriorated in the last three years. Though this deterioration may be partly attributed to the difficulties of the times, it is also due to the strain of the Government's economic policy and to undoubted budgetary extravagance. Relevant figures in this connection, during the last five complete years, are shown in the following table.

CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.

IRISH FREE STATE BUDGET (£000)

	1930-31	1931-32	1932-33	1933-34	1934-35
Revenue—					
Customs and Excise	13,767	13,717	14,774	15,009	14,993
Property and Income Tax	4,193	4,809	5,194	5,333	4,868
Estate, etc., Duties	1,324	1,274	1,138	1,067	963
Other Revenue	5,081	4,896	8,835	8,822	7,947
Total Revenue	24,365	24,496	29,991	30,229	28,771
Expenditure—					
Agriculture, Land, etc.	1,688	2,360	6,306	6,193	6,911
Education, Science, Art	4,544	4,578	4,610	4,447	4,641
Old Age Pensions	2,746	2,698	2,897	3,290	3,402
Service of Debt	1,973	2,076	2,369	2,034	2,315
Police	1,583	1,634	1,663	1,702	1,810
Posts and Telegraphs	2,144	2,042	2,034	2,026	1,949
Army	1,133	1,161	1,179	1,209	1,324
Other Expenditure	9,456	9,587	7,892	10,649	8,851
Total Expenditure	25,267	26,136	28,850	31,550	31,203
Surplus (+) or deficit (—)	— 902	— 1,640	+ 1,141	— 1,321	— 2,432

It will be noticed that the large increases in expenditure have outrun the extreme possibilities of revenue yield. The inevitable consequence has been an increase in the public debt, as shown in the next table:—

IRISH NATIONAL DEBT AND CAPITAL ASSETS (£000)

	1930	1931	1932	1933	1934	1935
Liabilities—						
National Loans	15,274	20,875	20,439	20,258	25,802	25,917
Savings Certificates	4,809	6,352	7,030	7,655	7,827	7,791
Other debt	5,791	2,086	2,380	8,497	15,844	15,475
Total	25,874	29,313	31,849	31,410	49,573	48,583
Assets—						
Shannon Electricity Funds	6,453	7,724	8,785	9,322	9,857	10,119
Local Loans Fund	1,416	1,966	2,536	3,086	5,236	5,636
Other assets	3,212	4,487	4,371	4,925	9,978	7,323
Total	11,081	14,177	15,692	17,333	25,071	23,078
Net excess of liabilities	14,793	15,136	16,157	14,077	24,502	25,505

Moreover, this table does not include the contingent liabilities of the State, which have been swollen by the halving of the land annuities and by the State's guarantee of the interest and principal of certain quasi-public undertakings. The Irish Budget has normally been in deficit, on the argument that capital expenditure ought not to be met out of revenue. There is much to be said for the theory, particularly as the Free State came into existence almost free of debt. But there are many who fear that the principle is being carried to excess. It is not impossible that the report of the Banking Commission, expected early next year, may have something to say on the subject.

The public finances are not the only field in which the strain is being felt. The Free State's balance of payments is becoming distinctly less favourable. Indeed, it is probable that it is now definitely deficitary and that the country's large accumulated external reserves are being drawn upon. The movement of these reserves can be roughly, though not precisely, indicated by the change in the net sterling assets

of the banks, which, as the final table shows, are still large, but are being depleted at a fairly rapid rate:—

NET STERLING ASSETS OF FREE STATE BANKS (£'000)				
	1932	1933	1934	1935
First quarter.....	82,180	91,858	81,547	74,679
Second quarter.....	83,574	88,315	79,045	74,162
Third quarter.....	86,440	85,844	76,752	73,151
Fourth quarter.....	88,275	82,983	75,455	...

For good or for evil, the Free State has embarked on a course from which it will not, and probably cannot, turn back. The protective policy of recent years, agricultural and industrial, has created vested interests which cannot be ignored, whatever political changes may take place. Moreover, the changed circumstances of the world outside will continue to exercise pressure on the course of events. The pace of further change is, however, more subject to deliberate decision, and there is a strong *prima facie* case for the view that, if a disastrous fall in the standard of living, possibly coupled with financial trouble, is to be avoided, the pace must be moderated. That in its turn calls for the re-opening of the export market, which depends upon a settlement of the economic war. It is possible that delay may tend to heal the political breach, but quite certain that procrastination will still further widen the economic breach. The initiative lies with Mr Malcolm MacDonald, who, in the settlement of this unfortunate dispute, has an opportunity to prove himself a very Daniel in his new office.

CARS AND ROADS

To those alike who make our laws and elect our law-makers, we dedicate the special Survey of British motor transport which appears on pages 1129 to 1154 of this issue. The first of its kind, the Survey discusses the implications of a mass of data covering every aspect of the motor transport industry. Some of this material has not, hitherto, been familiar even to the expert. Much of it has been quite unavailable to the wider public, who are most concerned—whether as car owners, passengers, pedestrians or taxpayers—with the post-war rise of the motor vehicle from a rich man's luxury to the status of a new and indispensable transport arm.

To the rapidity and scope of this development our Survey affords striking testimony. Between 1921 and 1935, the total number of motor vehicles in use in the United Kingdom has increased from 473,000 to 2,047,000. Of the present total 73 per cent. are private cars, 23 per cent. are goods vehicles, 2 per cent. are taxis, and the remaining 2 per cent. are passenger vehicles in the omnibus, motor-coach and trolley-bus categories. The British motor manufacturing industry turned out 306,365 private cars (including taxis) and 92,485 commercial vehicles (excluding trolley buses) in the twelve months to September 30, 1935, against 71,396 and 23,604 respectively in the calendar year 1923. The industry consumes annually something like 860,000 tons of iron and steel, 22,240 tons of non-ferrous metals, 8 million square feet of glass, 97,000 tons of rubber, and about 1,350 million gallons of petrol and oil. These estimates are based on the latest production and consumption figures, and the totals are still steadily rising.

What has been the secret of this phenomenal progress? One explanation may be found in the index prepared by the Society of Motor Manufacturers and Traders, which shows that the price of the average private car in 1934 was no more than 52 per cent., and that of the average commercial vehicle no more than 62½ per cent., of the corresponding prices of 1924. In the meantime, the standard of comfort and mechanical efficiency has been progressively enhanced. The reduction in average prices is due, in part, to the successful endeavour of motor manufacturers to "meet the market," and, in part (so far as private cars, at least, are concerned), to increasing concentration of production on the smaller and less expensive vehicles. In the last six years, the proportion of "baby cars," of ten horsepower or less, to the total new registrations of private cars, has risen from 23½ per cent. to 60½ per cent. The vogue of the small owner-driven car has, in fact, been contemporaneous with the boom in the owner-occupied house. Both have been outward and visible signs of a rise in the

average standard of living of the numerous members of the population who are neither very rich nor very poor; and who have benefited from the rise in real income which has followed the recent reduction in the money costs of prime necessities of life.

The rise of the motor transport industry, therefore, must be regarded, fundamentally, as a species of index of national prosperity. In the past, every extension of transport facilities has been followed by a quickening of general economic activity. There is every indication that history is repeating itself in the present instance. It is, however, equally true that every historical transport development has brought in its immediate train a host of perplexing problems, especially those of adjustment between the old order and the new. In this respect, also, motor transport is running true to historical "form." Such questions as the relationship between the new transport arm and established interests like the railways, the physical control of road traffic and its regulation in the interests of public safety in life and limb, all cry out for urgent solution. By common consent, the multitude of new measures which have lately crowded the Statute Book have fallen short of finality on any one of these points.

What light do the conclusions of our Survey throw upon this matter? In the first place, they suggest that the root of the problem may be not merely the great increase in the number of motor vehicles but the nature of their ownership. Three out of every four vehicles in use in the United Kingdom to-day are privately-owned cars. A significant proportion of the remainder are goods vehicles, owned by small traders, which fall essentially into the same category. In other words, recent developments have involved a substantial change-over from "collective" to "individual" modes of transport. It is by no means certain that all the necessary implications of this change have even yet been realised, either by other "collective" transport agencies like the railways, or by the State, which is responsible for keeping the ring and devising control measures.

In the second place, the development of British roads, to carry a vastly increased volume of traffic, has been intensive rather than extensive. Although the effective volume of motor traffic (allowing for increased journeys as well as for a higher total of vehicles), is estimated to have increased something like tenfold since 1920, the mileage of roads and streets has shown only a slight increase. Road surfaces have been improved, existing highways have been widened, and certain new arterial and by-pass roads have been constructed. But it is clear that the increase in facilities has been nothing like in proportion to the increased demands made on them. The result appears—and this is the real gravamen of the charge against the national authorities—to have been achieved "by default," rather than of set purpose. Both as regards expenditure and traffic control, the policy of the State has been empiric, vacillating and uncertain. Speed, rather than care, has been regarded as a criterion. A speed limit has been imposed, abandoned, and later re-adopted in a modified form. The permanent economic relationship of road and rail transport has never been satisfactorily defined, but far-reaching limitations have been imposed on the newer at the instance of the older industry. Road expenditure by national and local authorities has not been governed, wholly and consistently by reference to needs, scientifically computed as part of a long-term programme. It has been partly determined by extraneous and irrelevant considerations, such as the revenue demands of a straitened national Exchequer, and, after 1931, a Government policy of "economy" in public works.

The latter policy, happily, is now to be reversed, for the Government has announced a new road programme based on the expenditure of an additional £100 millions in the next five years. How far this represents a *net* advance on the pre-depression scale of expenditure can only be decided when fuller details are available. The crucial conclusion brought out by our Survey, however, would seem to be that careful "planning" in road transport is of far more vital importance than the expenditure of any given sum of money, however large. Hitherto, the State has been content to attack the problem piecemeal. It is essential that the Government should see its problem steadily, and see it whole.

NOTES OF THE WEEK

The Oil Embargo Approaches.—There is cold comfort for Signor Mussolini in the Canadian Government's disavowal of Mr Riddell and in the United States Secretary of the Interior's interpretation of himself. If the Canadian Government hoped to appease the isolationist element in Canadian public opinion, it has succeeded only at the cost of evoking from the collectivist wing a very impressive expression of the strength of their feelings and convictions. Moreover, Mr Riddell's motion has already been adopted at Geneva by the Committee of Eighteen; and there is no suggestion that Canada will refrain from acting upon it. Again, Mr Ickes's "correct" correction of the impression that he was speaking last week about oil, and not about munitions in the narrower sense, does not traverse the evident intention of the Washington Administration to obtain at least a limitation of American oil exports to Italy and Abyssinia. Even more important is the attitude of France. It has now been agreed that the oil sanction will definitely be considered at Geneva on December 12th, and signs are accumulating of a resignation, on the French Government's part, to the inevitability of the imposition of the oil sanction unless Signor Mussolini shows, in the meantime, an obviously *bona fide* desire to make peace on acceptable terms. Moreover, M. Laval appears to have warned Signor Mussolini, with unusual bluntness, that, if he were to make the imposition of the oil sanction into a pretext for a naval or military attack upon the British Empire, then France would at once intervene on the British side in accordance with her obligations under the Covenant. Nor is there anything in the King's Speech to suggest that Mr Baldwin's Government have weakened in their determination to lubricate the sanctions screw. Indeed Sir Samuel Hoare, in discussing the oil embargo in the House on Thursday, declared that it was now possible for the Committee of Eighteen to have a further meeting for the purpose of discussing "the actual application of a form of pressure that has already been accepted in principle." This sounds like the language of conviction; even if Sir Samuel's assurance that the Anglo-Iranian company had sold Italy less oil this year than last was hardly satisfactory. There was at any rate little consolation for Signor Mussolini in Sir Samuel's speech. But the head of the Italian State has still an opportunity of extricating Italy—and perhaps himself—from a situation which is bound to become increasingly unfavourable with every week's delay.

America: Budgets and Belligerents.—Finance and "neutrality" seem to be sharing the political limelight in Washington. The Republican Party, perhaps with more conscious rectitude than honesty, is basing its campaign upon a demand for a balanced Budget. At the same time, there is a definite movement of opinion among business men against the theory of Recovery by Expenditure. Mr Roosevelt has evidently found it necessary to counter this movement, and did so by a speech on Friday of last week. His defence was along familiar and, in the main, justifiable lines. He argued that relief measures were essential when he came into office in 1933 and that they could not possibly have been met out of taxation. Business recovery was reducing the necessity for large deficits, but to embark upon a rigid and immediate balancing of the Budget would mean either a cessation of relief or a crushing increase of taxation. Let the Republicans make their choice. But this argument was embroidered by a certain amount of abuse of bankers and of "gentlemen in well-warmed, well-stocked clubs," which will hardly promote the alliance between the Government and Business and may even disturb the steady respiration of the "breathing-spell." The Government's neutrality policy has also led to some interesting pronouncements. The Secretary of State, who is chiefly responsible for the execution of the policy and presumably has the backing of the President, has made no secret of his desire to discourage exports to Italy (and incidentally to Abyssinia) by every means in his legal power. But pressure is being brought from outside, partly by the commercial interests involved, and partly by the more factious wing of the isolationists.

These people are seriously disturbed by the fact that American isolationist policy seems to be fitting in with the League's sanction policy. Even isolation, in their view, can only be the right policy so long as it irritates Europe. Such patriotic paragons as Father Coughlin and Mr William Randolph Hearst are in full cry after the Administration for attempting to enforce the very policy for which they were clamouring not many months ago. This pressure has been enough to impose verbal caution on Mr Ickes, the Secretary of the Interior and Oil Administrator. There is no sign as yet, however, that it is likely to deflect the Administration from its purpose.

Standstill in Abyssinia.—The note of the East African campaign this week is "no change." On the Ogaden front the Italian forces seem now to be back again on the positions from which they started—all the points occupied at one moment or another being either once more in Abyssinian hands or in No-man's-land. So far, Italian tanks and lorries have been unable to make the hoped-for thrust up to Harrar and beyond, in order to cut the lines of communication along which the Abyssinians are obtaining munitions from Berbera. Bush, rain, crocodiles and Amharas seem to have collaborated in frustrating this southern enterprise; and operations are at present confined to aerial bombardments. The Abyssinians deny that Italian bombs have yet done serious damage to the fortifications across the road to Harrar. They have fears, however, for Harrar itself—a substantial city of 50,000 inhabitants—and have announced its evacuation by the Abyssinian armed forces. Harrar has thus become an open town, the bombardment of which would be a violation of the accepted rules of civilised warfare. Meanwhile, on the northern front the arrival of Marshal Badoglio has not yet been followed by any desperate attempt to secure an early decision. The only recent reports from either side relate to operations in the Tembien *massif*: a salient of intricate and trackless highlands which juts out into the territory which the Italians have occupied. So long as Ras Seyyum's forces continue to lurk in this fastness, the communications between the Adowa and the Makalle sectors of the Italian front will remain precarious. If Marshal Badoglio had made up his mind to clear up the Tembien before any further southward advance, his decision would be significant in two respects. In the first place, it would appear that the present Italian commander had determined to move as cautiously as his predecessor, in defiance of the political time-factor. In the second place, it would suggest that the "mopping-up" operations in the Tembien were already proving difficult. The latest story that the Abyssinians are preparing to attack in the North must not be interpreted too literally. A mass attack would, of course, be folly; but a mere "clean-up" of the Italian remnant in Makalle might possibly succeed.

M. Laval's Difficulties.—M. Laval has been walking the parliamentary tight rope this week before the wondering and uneasy gaze of his own countrymen and the world. After securing a preliminary vote of confidence last Thursday, he succeeded in postponing the vote on the Fascist Leagues until after the debate on the Budget. But that debate did little to strengthen the Government's position. M. Paul Reynaud was not the only deputy this time who openly supported devaluation. The Neo-Socialist leader, M. Déat, declared that "there has been 25,000 million francs of deflation since 1932, and the experiment has definitely failed." M. Reynaud himself pointed out that Great Britain, Belgium and the United States, when their currencies were overvalued, had all had the same difficulties as beset France to-day.

To reduce expenditure (M. Reynaud said) is good, but economies alone, though practised for the last four years, have not wiped out the deficit. Taxes cannot be reduced in a country where revenue is falling. The only issue is to solve the problem of prices; and Great Britain has rendered an immense service by abandoning the gold standard.

M. Rénier, the Finance Minister, replied, as is common form on such occasions, that the Government would "defend the franc against all attacks." More significantly, he admitted that he had been obliged to discount Treasury bills at the Bank of France to a value of 4,000 million francs. He also made the important statement that France "might consider" devaluation if other currencies were to be stabilised on gold. In the end, half the Radical-Socialists voted against the Government, and its majority was reduced to 77. The third critical debate, that on the Fascist Leagues, began on Tuesday in a Chamber crowded with deputies and surrounded by spectators and police. Before many hours the debate degenerated into disorder, and was adjourned till Thursday. M. Laval may so far compromise over the Leagues as to agree to institute legal proceedings against persons publishing incitements to murder in the press, and even to transfer the control of the Gardes Mobiles from the Minister of War to the Minister of the Interior. His fortunes are precarious, however, and vary from hour to hour. If he leans too far to the Left, and suppresses the Leagues outright, he may fall; and if he leans too far to the Right, and refuses to curb them at all, he certainly will fall. It is a breathless performance. But M. Laval has shown himself so accomplished an acrobat in recent months that we shall not be amazed if he stays aloft a little longer. And should he do so, he will be beginning to win himself a place in the same gallery of consummate tacticians as Briand, Thiers and Talleyrand.

Aggression in China.—The Japanese militarists have chosen the week in which the new naval conference opens in London as the time for a new act of aggression in Eastern Asia. President Chiang Kai-shek's success in foiling General Doihara's attempt to force an autonomy *à la japonaise* upon five North Chinese provinces has proved ephemeral. The Japanese have returned to the charge; and an act of spoliation which dwarfs the seizure of Manchuria is being masked under the excuse that North China autonomy is a spontaneous Chinese movement of irresistible strength. It is also asserted that the Japanese forces which have passed the Tanghu armistice line are below the strength of those allowed to Japan in Hopei Province under the Boxer Protocols. The purpose of those instruments was to ensure the protection of the foreign legations at Peking, and not to facilitate the dismemberment of the Chinese body politic. The intrusive Japanese military forces have seized control of the railways running from Peking to Tientsin to the south in order to prevent the evacuation of locomotives and rolling stock. It is evident that the Japanese army is determined to make itself master of North China, and the only mitigation to which they are likely to assent is a nominal maintenance of the Chinese Central Government's suzerainty over the North in exchange for a measure of Japanese control over Nanking itself. This is a bargain into which General Chiang Kai-shek is unlikely to enter. For there is still hope for China's political future so long as she presents a genuine independence in even a nucleus of her vast national domain. Even if Japan were eventually to add an "autonomous" lower Yangtse Valley to her "autonomous" North China and "Manchukuo," President Chiang Kai-shek would still be able to retreat into his upper Yangtse fastness of Szechuan. Here is a patch of free Chinese soil with a population of seventy million inhabitants. Thus we may expect the Chinese Government not to condone Japan's action in the hope of obtaining a touch of leniency. Its policy may be rather to expose this aggression for what it is by continuing to retreat until a line is reached at which China can begin to put up a military resistance. Meanwhile, Sir Samuel Hoare's speech, on Thursday, suggests that Great Britain means to limit her attitude to the expression of pious hopes that Japanese and Chinese conversations will result in "an amicable settlement."

Greece's King and Peacemaker.—General Kondylis has been a kingmaker, but that has been the limit of his power. He has now definitely failed to prevent King George of Greece from justifying his restoration by playing the beneficent part of a peacemaker. The General even went so far as to organise a demonstration in the streets

against the King's policy of appeasement. But the passionate desire of the Greek people to see the King's policy carried out has proved stronger than the rancours and the fears of General Kondylis' military junta. The Greek *dictateur manqué* has now retired to bed, which is an even more satisfactory end than the conventional retirement to a semi-detached villa at Cannes or Bournemouth or Montreux. King George has entrusted an experienced, disinterested and conciliatory statesman, M. Demirdjis, with the task of forming a Ministry to perform a double task: the passing of an amnesty and the holding of a free general election. The amnesty is already a fact, and includes everybody up to and including M. Venizelos. The prisoners have been released, the exiles are free to return to Greece with impunity; the confiscated property has been restored to its owners. The sole concession which the King has made to the Kondylis faction is that, in the case of the military and naval officers who were concerned in the unsuccessful Venizelist insurrection of last spring the amnesty does not carry with it a restoration of rank or employment. The vacated places have, of course, been filled, in the meantime, by representatives of the opposite faction. Doubtless, however, ways may be found of gradually taking the cashiered officers back into the service. The King's triumphant execution of a policy which is as courageous as it is statesmanlike has melted the hostility of the Venizelists without alienating the good will of more than a very small section of the Royalists. M. Venizelos has played his part by publicly expressing his admiration for the action of the King. On the whole, the prospects of Greece may be brighter to-day than they have been at any time within the last twenty years.

Egypt and Great Britain.—Unrest in Egypt still continues, and its latest manifestation has been a Wafdist demonstration against Mohammed Pasha Mahmud. Today, as on earlier occasions, the Egyptians are at odds with one another about the question who is to represent Egypt in an eventual negotiation for an Anglo-Egyptian settlement. This is as unfortunate for us as for the Egyptians themselves. It would be a grievous error to congratulate ourselves on being exempted, by the Egyptians' own behaviour, from the necessity of coming to parley with them. An early as well as a comprehensive and conclusive settlement of outstanding Anglo-Egyptian controversies is a common Anglo-Egyptian interest, of equal importance to both parties. We trust that the Wafd and Nessim Pasha and Mahinud Pasha will succeed in forming a representative Egyptian united front—not for a political offensive against Great Britain, but for the statesmanlike object of arriving, by free negotiation, at a mutually satisfactory settlement. The British Foreign Secretary has repeated the declaration that his Guildhall speech, whose "misrepresentation" had such serious consequences, was actuated by the most friendly intentions towards Egypt. We have never questioned this; but in the present Egyptian situation good intentions are not enough.

"Trading Estates" for Depressed Areas.—The Government let it be known last week that an experimental trading estate would be established on Tyneside—and possibly elsewhere. And Mr Baldwin, in his speech in the House on Tuesday, said that "trading companies" were to be formed which would "establish and equip estates" in the special areas. Manufacturers, it is understood, will then be invited to rent the factories, with an assurance that if necessary they will be able to acquire additional adjacent accommodations, will be available. We welcome the Government's decision to make this interesting experiment, since it is at least evidence of a desire to take positive action. Some doubts about the scheme's prospects, however, will naturally of which the Government's new policy seems to be based, wards which British industry has been gravitating, for whatever reason, in the last fifteen years. Will it gravitate again to the N.E. Coast for the sake of no greater advantages than a Government trading estate? Those who think that the new trades have come to West London

primarily in order to be near their chief market will be more pessimistic than those who attribute the "Southward drift" mainly to the desire of company directors to live in the West End of London. Possibly, in a time of rising economic activity, a slight change in comparative advantages may tip the balance substantially. No such expedient, of course, can reach the heart of the problem of the depressed areas. But as one among many expedients, it is sufficiently constructive to be well worth trying.

Housing Prospects.—The possibility that the current housing "boom" might collapse has been a favourite topic of discussion for some months past. In two articles, in the *Economist* of October 26th and November 2nd last, we suggested that, while a collapse was improbable, a more gradual decline in the activity of private enterprise in building houses could be anticipated. Judging by the latest figures published by the Ministry of Health, this anticipation is already being realised. In the half-year ended September 30, 1935, approximately 125,600 houses were built by private enterprise as compared with 149,000 in the previous six months, which is normally the less active building period of the year. In spite of an increase in the number of houses erected by Local Authorities for rehousing slum-dwellers, the total number of houses built in the year ended September, 1935, was 316,000, only about 3,000 more than in the previous year. Mr Geoffrey Shakespeare, Parliamentary Secretary to the Ministry of Health, in a speech this week, described the current rate of output of 327,000 houses a year as excessive and suggested that "something like 250,000 or 300,000 decent houses a year would be sufficient." From the point of view of averting a collapse of the building trades, 250,000 doubtless would be a satisfactory figure, but from the point of view of the housing requirements of the nation, satisfaction with even 300,000 houses a year argues a very unambitious attitude. Steady public pressure over the last three years has produced a considerable advance in the attitude of the Conservative Party towards the housing problem. But there are still signs that the full meaning of the public determination to raise our housing standards has not been grasped. There is, for example, the disquieting news that the new Conservative majority on the Leeds City Council has decided to scrap part at least of its Labour predecessor's thoroughgoing housing policy. The only decision hitherto taken has been to abandon the project of creating a large estate on the City boundaries, and on that narrow point there is a great deal to be said for the new Council's view. But it is clear that there is a danger lest Leeds should slip back from the position of the most enterprising municipal authority which it had acquired in the last two years. If so, it will be regrettable for Leeds and, through the abandonment of an encouraging example, for the nation at large.

Dr. Schacht and the Nazis.—Nowhere is the conflict between Fascist economic ideas and the normal working of private enterprise more acute than in Germany. Indeed, those who regard Fascism as no more than the creation of the capitalists should observe the struggles of Dr. Schacht with the strange allies adopted by his friends of the old Nationalist Party in the process of suppressing their Left-wing opponents. Speaking in Berlin on Saturday, before an audience including Herr von Ribbentrop and Herr Julius Streicher, the anti-Jewish propagandist, Dr. Schacht derided both the rural romanticism of Herr Darré and the specifically Nazi conception of the "leadership principle" in industry. "Folk dances and spinning wheels," Dr. Schacht said, were no doubt "desirable traditions"; but other things were necessary to maintain the strength of a nation of 65,000,000 people. Dr. Schacht did not so much argue that "autarky" must lower Germany's standard of living, but rather—that what was naturally more calculated to impress his Nazi audience—that it would impair her military strength:—

Guns, aeroplanes, submarines (he said) and everything required for defence in modern times are unthinkable in the absence of the highest development of capitalised industry.

The MERCANTILE BANK of INDIA

WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

And so for the sake of guns, aeroplanes and submarines the Nazis must be prepared to give up even their folk dances and spinning wheels. Worse still, they must give up the "leadership principle" in industry. "To apply the principle of leadership to every stocking factory," Dr. Schacht mercilessly continued, "is to make it ridiculous. The leader in a joint stock concern arises just as does the leader in any other district of economic activity." Evidently the Nazi enthusiasts will have to abandon many cherished ideas, if they are to retain the indispensable Dr. Schacht as economic dictator.

A Monetary Puzzle in New Zealand.—The evolution of the New Zealand Labour Government's economic policy will be watched with great interest. For the declaration made by the Prime Minister, Mr Savage, on the morrow of his victory can only be described as perplexing. Wage cuts are to be restored, social expenditure expanded, and farmers' prices guaranteed. So far so good. But at the same time the exchange rate is to be "reduced." "Reducing" the exchange rate means, of course, raising the value of the currency—i.e. diminishing the number of New Zealand pounds that can be bought for a pound sterling. This in its turn means deflation, which will doubtless benefit the purchasers of imports, but will at the same time be directly contradictory to the rest of Mr Savage's policy. There is one form of combined inflation and deflation which is practicable and may be desirable; that is the policy adopted by Australia of simultaneously deflating costs and inflating prices. This naturally promotes profits and so general recovery. But Mr Savage's idea is simultaneously to deflate prices and inflate costs. The effect of such a policy is not difficult to foresee. We strongly suspect, however, that the deflationary part of Mr Savage's programme—the "reduction" of the exchange rate—will fade decorously into the background.

Iron and Steel Reorganisation.—The principles of reorganisation, embodied in the constitution of the British Iron and Steel Federation, are slowly—very slowly—being translated into practice. The agreement concluded earlier this year between the British iron and steel industry and the International Crude Steel Cartel necessitated the establishment of machinery to control imports and exports of iron and steel materials, now subject to quantitative regulation. This machinery has now been set up with the formation, this week, of the British Iron and Steel Corporation to handle all the import and export business of the British Iron and Steel Federation, to make contracts and to undertake commitments on behalf of the British steel industry as a whole. The functions of the new concern will be much larger than those of the British Steel Export Association, which was concerned only with large export orders for plates and heavy sections. The corporation's controlling powers may eventually be extended to include tinplate and tubes, now subject to sectional agreements. The latest decision is a step in the right direction, but the industry, we trust, will not rest content with the establishment of machinery so long as its internal efficiency remains capable of far-reaching improvement.

Coal Exports to Italy.—British coal exports are already reflecting the effects of sanctions against Italy, writes our Cardiff correspondent. In pre-war years we supplied Italy with over 90 per cent. of her total coal imports. In 1913 our shipments totalled 9.6 million tons, of which 5½ million tons were consigned from Bristol Channel ports. Shipment declined during the period when German reparation coals were being delivered under the Versailles Treaty. Even in 1929-30, however, despite the large electrification schemes carried out by the Italian Government, shipments exceeded 7,000,000 tons. After the discontinuance of reparation deliveries, the relative position of British coals improved. In 1932, imports into Italy from the Ruhr totalled less than 1,500,000 tons, as compared with nearly 5,000,000 tons in 1929. During the past three years, however, the direction of Italian demand has been profoundly affected by the clearing system, under which the exchange relations between Germany and Italy are regulated. German coal exports to Italy rapidly expanded; and after reaching 4.8 million metric tons last year they have further increased to over 5.8 million metric tons for the ten months ended last October. This expansion has been secured almost entirely at the cost of the United Kingdom, whose exports to Italy in the ten months ended October totalled only just over 3.1 million tons, as compared with 3.9 million tons in the corresponding period last year. Great Britain's failure to share in increased Italian consumption, due to recent military and naval activities, has been mainly attributable to exchange transfer difficulties. In October, exports from this country were just over 100,000 tons, compared with 878,320 tons received from Germany, and the British returns for November are expected to be even lower. Last year the f.o.b. value of our coal exports to Italy was nearly £3.8 millions, or approximately 40 per cent. of the total f.o.b. value of all our Italian exports.

* * *

Mosquitos by Air.—The term "Machiavellian" has not infrequently been applied to statesmen—sometimes even to British statesmen. There is, however, at least one wholesome lesson which modern rulers might learn from the Italian master, who, writing of conspiracies, declared that "by foreseeing them at a distance, which is only done by men of talents, the evils which might arise from them are soon cured; but when, from want of foresight, they are suffered to increase to such a height that they are perceptible to everyone, there is no longer any remedy." This dictum seems peculiarly relevant to the state of affairs revealed, almost casually, in a statistical survey of yellow fever, published by the Health Section of the League of Nations. This survey discloses that infected mosquitos can survive long aeroplane rides, and that many animals and insects can act as efficient carriers once the infection is brought to them. India is not now a yellow fever country, but is highly infectible and has mosquitos to serve as carriers, a large susceptible monkey population, and jungles that are ineradicable breeding grounds. Suppose the disease were introduced by an odd mosquito, say, from East Africa, which came as a stowaway on an air liner? The unemotional reaction of the expert would be to recommend, to the public health services concerned, various methods of treatment to get rid of such unwanted travellers. To human passengers, such measures might seem merely "fussy"; but with memories of the spread of the fruit fly in mind serious observers would rather count them examples of wise "Machiavellian" statesmanship. The instance may serve to draw attention to the importance of the work of the League's health experts in bringing together results of research in many countries. The cost of this work is trifling when compared with the expenditure of Governments in other directions. Its usefulness may be borne in mind whenever suggestions are made for the reduction of League expenditure on "non-essential services."

* * *

Sterling and International Prices.—There has been a slight drop in British wholesale prices during the past fortnight, amounting to 0.3 per cent. in the case of the complete index number and 0.5 per cent. for primary products alone. Since the autumn a rise was checked in early Octo-

ber, British wholesale prices generally have remained very steady, but there has been a tendency for primary products to decline. This last movement finds its parallel in the United States, where since the end of September primary products have fallen by 3.9 per cent. The Irving Fisher complete index number is also lower than it was in early October, but it has risen fractionally during the past fortnight. On the Continent, French wholesale prices are unchanged after their previous sustained advance, while German prices are also steady. No Italian index number is available. The impression left by recent figures is that the rapid advance of the early autumn is giving place to a moderate recession, from which, however, France is so far immune. It looks very much as if France is beginning to experience a slight though concealed internal inflation.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Nov. 6, 1935	Nov. 20, 1935	Dec. 4, 1935
Cereals and meat	64.5	70.2	69.7	69.5
Other foods	62.2	60.9	61.2	61.3
Textiles	43.7	61.6	63.2	62.7
Minerals	67.4	83.6	83.4	83.6
Miscellaneous	65.8	78.1	78.0	77.6
Complete index ..	60.4	71.0	71.3	71.1
1913 = 100	83.1	97.8	98.1	97.8
1924 = 100	52.2	61.3	61.6	61.4

English wheat and barley have fallen in price during the past fortnight, but flour is dearer. There was an advance in English beef, but declines in English mutton and Danish bacon. Tea is dearer, and there were slight increases in butter and refined sugar. Cheese is cheaper. In the textiles group, Egyptian cotton is higher, but American cotton, Australian wool, hemp and jute have all declined. In the minerals group there is a seasonal advance in house coal and slight increases in copper, tin and lead. Spelter is cheaper. Among miscellaneous materials, there was a moderate fall in hides and small decreases in linseed oil and tallow.

Industrial Production in Britain.—The final report* on the Census of Production taken in 1930, published belatedly last month, contains a mass of information concerning changes in the structure and organisation of British industry between 1924 and 1930. Among other things, it includes a detailed analysis of changes in the volume of

* Final Report on the Fourth Census of Production of the United Kingdom (1930), Part V. H.M. Stationery Office. 3s. net.

production, of specialisation and of regional distribution of output, as well as of employment, wages and the power equipment of British industries. Some of the information contained in this volume has been brought further up-to-date by the Report on the Import Duties Act Inquiry (1933). The first part of this report*—dealing with textiles, leather and clothing, food, chemical and allied industries and certain miscellaneous trades—was published recently. The changes in the value of the gross and net outputs and in employment and net output per head of some of the leading industries are shown in the following table:—

Industrial Group	Selling Value of Gross Output	Cost of Materials and of Work given out	Value of Net Output	Average No. of Persons Employed	Net Output per Person Employed
	(Mill. £)	(Mill. £)	(Mill. £)	Thousands	£
Cotton spinning.....	1930 78.6 1933 67.6	58.8 48.0	19.8 19.6	190.7 183.8	104 107

UNITED STATES

THE INRUSH OF CAPITAL

THE foreign trade figures for October showed no change of trend from those of the past year. Merchandise exports at \$221 millions and imports of \$189 millions resulted in an export surplus. But exports compared with \$206 millions in October, 1934—a minor increase; and imports with \$130 millions—a major increase. Gold imports amounted to \$315 millions and silver imports to \$49 millions. Combined gold and silver imports, \$364 millions, are almost exactly double merchandise imports for the month. For the ten months, merchandise exports of \$1,789 millions are almost identical with those of 1934—\$1,767 millions. But imports at \$1,692 millions are up \$320 millions from the \$1,372 millions of 1934. That is, an export merchandise surplus of about \$400 millions in the first ten months of 1934 has shrunk to one of about \$100 millions. Against this active trade balance of \$100 millions must be set gold imports of \$1,337 millions and silver imports of about \$220 millions, a total of \$1,558 millions of gold and silver metal, compared with \$986 millions in 1934. These figures give an import surplus of \$591 millions in the first ten months of 1934; and an import surplus of \$1,471 millions in the first ten months

and clothing trades, the value of the net output per person registered an increase, most marked in the chemical and allied industries group. An attempt was made during the inquiry to calculate changes in the magnitude of production in the various industries. The volume of the output of the textile industry as a whole, for example, rose by 21 per cent. between 1930 and 1933. The figures for cotton manufactures and woollen and worsted goods show rises of 10 per cent. and 27 per cent. respectively, while the output of the silk and rayon trades increased by 80 per cent. and that of boots and shoes rose by 8 per cent. Production of foodstuffs increased by 12 per cent. The chemical industry registered an increase in production of as much as 21 per cent. The main purpose of the inquiry was to elucidate the effects of the imposition of a protective tariff in 1932. In this it can scarcely be said to have succeeded, since the effect of the tariff cannot be isolated from that of many other factors influencing productive activity. None the less, the information contained in the report has a high objective value.

* * *

The Cost of Re-armament.—An attempt is made in the first two of a series of articles in the *Financial News* to compute the cost of the re-armament programme believed to be contemplated by the British Government. The writer points out that in actual strength the British Navy is far superior to any in the world except that of the United States; and he adds that the question of comparative obsolescence depends on the outcome of the Naval Conference. He suggests, however, that seven new battleships, twenty cruisers, 50 destroyers, 20 submarines and one aircraft carrier might be built in the next five years. It is also admitted that the comparative real strength of the British, German, French and Italian Air Forces is not known to any but a few experts. The computation is nevertheless made that a total of £52 millions gross may be spent on enlarging the Air Force. In this way the conclusion is reached that £20 millions a year may be added to the Defence estimates, and that the staggering sum of between £140 millions or £150 millions will be required for extraordinary expenditure on re-armament in the next few years. Such is the bill the nation will be required to pay, if this calculation proves correct, for the failure of the Disarmament Conference.

of 1935. The figure for 1934 represented a transfer of capital of conspicuous magnitude; the figure for 1935 is more than double that of 1934.

That this represents chiefly an influx of European capital rather than a repatriation of American funds is now generally agreed; there is no agreement about the proportion which has been merely left on balance compared with that invested in American securities, but it is recognised that a large amount has taken the latter course. As an inflationary force, this import of \$1,568 millions of monetised metal has approximately equalled the financing of the deficit in its quantitative creation of commercial bank deposits. Just as the stock market of the 'twenties was a force for credit expansion through the medium of brokers' loans, so the stock market now is a major force for the expansion of credit, because it is a magnet for foreign capital, which, reaching the American market in the form of gold and silver, in turn becomes not merely bank deposits but excess bank reserves. In the 'twenties there was an expansion of commercial bank credit via a bull market in shares. The present bull market is not merely expanding commercial bank credit through the attraction for gold, but it is expanding the basis of the credit system. Virtually the entire sum of excess reserves, which figure so largely in current discussion in America, has derived from

he gold and silver imports of the past ten years; and the argest single force attracting these imports seems to be the magnetism of the American stock market.

Two major clashes between business and the New Deal are approaching their tests in the Courts. Several cases affecting the processing taxes have been combined for hearing on December 9th. The processing taxes are among the largest single items of revenue, and their proceeds are allocated for the payment of the agricultural benefits. Their incidence is disputed. In some cases it appears to have been passed back to the producer; in others it has probably been passed on to the consumer; but in certain cases it seems to have fallen largely upon the processor with severe consequences. These facts alone would make the case important; but there is the added possibility that the decision may be more comprehensive and involve the basic principle of the A.A.A. The second most awaited case is one involving the Utility Act. It had been generally supposed that the Utility Act of last August would not reach the Supreme Court for months, but the numerous refusals of the utilities to register by December 1st, as demanded by the Act, have given both sides a desire for a quick decision; whereas in numerous other cases (as in the gold clause cases) it was apparently the strategy of the Government to delay action.

TRADE UNION CONTROVERSIES

The schism in the American Federation of Labour is probably a matter of significance, although its interpretation as yet can be only sketched. Broadly speaking, unionism appears in three forms in the United States. The craft union has been sponsored by the Federation, and has for years been very strong in a small number of trades—the printing trade and the building trades conspicuously; and has found independent form in the Railway Brotherhoods. In opposition, the company union had become quite widespread, and under the collective bargaining provisions of N.R.A., reaffirmed by the Wagner Act, appears to have gained far more ground than the craft union, to the chagrin of the Federation. Two great industries alone—the clothing workers and the coal miners—have long been organised on industrial, as contrasted with craft, lines; but the United Coal Mines, under their president, Mr John L. Lewis, were allied not long ago with the Federation, and Mr Lewis became a vice-president of that organisation. His resignation last week has precipitated a conflict between the idea of industrial unionism, now personified by Mr Lewis, and craft unionism represented by Mr William Green, the president of the Federation.

Although car loadings are now showing their usual seasonal recession, they remain above the levels of a year ago, when industry was just beginning its sharp upturn from the third-quarter slump. Steel operations, on the other hand, are equal to or better than their spring peak—a most unusual condition for this time of year, and largely explicable in terms of the displaced seasonal output of the motor industry. Although the index of primary commodities is still below its early autumn peak, and the Bureau of Labour index has shown little change in the past few months, one hears continually in conversation or reads in the Press of advances or prospective advances in the prices of finished goods.

NEW YORK, November 27.

FRANCE

POLITICAL PARTIES AND DEVALUATION

BY 324 votes to 247, the Chamber this week affirmed its confidence in the Government's "defence of the franc." The debate was marked by a gravity which was generally unexpected after the agitated meetings of the Finance Committee of the Chamber. The movement of security prices has been directly reversed. The rentes are recovering. And the gold drain is drying up, though the latest return of the Bank shows a new loss of 2,800 million francs. The money market, however, remains tight.

Chamber criticism of M. Laval's deflation policy turned naturally into a crusade for devaluation. But if members were unanimous in their dislike of deflation they were largely divided in their views on devaluation. They realise that the majority of the population are still opposed to monetary change. The Chamber and the Government are therefore officially of the same opinion. One Neo-Socialist speaker, however, pointed out that deflation and devaluation had the same object: the lowering of (gold) prices, a result which would be automatically reached by devaluation, while M. Laval's deflation remained incomplete and had failed to lower the rate of interest.

M. Laval answered that he still believed a rise of rentes to par and a consequent revival of business to be possible. The Communists and the Socialists supported the maintenance of the gold parity. The reason is that they imagine that the maintenance of the franc will involve an economic revolution. On the other hand, certain devaluationists on the Right, such as M. Reynaud, believe that devaluation could not be sufficient to bring recovery. Further deflation, he thinks, should be added to devaluation, while at the same time some State control of bankers and industry would be necessary. M. Reynaud won much applause when he argued that the problem consisted in lowering prices in gold and raising them in francs. But when he tried to justify this necessity by the fact that the burden of public expenditure on a gold basis was almost unupportable, his opponents declared that this "explanation" proved that the deflationists were right when they urged an alleviation of this burden.

CONSERVATIVES AND THE FASCIST LEAGUES

The moderate Conservatives, in fact, favour deflation, but are unable to achieve a lowering of interest rates by this means; and they are opposed to a lowering of tariffs. Some of them would accept devaluation, but they fear its corollary—reforms. They thus adopt *in fact* the Socialists' position: "Neither deflation, nor devaluation." But while the Socialists are recommending an economic revolution, the Conservatives, confused by the crisis, are seeking their salvation in the Fascist leagues. Consequently, the success of the Cabinet in "defending the franc" is most imperfect. Recent events have severely shaken confidence at a time when the Treasury needs to launch new loans. The 3,000 million francs of October and November loans, however, have been raised despite the political crisis.

Partisans of the *status quo* are anxious to gain time, and they emphasise the favourable movement of prices and the existing indications of a business revival. They point out that the margin between foreign and French prices is contracting rapidly.

They also observe that decline in economic activity ceased two months ago; that certain industries such as textiles are reviving—the index (1917 = 100) rose to 68 in September, 1935, compared with 54 in September, 1934; that the Parisian warehouses' turnover has been steady for three months (against a decline of 10 per cent. for the same period of 1934); that new issues in September and October increased to 161 and 252 million francs, respectively, against 11 millions in August and an average of 71 millions in 1934; and that coal output is increasing. If continued, might not this economic revival, coupled with more constructive Parliamentary work, open the way, with or without devaluation, to a pacific solution of the French crisis?

PARIS, December 5.

GERMANY

DR. SCHACHT AND THE NAZIS

DR. SCHACHT addressed the Academy for German Law this week on the Nazi Party and capitalism. He rejected certain of the radical reforms demanded by the Party, which had been seconded in somewhat milder form by the Academy and in still milder form by the official in the Ministry of Justice who is supposed to be preparing the

legislation. The immediate theme was the State's attitude to joint-stock companies. According to Nazi utterances, this attitude ought to be anti-capitalistic and in fact anti-company. Dr. Schacht defended both capitalism and the present form of company organisation. So far the Government has promulgated only one law, that of July 5, 1934, dealing with this matter. This law was designed to facilitate the transformation of joint-stock companies into "personal" undertakings.

The notion that business ought to be "personal" underlies the Nazi programme, but the law of 1934 covered only a minor aspect of the problem, and its results so far have been meagre. One side of the Party's attitude is, to quote Dr. Schacht, "determined by handworker and peasant romanticism derived from the past." Another side connected with this romanticism, but strictly practical, is a desire for a rigid, unchanging caste or guild economic structure, which would keep the individual citizen and even his descendants in the same economic position. This Party ambition has already materialised in domains outside company organisation. Instances are the hereditary farm law, which ties agriculturists to their land and excludes outsiders from agriculture other than as wage labourers; numerous measures restricting the foundation of industrial and commercial undertakings; restrictions on entry into the professions and arts; and, finally, the abolition, so far partial, of freedom of choice of residence. By such measures of repression and elimination Nazi Party members and supporters have often themselves benefited materially, having established monopolies in their own interests; and they naturally distrust, as a possible factor of disturbance, the economic mobility of the "Liberalistic era."

The Party's company law proposals accord with these principles. Herr Schlegelberger, of the Ministry of Justice, the official concerned, has published a programme of reform, according to which the shareholders' meeting, in present German law the supreme company organ, is rejected as an outworn form of "democracy." It is even compared derisively with the position of an abdicated sovereign. The right to decide in all important matters, including the distribution of profits, should be transferred, in Herr Schlegelberger's opinion, from the meeting to the directorate. The directorate would henceforth be the "leader." The change proposed he regards as necessary in order to emancipate the leaders from the changing majorities of shareholders.

"FOLK DANCES AND SPINNING WHEELS"

It had been understood that Dr. Schlegelberger's recommendations would be embodied in the new Company Law. Dr. Schacht, however, has now condemned most of them root and branch. In his speech he began by paying a tribute to the righteousness of the Party's attitude: "the leader principle, the supremacy of the public interest, the overcoming of capitalism and so on"; but added that the "catchword formulation" of these principles constitutes a great danger.

Germany (he said), cannot do without capitalism. At the present time, although a praiseworthy revival of folk dances and spinning-wheels is under way, it must not be forgotten that capital-goods such as grain-elevators, reaping-machines, and steam ploughs are indispensable to agriculture. Agriculture, industry, communications and trade demand the most intensive capitalistic equipment and nothing so urgently requires a capitalistic substructure as National Defence. The State cannot possibly provide this complicated capitalistic mechanism; and the State's officials cannot become farmers, manufacturers, or traders. The joint stock company is the proper means for concentrating the savings of the many. Company Law must therefore be designed to facilitate company operations, not to impede them. A primary facility lies in the present mobility of shares; therefore the "permanent share" plan must be condemned. Restrictions on change in the ownership of shares would make it impossible to obtain company capital from the public.

Dr. Schacht proceeded to ridicule the "leader principle" in company administration. To apply this principle to every stocking factory, he said, would be to make it ridiculous. He also opposed the Party plan to increase the powers of

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

LONDON OFFICES:

City Office: 38 Threadneedle Street, E.C.2
West End Branch: 198 Piccadilly, W.1

directors at the cost of shareholders, declaring that the chief of a company who possesses "leader" qualities would always have sufficient influence with his shareholders. "The idea that the shareholder, when he has paid in his money, has no further duties and that he can therefore give a free hand to the directorate is mistaken."

Under the law of November 5th, concentrating Labour Exchange activities in the hands of the Reich Unemployment Board, the organisation of the labour market will be made more minute. Unemployed persons will be classed as "fully employable," "partly employable" or "not employable." Free jobs will be distributed correspondingly; a "fully employable" applicant will, for instance, not be given work that could be done by a "partly employable."

Retail trade turnover in October was 1 per cent. above that of October, 1934, which represents approximately the rise in the official cost-of-living index (housing eliminated).

The month-end demand for cash exceeded expectations; but owing to certain repayments of public issues, the supply of money was adequate. The Reichsbank's return for November 30th indicates that the banks laid in more cash in advance than they needed. On the one hand, the total of Reichsbank credits and investments rose by Rm. 513 millions, as against Rm. 444 millions in the corresponding week of last year. On the other hand, deposits increased by the large sum of Rm. 88 millions. Owing to the heavy credit repayments in the earlier weeks of November, the rediscounts portfolio is only slightly above the level of a month ago. Money this week is somewhat easier, the day loan rate on Tuesday being 3½-3¾ per cent. The savings deposits in the savings banks on October 31st totalled Rm. 13,272 millions, having increased during the month by Rm. 34 millions.

BERLIN, December 4.

HUNGARY

TRANSFER MORATORIUM AND THE FOREIGN CREDITORS

AT Christmas it will be four years since the transfer moratorium was first decreed by which the debt service of all Hungary's foreign debts except the League loan was paid into blocked account with the National Bank. The latest report of Mr Tyler, the League representative, shows that out of 274.3 million pengő received by the Cash Office of the Foreign Credits 152.2 million pengő has paid been out on coupons and bonds redeemed. At present the balance held in cash is only 20.1 million pengő. The rest is partly borrowed by the Government and partly made up of Treasury bills which were accepted by the Office according to specific agreements with the Government. There are no State arrears outstanding. Other arrears total 31.6 million pengő as per September 30, 1935.

The amounts deposited in pengő with the National Bank up to the above date, under the Standstill Agreement, in order to cover interest and commission on short-term banking debts not satisfied in foreign exchange totalled 57.35 million pengő. Of this, 51.5 million pengő had been paid

to creditors accepting such payments in satisfaction. The amounts paid under the same agreement for capital repayments in pengő to the National Bank totalled 23.4 million pengő, of which 22.1 million pengő had been disposed of by the creditors. The balances held by the National Bank are 5.9 million pengő and 1.2 million pengő respectively. It is claimed that the transfer moratorium, which was thought to be a great hardship to the foreign creditors, enabled them, nevertheless, to thaw the blocked pengő balances, at a sacrifice which, though great, should be judged with due reference to the fall in money rates in the creditor countries. Both short- and long-term creditors still receive on the average a more than 2 per cent. yield on their invested capital, if calculated in the currency in which it was originally lent.

AGRARIAN DEBT RELIEF

The fall in food prices that began in 1929 and continued unevenly until 1933 rendered insolvent many Hungarian farmers who had borrowed money on a large scale. The number of these insolvent debtors was so great that the Government began in 1932 to take exceptional measures without prejudice to the rights of foreign creditors. In October, 1933, it issued a decree permanently relieving, subject to certain conditions, holders of not more than 15 acres from short-term debts owing to banks, and in general protecting land-owners from bankruptcy for two years, subject to the payment of taxes, interest and other charges calculated according to the size of the holding and the debt.

Now that this period has elapsed, the Government has issued a further decree, subsequently approved by the House of Deputies, which aims at a final solution for owners of holdings of up to 15 acres, and defines, for another two years, the obligations of agrarian debtors in general. The decree distinguishes between two main categories of embarrassed debtors: (a) those owning over 1,500 acres and (b) those owning not more than 1,500 acres. The first category will be considered individually. The second will be the object of general measures, which may be summarised as follows:—

(1) Where a farmer owning not more than 1,500 acres is indebted for beyond a certain amount, the State is to take over a certain part of his debts, and the creditor is to receive from the State, in full satisfaction, payment over a period of forty years calculated at 3 per cent. per annum (interest and amortisation) of the capital debt. But the State will pay 100 per cent. up to a certain limit only. Above this limit, the State will take over a gradually decreasing percentage; and the full amount of the capital debt will thus be definitely settled. The capital debt to be taken over in this way is estimated at between 120 and 150 million pengő. The annual charge assumed by the State (3 per cent.) in this way may therefore be between 3.6 and 4.5 million pengő.

(2) In the case of protected holdings of not more than 15 acres certain short-term debts are to be converted into long-term obligations dischargeable by the debtors by an annual payment of 4½ per cent. for fifty years. It is estimated that roughly 80 million pengő bank debts will have to be handled in this manner. Of the total number of protected holdings, now over 78,000, it appears that 55,000 are of not more than 15 acres.

(3) The relief hitherto granted by the State (by paying part of the debt in cash and bearing part) to protected holders of not more than 15 acres is now extended to protected holders of between 15 and 30 acres. This means that the State will eventually have to pay 8 million pengő in cash and bear a debt of 4 million pengő. Interest rates payable by non-protected agrarian debtors are also to be reduced from 5½ per cent. to 5 per cent., and by the protected from 4 to 3½ per cent. The amortisation payments of the protected holders are reduced by one-third of the amounts hitherto paid.

The debts for which protection has been granted under the 1933 decree have been estimated at 828 million pengő. The latest estimate of the debts of agriculturists, made as at the end of 1932, including long-term and short-term debts, under the Land Reform procedure and tax arrears, is given by the Hungarian Statistical Office at 1,778.7 million pengő, that is more than £100 millions at par.

BUDAPEST, December 1.

BULGARIA

SIGNS OF ECONOMIC RECOVERY

THE Government have already intimated their intention not to prepare a new Constitution, but to make some modifications in the Constitution of 1879. The project provides some extension of the executive power and the creation of a Senate, composed of *de jure* members and others elected by the various economic organisations. It is expected, however, that even this project will undergo some changes, since it will have to be approved by a vote of the nation. There is consequently a possibility of a change of Government in the near future, whose main object would be the passing of the new Constitution.

Considerable improvement is observable in the economic situation of the country, due not only to the fairly good cereal crop, but also to the favourable results of the tobacco and vegetable crops. The cereal crop has yielded 30,018,000 quintals, as against 24,110,000 last year, while the production of tobacco, cotton, vegetables and some fruits has increased by nearly 50 per cent. compared with last year.

BIG INCREASE IN FOREIGN TRADE

As a result, credit has become easier and the Bank rate has been reduced from 7 to 6 per cent. While local trade is certainly more active at present, the increase in the volume of foreign trade is notable:—

	(Million leva)	
	1934	1935
	(10 Months)	(10 Months)
Exports	1,916	2,557
Imports	1,840	2,365
Export surplus	76	192

Exports have increased by 34 per cent. and imports by 29 per cent., compared with the corresponding period of 1934.

But this improvement in foreign trade has not reflected itself in the foreign exchange position of the National Bank or in foreign debt transfers. In fact, the increased volume of foreign trade is the result of the big tobacco compensation agreement amounting to 900 million leva, concluded in the first place with Germany and, in lesser proportions, with Austria, Czechoslovakia and Hungary. The share of Germany in Bulgaria's foreign trade has risen to 50 per cent., as against 40 per cent. in the preceding year. The Reichsmark balances at the National Bank have markedly increased, but there is no improvement in the free devisen position of the bank.

The negotiations with the representatives of the bondholders designed to secure a new agreement have resulted in a prolongation of the existing one for another six months. The Government will transfer, as heretofore, 15 per cent. on all foreign loans, while 17½ per cent. will be blocked with the National Bank in leva, in order to be transferred when conditions permit.

The decree-law concerning the sanctions against Italy was published on November 16th, in accordance with the recommendations of the League of Nations.

SOFIA, December 1.

EGYPT

SANCTIONS AND BUSINESS

APART from the Stock Exchange, which was depressed for a couple of days, the recent political agitation has affected business very little. Nobody ever doubted that despite present exceptional conditions the Government would not allow the situation to get out of hand, and that it is in a position to cope with any emergency. The complete calm that prevails in Alexandria, Egypt's most turbulent city, is partly due to the recent improvement in employment and wages resulting from military activities. Dockers are now

getting 25 per cent. more than in September, while the food price index is at 113, against 122 last year.

Public opinion is mainly concerned with sanctions, which Egypt has consented, in principle, to apply. November 18th passed without bringing any change, however, as the Committee of Co-ordination had not then had time to work out a plan owing to the complexities arising from the Capitulations. The report is nearing completion, now, and may be given official approval shortly.

In spite of active propaganda by the pro-Italian European Press, little concern is felt over the consequences of the application of sanctions to Italy and the latter's measures of retaliation. The cotton season is so advanced already that Italy has been able to cover an important part of her requirements. Her purchases up to November 14th exceeded by 39.3 per cent. those of last year at the same date, and attained 33.6 per cent. of her total imports during 1934-35, which absorbed 8.6 per cent. of all Egypt's exports. Coming at this time and in a boom period, the loss of the Italian outlet will be felt less severely. Shipments of Egyptian cotton to all countries are now 25 per cent. above those of the past season at this date, and stocks in Alexandria are 11.1 per cent. lower than a year ago. It is not forgotten, either, that the present record export surplus of rice ought to increase further as a result of the elimination of Italian competition.

Since the September scare, credit conditions have been improving steadily and may now be termed quite normal. Sales of securities, withdrawals of deposits and transfers of funds by Italian residents have ended long ago. So have liquidations by other weak holders. Securities have regained a substantial part of their previous losses, and confidence has been restored by the easier situation in the Mediterranean as well as the local defensive measures. The reinvestment of profits made out of the sudden rise in imported goods first helped to relax the tightness of money, and the improvement has been further enhanced by military expenditure such as renting of buildings, recruiting of labour, purchase of provisions. Finally, there has come the rise in the value of cotton, which has appreciated 24.9 per cent. since September 1st.

PROSPEROUS TRADE AND BUDGET

Exports continue to expand; and the latest returns show that, despite active cotton shipments, imports are expanding even faster:—

	1934	1935
	(Nine months)	(Nine months)
	£E.	£E.
Exports	20,859,165	22,139,097
Imports	20,570,001	22,486,982

This may be explained by the large quantities of Japanese goods introduced into the country many months before the imposition of the 40 per cent. exchange compensation tax, and by the larger imports from other sources resulting from anxiety about the situation in the Mediterranean.

An agreement has just been reached with Roumania, which will help to lessen the import surplus with that country and facilitate payments. An expansion of exports of Egyptian rice is expected, and a new outlet for raw cotton and yarn. Negotiations have also been resumed with Japan, and the imposition of a double tax on all Japanese goods entering Egypt after November 18th has been postponed for the while.

Customs receipts compare very favourably with those for last year and the divergence continues to increase:—

	1934	1935
May 1st to October 31st	£E7,289,016	£E8,534,458

Much satisfaction is expressed at this, as the Budget draws about 43 per cent. of its total resources from this quarter. An important surplus might therefore be predicted for the end of the fiscal year, were it not that the extent of the new military expenditure is unknown. Nevertheless, it is felt that any money spent on roadmaking will enhance the national assets.

ALEXANDRIA, November 25.

ARGENTINA

EXPORTS STILL INCREASING

EXPORTS for October show a substantial increase over those for the same period last year both in value and in tonnage. Although shipments of meat and other pastoral products showed a decline in tonnage, the improvement in prices more than offset the decrease in tonnage. Maize and linseed showed a large increase in tonnage shipped. The following are the figures for exports in the first ten months of 1934 and 1935:—

	Tons		Average Prices (pesos)	
	1934	1935	1934	1935
Chilled beef	291,066	286,048	366.52	385.45
Mutton	41,428	42,084	389.58	480.49
Salted and dried hides ...	103,078	114,065	532.45	566.19
Unwashed wool	81,229	98,965	1,122.96	787.95
Wheat	4,122,392	3,607,406	61.54	69.91
Maize	4,696,725	5,731,180	54.08	46.11
Linseed	1,150,939	1,516,211	125.47	120.17

The value of exports during the same period was as follows:—

	(Pesos)		Increase or Decrease per cent.
	1934	1935	
Pastoral products	388,475,731	413,195,418	+ 6.4
Agricultural products ...	759,493,243	828,455,172	+ 9.1
Total	1,212,939,782	1,304,751,038	+ 7.6

The percentage increase or decrease in average prices during the first ten months of 1935, as compared with the same period of 1934, was as follows:—

	Per cent.		Per cent.
Chilled beef	+ 5.2	Wheat	+ 13.6
Frozen beef	+ 3.2	Maize.....	- 14.7
Mutton	+ 23.3	Linseed	- 4.2
Salted cowhides	+ 7.1	Oats	+ 20.1
Unwashed sheepskins	- 23.5	Barley	+ 19.2

The rise in meat prices during October is remarkable. The market value of exports for the first ten months of 1935 is the highest obtained since 1929, and the tonnage exported is the greatest since 1931.

The figures for October show a substantial increase both in revenue and expenditure, though the latter exceeded the former by some \$18 millions. The figures for the first ten months of 1935, compared with those for a similar period in 1934, show that the Government have spent during this year some \$38 millions more on wages and salaries alone. General expenditure is up by over 39 millions.

BUENOS AIRES, November 20.

CHINA

THE JAPANESE "STRANGLEHOLD"

THE attention being paid by Japan to the south-west provinces of China has a sinister appearance. A few months ago General Doihara made a tour of Kwangtung and Kwangsi. Last week Major-General Okamura arrived in Canton on what he described as a private visit devoid of any political significance. He was received by the leading provincial officials and found time to make a brief tour of

Kwangsi by car and aeroplane before returning to Shanghai. A few weeks earlier a dispute between Japanese merchants in Swatow and the provincial authorities there was brought to a sudden termination by the arrival of some six or seven Japanese destroyers. It is now reported that the Japanese community has been granted a site on the foreshore in order to construct a special wharf for the handling of cargo. In the meantime the dying embers of the anti-Japanese boycott have been finally quenched and there has been a cessation of anti-Japanese propaganda and Press criticism.

Until quite recently the pro-Japanese policy of Chiang Kai-Shek and his followers in Nanking formed a constant target for the Canton party. Now, however, attacks have ceased, and after a good deal of shilly-shallying an influential group of officials of the south-west regime has left for Nanking to take part in the National Congress of the Kuomintang, apparently quite prepared to work in harmony with the Nanking party. This change of front suggests that Japanese influence is making itself felt in the south, and that the stranglehold is being gradually tightened throughout the country. It is not surprising, therefore, that many ardent officials, whose progressive ideas have yielded most promising reforms during the past ten years, are losing heart at finding their efforts stultified by higher authority under Japanese domination.

The suggestion put forward from various quarters that British policy in the Far East should be directed by a statesman of first-class rank in close touch with the Cabinet appears to have met with no response from the Imperial Government.

FALL OF THE HONGKONG DOLLAR

Within the past fortnight the value of the Hongkong dollar has fallen from 1s. 11d. to 1s. 4d. Rumours of the devaluation of the Chinese standard dollar at the end of October had a depressing effect on the Hongkong exchange, and when the market opened on November 4th the decree of the Nanking Government nationalising silver, which had been published over the week-end, started the Hongkong dollar on a downward slide. For the rest of the week the cash rate fell daily, with forward rates heavily penalised, and on November 9th, the Hongkong Government instituted an embargo on the export of silver in any shape or form. A meeting of the Legislative Council was held on the same day to pass an Ordinance empowering the Colonial Treasurer to issue one-dollar notes as a temporary expedient, pending the provision by the three authorised banks of issue of an adequate supply of one dollar notes. Subsequently, a further proclamation authorised the issue of cupro-nickel 10 cent and 5 cent pieces to take the place of the existing silver subsidiary coinage. The currency of Hongkong is now no longer based on silver, and the anomaly of a dollar technically tied to silver but actually several pence below parity has been removed.

The fact that the Government was in a position to replace silver with notes and a nickel subsidiary coinage confounded

those critics who had railed against a policy of drift. Presumably the recommendations of the last Currency Commission about the need for prompt action in the event of China abandoning silver had been heeded. At any rate, there is now no fear of a currency shortage. There is, however, considerable uncertainty about the course of exchange. The provision of acceptable substitutes for a vanishing silver coinage has done nothing to give stability to the currency itself, and Hongkong is still subject to the influence of Shanghai speculators who, being over-bought in sterling at high rates, find themselves with profits which may be realised at any time. This possibility may tend to keep the Hongkong dollar from a further decline in the near future, but if the currency reforms of the Nanking Government can be carried out, then the natural course would be for the Hongkong dollar to be allowed to fall another 10 per cent. or more until it approximates to parity with the Chinese standard dollar.

Hongkong is not unused to violent fluctuations in its currency, and since the war has seen its dollar as high as 6s. 2d. and as low as 10s. 4d. Nevertheless, the rapid fall of last week has come as an unpleasant shock to most people, and the community will take some little time to adjust itself to the new level of exchange. The optimists feel that the lower level will do much to relieve the depression which has been hanging over the Colony for the last year or more, particularly as the Hongkong dollar has been brought into closer relationship with the currency of Shanghai. Already share values have had a substantial rise all round, a recovery which has been welcomed by bankers and investors alike and should go some way to restoring confidence in local securities. Then again, the lower exchange rate will revive the export trade.

These various benefits to be derived from a depreciated dollar will, it is hoped, offset the increased cost of imported articles, many of which have already been advanced in price by some 40 or 50 per cent. More ominous, however, is the effect on the Government's budget for 1936. This has been based on the assumption that exchange would remain above the level of 1s. 8d., and its introduction was accompanied by a warning that a fall below that rate would require an increase in revenue to avoid a deficit. Such a contingency will have to be met, under instructions from the Secretary of State, partly by a cut in Civil Service salaries and partly by increased taxation; and neither Civil Servants nor taxpayers contemplate with equanimity the possible sacrifice which may be demanded.

HONGKONG, November 12.

LETTER TO THE EDITOR

"BARGAINING WITH THE AGGRESSOR"

TO THE EDITOR OF THE ECONOMIST

SIR,—A good many people are saying that the object of sanctions is to shorten the war. The actual result may very well be to prevent a quick, decisive result in the field and so to lengthen the war. In any case, would a problematical shortening of the war justify sanctions?

If, however, the object is to prevent any future resort to arms in defiance of the deliberate collective opinion of the world, then sanctions are a cheap price to pay even if the attainment of the object is not absolutely certain. But if it is to be attained, there must be no bargaining with the aggressor in the meantime to induce him to cease his aggression. Italy must evacuate Abyssinian territory and release all prisoners of war, as a result of sanctions, not as a result of negotiations. Otherwise the future deterrent effect of sanctions will be weakened. Any country which, with the best of intentions, negotiates now is endangering the cause of ultimate world peace, on which its own existence may one day depend.

It is to be hoped that if the application of sanctions should ever become likely in the future, the mistake will not be repeated of offering the aggressor a price to abstain from aggression. Otherwise all would-be aggressors will demand a premium for not breaking the world's peace. Their remedy for wrongs must be obtained by an appeal to the world for peaceful redress.

Yours truly,

T. G. G. POWELL.

The rise of the motor industry to the status of the third largest manufacturing industry in Great Britain has synchronized with the development of transport from a "luxury" activity to an indispensable auxiliary in the economic life of every country. The process, like every other major advance in the field of transport, has been contemporaneous with an expansion in the range and efficiency of modern business, and a rise in the standard of living of the people. No less inevitably, it has brought a host of new and pressing problems in its train. It has involved far-reaching legislative and economic adjustments in the relationship of the new transport arm with the activities, partly complementary and partly competitive, of older methods of transport. It has produced a significant change over from publicly- to privately-owned vehicular conveyance. Above all, it has confronted the State with the necessity of devising means of control, in order to protect the interests of its citizens in life and limb. The following survey is designed as a contribution to a clearer understanding of the background of these urgent problems. It deals with the organisation of the motor industry on the production and marketing sides, the influence of British tariff policy, and the scope of recent technical developments. The industry is further considered in its insurance and investment aspects. Finally, the question of Government control is discussed in its historical setting.

FOREWORD

(By P. F. Bennett, O.B.E., J.P., President of the Society of Motor Manufacturers and Traders, Ltd.)

THE publication by the *Economist* of a review of the British motor industry will be appreciated by those who have spent their lives in bringing it to its present position as one of the most important of our national activities. Its history has not previously been available in a compact form suitable for presentation to the public, and thus there is a lack of information among those in authority regarding the trade. The present review will be invaluable in adjusting a sense of its proportion in relation to other industries.

It is not generally remembered to-day that the practically complete cessation of the motor industry during the War, and its conversion to the output of munitions, resulted in the surrender of its world markets to its competitors not then engaged in hostilities. The consequences of that imperative step have dogged the footsteps of our overseas pioneers ever since.

Not less serious in its effect upon the world position of the industry was the imposition of a system of taxation on private cars based on horse power. It is easy to be wise after the event, but there can be no doubt that those responsible for its introduction were unable to foresee its ultimate effects. True, the industry has built up a market demand for the light car, particularly at home, and the value of this is not to be underestimated, but the future of the great export field lies primarily with the large car and the high powered engine. Our competitors, particularly in the United States of America, with its enormous home market for such vehicles, have at present a definite advantage over us. We are not without signs, however, of awakening interest in the progress of this important export effort, and the recent reduction of 25 per cent. in the tax is a step in the right direction.

The position of commercial vehicles both in regard to taxation and general restriction is indicative of experimental legislation which more recent knowledge clearly shows in some directions to be contrary to the interest of industrial development. The mistaken idea that the growth of road

traffic could injure other forms of transport is now sufficiently disproved to justify renewed examination of the material facts. It is gratifying to notice that the recent progress of the railway receipts follows in almost exact relationship the recovery of other industries under the direct lead of motor vehicle production. This relationship, indeed, has been evident for the past decade, but appears to have been obscured by other considerations.

No one interested in the future of Great Britain as the home of a manufacturing and exporting community, can view without a certain amount of anxiety the restricted character of our road system. Based, in the past, on the service of local requirements only, and thus rightly for such purposes controlled by local authorities, our roads have not kept pace with industrial and private services which have been introduced by the advent of the motor vehicle. Over fourteen hundred authorities controlling the provision of road space is much too large a number for consultation under modern conditions. A central authority for the construction, control and supervision of at least our main through routes is an urgent necessity, and already its absence has placed this country in a seriously backward position in regard to road development. Our roads are much congested, and any expansion of the use of motor vehicles which will bring us within a comparative relationship to our principal competitors will be impossible unless immediate steps are taken materially to increase our road accommodation.

Now that a new Parliament has assembled with a full term mandate and a realisation of the increasing importance of our export trade, the timely appearance of this review is of particular importance, as a compendium of up-to-date information regarding the industry and its immediate requirements. I recommend its study to all interested in industrial affairs, and particularly to those who still hold the view that restriction of road transport contributes to the welfare of its competitors and the nation at large.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE RISE OF A NEW INDUSTRY

HUMAN beings have never been content to rely entirely on their legs for moving about, and they have always disliked to fetch and carry for themselves. For a long time, however, *homo sapiens* had to be content with the horse, the camel, the dog and the donkey, whose speed and carrying capacity he ever sought to increase. The industrial revolution offered new opportunities for the satisfaction of man's craving for speed and for moving things about. For a time the railway and the bicycle held the field. But physics and chemistry had more to offer to human ingenuity.

The development of the internal-combustion engine, a small and effective power unit, made possible the mechanisation of road transport and the conquest of the air. The outbreak of the Great War closed the experimental stage of the new means of transport. The end of the war ushered in the period of expansion. After some initial difficulties, due to the war, mechanisation of road transport in Britain proceeded apace with a rapidity unrivalled by any other major industry. A new industry grew up to satisfy the ever-increasing demand for mechanised road vehicles. Within fifteen years the British motor industry rose from a position of relative insignificance to third place among factory trades. Production of motor vehicles increased from 34,000 in 1913 to 73,000 in 1922 and 403,720 in 1935. Similarly, the number of vehicles in use in the United Kingdom rose from 207,878 in 1913 to 575,823 in 1922 and 2,047,000 in 1935. This is no mean achievement, even if it seems small in comparison with the astronomical dimensions reached by the industry in the United States.

But in comparing the achievements of the motor industries in Britain and in the United States, it must be borne in mind that manufacturers across the Atlantic command the largest and richest home market. The motor car lends itself to mass-production methods, and, given the desire of almost every individual to run a car, manufacturers in the United States proceeded to satisfy this desire by producing vehicles at prices within the reach of an increasing proportion of the inhabitants. The large-scale production of motor cars, by reducing costs per unit, gave United States manufacturers an enormous advantage over British pro-

ducers in the export market. Further, the industry in the United States gained an advantage at the start, for while production of motor vehicles in this country was severely restricted during the war, producers in North America were able to forge ahead.

By the end of the war, United States manufacturers had established a strong hold on the British market, while the industry in this country had to start almost from scratch. Thus, the path of British manufacturers was beset with difficulties in the years following the war. Their opportunity came, however, with the imposition of a tax on private cars of £1 per unit of horse-power. Despite the relatively low initial cost of American cars, this heavy tax tended to reduce the number of persons able to run the high-powered vehicles in which American manufacturers still specialise, and created a demand for low-powered cars. Aided by the McKenna duties, imposed in 1915, British industrialists were at last able to make headway. But the position was still precarious in 1924, for the temporary revocation of the McKenna duties in that year opened the gates to a flood of American vehicles. Since 1925, however, the British industry has gained ground rapidly. The price of private cars has been halved since 1924, and this has speeded up the translation of potential into effective demand.

The structure and organisation of the British motor industry have undergone considerable changes during the past fifteen years. There has been a tendency towards specialisation and towards collective research to further the mechanical efficiency of the industry. Moreover, the industry has created an association—the Society of Motor Manufacturers and Traders—to further its interests at home and abroad.

But the very rapidity of the growth of mechanised road transport has created problems of far-reaching importance—the accident problem, the road-rail problem, and many more. In the following pages, therefore, we consider, first, the rise of the industry, and, subsequently, the measures by which the State has sought to cope with its road transport difficulties.

ORGANISATION OF THE INDUSTRY

A.—PRODUCTION

THE growth of the motor industry into the third largest manufacturing industry in Great Britain, after general engineering and cotton, is almost entirely a post-war development. For reasons stated above, the British motor industry was somewhat handicapped in the early years of the war. However, British manufacturers gradually succeeded in opening up a market for low-powered cars and in establishing a quasi-monopoly in that particular sphere.

PRIVATE CARS

Demand for motor vehicles increased rapidly. Several firms emerged from the welter of competition, and, by adopting the methods of mass-production which were already being exploited in the United States, quickly attained a dominant position in the British motor industry, so far as volume of output was concerned. The largest producers are Morris and Austin, with Ford and Standard some little way behind. The entry of General Motors into the British industry in 1929, through the purchase of Vauxhall Motors, brought that firm into the same category. Rootes, who alone among the leading interests have adopted, since 1932, a policy of buying up and consolidating smaller firms into a compact group, may claim a place in the same list.

Apart from Rootes, amalgamations or consolidations among the producers of popular cars have been conspicuous by their absence. Competition has been very acute, and the fluctuations in the fortunes of different concerns, owing to the varying extent to which their new models each season succeed or fail in catching the public fancy, make the goodwill of a firm a somewhat difficult factor to assess for pur-

poses of negotiation. Any regulation of output and sales on a cartel basis, therefore, is impossible. Instead, each manufacturer tries, by producing a wide range of models, to keep a hold on every market, and hopes that the losses on the failures he produces will be more than offset by the profits on the popular "winners." The tendency to increase the number of models in production has been a feature of the industry for many years. It has been one factor limiting reductions in costs, which can most easily be achieved as a result of specialisation on the large-scale production of a very limited range of models. Nevertheless, regarded as a group, the larger manufacturers have consistently increased their share of the total output.

At the other end of the scale, the manufacture of luxury cars has always been a feature of the British motor industry. There have been many casualties, but three groups are now in a dominant position. They include Rolls-Royce, who recently acquired a valuable asset by the purchase of the name and goodwill of Bentley. The Daimler group comprises Lanchester and the less luxurious B.S.A. Finally, Rootes, with their Humber and Talbot interests, and their recent purchase of the Sunbeam name and goodwill, may be considered competitors in this class. On a somewhat smaller scale are concerns such as Alvis and Lagonda. A motive for the purchase of competitors in the luxury trade is that the market is strictly limited. The negative value of smaller competitors with a name and goodwill, who restrict the sales of the larger concerns, can be calculated fairly exactly; a price can be fixed at which it is cheaper to buy out such firms than to allow them to continue to compete. In the luxury trade, prices are maintained at a high level in much the same way as those of well-known brands of

pipes and fountain pens, and profit margins are wide. The policy is probably wise; without the *cachet* that goes with name and price, competition from the better-class American cars would be formidable.

In an intermediate position between the popular and the luxury car are two classes of concern. The first includes the manufacturers of medium-priced cars with a steady demand, such as Rover and Armstrong-Siddeley; the second comprises manufacturers of the semi-sports type of car such as Riley, M.G., S.S. and Triumph. The improved performance of the ordinary popular car is tending to contract the market for sports cars. The firms concerned are therefore showing a tendency to develop into manufacturers of medium-priced cars which fall neither into the popular nor into the luxury categories.

COMMERCIAL VEHICLES

On the commercial vehicle side, the British motor industry may be grouped under two main categories. The heavy-weight manufacturers, with Leyland and Associated Equipment Company in a class by themselves, include also such concerns as Dennis, Albion, Scammell, Armstrong-Saurer and numerous smaller firms. The heavy-weight manufacturers specialise in omnibuses and heavy lorries, mainly of over 2½ tons unladen weight. In recent years, Leyland and A.E.C. have become manufacturers of Diesel as well as of petrol engines. Most of the other heavy-weight manufacturers, however, with the exception of Armstrong-Saurer, buy their engines from specialist engine manufacturers (mainly Gardner) and build only the chassis themselves. The light-weight and middle-weight manufacturers form a distinct class of producers, who, on the whole, confine themselves to goods vehicles not exceeding 2½ tons unladen weight—and in one or two cases to taxis. The firms concerned are, as a rule, leading manufacturers in the popular mass-produced car market, from which they have graduated. They include Vauxhall (Bedford), Morris Commercial and Ford, with Austin strongly represented in the light-weight and taxi categories. Rootes (Commer) is also an important producer in this market.

SPECIALISATION

The motor industry as a whole is moving towards increasing specialisation and standardisation. The manufacturer is more and more becoming an assembler of parts provided by specialists in different lines. Tyres, sparking plugs, batteries, electric lighting and starting equipment, clocks, speedometers and gauges, carburettors, radiators, glass, bodies and upholstery—all these are the products of specialist manufacture. They provide the mainstay of important firms, which, although not actually motor manufacturers, are almost as dependent on the motor industry as the car manufacturers themselves. Such firms include Dunlop, Lucas, Triplex, English Pressed Steel, Briggs Motor Bodies, S. Smith and Sons, and Imperial Chemical Industries. To be near their customers and to save transport costs, the factories of these companies are usually situated in or near the main motor manufacturing centres.

GEOGRAPHICAL DISTRIBUTION

The original home of the motor industry was Coventry, which had previously been the leading cycle manufacturing centre and had specialised in the light engineering trades. Coventry may still be considered the citadel of the industry, where most of the smaller car manufacturers and many of the accessory manufacturers have their works. The largest producers have, however, tended to develop or to settle away from Coventry. Austin's headquarters are in Birmingham, another centre of the light engineering trades. The Morris works are at Oxford, largely by a species of "historical accident." Ford was originally located at Manchester, but production was transferred to Dagenham in 1933 in order to obtain the advantages of closer proximity to the London market and of a better situation for export business. Vauxhall have largely built up a new centre for the motor industry at Luton, which is nearer than Coventry to the London market. Of the heavy-weight manufacturers, Leyland have their works at Leyland, Lancs., and A.E.C. at Southall. Rootes' factories are in

Coventry and Luton, and those of Standard at Coventry. There is some evidence that London is acting as a magnet for the motor industry, tending to draw it southwards.

The motor industry, in spite of the highly developed individualism of its constituent members, is in many respects a model to other industries in the matter of collective action. It possesses one of the best organised and strongest manufacturing associations in the country in the Society of Motor Manufacturers and Traders. This body looks after the interests of the industry in Parliament and in the Government Departments. It provides the industry with information and statistics regarding every section of the home market and the export trade. It also organises the annual Motor Shows, undertakes collective advertising and propaganda for the British motor industry, and takes a leading part in initiating measures of "rationalisation" through the standardisation and simplification of parts. It has offices overseas and is an important factor in the export market. Other organisations, such as the Institute of British Carriage and Automobile Manufacturers and the Institution of Automobile Engineers, deal with individual aspects of the industry. The Motor Legislation Committee, representing the S.M.M.T., Automobile Association, Royal Automobile Club and other bodies, is concerned with Parliamentary and legislative work affecting the use and taxation of motor vehicles.

Labour in the industry is fairly highly organised, but the number of separate unions is rather large. Most grades of workers are represented by bodies such as the Amalgamated Engineering Union, the Electrical Trades Federation, Woodworkers' Federation and General Workers' Union. A number of smaller unions cater for special categories of workers. The negotiating body on the employers' side is the Engineering and Allied Employers' National Federation.

B.—MARKETING AND DISTRIBUTION

INTEREST in the distribution and sale of motor vehicles is centred principally on private cars, the sale of commercial vehicles being effected for the most part direct from manufacturer to user. The wide scope of the selling side of the industry is apparent from the fact that in 1934 there were over 20,000 firms and individuals engaged in the sale of new and second-hand vehicles, though not all of these were recognised dealers with facilities for the display and "servicing" of the vehicles sold. The general system of distribution adopted by the principal manufacturers has not altered materially during the last few years. In the majority of cases the manufacturer divides the country into a number of sales areas and appoints a distributor for each of these areas, through whom all sales in that area are effected. In the case of the Ford Company, for example, there are about 300 distributors. The distributor, in collaboration with the manufacturer, then appoints sub-dealers within the area. Both the distributors and the dealers make retail sales, but the distributor may not allow all his dealers to sell to the trade. The margin of discount available is approximately the same in both cases, but the distributor has an additional commission and probably also a quantity discount.

During the last few years efforts have been made to tighten up the relationship between the manufacturers and their retail outlets, in order to prevent retailers with limited facilities and low overheads from undercutting the larger firms. Under the system outlined above it was possible for small garage proprietors and others, whose main business might be the sale of petrol and oil, to undertake delivery of a car below the list price, by sharing their profit margin with the purchaser of the car. Rather more than a year ago, however, a scheme was put into force under which the Society of Motor Manufacturers and Traders, to which most of the larger car distributors belonged, published a list of approved dealers. Those who supported the scheme (i.e. all the manufacturers and concessionaires) undertook not to sell vehicles at trade prices to anyone whose name did not appear on that list.

At the same time retailers were divided into two main classes, namely, "stockist" dealers, who had facilities for displaying cars and contracted to keep at least one in stock; and casual traders, who were equipped to carry out servicing but did not contract to stock vehicles. The profit margin of the casual trader is now limited to 10 per cent. of the price of the vehicle. The maximum margin of discount allowed by the manufacturer varies with different makes of car. For the purpose of the S.M.M.T. dealers in any make of car may be classified as stockist; but the profit margin allowed by the manufacturer of the car which is not stocked is usually somewhere between the 10 per cent. of the casual trader and the full rate allowed to stockist dealers. Although the scheme has not been free from criticism, it is on the whole achieving its objects.

RETAILERS' POSITION

The Motor Agents' Association was formed in 1913 from the Agents' Section of the S.M.M.T. to protect the interests of retailers. It deals with all matters except the maintenance of fixed prices, which comes under the Motor Trade Association. Although the membership of the M.A.A. is considerably less than the total number of retail outlets, it probably represents about 90 per cent. of the total retail sales of cars and parts. The outsiders generally do little more than petrol pump and minor repair work.

Of the 20,000 retailers mentioned above, some 13,600 are retailers of new vehicles recognised as official dealers, and of these about 4,900 are stockist dealers. Although figures for earlier years are not available, it is probable that the rate of increase has been considerably below that of total sales of cars, and that individual firms have grown in size. Such a growth is, in fact, the natural complement of the substantial reduction which has taken place in the prices of both private cars and commercial vehicles. Thus, on the basis of the year 1924 equals 100, the index of retail prices of private cars published by the Society of Motor Manufacturers and Traders stood at 51.8 in 1934, and that of commercial vehicles at 62.4. Assuming, therefore, that the percentage profit margin has remained constant, it is now necessary to sell nearly twice as many cars as in 1924 in order to achieve the same total profit. Actually, new registrations have increased between 1924 and 1934 by about 79 per cent.

Detailed figures for the sale of second-hand vehicles are not available, but in actual volume these far outnumber new sales. The average life of a private car is about eight

years, and it may be taken that, on the average, it changes hands at least three times during that period. It is estimated that there are about 1,200,000 second-hand cars available. On the above assumption, therefore, the annual turnover would amount to 450,000 cars.

SERVICING AND REPAIRS

Closely allied to the system of sale and distribution is that of servicing and repair work. All the dealers whose names appear on the list published by the S.M.M.T. can give adequate repair facilities. Probably the greater part of the repair and service work is carried out by these dealers. In some cases, however, the manufacturers maintain their own main service stations, with or without the co-operation of their distributors. Major repairs and overhauls are in many cases carried out by the manufacturers. The tendency, however, for manufacturing companies to transfer their service stations away from the centre of London to trading estates in the suburbs has to some extent lessened the convenience to the average London motorist of running his car direct to the makers' service station for minor repairs. The manufacturers, however, usually take steps to see that the dealers with whom sales contracts are made have adequate service and repair facilities.

The present tendency is, therefore, for all servicing to pass through the hands of dealers, who in turn send the car to the manufacturer if the nature of the work justifies it. In general, however, arrangements for servicing and the stocking of spares have been improved during recent years to such an extent that it is unnecessary, even with the less important makes of car, to rely on the manufacturer to any considerable extent.

A growing proportion of car sales are effected on hire purchase terms. While some dealers finance these sales themselves, in the majority of cases the collection of the payments is taken over by a company in return for a cash payment to the dealer, who is thus relieved of the necessity of locking up his capital over a considerable period, and of the trouble of collecting the payments and the risk of bad debts.

Taking the industry as a whole, the increase in the number of cars sold, during the last few years, has been more than sufficient to offset the lower profit per vehicle. But in return the industry has improved both the facilities offered for inspection of new models and the service given to purchasers. Moreover, the industry should benefit in the future from the regulation of sales, though it is open to doubt how far this is in the interest of consumers.

PROGRESS OF THE INDUSTRY

THE development of the motor industry has in most countries been canalised by taxation and legislation into clearly defined channels. In all Western countries almost everybody who can afford it runs a car. Ultimately the problem of the motor industry, which is to increase the number of car-owners, can only be solved, either by increasing the number of persons above the car-income level, if motoring costs are fixed, or by reducing motoring costs in order to bring more people into the car-owning category.

There are to-day nearly 1,500,000 cars taxed on horse-power in the United Kingdom. It may be assumed that, according to Mr Feavearyear's estimate, one-quarter of these, say 375,000, are used for business purposes, and are not strictly private cars, while probably a further 100,000 are owned by families with more than one car. This means that there are over 1,000,000 private car-owning families in the United Kingdom, or some 8 per cent. of all families. If the 500,000 motor cycles were included, the proportion of families possessing instruments of private transport, other than bicycles, would be increased to 11 or 12 per cent. of the total. Along with the fall in motoring costs

there has been a progressive increase in the number of families owning cars; this tendency has been accelerated by the fact that the cost of living has on the whole been falling faster than wages and salaries, thus leaving a larger margin available for expenditure on amenities by families not affected by unemployment. Moreover, during the last year or two, there has been a greater feeling of security in their employment by many people. This has made them more disposed to undertake new financial liabilities such as a house or a car. There has also been an increase in the co-operative ownership of cars by several members of a family or by friends. This has taken place concurrently with the development of new housing estates at some distance from the places of work of the inhabitants, and often in areas not very well served by public transport facilities. Many people have thus become accustomed to spend rather a high proportion of their income on motoring. Judging from the Inland Revenue returns, which show some 800,000 incomes of over £400 a year, the minimum car-income, which a few years ago was estimated to be not less than £450 a year, has fallen to some-

40 years

Here you see the first Daimler ever built, at Coventry, under the patents of the pioneer, Gottlieb Daimler. Below is an illustration of a 1936 Daimler Saloon. The history of motoring is epitomised in these two cars.

It is an exciting story — but what dull reading it would make, compressed to the trifling measure of this single page! The dates, the names, the barest of the bare facts. Only professional historians could be bothered to read it — and theirs would be the unsympathetic professional eye, eager to detect mis-statements. Yet the moral of it all can be pointed in a single paragraph. Ranging in price from £235 to £1525 and in horse power from ten to thirty-two, the 1936 models are motor cars as good as Daimler—Lanchester—B.S.A. can make them, in the light of an unrivalled experience, with the full sense of an unequalled responsibility. All of them have Daimler Fluid Flywheel Transmission. Ten minutes at the wheel of a car with this transmission will spoil you for any other.

EFFECT OF HORSE-POWER TAX

Given the widespread desire to possess a private car, the type of car bought is largely controlled by the system of taxation and by factors such as compulsory insurance. Up to 1920, when car-owning was confined to the well-to-do minority, the British market, like most other markets where there is freedom of choice, showed a preference for high-powered cars, and was largely supplied by imported American cars. At the beginning of 1921, the petrol tax, which had been at the rate of 6d. a gallon since 1915, was abolished, and a vehicle tax introduced at the rate of £1 per unit of horse-power per annum. This led to the development by British manufacturers of high-compression engines which came into a low category for taxation purposes, and enabled British manufacturers to open up a new market for small cars in which the Americans were unable to compete. As it became necessary for the British industry to seek expansion by bringing in lower and lower income strata into the car-owning class, attention was directed increasingly towards very light "Baby" cars of 8 h.p., since these were rated at only £8 a year for tax. The 12 h.p. and 14 h.p. classes, the first to be developed under the new system, began to lose in popularity to the 8 h.p. and 10 h.p. classes.

Export demand for these very small cars was found to be limited, and attempts were made to compete abroad in the cheap higher-powered categories. Until recently, however, these experiments met with indifferent success, because, without a large home demand for this type of vehicle, it was found impossible to obtain a big enough output to secure profitable production. Exports received a stimulus in 1931, when the abandonment of the gold standard by Great Britain coincided with difficulties for the American exporters, together with reduced purchasing power and increased motor and petrol taxation in the importing countries; the peculiar circumstances of the time assisted the British industry by making buyers more favourably disposed towards small cars which were cheap to run and came into a low taxation category. With improved purchasing power, however, and lower prices for American cars, most of these countries have reverted to their previous buying habits. But the share of the export trade falling to the British industry is much higher than it was prior to the depression.

Meanwhile, in the home market, the makers of very small cars received an additional fillip from the imposition of compulsory third-party insurance on motor cycles by the Road Traffic Act of 1930. This led many motor cyclists to scrap their cycles and purchase small cars. The number of motor cycles licensed actually fell from 731,000 in 1929 to 500,000 this year. At the beginning of the current year, following the announcement in the Budget speech of 1934, the horse-power tax on private cars was reduced from £1 to 15s. per unit. It was expected that this would lead to the use of higher-powered cars. But, in fact, the number of new motorists has been greatly increased, and the newcomers, who belong to relatively low income categories, have naturally shown a preference for the smallest types of car and the cheapest to run. A large proportion of the

motorists in the higher income strata who were previously buying medium-powered cars, have, however, changed to high-powered vehicles. This change in buying habits has initially benefited American exporters, who have increased their sales in the British market. But the greater demand for cheap high-powered cars is at last giving British manufacturers a chance of competing effectively in this trade, and the results of the attention which they are now devoting to it will no doubt in due course be reflected in an improvement in British exports:—

COMMERCIAL PASSENGER VEHICLES

On the commercial vehicle side, the motor industry falls into two sections, passenger and goods. Demand on the passenger side expanded rapidly during the 'twenties, when the growth of bus routes was linking all but the most remote villages with the nearest town by regular services, besides improving the services between neighbouring towns and making possible the dispersion of the population of the larger towns in scattered suburbs away from the old tram routes. After 1925, these were supplemented by long-distance coach routes in competition with the main-line railways. The position created by the growth of omnibus and coach services was reported upon by the Royal Commission on Transport, and in accordance with its recommendations all omnibus and motor coach services were placed under the control of the Traffic Commissioners by the Road Traffic Act of 1930. There was an immediate reduction in the number of vehicles in use, which has continued to a certain extent ever since, the growth of monopolies on particular services having enabled the same work to be done with fewer vehicles.

The first effect of the reduction in the number of omnibuses in use was to check sales of new vehicles by glutting the second-hand market. Following the absorption of the surplus and the development, during the past two years, of the Diesel omnibus with its lower running costs, there has been a recovery in demand up to a normal replacement level. It may temporarily be at rather more than the replacement level, since, despite the equalisation of taxation between petrol and oil, the Diesel bus offers a saving of over 40 per cent. in the fuel bill to set off against its higher initial cost; in view of the fact that the average annual mileage of a bus is now 32,700, this is an important item. The licensing system for omnibuses, imposed by the Act of 1930, involves control of the routes on which omnibuses or motor coaches may be run, and of the time-tables; but as it does not limit the seating capacity there has been a tendency to buy larger vehicles, in order to make up for restricted vehicle-mileage by increased seat-mileage. The consolidation of the omnibus industry, through the absorption of the smaller operators by the large concerns in the group affiliated with Tilling and British Automobile Traction and the railways, has made orders fewer and larger. Moreover, as replacement programmes have been regularised, the larger manufacturers have been placed in a stronger competitive position and have been increasing their

BUY A CAR MADE IN THE UNITED KINGDOM

THE AUSTIN RANGE.—Seven h.p. from £102.10a. Ten-Four h.p. from £158. Light Twelve-Four h.p. from £188. Twelve-Six h.p. from £205. Sixteen and Eighteen h.p. from £298. Twenty h.p. £650. (Prices at works.)

What AUSTIN has contributed to the Motor Car Industry

You can measure the progress of the British Motor Industry by the history of Longbridge—that immense factory which produces Britain's most popular car, the Austin.

In every stage of manufacture—from the drawing-board to the testing of the finished model—Austin set and maintain a standard of excellence which is an inspiration to the Industry. Precision in details, ruthless abolition of waste, the selection of only the very finest materials, and high-speed efficiency at every stage are the principles on which Austins are built. By such methods cars and vans were produced and sold during the last financial year greatly in excess of the previous year—the increase being in the Home Market 23% and in the Export

Market 30%. This result represents the combined efforts of 19,000 work-people. In addition to this expansion of industry and creation of employment, such highly specialised production has brought the motoring public many benefits. Taking the Austin Seven as an example, Austin prices have been practically halved during the last ten years and thus, under Austin leadership, motoring for the million has become definitely assured. Moreover, every year has seen the Austin become more comfortable, more attractive, easier to drive and control, and more dependable than before. This season's models, with their many improvements, maintain this tradition of engineering excellence and truly illustrate the vitality of a great National Industry.

You buy a car—but you INVEST in an

AUSTIN

share of the market, more particularly since the development of the Diesel vehicle.

GOODS VEHICLES

The manufacture of goods vehicles has forged steadily ahead with the increasing use of motor transport. The road haulage industry has grown considerably, first in a somewhat unorganised fashion, but latterly with a growing degree of specialisation. Moreover, where general or parcels work is catered for, the running of regular services on fixed routes has been developed. However, the growth of road haulage was checked by the Road and Rail Traffic Act of 1933, which placed the licensing and control of haulage vehicles under the Traffic Commissioners. On the other hand, there has been an increasing desire on the part of business undertakings to own and operate their own vehicles, partly because of the flexibility offered by the possession of one's own instruments of transport, partly because of the advertising value of one's own vehicles in the streets, and partly because of the increased services to customers which become possible through the possession of privately-owned vehicles. In addition, certain ancillary users claim that they can undertake transport work for themselves for less than the charge made by public concerns. Demand, which had been, in the main, either for "heavy-weights" or for light trade vans in the early days after the war, began in the later 'twenties to turn over to "middle-weights." At first this demand was met largely by imports from North America, where the "middle-weight" had already become the popular utility vehicle. But British manufacturers soon entered this market, and imports of commercial vehicles were virtually eliminated by the transfer of General Motors' activities to Luton.

SALES AND EXPORTS

Contrary to what might have been expected, sales of new lorries expanded rapidly after the beginning of the depression in 1930. There is reason to believe that many concerns attempted to reduce costs by increasing their use of motor transport, while increased competition in the distributive trades led to the provision of more elaborate services for customers and the use of more motor vehicles by ancillary users. The building boom, which began in 1932, has led to a more extensive use of motor vehicles by ancillary users, who now have to make deliveries over a wider radius than previously. At the same time, the effect of the increased taxation of heavy lorries, imposed in 1934, has been further to reduce sales of "heavy-weights," for many users have found it cheaper to employ more and lighter vehicles. Manufacturers were encouraged to increase the ratio of pay-load to unladen weight. However, the new scale of duties gave the *coup de grâce* to the steam lorry. Thus, not a single steam vehicle was exhibited at the Commercial Motor Show this year. The decline in the demand for "heavy-weights" has tended to restrict the market for Diesel lorries, which are mainly confined to the heavier categories. Sales of new Diesel lorries during the first nine months of 1935 numbered 1,298, or 2.6 per cent. of all goods vehicles, compared with 1,343, or 2.6 per cent. in the corresponding period of 1934. On the other hand, registrations of new Diesel omnibuses during the first nine months of 1935 numbered 1,962, or 50.4 per cent. of the total, compared with 753, or 25.5 per cent., of the total during the corresponding period of 1934. As far as goods traffic is concerned, the growth of the Diesel lorry or "oiler" has been at the expense of the "steamer" as much as of the petrol vehicle.

REDUCTION IN PRICES

Exports of motor vehicles, parts and accessories in 1934 amounted to £11,305,497. The wholesale value of new vehicles sold on the home market in 1934 may be estimated at £35 millions for private cars and £22 millions for commercial vehicles, giving an estimated total value of the industry's output of £57 millions. Subject to minor fluctuations, prices of both private cars and commercial vehicles have been falling steadily. Taking the year 1924 as 100, the index for private cars, calculated by the Society

1935 — THE TRIUMPH OF SPECIALISATION

**Over 108,000
Morris Cars
sold in 12 months**

Britain's motor industry has never before known such sensational sales figures as these—because British motoring has never before known such a sensational policy as Morris-Specialisation.

From the Morris Eight, which has the largest sale of any one car in this country, to the Morris Big Sixes, the finest cars ever produced at their price — every Morris has a measure of value which bids fair to establish new conceptions and conventions in motoring.

of Motor Manufacturers and Traders, had fallen to 51.8 by 1934, and that for commercial vehicles to 62.4. The private car index fell very steeply between 1933 and 1934, largely because of the growing tendency of manufacturers to offer higher-powered engines with the same chassis at the same price as the smaller engines, but also because of the development of the cheap large car. In considering the trend of the index of commercial vehicle prices since 1924, it should be borne in mind that the lorry has improved even more than the private car in engine and body design, springing, tyres and finish.

S.M.M.T. INDEX OF RETAIL PRICES OF MOTOR VEHICLES

	(1924 = 100)	
	Private Cars	Commercial Vehicles
1925	97.1	89.7
1926	94.8	92.2
1927	91.6	85.2
1928	80.0	86.2
1929	75.0	84.3
1930	68.1	79.3
1931	60.8	75.5
1932	59.6	73.1
1933	61.4	69.5
1934	51.8	62.4

EMPLOYMENT IN THE INDUSTRY

Employment in the manufacture of motor vehicles is difficult to ascertain precisely, as, for purposes of unemployment insurance, one category covers all workers engaged in the construction and repair of motor vehicles, cycles and aircraft. Nevertheless, changes in the relation-

ship between employment in this category and production of motor vehicles provide a rough measure of the increase in the productivity of the motor industry.

Year	EMPLOYMENT IN MOTOR INDUSTRY		Col. 2
	No. of Registered Workpeople Actually Employed in Construction and Repair of Motor Vehicles, Cycles and Aircraft—aged 16-64	Total Production Divided by Vehicles Col. 1	
1924 ...	189,722	146,600	.773
1925 ...	202,708	167,000	.824
1926 ...	202,431	198,000	.978
1927 ...	211,791	211,780	1.000
1928 ...	212,815	211,877	.996
1929 ...	227,796	238,805	1.048
1930 ...	206,514	236,528	1.145
1931 ...	193,858	226,307	1.167
1932 ...	196,301	232,718	1.186
1933 ...	217,552	286,287	1.316
1934 ...	242,711	342,499	1.411
1935 ...	264,393	398,850	1.509

But, in comparing these figures, it must not be forgotten that a large proportion of the persons registered as belonging to the motor group of industries are actually employed in motor repair shops. Moreover, as the greater reliability of the modern vehicle has tended to reduce the amount of repairs per unit, the proportion of the total number of workers engaged in actual construction has probably increased. The average wage of adult male workers employed in the motor industry in 1934 was estimated at 79s. 4½d. a week by the Society of Motor Manufacturers and Traders.

EQUIPMENT AND ACCESSORIES

THE market for motor vehicle equipment and accessories may be roughly divided into two sections. The first deals with equipment supplied to motor manufacturers and sold to the public as part of a new vehicle; and the second with equipment sold directly through garages and retailers for accessory replacement and repair purposes. Of these markets, the first has shown a remarkable growth during recent years. This has been largely a result of the practice of many manufacturers of maintaining the price of particular models at a more or less constant figure over a number of years, and of giving increased value to the public through the inclusion of more elaborate equipment. Indeed, the majority of cars to-day are supplied with full equipment, and the motorist has no further expense beyond that of registration and insurance before taking the road. Before the war, on the other hand, it was not uncommon for even the lighting system to be considered an extra. An average expenditure of £40 to £50, over and above the price of the car, was frequently required for full equipment.

Moreover, the scope of the term "motor equipment" has been constantly widened. To-day the equipment and accessories industry covers not only tyres, electrical equipment, instruments and tools, but also fire extinguishers, direction indicators, wireless, cigarette lighters and a wide range of interior fittings.

TYRES

In the case of tyres, the number sold for replacement purposes is considerably greater than that for new vehicles, and probably accounts for about 70 per cent. of the total market. This proportion varies fairly widely, however, for different makers. The prices received from the motor manufacturers vary with the size of the order, but are generally considerably below those realised on sales for replacement purposes. As far as the tyre manufacturers are concerned, however, the difference may properly be regarded as partly "advertisement expenditure," since the make of tyre fitted as original equipment probably has an important influence when the time comes for replacement.

The channels through which tyres are sold for replacement are the factors and retailers. The former obtain supplies from depôts maintained by manufacturers in the principal towns. Retailers who are members of the Motor Agents' Association are allowed to deal only with approved factors, and this has enabled a fairly strict price control to be main-

tained. Formerly, only the price paid by the retailer to the factor was fixed. Now, however, both wholesale and retail prices are controlled, and this enables the tyre manufacturers to compensate themselves for the low prices received from the motor manufacturers for original equipment.

Manufacturing technique has been improved to such an extent that the average life of tyres has been increased from approximately 6,000 miles before the war to over 15,000 miles, in spite of the increased speed and improved braking of modern cars. Nevertheless, the increase in the number of motor vehicles in use has been sufficient to offset this factor. The production of tyres has consequently increased from 5,219,000 in 1929 to 5,802,000 in 1934, in spite of the reduction in the average replacement rate per vehicle from about 2.2 to 1.7 per annum.

The importance of the motor tyre industry at the present time can be gauged from the fact that it is responsible for about 75 per cent. of the total consumption of rubber in this country. Of the total production of tyres, the Dunlop Rubber Co. accounts for nearly two-thirds. The bulk of the remainder is produced by the Goodyear Tyre and Rubber Co., the British Goodrich Rubber Co., Ltd., and the Firestone Tyre and Rubber Co., Ltd.

ELECTRICAL EQUIPMENT

The predominance of a few large companies, is, in fact, noticeable in the case of most motor accessories. Examples of the tendency towards concentration are afforded by Joseph Lucas Ltd. (with its associates, C.A.V. and Rotax Ltd.), and the Chloride Electrical Storage Co., Ltd. These two companies account for a very large proportion of the total output of electrical equipment for the motor industry, and especially of batteries. The life of a motor battery varies very considerably in accordance with the treatment it receives and its capacity in relation to the work to be done. It is probable, however, that until recently the average life was not greatly in excess of two years. The manufacturer generally guarantees the battery for one year, but recently batteries have been put on the market with a two years' guarantee. It appears reasonable to assume that the actual average life of this type will be three to four years. Since the total number of motor vehicles in use on August 31, 1935, was 1,952,700, it appears that the annual sales of batteries for motor vehicles must amount to at least 650,000. Actually, in the year ended August 31,

SERVING THE MOTOR INDUSTRY

A unique LUCAS Engineering Service

The Lucas Head Offices and Works at Hockley, Birmingham. The total floor area of the seven Lucas Birmingham factories is two million square feet.

TO appreciate the character and needs of a great industry perhaps the surest way is to "grow up" with it.

From the distant days of oil and acetylene car lamps, when electrical equipment for cars was unknown, up to the present, when thousands of Lucas lamps, dynamos, starters, batteries, ignition equipments, windscreen wipers, direction indicators, etc., are produced each week, Joseph Lucas, Ltd., have worked in close co-operation with the British Motor Industry.

To-day this co-operation is more widespread than ever before. In the great Lucas Research Laboratories, among the largest of their kind in the world, the most extensive testing and research facilities are available, not only for the development of Lucas products, but equally to assist Car and Motor Cycle manufacturers with their own research problems.

Specialised Research Equipment

This specialised research equipment includes apparatus for accurately re-

producing extreme climatic conditions. In the Refrigerator Room, illustrated below, for instance, the temperature can be reduced to as low as -15° F. (or 47° of frost). With this apparatus (which is large enough to contain a heavy commercial vehicle) valuable information has been obtained regarding such problems as engine starting in cold weather.

The illustration below shows a car being tested on the special Dynamometer Equipment; this facilitates the study of a whole range of problems affecting ignition equipment, transmission, brakes, etc. The rollers beneath the rear wheels of the car absorb the drive and are connected to delicate measuring instruments.

Tropical Test Room

In another part of the Laboratories is a specially constructed Tropical Test Room in which equipment, materials or finishes can be tested under conditions which reproduce the heat, humidity, and dampness of tropical countries. This is of great service to manufacturers who wish to discover

how their products will withstand extreme tropical conditions.

By similar co-operative efforts, as well as by a policy of "never to be satisfied" in its own productions, Lucas are looking to the future and contributing to the progress of the British Motor Industry.

The Lucas Refrigerator Room

Dynamometer Testing Equipment

LUCAS

JOSEPH LUCAS LIMITED. BIRMINGHAM. ENGLAND.

1935, sales of batteries for new vehicles alone, based on the new registration figures, would seem to have amounted to about 336,000. There are, of course, considerable variations in the size of batteries. On the other hand, some cars have two small batteries rather than one large one. If allowance could be made for this fact the figures given above would be even larger.

PLASTIC PRODUCTS

The use of plastics in the motor accessory field will undoubtedly increase considerably in the future. Already the fitting of wireless sets as standard equipment on several cars has opened up a considerable new field for their application. Another noteworthy development with which plastics are connected is the combination instrument panel. Moreover, by grouping all the instruments in a single panel the space saved can be utilised to give larger storage pockets.

Apart from equipment, there are also a number of firms manufacturing special components which are incorporated in the design of several of the principal makes of car. Among these may be mentioned Zenith, Solex, and S.U. Carburettors. Several car manufacturers purchase radiators from such firms as Serck Radiators Limited. This company maintains its own service stations in addition to eleven repair branches throughout the country. Other examples are the Wilmot Breeden plant, which is equipped for the production of 8,000 bumpers per week in addition to flexible steering wheels and other components.

BODIES AND COMPONENTS

Bodies, particularly for mass-produced cars, are frequently manufactured by companies associated with the motor producers. For example, the Pressed Steel Company, which is associated with Morris Motors, was formed originally for the production of bodies for Morris cars, but has since extended its activities to include several other makes. In the same way, Briggs Motor Bodies, Limited, and the Kelsey Hayes Wheel Company, Limited, were formed to manufacture bodies and wheels for Ford cars. The former acquired the British rights to the patents of

the Briggs Manufacturing Company, whose plant is equipped for the manufacture of one million bodies per annum for the American Ford and Chrysler companies. The customers of Briggs Motor Bodies, Limited, now include Austin, Chrysler, Riley and Standard, as well as the Ford Company.

In addition to equipment and accessories, the motor industry buys large quantities of components from the engineering industry. For example, ball and roller bearings are purchased from the British Timken Company, Limited, the Hoffmann Manufacturing Company, Limited, and the Skefko Ball Bearing Company, Limited, and chassis frames and axles are obtained from various steel-producing companies. The industry is also an important consumer of leather cloth for upholstery. The market offered, however, to such companies as I.C.I. (Rexine), Limited, has diminished owing to the decrease in the number of fabric bodies made, though sales for upholstery purposes continue to expand.

A considerable export trade is done in motor vehicle parts and accessories. The total value of exports in 1934, excluding complete chassis and engines, amounted to £2,774,336, compared with £2,529,012 in 1933 and £1,403,874 in 1931, the lowest level reached during the depression. The increase must be ascribed partly to the export of components of Ford cars to assembly plants on the Continent and partly to the increasing service requirements of British cars abroad owing to the rise in exports of complete vehicles which has taken place recently.

So far as future prospects are concerned, the continuous rise in the figures for new vehicle registrations indicates a considerable increase in the market. Against this must be set the fact that the greater part of the increase is accounted for by cars of low horse-power, which do not carry the same amount of equipment as the larger ones. In this respect, however, the industry may be expected to benefit from the reduction in the horse-power tax. Another factor which adversely affects the industry is the increasingly seasonal nature of the demand for motor vehicles. That these difficulties, however, are being successfully overcome is indicated by the financial results of the leading companies.

RAW MATERIALS OF THE INDUSTRY

THE quantity of materials consumed in the manufacture of motor vehicles has risen steeply with the expansion of the industry. Moreover, there have been considerable changes in the nature and in the proportion of the various materials consumed by the motor industry as a result of improvements in design, additional fittings and the displacement of the open by the closed car. As available information concerning the products used in the manufacture of motor vehicles is somewhat meagre, an attempt has been made to estimate approximately the quantity of the materials consumed by the industry in 1935. The estimates, which exclude materials used in connection with plant and equipment, may be grouped under the following heads:—

Iron and Steel.—Owing to the variety of materials used no attempt has been made to give other than a grand total, amounting to 860,000 tons. This estimate is based on an analysis of the various groups of vehicles manufactured and of their proportion to the total. Allowance has been made for wastage during the process of manufacture and repairs.

Non-ferrous Metals.—Consumption of copper and brass, mainly for electrical equipment: brass and copper, rolled, 7,500 tons; extruded rods, 2,500 tons; wire, 1,500 tons; tubing, 500 tons; total 12,000 tons. Lead and lead oxide, mainly for batteries, 7,300 tons; zinc alloys, 1,440 tons, including about 240 tons for carburettors and pumps; tin, 1,300 tons. The motor industry is, of course, one of the chief consumers of tin. The estimate for tin is based on the average consumption per car given by the Anglo-Oriental Mining Corporation. Aluminium and bronze, the latter largely for bearings, 400 tons. The total quantity of these non-ferrous metals amounts to 22,240 tons.

Trimings.—Trimings include the materials used in upholstery. They may be divided into primary and

secondary materials. Primary materials are interchangeable and include leather, leather cloths, reps and moquettes. Demand for these materials varies with the quality of the vehicle and with fashion. Consumption of primary materials is estimated at about 7,900,000 sq. yds., plus wastage of approximately 650,000 sq. yds. Of this total commercial vehicles consume about 800,000 sq. yds. Secondary materials, which consist of head lining cloths, canvas, felt, calico, carpets, cotton reps, velveteen, cloth, plush, and silk blinds, are not readily interchangeable. Excluding wastage, the total quantity of secondary materials consumed approximates that of primary materials, but wastage is not likely to exceed more than about 50,000 sq. yds. Total consumption of trimings is estimated at about 16,500,000 sq. yds.

Glass.—Four types of glass are used in motor manufacture:—(1) Laminated or sandwich glass; (2) toughened or armoured glass; (3) plate glass; (4) glass for lamp lenses and instruments. Of these, the first two are termed safety glass, while the first three are used for windows and windcreens. Total consumption of glass is estimated at 8,000,000 sq. ft. Of this total body lights account for 6,000,000 sq. ft., windcreens for 1,500,000 sq. ft. and lenses for lamps and instruments for 500,000 sq. ft. It is interesting to note that by law all windcreens have to be made of safety glass except the front windows of the upper deck of a bus. Although this law does not apply to body lights, less than 10 per cent. of the total glass used is plain. Consumption of safety glass by classes of vehicle is estimated as follows: Private cars, 6,300,000 sq. ft.; trucks, 700,000 sq. ft.; Hackney vehicles, 500,000 sq. ft. The weight of the glass used is approximately 4,500 tons. The industry consumes nearly 50 per cent. of total plate glass

The Golden Jubilee of The Avon India Rubber Co., Ltd.

1885 - 1935

This diagram shows how the patented holes form the second tread, and air-cool and air-cushion this double-mileage tyre

For 50 years, the Avon Company has been in the forefront of the Rubber Industry, and has pioneered improvement after improvement. The name of Avon on any article is in itself a symbol of outstanding quality. Makers of motor, motor cycle and cycle tyres, giant tyres, rubber flooring, footwear rubber, sports goods, moulded novelties, mechanical rubber for railways, etc., etc. Produced by British workpeople in a British Factory with British Capital.

AVON

British Made

TYRES

THE AVON INDIA RUBBER Co., Ltd., (Est. 1885) Melksham, Wilt. Depots: LONDON (Mabledon Place, St. Pancras, W.C.1), Manchester, Glasgow, Bristol, Birmingham, Nottingham, Newcastle, Liverpool, Belfast, Dublin.

Paints.—The motor industry is one of the most important users of paints. These can be divided into three main groups:—(1) Body paints, including fillers, primers and thinners; (2) accessory paints, including stoving enamels, japans, etc., used for wings and chassis; (3) maintenance paints which are used within the factory itself. Total consumption by motor manufacturers, coach builders, repair and maintenance works, expressed in terms of paint ready for use, is estimated at 2,074,000 galls. Of this total, body paints account for 1,200,000 galls., accessory paints for 710,000 galls., and maintenance paints for 160,000 galls. Expressed in weight, consumption is estimated at 9,240 tons.

Petrol and Oil.—Total consumption of petrol and oil is estimated at about 1,351 million gallons, including 1,278 million gallons of spirits, 32 million gallons of lubricants, and 41 million gallons of heavy oil for motor vehicles. The total equals about 422,000 tons.

Rubber.—The industry is the largest consumer of rubber, absorbing about 62 per cent. of total British consumption.

The tyre industry is the main user. It is estimated that the total weight of tyres produced is approximately 92,000 tons, comprising the following principal components:—Rubber, 50,500 tons; cotton, 3,000 tons; wire, 3,000 tons; carbon black, 9,000 tons; zinc oxide, 7,500 tons; other chemicals, 9,700 tons. In addition to rubber consumed in tyres, a further 5,000 tons is consumed on and about the car in the form of draught excluders, sponge rubber and mats, etc. This gives a total consumption by the motor industry for all purposes of about 97,000 tons.

Miscellaneous Materials.—(1) Plastics. These may be divided into three main groups: Phenolic and fillers, 1,200 tons; urea, 150 tons, muckites, 2,000 tons. Total 3,350 tons. Phenolic plastics are used for various mouldings, urea is translucent plastic, while muckites are used as dielectrics for battery casings, etc. (2) Fibre for body mountings, 2,000 tons; (3) felts for various purposes, 1,000 tons; (4) asbestos for brake linings, 250 tons; (5) porcelain and mica, 300 tons; (6) anti-freeze chemicals, 50 tons; (7) timber (hard and soft woods), approximately, 100 million board feet.

PETROL AND OIL

THE rapid development of the motor industry has led to a considerable increase in demand for motor spirit and lubricating oil, and has made the distribution of petroleum products one of the most important branches of the distributive trades. Consumption of motor spirit in the United Kingdom, as estimated by the Society of Motor Manufacturers and Traders, increased from 101 million gallons in 1913 to 182 million gallons in 1920, 487 millions in 1925, 891 millions in 1929 and 1,211 million gallons in 1934:—

ESTIMATED CONSUMPTION OF MOTOR SPIRIT AND LUBRICATING OIL
(In millions of gallons)

Year	Motor Spirit	Motor Lubricating Oil
1929	891	24.0
1930	995	25.9
1931	1,025	26.7
1932	1,075	26.9
1933	1,124	28.1
1934	1,211	30.3

The indications are that consumption of motor spirit in the current year will show a further increase of between 5 and 6 per cent. The ratio of lubricating oil to spirit consumption is believed to have fallen continuously with the improvement in the efficiency of the internal combustion engine, from some 3½ per cent. immediately after the war to about 2½ per cent. now. In addition to motor spirit, an increasing amount of heavy oil is used as fuel for motor vehicles; the annual gallonage involved, which was estimated by the Chancellor of the Exchequer for the current financial year at 41 million gallons, is undoubtedly increasing rapidly with the steady extension of the use of Diesel vehicles, more particularly on omnibuses and motor-coaches. On the basis of the annual consumption figures per vehicle, collected by the Salter Conference, the consumption of motor fuel by different classes of vehicles at the present time is probably roughly as follows:—

APPROXIMATE ALLOCATION OF CONSUMPTION OF MOTOR FUEL 1935
(In millions of gallons)

	Motor Spirit	Heavy Oil	Total	Per-centage of Total
Private cars	533	...	533	41
Motor cycles	39	...	39	3
Taxis and hired cars	39	...	39	3
Omnibuses	196	25	221	17
Goods and exempt vehicles	452	16	468	36
Total*	1,259	41	1,300	100

* Excluding motor spirit not used as fuel for motor vehicles.

TAXATION AND PRICES

Concurrently with the increase in consumption, there has been a steady fall in the price paid for motor spirit by the motorist, although of late years this has been

obscured by the tax. Excluding tax, the retail price of first grade motor spirit in the London area, which stood at 1s. 6d. a gallon in 1914, reached a maximum of 3s. 9½d. in 1920, and then fell with slight fluctuations to 1s. 6½d. in 1925, 1s. 3d. in 1929 and 9d. in 1933. These figures include the retailer's profit, now at the rate of 2½d. per gallon, compared with 4d. in 1927 and 4½d. in 1920; the retail price, exclusive of tax, has risen to 10d., the current level. The tax, on the other hand, which was first imposed in 1909 at the rate of 3d. per gallon, with a 50 per cent. rebate in respect of spirit used by commercial vehicles, was increased to 6d. per gallon in 1915 and abolished at the end of 1920. It was re-imposed in April, 1928, at the rate of 4d. per gallon, with no rebates for any class of road vehicle, and subsequently increased to 6d. in April, 1931, and 8d. in September, 1931. The tax is levied on all imported motor spirit and on all motor spirit produced in this country from imported crude petroleum or distillate.

Entirely domestic products, such as Scottish shale spirit, spirit produced by the hydrogenation of coal or creosote or the low temperature carbonisation of coal, and benzole, are guaranteed exemption from the tax by the British Hydrocarbon Oils Production Act, 1934, for a period of nine years, with the tax at the rate of 4d. per gallon, or for a proportionately shorter period if the tax is more than 4d. The present tax of 8d. per gallon will mean four and a half years' exemption. Home production of petrol from coal has tended to increase, and it is interesting to note that the Air Ministry has been taking the output of Low Temperature Carbonisation after it has been subjected to a special process of refinement by Carless, Capel and Leonard. The total yield of the petrol tax in the current year is estimated at £38,900,000, to which £950,000 should be added in respect of the heavy oil duty, imposed at the rate of 1d. per gallon in 1933 on all imported heavy hydrocarbon oils, and increased to 8d. in August last in respect of all heavy oil used as fuel for road transport. Tax at the rate of 1d. per gallon is also payable on the lubricating oil consumed by motor vehicles; this is equivalent to an additional £125,000 per annum. If it be assumed that 98 per cent. of the motor spirit consumed is in respect of motor vehicles, the total burden of these taxes as affecting the motor industry reaches some £39 millions per annum, and accounts for nearly 6 per cent. of the total national revenue; the corresponding yield of these taxes was only £12,700,000 in 1928/29, while between 1920 and 1928 they were non-existent.

MARKETING METHODS

The service which has been developed by the oil companies since the war in order to meet the greatly increased demand for petroleum products has been subject to continual modification to meet the needs of the motoring

public. At first, distribution was based on bulk imports from tankers into a very limited number of ocean installations situated round the coast, and on dispatch from these installations in rail tank cars to main depôts within the radius served by each installation. At the depôts the rail tank cars were discharged into underground storage, and ultimately the motor spirit was filled into two-gallon cans, which were distributed by road to sub-depôts. These sub-depôts also served the function of sales units, each being under the charge of a salesman with a definite territory allotted to him and having one or more motor lorries by which deliveries of the cans were made to customers in the area served. The greatest improvement in methods of delivery occurred in the middle twenties, when the development of the hand-operated metering pump affixed to an underground tank at garages and commercial users' premises, and the general agreement between distributors not to deliver a load of less than 200 gallons at a time into such storage, completely revolutionised the service of distribution. This change, together with the technical improvement of the motor lorry and of the roads, especially the development of low-pressure pneumatic tyres, increased the effective radius for delivery vehicles and made many of the original depôts redundant; those which remained were given increased storage accommodation and facilities for direct bulk feeding from the installation.

The tendency in recent years has been to increase the number of ocean installations and reduce the number of depôts, but the larger distributors still operate a very great number of depôts—in the case of the two largest, probably some five hundred each. The cheapening and improvement of motor transport have also led to the feeding of depôts from the ocean installations by road instead of by rail, while the development and cheapening of the small motor boat, through recent technical improvements in the Diesel engine, has encouraged the construction of small

coastal installations and new depôts at places where they can be fed by water, either coastwise or via the inland waterway system, from the main installations.

The companies engaged in the distribution of petroleum products fall into two main groups. On the one hand, there are the "national" companies, which control by far the greater part of the trade and observe certain rules concerning terms of business and prices. These include non-discrimination in the prices at which garages will be supplied and the maintenance of fixed retail prices. On the other hand, there are the "independents," who are not bound by such rules, and many of whom do not observe them.

COMPETITION

Formerly competition from "independents" was met by the "national" companies by means of a price zone system, which made prices rather lower in districts where competition was acute and higher elsewhere. But this method was found to cause such difficulties along the zone boundaries that it has been discontinued. All England and Wales and most of Scotland are now included by the "national" companies in a single zone. The "national" companies have met competition by a rigid attention to distribution costs. But they have been handicapped by reason of the fact that they offer a nation-wide service based on established depôts, whereas many of the "independents" have no depôts, but operate solely by means of road deliveries from hired storage at public installations, picking customers who will be cheap to supply and "skimming the cream" of the trade by appearing as strong sellers whenever the margin between selling prices and replacement costs appears attractive, and giving up business, often quite irresponsibly, when the margin narrows.

The other problem of the "national" distributors is the rapid growth in the number of garages and pumps, and

the consequent difficulty of reducing distribution costs. There are estimated to be at the present time some 35,000 garages in the country and upwards of 90,000 petrol pumps at garages. The garage industry is one of the easiest to enter for a man with little capital or technical knowledge. The outcry against the spoiling of the countryside by the erection of unnecessary petrol stations is widespread, but it is difficult to see how, without legislative action, the number of garages can be prevented from exceeding the needs of the community. Competition compels the oil companies to supply newcomers, while it is the business

of the pump manufacturers to sell as many pumps as possible. The would-be garage owner can usually arrange to buy motor spirit and oil on credit from the distributors and obtain his pumps on hire-purchase terms spread over a number of years. His outlay on entering the business is thus often negligible. In consequence, the supply of garages and petrol stations tends constantly to outrun demand, in many cases making it impossible for established enterprises to earn a reasonable livelihood, and effectively preventing the consolidation of the garage industry into larger and more efficient units.

TECHNICAL DEVELOPMENTS

In 1919 many latent ideas were awaiting commercial development in the motor industry. In describing the progress of subsequent years, we may conveniently begin with the power unit. Here a most important feature has been the great advance in the power/weight ratio. In no country has greater success been achieved in this direction than in Great Britain, where the weight, not only of the power unit but of the complete vehicle in terms of horse power, is astonishingly light. This result has been achieved, with no sacrifice of "roadworthiness," largely by intensive research into ferrous and non-ferrous alloys. In the course of this investigation, engine speeds have increased greatly and improvement in lubrication has been obtained. Road speeds have also advanced.

Though the conventional internal combustion engine has progressed rapidly, the compression ignition, or Diesel type has arisen as a new factor in vehicle construction, particularly in the commercial and public service field. Some three years ago the use of the compression ignition engine for road vehicles was limited, partly by the exigencies of the power/weight ratio. The additional weight entailed in the early days of the compression ignition engine has now been eliminated to a considerable degree, and vehicles equipped with it represent an increasing proportion of the national total.

It is a natural step from the power unit to the transmission, where most important developments have centred round such features as the fluid flywheel and the pre-selector gear. Progress in suspension has also been noteworthy. Springing, shock absorbers and tyre development—for the tyre is part of the suspension system—have materially improved. Probably no other advance has contributed so substantially to the comfort of the passenger. The independent suspension, now provided on certain private cars, is another instance of "refinement."

Considerable progress has been made in the construction of goods-carrying vehicles. Smooth running, with attendant quietness, and the adoption of pneumatic in place of solid tyres, have added to the amenities of the highway. The increased roadworthiness of this class of vehicles has contributed substantially to the durability of British roads by considerably reducing "road impact." The trolley bus, with its flexibility of track to facilitate its passage through city streets, is making rapid headway in supplanting the tramcar, with its fixed track and its dangerous practice of discharging its passengers in the centre of a crowded highway.

COACHWORK AND BRAKING

No development has made more appeal to the eye than that of coachwork, both for the private car and the public service vehicle. The coachbuilt private car body, constructed largely of wood by the survivors of the old coach-building art, was succeeded by the fabric body, which in turn has been replaced by the all metal body. The latter is practically supreme to-day and lends itself to intensive production methods, though skilled craftsmen are still available to produce by hand the luxurious, specialised type of body when necessary.

In 1919 the great majority of private car bodies were of the open touring type. To-day, while adherents of the open tourer remain, the closed saloon is predominant.

An important factor from the safety aspect has been the development of more efficient braking. Road speeds have generally risen and the increased gross weight of commercial vehicles has necessitated a higher braking efficiency. This has been achieved, first, by improvements in brake linings and in brake drum material and construction; secondly, by the large-scale adoption of brakes on all wheels; and, thirdly, by various proprietary systems whereby the manual effort of the driver is reinforced to give prompt and adequate braking under the most arduous conditions. Tyre development, referred to elsewhere, has given the maximum road adhesion which is required for good braking.

Progress in accessories and components has contributed to the general advance. Mention may be made of improvements in lighting and electrical equipment generally, including the provision of automatic voltage control, which has eliminated the possibility of overcharging. Thermostatic control of the cooling system is another noteworthy feature. The adoption of fuel pressure systems, again, has enabled the fuel tank to be located in a non-vulnerable position. Contemporaneously with the development of the power unit, carburation has made a considerable advance. In the early days of motoring, coil ignition was practically universal. The magneto subsequently ousted the coil, but to-day the coil has regained its popularity for light car work, the magneto being still used for heavier vehicles. Automatic advance and retardation have contributed to ease of driving. Group lubrication, general lubrication by one motion—the depression of a pedal—and improved jacking mechanism have all added to the convenience of the average owner. Again, not many years ago, the wind-screen wiper, now universally fitted, was unknown.

FUTURE DEVELOPMENT

Future development is a matter of interesting speculation. It may be that the system of unit construction by specialists in the manufacture of particular components, such as the engine, gear box and back axle, will be more widely adopted. The application of the compression ignition engine to the private car may also be the subject of intensive study. Streamlining, again, has lately been much in the public eye. Ultra-streamlining, in the sense of attaining a true "tear-drop" shape of body, will probably be never realised. The modern designer will doubtless be content with a reasonable degree of streamlining which will preserve graceful and pleasing lines. Adequate ventilation, without draught, is another matter which is receiving increased attention. The air conditioning of public service vehicles may also demand further consideration. There is now little criticism of visibility, in the sense of providing the driver with a clear view ahead and at each side, though the designers will probably achieve further improvement. Moreover, it is hoped that the efforts to overcome the comparative immobility of traffic in fog will be successful, for the loss of business is enormous and affects all sections of the community.

Collective technical investigation has made considerable progress in recent years. The Society of Motor Manufacturers and Traders has within its organisation a technical department which is at the disposal of manufacturers. Thus,

The History of the British Motor Industry includes the creation of the

**Works, Dagenham, the best-equipped, most self-reliant,
in either the British Empire or Europe.**

Therein are manufactured Ford cars, Ford and Fordson commercial vehicles, Fordson tractors, agricultural and industrial, and Ford industrial power-units, for the energisation of portable, stationary or marine plant, every product typifying the Ford tradition of efficiency and economy, hand in hand.

The blast furnace and coke-ovens at Dagenham, unique in Southern England, enable Ford Motor Company Limited to produce their own pig-iron and other ferrous materials of too high a grade to be economically purchased in open market. That fact alone justifies the claim of quite an exceptional standard of independence, self-reliance.

A postcard will bring you detailed and illustrated descriptions both of the Ford Works at Dagenham and the remarkable value-propositions produced in them, notably including Britain's Best Value in Four-Seated Saloons, the Popular Ford, £100, completely equipped, at works, now rapidly approaching its second hundred-thousand, proved by test all over the world, the car with which "There Is No Comparison!"

The Local Ford Dealer can arrange visits to Dagenham, either individual or of parties, and from April to October the journey from Westminster to Dagenham and back can be made upon a motor-vessel expressly built for the trip.

Ford Products—Proved by the Past—Improved for the Future!

FORD MOTOR COMPANY LIMITED, DAGENHAM, ESSEX. LONDON SHOWROOMS: 88 REGENT STREET, W.1

a number of technical standards have been adopted in co-operation with the Institution of Automobile Engineers. For some years past, the Institution of Automobile Engineers has maintained a Research Department. This department, which has already achieved valuable results, is supported by the Department of Scientific and Industrial Research, the Society of Motor Manufacturers and Traders, and manufacturers and operators individually. Moreover,

apart from its activities as an educational centre for the automobile engineer, the Institution has inaugurated a Repair Certificate Scheme. The system of examination which the Institution has adopted and the award of badges to members of garage staffs who satisfactorily demonstrate their capabilities is making rapid headway, thus improving the "servicing" facilities at the disposal of motorists.

TARIFF POLICY

ALL motor vehicles and components imported into Great Britain are subject to an *ad valorem* duty of 33½ per cent. if of foreign origin and 22½ per cent. if of Empire origin. This rate of duty was imposed on private cars, motor cycles and parts in September, 1915. The duties were repealed in August, 1924, but re-instituted in July of the following year. They were extended to commercial vehicles and parts in May, 1926, and to tyres in 1927.

These changes are clearly reflected in imports of motor vehicles. Thus, imports of private cars and chassis rose from 22,890 in 1924 to 47,224 in 1925, only to fall to 20,911 in the following year. Since then the highest level attained has been 32,111 in 1928 and the lowest 2,118 in 1931. In the case of commercial vehicles, imports of chassis are not available by numbers before 1929, but imports of complete vehicles fell from 632 in 1925 to 93 in 1926 on the imposition of the duty. Imports of chassis declined by value from £2,135,000 in 1925 to £1,331,000 in the following year, but during the next three years there was a slight increase, which was followed by a decline to £220,000 in 1930. The effect of the duty was therefore immediate in the case of complete vehicles, but the effect on imports of chassis was less marked.

The effect of the duty was most pronounced in the case of imports of private cars from France and America; they declined from 13,028 and 18,534 respectively in 1925 to 4,760 and 5,910 in the following year. Imports from the United States, which consist largely of the cheaper high-powered cars not manufactured on an extensive scale in this country until recently, subsequently recovered to 12,272 in 1928. The immediate effect of the duty was, therefore, to cut out the smaller types of car previously imported from France and Italy. Imports from Canada, which consisted principally of Buick, Chevrolet and Ford cars, fared rather better than those from the United States owing to the preferential duty on cars of Empire origin; British purchases of complete vehicles and chassis from Canada actually increased from 5,231 in 1925 to 7,855 in 1929. In this connection, it may be noted that in order to qualify for the reduced rate of duty only 50 per cent. of the cost price need consist of Empire labour and material. This offers considerable scope to United States companies which are able to supply their plants in Canada with a number of components manufactured across the border. On the other hand, British manufacturers, in defining British-made cars, insist on 75 per cent. British labour and materials, and the engine, gear-box, back axle and complete vehicle are treated as separate entities in order to prevent, for example, the fitting of an expensive body to a comparatively cheap foreign chassis in order to comply with the regulations. In 1934, 60.5 per cent. of the imports of cars came from the United States, 27 per cent. from Canada and 10 per cent. from France. In the case of commercial vehicles over 95 per cent. of the total imports came from the United States.

Imports from all sources were very considerably reduced during the depression, principally as a result of the decline in purchasing power, which restricted the market for the larger types of car. But imports of complete cars increased from 2,997 in 1933 to 10,155 in 1934 as a result of the revival of purchasing power and of the reduction of the horse power tax from £1 to 15s. This gave rise to the suggestion in some quarters that the duty should be increased, but it should be noted that imports in 1934 were still considerably below the pre-depression level and that they constituted less than 4 per cent. of British production.

TAXATION OF COMPONENTS

Since parts of motor vehicles are taxed at the same rate as complete vehicles, there is no apparent incentive to foreign manufacturers to erect assembly plants in this country, as they did in several continental countries. Nevertheless, 1,451 engines for private cars and 2,589 engines for commercial vehicles were imported during 1934, and it is probable that these figures give a close approximation to the number of vehicles assembled in this country. Actually, with equal duties on complete vehicles and components, the advantage to a foreign manufacturer of assembly in this country is 33½ per cent. on the cost of assembly. This may be a considerable item, provided the cost of labour in this country is not greater than that in the country of origin. Moreover, in some cases the Customs authorities insist on including a proportion of such items as advertising expenditure in assessing the dutiable value of complete vehicles, an obstacle which is overcome by importing the vehicles in the form of components. In general, manufacturers divide the vehicle into components and price each of these. The prices are then compared with those of similar items in the importing country, and if an appreciable saving is apparent, assembly is undertaken. In some cases the most profitable procedure may be to import certain components and purchase others in the country where assembly is undertaken.

Apart from components for assembly, a considerable volume of other parts and accessories are imported. The total value of imports of parts and accessories, including chassis frames without engines and spare engines, amounted to £1,259,155 in 1934. This shows a considerable reduction from the 1929 figure of £4,281,402. One of the largest items is ball and roller bearings, which are imported in large quantities from Sweden (£88,040 in 1934) and Germany (£33,379). Apart from this item and of kerbside pumps from the United States, which were valued at £70,632 in 1934, the principal sources of imports are France and the United States, the inference being that such imports consist principally of spares and accessories for the complete vehicles imported from these countries.

RAW MATERIALS

The question of import duties on motor vehicles is also closely bound up with that of the duties on the raw materials of the industry, of which one of the most important is steel. Though the motor industry probably does not import any considerable quantity of steel directly, several manufacturers have been complaining recently that, since the imposition of the steel duties and the agreement with the continental cartel, British steel makers have raised considerably the prices of their products. Manufacturers also complain of considerable delay in obtaining supplies. It is to be hoped that an improvement in the position will take place as soon as the process of technical modernisation, now being carried through by the steel industry, has been completed.

On the whole, a considerable reduction in the price of the finished product has been achieved and passed on to the consumer. The present duties are now assuming an added significance in view of the reduction of the horse power tax, of which the American manufacturers might have been expected to have taken even more advantage than has actually been the case. With the tax at its present level, British manufacturers will be able to turn their attention to the production of larger cars. At the same time, imports will probably continue at a level sufficient

★ 72 ACRES OF PRACTICAL IDEALISM

THESE FACTS ARE INTERESTING

- Number of Employees 6,500
- Cost of factory equipment £2,000,000
- Electrical Consumption 1,250,000 units per month
- Gas Consumption 2,500,000 cubic ft. per week
- Coal Consumption 200 tons per week
- Water Consumption 1,000,000 galls. per week
- The conveyor system has storage for 100 bodies and 700 to 1,000 engine units.
- The welfare organisation is very complete and includes one of the fine works canteen buildings in the country.
- The first three Wolseley cars, built in 1895, 1897 and 1899 respectively are still in existence at the works.
- Area of works 72 acres
- Area of floor space 1½ million sq. ft.

In the thirty-five years we have been manufacturing automobiles—and not without a measure of success—we have sought always to remember that our responsibilities towards the Public are bound up with those we owe to our employees, the industry as a whole and above all towards our country.

Whilst raising the efficiency of our plant and organisation to the highest level possible, we have endeavoured, concurrently, to improve the conditions under which our employees work, to take our share in lessening unemployment and to frame our policy towards the common aim—world leadership for British cars.

Such is the Wolseley policy—instigated by Lord Nuffield. "An institution," said Emerson, "is the lengthened shadow of a man."

to provide the necessary stimulus towards improved design without flooding the market. The importance of success in this respect lies largely in the export field. Although British exports were assisted during the depression by the reduction of purchasing power which compelled many car users abroad to purchase smaller vehicles with

lower running costs and by the gradual improvement of roads in many foreign countries, the bulk of demand may be expected to return to the larger car on the revival of prosperity. Moreover, any increase in the average size of car purchased in the home market should be reflected in improved financial results and still lower prices.

GOVERNMENT CONTROL OF ROAD TRANSPORT

THE extraordinary development of motor traffic has created a multitude of problems demanding the attention of the Government. Since its establishment in 1919 the Ministry of Transport has taken the initiative in devising new legislation. The problem has many facets. The first is the question of public safety. The number of persons killed in road accidents has increased from 2,700 in 1920 to a present figure of about 7,000 a year. In addition, over 200,000 persons are injured annually on the roads. A second question concerns the size and weight of vehicles and the type of tyres used. Great Britain inherited a road system from the days of horse traffic. Though much has been done subsequently to improve the roads, they have not, in fact, been radically altered. It has been impossible, consequently, to allow motor vehicles an unlimited increase in size and weight, for such a course would have involved enormously increased charges for road widening and strengthening, the rebuilding of bridges, etc., as well as congestion and inconvenience to road users operating small vehicles.

In the third place, the road transport industry has a social aspect. Omnibus and tramway operation provides a livelihood to-day for 183,000 persons registered under the Unemployment Insurance Scheme, and "Other Road Transport" (broadly, the road haulage industry) for 214,000. Further, at least 300,000 of the 2,000,000 persons registered under "Distributive Trades" are probably motor drivers and assistants, although their duties may also include sales or canvassing work. During the 'twenties the majority of these people were unorganised, worked relatively long hours and had no effective machinery for collective bargaining.

Finally, the road transport industry has been subject to far-reaching Government intervention. The railways have lost a good deal of traffic to the roads, and have been compelled to reduce their rates and fares to meet road competition. Until recently, it has been easy for the man with little or no capital to enter the omnibus and road haulage industries, and the latter, in particular, have been subject to waves of uneconomic rate-cutting. Thus the desire of the railways to restrict competition has been backed by pressure from a section of the road transport industry itself for legislative action to restrict the number of new entrants.

PUBLIC SAFETY

Such, in brief, are the problems to which modern road transport development has given rise. Clearly, the first concern of any responsible Government must be with the question of public safety. Here, however, a formidable difficulty has arisen. Accurate knowledge of the relative importance of different causal factors in road accidents is an indispensable preliminary to any remedial policy. And such knowledge has been almost non-existent. Up to 1930, a nominal speed limit of 20 m.p.h. was in force for all motor vehicles. Though, in fact, it was honoured in the breach rather than the observance, it was criticised on the ground that it concentrated attention too much on speed and too little on careful driving. Following the recommendation of a Royal Commission on Transport, it was abolished for private cars and motor cycles by the Road Traffic Act of 1930, which at the same time imposed heavier penalties on the dangerous and careless driver. Speed limits for pneumatic-tyred omnibuses and coaches were simultaneously fixed at 30 miles per hour; for pneumatic-tyred goods vehicles up to 2½ tons unladen weight at 30 m.p.h.; and for heavier vehicles at 20 m.p.h., with still lower limits in other cases.

The fact that the number of deaths from road accidents

fell from 7,305 in 1930 to 6,691 in 1931 was hailed as a proof that the policy of abolishing the speed limit was correct. Road deaths, however, began to mount again in 1933. After considerable pressure, the Minister of Transport re-imposed a speed limit of 30 m.p.h. for private cars and motor cycles in built-up areas in March, 1935. There followed, in the May-July period, a reduction of 19.4 per cent. in road deaths and in the August-October period a reduction of 8.6 per cent. It would appear that any change in Government policy which focusses the attention of Press and public on the subject of road accidents leads immediately to their diminution, but that this effect tends to disappear as public interest wanes. During the last two years much has been done by way of the provision of pedestrian street crossings, of traffic lights, and of an increased number of footpaths along main roads in the country. A beginning has also been made in providing special tracks for cyclists. On the whole, however, these measures have not met with the degree of success which was expected. It has been alleged that pedestrian crossings are too numerous and that they are only partially effective, since pedestrians are under no legal compulsion to use them. Cyclist tracks are opposed by the official organisations concerned. Traffic lights relieve the police of a great deal of control work, but are responsible, with other regulations, for much bitterness among private motorists, who, rightly or wrongly, feel themselves the object of a certain amount of "petty persecution."

RESTRICTION OF SIZE AND WEIGHT

As regards the second point—control of the size, weight and tyres of motor vehicles—the ruling consideration is that although the effective volume of motor traffic has increased approximately tenfold since 1920, the mileage of roads and streets has risen only from 176,993 to 177,822. Annual expenditure on road construction, improvement and maintenance, which was £43 millions in 1921, is no more than £55 millions at present. In other words, official policy has been based on the utilisation of existing roads rather than the constructing of new roads on the lines followed, e.g., in Italy and Germany. Consequently, it has been necessary to restrict the maximum size and weight of motor vehicles. Under existing regulations the maximum gross laden weight varies from 12 tons for a four-wheeler to 22 tons for any motor vehicle. Overall lengths must not exceed 33 feet and widths 7 ft. 6 ins. It has been illegal to use steel tyres since 1932. Solid rubber tyres were forbidden to new vehicles a year earlier and must be completely replaced by pneumatics by 1940. Further, taxation has been continuously steepened for the heavier classes, and operators have been driven to use more and lighter vehicles. Between 1926 and 1934 the number of lorries in use of over three tons unladen weight fell from 59,409 to 46,779. Simultaneously the number of less than three tons increased from 197,714 to 366,541.

WORKING CONDITIONS

So much for considerations affecting size and weight. As regards the third point, wages and conditions of work among drivers of motor vehicles have received official attention only during the past five years. Much has already been done, however, by way of official control. Wages for the omnibus industry, under Section 93 of the Road Traffic Act, 1930, must not be less favourable than those which would need to be observed under a contract with Government departments. The same Act limited hours to 11 in any one day. This was effective for omnibus drivers, but lacked machinery for its enforcement in the case of lorry drivers. It was only with the passing of the Road and Rail Traffic Act of 1933 that the keeping of records of hours of

The GROWTH OF Vauxhall

work and journeys by lorry drivers was made compulsory, and enforcement became possible in practice.

The same Act made the provisions of the wages section of the earlier Act applicable to drivers of haulage vehicles, but not of ancillary users' vehicles. A National Joint Conciliation Board was established to agree upon wages for the different classes of lorry driver in each area. It was understood that failure to pay such wage rates might ultimately lead to a refusal to renew the offending employer's licence to operate. In fact, there has been delay in enforcing payment of the standard wages in certain instances. Lorry drivers' standard wages vary (according to district, type of lorry and type of service) from a minimum of 45s. a week for light vehicles on local work in rural areas to a maximum of 75s. for "heavy-weight" drivers in London. The basis is a 48-hour week, and special overtime rates are payable for all work in excess of that maximum. On the whole, it is agreed that Government control of wages and conditions has been fair and reasonable.

CONTROL OF PASSENGER SERVICES

By far the most interesting and important aspect of Government intervention, however, has been concerned with economic control. The Road Traffic Act of 1930 took the licensing of omnibuses and motor coaches out of the hands of local authorities and placed it (together with fairly complete control of fares, time-tables and density of services) in the hands of Traffic Commissioners appointed by the Minister of Transport and answerable only to him. As a result, the number of hackney carriages of over eight seats, excluding trolley buses, which had increased from some 40,000 in 1926 to 52,156 in 1930, fell to 48,519 in 1931. Subsequently, the omnibus industry has been relatively stabilised, as the following table shows:—

Year	Omnibuses and Motor Coaches				No. of Private Cars in use (Great Britain)
	Vehicle Miles	Passenger Journeys	Average Receipt per Journey	Total Passenger Receipts	
1931	1,318,939,521	5,269,475,607	d. 2-66	58,307,279	1,083,457
1932	1,323,721,070	5,344,884,136	2-61	58,207,546	1,127,681
1933	1,312,967,540	5,423,988,292	2-57	58,069,074	1,203,245
1934	1,345,598,053	5,721,900,854	2-52	60,030,067	1,308,425

The increase in 1934 is ascribed to the replacement of trams by buses in a number of municipalities and to an increase of bus receipts by the London Passenger Transport Board. The growth in the number of private cars, however, suggests that there has been a loss of business by public transport, as a whole, to privately owned transport. There has also been a large increase in pedal cycle ownership. Had the omnibus industry been able to adopt a more flexible policy in the matter of fares, some of the business lost to privately owned transport might possibly have been retained. On the other hand, stabilisation has made possible considerable economies through the better use of vehicles and the buying up of competitors on particular services. This in turn has established a number of local monopolies, and there is no doubt whatever that the profitability of omnibus operation has greatly increased.

ROAD USERS' ORGANISATIONS

PRIVATE-CAR owners, numerically the strongest body of users, early recognised the necessity of taking steps for their own protection against the legislator and vested interests, who did not welcome the emergence of new methods of travel. The Automobile Association, representing over half-a-million owners, and the Royal Automobile Club, with a membership of approximately half that figure, share the work of serving the private individual. Both of these organisations date from the early days of the century, and are, in effect, national institutions performing many duties in the public interest which otherwise would have to be paid for by the authorities. A traveller in Great Britain is seldom at a loss for assistance and advice from the efficient patrolmen of these two bodies. In Scotland, the Royal Scottish

CONTROL OF ROAD HAULAGE

The Road and Rail Traffic Act of 1933 went some way to extend the same policy to the road haulage industry by placing the licensing of its services under the control of the Traffic Commissioners. It is now virtually impossible for new concerns to enter the industry; and established operators must bring definite evidence of the growth of their business, and the unsuitability of other operators or alternative means of transport for their particular work, in order to obtain permission to extend their fleets. Interested parties can object to applications for such extensions, or to the renewal of licences, on the ground that the services are, or would be, in excess of requirements. In the absence of official figures showing the effect of this control, the general opinion of the road haulage industry is that the history of omnibus licensing is being repeated, although in a somewhat milder form. There is thought to have been no further diversion of traffic from rail to road hauliers, and in fact some regaining of traffic by the railways as a result of the "agreed charges" they are permitted to quote under the Road and Rail Traffic Act of 1933. The increase in available traffic brought by the improvement in trade is believed to have been mainly absorbed by privately owned and operated ancillary users' vehicles. It would appear, further, that, on the goods side also, a loss of traffic from public to private transport is taking place. This is important from the manufacturer's point of view, as the ancillary user mainly operates relatively small vehicles with comparatively low annual mileages, while the haulier uses larger vehicles running much greater mileages.

CONTROL BY "BOARDS"

In two instances, Government control has proceeded a good deal further than elsewhere. The first has been the establishment of the London Passenger Transport Board by the London Passenger Transport Act of 1933. This brought all London public passenger transport—omnibuses, trams and "tubes"—under the ownership of a single public board, and provided for pooling agreements as regards the passenger traffic of the main-line railways in the London area. The second new departure has been the Road and Rail Transport (Northern Ireland) Act, passed this year. Under this Act, all public road transport—passenger and goods—in Northern Ireland will be brought under the ownership of a single public board. There is to be a pooling agreement with the railways, but no common ownership.

It is somewhat early, as yet, to pass judgment on these schemes. The greater part of London transport had been controlled by the "Underground" combine before the establishment of the Board. The administrative changes involved in its establishment were numerous rather than formidable. There are some indications already, however, that on the omnibus side greater flexibility and more rapid expansion are obtainable in London than in other areas, where omnibuses are strictly controlled by Traffic Commissioners with an eye on rail competition. The Northern Ireland board is still in the experimental stage. It may, however, be doubted whether the lessons to be learnt in a territory approximately the size of Yorkshire, with a population comparable with that of Birmingham, will be necessarily of direct application to more complicated problems which would arise under a similar board in Great Britain.

Automobile Club and, in Ireland, the Royal Irish Automobile Club, enthusiastically second the efforts of the two principal organisations.

Of similar importance to the user of the commercial vehicle in its several forms are the organisations attending to their special interests. The Commercial Motor Users' Association, with its counterpart, the Scottish C.M.U.A., are particularly interested in the ancillary user, as the trader owning his own transport is termed, though their activities extend into other spheres. They are unceasingly active in their endeavours to resist encroachment on the industry of their members have created, and to prevent the enactment of legislation detrimental to their interests.

The haulier hires out his transport to the public; he is an important factor in the motor industry, who performs for British trade a service which would not otherwise be available. The pressure of recent legislation has compelled several of his smaller representative associations to amalgamate for the sake of strength. Thus, the Associated Road Operators has emerged, with a membership of over ten thousand fleet owners, to do battle in the interests of hauliers.

In the omnibus field, there is a considerable variety of ownerships which find difficulty in working together closely. The independent owners have merged their association, the Motor Hires' and Coach Services Association, in the Associated Road Operators, but local prejudices still support a number of organisations which would doubtless gain in strength by amalgamation in the national body. The com-

panies partly controlled by the railway companies are joined in the Omnibus Owners' Association, while municipal interests are served by the Municipal Tramways and Transport Association and the Tramways and Light Railways Association.

The prevailing idea that all these organisations are necessary and have special interests to conserve is an unfortunate circumstance for the motor industry, as the consequent lack of co-ordination leaves them open to separate attack by opposing interests. Attempts have been made to bring them closer together. But while hope of ultimate success is not wanting, the Motor Legislation Committee representing one section, and the British Road Federation, with chiefly commercial user interests, still work in separate compartments. It would seem that considerable energy in legislative matters might well be conserved by united action.

MOTOR INSURANCE

(BY AN INSURANCE CORRESPONDENT)

In the family of insurance the motor department is a youngster; and like the junior members of many other families, it is vigorous, it is growing quickly, and it is apt at times to cause its elders a certain measure of anxiety. Many motorists believe that it is a source of enormous profit to the insurance companies and resent having by law to pay premiums (which they are inclined to regard as excessive) to private concerns which are already of untold wealth and continue year by year to increase their reserves at the expense of the hard-used owners of cars. That is a mistaken belief. Insurance companies do not make large profits out of motor insurance. If it were possible to separate the figures of motor insurance in Great Britain from the general accident figures, home and foreign, there is little doubt that the result would be, in 1934 at any rate, a substantial loss. The British motorist is not, to the insurance industry, the most profitable. He travels on crowded roads in a country which sets a high value on human life. He is subject to an unusually high risk of accident, and once in an accident, is liable to pay damages on an unusually high scale. Motor insurance, in fact, tends to be profitable in inverse proportion to the state of a country's civilisation. It is easier to do well as a motor underwriter in places where the general level of wealth is not high and the legal system not highly developed than in a country like ours, which enjoys a generous standard of living, the best roads in the world, and law courts which rightly put a big cash value on life and limb. For this reason the motor department of an insurance company needs in this country the most careful and vigilant management, and motorists have really no ground for complaining that the companies make excessive profits.

Thus, the manager of the motor department of an insurance company has in the past few years been more subject than any of his colleagues to the competition of unsound companies. The reason is that it is easier to get new business in the motor department than in any other, and new concerns starting their careers and trying to cut into the market have naturally concentrated on this form of insurance. The result has been that the scandal of defaulting companies has been for the most part confined to the motor business, and the injured pedestrian—the person whom Parliament has been most anxious to protect—has in fact been the greatest sufferer from insurance failures. It may prove that the epidemic of failures has, temporarily at any rate, worked itself out, but so long as present conditions hold good there will always be a temptation for the optimist to collect a big premium quickly in the field which offers the greater opportunity for that dangerous form of enterprise.

The profits of motor insurance are conditioned largely by the attitude of the courts to third-party claims, and in recent years judges and juries have become more and more sympathetic to the pedestrian and the motorist who has been injured in a collision on the road. That tendency, in

the present state of public opinion, would be inevitable in any case, but it has been accelerated and intensified by the Road Traffic Act, which makes third-party insurance compulsory and consequently does away with the old rule that in third-party actions the existence of an insurer behind the defendant must not be disclosed. Any human jury will be influenced by the knowledge that damages will fall not on a private citizen but on an insurance company. A fair analogy to what has happened since 1930 would be this: imagine a sudden upward movement in the price of commodities and a fire department which, without being able to increase its premium income in proportion to the risk, has to pay all its losses on a much higher scale of

prices. That is in effect what has happened to the motor departments. Their premiums are not fixed on a rate per cent. of the liability they run, but they have, nevertheless, had to face something not unlike a revolution in the extent of that liability.

GOOD AND BAD RISKS

Moreover, motor insurance is at present entangled more closely than any other form of insurance with Government control. The motorist is the only person in England who is bound by law to insure, and while there is no corresponding obligation on an insurance company to accept his business, there is a certain moral obligation, which has to be recognised, to give him in some form the necessary cover. Perhaps it would be better if the insurers hardened their hearts and made it impossible for the bad driver to get the cover that he needs. It might force him off the road and reduce the risks that we all of us run when we take our walks abroad; but, as things are, it is the rarest thing in the world for a motorist, however bad his record, however great his proneness to accidents, to be prevented from driving by failure to obtain cover. And it is undoubtedly true that most of those motorists who have been bludgeoned into insuring by the Road Traffic Act are bad risks. They are, for the most part, irresponsible and careless. They were willing, so long as the law allowed, to drive with their third-party liability uncovered—a thing that no one but a really wealthy man ought ever to have done—and many of them regard their insurance certificate as nothing but a necessary nuisance which they must get (as they must get their driving licence) before starting out in their car. It was largely by catering for these gentry that the companies which have defaulted in the last few years came to their inglorious end.

There is no other form of insurance in which the personal equation is so important as in the motor department. In every kind of insurance, of course, the personal equation matters. Good management on the part of the insured will always make a risk more desirable whether it is the fire risk or the workmen's compensation risk of a factory or the insurance of the hull and machinery of a steamer. But in motor insurance this element is stronger still. The same car going on the same journey is obviously an entirely different risk according to the person who is driving it; and although there are certain types of driver who can be spotted as dangerous at first sight, there are others who are equally dangerous—but for no visible reason. They are the people for whom the terrible adjective "accident-prone" has been invented, and they make it extraordinarily difficult for the insurers to fix a scale of rates that will be fair all round. And it so happens that in private motor insurance not only tariff offices but non-tariff offices and Lloyd's underwriters as well work on schedules, most of which are published and presented to agents, and so are not too easy to adapt to the idiosyncrasies of individual drivers. That tends to increase the difficulty of motor underwriting and perhaps accounts for the feeling which is common among careful motorists that they are penalised in their

premiums for the sins of the reckless or the unfortunate driver. If they are, it is to some extent inevitable, since the essence of insurance is the bearing of one another's burdens, and the premium for insuring A cannot be fixed without reference to the risk of insuring B. If it were it would not be insurance. But there is a natural tendency in the present circumstances for motorists who for any special reason are a good risk to detach themselves from the general market and insure under a separate scheme of their own, so that the very good risks are apt to drift away from the ordinary offices, with the obvious consequences.

EXPENSE RATIOS

Motor business is by its nature very largely made up of small cases. Big fleets of lorries and cars are comparatively few in number, and the backbone of the business is the middle-class owner-driven car, a large proportion of these risks being placed through the agency of garages and selling organisations whose interest in insurance is naturally subsidiary to their main business. The manager of a motor insurance department consequently has to watch with care his expense and commission ratio, and it is sometimes urged as an objection to the companies that too much of the premium income goes in this way. That objection, however, is not borne out by figures. A table recently published by the *Post Magazine* showed that tariff offices—deriving business, of course, from abroad as well as from this country—spent almost exactly 40 per cent. of their 1934 motor premium income in working expenses and commission, while a number of non-tariff offices spent 37.9 per cent. and a specialised mutual office spent 39.3 per cent. To a layman those percentages may seem high, but they are not high when compared with the corresponding figures of other departments. On the whole managers are to be congratulated on working this difficult business, collected largely in units from here, there and everywhere, and subject to Government regulations, on this average expense ratio.

The future of motor insurance will probably not be easy. The business on offer will almost certainly continue to increase, but the task of selection is not likely to grow simpler. The control exercised by Government may be expected to tighten rather than to relax, and the standard of damages appears still to be moving upwards. Composite offices may find that the competition of specialised organisations increases and draws from the regular market more of the safest class of risks, and they may be forced to classify risks on new lines, going less by horse power than by personality, location, occupation and record. It will never be feasible to rate each risk separately, but the recent re-rating of cars garaged in certain areas indicates the possibility of taking new factors into account. Before long the tariff may have to introduce more elaborate methods of rating and so enable the offices to work on a more varied range of quotations. An enterprising hosiery now offers shirts with three different lengths of sleeve to every one size in collars. Motor insurance may have to improve on that.

THE INDUSTRY AND THE INVESTOR

In all "new" industries, the romance of individual success is invariably followed by the participation of the investor at large. The motor industry is no exception. In two decades motor shares have become one of the most popular industrial groups for those investors who seek something more than the yield on "investment" industrials, and who relish the flavour of mild—and sometimes exciting—speculation which is still characteristic even of the leading shares of the group.

In some respects, the general investor's interest is not fully representative of the industry. He has never shared, for example, in the equity of Morris, which is controlled by Lord Nuffield. Similarly, the steady recovery of Vauxhall to very high profits is a matter of indirect investment interest, via the common stock of General Motors, which controls Vauxhall. Any computation of the capital invested in the industry from the Stock Exchange List would exclude these important interests, and would also give an entirely false impression of Dennis, whose capital, after the

large refunds some time ago, now bears little relation with its effective earning power. Again, the acquisition of the Humber, Hillman, Talbot, Sunbeam and Commer interests by Rootes gives the investor no opportunity of sharing directly in the fruits of the striking reorganisations which that concern has effected.

That the investor, however, has sufficient scope for diversification is suggested by the accompanying record of profits of 15 concerns since 1929. Of these, eight represent private car producers, three are concerned with commercial goods and passenger vehicles, and four are makers of accessories. The list excludes other concerns with an important motoring equity such as Dunlop, the leading oil and petrol distributors, and certain motor-cum-aircraft concerns such as Rolls Royce.

Since 1929, the private motor industry has enjoyed a period of marked expansion. New strata of demand have proved surprisingly responsive to the advent of the cheap

and reliable family car produced by the large popular makers. A second class of producers caters for the smaller clientèle, which demands expansiveness, or exclusive technical features, for example in transmission gear. While the history of the industry is a constant reminder that within the general advance the fortunes of the individual firm may swing between prosperity and bankruptcy in a few years, such scope for stability in profits as exists tends to fall to these general classes. The diversification of models by the popular makers offsets the risk of failure of specific models which the small producers inevitably face and similarly limits the profits due to one striking success among a dozen models. Again, the large concerns have endeavoured to maintain their share of a growing market by reduction in prices and by improvement of quality and range of equipment. The course of profits of such concerns as Austin and Morris sufficiently illustrates the relevance of these factors during the last six years.

THREE CATEGORIES

If, however, the price of success is eternal technical vigilance, no less important is the necessity for strong internal finances. While some of the concerns in the first section of the table have on occasion been compelled to trim their allocations to free reserves to fit the circumstances, it may be doubted whether many industries could produce such a consistent record of under-distribution of earnings. To the long-term investor, however, some considerable part of these reserve provisions must be reckoned as a charge against profits, so far as they may be eventually applied to "exceptional" writing down of equipment with a short effective life, and to expenditure upon development work and research. Moreover, while considerations of policy tend to limit dividends from earned profits, there are signs that no opportunity on the production side must be lost in earning them. Already it appears that the cost of raw materials is tending to rise, and Sir Herbert Austin has followed Lord Nuffield's recent protest with the formation of a company to produce special steels for the Austin works. Again, it is not yet clear whether the new £100 Ford portends a further reduction of prices and of profit-margins.

In the second category, it seems natural to place such concerns as Standard, Vauxhall and Humber. All three have passed through more or less serious adversity, but they are now operating at satisfactory profitability. It would be equally unwise for the producers to infer individual prospects from the trend of the industry as a whole, but since they serve a market as responsive to considerations of quality as of price, their goodwill at least tends to promote a certain stability of turnover. From the stock market point of view, however, the attractions of this group are limited by private ownership of the Vauxhall and Humber equities, while Standard shares, for all their deserved popularity, do not enjoy the same wide market as those of Austin and Ford.

In the third class of private car makers who still hover between a policy of popular and specialised cars, scope for the lay investor tends to be restricted. Frequently the profits of these concerns depend upon the consistent success, from season to season, of a small range of models, and to fail to suit customers' tastes in a single year may involve an arduous regaining of lost ground. Some indication of the relatively large losses which may arise in this section may be gathered from the trend of Rover profits, and also from that of Singer, which is not included in the table. Nor does a striking achievement in design or technique guarantee perpetual profits, for the large popular makers—themselves not backward in this respect—can readily profit by the smaller firms' experience. While there is considerable speculative scope here for the specialist investor with reliable sources of information regarding the position of individual units, these shares are of limited attraction in a general investment portfolio which seeks to restrict its holdings to seasoned industrials.

COMMERCIAL VEHICLE PRODUCERS

Broadly, the private car producers as a whole appear to be facing reasonable prospects of increased profits, provided that raw materials costs do not rise so far that prices must

be increased or quality and refinements reduced. Commercial vehicle producers, however, come in a somewhat different category. The effects of legislation during recent years, coupled with rapid development of the Diesel engine, have been responsible for a sequence of sub-normal profits, from which recovery has been only partial as yet. Both the Associated Equipment and Dennis profits have yet to achieve the high levels which were earned between 1929 and 1931. The larger concerns—in particular Leyland and

A.E.C.—have strengthened their position vis-à-vis the considerable number of smaller companies whose inauspicious profits records were only equalled by their weak selling. But since the latter are now dependent upon the larger concerns and a number of private companies for Diesel units, they have inevitably lost ground to the integrated engine, chassis and coachbuilding concerns. The latter, nevertheless, have still to regain a considerable part of the market in heavy vehicles, which were singled out for

legislative attention. Their lighter types, moreover, must compete with the less expensive petrol vehicle, which has advantages where high annual mileages are not required.

In this group, A.E.C. became a public company on the formation of the London Transport Board, with which it has a ten-year contract for supplying certain chassis and parts. Relative stability of profits rather than spectacular upswing is suggested by the earnings since 1929. Similar considerations are suggested by Dennis, but Leyland profits have been rather more sensitive. Their fluctuations may be explained by the period of poor business in passenger vehicles which succeeded the Road Traffic Act of 1930, owing to the conditions of glut in the second-hand market. The waning effect of this legislation, however, is suggested by the improvement in the passenger registrations, although they are little over half the level of 1929. Again, the expansion of the lorry market—despite the emphasis on lighter weight vehicles—suggests some possibility of rising profits. The general investor may be advised to limit his choice to those concerns which build their own Diesel engines, and the list is sufficiently small to allow the risk of fluctuation in the profits of individual firms to be hedged.

ACCESSORY MANUFACTURERS

A useful indirect equity in the prosperity of the motor industry, and, latterly, in the aviation industry, is provided by the accessory makers' shares. The final section in the table illustrates the course of profits of four of these concerns. While it shows the influence of rising output upon profits, these have not been "highly-g geared" for a number of reasons. Although the motorist has come to require a fuller dashboard of instruments, the number of companies

originally catering for the demand was too large to permit substantial profit margins, and even now, after a number of bubble companies—particularly in the safety-glass business—have been weeded out, conditions are still competitive. However, the emergence of Triplex as the premier producer has been marked by an increase of profits during the last six years by over eight times, while dividends have risen six-fold. The instrument and lighting equipment makers show stability rather than rapid progress, although S. Smith and Sons (Motor Accessories), which passed through a difficult period in 1931 and 1932, has restored its former earning capacity. On the aviation side, the instrument business is conducted at relatively low profit per unit, and if the emergence of the new £100 Ford heralds a campaign of price reduction by the leading makers, it is possible that the accessory makers will be called upon to meet some part of the burden. Already production costs have been greatly reduced, and the scope for further economies has undoubtedly narrowed. It would seem fair to put a modest interpretation on future prospects, and the shares make their greatest appeal to the industrial investor who seeks a fair degree of stability coupled with a "back entrance" into the motor industry through which he can hedge some of the difficulty of choosing the year's successful producer.

The motor industry has achieved its majority, but technical conditions are still in process of change, and the investor who wishes to avoid the extremes of individual good and bad fortune can only seek refuge in a diversified holding of the leading equities. If this is periodically examined in the light of competent technical advice, there should be scope enough for a satisfactory long-term interest in an industry whose market is still actively expanding.

PROSPECTS OF THE INDUSTRY

THE story of the growth of the motor industry in the leading industrialised countries is impressive. The rise of the British motor industry to third place among factory trades within the short time of fifteen years is no mean achievement, especially in view of the considerable difficulties under which manufacturers in this country laboured in the early years after the war. The period of rapid and somewhat haphazard expansion of mechanised road transport has come to an end. What then are the prospects of the British motor industry?

There are no signs that the limit of expansion in the protected home market has been reached. But although at home saturation point may be approaching, given the present level of incomes and costs of running a car, replacement demand alone will keep the industry busy in times of prosperity. But as saturation point at home draws nearer, the vulnerability of the industry during a period of falling incomes increases. This is amply demonstrated by the experience of the industry in the United States since 1929.

There are two ways in which the approach of saturation point of the home market may be deferred. In the first place, the area of the population whose income limit brings them within the potential car-owning class may be widened by still further reductions in the prices and running costs of motor vehicles. Competition among individual manufacturers provides a powerful incentive for continuous application to secure a further reduction in costs. The minimum income necessary to run a car has fallen rapidly in recent years and may soon reach the £300 level. Manufacturers, however, have little influence over the level of

taxation of petrol and vehicles and over the application of the proceeds. But it is the duty of enlightened Government to see to it that no unnecessary obstacles are placed in the path of the industry. The second way in which the interests both of the industry and of the consumer can be furthered is the provision of roads suitable to the motor vehicle. The present road system remains inadequate despite the improvements carried out in recent years. An intensive "five-year plan" under central control might do much not only to relieve congestion and to increase the carrying capacity of the highways, but also to reduce the number of accidents.
